We have little to add to what we said last week in the way of advice on this subject, now that the deputies of the standard companies have backed out of this abortive treaty." true course to be followed hereupon by the London and North-Western and London and South-Western was plainly laid down in our answer to supposed arguments in favour of a hollow peace. The Great Western can do them no harm, by any measures it is in a condition to pursue in its independent capacity, half so great as they might have sustained from an unwise amalgamation with that body. And the only "protection" its neighbours can safely rely upon hereafter is, as we then said, to be sought at home and within their respective limits; by making the best of what they have got; by refusing to enter into any new competition whatever; and by saving, in short, instead of spending on all hands, as heretofore. If the Great Western are wise, they, also, will do the like: if they are mad enough to do as they have been doing for the last four years-in the face of the effects which past proceedings have already brought upon them—so much the worse for the Great Western. Their neighbours, whatever the Great Western may do, will do well if they learn, at last, that it is a blind and shallow policy, indeed, to commit an expensive folly because a rival at the next door chooses to be extravagantly foolish; -that this is a very sure way, indeed, to ruin both, but is as far as possible from "protecting" either. Hitherto no suspicion of this truth, plain as it is, can be traced in the external policy of the London and North-Western: its future success or decay will depend on the degree to which it may henceforth be perceived and adhered to.

The practical rebuke, indeed, which has now been publicly given to a great error in judgment, ought to lead, in one way or another, to a thorough reconsideration of the principles on which this great concern is to be managed; and the determination of this matter may be regarded from henceforward as the critical point in its fortunes.

The shareholders of the BIRKENHEAD, LAN-CASHIRE AND CHESHIRE JUNCTION, after a contest which appeared to incline against the directors, quietly adopted the resolutions authorizing the substitution of the new shares of 71. nominal value for the 311. Cheshire Junction shares, and the various provisions consequent thereon. The works are to be limited to operations from Moore to Chester.

The special meeting of the WHITEHAVEN AND FURNESS confirmed the directors' proposed forfeiture of shares.

The borrowing powers of the EDINBURGH AND GLASGOW, to the amount of 652,000l., were sanctioned at a special meeting of the shareholders. The amalgamation with the Union Canal was also authorized, and after an opposition, conducted in a very fair and business-like spirit, the arrangements with the Caledonian and Northern Companies received the formal approval of all present but three. The chairman stated that the traffic at Castlecary had considerably increased since the opening of the Scottish Central.

The GREAT LUXEMBOURG directors' report declared the progress of the negotiations with

the Belgian Government for the application of the caution-money to the completion of the canal, and the removal of all obligations to construct the line from Namur to Arlon, necessitated by the failure of the Louvain à la Sambre in their contract. The report was adopted with only one dissentient. It was understood that 2L per share would enable the Board to complete the canal.

From our official returns it appears that the amount of traffic for the last week, on 4,205 miles of railway, was 183,068l., thus accounted for: —81,166l. for the conveyance of passengers only, 55,351l. for the carriage of goods, and a remainder of 46,551l. for passengers and goods together, not respectively apportioned; being an increase of 23,122l. over the corresponding week of last year, when the mileage was 3,317. The average earnings per mile were 43l., whilst in 1847 they were 48l.

### RAILWAY PROSPECTS.—MR. HUDSON'S STATEMENT.

We have already expressed our opinion on the financial statements of the leading companies, but we cannot refuse insertion to the following able communication of a valued correspondent on the efforts still manifested in certain quarters to decry all such praiseworthy attempts to re-assure the public.

It is evident that another confederate effort is being made to keep down, and even to depress still further—notwithstanding the enormous depreciation which yet remains—the value of railway property; and it is to be regretted that a railway journal,* which from the beginning has been one of the principal vehicles of information on railway subjects, should not only admit into its columns communications addressed to its editor with this obvious view, but aid them by the most reckless and arbitrary statements, together with flippant observations of its own. I purpose to advert to a few of the objections made to the statements issued with reference to Mr. Hudson's lines, excepting the Eastern Counties,—a line which I am not much acquainted with.

I first, however, advert for a moment to your record of the amount of railway traffic for the last reported week; from which it appears that the total amount was more by 27,000l. than for the corresponding week of last year, and the mileage less by only 3l. out of 48l., or 1-16th of the whole; a record which, considering the length of new line which was opened—large portions of it only for a few weeks—the unprecedented period of adversity from which we are barely beginning to emerge, the continued prostration of commerce, and the enormous losses inflicted on railway shareholders themselves (no inconsiderable element in the diminution of railway receipts), is certainly not such as to give any countenance to such desponding anticipations of the future condition of railway affairs as these unprincipled efforts are designed to produce, especially when the inferior cost of the new lines, as compared with the old ones, is taken into account.

I cannot say that I think the statements either of the York, Newcastle and Berwick, the York and North Midland, or the Midland lines, are well made out; the two former certainly do seem to partake of that "off-hand" character which characterizes Mr. Hudson's statements generally, and the latter might certainly have been rendered more explicit: but at the same time I believe that a more complete investigation or exposition of the state and prospects of these concerns would only place them in a more satisfactory point of view, and more completely nullify the exaggerated statements which are made in order to depreciate them, though most of these confute themselves by their own extravagance. with regard to the York, Newcastle and Berwick line, the writer referred to coolly brings down its dividend to 4, and one of his correspondents to 3l. 8s. per cent. In order to show this, the average receipts of the current year are stated at 13,000%, a week, and are taken as the standard of future receipts on the existing lines, although it is only during the last few weeks that the line has been completed -- a double break in the continuity of the route having existed until then—by the opening of the bridges (even now

* It need hardly be stated that the writer does not allude to the Railway Chronicle.

only temporary and inconvenient ones) over the Tyne and Tweed, while the competing and unbroken Caledonian line has been in full operation; and though the very last return shows a receipt of nearly 13,500l. not for an average week, such as it will be in future, but for a week at the very worst period of the year; and this standard being first laid down, an arbitrary deduction of 3,000l., or nearly half, is made from the estimate formed by the directors of the increase of the returns from 68 miles of new railway and an essentially altered condition of the main line, including dock and harbour dues, wharfage, rents, &c., of which the writer apparently makes no account whatever. He then makes an equally arbitrary addition of more than 30 per cent. to the cost of working, as estimated by the Board, making 40 per cent. upon the traffic, though last year, with all the disadvantages and expenses of a broken line, the working expenses were only 33 per cent. (111,500l. on 334,500l.), which on the working even of the current year will be reduced to about 30 per cent., and with the increase of traffic will become less. On the value of merchandise and mineral traffic, and the expense of working it, as compared with passenger traffic, much light has been thrown by the letter of Capt. Huish, which has appeared even since I began write, but from which I will only quote these words: -"I would moreover beg to remind Mr. Whitehead that the most profitable lines in England, and the only profitable ones in Scotland, have been confined exclusively to the carriage of coal and other minerals.' Take all the passenger traffic and goods traffic away; and notwithstanding its extravagant and foolish bargain with the Great North of England Company, this line may still pay the minimum dividend con-templated by the directors, and even more. I certainly consider its prospects to be better than those of any other existing line; but the leases of the Car-lisle lines, and the Stockton and Darlington lines, upon the terms proposed, should be unhesitatingly rejected, and Mr. Hudson be taken at his word and allowed to take them upon his own hands, as he promised to do with regard to the Leeds and Bradford line, if it proved unprofitable to the Midland Company; a promise which, if on the opening of the connecting lines it proves to be so, he is certainly bound in equity to fulfil, though he did not vouchsafe to make any observation upon this point when reminded of his promise at the last half-yearly

meeting.

By a yet more summary and arbitrary process, it is affected to bring down the York and North Midland dividend to 4 per cent.; though no part of the line—except, perhaps, the Market Weighton branches, which should have been left, like the Maldon and Driffield line, in the hands of any parties foolish enough to make them—is likely to pay less than 5, whilst others will pay 10, 15, and 20 per cent. All of them, except the Church Fenton line, have been very cheaply made; the Whitby line, though some expense has since been incurred upon it, was bought for little more than the price of the rails; the company has the option only of paying for the Leeds and Selby line; and 7½ per cent. appears a moderate estimate for the produce of the whole line, though it does not seem probable—unless a great increase takes place in the trade of Hull, so as to leave a large surplus on the Selby line—that 10 per cent. is likely to be realized again, as Mr. Hudson seems to hope.

The recent arrangement with the Great Northern line must have the effect of not only securing the north and south traffic of the York and North Midland, at least for several years to come, but of increasing it when the connexion between Lincoln and Doncaster is completed; and if the main line north from Peterborough to Retford should be formed, it would evidently be of still further and very considerable advantage to it, as well as to the York, Newcastle and Berwick line; whilst the same circumstance would be adverse to the Midland line though to a very much less extent than has been generally supposed, from an exaggerated estimate, both of the value of the through traffic between York and London, and of the proportion of it which could be withdrawn from the Midland line. In case of direct competition between two lines, it is a recognised principle that it is not the short line, dependent on its through traffic, that governs the long one, but the long one which has a large local traffic and extended connexions, that governs the short one. The Midland by carrying passengers from Normanton to Rugby for nothing, might sacrifice 1 per cent. of its own dividend, but the Great Northern line under such circumstances could pay none; the Midland therefore -whose route, moreover, has better gradients (the first class gradients of the old lines throughout), and could be shortened by opening through the Erewash Valley line and avoiding the town of Derby, and could easily be reduced in time to within half an

hour of the direct route-would always be able to command an equitable division of the traffic: so that its dividend is not likely to be affected to the extent of more than one-half per cent.—and that only some years hence — even if this disadvantage should remain uncompensated by other means. I assume, however, that the line from Peterborough to Retford is not likely to be made; the Great Northern pro-prietors will not be desirous to extend their capital at a discount of 13l. on 19l. paid; and the directors must have had sufficient cold water thrown upon them by this time, to make them little anxious to make an unproductive and nearly useless line. Of itself that portion of the line would certainly be unremunerative; and the company would lose as much by the traffic of which it would rob the loop (with its longer mileage,) as it could gain by any additional portion of the Northern traffic that could be brought on the line between Peterborough and London. In fact, nothing has yet been done upon this portion of the line, nor did the directors at the last meeting seem to have any present intention of proceeding with it, nor does it appear that there will be any capital available for the purpose. Supposing the contracts made within the parliamentary estimates, yet there has been a great excess in the cost of land; 500,000L, will have been absorbed in preliminary expenses, 500,000l. more by interest on the calls; 19l. out of 25l. is called up already, and out of 1,666,000l. the company at their last meeting had only been able to borrow about 40,000l.; whilst the works on the loop are incomplete, a good deal of land, it is said, remains unpaid for, the Doncaster line to be completed, the metropolitan station to be provided, a great expense yet to be incurred on the southern portion of the line, and (except that which is now employed upon the loop) the locomotive stock to be provided for the whole. Under these circumstances, it is evident that that portion of the line which would be most adverse to the Midland Company cannot be proceeded with until a very different status of railway affairs has been established; and at all events cannot be completed for several years to come. That the price of Midland stock should have receded on the appearance of the statement-whose purport was so much better than many had anticipated—appears surprising. It might not have seemed so if the previous price had borne the same proportion as its dividend to London and North-Western stock,—that is to say, if its previous price had been about 103; but a declension from 83 seems scarcely to be accounted for, except by the prevalence of some extraordinary delusion, such as the expectation entertained, I believe, by many, that it was about to lose at least one-fourth of its traffic immediately, by the opening of the Great Northern line. Some further observations with reference to the line, and some additional general remarks, I find it necessary to defer. OBSERVER.

RAILWAY PROPERTY: THE CAUSES OF ITS DE-PRECIATION, AND THE REMEDY.

We showed in our previous remarks, that the monetary writers of the *Times*, at the close of 1845 and the beginning of the year 1846, mistaking the effect for the cause, attributed to the railway system the evils felt in our social condition, which were really attributable to the monetary system, rendered more restrictive by the Bank Charter Act of 1844—so much more restrictive, in point of fact, that it was unable to express the legitimate transfer from the bankers severally with whom they had been deposited, to the Accountant General, the fifteen millions of deposits actually paid up by the railway proprietors.

It is a known fact, of which the Times' writers ought to have been cognizant, if they really understood that upon which they wrote, that it was under this difficulty the directors of the Bank of England sought, from the then Prime Minister, a relaxation of the restrictive clauses of the Bank Charter Act. But this was refused, and resort was had, to circumstances such as Mr. Samuel Jones Loyd, the reputed author of the measure in question, indicated when, in reply to question 5146, put by the late parliamentary committee "on the causes of the national distress," he points out that such a difficulty "can be easily met by judicious banking arrangements;" such "judicious banking arrangements," may be imagined, as were described by Mr. Birkbeck before this same Committee, in the answers following upon question 5801; or as those to which the Bank of England was obliged to resort in the year 1839, when to prop up the then rickety and embarrassing monetary system, a supply of gold was procured from France by the creation and negotiation of some large accommodation bills an evidence at once of

the unsoundness of the system which required such support.

But to return to the Times: another of the fallacies of the public writers in question, on which their declamatory leading articles obviously rested, was, that the nation had become poor in the most indubitable form in consequence of railway investment; these writers ignorantly confounded "capital" with "money." They could see no other capital" "wealth" but what consisted in the precious metals: purblind as they were, they could not see that still more substantial wealth abounded on every hand_that the real source of all accumulated wealth is labour and that in a nation artificially circumstanced as this is, particularly with the heavy taxation incident to the National Debt, any monetary system measured by the mere quantity of the precious metals present among us, is not only absurd in itself, but is at variance with the practice of other nations, and with the true science of money. Midas-like, the entire aspirations of the Times were for gold, not in its legitimate function as the standard measure of interchange between nations, but as the only currency of this country. These short-sighted political economists of the modern school could not, or would not see_that land appropriated to a more useful purpose—that our forests, our mines, the labour of our industrious classes, the talent of our engineers, and the discoveries and application of modern science, might indefinitely be rendered the means of more productive wealth_if we were only wise enough, in the cultivation of the nobler arts of peace, to adopt in principle and in sufficiency, though as much more soundly as experience might teach. such conventional money as Bank of England notes, introduced for carrying us through the long European war,—and if we were wise enough to discard for ever the monstrous notion of rendering one foreign commodity_gold_the only condition upon which native industry could be employed.

The mystifying process to which the talkers and writers on the dangers of railway investment resort is in ringing changes on "fixed capital" and "floating capital." It would appear that the capitalists of the present day are mere children, who cannot themselves best determine, by experience, in what mode and with what degree of fixity they should apply their wealth. Then again the Times' writers were especially alarmed lest more than "the surplus capital" year to year should be applied;—a sum not exceeding a million per month of "surplus capital" devoted to railways appeared to frighten them out of their They never thought to look for a precedent at that time, or they would have turned to ten years of the earlier part of the European war, during which the population of Great Britain was rising from 10,320,000 to 11,600,000, when the holders lent to Government, of their surplus capital, what constitutes about 300,000,000 l. of our present national debt; and when the annual taxation on a population little more than one-half the present rose from 20,500,0001 to 55,000,0001. It is curious here to remark that the market-price of gold at this period advanced to about 41. per ounce only.

The real solution of the problem of applying surplus capital with facility, would have been found by turning to the scale of currency irrespective of the precious metals legally permitted at the time referred to, namely, in 1806. Had this reference been made, it would have been found that at that period the Bank of England note and bank-post bill circulation exceeded seventeen millions_an amount nearly equal to its present scale. There is no record available of the country bank-note circulation of that period, but it is fair to presume that the amount was nearly as much, for in 1814 the totals stood thus: population of Great Britain, 13,200,000; Bank of England circulation, 24,801,080*i*.; country note circulation, 22,700,0001; Scotland, 3,000,0001: total, 50,501,0801. In the year 1847, the figures stood thus: _population of Great Britain, 20,100,000; Bank of England circulation, 18,780,0381.; country note circulation, 6,742,7891.; Scotland, 3,000,0001.: total, 28,522,8271. ; or fifty millions in 1814, for a population of thirteen millions; and twenty-eight millions in 1847, for a population of twenty millions!!

Hence it would appear our modern monetary doctors regulate circulating medium in the inverse ratio of population—they endeavour to place the of his own immense fortune, re-declared as recently as

cone upon its apex. Here is a solution of the industrial difficulty of the present day; under such an inconsistent system as exists, can the sickliness of the population be matter of surprise? Currency to the body commercial is like vital air to the human body. Let our medical doctors so restrict the quantity of vital air to their patients, and we should soon see in what condition they would be found.

This calculation is over and above the precious metals, which, from the statistics of the mines of the world, and with an estimate of annual consumption in manufactures, cannot be proved, relatively with population, to have materially increased.

With these facts in view, and with a proper consideration of the principle of supply and demand, it will not be surprising that the effect of rendering money scarce and dear, is to depress the value of railway property and every other species of property measured in the money so restricted_the operation is obvious when viewed in the light of the interest which obtains for the use of money as well as in the fugitive nature of gold itself, whenever prices rise towards a remunerating level. It will no longer then be matter of surprise that when, under the existing monetary system, the Government, for the first time in modern history, stipulated for interest being paid by its subjects at the rate of 8 per cent., prices of railway shares as well as of other property were forced down and railway traffic was materially diminished.

With the experience of the benefits to labour and capital of the monetary system which obtained during the war, the real question in 1846 ought to have been-shall the arts and pursuits of peace be brought to a stand?-shall reasonable and desirable projects of railway investment be deteriorated ruinously to the proprietors, by the continuance of an embarrassing monetary system? or shall we, in accordance with the Report of the Lords' committee and the evidence recorded on that of the Commons, proceed to revise the present money laws on principles sound and such as experience would suggest? But to do this would not accord with the bullion views of the Times, and therefore the variety of fallacies in order to throw the blame on any system, rather than allow it to rest upon that which its conductors defend. only necessary to glance at one or more of these

The remaining fallacy arises from the same mistake into which the Times' writers have fallen in respect to money being the only wealth. They argue as though the money by which parties express the transfer of their property to railways, and by which the materials and labour are set in motion, would actually be buried in the mounds, be embodied in the iron, be retained in the pockets of the labourers, or be hoarded in the chests of the carriage-manufacturers, instead of performing its weekly or other periodical circuit, and employing other labour as it proceeds, through the hands of bankers, again to the public.

We observe from a recent leading article of the Times that the writers begin to be ashamed of the last shallow pretence, and try to prevent its possible reproduction against them; but it is necessary to show, in considering the cause of the extreme mischief experienced, on what fallacious grounds the public mind has been influenced. It is truly lamentable to see how intellectual men, capable of so much when rightly directed, can shut themselves up into one class of conclusions, how, for instance, a statesman so elevated as Sir Robert Peel could so far commit himself to a great practical blunder, as with the one hand to encourage, as he did, the progress of the railway system, which afforded almost in-definite employment of materials and labour in a new form of adaptation, and which involved the transfer from other investments of hundreds of millions of property in five or six years, and with the other hand so contract the currency, that in addition to the other industrial transactions, it could not, from its convertibility into gold-a fixed quantity_furnish the means of effecting the requisite transfers. It is to be regretted that when Sir Robert Peel raised the first sod of the Trent Valley Railway, he did not leave beneath that sod all those monetary crotchets which have so grievously afflicted this country for nearly thirty years - and which his worthy father, the late Sir Robert Peel, the architect

1826, that if persisted in would ultimately go far to ruin this great producing country. The following description of the monetary policy of the great William Pitt_in contrast with that of the present Sir Robert_ will be seen to speak volumes: —" Whilst directing the energies of the State in war, Mr. Pitt evinced equal ability in discovering, improving and applying our internal resources. The war drained the country of its specie, and our enemies entertained sanguine hopes that our ruin would sooner be effected by this want of pecuniary means than the want of courage, discipline and conduct in our armies. Mr. Pitt was even then a match for our contingencies. aid of the Bank of England, and other opulent houses, the energies of Great Britain were maintained in full activity, and the importance and utility of paper money were clearly established.

We must defer to other articles the corroborative proofs we intended to adduce in this, as well as the rationale of the subject, but we cannot resist declaring that it has been because this class of public writers and our prevailing statesmen have fallen under such pernicious delusions, that useful and most desirable railways have been suddenly stopped, and the marketable value of others has been ruinously depressed; that districts and towns have been thrown into confusion. It has been for reasons so flimsy as those we have characterized, that workmen who were freely expending their wages and giving employment to the agricultural and commercial classes, and who thus brought on the comparative prosperity of 1844, 1845 and 1846 have been turned adrift. These industrious men were discharged by tens of thousands distress in the persons of these honest and confiding labourers became wide spread; and we have witnessed the effects too plainly in the poverty and squalid misery of those thrown out of employment, and of the disloyalty thus engendered. imperative duty of legislators to provide a sound, sufficient and suitable medium of interchange for the enterprize and industry of the people; if they neglect this, or if they take an opposite course, the consequences will recoil upon themselves. It was most truly observed by a profound and elegant writer: -"In the moral system, it is a part of the wise arrangements of Providence that no member shall suffer alone: that if the lower classes are involved in wretchedness and beggary, the more elevated shall not enjoy their prosperity unimpaired." KAPPA.

#### JUSTICE FOR SHAREHOLDERS!

Sir, Directors, in making up their financial statements, appear to lay it down as a rule that 7 per cent. is to be considered as the maximum dividend upon money invested in railways ;-that if they can show a probability, when all their schemes are carried out, of a return of 7 per cent., that they have not only done their duty, but have performed a feat; -not one of them pretends to calculations that will give more than 7 per cent., and some have lowered their figures and our hopes to 6, nay, even to 4 per If the lines, under present circumstances, do not afford a prospect of returning more than 7 per cent. directors are to be commended for telling us so; but why they should couple with that information the inference that 7 per cent. is as much as we ought to expect_that it is a fair return_that with it we ought to be satisfied, I cannot conceive, for it is far, very far, short of our just expectations; we have borne the risk-how many times must I repeat it ?of a speculation at its commencement of very doubtful success, as to safety and to speed at all events; we have had a return for our capital for the first three or four years (for it will not be asserted that interest on calls is anything but a back payment of part of our money). Through the injustice of Parliament, we are made to carry the mails at a loss; by the same irresistible power we are constrained to transport the army at a price yielding us no remuneration as regards the privates, and at rates for the officers in some cases saddling us with a loss of 100 per cent., an officer-so the "law officers" decide it-having the right to take his seat in a train which costs 31d. a mile (no special trains have paid at the fares charged to the public, and perhaps 32d. is below the mark) for 2d. a mile. In fact, except the West India interest, there is no parallel to the injustice with which railways have been treated by the Government, by Parliament, by the press, by

the public and by their own directors. The result in the Private Bill office. They are verbatim the is, that much of our 150,000,000% is gone never to return, and the remainder is fast flitting away, in doing the work of the Post-office; in carrying "the lower classes"; in paying part of the army estimates; in giving pleasure parties to towns; and in special trains for 50 or 60 miles each, that directors "may dine." All sorts and descriptions of men have plucked the pigeon, till now he is "clean as a Christian." Let the honourable officials of England and "a generous public" continue their wonted attention to us for three years longer, and all we shall have will be our certificates, which will be worth exactly a French assignat of 1793. And why are these crying wrongs visited upon us? In other days were coach-masters treated after this fashion? Did Government, the press and the public bully Chaplin or Horne to carry them home at a loss and himself to ruin? No, say the Jesuits; but "he had no beneficial Act of Parliament; you have a monopoly,"-which is not true ;- "you have cut up the country; you have divided people's estates; you have arbitrarily obliged people to sell their land; and for all these advantages are you to give nothing? You have incurred"
—hear the cant!—" duties as well as rights." Let them show if they can that there is any right in the matter but their right to ruin us. . I have shown that at this moment our capital is daily, hourly appropriated to the public in every variety of spoliation, and let not the blustering landowner force upon me the task of exhibiting to the world the machinery by which, from the prospectus to the consideration "in hand well and truly paid," he and those who should not have aided him succeeded in extracting from our calls 300 per cent., on the average, more than his often sterile acres were worth. English industry, if the system be continued, is gone; for no man will work to be so despoiled. Apart from my individual interest as a person wishing well to the land of his birth and having some regard for its honour, I submit our hard case to the consideration of the Government, and to the trader who desires for himself a living profit; and if they possess a sense of right, I shall not speak in vain. We must have the rates for goods—particularly for coals, which we are now carrying for the coal masters' benefit and not for our profit—the Post-office rates, the army rates, the third-class rates materially increased, or we shall get no dividends when no more capital can be raised; and if directors. the Government and the public refuse to concur in this, we may as well know it at once, and let railways become public property and be worked at the public expense. I had rather it should be so that I might have the barren satisfaction of telling the world that I have been openly robbed, than to see my fortune sapped, undermined and yearly taken from me, bit by bit, in carrying a passenger for 1d. who costs me 13d., and thus witnessing my destruction in detail. 4 per cent., 6 per cent., 7 per cent. is not fair remuneration for some years to come. Our money has, at great hazard, brought into general use one of the greatest inventions of man, and if there be the least feeling of justice in Englishmen, they will not begrudge us a tradesman's profit because they may have the power to ruin us. SCRUTINEER.

#### Gassip.

Messrs. R. W. Kennard, J. Bradshaw, C. Ironside and J. Renshaw, have been elected directors of the The financial statement is in SOUTH-EASTERN. course of preparation.

The South-Western directors have determined on issuing annual tickets for the first-class passengers on the RICHMOND branch, at the rate of 2d. per mile daily, for six days in the week. This reduction would be at the rate of about one-third of the present daily double-journey tickets.

The directors of the Great Northern have issued "market tickets," similar to the return or day tickets upon other lines, at reduced rates, to accommodate the agriculturists and farmers attending the Louth, Lincoln and Boston markets.

It will be observed that on the announcement of the breaking off of the amalgamation proposition of the Great Western, the London and North-Western shares immediately rose in the market. In the eyes of many influential parties in the City, the narrowgauge interest has escaped a very dangerous shoal.

The REGULATIONS FOR DEPOSITING PETITIONS in the next session, and for determining the order in which

same as we published last year, see the volume, p. 1068.

Our readers probably remember the floating bridge across the Itchin at Southampton. Some such plan has been devised, says the Glosgow Citizen, for carrying the trains bodily across the Tay at Broughty Ferry, where it is about a mile and a half broad. Mr. R. Napier is at present boulding in his yard, at Govan, a deating religious for the Edishured Noval, a floating railway, for the Edinburgh and Northern. It is being built of iron, 180 ft. in length, and 35 ft. in breadth. It is to have three lines of rail on its deck so as to enable it to take on a railway train of 500 ft. in length, and is to be propelled by engines of 250 horse power. As the main line on each side of the Tay is considerably above the level of the sea, stationary engines on either side of the frith are to be employed to draw up or lower the trains. This railway steamboat is expected to be launched in a few weeks.

We understand that Mr. GILL, the chairman of the South Devon, has resigned his office in consequence of some difference of opinion between him and his colleagues. It is said that Dr. Millar, of Exeter, is to succeed him. In his farewell address, Mr. Gill strongly supports the atmospheric system and argues that a further trial for twelve months would have been attended with comparatively small cost, while it would have tested a principle which, from various causes that he describes, had never the good fortune to receive that fair play to which it was entitled.

The directors of the Ambergate, Nottingham AND BOSTON have been memorialized by shareholders representing an aggregate interest of 20,000l. in the capital, to call an immediate meeting, for considering an application to Parliament to reduce the amount of capital; to limit it to the construction of the line between Nottingham and Grantham for the present; to enable the company to amalgamate with either the Midland, Great Northern, or Eastern Counties; or to improve the general management, and also to abstain from any further call till after the meeting.

The law officers of the Crown have been settling the subject of CONVEYANCE OF TROOPS BY RAILWAYof course to the cost or detriment of the companies. In one of the cases submitted for decision, an officer proceeding on duty by route, unaccompanied by troops, was refused conveyance by one of the express trains on the London and South-Western, at the rate of 2d. per mile, on the ground that the company were bound only to provide such conveyance by the ordinary train; and upon the question being referred to the Attorney and Solicitor Generals, they have, upon solicities the technical conveyance of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the solicities of the looking at the bearing of the statute on these cases, given it as their opinion that railway companies are bound to provide conveyance for troops at the fares and upon the conditions mentioned in the statute by all trains starting at times fixed by the company's time-table, by whatever name or description such trains are known. According to this opinion, the obligation to provide conveyance by the express trains extends to the conveyance of troops generally, including private soldiers as well as officers. Since, however, the accommodation by express trains is limited, the military authorities do not think it expedient to enforce this right, unless in the case of officers proceeding on duty unaccompanied by troops. The companies, when called on to convey troops under an official order, are to be entitled to charge the maximum fare of 1d. per mile, although it may be higher than the rate charged by them to some class of ordinary passengers.

The Manchester Chamber of Commerce convened a meeting on the 28th ult. of merchants and manufacturers and others favourable to the prosperity of India by the introduction of RAILWAYS. Several resolutions were passed in favour of the growth of resolutions were passed in layout of the provided for its conveyance to the ports. Mr. T. Bazley, on moving the first resolution, said that India was much behind the intelligence of the age in having no railway or other efficient means of internal communication. He might take a rapid survey of the trade between this country and India. Having a population of 113,000,00, though our exports had increased within the last few years, they only amounted to 1s. 3d. per head per annum; turning to Brazil, however, they amounted to 6s. per head. India was therefore far below the standard it should occupy in the scale of consuming powers, an evil increasing for want of efficient means of bringing cotton from the interior to the coast. The remedy to be proposed was a railway to communicate with Bombay and the other ports, from the interior, and especially from the cotton districts. He believed there were no fewer than 500 individuals in Lancashire who were ready to take twenty shares each: 50,000l. being thus raised in support of the undertaking, it would cer-

Bright, M.P., in a speech of great length, supported the observations of the preceding speaker, and com-mented upon the asserted delay by the East India Company in furtherance of the project.

A requisition is in course of signature for a meeting of the shareholders in the Dublin and Droghena, Dublin and Belfast Junction, Dundalk and Enniskillen and Newry and Enniskillen, to take into consideration the best means of effecting an amalgamation. Power to amalgamate, says the Irish Railway Gazette, the companies already possess, so that there would be no necessity for an application to Parliament, but the amalgamation company would not be legally styled, as suggested in the circular addressed to the shareholders, "The Great Northern and Western," without a new Act to authorize the change. The great saving effected by the working of the combined companies would be one of the least of the advantages derivable from the measure. amalgamated company would embrace an extent of 209 miles, of which, however, only 35} is open, while 59 miles are in an advanced state of construction, and will be opened, we presume, by January next. When these portions are opened there will then be 941 miles of railway working together, with the exception of the break at Drogheda over the Boyne, leaving 1143 miles to be completed; and it cannot be questioned that under the management of one Board and one set of officials, the working could be more satisfactorily and economically conducted than by four Boards, with their conflicting opinions, their divided responsibility and their seemingly antagonistic interests.

#### Reports of Meetings.

BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNCTION.
Nov. 25.—Special Meeting, Birkenhead.—Mr. Ald.

BANCROFT in the chair.

The following proposals by the directors were submitted:—
1. That the existing 45,000 Cheshire Junction shares of

311. mortinal value be cancelled. 2. That in lieu of, and in substitution for, such 311. shares, new shares of 71. nominal value be created. 3. That in consideration of the 102. paid substitution for, such 30. shares, new shares of 7. nonmai value be created. 3. That in consideration of the 10. paid on the 318. shares, and of the loss that may be sustained by the Chester and Birkenhead shareholders, by reason of the postponement of the works, it shall be understood and agreed that 25s. per share has been paid on such shares. 4. That one new share shall be allotted to the holder of every slt. share upon which 10t. has been paid. 5. That every holder of a 31t. share upon which 10t. has been paid, who may decline to accept such new share, shall be paid in money 25s. per share, and cease to have any further interest in the concern. 6. That the residue of such new shares not taken up by the holders of 31t. shares shall be divided shares of the nominal value of 27t. 10s. and 22t. 7. That interest at the rare of 5 per cent, per annum be paid to the Chester and Birkenhead shareholders, until the Chester Junction line is opened. 8. That application be made to Parliament for power to revise the capital as above proposed, to limit the works from Warrington or Moore to Birkenhead and Chester, and to make such arrangements with other companies as may be determined upon. with other companies as may be determined upon.

The CHAIRMAN said, it had for some time been obvious to the directors that the line could not be carried out in its entirety, and latterly it had become equally obvious that with the present register and shareholders the line could not be made even to Moore, the estimated amount for which was 450,000l., and the directors had considered it advisable under existing circumstances to make the line from Moore to Chester and no further, being a distance of 15 miles. He then, at some length, entered into a detail of the proceedings. One of the shareholders, who had strenuously opposed the scheme (Mr. Brown) had, in a conversation with him, said he had been mistaken as to the facts upon which he had opposed the measure and as to the scheme itself. As the interests involved were too important to be trifled with to gratify personal feeling, and as all differences were adjusted, he (the Chairman) would move the

adoption of the propositions.

Mr. Brown (of Glasgow) explained that since his conference with their chairman, he had now great

pleasure in seconding the proposition just made.

Mr. Cochrane had attended the meeting on behalf of himself and several other shareholders, to give the proposals of the directors a fair and manly opposition. proposals of the directors a fair and manly opposition. But from what had since transpired he believed that such opposition would be futile. He should not now give his opposition to the general question; but the proposal of giving 25s. to the Chester Junction party was one to which he could not consent without taking the opinion of the meeting. With respect to the third resolution he did not think it quite logical that, in consideration of the loss already sustained, a further loss should be incurred. With respect to the fifth resolution he should move as an amendment, that 10s, should be substituted for 25s. He would they will be heard by the examiners have been posted | tainly lead to its successful accomplishment. - Mr. | allow the 25s. where the shares were taken up-

Mr. Armstrong (of Dublin) seconded the amendment

Mr. Hoggins asked what was intended to be done with those parties who had not paid up.
The CHAIRMAN: Compel them.

Mr. Hoggins said with respect to the extension line to Birkenhead the expenses had been undertaken by the directors of the Chester and Birkenhead line, who made it their own undertaking; and it was too bad first to commit an act of folly and then endea-vour to put it upon another. The errors of the Chester Extension ought not to be visited upon the Chester Junction shareholders.

After a lengthened conversation, Mr. JACKSON said if there was to be any blame attached as to the expenditure it must be thrown upon the Chester

Junction party.

Mr. PICKERING considered it a very hard case if he was to sustain a loss of 8l. 15s. per share, making to him the gross sum of 1,098l. He was both willing and ready to go forward with the Chester Junction, but if the capital wanted reducing, why not reduce it one half !

The CHAIRMAN remarked that if 211. were paid up by all parties who had already paid 10L, it would leave a deficiency of money needed to complete the entire undertaking of 20,000l. As it was, to finish the line from Chester to Moore, 450,000l. would be required, in addition to all their present assets.

Mr. Hampson thought this a most extraordinary sum—between 40,000t. and 50,000t. a mile. His view had been to abandon all the other line-to make the one from Chester to Moore, and reduce the amount from 211. to such a sum as would enable them to complete the line from one point to the other.

Mr. WILLS condemned seriatim the proposals of the directors.

Mr. Wyxen protested not only against the principle, but against the way in which the proposals had emanated.

Mr. Webster objected, at considerable length, to the several proposals. He denounced the attempt of

Mr. MALLABY believed it would be better for the Chester Junction to accede to the propositions than to have the amalgamation contract for completing the works enforced upon them, as this would entail decisive and inevitable ruin. He would suggest to Mr. Cochrane the desirableness of withdrawing his amendment, for it must be recollected that their powers to purchase land expired on the 26th of June next, and if they went to Parliament and were met by an opposition, they might lose the Act they sought, and in the meantime their powers to purchase would expire.

Mr. COCHRANE, desirous to meet the wishes of the directors, if compatible with the views entertained by himself and proxies, had no objection, with the permission of the meeting, to withdraw the amendment, upon receiving an assurance from the chairman, on the part of himself and directors, that provision should be made relative to the purchase of the land.

Mr. W. Jackson strongly recommended Mr. Cochrane not to withdraw his amendment, and said if he did so, he (Mr. Jackson) would re-propose it

A Shareholder: And if you propose it I will second

The CHAIRMAN then put the amendment to the meeting. It was to the effect that each holder of 31t. shares, upon which 10t. had been paid, and who accepted of the 7l. shares, should be allowed 25s. upon each share, but if he refused to accept such 7l. shares, then that 10s. upon each share should be paid to him in money, and he should cease to have any further connexion with the concern.

Upon the show of hands being taken, the CHAIR-

declared the amendment carried.

Mr. BIRLEY demanded a poll, and while some arrangements were being made relative to taking the wotes, a conference took place between the Chairman, Messrs. W. Jackson, Cohirane and other gentlemen. Mr. W. Jackson said it might appear strange that he, after the course he had pursued and the observa-

tions he had made, should now be an advocate for the withdrawal of the amendment; but when the chairman assured him that upon serious considerations he would advise that it should be withdrawn, he could do nothing less than ask the consent of the meeting to do so.

The amendment was accordingly withdrawn.

An amendment was then proposed by Mr. Wills, which, upon being submitted, received only the

which, upon being shoulders, received only the support of five shareholders.

The original propositions were then adopted.

The CHAIRMAN, in reply to a vote of thanks, expressed his conviction that the course which had been adopted would be found to be politic and to the advantage of all parties concerned.

WHITEHAVEN AND FURNESS.

Nov. 29 .- Special Meeting, London .- The Earl of ONSDALE in the chair.

The CHAIRMAN observed that he was called upon to perform a painful duty, but the measure proposed required in justice to those shareholders who had paid up. The forfeiture of certain shares had been carefully deliberated upon by the directors, and three modes of procedure had been suggested. The first was the distribution of the shares among those pro-prietors who had paid up, but he feared they might not be willing to take them. The second was, that the forfeited shares should be put up to auction, but he apprehended that the result of this would be that no bidders would come forward. The third course, which the directors thought the most advisable, was, that they should keep the shares, and not sell or dispose of them until the proprietors had been called

together again.

The resolution, confirming the declaration by the directors of the forfeiture of certain shares, the numbers of which, with the names of the holders, were read by the secretary, and ordering the sale or other disposal of the said shares, was then carried.

The CHAIRMAN next proposed a second resolution, to the effect that, at the suggestion of the directors, the above resolution should not be carried into effect as regarded the sale or disposal of the shares, until it had received the sanction of another general meeting.

After some remarks from Mr. BASSETT, and the CHAIRMAN having, at his request, repeated the financial position of the company, as detailed in the last

half-vearly report.

Mr. DE VITRE expressed his doubts whether the proceedings of this day would not cause the burden to press more heavily upon those proprietors who had

paid up, and he trusted something would be done to relieve them from the incessant calls.

Mr. Hildyard, Q.C., observed that, on the contrary, the only mode of relieving those who had paid up was to show those who were in default that they would be proceeded against; and however he might regret the necessity for such a step, he could not see the hardship of compelling those who had entered into commercial engagements to fulfil them. He contended that the proprietors who had paid up would be placed in a better position by the forfeiture

Mr. TILL (a director) assured the meeting that every effort had been made to induce parties to pay up the calls, and it had been only after many fruitless attempts that the forfeiture had been deter-mined upon. The company would not lose anything by the forfeiture, but, on the contrary, an incubus would be got rid of.

Mr. HILDYARD expressed his opinion that the undertaking would turn out a profitable one.

The resolution was then agreed to.

EDINBURGH AND GLASGOW.

Nov. 28.—Special Meeting, Edinburgh.—Mr. P. Blackburn in the chair.

The CHAIRMAN said the first notice in the paper of resolutions to be submitted refers to a matter which requires little explanation. It is pretty well explained in the report. It is an arrangement merely intended to keep the financial affairs of the company technia considerable sum of share capital, and by declaring the 2,109,375*l*. share capital, created and held by the shareholders, to consist of 1,888,250*l*. share capital authorized by Parliament, and 221,125% of capitalized loan, the company would have the power to borrow 512,800l., even after the whole share capital is called up. It was not intended to issue more share capital to pay off loans. In the present depre-ciated state of the share-market were we to do so we should be obliged to issue preference shares, which we do not approve of, and which, with your support, we never mean to do under any circumstances. We think it better to issue the whole share capital autho-rized by Parliament, and to enable us to exercise our borrowing powers if necessary, to declare a certain amount of the share capital capitalized debt. The Chairman then moved the resolution to the effect that resolution approved of at the general meeting held upon the 26th of August 1845 be so altered and modified as to substitute a certain amount of share capital and a certain amount of loan capital, in all 282,000l., for an equal amount of the loan capital authorized to be created under the said resolution. The second resolution might be taken along with the first, as they were both connected with the same arrangement. This resolution authorized the directors to exercise their borrowing powers, under various Acts, to the extent of 652,000l. in all.
Mr. H. Dunlop, of Craigton, seconded the resolu-

Mr. J. LEECHMAN asked if the directors were quite

satisfied that the arrangement was legal.

The CHAIRMAN said they were quite satisfied the thing was legal. It had been done before, and their Acts of Parliament authorized them to take that way of raising the money.

The resolutions were unanimously approved of.

The CHAIRMAN said that the second point was the amalgamation with the Union Canal. The directors unanimously advised that this amalgamation should take place. The only question was, were they giving too much for the Union Canal. The canal drew at too much for the Union Canal. The canal drew at present 170%, a week, and had done so ever since it came into their hands. It would take 200% to make it pay its own way, and they had no doubt that in a short time it would clear that sum. The total sum the canal was to cost the railway company was 114,000l. of their stock, and they were to assume 95,000l. of the canal company's debt. He had therefore to move that the agreement entered into be approved of.

Mr. Bell, of Dundee, questioned one point of this arrangement. Was the produce of the property of the canal to be applied to the extinction of the debt? The canal company possessed a certain amount of property, and the railway company were to take over 95,000% of debt; and he wished to know if it was meant that the produce of that property was to be applied to the extinction of that debt.

The CHAIRMAN: The whole of the debt of the canal company was 125,000%. or 130,000%, and the canal company were to discharge all above 95,000l. out of

their own means.

The motion was seconded and agreed to.

The CHAIRMAN said they had now come to the knotty point of the day's proceedings. The directors had laid before the shareholders, as plainly and can-didly as possible, their real reasons for an arrangement, upon the terms specified, with the Caledonian. They were anxious to have peace with the Caledonian, and they were prepared to sacrifice something rather than carry on a war. They were satisfied that the arrangement with the Scottish Central was a good arrangement, but it was so mixed up with arrangements with other lines that the value of that con-nexion was very much lessened. There was no doubt but that, if they could get it by itself, it would be most desirable, and they were quite willing to be parties to an arrangement with the Scottish Central, and to take part in the guarantee, but when they went farther north that was not the case. They did not like the connexions formed by the Caledonian there. They did not think any advantages to be derived by the Caledonian, or by them, could make up the loss arising from those guarantees. They therefore refused to become bound by those guarantees. tees in any way; but they agreed to take one fourth of the loss which the Caledonian might incur. They had nothing to do directly with these northern companies. They thought the connexion with them would entail a considerable loss; but at the same time they were of opinion that to stand in opposition would likewise cause a loss, and cause them to run their trains at greater expense. Taking the agree-ment as a whole, therefore, it was the recommendation of the directors that it should be approved of. In conclusion, he begged to move that the agreement entered into by the directors with the London and and North-Western, Lancaster and Carlisle, and Caledonian, by which the Edinburgh and Glasgow is to participate to the extent of one-fourth of the profit or loss accruing to the said companies, from an agreement to work and lease the Scottish Central, and also one-fourth of the profit or loss accruing to the Caledonian, from an agreement to work and lease the Dundee, Perth and Aberdeen Junction, and Scottish Midland, in consideration of certain arrange-

ments as to traffic, be agreed to.
Mr. DUNLOP seconded the motion. Mr. Bell, of Dundee, rose for the purpose of expressing his own most decided dissent, and the dissent of other parties. The resolution he considered to be fraught with the most serious consequences. He had no doubt but that the matter had been fully considered by the directors; but if they knew the value, or rather he might say, the worthlessness—of the concerns they were going to guarantee, as well as he did, he thought they would alter their opinions. For his part he would have nothing to do with them. It was proposed to guarantee three lines. The first line they proposed to guarantee was the Scottish Central. As a separate guarantee, he did not object to the Scottish Central. Seeing the repeated offers they had made to that line, and the frequent attempts made to get possession of it, and considering that it was a line which they should have had from the beginning, if the predecessors of the present directors had not shown a want of discretion and a want of foresight, he thought they were bound in honour to accept

Digitized by Google

of that guarantee, and give the shareholders their 7

per cent. A connexion with it was desirable in many respects. But their friends of the Caledonian were very imperative and dictatorial; they must take the whole bundle of lines or none. Now, what were the proposed guarantees on the other two lines? They were, first, the Dundee, Perth and Aberdeen Junction, and, second, the Scottish Midland. Perth and Aberdeen Junction consisted of three, or The Dundee, partly separate lines—the Dundee and Arbroath, the party separate nnes—the Dundee and Arbroath, the Dundee and Perth, and the Dundee and Newtyle. He knew the districts through which each of those lines passed, and could speak distinctly as to their capabilities. The Dundee and Arbroath was a good line, and commanded an extensive traffic in both goods and passengers. It was guaranteed 8 per cent., but he did not think it worth that at all times. It ran through a manufacturing district pretty densely populated, and it connected two towns between which there was a good deal of traffic. He came next to the Dundee and Perth, which presented a contrast to the other line. It passed through a purely agricultural other line. It passed through a purely agricultural country, not densely populated, and with a few villages on the line; and it had to contend with river competition. That line would not yield anything like the 8 per cent. which they proposed to give it; 4 per cent. would be much nearer the mark. The Dundee and Newtyle line was an utterly had one and would not produce anything approach. had one, and would not produce anything approaching the per centage proposed. Between 10 and 11 miles in length; it passed through a hilly country, and, in the course of a short distance, there were three inclines with stationary engines, and a mimic tunnel of 900 feet. It exemplified all the bad features of the worst lines in the kingdom. It cost 90,000% to 100,000t. The original proprietors never drew one farthing from it. It was badly constructed; and even the mortgagees were glad to accept 10s. in the pound for the money lent upon the undertaking. The proprietors ultimately accepted of 1,400%. a-year for it, after its costing them 90,000l. It never could be converted into a useful line; besides, the traffic which it had was chiefly in coals, line and manure, and that traffic was now withdrawn and carried by the Scottish Midland. He held that this line would never pay anything; and all these lines, instead of paying, in addition to their working expenses what it above 3 or 4 per cent. The Scottish Midland runs peopled, and with no villages nor places of any im-The line of communication could support a single coach, and they had therefore little support a single coach, and they proposed to gua-to expect from local traffic. They proposed to gua-rantee the Dundee and Perth, as well as the Scottish Midland, which were competing lines, so that what traffic was given to one would be withdrawn from the other. The proposed guarantees were 8 and 6 per cent.—say for the whole, 7 per cent. The Dundee, Perth and Arbroath, he believed, might yield 4 the Scottish Midland than 2 per cent.; and this was a liberal allowance. This would make an average of about 3 per cent., leaving a deficiency upon the whole guarantees of 4 per cent. The whole dividend proposed to be guaranteed by the Caledonian and the Edinburgh and Glasgow amounted to 70,000t. Deduct from this 3 per cent. which the lines might yield, or 30,000%, and a deficiency remained of 40,000%, of which they had to pay one fourth; so that the loss on those two lines alone, not taking into account the loss which may accrue from the Scottish Central, would not be less than 10,000% a-year. This was not over-estimated; for the directors said in their report that the loss might be put down at 12,500l. to 15,000l. to be paid by the company on the three lines. But what advantages were offered to them to compensate for this heavy loss? The Caledonian, forsooth, were to allow them the whole traffic between Edinburgh and Glasgow; but no thanks to them—they could not hurt them there. They were to allow them the whole of the traffic from Glasgow to all parts. beyond Edinburgh, as far as Newcastle, and the traffic from the Central to Edinburgh. Still, no thanks to them; they could not withdraw it. For these allowances, they were to give them, at least, equivalents in not interfering with traffic which did not properly belong to them. But besides that, they asked the whole goods traffic from the Central to Glasgow; and not satisfied with that, the Edinburgh and Glasgow were to carry the whole passengers by sufferance of the Caledonian, for which privilege they are to be allowed one half of the nett passenger receipts. They were to do the business, and liberally hand over to the Caledonian the half of the receipts. He did not think that a proper position for them to take up. He thought it rather humiliating. He take up. He thought it rather humiliating. He thought the proposal not well considered; and rather than go into such an arrangement, he would say to this company, "Stand upon your own rights, take the the dissent.

Scottish Central, if it is given to you, but rather abandon the whole—give up the Scottish Central and all—and go to Parliament and protect your rights, if At one time their line was considered guarantees. At one time their line was considered the best in Scotland, but times seemed to be much changed. They went to the north of Scotland, and proposed a guarantee of 6 per cent. to lines which were absolutely worthless; and they propose to give 8 per cent. to a line comparatively worthless, by their own estimate, while they could not pay 6 per cent. to their own shareholders. their now magnificent line on a lower footing than that absolutely worthless Scottish Midland. He would be delighted to receive a perpetual guarantee of 6 per cent. from the Endinburgh and Glasgow Here they were now placing yet they went to the north to guarantee such worthless lines. He was decidedly opposed to going into the proposed arrangement.

CLARK concurred in all that had been said by Mr. Bell. He rose to protect his own property; and in order that they might have the whole question before them, he begged leave to ask, in regard to those northern lines, what was the amount of their those northern lines, what was the amount of their loan capital! It amounted altogether, he believed, to about 773,000L., of which no notice appeared to have been taken in their statement. This would take, at 5 per cent., upwards of 36,000L, to pay the interest, of which the Edinburgh and Glasgow Company would have to pay 9,100L. He would be glad to know what remuneration they were to receive for coming under these obligations? It appeared to him to be a mere bagatelle. What he would recommend was, that if they could not get the Scottish Central without the rest, they should totally decline this without the rest, they should totally decline this amalganation. It would be far better to take their chance of a struggle, than submit to a perpetual

confiscation of property to an enormous amount.

The CHAIRMAN asked if Mr. Bell moved any amendment, or if he merely dissented. Mr. Bell said he would move that the arrangeent be not gone into.

Mr. CLARK seconded the amendment.

In answer to questions by Mr. G. WEIR,
The CHAIRMAN said the arrangement had not been formally signed, but it was only waiting for the approbation of that meeting. They were not to pay the Caledonian any money unless the arrangement the Caledonian any money unless the arrangement was carried out. There was a penalty attached if the bargain was violated.—He stated that the guaranteed lines were expected to pay the interest upon their borrowed money, in addition to the estimated per centage upon their capital. The sum of 15,000L was a liberal allowance for the whole loss. The interest upon loans would be paid out of the revenue.—He felt very much the responsibility of the directors in this matter, and he also felt very much for the shareholders; but they might rest assured that it was for the advantage of this company to enter into the agreement. The directors pany to enter into the agreement. The directors had received a letter from Mr. Bell, which very much coincided with their views; but while he fairly estimated the loss which would accrue from the particular than the received to underwhipe the the northern lines, he seemed to undervalue the advantage of the connexion to the Edinburgh and advantage of the connexion to the Edimourgh and Glasgow line. The whole passenger receipts, with 8s. lares, were 61,000L; now, suppose they had gone on with 4s. fares, the receipts would have gone down about a half, which would have caused a loss of about 30 (000) all at once. On the other a loss of about 30,000L all at once. On the other hand, the traffic coming upon the line at Castlecary had increased very considerably since the opening of the Scottish Central. By the depressed state of trade, the loss for one month upon passengers and through traffic was 1,700%; but the increase, in consequence of the Scottish Central, was 1,1001.; making an actual of the Scottish Central, was 1,100t.; making an actual decrease of only 600t. Now, supposing all that had been brought in by the Caledonian, there would have been a loss of the whole 1,700t. They had no joint liability. They were only liable for one-fourth of the loss. With the North-Western and the Caledonian, it was a joint and several liability for the threeit was a joint and several liability for the three

fourths, but they were not liable for any one's debts. Mr. Weir asked what would be the result if the bill was not got.

The CHAIRMAN said that was left in the hands of The CHAIRMAN said that was lett in the hands of other parties, but when it was got, they had to pay one-fourth of the expense. He also said, that as they were only to pay one-fourth of the loss, they were scarcely entitled to more than one-fourth of the traffic; but they thought one-half of the passenger traffic better than a fourth of the general traffic. traffic better than a fourth of the general traffic.

After a short conversation, Mr. Bell remarked that as he was aware the result of a division would be adverse to his views, he would withdraw his amendment, and enter his dissent to the

Mr. CLARK and another gentleman concurred in

The resolution was then approved of. In answer to questions from Mr. JAMIESON,

The CHAIRMAN stated that the sum of 138,000%. entered in the statement included the estimated amount of their engineer's and lawyer's outstanding accounts, parts of which had been paid since the statement was published.

GREAT LUXEMBOURG.

Nov. 29 .- Special Meeting, London.-Sir W. Mac Ay in the chair.

The SECRETARY read the report, which referred to the proceedings of the directors since May last, and their negotiations with the Government of Belgium for the purpose of getting their consent to the application of the remainder of the caution-money to the completion of the canal, with a view to render the company's capital productive, and that all obliga-tion to construct the line from Namur to Arlon might be removed. A deputation had several interviews with members of the Government at Brussels. In the midst of these negotiations the directors received an official announcement from the Minister of Public Works that the Louvain à la Sambre, who were to have constructed the line between Wavre and Namur, had incurred the forfeiture of the concession by being unable to proceed with their works. Whilst the Luxembourg engaged to construct a line from Brussels to Wavre, and from Namur to Arlon, the Government had undertaken to secure for it the use of the intermediate link between Wavre and Namur. failure of the Louvain a la Sambre had the effect of releasing the Luxembourg from their engagements with the Belgian Government in respect of the line, without their being liable to any further outlay on account of their line. It was the opinion of counsel that the company were entitled to demand immediately the abrogation of a contract which had been rendered impossible by an unexpected case of force majeure. Under these circumstances the directors made a proposition to the Minister of Public Works, who considered it necessary to consult the Department of Ponts et Chaussées, and with their assistant ance he would endeavour to propose a plan which should reconcile the interests of all concerned. The report proceeds to state the course the directors propose should be followed. The number of shares being now reduced to about 50,000, representing a paid-up capital of 380,000L, the present shareholders profiting by the receipts from forfeited shares possess the following property, viz. — 120,000l. in 4 per cent. Belgian Stock; 100,000l., the value of their portion of the line between Brussels and Namur (11 miles), with the line between Drussels and Ivamur (11 miles), with surplus land; 260,000*l*., the purchase value of the canal; making together 480,000*l*.; against share capital of 380,000*l*., and loan capital of 20,000*l*.: together, 400,000*l*. The report then considers the together, 400,000%. The report then considers the manner in which the company's property is to be mainer in which the company's property is to be turned to account. The canalization of the first 20 miles of the river Ourthe, beginning from Liege, would cost 80,000!, and would yield, according to the most careful calculation, a nett income of 12,000!. per annum, being nearly equivalent to 4 per cent. on per annum, being nearly equivalent to a per cent. on the 260,000*l*., the original cost of the canal, and the proposed new outlay of 80,000*l*. There exists therefore in the form of Belgian stock a fund sufficient to confer a permanent value upon all the outlay already This favourable result will be greatly incurred. This favourable result will be greatly augmented by the ultimate completion of the caual at a further cost of 80,000l. and the nett income would then reach 25,000l. per annum, equivalent to more than 6 per cent. upon the first cost of 260,000l., more than 6 per cent. upon the first cost of 200,000c.; by the additional outlay of 160,000c. together, 420,000c. For this purpose there will be no necessity for any further call on the shares 10c. paid; and to meet the convenience of all parties, the call upon the shares 7%, paid in January 1849 will be limited to 10%. per share, whilst those who prefer completing their payments in advance will be at liberty to receive payments in attracted a schange for a corresponding shares 10t. paid in exchange for a corresponding number of shares 7t. paid on making a further payments of 5 ment of 2l. per share, the shares to bear interest at 5 per cent. per annum. At the same time the directors do not consider the money spent upon the railway (which consists of one-third of the main line between Brussels and Namur) as lost, but in more favourable times these lines must be completed, and an arrangement may be practicable which would secure to the proprietors the full value of the capital expended upon their line. The directors have arranged to return to Brussels early in the ensuing month to receive the propositions of the Government; and so soon as any definite plan can be recommended for the adoption of the proprietors, a special meeting will be called to determine on the best course to be adopted.

The CHAIRMAN observed that the directors had felt that, in the present altered circumstances of the Continent, to make the line from Namur to Arlon would be drawing on the resources of the proprietary

Digitized by 

further than they should be warranted. The position in which they now stood would enable them to make the most of the shareholders' property, and in any arrangement made with the Belgian Government they would endeavour to make the most advantageous terms possible for their constituents. The line from Brussels to Namur would be undoubtedly remunerative, if of British capital. The distance was \$2 miles, of which 10 miles, as they had heard, had already been completed; 100,000. had been expended upon its commencement, and the whole of the works had been executed in a manner highly satisfactory to the Bel-gian Government. The directors had husbanded gian Government. The directors had husbanded their resources. They were therefore in a position to take advantage of those circumstances which had released them from the obligation of making the long line. They had a tangible property which was not liable to any forfeiture or default. With respect to the canal, they had expended but little upon that to the canal, they had expended but little upon that hitherto; but they had come under engagements with the Belgian Government to complete that work. It was therefore necessary and desirable that they should proceed with it, having so large a fund in the country disposable for that object, as would enable them at once to render productive 20 miles of its length; so that the money, instead of realizing 4½ per cent. in the Belgian funds, would be at once converted into a property which would produce at the verted into a property which would be at once con-verted into a property which would produce at the par value of the shares, 10 or 12 per cent. The directors felt it necessary to proceed with that, because it was a means of realizing to those who had subscribed to the company a fair remuneration for their money, so far as paid up. They had previously secured to themselves an extension of time for the completion of the whole of the works, so that they might have rested upon their oars for three years without incurring any penalty from the Government. With regard to the canal, there was a feeling in this country averse to that sort of property; but anybody who was conversant with the traffic upon Belgian oanals would at once see that it was quite equal, if not superior, to any railway speculation. The principal canals of Belgium produced at the present time from 12 to 15 per cent. With respect to their canal, they could have no competition, the nature of the country being such that it would be utterly impossible to devise any other means of conveying goods to the towns in its immediate vicinity. The portion to be commenced upon would be that near the large town of Liege, which would make the largest return; 80,000%. expended upon that would, he had no doubt, yield a return of 14 or 15 per cent. The position in which they were placed did not enable them at present to give any further information as to the actual state of the negotiations with the Belgian Ministry, but the directors had thought it right to give this account of the actual state of their affairs, to put the proprietors in possession of the facts of the case, and thus enable them to form a just opinion of the value of their investments. The present value of the shares was such as would afford from 30 to 40 per cent. on an investment.

A Proprietor asked if, instead of a railway com pany, they were hereafter to be a canal company.

The CHAIRMAN said they would be just what they always had been, a railway and canal company.

A Proprietor understood that 2l. per share would

enable them to complete the canal.

The CHAIRMAN: Undoubtedly. As matters at present stood, they were under engagements only to make the canal.

After some desultory discussion, in which Messrs.
MASTERMAN, Ald. SIDNEY and the CHAIRMAN took

Mr. Anderton moved that the report be adopted, and that the thanks of the meeting be given to the chairman and directors, for the zeal, judgment and industry with which they have discharged their functions.

Mr. CRAKE seconded the motion, which was carried with only one dissentient voice.

LANCASHIRE AND YORKSHIRE.—Nov. 28.—Meeting of Shareholders, Manchester.—Mr. W. Rawson in the chair.—Mr. H. Rawson read the following report from the committee :-

The committee beg to draw the attention of the shareholders to the following statements made in the report of the directors. That report states—

Estimate to complete lines opened for traffic . £431,977

— lines in progress . . . 1,920,847

The money to be raised by calls to make these .. 1,642,722 •• . • • ••

Balance to be raised by mortgage or otherwise (qy.) £710,102 Of the above sum the additional amount proposed to be cross Ease spent on West Riding contracts between Halifax and Exchange

Bradford, 12 miles in length, is 620,084L, which is at the rate of 51,673L per mile; to which if you add the plant of 5,000L a mile to work this branch, it will make the expenditure still to be incurred 56,673L per mile on this duplicate branch of railway. The shareholders should be reminded that on the other branch in this direction, the Cleckheaton Valley line, which is now opened for traffic, the amount expended is 230,150L, and a further sum of 79,860L is to be expended for its completion. Another most important item in the proposed expenditure of the company is the following:—"Main line, Tythe Barn-street extension, Liverpool station and Dock branch, 498,794L" Of this sum, 350,000L is the estimated, amount to be paid by this company for their share of the sum to be expended in making an extension into Liverpool from their present station to Tythe Barn-street, and a dock branch of I mile. The joint estimate for this short extension beyond the borough jail is more street, and a dock branch of I mile. The joint estimate for this short extension beyond the borough Jail is more than 700,0000, whilst the main trunk of the Liverpool and Bury line, 28 miles in length, will cost little more than 1,000,0000, and from past experience there is a great probability of this short extension beyond the borough jail considerably exceeding the estimate, and costing as much as the main line. The committee do not deem it necessary to make any remark upon the proposition to commence the line from Manchester to Wigan, the directors having to bring this matter before a meeting of the general body of the shareholders. The committee, however, cannot conclude without drawing the attention of the shareholders to the extraordinary amount already expended and to be Expended extraordinary amount already expended and to be expended upon the Huddersfield and Sheffield branch of 15 miles, viz. 730,000. After such a sum expended upon works of so doubtful a character, it ought to be a warning to the shareholders to prevent any further wasteful expenditure of this description. The report also states the number of shares purchased by the directors in their own and other companies, and the number of shares not issued. The extra liabilities incurred by the shareholders from these purchases amount to upwards of a quarter of a million, and on the shares not issued to 250,4684. This does not include the shares not issued to 250,468/. This does not include the unissued 6 per cent. preference. It should be remarked that whist the total amount of money to be raised by the company to complete the lines is 2,352,824/. It is not at all certain that the calls proposed to be made will amount to the sum required; for it must be remembered that if the new works are proceeded with, a large number of them will never be paid up, and either new stock will have to be issued or additional calls made to meet the deficiency. In addition to the calls proposed, a further sum of 710,102/. will be required to complete the new works. This the directors state is to be raised by mortgages or otherwise. It is needless to say that it is very probable that this sum can only be raised by another issue of preference stock, which will be a further and permanent burden upon the company. The following resolutions were adopted unanimously:—

mously:—

1. That the report issued by the Lancashire and Yorkshire is very unsatisfactory, because they make no promise to suspend the expensive contracts they have entered into in the West Riding of Yorkshire and in Liverpool; and because they propose commencing to make the line from Manchester to Wigan. That this meeting is of opinion that to proceed with these unprofitable works, and to add to the already enormous capital of the company, is most undesirable under any circumstances, and must lead to permanent depreciation of the stock. 2. That in order to carry out the opinions contained in the above resolutions, and protect themselves from further loss, it is desirable that all classes of shareholders should be thoroughly informed as to the themselves from further loss, it is desirable that all classes of shareholders should be thoroughly informed as to the present condition of the company, and to provide the means for doing this, it is necessary that a pro rata subscription be entered into. 3. That this meeting deems the refusal of the directors to give a list of their partners unwarrantable and unprecedented, and that this committee be requested to

make a further application to the Board.

WYLD'S NEW MAP OF THE WORLD,—
Lately published, a NEW MAP OF THE WORLD, on
Mercator's Projection, beautifully engraved, and containing the
most recent feeographical information. Four large sheets, 6ft. 3 in.

LANCASHIRE AND YORKSHIRE

The Proprietors of the above Shares are reminded that the THIRD INSTALMENT of 22, 10a per Share will become due on Thursday, the list day of December 1849, and may be paid to any of the undermentioned Bankers:—

Manchester and London-Meesra Cunliffes, Brooks & Co.

Manchester and London-Meesra Cunliffes, Brooks & Co.

Wakciteld—Messra, W. Williams, Irown & Co.

Wakciteld—Messra, Leatham, Tew & Co.

Bradford—Messra, H. A. & W. M. Harris & Co.

Should the above Instalment remain unpaid on any shares for one calendar month after the date of its becoming due, such shares will lapse to the Company; or if for less than one month, the Proprietor must pay to the Bankers, in addition to the interest at the rate of 5 per cent. for the period of arrear, the Dividend at the rate of 5 per cent. which would have accured on the Shares had the payment been made on the due day.

Manchester, Nov. 29, 1848.

ROSTON, NEWARK AND SHEFFIELD

The Directors beg to announce that they have at length so far actitled the disputed claims on this Company as to be able to PAY A FINAL DIVIDEND of 1s. 64 per Share; and they request that shareholders who may not have received a Statement of the Accounts will apply for the same to the Chairman, to whom their Scrip Certificates are to be sent, accompanied by the form of application for the Dividend, the amount of which will be remitted them in a Bank Cheque.

JAMES SALMOND, Chairman.
Manafield, Notts, Nov. 15, 1848.

### CALEDONIAN RAILWAY

GOODS TRAFFIC.

GOODS TRAFFIG.

J. & P. CAMERON respectfully inform their Friends and the Public throughout Scotland that GOODS TRAINS are now running DAILY to and from EDINBURGH, GLASGOW, DUNDES, PERTH, STIRLING, ABBROATH, FORFAR, MONTROSE; also LONDON, LIVERPOOL, MANCHESTER, BIBMING-HAM and CARLISLE.

Information as to Rates and the forwarding of Goods throughout Scotland and England will be given on application to Chaplin & Horne and Pickford & Co., London; the Lancashire and Yorkshire Railway, Salford Station, Manchester; S. Eborall, Eeq., Railway, Salton, Birmingham; Braithwaite Poole, Esq., Liverpool; Mr. Christopher Johnstone, Goods Mamager, Caledonian Railway, Edinburgh; Mr. Robert Small, Dundee, Perth and Aberdeen Junction Railway, Dundee; and at J. & P. Cameron's Warehouses in Edinburgh, (Basgow, Leith, Granton, Dundee, Perth, and at the various Railway Stations.

### MAUNDER'S • POPULAR TREASURIES.

The TREASURY of NATURAL HISTORY; or, a POPULAR DICTIONARY of ANIMATED NATURE: in which the Zoological Characteristics that distinguish the different Classes, Genera, and Species, are combined with a variety of interesting Information illustrative of the Habits, Instincts, and general Economy of the Animal Kingdom. To which are added, a Sylabus of Practical Taxidermy, and a Glosmarial Appendix. Embellished with a Frontispice and 900 accurate Wood Engravings. Fcap. 8vo. price 10s. cloth; embossed binding, gilt edges, 12s.

"We know of no work of its size which contains such an amount and careful selection of highly interesting details of the boundless subjects of which it treats, or which puts them in so intelligible a form."—GLOBE.

The TREASURY of KNOWLEDGE, and Library of Reference: a comprehensive Dictionary of Universal Knowledge. New Edition, revised and greatly enlarged. Peap, 870, 10a cloth; embossed binding, gilt edges, 12a.

The BIOGRAPHICAL TREASURY:

a Dictionary of Universal Biography; comprising 12,000 Memoirs.

New Edition, with a copious Supplement of additional Memoirs.

Fcap. 8vo. 10a. cluth; embossed binding, gilt edges, 13a.

The SCIENTIFIC and LITERARY
TREASURY: a copious Popular Encyclopædia of the Belles-Lettres and Fine Arts. New Edition. Fcap 8vo. 10s. cloth; embossed binding, gilt edges, 12s.

The HISTORICAL TREASURY: comprising a compendious Introductory Outline of Universal History, and a separate History of every Nation. New Edition. Fcap. vo. 10e. cloth; embossed binding, glit edges, 12e.

Pliny records that Cicero once saw a copy of the Iliad enclosed in a nutshell; and Ælian mentions the circumstance of an artist writing a distich in letters of gold, which he was able to deposit in the rind of a grain of corn. These and other similar 'curiosities of literature' are remarkable, but useless, instances of minute penmanship. Mr. MAUNDER, however, in his five popular Treasuries, has achieved a far greater and more useful condensation of materials. Within the limits of each small volume he has deposited the very quintessence of facts and information on the range of subjects included under its title. He has by 'subtle force distilled' the spirit of every branch of knowledge subjected to his mental alembic: every article from his pen is a model of pregnant conciseness, with not a superfluous word inserted, not an essential fact omitted or vaguely stated. Old Myles Davies, with his love of 'little' tomes, would have been enraptured with Mr. MAUNDER's. 'The smallness of the size of a book,' he says, 'was always its own commendation; as, on the contrary, the largeness of a book is its own disadvantage, as well as terror of learning.' What would Myles Davies have said of works, which, though of pigmy stature, comprise each within its limits, the cream of a wellstored library? The type, though small, is exquisitely clear; and the pages are so closely packed, that many a large folio contains less matter than one of these extraordinary volumes. Mr. MAUNDER has made out an undeniable claim to the title with which Jurieu reproached Calomies, that of being 'a great author of little books."

MORNING ADVERTISER.

"These works are, indeed, locomotives on the railroad of the mind, to bring with speed and profit the eager traveller to the terminus he must long seek in vain by any other course."—Atlas.

### Works in Illuminated Printing,

BY

HENRY NOEL HUMPHREYS,
AUTHOR OF 'THE ILLUMINATED BOOKS OF THE MIDDLE AGES.'

MAXIMS and PRECEPTS of the SAVIOUR: being a Selection of the most beautiful Christian Precepts contained in the Four Gospels. Richly Illuminated with Borders composed of Birds and Flowers, in illustration of the Passages of Probability of the Passages of Probability of the Passages of Probability of Passages of Probability of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Passages of Pa

II.

#### A RECORD of the BLACK PRINCE:

being a Selection of such original Passages in his Life as have been most quaintly and strikingly narrated by the Chroniclers of the Period. Printed in black letter, and embellished with highly-wrought Illuminated Miniatures and Borderings, selected from various Illuminated MSS. referring to Events connected with English History. In massive carved and pierced covers, designed from one of the compartments of the Prince's Tomb, at Canterbury. Post8vo, price 21s.

111.

#### The MIRACLES of OUR SAVIOUR.

Bichly Illuminated with highly-wrought appropriate Borders, of original design, to every page; a series of superbly Illuminated Figures of the Apostles from the Old Masters; six Illuminated Miniatures; and other Embellishments. Uniform, is size, with 'The Sermon on the Mount' and 'The Good Shunammite.' In an elaborately carved binding, designed from an ivery book-over of the XIIth Century, preserved in the British Museum. Square feap. 8to, price 21a; or, bound in morocco, in the Missal Style, by Hayday, 30a.

"A magnificently-illuminated volume, in the style of 'The Sermon on the Mount' and 'The Good Shunammite,' but, in some respects, superior to either. The miracles afford scope for pictorial display; and the designs, though small, are skilfully drawn, and represented in brilliant hues of colour. We can express our admiration of the exceeding beauty of the book, which, in point of the paintings, the printing, and the elaborately-illuminated borders, is one of the very finest specimens of mechanical art which here ever appeared."—BRITANNIA.

PARABLES of OUR LORD.

Richly Illuminated, on every page, with appropriate Borders, printed in Gold and Colours, and in Black and Gold, in the style of the ornamented Missals of the XVH Century; with a Design from one of the early German engravers. Uniform, in size, with The Sermon on the Mount and The Miracles of Our Saviour. In massive carved covers, containing the Sower, the Barren Fig-tree, and the Emblems of the Evangelists. Square feap. Svo. price 21a.; or, bound in morocco, in the Missal Style, by Hayday, 30s.

"The most superb book which has come under our notice. We hardly know whether our description will convey the appearance of the volume to a reader. It is bound in black, heavy, thick covers, as weighty as cbony, and claborately and deeply carved, between the massiveness of which, the delicate paintings seem in danger of being crushed. The leaves contain the Parables of Our Lord, commencing with the Prodigal Son, and ending with the Virgins. They form the centre of the page, and are in old English; and around each portion is a far larger and most superb illumination in gold, silver, and colours, with a foral or other design having reference to the text. These illustrations are by Mr. Nocl Humphreys, and anything more beautiful than the volume it is impossible to conceive. Where taste exists, this extraordinary volume wil find an honourable place."—Covar Journal.

The COINS of ENGLAND: being a Series of English Coins from the Earliest Period to the Present time, executed in face-simile of the Originals; each Coin being printed in its respective metal, Gold, Silver, ar Conper; thus exhibiting the Progress of the Coing by above 25 camples of the obverses and reverses of the Coins of each successive Reim; including a Face-simile, in actual relief, of the new suppressed Vi toria Crown-piece. Proceeded by a Sketch of the History of the British Coinage, at Edition. Square crown 8vo. price 18s. in an ornamental binding.

London: Longman, Brown, Green, and Longmans.

Printed by James Holmes, of No. 4, New Ormond-street, in the county of Middlesex, printer, at his office No. 4, Took's-court, Chancery-lane, in the parish of St. Andrew, in the said county; and published by John Francis, of No. 14, Wellington-street North, in the said county, Publisher, at No. 11 in Wellington-street aforesaid; and sold by all Booksellers and Newsvenders.—Agents: for Scotland, Messia, Bell & Bradfute, Edimburgh;—for Ingland, Jones & Matthews, Dublin.—Saturday, December 2, 1848.

#### DIRECTORS FINANCIAL STATEMENTS.

#### EDINBURGH AND GLASGOW.

The directors commence by assuring the shareholders of the correctness of their anticipations as to income, and of the accuracy of the following statement of their liabilities. The 2,109,375t. share capital consists of 1,888,250t. share capital authorized by Parliament and 221,125t. of capitalized loan; leaving the company power to borrow the balance of the debentures, 519,800l., after the whole share capital is called up. By the arrangement with the Edin-burgh and Glasgow Union Canal the railway com-pany and the canal company are to be amalgamated on application to Parliament: the railway company to maintain the canal and works, and to give 1,140 shares of its 100% stock, or 114,000%, to the shareholders of the Union Canal; the debt upon the canal, amounting to 95,000l., to be assumed by the railway company; the agreement to date from the 15th of September last. The arrangement with the London and North-Western, the Lancaster and Carlisle and the Caledonian, with regard to leasing the Scottish Central, and with the Caledonian as to the leasing of the Dundee, Perth and Aberdeen Junction and Scottish Midland, is to be considered as an arrangement for permanent peace, by which each party confines itself to carrying on the business for which its line was best adapted; and in consideration that the was best adapted; and in consideration that the Edinburgh and Glasgow secures to itself more than it secures to the others, it undertakes a portion of their liabilities, amounting to one-fourth of the guarantees. The directors, with a view to secure the company from competition with the Caledonian, entered into this arrangement, and became partners to the extent of one-fourth of the profit or loss with the above-mentioned companies for guaranteeing a fixed dividend to the Scottish Central, Scottish Midland, and the Dundee, Perth and Aberdeen Junction. for the use of their lines.

Authority has been given to raise capital for the main line and branches to the extent of 2,038,250t., and to borrow 733,925t.; also for other branches, which are not intended to be made, capital to the extent of 633,050t., and to borrow 83,000t.; total authorized capital, 2,671,300t.; and loan, 816,025t. The amount of share capital created is 2,109,5754, and for the Stirlingshire Midland Junction, 150,0004. and for the Stirlingshire Midland Junction, 190,0000, total created, 2,259,375*l.*; and the total capital received, 2,554,463*l*. The capital expended on the nudertaking amounts to 2,490,730*l.*, and in subscriptions to other lines 110,674*l.*; total expended, and the straight of the complete works 2,601,404l.; the amount required to complete works, 284,951l.; total, 2,886,355l. The directors calculate that the land, houses and other property will realize 116,680L., and being deducted from the former sum, will leave the total sum to be provided 2,769,675L, to which is added the capital for the Union Canal Company, 114,000*L*, and the loan capital thereof, 95,000*L*; total capital required, 2,978,675*L*. This is provided for by share capital, 2,223,375*L*, and 5 per cent. preference capital, 150,000*L*; and loans, 605,300*L*. Three lines are guaranteed by the company 25,250*L* per annum; and also three other lines, viz. the Scottish Central, the Midland, and the Aberdeen Junction, are to be guaranteed, according to the above-mentioned agreement, one-fourth of the whole guarantee, or 35,350l. The estimate of gross and nett revenue is taken from the actual receipts and expenses, including rates, taxes and all charges for the last two years, ending July 31, 1848. Upon the new mileage opened and to be opened, 42 miles, an estimate of 20t. per week per mile of clear revenue is assumed. The gross revenue of the main line has hitherto been from 70l. to 80l. per mile. The revenue from the canal is taken from the weekly returns after expenses are deducted. The length of main line and branches open, 574 miles; Stirlingshire Midland Junction, 54 miles; Edinburgh and Bathgate, 114; Wilsontown, Morning. side and Coltness and Bathgate Junction, 141; total side and Cottness and Bathgate Junction, 14; total, 81½ miles; Union Canal, 29 miles. The income from the main line, 46½ miles in length, was, for the year ending July 1847, 187,180l.; ending July 1848, 180,546l.; total for the two years, 367,727l. Working expenses for same period, 145,748l.; leaving 221,978l., or a profit of 110,989l. per annum. The estimated income from the new lines, being an addition of 42 miles and the Livier Canal assembled. tion of 42 miles, and the Union Canal, amounts to 74,360l., making a total nett income of 185,349l., which, after paying 52,488l. interest on borrowed money and guarantees on three lines, would leave 132,860% to pay dividend, when the various branches are countern or 4,223,375t., which at 6 per cent. MII require 133,1024. In these calculations no ac-count has been taken of any increase upon the main / line wine., line which may be expected from any improvement GLASGOW, DUMFRIES AND CARLISLE.

The Directors state that the line may be divided into two distinct portions, viz.:—1. From Gretna Junction to Dumfries, a distance of 24 miles;—and, 2. From Dumfries to its junction with the Glasgow and Ayr line, near Cumnock, in length 41 miles.

1. The first of these portions was opened on the 23rd of August last for passenger traffic, and is wrought by the Glasgow and Ayr. Permanent stations are in course of erection at Annan and Cummertrees; but at Dumfries and at Gretna Junction the requisite engine and carriage sheds only are being built. Temporary wooden erections have in the meantime been made for the passenger booking-

Total estimated cost of line .. £1,192,040 11 3 The parliamentary estimate was 1,200,000l., and thus the main line will be completed for a sum less than the estimate.

The Dalswinton contract may be finished in about three months—thus giving a continuous line from Gretna to the vicinity of Thornhill, 36 miles in length. The cost of completing this additional distance is estimated at 110,000l., after deducting the amount of permanent materials now at disposal. The periods for finishing the Closeburn and Sanquhar contracts have been extended to July 1, 1849; while the heaviest contract, that for the Drumlanrig tunnel, has been re-let to a contractor under an agreement by which he is bound at present only to keep the works already executed in good order, and to delay any active operations otherwise until April 1, 1849, when the company have the option of either allowing them to be proceeded with or of delaying them for a longer period. By the Act 10 & 11 Vict. c. 183, altering the terms of amalgamation with the Glasgow and Ayr, the stock of the original shareholders was restricted to 433,333l. 6s. 8d. For the purpose of providing the balance, the Glasgow and Ayr were authorized to create additional capital; and they have recently issued new stock to the extent of 250,000l., in preference shares of 10l. each. These, when paid up to the extent of 217,000l., will enable this company to exercise their loan powers of 433,300l., which respective amounts, it is expected, will enable the line to be completed under the present

The amount received on capital account to this date is . . . . . . . . . £424,535 16
Arrears of calls . . . . . . . . . 8,797 10 8.797 10 0

£433,333 6 8 Reduced capital ... The expenditure since the accounts were last audited, on the 31st of July last, has been 70,1981. 19s. 3d., and this, with the large balances then due to the bankers of the company, has been liquidated by the receipts arising from the calls on the prefer-

which, although under present circumstances, it cannot be made immediately available, except at an unnecessary sacrifice, may hereafter be disposed of at par. This stock is the balance of shares not taken

up in the allocation made in 1847.

The Board unanimously recommend the propriety of adopting every expedient to finish the line to Thornhill; but they fear, in the present depressed state of the money-market, that they are under the necessity of stopping all farther operations between Thornhill and Cumnock until a decided improvement shall take place.

#### NORTH BRITISH.

The directors in their statement affix the total amount of capital authorized to be raised at 4,030,666L The receipts from calls on shares have been 2.343.1504. 16s. 8d.; loans, 614,993l. 18s. 8d. The directors have also borrowed, chiefly on their own personal guarantee or promissory notes, to make the calls on the share-holders lighter during the year, 369,412*l*. 19s. 5d., making a total of 3,327,557*l*. 14s. 9d. No part of the money authorized to be raised under the Act of 1848 has been called up, nor have the shares been issued; but a deposit of 12s. 6d. per share, amounting to 58,039l. 7s. 6d. was paid upon what were called the Carlisle Extension shares. That sum, however, does not properly come to be taken into the present statement, except in so far as the balance unexpended may be held to be a loan to this company. That balance has been so stated accordingly in the sums mentioned as having been borrowed. The amount expended has been 3,281,310*l.* 6s. 8d.; the estimate of sums to be expended, 753,152*l.* 9s.; making a total of 4,034,462*l.* 15s. 8d. on the whole length of line of 152) miles, giving an average cost of 26,4551. per mile, including plant. This expenditure also includes land, rails, &c., bought for the Edinburgh station and various small branches, amounting to 84,1871. 10s., a considerable portion of which will be sold, though at present they fall on the capital account as stated. The only liability incurred to other companies is the one in progress with the Aberdeen, amounting to 113,000l. of the preference stock of the company. 113,000l. of the preference stock of the company. The abstract of the affairs of the company stands thus:

—Amount received on shares and loans, 2,958,144.

14s. 4d.; ditto to be received on ditto, 1,072,521l.

4s. 8d.; total, 4,030,666l. Amount already expended, 3,281,310l. 6s. 8d.; ditto to be expended, 7,53,152l. 9s.; together, 4,034,462l. 15s. 8d., less value of surplus property and rails, which may be sold if necessary, 84,187l. 10s. = 3,950,275l. 5s. 8d.; leaving a surplus in favour of the company of 80,390l. 14s. 4d. But the funds to be made available under the existing Acts funds to be made available under the existing Acts will not be sufficient to construct the three branches to Jedburgh, Selkirk and Cockenzie, in all about 14 miles long. The first two have not yet been begun, and scarcely any work has been done on the last. The cost of the whole would be about 250,000l. Whatever the directors might have done under ordinary circumstances, they have no alternative at present but to recommend that the execution of those three branches be postponed until the shareholders shall order them to be proceeded with. The length of the lines already opened is 99 miles, and of those in course of construction 534 miles, making a total of 1524 miles. Twelve additional miles of the Hawick branch will be opened in January with the means which the directors now possess, but the other works can only be gone on with gradually, as the money comes in. The funds required are to be procured from two sources, viz., the arrears of calls, amounting to 270,182l. 10s. now in course of being recovered, and the issue of the shares authorized by the Act of These shares will be offered, in the first instance, to the holders of Carlisle Extension scrip, in terms of former resolutions of the company. During the first year after the line was opened, the expense of management and working exceeded 44 per cent. on the gross revenue. Last year it was reduced to 403 per cent; and the directors believe that they will be able gradually to effect a considerable saving in the expense of every department. Notwithstanding the serious depression of the times, the revenue of the line has suffered less than most others during the bygone year. The lines open for the bygone portion of the current half-year give a weekly average of 2,940l., and looking at every circumstance likely to arise, the lines open and to be opened will give a fair

ABERDEEN.
The directors, in their financial statement, declare that a small portion, consisting of 12 miles of the main line and 6 miles of a branch to Brechin, has been opened for seven months, ending the 31st of August, and has been worked in conjunction with the Forfar and Arbroath. The receipts for the seven ence stock created by the Glasgow and Ayr. This months have been, including 3,000% for carrying the company have an asset of 2,863 of their own shares, mails, 17,015% and the expenditure 9,025%. They

confidently expect to be able to open early next year the other 25 miles of the line, bringing it within 12 miles of Aberdeen, and have made arrangements with the Edinburgh and Northern, the North British and the York, Newcastle and Berwick for the necessary funds, on favourable terms, for completing, without further interruption, the whole of the line to Aberdeen, thus giving an uninterrupted railway communication from London to Aberdeen, a distance of more than 500 miles. The directors continue to entertain the same confident opinion respecting the remunerative character of their line, and consider its prospects and position improved by the arrangements with the southern companies. The amount received in calls is 784,847l., and including the amount received on loans, the total sum expended on the line is 997,466l. The three companies already mentioned are to advance 276,000l., which, with 40,000l. to be received in arrears of calls and the sum which the company has power to borrow, will complete the entire line at a sum not exceeding 1,450,000l., or less than 24,000l. per mile, which the directors conceive will be less than any other equally important trunk line has ever been constructed for. Including the Arbroath and Forfar, the Aberdeen line will be 75 miles in length. The company has no hiabilities of any kind, with the exception of the Arbroath and Forfar line, 16 miles in length, which is leased at 54 per cent. on a capital of 220,000l., but the profits already more than exceed the guarantee.

# CAPT. HUISH'S VIEW OF RESPONSIBLE MANAGEMENT.

We promised last week to return to Capt. Huish's letter to Mr. Glyn, for the sake of certain matters he has incidentally touched upon, in refuting Mr. Whitehead's errors. Among these, the responsibility of the managing Board for the conduct of special branches of the service comes into question:-and Capt. Huish, quoting Mr. Whitehead's own words. asserts that in the London and North-Western "the management is in the hands of small bodies of responsible directors, each having charge of one particular department, the whole forming a general council;" adding, "such is, in truth, the practice of the London and North-Western Railway Company." The accuracy of this description of the system in use, as it seems to us, will depend on the meaning attached to the term "responsible"; and, as the subject is of some importance, it may be as well to define what "responsibility" means in any sense to which a practical value can attach; after which it will be more easy to ascertain how far the "practice" alleged by Capt. Huish does or does not fulfil its essential requisites.

The value of the term, we apprehend, lies in the following condition:-That the person or persons appointed to superintend a certain department shall be known—by those whom its results concern—to have it under their control; and consequently have the credit, if those results are satisfactory—the blame, if otherwise. In other words, that in every part of the business to be divided among "responsible" directors, it shall be known by those for whom they act as stewards, who is chargeable with the more or less of order, success, economy, &c., in each several part; to whom the proprietary may look, in case of any matter calling for remark or in need of improvement. This and this only can fulfil the idea of a responsible management on a system of divided labours. The object in such a plan clearly is, that the party in charge shall know himself accountable, -not to his fellow directors only, nor to the general Board of which he is a member, but to the proprietors at large,-for the perfection or defect of the department he undertakes to manage: and may thus be induced to administer it with his general regard to their interests quickened by the constant recollection that on the result of his acts in that office his own character for efficiency, diligence and judgment as a director will depend. In this position he can only be fixed by standing forward as the recognized administrator of a given

branch of business; and his special employment is, of course, nugatory, as far as the "responsibility" in question goes, if he does not so distinctly appear, or if his liability, in reference to the shareholders, is in any way taken up by the collective Board after having appointed him to a specific function. The obligation, in short, to have any effectual worth, must be directly to the whole constituted body, and not to the Board.

It will be seen that in this matter there are two distinct questions; one, whether such a division of responsible duties amongst different sections of a Board is or is not expedient? the other, how such a division, if expedient, can alone be brought into the condition of true responsibility? On the first of these questions Capt. Huish seems to concede the affirmative; inasmuch as he does not contest the expediency of a division of responsible labours:-which, for our parts, we are strongly inclined to affirm in positive terms. The second he answers in the words we have quoted: and as we have now shown how a special charge can be made a responsible one, it will be easy, on applying this test to the case in question, to perceive that the "practice" on the London and North-Western does not by any means fulfil the conditions of a responsibility of this effectual kind.

There are, we know, sub-committees deputed from the general Board, to look after one or the other department; but they are known and accountable to the Board only. The proprietors may have heard that such subaltern bodies exist; but nothing occurs to connect the individuals in them with the duties allotted to each; to make it clear, for instance, that if the locomotive department were neglected, or its servants mutinous, Mr. A., and no one but Mr. A., must bear the weight of the mismanagement; that if the goods traffic be thriving and orderly, Mr. B. is entitled to the merit of this-so far, in all cases, of course, as any praise or blame attaches to the directors as overseers of the special paid heads of each department. All the functions of the sub-committee are merged, in the eyes of the proprietary, in the general Board; which bears collectively the onus in the one case or absorbs the credit in the other. The responsibility so conveyed from a part of the Board, to the Board of which it forms a part, is an arrangement that amounts to no responsibility at all, in any practical sense of the term, whether implying a guarantee of special obligations or enforcing special administrative diligence. And it looks somewhat like evading the question to advert to a systemthat merely allots certain divisions of labour to certain members of the directory, without adding any stimulus or obligation to the members appointed, beyond the limits of the Board itself-as fulfilling the conditions of what is really meant by a responsible scheme of direction in The arrangement may be convenient this way. in other ways; but whatever value it might derive from the duties being discharged under individual responsibility is clearly not obtained on the system referred to by Capt. Huish. is nothing more than a family partition of the work of the Board within doors; and beyond its precincts is in no way recognizable. of course is not what any one can have in view when suggesting, as an improvement on the old routine—under which the entire Board is the sole ostensible and scarcely accountable body in the eyes of the proprietors-any distribution whatever of its powers among responsible members. If the principle is to be adopted to any purpose, the parties must be seen, -their obligation be tangibly assumed; and nothing must interpose between them and the consequences, good or evil, of their administration.

Upon another of the points thrown out in an incidental way at the close of Capt. Huish's remarks—which there also appear to advance a partial view of an important subject—we have said enough this week in another article, to which we refer, instead of again discussing here the causes to which he would seem chiefly to impute the present difficulties of the railway interest, or the methods by which it may obtain the improvement he sanguinely promises it.

In our advertising columns will be found an announcement of a pamphlet on the question lately discussed by Mr. Whitehead and Capt. Huish as to the profit of goods traffic, written by Mr. Eckersley, the comptroller of the Lancashire and Yorkshire; and as that gentleman is in a position to throw some light on the subject, we shall extract a few passages embodying important facts. He says:—

In the early part of the year 1847, the Lancashire and Yorkshire became more completely their own carriers than they had previously been, and in referring to the receipts and expenditure of the company for that period, it will be necessary to observe that the whole of the receipts for every service performed by the company over the Manchester and Leeds line proper is included in the amounts given, as well as the whole of the expenditure incurred, including rates and taxes. The total receipts earned by passenger trains in this year amount to 165,7641, and the amount earned by the carriage of goods, cattle, &c. is 185,6104. The total expenses connected with the passenger traffic are 58,7371, while the expenses connected with the goods traffic are 74,0764. Hence, it follows, that the profit on the passenger traffic amounts to 107,0271, and the profit on the goods traffic to 111,5344. It will thus be seen, without going into more detail, that there is but little foundation, as far as the Lancashire and Yorkshire is concerned, for Mr. Whitchead's statement "that the losses attendant on the goods trade, as at present conducted, are most uncommonly heavy."

He then gives the receipt and expenses per train of goods as compared with the passenger traffic, and the mileage of the locomotives employed:—

the inneage of the locor								
Miles run by passenger e								28
Ditto by goods engines					711,	400		
Average receipts for every	mile	run	by	a p	ASSET	ger	8.	d.
engine		• •		٠.	• •	·	5	0
Average expense of ditto	٠						1	9
•							_	
	n.	- 0 -					•	

One of the greatest evils with which the railway system is beset is, the principle now adopted of assessing railways to parochial rates. The operation of this principle is becoming a great hardship, as every parish Dogberry is constantly trying his ingenuity to mulet the railway in one shape or another, and what with this, and the injustice, as it appears to me, of the principle itself, rates are becoming most oppressive and burdensome. It behoves therefore railway companies to make a stand against these encroachments, and to present the case, with their united influence, before the consideration of Parliament.

Some other points of moment are touched upon; but as we have already treated the subject so largely, we must content ourselves with recommending those who are interested in railway management to profit from the experience of such practical men.

# ALTERATION OF SOUTH DEVON, AND PROTEST OF THE LATE CHAIRMAN.

We casually adverted last week to the matter in dispute between Mr. Gill, the late chairman of the South Devon, and the majority of the Board; which has led to the retirement of the former from the direction. On the main question, of abandoning or trying further the atmospheric system, we had already hinted, some time since, that the determination might be found, on further inquiry, to present a character somewhat different from the unqualified expediency or necessity which the nearly unanimous vote of the Board, and the decisive recommendation of the engineer, might have been taken to establish. Mr. Gill now comes

forward to prove, in a pamphlet, accompanied by very precise statements in figures, that the immediate rejection of the atmospheric apparatus, without further trial, has been premature; and that, under the especial circumstances of the railway, it would be anything but wise to overthrow all that has been so far done, at a very great expense, in an experiment which, as he affirms, was only beginning to be fit for a fair working trial at the time when it was resolved to suspend it. There certainly does appear to be a pretty strong prima facie case made out by Mr. Gill on both these heads of his protest; -on the first, indeed, which concerns the expense already laid out on the atmospheric apparatus, and the total loss of that outlay if the system be now abandoned; as also the unfitness of the line, expressly framed for that system, for locomotive traction, and the great expense which must be incurred in order to adapt it to the latter—on this division of the subject, we say, there can scarcely be much dispute in any quarter. The main contest will be waged on the second branch of the argument. The one party admits the disadvantage of a change, but insists on its necessity, as the less of two evils. The other, represented by Mr. Gill, avers that the change ought not to be made until the system shall have first been more fully tried; and that there are reasonable grounds for expecting from a further trial much better results than heretofore; that, in fact, no fair trial can be said to have been made until a very short time before the resolution to give up the process was taken; -owing to failures in the engines; mechanical defects in the apparatus, which he asserts are capable of being entirely removed-calling Mr. Brunel as a witness to the point; the delay in getting the electric telegraph in working order, &c. and at the close he prints accounts of the working expense, which, if correct, certainly show a decided progressive reduction, con-sequent on alterations that had lately been effected, which seem to encourage some expectation of improved results from possible amendments of the system as it now stands. The balance-sheet of past receipt and working cost may therefore fairly be open to objection as a datum on which to proceed absolutely; inasmuch as it exhibits results impaired by what Mr. Gill undertakes to prove are accidents of this particular case, rather than essential defects of the system the directors so abruptly condemned.

It may be observed, that the question is not merely. Will the traffic, as it may be worked by the atmospheric power, leave a satisfactory margin? There are these others: Will it do better when worked by locomotive power? and will not the outlay needed to adapt the line to another kind of traction demand so large a positive increase of nett receipt, to make any return on the increased capital outlay, that the change must certainly be disadvantageous, allowing locomotive traction, cæteris paribus, to be the cheaper? These are certainly questions demanding to be fully considered, and duly answered, before a final resolution is taken in the matter: an enormous loss on cancelling what has been established being certain, on the one hand; while the evidence adduced by Mr. Gill may at least be admitted as throwing some doubt on the certainty of a compensating advantage on the other. Admitting that the traffic will not pay the expenses of the atmospheric, however completed, it may still be found that with locomotive power, as it must now be in-troduced, it will not pay any better; and it would be well to be quite sure that the exchange would not merely be of one loss for

might be remembered with advantage, and the parties had better sit down contented with the first, than go forward to invite a second. The question, we say, is at least worth inquiry; and Mr. Gill's pamphlet makes out a plausible case for avoiding any final step until the whole business has been more fully investigated than it would appear to have hitherto been.

This conclusion, of course, will not be affected by any opinion as to the expediency of planning the works in the first instance on the atmospheric system, or as to the prudence of applying it to future lines, after the results which have so far attended its adoption. The inquiry in the present case is simply what will be the best course under the circumstances to which the South Devon has already been committed. by following the express recommendation of its engineer.

One point, in the meanwhile, is already established, beyond any dispute whatever, by Mr. Gill's pamphlet. The position it gives to Mr. Brunel, as the engineer who first positively recommended the system, and now as positively condemns it, is a remarkable one; and the more so, because it is wholly founded on reports written by Mr. Brunel himself. Mr. Gill has contented himself with quoting at full length the report on which the directors adopted, and that in which they were finally advised to abandon, the atmospheric system—the dates being respectively August 1844 and August 1848: documents, we apprehend, hardly paralleled in the records of engineering; whether the confident terms of the former be regarded, or the composure with which the latter passes sentence on the experiment for which the first report, as aforesaid, was the sole and most unqualified authority. On this experiment, so confidently advised, so composedly sentenced, there have been expended, it seems, above 400,000l.; and a further outlay of nearly equal amount will be needed if the line be re-fitted for locomotive traction; the probable result, in that case. before all is finished, being likely to amount to something like a million sterling! But leaving all mere estimates out of the question .- and taking reports of actual outlay as illustrating the unqualified advice, in the first instance, and the positive condemnation of the result of that advice at a later stage of the business, -it will be felt that the exhibition is something quite exceptional in every point; and that Mr. Brunel, if ambitious of singularity, may be allowed, in the present case, to have attained the object of his desire in the most egregious way; with what satisfaction to those who risked their means on his authority, it is for them to say. Bystanders will, meanwhile, be in some condition to judge of the value to be attached hereafter to advice given by Mr. Brunel, as in this instance, after "considering" a subject "for many years past, cantiously and without any cause for a favourable bias;" to his "decided opinion as a professional man," and to his declaration that he " has no hesitation in taking upon himself the full and certain responsibility of recommending' any "system" whatever. In the case before us, where the system thus formally recommended is now as formally discredited by Mr. Brunel himself,-and this at the cost of something like a million sterling, -it might be worth the while of the losers to inquire, what is meant by "full and certain responsibility," and in what manner Mr. Brunel thinks of redeeming it.

We see that a preliminary meeting of shareholders in this unfortunate enterprize was held this week, for the purpose of inducing the Board to suspend the removal of the atmospheric machinery until a further trial-in the sense urged by Mr. Gill-shall have supplied more

The result of the meeting was to resolve that measures should be taken to convene a special general meeting of the whole company as early as possible.

#### Progress of Works.

CALEDONIAN .- By the flooding of the Clyde by the late heavy rains the traffic has been considerably impeded, owing to the embankments having given way at two points, namely, at Lammington and Crawford Bridges. In the high lands adjoining the line at these points the storm of wind and rain was exceedingly severe, many of the farmers in the vici-nity declaring that they had never seen such a night as that of Sunday. The Clyde overflowed its banks, and the ditch, constructed for the purpose, at the bottom of the embankment being quite insufficient to carry away the water, the earth was gradually undermined, until a space of about 14 ft. was entirely swept away at each of the places alluded to, leaving the rails hanging like threads over the chasm beneath. For tunately, says the North British Mail, owing to the precautions adopted by the company of keeping constant patrols along the line, both day and night, no loss of life or limb has occurred in consequence of the accident. The night patrol on that part of the line discovered what had occurred very shortly after the embankment had been sapped, and gave the alarm in sufficient time to stop the trains either way. As soon as intelligence arrived at Edinburgh, Mr. Collister, principal engineer on the line, proceeded to the locality, and made prompt arrangements for repairing the damage. A great number of surfacemen and labourers were procured without delay, in order to fill up the chasms in the embankment.

CHESTER AND HOLYHEAD. - The Carnarvon tunnels on the contracts between Conway and Bangor are being arched over with brick in a most effective and superior manner. It was at first thought that the rock through which they had been cut would not require this precaution; but various falls having taken place, the contractors deemed it necessary to be at the expense of arching. Several massive blocks of the Anglesea limestone have been lately placed in position as the coping stones of the tunnel entrances. They weigh from 20 tons to 37 tons each. The blasting of the Swilley rocks has long been desired by all parties interested in the trade of the Menai Straits. These obstacles are situated in the middle of the Menai navigation, and it is on one of them, called the Britannia Rock, that the centre pier of the great bridge is being erected. It was agreed by the contractors and the trustees of the Carnarvon Harbour, before the commencement of the works, that a portion of the rocks should be blasted by the former; and these gentlemen have stated, in reply to a communication from the trustees, that they are willing to fulfil the agreement as soon as they are in a condition to remove the scaffolding, which will be about May next. The piers, it is understood, are now 80 ft. in height.

CORNWALL.—The directors having obtained an extension of two years for carrying on and finishing their works, the contractors have suspended operations, paid off their men, and disposed of their working plant. The dearth of employment in mining pursuits renders this rather unfortunate for the operative portion of the district, who looked forward to a continuance of the works throughout the winter. No less than 200,000l. has been expended, but nearly all of it for preliminary outlay in connexion with par-liamentary expenses, and but little upon actual works.

GREAT NORTHERN (Grantham).—The survey for the line is rapidly proceeding in this neighbourhood. The line crossing Spittlegate-hill takes down the newly-erected fever hospital at the corner of the Union-house premises, through Peacecliffe-hill, and, skirting Jericho Wood, proceeds in the parish of Hougham towards Newark. The surveyor, remarks the Lincoln Mercury, was enabled to pass his line through the Peacecliffe plantation without cutting down a tree. It is expected the navvies will be at work in this neighbourhood within four months. There is little appearance of progress, or prospect of opening, in the lines in the neighbourhood of Gainsborough. The works at the Trent Bridge alone manifest any symptoms of activity. A great number of labourers are out of work.

KINGSTOWN AND DALKEY .- In order to remedy the great inconvenience experienced by the inhabitants of Dalkey from the temporary suspension of the railway, owing to some necessary repairs being done to the engine, the directors have had one of their locomotives adapted to bring the trains up and down as usual. The 'Princess' engine has accordingly had as usual. The Trincess engine has accordingly had her chimney cut down, so as to pass under the low arches and tunnels on this line, and a cover or shield another; in which case, perhaps, the old maxim | certain data for their proceedings in this matter. | has been placed over the engineers to guard against

accident. The water-tank has been lessened, in order that it might pass over the tube, and other necessary alterations have been made to guard against delay or accident. On Thursday the 'Princess' made her trial trips, first with one and then with two carriages laden, and performed the journey most satisfactorily. It will be recollected that both curves and gradients are very severe on this line. The average gradient is 1 in 115, and in one part it amounts to 1 in 57. The sharpest curve has a radius of less than one-third of a mile. The car-drivers took every advantage of this brief stoppage of the traffic, and insisted upon 8d. and ls. each for conveyance to and from Dalkey and Kingstown. The line will be re-opened in a few days.

LEEDS AND THIRSK (Wharfdale Viaduct).—Nov. 30

The top or last stone of this stupendous piece of masonry was safely deposited by the contractors. The viaduct, as our readers will remember, consists of twenty-one arches, each of 60 ft. span.

SHROPSHIRE UNION AND SHREWSBURY AND BIR-MINGHAM .- The Daily News furnishes, by a corre spondent, the following observations:—The line of the Shrewsbury and Birmingham, now in course of construction, commences at Shrewsbury, where it is in junction with the Shrewsbury and Chester (recently opened), the Shrewsbury and Stafford line of the Shropshire Union (rapidly approaching completion), the Shrewsbury and Hereford, not yet commenced. The station at Shrewsbury, where these four lines unite, is highly ornamental. The first work of importance after leaving the station is a bridge over the river, rising some 20 ft. or 30 ft. above the stream, upon the completion of which will mainly depend the opening of the line to Stafford, for the same line serves both the Shropshire Union and Shrewsbury and Birmingham, till just beyond the town of Wellington (some 10 miles from Shrewsbury), where the line of the former company branches off towards Stafford, skirting Newport in its way. bridge passed, the line in great part appears ready for traffic, but as we approach the Severn considerable work has to be done. A heavy embankment of nearly a mile in length brings us to the Shrewsbury Canal, which is crossed about 14 mile further, near which point (Upton) the first station out of Shrewsbury will be erected. About 2 miles further we arrive at the village of Walcot, where another station is to be built. Between this point and Wellington much progress has been made, the permanent way being laid for a great part of the distance. The line passes through Wellington in a deep cutting, crossing the main street, and running by the side of the old church, just beyond which a station is to be erected for the use of the two companies. Shortly after leaving the Wellington station the line of the Shropshire Union branches off towards Stafford, while the now independent line of the Shrewsbury and Birmingham pursues its way amid enormous pit mounds and cinder heaps, which render the surface of the country very irregular, towards the mining district of Oakengates, about 3 miles beyond Wellington, and where another station is to be built. Here the works are very heavy. The only tunnel on the line is at this place. Between Oakengates and Shiffnal are two heavy cuttings, the earth from which is however well nigh removed. The last of these cuttings is succeeded by an immense embankment, extending from a mile on the west side of Shiffnall to half a mile beyond it. The line is conveyed through the town upon a viaduct, 700 ft. or 800 ft. in length by about 40 ft. in height, and across the principal street a cast-iron arch is being thrown. Here, as in Well ington, the railway has completely metamorphosed the town; but in the one case the line is far below the foundations of the houses, while in Shiffnall it is level with the chimney tops. Preparations are making for the erection of a station adjoining the bridge. Beyond Albrighton there is a rather heavy cutting, then a corresponding embankment, to which succeeds a hill of perhaps three-quarters of a mile in length. The works between Wolverhampton and Cadsall are very heavy, but are fast progressing towards completion. The principal features are a magnificent bridge across the Staffordshire and Worcestershire Canal; a viaduct apparently as long as that at Shiffnall, but much higher, one arch of which spans the Birmingham Canal, and a bridge across the Stafford-road on the skew principle. At this point another line, in which is a similar viaduct, runs down towards the Grand Junction. This is a portion of the Stour Valley line, which unites with the Shrewsbury and Birmingham near the point at which we have arrived, and the joint line runs almost into the heart of Wolverhampton, where a large station is to be creeted. At this station the Shrewsbury and Birmingham line will end, the communication with Birvery heavy, and between Wellington and Wolver-hampton there is scarcely a cutting in which large quantities of rock have not been quarried or blasted.

FOREIGN.

SAMBRE AND MEUSE (Marchienne to Walcourt). Nov. 30 .- The directors opened this section of the Sambre and Meuse, the chief trunk communication from Belgium and Germany to the north-eastern provinces of France. The total extent thus opened up from the Government line at Marchienne to Walcourt, with branches to Morialmé and Laneffe, 25 miles through the richest mineral districts of Belgium. After inspection by the Minister of Public Works, the traffic in passengers and the staple products of the districts, such as coal, coke and iron, commenced on the 2nd. Upwards of 3,000 tons of zinc ore—a mineral extensively worked at Samart and Sautour, near Philipville, were ready for conveyance to the banks of the Sambre, for smelting. chief engineering works are the Laury and Ham-sur-Heure tunnels. Some delay in the prosecution of the works on the Morialme branch, says the Morning Chronicle, was occasioned in consequence of the mineral proprietors claiming heavy indemnities for the damage they alleged would be done to the mines by the railway passing over them. There has been an excess on the cost of this first section of 73,329l., owing to the earthwork having exceeded all original calculation, and which is attributed by the engineerin-chief, M. de Grandvoir, to the hard nature and treacherous character of the rocks that had to be encountered. The Sambre and Meuse is the first railway in Belgium of any extent conceded, con-structed and worked by British capitalists, all the other lines being the property of the State.

EAST AND WEST INDIA DOCKS AND BIRMINGHAM JUNCTION. - Dec. 4. - Three arches of a viaduct recently erected, almost at the very centre of the line, between Bridge-street, Hackney, and Shepherd's lane, have fallen. The country, for a short distance on each side, is low, and the soil swampy, so that it became necessary, in order to preserve the level of the line, either to construct an embankment some 20 ft. high, or to carry the rails along upon arches. A viaduct was accordingly formed for about half a mile in length, and it was three of the arches near the dock end of this viaduct which unfortunately gave way, burying three workmen in the ruins. They were each 30 ft. span, the arc starting from a springing—that is, leaving the perpendicular piers at a height of 10 ft. and forming the segment of a circle. The arches were supported upon solid brickwork piers, 4 ft. in width, and were stated, by the employes of the contractors and engineer, to have been built about two months. The same persons also state that the wooden centering had been struck about three weeks. Persons in the neighbourhood, on the contrary, assert that the centering had been struck much more recently. The total mass that fell must have weighed at least 100 tons, and masses of brickwork some three or four tons in weight, are still to be found. Active assistance was procured to extricate those buried in the ruins. After an hour's search two were brought out quite dead—the third man was removed alive.—Dec. 7.—At the inquest on the bodies the inru alive.—Dec. 7.—At the inquest on the bodies the jury (notwithstanding evidence directly contrary) attributed the accident to imperfect materials and too early removal of the centering.

#### Law and Bolice.

DEFUNCT DIRECTORATE.-Dec. 2.-In the LORD CHANCELLOR'S COURT, in the well-known case Goodman v. De Beauvoir, this was an application, at the instance of Capt. Fisher, one of the directors of the abandoned Warwick and Worcester, to strike his name out as one of the defendants in the suit, and for an order that the solicitors of the company, who used his name without consent, pay the costs of the motion.—His Lordship said, the question was, whether the appearance for Mr. Fisher had been entered by the solicitors without sufficient authority. His Lordship was satisfied, from the statements before him, that they had authority. The defendant Fisher was one of the governing body. The bill was filed by a shareholder against the directors; and by one of the resolutions of these directors it appeared that the minority was to be bound by the acts majority, and the majority had resolved to dissolve the company. In proceedings taken to restrain the directors from dealing with the funds of the company, Fisher had been made a party, and he did not object; but he now, after removing himself beyond the jurisdiction of the court, tried to prevent the mingham being completed by means of the Stour Valley line, which is being rapidly constructed. Taken as a whole, the works on the entire line are authority to use his name. His Lordship could not

now take such an objection, and he therefore dismissed the application with costs.

-In the same Court, in re the South-Eastern v. Martin and Fox, this was an appeal from the Vice-Chancellor of England, refusing an injunction to stay an action at law. The defendants brought an action for work and labour done for the company, in surveying and mapping one of their lines, which claim the company resisted as being exorbitant, and filed the present bill to have the disputed accounts taken before a Master in Chancery. For this purpose an injunction to stay the action was moved for before the Vice-Chancellor, but refused, and from that decision the company appealed.—The Lord Chancellor said there was nothing in the facts of the case or the position of the parties to prove why the action at law should not go on, and the appeal must be dismissed with costs.

LIABILITIES OF PROVISIONAL COMMITTEEMEN .-Dec. 4.—In the COURT OF QUEEN'S BENCH, in re James v. Wilson, the action was brought to recover the sum of 2,106%. 4s. 1d., but the plaintiff now sought to recover only the sum of 616%, for money disbursed by the plaintiff, by direction of the defendant, to Mr. Abrahams, the engineer, and on account of expenses incurred at different times by the committee of which the defendant was a member, for a railway called the Wolvernampton, Walsall, Stamford and Peterborough and Norwich Junction. The project was subsequently registered under the name of the Narborough and Watlington. The defendant knew of and approved of these charges, and held his office of vice-chairman till the 26th of January 1847, when he resigned. The line was surveyed, plans prepared and shares allotted, but as none of the calls were paid, the scheme was abandoned. The engineer, who had been employed by the plaintiff, the solicitor to the company, pressed for payment, and the claim having been laid before the committee, in the presence of the defendant, the defendant told the laintiff to make the best arrangement he could with the engineer on the part of the company, and the committee would repay him. The defendant affirmed that the plaintiff, who was one of the proprietors, had given to the local agents to give to the members of the provisional committee a written guarantee that they should not be held personally liable for any expenses which had been or might be incurred. defendant had come to resist payment of an attorney's bill for 2,106l. 4s. 1d., so that he was taken quite by surprise. - The jury gave a verdict for the defendant.

COMPENSATION.—Dec. 4.—In the COURT OF EX-CHEQUER, in re Dearden v. the London and North-Western, the plaintiff (about seven years of age, who appeared in court upon crutches) sued, by his father, Mr. P. Dearden, solicitor, to recover compensation from the defendants for injuries sustained by reason of their negligence upon the 3rd of August 1847, while travelling from Birmingham to London by their line. On the day in question, Mr. Dearden, with his five children and two female servants, travelled from Birkenhead, where he then resided, to London. They travelled in a second-class carriage, which, with the exception of a strange lady, they had entirely to themselves. The train, which consisted of nineteen or twenty carriages, arrived at the Euston station at 6 p.m. The carriage was divided into four compartments, communicating with each other. The two servants and four of the children occupied the last compartment, Mr. Dearden and one of the children sat in the next, and the strange lady in another. Nothing remarkable occurred until the arrival of the train at Euston-square. While it was in motion, the plaintiff, whose name was George, was leaning against the door of the carriage next the platform upon which the passengers were landed. His chin was rested upon both his hands, which were placed upon the door; and while in that position the door suddenly flew open; the boy, who was at the time little more than five years old, fell out—first upon the platform and afterwards between it and the carriage which passed over him. The tes-timony on the side of the plaintiff attributed the accident to the insecurity of the carriage doors of the company, but witnesses for the defence declared the door to have been fastened, and the surgeon who first attended the boy during the necessary amputa-tion affirmed that the boy while in the hospital had acknowledged that the servant accompanying him had opened the door. After the charge from the Chief Baron, the jury returned a verdict for the plaintiff. Damages 600l.

RAILWAY WHEELS .- The Patent Journal this month records the patented invention of R. Madigan and J. C. Haddan, civil engineers, for improvements in the manufacture of wheels for railways. invention has reference first, to wrought-iron disc

Digitized by GOOGIC

wheels, which is divided into five several parts; 1st, in making the disc of wrought iron with the circumference bent to form a rim or felloe for supporting the tyre; 2nd, in making the disc of wrought iron, with a rim or felloe formed by forging or upsetting or otherwise thickening the edge of the disc for sup porting the tyre; 3rd, in making the disc of wrought iron with the circumference thereof fitted against and riveted to a ribbed tyre; 4th, in forming the nave by forging the disc with a boss or swell on one or both sides of the centre, or by welding to the centre of the disc, a boss or cheek, on one or both sides; and 5th in forming the nave of cast iron by running or casting the metal upon one or both sides of the disc. The second part of the invention, has reference to wrought-iron spoke wheels, with wroughtiron naves, the improvements consisting,—lst, in welding the inner ends of the spokes flatways, against and on to the sides (or front and back) of a solid hoop or nave and with the outer extremities welded to an inner rim or hoop, or to a ribbed or feathered tyre, in manner set forth in the specifica-

tion of a patent granted to G. Cottam, bearing date December 5th, 1837; 2nd, in welding the inner ends of the spokes into a nave cut or formed with grooves or spaces for their reception; 3rd, in forming the nave and spokes of bars of wrought iron rolled, with swelled or thickened parts, of such shape that when cut into lengths, and the said lengths are radially dis-posed, such swelled or thickened parts may form the nave, and the other portions of the lengths may form the spokes or the spokes and portions of an inner rim for supporting the tyres; and 4th, in welding the outer extremities of the spokes of such wheels to ribbed tyres, under Cottam's process as before men-tioned.—The third part has reference to wheels with frames or bodies composed of wrought and cast iron, or of cast iron only, and consists; 1st, in pouring or running a layer or thickness of cast iron upon a disc or sheet of wrought iron; and 2nd, in forming or moulding the body of a cast-iron wheel within the tyre, by pouring or running the east iron forming the body of the wheel within or against the inner side or surface of the tyre.

IMPROVED JOINTS FOR RAILWAY RAILS. many inconveniences attending the original mode of laying the rails has been attempted to be avoided. either by a perpendicular lap-joint instead of a butt-joint, or by a different arrangement in the system of keying. None of the numerous patents taken out have, however, remedied the dangers attending that position of the ends when one is raised above the other, and which invariably happens on the rail in front of the locomotive being higher than the other, from the back rail being depressed by the passing weight. Mr. L. D. B. Gordon has patented a rail with a lap-joint, by which means it is next to impossible for the loaded rail to sink below the one directly in front of it on the approach of the train, as the joint is underlapped, and whatever advancing pressure there is acts equally on both rails and the chair. There are a number of modifications of this arrangement, all of which appear well calculated to effect the object in view, and they are stated to be the most economical as well as safe of any now in use.—Mining Journal

London Stock Exchange, Dec. 8 .- The business transacted in the share-market during this week has been more limited than for some time previously. Prices have been generally maintained by a steady demand. The following are the latest transactions in foreign lines:—Boulogne and Amiens, 6; Luxembourg, §; Northern of France, 6\frac{1}{4}; Orleans and Bordeaux, 1\frac{1}{4}; Rouen and Havre, 7.

Liverpool, Dec. 7 .- There has been a better feeling in the market this week, and more business doing at higher prices. The following are the actual transnigher prices. The following are the actual transactions of today:—Birkenhead, Lancashire and Cheshire, 13. Caledonian preference, par; Great Northern, 12½ dis.; Lancashire and Yorkshire fifths, 4l. 8s. 9d. dis.; ditto, West Riding Union, 5½ dis.; ditto, 32l. shares, 8½ dis.; London and North-West and 171 is ditto new guarters. 3 prem. ditto ern, 117½; ditto, new quarters, § prem.; ditto, fifths, 3§ prem.; Midland, 79½; ditto, halves, 10½ dis.; ditto, Birmingham and Derby, 53; North Union, B, 142; South-Eastern, No. 3, 103 dis.; Shrewsbury, Oswestry and Chester preference, 131 dis.
Sublow, Brothers.

Manchester, Dec. 7 .- Our share market has been pretty much the same this week as it was last—little pretty much the same this week as it was last—little business doing, and no great difference in prices. Actual transactions this day:—Ambergate, Nottingham and Boston, 4½ dis.; Caledonian preference, par; Eastern Counties preference, 11; Lancashire and Yorkshire preference, ½ prem.; London and North-Western, A and B quarters, 1l. 3s. 9d. prem.; Grimsby 20l. shares, 12½ dis.; Sheffield and Lincolnshire, 14l. 13s. 9d. dis.; South-Eastern, No. 4, 11. 2d. SAM. GRINDROD.

Birmingham, Dec. 7 .- This market has been heavy throughout the week. North Staffords, in which there has been the principal business, have varied between 6\(\frac{2}{3}\) and 6\(\ldots\). 6s. 3d. dis.; to-day they close at 6\(\frac{1}{3}\) dis. firm; Shrewsbury and Birmingham B's have been done at 4\(\frac{1}{3}\) dis.; South Staffords, 4\(\frac{2}{3}\) dis.; and Shrewsbury and Birmingham preference, 1 prem. W. Banks.

York, Dec. 7 .- There are few transactions to notice this week in the share-market; a firmer appearance is shown and better prices are got. Our latest transactions are, Great Northern, 6½; North British Extension scrip, 3s.; York, Newcastle and Berwick, No. 2, 111; ditto, preference, 64; York and North Midland, 484.

GRAYSTON & EARLE.

Hull, Dec. 7.—The market remains without excite-

ment of any kind, and we do not expect much altera-tion will occur until the French Presidentship shall have become an affair finished. We may remark that were it not for the unsettled state of foreign politics and the period of the year being adverse to speculation, circumstances generally would justify the conclusion that share value would improve.

FLINT & TOOTAL.

Necestle-upon-Tyne, Dec. 7.— There has been a moderate demand for shares this week in our market. Newcastle and Carlisle, York, Newcastle and Ber-

wick and North British shares have commanded attention. W. FORDYCE.

Dec. 7 .- We have had a steady demand Glasgow. for shares during the week, and prices have improved, except in cases where a call has been announced. The business done has been on a moderate scale, and stock for immediate delivery scarce, prices considerably above the usual rates having been paid. The following are to-day's latest sales:—Caledonian preference, par; Ayr, 44; ditto, halves, No. 1, 13t. 3s. 6d. dis.; ditto, No. 2, 13\frac{1}{2} dis.; Great Northern, 12\frac{1}{2}.

BUCHANAN, AITKEN & Co.

# Joint-Stock & Commercial Gazette.

The half-yearly meeting of the proprietors of Waterloo Bridge was held on Thursday. Mr. W. Anderson in the chair.—From the report and statements made to the shareholders we glean the following facts, viz. :- that since the opening of the Waterloo Station of the South-Western Railway the receipts gave an increase over the corresponding period of last half-year of 7071., and great expectations were entertained that the company would be still further benefited. The balance-sheet of the company shows that during the half-year, from the 23rd of February to the 23rd of August, the foot-tolls received amounted to 4,262l. 10s. 9d., and horse-tolls to 2,804l. 18s. 9d., making a total of 7,067l. 9s. 6d. Rents, interest and

other payments increased the income to 7,878l. 16s. 1d., other payments increased the income to 7,878. 16s. 1d., to which was added 471l. 3d., appropriated from the last balance, thus making the aggregate receipts 8,349l. 19s. 1d. On the other side of the account it appeared that the disbursements, including Incometax, amounted to 1,429l. 3s. 1d.; the interest upon the bonds would absorb 1,295l. 16s., and a dividend of 3s. in the pound on 37,500 annuities, 5,625l.; thus balancing the account. The report was adopted, directors re-elected, and thanks voted to the chairman. directors re-elected, and thanks voted to the chairman.

A meeting of those interested in the British Whale Fisheries Company was held on Thursday. Mr. Enderby, the promoter, was called to the chair. The attendance of subscribers for the capital was large. One-third of the proposed capital has already been taken up, and all doubt as to the objects of the company being prosecuted is now at an end. We have before adverted to the project, which is one of national importance, and will eventually prove of great benefit to the nation. Mr. Enderby is going out himself to the Auckland Islands to organize the fishery. The report of the provisional committee was unanimously adopted, and the matter is now left in the hands of the influential gentlemen who been appointed to direct the affairs. The Earl of Hardwicke has been elected governor, and it was expected that Mr. T. Baring would accept the office deputy-governor.

The New Zealand Company are taking up more ins to carry out emigrants. Land at Otago is to ships to carry out emigrants. be balloted for shortly : the price fixed for 60 acres is 1201.

#### Banks.

The advices received from Calcutta, in reference to the Union Bank of that place, mention that the Government had given its sanction to an Act, the object of which was "to confirm an agreement between certain shareholders and creditors of the Union Bank." This Act is to make hinding the agreement Bank." This Act is to make binding the agreement proposed to pay off the liabilities of the bank, and it was expected that many who had refused to pay the amounts for which they had been assessed would now do so. Several of the shareholders, unfortunately, will be prevented, owing to losses sustained by the commercial crises of the last two years.

Letters from Jamaica state that the present paper currency greatly militated against any revival of trade in the Island. Great discredit attached to the notes both of the Treasury and the Planters' Bank. A call made on the shareholders of the bank had been well responded to.

The following banks and other public companies in North America have declared half-yearly dividends, viz.:—Bank of Chester County, 3 per cent.; Harrisburg Bank, 3 per cent.; Bank of Georgetown, 34 per cent.; York Bank, 4 per cent.; Doylestown Bank, 3 per cent.; Farmers' Bank, Bucks county, 3 per cent.; Catthium Bank, 2 per cent.; Parmers' Bank, Bucks county, 3 per cent.; Parmers' Bank, Bucks county, Bank, Bank Gettsbury Bank, 3 per cent.; Chambersbury Bank, 3 per cent.; Columbia Bank and Bridge Company, 3 per cent.; New Brunswick Fire Insurance Company, 4 per cent.; New York, Albany and Buffalo Telegraph Company, 5 per cent.; Bowery Fire Insurance Company, 10 per cent.; Rome and Oswego Plankroad Company, 6 per cent., out of earnings amounting to 9 per cent. during the half-year, the remainder being carried to the sinking fund; Knickerbocker Fire Insurance Company, 10 per cent.; New York Floating

Dry Dock Company, 8 per cent.; Jackson Marine Insurance Company, 10 per cent.

An extraordinary neeting of the proprietors of the London and County Bank was held on Thursday at the London Tavern. Mr. Sadlier, M.P., in the chair. The object of the meeting was to increase the qualification of a director to his holding fifty shares in the concern. The chairman observed that in the selec-

Digitized by GOGIE

tion of directors, the proprietors had the best guarantee of the affairs of the bank being ably and profitably carried on. In answer to a question put by a proprietor, Mr. Luard (a director) informed the meeting that the qualification in the four existing joint-stock banks was as follows:—In the London and Westminster, 50 shares of 100l.; in the London and Joint-Stock Bank, 100 shares, with 101. paid up; in the Union, 10 shares of 50l.; and in the Commercial Bank, 50 shares, with 10l. paid up. The proposition of the directors for raising their qualification to 50 shares was adopted, likewise one raising that of auditor to 20 shares. The director appointed in the place of Mr. Emanuel Cooper is Mr. Lane, and Messrs. Overton and Wright were elected auditors. The business of the meeting was finished after voting thanks to the chairman.

Steam Navigation.

It is expected that a contract will shortly be entered into between the Admiralty and the India and Australia Steam Packet Company, for the conveyance of the mails between Singapore and Sydney for a period of seven years.

Canals.

The general meeting of the Grand Junction Company was held at the Whittington Club on Tuesday.

The Hon. Mr. Bouverie in the chair. The select committee's report was read, from which we glean

The nett tonnages for the half-year ending the 30th of June last, amounted to 38,0871. Gs. 7d., being 4,6921. 4s. 7d. less than in the corresponding period of last year. This was, in part, occasioned by a protracted stoppage of the navigation for repairs, in the month of June last; but is mainly In part, occasioned by a protracted stoppage of the navigation for repairs, in the month of June last; but is mainly attributable to the depressed state of trade during the last year, which has borne heavily on traffic peculiar to water communication. The principal decrease has occurred in the conveyance of bricks, coals, timber, iron bars and castings; and much of it is owing to causes of a temporary nature. On the other hand, there was an increase during the same six months in the conveyance of cotton goods and miscellaneous articles. The company's carrying trade, from its commencement in December last till the 30th of September last, showed a total as follows:—Weight carried, 18.784 tons; distance travelled, 359,726 miles; average load per boat, 1024 tons; receipts, 25,3774. 15z. 9d.; tonnage dues earned to Grand Junction Canal, 2,8931, 9z. By a resolution of the shareholders on the 27th of June last, the creation of 11,445 10t. shares was authorized. Of that stock there have been taken up by the shareholders 10,455 shares, representing a capital of 104,550t, which is specially applicable to the carrying trade. The first instalment of 2t 10z, per share has been fully paid, and amount 50 26,1374. 10z.; there remain 1,000 10t, shares undisposed of. The canal and works have cost, from first to last, a sum of 1,785,730t. 6z. 8d., which is now represented by a capital of 1,145,500t, the remainder of the cost having been from that the defrayed or regard out of the receits of aum of 1.715.7.304. 6s. 8d., which is now represented by a capital of 1.145.700k, the remainder of the cost having been from time to time defrayed or repaid out of the profits of the undertaking, and the capital account having been closed since 1818. In addition to the navigation itself, and the works essential to it, the company possesses a large rest, of which 11.502k. 6s. 10d. is in cash or convertible securities, and the remainder is invested in real property, producing a yearly rental of 7,144k. Iesides which, the company is secured by Act of Parliament in the payment of water rent yielding 2,000k yearly. The whole is estimated to be worth 240,000k. The revenue from all sources, during the half-year ending the 30th of June last, amounted to 46,3343. 1s. 2d., and the expenses, ordinary and extraordinary, to 20,430k. 1s. 4d., leaving a nett profit of 25,913.7s. 10d. The dividend declared is 2k. 10s. on the original stock, and on the preference stock at the rate of 6 stock, and on the preference stock at the rate of 6 per cent. per annum, both free of income-tax. The report was adopted unanimously, and the meeting terminated, after voting thanks to the chairman.

The traffic on the Caledonian Canal is stated to be continually increasing. On Wednesday there were 13 schooners, 5 sloops, 1 barque and 1 brig in the Basin and Muirton Locks.

Life Assurance.

The annual general meeting of the Medical, Invalid and General Life Assurance Society took place on the 30th ult. Mr. B. Phillips, F.R.S., in the chair. The directors' report to the sharcholders was gratireceipts of the society; and gave tokens of the advances being made in the estimation of the public of the principles upon which the society is based. The assets and liabilities as valued, yielded a surplus of 7,740l. 18s. 3d. to be divided among the shareholders and policy-holders on the participating scale. This would in terms of the deed of settlement give the sum of 2,580l. 6s. 1d. to the former, and 5,160l. 12s. 2d. to the latter: but it is proposed that the sum to be now vested as surplus should be 2,500l. to the sharethe use of the fractional sums. This will enable the directors to assign a bonus of 5s. to each share, and a reversionary bonus on the amounts assured by the participating policies of all classes, healthy and diseased. The report was unanimously adopted, the retiring directors and auditors re-elected, and a vote of thanks passed to the chairman, directors, and the actuary, Mr. Neison.

The Argus office has opened a West-end branch.

Two life assurance companies are expected shortly

to be amalgamated. The uniting of their interests and influence will form a greater security for those assured.

#### Mines.

The lead mines at Kellog, Arkansas, America, are being actively prosecuted, and ore, it is stated, is daily brought to the surface. Discovery has been made of several new lead mines in the district, and a bed of fine coal, within a few feet of the surface, has also been found.

The St. John del Rey Company have declared a dividend.

Proposals are being made for the purchase of the estate and effects" of the Rel del Monte Company. In the share market this week very little business has been done, although the market is steady, and very little fluctuation has taken place in price.

IRON TRADE.—Glasgow, Dec. 1.—No improvement is remarkable in pig iron; the business done is small; and to-day prices quoted are 41s. for mixed numbers, and 41s. 6d. for No. 1, cash.

#### TO CORRESPONDENTS.

An OLD SUBSCRIBER, Hull, should have sent his name in confidence: indeed all correspondents who communicate statements of facts should do so.

J. H. A., Whitelaven.—Declined, with thanks.

A REGULAR SUBSCRIBER will find a condensed account at p. 812. At the same time, he is thanked for his communi-

cation.

E. M. J., Bolton.—Apply to the district surveyor.

A. Workman, Swindon.—The interest is paid, and the lease perpetual, with a guarantee. Our Share List will show the amount last paid per share.

RECEIVED: YOUR SUBSCRIBER—A. M.—OBSERVER. We

not room this week: we shall be glad to be furnished with your address.

# Railway Chronicle.

LONDON, SATURDAY, DECEMBER 9.

THE AMALGAMATION SCHEME, AND THE RESULTS FROM ITS RUPTURE.

As far as we can learn, the feeling among the proprietors of both the narrow-gauge companies, on the rupture of the triple negotiations. has been pretty unanimous. The shares of the London and North-Western immediately rose on the announcement; while those of the Great Western have since considerably fallen. Although the change, in the latter case, may be ascribed in part to the heavy calls just made, still it is probable that the depression has not been uninfluenced by those recent transactions which have made apparent the real tendencies of the outlay that calls are intended to provide for. That much further progress can be made in the way that has led to the present state of things, is not very likely; it certainly will not be attempted, if the shareholders have sufficient good sense to draw obvious inferences as to future effects from what they must now be feeling of the operation of past measures.

It must be clear to any reasonable view, that peace is essential to the well-being of all the three concerns; to some, it may be, more urgently than to others; but to none of less than vital importance. Nor does it follow that war must of necessity ensue from the failure of an attempt to make an absolute coalition between elements in no respect prepared to coalesce. If there were anything honest, rational or practicable in the spirit of that proposal, there is nothing to prevent its still operating on the reciprocal dealings of the several parties, as independent concerns. The course they may hereafter take will indeed determine whether the amalgamation plan was the result of straightforward intentions, or a device framed to circurrent and deceive. The certainty of this test results from the nature of the proposed amalgamation, which, to all real intents, would have left the several bodies, though nominally united, in complete practical separation

all its parts, that the difficulty—could it have been carried into effect—would have been to discover in what respect, or to what end, the union existed: seeing that the barrier of gauge was to remain as heretofore; that each company was to complete its own schemes without the interference of the others; and even, it is said, that the capitals were not to be fused into one mass until the existing obligations had been thus brought to a close. What, under such an arrangement, could have been the element of united action? At the most, a general pause from further encroachment and strife; and the adoption of such few regulations, in the interchange of traffic, &c. as could have been possibly made in common by the managers of systems that were to remain, in all essential points, as distinct from each other as before. Now all and every one of such objects, we say, can be just as well attained by mutual arrangement between company and company, as they could have been under the amalgamation, as sketched by its proposers; and therefore, we repeat it, the good faith in which it was proposed will be absolutely tested by the degree to which a desire to promote these objects may be found to prevail hereafter. If it were at any time, it still must be a sincere and pratical resolution; there is nothing in the independent relations of the several companies to prevent its being as effectual as it could have been on the plan by which they were to have been nominally united. If the failure of this nominal union be followed by a return to hostile proceedings, it will be plain that the motive of that plan was not, in the first instance, what it professed to be; that it was merely started in the hope of gaining by manœuvre some advantage which it was no longer convenient to pursue by open warfare.

However this proof may fall out, the satisfaction of those concerned in the national lines, with the breach of the treaty, will not be affected by it. If they find the Great Western once more, overtly and covertly, pursuing hostile objects, they will the more rejoice that this course is not at least favoured by the cloak of an alliance that would have left the power to injure unimpaired,-supposing the desire still existed; and that the desire would have so existed will, as before said, be proved by the continuance hereafter of hostile machinations: for the desire of pacific arrangement, if sincere, can be as well displayed by the Great Western and its neighbours, while avowedly independent, as it could have been, while united in name only, according to the limited provisions of the treaty. And whatever the Great Western may do, the course of its neighbours on each side ought in no respect to differ from that which they could or should have followed, had the treaty been carried further. One of the uses of breaking up a mere pretence of union, indeed, lies in the circumstance that it destroys nothing that could have been made practical or beneficial; while it fixes the performance of all that such a treaty as this could have properly effected on its only true bases; and requires it to proceed on more natural principles.

What these are we have already stated; and we repeat the assertion, that the future of all railway concerns will be decided by the degree in which they may now be recognized. interest has hitherto been for the most part managed on the principle of seeking its advantages and securities from without, and of attributing its disadvantages and dangers to external influences; -while it really depended on its internal conduct how far these should or should not have affected it to any serious extent. for the term of five years, at least; and so completely does this character of the scheme colour lation," of the "mania of competition," &c.,

Digitized by GOOGLE

they are apt to overlook the fact that neither the one nor the other could have done half the injury they have actually caused, if the interests menaced had not gone half way to meet the injury. What, for instance, has made low fares (however imposed) ruinous, but the heavy capitals of the lines on which they are left to earn a dividend? and what has burdened those capitals, but the deadweight of branches, and the cost of fighting and scheming for unprofitable ground, in the erroneous view of "protection"? What "competition" need any one of our great main trunks have feared, if it had restrained its cost within such limits as would have enabled it to work profitably, even at low fares; if it had occupied no ground of inferior productiveness, by expensive works that swamp the receipts on the main channel? These are questions that directors have never yet been sufficiently disposed to study; and the view implied in them may be called an exceptional one in the railway world. We find Capt. Huish, for instance, in his late pamphlet, while summing up the causes of railway decline, laying, as usual, the chief stress on external causes; a "vicious system of legislation," "clashing interests," "discouragements and oppressions of Parliament," &c.—while behind all these there lies the plain fact, above stated, that none of them could have done more than a very limited injury, but for the indiscretions that courted their operation: - and, what is of more present importance, that their injuries can now only be remedied, not by looking to new measures or aid from without, but by steadily cultivating the business and applying severe economy within. To this process neither Parliament nor amalgamation will contribute one iota; without it nothing will restore the decayed prosperity of the interest. It has been wounded to its very heart by an erroneous policy that has carried it to Parliament year after year, and kept it endlessly scheming and negotiating and spending money, -in the futile hope of catching at last what has constantly eluded the grasp; while the cost of the pursuit has gone on perpetually increasing. And nothing can effectually cure it but the renunciation, once for all, of this shallow delusion, and a steady application to the only rational means of safety—at home.

The special meeting of the BIRMINGHAM, WOLVERHAMPTON AND STOUR VALLEY, to sanction the lease of the line to the London and North-Western, was further adjourned, from the insufficiency of the notice summoning the meeting. Some misunderstanding appears to exist respecting the terms of the lease;—the shareholders of the Birmingham, Wolverhampton, and Stour Valley contending on one side that the expenses of offices, &c. were not to be included in the 4 per cent. guarantee; and the London and North-Western insisting that they strictly abide by the contract in giving 4 per cent. on the entire line.

The shareholders of the DERBYSHIRE, STAF-FORDSHIRE AND WORCESTERSHIRE JUNCTION, after criticising the balance-sheet, adopted the report of the directors at the half-yearly meeting. Impediments have prevented the payment of calls in various cases; but the Board declare that they begin to see their way towards meeting the existing liabilities; and, strong in faith, believe that the property will be eventually available and valuable.

By the Report which the proprietors of the ABERDEEN received, after some discussion, the directors announce that the line will be opened early in the coming year, within twelve miles of Aberdeen. They congratulate the shareholders

and Northern and other companies, for the completion of the line. The election of directors was postponed till the 27th.

The BELFAST AND BALLYMENA directors, in the face of their disappointment in the passenger receipts, declare a dividend of 10s. for the past half-year, payable on the 14th. The general expenses have been carefully attended to, and the reduction in the fares of the second and third class passengers it is hoped will result satisfactorily to the company. The report was adopted, and Mr. Macartney, in an address full of minute details, completely rebutted the charges brought by Mr. Maunder against the Board. The local papers report that Mr. Maunder has since published an apology for his attacks, which appear to have had but slight foundation.

Of the reports adopted at the half-yearly meeting of the shareholders of the CORK, BLACK-ROCK AND PASSAGE, that of the directors expresses a hope that the calls will be at once paid to enable the company to exercise its borrowing powers, and that of the engineer shows that the works have been steadily progressed with. The directors appear to have been economical and energetic in their management; and the whole of the officers manifest their faith in the good prospects of the undertaking by the large number of shares which they have taken up.

From our official returns it appears that the amount of traffic for the last week, on 4,205 miles of railway, was 174,861l., thus accounted for: -75,769l. for the conveyance of passengers only, 53,605l. for the carriage of goods, and a remainder of 45,487l. for passengers and goods together, not respectively apportioned; being an increase of 20,818l. over the corresponding week of last year, when the mileage was 3,317. The average earnings per mile were 42l., whilst in 1847 they were 46l.

# RAILWAY PROPERTY: THE CAUSES OF ITS DE-PRECIATION, AND THE REMEDY.

It will be sufficiently apparent to those who have read and weighed our preceding remarks, that the panic which commenced in railway property was mainly attributable to the mistaken views adopted and urged by the writers in the Times newspaper, acting upon a fettered and impracticable currency law, which it has been a fond object of those writers to maintain,-and that, but for the absurd restrictions upon the quality and quantity of the circulating medium prescribed by the legislative Act of 1844, all railways that were well considered and worthy of parliamentary sanction, might have been carried into effect without any more injury to the proprietors of the older lines than a fair measure of competition would have produced.

In order that it may be perfectly clear that the comparative difference between the permitted circulation of Bank notes in the years 1814 and 1847 accounts, in an important degree, for the depression which railway profits and stock, in common with all other property, has undergone, we give the figures which we produced last week, in a tabular form :-

	Bank of England circula- tion.	note cir-	Total circulation.
13,200,000 20,100,000			£. 50,501,080 28,522,827

It will be obvious that the power of production has increased much more rapidly than population, and that the accredited circulating medium, as the basis of all hills of exchange and other modes of interchange. should bear a proportion to production. We have then 50 millions of Bank notes for a population of 13 millions, and 28 millions for a population of 20 millions! It can be no answer to this statement to say that the precious metals have increased in circulation :- it is notorious that for many years after 1810 the produce of the mines in South America greatly failed, scarcely producing a third of what on the arrangements made with the Edinburgh they had previously done, while the boasted sup-

plies of gold from mines in Russia are scarcely a drop in the bucket compared with the progress of population and production of the world.

These figures give the real solution of the problem that so much confounded our statesmen of the present day, who, after doing their utmost to stop railway progress, and allowing the terrific ruin of our merchant princes, in order to relieve themselves of the serious responsibility they incurred, summoned Committees in both Houses of Parliament, professedly to consider the causes of the "national distress." No sooner, however, had the evidence arrived at that stage that a report was to be made, than, strange to say, rather than listen to the truth that had been elicited, unfavourable to the legislation of 1844, the Chancellor of the Exchequer assembled those members of the committee who had listened little or not at all to that evidence, and swamped the votes of those who had closely attended to the proceedings, and who, had the matter been concluded with propriety and fairness, would, —like the majority of the House of Lords,—have condemned the restrictive clauses of the mischievous Act of 1844, and the principle of the law of which it professed to be a "complement." The result, as might have been expected, has been a second panic in railway property-so ruinous in its effects as to break many hearts, and no doubt to cut short the lives of many of those who confided their property to a system formerly sanctioned by Parliament and productive of incalculable public benefit.

In confirmation of what we have formerly advanced, and now in a measure repeated, we have pleasure in adducing the following testimony of gentlemen examined before the recent committees on "national distress," in the House of Commons.

Mr. Gurney, the eminent bill-broker in the City,

thus replied to question 1606 :-

Do you attribute much to the effect of the rail--I cannot in my own experience (observed Mr. Gurney) trace it to railways; my own experience, which is in the floating money of the country, has not led me to perceive much derangement in the circulating medium on account of railways. I have been asked several times whether I thought it affected the money-market while they were in progress; even during their progress I was under the necessity of giving an answer that I could not tell, but still my reason would say that so far as the commercial capital of the country (I do not mean the mere floating money) has been withdrawn from commercial pur-poses and trading purposes into railways, it must have had a certain injurious effect upon trade. the other hand, I should say that it was rather a time of excitement, in fact, in trade, and there was no facility wanted; facility, if I may so say, was rather too ready, and therefore, though my reason and my judgment tells me that it must have had such an effect as that alluded to, my experience has not shown it

Mr. Birkbeck, the eminent Yorkshire banker, who was considered to represent the country bankers of England, and whose transactions include both manufacturing and agricultural classes of large extent. thus replied to the several questions put to him on this point :-

5919. And there has been, in conjunction with that. a very large investment in railways !- That, I think, would not have been felt to a serious degree but for the other causes; it would have caused individual suffering, but it would not have caused national

suffering.
5920. Does it not raise the rate of interest in the market !- No, it does not; the money is there still.

5921. Then you do not think that the calls upon the country for railway purposes to the amount of three millions or four millions a month have had any effect in raising the rate of interest in the market or producing a scarcity of money — I cannot conceive that it could do so; provided there was a good state of trade, I do not think the nation would have felt it in the least; individuals might have felt it, but not the nation; the money is there still.

5922. It goes to landed proprietors, shopkeepers and others!—Yes.

5923. There is the same amount of railway calls going on now, but yet money is at the cheap rate you have described?—Yes; there is very nearly the same amount of railway calls.

5024. At the time you allude to money was very cheap in the market?—It was.

5925. There was a great difficulty in employing it?

5926. If it had not been employed in railroads, do

Digitized by GOGIE

you think it would have gone for investment elsewhere !—I think a good deal would have gone abroad.
5927. Being kept at home, have not the labourers of this country benefited from the general expenditure !- Yes.

5928. And the revenue has also benefited from that

expenditure?—Yes.
5929. Did it at all lessen the amount of currency in the country ?- I cannot conceive how it could lessen it.

5930. As you said before, it might have created some individual distress — No doubt it has done so. 5931. But nationally it has not produced any

No; all that I can charge upon the railways is, that it has occasioned the difference between keeping a number of labourers upon good wages and throwing them upon the poor rates.

The next witness we shall quote is one whose character for investigation is beyond all question, Mr. John Taylor, the well-known author of 'Junius Identified.' This gentleman has thrown more light on the great social question of the currency than

any writer of the last thirty years.

5498. Will you have the goodness to state to the committee what you consider to be the causes of the distress of 1847 — I think that the ordinary causes to which that distress is attributed are not the causes of commercial distress; they are the causes of great distress to some part of the community. The failure of the potato crop undoubtedly was a great calamity, but I do not think that that calamity was necessarily the cause of the commercial distress; I think the commercial distress was rather caused by a peculiarity in our currency, which forbade our exercising the ability we ought to have to counteract that calamity.

5499. Do I understand you rightly that you consider the failure of the potato crop would have produced distress, but that under a wholesome system of currency it would not have produced the distress which the country has recently gone through?-

Exactly.

5500. With regard to the speculations in railways, do you consider that that was a cause of the distress—I do not think it was at all a necessary cause of the distress; on the contrary, I think that to a considerable extent the money spent in railways mitigated the distress. I think the money spent in railways, instead of injuring the country, contributed to the prosperity, in a certain degree, of the country. I believe again it was owing to a peculiarity in our currency, which, in my opinion, is not fitted to our circumstances, that railways were not of more advan-tage to the commerce of the country than they were

permitted to be.

ourselves:

5501. Do not you conceive that the transfer of a large quantity of capital from floating capital to fixed capital produced great temporary injury to the country -It might have done so under the peculiar circumstances in which this country is placed with reference to its currency, but I do not think it would have been at all a cause of the distress if we had had the state of currency in this country which I conceive we ought to have.

It remains only to add a paragraph from a volume which has just been published, entitled 'Breach of Privilege, + and which should be in the hands of all who would unravel the sophistry of the bullionists of all grades, and who wish to discern a remedy for present evils. The author of this volume has made a selection from the evidence on the "Distress Committee, of which we have not hesitated to avail

The diversion of capital, as it is called, from its ordinary employment in commercial transactions to the construction of railroads, if it have any meaning or had any bearing upon the question, must have had the very opposite effect; it must have tended to relieve the commercial and agricultural interests from a portion of that capital which was too abundant to enable it to obtain an adequate return, and to have lightened that accumulation which has been stigmatized with the mistaken name of "over-production. It is not capital that has been wanted during the present distress, notwithstanding the enormous quan tity that has been sacrificed to a vicious theory, but the permission and means of using capital, which would have been afforded by a free currency. diversion of capital from one useful employment to another may produce inconvenience and loss to some, but cannot create a general panic or distress. No distress arose until the new employment was stopped

when immediately thousands were delivered up to ruin and starvation. With such evidence of legislative blundering, and such testimony of practical men, showing the em-

barrassing nature of our existing monetary system, will the powerful Directories of our national railways _will the Shareholders at large_consent longer to see their property first depreciated, and then decried as injurious to commerce, by inconsiderate writers? No, we believe not: the Directors will consider the interests confided to them by the proprietaries generally, and they will, we trust, as with one voice, demand legislative enactments in accordance with the evidence offered before the recent committees on "National Distress,"-they will demand a just, sound and sufficient currency for all the fair industrial operations of the kingdom.

Our next remarks will be directed to the depreciation of property generally from the same cause, to the theory of a currency, and to the anticipation of some probable objections. KAPPA.

#### THE AMALGAMATION VENTURE.

Sir, I have read with more care than I did in the public papers, the resolutions and correspondence for amalgamation of the three companies, now sent to me from the London and North-Western, and I cannot help expressing my surprise that the management of such large interests has not secured in its support something like talent, of which throughout there is not a particle. More common compositions, negotiations evincing less ability, I have rarely seen; and my confidence in the capacity of the present managers of railways every day becomes less. An affectation of diplomatic formality is a poor substitute for good sense. It is evident that the bubble now broken was a device of the Great Western—a last resource, to scramble out of the quicksand in which it flounders, by placing one hand upon the shoulder of the South-Western and the other upon that of the Birmingham; and it is marvellous that sagacity was wanting to perceive the drift of so bald an attempt. Thirteen more one-sided propositions, taken as a whole, impudence herself never tendered for acceptance; they are so absurd that it would be a waste of time to comment on them, if there were not grounds for fear that weakness on the one hand and no shame on the other may some day revive them. The Great Western was to prohibit the South-Western from getting to Windsor; the Great Western was to have as many members at the united Board as the North-Western; the Great Western stipulated that this Board should be irremovable for five years; the Great Western made it a sine qua non that the broad gauge should not only not be disturbed, but be continued in all its proposed ramifications; and the two other Boards condescended to treat upon these preliminary conditions! The farce would have been complete, if we had been favoured_and I wonder that we were not_with a fourteenth clause, making it a point beyond discussion that the 1001. stock of the three should be amalgamated at equal value. The condition that the broad gauge should, under all circumstances, after amalgamation—whether hereafter it should be found more inconvenient and expensive than it is now, or not-for ever be laid and maintained, is of a character that seems to take from its propounders a claim to common sense and common honesty. If, from being surrounded by the 4ft. 81 in. gauge, it should have been proved that railway profit and the public convenience suffered from its continuance, and more from its extension, what good motive could there be for binding us to its continuance? Why should the Great Western prohibit its abandonment, if further experience should oblige its adopter to admit that it is dearer than the other? If amalgamated there would have been but one interest, and it is difficult to imagine the line of argument which Great Western directors could use in defence of this seventh clause, if, as I think would have happened-if it has not happened already-that all the world but their engineer and Mr. Saunders had concurred that it ought not to be continued. I should like to hear any public reasons these gentlemen may have to give ;their private ones I have no desire to investigate, for it would afford me no pleasure. We have escaped disaster which it is almost a mercy of Providence that we have not suffered; and I hope that at the Febru-

will alone, and in secrecy, but that ab initio it is their bounden duty to make their constituents acquainted with intentions which go the length of involving, in its entirety, the great capital confided to their care and preservation. SCRUTINEER.

#### CALEDONIAN GUARANTEES.

I observe, in a letter in one of the papers last week, it is stated that the Dundee, Perth and Aberdeen is only able to pay its expenses. The fallacy of this I could easily expose; but it is unnecessary, seeing that the chairman of that railway, in his letter appended to the Caledonian Company's last report, shows that, in fact, it pays its expenses, and leaves near 7 per cent. for dividend. Can there be any authority better than this, and is it likely that any credence will be attached to the anonymous statement opposed to it? It is strange that self-interest could embolden any one to make such a statement, in the face of the chairman's figures, and figures not of fancy but of the actual cost. R۵.

#### GREAT WESTERN AND SOUTH-WESTERN.

We have received a copy of the following statement, which has been printed. Our readers will be able to judge for themselves of the comparison which it institutes between the finances of the two com-

Some Points of Comparison between the Great Western and London and South-Western Companies, derived from the Financial Statements of the respective Companies.

Necessity of Creation of Additional Capital.

The Great Western reckon among their assets, to meet their engagements— £. their engagements without Calls on old capital 1.189,550 any new call on their share-on Windsor capital 130,000 holders; and the compulsory

felt and appreciated by their countrymen in Germany and throughout the world

On the 4th, along the lines of the Great Northern and York and North Midland there was an excursion trip from Bridlington, with the members of the Mechanics' Institution and the inhabitants of other towns along the route to London from Hull, Scarborough and other places, in covered third class carriages, for 12s. 6d. the trip to and fro; each passenger having the option of a seven days' stay in the

During the last fortnight there went from the Bangor station of the CHESTER AND HOLYHEAD a pig cargo, from Ireland, in upwards of 80 trucks, each truck with 25 pigs, or about 2,000 in the whole.

Mr. Bluntisto lay down his SUBMARINE TELEGRAPH

between Holyhead and Dublin. The Admiralty have authorized Capt. Fraser, R.N., the commanding officer of her Majesty's naval establishment and dockyard at Holyhead, not only to permit this gentleman immediately to commence his operations, but also to afford him every assistance. In connexion with the subject of the Telegraph we may mention that an Electric Telegraph is being formed from Potsdam to Brandenburg. The copper wire is to be surrounded by gutta percha, and conducted along the railway in sinking the pipes in the bed of the Havel. The expense will be defrayed by the State, and the works will be executed by the railway board of works, under the superintendence of the government surgery of buildings as quickly as possible. veyor of buildings, as quickly as possible.

A rumour has been spread that the MIDLANI

intend to commence CARRYING SMALL PARCELS of groceries and other wares, at the rate of 1l. per ton, from London to Leeds, 205 miles, including the col-

lection and delivery.

Of the railway plans deposited up to Nov. 30, for Acts during the ensuing session, the whole collection does not include an extent of above 40 miles. From 1831 to 1840 the number of railway Acts passed was 299, authorizing the construction of about 3,000 miles of railway. In 1841, 19 Acts, authorizing 15 miles; 1842, 22 Acts and 67 miles; in 1843 24 Acts passed, for constructing 91 miles; in 1844 48 Acts received the Royal Assent, by which 797 miles of railway were authorized to be made; in 1846 272 Acts passed for 4,790 miles; in 1847 184 Acts passed, empowering the construction of 1,663 miles; and in 1848 83 Acts were passed for 300 miles. The total number of Acts passed since 1831 has been therefore 1,071, and the total number of miles authorized to be made is 13,600, of which up to the present time about 4,400 have been opened, leaving 9,200 either partially constructed or not yet begun.

Parties at Portsea and other places have received notices with a view to the commencement of operations in laying down the system of short tramways at the various arsenals and harbours, to which we had

previously called attention.

It is commonly reported that the bill of charges of the late solicitor to one of the southern railway companies contained 10,000 folios, has occupied twelve months in the process of taxastion, and amounted to 240,000. These lawyers are the "frages consumere nati" of the railway system.

ne proposed line between BANGOR AND CARNAR von has been abandoned for the present, though a staff of surveyors have completed the survey. A neighbouring landowner threatens an opposition, which is deemed by the inhabitants vexatious, the more especially so when contrasted with the manner in which another landowner has come forward and munificently offered, free of cost, the whole of that portion of his land which the line would traverse. The undertaking, if carried into effect, would prove of the utmost benefit, not only to towns forming the termini, but also to the adjacent ones of Pwllheli, Tre Madoc, Port Madoc, Festiniog, &c., and indeed the whole of Merionethshire.

The vacancy in the Secretaryship to the WATER FORD AND LIMERICK, which will be caused by Mr. Saunders's retirement in March next, is not to be filled up. The line is worked by the Great Southern and Western, only 25 miles, or one-fourth being opened, though three-fourths of the capital has been

expended. The weekly receipts average about 350l.

The Euston station of the London and Northweekern, recently enlarged and completed, at a
cost of about 150,000l., now comprises, says the Observer, an area of about 2,100 ft. in length by 500 ft. server, an area of about 2,100 ft. in length by 500 ft. in breadth. On either side is a platform: the one on the east side, or the arrival platform, is 1,100 ft. in length, and about 40 ft. in width; and the departure platform is about 800 ft. in length. In this space on the various lines there are sixty turntables, and over this are about 700 ft. by 350 ft. of glass roofing. There are also 16,000 ft. of drains and sewerage. On the west side, adjoining Cardington-

street, a number of coach factories have been erected, the area occupied by these being 300 ft. by 400 ft. A smithy, with every convenience for the manufacturing of vehicles, is attached. The waste materials not required by the contractors were sold, and realized nearly 1,000l. The works at Liverpool, which are of a similar description to those at Euston-square, are now nearly completed. The whole area of the station has been considerably enlarged, and the mouth of the tunnel terminating at Edge Hill has been widened. The entire alterations and improvements have cost several hundred thousand pounds. The old façade, fronting St. George's Hall, the exterior of which is also nearly finished, is to remain with some few alterations, such as carriage-ways and promenades. The driftway of the immense tunnel, called the Victoria tunnel, running right under Liverpool, is nearly through. It is 21 miles long, and is intended to connect the goods depot at Edge Hill with the North Docks at the Mersey, so as to take all the foreign cargoes at the water's edge on to the railway at a great reduction in cost of carriage. The operations have been very perilous, many of the houses and public buildings in Liverpool being only 50 ft. above the point where the rails will be laid, and where the locomotives with the goods trains will have to run, which is expected to be the case by this time next year.

Messrs. W. D. Wells and J. Broadfield, surveyors, of

Kidderminster, have published a mode of communication for trains, to be attached to every description of railway carriage, so that in case any one of them should break away from the rest of the train, it would immediately communicate the fact to the engine-driver, by blowing the steam-whistle on the engine. This can also be done by the guard at any moment. In principle it is self-acting, and is entirely removed from the control of the passengers; simple, efficacious and cheap in its application and construction, it can be attached with great facility and saving of time, and in case of breakage can be restored to its proper action again by the guard in one moment and at the simple cost of a w pence. The above-named parties are in poss of a number of model carriages, showing the principle

of action throughout.

The Dundee Advertiser reports that there is an embankment carried away on the Scottish Central, at Dunblane, which renders it necessary to coach a distance of about seven miles. We have not heard that any accident happened to the trains or pas sengers farther than detention.

The stoppages and dangerous accidents from snowstorms that formerly attended travelling in winter, are now almost forgotten. We have been reminded of them by the New York correspondent of the Daily News, in speaking of the railways in America. When these means of communication were first projected (says he), our deep snows, it was supposed, would make the winter transit almost nothing. experience has taught us how to overcome this difficulty. We have the snow-plough everywhere, an iron machine like a triangle, with high sides, like the bow of a sharp vessel, which is placed in front of a loco-motive engine, and is forced through drifts sometimes lying above the top of the boiler. I have seen one of notive engine, and is noted that shall have seen one of the engines on our Great Western Railway attack and the engines on our Great Western Railway attack and with apparent ease. The frozen particles would fly like clouds of mist before it.

A correspondent of the Morning Herald con-trasts the publication of railway accidents in America and our own country:—Instead of a broadside, filled with horrible details, with verbatim reports of the inquests. &c., a few lines only serve to settle the whole affair. It is more a matter of seeming business with the Americans, whose appetites for lengthened news-paper particulars of such occurrences are not on a par with John Bull's taste for a wordy narrative of the whole affair, heightened with artistic descriptions of the mained and most scientific comments on the cause of the accident. If a railway accident occurs here, the directors and officials of the company are safe from being flayed alive, the survivors are thankful for their own escape, and the public seem to have arrived at a conviction that the railway companies have no direct interest in slaughtering passengers, neither is it very profitable to them to destroy their own engines and vehicles by collisions or other accidents. A short time since six persons were killed and no less than fifteen others wounded, by a collision on the Salem line-eight lines are made sufficient to the Salem inc—eight lines are made summent to convey this frightful occurrence to the public, and with this amount of information everybody seems perfectly satisfied.

At a meeting in Paris of proprietors of the AMIENS AND BOULOGNE, on the 2nd inst., the proposed modification of the statutes bearing on the number of the directors who should comprise the Board of direction was settled not to exceed eleven. With the exception of the permanent works through the fortifications at Abbeville and the passage at the river

Somme, where the structures are only temporary, the

line is at work throughout its whole length.

The Minister of Public Works has sequestrated the line from AVIGNON TO MARSEILLES, and the construction of it is to be carried on under the surveillance and direction of a government engineer.—The works at Saumur, on the Tours and Nantes, are carried on with great activity. Upwards of 1,000 labourers are at full work.

The Bureaux of the National Assembly examined

on the 3rd the bill relative to the line from Paris to Lyon, Avignon and Marseilles. The working of the Lyon line by the State was generally approved of, but it was suggested to farm it out in portions, on short leases. The credit of eight millions demanded for the first part of the works, on a branch line between Valence and Avignon, was objected to, the appropriation of that sum to the line between Chalons and Paris being recommended in its stead, as tending to enable the line to be sooner opened to the

public.

At the special meeting of the foreign shareholders of the WEST FLANDERS, at Bruges, in conformity with the statutes, the proceedings were as nearly as possible a repetition, as regards the reading of the report and resolutions, of those at the last meeting of the English shareholders, (see p. 813). The traffic from Ostend to Namur, Liege and West Flanders, over the Tournay and Jurbise line, just opened, is satisfactory.

A letter from Amsterdam states that the railway traffic to Rotterdam has fully realized the expecta-

tions of its projectors.

The receipts of the BERLIN AND ANHALT during the third quarter of 1848 were 146,430 thalers, showing a decrease of 80,070 thalers compared with the corresponding period of 1847; and the receipts of the BERLIN AND STETTIN line during the same quarter of the current year were less by 36,290 thalers than those of the third quarter of 1847. The receipts of the Berlin and Magdeburg during the month of October last were 61,315 thalers.

In the Frankfort Assembly, on the 17th ult., the following important articles of the constitution relating to German Lines were adopted:—the central power will have the right of legislation and control over the outer power will have the right of legislation and

control over the entire railway system in Germany, in so far as it shall judge necessary for the surety of the empire and the interests of the national com-The central power has the right to establish railways, or to authorize their construction, as well as to acquire by vote of expropriation the lines already existing. The central power can make use at all existing. The central power can make use at all times of the railways by means of an indemnity. At the time of construction or authorization of railways by particular States, the central power is authorized to look to the surety of the empire and the interests of national commerce. It also exercises the right of legislation and surveillance over the lines serving the general commerce, and necessary for the surety of the empire, as well as the receipt of tolls and other rights on the said lines.

#### Reports of Meetings.

DERBYSHIRE, STAFFORDSHIRE AND WORCESTER-SHIRE JUNCTION.

Dec. 7 .- Half-yearly Meeting, London .- Mr. J. M. MATHEWS in the chair.

On the motion being proposed for fixing the complace upon the question whether the names of Messrs. Spiers and D. T. Johnson, two of the late directors, should be inserted in the register, a previous meeting having by express resolution conductation. having, by express resolution, excluded them. It was, however, eventually agreed to fix the seal; and at a subsequent stage of the proceedings a substantive mo-tion was made by Mr. WESTON, and carried, rescind-ing the resolution of the previous meeting, as far as

it concerned the two names in question.
The report was read. It stated that-

The report was read. It stated that—
Since the last half-yearly meeting in June last, the directors had been unceasingly occupied in endeavouring to obtain payment of the call of 11. per share, to enable them to discharge the debts owing to the engineer and others for services rendered in obtaining the Act of Parliament. When the Board first commenced their labours upon this most essential part of their duty, they cause a letter to be written to every defaulter by the chairman; another was afterwards addressed to them by the secretary, and subsequently a third, by the solicitor. Very few shareholders, however, responded, and the Board was driven to the unpleasant necessity of commencing actions at law against a considerable number of shareholders—two of whom defended and went to trial, their defence being that the register scaled at the first ordinary meeting of the company was illegal, and that therefore the call could not be enforced. The company, however, obtained verdiets in both cases. Both the defendants subsequently moved the Court of Queen's Bench for new trials, but the judges unanimously refused to grant them, and declared the register good and valid. Considerable expense had necessarily been incident

upon these proceedings, and the directors had not yet succeeded in obtaining either the debt or costs. In one of the céeded in obtaining either the debt or costs. In one of the cases the defendant had become bankrupt, and the other had filed a petition as an insolvent debtor. Impediments had arisen to prevent the payment of the call by several other shareholders, by reason of which the directors had not been enabled to collect a sufficient sum to enable them to discharge the heavy debts incurred by their predecessors. Those debts, however, had been very considerably reduced; and with the moneys remaining to be received from shareholders in Scotland, and others, believed to be solvent, it was intended to reduce the claims as fast as the assets came in. The report then referred at considerable length to the bills of the late solicitor to the company, which, length to the bills of the late solicitor to the company, which, it appears, are under taxation, and to several other claims which the directors resist; but it was added that every opportunity would be taken to avoid unnecessary expense in litigation. The Board had used the utmost endeavours to arrange the various complicated affairs of the company, which had been left unsettled by the previous Board, and they were now beginning to see their way clear to that most desirable object; and when it should be accomplished they elt condident that the line might be made available and valuable to the company. Measures had been taken to keep down the office expense; the staff had been reduced, and the Cornhill premises were to be quitted for others at a considerably less rent. No new debt or engagement had been contracted; the expenses for the last twelve months had, indeed, been but trifling, and no money had been spent which could possibly have been avoided.

The balance-sheet presented the following fea-

which could possibly have been avoided.
The balance-sheet presented the following features:—Receipts, balance from May 1818, 78%. 11s. 5d.; calls, 1l. per share, 2,496l.; other items, 18l. 10s. 9d.; total, 2,593l. 2s. 2d.; expenditure, law, adversing, engineers, &c., 2,148k. 14s. 4d.; cash at bank, 444l. 7s. 10d.; total, 2,593l. 2s. 2d. Assets, balance at bank, 444l. 11s. 5d.; calls unpaid and not expected to be paid, 5,403l.; D. T. Johnson, 234l. 10s. 6d.; office furniture, 80l. Claims, sundry law bills and engineer's bills specified, 2,617l. 15s. 5d.d.
Strong dissatisfaction was manifested by sundry

Strong dissatisfaction was manifested by sundry shareholders, one of whom complained that he had been summoned to the petty court to pay up his calls, and another stated that shareholders had been let off who ought to have contributed their quota to the defalcation in the company's books.

The report was eventually adopted.

Mr. Mathews (the chairman), was re-elected a director, and Mr. Weston, who represents a number of country shareholders, was elected a director in the place of Mr. Brooks. The auditors were re-appointed.

BIRMINGHAM, WOLVERHAMPTON AND STOUR VALLEY.

Dec. 5 .- Adjourned Meeting, Birmingham .- Mr. J. F. LEDSAM in the chair.

The object contemplated was the sanction of the proprietors to a lease granted to the London and North-Western, at the rate of 4 per cent. upon the

capital advanced.

Mr. Knox, the secretary, and Mr. Ray, the solicitor to the Birmingham and Shrewsbury line, attended on

the part of that company, who are proprietors to the extent of one-fourth in the Stour Valley.

Mr. Ingleby read the terms of the lease. It appeared that the lease was to be for 1,000 years, at the rate of two-thirds the dividend, payable half-

yearly, in June and December.

A long discussion ensued. The London and North-A long discussion ensued. The London and North-Western, who had purchased the lease, contended that they had abided by their contract when they gave 4 per cent. upon the entire line; whilst, on the other hand, it was urged on the part of the Shrewsbury that the expenses of offices, management, &c., were not inserted in the original contract, and that they could not consent to give their sanction to the contract in its present shape, inasmuch as it fixed them with a deduction from the full dividend to which they conceived they were entitled in consequence of Both parties had submitted their these expenses. case to counsel.

Ultimately Mr. Scott (late member for Walsall) took exception to the power of the meeting to take any proceedings with regard to sanctioning the confirmation of the agreement, because sufficient notice had not been given consonant with the requirements of the Act.

The meeting consequently adjourned till the 12th inst.

ABERDEEN.

Nov. 29 .- Annual Meeting, Aberdeen .- Lord J. HAY in the chair.

The SECRETARY read the report of the directors, which entered fully into the present position and prospects of the company and gave a detailed account of the various measures that had been adopted, so as to improve the financial resources of the concern. Referring to the opening of the south end of the line, the directors stated that the revenue for the first seven months preceding the 31st of August, including the Arbrouth and Foriar, showed the gross receipts for that period to have been 14,0154. 9s. 104d., and

the expenditure 9.025l. 10s.  $6\frac{1}{2}d$ .; leaving a free surplus of 4.989l. 19s. 4d., exclusive of the mails, the rate for which had not been settled, but which, it was expected, would at least amount to 3.000l. directors expect to open early next year 25 miles further, being within 12 miles of Aberdeen. Reference was also made, in congratulatory terms, to the arrangement made with the Edinburgh and Northern and other companies, for the completion of the line under the newly-appointed engineers, Messrs. Locke and Errington, and it was also stated that a report on the whole financial affairs had been made up, from the commencement of the undertaking, by Messrs. Quilter, Ball, Jay and Crosbie, of London. From an abstract of the accounts it appeared that receipts on the capital account amounted to 784,847l., and from other sources, viz., loans, &c., 215,700l., making a total of 1,000,547l.; the expenditure had been within 5,024l. of that amount.

The CHAIRMAN, in moving the adoption of the report, said—It appears to me that our position is satisfactory. We have now the prospect of getting funds to open the line to a point near Aberdeen, without incurring great liabilities to the prejudice of the original shareholders, and there is a healthy and industrious population in the north of Scotland eager for the day of opening to pour into the dense popula-tion of the south their surplus produce. Those acquainted with the capabilities of our sea-coast for fishing stations, with the industry and perseverance of our agriculturists and the capability of our soil, cannot doubt that the Aberdeen, when carried on to cannot doubt that the Aberdeen, when carried on to Inverness, will fulfil the expectations of its most sanguine friends. With the city of Aberdeen at its northern extremity, containing 70,000 inhabitants, and a country beyond, in connexion with it, of 600,000, a railway, without a competing line, that costs under 24,000*l*. a mile, gives the hope that the result will be favourable. The Chairman then moved a series of resolutions approving of the report, re-electing the present directors and increasing their re-electing the present directors, and increasing their number from eleven to thirteen.

The SECRETARY, in reply to a question put by one of the shareholders, intimated that the sums paid on the forfeited shares averaged 35l.; but that the directors proposed only to forfeit such as would be a sufficient guarantee to the company from any In the case of the rest, means would be taken

for obtaining payment.

Mr. Spices, from London, appeared as the representative of shareholders in that city holding upwards of 2.000 shares. Referring to a rumour that certain of the directors were attempting to remove their liability for stock amounting to 180,000%, from themselves to the company, he said he had put some queries to the chairman, to which he had received answers, to the effect that a director of the company had made a proposition to the Board to guarantee him against loss for the purchase of 2,654 shares, on the plea that the purchase was made for the benefit of the company, but the Board would not entertain it, and declared the claim unfounded.

During a long and somewhat personal conversa-tion, Mr. J. BLAIKIE denied certain charges made by Mr. WESTLAND respecting these shares, and repudiated the motives ascribed; but, in answer to a question from Mr. PIRIE, admitted that had he made profit by the transaction he should have considered it his own.

Mr. F. EDMOND said Mr. Spicer made charges against the direction and management of the com-pany's affairs without a full knowledge of the circumtances in which the directors had been placed. they had committed an error, it was an error of judgment, and he felt persuaded that no direction could be more anxious than the present had been to promote the interests of the shareholders.

Sir J. DALRYMPLE said he had not been in the direction more than a twelvemonth, and was bound to state that with the exception of the single question on which the directors had appeared that day divided, they had acted together in the most cordial manner. He protested against the sweeping charges that Mr. Spicer had made against the directors on that occasion.

Mr. Spicer said the only interest he had was that which he felt as a shareholder, in common with other shareholders, who had a large amount at stake, and were determined to have the whole affairs sifted to the bottom.

After some explanatory conversation, the resolutions moved by the CHAIRMAN, adopting the report, with the exception of the recommendation to re-elect the directors, were agreed to; and, on the motion of Mr. SPICER, it was also resolved to meet on the 27th of December next, to re-elect a new Board, the present members being eligible for re-election.

BELFAST AND BALLYMENA.

Nov. 30 .- Half-yearly Meeting, Belfast .- The Hon. G. HANDCOCK in the chair.

The SECRETARY read the report, which stated that the arrangements for the carriage of goods traffic were nearly completed. The directors express deep regret that the passenger receipts had fallen short of their anticipations, and that the results of the halfyear were unsatisfactory. They had endeavoured to increase the traffic by reducing the fares on second and third-class passengers. The result of this experiment (commencing the 1st of October) had shown a considerable increase in the number of passengers, but as yet not an increase of revenue; and, as far as the directors were able to form an opinion, no advantage had accrued to the company; but they were still inclined to hope a favourable result would follow, by affording every facility consistent with their duty to the proprietors, and at such rates of charge as they hoped would, ere long, induce a much larger number of persons than at present to adopt the line as their means of transit. To increase the merchandise traffic the directors had reduced their scale of charges for goods and cattle, and they confidently expected a large increase of both descriptions of traffic. The harge increase of both descriptions of trams. In half-year's receipts amounted to 12,358/. 5s. 10d.; the working expenses to 5,317l. 11s. 5d.; the interest on loans to 3,036l. 4s. 3d.; leaving a balance in favour of revenue of 4,004l. 10s. 2d.; out of which the directors recommend a dividend of 10s. per share, payable on the 14th of December, on all calls paid up and enti-The balance to be reserved would tled to dividend. be about 500l., exclusive of the amount to be received for the conveyance of the mails. No arrangement had yet been come to with the General Post-office; the matter would have to be settled by arbitration.
In concluding their report, the directors state that no accident had occurred in working the line whereby either life had been lost or any injury sustained by the 225,053 passengers who have travelled over it.

Mr. LANYON, the engineer, in his report stated that all the works are now very nearly completed, and that everything had been executed in a satisfactory manmer. Little now remains to be done on the line by Mr. Dargan. It will be satisfactory to the shareholders to know that the amount of the contract originally made with him will be more than sufficient to cover the cost of the whole of the work he has executed, even including the extra fillings, masonry, &c., at the several stations. The roadway is now in very good working order. Very little annoyance has been experienced from slips or subsidence.

The CHAIRMAN moved the adoption of the report, which was seconded by Mr. E. Jackson, of Manches ter, who, while he sympathised with the disappointment of the directors in the merchandise receipts, said he was convinced of the commercial advantage of low fares. Their disappointment would, however, lead to economy, to a due attention to business, and would necessitate a prudence and caution in their management, so necessary to young beginners. The declaration of a dividend, however small, was doubtless acceptable to many of those investing their money in this concern.

Mr. MAUNDER had offered an apology for his attacks upon the directors if they should be found

unjust.

Mr. R. Workman complained that they had too many first-class carriages, and suggested that the third-class carriages should be covered in the winter

Mr. MAUNDER concurred with the remarks of Mr. Jackson. He was ready to make an apology if he had been too severe. He moved the following resolution :-

That, considering the fact that by the proprietors of the Belfast and Ballymena, the capital required for its completion was estimated at 385,000..; that, by the same prospectus, it was proposed that one-third of the above amount should be borrowed, and that the shareholders would only be required to pay up 256,686.. 13c. 4d., or 33.. 6c. 8d. per share; that, by the same prospectus, the traffic was estimated at 57,303.. per annum, and that subsequently, by the evidence of Sir J. Macneill and other gentlemen, the sum of 383,000.. was considered amply sufficient to complete the line with a double set of rails, and at the same time the estimate of traffic was advanced from 57,303. to 78,324. per annum; that, by the accounts now presented, it would appear that the company have not only called up the whole capital of 385,000.., but have borrowed a further sum of 105,270.., and have also several liabilities still unliquidated; that the traffic realized during the last six months is only one-third of the amount per annum estimated by Mr. Lanyon; it is therefore expedient that a committee be appointed to examine the account, in order to ascertain the cause of these serious discrepancies in the estimates of the expenditure and traffic, as compared with the prospectus and results; and also to advise with the directors as to the improved future management of time line, with a view to the developement of its resources and the prosperity of the company. That, considering the fact that by the proprietors of the prosperity of the company.

Mr. BELOE seconded the amendment.

Mr. G. MACARTNEY then went through the charges against the directors. He challenged the production of a better set of officers, either for attention, civility or efficiency, from any line in the kingdom. posed of the assertion as to their buying landed property at too high a valuation, which was affixed by arbitrators. He showed that the Irish proprietors were the most numerous. In contradiction to the assertion that the line was an English one on Irish ground, the chairman of the company and his family held 160 shares, instead of thirty-five, as affirmed; and the other allegations as to the loans of the comany and their contracts were also entirely refuted. He reviewed with numerical statements the estimate in the original prospectus which had been made a means of assault, and showed that their increased expenses resulted from causes over which they had no p control. After remarking that, to make the Belfast and Ballymena a double line, it would cost only 1,750L more, and after dwelling upon the favourable results which such a table presents, he made a few passing observations highly complimentary to Mr. Lanyon, the engineer, who, it was insinuated had been overpaid, but who, Mr. Macartney contended, had not obtained all he had a right to claim. He went on to make an analysis of the outstanding liabilities in the capital account. By the report the liabilities are stated at 31,756l. 15s. 6d., the greater portion of which is in the balance of Mr. Dargan's account, which has not yet been settled, and on which the engineer states there will be a considerable saving. To meet these liabilities the outstanding sum due on the seventeenth, eighteenth and nineteenth calls amounts to about 45,946L, of which about 10,000L. has been paid up since the publication of the report, leaving only about 34,000l. to be paid up, of which the 355 forfeited shares form a part, so that there will probably be only about 1,946% of a loss upon the original capital of 385,000%. He affirmed (and supported his affirmation by traffic data) that their prospects were highly satisfactory, and concluded by asking for a vote stigmatizing Mr. Maunder's charges

as utterly untenable and groundless.

Mr. Beloe could not help complimenting Mr. Macartney on the lucid and satisfactory manner in which he had gone through and detailed the capital and revenue accounts. In justice, however, to himself and Mr. Maunder, he felt it necessary to say that his authority for making the statement in the amendment regarding the estimated amount of traffic on the line was founded on the evidence of a gentleman in Mr. Lanyon's office, Mr. Young, who testified to the accuracy of the estimates. The only really serious charge brought against Mr. Maunder was that he stated without inquiry that the chairman held only thirtyfive shares. Now such is not the fact. Mr. Maunder applied to the company for a list of the shareholders, and on that list the Hon. G. Handcock was returned as holding only thirty-five shares. Mr. Beloe having expressed his opinion that money obtained at 6 per cent., considering the times, was reasonable, advised Mr. Maunder to withdraw his amendment, as he had no doubt that the directors were justified in the course which they adopted.

After some further conversation the CHAIRMAN

put the amendment, when four voted for it, and fifty-five for the original motion.

A sum of 300l. was voted as remuneration to the directors.

Mr. MAUNDER said he had merely re-echoed in his letter the rumours furnished by the Belfast townspeople.

After some remarks from Mr. DAVISON, severely reflecting on Mr. Maunder, Mr. MAUNDER proposed to withdraw his letter; but this step was refused, as it was considered necessary for Mr. Maunder to write a public apology, (which he is reported to have since made).

The CHAIRMAN at some length deprecated Mr. Maunder's offer at the eleventh hour. In addition to maligning the directors (said the chairman), the clerks, the porters, all the servants have been included in these charges. Now, on this point I may state that not many days since I happened to be travelling on the line in company with Mr. Shafto Adair, an English gentleman, and son of Sir R. Adair, who holds property in this county, and he expressed a wish that he could bring over some of the English directors, that they might see the efficiency, the cleanliness, and the civility of all on the line; and he added that every portion of it was in the highest degree creditable to all concerned in its management. If any proof were wanting of the efficiency of all our officers it would be found in this—that although 225,000 passengers have travelled on the line since it was opened, there had not been a single accident, nor

was misconduct attributed to any of our officers.

It was then proposed that the ballot should be taken for directors in room of those who vacated by rotation.

Mr. Adams said he thought they had better now, in order to reduce the directory gradually, appoint but three at this meeting; and at the next only so many as would bring the number down to fifteen.

The CHAIRMAN said, if Mr. Adams would put the substance of his remarks in the form of a motion, he would, of course, receive it.

Mr. Adams (after consulting with some gentlemen) said, from what he found to be the opinion of so many in the room, he would not trouble the chairman with any motion, or other remark.

with any motion, or other remark.

The ballot was then proceeded with. It resulted in favour of the Hon. George Handcock, Mesers. John M'Neile, John Harrison, Joseph Dyas, John Jackson, Thomas Greg and John Dunville.

The chair was then taken by Mr. MACARTNEY, on the motion of Mr. GRIMSHAW, seconded by Mr. HARRISON, and a vote of thanks, carried by acclamation, was accorded to the chairman.

CORK, BLACKROCK AND PASSAGE.

Nov. 30.—Half-yearly Meeting, Cork.—Mr. T. Lyons in the chair.

Mr. Dunbar, the Secretary, read the reports.

The directors have to regret the continued distress of the country, which has damaged every interest and checked the progress of all public undertakings; yet notwithstanding the recurrence of the potato blight and its fatal effects, your directors have steadily carried on the construction of the works along the line during the summer and autumn months; and had the results of the harvest realized the promises of spring, the line from the Victoria-road to Ardmore would now have been all but completed; as it is, there has already been paid for works and land nearly 25,000l.; the entire of the latter to Ardmore has been settled for, and is in the company's possession. The directors have hitherto made calls small in amount and at distant intervals, but the shareholders must now perceive how important it is that an effort should be made by them to have the line finished during the approaching season (as with sufficient funds could easily be done)—at all events by the close of next autumn. Italf the capital of the company having been called up, your directors hope that such of the shareholders as are in arrear will see the urgent necessity of paying up their calls, so as to place the directors in a position to exercise the borrowing powers of the company. As required by the Act of l'arliament five directors and one auditor will to-day retire from office, but are all eligible for re-election at the option of the shareholders.

at the option of the shareholders.

The statement of receipts and expenditure from the commencement of the undertaking to the 28th of October showed the account to stand thus:—Total receipts, 45,089l. 3s.; total expenditure, 37,664l. 2s. 4d.; balance to credit of company, 7,425l. 0s. 8d.

The engineer's report was as follows:—
Ibeg to send you the following report on the state of the

The eligineer's report was as follows:

I beg to send you the following report on the state of the works to the 30th of October. The greater part of the embankment through the city park is now finished, with the exception of 233 yards in length. It is to the proper height, and the slopes are dressed off and sown with grass seed. The embankment next Blackrock-hill is in a very forward state. It is made up from the cutting through Blackrock in this embankment there is to be a 7-ft. culvert, to form which the contractor has gone to a great expense in constructing an embankment outside, and putting in a temporary sluice to keep off the tide. A portion of the timber pling for the foundations of this culvert has been driven. The rock cutting through Blackrock-hill is progressing rapidly; it has been excavated to the proper level for a length of nearly 500 yards—42.936 cubic yards of rock and 11.789 cubic yards of carth having been removed, averaging 26 ft. in depth. The contractor bas laid down rails in this cutting within the last few days, and the works will now be carried on with renewed vigour. In the embankment along the Passage-road considerable progress has been made, the greater part having been formed from side cutting: it is nearly all to the proper height, extending for a length of 1.633 yards, but not yet quite to the full width. It averages 14ft. in height, and nearly 100,000 cubic yards of carth have been already put into it. Nearly all the land that the contractor is in possession of has been fenced off according to the several agreements with the different proprietors. There have been 700 men on an average employed on the works through the entire summer and 80 horses.

Mr. Lakee complained of the amount of arrears.

Mr. Large complained of the amount of arrears. Dr. M Even thought their general expenses were not inordinate, but said that there was a rumour that rich shareholders had not been pressed for their calls so urgently as needier parties.

After some conversation, Mr. Dunbar, in reply to

After some conversation, Mr. Dunbar, in reply to an assertion of his not having paid his calls on 300 shares, declared himself as possessor of only 50, on which he had paid up all required. He would have been glad to have held more if he could have afforded it, for he was thoroughly satisfied with their property.

been grad to have ned more it he could have anorocal it, for he was thoroughly satisfied with their property. Dr. F. Lyons explained their present arrears. The total amount was 13,000%, of which 7,000% would be recovered. No system of favouritism existed in their measures to enforce payment. The directors granted a licence to honest people, but followed up those disclaiming their responsibility. The construction of the line was in operation from the Victoria road to Ardmore; and they had got possession of the convent lands, and before two months the line would be cut through the peninsula of Blackrock; and they had arranged with the persons holding land beyond Ardmore with one solitary exception. Nothing impeded

the completion, but the badness of the times and the want of money. The works were contracted for far within their estimate, and the contracts for rails, &c., were astonishingly low. So that in place of requiring the capital originally stated they would have the line finished for less than 100,000%. He might have feared that the engineers made grave mistakes in their calculations, but now he found that everything could be done for much less than they were estimated at. All the directors had paid every shilling on their shares except one gentleman, who owed on the last call 30s, on 40 shares, and he said he would not pay until the day after the meeting of the shareholders. He was satisfied the line would be remunerative, for it would be completed for less than any railway similarly circumstanced. The only one which could compare with it was the Dublin and Kingstown which cost 40,000% a mile, and notwithstanding that it was the most remunerative in Ireland. The only advantage it had over theirs was that it had a large city at one of their termini, but the Cork and Passage would have the advantage of it, by having Cove, Passage, and Monekstown at the back of one of the remini. A receive of 200% a-week would pay them 5 or 6 per cent. by taking the cost at 180,000%, but when it could be completed for less of course the per centage would be greater.

Mr. Seward thought the directors well entitled to praise for their prudence and caution. As the matter stood there was not a shareholder whose shares were not worth 25 per cent more to him at present than when he originally joined them, for they entered under the idea that the line would cost 130,000l. while it would only cost 100,000l. That made the shares 25 per cent more valuable.

Mr. Lakke objected to their borrowing money,

Mr. LARGE objected to their borrowing money which Dr. Lyons had hinted at.

In answer to several shareholders, Dr. Lyons again defended the conduct of the directors, who worked earnestly and without remuneration. He himself was out of pocket considerably by his personal travelling expenses. The shareholders should support their directors, and not carp at and bring futile charges against them.

Mr. Seward intimated that there had been an undertaking entered into on the part of the directors not to sell any of their shares until their Act was obtained and the first deposit paid up, and to show their confidence none of them did so. There was no instance of such an undertaking being kept in any other company. So far from the conduct of the directors being impugned, the shareholders at large felt that the directors stood to their interest as well as if it was their own private business. He begged to ask the secretary how many shares the directors and officers held, and that would show their interest.

Mr. Dunbar replied that the directors and staff

held 1,300 shares, or a fifth of the entire.

Mr. Sugrue, as a director, was far from being displeased with the observations of the shareholders, for it gave the directors an opportunity of affording them every explanation. From what he had heard he was inclined strongly to hope that their loan would be granted if they applied for it. If it was got on reasonable terms, and the Commissioner of Public Worksgave it on the terms proposed by Government, to be repaid in twenty-two instalments of 6 per cent. it would be of advantage, for it would prevent the necessity arising of making rapid calls when it might be incorporated to pay them. Some of the most monied of the directors increased the number of their shares when they were thrown on the market, and invested a large amount of capital on them.

a large amount of capital on them.

Mr. GOULD stated that from his experience as auditor he considered the amalgamation of the offices of secretary and accountant would be incompatible. The manner in which the accounts were kept were a credit to any one. Mr. Dunbar was a very efficient officer, and Mr. Olliffe's books were a credit to him.

Mr. SMITH found that in place of the directors and staff holding but a few shares, that they held 1,300, on which all had been paid up except on shares held by one gentleman, who was good security for a very large sum.

Mr. LARGE felt greatly annoyed at not being shown a list of the defaulters, and if law would enable him he would take steps to get possession of it.

would take steps to get possession of it.

Dr. Lyons did not think that the shareholders would wish them to depart from the practice of other companies. Were they to publish what might damage the prospects, and ruin the fortunes of many individuals! No means were left undone, where a shilling is due, to recover it, and they would follow that up against the shareholders in arrear until they paid up everything, or proof was given of their insolvency.

everything, or proof was given of their insolvency.

Mr. Seward remarked that if Mr. Large's proposition was carried into effect the company would be broken up.

Mr. Sugrum begged leave to ask any gentleman

who held debentures in the Bank of Ireland, Provincial, or National Banks, whether if they went into those banks and demanded to see who owed money there, would they get the information they required!

Mr. JEFFREYS assured the shareholders that every care was taken of their interests; and so far from wishing to show a preference, it was with the greatest reluctance the directors sued at all.

The Secretary said that their next business was

to elect five directors in the room of Messrs. F. B. Beamish, Simeon Hardy, Robert Hall, W. K. Rogers, and H. O. Seward, who retired by rotation; and an auditor in place of Mr. Walter Morrogh.

Mr. D. MURPHY moved the re-election of all those gentlemen.

Mr. SMITH seconded the motion.

Dr. M'EVER begged to assure the meeting that in the observations he had made he had no object but the observations he had made he had no object but the benefit of the company. When it was recollected how mismanaged some of the railways in this country were it was no wonder that shareholders should be anxious about their shares. He thought they should infuse new blood into the Board, and elect one man at least from the body of the shareholders. There was a gentleman present who held a large number of shares, and who the shareholders had great confidence in, Mr. J. Harty, and he moved that he should be elected in place of one of the five gentlemen retiring.

Mr. LARGE seconded the motion.
Dr. Lyons remarked that all the gentlemen retiring were useful members of the Board. He understood that Mr. Hickie, who from his residence in Dublin could not attend, was about to send in his resignation, and then the directors could elect Mr. Harty in his

This was agreed to, and the retiring directors and auditors were re-elected.

Mr. Connell did not intend to intrude on the meeting, but as a shareholder in the concern and one who took a great interest in it, and having a knowledge of the price of shares from his position in Cork, he thought it right to state that thousands of railway shares were pressed on him to sell, and he never knew a single Cork, Blackrock and Passage that never knew a single Cork, Blackrock and Passage that did not sell considerably above the average price of other shares. He got shares of other companies on which 35l. was paid up, and the owners would now dispose of them for 2l. 10s.

The CHAIRMAN signified his intention of retiring from the station of chairman, in consequence of his inability to attend so closely as he could wish to the duties of

The meeting was made special, for obtaining sanction to their borrowing a certain sum of money to complete the works.

The CHAIRMAN moved that the directors be authorized to borrow 43,000*l*., if deemed expedient, when half the subscribed capital was paid up.

Dr. Lyons remarked that the sum of 43,400*l*. was

stated in the resolution as it was the amount men-tioned in their bill, but they did not contemplate borrowing half that sum. When they had called in 21. 10s. more, half their capital would be paid up, even if they threw overboard the arrears; and they wished to be in a position to enter into a communication with the Government for the loan of 25,000l. on the easy terms they proposed. They had no doubt the easy terms they proposed. They had no doubt but that they would be able to obtain sufficient money from the shareholders to finish the line, but they would be enabled to complete it more quickly by getting the loan, and that would be a point of true economy.

The resolution was then passed, Mr. LARGE being the only dissenting shareholder.

SOUTH DEVON.—Dec. 5.— Meeting of Shareholders, Bristol.—Mr. Unicott in the chair.—The Chairman, in commencing the proceedings, said that the object of their meeting was to ascertain the feelings of the shareholders with respect to the statements contained in a pamphlet published by Mr. Gill, the chairman, and the propriety, or otherwise, of adopting the proposition of Mr. Gill, which was, "that before the atmospheric system is (says Mr. Gill) irrevocably abandoned, it would be a wiser course to hazard a further constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the constitution of the const ther expenditure of a sum of about 6,000%, rather than incur the penalty of a positive loss of at least 300,000l. added to the necessity of a further expenditure of from 300,000l. to 400,000l. The total amount that from 300,000% to 400,000%. The total amount that would be hazarded (the pamphlet continues) by a further experiment for twelve months may thus be stated—6,000% if it succeeds, or 4,000% should it prove unsuccessful. From this it is evident that, with the expenditure of a sum of 6s. per share, if 6,000% be required, a further experience of this system for twelve months under the most favourable circumstances may be obtained, which in all probability will prevent a loss of 300,000% (equal to 15% per share), and place this undertaking in a position from which

the most sanguine hopes as to its future success might be realized."—A desultory conversation ensued in the course of which the whole of the shareholders present appeared anxious to try the experiment.

—One Shareholder, however, wished to know if they had any guarantee that the expenditure would be confined to that amount.—Mr. T. R., Hutton then noved, "That from the statements contained in Mr. Gill's pamphlet, it is highly desirable for the interests of the shareholders, that a public meeting should be called, in order that the statements contained in Mr. Gill's pamphlet should be satisfactorily explained for the guidance of the shareholders as to the propriety of expending the further sum of 6s, per share, as mentioned in the pamphlet, so as to test the efficacy of the atmospheric principle of traction, before finally abandoning it and disposing of the materials.—Mr. W. J. Mogg, having seconded the resolution, it was put and carried unanimously, as was also a resolution requesting the directors to summon a special meeting to consider the subject.

### CORK, BLACKROCK & PASSAGE.

At the HALF-YEARLY ORDINARY GENERAL MEETING of the Cork, Blackrock and Passage Railway Company, held this day, pursuant to Advertisement, at 21, Warren's-place, in the City of Cork,—

21, Warren's place, in the Chy of Coll.,
THOMAS LYONS, Esq. J.P., Chairman of the Company,
in the chair,—

The following Resolutions were passed, viz. :-

That the Seal of the Company be affixed to the Registry

That the Seal of the Company be affixed to the Registry of Sharcholders now presented.
That the Reports and Balance-sheet, just read, be adopted, printed and circulated among the Sharcholders.
That the five Directors and one Auditor, who have now retired from office, be re-elected.
That the Ordinary Meeting be now adjourned, proformá, for five minutes, to permit the Special Meeting being held.
At a SPECIAL MEETING of the Cork, Blackrock and Passage Italiawy Company, held this day, pursuant to Advertisement, at 21, Warren's-place, Cork, for the purpose of Exercising the Borrowing Power vested in them by the Act of Incorporation, intituled, 'An Act for making a Railway from the Borough of Cork, through Blackrock, to the Town of Passage West,'—
It was Resolved,—

It was Resolved,—
That the Directors be authorized to borrow such sum and

sums of money, not exceeding in the whole 43,330d., as they may deem expedient, when, and so soon, as one-half of the subscribed capital shall have been paid up.

The Ordinary General Meeting was then resumed, and the Chairman having been requested to leave the chair, Henry Osborne Seward, Esq. was called thereto.

THOMAS LYONS, Chairman.

It was proposed by DANIEL MURRINY, Esq., of Belleville, and seconded by PATRICK KERIOF, Esq. M.D., of Cork,—
That the marked thanks of the Meeting be given to Thomas Lyons, Esq., for his impartial and dignified conduct in the chair. HENRY OSHORNE SEWARD, Chairman.

JOSEPH DUNBAR, Secretary.

Nov. 30, 1843.

#### BELFAST AND BALLYMENA.

SEVENTH HALF-YEARLY GENERAL MEETING OF THE COURT OF PROPRIETORS.

At a MEETING of the Belfast and Ballymena Railwa Company, held in pursuance of the Act of Incorporation, at Belfast, on the 30th of November 1848,—

The Hon. GEORGE HANDCOCK in the chair,-

2. Moved by the Hon. GEORGE HANDCOCK, seconded by

S. K. MULHOLLAND, Esq.,—
Resolved,—That the tenement No. 11, Donegal-place, Belfast, in which the Shareholders are now assembled, be deemed, for the purposes of this meeting, the office of the Company, having been selected from want of space in the ordinary office.

3. The Seal of the Company having been affixed to the Register of Shareholders, and the Report of the Directors

4. Moved by the CHAIRMAN, seconded by JOHN JACKSON.

Esq., of Manchester,—
That the Report of the Directors now read, and the Statement of Accounts thereto annexed, are deemed most satisfactory, and that the same be adopted by this meeting and circulated amongst the shareholders.

Amendment thereon.-

Amendment thereon,—
Moved by JOSEIR MAUNDER, Esq., of Liverpool, seconded by HENEY CHRISTIE BELOE, Esq.,—
That considering the fact that by the prospectus of the Belinst and Ballymena Railway Company the capital required for its completion was estimated at 385,000.;—
That by the same prospectus it was proposed that one-third of the above amount should be borrowed, and that the shareholders would only be required to pay up 256,6663.
13. 44., or 384.6. 86. per share;—
That by the same prospectus the traffic was estimated at 57,3031. per annum; and that subsequently, by the evidence of Sir John Macnell and other gentlemen, the sum of 385,0008. was considered amply sufficient to complete the line with a double set of rails, and at the same time the estimate of traffic was advanced from 57,303. to 78,324.

per annum ;—
That by the Accounts now presented it would appear that

That by the Accounts now presented it would appear that the Company have not only called up the whole capital of 385,000L, but have borrowed a further sum of 105,270L, and have also considerable liabilities still unliquidated;—
That the trailer catized during the last six montha is only one-third of the amount per annum estimated;—
It is therefore expedient that a Committee be appointed to examine the Accounts, in order to ascertain the cause of these serious discrepancies in the estimates of expenditure and traffic, as compared with the prospectus and results; and also to advise with the Directors as to the improved future management of the railway, with a view to the developement of its resources and the prosperity of the Company. Company.

On a division-

For the amendment . . . 4
For the original motion . . 55 Majority .. . . . 51

5. Moved by Robert Thompson, Eaq., seconded by the Rev. R. W. Bland, -

Resolved,—That the thanks of this meeting be given unanimously to the Chairman, Vice-Chairman and Directors of this railway company for their indefatigable exertions and unremitting attention to the interests of the shareholdera

6. Moved by William Chaine, Esq., seconded by James
Boomer, Esq.,—
Resolved,—That Richard Niven, Esq. be elected one of
the Auditors for the ensuing year.

the Auditors for the ensuing year.

7. Moved by A. J. Macrory, Esq., seconded by Andrew Micholland, Esq.—
Resolved unanimously,—That the charges preferred by Mr. Maunder in his correspondence with the Board of Directors and in his circular to the English shareholders are groundless, and unsupported by any evidence, and calculated unjusty to prejudice the railway in public estimation, and to damage the property of the shareholders.

8. Moved by Grore Greer, Esq., seconded by John White, Esq.,—
That a sum not exceeding 300l. be placed at the disposal of the Directors, as a remuneration for their services for the last twelve months.

9. Moved by Robert Grimshaw, Esq., seconded by John

HARRISON, Esq.,Resolved,-That the Hon. George Handcock do leave the chair, and that George Macartney, Esq. be called thereto.

A ballot having been taken, the following gentlemen were elected Directors:—The Hon. Geo. Handcock, John M. Neile, John Harrison, Joseph Dyas, John Jackson, Thomas Greg and John Dunville, Esqra.

10. Moved by Robert Grinshaw, Esq., seconded by William Gray, Esq.,—

That the cordial thanks of this meeting be given to the Hon. George Handcock for his dignified and impartial conduct in the chair this day; and for the zeal, talent and gentlemanly manner in which he has conducted himself in his capacity as Chairman of the Board of Directors.

GEORGE MACARTNEY, Chairman.

# MEDICAL, INVALID, AND GENERAL LIFE ASSURANCE SOCIETY.

DIVISION OF PROPITS.

The ANNUAL GENERAL MEETING of the Proprietors assembled at the Chief Office, 25, Pall Mall, on Thursday, the 30th November, to receive a Report of the progress of the Society during the past year, and to investigate the calculation of the profits of the Society during the first seven years, with the view of deciding on the amount of bonus to be distributed among those Policy-holders who participate to the crefits.

be distributed among those Policy-holders who participate in the profits.

On the motion of John Stirling Taylor, Esq., seconded by George Gun Hay, Esq., the chair was taken by Benjamin Phillips, Esq., F.R.S.

The advertisements in the Gazette and the Times convening the Meeting having been read, Mr. Neison (the Actuary) read the minutes of the last meeting, which were duly confirmed.

read the minutes of the last meeting, which were day, or firmed.

The Meeting then proceeded, by the direction of the Chairman, to the election of Directors to supply the vacancies caused by the retirement of two Directors by rotation, in accordance with the Deed of Settlement. The lot having fallen on Benjamin Phillips, Esq., F.R.S. and Jas. Whishaw, Esq., F.S.A., those gentlemen, being eligible, were proposed for re-election, and returned without opposition.

The Chairman stated that the two Auditors retiring from office were James Parker Deane, D.C.L. and Martial Lawrence Welch, Esq., who, being eligible, offered themselves for re-election, and no opposition being offered, were duly re-elected.

The Actuary read the accounts for the twelve months ending the 30th of September, 1848, and the Auditors' Report, which were duly received.

The following Report of the Directors was then read by the Actuary :-

Directors' Report.

"In presenting to the Shareholders a statement of the progress of the Society since its last annual meeting, the Directors are glad to be able to show a steady increase of business during the last year. The number of Policies completes has a statement of the progress of the first six years was all a manual of the steady increasing from 161 Policies in the first year, to 368 in the activation of the steady of the steady of the first six years was all a manual of the steady of the first six years was all a manual of the steady of the first six years was all a manual of the steady of the first six years was all a manual of the steady of the first six years was all a manual of the steady of the first six years was all a steady of the first six years was all a steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady of the steady

ingly been prepared, from which it appears that the Society can safely and fairly add a bonus of 5a to each share of the proprietary stock of the Company, and this the Directors recommend to be one.

"As to the bonus which the Directors recommend should be added to the policies effected on the participating scale, clause 106 of the Deed of Settlement declares that two-thirds of the whole surplus must be added to those policies entitled to profits; but did not be almost impossible to embods in declare; but since it would be almost impossible to embods in declare; but details of each policy, the refer to be seen that the amount of bonus as cording to their respective interests.

"This rate of bonus shows the advantage of effecting policies in a company constituted like the present. In illustration of this it may be sufficient to compare the result with that which would have been attained had the company been founded on the principles of a mutual assurance society. It appears that about one-third only of the existing policies in this company are effected on the participating scale; and from the fact of the office assuring diseased lives, there is reason to believe this ratio will continue a distinctive feature of its business. As already stated, two-third of the whole profits of this Company wever, the Company been established policies and all called a purely mutual basis, every Policy-holder must necessarily have shared in the profits; consequently, one-half only of the present bonus could have been appropriated to each policy. Hence, without disparaging the principle of mutual assurance, the advantage to begained by those effecting profit policies in a Company like this must be obvious.

"The Directors have only further to remark, that they will continue to forward as much as possible the objects of the Society; and that, while they have a due regard to economy in the expenses of management, they will not omit any outlay which may tend to promote the immediate or ultimate prosperity of the Company.

This Report

mode he had adopted in calculating the profits of the Society:—

"In order to determine the assets and liabilities of the Society, with a view to the declaration of a bonus to the Proprietors and Policy-holders of the Society, it was necessary, in the first place, to fix on certain data on which to base the calculations. The first and most material point was the rate of mortality to which the lives assured by the Society is subject. As far as research healthy lives, little difficulty could exist, as the experience of fite offices and other collateral cult with the country generally; but in respect to discussed lives, a consideration of all the facts bearing on the subject, including the experience of the Society itself, led to the conclusion, that the safets course would be to follow the tables for the particular diseases on which the lives were originally accepted, the particular diseases on which the lives were originally accepted. The next point of importance arising was the rate of interest that may fairly and safely be expected to be realized over a series of years by the investments of the premiums and funds of the society, and on this point it was deemed best to take a moderate view of the question, and that although a higher rate of interest might in general be hoped for, it was deemed beat to take an moderate view of the question, and that although a higher rate of interest might in general be hoped for, it was deemed beat to take an moderate view of the species of sake of future retween the most prudent course to make a separate and independent calculation for each policy. To exhibit the results also in a still more distinct and satisfactory

form, all policies of the same kind or form of assurance are grouped together on sheets by themselves; in every instance, however, keeping the policies entitled to participation in the profits in different classes from those of the non-participating policies. This having been done, and, as already stated, a separate calculation made for each policy, the results of each class or group were summed up, and will be found set forth in the following sheet. In determining the liabilities existing under the policies, &c., no further remarks are called for; but in the estimation of the assets it is necessary to remark, that if the gross premiums were valued without making any allowance for the expenses of management, and other contingencies, that the results might be fairly charged as being overstand. The nett premium was therefore the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of th

emote the Directors to assign a bonus of 5s, to each share, and a reversionary bonus on the amounts assured by the participating policies of all classes, healthy and diseased, averaging 134 per cent. Per annum.

"A curious result is arrived at here. From the fact that about one-third only of the existing policies are on the participating scale, the preceding bonus can be set apart; but if all the policies shared in the profits the bonus would average only 60 per cent, or about 12s, per cent, yearly added to each policy. This ratio of participating to non-participating policies is likely, for some time at least, to remain a distinctive feature of the Society's business, the circumstance of assuring diseased lives, which operates in two ways to produce the result: first, from the high rates of premium required under disease, those effecting policies are induced to select the cheaper scale without profits: and, second, there appears to be a much greater tendency to allow policies on diseased lives to lapse. Of all the policies effected on healthy lives, from the commencement of business to the 34th of June of the present year, about one-fourth have lapsed, but of the diseased lives four-tenths, or 40 per cent, have lapsed. The consequence of this, it is evident, must be to very materially augment the bonus assignable to existing participating policies will assert and the second of the present year, and the second of the present of the person of the present of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the person of the p

From the mass of figures and details in this Report, the following abstract has been made, to show the effect of this bonus on healthy lives, at different ages, and also on one of the most numerous groups of diseased lives, namely, consumption .-

George Henry Pinckard, Esq., the Actuary of the Clerical, &c. Life Office, recommended that the profits mentioned in the Actuary's Report should not only be applied as an increase to the sum assured by way of reversionary bonus, but be applicable also to the reduction of premiums.

The Actuary stated that, although the report of the profits of the Society and their application only recommended the profits to be declared by way of increase to the sum assured, still if any Policy-holder wished his bonus to be applied by way of reduction of premium, every facility would be afforded for carrying out his wish.

The Mesting having adouted the recommendation of the

The Meeting having adopted the recommendation of the

The the thinks of the Meeting should be given to the Directors for their past management of the affairs of the Society, which, being seconded by WM. Vose Pickett, Esq., was

The CHAIRMAN returned thanks for the Directors and

assured the Proprietors that they were influenced by an earnest desire to promote the welfare of the Society.

It was moved by HENRY SCOTT TURNER, Esq., and seconded by Joseph Whitehouse, Esq.,—

That the thanks of the Meeting should be given to the Auditors or their past services. for their past services, which, being carried,—

Dr. Drank returned thanks, and stated that the Auditors would pursue the same course which had already met with the approval of the Proprietary, vigilantly and independently, and hoped they should thus merit the continuance of their approbation.

It was moved by Dr. Deane, and seconded by Martial L. Welch, Esq.,— That the thanks of the Meeting should be given to Francis G. P. Neison, Esq., the Actuary of the Society, for the zeal and ability displayed in the performance of the duties of his office. Mr. Neison returned thanks.

THOMAS COATES, Esq. stated that it afforded him great pleasure to bear testimony to the talents which the Chair-man always exercised on behalf of the Society, and proposed.

That the thanks of the Meeting should be given to Benjamin Phillips, Esq., for his able conduct in the chair, which, being second carried unanimously. being seconded by CLAUDE PERRING, Esq., was

Mr. PHILLIPS, in returning thanks, stated that as he had undertaken the office of a Director, he felt it to be imperative on him to perform its duties as efficiently as he could, and that as long as he held that office he would continue to

The Meeting was then dissolved by the Chairman leaving

MIGRATION.—UNITED STATES of AMERICA, in the State of GEORGIA.—FOR SALE, 120,000 Acres of FREEHOLD LANDS, in large or small lots, The Lands lie between 31 and 32 degrees north, distant from the Atlantic Ocean 120 miles, and at an elevation of 400 ft, above its level, free from swamps, climate salubrious and healthy, distant from England 18 or 20 days' sail. They are bounded by the navigable rivers the Flint and the Oemulgee: by the former a communication is open to the Gulf of Mexico, by the latter to the Atlantic; a Railroad, two-thirds finished, passes through the Lands, which will connect both these rivers. Every information may be obtained relative to the above, &c, from RICHARD KEILY, Esq., 1, Royal Exchange-buildings, London.

#### RAILWAY TRAVELLER'S COMPANION. By FELIX SUMMERLY.

TRAVELLING CHARTS; or, IRON ROAD BOOKS, for perusal on the Journey; in which are noted, the Towns, Villages, Churches, Mansions, Parks, Stations, Bridges, Viaduets, Tunnels, Gradients, &c.; the Scenery and its Natural History; the Antiquities, and their Historical and Stations, History; the Antiquities, and their Historical articles, constituting a Novel and Complete Companion for the Railway Carriage.

- The following, each in a wrapper, may be had at all the Stations:—

  1. LONDON AND BRIGHTON, containing a Map and 83

  Pagervings and add in price 6,
- Engravings, 2nd edit. price 6d.

  2. LONDON AND TUNBRIDGE WELLS, with 52 Engravings, price 6d.

  3. LONDON TO WOKING AND GUILDFORD, with 52

#### Mechanical Improbements.

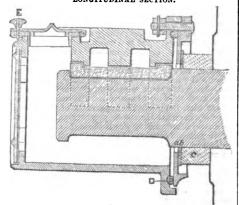

NORMANVILLE'S PATENT AXLE-BOX.

This novelty in the mechanical arrangement of the axle-box may be said to supply a great desideratum, for its advantages are many. the first place it supersedes the necessity of men going to the grease-boxes of the wheels every time a train stops, and making the annoying snacking noise, that is enough to wake any passenger who may be enjoying a nap-besides resulting in the prevention of fire and a considerable saving in wages, grease, and wear and tear, the box being closed so as to prevent any dirt getting in between the rubbing surfaces. We need not repeat the peculiarity of construction by which these ends are obtained, as the statement of the patentee, which we give below, will amply suffice. The inventor is employed in the engineer's department, at the Euston station of the London and North-Western, on which line the improvement has been successfully carried out, carriages having been working with the new axle-boxes on the southern portion for some months past, with the entire approbation of the authorities; and no doubt the invention will be speedily adopted on other

The following is the patentee's statement:

The patentee, in carrying out this invention, has had the following objects in view, viz.,—the inclosing within a comparatively air-tight vessel the brass step or bearing, the journal itself, and the lubricator used to keep the journal at a proper temperature. This he has accomplished by a contrivance of so simple a nature, that while the whole of the parts of the carriages, or other vehicles, remain as before, the axle-box itself is so simplified in construction that it lifts on and off the journal in one piece; and the mere pressing it forward towards the nave of the wheel brings the end of it in contact with a brass washer or valve, acted upon by a spring of vulcanized India-rubber, which valve and India-rubber rotate with the wheel, and being pressed against the end of the axle-box effectually closes it. A reference to the diagram in section will fully illustrate the arrangement of the parts. The axle box itself is a cylinder, to which both ends are affixed by screws. These and the spring ties are fixtures to the box, and lift on and off with it as before described, the end towards the wheel is turned and polished, and the box in this state is ready for use. To prepare the axle to receive it, a washer or spring of vulcanized India-rubber, of the same diameter as the axie, is passed on to it, and placed against the nave of the wheel. A brass washer or valve is then placed against the India-rubber, and both these washers are forced to rotate with the wheel by small pins acting against each other; the axle-box being previously filled with grease (leaving room for the journal), is pressed forward upon the journal, and the end of it coming in contact with the brass valve and spring, is effectually closed thereby.

LONGITUDINAL SECTION

In the above diagram a is the polished plate b the brass valve, and c the vulcanized India-rubber washer or spring (this spring is made 3-16ths thicker than the actual space it is to occupy, and is conse-quently compressed to that extent) and D also an India-rubber washer at the back of the polished fications to suit the different kinds of axles in use on | about to increase enormously by the multiplicarailways.

The advantages to be derived from the adoption of this axle box must be obvious to all parties acquainted with the practical defects of the present system; and in describing what has already been done, the patentee is proud in being allowed the privilege of using the names of Capt. Huish, H. P. Bruyeres, Esq., and Joseph Wright, Esq., as references for the corroboration of the statements he is about to make.

One of the carriages has been running with an ex-press train since the 24th of July. It has been greased twice since that date, the last time was on the 6th of September, since which period it has travelled 10,000 miles. Nor does it yet appear to require grease. Other carriages, fitted in the same manner, travel distances varying from 4,000 to 6,000 miles.

The advantages above enumerated are entirely referable to the careful exclusion of the dirt and grit from the interior of the axle-box; and this is further demonstrated by the slow wear of the axle brasses, which when enclosed, as described, will last out three or four sets of brasses under the ordinary circumstances; added to which, the end wear of the brasses, the cause of so great a portion of the lateral oscillation of railway carriages, is prevented. Another advantage of this arrangement is, that in the event of an axle becoming heated, from an excessive load upon it, defective workmanship, or any other cause, as long as the valve closing the end of the axle-box continues to retain the grease it cannot fire, the axle and brass bearing being immersed in it; and should the valve even fail altogether the carriage may travel safely to its journey's end, by being attended to in the same manner as the common axle-boxes are. It should be observed, that these axle-boxes are intended to be worked with the grease in ordinary use on rail-ways; free oils must on no account be introduced into them, as they decompose the vulcanized India-

While making a statement of the actual results of the experiments that have been made, the patentee wishes it to be understood, that should the boxes come into general use, he does not anticipate that in every case the saving will be in so enormous a proportion as is there apparent: there is a degree of roughness about the axles of the existing stock of railway carriages, owing to their having been for so long a period subjected to the injurious effects of the admission of grit into the axle-boxes, that must to a certain extent prevent the full developement of the advantages to be derived from this arrangement. At the same time he wishes to observe, that the axles and wheels hitherto used in the experiments have all been old ones, and some of them of the roughest kind.

#### LIGIT PASSENGER STEAM CARRIAGES.

The rapid deterioration and frequent replacement of the rails forming the permanent way of several of our most important railways, and especially of those on which very high velocities and their inevitable attendants-very heavy engines, have been introduced, has for some time been compelling the attention of railway proprietors to undertake an elementary revision of the whole question of locomotive power, maintenance of stock and maintenance of way. If rails wear out in eight years, and chairs and sleepers be replaced in a much shorter time, the allowance of 1201. a-year for maintenance and 150l. a-year for replacement for every mile of railway will come to be a formidable item in current expenses, especially after the capital accounts have been closed. Everybody must admit that in an ordinary fast or express train, the unprofitable load has a fearful preponderance over the profitable load; 50 tons of engine and tender with 50 tons of train to carry 8 or 10 tons of passengers and their luggage is an illustration of dead weight alarming even to the most orthodox of shareholders. On branch lines this disparity is still more alarming: even we ourselves have felt humiliated when, as the one passenger on a branch of the Great Western, we have stepped into a magnificent broad-gauge first-class carriage to be conveyed, by a whole engine, with its full complement of engine-man, stoker and guards, over the few miles of one of its branches; but there are many other lines on

tion of new lines and branches.

To remedy these evils, Messrs. Adams, the well-known carriage builders, of Bow, and Mr. Samuels, the resident engineer of the Eastern Counties Railway, have contrived a hybrid machine—half engine half carriage—which has just been tried on the West London Railway, and appears to have realized all the expectations entertained of its performance. This compound machine is six-wheeled; the first pair of wheels are drivers, and support the engine and boiler, of a construction not unlike the ordinary in principle, but very different in arrangement; the next two pairs of wheels support the passengers and their luggage, and a vertical water-tank, &c., placed between the first and second pair of wheels supplies the place of the usual tender. This six-wheeled carriage is therefore in itself engine, tender, first-class carriage, second-class carriage and luggage van. should have added, perhaps, that it is of the broad gauge, and designed for a branch of the Bristol and Exeter; that it is roomy, luxurious, well ventilated and well hung.

We noticed last year (see p. 1032), and again in the number for July 8 in the present year (p. 471), Mr. Samuel's Liliputian engine on the Eastern Counties, and anticipated that it would soon be followed by a progeny of larger growth, capable of doing the work of branch lines. This has now been achieved by Messrs. Adams, as the experiment above alluded to has been successfully tried with one of these composite engine - carriages on the broad gauge. It is named the 'Fairfield,' and is three times the length of Mr. Samuel's, being 39 ft. long, and may be made capable of carrying sixty passengers, equal to the average number per train of the leading lines. The peculiarity of Mr. Samuel's boiler being vertical, as long practised in America, is adopted in the present engine: but another is concounties, with a horizontal boiler, as being preferred by the locomotive superintendent of that line. It appears that its length is no impediment to its being turned on a turn-table which is adapted for the ordinary engine and tender,-but it is affirmed that it will go as fast with the engine in the rear as in the front, thus doing away with the necessity of turning it at all, by which means a single line may be advantageously adopted for minor branches;in short, there is no calculating all the advantages that may result from this new feature in railway practice. We are indebted to our daily contemporaries for some of the particulars hereafter given of the experiment illustrating this gratifying state of things in the engineering world, and hope shortly to have the pleasure of witnessing personally a new triumph, when we shall impart such further facts as we may deem worthy of note.

The trials of these new light passenger engines appear generally to have satisfied those present at the experiments of their economy and aptitude for the service for which they have been specially introduced. For the short traffic passengers, and the other class of travellers by railway who do not indulge in the morbid appetite for the excessive and costly high speeds, this new service will be admirably useful.

The following are the particulars of the new machine, with an account of some of the trials which have been made of its performance. We think the subject is one which at this moment deserves to be entertained very seriously, especially by the proprietors of such new lines and branches as are not likely to be soon overwhelmed with an inordinate amount of traffic.

The 'Fairfield' is composed of an engine and carplate; but these arrangements require various modi- which the same thing happens, and the evil is riage in one framework, so that they form one machine, and reduce the weight and capabilities of the engine as near as possible to the nature of the work required. The total length of the machine is 39 ft., and the carriage, which has a first and a second class compartment, is constructed to carry forty-eight passengers. The following statement of its dimensions, however, will give a more accurate idea of the nature of the invention. The driving-wheels are 4 ft. 6 in., and made of solid wrought iron; the trailing-wheels 3 ft. 6 in., of wood, and running independently on their axles as well as their journals, the middle wheel having a lateral traverse of 6 in. The boiler is tubular and vertical, 3 ft. in diameter and 6 ft. high; the fire-box 2 ft. high and 2 ft. 6 in. in diameter. The cylinder is 8 in. diameter, with 12 in. stroke; the connecting rods work a separate crank-shaft, which communicates with the driving-wheels by side rods, the axle of the driving-wheels being straight, with crank pins on the outside. The boiler is placed behind the driving axle; the tank, capable of holding 220 gallons of water, is in front of it; and the coke-box is attached to the front part of the carriage, behind the driver. The bottom of the framing is within 9 in. of the rails, so that, by keeping the centre of gravity low, greater safety may be insured at high speed and freedom from oscillation obtained. The first-class carriage is in the form of a saloon, and can accommodate sixteen passengers, while the second-class compartment is seated for The entire weight of the machine is thirty-two. about 10 tons; when occupied with forty-eight passengers it will amount to about 123 tons. On the experimental trip on the 8th, the 'Fairfield' left Paddington station at 10 30 a.m. for Swindon, 77 miles down the line, with a party of gentlemen connected with various railways;—Mr. Macgregor, chairman of the South-Eastern; Mr. Bruce, chairman of the East Anglian; Mr. Small, of the South-Eastern and Northern and Eastern; Mr. Roney, secretary of the Eastern Counties; Mr. Samuel, resident engineer of the Eastern Counties; Mr. Farey, C.E.; Mr. Hjorth, and Mr. Adams, the patentee, were in the carriage. Mr. Gooch, superintendent of the locomotive department of the Great Western, officiated as driver on both the down and up journeys. Though the rails were greasy from the prevailing rain, in addition to the disadvantage of a head wind, and, what is worse, a leak in the boiler, the machine soon attained considerable speed, and for a portion of the way reached the rate of 49 miles an hour. On arriving at Swindon the fire was extinguished and the leak partially repaired, and after a reasonable sojourn the party returned to town. The run back was exceedingly satisfactory, the speed of 49 miles being maintained for a considerable part of the way. The passage from Slough to Paddington was performed in 30 minutes. The party expressed themselves highly satisfied with the result of the experiment, and it was repeatedly observed that as a means of economizing the expen-diture of railways the principle ought to be regarded as one of great importance, not only with reference to branch lines, but also to the running of express trains on the main trunk. The new machine, it was said, could be worked at an expense not exceeding one-fourth of that now employed on small branch lines. By a trifling modification of the seats, sixty passengers, it is said, may be accommodated. Thus, upwards of 4 tons of passengers may be conveyed at 50 miles per hour requiring only 10 tons of dead weight; while Capt. Huish, in his Letter addressed to Mr. Glyn, says that on the London and North-Western trains the average of the passengers for the month of October last weighing 4 tons, required loco-motive power to draw 52 tons of dead weight, including locomotive, tender, carriages, &c.

We may take the present opportunity of speaking of another locomotive novelty, which has been introduced by Mr. England, of Hatcham works, near the New Cross station, being a specimen of a light locomotive, called the 'Little England,' which, with its tender on the same frame, will work the ordinary stock of a company.

The Little England' and tender weigh together when roadworthy 9 tons 5 cvt. It has a 7-in. cylinder, a 12-in. stroke, and 4 ft. 6 in. driving-wheels. The distance between the extreme centres is 14 ft. The boiler has sixty tubes, 11 ft. 2 in. in length, with a diameter of 1½ in. inside. The fire-box has an area of 27 ft., and the total heating surface is 282 ft. The tank holds 268 gallons. The 'Little England,' therefore, while the diameter of its driving-wheel and its length of stroke are those of Mr. Adams's 'Fairfield,' has an inch less of cylinder but 2 ft. more of fire-box, and 47 ft. more of heating surface, while her weight, including tender, coke and water, is about 4 tons

heavier. The 'Little England' started from the New Cross station of the Brighton with three first-class carriages, containing thirty-one persons, among whom we observed Mr. Ransome, the deputy-chairman of the Eastern Union and Hadleigh branch; Mr. C. H. Gregory, the engineer of the Bristol and Exeter; Mr. P. Bruff, the engineer of the Eastern Union; Mr. A. Weightman, the manager of the Blackwall; Mr. J. Cubitt, C.E.; Mr. Statham, and several other gentlemen connected with railway engineering. The gross load was about 22 tons. The weather was fine, but a very strong head wind was blowing the whole of the down and up journeys.—The working of this little engine, according to the results afforded by the Moraing Herald, seems to be of a very high character. In the following observations, which conclude a very minute notice of its performances, the correspondent of that journal affirms that the 'Little England' will maintain on a level an average speed of 45 miles per hour with a gross load of 20 tons, or 16 miles per hour more than the maximum velocity reached nine teen years since with a gross load of 17 tons with the 'Rocket'; an engine which was at that time very justly deemed a wonderful specimen of mechanical skill and ingenuity. Such a locomotive as the 'Little England' would, with wheels of 3 ft. 9 in. diameter coupled, and a 9 in. or 10 in. cylinder, be able to work, at a speed of 10 miles or 12 miles an hour, the goods traffic of nearly all the smaller branch hour, the goods traffic of nearly all the smaller branch lines in the kingdom. We believe, also, that with its small cylinder and the perfectly safe ability of working the boiler at 140 lb. or 150 lb., the 'Little England' would be able to work trains of five or six passenger carriages at moderate speeds over even very heavy gradients, and that she would do so at a very low consumption of coke. With engines of very low consumption of coke. With engines of the 'Little England' or 'Fairfield' class, the services of half the permanent-way men employed upon branch lines might be dispensed with, and the rails would last at least five times the period of their present duration; and it is thought that with 12-in. cylinder engines working at high pressure—and such a pressure might be secured with an engine and tender weighing together not more than 12 tons-the passenger traffic of the majority of the railways of the country might be managed at moderate speeds and at a greatly reduced cost, both in working expenses and maintenance of way.

#### Proceedings of Bocieties.

Society of Arts. _ Dec. 6. _ Mr. T. Webster, F.R.S., in the chair. Mr. N. Holmes read a paper On the present State of Electricity as applied to Telegraphs.' Mr. Holmes, on bringing the subject forward, stated that it was his intention only to consider the principles of the best known forms of existing telegraphs. After giving a short history of the subject, prior to Volta's discovery of the voltaic current in 1800, overcoming the difficulties presented by the use of free electricity, he dated the progressive advancement of the science from Oersted's grand discovery in 1819, of the rotary influence exercised by an electric current upon a magnetic needle, which was immediately followed by that of Arago's, in the formation of the electro-magnet. The introduction of the telegraph into this country took place in the year 1837, at which time many persons were engaged in the practical carrying out of the idea; but it was not until Prof. Wheatstone's researches in the more theoretical portion of the science, that the requisite perfection was obtained. The telegraphs at this time were classified into two great divisions; those of a mechanical nature, and others depending upon the direct action of the current, either by induction upon a magnetic bar, producing deflection, or by the decomposition of certain chemical solutions. The objection to mechanical telegraphs, he stated, were too great to render them fit for railway or commercial purposes, although as many as 2,000 signals had been given consecutively without error, by the improved instruments constructed by the author (Mr. Holmes). The only railway in this country, out of the 2,000 miles of telegraph laid down, upon which they have been adopted, is the South Devon; and they were there used to give the signals for starting the fixed engines, in connexion with the atmospheric system. After alluding to the numerous varieties of printing telegraphs and alarms, Mr. Holmes exhibited his new signal, in place of the old clock-work bell, producing the sound by means of an air-whistle. In considering the second division of the subject, the various errors in the old form of

improvements made, first, by the introduction of his diamond instrument, now working at all the commercial stations in England, effecting an enormous decrease in the battery power, and again in his new form of helix, further reducing the helical resistance in the instrument, a point also of great importance. In speaking of the chemical telegraph recently perfected by Mr. Bain, many of the errors were pointed out, particularly those of resistance and want of rapid reciprocity in cases of errors. In reference to the insulation, it was stated that the exposed wires extending over the lines in this country were in a very imperfect state; damp, moisture and other circumstances frequently causing delays and interruptions, not excepting the street-work of the metropolis, which was based upon a fundamental error, that of enclosing one conductor in another improperly protected. As a means of improving the insulation, the plan of encasing the wires in a non-conducting substance from end to end was shown, with specimens.-The subject was closed after briefly noticing the derangement the telegraph was liable to receive from lightning and the influence of magnetic storms; and the modes hitherto adopted to counteract these phenomena were shown to be very inadequate for the purpose. The paper was illustrated by a comprehensive series of diagrams.

#### Brogress of Works.

BUCKINGHAMSHIRE.—Much activity has been displayed on the works of the main line, notwithstanding the late very unfavourable state of the weather for such labour. Between Claydon and Oxford, where the works are very light, but little is now doing; there are however about fifty workmen at Langfordlane, Bicester, working towards Islip, and about the same number at Islip working towards Bicester. Active preparations are in progress for carrying on the latter portion as soon as the days increase in length. Some hundreds of tons of chairs and metals are already carted to Bicester and the locality, and the carting of sleepers from the company's depot at Lower Hayford is continued daily. At the latter place there are now about 10,000 Kyanized sleepers and about 7,000 metals, and the store is increased by the unloading of several boats each day.

unloading of several boats each day.

General Terminus and Glasgow Harbour. The Railway and Shipping Journal announces that this undertaking is nearly ready for traffic, and that a week or two of good weather will finish the work so far as to permit the shipping of minerals at this harbour, though it may be the end of the year before the connecting branch of the Glasgow and Paisley joint line will be completed. Preparatory to the shipping of minerals, two powerful cranes have been serioted by the railway company, on the new quay, at Springfield, one of which is to be worked by water, the other by steam. The hydraulic crane is the first of the kind that has been erected in Scotland, and is the most powerful yet made by Mr. Armstrong, of the Elswick engine works, Newcastle. Its principal duty will be to lift the loaded mineral waggons off the quay and empty their contents into the holds of ships lying alongside; but it will also be available for moving goods of any kind and weight up to 12 or 15 tons at a time, from the ships to the quay, and vice versa. The motive power is supplied by the Gorbals Gravitation Water Company, whose 9 inch main has been continued from the Paisley-road down to the brink of the quay by the railway company. By this means a pressure equal to a column of water 210 ft. high is obtained, under deduction to the loss due to the friction after passing through some 5 or 6 miles of pipes, varying in diameter from 24 in. to 9 in. between the fountain-head and the crane. The mode of applying this power is exceedingly simple, though at the same time very ingenious. The machine consists of what has much the appearance of a common crane of somewhat Herculean proportions. The lifting chain, after passing down through a ponderous hollow pillar of cast iron, forming the upright shaft, is attached to a piston rod, at the other end of which is a water-tight piston working in a horizontal cylinder, 32 in. diameter and 12 ft. long. When the water is let in upon this piston, the machine lifts, and when it is run off the lowering takes place, both movements being effected by the turning of a small lever handle, which opens and shuts a series of valves. To effect the slewing, or horizontal motion, a smaller cylinder, fitted with rod and piston, is used, for which another handle works a separate set of valves, the only difference being that, instead of a chain, as in the lifting process, the piston rod is prolonged in the shape of a straight-toothed rack, which works into a cog-wheel, fixed on the lower end of the perpendicular shaft of

Digitized by Google

the crane, by means of which the turning round is accomplished with great nicety.

GREAT NORTHERN.-After a delay of some weeks the works at the curve which is to join the line with the Sheffield and Grimsby, in Humble Carr, have been recommenced, and the contractors have nearly effected a junction. The operations are actively continued in the works on the line between Grantham and the junction with the Eastern Counties at Walton, near Peterborough. Already they have reached Corby, says the Lincoln Mercury, and it is anticipated that in the next summer the line will be opened, viá Grantham and the Ambergate line, to Nottingham and northward.

LONDON AND SOUTH-WESTERN (Hampton Court). This short branch, which turns off at Gig's Hill, in the parish of Long Ditton, about one mile from the Kingston station, running through the parish of Thames Ditton to West Moulsey, and within a few yards of the river Thames, where a bridge crosses over to Hampton Court, is progressing rapidly towards completion. The permanent rails are laid down nearly the whole distance, and it is expected to be opened for traffic shortly after Christmas; this branch forms a gentle curve, and had to be raised by an embankment. At the Hampton Court terminus the arrival platform is already formed, being 300 ft in length, and 40 ft. in width, the roof being supported by fifteen neatly-turned pillars on each side. The departure platform will be of the same size and of equal convenience. The temporary offices, waiting-rooms. &c. are built of wood. The engine-house and the tank sheds, &c. are in the Elizabethan style of architecture and are nearly finished, the former being 90 ft. in length, and 30 ft. in width, and are built of red brick and Caen stone for arches, &c. strong bridge is erected over the river Mole, by which carriages and passengers will be enabled to pass to and from the station.—(Richmond).—The covered passenger-sheds, which have lately been added on both sides of the line at the stations are found to be very convenient and protective against the inclemency of the weather. The short passenger traffic continues satisfactory.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.-The Nothingham Journal thus reports the operations on the line:—Of the heavy works in the Retford district nearly 8 miles are ready to receive the ballast and permanent way. Coming from Bole Field, past Bole, West Burton and Sturton the level has been made up, all the culverts erected, and most of the principal bridges finished. The tunnel through the Clarborough Hill, which is 550 yards long, is, with the exception of the entrances, open throughout. The strata through which it passes are composed of a very hard blue marl, interspersed with veins of gypsum, lying on a flat bed, and varying from 1 in. to 6 in. in thickness, brilliantly white and sparkling. The quantity of water has not been by any means so much as was expected at the commencement of the works-indeed, a great proportion of the tunnel is almost dry. The approaches, through heavy cuttings of red and blue marl, will be easy, so that trains will be able to pass at a great speed. Passing on westward through a deep cutting for 9 furlongs, the rail comes to the Retford and Gainsborough turnpike-road, over which it passes; a heavy embankment then commences, and proceeds for nearly a mile; this, at its greatest height, is 34 ft. The material of which this and the other embankments are formed is so well adapted to the purpose that no slips have occurred, nor has there been any settling worth mentioning; and they are now so well consolidated that all danger from these causes is passed. Having passed the Retford and Leverton turnpike-road on the level, it continues nearly so for upwards of 600 yards, when it enters another cutting at Dominie Cross, which at its greatest depth is 27 ft. This is now nearly finished. and the materials coming therefrom have been trans ferred to a heavy and broad embankment over the valley of the Idle, which it passes by a very wide and handsome bridge. The width of this embankment is sufficient for five permanent lines, in order to accommodate the Great Northern, which here runs into the Sheffield and Lincolnshire lines. Here also are to be the stations of both companies. The foundations of the passenger station have already been put in, walls brought up to the level of the rails; the foundation of the goods station is now being laid, and on the opposite side the wall supporting the platform has been erected, and the interstices completely filled in. Leaving this valley, the line soon encounters higher ground, and passing the Ordsall and Babworth-road it enters the estate of Mr. J. Kippax, at the Biggins, where a deep cutting commences, and from whence and the circumjacent ground the ballast for the whole line from thence to the river Trent has to be taken. The cutting and done to the satisfaction of the principal engineer,

the embankment at the Whisker Hills, on the estate of the Hon. J. B. Simpson, is fast progressing, and there can be no doubt that the whole line will be ready for being publicly opened at the time now fixed upon, namely, early in June 1849. The quantity of bricks consumed in the construction of the Clarborough tunnel amounts to upwards of 7,000,000.

SHREWSBURY AND CHESTER.—The Oswestry branch is completed and ready for traffic. The first accidents that have happened on this line occurred during the week, when, in consequence of collisions, a guard and time-keeper were killed.

SOUTH DEVON (Torquay).—The directors at their meeting on the 5th inst. decided on opening this branch on Monday next. An engine has been running over the line, accompanied by Mr. Brunel and Mr. Margary, the company's engineer, and other officials of the line. The engine ran up to the station, and all the works are very satisfactory. The Government Inspector has since issued his permissive order for the opening, having previously inspected the works and pronounced them ready for traffic. The new line commences at Newton, 214 miles from Paddington, and 30 miles up the South Devon main line, with which it runs parallel for 1½ mile, when it diverges to the left, towards Torbay. It is 5½ miles in length, having its terminus at Tor, 1½ mile from the centre of Torquay, into which, at present, it has not been carried, in consequence of the difficulty experienced in the purchase of land. Being a single line, it is provided with the electric telegraph, to insure security of working. Passengers will now be able to run through the 220 miles to Torquay in the same carriage that takes them from Paddington .- A public meeting has been held in Torquay to make arrangements to celebrate with éclat the proceedings of the day of opening, and it is intended to carry them out with spirit. The directors are to be entertained at the hotel. Shops are to be closed, and a sum of 50l. has been already subscribed to allow the poor to participate in the rejoicing. We understand that it is intended to run four trains daily from the principal long trains.—Of the bridge over the Union-road, Plymouth, three of the immense iron girders have been placed across the road during the past week, on the columns. These massive beams weigh from 43 tons to 6 tons. The other parts of the works are being rapidly proceeded with.

SOUTH-EASTERN .- The works on the North Kent line are now proceeding rapidly towards completion, and the taking down of houses has commenced in Woolwich, to make room for the works on the line. The materials of upwards of 100 houses are, it is reported, engaged to be cleared away in the course of the present week.

#### Law and Bolice.

Dec. 9.—In the Vice-Chancellor's Court, in re the Newry and Enniskillen v. Forbes, this was a motion to dissolve an injunction, restraining the defendant from receiving, and two persons paying to him, two sums of money. Forbes was a shareholder of 100 shares, and being unable to answer the calls, agreed to assign the two debts in question as a security for the payment of the calls. A long negotiation was entered into, but no agreement executed, though the plaintiffs contended that there was an agreement contained in the letters. Forbes, who was now out of the jurisdiction, had commenced actions against his two debtors, upon which the company obtained the present injunction.

REFUSAL OF ENGINEER TO CERTIFY .- Dec. 13, 14. In the same Court, in re M'Intosh v. the Great Western, demurrer to a suit by the executors of the late Mr. Hugh M'Intosh (a contractor employed by the Great Western), praying for a declaration that the withholding, on the part of Mr. Brunel, of the certificates necessary to entitle the contractor to payment, was a fraud upon the latter; and for an account of what was due from the company; and for payment. A portion of the contracts, which were entered into in 1836, related to works upon three miles of the line between Ealing and Hendon, the stipulated payment being 27,956l. The contract was under seal, dated Nov. 5, 1836. It was thereby agreed that Mr. M'Intosh would perform the works to the satisfaction, in all things, of the company, and their principal or assistant resident engineers. It was also provided that, in case of any variation in the works, the contractor should perform them agreeably to the former stipulations. If the works should be impeded or delayed through the act of the com-pany, an extension of time and allowance of extra

and unless it should have been certified by him to have been so executed. According to the statements in the bill, the truth of which was assumed for the purposes of the argument, the works had been properly performed according to the contract, and notice had been given by the contractor for the engineer to examine the works and give his certificate. But the bill charged that although it was the duty of the engineer so to certify, he refused to do so until another contract had been completed by Mr. M'Intosh; and the bill also charged that in so re-fusing, Mr. Brunel was acting in collusion with the company, and under their direction and authority. case was argued at considerable length on Tuesday last; and yesterday, the Vice-Chancellor said the case was substantially this: A tradesman and customer contracted together that the former would execute for the latter works of considerable magnitude, in consideration of being paid according to their valuethat value being to be decided by a third person, specified, who, when satisfied of the due execution of the work, was to certify accordingly, and the tradesman was not to be entitled to receive anything without such certificate. The works were then executed by the tradesman to the satisfaction of the customer and the third person, but payment was refused for want of the certificate from the third person, who, by the direction of, and in collusion with the customer, withheld the certificate without any just His Honour thought that a state of things which would entitle the tradesman to relief in equity against the customer: the case of the tradesman being that of the plaintiffs here, and the case of the customer that of the company. His Honour thought the demurrer of the company unsustainable. It had been argued that the refusal of the engineer was a breach of covenant on the part of the company, for which an action would lie; but if it were, that not sufficient to defeat the plaintiffs' right to relief in equity under the circumstances of the case; nor did his Honour think that the position of the engineer, as being employed by the company, a sufficient objection to the case of collusion stated by the bill, he having been, under this contract, appointed to functions analogous to those of an arbitrator. It had scarcely been contended that the case of the secretary differed from that of the company, but for Mr. Brunel it had been argued that his demurrer stood upon wholly different and independent grounds. The charges in the bill, however, were such, that upon the whole Mr. Brunel appeared to be made a party with as much fitness and propriety as Mr. Saunders; and against both the discovery, which could not be obtained on oath from the company, might, his Honour thought, be properly prayed; and that was all the bill sought from them. The demurrers must therefore be all overruled.

CALLS .- Dec. 9 .- In the Court of Common Pleas, in re the Cork and Bandon v. Conolly, the defendant was sued as a shareholder for four different calls on eleven shares, the first of 5l., the two next of 2l. 10s. each, and the fourth of 5t., payable by two instalments. Evidence was given of the resolutions sanctioning the calls, with their dates of becoming due, and their being publicly advertised and notified by circular to the shareholders. The defendant objected -first, that all the calls, save the second, had been made improperly, inasmuch as two months had not been allowed to clapse between them, whether the date of the notice or of the calls being payable were considered as the time of making each call; secondly, that under section 27 of the S & 9 Vict. c. 16 it was incumbent on the company to prove, not only notice to the defendant, but also to each of the other shareholders; thirdly, that the shareholders' address-book was not admissible in evidence to prove the defendant's address, or, at all events, not an altered address, in the absence (as here) of any sufficient proof of where the substituted address came from; fourthly, that the 22nd section of the same Act gave the power to make calls, "provided twenty-one days' notice at least be given of each call," and that meant either twenty-one days before the call was resolved upon, or afterwards, and before the time when it was payable. If the former, all the calls had been improperly made; but if the latter, then only the second could on that ground be objected to. - The Lord Chief Justice, after expressing an opinion to the effect that the 22nd section meant twenty-one days' notice before the time of payment, suggested that the best course was to turn the facts into a special case, so that the points raised might be considered by the full court, which was accordingly done, a verdict for 165l. for principal and 12l. 6s. 8d. for interest being taken, subject to such special case.

SHARE DEALING .- Dec. 14 .- In the Court of Ex-CHEQUER, in re Beagin v. Sherman, the plaintiff, a member of the Stock Exchange, sued the proprietor

Digitized by **GOO** 

of the Bull and Mouth booking-office for the difference upon thirty certificates of shares in the Namur and Liège. On the 14th of November 1845, the defendant, who was about to go to Belgium, went to the passage leading to the Stock Exchange, and asked for fifty shares. A Mr. Barnes, to whom he spoke, said he did not deal in them, but referred to the plaintiff, who said he had only thirty. The defendant there-upon said, "Let me have them," or "Send them to me." This was after half-past two, and about four o'clock, that day, the 14th, was the settling day; the next settling day was the 28th. Before that day arrived, the defendant, who was the director of a Belgian railway, went to Belgium; and the plaintiff a Belgian railway, went to Belgium; and the plainting alleged that he could not afterwards find him to tender him the scrip till July 1846. When he was tendered it, he at first seemed to have forgotten the transaction; but he afterwards said the scrip had not been delivered in time. Mr. Barnes knew that the defendant wanted the scrip to take with him to Belgium, and that the impression on his mind from the words "Let me have them," or "Send them

to me," was that the defendant wanted the shares at once. The rule on the Stock Exchange was that if a bargain were made between two members the account day before half-past two, and nothing were said as to time, the delivery would be on that day, but if made after that hour, the delivery would be on the next account day. He (Mr. Barnes) knew of no general rule as to bargains between members of the Stock Exchange and third parties, which must depend entirely on the express terms of them, as strangers were not bound by the rules of the Exchange.—The Lord Chief Baron said the question would be, whether there was to be an immediate delivery, or a delivery on the next account day. He thought that the defendant's saying, "Let me have them," or "Send them to me," left no doubt that the defendant meant to have them at once.—The jury immediately found a verdict for the defendant.

In the same Court an action followed, by share-

brokers, to recover from a gentleman in the West of England the price, at 10*l*. per share, and a call 3*l*. per share, and a quarter premium, on fifty shares

in the Northern of France. There was virtually no defence. Verdict for the plaintiffs.

RATING .- LONDON AND NORTH-WESTERN (Macclesfield Branch).—Dec. 5.—At the Special Sessions, at the Police Court, Macclesfield, several agents of the company appealed against the assessment upon the Macclesfield branch, in the township of Butley, viz., 2001. per mile; and proposed to prove, by the evidence of Messra. Perrin and Watkin, that the earnings and expenses of the line left so small a balance of profits, that after making the deductions for tenants' profit, depreciation, &c., allowed by law, there remained no rateable value on the company's property.—After some discussion, says the Manchester Guardian, the magistrates being of opinion that the company were right in their view of the case, the overseers accepted Mr. Heelis's offer to be rated at 30l. per mile, in lieu of 200l., such sum being double the original rent of the land taken by the line; and the rate was amended accordingly.

London Stock Exchange, Dec. 15 .- The improvement in the public funds has had the effect of causing a considerable demand for railway shares, and prices are generally higher. The business transacted has been more extensive than for some time past, and of a better character. The following are the latest transactions in foreign lines :- Boulogne and Amiens, 7; Luxembourg, ‡; Northern of France, 7; Orleans and Bordeaux, 2½; Paris and Rouen, 16; Rouen and Havre, 8; Strasburg and Basle, 33.

Licerpool, Dec. 14.—Our market is decidedly better this week; there has been a fair demand and stock

The following are the actual transactions scarce. The following are the actual transactions of to-day:—Caledonian preference, par; Great Northern, 11\(\frac{1}{2}\) dis.; ditto, A's, 4\(\frac{1}{4}\); Lancashire and Yorkshire fifths, 4\(\frac{1}{4}\) dis.; ditto, 32\(\textit{L}\) shares, 8\(\frac{1}{2}\) dis.; ditto, Preston and Wyre, 35; London and North-Western, 119; ditto, new quarters, 16s. 3d. prem.; ditto, fifths, 3\(\frac{1}{2}\) prem.; Midland, 80; ditto, halves, 10 dis.; Manchester, Sheffield and Lincolnshire quarters, 8\(\frac{1}{2}\) dis.; ditto, late Great Grimsby 20\(\textit{L}\) shares, 12\(\frac{1}{2}\) dis.; North Staffords, 6\(\textit{L}\) is. 3\(\delta\). dis.; South-Eastern, No. 4, 6\(\frac{1}{6}\); York, Newcastle and Berwick, Great North of England Purchase, 1\(\textit{L}\) 6s. 3\(\delta\). Sublow, Brothers.

**Manchester Dec. 14.—Our share market this week

Purchase, 1l. 6s. 3d. dis. Suplow, Brothers.

Manchester, Dec. 14.—Our share market this week has shown more buoyancy than we have experienced for some time; and more business would have been done if sellers had not been so unwilling to operate. done if sellers had not been so unwilling to operate. Actual transactions this day:—Caledonian preference, par; Lancashire and Yorkshire preference, \(\frac{1}{2}\) prem.; London and North-Western, 119; ditto, fifths, 3\(\frac{3}{2}\) prem.; ditto, Manchester and Birmingham C quarters, 1\(\frac{1}{4}\) prem.; Grimsby 20l. shares, 12 dis.; ditto, 12l. shares, 7\(\frac{1}{2}\) dis.; North Staffords, 6\(\frac{1}{6}\) dis.; North Union B's, 142; South-Eastern, No. 2, 12\(\frac{1}{2}\) dis.; ditto, No. 4, 6\(\frac{1}{6}\).

No. 4, 64.

Birmingham, Dec. 14.—This market has decidedly improved during the last three or four days; there is a better demand for shares, and the general will on un. North Staffords done opinion is that they will go up. North Staffords done at the beginning of the week at 6½ have closed to day at 6½ dis.; Shrewsbury and Birmingham A's at 7l. 11s. 3d. dis.; ditto, B's, at 4½ dis.; and Ambergates at 4½ dis.

gates at 4 dis. W. Banks.

York, Dec. 14.—The share-market hasevinced more Fork, Dec. 14.—The share-market hasevineed more firmness, and stock is not so much on the market at present; most of the northern lines are quoted somewhat higher. The following are our latest transactions:—Great Northern, 64; North British halves, 6; ditto, extension scrip, 4s.; York, Newcastle and Berwick preference, 65; York and North Midland preference, 94. Grayston & Earle.

Hull, Dec. 14.—We have to note a better feeling in the sheet purplet which we hope will continue. All

the share-market, which we hope will continue. All the elements of an improvement are visible, held in check however by the unsettled state of foreign politics. We trust the direction affairs are taking in France will afford the appearance at least of stability for a time, but we fear there is nothing to be very sanguine about. FLINT & TOOTAL.

Newcastle upon-Tyne, Dec. 14.—There has been a much better feeling in our share-market this week, and business has been done at advanced prices. Toand business has been done at advanced prices. 10day's transactions are:—Newcastle and Carlisle scrip,
97; North British, 15; Original Newcastle and Berwick, par; and North Staffordshire, 8\(\frac{3}{6}\).
W. Fordyce.

Glasgow, Dec. 14 .- The transactions this week have been greatly restricted by the short supply of stock in the market, and prices have again steadily (although slowly) advanced. Caledonian preferences, Ayr, North British thirds and Scottish Central close in good demand. The following are to-day's last in good demand. The following are to-tays has sales:—Caledonian preference, par; Edinburgh and Bathgate, 8\(\frac{3}{2}\) dis.; Edinburgh and Northern, 10\(\frac{3}{2}\) dis.; Ayr, 47; ditto, halves, No. 1, 12\(\frac{1}{2}\) dis.; Great North of Scotland, 48. dis.; North British thirds, 83s.; Scotland, 40s. tish Central, 26; Scottish Grand Junction, 47s. dis. Buchanan, Aitken & Co.

# Joint-Stock & Commercial Gazette.

The Irish Amelioration Society are turning their attention to the conversion of the immense peat-bogs into charcoal, by compressing the peat by steam-power and then burning it. The advantages derived by the "conversion" are stated to be very great, the fuel being superior to other charcoals for burning and fit for agricultural purposes in a prepared state.

The very rich beds of potters' clay that are so extensive along the southern shore of the Lower Shan-non, in Kerry and Limerick counties, are about to be made available as material for native manufacture in the neighbourhood of Tarbert, on the estate of Trinity College. The proprietor, or lessee, Mr. Blacker, is erecting a pottery for the manufacture of crockeryware on a large scale, and the works are now nearly complete. The clay has been tested by experienced potters from Staffordshire, who are erecting the buildings, and declare it to be "as good as ever the sun

shone upon. Banking. In the Vice-Chancellor's Court this week, a petition

in the vice-Chancelor's Court this week, a petition in the matter of the Marylebone Joint Stock Banking Company was heard. The petitioners were a Mrs. Elizabeth Troutbeck (executrix of a Mr. G. Troutbeck) and two Misses Stephenson and a Mr. E. Weller (Change of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Court of the Walker. The petitioners named Stephenson and the deceased Mr. Troutbeck had been original shareholders. It was alleged that Mr. Troutbeck had intended to transfer his shares to Donald M'Lean, but not having done so legally he had paid 3,214. towards the promotion of the banking company upon his promissory notes. On Mr. Troutbeck's death, his widow, one of the petitioners, being his executrix, claimed contribution from the sharcholders, and as she and her co-petitioners considered themselves liable to the her co-petitioners considered themselves hable to the creditors of the company, they had filed this petition. The petitioner, Mr. Walker, was also a contributor to the company. The petition prayed a dissolution and winding up of the company's affairs, under the Act, and that it might be referred to the Master to carry the same into effect. It was proved by affidavits that the petitioner Walker had paid to the creditors of the company considerable sums, and, as he alleged, greatly beyond his proportionate liability. The petition was subsequently referred to the bility. The petition was subsequently referred to the Master.

The Morning Chronicle states that the accounts from Madrid mention that the affairs of the Bank of San Fernando were improving. The measures adopted a month or two back had been found very beneficial. Rigorous economy had been introduced into every department, and large savings have been effected. Further measures were spoken of as about to be adopted, to place the bank upon a sound footing.

The Auckland papers give a statement of the business of the Branch Bank of the Union Bank of Australia during the first six months of its establishment. The amount of bills discounted during the half-year was, British bills, 12,633d. 17s. 11d.; foreign bills, 472l. 16s.; local bills, 14,844l. 15s. 4d.; total, 27,954l. 9s. 3d. The amount of gold coin paid into the bank was, 39,645l. 10s., and of silver, 15,729l. 9s. 9d., making a total of 55,374l. 19s. 9d. specie. The amount of drafts drawn upon the London office and the branches was, 22,084l. 17s. 2d. The note circulation of the bank was, 5,170l. The amount of daily balances in the bank, belonging to the public, exceeded 17,000l.; and the total amount of business, between the establishment and the public, was upwards of a quarter of a million sterling.

The St. Alban's Bank stopped payment last week. The event is ascribed to the recent heavy and unforestering the stablishment and the stablishment and the stablishment and the public, was upwards of a puarter of a million sterling. tralia during the first six months of its establishment.

The event is ascribed to the recent heavy and unfore-seen calls upon its resources, arising out of the indisposition of the proprietor, Mr. Story, and an erroneous impression that, there being no second name in the bank, the creditors would, in the event of Mr. Story's death, be compelled to wait twelve months for the payment of their claims. The issue has been purposely kept as low as possible, and is not more than about 700%. The whole liabilities of the bank do not, as we unknown a possible and controlled the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second as we understand, amount to 10,000%, and everyone will in the end be paid in full.

The annual meeting of the Oriental Bank took place on Thursday, Mr. H. Gordon in the chair. place on Thursday, Mr. H. Gordon in the chair. The accounts submitted to the proprietors showed a profit to the first of June of 46,7071. 3s. 7d., and to the 1st of December of 46,2091. 10s. 2d.; making a total of 92,9161. 13s. 9d. Out of the profits to the 1st of June the directors had declared a dividend of 41 per cent., amounting to 41,9171. 10s. on the 1st of June, and the directors had now appropriated a further sum to pay a dividend of 3½ per cent., amounting to 32,485*l*. 5s.; making a dividend for the year of 8 per cent., and leaving a surplus of profit on the year of 18,513*l*. 18s. 9d., which, added to the reserve from the profits to the 1st of December last, of 17,202*l*. 7s. 3d., gave them a sum of 35,716*l*. 6s. over and above the present reserve of 128,380l. 19s. 6d. The losses sustained by the bank owing to the commercial crisis, it is stated, will not exceed 52,000l. The directors proposed at once to write off the loss by the amount of contingent fund, as above, 35,716l. 6s., and taking from the reserve fund 16,380l. 19s. 6d. together 52,097l. 5s. 6d., still leaving to the credit of the reserve fund, 112,000l. The result of the operations of the bank for the last two years, was a profit of 10 per cent., after paying all charges on the company. The report was adopted, the dividend declared, and some shares forfeited. The business of the meeting then finished, and thanks were voted to the chairman.

#### Assurance.

The vacancy in the direction of the Mutual Assurance Company has been filled up by the election of Mr. Mollett, a gentleman well known in mercantile circles.

Mr. Butler has been elected a director of the Licensed Victuallers' Life Assurance Company, in lieu of Mr. Bleaden resigned, who has had an annuity of 200l. voted to him. The chairmanship of this company is now held by Mr. Ald. Musgrove.

Docks. The new docks at Leith are being proceeded with very fast; 350 persons are now employed on the works, which will prove of great benefit to the com-

merce of the port.

Steam Navigation.

The Diamond Steam Packet Company have this week been sued by a party for personal damages from a collision with one of their steamers near Gravesend, and the verdict against them is for 900l.

The eighth annual meeting of the Peninsular and Oriental Steam Navigation Company was held on Wednesday. The report laid before the shareholders shows the company's affairs are, notwithstanding the distress that has occurred, in a prosperous and satisfactory state. The amount available for dividend is 51,827L, out of which a dividend of 4 per cent. for the half-year ending September 30 last, is declared payable on the 23rd inst. The subjects of interest discussed were the discontinuance of the India Mail of the 3rd of the month from Southampton, and the proposed line from Singapore to Sydney. In reference to the former, the directors state that they are not responsible for the stoppage of the steamer of the 3rd of the month; they were willing to continue it (although not remunerative to the company), but the Government gave notice to discontinue the service, and there was no option but to submit. The proposed communication by steam with Australia, the directors had tendered on "lower terms than it was possible to execute it for with similar vessels and to derive a fair remuneration from it, the directors looking chiefly to the additional traffic it may bring to their established lines, rather than to the receipts from the line proposed per se.' ing to the Eastern Archipelago Company, the directors stated that they will afford all the support in their power, and have offered to contract for supplies of Labuan coal for their depots at Singapore and Hong Kong. The report and all the resolutions were unanimously carried, and a vote of thanks passed to the chairman, Ald. Sir John Pirie, Bart.

Mines. On Monday last the meeting of the Australian ining Company took place. The report to the Mining Company took place. shareholders was very favourable, and the company's snarehotters was very lavourable, and the companys prospects show signs of great improvement. The cargo per Derwent has arrived, and 137 tons of copper is shortly expected by the Brankenmoor. It is expected that by next month nearly 3,000 tons of rich ore will be raised. The company's land was becoming more valuable by the arrival of new colonists. The shares in Australia had all been taken up. It is stated that a call will be made of 10s. per share, which it is expected will be all that will be required from the proprietors. The following is extracted from Capt. Phillipp's report:—

Tungkillo, June 30.—Goad's Winze is 6 fathoms below the 30, the lode is 5 ft. wide, and will in north end of it turn out 6 tons of copper ore per fathom, worth 12ct. Stephen's Winze is now four fathoms below the 30, and will

produce 1 ton per fathom at 20%. The lode in 40 north of Rabbin's Winze is promising, but not yet productive. The lode in 40 south is also unproductive. We are pushing forlode in 40 south is also unproductive. We are pushing forward these ends with all despatch, so as to communicate with the adit from foot of the hill, and to lay open the fine course of ore seen in Goad's and Stephen's Winze. I have been through the mine three times this week, and have never

seen it looking so well as at present.

The 40 South on Baker's Love. — In this end the lode is 3 ft. wide, and contains some stones of blue and green

carbonate.

The 40 North on Baker's Lode.—The lode in this end is not productive, but as it gets nearer the course of ore below the 30, the alteration in its dip, and other indications, induce us to expect we shall soon have the pleasure of seeing this a rich level.

Goad's Winze under 30.—The lode in this winze is 5 ft.

wide in its north end; it will produce 120l. worth of ore to the fathom. This winze is within four fathons of the back

A gold mine is said to have been discovered, close to the sea coast, at Salt Key, or Creag, belonging to Capt. Shepherd, governor of San Juan, America.

The previous reports of the gold mines of California are confirmed. With respect to the alleged discovery, a contemporary has the following notice: We learn that two gentlemen, recently returned from California, and arrived at Southampton by the West India steamer, confirm, in part, the late statements as to the discovery of gold in that country; and, as evidence of the fact, exhibited specimens of the metal which they had with them. We never had a doubt of gold being found there; them. We never had a doubt of goid being found sheet, but to the extent represented we are very credulous. That mica has been mistaken for gold, we are assured; and can state, on the authority of a gentleman now in London, who is extensively engaged in the gold mines of Brazil, that he has frequently had applications to purchase gold, which has proved to be mica. To inexperienced persons the conviction movement by saddy. but to a practical and experienced nas requently nad applications to purchase good, which has proved to be mica. To inexperienced persons the conviction may not be ready; but to a practical and experienced miner the detection is easily made.

The Morning Chronicle states that the papers

from Port Adelaide, South Australia, to the 23rd of July, represent the mining interests of the colony as increasing in importance. The mining sharemarket was becoming of some magnitude, the daily transactions being numerous and for large sums Various new discoveries are spoken of, and other companies had been formed. There had been a good deal of business done in the Burra Burra shares, which had advanced from 140l. to 162l., and had been done at 160l. per share. Large orders to purchase had been received from the neighbouring colonies. The Wheal Gawler Mines Association had been definitively formed, and the whole of the shares, 10l. each, subscribed for. They were selling at 15l., being 5l. prem. Specimens of a quantity of very beautiful silver lead one, from the Fahlerz lode, just raised, had been exhibited to the proprietors, and the general prospects of the mine are represented as very favourable. The Belvidere Mining Company had likewise been formed. The shares to be 640 in number, at 54. each, making the capital 3,2004. The purchase of of the land amounted to about 6401., and there has been 9281, paid up, so that the sum paid up on each share is 11. 9s., and the amount of call remaining to be made is 3l. 11s. per share. The price of these shares in the market was nominal. Several drays of fine ore were on the way to the port, which, from specimens exhibited, were likely to prove very rich in silver. From the general operations of the men employed, the prospects of this mine were considered very satisfactory. The shares of the Adelaide Mining Company had been largely dealt in at 21. 5s. to 21. 6s. The affairs of the Port Lincoln Mining Company were progressing favourably.

Much excitement had been caused by judicial proceedings taken against the Adelaide Company for the payment of royalty on the mineral collected, and a public demonstration had been made against any attempt of the Crown to impose a tax of the kind. A public meeting likewise had been held, when a resolution was passed for drawing up a memorial to the Queen, praying her Majesty "not to sanction any future attempt to impose on the colonists the unjust, obnoxious, and partial royalty tax.

The latest prices received from Adelaide are as

The St. John Del Rey Mining Company have declared a dividend of 17s. 6d. for the half-year ending the 31st of August, which is 7s. 6d. per share more than at the same period of last year. The division of profits was 9,625l. The total produce of the mines for the six months was 36,570*l*., from which there is deducted 2,694*l*. for duty at the mine and export, and 22,604. for general expenditure, leaving the gross profit at 13,272L, which, for the same period of last year, was 9,970L, showing, consequently, an increase of 3,302L in 1848 over 1847, although there is an augmentation of no less than 3,392L in the item of general expenditure; in fact, the true improvement in the value of the produce for the six months in 1848 was 6,664l., as compared with the same period in 1847. The value of gold raised in March 1848, was in 1847. The value of gold raised in March 1848, was 6,510*l*.; in April, 5,901*l*.; in May, 6,402*l*.; in Juhe, 5,409*l*.; in Juhy, 6,817*l*.; and in August, 7,531*l*.; being an improvement, as compared with 1847, of 1,703*l*. in March, of 945*l*. in April, of 1,302*l*. in May, of 199*l*. in Juhe, of 1,232*l*. in July, and of 1,769*l*. in August. The present price of the shares in this company is 12*l*. 10s. to 13*l*., and the amount paid up is 15*l*. The share-market has been firm this week, with better quotations for some of the leading companies.

better quotations for some of the leading companies. Transactions have taken place in St. John del Rey, Australian and Brazilian, and many others.

IRON TRADE.—Glasgow, Dec. 8.—The market for pig iron is quiet, but firm. Prices are steady, and mixed numbers may be quoted at 41s. 6d. per ton, cash.—Note furnished by the North British Railway Journal of the exports of pig iron in November 1848, as compared with 1847 :-

1847. 1848. .16,730 tons. 11,371 tons. From Broomielaw . . Port Dundas to Kirkintilloch 16,111 32,841 15.214 Decrease in 1848...... 17,627 tons.

Mr. G.—By an order of the Stock Exchange, Jan. 1846. RECEIVED: A REGULAR SUBSCRIBER.—E. M. J., BOW.— M. H .- AN ORIGINAL SHARBHOLDER.

# Railway Chronicle.

LONDON, SATURDAY, DECEMBER 16.

At the special meeting of Cameron's Coalbrook, Swansea and Loughor an unusual scene was enacted. The committee appointed to inquire into the affairs of the company having presented a report bearing only the signatures of four out of the five members, the chairman objected to its being received, when a motion was made, by way of amendment, to receive and adopt it, which was carried by a show of hands, but on registering the votes the dissentients were in the majority. The chairman, amidst great uproar, declared the committee dissolved, and, with the other directors, left the room, when resolutions for dissolving the company were carried unanimously by the dissentients.

The lease of the BIRMINGHAM, WOLVER-HAMPTON AND STOUR VALLEY to the London and North-Western has been confirmed by the shareholders at their adjourned special meeting. The term is for 1,000 years, at two-thirds of the London and North-Western dividend, from Jan. 1, 1850, interest at 4 per cent. being paid in the meantime, and no further calls to be made.

The shareholders of the LANCASTER AND PRESTON, at their special meeting, confirmed the agreement with the Lancaster Canal Company for a transfer of the line to the orginal

proprietary on the terms proposed.

The special meeting of the East LOTHIAN CENTRAL sanctioned the proposal for dissolution, for which a bill in the next session has been prepared. The directors declare the absolute necessity of this step, from the continued depression of railway interests.

From our official returns it appears that the amount of traffic for the last week, on 4,205 miles of railway, was 175,204l., thus

accounted for: - 76.249/. for the conveyance of passengers only, 54,453l. for the carriage of goods, and a remainder of 44,502l. for passengers and goods together, not respectively apportioned; being an increase of 24,793l. over the corresponding week of last year, when the mileage was 3,317. The average earnings per mile were 42l., whilst in 1847 they were 45l.

# PRECAUTION ON THE STANDARD OF DIVIDENDS.

Our correspondent "Scrutineer," in a letter we printed last week but one (see p. 843), touched upon a point to which it will certainly be advisable for shareholders to keep their eyes alert and steadily directed, if they would avoid injurious effects on the future permanent value of their property from the temporary re-action of attempts to discredit it on false grounds. The risk obviously lies in confounding, or suffering to be confounded, two very distinct things: in taking for granted as a satisfactory result in one point of view what is, beyond any doubt, quite convincingly so in another. It will be seen that we allude to the estimates lately promulgated, in which a certain rate of dividend is made out for the future; and we quite agree with "Scrutineer," that where that rate in any concern is much lower than the same concern formerly divided—a condition which prevails in all these statements—it will be proper to keep constantly in the foreground the fact that this is a very serious mortification to all proprietors—to many a very serious loss; and that there can be no reason whatever for being absolutely contented with such an issue, but every reason for insisting that all possible efforts should be made to return to something like the scale from which this unwelcome descent has taken place.

The late exhibitions of present results and future prospects, as far as they meet false statements merely intended to prove railway concerns little better than bankrupt, were, of course, triumphant. But their complete success against this easily refuted calumny—this exposure of exaggerated accounts of ruin-will not, after all, dispose of the fact that in the real condition of the business, after all mere calumnies and exaggerations have been silenced, there remain many and serious grounds of disappointment, in which nothing short of a certain proof of the hopelessness of a change for the better can justify the shareholder in acquiescing. It will therefore, we say, be for his interest to see that no occasion be taken, from what has been lately occurring, to let the property permanently down to a lower level, as a matter of course, as though it were enough to have proved it by no means insolvent; or as though the maintaining it hereafter at a scale several degrees below that of former years will be a complete vindication of the directors' past policy, or a consummation at all in accordance with the grounds on which that policy was expressly recommended to the proprietors.

There are many reasons for keeping this subject in mind: the strongest, however, is plainly this :- If it be once taken for granted that the reduced dividend—we will say of 5, 6, or 7 per cent., as the case may be-will be a sufficient maximum, the dividend will never hereafter rise above it, if, indeed, it should keep, or even reach, that level. The only practical foundation for improvement hereafter must be laid in the clear understanding that such a maximum was not what the directors expected or promised when the present state of things was being prepared; and that it is by no means satisfactory;—that to

justified in sitting down patiently, while anything that diligence and economy may do can be done to make their prospects better. This is a far more important distinction than may be, perhaps, conceived by those who have not themselves seen something of the internal working of managing bodies. The proportions of all questions of traffic or outlay differ immensely according as the point in view is to improve what is felt to be unsatisfactory, or to keep at the same level what is just as it should be; and the manner in which this difference will act throughout every part of the business can scarcely be too strongly described. And these plain truths should be brought home to all concerned: that much can and will be done to make matters better, if it be constantly kept in mind that they are far from being well as they are; and that causes will always be present for keeping matters as they are, if it be once understood that no better is expected.

But why should not proprietors be satisfied? some one may ask. Is not 7 per cent.—say 6 per cent.—a very good interest?—and will not railway shareholders have done well enough if they get so much as this secured to them? By no means. Even supposing there were not one of them who holds a share otherwise obtained than at par,-to such, even, we say, the just measure of expectation is obviously what the best management is capable of producing in an enterprize which the promoters were invited to join on the express understanding that it should be so managed, with a view to the highest advantage of all. And it is clear that this having been the virtual-nay, the positively declared-foundation of the whole business, its true standard of profit must be fixed by what it can be made to produce by the most judicious government with a view to profit; such having been the intent of all who started it-such the implied condition on which its management was placed in the hands of directors. If they have conducted it imprudently, and thereby made it less productive than it might and would have been if prudently conducted, it is not at all allowable to excuse this result by any reference to an arbitrary standard of profit, and say, "this or that is a very fair dividend, with which you may well be content.' It is no fair dividend at all, unless it be the best which the nature and conditions of the business will allow of-this, and not any other limit, being the sole proper boundary of the shareholders' expectations, both now and hereafter. This is in all cases the ruling measure: it is, however, particularly distinct in cases in which a great decline from better dividends has taken place. The question here arises: How has this come to pass? And when the only real answer is: "It is the consequence of what we have been doing for the last three or four years"the rejoinder cannot be avoided: To what end, then, has all this been done? Of course, if not to make the concern more profitable, at least to prevent it from becoming less so. The result, then, has been quite the contrary. We should have been very thankful to remain as we were; but so far from this being the case, our rate of receipt is fallen off, it may be, to the extent of one-third. This visible and serious result there is no gainsaying. Whatever the cause may have been, the effect is sensibly disastrous to us. We have been "protected" out of something like one-third of our property; and so far from being contented with remaining on this losing ground, we must desire to get back, as soon as possible, to that from which we started on this "protective" system, three or four years since. We have descended to it is felt to be (as indeed it must regret to see, beyond the least doubt, that

under which those concerned are by no means | lead us further and further from that point. We must not only take care to go no further in the mistaken courses that have led us so far towards zero, -instead of advancing on an upward scale, or even keeping us at the former one; but we must also, while feeling profound disappointment at the result, and renouncing the policy which has led to it, study what can be done to remedy its consequences.

> To this kind of protest, of course, there will be returned the usual answer,-that the process was not willingly begun; that it was forced on the ruling bodies by "erroneous legislation," by the "competition of rivals," &c.: and that what has happened-with the sanction, too, of the proprietors-must therefore be accepted like any other inevitable misfortune. But such answers are far from stating the whole truth, or indeed the most material part of the truth. What has been done was certainly sanctioned by proprietors—but alto-gether at the instance of the directors, in whose judgment they implicitly confided. It was moreover fully as much the voluntary result of the errors of that judgment, of unfounded expectations, of jealousies and excesses foreign to the true objects of management,—and not unaided, it may be, by less ostensible motives,it was as much the result, we say, of these causes, voluntarily introduced, as of any com-pelled act or series of acts. This ought not to be lost sight of, for very good reasons. If it once be got admitted as a current truth, that what has taken place could not have been in a great degree prevented by a wiser foresight and more prudent moderation, it will very soon be found that no due efforts to repair the past imprudence will be thought necessary, or allowed to be practicable. The prevailing reason for insisting on putting the saddle on the right horse, and on keeping it there, is, accordingly, no captious desire of fruitless retrospect or proneness to idle incrimination. In it is directly involved the sole hope of all real improvement for the future; -in it lies the only security against the repetition of the same injurious mistake hereafter.

> Hitherto we have been speaking of the bearing of this matter as it properly comes home to those who have never taken any stock above par. But there is a stronger case yet to be insisted upon. In all our great concerns such shareholders have long since ceased to be the numerical majority: - of those at present registered a very large proportion have bought in at high premiums, which barely gave them common interest at the dividends then being made; the return on whose investment the serious fall of dividends has reduced to something very much indeed below the common rate of interest. And of these there are vast numbers ill able to bear so great a loss,-parties who invested their all on the faith of an understanding which every pains were taken to confirm, and which understanding was ratified by the heads of the railway world, at the time of high premiums, in the most emphatic manner, on all occasions. If the original shareholder has a right to agitate for improvement, while any improvement can by any amount of effort be secured, still more must the holders of purchased stock have a pressing claim for redress; and they ought to be considered as deserving of especial consideration by all who are in any position to influence the future result of these enterprizes.

Let us repeat it, there is one prospect for them-for all concerned-if their present state be allowed to pass quietly into the character of a settled fact-if it be laid down without contest that they are very well as they stand in the programmes of last month, and that if these is) "a heavy blow and great discouragement," all we have been doing since then has been to are fulfilled there will be no reason to com-

plain. There is another if the very contrary of all | this be-as it may truly be-maintained and kept in the foreground. On the first-named understanding it will very soon be found that these very programmes themselves will not be realized; that they will merely present a new point of departure from which to descend to a still lower level. On the other, there may still be a chance of preventing matters from going down further -if not of some little approach to the better scale of three years since.

# FUTILE ATTEMPT TO BRING BACK THE COMMON CARRIERS.

The discussion of the MERCHANDISE QUES-TION, revived by Mr. Whitehead's plea for a return to an exploded system, is not yet terminated: fresh writers have put forth their views or communicated their experience on the subject; and it is possible that others may follow them. In the meanwhile, it is obvious that any attempt to re-open the main question is a mere absurdity. That has been sufficiently determined already, by facts which can leave no doubt whatever on the minds of those who are concerned in ascertaining the best means of drawing a profit from railway traffic:—and the efforts of those who, pretending to start from that ground, are in reality trying to fight once more the lost battle of a party hostile to the railway interest, will end, as all such dishonest endeavours ought to do, in nothing but discomfiture. The day of the fallacy they wish to reproduce is past; and there is no fear of any return to an error condemned by sound reasoning, indeed, from the beginning, which has now the weight of a mass of practical experience, also, accumulated against it. All that can be expected from the controversy, therefore, will be the clearer exhibition of the results of that experience in aid of the true theory, on the one hand; and a more open display, on the other, of the shallow devices and palpable attempts to deceive, on which alone the contrary system has ever been or can now be maintained.

To the former class belongs the statement of Mr. Eckersley, superintendent of the traffic on the Lancashire and Yorkshire series of lines; a series in which, above all others perhaps in the kingdom, there is the largest scope for a thorough trial of the principles of a general goods business; whether we consider its various elements, embracing all kinds of traffic; its great extent; the presence of active canal competition; or the fact that to those lines the common carriers had formerly an almost unlimited access. The actual results presented by Mr. Eckersley of the working of the better system now established there, whether as compared with those under the regime of the common carriers, or as productive of absolute nett earning, and the ratio of such earning to that from the passenger business, will be found notable and to some extent instructive. The only circumstance that prevents us from calling them positively so, and highly important, is that which we have already stated; viz., that the question is already settled beyond the danger of material disturbance: -so that contributions of this kind, however conclusive, can scarcely count as more than cumulative proofs of a truth already known to all who have an interest in knowing it, and a desire to promote the welfare of the property interested in this knowledge.

The letter to Mr. Glyn, by "A Sufferer," is evidently the production of the second (and quite different) class-the writer, while professing to commiserate the losses of railways, having a totally adverse object lying beneath this illchosen cloak. The misfortune of his choice, indeed, is that the sinister purpose is far too in 1846 at 28s.; in 1847 at 25s. awkwardly covered for concealment: it peeps

sufficiently condemn itself in the more than suspicious proposals set forth as means to improve railway profits-were not the texture of the general argument too loose, and the alleged matters of fact and figures too palpably misstated or perverted to obtain the least credit, even for suggestions advanced with an honest purpose of doing good. What the writer's purpose really is may be learned from the first and second remedies he prescribes to Mr. Glyn, viz., "Retrace your steps, and invite and encourage the return of the old independent carriers, or rather agents, to the conduct of the terminal portion of your carrying business.' "Cease your useless (because unavailing) contest with the canal," &c.

Something like this we have surely heard often enough before now; -the sole novelty in the present case is, that it should be uttered from under the mask of a railway adviser. Of this pretence one does not know which most to admire, the effrontery or the folly of such a method of reforming railways. We shall next have some disinterested "sufferer" advising Mr. Glyn to call back the "old independent" coachmaster to undertake the "terminal portion" of the passenger and parcel business. Why not the one as well as the other?

It cannot be very welcome to Mr. Glyn to be marked out as the object of these ingenuous proposals. It was by a serious error of the London and Birmingham, under that gentleman's presidency, that the intrusion of the common carrier on the merchandise business took place; and now that the mistake is too well known, and some of its ill consequences are not yet rooted out, it must be anything but pleasant to be reminded of a false step, by these endeavours to bring it once more into credit. They will, however, produce the very contrary effect, since the more the subject is discussed, the stronger will the reasons appear for regretting the original mistake, and the less will any honest friend to railways desire to hear of its repetition.

# RAILWAY PROPERTY: THE CAUSES OF ITS DE-PRECIATION, AND THE REMEDY.

Although there were causes, such as we have pointed out, that peculiarly affected, or rather aggravated, the depression experienced in railway property within the last two years, there was evidence in all other forms of production of similar, if not of equal depression in prices, from the same monetary panic :- in manufactured property, for instance, and even in food and raw materials, which are generally less liable to fluctuation than when that food and those materials have been combined with labour, as in railways and manufactures.

That the frequent variations in the value of money, incident to the legislation of 1844, has told with fearful effect on commodities generally, we prove in relation to corn, to cotton and to iron, by showing the variations in the value of money, estimated by the rate of discount at the Bank of England in 1847, and comparatively with those commodities.

In the summer of the last-named year, wheat, under apprehended scarcity, it is admitted, rose on the weekly average to 102s., Bank of England discounts being at the rate of 5 per cent.; by the close of the year, discounts having risen in October to 8 per cent., the weekly average fell to 52s., having touched in one week 49s. 6d.

Cotton, which, from its reduced quantity in this country, had become a subject of speculation in 1846, rose from  $4\frac{1}{4}d$ . to  $7\frac{1}{4}d$ . in that year; and in 1847, after some depression in the summer, rose again to  $7\frac{3}{4}d$ ., discount being at 5 per cent. Under the rise in the value of money at the close of that year, the price sunk to 43d.

Wool, under the action of our restricted monetary system, stood in 1845 at 31s. 6d. per tod of 28lb.;

Scotch pig iron, which, in the spring of 1845, when | prudence? How can the farmers—how can retail

out on every side of the composition; and would | the railway system was rife, rose from 41. 10s. to 51. 15s., and one week to 61. per ton, in 1846 its highest quotation was 41.2s.6d., its lowest 31.12s.6d.; while in 1847, under the action of the increased rate of discount, its variation was from 3l. 17s. 6d. to 21. 5s. and 21. 7s. 6d.

Similar illustrations would be afforded were the comparative prices of sugar, tea, coffee, or rice furnished, the importers having, by an unseen operation, been cruelly mulcted of their fair return. So indeed might the variations in consols be adduced, exhibiting a difference of nearly 12 per cent, in seven months of 1847, and equally so by the fluctuations in the rates of Exchequer Bills.

If this was the result of the first fair trial of the principle of the money law of 1819 by means of its complement of 1844, on the food and raw materials necessary to more complicated production, what must have been its effects on manufactures generally, and upon the wages of labour !- what upon the stocks of manufactured articles, some of which the necessities of the holders compelled them to realize? If this was the scale of reduction in articles of first necessity, what must have been the condition of dealers in luxuries?

The reports from the Foreign and Colonial markets for British merchandise, assist in unravelling these questions. It is the principle of our monetary system, based, as it professes to be, upon gold, that whenever that commodity is exported, the prices of our produc-

tions must be reduced, so as to render them cheaper than gold, in order to attract the purchase of the foreigner; or they must be sent out on consignment, to be sold at any sacrifice, in order to support the credit of the manufacturer or the merchant, and to bring back gold. This operation is so clearly apparent in the evidence of the governor and deputygovernor of the Bank of England, on the recent committee of inquiry into the causes of the "commercial distress," that no apology will be needed for its introduction here. In reply to questions put by Mr. Cayley, the member for the North Riding of Yorkshire, the governor and deputy-governor thus explained the mode of replenishing the Bank coffers:

3278. When the Bank reserve is very low under the export of gold, is it impossible to afford an inducement for a speedy return of gold without creating great pressure?—The means of getting back the gold is by making money dear, and causing a fall generally in the price of commodities which will bring back

3279. Then the means of attracting gold back to this country, after it has gone out, is to lower prices?

—Prices will fall in consequence of the increased value of money.

3280. Under a great fall of prices the Bank is com-paratively safer?—A great fall of prices has a ten-dency to bring capital into the country, and as bullion flows into the country it acts upon the reserve of the Bank and of all private bankers.

3281. But in order to attract gold back into the country, the more forced sales there are, and the lower the prices, the safer the position of the Bank is !-The lower the prices of commodities, the greater will be the tendency to the increase of the importation of the precious metals, and of the reserve of the Bank, and of bankers generally.

3282. Under that state of things, that is a pressure arising from a fall of prices, in order to secure the return of gold, does not any accommodation afforded to the public rather tend to obstruct the fall of prices? -Yes

3283. The less accommodation, under that state of things, that is afforded to the public, the safer to the system ?- The accommodation must of necessity, under that state of things, be reduced.

In the light of this explanation, the variations in the value of money in this country, arising from the export of gold, will be seen to have been marked by a gradual rise of discount for the best commercial paper, from 3 per cent. in January 1847, to 31, 4, 5, 64, and in October, 8 per cent.; the last rate of the Bank of England producing, in other quarters, 10, 15 and even 20 per cent. The variations between the rate of discount between January 1845 and October 1847 amounted to more than 200 per cent.

How is it possible, it may be asked, for any nation to continue in prosperity under such fluctuations in the most important element of all price, namely, money? what interest can be safe? How can manufacturers frame their plans with any degree of

traders even, stand against such changes? How can large vested interests, like those in railways, be sustained?-at one time carrying on their operations upon one scale of interest, and then upon another. It is well that these great companies, amidst such difficulties in the money-market, have been able to present their shareholders with such statements of their condition as they have done; but it may be a fair subject of consideration how much better would have been the result, had their beneficial progress been conducted, both in respect to cost and a full measure of traffic, under a prosperous state of currency.

It will hence be manifest how paramount will be the duty of the directors of the companies severally to their constituents, to take care that in the ensuing session of Parliament it shall be a first object to obtain a just, sound, steady and sufficient currency, such as may with the light of experience be devised for the successful pursuit of the great operations over which they preside, and which must ever be dependent upon this common weal. Sir Robert Peel, in 1844, professed, and no doubt intended, to establish a steady circulating medium,-but he consummated such an one as is calculated, both with reference to our home and colonial interests, to render all production, trade, and enterprize mere gambling.

KAPPA.

#### POSITION AND PROSPECTS OF THE MIDLAND.

When, at the close of 1844, the London and York line and its rival projects were about to come before Parliament, Mr. Hyde Clarke observed with reference to the Midland, that it had probably a better basis for a traffic of which it could not be deprived than any other line; nor was he far wrong; a line which, running through the very heart of the country, connects all the midland manufacturing towns with each other, London with Newcastle and Edinburgh, the Northern Ocean with the Bristol Channel and the English Channel, and has a through traffic and a local traffic in passengers, a mineral and a merchandise traffic, all of very large amount, must have (as Mr. Hudson expressed it) a "vitality" about it, which no adverse circumstances short of the ruin or permanent decline of national prosperity, can long repress. The mineral traffic on this line is now of very large amount, and susceptible of further development to such an extent as may hereafter make it little inferior-having all the principal elements of this traffic, coal, iron, stone and lime_to those of the York, Newcastle and Berwick, or the South Wales, in amount and value. This traffic will shortly derive considerable accessions from the opening of the Leicester and Swannington extension, connecting Leicester, Ashby-de-la-Zouch and Burton-upon-Trent, the extension of the Erewash line and branches, and the remodelling of the Mansfield and Pinxton line. The first traverses, throughout, the Ashby coal-field, and will greatly increase the mineral traffic on the Birmingham and Derby portion of the old line especially; it will also bring to distant markets the lime from the neighbourhood of Ashby, which is now only locally used but which is of much greater value for agricultural purposes than the Ambergate or Crich lime, and from this circumstance as well as from its situation. can be carried much farther into the south-midland and eastern counties. The connexion of the Erewash Valley and Nottingham and Mansfield lines with the Pinxton coal-field will also largely increase the supplies of coal and divert a large traffic in this article from the canals. A very important object both to the railway companies and the public will result from the opening of so many new coal-fields in the midland counties an object which Mr. Hudson expressly designed-the lowering by competition of the price of coal at the pits; the coal-owners hitherto, whilst forcing upon the railway companies such unreasonably low charges, having maintained monopoly prices for themselves, even to such an extent as to raise the local price in consequence of the facility of transmitting their produce to distant markets; and not only so, but put into their own pockets the whole saving in the cost of conveyance. The result of this unavoidable competitionfor when a coal mine is sunk its produce must be sold-will be a large increase of consumption. Stone is a very important article of mineral traffic, where a railway has access to good quarries, from the great | that the South Wales line also will bring a very

able magnitude requires, though the demand for it is not so uniform as would be desirable. The Midland now carries this article in considerable quantities, and for long distances; but the Rowsley branch (as the Matlock line may be considered) passes close to one of the finest quarries in Britain, the stone from which has been carried, by an inconvenient method, involving two or three "trans-shipments," to Liverpool, for the erection of St. George's Hall; and the Mansfield line will be within reach of the quarries near Bolsover, producing the magnesian limestone selected for the exterior of the new Palace of Westminster. The iron works along the course of the line in Nottinghamshire and Derbyshire are increasing rapidly in importance. The Ripley branch, if made, would traverse a coal and iron field of great value. The South Wales line, and the Oxford, Worcester and Wolverhampton line, will bring very heavy mineral traffic on the Bristol and Birmingham portion of the line, where that traffic is now perhaps the lightest. In estimating the prospects of the Midland line more stress is not here laid upon its mineral traffic than it deserves. The traffic in goods, cattle and minerals paid last half-year the whole of the working expenses of the line, rates, taxes and duty; leaving the proceeds from passengers, carriages, horses, parcels and mails entirely free. The time may not be distant when the mineral traffic alone may pay half the expenses leaving a large proportion of the merchandise traffic free; a consideration which shows the great importance of a mineral basis for railway traffic.

The directors estimate the increase of traffic necessary to pay a dividend of 6 per cent. (when dividend becomes payable out of revenue on the cost of works now under contract) at 2301. per mile. This seems a most moderate expectation, and one which may prove considerably below the actual result. It is an increase of little more than onetwelfth of the traffic, carried on under serious disadvantages and in most unprosperous times, of the year ending with June last. In the year ending with June 1846 the traffic exceeded that of the year ending with June 1844 by more than a third; and though the year 1845-46 cannot be considered a standard year, yet the interval is wide between an increase of one-third and of one-twelfth, and the whole line that was worked in that year had already been opened five years at the commencement of it. It is obvious at least that the traffic of a year or two of peculiar adversity would be a very fallacious standard of the future. In the Midland statement, as in those of the other companies, the directors have been solicitous to show what they consider the probable minimum of future dividend, and forthwith is concluded that this is only a possible maximum!

Probably no circumstance has so much contributed to reduce the estimation in which the Midland line was held, as the preposterous terms of the lease of the Leeds and Bradford line; and yet it is worthy of remark, that the directors in their statement make no reference whatever to the North-Western line (continuing the Leeds and Bradford from Skipton into the Lancaster and Carlisle, with a diverging line to Lancaster); though the command which this would give over the traffic with Glasgow and the North vas actually the leading inducement offered to the Midland Company for taking the Leeds and Bradford line, and that which probably induced one of the directors, in my hearing, to describe the opportunity of taking it (when thrown up by the Lancashire and Yorkshire), as "a perfect godsend." North-Western line (which is in progress, and will probably be opened into the Lancaster and Carlisle at one point next year) was first considered a sufficient reason for giving 90,000l. a-year for a line which by itself could never produce (even when connected with the East Lancashire) two-thirds of that amount, and then is not thought worthy of being mentioned in a statement of the affairs of the guaranteeing company! In both points the directors have been wrong; it was no sufficient consideration for such a bargain; it was worth mentioning as a line which will largely increase the traffic on the leased line, which is now considered productive of so great a loss, and will have a very materially favourable effect on the main line. There can be no doubt

weight which even a single edifice of any consider- important traffic on the line at Gloucester, though it is not mentioned in the statement as a source of future increase. Mr. Hudson and several other directors of the Midland line, as such, were made directors of that important project the Welsh Midland Railway, which has for the present failed, in the expectation, doubtless, that it would bring a large traffic upon their line, as it must have done; but of the two, the South Wales line must be of far greater value to it, both as traversing a more important district, and bringing its traffic to the Midland line at Gloucester, instead of Worcester; or, as I believe, it was ultimately arranged at or near Birmingham. In the district which it traverses, the richest mineral field in Britain, 4,500,000 tons of coal are annually consumed, chiefly in the reduction of ores and the manufacture of iron. Independently of iron and coal,—not to mention the interchange of other products,—I believe that nearly all the copper used in England—(an article so largely employed in the manufactures of Birmingham and other towns)-is smelted in the neighbourhood of Swansea; including, if I am rightly informed, the Australian ores. The Nottingham and Grantham line (Ambergate, Nottingham and Boston), will also be an important tributary. There will be little, if any loss, on the company's subscription to the Manchester, Matlock and Midland line: though the preliminary expenses will fall heavily on 12 miles of line, they will still cost less than the average of the Midland; and it is fully expected in the neighbourhood to pay 5 per cent. If carried through to Stockport. though in existing circumstances this ought not, and is not likely to be done-it would fully pay Midland dividend at least, and be a connexion of first-rate importance to the line. As a branch terminating at Rowsley it will be of considerable importance.

> The value of the Midland line appears to be greatly underrated; but it is very possible that with the nearly certain prospect of a permanent 6 per cent, dividend, and the probability of a larger one, it might fail, under a peculiar conjuncture of circumstances, to realize the stated minimum for an odd half year; and it seems probable that, without a very material improvement in the circumstances of the country, the company may be more pinched in the next half-year than in any preceding one since the amalgamation. It will be a critical period, and therefore,-though it may seem premature to speculate on the dividend of next June, -I think it worth while to inquire into its probable amount. If it fails to be 3 per cent. it will not prejudice the future; if it amounts to that, the prospect will be very good. It is, of course, in some degree, contingent; but in the best estimate I have the means of forming, I think it will in all probability be of that amount. reckoned the mileage of the trains discontinued on the 1st of November (exclusive of Sunday trains, and certain sections of the line), at about 700 miles a-day; and some trains have been discontinued since. Capt. Huish reckons the minimum average cost of the passenger trains on the London and North-Western line at 2s. 9d. per mile; if we take 2s. 6d. we shall here find a saving of about 30,000%. a-year; and if we suppose the saving in the maintenance of way on the North Midland section (expected to be some thousands a-year), and by other measures of economy now in force, to amount to half as much, we have an aggregate of 45,000l. a-year; this is a large amount, but there was ample room for retrenchment, and the reduced cost of material of every kind must greatly facilitate it. If that amount be deducted from the traffic of the year ending with June last, it would leave the working expenses 30 per cent., notwithstanding the great improvement of engines, and the great extension of the concern (with some increase of mileage receipts) since 1844, when they were expressly stated to have been 26 per cent. The balance left at the end of last year was 45,000L; the receipts this halfyear will apparently be 12,000%, or 15,000% more than in the corresponding half of last year, but against this may be set the increased proportion of expense in working a longer mileage. Allowing for the diminution of train mileage for two months and for other savings during the half-year, and for the difference between 31 and 3 per cent dividend on Midland stock, and for a corresponding (but in proportion larger) difference on the Birmingham an

Derby stock, which amount to about 27,500%, on the one hand, and charging the revenue with 37,500%. for dividend on three-quarters of the 40l. shares issued, on the other, I think there should be about the same balance as before at the end of this year. Then, giving credit for the reduction of expenses on the one hand, and charging the revenue with 22,500% more for the Leeds and Bradford line, with four months dividend on three-quarters of the 401. shares, and with some increase of interest, on the other, I estimate the increase of income required to pay 3 per cent. at about 30,000l. A receipt of 1,000% a mile on 68 miles of new line (deducting the same amount on 48 miles for two months, during which the Syston and Peterborough line was open last half year,) will produce 52,0001.; and this, deducting 20,0001. (almost 40 per cent.) for working expenses; &c., will furnish 32,000*l*. rather more than the amount required. This computation supposes that no part of the 50*l*. shares or calls on the Bristol and Birmingham stock will be entitled to dividend out of revenue next half-year, (or that any new portion of line in respect of which it becomes chargeable will pay for itself) and that the effect of new portions of the line and of other feeding lines on the traffic of the old line will be at least sufficient to compensate for the traffic abstracted by other lines; but it does not require any increase of the receipts per mile. It is only when several hundred thousand pounds more (to pay for works under contract) have become entitled to dividend that the directors appear to contemplate the necessity of such an increase. At all events a very small increase in the meantime would be sufficient to maintain the dividend. If dividend or interest becomes payable out of revenue on the capital expended on the Nottingham and Mansfield line whilst incomplete (which was not the case with regard to the Syston and Peterborough line) then some increase of mileage receipts ap-parently will be required. I must repeat, however, that a temporary defalcation of the dividend, should it occur, during commercial depression and when competing lines, as such, have nearly their full effect, whilst on the very same lines as feeding lines (the North Staffordshire, for instance, which will most likely bring more than it takes away) the traffic is scarcely organized, much less developed, may occur without forming any unfavourable criterion for the future.

I know that amonest many of the less informed persons who speculate or invest in railway shares. the large amount of saving that is or yet may be effected by the reduction of trains and other means, (though I do not assume the correctness of an estimate which I have not the means of forming properly,) the surplus arising from the difference between 31 and 3 per cent. in the second half of the year, and other very important con-siderations affecting the value of the line, are overlooked. They dread competing and make no account of feeding lines, and look for an immediate declension of the dividend to 5 per cent. and its permanent limitation to that amount, if it does not fall below it. Supposing an average degree of general prosperity to be restored, such anticipations appear to me quite erroneous; and if timid holders especially can be brought to form a better appreciation of their property—a property which may very possibly attain hereafter as high a value as it has ever borne it is not time lost to point out a few of the various considerations which should tend to prevent the deplorable sacrifice involved in the sale of it at the present or near the present price. Apologizing for the length of the present communication, I find that I must still defer some general remarks.

OBSERVER.

P.S. The affairs of the Midland Company are most favourably distinguished from those of some of the other great companies, in the very small amount of works under construction and the short period in which they may be completed; so that there does not appear to be anything whatever, unless it be the will of the directors, to prevent the closing of the capital account next year, and carrying to a strictly separate and distinct account the expense of any works, if any, that may be afterwards undertaken. Another favourable point of distinction is, that the company is not raising any preference stock (except the unpaid portion of the Bristol and Birmingham

capital), much less has the prospect of being obliged to create any new preference stock; but, on the contrary, has a surplus of two millions to apply, if necessary or expedient, to the reduction of its debt,—a circumstance which must give to its debentures a decided preference over those of almost every other company. Except to the extent of about 100,000t. a-year, even its guaranteed stocks are only entitled to the same rate of dividend as now paid on the main stock, whilst on nearly a million of the capital expended on an integral portion of the original line, a dividend less by nearly one-fourth is payable.

The powers of construction, on the other hand possessed by the company, are of great value. If the London and North-Western Company should attempt any unfair competition with it, the formation of the Leicester and Bedford and South Midland line would transfer a large proportion of the main traffic of that company to the Midland line, which would be thus possessed of a duplicate, and even shorter route, than any other (Remington's line, in fact,) between London and Manchester and the North. The Burton and Nuneaton line would form the shortest route, even between Rugby and Manchester. The power which the company possesses of thus protecting or improving its position, whilst not entangled with the actual execution of the works, and at liberty to proceed with them or not, as a prudential regard to circumstances may suggest, and the proprietors at large determine, is certainly no inconsiderable advantage, though the cost of placing the company in this position may have been a serious one.

#### Gassip.

There is, we hear, no truth in the assertion that the LONDON AND SOUTH-WESTERN intended to withdraw their DAY TICKETS. A revision in the rates of charges, for the benefit of the public, is at present under the consideration of the directors.

The LONDON AND SOUTH-WESTERS, to accommodate the Londoners who may wish to spend either Christmas or New Year's day with their friends residing in the district of country through which the company's lines run, have agreed, with a seasonable liberality, to issue return tickets available from the 23rd to the 20th inclusive, and from the 30th inst. to the 1st of January.

Mr. Hudson has again secured the services of Mr.

Mr. Hudson has again secured the services of Mr. Peter Clarke, who has resigned his post of manager of the London, Brighton and South Coast. The Brighton Company do not intend to fill up the vacant appointment.

To further the Extension of the telegraph to

To further the EXTENSION OF THE TELEGRAPH to the principal cities in the North, a new company has been started, called the Scottish Electric Telegraph Company.

graph Company.

Signals.—Capt. Huish has suggested to the directors of the London and North-Western a new species of Signals, which is called "The self-acting Time-signal," introduced by Mr. J. Seetch, of the Strand. It consists of a barrel, containing a composition, with a spike at the end, for the purpose of sticking it into the ground or the carriages of a train, as occasion may require. A blow on the top will ignite it in an instant, producing a crimson light which will last from ten minutes to a quarter of an hour, and which burns with such intensity that it is seen even by day for a distance of upwards of 600 yards, and four or five times that distance by night. It is more particularly to be adopted for use in foggy weather; and these signals have been ordered to be carried by the guards of ballast and all other trains, with instructions to be used as occasion may require.

It is rumoured that the subject of Sunday Tra-

It is rumoured that the subject of Sunday Travelling will be brought before Parliament next session, with the view of binding railway companies by Act of Parliament to carry passengers on Sundays throughout England, Scotland and Ireland at the same fares as on week days.

After some delay the usual formal instruments are now being prepared for the transfer of the EAST LINCOLNSHIRE, about 50 miles in length, and which runs from the Great Grimsby and Boston to the Great Northern, which will commence paying on it the 6 per cent. dividend from the 1st of November last.

Capt. Laws has gone back to his old quarters, after resigning the management of the Great Northern, and has been re-appointed managing director of the Lancashire and Yorkshire, at a salary of 1,500l. per annum.

A great convenience is RAILWAY COMMUNICATION in an election district, leaving alone the increased celerity of the conveyance, instead of post chaises

and horse vehicles of any and every description, hired at prices affixed by the owners, and against which there was no appeal, there is now a regular and organized service ready at all times. This has struck us in the present West Riding contest, when on the day of nomination the trains carried the respective partisans of the candidates in great numbers to Wakefield.

The statements respecting the damage done to the Calebonian during the flooding of the Clyde by the late heavy rains having been much exaggerated, the engineer, Mr. Collister, reports the injury as but slight, about 70 ft. at one place and 30 ft. at another having been washed away, the particular portion of the embankment being only 15 ft. in height. The flood was unprecedented, and a heavy fall of snow took place on Saturday and Sunday, to the depth of about 2 ft., and then soon after a sudden thaw, accompanied by heavy rain, which caused the flood to come down rapidly, and run about 2 ft. higher than has ever been known before. The bridges, it appears, are not the least injured. The embankments have been completely filled and consolidated, and the floods, while they have not materially injured, have had the effect of testing the solidity of the works in general. Additional outlets are to be provided against an irruntion of a similar nature.

The gauge of the Arbroath and Forfar, 16 miles in length, being now altered and completed from 5t. 6 in. to what is termed the national or narrow gauge of 4 ft. 8½ in., has had the effect of giving one uniform gauge from London to Perth, Dundee and Aberdeen, a distance of 500 miles. The stock of engines, carriages and waggens that worked the line, having thus been rendered unfit for the purpose, will have to be sold by auction.

The APPARATUS FOR COMMUNICATION BETWEEN THE GUARD AND ENGINE DRIVER, which has been tested at the Wolverhampton station, consists, according to the Staffordskire Courier, of a gutta percha tube, of about half an inch bore, fixed under the carriage in the train; and at each end is attached a vulcanized India-rubber tube of the same diameter, and about two feet in length, which hangs down at the end of each carriage when not in use; but when the carriages are connected the tube is joined by a similar joint to those used in a shot-belt. In the passenger luggage-van, at the end of each side, is a rostrum for the guard, protected from the weather, and in which are two plate-glass windows, so as to enable him to see over all the carriages in the train without leaving his scat. The end of the telegraph-tube is carried near to the guard's seat, and a mouthpiece attached; while at the other end, on the tender, is a shrill whistle, and the guard, by the mere action of the breath on the tube, is enabled to give the requisite signals for increasing or decreasing speed, stopping, &c., and which cannot fail to attract the attention of the engine-driver. The invention is the joint discovery of Mr. Whishaw, C.E. and Mr. Kinder, of the Bromsgrove Railway Carriage Company. Some of the officials on the Midland have ordered it to be applied to the carriages on their line.

The Town Council of Ely, says the Cambridge

The Town Council of Ely, says the Cambridge Advertiser, are making a strenuous endeavour to move the Eastern Counties in behalf of an object which is considered of prime importance to the interests of the trade carried on at the port, indeed a necessary condition to the full development of our advantages in situation as a port—the continuation of the line from its present terminus to the harbour below the town; for which the company have full power under the Wisbeach and St. Ives Act.

An immense quantity of merchandise, says the Limerick Examiner, of every description is now conveyed daily by railway from Dublin to Limerick. The stores of the company are almost constantly full of goods. The passenger trade has been rather slack for the past week, as the departing emigrants are not now so numerous as they were.

In a letter to the Daily News, a "Railroad Traveller, after noticing the proposed reduction, which on the 1st of January takes place throughout France, in the postage charges, suggests the propriety of now seeking a reduction of the rates of postage of letters to France, Belgium and other countries on the Continent, wherever railroads have superseded the former slow modes of locomotion and despatch. The present postage of a letter to any part of France from this kingdom, is, under the \(\frac{1}{2}\) oz., 10d. pre-paid; to Calais, Boulogne and some other ports, if sent bearing postage, still less: to Calais (I state from my own knowledge) the postage of a letter of the above weight from England, unpaid, to be but 70 cents. The railroad from Calais is open now to the chief towns of France and Belgium. By confining the mail packet service to one port on each side of the Channel, Dover and Calais, the despatch will be

greater, if proper arrangements are made in France and England with the railway authorities for expediting the conveyance of the mails on their being landed at either of the above ports; and it will be obvious to any one who will reflect on the subject, that the expenses of this route for the Continental mails must be considerably diminished, so as to allow of great reduction in the present rates of postage for French, Belgium and Continental letters—of course it is meant

from or to those parts.

We think it worth while, in noticing an Accident that occurred to a gentleman on Tuesday on GETTING that occurred to a gentieman on fucsday on Getting OUT OF AN OMNIBUS at Charing Cross, by which his leg was broken, to suggest to all passengers by omnibus, that the mode of getting out usually followed by most persons is the chief cause of the danger, as they cannot be sure that the horses may not start at the cannot be sure that the norses may not start at the moment and prostrate them on the pavement. In Paris, where the omnibuses are in correspondence with each other, one travelling only a portable of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the cont dence with each other, one travelling only a por-tion of the way a passenger may wish to go, the passenger has to change his vehicle, and the expert Parisian will leave the vehicle with safety, while it is in motion, by simply turning round and leaving the sten hackmards. instead of going out forwards as most step backwards, instead of going out forwards, as most people do in London. We tried this plan once when people do in London. We tried this plan once when in Paris, and succeeded in accomplishing it with much self-satisfaction. It is safer to adopt this plan even when the vehicle is at rest.

The Chemins de Fer reports that the proposal of the directors to increase the number of the Board of the AMIENS AND BOULOGNE by two, one of whom must the AMIENS AND BOULOGNE by two, one of whom must be a director of the SOUTH-EASTERN, was ratified after a slight opposition. The demand, by a shareholder, for printing the accounts some short time before the half-yearly meeting, was adopted and agreed to.

A meeting of the shareholders of the VERSAILLES (LEFT BANK) terminated in a confusion which the

(LEFT BANK) terminated in a confusion which the Chairman vainly endeavoured to quell. The increased expenses appear, according to the Chemins de Fer, to be the principal ground of complaint against the

# Reports of Meetings.

CAMERON'S COALBROOK STEAM COAL, SWANSEA AND LOUGHOR.

Dec. 15.—Special Meeting, London, to receive the report of a committee of shareholders, appointed on the 28th of July last, for the purpose of investigating the affairs of the company, Mr. W. P. J. CAMERON in

Mr. Burns rose to read the report, but was opposed by the CHAIRMAN on the ground that it had the signatures of only four members of the committee, instead of five, the entire number.

A Shareholder suggested that one might have died, or might have left the concern.

The CHAIRMAN: In that case the committee is dissolved.

A Shareholder: Has Mr. Danford (one of the com-

A Shareholder: Has Mr. Danford (one of the committee) sold his shares?

The Secretary: Mr. Danford is still a registered shareholder. He has applied to transfer his shares, but his application has been refused.

Mr. Rungs. If you do not recognize the report you

Mr. Bunks: If you do not recognize the report you must give it back.

After some consultation with the directors,

The CHAIRMAN decided that the report could not be received.

Mr. Burls proceeded to address the meeting, but was opposed by the Chairman, when much recrimination ensued.

Mr. Barnam, a director, moved that the committee be dissolved.

Mr. Burns moved as an amendment, that the report be read and received, with the signatures of four out After some angry discussion,

Mr. Burns proceeded to speak to his amendment. He concluded that the report would be an authentic document, even if only one member of the committee

A Shareholder cited a case in the Brighton, in which a report had been received and acknowledged

under circumstances similar to the present. A show of hands was taken, when 45 appeared in favour of the amendment.

The Chairman asked whether the gentlemen had paid their calls.

Several Shareholders (addressing the Chairman), have you paid -in money?

The CHAIRMAN: I have. Several voices: No, no.

The question was then put in the negative, and three hands were held up against the amendment.

Several Shareholders asserted simultaneously that the three dissentients had not paid their calls.

The Secretary called upon the supporters of the amendment to give in their names, in order that it might be ascertained whether or no they had paid

This caused a renewal of the uproar, in the midst

The CHAIRMAN declared that he would receive

and register the negative votes.

Mr. CHALMERS declared that the Chairman's ob-A Shareholder moved that the Chairman do leave he chair.

At this period the meeting broke up into groups, and all regularity of proceeding seemed to be aban-

med. After a pause,
The Secretary declared that the result (in shares) of the vote was, for the original motion 1,329, for the amendment 299.

This announcement was received with unequivocal proofs of disapprobation. Several Shareholders protested against the decision as grossly unfair.

The CHAIRMAN declared the committee dissolved The CHAIRMAN decisived the committee dissolved amid great clamour and calls for Mr. Burls, who proceeded, notwithstanding the opposition of the chairman, to read a resolution for the dissolution of

The CHAIRMAN declared the meeting dissolved, and, with the directors, left the room, amid general

hooting.

Mr. HART was then called to the chair, and resolutions, restraining the directors from further action and dissolving the company, were carried unani-

At the termination of the proceedings, Mr. Burls stated that a meeting of the dissentient shareholders would be held at Rudley's Hotel on Monday next, at

BIRMINGHAM, WOLVERHAMPTON AND STOUR Dec. 12.-

-Adjourned Special Meeting, Birming -Mr. F. LEDSAM in the chair.

On the motion of the CHAIRMAN, seconded by Mr. A. PEYTON, the lease of the line to the London and North-Western was confirmed, and the seal of the company affixed thereto. The lease is for 1,000 years, and the terms are two-thirds of the London North Western dividend. The shares are to come Morth-Western dividend. The shares are to come into this dividend on the lat of January 1850, the first payment being on the 15th of September in that first payment being on the 15th of September in that year, and in future half-yearly, on that day and the 15th of March. Until the time just specified the shareholders will continue to receive 4 per cent. the snarenoiders will continue to receive a per cent.

The company is to pay the expense of keeping itself together as a company out of the dividend received from the lessees. In the event of a new stock being created by the London and North-West-ern, the proprietors of the Stour Valley are to receive ern, the proprietors of the stour valley are to receive a share in proportion to the two-thirds capital on which they receive dividend. There are to be no further calls on these shareholders, the London and North-Western engaging to find the remainder of the capital required, for which purpose the borrowing powers of the Stour Valley may be used.

# LANCASTER AND PRESTON.

Dec. 13 .- Special Meeting .- Mr. J. Bushell in the chair.

The meeting was convened for the purpose of affirming an agreement entered into at the beginning of last month with the Lancaster Canal Comning of last month with the Lancaster Canal Com-pany, by which the latter, as present lessees of the line, agree to surrender it to the original proprietary, on condition of receiving 4,785% per annum, as compensation, for the fifteen years yet unexpired of the lease. The option of purchasing the annuity at an allowance of 5 per cent., if within eighteen months after the ratification of the agreement, and 44 per after the ratification of the agreement, and 43 per cent. at any subsequent period, was reserved to the Lancaster and Preston Company.

Resolutions confirmatory of the agreement, and

applications to Parliament for power to reconstruct the board of direction, and to provide for collateral interests of the company, were passed by large majo-

# EAST LOTHIAN CENTRAL

Dec. 13.-Special Meeting, Edinburgh.-Mr. H. M. DAVIDSON in the chair.

Mr. J. B. Gray, writer, a holder of 370 scrip shares, wished to know whether the holders of scrip certificates would be allowed to take part in the proceedcates would be allowed to take part in the proceedings and the Chairman having replied that registered shareholders only could be recognized, Mr. Gray protested against the proceedings.

Mr. Drew then moved that the scripholders, who were chiefly interested in the distribution of the remaining funds, be allowed to take part in the proceedings of the meeting.

ceedings of the meeting.

Mr. H. Dod moved, as an amendment, that as they

could not allow parties to take part in their proceedings who were not recognized by the Act of Parlia.

ings who were not recognized by the Act of Parliament, Mr. Drew's motion be not put to the vote.

The amendment was carried by a majority of 1,507 to 36; whereupon Mr. Drew lodged a protest against the illegality of the proceedings, as did also Mr. W. Darling, ironmonger, Glasgow, and Mr.

The CHAIRMAN said that the directors, looking to what took place at the last half-yearly meeting, and also at the circumstance that a number of the si holders pressed upon them the propriety of winding up the concern, in consequence of the depressed state of the railway interest all over the country, and the very great improbability of this company being able to raise the necessary funds for the completion of to raise the necessary lunds for the completion of the undertaking, considered that they would be justi-fied in giving notice that a special bill would be brought into Parliament authorizing the dissolution of the company. A short bill authorizing the dissolution had been prepared by their solicitor in London, which was now before them. As the directors found that they could not have called a meeting in time to have given in the requisite notices for the time to mave given in the requisite notices for the ensuing session, they, on their own responsibility, ordered these notices to be given in, trusting to the subsequent approval of the shareholders of what they had done. The matter was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now before the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be considered in the character was now to be consider had done. The matter was now before the shareholders,

nad done. The matter was now before the shareholders, to say whether or not they should go on or dissolve.

Mr. Thompson, advocate, moved "That the draft of the proposed bill for the dissolution, and the preliminary proceedings adopted by the directors, be approved of; and that the directors be authorized to take all necessary steps for bringing the said bill before the ensuing session of Parliament, and for having the same passed into an Act."
Mr. Levi seconded the motion.

Mr. Draw said that, while he was favourable to the dissolution, it was on the condition that that portion of the 7th clause of the bill were altered, which designs that the remaining colds the life. which declares that the remaining goods shall be divided amongst proprietors for the time being duly registered in the books. They all knew that no call had been made, and that the funds in hand consisted solely of deposits. 2l. per share was longed to the parties who held the scrip. He did not see what right the parties who had sold their scrip, and who, perhaps, had got a good premium thereby, had to the funds remaining in hand. For these parties to take that money would, in his opinion, be little short of dishonesty. He would move, as an amendment, "that the motion be agreed to, on condition that the funds be paid and distributed amongst such of the shareholders as are registered, and had, which declares that the remaining goods shall such of the shareholders as are registered, and had, on their registration, delivered their scrip to the company, and to the holders of scrip certificates who may not yet have been registered."

The CHAIRMAN said that this amendment was impracticable.

A division took place, when the motion of Mr.
Thompson was carried by a very large majority.

# TESTS OF RAILWAY MATERIALS.

A commission is reported to have been appointed at the recommendation of the Railway Commisat the recommendation of the Railway Commissioners to investigate the propriety of employing Tron, and particularly cast iron, in railway works. The Commissioners are of opinion that when exposed to the rapid motion of railway trains the structure should be capable of sustaining, without permanent injury to any part, the concussions that any irregularity may occasion, as well as the vibratory action. They believe that much cussions that any irregularity may occasion, as well as the vibratory action. They believe that much difference of opinion exists among the most eminent engineers of the present day as to the proper form engineers of the present day as to the proper form and dimensions to be given to iron girders to resist the combined action of alternating forces; and they therefore recommend that every facility for experiments on an extensive scale should be given to the ments on an extensive scale should be given to the commissioners, that they may arrive at such principles as to enable the engineer and mechanic in their respective spheres to apply the metal with security

We may here notice Mr. G. Buchanan's third exposition of the strength of material, read at the SCOTTISH SOCIETY OF ARTS, and published in the Scot-

tish Railway Gazette.

Having been particularly requested by the Society at the last meeting on this subject to extend and complete his experiments on tensile and compressive strengths of different stones, he would now state the result of these experiments. The mode of trying the direct tensile strength was formerly exhibited by annending weights to the subfine mode of trying the direct tensile strength was formerly exhibited by appending weights to the substance till it was actually torn asunder. In this way the strength of the different stones, by careful and the strength of the different stones, or carrier and repeated experiments, was found at an average as follows: follows:-

				1	Bre	aki	ng	Weigh
Craigleith	stone						453 lb.	
Hailes			٠.			٠.	334	;
Redhall		٠.					326	; ;;
Humbie								3
Binnie	•					•	279	)

Several other specimens had been prepared of marble, whinstone, Caithness and Arbroath pavement, and the results on these would be afterwards com-

The compressive strength of these substances, or their power to resist crushing, being generally far beyond their tensile strength, could only be tried conveniently by mechanical power; and he showed the apparatus which had been used for the purpose, consisting of a combination of two levers, giving an increase of power of 30 to 1. The specimens, consisting of nearly exact cubic inches of the material, being placed near the centre of the motion, and the upper lever brought down with a plate of metal to fall exactly on the stone, the weights were applied at the extreme end of the lower lever until the stone gave way. On trying, at the meeting, with this apparatus a piece of Hailes stone, it bore 3,540 lb., and then gave way with a violent crash. A specimen of Craigleith stone was next tried, the side of the cube being about one-eighth part more than a square inch. This carried upwards of 6,500 lb., when the sides began to skirt off, and with 6,810 lb. it suddenly gave way, and was crushed to powder. In all these experiments it was observed that when any part of the stone remained entire, it exhibited the same appearance noticed by Mr. Hodgkinson in the fracture of cast iron; pieces breaking off at the sides at certain angles and leaving a nucleus of a conical shape. Specimens of these were preserved, and may be shown at an-other meeting. By experiments of this kind carefully made and repeated he had found the compressive strength of the different stones as follows :-

```
Craigleith gave way to a pressure of 4,900 lb.

    Grantenin gave way to a pressure of 4,300 fb.

    Humble
    37,40 grants

    Halles
    35,30 grants

    Redhall
    35,20 grants

    Binnie
    2,020 grants
```

In regard now to the transverse strain; this, as formerly explained, is of a compound nature, both the tensile and compressive forces being brought into play. A beam supported at the one cavicant, loaded at the other, becomes a lever, at the extreme A beam supported at the one extremity, and end of which acts the weight tending to bend and break the material, by turning it round the point of support; while the power of resistance, residing in section of fracture at the support, acts in middle of that section, and at a distance from the centre of motion equal only to half the depth of the beam. The same is the case with a beam supthe beam. The same is the case with a beam sup-ported at the two extremities and loaded in the middle; the beam, in that case, dividing itself in the centre into two levers, and half the weight acting at the extremity of each; while the strength of the beam acts as before in the centre of resistance, which is in the middle section of the beam. The notion of the beam turning round the point of support, and distending or stretching all the particles in the section of fracture, which was that of Galileo, is not correct; the centre of rotation is in a point somewhere near the middle of the beam, and all the particles below this point are distended, while all the particles above this point are compressed or crushed together, while in the centre they are neither compressed nor distended, and hence this point has been termed the neutral axis. Much discussion has arisen regarding the exact position of this neutral axis-the limit between the tensile or compressive forcesa nice question, and one of abstruse and difficult investigation; and the probability is, after all, that it is not a fixed point, but is liable to vary with the nature and intensity of the strains. Be that as it may, it fortunately happens that the practical result as to the strength of the beam is almost exactly the same, whether the axis be supposed, with Galileo, at the point of support, or, with succeeding philosophers, at a point near the centre. In every case the strength depends, as formerly explained, on the length and depth of the beam, combined with its area at the section of fracture; and by these three elements the strength can be calculated in every case, provided we ascertain by experiments the actual strength of a beam or beams of given dimensions. Numerous experiments have been made with this view, and particularly on cast-iron, by Messrs. Hodgkinson and Fairbairn and other observers. These were made on beams of various dimensions as to length, breadth and thickness; but the calculation is simplified if we reduce them all to a unit or standard of one cubic inch: taking, for example, a bar one inch square, resting on supports one inch apart, and loaded in the middle; and the average result of all the different experiments is, that such a bar of cast-iron would bear a weight of 24,400 lb., or very nearly miles, and are employed in forcing water into the

11 tons. The strongest specimen was of No. 3, cold blast, which gave 31,212 lb., or nearly 14 tons; and the weakest, being one of No. 2, hot blast, gave only 19,278 lb., or better than 84 tons. The difference as to strength between the hot and cold blast appears to be triffing. The following are the strengths of some of the irons, given by Mr. Hodgkinson:—

Carron, No. 3, hot blast ... 12.7 tons. Ditto, ditto, cold blast ... 10.9 ,, Ditto, ditto, cold blast Ditto, No. 2, hot blast Ditto, ditto, cold blast ... Low Moor, No. 2, cold blast ... Muirkirk, No. 1, hot blast .. 10.1 Buffery, No. 1, hot blast

Every other beam, then, will bear in this average proportion of 11 tons, in respect of the three elements above mentioned—namely, 1st, the section of fracture; 2nd, the depth of the beam; and 3rd, the length or distance between the supports;—and the rule is, to multiply this average unit of strength of 11 tons, 1st, by the section of fracture; 2nd, by the depth; and 3rdly, divide the product by the length. This is a universal rule, and one of most extensive application, and is here given in a somewhat simpler form than is generally found in elementary works. He then showed the effect, by experiment, on a castiron beam, one inch square, supported at the extremities at two feet apart, and loaded in the middle till it broke. By the above calculation of 11 tons for the unit, the strength would be 1,068 lb., and it first deflected greatly, and then broke all of a sudden, with a weight of 1,140 lb.; and as the exact area of the bar is about one-tenth more than an inch, this gives a unit of strength very nearly that of the average above mentioned. This specimen of iron was from Broughton Foundry, and he understood was of Summerlee iron, No. 2.

The paper concluded with illustrations, by draw-

ings and models of various railway bridges, and an examination of the construction of several of the most remarkable of the American bridges, which much resemble in principle Mr. Stephenson's Conway

FIRE ON THE EASTERN COUNTIES .- On Wednesday night a fire broke out upon the Eastern Counties, near Stratford-bridge. The flames originated in some extensive worshops, on a siding at Chophamfarm-bridge. The premises contained a number of farm-bridge. The premises contained a number of trucks and other property. The discovery was made by one of the company's servants. Immediate information was despatched to the proper parties, and a number of porters and others hastened to the scene of conflagration, followed by the parish engine. The flames continued to rage with violence, and as they broke through the roof the reflection could be seen from most parts of London, which brought to the spot several engines, but before they reached Stratford the whole of the property in the workshops, and the building itself, composed principally of timber, were destroyed. The damage done is thus reported by Mr. Superintendent Braidwood :- "Shedding, used as workshops, about 150ft. long by 25ft. broad, with a number of trucks, the property of the Eastern Counties Railway Company, at Chopham farm-bridge, near Stratford-bridge, destroyed, building and contents uninsured. The fire was extinguished by the parish engines and the company's servants." Yester-day morning Mr. C. P. Roney, the secretary, and other officials, instituted an inquiry with a view of learning how the disaster occurred but without success. The general opinion is that the fire was accidental, being probably caused by a spark dropping upon the floor, or from the spontaneous ignition of ome cotton wipings.—Daily News.

HYDRAULIC PRESS FOR RAISING BRITANNIA-BRIDGE. On Wednesday, the 13th inst., the large cylinder of the hydraulic press intended to be used at Bangor to raise the tubes of the bridge of the CHESTER AND HOLYHEAD was cast at the Bank Quay Foundry, War-This cylinder is, we believe, the largest ever made for hydraulic purposes, and weighs about 25 tons. It will have to sustain a pressure of upwards of 1.000 tons when at work .- Times.

PILBROW'S HYDRODYNAMIC SYSTEM OF PROPULSION. The Mining Journal gives the particulars of a novel mode of railway, or canal transit, patented by Mr. Pilbrow, of Tottenham, the inventor of a defunct atmospheric line. The plan is to lay down a main pipe, of about 5 in. or 6 in. diameter, between each line, and having, at about every 50 ft., branch pipes, leading to vertical pipes, fixed between the rails, termed "adjutages;" these are fitted with suitable cocks, or valves, from which a series of jets of water impinge on an apparatus attached to the train, and propel it in the direction of the jet of water. tionary engines, water-wheels, or other suitable

mains at a pressure of about thirty-two atmospheres, which will be about necessary to propel the trains at the required speed. At every length of tube there will be a receiver, standing about 10 ft. high, constituting a series of air chambers, in which the air will be condensed, according to the pressure of the water, and will maintain a permanent expansibility, ready to act immediately on the opening with the adjutages adjacent thereto. The power thus does not merely depend on the pressure maintained by the engine, but is directly acted on by the compressed air in the receivers, which will become reduced by the passage of a train, but afterwards attains immediately its proper elasticity. The arrangement necessary to be affixed to the leading carriage of a train is an inverted trough, having a series of buckets, or recesses, at such an inclination as properly to receive the jet of water as it issues from the nozzle of the adjutage; it then passes through a channel, and down into suitable recesses underground, or might be used again and again where the water is scarce. There is a self-acting apparatus attached to the axle of the carriage, consisting of a wheel, close to the flange of the bearing-wheel, furnished with a long boss, and sliding on the axle; a number of rings are turned on this boss, in which the teeth of a pinion take—this is on a vertical shaft passing through the bottom of the carriage, and having a cross handle at top, worked by the guard or other attendant, situate right in front of the train; when this handle is depressed it opens the plug, admitting a rush of water; and, as the last rim of the wheel passes, it is closed. If the conductor wants to stop, he raises the handle, when the lever will not open the cocks, and applying the brakes, stops the train immediately.

DUBLIN AND KINGSTOWN. - Herapath gives the following details of the measures adopted on the line for the encouragement of passenger traffic, and which, we think, contains hints for our metropolitan lines: -I should here premise that almost all their passengers are second and third-class passengers. Very few travel by the first class. Nor is that to be wondered at when the Lord Lieutenant and his lady have honoured the second-class with their presence. Their second-class carriages have air seats and back cushions. Some of them are open at the sides for those who like it, but the others have neat glazed windows, and are so tastefully fitted up as to be very attractive. I have seen nothing, either here or on the Continent, to equal them in comfort and simple elegance. There are different kinds, but those I elegance. There are different kinds, but those is allude to are divided into two bodies, if I may so call them, the compartments being half back high in each body, and the roofs supported by a tasty iron in the middle. The principle of the quarterly and half-yearly, &c., tickets, is to induce people to reside at the various points on the line by the reasonableness of the various points on the line by the reasonableness of the fares. But they are not satisfied with attractions for the heads of establishments only, that is gentlemen; they have been desirous to take captive the hearts of the ladies, knowing full well, cunning rogues, that it is, after all, "they who rule the roast. Lady wives, as an inducement, are allowed to subscribe at half the price of their lords. Young men, between fourteen and twenty-one years of age, are placed on a par with married ladies, and children under fourteen years of age, at half the price of the ladics. This system, I believe, continued from 1839, when it was begun, up to 1843, when another improvement, that of discounts, was introduced. As far as I remember it is this:—When a gentleman and lady subscribe, there is a discount of 10 per cent. thrown off both; and, when three, a discount of 15 per cent., and so on for four or more. The result this may be seen in the following figures of receipts, beginning with 1839, when the subscription system was first introduced :-

Before discounts were allowed. After they were introduced

6 discounts were a 1839 . £2,458 1840 . . . 2,359 1841 . . . 3,569 1842 . . . 3,989 1843 . . . 5,166 1844 .. £5,785 1845 .... 6,867 1846 . . . 7,698 1847 .. .. 7,901 1848 .. . 7,984

The years end on the 1st of March. It will be seen that in 1848 they are nearly quadruple what they were in 1840, and they go on increasing. Up to the beginning or end of June this year they have taken 2211. more than for the corresponding period of last year. Their daily receipts have also, I understand, increased 8771. in four months this year on the Dublin and Kingstown, and 1191. on the Kingstown and Dalkey. Their prospects appear to have materially improved since the panic has subsided. Besides the above for the masters and chiefs of families, they have other privileges for servants, teachers, workmen and poor parties supplying the neighbourhood on the line with vegetables, fruit, &c., all tending to induce parties to build and take up their residence at the delightful spots on and beyond the line.

#### Literature.

Is India to have Railways? Fallacies of an East India Merchant exposed, in a Letter to Lieut.-Gen. Sir James Law Lushington, G.C.B., Chairman of the Hon. East India Company. By an East India Officer.

This is a vigorous and unsparing exposure of the crooked courses of the East Indian Railway Company-a concern which appears to be in a fair way of acquiring as unenviable a notoriety as some of the Bengal incorporated companies which have been recently edifying the public of this country. The writer, who is a shareholder in this unhappy scheme, is of opinion that railways can be carried into execution in India, not merely with great advantage to the country itself but with large profits to the persons embarking their money in them; but in order to achieve this result, he says some other line than the East Indian, in its present dwarfed proportions, must be selected, and some management must be obtained which is both more skilful and more fastidious, to direct the progress of the undertaking. The East Indian Railway Company, he states, now occupies a merely obstructive position; it has failed in all its attempts to satisfy the conditions required by the India House, as a proof of its ability to carry out the design; and as it does not appear that the railway in its present mutilated form can be profitable, and as the company has therefore no attractive object to accomplish, while its perpetuation is a source of expense, the writer recommends its immediate dissolution. course, he says, is the best for all parties, except, indeed, those official leeches who live upon the shareholders, and it is high time, he says, that their insidious counsels should be disregarded.

We have on various occasions expressed our views on the subject of Indian railways, in considerable detail, and although at the time they provoked much hostility and animadversion, we believe that all judicious and unbiassed observers are progressively acquiescing in their propriety. Here, at least, in the person of an "East India Officer," possessing a practical knowledge of India and a competent acquaintance with railway affairs, we have an able witness in our behalf; for every doctrine we have put forth upon the subject is in this weighty discourse fully justified and established. Of course there are some persons who, discerning the great importance of railways for developing the resources of India, blindly support any scheme propounded for that object; but to this dim-eyed class an "East India Officer" does not belong; for he shows on the most convincing evidence that the execution of any short piece of the East Indian Railway, as proposed by its directors, would not only entail a loss of money, but would operate as a public discouragement to all subsequent railway enterprizes in the East. Under this conviction we have from the first reprobated any design which would lead to so unfortunate a result; and it is precisely because we have been so fully impressed with the importance of railways to India, and the grandeur of the results which under favourable auspices it is their destiny to achieve, that we have lent all our strength and influence to arrest the progress of such futile projects as the East Indian and Indian Peninsula railway schemes in their present form, believing that they could have no other issue than disgust and disappointment. Such enterprizes, while achieving nothing for the present, would ruin the prospects of the future, and the larger the benefits and the more magnificent the field, the more assiduous should be the care to preserve it from in their present form, believing that they could

such hurtful inroads as would defraud us of the harvest for many generations.

The East Indian Railway is a scheme for connecting Calcutta and Delhi by means of a railway a thousand miles long, and estimated to cost fifteen millions sterling; but as the present capital of the company does not exceed one million sterling, it is at present proposed to execute only one-fifteenth part of the projectleaving the residue to await the result of the experiment upon the profits of the short portion. The physical peculiarities of the country, however, are such that no portion of the line, after leaving Calcutta and its river, could stop short of Mirzapoor, nearly 500 miles distant, without landing the goods and passengers in a jungle; for, with the exception of the country contiguous to Calcutta and Mirzapoor, nearly all the intermediate tract is in a state of nature. From these and other circumstances, it has been proved beyond dispute, that no portion of the line falling within the present capital could be profitable, or could be worked otherwise than at a loss; and as the guarantee given by the East India Company does not provide for this loss, while the railway company is by its agreement bound to work the railway, it follows that the whole of the 5 per cent. interest granted by the East India Company may be swallowed up by expenses, leaving the shareholders no dividend, or perhaps even entailing upon them the necessity of an annual contribution. Under these circumstances, the shareholders in the railway wish the company to be dissolved, but the directors and officials of the company appear to desire its perpetuation, and the author of the pamphlet before us therefore comes forward to expose the manœuvres which have been resorted to for the purpose of still keeping it in existence. In a plausible pamphlet lately put forth, and which has been attributed to Sir G. Larpent, the late chairman of the company, an attempt is made to clear the directors of the railway from the charges made against them, by casting the blame of the misconceptions which have existed respecting the guarantee, and all other blame whatsoever, upon the East India Company; but this doctrine the author of the pamphlet before us shows to be wholly untenable, and we here introduce to our readers this Shareholder in the East Indian Railway, to enable him to state his own sentiments in his own words:-

"The 'East India Merchant' lays it down as the basis of all his arguments, that it was seen from the beginning that the East Indian Railway would not be profitable, and that an absolute guarantee of 5 per cent. was consequently demanded as essentially necessary. Whatever might be said of the risks of the investment at the India House, to extort better terms, it is certain that large expectations of profit were held out to us. The first report of the directors, dated the 12th of April 1847, has the following passages:—'The result shows that without an increase in the existing traffic a large dividend may be expected, and, with that increase (which the experience of every line in this country and on the Continent has rendered more than probable, and which may be peculiarly augured for a railway in India), a return much more remunerative than has hitherto been obtained upon any project of a similar character. To this traffic there have still to be added the charges for the transport of Government mails, troops, milifor the transport of Government mails, troops, military stores, &c., which have not been included in the estimates. The traffic estimates referred to, and which are appended to the report, show a profit upon the upper portion of the line of 11 per cent., and upon the lower portion of the line of 12 per cent; and these developements were confessedly laid before the shareholders as 'the means by which they may have been also because the means by which they may

proceed to express their views in the report in the following words, that, they submit therefore to the following words, that, 'they submit therefore to the proprietors that they should proceed at once to constitute the company by deed of settlement in the usual manner,' which was accordingly done. Yet, in the face of this report, and possibly by the very framers of it, it is now sought to make the public believe that the railway directors never contemplated a profit, and that 'they foresaw the railway might not, under their auspices, or for a considerable period, afford a remunerative traffic.' (See 'East India Merchant's' Letter, p. 95). I leave to the reader to decide whether this assertion is reconcilable by to decide whether this assertion is reconcilable by any honourable supposition with the announcement that the undertaking we were invited to enter, leaving out of consideration the guarantee, could yield a profit of from 11 to 12} per cent., or that the return would prove 'much more remunerative than has hitherto been obtained upon any project of a similar character.' If it were the secret belief of the railntherto been obtained upon any project of a similar character. If it were the secret belief of the railway authorities that the railway would return nothing, they manifestly deceived us by inculcating an opposite doctrine. The shareholders of the East Indian Railway entered into that undertaking under two different inducements; the first, the expectation of a good profit from the working of the railway: the of a good profit from the working of the railway: the second, the assurance of a minimum dividend which they were informed by the directors the East India Company had given. It turns out, however, that upon both of these points the shareholders have been completely misled by the directors. The engineer who made the estimates, while still in the company's employment, published a pamphlet to show that the profits he exhibited, and which were adouted by the directors as illustrative of the merita adopted by the directors as illustrative of the merits of the undertaking, could not be realized until the whole scheme of a railway from Calcutta to Delhi, estimated at the lowest amount to cost 15,000,000*L*, while our capital was only 3,000,000*L*, had been completed; and he stated moreover that he had completed; and he stated moreover that he had pointed out this circumstance to the railway authorities before the publication of the report from which our quotations have been taken. Of this conclusion, however, no notice is taken in the report of the directors, and the engineer, consequently, published his estimates without mutilation, to discharge himself from any responsibility attaching to their concentration. It awares from these deep charge himself from any responsibility attaching to their concealment. It appears from these docu-ments, that while the extended line held out a prospect of some such dividend as the directors assume for the fragments of the line we were invited to construct, yet that, taking the same data, there would not only be no profit upon the frag-ments taken by themselves, but an annual loss, and yet our directors, although their attention had been called to these circumstances by the engineer they had themselves employed to estimate the traffic, tell as that our undertaking was to prove 'much more remunerative than any project of a similar character.'

This is a serious accusation against the directors, for it asserts that, to induce the shareholders to execute a piece of the line, they set before them computations of profit which they secretly knew were only applicable to the completed line. We trust that to so grave a charge they are prepared with some exculpation.

Having shown by the evidence of their own reports, that the directors had led the shareholders to believe that the pieces of the line proposed for execution would be profitable, the writer next proceeds to refute another statement of the railway directors, viz., that the East India Company had first granted, and had subsequently withdrawn, an absolute 5 per cent. dividend. Such a statement, he says, is in itself sufficiently incredible, as it is not the practice of an English Government to depart from its deliberate engagements; but as it is within the compass of the law, he remarks, if such a thing had been done, to compel the fulfilment of those engagements; and as no such compulsion has been attempted, the inference, he holds, is irresistible, that no such engagement has been broken. He does not rest satisfied with inference, however, but proceeds to

a certain return upon the capital of the railway company was repeatedly applied for, it was not only company was repeatedly applied for, it was not only never granted, but positively refused. (See pp. 41, 42, 43.) It is obviously futile to seek to extract out of any incidental allusions to the 'terms and conditions' any meaning which the precise terms of that document show cannot properly attach to them; as the paper of 'terms and conditions' contains the only stipulations touching the nature of the guarantee, although its amount was subsequently raised from 4 to 5 per cent. Besides, the words of the 'terms and conditions' being precise as to the true intent and meaning of the Honourable Court regarding the guarantee, and proving thereby that they never anticipated and and proving thereby that they never anticipated and never incurred any other obligation than that of paying a certain interest upon sums of money, under certain stipulations, paid into the treasury, the very stipulations themselves, as formerly remarked, prove that the interest guaranteed could not be a dividend not liable to dilution. One stipulation was, that two trains should be run daily, and another subsequently added, that the mails should be conveyed free of charge. It is quite clear that there could be no significancy in the stipulations that trains should be daily run, and that mails should be conveyed free of charge, if the expense of those services were ultimately to devolve upon the Government in the shape of an aggravated guarantee. Instead of two trains a day, the railway company would no doubt run twenty, if the Government were to sustain the loss; and to ask that the Honourable East India Company should be responsible for all the losses which the railway company might sustain in the performance of such serpany might sustain in the performance of action services, or otherwise, is to ask for the complete stultification of every act of the contracting parties! But while it is quite clear that the Court never agreed to make up the losses which might be sustained in working the railway, it is equally clear that this was the interpretation of the agreement given to the shareholders—the official document itself being, up to the publication of the 'East India Merchant's letter, withheld by the railway directors. It does not appear, however, that the directors themselves acquiesced in the interpretation they had led the shareholders to entertain (vide their report of the 12th of April entertain (vide their report of the 12th of April 1847), for, as formerly adverted to, it will be seen by the correspondence quoted by the 'East India Merchant' (p. 41), that, subsequently to the receipt of the paper of 'terms and conditions,' the railway company applied to the Honourable Court for such a modification of the terms as would 'place the whole matter on the basis of a moderate but certain return,' thus implying that in their judgment the paper of 'terms and conditions' gave no assurance of such result. This application, and others to similar effect, were refrectly write ('ourt, who conducted the corresponrefused by the Court, who conducted the correspondence with a degree of circumspection, then possibly deemed superfluous; and guarded themselves against the possibility of being misunderstood or misinterpreted by the railway company, by repeating on every occasion that the paper of 'terms and conditions' was the basis of agreement, and from which no deviation, except those specifically assented to, could be made. If then, it be incontestibly proved, both by the reports of the railway company and by the pages of the 'East India Merchant,' that an unconditional guaranteed dividend was not even named in the 'terms and conditions, and could not have been con-'terms and conditions, and could not have been con-templated without stultifying various stringent stipu-lations in the document, and that a 'moderate but certain return,' although repeatedly applied for, was never granted in any of the subsequent clearly speci-fied modifications, how can the Honourable Court be justly accused of having withdrawn what they had always refused to grant?"

The railway directors, in their correspondence with the India House, account for the reluctance of their shareholders to proceed with the undertaking, on the ground that it arises from the repugnance to an unlimited responsibility, to which the want of an Act of incorporation leaves them liable; and as the bill was withdrawn from Parliament by desire of the East India Company, they represent it as a hardship that they should suffer by their inability to induce the proprietors to pay calls when it is by an act of the India House their payment is prevented. This plausible hypothesis is completely demolished by the author of the pamphlet, by an appeal to dates; for whereas the East India Company did not, until the 4th of July, require the railway company's bill to be withdrawn, the shareholders, at the bill to be withdrawn, the shareholders, at the meeting of the company on the 18th of the previous April, came unanimously to a resolu-

tion that unless the inducements were increased it would not be prudent to go on with the undertaking. How could a decision come to in April be the result of a command not given till July? Our "East India Officer," however, exhibits the reasons of the bill having been ordered to be withdrawn, in its own irregular and overreaching provisions; and the shareholders will be able to judge, after the following exposition, whether they have not reason to thank the East India Company for saving them from their own directors :-

"We are told, at page 47 of the East India Merchant's pamphlet, that 'the proprietors made it a point with their directors to reduce the nominal amount of the shares in the company from 50l. to 20l., and, at page 73, that 'the provisions of which (bill), as your Honourable Court is aware, are confined to securing limited liability to the shareholders, and a power to reduce the shares of the company from 50l. to 201. each, upon which basis the company's calculations are founded.' This is the interpretation of the tions are founded.' This is the interpretation of the objects contemplated by the bill which the directors of the railway company ventured to address to the Honourable Court on the 24th of August 1848, when they deprecated the withdrawal of the bill. Now let us turn to the objects contemplated and provisions contained in the preamble and clauses of the bill itself. In the preamble, the objects contemplated by the directors of the railway company are thus recited, with the view to the formation of 'a company, under the name or style of the East India Railway Company, for the purpose of acquiring and holding lands in the East Indies and Great Britain, and making, acquiring, and working one or more railway or railways in India with all necessary works, stock and conveniences, and of doing and performing all such matters and things as are generally done by persons or companies en-gaged in business of the like and as extensive a nature, as might be deemed desirable for carrying into effect the objects and purposes aforesaid, including therein the working of mines of coal, iron, and other minerals in the East Indies, and manufacturing the produce thereof, and the erecting and carrying on all neces-sary and convenient works, furnaces, forges, smeltinghouses and gas-works, for furthering the objects of the company, and selling and disposing of such of the produce thereof as from time to time should not be wanted or necessary for the making, repairing, or carrying on any railway of the company. At page 3 of preamble, power is to be given to directors to raise 10,000,000*l*. of new capital without consulting shareholders: that, by the indenture of settlement, 'powers were thereby given to the board of directors on behalf of the said company to enter into and conclude such contracts, agreements and arrangements as therein mentioned, and it was by the said indenture of settlement further provided that the said board of directors should, when and so soon as the same indenture should have been executed by proprietors of one equal fourth of the number of the said 80,000 original shares, have power, from time to time, or at one time, by a resolution or resolutions, to increase the capital of the company to an amount not exceeding 10,000,000l. of lawful money of Great Britain, so that the capital might amount to 14,000,000l. by the creation of a number of new or additional shares of 50l. each over and above the said number of 80,000 original shares.' The preamble does not refer to reduction of shares from 50l. to 20l. each."

Our space prevents us from giving all the extracts from this pamphlet that the interest of the subject and the ability of the writer require; but we must make room for the following:

" Nothing is more notorious, than that the share-holders in the East Indian Railway Company long ago wished to abandon the undertaking, as shown by the forfeiture of their shares, and the non-payment of their calls, and they are daily becoming more impatient of its perpetuation; but neither is anything more notorious than that the remaining directors and officials, in spite of this prevailing wish, persist in keeping the scheme in a sort of galvanic existence, so that it can neither live with profit, nor die with dignity. Practically, I should imagine the shareholders are released from all obligation to prosecute the undertaking further—by the reduction of the capital, the mutilation of the project, the many apparent illegalities which have been committed in borrowing money, entering into contracts, and making calls before an Act of Parliament had been obtained

therefore, to enter into negotiations on the part of the shareholders, to carry into effect measures cannot be enforced, is only to mock the authorities with whom such negotiations are held. As a shareholder, indeed, I have no reason to quarrel with this impunity, but being deeply impressed with the importance of railways to India, I object to the merely obstructive position so long occupied by the East Indian Railway Company, and I object moreover to this obstruction being maintained at my expense, and that of those who are of the same way of think-ing,—and they constitute five-sixths of the existing shareholders, if a judgment is to be formed from their nonpayment of the calls. As the question of Indian Railways is about being discussed at the next court of proprietors at the India House, I trust that the honourable proprietors will not be seduced from their anxious desire to promote these great national undertakings, into the concession of any mistaken grace to a company, whose conduct and arrange-ments have tended notoriously to retard the solution of this most interesting and important problem

The directors of the East Indian Railway Company may be bold men: we question if they are wise ones, for no man can be justified in playing with his reputation. It is true, we never have, and do not now, hold these gentlemen in that low estimation which their accredited acts appear to justify. On the contrary, most of them we believe to be men of integrity and worth; but no reputation can for ever endure a vicious contact without contamination-no character can be the object of incessant assault with impunity. The dripping of water wears away stones, and experience has shown that any doctrine will in time be believed if only often enough propounded. is unwise, therefore, even for men of the loftiest virtues, to despise the censures of many persons; and it is perilous for directors, who have to bear the odium attaching to acts of unscrupulous officials, to refuse a prompt compliance with the wishes of shareholders when those wishes have been so clearly pronounced as in the case of the East Indian Railway. Nobody believes that motives of public spirit will animate a commercial enterprise for ever, and zeal perversely directed is in danger of being suspected of sinister designs, and of being counted among the sins for which it is intended to atone.

#### Progress of Works.

DUNDALK AND ENNISKILLEN .- A trial trip, says the Newry Examiner, was made on the portion between Dundalk and Castleblayney on the 13th. Those present expressed their satisfaction with the manner in which the work had been completed. The line will be ready for opening about the same time as the Dublin and Belfast Junction.

EDINBURGH AND NORTHERN .- A wooden terrace, says the Caledonian Mercury, from the platform in front of the booking offices at the Edinburgh station to the top of the tunnel, between Princes-street and Scotland-street, has just been completed, with com-modious staircases diverging on either side, and lead-ing up to Princes-street, by which a much more convenient access to the station is opened up than that gained hitherto by Waverley-bridge. To the passengers, this will prove of considerable advantage, being much cleaner and more generally agreeable than the as yet unpaved northern half of the bridge, to cross which, in wet weather, is extremely unpleasant.

LONDON, BRIGHTON AND SOUTH COAST (East-bourne).—The rails were laid down, says the Sussex Express, and completed on the site of the intended terminus, and on the 13th inst. the ballast engine, No. 102, came in with colours flying. A temporary station will shortly be erected, but the transmission of passengers will not take place till early in the spring. The Hailsham branch is proceeding rapidly, the rails now being laid three-quarters of a mile from Polegate towards that town.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE (Wicker Viaduct).—Dec. 12.—The last stone of the last arch of this work was laid by Dr. Bartolomé, one of the directors, with several officials of the company, Mr. Shortridge, the contractor, and some other gentlemen connected with the engineers' department. The centre keystone of the great or centre arch, weighing upwards of a ton, was lowered from the crab, and permanently fixed in its place by Dr. Bartolome, one of the original promoters of the Sheffield and Lincolnshire Junction, of which the Wicker Viaduct is the commencement. This viaduct (says the Sheffield Times) contains more cubic yards of masonry than any other work in this country, our largest cathedrals and even the New Houses of Parliament not excepted.—Dec. 16.—An engine and two carriages travelled over the viaduct at Sheffield, and over the new line as far as the junction with the Midland at Beighton. A roadway is now therefore completed over this viaduct, the heaviest work on the eastern portion of the line of this company, and considering that it was commenced only eighteen months ago it is an extraordinary instance of rapid As the calls of this company make themselves known, it is well that the proprietors and the public should also know what is being accomplished in works. The rails having been long laid on every portion of the new length except the viaduct, the train proceeded as smoothly and rapidly as over an old railway, and accomplished the distance (seven miles) in fifteen minutes. The contractor will con-tinue regularly to work the engine over this portion it will probably be used for goods almost immediately, and be opened for general traffic in a month or thereabouts. --- Dec. 18. -(Lincoln to Hull.)-This line was opened for public traffic. It furnishes a direct route from Hull to Lincoln, and, by means of the Nottingham and Lincoln line, to Derby, Leicester, Birmingham and the midland district of England; and the route from Hull to London, via Lincoln and Rugby, is very few miles further than by the East Lincolnshire and the Eastern Counties lines. The first train for Hull left Lincoln on Monday at 7 15 a.m., and reached New Holland Ferry at 9 45 a.m. and Hull Pier at 10 15 a.m. Three other trains followed in the course of the day. A train left Hull about 8 a.m. and reached Lincoln at 11 a.m. Other trains left Hull at noon, and the company who came by the opening train from Lincoln returned at 3 p.m. and 5 15 p.m. The distance from Lincoln is 454 miles; the route for the first 15 miles, to Market Rasen, is north-east. The line starts from the Midland station at Lincoln, crosses the river Witham (over which a handsome bridge, which we have previously described, on the tubular principle, has been erected), and runs close past the ruins of the old Monk's Abbey; it then proceeds through Willingham, Repham, Langworth and Wickenby to Rasen: from Wickenby for 15 miles north, the land on either side the line is poor, and the prospect uninviting, being only relieved, now and then, by views of the Lincolnshire Wolds on the east. From Rasen the line proceeds due north for 10 miles, where it joins the main trunk line from Sheffield to Grimsby, on which we proceed some four miles due east, to Brocklesby. The seat of the Earl of Yarborough, the chairman, is close adjoining. The station is highly ornamented. A mile further east and the Hull line leaves the grand trunk, and at Ulceby junction proceeds again due north to New Holland, passing, by the way, the majestic ruins of Thornton College, formerly a monastery, but at the Dissolution changed into a college—(here Henry the Eighth rested for a night on his visit to Yorkshire). New Holland is now an extraordinary place. A few years ago it was unknown. A creek was made, as a drainage outlet, up which the smugglers ran their contraband spirits (Hollands). It thus acquired the name it bears. The company have erected a pier, which runs some 500 yards into the Humber, and the railway carriages run on it to the very extremity, taking and receiving goods and passengers to and from the steam-vessels which ply ten times a day between New Holland and Hull. At this terminus a handsome station has been creeted, with spacious warehouses for goods, and yards and sheds for cattle. A branch railway to Barton Ferry is nearly ready, and a spacious dock is in course of formation. The works on the line-cuttings and embankments-are rather heavy, but there is no tunneling.
South Devon (Torquay).—Dec. 18.—The extension

to Torquay, as previously announced, was publicly opened with great eclat and rejoicing. The weather was favourable, and thousands of the inhabitants were abroad to be spectators of the first train travelling through the valleys and ravines of that picturesque neighbourhood. At 11 5 p.m. a special train left the Exeter station, containing the directors and a large party of friends and members of the Board of the Bristol and Exeter. The train, which also contained a large number of the gentry of Exeter, was decorated with flags and evergreens, and so were the stations along the line. Mr. Martley, C.E., the head of the locomotive department, accompanied by the contractor and the resident engineer and others, drove the engine. As the train proceeded at a rapid pace to Torquay, it was cheered by several thousand people; in fact, nearly the whole length of the line

arriving at the Torquay terminus, the directors were met by a procession, consisting of the commissioners, principal tradesmen, townspeople and coast guard, with bands and banners. The procession got into marching order at the Royal Hotel at about 10 30 a.m., and consisted of upwards of one thousand persons. The shops were closed, and business was entirely suspended. The procession arrived at the terminus at noon, when Sir J. Y. Buller, M.P. for the southern division of the county, who spoke from the centre of the platform, briefly addressed the assemblage, congratulating them on the events of the day. hon, gentleman concluded by presenting an address from the inhabitants of Torquay to the directors of the South Devon.—Mr. T. Woollcombe (who succeeds Mr. Gill, M.P., as chairman of the board of directors) acknowledged the presentation of the address. directors had, in common with other railways, had to encounter difficulties, and he could assure all those who were interested in the welfare and working of the South Devon line, that the parties who at present had the management and care of the undertaking. were not appalled by the difficulties before them, and would not blench before any kind of obstacle. They would pursue a firm and temperate course, and they hoped to merit that public approbation which was always readily accorded to a generous, deliberate and cautious policy. The hon. gentleman concluded amidst loud cheers, which were followed by a renewed round for Sir J. Y. Buller.—Torquay, which is called the "queen of western watering-places," will now be within five and a half hours' journey of London, the distance being about 220 miles. The line, which is nearly 6 miles long, is expected to be a valuable auxiliary to the main line. Striking off from the Newton station, in the neighbourhood of the Teign, it passes through valleys, orchards, and a picturesque country of declivities and mountain tors to its terminus, short of a mile of the centre of Torquay, to which, had it not been for the expense of cutting a rather long tunnel, it would at once have been extended. The chief objects in its vicinity are the Wattcombe Rock, the Tor marble quarries, Pomeroy Castle and Tor Abbey, founded in 1190 for the Premonstratensian order. There will be seven trains each way between Newton and Torquay in connexion with all the main trains, and passengers will be able to run through from Torquay to London, and from London to Torquay, without any change of carriage. The trade of the town is expected to receive a great impetus by the opening. At present its chief trade is in fish, coals and timber, with some amount of foreign commerce. The fish markets of London and various parts of the country will now be supplied with regularity and rapidity from the inexhaustible bays about Torquay, a large portion of the produce of which hitherto, for want of the facilities of communication with other markets, has had to be used for manure. It will now be taken by the South Devon and Torquay lines, with the passenger trains, to London in five hours, and several hundred tons will be taken before Christmas at 20s. per ton. The chief works on the line are a viaduct of 100 yards, and one steep incline. The station at Tor is extremely elegant. A new church has just been consecrated at Torquay by the Bishop of Exeter, and a market is to be erected. Handsome houses, villas and terraces are springing up in various portions of the town. Nearly 2001. were subscribed to carry out the entertainments of the day. The poorer portion of the inhabitants had distributed amongst them in the market-place bread and meat, &c. Trips were made throughout the day to Newton and back, and in the evening there was a sumptuous dinner at the Royal Hotel, and a ball in the assembly rooms.

SOUTH-WESTERN (Guildford to Godalming) .inhabitants of these two towns are greatly disap-pointed at the workmen being withdrawn from this four-mile branch line for the present, as it is only sixteen days since those living in and around God-alming had a public meeting to congratulate themselves, and thank the directors for going on with the same, when the works were put a stop to in many other places. The progress of these works will probably not be impeded beyond February next.

STIRLING AND DUNFERMLINE.-We are happy to learn, says the Scottish Railway Gazette, that the works are proceeding with much energy, and that a considerable portion will be ready for opening on an early day.

WATERFORD, WEXFORD, WICKLOW AND DUBLIN.— The Irish Railway Gazette announces that the largest of the tunnels has been driven through with perfect accuracy and success. At Bray Head there are three tunnels—the one at the south side, which has just been completed, is 220 yards in length, in breadth 26 ft., and in height 25 ft. It is through clay slate, of sufficient

was hedged in by the inhabitants of the district. On | atmospheric influence exfoliation takes place to a much greater extent than it is at all probable, no arching will be required. Indeed, the strong presumption is against such exfoliation. The tunnel is exceedingly dry, and promises well for future stability. The line through it is on a curve of 30 chains radius. The next tunnel, on the Dublin side, is 150 yards in length, and of the same height and breadth as the former. The work is nearly completed, there being only 22 yards to be driven. The line through this tunnel is on a reversed curve of 20 chains radius. The third tunnel is only 40 yards in length, the height and breadth as before; and the line through it is on a curve of 40 chains radius. The works here are about being commenced now that the heavier portions at other points are so far advanced. At Killiney the tunnel which, being 150 yards in length through granite, was more difficult to work, has also been completed in a very satisfactory manner. The line here is on a curve of 15 chains radius. It will thus be seen (continues the writer) that very satisfactory progress has been made on all the heavier portions of the works, and such a head has now been obtained, that the company are in a position to push on vigourously with the completion of the line to Wicklow. In fact, there is nothing to hinder the line being ready for opening to Wicklow by the close of next year but the disinclination of the directors to press the shareholders for calls.

#### Accillente.

EASTERN COUNTIES .- The following are the particulars of a singular accident which occurred on the 17th inst., but which fortunately was not fatal to either officials or passengers. — Shortly before the usual arrival of the up morning mail (which is due at 2 45 a.m.), at the Witham station, the night porter perceived a down luggage train approaching, which presently stopped at the station, when intimation was given by the guard of this luggage-train, that in the magazine in the last truck, there were two barrels of gunpowder, which, being respectively consigned to the towns of Maldon and Braintree, were to be removed from this train and forwarded on the branch lines from Witham to these towns. train was an unusually long one, and the end was several hundred yards distant from the station, extending, indeed, about thirty yards under and beyond the bridge on the high road from Chipping hall to the town. On the poters coming to the magazine they removed the barrels, placing them upon the ground until the train should have moved on. But just at this time the mail train was seen to be coming up the line near the station, and the porters therefore immediately left the luggage train to attend to the mail. While the mail was waiting the luggage train moved on, and the mail train, having changed its bags, was allowed to proceed; its engine had no sooner arrived at the spot where the other train stopped than a violent explosion took place, driving all the fire out of the fire-box of the engine, lifting the engine itself completely off the rails, and tearing up part of the permanent way, by which the train was almost instantly stopped. On the arrival of the porters from the station the engine-driver and fire-man were found both thrown back upon the tender, but neither of them seriously hurt, which was most surprising considering the shock the engine had received. On the partial clearing away of the dense smoke in which the train was enveloped it was found that several of the carriages were very much shattered, but neither the passengers, of whom there were six or eight in the train, nor the guard, had received any material injury, although they were very much shaken by the sudden stopping of the train, and also alarmed by the loudness of the report. The escape of the engine-driver and fireman remarkable. The former, indeed, did receive a blow from a bar of iron blown from the engine, but it did not produce any ill effect, and it could only have been the intervention and strength of the fire-box apparatus which saved both their lives. As an instance of the force of the explosion, one of the rails of the line was almost bent double. A ballast-waggon standing on the opposite side of the line was much shattered, and the windows of the house near the station were considerably injured. At the Albert Hotel, but a short distance from the line, forty-six squares of glass were broken, and a number of glasses, &c. displaced from the shelves. Indeed, many of the persons living near state that they felt themselves sensibly raised in their beds by the shock, and this feeling was also experienced by some in the town, at a distance, as we have before stated, of half a mile. The report was heard at Colchester, 14 miles distant, also at Chelmsford, 8 miles, and the other surrounding towns. Mr. Aldridge, the superintendent of the tenacity to dispense with arching; and unless by Maldon and Braintree branch line, was quickly on

Digitized by **GOO** 

the spot, and measures were taken to restore the permanent way, which laving been done, and a fresh engine obtained, the train again proceeded towards London, after a delay of about two hours. Telegraph messages had been communicated to the intermediate stations informing them of the cause of the stoppage. The train arrived in the metropolis safely, the engine-driver, fireman and guard of the safely, the engine-driver, fireman and guard of the first train having been enabled to proceed with it. The following are the particulars of the weights and destination of the barrels, as booked to the company—one barrel, 3 qrs. 17 lb., to Mr. Smith, of Braintree; the other, 3 qrs. 6 lb., to Mr. Handley, of Maldon.

MIDLAND (Kegworth).—Dec. 12.—At 1 30 a.m. a luggage train, consisting of 76 waggons, many of them empty, drawn by two engines, arrived at the station, and while being nut back to shunt on to the

station, and while being put back to shunt on to the up line, to be out of the way, the mail train arrived and ran into the train, smashing several of the empty waggons and the guard's brake to atoms. The mail train was behind time at the Loughborough station, and had not arrived when the luggage train

started thence to Kegworth. The drivers and the guard of the luggage train left orders with the porter on duty at Loughborough, to tell the driver of the mail train that the luggage train would be shunted at Kegworth, and that he must come cautiously along the line till the train had passed the Kegworth station. This direction, however, was not attended to, nor did Adcock put on his signal to that effect. The mail bags and passengers were detained till 4 a.m., as both lines were blocked up with broken waggons, which were burnt for the purpose of making a light; but an engine and carriages having arrived from Derby, in answer to the telegraph, they proceeded. Adcock was placed in custody for examination before the magistrates at Loughborough. The guard of the mail train was rather seriously injured.

On Monday morning, says the Berwick Advertiser, as the mail train, on the NEWCASTLE AND BERWICK was going north, and when near the Cramlington station, a party of horned owls made a furious attack upon the engine and those in charge of it. The fireman while seated in a comfortable position was assailed and seriously pecked in the face, and had one of his teeth forced out of its place, before he discovered the character of his foe. Such an assault in the dark was the more alarming from the extraordinary visages of the assailants when seen only by the glare of the fire light. One of the birds was captured by the engine driver, who will keep it as a curiosity.

The following extraordinary fact is stated in the Cincinnati Gazette:—"A singular accident occurred on the Michigan Central line. It became necessary to carry a grading or embankment, of 15 ft. high. across a low piece of ground, containing about 100 acres, nearly dry enough for plough-land. When they had progressed with the grading for some distance, it became too heavy for the soil to support, the crust. of the earth broke in, and the embankment sunk down into 79 ft. of water! It appears that the pieceof ground had been a lake, but had collected a soil of roots, peat, muck, &c., on its surface, apparently from 10 to 15 ft. thick, which had become hardened and dry enough for farm purposes.'

London Stock Exchange, Dec. 22.-Some considerable fluctuations have been produced by the changes in the money-market, but on the whole shares are in fair demand at improved prices. The following are the latest transactions in foreign lines:—Boulogne and Amiens, 8½; Central of France, 8; Demerara, 4; Amiens, 8½; Central of France, 8; Demerara, 4; Luxembourg, ½; Namur and Liège, 5½; Northern of France, 7½; Orleans and Bordeaux, 2½; Paris and Orleans, 28½; Paris and Rouen, 18; Paris and Stras-burg, 2½; Rouen and Havre, 8½; Sambre and Meuse, 3½; Tours and Nantes, 1½. Liverpool, Dec. 21.—There has been a decided im-provement in our share-market during the week; and

although prices have fallen a little from the highest point, the market may be quoted strong. The following are the actual transactions of the day: flowing are the actual transactions of the day:

Eastern Counties, 12\frac{1}{2}; Great Northern, 10\frac{3}{4} \text{dis.};

Lancashire and Yorkshire fifths, 4 \text{dis.}; London and

North-Western, 121; ditto, new quarters, 1\frac{1}{4} \text{pm.};

Manchester, Sheffield and Lincolnshire eighths, 6\frac{1}{4} \text{dis.}; \text{ditto, preference, 10\frac{1}{4}; \text{ditto, Great Grimsby} 20L \text{shares, 11\frac{1}{4} \text{dis.}; \text{ditto, quarters, 7 \text{dis.}; \text{Midland,} 83; \text{ditto, halves, 9\frac{1}{4} \text{dis.}; \text{Surth-Eastern, No. 4. 7\frac{1}{4}; \text{York,} \text{Newcastle and Berwick, 1\frac{1}{4} \text{dis.}; \text{ditto, No. 2, 1\frac{1}{4} \text{dis.} \text{Sudlow, Brothers.}

Manchester, Dec. 21.—We have had a fair amount of business done in shares this week; and though

of business done in shares this week; and though there has been considerable fluctuation in prices the market is looking well; there is evidently a demand market is looking well; there is evidently a demand for shares for investment. Actual transactions this day:—Caledonian preference, 3s. 9d. pm.; Great Northern, A deferred, 4g; Kendal and Windermere, 4g; Leeds quarters, 6g dis.; ditto, fifths, 3g dis.; West Riding Union, 5g dis.; London and North-Western, new quarters, 1 pm.; ditto, C quarters, 2l. 1s. 3d. pm.; North Staffords, 5l. 8s. 9d. dis.; South-Eastern, No. 4, 7g.

Birmingham, Dec. 21.—There has been more disposition to press sales in this market consequent on

position to press sales in this market consequent on the rise in the value of shares; to some extent however this has subsided, and to-day prices have been steady. North Staffords were done at 5l. 11s. 3d. dis.; Shrewsbury and Birmingham A's at 6l. 16s. 3d. dis.; ditto, preference, at 2 pm.; and Shropshire Unions at 3 dis.

W. Banks.

York, Dec. 21.-A very little business is doing in railway shares; two heavy calls of 5l. each on Nos. 1 and 2 of the York, Newcastle and Berwick stock, payable in three weeks, must have an effect upon this stock, as the money to be thus raised will amount to a very large sum. The following are our latest transactions:—Great Northern, 8½; North British halves, 6½; ditto, thirds, 4½; York, Newcastle and Berwick preference, 7t. 3s. 9d. Grayston & Earle.

Hull, Dec. 21.—Under the influence of an improved

market in consols and a partial revival of confidence, better prices have been paid for shares since we last wrote, but they have receded a point or two from the highest rates marked. FLINT & TOOTAL.

Glasgow, Dec. 21.—During the earlier part of the week considerably higher prices were paid for several of the speculative lines; and although yesterday and to-day a re-action to some extent has taken place there is very little inclination shown to sell at the reduced rates; on the contrary, unless some unlooked for event occurs, there is every appearance of a fur-ther rise, as the opinion is gaining ground that prices, although high compared with those lately current, are still below their proper level. The following are the latest sales:—Clydesdale Junction, 58; Dundee and Perth, 26; Dumfries and Carlisle, 5; Ayr, 47½; ditto, halves, No. 1, 12½ dis.; Great Northern, 10ℓ. 19s. dis.; Scottish Central, 26.

BUCHANAN, AITEEN & Co.

## Joint-Stock & Commercial Gazette.

The Morning Chronicle states that the Spanish Government had been in communication with the Labuan authorities on the subject of obtaining a supply of coal for their steamers at the island. Sir James Brooke considers that the operations of the Eastern Archipelago Company will greatly advance the prosperity of the settlement of Labuan, and it may be observed that the circumstance of steamships calling frequently at the island for a supply of coal will of itself greatly aid in the object which our Government had in view in establishing the settlement, viz., to suppress piracy throughout the Eastern Archipelago.

The National Discount Bank of Paris has declared a dividend of 3 per cent. for the past half-year. That of Marseilles has reduced its rates of discount to

4 per cent. from the 11th inst.

The letters from Calcutta, in referring to the Union
Bank, mention that a successful application had been made on behalf of the creditors for an adjudication of insolvency against the wealthy native brothers Day. The application was founded on an alleged contravention of the new Insolvent Act, by the transfer of property, without good consideration, for the purpose of defrauding or delaying creditors. It was ex parte, but the decision is regarded in the light of a rule nisi, but a motion would be made to set it

The latest prices of bank shares at Calcutta were: Bengal Bank, (Co.'s rs. 4000), 1950 to 2000 pm.; Agra Bank (Co.'s rs. 500), 50 to 70 pm.; North-Western Bank (Co.'s rs. 500), par. The Government Bank at the Mauritius, by the

last advices, had not commenced business, but awaited instructions from the Home Government. The commercial interest were looking forward to the meeting of the Commercial Bank, which was to be held on the 7th of Nov., when it was expected that something would be done to ameliorate the want of an adequate currency; and to either maintain or waive their right to a paper issue.

The following banks and other public institutions in America have declared half-yearly dividends:—
Merchants Bank, 4 per cent.; Franklyn Bank of Cincinnati, 5 dols. per share; Howard Insurance Company, 12½ per cent.; Gas Light Company of Baltimore, 3½ per cent.; Delaware and Hudson Canal Company, 8 per cent.; Portsmouth, Saco and Portland Bailway, 3 dols was share. land Railway, 3 dols. per share.

In the Vice-Chancellor's Court this week, in the matter of the North of England Joint Stock Banking Company, a widow, named Sands, directed 66 shares in the North of England Joint-Stock Banking Company to be purchased for a grandson, named Beaveley, then and still an infant, as a gift to him. father of the infant accordingly purchased the shares in the infant's name, on which occasion the usual declaration was made that the purchaser was of age; afterwards the father executed a deed between himself and the officers of the company, reciting that, in fact, the person in whose name the shares were purchased was not of age, and containing a covenant on the part of the father to perform the covenants of the deed of settlement of the company, and that the son should execute the deed when of age. The affairs of the company are being wound up under the Act.
Master Farrer had included the father among the
"contributories" to the company. The Vice-Chancellor said that it was unnecessary to decide how the case would have stood if the infant had now attained 21, or if the company had not been dissolved, or its affairs wound up under the Act; but, under the actual circumstances of the case, his Honour thought the Master had arrived at a correct conclusion.

It is rumoured that the New Joint Stock Banking Company, about being started, will take part of the Hall of Commerce for offices.

A special meeting of the shareholders of the Bank of Manchester was held on Monday at Manchester, to receive the report of the committee appointed at the last annual meeting, to consider the propriety of returning to the shareholders the sum of 8s. per share from the surplus capital, and upon other matters. The question of the resumption of active business by the bank was postponed to the next annual meeting, under a strong presumption that more favourable reasons might then exist to enable them to come to a prudent decision. Resolutions authorizing the directors to pay the 8s. per share, and to buy up shares at the rate of 15s. per share, were carried. After passthe rate of 15s. per share, were carried. After passing a vote of thanks to the chairman the meeting terminated.

The weekly circulation of the Irish and Scotch The weekly circulation of the Irish and Scotch Banks for the four weeks ending the 2nd inst., gives the following average, viz.: Average circulation of the Irish banks, 4,969,050l.; average circulation of the Scotch banks, 3,570,126l.; average weekly circulation of these banks, 8,539,176l. The specie held by the same during the same period was 2,566,569l.; being an increase of 73,930l. as compared with the return of the previous month, and a decrease of 157,6321. on the same period last year.

Mines. The annual meeting of the East Crowndale Mining Company was held on Thursday, at Winchester House, Old Broad-street, Mr. G. Thomas in the chair; when a report from the directors, and a statement of accounts for the year ending 30th of Nov. last, were presented. No satisfactory result had been arrived at from the working of the copper lodes, but there seemed almost a certainty of a profitable result from operations on the tin lodes,—a course of ore having been wrought on for a distance of 26 fathoms, of a balance against the company of 2,187l. 14s. 3d.; to meet this a call of 10s, per share had been made, and the secretary estimated the quantity of tin in surface

from the captain's reports, at about 1,300l. After some severe remarks from a proprietor on the want of regular information as to the returns—the reports conveying but little data to guide the shareholders it was ultimately agreed to adopt the report, on the promise that in future monthly statements should be forthcoming.

At the Bedford United Company's meeting the accounts showed a balance of 1,757l., when a dividend of 5s. per share was declared—being the second during the year. The profit on the workings from the 1st of January to the 30th of October has been about 830%, notwithstanding the depressed standard, and performing necessary erections which will not be again required. The balance in hand, after payment of dividend, amounts to 7571, which is carried to the credit of the next account.

At the meeting of the Lamperooe Wheal Maria Mining Company, the balance-sheet showed that the calls received, including interest and law charges, amounted, after deducting 16l. 10s. for forfeited shares, to 13,808l. 4s. 2d., and placing to the debit side unpaid cost, 177l. 5s. 3d., left 13,979l. 9s. 5d. On the credit side, the cost, up to the 12th of Sept., as per account rendered, was 12,866l. 13s. 1d.; the per account rendered, was 12,866l. 13s. 1d.; the additional cost on the mine for the months of August, September and October being 550l. 8s. 5d.; arrears of call, 186l. 10s.; and cash at bankers, 27l. 11s. 10d. = 13,979l. 9s. 5d. The assets appeared to be 529l. 17s. 3d., and the liabilities 17ll. 5s. 3d., leaving a balance in favour of the mine of 358l. 12s.

At the meeting of Wheal Ash adventurers, the statement of accounts showed a balance due to the purser, after payment of all liabilities (no credit being given for any unrealized assets), of 370l. 2s. 8½d. The accounts were passed, and a call of 15s. per share

made.

At the meeting of Birch Tor and Vitifer shareholders the report presented was received, the work recommended was ordered to be commenced immediately, and a call of 11. per share made.

In reference to the gold in California, a contemporary states that "the recent arrivals from America furnish us, with an air of authenticity, with continued rumours of the extraordinary resources of the gold regions of Upper California, &c., and the previous reports are confirmed, that from 60,000 to 100,000 dols. worth are daily extracted. We believe that these statements are much exaggerated—first, from the now known tendency of all districts to amplify new discoveries of the precious metals, as was repeatedly done in the states of Virginia, Carolina and Georgia, whose splendid discoveries and products are now totally forgotten—the land-jobbers and clever speculators having made their hay while the sun shone.' It is too much to suppose this in a country discovered by Spaniards, a class very different from the present race, in enterprize, talent, and activity, with the unlimited command of the cheap labour of the Indians—the mita, or forced conscription, working for a certain time, and the survivors replaced by other Indians. In this manner much of the country was examined by pits sunk on the banks of the streams, until they reached the diluvial deposits of gravel, which frequently, or mostly contain gold, and, if found rich enough, were worked, otherwise abandoned for other places more promising. We therefore think it little likely that strangers should at once enter in a country and

suddenly make discoveries to an extent beyond precedent, as British capital, to the amount of many millions, since 1825, has been spent in mining for the precious metals of the New Continent, from the supposition that the natives were incapable of working these rich mines to an amount of profit that British capital and industry could do. The experiment was capital and industry could do. The experiment was made on a princely scale in many different sections of the country, — with what results the share-holders can best tell; and, after the lapse of twenty-two years, how many of these magnificent bubbles exist! Only two or three in South America. The Mexican, Bolivian, Colombian, &c., where are they We would therefore earnestly entreat those who have the command of the capital to pause ere they apply it to foster El Dorados, or they may learn to their loss that 'all is not gold that glitters,' and that even gold may be bought too dear.

The gold discovery in California is still further confirmed. The whole valley of Sacramento may be said to be one vast deposit of gold, the metal lying in more or less abundance from the crags of the Sierra Neveda, to the embouchures of that river and its many tributaries. Sickness had set in amongst the gold-hunters, and many were leaving in consequence. It is stated that, "many persons have collected, in one day, of the finest grade gold, from 300 to 800 dols., and for many days together averaged from 75 to 150 dols. Although this is not universal, yet the general average is so well settled, that, when a man with his pan or basket does not easily gather 30 to 40 dols. in a day he moves to another place; so that, taking the general average, including the time spent in moving from place to place, and looking for better 'diggins,' the opinion set down is an ounce of pure gold, or 16 dols. per day, to the man. Suppose there are 4,000 persons at work, they will add to the aggregate wealth of the territory about 4,000 ounces, or 60,000 dols. a day. Agricultural pursuits were being

neglected, and produce was becoming very dear.

A railway has been projected at Copiapo, which will render great aid to all engaged in mining operations

The share-market remains quiet.

IRON TRADE.—Glasgow, Dec. 15.—The market for oig iron remains much in the same state as it was last week; the slight improvement manifested some days ago has been maintained. Prices quoted are 42s. for mixed numbers, cash.

# Railway Chronicle. LONDON, SATURDAY, DECEMBER 23.

LIEUT.-COL. ALDERSON, it is said, is to retire from the RAILWAY BOARD, on an appointment to the secretaryship of Chelsea Hospital; and we trust that the report may also be true that the vacancy is not to be filled up. At a time when public opinion justly condemns the inexcusable growth of State expenditure in the face of a deficient revenue, Ministers may well begin to reduce, if not to remove altogether, a department created without necessity; composed of the most unfit materials; powerless, by its very constitution, for good; and only effectual in troubling the interest it cannot regulate, and in drawing from the public purse salaries, &c. to the amount of 13,500l. per annum, -independently of some thousands more for "expenses in connexion with the establishment," and of the charges for "inspection," &c., which fall on the railways exposed to its visitations. The whole affair has been made, as if on purpose, an insult to common sense, a type of official extravagance, and a specimen of political jobbery, such as have rarely been displayed elsewhere in the worst cases; and our financial reformers will manage their task but poorly, if they do not lay a firm hand on this discreditable blot, among the first of those marked in their list of jobs to be denounced, and wasteful ex-

penditure that may and ought to be peremptorily cut down. Since the appointment of the Commission, it has done no single act of practical usefulness. During the railway mania, when a public Board, rightly framed and well-officered, might, perhaps, have been of some advantage, it showed itself utterly incapable of controlling the mischief; and now that the reaction from it has compelled the railway interest to retire within its existing bounds, keep away from Parliament, and manage as well as it may, with its own powers, to clear away the confusion which the public office did nothing to prevent, the last pretence of continuing such a department on its former scale can no longer be maintained. All that has hitherto been paid, indeed, in respect of the Railway Commission, has been merely so much thrown away in providing comfortable appointments for protégés of the present Ministry, the most unfit, perhaps, that could have been found for the offices given to them. The indecency of continuing such an expense now, when economy is urgently required on the one hand, and, on the other, the very business it was proposed to undertake has ceased, will surely lead to some effectual reduction of this incubus-if not by an awakened sense of duty or even decency in Ministers, at least at the pressing instance of those who can ill afford, in times like these, to pay for such ministerial indulgences.

During the week another section of the Man-CHESTER, SHEFFIELD AND LINCOLNSHIRE has been opened, from LINCOLN TO HULL. At first sight this opening may not seem very important, but it is so. By this route the port of Grimsby becomes connected with all the iron net-work in and about Manchester and the manufacturing districts. The route is a little circuitous, but there it is; and every one knows how soon traffic finds its way where it is its interest to do so. The opening to Yarmouth immediately caused a certain amount of cotton twist to be brought from the North to that port for exportation, which would otherwise have gone via Hull. The Manchester, Sheffield and Lincolnshire may look for a similar result; and this little opening is virtually the first connexion of the Humber with the Atlantic. Obviously, however, no great traffic results can be expected till the direct line is completed. At Lincoln the new portion is connected with the Midland; and the latter is now, we believe, connected at Sheffield with the Manchester, Sheffield and Lincolnshire. We cannot doubt that the event will inspire the shareholders with fresh confidence in their property.

At the special meeting of the AMBERGATE, Nottingham and Boston, a majority of 4,080 votes decided against the adoption of a recommendation from the London shareholders for limiting the undertaking and share capital of the company. The directors adhere to the determination formed in May last, to confine operations to the works between Bulwell and Grantham, and when those works are completed the proprietors may deal with their remaining powers as they think fit.

From our official returns it appears that the amount of traffic for the last week, on 4,212 miles of railway, was 174,031*l*., thus accounted for: — 76,486*l*. for the conveyance of passengers only, 54,456l. for the carriage of goods, and a remainder of 43,089l. for passengers and goods together, not respectively apportioned; being an increase of 25,0831. over the corresponding week of last year, when the mileage was 3,342. The average earnings per mile were 411., whilst in 1847 they were 441.

#### THE RATIONALE OF WHAT IS CALLED PRO-TECTION: ITS OBJECTS AND RESULTS.

As the eventful year 1848 is now drawing to an end; as the manifestos elicited from the companies by its events have now been all published and discussed; and as the panic that gave the immediate summons to produce them has now pretty nearly subsided—it may not be out of place to take a rapid general survey of the condition of the railway interest as displayed in its official statements; and to discuss the rationale of the process by which the results they exhibit have been brought about.

The total of these in the first place is obvious enough. The mass of new railway capital added during the last three years to what had been expended up to 1845 has been, on the whole, a dead weight on the old. The effect of its outlay has been and will hereafter be to reduce the ratio of profit; so that were the entire property in one hand, the practical outcome would be somewhat to this effect, viz., that to a capital—we will say of 50 millions—paying, or certainly capable of being made to pay, an average dividend of 8 to 9 per cent., there has been added a further capital of 100 millions—(such round numbers will suffice for the illustration),—the profit from which will be less than 5 per cent.; so that the rate of gain on the whole has been pulled down to an average below the standard rate of common profit. This is the total outcome of what has been doing in railways since

Now it is quite clear that it is a result the very contrary of what was expected by all the parties to the increase. And if, instead of looking at the entire mass, we turn to the separate portions of which it was composed, it will be found that one and all have been alike disappointed in the views on which it was contributed. The two main objects were unmistakably these: - To make profit from fresh investment; to secure the profit on old investments. Neither the one nor the other has been attained. The failure, however, has been the most conspicuous in the second point named. It affects all the great bodies which compose the bulk of the railway interest; and it determines the value of the policy on which they have been contending in and out of Parliament, spending the proceeds of calls and borrowing from every one that would lend-all, without exception, professing to do this, if not for increase of profit, then at least for "protection" against some apprehended competition for profits. The first of these objects we need not dwell upon-it is indeed absorbed in the second.

Now, one might understand the virtue of the process if any part of the multitude of contenders had secured their aim. If A., B. and C. had succeeded in keeping their gains unimpaired, while D., E. and F. had lost some of theirs, it would appear that there was something in their policy which might indeed require skill and good fortune to carry triumphantly through, but, being apt to succeed with these advantages, was worth the effort to realize. But how does the matter stand in fact? Simply that not one of the whole alphabet has improved its position: that all are now floundering in the same general slough of increased obligations, entailing reduced gains, -some a little deeper, others not quite so deep, but all, without exception, in the mess. This is surely a marvellous result of a policy recommended as "protective." It shows a desperate flaw in some of its main conditions. Let us see if we can trace it out in any way.

In order to get at the fault, we shall first —that has created the difficulties we have seen clear off peremptorily all that has been adits several members coming forward to describe; assume to determine and not any "crroneous legislation" whatever. for them at a loss?

bodily all that has been pretended about "erroneous legislation," "State injustice," &c. There has been enough, and more than enough, of error and wrong in those respects; but the first step of those who would discover the truth must be to learn that outward influences were not the essential causes of the mischief; that they only became injurious because of others that lay at the heart of the railway interest itself; and that could by that interest, in each separate case, have been deprived of their power to injure seriously. This is the first truth to be studied. It will become clear to all who will study the cardinal facts of the process.

Let us take the case of any one of the great bodies which has swamped, we will say, its 10 per cent. capital, by a double amount that may scarcely pay 4; and which its managers now declare to have been forced to do this by "competition," "erroneous legislation," &c. The two essential questions are-How was it done?-why was it done? It was brought about by making, and by the ruinous cost of fighting for leave to make, new lines, unprofitable, or less profitable, than those already possessed; and this in order to prevent some rival from making those or other lines that would abstract traffic from the main system. Very good; but what was the danger apprehended from the abstraction?—a loss, of course, of profitable receipt. Now the wisdom or folly of the attempt to avoid the apprehended mischief will clearly depend upon the proportion of income possibly endangered by any such casualty, to that which has actually been forfeited in the hope of avoiding it;-there being also to be taken into account, this essential fact, that in the first case there would have been no additional capital spent-while in the second, the demand for an enormously increased outlay has been inevitable. On a survey of the results of past years, it is now quite plain that nothing which could have been taken away by competition from a railway that kept its own ground on a limited capital, would have punished it half so severely as the efforts it has made against competition, - with a vast permanent increase of its capital. The process, we need not add, has failed after all-this, indeed, makes the case more conspicuous. But even had the rivalry been kept off at this price, -which it has not,it may be seen that those who had to pay such a price for its exclusion, would still have been merely losers after all. This view of the matter, we say, will force itself on all who are capable of weighing the results of what has been doing for the last four years: it proves the main policy of the railway world on this subject to have been founded on two entire mistakes, one of the conditions surrounding it, the other of the effects of what might be attempted under those conditions.

The first mistake was that of supposing it possible, by any course of treaty, guarantee or further extension, to prevent others from making rival lines, so long as there was any belief that profit could be made by constructing them. The second mistake was in overlooking the fact that such rivalry, in any sense proper to be considered, was merely reducible to effects on money receipt, and consequently on profit; and that it mattered nothing whether that effect was produced by a neighbour, or brought to pass by a company itself. It is the combined action of these two errors—the fruit of a narrow adherence to routine, instead of applying sound and large views to the new circumstances of the railway system-the operation of this, within, and by the default of the railway interest itself, -that has created the difficulties we have seen its several members coming forward to describe;

That evil, great as it has been, only became injurious by the previous error of the railway interest.

We shall more clearly see the bearing of this position when we consider what would have been the present state of any one of the bodies that has been protecting itself at this desperate rate, had it been governed from 1843 on a totally different principle. It is our purpose, therefore, next week, to trace a pro forma sketch of what might have been the course of any railway, of a profitable class, conducted on a plan which we believe to be the only truly protective one. That the methods actually adopted have wholly failed in the only object that could give protection any value, is now quite obvious, at all events. We think it may not be difficult to make it equally apparent that a much simpler method would have insured a fair degree of security, if not an absolute continuance of the highest standard of prosperity, to those who would have practised it; and this under the worst circumstances that have been either suffered or apprehended by railways.

## THE FARE DEMONSTRATION AT THE "HERO OF WATERLOO."

An imposing number—some twenty of the PASSENGERS who make use of the LONDON AND SOUTH-WESTERN line between the City, Richmond, and Windsor, held a meeting on Monday last at a tavern in the Waterloo-road, for the purpose of making a "demonstration" against the revised scale of fares established on that railway, and particularly against the rate of mileage for season tickets, and the reduced allowance on those issued for day journeys in and out. They resolved, as the first step, to appoint a committee to make their complaint known to the directors; and, if this should fail of the desired effect, to "take ulterior measures"—of what description does not appear.

It is natural enough that gentlemen should like to travel as cheaply as possible; nor can we expect that they will be pleased with any increase of charge which the company may find itself under the necessity of making in order to obtain a fair return for the money that has been laid out in providing the convenience used by travellers. But it is wholly out of the question to assume that their wishes alone shall be the measure of the rates to be demanded for this convenience: or that the circumstance of prices being raised-on the discovery that they have been placed too low to afford a reasonable profit - should entitle the public to protest on the mere ground that they would rather have less to pay. The matter cannot be determined by any such consideration. It must be viewed with reference to both parties in the business:—these protesting gentlemen look at their own side of it only.

It is not pretended that the maximum laid down by Act of Parliament has been exceeded. Within this maximum, the only rule which the directors of railways can fairly be required to observe, is plainly that of so fixing their charges as to ensure the most profitable return on the capital invested; -and as this cannot be obtained by any scale of rates so high as to keep travellers from using the railway, and any error will thus correct itself, it is not only preposterous but unjust to demand the application of any other standard whatever:-and merely absurd to pretend that the wishes of passengers alone should be allowed to determine the scale of payment. The railway cannot thrive without custom: - its own interest will regulate the charges so as to obtain as much custom as is profitable; - on what ground can the public assume to determine that a company shall work

All directors on all railways must now see that the sums they have been laying out for the last three years have, for the most part, been profiting the public at the expense of the contributors of the money:—and as this money was raised-often with difficulty enough-in the expectation of profit, it is their bounden duty now to see that this expectation shall not be disappointed, if they can do anything to realize it. The public, far from having any right whatever to complain of measures needed to redress the balance between those who have made the new railways and those who use them, are a long way from having contributed their quota of the payment justly due to these parties:-and it is to be hoped that no amount of clamour will prevail with railway Boards to give up one iota of what is requisite to obtain full payment from those who owe it;—that they will take a firm stand on the ground that the proprietor is entitled to his profit, as well as the passenger; and that so long as the former does not receive his just share, the main object to be studied must be to procure it for him.

This, we repeat, can lead to no hardship or injustice whatever. The nature of the business, like that of any other natural trade, will always sufficiently correct any overcharge; the principle of the bargain being one of mutual advantage: - what these gentlemen of the Waterloo tavern meeting want is, that the advantage shall be all on their side—a demand the frequency and assurance of which, as against railways, does not give it a shadow of right; and, if regarded, would merely prove the weakness of those who concede, as well as the selfishness of those who ask.

If any of the travelling public do not like to pay the charges which will give a fair profit to those who furnish the means of travelling, the only proper remedy is in their own hands. They may abstain from travelling, or procure, if they can, better and cheaper means of conveyance. If they can succeed, for instance, in inducing stage-coach or omnibus proprietors or postmasters to carry them at any low terms that may be proposed, at whatever loss to themselves,-there is the point they desire gained, as far as charge is concerned. But they can make no such bargain;-it never occurs to the most exacting gentleman on the road to complain that the owner of such conveyances should carry him at a loss to himself, -or, if he did, he would merely be laughed at. On what ground is the owner of a railway to be subjected to a different rule? Why must the parties who have supplied the very best of all kinds of conveyance, on the most liberal terms, be assailed with a class of requisitions that no one dreams of applying to others in the same business, who only differ from these in the inferiority of their service at higher charges?

Let the directors, for the present, keep in view solely and singly the redemption of the proprietors' income. This object can of course be only promoted by such terms as will afford a fair balance of benefits between those who carry and those who are carried; and while on the one side no unfair advantage can be taken, it would be mere imbecility and breach of trust to their constituents to allow themselves to be bullied or threatened into giving an unfair advantage on the other,-which would be the case if passengers were conveyed at prices that do not produce a fair dividend, after paying the cost of the service, on the capital invested in the means of conveyance. This, and this only, is the true measure of charge and of accommodation; and the idea of establishing any other is a mere impertinence.

rule that prevails in all others,-they had better, instead of wasting time in meeting to remonstrate with directors, set themselves to establish a new system of travelling to their own mind. Let them see what can be done to make, or to induce others to make, a series of roads on which the charges shall be fixed,-not by the ordinary laws of supply and demand, and on the principle of quid pro quo, -but by the wishes of the passengers only; and if they can succeed in this object, no railway owner, of course, can complain of their forsaking his line, which does not offer, and ought not to offer, any such inducements. There is nothing to hinder any one who feels himself aggrieved from taking such "ulterior measures, -- except only the two or three conditions which are really decisive of the right of this question, but which it is the fashion of "the public" to overlook. It is now the main duty of all concerned in railways-taxed and pinched as these have been on all sides, on behalf of that portentous abstraction-to see that the practical fulfilment of these conditions shall not be set aside by any amount of protest whatevernot even by so imposing a display as that of the twenty gentlemen at the Waterloo-road tavern.

#### NEW AXLE-BOX FOR RAILWAY CARRIAGES.

Sir,-Observing in your last number a description of a newly-invented axle-box, patented by Mr. Normanville, with the result of some experiments that had been tried on the London and North-Western Railway,-by which it appears that carriages so fitted have run distances varying from 4,000 to 10,000 miles without requiring a renewal of grease, I beg to inform you that a patent for a close axle-box of a similar character was granted to me in December 1847 (five months prior to the date of Mr. Normanville's patent), which is now being experimented upon on the Eastern Union Railway, and so far as those experiments have gone, the result has been fully satisfactory with that described in your columns, and which it was my attention to have made public as soon as the experiments now in progress were brought to a close and the practical economy of the invention fully tested. In your next number I will, with your permission, give a detailed description, with engravings of my axle-box, when your readers will be able to judge for themselves of its advantages. I would add that in Mr. Normanville's specification, the principal arrangement described is a washer, of vulcanized india-rubber, fixed to the axle-box, within which the axle revolves; consequently the friction of the axle within the vulcanized india-rubber washer would tend rapidly to destroy it, especially should it by any chance get dry; whereas in my specification and plans I show the application of a metal collar working against a polished shoulder on the axle in conjunction with a ring of vulcanized india-rubber, to press the faces together, which Mr. Normanville appears to have also specified, in a slightly modified form, as a secondary matter, and brought before the public as his invention. Whether such be an infringement of my patent right or not remains to be proved. I do not wish to discuss the matter in your pages, my only object being to make known the above facts and to request you to give them pub-R. WRIGHTON.

Lower Brook street, Dec. 20, 1848.

[We shall willingly give a place to our correspondent's elucidation of his invention, as he proposes;_ and we may take this opportunity of stating that we shall always be ready to give publicity, through our columns, to inventions of merit. Ed. Rail. Chron.]

## NEWCASTLE AND CARLISLE GUARANTEE.

To George Hudson, Esq.
Sir,—A great many uncharitable remarks have lately appeared in the papers about the proposed guarantee by the York and Newcastle Railway to the Newcastle and Carlisle line. As a mode of putting an end to these attacks, I would suggest that an official statement of the income and expenditure of the Carlisle Railway should be published immediately after the close of the present year, to give If the travelling public do not approve of this principle—if they wish to establish an exceping whether they are likely to be benefited by the the shareholders of both lines an opportunity of judg-

tion, as against this particular business, to the | bargain. A number of shareholders, such as myself. who live at a distance, never think of attending the meetings; and even those who do attend cannot at the moment weigh the statements submitted to them, and must, of course, rest entirely on the judg-ment of the directors. This confidence is well enough when limited to the ordinary business of the railway; but in purchasing another line, every shareholder should have before him, with time to consider it, all the necessary information, before giving his vote. I would even go the length of allowing (with certain restrictions, of course,) any shareholder to see the register of proprietors of the railway he is negotiating with, as it stood when such treaty was first suggested. This would dispel all suspicion that private advantage had either planned or promoted the scheme. I see no use for secrecy in such bargains, for they ought only to be entered into when both parties are to be benefited by dividing fairly between them any saving that may be effected by joint management of their lines. Railway property has been suffering enough in these times, without adding to it by giving any cause for suspicion; and wherever confidence can be restored by the exhibition of truth, it should never be withheld. No mere abuse can ever harm us. For if it could, how should we have endured the abundance lavished from various quarters, and among others from the editor of one of your contemporaries, until he was very properly pulled up for it in a judiciously written article by the Railway Chronicle. Since then a great part of his paper has been occupied by letters from correspondents, all trying to depreciate the character of our stock; but somehow the public have put a proper value on these productions; for our shares never fell, even when the editor himself stood forward (charging us 5 per cent. in all time coming on our borrowed capital!), but on the contrary, have fully participated in the late advance on railway property. It is easy to make up plausible statements showing prospective dividends; but it is curious that none of that journal's correspondents attempt to divert themselves with a glance at our affairs for the current half-year, which is now so near a close, that they could arrive at the result with very great certainty. Allow me, in conclusion, to communicate that I have heard some of our shareholders here say, that although our statement ending the 31st inst. should show a clear dividend of 8 per cent. or upwards, they would prefer receiving 7 per cent., allowing the balance to go to the "rest," as some guarantee for that rate being maintained.

A YORK AND NEWCASTLE SHABEHOLDER. Glasgow, Dec. 19.

#### EAST INDIAN RAILWAY.

-The accompanying laboured dissertation reached me yesterday evening ;-its author, I suppose, conceives its massiveness will compensate for the trouble of reading it. A brief word of real ex-planation would save Mr. M. Stephenson the onerous task of compiling and the proprietors the tedium of scanning over his production. What are the nature of the communications between the railway directors and the East India Board? and why not place the subject of guarantee or no guarantee, referred to in page 8 of the printed letter, in a position that cannot be misunderstood? On the contrary, Mr. M. Stephenson's explanations seem intended to mystify in a greater degree than before this abstruse subject. This paper (page 9) shows beyond dispute the feeling entertained by the proprietors as to the nature of the guarantee rendered or to be rendered by the East India Directors, upon the faith of which alone they ventured to subscribe their money and pledge their credit for the furtherance of the undertaking. I send you the accompanying paper lest it might not have reached you through other hands.

Dec. 17, 1848. A SHAREHOLDER.

[The paper referred to in the foregoing is a prolix Report, by Mr. Macdonald Stephenson, extending to many folio pages, and signifying—nothing. If Mr. Stephenson had been able to show that some particular portion of the line which the capital would suffice to construct would pay a good dividend, and that the guarantee granted by the India House was an unconditional one, there might have been some benefit in his manifesto; as it is, he only shows into what follies a well-meaning man may be betrayed in his over-zealous advocacy of a weak cause. Ed. Rail. Chron.]

GREAT INDIAN PENINSULA RAILWAY.

The Bombay Times of the 7th of October, after stating its acquiesence in our view respecting the nature of the guarantee accorded to the Indian Railways, points out a circumstance which affects, to some extent, the prospects of the Callian line:—

There is another point on which divers views have been entertained which it would be well to have cleared up—whether the Court means to provide the ground for the railway only where it can do so from its own territories, or whether it be their intention, in addition to this, to purchase such property from individuals as may be required, and to place this at the disposal of the company. We confess our own impression is, that the Court has no intention whatever of giving more than what already belongs to it, and that if we bring the line through private property the railway company must purchase for itself. The clearing up of this is not only a matter of importance in itself, but has a most important bearing both on the liabilities either of the treasury of the Court or company, as well as on the direction the line is likely to take. Half-a-dozen lakhs of rupees would go a very small way in the purchase of property were the line to be pushed through some of the more densely peopled districts of Mazagon, Byculla or the native town; and we scarcely think it likely—though others, whose judgment we have the utmost reason to regard, hold an opposite view—that in addition to the land, so far as it is their own, and the guarantee of interest to the extent of nearly sixty lakhs,—the Court have any idea of putting their hands in their pockets for some ten or a dozen lakhs more, should the railway require it, on which they are to have no return whatever.

#### Gossin.

Yesterday the 'Fairfield' PASSENGER STEAM CAR-RIAGE left the Paddington station at 8 a.m., and proceeded to Bristol at the rate of forty-five miles per hour. She went easily and pleasantly, and every one appeared gratified with her performance. It is expected that she will commence her regular trips on the Tiverton branch of the Bristol and Exeter to-day. Among the gentlemen present on this journey were Rowland Hill, Esq., of the Post-office, Capt. Simmons, Government Inspector, Mr. Valentine, engineer of the East Anglian, Mr. Gregory, engineer of the Bristol and Exeter, Mr. Chapman, of the East Indian, and a number of other gentlemen connected with railways, who all expressed themselves satisfied with the result of this trial trip. If this steam carriage, when it gets better into work, should go at fifty miles per hour with fifty passengers, consuming about eight pounds of coke per mile, and weigh only fourteen tons, including passengers, motive power, fuel and water, (which it is confidently believed will be the case), what a triumph it will be for the principle of combining motive and carrying power on the same vehicle (upon six wheels) over the old method of employing a locomotive, tender, 1st, 2nd and 3rd class carriages and parcel van, making six vehicles on thirty-six wheels, weighing some 56 tons, and consuming 45 lb. of coke per mile, costing more than double what this steam carriage does, which will do the same work in the same time, at the greatly diminished first cost and expense for fuel, &c.! Hitherto on many branch lines, trains as above composed, have been employed to carry fifteen, twenty, thirty or forty persons, thus making much ado about nothing, and eating into the pockets of shareholders. Hereafter we hope to see the means properly adapted to the end, and not an elephant employed to do the work of a donkey.

We have had our attention drawn to a paragraph which has been going the rounds of the daily papers, relative to the recent introduction of HAND-DETONATING-SIGNALS on the LONDON AND NORTH-WESTERN. As this company are not the originators of this mode of giving notice of casualties that may impede the progress of the train, but have merely copied, like some of our contemporaries, without proclaiming the authorship, we think it due to Mr. Buhy, the emin-nt locomotive manager of the Great Northern, to award to him the credit of their original introduction, and to Mr. Armitage, of Louth, the manufacturer of the detonating light, the merit, after much perseverance and labour, of bringing them to that degree of perfection and certainty of discharge which renders them effective in all states of the atmosphere.

The Marquess of Clanricarde has been visiting Paris about the renewal of the Post-office Convention between the two countries, which expires on the lat of January next. The changes to be made are not extensive, but report says that an hour will be saved in the trajet between Paris and London. It is not

determined whether the mails are to go by the way of Calais exclusively, or by way of Boulogne and Calais, as at present. At least one mail a day will probably come by Boulogne; and there is, in fact, no good reason why that port should be abandoned. Calais harbour is better than that of Boulogne; but, on the other hand, the distance between Paris and Boulogne is considerably shorter than that to Calais, and the time employed in crossing from Boulogne to Dover has been found to be only one minute more than that required for the passage from Calais to Dover. The French Government and the directors of the Northern hold to Calais, for reasons of their own; but certainly, as far as public convenience is concerned, it would be better if all the mails went by way of Boulogne. The interior postage in France is to be greatly reduced on the 1st of January, but not so the postage to foreign countries. It is to be hoped that the Postmaster-General will not have neglected the interests of England in this matter. At present, France gets 6d. upon each single letter going to and coming from England, while the British Government only gets 1d.

Government only gets ld.

The requisition of the Bristol shareholders, calling on the directors of the South Devon to convene a meeting for the re-consideration of the atmospheric system, has been presented to the Board. None of the atmospheric apparatus has yet been taken up, and the locomotives still work over the rails with the tubes between them. The high tides which have lately prevailed have swept away a large portion of the public promenades on the sea side, and at some exposed points where the sea encroaches too near to the rails, so as sometimes to sweep over it, breakwaters are being constructed. The extension of the line from Laira into the heart of Plymouth is not likely to be opened before February next.

From a paragraph in the daily papers we learn that, in commemoration of the transfer of the BRISTOL Docks to the corporation, and the consequent great reduction of the dock dues, a gentleman of the ancient city (a dissenter) has offered to bring from Caen, freight free, 100 tons of stone, for the restoration of

the church of St. Mary Redcliffe.

Mr. Hudson is reported to have determined on carrying out the entire completion of the docks at the Tyne, which will give to the YORK, NEWCASTLE AND

BERWICK a perfect water terminus.

On the 18th, says the Liverpool Mercury, the new arrangements commenced, by which passengers may proceed almost the entire distance between Manches-and Southport by railway. These arrangements are effected by the LANCASHIRE AND YORKSHIRE and the LIVERPOOL, CROSHY AND SOUTHPORT, and the entire distance is travelled in little more than 2 h. 30 min., a saving of about one half the time, in comparison with the old route vid Euxton.

with the old route vid Euxton.

The return which some of the passengers of the Datchet branch of the South-Western are willing to make to the directors for the accommodation lately offered by the issue of annual tickets appears in another part of our paper. But a "little month ago," and earnest and eager were the complaints against the company for their withholding that favour which the Boards of the Croydon and Eastern Counties had unanimously afforded to their customers. Petition unanimously anorued to their customers. Fettition after petition we were assured had been sent in, but all to no purpose. Datchet, Englefield Green, Staines and Richmond, each vainly forwarded its quota of signatures of the "daily passengers who ought simply an extension of the accommodation sought simply an extension of the accommodation afforded to residents on the line by other metropolitan companies"—so ran one of the petitions which came into our hands. And yet, "ere those shoes were old" with which they followed the petition, the petitioners are all grumbling at their prayers being granted. This is "blowing hot and cold" with a venue. It would be idle to comment on the misseness. granted. This is "blowing hot and cold" with a ven-geance. It would be idle to comment on the grievances brought forward at the meeting of these deeply aggrieved gentlemen. A specimen is afforded in one of the complaints, loudly urged, "of the increase in fares on the opening of the Waterloo Bridge extension;" as if the directors were to spend a million of money and to receive no return whatever! All the inconvenience and expense of reaching the old Vauxhall terminus of course being quite obliterated. Let us add, that if any further concession is to be obtained, those seeking it should not resort to threats and indignation, in answer to a step which the administration of the South-Western line have taken as much for the public benefit as for sustaining the value of their

own property.

Mr. Roney, of the EASTERN COUNTIES writes, in reply to the Manchester Share List—" It is necessary that the certificates of the 6 per cent. stock should be sent to the office of the company before the interest can be paid (each half-year) as long as they are held as scrip. It is optional on the part of the holders whether they choose to register or not; if they do, struction.

the interest is remitted when it becomes due, but they incur the price of a stamped deed of transfer when they sell."

In consequence of the recent opening of the line, says the Hereford Times, from Sherwsbury to Ruabon and Chester, considerable quantities of good coal find their way from thence even into the valley of Knighton. The advantage of a line of railway from Shrewsbury to Ludlow and Hereford can scarcely be estimated.

The reduction in the price of coal consumed at Bury St. Edmunds, since the opening of the EASTERN UNION, according to the *Ipswich Journal*, has been equal to the yearly amount of poor-rates levied in that town.

The Companion to the British Almamack notices the services to which the RAILWAY SYSTEM may be turned in conveying away the refuse from large cities:—At Newcastle-on-Tyne the town's refuse has been for some years carted out on a spot in or near to the common moor, whence it was taken away in other carts belonging to the farmers to Morpeth and other places, who paid 4s. 6d. per cart-load for it. The York and Berwick has become the medium of a much improved arrangement. The corporation now takes the collection of these matters upon itself; the refuse is conveyed in carts to the line, along which it is transported, in vehicles and at hours likely to be as little inconvenient as possible; and it is now deslivered in the agricultural districts at 2s. 6d. per ton. The farmers of Northumberland now use the whole of the refuse of Newcastle, and the demand is far beyond the supply.

We regret to have observed a notice of the DEATH

We regret to have observed a notice of the DEATH OF MR. Bigg, of Parliament-street, in his 63rd year. Among the publications especially useful to the railway interest which issued from the firm to which he belonged, our readers will probably connect his name with that well-compiled digest of the Special Railway Acts of the various sessions, which we have frequently noticed in terms of commendation.

The jury of an inquest on the body of a driver named Whittle, who was killed on the LANCASHIRB AND YORKSHIRE, have very properly recommended a stoker named Callaghan to the favourable notice of the directors. The circumstances have been already briefly noticed, but we repeat them at length as connected with the unflinching courage of the man Callaghan:—On the 1st inst., as an engine and tender were proceeding from Normanton to Wakefield, when nearly opposite Kirkthorne Church, the crank arm of the leading wheel on the left side of the engine broke, and the engine was precipitated down a high embankment, turning over twice before it got to the bottom. There were three men on the engine at the time, the driver, named Callaghan, the stoker, named Hawkshaw, and a driver on the Midland line, named Whittle. In his evidence before the Coroner, on the inquest upon the body of Whittle, who died from injuries received, Callaghan, after narrating his having assisted his companions to the best of his power, stated that, hurt as he was, he had the presence of mind to recollect that the mail train from Leeds to Manchester was just about due. He managed to scramble on to the line, and found that the rails had been sprung and two of the chairs broken. He started off towards Normanton to stop the train, and after falling several times from weakness and the darkness of the night, the poor fellow reached the signal light at the junction of the Lancashire and Yorkshire with the Midland. When he got to this point he was so exhausted with fatigue that he could not tell the signal man what he wanted, but he made him understand by motions that the approaching train was to be stopped. The red signal light was turned on just in time to stop the mail train, which was coming up at the moment.

A project for UNITING ALL THE RAILWAYS ROUND PARIS, by a line forming a circle to go from station to station, is mentioned in the French papers; the several companies interested have, it is said, already asked the Government to obtain the assent of the National Assembly to granting the necessary aid. Independently of the stimulus that would be given to commerce and the facility of intercommunication generally, it would be of great importance for the employment of the working classes all round the metropolis. We fear, however, that more urgent claims on the State will for the present prevent its accomplishment.

A correspondent of the Journal des Chemins de Fer announces that the works on the Paris and Lyon in the Côte d'Or territory, between Aisy and Blairy, will not be undertaken this winter, as all the applicable funds are to be devoted to the district between Paris and Tonnerre. The section from Dijon to Chalons, which is finished excepting in the stations, will not be ready for working till Easter, that is, at the end of the seventh year of its construction.

In consequence of the prolonged commercial crisis, the Paris to Sceaux has suspended its service, and has accordingly notified its condition to the Government. M. Vivien has presented a project for substituting the State for the company till the 1st of April, when a definite resolution will be adopted.

The line is therefore sequestered.

The hopes which had been stifled during the viceroyalty of Ibrahim Pacha for the maintenance of a RAILWAY between ALEXANDRIA and SUEZ appear again to have arisen at the accession of his cousin. Abbas Pacha, who is said to lean (if to any) to British influence. Were the project determined, even in these times of railway adversity, there would be, doubtless, capitalists found to undertake it.

#### Reports of Beetings.

AMBERGATE, NOTTINGHAM AND BOSTON AND EASTERN JUNCTION.
Dec. 19.—Special Meeting, Nottingham.— Mr. W. F. N. NORTON in the chair.

The SECRETARY read the requisition of London

ahareholders calling the meeting.

Mr. Briggs, of Lewes, said it would be recollected that after the committee of inquiry had been appointed a report was presented, for which every shareholder ought to be deeply grateful; and although that report had been questioned, it was a most important document. At the time the Ambergate was projected the railway map of the country was pretty nearly a blank, and it was determined to make the line in its integrity; but since the Act was passed very many other lines had been constructed, and several competing lines had been formed. The passing of the London and York Act, with the construc-tion of the Manchester and Lincoln line, had completely changed the features of the undertaking. And then, the Syston and Peterborough line, belonging to the Midland—a company with which he hoped to see the Ambergate some day in alliance—had also been constructed. Another competing line was from Grantham to the eastern districts of England; but from Nottingham to Grantham they had no competitor, and for that he hoped they should some day obtain a good price. But how was it with the project from Nottingham to Ambergate? Why, there was now a communication round by Derby, and one more direct by the Erewash Valley line. If they constructed their intended line from Nottingham to Ambergate they would be competitors with two of the Midland lines; and thus they would depreciate the value of the other and sounder portion of their If the inquiry so recently instituted had been made sooner, the directors would not have rejected offer after offer of amalgamation made by other and more powerful companies. The directors had relied too much upon their parliamentary estimates; they had blindly striven to carry out the line in its integrity, and had ignorantly rejected evidence of a most important character that had subsequently been obtained, until at last they had been compelled most unwillingly to receive it, and then they somewhat modified their scheme. He moved—"That it is expedient definitively to limit the undertaking of this company to the construction of a line between Bulwell. Nottingham and Grantham, retaining the power to make the line between Ambergate and Codnor Park, and to limit the share capital of the company to 660,000l." He further observed, that when the report of the committee of inquiry had been some time before the public, the value of the company's shares rose in the market; but after a time that confidence again gave way, in consequence of a fear lest the directors should ultimately determine to construct the entire line. Mr. Briggs again impressed upon those present the desirability of improving their property by limiting it in the way proposed. By so doing they would not only be able to limit the shares to 71. 10s. each, but would also make their property marketable and desirable either to the Midland, the Great Northern or the Eastern Counties.

Mr. Davies seconded the proposition.

The CHAIRMAN said this meeting was called for the purpose of considering a proposition to give up, by application to Parliament, certain powers with which they were invested: but there was nothing to that effect in the resolution moved. Mr. Briggs's resolution merely expressed the opinion of certain shareholders relative to a particular line of policy. Now, he could not conceive that they (the directors) would derive any advantage from going to Parlia-ment, for Parliament would not be likely, without any advantage to the public, to pass an Act solely for the purpose of raising the value of their shares in the market. It never was the intention of the directors to construct any portion of the line not now in course of formation until they had been authorized to do so by the proprietors in public meeting.

After a tedious discussion, of no particular interest, relative to the informality of the proceedings, the resolution moved not going so far as the requisitionthe solicitor to the company and several professional gentlemen having given their opinion that it would be an act of informality for the chairman to put the resolution as proposed—it was withdrawn, and removed with the following addition :- " That in the event of the passing of a public Act empowering railway companies to accomplish the objects embodied in the foregoing, this company shall, at the earliest opportunity, carry into effect those objects under the provisions of such Act. But, as a pre-cautionary measure, it is expedient to take prelimi-nary steps towards a special Act for the above purposes, in case of the failure or inadequacy of the public Act."

Mr. DAVIES seconded the motion as amended.

The CHAIRMAN said that as some doubts had been insinuated as to the bond side intentions of the Board, he (as representing the Board) might say they considered themselves pledged to adopt the recommendations in the report of the joint committee appointed on the 25th of February last, and approved by the special meeting of proprietors on the 19th of May last; that is to say, that they would confine operations solely to the completion of the works now in course of construction between Bulwell and Grantham, and that when that portion of the line should be completed, they would leave it to the proprietors to deal with the remaining powers of the Acts of Parliament as they may deem fit. The Chairman, in conclusion, moved as an amendment—" That it is inexpedient to entertain the consideration of any of the subjects contained in the requisition upon which this meeting has been convened."

Mr. L. Wyles, of Grantham, seconded the amend-

Much confusion here followed, which lasted for

two hours.

Mr. T. Bishop (the deputy-chairman) severely censured the conduct of the London shareholders a suspicious and factious. In speaking of the Act of incorporation, Mr. Briggs had described portions of it as incumbrances. He (Mr. Bishop) knew that the vice-chairman of the Midland (Mr. Ellis), in speaking of the attempts to get rid of portions of that Act, had said, "Surely thou art not going to part with thy Act of Parliament; it would be suicidal. Keep it." Of what value would the line from Nottingham to Grantham be if they threw away the important powers they possessed in connexion with the Eastern Counties ?

Mr. BURLEY, of Leicester, speaking in support of the amendment, observed, in reference to the object of Mr. Briggs and his supporters, that "it was a broker's job from beginning to end."

After some further discussion the amendment was put, and, on a show of hands, was carried by a large majority. A poll was demanded by Mr. Briggs in favour of the original motion; and the proceedings, at 6 30 p.m., were adjourned to 11 a.m. next day, to receive the report of the scrutineers.

At the appointed time next day the numbers were officially declared as follows :-

Present. Shares. Votes

Majority for the amendment 4,080

SOUTH-WESTERN .- Dec. 18. - Meeting of Passengers, Waterloo Tavern, near Waterloo Bridge, for the purpose, as the advertisement announced, of taking into consideration certain alterations recently made in the scale of charges on the South-Western. We give the report of the proceedings as furnished by the Morning Chronicle, that our readers may see the amount of acknowledgement or gratitude which a railway company is likely to receive when it offers any additional boon or advantage to the passengers on the line.—The room was not full, probably not more than twenty-five or thirty persons being present; but they all appeared to have a strong personal interest in the matter, and to consist of gentlemen and men of business resident near the stations within short distances of the terminus. Mr. Gifford was called to the chair, and in opening the proceedings adverted to the recent proposition of the South-Western to grant annual or season tickets, but which would, however, amount to about 2. 10s. per mile, without

any allowances as regarded second-class passengersa tariff which was tantamount to a prohibitory price, considering the various casualties which prevented men from travelling regularly every day; and the plain truth was, the directors knew perfectly well that no possible benefit could be derived by their customers from such a proposition. The directors had also proposed to increase the price of the doublejourney or day tickets. Everybody who had used the line knew that the allowance on a day ticket had been one-third of the single fare; and so they proposed, by granting a pretended boon, which was no boon at all, called season tickets, to take away a direct and substantial advantage, which had been long enjoyed by the travellers on the line, in the shape of day tickets, at a reduction of one-third.— Several speakers followed. The strongest indignation was expressed at the conduct of the directors. It was urged, that at the time the company obtained powers to extend their line from Vauxhall to Waterloo-road, it had been expressly stated that no increase in fares would take place; but so far from that engagement having been fulfilled, not only one, but two positive enhancements of charges had been made. If the public, deeply affected as they were by such a course of proceeding, were to make no stand, the railway companies would have it all their own way. It was stated that the Great Western had lately discontinued their return tickets, and the result had been that a great number of gentlemen living at short distances on that line—Ealing being particu-larly specified—had come to a resolution that such of them as had been in the habit of using first-class carriages would travel for the future in the secondclass, and those who had patronised the second-class class, and those who had patronised the second-class would, whenever practicable, go by the third-class and parliamentary trains. These gentlemen had pledged themselves to endure any personal inconvenience or annoyance rather than submit to the arbitrary proceedings of the directors. In addition to that, an omnibus had been established from Ealing, carrying from twenty to thirty passengers every journey, and it always went full. The result of these proceedings had been, that the Great Western directors had now under their consideration the policy of restoring the day-ticket system. One of the gentlemen who spoke said that such was the feeling excited by the course of the South-Western directors, that an omnibus had already been established from Kingston new town—a most important station on the line
—which carried passengers to London for 2s. 6d. return fare, and was always full. The people there had determined to patronize that conveyance when-ever practicable. The various speakers recommended that all frequenters of the railway should travel by the class of carriage below that which they had been in the habit of using, and that they should promote and support, by every means in their power, any other means of locomotion in preference to the railway, so as to diminish the revenue, until the directors had been brought to their senses. Resolutions were proposed and carried nem. con., to the general purport— That the meeting greatly regretted the increase in the price of the double-journey or day tickets on the South-Western, as an unreasonable rise upon passengers, and as injurious to both shareholders and owners of property on the line. That the public were led to support the continuation of the line from Vauxhall towards London Bridge on the faith and belief that the fares would not be altered; but that, notwith-standing that compact, the fares had been twice advanced since the completion of the terminus at the Waterloo-road; and that such a course was injurious alike to the shareholders and to the holders of property on the line, as well as unjust towards the passengers and the public. That the charge for annual or season tickets was, when the casualties preventing daily travelling were considered, no inducement what-soever to use the line, and that a distinction ought to be made between first and second class travelling-30s, per mile for the former and 20s, for the latter appearing to be about the fair average, as adopted by other companies.—A committee was then ap-pointed, to negotiate with the directors of the South-Western on the matters aforesaid.

#### Law and Bolice.

LIABILITIES OF PROVISIONAL COMMITTEEMEN.—Dec. 19.—In the COURT OF QUEEN'S BENCH, in re Wilson v. Holden, this was an action to recover a sum of 94l. 6s. for stationery supplied by the plaintiff, the bookseller and stationer of the Royal Exchange, to the Avon and Severn Valley, of which the defendant, a gentleman of fortune in Derbyshire, was a committeeman. The company was got up by four solicitors, who were registered as the promoters, and on the 27th of September 1845 the defendant sent in a letter consenting to become a member of the pro-

Googl Digitized by

visional committee. The company had been previously registered, and after that time many proprovisional committeeman were issued. It was soon found that the company could not be carried on, and an arrangement for winding up its affairs was made as early as November 1845. In the meantime the defendant had made one or two calls at the offices of the company, and had urged the necessity of proceeding with vigour, but he did not appear to have been present at any meeting of the committee at which any order for the supply of these goods had been given. It was however stated that when been given. It was however stated that when present on different occasions in the company's offices he had used the stationery then in the office, and that at one of the meetings held for the purpose of winding up the affairs of the company he was present, when a resolution was passed authorizing the delivering up to the solicitor of the company of some of the stationery in part payment of his bill. The bill of particulars of the plaintiff's claim began in September and terminated in the month of December 1845.—The defence was, that the defendant had not done any act to render himself liable; that his merely being a provisional committeeman would not make him so, and that if he had done anything which might be construed into a recognition of liability, it was to be attributed to the mistaken view of the law which a decision of the Court of Exchequer had, when actions of this kind first arose, rendered general, and that if such were the case, his mistake as to the law would not render him liable. The mere fact of his having been on the provisional or manag-ing committee was not sufficient of itself to constitute ponsibility for debts incurred by that committee, but he must actually have interfered in ordering the goods, or in distinctly adopting the order after it had been given. No mere dealing with the property after it had been supplied was sufficient for this purpose; an active interference in the matter of the supply of the goods, or a distinct and unequivocal recognition of it afterwards, was required. - Lord Denman adopted this view of the law, and remarked that in this case there was no question of law. The only question was one of fact, namely, whether the defendant had, by his own conduct, made himself a party to the supply of the goods, and given, by his interference, a right to the plaintiff to hold him responsible. The jurors brought in a verdict for the plaintiff—damages 94t. 7s. 6d.—Bailey, Brothers v. Brace-bridge was also an action against a provisional committeeman. The railway in this case was that of the Midland Union. The demand amounted to 9721., and was incurred for advertisements inserted in the various newspapers during the months of September, October and November 1845. On the 22nd of December in that year there was a report presented at a meeting of the company, in which it was stated that only 350L had been paid as deposits on shares. It was then resolved that the intended application to Parliament for a bill should be postponed till the next session, and that all further expenses on account of the company should cease from that day, except such as should be specially ordered by the Board. defendant was afterwards applied to for payment, as it was said that he had interfered, more than most others of the committeemen, in the affairs of the company, and had so rendered himself liable.-The jury returned a verdict for the plaintiff-damages 630l.

- Dec. 20 .- In the same Court, in re Dawson and others v. Hay, this was an action brought by the plaintiffs, advertising agents, in Cannon street, City, against a jeweller, residing at Wolverhampton, to recover the sum of 2721. odd, for advertisements inserted in various papers, and for printing, in respect of the Leicester and Shrewsbury Direct, of which the defendant was a provisional committeeman and a director. Evidence was called on the part of the plaintiffs, proving the orders for the work, and that the defendant, in conjunction with a solicitor of the name of Turner, who was examined on behalf of the plaintiffs, was the chief promoter and concocter of the scheme; that he was aware of and sanctioned the orders given by the plaintiffs; and also that he recognized his liability by paying the sum of 63l. as his was broken up. On behalf of the defendant, it was urged that the parties who were really liable were Messrs. Turner and Vardy, who promoted the scheme, and that the defendant having, in common with the other provisional committeemen, paid the sum of 63t. as his share of the expenses (which was more than he considered he ought to have paid at all), he was not liable for the demand of the plaintiffs. —Lord Denman having summed up, the jury returned a verdict for the plaintiffs—damages 272l. odd.
— Dec. 20.—In the COURT OF EXCHEQUER, in re Gurney v. Lord Ingestre, this was an action brought

called the Marseilles and Toulon against the defendant, as a provisional director, to recover back the amount of deposits paid on the 12th of March 1845, into the London and Westminster Bank. After the case had proceeded for some time it appeared the plaintiff was unable to prove that Lord Ingestre had attended a meeting of the directors, or that he had authorized the publication of his name as a director until after the deposits, now sought to be recovered back, had been paid. It appeared further that these deposits had been paid into the bank to the credit of four of the directors, and that the defendant was not one of them.—The learned Judge having expressed a decided opinion that the action, which was for money had and received, could not under these circumstances, be sustained, the plaintiff's counsel elected to be nonsuited.

COMPENSATION.—Dec. 21.—In the COURT OF EX-CHEQUEB, in re Gillard v. the Lancashire and York-shire, this action was brought to recover compensation damages for the death of the plaintiff's husband, alleged to have been caused, in September 1847, by the negligence of the defendants. There are some points of interest connected with the plaintiff's statement which are rather unusual, and which we here insert. The plaintiff was left an orphen at an early age, and became acquainted with the deceased in 1843. After some time they were privately mar-ried. The deceased was obliged to become a clerk in the Leeds Telegraph office, at 1l. per week, as his father disapproved of his marriage, and refused to make him any allowance. The plaintiff had one child during the lifetime of her husband, and another since his death. In consequence of the shock the plaintiff suffered, her last child was of a very delicate constitution, subject to convulsions, and it was apprehended its mind was also affected. The plaintiff was since incapable of earning the means of subsistence, and was entirely dependent upon the bounty of others. On the 16th of September 1847 the plaintiff and her On the loth of September 1847 the plaintiff and net husband were residing at Wakefield. On the morning he left Wakefield for Manchester, and was returning by the 1 p.m. express train for Leeds, when the accident occurred. There were seven carriages, being one more than the usual number in an express train. The deceased was in the last carriage, a large one. One of the rules was that in a train like that, one-third of the entire number of carriages in such train should be what are called "brake car In fact, that there should be proper brakes, riages. In fact, that there should be proper brakes, and that especially the last carriage of each train should be a brake carriage. The carriage in which the deceased was seated ought to have been a brake carriage. In the train in question there were only two brakes, one in and the other outside. Each should have been under the control of a guard. It was the duty of the guard who had the management of the inside brake to be inside, and of the guard who managed the outside brake to sit outside. The day upon which this accident occurred was very wet and stormy, and the guard who should have sat outside went in. The rails were in such a state from the weather that particular caution was necessary, and particularly so as at that very part the line was being altered. At Luddenden Foot station, about two miles from the spot where the accident occurred, it appeared that one of the new rails, which came up within a short distance, was broken, and the carriage in which the deceased was riding was thrown off the If there had been a guard on that carriage he could have communicated with the engine-driver, and the train might have been at once stopped. Unfortunately, however, it was not a brake carriage, and there was no guard outside. On passing Luddenden Foot station, the train had to pass through a tunnel very near Sowerby-bridge station. On arriving at latter station, the state of things was observed by a parcel boy, who was standing on the platform. and who motioned to the engine-driver to slacken his speed. It was impossible to stop the train at once. The carriage was dashed against the platform, and the two last wheels of it were wrenched off. There was unfortunately on the line itself an ash-pit, into which the carriage was thrown and dragged out again. After the train had proceeded a few yards, the deceased, with two others, was thrown out.— The Lord Chief Baron intimated an opinion that the Legislature never intended that compensation should be given for the consolation of a bereaved man or woman who had sustained no pecuniary loss whatever; therefore the damages ought to be altogether confined to pecuniary loss.—The engineer and inspector of the line proved that the accident could not be attributed to the state of the rails, which were at the time in proper condition.—The Lord Chief Baron directed the jury that they should take into consideration the fact that the deceased was earning 501.a-year. They were not at liberty to award damages by the holder of 230 shares in a projected undertaking | for sentimental losses sustained either by the plaintiff | ment with the company's bill, in 1846 and 1847. The

or her children, nor could they consider what the deceased might probably have been able to earn if now alive. They should only consider his actual salary when he was killed. They should then consider how much of the 1l. a-week he earned was the plaintiff's fair share; and next, how long, considering the average duration of life, she was likely to be in receipt of that portion. The damages should be a fair compensation for the pecuniary loss sustained by the plaintiff.—The jury returned a verdict for the plaintiff—damages 7501.

DIRECTORS' DUES .- Dec. 18 .- In the COURT OF COMMON PLEAS, in re Serrell v. the Derbyshire, Wor-cestershire and Staffordshire Junction, the action in assumpsit was brought by a solicitor on a banker's cheque, dated August 13, 1847, for 420*l.*, drawn in favour of a former director, D. T. Johnston, or bearer, and signed by three other co-directors of his, named Mathew, King and Spires, and which cheque was subsequently transferred by Johnston to the present plaintiff. The pleas of the defendants, in effect, denied the making of the cheque, the due presentment, notice of dishonour, and alleged that the cheque had been improperly drawn in favour of Johnston without the sanction of a general meeting; that the plaintiff took the cheque with notice of its having been so improperly drawn; and that the plaintiff had presented the same in violation of the agreement made by him to the contrary. The case for the plaintiff, (which disclosed some curious facts respecting the value which the directors had set on their services,) first, as to the making of the cheque, rested (in addition to the general principle of law applicable to the cases of the liability of corporate bodies) upon the 8 Vict. c. 16. s. 97, which gave to the directors of railway companies power to make contracts on behalf of the company, and provided, in effect, that written contracts, if signed by two directors on behalf of the company, should bind such company; and that the company should be liable to be sued in the same way as if it had been a private individual, and not a corporate body. The 14th section of the Act incorporating the company, passed in July 1847, was referred to as containing the names of the five persons then appointed directors, and amongst them those of the three directors who had signed the them those of the three directors who had signed the cheque in question. Afterwards Mr. Spires, one of the last-mentioned directors, proved the signatures to the cheque, and then, upon being cross-examined, stated that he was present at the meeting of directors in August 1847, when it was resolved to give the cheque as a remuneration for the trouble Johnston had taken as a director. It was agreed that the directors should each have a sum of money for his trouble—600 guineas for chairman, and 400 guineas for each of the four directors. The principle of counting the attendances was to put all times of attendance together and to divide them equally amongst the directors, without reference to the time each had attended. In voting the remuneration the directors proceeded upon the advice of Mr. Mathew, the chairman, who advised them both as counsel and chairman. He (witness) voted against the amount of the remuneration as exorbitant; but his was the only vote in opposition, and he ultimately took a cheque for his 400 guineas, because he was told if he did not the other directors would divide it amongst them. At that time debts to some extent were owing by the company, and a call of 1l. he (witness) thought was made afterwards. When he (witness) went out of office in the following December, the company was indebted to bona fide creditors in sums which it was unable to pay. He did not know that his objections to the remuneration were founded upon the circumstance of the company having debts to pay at the The cheque for his (witness's) remuneration time. had not been presented for payment, as it had been agreed that the cheques should not be presented until the company was in funds, when they were all to be presented together. He (witness) had persisted at the time in his objections to the remuneration because he thought the shareholders would not approve of it, although he would not undertake the same trouble again for double the amount. He had, as director, attended almost daily in 1845 and part of 1846. He had never paid the amount of his portion of the calls made. It was remitted, by way of further remuneration, from the time of passing of the Act in July 1846 until the general meeting in December. The amount remitted to him (witness) was 301., and would be about the same to the other directors, and the respective amounts were entered in the book as so much money paid up by the directors. The remission was made to enable the directors to attend the general meeting in December as proprietors who had paid up their calls. He had refused to give up his cheque until he had seen the result of the present Re-examined: We were twice before Parlia-

presentment of the cheque by the plaintiff's bankers was secondly proved to have been made on the 6th of October 1846 to Messrs. Hankey, bankers of the company, by whom it was dishonoured, and cases were referred to as authorities, showing that the delay in the presentment did not affect the plaintiff's title. Notice of dishonour was thirdly proved to have been given at the company's offices, 22, Cornhill, on the 7th of October 1847. Evidence was adduced to show that the plaintiff had given valuable consideration to Johnston for the cheque, accompanied, however, with certain other securities; and the plaintiff's case concluded with the statements of two witnesses. and one or two letters to Johnston, to the effect that Johnston had requested the plaintiff, after the transfer to him, to hold the cheque over and not present it, adding in one of his letters that the calls were responded to slowly but surely. The only evidence as to the time of transfer was the fact of the cheque being in the plaintiff's possession on the 23rd of August 1847.—On behalf of the defendants it was objected that the cheque not appearing to be signed by the directors on behalf of the company, did not even establish a prima facia case against the defendants; and that led to the Lord Chief Justice suggesting that the best mode of having that and the other points of law, with respect to due presentment and notice of dishonour, &c., which must arise in the case, decided, would be to turn the facts into a special case for the opinion of the full Court, which was accordingly assented to, a verdict being taken in favour of the plaintiff for the amount claimed, subject to such special case.

Dec. 16 .- At the RICHMOND POLICE COURT, S. Heeley, the driver of the 'Vulture' engine, was charged with the manslaughter of R. Perry, a "chaimman" in the service of the engineers of the South-Western, at Richmond, on the 17th of November last. The evidence was mainly a repetition of that already given at the examination of Watkins, the fireman, or at the inquest (see ante, pp. 831, 838, &c.).—Mr. E. H. Hills, surgeon, proved that the deceased Perry's death arose from a fracture on the right side of the skull.—S. Luck, the pointsman at New Richmond, added to his former testimony that the sound of the bell which he had to ring on the approach of a down-train com-pletely buried the noise of a train or engine coming in an opposite direction. An engine in progress is very deceiving—one moment it is 100 yards off, and the next it is upon you. He thought, in coming round the curve from Old Richmond station, it was scarcely possible for an engine to pull up in 150 yards, or before it had got on the points. The night was very dark, but not foggy.—Mr. J. V. Gooch, superintendent of the locomotive department, added to his former testimony that the book of rules produced, to every man in the company's service: he observed that the 63rd rule had been torn out. Rule 3 was, that "a red lamp by night or a red flag by day, or any signal, of whatever colour, violently waved, shows that an engine must stop instantly." This important shows that an engine must stop instantly." This important rule the prisoner had wholly disregarded.— Capt. Price, one of the magistrates, said it was assumed that every engine-driver and fireman was well acquainted with these regulations; but he wished to know if, before they were intrusted with an engine, they were subjected to a course of examination as to their proficiency. A captain was not intrusted with the command of a ship until it was ascertained whether he knew how to manage one, and the same responsibility attached itself to an engine-driver.—The officials were understood to state that no such regulation existed .- J. Andrews, who was one of those who rode on the engine, swore that the prisoner was who rode on the engine, swore that the prisoner was perfectly sober.—The prisoner was committed for trial at the present sessions of the Central Criminal Court.—Mr. Hills, the surgeon, said the prisoner, when taken to gaol, must be admitted into the infirmary, or he would not answer for his life.—Mr. Penryhn, the committing magistrate, said that should

Dec. 13.—At an inquisition in the GUILDHALL, PLYMOUTH, to assess the value of two houses in the town, possessed by Mrs. Worsley, and which the South DEVON required for their line, the jury gave a verdict for 1.650L, which being less than the company offered, the vendors will have to pay their own costs. The vendors asked 2,040l., and were offered by the company 1,700l.—The second case was then called: a claim of a tenant of one of the houses, Mrs. Tollett v. South Devon, but the plaintiff not answering, the case was withdrawn. In this case the party asked 100*l.*, and the company offered 25*l.*, as a compensation for quitting without due notice.

DARLEY'S SCIENTIFIC LIBRARY for the Use of Schools, Private Students, Artists, and

Mechanics

Mechanics

Mechanics

It is the purpose of this Work to furnish a Series of Elementary
Treatises on Mathematical Science, adapted to the wants of the
public at large. To youth of either sex at public and private
schools; to persons whose education has been neglected, or whose
attention has not been "tected in early life to such studies; and to
Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered
as familiar and brought as near to our commonst t leas as possible;
the demonstrations of propositions are made plvin for the mind,
and brief for the memory; and the Elements of each Science are
reduced not only to their simplest but to their shortest term.

1 A System of Popular Geometry. Containing

1. A System of Popular Geometry. Containing in a few lessons to much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in talending Truths and general Principles. By George Darley, A.B. Pithl Edition, now ready, 4c, 6d, cloth.

2. Companion to the Popular Geometry. In which the Elements of Abstract Science are familiarized, illustrated, and rendered practically useful to the various purposes of lafe, with numerous Cuts. Second Edition. 4s. 6d. cloth.

3. A System of Popular Algebra, with a Section on Proportions and Pro. (Characteristics of the Action of Popular Algebra, with a Section of Popular Algebra, with a Section of Popular Algebra. (Characteristics of the Action of Popular Algebra).

COOKERY-BOOK. New Edition. Fcap. 8vo. Plates and Woodcute, 7s. 6d.

London: Longman, Brown, Green, and Longmans.

### WORKS AND VOLUMES

ADAPTED FOR

PRESENTS AND REWARDS.

#### Half-Hours with the Best Authors.

Selected and arranged, with short Biographical and Critical Notices,

By CHARLES KNIGHT.

In Four Volumes, price One Pound, in elegant cloth. Printed in a bold type, in crown 8vo, so as to produce the most legible series of portable books existing.

The Four Volumes of 'Half-Hours with the Best Anthora,' are illustrated with 18 Portraits, Engraved on Steel, of Great European Writers.

In 2 vols. small folio, price One Pound, in elegant cloth,

#### The Land we Live In:

A PICTORIAL AND LITERARY SKETCH BOOK OF THE BRITISH EMPIRE.

Profusely Illustrated with Woodcuts, drawn and engraved ex-pressly for this work, by the most eminent Artists, and with splendid Line Engravings on Steel.

#### The Cabinet Edition of Shakspere;

Edited by CHARLES KNIGHT.

In Twelve Volumes, price 18s. sewed; and 30s in elegant cloth, viz.: INTRODUCTORY VOLUME.

THE POEMS AND LIFE, 1 vol. PLAYS OF SHAKSPERE, 10 vols.

In Four splendid Volumes, in elegant cloth, price Three Pounds, THE STANDARD EDITION

#### The Pictorial Bible;

With ORIGINAL NOTES by JOHN KITTO, D.D. F.S.A.

And Illustrated with many Hundred Woodcuts, Steel Engravings, and Maps.

*** This entirely new edition, one of the most popular Family Bibles ever produced, has been brought out at a great expense, the voluminous Notes having been entirely re-written, or revised so as to embrace the immense increase in our stores of Biblical information.

In Two Volumes super-royal 8vo. in elegant cloth, price 11, 15z.

#### The Farmer's Library.

Illustrated with several Hundred Woodcuts.

This important and original Work is devoted to that class of subjects which is peculiarly interesting to every country resident, and is essentially the foundation of scientific rarming—the ANIMAL ECONOMY. It consists of the following BOUKS:—

- 1. THE OX. By W. C. L. MARTIN; late one of the Scientific Officers of the Zoological Society of London.
- 2. THE HORSE. By WILLIAM YOUATT. From the last improved edition—the Copyright of the Publisher. With A TREATISE ON DRAUGHT.
- 3. SHEEP. By W. C. L. MARTIN.
- 4 THE DOG. By WILLIAM YOUATT.
- & SWINE. By W. C. L. MARTIN. 6. POULTRY. By W. C. L. MARTIN.
- 7. BEES. By JOHN SAUNDERS.
- These Treatises aim at uniting the scientific and amusing parts of Zoology with practical directions for management, and such details of Animal Structure, and of Veterinary Knowledge, as may be really useful instead of merely empirical.

#### Almanacs and Year Books for 1849.

THE BRITISH ALMANAC of the SOCIETY for the DIFFUSION of USEFUL KNOWLEDGE; containing the usual information, corrected up to November 1. Price is sewed in wrapper.

The COMPANION to the ALMANAC.
Price Half a Crown, sewed; or bound in cloth, with the BRI-Contenta,

PART I.—Short Supplementary Remarks on the first six Books of Euclid's Elements—Ordinance Surveys; Mctrophitan, Sanitary Survey.—The Chorlera—Farm Produce of Ireland in 1847—On the Progress of Organic Chemistry—Relative Progress of the Population and of Industrial Wealth—On the Variola Oris—Railways of Great Britain—Emigration to the British Colonies

The UNIONS' and PARISH OFFICERS' SHEET ALMANAU. Price, Plain, 1s.od.; Varnished, 2s. 3d.; in Frame and Varnished, 7s.

Price 4s. cloth, or 4s. 8d. roan tuck,
The UNIONS' and PARISH OFFICERS
POCKET ALMANAC and GUIDE, greatly extended.

London: CHARLES KNIGHT, 90, Fleet-street;

GUARANTEE TAX ON THE LONDON AND NORTH-WESTERN.

It is said that the London and North-WESTERN have resolved on introducing a system of insurance against loss from any pecuniary defalcations in the accounts of the company, by raising a guarantee fund, from an annual tax on salaries, varying from 1d. to 4d. in the pound:—the working hands, however, being exempted from its operation. Whether this measure may or may not have been suggested by any frequent occurrence of loss of late from the delinquency of parties intrusted with money, we have not the means of knowing: the plan itself, it is clear, will be unpopular, and its expediency may be seriously questioned.

In the first place, it will not be easy to distinguish, in levying this kind of tax, between those who have virtually the charge of money receipts and those who have not. If it be imposed alike on all, it will naturally be felt a hardship by those who, having nothing to do with cash transactions, are not liable to the kind of error against the consequences of which the fund is meant to provide. If it be attempted to restrict it to those alone through whose hands the company's funds may actually pass, it will fall unequally upon those, even; as the circumstances of charge and responsibility vary exceedingly between those who are constantly paying or receiving, and those who may but occasionally have to take part in money transactions. The process of modifying the deduction according to degrees of responsibility can never be so adjusted in practice as to avoid an appearance of arbitrariness and to satisfy all concerned of the justice of the apportionment: while the rougher method of taxing all, without exception, above the class of mechanics or porters, will only get rid of this objection to fall upon others still more open to remon-

There is another circumstance that will not tend to reconcile the company's servants to this kind of deduction from their wages. It is expressly required in its Acts of Parliament-and we have not heard that the clauses have been repealed-that security shall be taken from all persons in its employ who are intrusted with money; and as the new arrangement will not get rid of this condition, which we presume the directors have not of late ventured to neglect, there will be a double onus imposed on those, at all events, who have had to find guarantees in compliance with the stipulations of the Acts of Parliament. It is always a matter rather unpleasant than otherwise to obtain such securities; -men of the highest characters even are loath to ask others to enter into surety bonds for them; and the giving of such a warrantry is never agreeable. This process, however, being in no wise got rid of by the guarantee tax, the effect on those who have given or who may hereafter be required to give the security demanded by the Acts, will naturally be of soreness at the necessity of having to consent to a deduction from their salaries, after having already gone through an unpleasant ceremony for the same purpose, -and, as they will be apt to think, in vain.

This of course supposes that the provisions of the Act, subsist as heretofore; and also that they have been observed. It would be somewhat hard on the company's servants to have to make good in this way a default of the directors, in case the security clauses have been suffered to fall into disuse :- a proceeding, we may observe, which would be apt to expose the Board to penalties, if any one chose to enforce the stipulations of the Acts against them, where they may not have been complied with.

the company-and there are no doubt many, very many such—an arrangement, such as is said to be in contemplation, will fall with something like a sense of undeserved oppression. To them it will amount to a reduction of salaries on the score of security, after years of faithful service have given a better guarantee than any which can be obtained by so taxing them. In fact, the whole tenor of such a system is based upon the bad principle of making the trustworthy pay for those who are not so; and this alone would render it objectionable in our eyes in all cases. In the case of a railway, where it is above all things conducive to the regularity and efficiency of the work, that those who are employed should like their places, feel that they are well treated so long as they behave well in them, and so not only wish to keep them but perform their duties zealously and cheerfully-in such an establishment as this, where so much depends on the morale of the men employed, a system under which the good must suffer for the bad-is especially to be deprecated.

The cause of this new resolution, we say, has not reached us; but if there have been reason to desire any fresh security, it is not in this direction that it will be most advantageously sought. The Board would do far better by turning their attention to the manner in which appointments are made-to the kind of claims that prevail in getting new men into offices of trust—than by giving free scope to a kind of patronage which by no means tends to put the fittest persons into the vacancies that occur; and then trying to correct the flaws of this system by making the honest servants of the company pay for any carelessness-or abuse of favour-which may have brought less creditable subjects into the establishment. The only real security for faithful service is in taking due pains to procure good men-a duty which we fear is at times too much postponed, in appointments of all classes, to lower considerations. that ought to have no place whatever in the selection of servants of any class in a railway company, from the highest to the lowest offices. This, at all events, is perfectly clear: that wherever an ill-regulated system of patronage is allowed to prevail, no guarantee fund will ensure the concern from serious damage, not of money defalcations only; while its establishment, by a general income tax, will chiefly punish men who rather deserve to be encouraged -for the want of a strict exercise of an important duty by those who are placed above them. And it may be added, that with the honest care to select candidates by ascertained merit and character, and not merely by their interest or at request of friends, &c .- by this care, added to the precautions enforced in the parliamentary Acts, all that can be usefully done in this way will be attained.

The guarantee tax, therefore, if it really be adopted, we should regard as a move in a wrong direction; it is likely to create discontent; it will press hardly on those who feel they do not deserve to have their wages cut down for the purpose of making good the default of peculators; and, above all, its principle, as above described, is at heart a vicious one. It is not in this way that the character of an establishment can be raised; and if it be suffered to sink, for want of due care in the choice of the persons appointed, no guarantee tax can redeem it.

#### EAST INDIAN RAILWAY.

A correspondent has sent us the following letter on the above project:-

Sir,-I have been a silent observer of your late strictures upon the merits of this undertaking, and, On the old and well-conducted servants of after a careful consideration of the arguments which the question of the prosecution or abandon-

you have thought fit to adduce against it, I am of opinion that you have not conducted the opposition in that fair and candid spirit which I believe you have heretofore exhibited in other railway matters. I trust you have not lent yourself or your columns to that small section of shareholders who seek at all events to bring about a dissolution of the company, regardless of the ultimatum of negotiations now pending with the East India Company. For myself, I have but a small stake in this grand object, and I have stood by the directors through good and evil report, being strongly impressed with the admirable and economical management of the affairs of the company from its commencement. I have also a high estimation of the personal character and position of every member of the Board. You have lately adopted a small opposition party, whose object is to throw discredit upon the project, to shake the shareholders' confidence in the present directors, to obtain at all hazards a dissolution of the company, and, consequently, a division of the present balance in hand, regardless altogether of the merits of the undertaking. The grand charge against the directors appears to be, that they "desire to perpetuate the company, contrary to the interests of the share-holders." To answer this, I will refer you to the following extracts from the published reports, which completely answer and fairly contradict the assertions of the opposition:

Extract from Report dated the 18th of July 1848.—
"In concluding this report, the directors desire once more to repeat, that it is entirely for the proprietors to determine the question, whether they prefer the prosecution to the abandonment of the scheme. The directors, however, have only to add, that on what-ever course the proprietors resolve, they may rely on their unremitting exertions to give effect to their wishes, and to advance and protect their interests to the best of their ability."

Extract from Report dated the 30th of August 1848.

—"It is needless to add, that the directors will not recommend to the proprietary any section which it is not their decided opinion will pay liberally, or suggest to the shareholders any contract to be entered into which it will not be advantageous in their judgment to accept. If the directors should err in their judgment or duty in this respect, the proprietors will have ample opportunity of rejecting the contract, as none can be entered into consistent with the resolution passed at the last general meeting without the previous sanction of the general body of share-holders."

Extract from Mr. Stephenson's Circular dated the 9th of December 1848.—" The board of directors have but one desire and one interest in common with the bond fide shareholders-to bring the undertaking to an issue satisfactory to the proprietary. They have reduced the expenses of the company to a minimum of efficiency; they are precluded from entering into any contract which the proprietors shall not first approve; and they are now engaged in negotiations with the court of directors of the East India Company, based upon and in accordance with the express resolutions of the shareholders.

The circular just issued by Mr. Stephenson is a document which deserves to be carefully read by every shareholder of the company; and its recommendation to reserve all opposition until the proposals of the East India Company are brought before a general meeting of shareholders, cannot in fairness be disputed by the most strenuous dissentient. I conclude with one more extract from the circular, dated the 10th of December, which is to me fully confirmatory of the integrity and honesty of purpose of the directors.
"I distinctly deny that the directors contemplate

proceeding with the undertaking, except upon terms which you will have submitted to you, and which shall have been fully sanctioned and approved by you. I am enabled to contradict the statement that a capital of 1,000,000l. cannot be profitably expended on a section of the line. I need scarcely contradict the assertion, that 'the guarantee cannot be made absolute, when, as already stated, the negotiations with the authorities are yet in progress for a satisfactory adjustment of the entire question."

I am, &c.

Words are cheap commodities to some persons, but when they are inconsistent with deeds they afford but slender exculpation. It is quite true that the directors of the East Indian Railway have repeatedly said that they left

Digitized by GOGIC

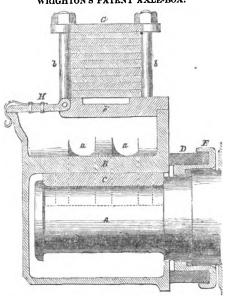

ment of the undertaking entirely in the hands of the shareholders, but they have at the same time taken measures to defeat any adverse decision the shareholders might pronounce upon the subject. The shareholders were required by the directors, if they wished the undertak-ing to go on, to contribute funds to enable a deposit to be made with the East India Company, as a proof of the existence of such a dis-position. The shareholders did not and would not contribute the requisite funds; nevertheless, the directors raised money, by loan and otherwise, and paid it into the India House; thus wise, and part it into the shareholders' hands, which they pretended to have left to their discretion. In the pamphlet lately put forth by an "East India Merchant," in vindication of the conduct of the directors, and attributed to SIR GEORGE LARPENT, the late chairman, it is said that the first intimation of the true nature of the guaran-tee came from an "enemy" to the railway; just as if it were not the true interest of every shareholder to understand the actual arrangement under which he subscribed his money. We suppose we ourselves are the "enemy" referred to by this eager partizan; and possibly those officials who would prosecute the undertaking at all hazards, and whose gain lies in the mystification of the shareholders, have reason to reckon us as such; but bond fide shareholders will no more complain of their enlightenment than a voyager would complain of being told of the rottenness of the ship in which he proposed to embark his fortunes. Mr. Stephenson stigmatizes as "interested parties" those shareholders who express themselves in favour of a dissolution of the company; and the directors have in effect done the same thing on several occasions, while they pretend to be willing to bow to the shareholders' opinion. The public meetings, it is well known, are attended on occasion by persons who are not shareholders at all, and who applaud or condemn, just as the policy of the officials may be supported or assailed, and to these public meetings, as thus manœuvred, every decision of consequence is referred. If the directors are sincere in their desire to accept the decision of the shareholders, let them send a circular to every shareholder, requesting him to state whether he wishes the undertaking to be abandoned or pursued; but if they are not sincere, then let them persevere in the course they have so long followed, and entail upon themselves a loss of reputation, in comparison with which the pecuniary loss of the shareholders will be but trivial.

#### Mechanical Emprobements.

We this week insert the diagram and description of Mr. WRIGHTON'S new Axle-box, and a letter just received from Mr. NORMANVILLE on the subject of his patent, alluded to in Mr. Wrighton's former letter. We must leave these gentlemen to settle the question between them and as the diagrams and descriptions of both inventions are now before our readers, those competent to judge of their respective merits will not require any further explanation from us.

The following is the inventor's description:-

The engraving represents a longitudinal section of the axle-box in the most approved form, through the centre of the journal. A is the journal of the axle, which revolves in the brass step c, fitted into the axle-box B, which is cast in one piece or otherwise so made as only to leave an opening on its face for the introduction of the journal of the axle. D is a ring of vulcanized india-rubber, which is compressed between the face of the axle box and the ring E, which works against a shoulder on the axle and against which it is pressed by the elasticity of WRIGHTON'S PATENT AXLE-BOX.

the india-rubber ring and in both of which the axle freely revolves. aa are apertures at the sides through which the grease passes from the grease-box to the journal and interior of the axle-box. The object of making the grease pass down the sides is to save diminishing the bearing surface of the brass by drilling large grease holes. The spring o rests on the plate r, which covers the grease-box and carries the grease cover H, made to fit sufficiently accurate to exclude dust and dirt; the whole being secured to the axlebox by the bolts bb.

In applying the axle-box the metal ring encircled by the india-rubber ring should be first put on the axle; the axle-box, with the brass step in its place, being filled with grease is then to be applied to the journal and pressed towards the nave of the wheel, compressing the india-rubber ring until the bearing drops on to its seat. The shoulder of the journal will prevent the axle-box from being forced back again by the elasticity of the india-rubber ring, which will press on one side against the face of the axle-box and on the other against the metal ring and keep it close up to the shoulder on the axle, and prevent the grease escaping and dust or grit getting to the journal. It is quite unnecessary to apply pins or fastenings of any kind to confine the india-rubber ring,-the adhesion between it and the face of the box being much greater than the friction between the two metal

The extreme simplicity and economy of the invention with its great advantages must be obvious from the description. The axle-box itself requires no fitting, polishing, or facing of any kind, nor the application of a polished plate fixed by bolts or screws. It may be used as it comes from the foundry. only thing necessary to look to is to see that the plate and cover close the grease-box sufficiently to exclude the dust and dirt. The metal ring need only to be turned where it is in contact with the axle. The shoulder for it to work against can be made either by turning the axle a little smaller as shown in the engraving, or by driving or shrinking on a metal collar faced and bored to fit it. The first method may be pursued when the axle-boxes are being fitted to new axles or those not in use, and both can be placed under the carriages when required, but in applying them to axles under carriages in use, the latter method is preferable, as a number of collars may, if required, be prepared and shrunk or driven on, and the boxes fitted in the course of a few minutes. Common axle-boxes of any description may, with little trouble and expense, be altered to the patent ones, simply by making the usual joint in the middle, tight-stopping the holes at the bottom left for the escape of the grease, and applying the metal and india rubber rings as shown. This alone would save a great expense to railway companies wishing to use the patent axle-boxes and having a large stock of common ones on hand.

As a practical proof of the efficiency and economy

of the invention it will be sufficient to state that after some experiments on the Eastern Union Railway a second-class carriage was fitted with the patent axle-boxes, which has now been running about four months and has travelled more than five thousand miles without lifting or requiring a renewal of grease, and at the present time there is not the slightest appearance of their requiring any, as the grease-boxes are as full now as when first put to work.

#### IMPROVED AXLE-BOXES.

Sir,—In your last number appears a letter from Mr. Wrighton on the subject of improved axle-boxes for railway carriages. That gentleman, in referring to the diagram you were kind enough to publish in your number of the 16th inst. of my improved axle-box, assumes rather prematurely that a portion of my combinations are so similar to his as to warrant him in hinting at an infringement of his patent Such subjects, he adds, cannot be discussed rights. through the press, in which opinion I quite agree: but as he announces his intention of publishing his invention in the same manner as I have done, I feel that I cannot do better than refer all parties interested in the matter to his diagrams and description, when I think it will be apparent to all practical persons that although we both employ similar materials, the combinations are so different as to set the question of infringement entirely at rest. The chief advantage of my arrangement, and the one I prize myself the most upon, is that I take the axles of the existing railway stock and apply my boxes without incurring one farthing of expense, while Mr. Wrighton's arrangement requires a cone or shoulder to be turned upon the axle. I also press my valve against the end of the axle-box, with a spring of vulcanized india-rubber acting upon the nave of the wheel, and filling up the space between the axle-box and the wheel, while Mr. Wrighton presses the end of his axle-box against the cone or shoulder on the axle itself, which he has had to prepare for it, leaving the space between the end of the axle-box and the nave of the wheel open. The above are the chief features of our inventions, and I conceive them to be After reading Mr. Wrighton's totally dissimilar. letter and examining his enrolled drawing and specification, I was at a loss to conceive upon what grounds he could, in such a public manner and without any previous communication with me, accuse me of The legal question, having infringed his patent. The legal question, should he after mature consideration persevere in assuming my invention an infringement of his, must, of course, be settled in the usual manner; but I felt bound, after the public way in which he has made his statement, to forward you this letter in reply to it, which you will greatly oblige me by inserting in your next publication.

W. J. NORMANVILLE. your next publication. W. J. Nor Engineers Office, Euston Station, Dec. 28.

#### Official Papers.

SAMBRE AND MEUSE.

Engineer's Report for the Meeting, Dec. 28 (p. 909).

Engineer's Report for the Meeting, Dec. 28 (p. 909).

I beg leave to lay before you the following report of my proceedings in Belgium from September last, when you appointed me engineer to the company, to the opening of the first section, on the 1st of December. On my arrival at Walcourt I found the works proceeding with little activity, and the unsettled state of the company's affairs had produced a want of co-operation in the various departments. My immediate attention was consequently directed to remodelling the staff, and placing it on a more efficient footing. I am now happy to say, through great changes having been made, it is in a much more efficient state. A careful examination of the first section—viz., from Marchelmenes to Walcourt, with the Morialme and Lanefe branches—determined me to complete such things as were indispensably requisite for the immediate opening of this part, observing also the strictest economy both in the extent and nature of the works. The objections raised by the State engineers to the tunnels of Ham-sur-Heure and of the State engineers to the tunnels of Ham-sur-Heure and of the state engineers to the tunnels of Ham-sur-Heure and of the state engineers to the tunnels of Ham-sur-Heure and of the state engineers to the tunnels of Ham-sur-Heure and of the state engineers to the tunnels of Ham-sur-Heure and of the state engineers to the tunnels of Ham-sur-Heure and of the same and the state of the demolition and re-construction of 11 instead of 17 metres. In the Ham-sur-Heure tunnel we made four distinct openings, and finding the brickwark much better than was anticipated, and the mortar more binding, instead of demolishing and re-construction of 45 metres, or 148 ft. English, the part previously condemned, a length of about 9 ft. only was re-constructed. On the 8th of November, M. Willmar, the inspecteur des

Ponts et Chaussées, accompanied by M. Delahaye, visited the tunnels with me and made a most minute examination. He expressed himself satisfied with the course that had been pursued. In compliance with their engagement the contractors finished the work at their own cost. The measure of time for the completion of the works, and consequent opening of the line, I found to be a very heavy embankment and cutting at Fraire, which had only been commenced a short time previous to my arrival, the former of the cubic contents of 45,000 yards, and the latter 18,000 yards, and the latter 18,000 yards, and the latter 18,000 yards, and the cubic contents of 45,000 yards, and the latter 18,000 yards. Here I concentrated a very considerable force, and by great exertions, and working for many nights. I succeeded in completing them within the prescribed time. Having determined with Mr. Sheward, in the early part of October, that every exertion should be used to open on the 1st of December, some little extra expenses have, with his sanction, been incurred, and notwithstanding the innumerable obstacles that have started up on every side, the opening for traffic commenced on that day and has continued without interruption. That the traffic has not developed itself in that time so much as it might have done, is owing to the delay which has arisen with the Government in fixing the tariff and permitting a communication with the state line at Charleroi. Happily all these difficulties have been overcome, and on the 18th inst. we may be fairly said to have commenced work, that being the day on which we were permitted to send goods to and receive them from the State line. I need hardly say that the development depends much on the increased activity of the trade in this neighbourhood, especially the coal and iron trade; already various applications have been made to me by provietors of coal and iron works, amongst which may be named the Charbonnage of Reunion and St. Martin, the in this neighbourhood, especially the coal and iron trade, already various applications have been made to me by proprietors of coal and iron works, amongst which may be named the Charbonnage of Reunion and St. Martin, the iron works of Zone and the Baron de Cartier. The proprietors of the iron works of Couillet, who possess the excater part of the Bois des Minières and the Bois du Marquis, over the whole extent of which a tramway has for a long time been established, have applied to me to connect the same with our railway, and as this will bring an immense traffic over the whole extent of the line opened, I have prepared a plan showing how this may be accomplished to the best advantage. You are aware that the passenger traffic was put down at an insignificant sum; should it at all bear out its present promise it will form no inconsiderable item in your receipts. I had hoped ere this to have been able to lay before you a general account of the works executed, but so much remained to be finished, so many applications have to be answered, so imperious have been the other duties, that I have not been able to devote as much time to the subject as its immensely important nature requires; it is, however, progressing, and will be ready to lay before you in another month, and as on this depends the settlement at Morialmé with the contractors, you may rest assured that no endeavour on my part will be omitted to bring it to an early conclusion. If, gentlemen, I have not made as much progress in this matter as I could have wished, it has arisen from a desire to leave nothing in a state of uncertainty, but to make it clear, complete, and correct.

The following is represented as the official notification of the London and North-Western regarding the MUTUAL ASSURANCE FUND, of which we have spoken elsewhere :-

spoken eisewhere:—
Regulations for carraing into effect the prescribed plan of
Matual Assurance, to come into operation Jan. 1.
1. Every officer, superintendent, clerk, or other servant
of the company, excepting labourers, porters, mechanics,
and policemen, shall contribute 2d, in the II, out of his
salary to constitute a guarantee fund; each payment,
whether weekly, monthly, or otherwise, being made in

2. It at any time the funds in hand are not sufficient to meet the defaults, each officer and servant of the company shall increase his contribution, if need be, to the extent, in all, of 4d. in the 1L, but not exceeding that amount, till the

shall increase his contribution, it need oc, to one excent, in all, of 4d, in the I/, but not exceeding that amount, till the deficiency be supplied.

3. When a fund shall be accumulated by the contributions as above, which the directors shall consider adequate for the purpose, so as to warrant a reduction in the rate, 1d, only in the Il, shall be charged thereafter, unless the necessity shall arise to advance the rate.

4. No contributor shall have any individual property in the Mutual Assurance Fund, which shall belong to the company, and be applicable to the purposes above stated. Any party having already procured a policy of insurance from a guarantee society, will not be required to contribute to the Mutual Assurance Fund till the next payment to the guarantee society shall become due. Every wofficer, clerk, or servant of the company shall hold his situation subject to the system of mutual assurance, as above explained, and in conformity with the regulations above hald down.

By order of the directors.

#### Progress of Works.

DUNDEE AND PERTH. - With reference to the stonpage of the works of this line across the town, we now understand, says the Perth Advertiser, that it is in consequence of the exorbitant demands of the on consequence of the exorbitant demands of the tenants occupying the property purchased for the formation of the line; and that by not proceeding with the work till their occupancy expires, which will be at Whitsunday first, the company will effect a saving more than equivalent to any profit they would derive from having the line opened at an earlier

GENERAL TERMINUS AND GLASGOW HARBOUR.-The works are nearly completed, and the line is expected to be opened in a few weeks at furthest.

SOUTH WALES. - Dec. 21. - The first locomotive engine, says the Hereford Times, named the and a tender, reached Tidenham for the cuttings near the Mead's House. The engine was hauled from Gloucester on a carriage built purposely, and drawn by eighteen fine grey horses. Four superior black horses hauled the tender. The novelty of the load, and the beauty of the teams, drew the attention of a number of people.—Sir John Guest has it in con-templation to form a line from Dowlais Iron Works to Penrhiwcalch, the limestone quarries near Talybont, in the neighbourhood of Brecon, so that with a con-tinuous line of railway from the town of Brecon, passengers will be enabled to join the Taff Vale at Dowlais, and thence communicate with the South Wales at Cardiff.

STIRLING AND DUNFERMLINE. -A considerable portion of the line, says the Scottish Railway Gazette, connecting Dunfermline with an extensive and valuable mineral district, is upon the point of completion. It is intended immediately to forward the usual notice to the Commissioners for a preliminary inspection, and after their official sanction the finished part of the line will be transferred to the Edinburgh and Glasgow, the lessees. The portion now in course of execution to the vicinity of Alloa is expected to be execution to the vicinity of Anna is expected ready for opening early in spring. This being a very important section, the directors have resolved to push forward the works with every possible speed. They have resolved to postpone the remainder of the under-taking from Alloa to Stirling until the whole of the line under contract shall have been opened. This is by far the most economical mode of proceeding; because the profits of the section which is brought into operation will help the shareholders to provide the funds for the portion in progress.

LIVERPOOL AND MANCHESTER.—Dec. 25.—As the Birmingham third class train, says the Liverpool Courier, was coming up the Sutton incline, the 'Bank' darted out of the siding and ran into the train. Fortunately a truck was attached to the train, and then a third class carriage; the truck was smushed, and the carriage, in which there were a number of passengers, much injured. The engine was so disabled as to cause an instant stoppage of the machinery. By this mishap two or three trains were delayed over

#### Law and Police.

DEPOSITS RECOVERED .- Dec. 22 .- In the COURT of Common Pleas, in re Dean v. M. Taggart, Bart, the plaintiff, a barrister, sought to recover 2001., paid of which defendant was a director, after the exhibition of the prospectus of the company. It was proved that on the 23rd of June 1845 the directors issued a public advertisement, stating that the allotment of the shares had been completed, and regretting that a number of respectable applications had unavoidably been disappointed. On the 25th of June 1845 the plaintiff obtained his allotment of shares, and upon the 1st of July 1845 he paid his deposit of 100. On the 16th of October the directors issued a report of the state of the scheme, and, amongst other things, stated that they had deposited 2,000,000f. in the coffers of the Belgian Government, being the caution-money required to be lodged by the Belgian laws. On the 11th of December the plaintiff paid 100l. more in respect of a call of 2l. per share made by the directors on the 15th of November, and so the matter remained until the 13th of July 1846, when the plaintiff wrote to complain of the delay, and to ask for a proper explanation from the directors, suggesting, at the same time, that the scheme should be ing, at the same time, that the scheme should be abandoned, the expenses paid out of the deposits, and the amount of the call returned. To that letter, on the 6th of August, the plaintiff received a reply, stating that the Belgian statutes had received the royal sanction, and that the project would be proceeded with without delay, and on the 13th of the same month another report of the directors was published, one forming what reactived in the result and lished, confirming what was stated in that reply, and giving an account of what had been done. A general meeting of shareholders who had paid the call was convened afterwards, and the result was the publication of another report by the directors on the 27th of July 1847, in which they stated that 91,000t. was the actual sum which they had realized; that deposits in England had been paid on 30,000 shares, and in Belgium on 4,900, and in effect that the sum of the deposits and calls in England and Belgium amounted to a sum of about one-third less than the amounted to a sum of about one-third less than the proposed capital, whilst the number of shares really allotted, instead of being as advertised, the whole number fell far short of it. The plaintiff's attorney,

he stated that at the last-mentioned meeting he and all the directors were present. The plaintiff also attended. A Mr. Moore, one of the directors, was deputed to make a statement of the general affairs. The statement then made was in substance embodied in the subsequent report. In answer to the plaintiff's questions at the meeting, Mr. Moore said that concession had not been actually obtained at the time of the issuing of the prospectus, as he believed, from what he had seen in a report of the proceedings in the Belgian papers; that 28,300 shares had been allotted in this country, and he understood him to say that only 24,105 had paid a deposit; 6,000 shares had been reserved, of which 3,000 were for this country; that in Belgium 5,000 shares had been given to the original concessionnaires, upon which the deposit was to be taken as paid, and the deposits paid on 3,400 shares; that the second portion of the caution-money, 45,000f., had been remitted from English shares paid up; that 11,515 shares had paid the calls, and in Belgium to the extent of 500l.; that altogether 91,800l. had been received upon deposits and the latter of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the calls and the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of and calls. The plaintiff then expressed his very great dissatisfaction at the conduct of the directors after what had been set forth in the prospectus, and also at the second portion of the caution-money having been sent over from the shareholders in England, and added that he would bring an action. Mr. Moore also stated that actions had been brought against the directors, and an attachment placed on all their funds; that a petition had been made to the Belgian Chambers to be allowed to abandon the canal for the present; and that an offer of 9,000l. had been made to the company's engineer to give up the coutract which he had undertaken for the construction of the canal. The company had been put an end to.
The jury found a verdict for the plaintiff for the sum claimed, and through their foreman begged to record that, in their opinion, not the slightest imputation of fraud could attach to the defendant and the other directors.

Modest Demands.—Dec. 21.—An inquiry was held before the Sheriff of Surrey, to award compensation to the firm of Brown, Gordon & Dunn, residing in Gravel-lane, Southwark, for their leasehold and other interest attached to the premises which were re-quired for the purposes of the London and South-Western extension to London-bridge. The claimants demanded in the whole 14,742*l*. 6s. 10*d*., which was particularized in the following manner, viz., for lease of premises, 5,205l. 18s. 3d., an additional amount alleged to be secured by the terms of the partnership, &c. 2,712l. 5s.; an amount to be expended upon new premises, 1,000l.; loss of interest on that amount, 750l.; removal of stock, 400l.; and 2,000l. for loss of profits on the business, and a sum of 2,670l. 13s. 7d. for Mr. S. Brown's private interest in the rental of for Mr. S. Brown's private interest in the relian of the residence, and for the removal of some patented inventions. The parties, it appeared, had a lease, of which six years were unexpired, at 250t, per annum. The claim was, we understood, reduced in court to half the original amount. Several witnesses were called, and the jury returned the following verdict : -" To the firm, for damages, removal, refixing the plant, and adaptation to other premises, 750l.; for the lease, 300l.; for Mr. Brown's private interest for gas, engine, &c., 100l.; and for house fixtures, &c., 344l. 1s., making a total of 1,394l. 1s. Mr. Dunn wisely enough repudiated the claim altogether.

POST-OFFICE ARBITRATION. - Two days, says the Irish Railway Gazette, were occupied in arbitrating the case between the Dublin and Drogheda and the Post-office, relative to the remuneration for the carriage of the mails. Capt. Williams was the arbitrator on the part of the Post-office, and Mr. Wyndham Harding on the part of the company; and they having disagreed, the umpire selected was the Recorder. The two days were occupied in hearing evidence, principally on the part of the company, to prove the cost of carriage and the inconvenience of the hours selected for running the mail trains as regarded the ordinary traffic of the line. The award of Mr. Harding, which was framed with great care, and based on minute and accurate calculations, was 4s. 2d. per mile for night trains, and 2s. 11d, per nile for day trains, or 12l. 9s. 9d, per day. The award of Capt. Williams was 2s. 6d. for night trains and 1s. 6d. for day trains, or 7l. 15s. 5d. per day. This award Capt. Williams subsequently increased to the sum of 91. 19s. 9d. per day. Ultimately the Recorder awarded the sum of 10t. 10s. per day, or 3,832t. 10s. per annum. This is a considerable advance on the sum formerly paid the company: it is an advance of 2.2321.10s, a-year, as the former remuneration was only 1,600l. amounted to a sum of about one-third reservance a spear, as the folial relation was only 1,000 proposed capital, whilst the number of shares really allotted, instead of being as advertised, the whole number fell far short of it. The plaintiff's attorney, who was also a shareholder, was then examined, and a fair profit, such as the company have a right to

It is not creditable that the Post-office should, under the operations of a vexatious law, seck to screw companies for mail service down to the lowest farthing. If dissatisfied with an award they can immediately evade it by giving notice of "a change of service," such as altering, in the slightest degree, the nature of the service by a change in the hours of departure; whereas the company are bound for a definite number of years. This is scarcely fair or reasonable. In the present case, however, the terms of the award are so far favourable to the company that they will make a small profit instead of a loss, as we believe they heretofore did; and yet the award is so low that the Post-office authorities have no inducement to set it aside.

The porter at the Witham station who neglected removing the barrel of gunpowder, which was fired on the Eastern Counties line on the 17th, has been fined 5l. before the magistrates, and at the same time discharged from the company.

The Daily News notices a newly-invented mode of starting, stopping and backing railway trains, working models of which were exhibited at Ingram's ware-rooms, City-road. For double lines, it consists of three wheels fixed horizontally above and at right angles to the rails—one wheel being placed in and filling the centre space between the two lines, and the other two (of 6 ft. 6 in. in diameter) outside the rails, the centre wheel being made to answer for both up and down trains. Each railway carriage is provided with traction or friction rails, attached like a frame outside its wheels, and extending its whole length on both sides. Propulsion is caused by these rails being brought into contact with the peripheries of the horizontal wheels, which, at the proper mo-ment are made to revolve with sufficient velocity by the aid of machinery, the machinery being set in motion by a vacuum through branch pipes connected with an air tight main, extending throughout the line beneath the surface of the ground, and in which a partial vacuum is continually to be maintained by stationary engines at intervals of about 10 miles.

When it is desired to stop the train, the horizontal wheels are fixed by shutting off the action of the ma-chinery upon them; and the traction thus created by them in contact with the frame or rail attached to the carriages, causes the train to stop, and this to the carriages, causes the train to stop, and this may be effected either directly by a servant on the line, or indirectly by the guard, who has the power, when he pleases, of acting on "tapputs," which are placed on the rails of both lines, and communicate with the horizontal wheels. He has also the power, by contracting the frame, of clearing the wheels altogether. It is proposed by the patentees to place fifteen of these wheels on every mile, so that the risk of accident will be lessened by the facility thus conof accident will be lessened by the facility thus constantly afforded either to the conductors of trains or any authorized person on the line to check or altogether arrest their progress. Its application to exist-ing railways would cost 4,000*l.*, a mile, although it s not involve the necessity of any alteration either in the construction of such railways or the carriages used thereon. The patentees allege that it would insure a saving of fully two-thirds.

* For opening, Jan. 16. + Ex div.

London Stock Exchange, Dec. 29 .- There has not the share-market been much excitement in week. A gradually increasing demand for railway property seems to have permanently improved prices. French shares have been greatly in demand. The following are the latest transactions in foreign lines —Boulogne and Amiens, 8; Central of France, 74
Northern of France, 8; Orleans and Bordeaux, 2
Paris and Rouen, 183; Paris and Strasburg, 2
Rouen and Havre, 93; Sambre and Meuse, 34 Tours and Nantes, 1½.

Liverpool, Dec. 28.—Our market has continued to

improve all the week, and there is also more business doing; the tendency is still upward. The following are the actual transactions of the day:—Aberdeen, 17; Caledonian preference, § pm.; Lancashire and Yorkshire fifths, 33 dis.; ditto, Liverpool and Bury, 151 dis.; ditto, West Riding Union, 5 dis.; ditto, 104. preference, 1 pm.; London and North-Western, 1234; gitto, new quarters, 18 pm.; ditto, C quarters, 2l. 6s. 3d. pm.; Manchester, Sheffield and Lincolnshire, late Great Grimsby and Sheffield, 27g dis.; Great Grimsby Dock, 13l. 16s. 3d. dis.; Midland, 85; ditto, halves, 8l. 6s. 3d. dis.; South-Eastern, 23g; ditto, No. 4. 7l. 6s. 3d.; York and Newcastle, 110; Waterford and Limerick, 38 dis.

Suplow. Brothers. Manchester, Dec. 28.—We have had no great amount of business doing in our share-market this week, partly owing to the holidays, and partly to the scarcity of shares offered for sale; prices are gradually improving. Actual transactions this day: Great Northern, 10 dis.; Lancashire and Yorkshire preference, 1 pm.; ditto, Preston and Wyre sixths, 6; London and North-Western, Manchester and Birmingham C quarters, 21 pm.; North Staffordshire, 43 dis. SAM. GRINDROD.

York, Dec. 28.—The market is firm, and inquiries are made for most of the stocks usually dealt in here; we notice a rise in the Great Northern shares, and the stock is in request. The latest prices are:—Great Northern, 8%; North Staffordshire, 10; Sheffield, Rotherham and Goole, 2%; York, Newcastle and Berwick Extensions, Nos. 1 and 2, 14; ditto, prefer-

ence, 7g. Grayston & Earle.

Hull, Dec. 28.—Transactions in shares have been very trifling since our last, with prices tolerably steady; Hull and Selbys in better request; but they can be bought much under the London quotations; Leeds and Bradfords are offered at 98; Darwen preference at 17%; North Staffords, free sellers; Ambergates wanted.

FLINT & TOOTAL.

Glasgow, Dec. 28.-The market has had a firm tone since our last notice, and higher prices have been given than for some time previously; there is still a demand at the advanced rates, although in a few instances the rise has brought out sellers. Today's latest sales are :- Glasgow General Terminus. 10; Ayr. 504; ditto, halves, No. 1, 12 dis.; ditto, No. 2, 112 dis.; Great Northern, 92 dis.; ditto, halves, B, 2 dis.

Buchanan, Aitken & Co.

Paris Bourse, Dec. 28.—There has been a general rise in shares since our last. The following are the latest prices in the leading lines:—Avignon and Marseilles, 71. 13s.; Central of France, 64. 11s. 3d.; Northern, 84. 0s. 9d.; Orleans and Bordeaux, 24. 11s.; Paris and Orleans, 294. 4s. 3d.; Paris and Rouen, 184. 4s. 6d.; Paris and Strasburg, 14. 15s. 3d.; Rouen and Havre, 9l. 16s. 6d.; Strasburg and Basle, 3l. 9s. 3d.; Tours and Nantes, 18s.

WHITEHAVEN JUNCTION.-11. 10s. on the 5L preference shares,

## Joint-Stock & Commercial Gazette.

A new company, under the title of "Locomotive Steam Carriage Company," is stated to be in course of formation, to carry out the invention of Sir C. J. Anderson. Mr. Clarke, C. E., has lately made a report, in which he states that Sir James, "after thirty years' study and indomitable perseverance, and at an outlay of more than 60,000l., has succeeded in perfecting a steam carriage to run on common roads, which will, I believe, remove every difficulty that has hitherto been met with.'

The Islington Cattle Market Company open their market on the 9th of January, for the commencement of business. The railway now forming near the neighbourhood will give increased facilities for the conveyance of cattle to that market, which will go a great way to abate the nuisance of Smithfield. The market is replete with every convenience, and the parties interested in the company are highly respect-

The meeting of the Commercial General Pier Company was held on Thursday last at Gerard's Hall, Mr. Chapman in the chair. After some discussion a committee was named to investigate the accounts. The directors resigned their seats, upon which a new Board was elected. The meeting terminated after declaring a dividend of 10 per cent. for last and 10

per cent. for this year.

The promoters of the Henley and London Water Works and Navigation Company, which has been under consideration for some time past, had a meet ing on the 22nd inst., at the office of Messrs. Burchell & Co. the solicitors. Mr. W. A. Wilkinson was in the chair. The Hon. J. P. Bouverie, Messrs. T. Graham, (chairman of the Grand Junction Canal Company), R. J. Tennent, M.P., J. Baxendale, T. R. Ward, H. G. Robinson, T. Drane, T. Earle, H. M. Jones, C. Manby, J. Mitchell, W. Cubitt, J. Howell, and others, were present. Messrs. M'Clean and Blackwell, the engineers of the company, explained, and Mr. Cubitt corroborated, the general plan of the undertaking. They stated that it was proposed to bring into London 100,000,000 gallons of water daily at such a level as would supply the metropolis without pumping, being a little above the reservoirs of the New River Company and other waterworks, for whose service it could be rendered available. The quantity was stated to be so abundant, that the pipes would be always full, so as to afford an instant supply in cases of fire and also, that a constant stream should pass through every dwelling, and the sewers have always flowing through them a body of water amply sufficient for their effectual cleansing. It was, in effect, bringing a great portion of the river Thames into London at a height of upwards of 100 feet above its present level, and pouring it through the houses and sewers, instead of letting it flow through Vauxhall-bridge. Mr. Cubitt further stated that his attention had been directed to plans for supplying the metropolis with water, and this proposition appeared to him the most complete. The promoters state that a charge of only one half-penny per thousand gallons, instead of the present price of the water companies (varying from 4d. to 6d. for that quantity), would return a profit equal to 10 per cent. on the proposed outlay. It is stated that one half the capital is subscribed, and that application for an Act will forthwith be made to Parliament.

The half-yearly meeting of the Canada Company was held on Thursday, at their office, Mr. C. Franks in the chair, who stated that accounts had been received of the rates of land to the 30th of November. There had been sold of Crown reserves, 3,409 acres, at 17s. per acre; of the Huron tract, 8,931 acres, at 13s. 1d. peracre; making in all, 12,340 acres, at an average of 15s. per acre. Up to the same period in 1847, 25,321 acres had been sold. With regard to the amount of lands leased, he had to state that there had been leased of the Crown reserves, 14,032 acres; Huron tract, 37,499 acres; making a total of 51,531 acres leased against 80,800 acres leased up to the 30th of November 1847. The total quantity of land disposed of in 1848 thus amounted to 63.871 acres, while the total disposed of in 1847 was 106.124 acres. That was the account which he had to give with respect to the disposal of land. With regard to the receipts of money during the same period, there had been received, not reckoning shillings or pence, for the first payment of lands sold, 6,146*l*.; bills received as instalments for previous sales, 11,706*l*.; rents of lands leased, 7,720*l*.; interest, 5,681*l*.; transfer fees, 123*l*.; timber cut down, 1191.; making together the sum of 31,497l. During the same period in 1847 the receipts had been 38,103l. 13s. 4d. The amount remitted by settlers to their friends in Europe through this company was 9,106l. 15s. 2d., in 1,731 sums, averaging 5l. 5s. 2d. each. The amount deposited with the company for remittance to Canada since the 1st of January last was 26,295l. 18s. The number of emigrants that had arrived at Quebec in the course of the year 1848 amounted to 27,939. He had only to read now the resolution which had been come to at the last meeting of the directors, with regard to the dividend, which was to the effect, that the directors recommended to the court of proprietors a dividend for the half-year ending the 10th of January next, at the rate of 6 per cent. per annum, on the amount of capital paid up, being 32l. 10s. per share, clear of incometax. The statements haid before the meeting were agreed to, and the dividend being declared, the meeting terminated, after voting thanks to the chairman and directors.

The South Australian Company's half-yearly meeting took place yesterday. The report of the directors was satisfactory. It is intended to facilitate emigration by allotting land at moderate rates. The rental of the company shows a profit of 12,000l. per annum, and the advices from the colony continue to be encouraging.

The Australian Agricultural Company have re-

ceived a grant from the Crown of one million of acres of land in New South Wales Proper. The land will be leased and sold at reasonable rates and in large and small quantities.

Banks.

It is now confidently stated that the promoters of the new bank, forming on the Scotch system, have taken part of the Hall of Commerce, and will shortly commence business.

The accounts from the Mauritius mention that the Commercial Bank there was making exertions to assist the commercial community, and that shortly the bank would again be in full operation. The

the bank would again be in full operation. The failure of joint-stock banking in the island is attributed to the local government.

The following companies in America have declared dividends:—The Hartford Bank has declared a semi-annual dividend, of 3½ per cent.; the Marine and Fire Insurance Bank of Savannah has declared a dividend of 4 per cent. for the last six months; the Central Railroad and Banking Company of Savannah has also declared a semi-annual dividend of 3 dollars per share on the stock of the company (other than the 8 per cent. stock), payable on and after the 15th of December; the semi-annual dividend on the 8 per cent. stock will also be paid on and after the 15th of December.

Assurance

The report of the National Provident Institution for Assurances, Annuities, &c. for 1848 has been published, from which we are informed that the annual income is increased to 126,232l. 7s. 6d., notwithstanding the reduction on premiums, amounting to the sum of 10,716l. 3s. 6d., allowed to those members who

chose this mode of appropriating the profits. At the meeting of the proprietors, at which the report was presented, Mr. C. Gilpin and Mr. R. Sheppard were elected in the place of two retiring directors.

The meeting held by parties interested in the formation of a society to be called the "British Railway Assurance Association," having for its object the assurance of parties travelling much by railways, will be found reported in a subsequent column. Canals.

The Morning Chronicle gives the following table of receipts upon all the New York State canals in each of the following years during the third week in November, and the totals up to the 23rd of Novem-

	Third week

Mines.

Transactions have been numerous this week, especially in Australian, St. John del Rey and Mexican. The Rel del Monte Company's shares have been dealt

in this week.

The steamer arrived from Mexico has brought 70,000 dols. for account of the Mexican Mining As-

sociation.

The following is an extract from a letter of an Australian emigrant, who in speaking of the Australian mines says: -- "July 1, 1848.-I live in a mining district, that of the Burra Burra mines; the popula-tion is about 1,600. The country, like most mining districts, is bare and unproductive as regards the vegetable world, but never was there a place so rich in copper in so small a compass: in the space of about 500 yards by 300, and 20 fathoms in depth, the last twelve months have paid more than 100,000l. in dividends, or about 800 per cent. on the paid-up capital.

Miners' wages are 35s. per week; labourers', 25s.;
carpenters and blacksmiths', about 40s.; a boy of
seven years of age earns 8s. a week by picking ore, and so on in proportion.

Some very large coal beds are reported to have been discovered in Onondaga County, State of New York.

The accounts of gold mines in California, which are being still further confirmed, appear to have produced a strong desire amongst many persons from all the States to proceed to that newly-acquired country. At New Orleans a California Emigration Company had been formed, for the purpose of aiding the enterprizing spirit of the residents. A vessel was to be purchased at a cost of 6,000 dols., in shares of 100 dols each. The eagerness of the people to join the undertaking may be gathered from the circumstance that the applications for shares amounted to 22,000 dols. One of the New York papers has the

We understand that interesting despatches have been received at the War Department, from Colonel Mason, the received at the war Department, from Colonel Mason, the present commanding officer in California, respecting the astonishing fertility of the gold mines in our new acquisition. It exceeds calculation, and almost reminds us of the treasures of Aladdin. The accounts are said to be wonderful. The smallest article of merchandise that happens to be in requisition is said to command a great value in exchange for gold. The quantities daily dug up are very large. This vast bed of treasure was discovered by accident sarge. This vast oed of treasure was discovered by accident Suter was desirous of enlarging the race of his mill, and permitted the stream of water to pour in and wash, by its abrasive power, the earth in the rayine. The alluvial surface being thus removed, an extraordinary mosaic of gold was

presented to the view.

The United States Stock and Share Markets had been greatly influenced in consequence of the discoveries in California.

CORNWALL.—At the Wheal Tremayne meeting on the 15th, the statement showed a balance of 168t. 7s. 11d. against the mine; at the same time, the agent's report represents the prospects of the mine as very good, and progressing in a satisfactory manner. The copper sold in the two months realized 453l. 7s. 10d., and the tin, 2,176l. Os. 5d., including the sale in December, which reduces the loss, during that period, to 14t. 11s. 6d only.

The East Crowndale annual meeting was held on

The Fast Crowndale annual meeting was held on 2,187l. 14s. 3d. against the company, to meet which a call of 10s per share had been made. According to the captain's report, in valuing the lode taken away, the secretary estimated that 1,300l. of tin was at surface.

At the Stray Park, Camborne Vean, and Wheal

dividend, a credit of nearly 400l. is carried to next account. The agent's report of the underground operations and prospects of the mine is highly

favourable.

At the Wheal Russell meeting, on the 8th inst., a call of 10s. per share was made, for the purpose of prosecuting the mine with vigour. The financial statement showed a balance of 214l. in favour of the adventurers. The report of the mine, furnished by such experienced and practical men, is quite sufficient for any body of shareholders to proceed in the undertaking with spirit and encouragement. the present end is highly promising, the leader carrying fine stones of rich ore.

At the Wheal Seton account meeting, on the 11th inst., a dividend of 10t. per share was declared on September and October workings. By the financial statement furnished it appears the profits on the two months amount to 1,247t. 7s. 4d., notwithstanding the low standard for copper ore. After the deduction of 990l. for the dividend, a balance of 710l. 8s. 8d. was carried to the credit of the next account. agent's report represents the mine to be as productive as last reported, especially in the ends, stopes and winzes between the 60 and 90 fathom levels.

IRON TRADE.—Glasgow, Dec. 23.—There has been a slight improvement in the price of pig iron during the week, and prices may now be quoted at 42s. 6d. to 43s. for No. 1, and 42s. to 42s. 6d. for mixed numbers, at which sales were effected yesterday. Gartsherrie at which sales were effected yesterday. Gartsherrie No. 1 has been sold at 44s. 6d. per ton, cash.—
Wolverhampton, Dec. 28.—The usual meeting, preliminary to the general quarterly meetings of the iron masters of South Staffordshire and surrounding districts, was held at the Swan Hotel. The attendance of the first firms in the neighbourhood was unusually numerous. After some discussion, it was unanimously resolved to maintain without advance or reduction the prices of the present quarter. There will consequently be no alteration. Although at the will consequently be no alteration. Although at the present time the Welsh makers are underselling those of Staffordshire, the ironmasters of this district rather than reduce the wages of the men are determined to adhere to the present rates.

TO CORRESPONDENTS.

Mr. IBBETSON'S communication cannot appear till next week, as a diagram has to be engraved for it.

We have received the second number only of Mr. Miller's

Statistics': until we see the first we cannot judge of its merits.

F. B. should apply to a solicitor.

RECEIVED: E. M., Derby.—A SCOTTISH SUBSCRIBER.—A READER, Blackburn.

*** We must entreat our correspondents to send us their names in confidence, as a guarantee of their good faith.

## Railway Chronicle.

The shareholders of the SHEFFIELD, ROTHER-HAM, BARNSLEY AND GOOLE have sanctioned the lease proposed by the directors to the Lancashire and Yorkshire, which somewhat modifies the terms originally agreed upon in 1847. The line is to be worked as a single line, but the works will be constructed so as to admit of a double line if required at any future time. The terms of the lease guarantee 5 per cent. on the capital and half the working profits.

The SAMBRE AND MEUSE report, adopted by the shareholders, detailed the fulfilment by the directors of the wishes of the last general meeting. An English engineer and a resident director had been appointed,-to the ultimate advantage, it is thought, of all parties interested. The Belgian Minister of Public Works had reduced the tariff previously agreed upon to that of the State lines. The directors were forced to accept his decision; or they would have been prevented opening their line from Marchiennes to Walcourt. The loss may probably be from 10 to 12 per cent. There are sufficient funds in hand to complete the works in progress on the first section.

From our official returns it appears that

accounted for: - 80,575l. for the conveyance of passengers only, 54,721% for the carriage of goods, and a remainder of 42,946/. for passengers and goods together, not respectively apportioned; being an increase of 21,790l. over the corresponding week of last year, when the mileage was 3,342. The average earnings per mile were 42l., whilst in 1847 they were 46l.

#### SKETCH OF A REALLY PROTECTIVE SYSTEM.

The main error that has run through the whole course of railway policy during the past five years, was pointed out in our remarks on the "protective" system last week. It lay in the notion that competition could be prevented or neutralized by getting possession of all the ground which a rival party showed any disposition to occupy—a process interminable as well as expensive, -which could only be made effectual by securing the command of all the lines, not only in a given district, but beyond it. For it is obvious that every fresh occupation of territory short of this, only enlarged the frontier to be defended, and increased the number of points at which traffic might be abstracted; whereas to secure this entire control was from the beginning wholly impossible. As soon as railways were proved lucrative undertakings, the certainty that they would be taken up by all who had capital to spare was apparent. The consideration of these two decisive conditions of such a struggle, one might have thought certain to produce a wholly different line of policy; but it is evident that the view, obvious as it may seem to be, was either never clearly discovered by the parties who had made the first great lines, or, if seen, was put out of sight by more immediate objects, that only seemed more important because of some inability in those concerned to estimate their due proportions, or to extend their survey beyond the moment.

Now let us sketch the probable fortunes of any company-that was in 1840, we will say, possessed of a profitable main trunk, completed and stocked for purposes of traffic, at some 25,000l. to 30,000l. per mile,—under a course of policy the very reverse of that which all such bodies have since pursued. It would have started from the conviction that to prevent others from making parallel or cross communications was impossible; and that the protection against the consequences of their rivalry must be sought,-not in enormous efforts to take the proposed works out of their hands-not in expensive contests to put down such attempts in Parliament,—but in keeping the main trunk so well in hand, that nothing which this competition could do, would deprive it of a reasonable degree of prosperity. It will be seen that such a system, pursued from the beginning, would in every way have set at defiance every kind of external injury or competition, which has since been the plea for the expenditure in fighting and for the adoption of unproductive branches, &c., that have now so generally reduced the scale of profits. The funds would have been wholly employed, with strict economy, in making the trunk line thoroughly complete; and the saving of all the extra outlay, which has been actually sunk, in the mere item of parliamentary contests, would have more than sufficed for this. The company would thus have been in possession of a well-frequented railway, completed at such a reasonable cost per mile, and so well provided, as to be ready for all future competition, while drawing in the meanwhile a noble annual income. While the rival works were going on the whole large dividend would have been Francis meeting, on the 15th, a dividend of 10s, per share was declared. By the accounts, we find a balance of 899l. 8s. 7d., and after payment of the 4,212 miles of railway, was 178,242l., thus that an enjoyment for two or three years of a

12 per cent, dividend would not have been safe and possible? Of this a reserve might have been made for any extra works or stock, so as to keep the capital down against the time of the real struggle with rival projects. Whenever this struggle began, the competition would have been met in two ways—each thoroughly effectual. The saving of capital outlay would have rendered it easy to make a profit on rates so moderate as to insure abundant custom; or, by keeping up original rates, to obtain, if a part were abstracted, a good income from what could not be taken away. The same would apply to any parliamentary reduction of charges;-the rule being in all cases that the real damage from an imposition of low rates, however caused, arises from the heavy capital on which they have to earn a profit. It is the enormous dead weight on our main railways that makes it impossible for them to keep up dividends at the lower tariffs to which they have been forced to submit since 1840. In the position secured as we have described, a railway company would have been unassailable by anything short of absolute confiscation; and it might have safely left the resistance to attacks from without to the owners of less profitable concerns; for this sufficient reason, that those who had made less profitable lines would be pinched and injured by them long before they could reach the point at which the stronger property could be affected; and that whatever could or would be submitted to by the owners of a capital less wisely husbanded, might he borne without apprehension by a concern that had made its whole outlay on the ground of a highly lucrative return.

Nor would the competition that has provoked such ruinous and ineffectual efforts to prevent it have been in the end altogether detrimental. It may be seen that when a railway system is complete, and the certainty of that prospect would, of course, have been kept in view by parties endowed with the foresight we are taking for granted in this sketch— that at this ultimate stage, we say, if traffic be drained away by many new channels, it will also flow in afresh from many others; whereas the cost of their formation, in the meanwhile, would, in the system we are tracing out, have fallen upon other speculators; and the body that prudently held fast to a healthy main trunk would, in due time, have enjoyed the benefit of this process; without having suffered from the charge of making supplements, which do not return a per-centage of profit equal to that of the principal through lines.

This alone would surely have been compensation and security enough, supposing all rival and supplementary lines not only made, but continued in the hands that first planned them. But this need not, probably would not, have been the case. The prudent owners of the main trunk might have taken possession at the proper time of any such schemes as they might have needed to obtain; and on terms wholly different from those which have attended their actual possession. During the heat of speculation such lines would certainly have been made in numbers, whether by independent bodies, or by some of the adjacent great concerns. But these would have found, as those who have really made them find, a vast difference between the estimated and actual cost-a still greater between the expected and the real profit. The true value of these works would have been seen, and they would have been glad to dispose of them at their true value. The company that had kept itself out of the mess would then have had a double advantage. It would not only have been able to purchase from parties thankful to sell, on terms that would have

profits as to have been in such a condition to buy as no existing concern has ever been. As it is, the main concerns have shared in the excitement that made these works on unprofitable terms, besides squandering enormous sums in the contention for leave to make them. In the case we are supposing the general excitement would no less have taken place, indeed; but the consequence would have fallen on the outlying projectors; and the prudent company, secure in its finance and in its high returns on a moderate capital, would have come in at a later period to enjoy the whole good of these undertakings without any encumbrance from that which was precipitate or ill-calculated in their origin or execution.

Nor would this have applied to minor concerns only; -a body, situated as we are supposing, would have had its hands free for still larger operations at a suitable period:—and, with shareholders enriched by a long enjoyment of good income undrained by calls, with credit raised to the highest point by an absence of debt, and a handsome dividend on capital, might have stepped in among its greatest neighbours to treat, or, if needs were, to buy, with an attitude of security and command that would have been altogether irresistible.

Let anyone carry out in detail the system we have thus rapidly sketched, consistently, and with practical knowledge of railway affairs, and he will find that we have rather under than overstated the advantages of the security which it would have afforded. It would be easy to exhibit its operation in more particulars, did our space allow of it, - but it must suffice to have drawn a general scheme which will be easily filled up by those who have an interest in studying its theory.

We may add, that this is not merely "a prophecy after the fact;" it corresponds with views which we know were strongly advocated in former years in one quarter at least of the railway world; and which, although little attended to at the time, have now been abundantly substantiated by later events. There are not a few of the managers of the railway interest who heard these events predicted long since, and were advised to study the kind of protection we have been describing. It is probable that they may now regret having followed routine, instead of listening to reason.

What has been said, of course, can only apply to main lines, which were profitable in themselves, at the time when the contest of late years began. The policy would not have been equally advantageous to those which either the heavy cost of making, or the inadequate amount of their proper traffic, disqualified from standing with entire confidence on an independent basis. Yet even with respect to these, it is clear that going further and plunging deeper in the way we have seen after unprofitable additions, could only make the first loss greater by a second: or, if the case were not so utterly bad as this, could only add to a capital unable to pay more than a low dividend, a further capital, paying, it may be, something still less. And let it be remembered what has been the outward cost of the process all this while:—that the millions spent in contention under it are so much thrown away, and not to be recovered in any shape whatever: that if these have borne heavily on 10 per cent. capitals, still more must they press on others of lower per centages. The principle we have been describing would not, indeed, have made schemes originally defective or extravagantly carried out become profitable; but it would in many cases have given them a chance of escaping from further loss; while made these supplements worth acquiring; but I those which were from the beginning sound and I

would also have been so strong in funds and | prosperous might have been established by it on a base of security which it is clear enough has not been in any way attained by the so-called protective" measures of the system that has prevailed in railway councils.

These remarks will not inaptly close our observations for 1848—a year which has brought to a notable crisis the operation of the errors that have been universally current on this chapter of Protection. The task of all concerned in railways must henceforth be to redeem, as far as possible, the consequences of an expensive and mistaken policy. Of these some are irretrievable; others may be in a great measure repaired by vigilance and industry, if guided by a true judgment, both of the causes of the mischief and of the proper means of curing its effects. Our chief purpose of late has been to promote this end by pointing out the only efficient means; and the necessity of studying these is the moral contained in the preceding summary; -with which we take leave of the most eventful year that has yet been recorded in the annals of railways.

RAILWAY PROPERTY: THE CAUSES OF ITS DE-PRECIATION, AND THE REMEDY.

Having shown that the ruinous depression recently occurring in the market price of railway and all other property was mainly attributable to the variations in the quantity and therefore in the value of money, inseparable from the present system, and to the panies they have occasioned, it may be useful to scertain more clearly to what cause those variations in the value of money are to be traced. A proper treatment of this branch of the subject will lead to sound conclusions as to the nature of the currency that would be suitable, safe, and steady for the interchanges of this highly-taxed country, and for the prosecution of all great national undertakings such as Railways. As we shall endeavour to pene-trate to the root of the evils of the existing system, we again bespeak the patient and candid consideration of our readers; we will be as brief and clear as possible on a question which has been so much mystified.

The first step in error of our existing circulating medium has been in viewing it irrespectively of the great sum of taxation, incident to our heavy national debt, as well as to our large State expenses_which extent of taxation is principally, that is, in the proportion of nearly three-fourths, levied by Customs and Excise, bearing upon articles which enter into the daily consumption of our industrious classes. These taxes are over and above the tithes and the poor and highway rates, which also constitute an important charge on the food of the country, as they are of those taxes which directly affect property of all kinds.

The great authority of modern days by whose doctrines our statesmen professedly have been governed is the late Dr. Adam Smith. This writer laid down certain principles with regard to a "standard of value" which are doubtless of great importance, and, for a country lightly taxed indirectly, deserving of first consideration. Dr. Adam Smith, however, while treating on a "standard of value," expressed his preference of corn over a series of years, and considered the precious metals as more portable representatives of corn so estimated; he seems never to have contemplated that circumstances would arise in this country that would disturb the equation recognized at the time he wrote, between the cost of the staff of life and the precious metalsboth being estimated by the expense of the labour which entered into their production. This eminent man who had been accustomed, with all other economists, to view one ounce of gold as equivalent to two quarters of wheat, and silver as bearing a settled relation to gold, never calculated that the comparatively small sum of national debt, which existed when he wrote, would increase eightfold, nor that the annual taxation of this country would take the form of an impost levied first on the necessaries of life and increase four or five-fold on a population increased scarcely twofold, or his penetrating mind would have provided at once for so obvious a con-

tingency, and would have pointed out for the guidance of future times the necessity of establishing an "equality" of money with the cost of commodi-He would have seen and declared at once that if under the artificial influence of taxation on the food consumed by labourers in producing, there followed a disturbance of the relation between the remunerating price of corn and the value of the precious metals-that the latter, at their natural value, could not consistently continue to be considered the proper media of interchange for corn and other productions highly taxed in their progress. It will be apparent that an important distinction is here made between "value" and "price," value being viewed as cost of production, irrespective of taxation, and therefore termed "natural value," and "price" being considered the combination of natural value and contingent taxation.

Had Dr. Adam Smith anticipated such a contingency he would have fallen back upon the first principles of money as propounded by the great Aristotle in his fifth book 'Ethics,' wherein he observes, - "Money is used by convention as the representative of all things wanted, since it serves as a pledge and surety that whenever those wants occur they will be speedily gratified; and its name is derived from the word signifying law, which indicates that it is founded not on nature, but on convention; and that human laws which have thought fit to employ it as a measure of value, may, at pleasure, set their use of it aside and employ some other measure instead." This was the principle of money adopted by the wisest legislators of Greece and Rome, in their highest prosperity, and it was only when statesmen turned from conventional money to that of intrinsic value, and allowed the demand from the industrious of large usury, that those States rapidly declined. This was in effect the principle of money acted upon in this country, more or less, prior to 1819-for even up to 1797 the coins ranged in the circulation materially under the mint price, and Exchequer bills and Bank notes were mainly the money of the country. It was by the more extensive adoption of money on this principle that Mr. Pitt, in 1797, saved the Bank of England from bankruptcy, and set free the springs of industry, so that the capitalists could lend to the Government the immense sums of surplus property explained in a former article. It was by rendering money conventional, or "the representative of all things wanted," and not the substitution of another thing intrinsically valuable and not being in the same condition, namely of taxation, in the lieu of such mere representative, or token, or "pledge," or "surety" that the Government issuing it, or authorizing its issue, would undertake again to receive it in the payment of taxes,
—that the Administration of 1797 was enabled to establish the means of carrying this nation through the war which then raged in Europe, and which, as the late Sir Robert Peel intimated, would have ended in certain ruin to this country, had not Mr. Pitt seized the true theory of money and applied it as became a statesman.

And for such reasons this same enlarged view of statesmanship was required when Railways were first projected in this country-such railways as were desirable could readily have been effected by means of the surplus capital to be created under an expansive currency during a time of peace. Then especially was it the province of a capacious and presiding mind to have reviewed the theory of money in its bearing upon industry-to have expanded the money of the country "by convention," and have brought out the treasures the nation possessed in her mines of iron, in her forests, and in the industry of her sons, who would cheerfully have applied their labour. Had this been done, we should never have heard of panics in railways or in commerce, or of hundreds of thousands of labourers and artizans thrown out of useful employment.

It has been said that a scale of prices ought to exist in this country, whether for commodities into which labour, or raw materials taxed in the commodities consumed in producing by such labour, enter. Such prices cannot be expressed by a precious metal at its natural value, or by money convertible by law into such metal at its natural value. It may be further observed, that it would be as unjust to force railway proprietors, who have converted land,

or used iron, timber, or labour enhanced by indirect ! taxation, to realize to Government or the public at the lower level of gold at its natural value, as it would be to force railway companies, with all the adventitious circumstances under which the property has been created, to compel them to run their trains at the low level of the Continent of Europe, or of the United States. Yet has this injustice been perpetrated on the proprietors of railway property as surely as if an express law had been passed to effect it. This has been effected by the unseen action upon the national currency covertly produced by the Acts of 1819 and 1844; and this has periodically been felt, or as often as prices have risen above the value of gold and towards a remunerating level-then have these legislative Acts come into effect and produced the misery we have witnessed in panics.

In our next, the degree in which taxation enters into labour shall be shown; and in the meantime it is confidently left for directors and proprietors to consider the deteriorating influences described. should ever be borne in mind, we repeat, that any cause of general depression in trade, whether legislatively or otherwise produced, operates as powerfully in the diminution of traffic as a reduction would do in the scale of fares. The origin of such gigantic disturbances in prices we have seen are clearly ascribable to our monetary legislation; and it is for the directors and shareholders of railway property to determine whether they will allow a continuance of such a state of things, or whether in the present short breathing time allowed to the country by the partial reaction now felt, they will not unitedly address themselves to Parliament for the establishment of a currency that will prevent the recurrence of such panies, and allow all desirable and legitimate railways and their branches to be completed. The errors of the existing system have been pointed out in the evidence offered to the parliamentary committees on "Commercial distress;" and all that is required is a proper expression out of Parliament and a settled determination on the part of the railway directors and proprietors who have seats in that assembly, to bring the question forward perseveringly from day to day, as occasion may offer. acting in protection of their own proper interests, and interests confided to their care, would in a few months effect an emancipation of the industry of this nation, more productive to the wealth of the community than the produce of the mines of California a thousandfold told. KAPPA.

#### DUNDEE, PERTH AND ABERDEEN.

Sir,-In regard to a circular by a few dissatisfied shareholders of the Caledonian, I cannot help asking, Is it fair to exaggerate the ultimate cost of a line, and to charge traffic of a partly opened line with the interest, &c. on the full cost? Yet, even more than this is done by these parties. Thus they state the ultimate cost at 812,000L, whereas, as stated by the chairman himself, its outside limit is 730,0001. Further, he states that only 630,0001, of that are now producing revenue; and that the working expenses on the main line are in fact 18,0001. while on the Newtyle line they are 5,720L; together, 23,7201. That circular corrected should therefore stand thus: __guaranteed dividend on capital which now yields traffic, 42,000%; interest on loans yielding traffic, 5,000%; together, 47,000%; dividend and interest on Newtyle line, 2,400*l.*; making a gross total of 73,120*l*. The yearly traffic now is 58,000*l.*, which makes the loss 15,1201., not, as stated in the circular, 40,476L, to be borne by the Caledonian and Edinburgh and Glasgow Companies; even on the very violent assumption that the Dundee, Perth and Aberdeen, only a year in operation, is not, as other lines, to increase double or treble in its traffic. Besides, by the want of a bridge across the Tay and other terminal accommodation, its present traffic is not nearly what it would otherwise be. Now the above is a small loss-even if it were one-but it is not one_because the advantage to these guaranteeing lines, in possessing the management of it, is greater than that sum. And further, as the money now mis-spent, is to be expended on the bridge and junction line, the want of which is the chief cause of the traffic being so low, there is no doubt that that part of the capital will be much more productive than what is already spent and producing revenue. So

that by this means and the diminished expenses. when it comes to be worked by these lines, the greater part of that deficiency will disappear. without allowing almost anything for the usual developement and increase of traffic on a young railway of little more than a year's existence, it is evident it will pay its expenses and the guarantee and interest. By-the-bye, the chairman of the Edinburgh and Glasgow was guilty of ignorance and inconsistency in lately stating that though he thought well of the Scottish Central, he held a different opinion of the Dundee, Perth and Aberdeen. "Facts are stubborn chiels, and winna ding." He must not be aware that it will cost only a half of the cost of the Central, while its traffic already exceeds that of the Central. - As I am anxious that the numerous shareholders of the Caledonian resident in England should not be misled, I will be obliged by your Ex uno disce omnes. inserting this.

Dec. 26.

#### EAST ANGLIAN PROSPECTS.

Sir,-It is with much surprise I observe the advertisement of the directors of the East Anglian Railway, stating that "the dividend due on the 6 per cent, preference shares on December 31st will not be paid at that time." Certainly, this is a gross violation of faith. I will grant that this miserable company is the most miserable of any, and that the shares are justly the most depressed railway stock in the kingdom. But, Sir, these 6 per cent. shares were issued and taken by the shareholders in the full faith of the directors honestly paying the dividend if funds existed wherewith to pay. The advertisement goes on to say: "the payment of this and all future dividends arising on these shares will constitute the first charge on the revenue, after payment of working expenses and interest on debentures. Whence it may be inferred that the payment of interest on debentures and working expenses has swallowed all the receipts. The directors in their reports, having little on which to congratulate themselves and shareholders, make a grand parade about "there is one subject of congratulation," viz., "the line will be as cheaply worked as any line in the kingdom" (or words to that effect). Now it is notorious that some lines are worked at, say, 30 per cent. of the earnings. On reference to the 'Traffic Table' of the Railway Chronicle I see the receipts of the East Anglian are about 650%, per week, and that the total amount received from the 1st of July to the 17th of December was 16,651L; at the same rate, it is presumed, they will for the six months ending the 31st of December have received 18,0001. 331 per cent. for working, balance of profit 12,000%; amount of debentures, 250,000L; interest at 5 per cent. is, for the six months, 6,250L; balance to pay interest of the "6 per cent. preference, guaranteed," 5,7501.; amount required to pay interest for six months on 120,0001. (the amount of these "guaranteed in perpetuity" shares) is say 3,750L; balance in hand, 2,000L All this of course depends on the fact of the line being as "cheaply worked as any line in the kingdom. If this is not true, if this is merely another mistake of the directors, let us have the truth and know the worst. It is saving but little to acknowledge that the directors have made egregious errors in their calculation of traffic, of the cost of the line, and its worth. These have resulted from incapacity of perception, or from the most marvellous aptitude for swallowing any and every statement made by lawyers and engineers. But the statement as to the cheap working was made after a professed discovery on trial, and admits of no alteration or excuse. I do not know if the third of the earnings is sufficient to pay working cost when the earnings are so miserably poor as on this line, but the outlay ought to be somewhat proportionate to the income, and every effort should be made to keep faith with the shareholders. Only think, Sir, of an English line, opened from end to end, 671 miles long, costing 19,000% a mile, and earning, after about six months working, 650%, a-week! And look at the effect of these preference shares on the original holders. There is interest at 5 per cent. (?) on 250,000l. debentures; ditto at 6 per cent. on 120,0001. first preference shares; ditto at 7 per cent. on 150,000L second ditto. Thirty thousand odd pounds profit out of 650l, weekly receipts! Thirty thousand pounds to be paid before one farthing is touched by the original

shareholders. When, in what year of our Lord, will these latter see interest?

ONE OF THE "DONE"

P.S. I believe the Belfast and Ballymena, earning less than 400*l*. per week, put down their working expenses at about 30 per cent. See the report of the directors in the *Railway Chronicle*.

#### GREAT WESTERN GUARANTEED LINES.

Sir,—In Tuck's 'Manual for Shareholders,' the Oxford, Worcester and Wolverhampton is stated to be leased in perpetuity to the Great Western, at 4 per cent. "on the total actual cost" and half profits; capital 2,293,000l.; Act obtained in 1845; in 1846, obtained power to purchase a canaland raise 300,000l. I observe the entire amount of share, 50l., is paid up, and quoted as selling at 22l. (28l. dis.) As this is so much below the Wilts and Somerset, also leased to the Great Western, there must be some cause for the discrepancy. Is it that the funds are inadequate, or what? or, is the lease repudiated by the Great Western? Will you oblige me by giving the position of the company? A Three Years' Subscriber. Poole, Christmas day.

[These discrepancies of price are not easily accounted for—our correspondent must wait till the next half-yearly meeting to know the position of the company.—Ed. Rail. Chron.]

#### EAST INDIAN RAILWAY.

Sir,-Upwards of three years have elapsed since the East Indian Railway Company was ushered before the public; about 100,0001. have been spent ;-and now we are to be told what has been accomplished. Such were the thoughts passing through my mind as I opened for perusal the late Report of Mr. M. Stephenson, addressed to the shareholders; and such, I doubt not, were the expectations of every shareholder. Are not their expectations then fulfilled? Are you not told, that it is now fixed that the line is to be in Bengal somewhere between Mirzapore and Calcutta; that the particular section to be made is to be profitable; that the directors are on the eve of completing satisfactory negotiations with the India House? And what more than this could you have wished? Well. I confess all this occurs in the report, but all this is to be found in the original prospectus of the company, published upwards of three years ago. How am I then benefited by the delay and the expenditure that have occurred? What guarantee have I that, some three years after this, we may not receive the same information and the same promises? Certainly nothing in the Report gives any other hope. No data are given whereby I may judge as to the chances of the selected section proving profitable; I am not even told what is the section selected. In the face of all this then I do not wonder that some interested parties should wish to wind up the scheme and free themselves from the responsibilities connected with it. I am only afraid that unless some more definite and satisfactory information is published, all the shareholders will find it their interest to become interested parties except the disinterested portion who may be drawing salaries from the company. X. Y. Z.

Sir .- I have the misfortune to be a shareholder in the East Indian Railway, and on the suggestion of another proprietor, I identified myself with the movement now being made by the shareholders for the dissolution of the company. This course I consider I had a perfect right to adopt; but the manager of the company, it appears, thinks otherwise, and he has published a report, in which he denounces those shareholders who are bold enough to take any steps with a view to their extrication from so doubtful a concern. Now I am of opinion that as the capital of the company has been reduced from three millions to one million, and the value of the shares from 50%. to 201., and as the certainty of the guarantee turns out to be a delusion, and the returns of the line, instead of 12 per cent. of profit, are in reality a certain per-centage of loss, I cannot be bound, under such circumstances, to go on further with the undertaking. It would be better, however, that exemption from further expense were obtained by the dissolution of the company than by a suit at law, and I trust therefore you will use your able pen in aiding the proprietors to get a dissolution accomplished.

have read with attention the pamphlet on Indian railways which you reviewed last week, and at p. 61 I find the following statement, taken from the reports of the directors:

The number of shares on which the deposit was

#### GREAT INDIAN PENINSULA RAILWAY.

Under the head of "Our Railway," the Bombay Times of Nov. 8, has the following desponding remarks respecting the Indian Peninsula Railway:—

The Telegraph and Courier states that letters have been received by last mail intimating that a proposition has been laid before the Court of Directors, and is likely to be favourably received by them, on the much debated subject of the railway guarantee. The stock was to be divided into two parts, of 25,000l. each. The one of these divisions was to be paid up in full by the shareholders, and a dividend of 5 per cent. certain allowed on it without relation to profit or loss which might accrue in working the line,—in neither of which were they to share,—for the first twenty-five years. The other "to bear a deposit of 10s., and to yield to the shareholders interest at the rate of 5 per cent.," with chances of loss or profit as these might arise. We are not quite sure that we understand the latter condition: if it be meant that the shareholders of the second class stock are only to be called on for half the amount subscribed, then, to complete the sum requisite for the construction of the railway, double the number of shares will require to be taken up. It is not, we presume, meant that shares on which 10s. in the pound alone have been paid, will at the end of twenty-five years be held of equal value with those on which the whole 20s. per pound were made good at first. It is no wonder that the public should entertain distrust in railway arrangements when they find a matter of such moment as the value of the guarantee left open to discussion, so that one party understands one thing, and another the opposite. Nor will it tend to improve the state of matters to see men connected officially with the railway abusing the Court of Directors for not giving more than they were asked for—asserting that it evinced want of candour not to make known the limited nature of the guarantee so soon as doubts on the matter made their appearance. While they do this, they assure the Court and the world that there is not the shadow of a shade of a risk: why then insist on any guarantee at all? Or why expect the India House to accept assurances on this head which the public refuse to receive! If the community were convinced of the fact that there was no risk, what need they care whether their guarantee was limited or unlimited? We for our own part begin to doubt very sadly whether we shall yet have railways at all -unless, indeed, Government themselves construct them. It is, it seems, our destiny to fight and conquer the operations of peace and war are incompatible with each other: if we insist on the latter, we must forego the former.

#### Gossip.

The Christmas season provided its usual quota of traffic for the metropolitan lines. By the North-Western, on the 22nd, there were conveyed 16,000 parcels, baskets, &c., filled chiefly with poultry, game and other eatables, as presents for Christmas. On the 23rd more than 20,000 similar packages were brought to London by the South Western; every train was filled (having double the number of car-riages), and these so heavily laden, that many did not arrive till nearly two hours after their regular time. The third class train of this line, due in London at 1 40 p.m., on the 23rd did not arrive till 3 p.m., although driven by two engines, the carriages attached having nearly 1,200 passengers. The first and second class trains were quite as much behind time; the one due in London at 4 p.m. did not arrive till nearly 6 p.m., having forty-two carriages. The one due at 9 10 p.m. was also more than an hour behind time, having nearly 800 passengers and 3,000 parcels. The mail train on the 24th did not arrive till nearly 6 a.m. being due at 4 30 a.m.; it consisted of thirty carriages quite full. On the London and North-Western, at Euston-square, an On the extensive temporary shed, covered with tarpauling at the top and sides, was constructed. The con-

veyance vans and parcel carts stood opposite this shed, over compartments of which were inscribed their destinations such as "City," "West-end," "Finsbury," "Strand," &c. and each as it received its full cargo drove off with it for immediate delivery. At one period of the day the shed, upwards of 18ft. high and 50ft. long, was perfectly full, but owing to the arrangements adopted, the entire mass was baled out in no time. A similar system, and as answerable in its operation, was adopted at the Paddington terminus of the Great Western, where upwards of 10,000 hampers, packages and parcels were distributed for delivery in London, besides, as was also the case with the London and North-Western, an almost equal amount during the week of outward-bound consignments, the one process being conducted by what is called the "inward," and the other by what is termed the "outward" office. The Eastern Counties, at the Bishopsgate station, had also a most extensive temporary shed in front of the Shoreditch station, and the consignments of turkeys and all descriptions of game, besides packages of provisions and presents, amounted to several thousands. Large quantities of fish came from Hull by means of the Great Northern, and from the newly opened line to Torquay by the Great Western.

The "Prince of Philosophers" presents the following nut to crack for the Christmas amusement of the calculating boys:—What must be the diameter or circumference of a Globe and the side measure of an equal-sized Cube, for each to produce the same cubical contents?

A new step has been taken by the POST-OFFICE in the right direction. At the RUGBY STATION of the LONDON AND NORTH-WESTERN lines a letter-box has been fixed in the window of the ticket-collector's room, under the colonnade on the "up" side. Letters posted up to 9 p.m. will be forwarded the same night to the metropolis and all parts of the country, without any extra charge.—Another convenience for passengers is the establishment of a READING ROOM adjoining the Midland sheds, on the "up" side, to which passengers may obtain access by the payment of one penny, and thus have an opportunity of reading the London daily and weekly papers, the country journals and a variety of periodicals. This is a notion taken from the French cabinets de lecture, and no one can deny that it provides a much pleasanter recreation than walking up and down the long, cold and cheerless platform, for those persons who are obliged to wait two or three hours before they can proceed on their insurance.

on their journey.

The LONDON AND BRIGHTON directors appear to sedulously further the comforts of their passengers. They have placed on their line a new description of first-class carriage. Instead of having three compartments, as in the ordinary first-class carriage, it has only two, and these, at the option of the passengers, family or pleasure party, may, by an ingenious mechanical contrivance, be thrown into one elegant saloon. As they are fitted with sofas at the sides and ends, they will be found especially useful for invalid travellers, and, indeed, may be converted into bed-

carriages, if required.

The directors of the LANCASHIRE AND YORKSHIRE have resolved on running for the convenience of the agriculturists and farmers "market trains" between Manchester and Rochdale.

Orders have been issued by the directors of the SOUTH-WESTERN to advance the charges on the first and second class fares, to the extent of about 20 per cent. along the whole of the line from London to Southampton. Of course, considerable discontent was manifested at this notification at several of the stations, and more especially at those near London.

The South-Western, says the Hampshire Independent, has served notices on the landed proprietors on the Basingstoke and Salisbury of their intention of going before Parliament for an extension of time to complete the works, the stoppage of which has caused dissatisfaction in this neighbourhood. We believe, continues that journal with much naïveté, a petition will be presented to Parliament from this town to compet the company to finish the works forthwith, as much inconvenience and expense are experienced from the loss of a direct conveyance between Basingstoke and Salisbury.

The abolition of the return-tickets on the GREAT WESTERN, according to the Oxford Chronicle, has been as detrimental to the interests of the company as inconvenient to the public. The directors will revive the old system, probably, at the commencement of the year. Immediately on the suspension of return-tickets, a coach was placed on the road between Bath and Bristol, and we are informed has been well filled.

The directors of the LONDON AND NORTH-WESTERN are said to have concluded a loan of 300,000%, with the Bank of England,

At the last Rugby Sessions, the LONDON AND NORTH-WESTERN appealed successfully against a POOR RATE in the parish of Church Lawford, levied at 1,800% per mile per annum. It was urged by the company, and confirmed by the bench, that 750% per annum should be the sum assessed in future, and in other portions of the parish the rate was reduced from 1,500l. per mile to 500l.

The board of directors of the SOUTH DEVON met on

the 24th, and received several requisitions respecting the consideration of the feasibility of the plans recommended for the resumption of the atmospheric system, as recommended by Mr. Gill, the late chairman. The Board fixed a meeting to be held at Exeter, on the 6th prox. Meantime the Board intend to issue a statement of their views upon the question, so that the proprietors may be in some measure prepared, when they come to the meeting, to discuss the ques-Mr. J. Rundle, the late member for Tavistock, has been elected vice-chairman of the board of directors, in the room of Dr. Miller, of Exeter, who, it has been discovered, being a director in virtue of the interest held in this line by the Bristol and Exeter, was not, on that account, qualified to sit as deputy chairman.

The Exeter Flying Post states that, in consequence an address from the inhabitants of Brixham, Paignton and the south side of Torbay to the direc tors of the South Devon, the branch line, which now stops near Tor, will as soon as possible be continued to the shores of Torbay, between Paignton and Torquay

The Mold, a line in the mineral districts of North

Wales, is now nearly completed.

After a correspondence between the railway com maies and the Secretary of State, and with the Rail-way Commissioners, it has been determined (the decision of the law officers of the Crown having first been obtained) that the provisions of the Act 5 & 6 Vict., relating to the conveyance of the military force by cheap trains, also applies to duties of the police by cheap trains, also applies to differ on the process body, in such a way as to entitle them to be conveyed at the rate, like soldiers, of 1d. per mile, by any train that starts, in order that they may execute

The inhabitants of the metropolis, since the extension of RAILWAYS, have been well supplied with pure milk in large quantities. A correspondent of the Morning Chronicle declares that from Worcester Park, near Kingston-on-Thames, there are fifty-six cans, each containing from 14 to 18 gallons, sent every seven days, making at least a total of 850 gallons of pure new milk conveyed in that short period. From the stations at Woking, Weybridge, Chertsey, Farn-borough, Guildford and Richmond, also on the Southborough, Guildford and Richmond, also on the South-Western line, there are nearly as many gallons sent from each, so that on this line alone there are be-tween 3,000 and 4,000 gallons weekly sent for sale in and around London. Supposing each cow to give 30 gallons per week, nearly 200 of these useful beasts are kept for that purpose in these particular districts only. From the Brighton South-Eastern, Great. only. From the Brighton, South-Eastern, Great Western and North-Western even a greater number western and North-Western even a greater induced of gallons arrive daily. On the Eastern Counties, by way of Colchester, Cambridge, Hertford, &c., that quantity is nearly doubled, so that at a moderate computation, 30,000 gallons are retailed every seven days (even if not adulterated) through the streets of days (even it not adulterated) through the streets of London, exclusive of what is produced by the London cowkeepers—to supply which more than 1,000 cows are kept and milked—giving employment to more than 1,500 individuals, producing an annual sum of nearly 100,000, at 1s. pergallon, and bringing into the exchequer of each railway from 500l. to 1,000l. every twelve months.

Some 300 men on the North British have struck for an increase of wages; and the works at the central station in Newcastle are at a stand-still from the same cause.—The farther progress of the railway bridge over the Tweed at Berwick has also been stopped, says the Newcastle Journal, in consequence of the men in a body having refused to work any longer for the contractors without wages. On the 16th arrears amounted to nineteen weeks. - A number 16th arrears amounted to nineteen weeks.—A number of masons employed by Messrs. Thomas and William Smith, ship-builders, at their new dock at North Shields, are now off on strike. They have refused to comply with certain deductions in the rate of wages proposed by their employers.—This credit system towards the poorer class of artizans invariably begets the improvidence which is so loudly denounced as their besetting vice.

The Bervick Advertiser records the fatal effect of LUMBING ROMA ATRIAN while in motion by two segments.

JUMPING FROM A TRAIN while in motion by two seamen, a captain and mate. They were on their way from Edinburgh to Eyemouth, to take charge of a vessel put into that port in a damaged state, and as Burnmouth was the nearest point to reach their destination, though there is no station there, they recklessly

jumped out after throwing out their bundles. result was that the mate broke his arm in the fall and lay some time insensible, but it being dark, he lost sight of the captain. He managed to get to the next station, and on relating the event search was made for his companion, when he was found dead in the side drain, his skull having been fractured.

Some disagreement has arisen at the Board of the ABERDEEN. An objection has been taken to the reelection of certain members, who favour some supposed claims upon the company. This allegation, says the Scottish Railway Gazette, however, is most distine Scottish Rational Gazette, nowever, is most unitarities these gentlemen, and it would be most unfair to refuse to admit their statement, as they have no personal interest in the matter. The whole question turns on a difference of opinion as to whether some parties who assisted the undertaking with funds in a season of difficulty should have their case considered by the company. In the meantime they have to decide upon the future character of the Board to whose management their affairs are to be committed. The most important and essential duty of the directors is to proceed with the construction of the line, and secure its completion as early as possible. To effect this object they have only to carry out the instructions of the shareholders, energetically and efficiently, with regard to the agreement entered into with the southern companies. that agreement they are enabled to command suffi-cient funds to complete the work, without unduly burthening or depreciating the original stock. This is a great advantage, and the line has been placed by this arrangement in such a position of prospective strength as could scarcely have been anticipated some seven years ago. And yet, according to the Scottish Railway Gazette, it is said that the first instalment due on the preferential stock under the recent agreement, though offered to be paid down, has not been accepted, and at the same time the request of the southern companies to be registered as shareholders has not been complied with by the Aberdeen directors.

Three engines recently employed by the PAISLEY AND RENFREW were sold last week in Glasgow. One of them, the auctioneer stated, was the second locomotive used on the rail for the transmission of passengers in Scotland, having been built about 18 years ago at Newcastle, by the late George Stephenson, for the Garnkirk Company, and from thence transferred to the Paisley and Renfrew. The wheels were of wood, and altogether the contrast it exhibited to the locomotive of the present day was very striking. It realized 13*l*.; the original cost was somewhere about 7501. The other two, says the North British Mail, were built in Glasgow not many years ago, and cost 1,1501. each, and had not been long in use; but in consequence of the discontinuance of steam power on the line and the difference of gauge, they had been laid by as useless. The 'Paisley and Renfrew' (the names of the engines) brought each 20 guineas. The lot was purchased to be broken up.

The proprietors of the GLASGOW AND AVR have been called together to consider how to provide funds to enable the directors to discharge their engagements, and for completing the main line of the Glasgow, Dumfries and Carlisle, by a debenture

contribution of 900,000%.

The City correspondent of the Morning Herald notices that several of the railway companies in course of liquidation have officially announced a partial return of deposits. Among these may be enumerated the Cockermouth and Workington Extension, the directors of which are paying 28s. out of the deposit of 42s. A further and final return of 1s.6d. per share is receivable on Boston, Newark and Sheffield scrip. The first moiety of 30s., returned by the London and South-Western to the shareholders in the London, Salisbury and Yeovil Junction, is also in course of payment; the remaining 15s., it is proposed, shall be liquidated in January next. A further posed, shan be inquitated in January fext. A further and final return of 6s, is payable by the Southampton, Manchester and Oxford Junction. The Over-Yssel continue their payments of 12s. 3d. per share. On the Anglo-Belgian shares a return of 2l. 15s. may be obtained. The Shrewsbury and Hereford make a final distribution of 1s. 4d. per share among their scripholders. The Derby, Uttoxeter and Stafford are paying their final instalment of 7s. 4d. per share. On the preference scrip of the Leeds and Thirsk a return of about 50s. is advertised. Since the 1st of November last the Liverpool, Manchester and New-castle-upon Tyne Junction have been returning 10s. per share, the first instalment of the 14s. agreed to be divided at the meeting. The directors of the Waterford and Tramere have announced that a further return of 2s. 3d. per share would be paid to all parties hold-

BORDEAUX announce the payment of interest for the last half-year on the lst of January, the former being 6f., the latter 3f. 25c. per share. These announcements give firmness to the stock in the market.

We quote from the Constitutionnel its report on the state of the BANK OF FRANCE on the accession of the new President:-We see, from the newly printed report of the Bank of France, that the metallic reserve is still on the increase. The amount of specie at Paris and in the branch banks has risen since the last week from 249,000,000f, to 254,000,000f, equivalent to an increase of 5,000,000f. The portfolio of Paris, which had momentarily reascended to 59,000,000f., has fallen again to 56,000,000f.; it is true, on the other hand, that the portfolio of the branches has risen from 107,000,000f. to 110,000,000f. The expired bills receivable amount to 881,000,000f.; the amount of the bills en sovyrance remains pretty much the same, viz., 11,500,000f. in Paris, and 6,500,000f. in the branches. The circulation of notes has varied but little; it is still about 389,000,000f. in bank-notes and 16,000,000f. in branch bank-notes. The credit account current with the Treasury has again increased, from 26,000,000f. to 29,000,000f. but it is about to be reduced by the payment of the half-yearly dividends on the 3 per cents.

The receipts on the line from ANTWERP TO GHENT amounted for the last month to 22,188f. The goods traffic on the State line has increased so much that trainc on the State line has increased so much that the coke furnaces of the company are insufficient to furnish the supply of fuel. The Tours and Nantes line has been opened between Tours and Saumur, and the second section from Saumur to Angers is to

be completed by the spring.

Our readers will remember that the Manchester Chamber of Commerce lately took up the subject of RAILWAY EXTENSION IN INDIA, with the more immediate view of encouraging the growth of cotton wool in the districts best adapted for the production of that important commodity. The Commercial Association at Blackburn have also had a meeting to consider the subject, at which it was unanimously agreed to lend their aid to the undertaking, and they recom-mend to public support the line proposed from Bombay to Callian, commonly called the Great Indian Peninsula

#### Reports of Meetings.

SAMBRE AND MEUSE.

Dec. 28 .- Half yearly Meeting, London .- Mr. W.

P. RIGHARDS in the chair.

The report was read. It stated that since the adjourned meeting in July last, the directors had carried out the recommendations contained in the report of the committee of shareholders who had recently investigated the company's affairs. The four new directors, Messrs. Sheward, Williamson, Crake and Bruce, had been appointed in accordance therewith, and Mr. Pinchbeck had been appointed resident engineer, and to measure the works before a final settlement with the contractor, in the place of M. de Grandvoir. Mr. Sheward had taken up his residence at Jardinet, as local director. The Board had raised 20,000t, out of the 40,000l. authorized, by the issue of debentures, which sum was sufficient for completing the works of the first section, on the opening of which, on the 30th ult., the Government authorities had expressed themselves perfectly satisfied with the works. On the 1st of December the line opened for passenger traffic, and on the 15th for that of goods. In making the agreement with the Government for the "through or joint traffic," the Minister of Public Works in Belgium insisted on the company's adopting the tariff of the State line; and finding that on no other terms would the co-operation of the State be given to the company, the directors were compelled to yield, under protest, against being compelled to accept lower terms and rates than those contained in the original concession, reserving the right of terminating the agreement at the end, should they think fit, of one year. The loss from the adoption of this tariff will amount to about from 10 to 12 per cent. on the traffic, subjected to it, and nothing but the utter impossibility to commence working the section could have induced the directors to accept it. (For Engineer's Report see Official Papers.)

The share capital account exhibits a receipt of 620,000l.; the construction account, including loans, &c., shows a receipt of 633,060l.; the expenditure up to March last, 534,074l.; expenditure during past half-year, 56,620l., leaving a present balance in hand

The CHAIRMAN offered a few observations on what had taken place during the past half-year. Since the last general meeting the first section had been opened ing accountable receipts for scrip previously cancelled, or 22s, per share for any scrip uncancelled.

The Northern of France and the Obleans and director, were far from having been removed. He

would first advert to the proceedings connected with a change in the board of direction and in their staff, and then occupy their time with a very brief reference to the mode in which the Board had been obliged, by the Minister of Public Works in Belgium, to deal with the traffic over the already opened portion. At the last general meeting a very strong opinion was expressed by many of the shareholders that a considerable alteration should be made in the constitution of the Board. Four of the members retiring had been replaced by other gentlemen who were recommended by the shareholders. A wish was expressed at the meeting in question that an English engineer should survey the works, make a careful admeasurement of them, and report thereon before any settlement was come to with the contractors. The gentle-man selected for that purpose was Mr. Pinchbeck, one of the members of the shareholders' committee of investigation. When the nomination of Mr. Pinchbeck was announced to M. de Grandvoir, the engineer-in-chief, that gentleman objected to it, on the ground that Mr. Pinchbeck was not of sufficient standing to survey his work, and he named three or four engineers of higher standing in this country from amongst whom the Board might select one to make the required survey and measurement. The directors found they could not comply with the wish of M. de Grandvoir without putting the company to very considerable expense, and they felt that it was their province to appoint, and not for that gentleman to suggest, who should or should not be chosen to survey and measure his work. Their refusal to attend to M. de Grandvoir's suggestion led to his resignation, and, with one exception, to the resignation of the whole of his staff. The directors, who were exceedingly embarrassed by the resignation, were compelled fill up the situation without loss of time. had selected Mr. Pinchbeck, and he believed the company would have no reason to regret the change. M. de Grandvoir had undertaken to organize a staff for managing the traffic on the line, and his retirement had induced the Board to appoint as resident director Mr. Sheward. That gentleman had been selected by the proprietors as a fit person to join the direction, and immediately after he took his seat at the Board, he proceeded to Belgium to look after the company's interest. He was there at the time of M. de Grandvoir's resignation, and was solicited to fill the office which he now held. His (the chairman's) opinion was that the appointment would prove of advantage to the company. He now came to the more important part of the directors report—viz., the condition on which the Belgian Government had sanctioned the traffic of the Sambre and Meuse line to intermingle with the traffic of the State line. When the concession of the line was accepted by the company, it was on condition of their receiving certain tolls, the amount of which had been fully discussed by all the parties concerned. It was not respecting those tolls, as it would be sufficient if he stated as an illustration the amount which the company were to have been allowed to take from the Sambre to the Meuse, or from the one river to the other, short of the summit level. The average of those tolls was to have been 5d. per ton per league. It was true the toll was higher than that of the State lines, but it was so granted to induce English capital ists to invest their property in the construction of the railway. The tolls in question were to be granted as a fair remuneration for an outlay upon works of more than ordinary difficulty and cost. In fact, they were fixed at a sum which it was considered would be remunerative to the company without being burdensome to the trade of the country. No specific agreement was entered into at the time with respect to the traffic of the company running over the State line, or of the traffic of the latter running over the Sambre and Meuse. They felt that Belgian justice was interested in preserving to the company the integrity of the tolls so agreed for; and they did not entertain the slightest suspicion that an attempt would be made by the Belgian Government to neutralize the advantages which they had, after mature deliberation, agreed to secure to the people of a friendly nation, in return for the outlay by the latter of a very large sum of money for the construction of the public works of the former. Everything that took place between the then head of the Public Works in Belgium and themselves convinced them that the final arrangement of the tolls would be a matter of easy and equitable arrangement, which could be effected at any time; and the King of the Belgians, who had taken great interest in the construction of the line always encouraged them in that opinion. He begged also to say that the present Minister of Public Works in that country had never given them any reason to think there would be any difficulty in the matter; he air refore thought that, under all the circumstances,

the Relgian Government itself should have submitted to some little pecuniary loss, rather than deprive the company of the tolls which it had always been understood would be secured to them. When the present Minister of Public Works came into office he felt great anxiety about simplifying the complicated system of Belgian tolls, and the plan he adopted was a toll of 3d. per ton per league for all heavy goods, and a fixed rate of 10d. per ton for everything, without reference to distance, that went along the line. Such was now the tariff of Belgian tolls. When they applied to the minister for permission to open their line, and for the purpose of ascertaining the terms on which they would be able to use the State line, he informed them that they would not be allowed to open the line unless they agreed to give in their adhesion to the tariff of the State lines. A strong remonstrance was made against this, but in vain, for the minister inti-mated to them that he had it in his power to insist on conditions which would he (the chairman) thought have effectually choked off the traffic. The directors therefore had to accept the tolls offered by the minister, or to refuse to open the line. The bias of his own judgment was to refuse to open the line; but as such a step would have been attended with considerable difficulties, they had accepted a toll of 3d. instead of 5d. per ton per league, and they had now to wait and watch their traffic and see what the differto wait and watch their trains and see what the difference would be between the tolls promised under the agreement and those which they had been compelled to adopt. When they saw what the difference was they could act accordingly. The minister had justified himself by a declaration that all the lines, except the Sambre and Meuse, had accepted his tariff of tolls, and that he could not have the comprehensive system, which he had adopted for the benefit of the country, upset by the Sambre and Meuse. This was not a fair way of putting the question, inasmuch as the Mons and Menage, the Tournay and Jurbise, and the West Flanders were not in the position which the Sambre and Meuse shareholders occupied; and therefore the argument of the Minister of Public Works was not a sound one. During the present month the Minister of Public Works had, in his place in the chamber, stated that his tolls were beneficial, because all the private companies had agreed to them; that they would not have been agreed to unless they had been considered advantageous. So far as the Sambre and Meuse was concerned, the argument of the minister was certainly without any weight, as they had, in effect, been compelled to accept his The directors were doing everything in their power to economize the expenditure of the company. He then moved the adoption of the report. The motion having been seconded,

Mr. Mellor thought it was conclusive, from what they had heard through the report of the directors and the observations of the chairman, that the policy of the Belgian Government was in this matter the policy of confiscation. He thought that the assistance which English capitalists had afforded to the developement of the commercial resources of Belgium should have secured to the Sambre and Meuse better terms than the Minister of Public Works was willing to grant. The departure from the arrangement under which the shareholders had expended their money would, he thought, reflect discredit on the Belgian Government, and render it extremely unlikely that the capitalists of this country would again assist the progress of national works in Belgium. He could not help thinking that the impulse of the chairman at the moment of the refusal of the minister to grant the tolls originally settled was a right one, and that the line should have remained unopened. Such a measure would have presented so strong a protest against the want of national faith on the part of the Belgian Government that it would have been extremely difficult again to induce our capitalists to give their support to any Belgian speculation.

A Proprietor thought that a very strong remonstrance ought to have been made by the directors against the reduction of the tolls.

The CHAIRMAN said a remonstrance was sent into the Belgian minister, but it was met in such a way that the directors thought it uscless to pursue it.

Mr. Sheward stated that the minister told them they could not expect anything from him unless they adopted his tariff, and that he was quite certain they would in the end be glad they had done so. Sheward) thought the acceptance of the minister's tolls would make a difference of 12 per cent., but that this loss would be attended with some economical advantages.

The CHAIRMAN, in answer to a question from a Shareholder, said they had sufficient funds in hand to complete the works in progress on the first section of the line.

would be in raising the money to go on with the next section of the line.

Mr. Brown: How much would there remain from the very best traffic they could expect to get over the first section of the line for a payment of any dividend after having satisfied the 10 per cent. holders and the various officers employed? The CHAIRMAN said he could not tell.

A Proprietor inquired what was owing to contractors and engineers.

The CHAIRMAN said it would be impossible to answer the question until all the works had been measured up.

The Proprietor wished to know what the directors

intended to do in case they should not be able to complete the line within the prescribed time of three

The CHAIRMAN said they must apply for additional

The Proprietor: Yes; and the Government, who had permitted their Minister of Public Works to drive a hard and unjust bargain with them, might, in the probability of things, refuse to grant additional

The CHAIRMAN said the Government certainly had the power of doing so.

The Proprietor wished to know what additional

amount was required to complete the line.

The CHAIRMAN said the estimated additional capital for completing the works was 380,000%.

The report of the directors was then adopted, and the election of the directors named in the report was confirmed by the shareholders.

SHEFFIELD, ROTHERHAM, BARNSLEY, WAKE-FIELD, HUDDERSFIELD AND GOOLE.

Dec. 27 .- Special Meeting, Wakefield .- Mr. J. BARFF in the chair.

The meeting was summoned to approve the draft deed for leasing the line to the Lancashire and Yorkshire, and also for the purpose of modifying the terms of the lease entered into with the above company in 1847, as regards so much of this projected line as is situated to the north of the centre of the station at the town of Barnsley (including the Silkstone branch), and to authorize the common seal of

the company to be affixed to such deed. the company to be affixed to such deed.

The CHAIRMAN proceeded at great length to review the attacks which had been made upon the board of directors, more particularly with respect to certain charges against Mr. E. H. Beaumont, the chairman, and Mr. G. Wentworth, who were the proprietors of the principal portion of the land through which the railway passed. These attacks charged those two gentlemen with starting a line which would enable them to secure an undue return for their land and then having accomplished that for their land, and then, having accomplished that object, they blindly led the shareholders, and handed the undertaking over to the management of the Lancashire and Yorkshire directors. He (Mr. Barff), Lancashire and to a single discount to the land committee, took upon himself to state that such charges were totally false. When it was considered that the amount paid was in no case more than 120%. per acre, he thought the aspersions which had been cast upon the management were quite unwarranted. The Chairman then proceeded to explain the nature of the deed of transfer to the Lancashire and Yorkshire at great length, ter to the Lancashire and Yorkshire at great length, the principal point in which was an agreement on the part of the Lancashire and Yorkshire to work the line with a single line of rails, from its completion on the 31st of December 1849, allowing the shareholders a guarantee of 5 per cent. upon their capital, and half the working profits, after making the usual deductions. By an estimate of all the metables deductions. By an estimate of all the probable ex-penditure (the contracts being all entered into), the directors calculated that the line could be completed with a single line of rails for 10l. 10s. per share, instead of 25l. per share, which was the estimated cost of a double line.

In answer to questions, the Chairman added that the bridges would be constructed with the view to a double line of rails, but should it be desired by the Lancashire and Yorkshire to construct a double line, they were empowered by the terms of the agreement so to do, charging interest on the additional capital thus advanced at the same rate of 5 per cent., and subject to all other similar rates of allowance on the additional traffic derived from thus opening up a more extensive passenger traffic by laying down a double line of rails.

In answer to further questions, the CHAIRMAN added that the expense of the line had been at the rate of 22,000. per mile, which included a tunnel of about a mile in length, which had cost nearly half the whole amount of the entire line.

A desultory discussion then ensued, which ended Mr. Brown: What will you do then?

The CHAIRMAN: Work the section. The difficulty the agreement in question, after which a resolution

Digitized by GOOGLE

was passed authorizing a balance-sheet of the company's affairs to be sent to each shareholder.

LONDON AND EXETER DIRECT.—Dec. 28.—Meeting of Shareholders, London. — No shareholder being willing to take the chair, Mr. Aldridge explained that the object of the meeting was to obtain an expression of opinion, and to devise some means by which whatever funds yet remained might be refunded to the shareholders. Mr. White, late accountant of the company, had alleged that a balance remained much more considerable than had been stated by the managing committee, and the question for the shareholders to consider was, whether they should proceed under the Act passed last session for winding-up joint stock companies.—Mr. Fowler took the chair.—Mr. Baker said that if Mr. White's account was correct, the managing committee were still accountable for a considerable balance.-Mr. Harris stated that the company was formed in May 1845, and that the actual amount of capital sub scribed was only 32,000l., whereas the sum necessary as a capital to justify proceeding to Parliament was 126,000%. The sum actually subscribed had all been expended in useless litigation. Mr. Harris contended that the members of the committee were responsible to the shareholders for the whole amount of money subscribed. He did not mean to say anything against the personal integrity of either Sir Bruce Chichester, Dr. Phillimore, or Mr. Chambers. He believed that they had not pocketed a farthing of the money. It was only their public conduct, their management of the company's affairs, of which he complained; and that had been such as to render them responsible to the shareholders for the whole amount of the deposits .- Mr. White, accountant, said that having been called upon at a former meeting to examine the accounts, he had found a charge of 4,346l. 11s. 3d. for preliminary expenses, but of that only 300l. had actually been paid. Cheques for the whole amount were drawn by the directors, but they burned them as soon as the meeting was over. The speaker read a letter from Mr. Columbine, confirming his statement, and affirming that the ma-naging committee were liable to the shareholders for the whole of this sum. With respect to the engineering account for 14,050%, he had ascertained that of that sum only 8,905l. had been actually paid. The law expenses were set down at 8,791l., of which 6,250l. had been paid to Messrs. Hollingsworth.—Mr. Baker said that Mr. Hollingsworth was a party to the original deed, and it was therefore a question whether being a party in the concern he could recover for any costs whatever .- Mr. Vallance denied that the provisional committee were liable to the share-holders. As to the original committee, of the whole hope of recovering. A bill in Chancery might be tried, but he believed it would never come to an end. The only remedy was a petition to the Lord Can-cellor.—Mr. Harris moved a resolution authorizing Messrs. Bromley & Aldridge to proceed by petition against the managing committee, and appointing a subscription of 6d. a share for expenses.—Mr. Hunter seconded the resolution, which was agreed to.

FAVERSHAM AND CHILHAM .- Dec. 26 .- Meeting of Inhabitants, Faversham, Mr. C. J. Hilton in the chair, to consider the propriety of co-operating with the promoters of the proposed line from Faversham to Chilham. - A letter was read from the directors of the South-Eastern, stating their willingness to afford every facility to the undertaking, but it was totally out of their power to furnish any portion of the capital necessary to be raised for such a purpose.— After the reading of a great deal of statistical infor-mation by the Right Hon. S. R. Lushington, the gentlemen present passed resolutions to the effect that the proposed line is likely to confer great benefits on the town and neighbourhood, and it is desirable that subscriptions should be raised, in order to meet the expenses hereafter to be incurred in promoting the bill, for which notices have already been given; also that the Mayor be requested to call a general meeting of the inhabitants of the town and neighbourhood for the further consideration of this matter early in the ensuing month.

British Railway Assurance Association.—Dec. 27.—Public Meeting, London Tavern, to consider a proposition to establish an Association for assuring adequate compensation to sufferers from railway travelling, &c.—Mr. Carter in the chair.—Mr. W. E. Cobb, honorary secretary, said the proposed institution was an endeavour to extend the principle of assurance to casualties to life and property occurring upon railways. It was also designed for mitigating

the losses sustained by railway companies themselves from fire and railway accidents. It was highly important to commercial travellers especially, and generally so to all persons having to perform journeys by railway, as it sought to secure for them more ample and adequate pecuniary compensation for damage sustained by passengers and goods than was at present allowed under any existing Act of Parliament, whilst it would operate to greatly diminish the frequency of railway accidents, by giving to all railway officers and servants a direct pecuniary interest in their prevention. He calculated that, as regarded passengers exclusively, a premium of one guinea only, once paid, during seven years, would insure 40l. for a casualty rendering medical treatment necessary; 600/. for a casualty causing severe internal injury or loss of limb; 1,200% for a casualty rendering the assured totally unable to gain a livelihood; and 2,000l. for a casualty causing the death of the assured. A premium of five guineas only, once paid, during seven years, would insure 2001. for a casualty rendering temporary medical treatment necessary 3,000l. for a casualty causing severe internal injury or loss of a limb; 6,000l. for a casualty rendering the assured totally unable to gain a livelihood; and 10,000l. for a casualty causing the death of the as-Numerous competent authorities had pronounced the scheme to be perfectly sound and practi-cable, and various highly respectable commercial firms in the City and throughout the country had also warmly approved of it.—Mr. P. Hardy, F.R.S., vice-president of the Institute of Actuaries, and actuary to the Mutual Life Assurance Society, &c., among others had given the following opinion upon the project to its promoters :-

I have carefully perused the accompanying prospectus of the proposed British Railway Association (to which I have attached my initials), and have considered with attention the four objects intended to be embraced by this association. In my opinion, the scheme, if carried out with energy and integrity, will offer many advantages to the public generally, and to the great railway interests of this country in particular. The scheme is perfectly sound and practicable, and I believe that the necessary operations for working the association will be found to be less complicated, and attended with fewer practical difficulties than at first sight might appear. The Mutual Beneit Fund for railway officers will be an useful application of the scheme of a friendly society on an extended scale to a large and important class of the labouring community; and while it will serve to encourage the self-respect and provident habits of the men, it will hereafter be found a very desirable, if not an essential adjunct to the management of every railway company, and a protection to the interests of the shareholders. Of the absolute necessity which exists for the formation of a "Casualty Compensation Company," there cannot be entertained a reasonable doubt. If some establishment partaking of this character be not soon formed, in connexion with the railway companies themselves, the public will, impatient of the delay, carry into operation an institution of this nature independent of them. The advantage, however, of attaching such a fund to the railway interests is obvious. As regards the scheme itself, it is novel and very valuable application of them. The advantage, however, do an entirely new class of contingencies. I have previously advised (July 1847) on this peculiar feature of the association, and I have found no reason to her contrary, I perceive many new reasons for desiring to see such a scheme brought, at a very early period, into operation. The two remaining objects of the proposed association are useful applications of self-as

The promoters propose to raise a capital of 600,000l., in shares of 10l. each, and thought a preferential option should be held out to the servants and officers of railway companies in subscribing to the undertaking. The shares would also be taken up conjointly by the public. The projectors were thoroughly convinced that the scheme was fully entitled to general approbation, and now confidently launched it upon the waters of public opinion, assured that it would only neet there with such a fate as it deserved. The following resolutions were then submitted to the meeting, and after some discussion unanimously adopted:—

- 1. That the occurrence of accidents on railways has been so frequent of late as to excite in the public mind a painful sense of the dangers inseparable from railway travelling; and that while this meeting is willing to admit that the contingencies arising therefrom are exceedingly remote, it desires to record its deliberate opinion, that they are generally so severe when they do occur as fairly to call for the intervention of the relief which the system of assurance is calculated to afford.
- 2. That the compensation awarded by juries in cases of accident, however liberal, has scarcely ever been known to meet all the various contingencies to which sufferers or their families are liable; and that inasmuch as a great public necessity exists, on this ground, for extending the application of assurance principles to railway casualties, it

is the opinion of this meeting that any sound plan by which the claims of the assured can be guaranteed by those on whose care and vigilance the safety of railways mainly depend, is obviously the one best adapted to meet the just requirements of the public.

requirements of the public.

3. That this meeting participates in the views of the promoters of the proposed 'British Railway Assurance Association,' and desires to record its deliberate opinion, that the proposition to establish so benevolent an association is entitled to the best consideration and support of the public generally, and of the railway interest especially, and that it is highly expedient, and would greatly tend to the comfort of railway travelling and to allay the painful apprehensions of the public, if all railway officers and servants had a direct pecuniary interest in the prevention of accidents.

It was next resolved:—

That it is expedient that the share capital of the association be subscribed for jointly by the public and by the officers and servants of railway companies, and that a committee be appointed to confer with the railway officers of the metropolitan and leading railways of England, and to enforce their views on the attention of their respective Boards.

A committee having then been appointed, the meeting adjourned till the 30th of December.

RAILWAYS v. STEAMBOATS.—It may be remembered, says Heraputh's Journal, that the Board of Trade, in their report of 1845, on the Kentish schemes, entered into a discussion of the competition to which a railway through North Kent would be exposed from the extreme cheapness of steamboat travel-It was considered that the greater portion of the traffic being a pleasure traffic, passengers would prefer the more agreeable, though longer, passage by water to that by railway, irrespective of its greater cheapness. It is a curious circumstance that, although cheapness. It is a curious circumstance that, although this report was drawn up during the winter months, the disadvantages with which steamboats have to contend in the winter were entirely overlooked, the report dwelling chiefly on the more pleasant nature of the water passage, the comparatively small importance of railway speed to the majority of the passengers, and the certainty that no railway company could afford to carry passengers at the rate of od., or at most 1s., for a distance of 22 miles. During the late foggy weather, the superiority which the South-Eastern Company's North Kent line will possess over the steamboats in the winter has been well illustrated. In consequence of the winter fogs the steamboats have been, and are, very irregular, as always is the case in winter, and a notice is someas aways is the case in winter, and a notice is some-times displayed at the Blackwall station, on these occasions that "No steamboats will run during the At such times the communications between London and Gravesend and other places are almost entirely suspended; there is scarcely a chance of getting a conveyance, except at an enormous expense, and many parties are obliged to remain in London, to their great loss of time, expense and inconvenience. The only land conveyance they can obtain between London and Gravesena is one coach, fare 7s. On a recent occasion, there was only one boat between London and Gravesend in the course of the day. This started at Brunswick pier at 4 o'clock in the afternoon, and the passengers who went by it waited at Brunswick pier, some of them for hours, on the speculation of being able to get away, the officials informing them that there was only a chance of a boat starting if the fog cleared up sufficiently. We could not wish for a better argument in favour of the superiority of railways over water communication. and we think the facts must be very consolatory to the South-Eastern proprietors. To a very large body of the public the opening of the North Kent line will afford a peculiar convenience; and when a punctual and rapid medium of communication is afforded, we do not doubt that it will be extensively patronized, that the traffic on the whole will be largely increased, and that, instead of the traffic being chiefly confined to the summer season, there will especially be a very large and constant flow of passengers during the winter months.

INCREASED DRAUGHT IN LOCOMOTIVE FIRE-BOXES.—
A patent has been taken out by Mr. E. Albon, reports
the Mining Journal, for an apparatus for regulating
and increasing the draught in locomotive chimneys,
consisting of a pipe of copper, or other suitable material, affixed to the chimney, one end of which is bellmouthed and open to the atmosphere, and the other
turns upwards into the smoke-box in a perpendicular
direction; the blast or steam-pipe passes up through
the bend, and by its exhausting action causes the air
which passes in at the bell-mouth to rush rapidly
through the same into the chimney; and it is stated
that by this means the current will be regular, though
the steam is intermittent.

The whole of the COLLIERIES of the SUNDERLAND DISTRICT, after the 22nd, will suspend their operations in the working of coals from seven to fourteen days, for the purpose of repairing their railways and machinary.

machinery.

EMIGRATION._UNITED STATES of MIGRATION.—UNITED STATES of AMERICA, in the State of GEORGIA.—FOR SALE, 190,000 Acres of PREEHOLD LANDS, in large or small lots. The Lands lie between 11 and 32 degrees north, distant from the Atlantic Ocean 120 miles, and at an elevation of 400 ft, above its level, free from swamps, climate salubrious and healthy, distant from England 18 or 20 days sail. They are bounded by the mavigable rivers the Fluit and the Oemulgee: by the former a communication is open to the Gulf of Mexico, by the latter to the Atlantic; a Railroad, two-thirds finished, passes through the Lands, which will connect both these rivers. Every information may be obtained relative to the above, &c., from RICHARD KEILY, Esq., 1, Royal Exchange-buildings, London.

A BOON COMPANION FOR RAILWAY TRAVELLERS.

Now ready, a New Edition, handsomely bound in cloth, reduced
from 5s. 6d. to 3s. 5s.

JOE MILLER'S JEST BOOK.

A work everybody quadra and for both services. A work everybody quotes, and few have read. A reprint from the genuine edition, free from all impurities, with copious Additions in press and verse.

The First Edition of this work having been exhausted, it has been reprinted equal to the original, and now issued at a greatly reduced price.

London: Whitaker & C.

## YORK, NEWCASTLE and BERWICK RAILWAY. KELSO BRANCH.

The Directors are now ready to receive TENDERS for the ERECTION of the STATIONS, GOODS WAREHOUSES, &c., on this Line.

The Plans and Specifications may be seen, and other information had, at Messrs, J. & B. Green, Architects, Arcade, Newcastle-

#### GREAT NORTH OF ENGLAND RAILWAY

FOURTH CALL ON THE £40 SHARES.

FOURTH CALL ON THE 40 SHARES.

At a MEETING of the Directors of this Company, held at Darlington, on Wednesday, the 3rd day of January 1849,—
NATHANIEL PLEWS, Esq., in the Chair,—
In pursuance of a Resolution of the Joint Committee of the Directors of the York, Newcastle and Berwick Railway Company and the Great North of England Railway Company, tin accordance with the provisions of the Beed of Contract and Agreement between the said Companies, for the Lease and Sale of the Great North of England Railway requiring the Directors of this Company to make a further Call of 10t, per Share upon the Shares of 4cl, each, created by this Company;—

icl. each, created by this Company;—

It was resolved,—
That a Call of 10d, per Share be, and the same is hereby made upon the Holders of the 40d. Shares in this Company, to be paid on or before Monday, the 5th day of February next, to the York Union Banking Company, at York; or to Messrs. Glyn, Hallifax & Co., Bankers, London.

Interest at the rate of 10 per cent, per annum will be charged by the Bankers on all Calls unpaid after that day.

J. M. SPARKES, Clerk to the Company.

Railway Office, Darlington, Jan. 3, 1849.

THE RAILWAY ASSURANCE COMPANY, for Assurance upon Loss of Life or Injury by Accident to Railway Travellers, Railway Officers, Entine-drivers, Stokers, Guards, Labourers and others employed on Railways.

PROVISIONALLY REGISTERED.

CAPITAL £250,000, In 10,000 Shares of £25 each. Deposit 2s. 6d. per Share. Directors.

Charles Brown, Esq. H. Hitchins, Esq. Charles Liddell, Esq. Edward Loder, Esq.

R. S. Newall, Esq. Edward Powell, Esq. William Turton, Esq. John Neville Warren, Esq.

Physician.
R. B. Todd, Esq. M.D. F.R.S.

Surgeon. W. Fergusson, Esq. F.R.S., Professor of Surgery in King's College.

Mesera Goodwin, Partridge, Williams & Edwards, Walbrook House.

Bankers.
Messrs. Barnett, Hoares & Co., Lombard-street.

Notwithstanding the great improvement daily taking place in the construction of railways, the skill of engineers, and the endies precautions adopted by directors for the public safety accidents on one or other of the numerous lines that intersect the cupier can one or other of the numerous lines that intersect the cupier of the numerous lines that intersect the cupier of the numerous lines that intersect the cupier of the numerous lines that intersect the cupier of the number of the number of the number of the number of the number of casualties is insignificantly small when compared with the number of travellers by railway, yet it is equally true that no one single passenger can feel, when travelline at the meteor speed which the locomotive has attained, that his life is safe for a single moment.

One moment's reflection must convince fathers of families, and others, of the paramount duty of securing to their relatives some compensation for the sufferings too frequently entailed upon them by the sudden loss of life from railway accidents, and some provision for themselves in case such accidents shall be attended with mental or bodily injury only, often incapacitating them for future accidence exertion in their accustomed content of the formal manual new scale accidents which we have any of the proposed to the number of the sumblest individual.

Railway, and will no doubt avail themselves of the advantages now held out to them, that the Company feels justified in adopting so low a rate of premium as shall being the benefit of Assurance within the reach of the humblest individual.

The arrangements for the formation of the Company are in a state of great forwardness, and, on their completion, the table of rates will be published, and applications for Pelicies received.

It is proposed to accept risks not exceeding 5,000, on any one life. The premium on each Policy will be payable on the issue thereof, in one sum; and no future payment, annual or otherwise, will be required.

SURVEYING.

The 2nd Edition, 8vo, with numerous Illustrations, 12e. Gd. of WILLIAMS'S PRACTICAL GEODESY; comprising Chain Surveying, the Use of Surveying Instruments, together with Levelling, and Trigonometrical, Mining and Maritime Surveying.

**x* This Edition contains new Chapters on Railway, Parish and Estate Surveying.

London: John W. Parker, West Strand.

## M I D L A N D R A I L W A Y. MIDLAND SIX PER CENT. STOCK AND SHARES. (Late BRISTOL AND BIRMINGHAM SHARES.)

Clate BRISTOL AND BIRMINGHAM SHARES.)

NOTICE IS HEREBY GIVEN, that the BOOKS in which
TRANSFERS of the Midland Six per Cent Stock and Shares o
this Company are recisered will be CLOSED on the 17th day of
January inst. to the 1st day of February next.

Derby, Jan. 3, 1849.

J. F. BELL, Secretary.

CASTERN COUNTIES RAILWAY. ASTERN COUNTIES RAILWAY.

The Holders of York Extension Shares in arrear are informed, that unless all ARREARS, teacher with Interest at the rate of 5 per cent. per annum, BE PAID on no before the 31st inst, they will FORFEIT ALL CLAIM to Six per Cent. Shares in right of them.

Bishopsgate Station, Jan. 4, 1849.

### NORTH STAFFORDSHIRE RAILWAY. GENERAL MEETING.

GENERAL MEETING.

NOTICE IS HEREBY GIVEN, that the SIXTH ORDINARY MEETING of the Shareholders in the North Staffordshire Railway Company, will be held at the Company's Station at Stake-upon Trent, on Wednesday, the 31st of January 1849, at 2 o'clock in the afternoon precisely.

A Resolution will be submitted to the Meeting, to confirm the forfeiture of certain Shares in the undertaking, and to direct the Sharess of orfeited to be sold or otherwise disposed of.

The Recister of Transfers will be closed from Tuesday the 18th of January until after the Meeting.

J. LEWIS RICARDO, Chairman.

J. SAMUDA, Secretary.

Stoke-upon-Trent, Jan. 5, 1849.

CREAT LUXEMBOURG COMPANY.—

NOTICE IS HEREBY GIVEN, that INTEREST, at the rate of 5 per cent, per annum, for the Half-year ending the sist of December 184, will be papable on and after the list of February 184, on those Shares on which all the Instalments shall have been duly paid, being at the 184 of 5.6 per Share on the Shares with 104, paid up, and 38. 6d. per Share on the Shares with 7t. 108, paid up,

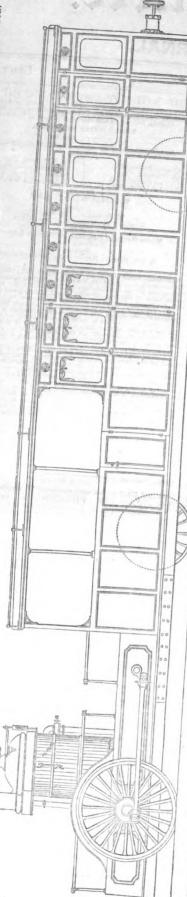

with 10t paid up, and 2s. 6s. per share of the Company must be exhibited at the Company's Offices, in Brussels or London, seven clear days previous to the delivery of the Literest Warrants.

By order of the Board,
THOMAS COXHEAD, Secretary,
No. 1, Royal Exchange-buildings, London,
Dec. 2s. 1848.

" FAIRFIELD WORKS,"

Mr. W. B. ADAMS's PATENT RAILWAY STEAM CARRIAGE, FOR FIRST, SECOND, AND THIRD CLASS PASSENGERS. BOW, LONDON.

Whele, of which the two driving-wheels are 4 ft. 6 in. diameter, and the middle and 28 third, weighing 4 tons, on six wheels the two driving-wheels are 4 ft. 6 in. diameter, and the middle and trailing wheels 3ft diameter. The state is the axies in wheel so the caxies in the lournals; this with the small distance of the frame from the diameter and 12 in. stroke; extreme centres of wheels 29 ft.; consumption of coke from 3ib. to 10 ib. per mile; with water and 12 in. stroke; extreme centres of wheels 29 ft.; consumption of coke from 3ib. to 10 ib. per mile; weight, The usual dead weight of the ordinary locomotive tug tender, break vans and carriages to carry a similar load would be between 40 tons and 50 tons, with an expenditure of coke from 30 lb. upwards per mile. This Steam Carriage can be

Remarks on the Economy of Railway Transit.

limit, deep girder rails with hardened steel surfaces, and the best substructure that can be devised. That the existing machines are far in excess both for weight and speed, is almost universally proved by the condition of the railways and the expense of "maintenance of In all mechanical conveying by accessing a runner by land or water, the axiom to be constantly borne in mind at the highest remunerating speed with the minimum load of the highest remunerating speed with the minimum load of the best for the paying load, from which profit is to be derived weight added to the machinery of transport is a source of weight added to the machinery of transport is a source of the steam transit by water this principle has been so well meen and around that the steambasts of the present day, as compared with those of twenty years back. The weight at times the power with one-third of the dead

There are two modes of restricting this difficulty—either to increase the strength of roads and rails, or to decrease the total weight or speed, or both conjointly, of the rolling

There is also another mode—to diminish the proportional weight of the rolling stock as compared to the paying load. This latter principle has not yet been put in practice, and so far railway mechanism is in arrear of water mechanism.

a It may be urged that steam transit by water and by land

One obvious distinction between railway transit and water it transit is, that the former is wholly performed by steam stranging water vehicle. When the principle of a self. par water, it is simply a contrivance to tow saling vessels in the a position to enable them to work by other men. When the steam-tug principle was adopted on railways, it is not a position to enable them to work by other means and then steam-tug principle was adopted on railways, it is arrives weight of the separate carriages.

Congitudinal concussion in starting and stopping has added the strength of balf at one spanning to each carriage.

Freater strength of framework required, both to carry the new for mechanism and to meet alternate shocks. For it is not of the heavy engine, by getting off the line or otherwise, the disconnection of the train, by one carrying concuston of the train, by one carriage expending control of the intervent of the carry the men another, of precisely the same kind and proportionately destructive as though a heavy body had proportionately destructive of power required to generate will be the expenditure of power required to generate will be the expenditure of power required to generate will be the expenditure of power required to generate will be the expenditure of power required to generate will be the expenditured to generate the forst weight of the train the same amount of time to see up speed in proportion to the dead weight, and enter the cost of the same amount of time to stop—in both cases at the cost for the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the cost of the co

On railways there are scarcely any means of drawing comparisons of proportion—all machinery being so greatly The destruction to the roads will be of two kinds, and in

worked by the driver and stoker without requiring a guard, as the brakes are on the engine within their control, and greater safety is obtained, inasmuch as the machine can be got very rapidly into speed, and can be retarded and stopped in a very short distance, owing to the small amounts of dead weight. The centre of gravity being very low, it would be practicable in summer time to carry twenty-five or thirty extra passengers on the roof.

The Carriage above shown is calculated chiefly for branch traffic at moderate speeds; but the same principle can be of repairs. The Carriage is capable of easily passing round curves of six chains radius.

in excess of the minimum. It is therefore by comparisons for with highways that any estimate must be got at.

A first-class four-wheel carriage on the narrow gauge. The carries eighteen passengers and weights 4 tons.

A London compiles occasionally carries twenty-eight per lim short, the four wheels of the realiway carriage exceed the limb for the total weight of the omnibus. The case of the committees of the committees of the committees of the case of the committees of the carriage exceed the limb as 18 to 42.

In the railway carriage the dead weight to paying load is as 18 to 42.

d. is as 80 to 27.

This surplus weight is one of the evils involved by the for included of train traction by engine tugs.

It would not be a difficult mechanical problem to construct a stem carriage, weighing 4 tons, carrying eighteen on modation, supposing it to berquired.

But beyond the evil of surplus dead weight in the trains, another evil is involved—the requirement of additional the diving-wheels to procure adhesion to overcome this aurplus weight and frieting and frietion; and this evil is multiplied in additional destruction of rails.

If will take, say six first-class carriages to carry, in round in numbers, 100 passengers. The passengers will weigh 7 tons the ardiages 24 tons, in all 31 tons.

In Coking at the turg-engine and tender that are to draw sen them, estimated at the not excessive weight of 39 tons, in competent to carry the 7 tens of passengers in their own the hacks, without requiring carriages in addition.

And it will not be difficult to see that there is material and enough to extend it in length and breadth conveniently to re-

But instanted as there would be 24 tons less of weight, less power would be required to draw the load. The tagengine of 26 tons, in which case it would carry a load one.

The saving in dead weight in a train of six first-class carriages would thus be equivalent to 26 tons, which,

is be equivalent to 26 tons, which, rate of one halfpenny per mile per ton

for haulage and maintenance of way, would be a saving of upwards of 6l, per train in the run between London and Birmingham.

The six first-class carriages would really carry 109 passengers, but so would the carriage engine. The brakes and train is an excessive number, if will be still more in favour first is an excessive number, if will be still more in favour first steam-carriage system, as the fewer the passengers per the greater is the disproportion on the tug system and, indiging by horse transit, there is much greater roam and, indiging by horse transit, there is much greater roam of weight have been but roughly taken, and, indiging by horse transit, there is much greater roam of stons of dead load will infinitely carry I ton of paying load,

as experience advances.
With these views various steam-carriages are in process of construction, with the expected result of economy in first

ocustruction, with the expected result of economy in first coust swelling and every size of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the supervised of the superv

required.
There are two classes of objects to which these steam carriages may be applied:

lst. To replace ordinary trains.

Stalt, As Express trains.

Stalt, As Express trains.

Stalt, As Express trains.

THE GRAND QUESTION FOR 1849.

Ox commencing a new year, after such a crisis as reached its climax before the close of 1848, the attention of well-wishers to the railway interest must be concentrated on practical objects; and consequently rather turn to consider what can be done towards future improvement than dwell, with unprofitable regret, on past errors. It is impossible, indeed, to avoid retrospect altogether. Without looking back to the origin of changes that were developed only in the course of last year, it will be of little use to study the prospects of the year to come; and the instruction best fitted to promote a wise management of the interest hereafter would be lost, if the lessons to be drawn from the errors of former years were not distinctly brought forward, and carefully got by heart. Still, at the present moment, there is little fear of their text being forgotten.

The consequences of past measures, which have borne fruits very different from what they were expected to produce, have been tasted by all who are concerned in railway affairs, in a manner that there is no mistaking. Those who have had shares to sell or calls to pay in 1848 have had pressing reminders of a kind that speak to the dullest capacities: - nor have those who invested their means in railways in better times been less plainly taught the meaning of what has been done of late years. All have seen and felt the reduced value of the property in a way far from agreeable; and the conclusion that must have been drawn from losses and disappointments common to all is quite irresistible. Whatever attempts may be made to explain it away, or to justify the policy of former years in this particular case or in that —there is no getting rid on the whole of this decisive fact:—that the main result has been universally unfortunate. And inasmuch as in a business of this kind, it is by the issue, in profit or loss alone, that any system of measures can or ought to be judged, it is clear that nothing can countervail the practical weight of the experience - without a single exception worth mentioning-of the whole railway body :- or persuade any sane mind that a series of proceedings under which all alike have seen their incomes diminished,—the demands on their purses increased, and the marketable worth of their property reduced more than one-half,can have been otherwise than mistaken and untoward. Nor has this practical kind of instruction by any means ceased with the year process, unfortunately, still is far from its final term. The extreme depression of railway property has, indeed, been greatly relieved; and the effects of mere panic no longer scare every one from touching it,—as was the case for some time during the autumn of last year. Prices are rising, and investors are once more venturing to buy. Still, the real damage which it has sustained-and which alone was at any time of permanent consequence, except to the very weak and timid—remains just as it was now that the temporary fright is over;—and the amount of this is quite serious enough to justify both regret and continued anxiety. This, too, must be kept alive by the recurrence of demands for fresh contributions—the results from which can now no longer be viewed in any hopeful light. In this present month there are upwards of three millions to be paid on calls; which cannot safely be expected to produce, when expended, an interest of 4 per cent.

In such a state of things, the voice of matters of fact speaks more directly to the point than any other. It would seem to be so clear that it must be understood, and if understood, that it must be practically applied. It is quite

evident, at all events, that if it does not make a distinct, forcible and general impression, or if the impression it may make does not lead to decisive effects—there is no chance of either the one or the other being produced by anything else that can be said or done:-and we may add, but a poor prospect of that sound and comprehensive policy which alone can redeem the money investments made since 1845.

Such being our deliberate and firm conviction. we must naturally look forward rather than backward at this particular season. What the past has brought about all have seen and felt; the chief matter of present interest is the position to be taken by directing Boards and by their constituents at the forthcoming meetings. Upon the result of what may then be determined, as to the actual state of the railway body, as to the objects and expectations to be kept in view, and as to the means for realizing what is proposed and expected,-the future course of this interest must largely depend. It may be turned -gradually, indeed, and not without strenuous exertion-in a rising direction: it may be suffered-by accepting things as they are, by ascribing to external misadventure what has been caused by imprudence within doors, and what energy and prudence may partly amend, -it may be suffered, we say, by this easy-going process, to run forward on the downward road -to ruin. It is therefore of peculiar importance to know which of these courses will be promoted just now: -- and this will be known when the directors and their constituents come together at the meetings, which are now at hand. Both have a serious part to play: -we trust that it will be performed on each side in a creditable manner.

From the directors, indeed, the initiative may fairly be demanded; and if they perceive what is their plain duty, are prepared to fulfil it thoroughly, and to pledge themselves to it frankly and implicitly,—the part of the shareholders will be greatly assisted, and the benefit to the common interest of both will be produced in the most auspicious and effectual way. What they ought to do and to say is perfectly clear. They have to recover from serious decline and heavy losses, a property created by expectations of profit; the profits of which have been thus diminished by attempts to enlarge and fence it in, which they have recommended and carried out. It is for them to do what in them lies to rectify this miscalculation. And this can be accomplished in no way but one. As the misfortune has been brought to pass by spending vast sums of money in various ways that have not been profitable, they must make it their first object to cut down future expenditure as much as possible; to avoid all questionable works, all waste, all finery, all outlay, in short, whether in great things or in small, that is not certainly productive; and hereby to reduce, as far as may be, the weight of the burdens already undertaken, the instalments of which are still pressing heavily on the proprietor,-who has now no longer the hope-to compensate him for present difficulty in raising the money-that the sums which it is so hard to raise will produce a satisfactory return hereafter. And inasmuch as, in all the great companies, the effect of their additional outlay, past and to come, is now known to be on the whole a drawback on the proceeds of the main line, their next great object must be to cultivate those proceeds as diligently as possible, so as to make up for the draining effect of this drawback on the proprietors' income. The traffic must be conducted altogether with a view to profit; and here again, in all arrangements and details, the rule of economy and diligence should be abso

flourishing in the public eye-with what result in gratitude or jealous hostility we all know :enough and too much of exertion repaid by no equivalent; of liberality exercised at the expense of the proprietor; of a magnificent contempt for small savings of the random disbursement of large sums. These efforts and bounties have not been appreciated by those who benefited thereby; but they have told heavily in the mass on those who supplied the means of this public charity. It is now time to think of the unlucky givers: to feel what they are suffering who have invested the whole of their small properties on the faith of promises, which were virtually, if not literally made, and which have not been fulfilled; to regard the enormous losses of larger investors; to follow, in short, the strict duty of faithful stewardship; and to remember that these enterprizes were not started to give distinction or influence to a certain small number of rich merchants or bankers; that they have not been wholly or in any great measure executed by the contributions of a class that can afford to disregard the difference of two or three per cent. a-year in their dividends: and finally, that directors have to fulfil a paramount obligation to those who depend upon or are seriously concerned in the profitable issue of these undertakings, before they can admit any other consideration; and that the degree to which their constituents have suffered by the changes of the last three years makes this for the present the sole object to which they ought to address themselves; this is the duty of directors at the present crisis. If they understand and fulfil it, there is still a good hope for the interest—which has been rudely shaken by their pursuit of objects that have not contributed to the welfare of those who appointed them.

Now, in order that they may be encouraged to pursue this course, if already aware of its necessity, or taught that it is necessary, if they have not yet discovered the obligation, it would be well for proprietors to take very firm ground on this occasion, and to make their position clearly understood. Without mutiny, without recrimination-but as men who have a right to be heard, and mean to enforce that right, let them make known what every proprietor of railways feels; and let them instruct the directors accordingly. Let it be clearly stated and proclaimed that the losses suffered have been severely felt, and that the managing body is required to make all possible efforts to improve the scale of gains: that neither the ambition, nor the contentiousness, nor the liberal style of expenditure which have hitherto prevailed, can be any longer justified or sanctioned; that the result of much that has been so laid out has been wholly unfortunate, and that a different system of policy must henceforward be adopted. That, after every allowance for bad times or other external causes, there still remains a clear surplus of error in the management itself, which did not depend on these, and which no allegation of outward circumstances can be allowed to gloss over. That the harder the times may be, indeed, the more are economy and prudence demanded to meet them. That much may be done by following their injunction, and that the proprietors rely on their giving the rule of conduct henceforth—and will expect substantial evidence that it is effectually practised. That circumstances common to all, and pressing heavily on all, justify this instruction; and that as men of business who are deeply concerned in seeing it observed, they are quite resolved on having it obeyed. That they are entitled to demand that the directories, who must fairly bear the whole responsibility of the past measures, the results of which are now seen and felt, will give heart and lute. There has been enough and too much of I hand to the work of redeeming their ill success.

Digitized by **GOO** 

That all future confidence and approval will been in receipt of means commensurate at least to depend upon the degree to which this obligation may be fulfilled: and that if it be neglected by those now in office, there must be others appointed who will undertake the duty.

Such is the position which it now becomes the proprietors to take; in a manner, of course, as moderate and friendly as will consist with a complete declaration of their objects, and of their resolutions to enforce them. The directors, if they are wise and conscientious, will meet them half-way on this ground: the only one which can now be taken with any real hope of advantage to the railway body. How it will be occupied by both is clearly the question of interest for 1849. We have therefore confined our opening remarks for the new year to this grand topic, -in which indeed it will be seen all others of moment are included.

We shall only add the hope that no revival of spirits on the rise of the share-markets may either induce directors to fly from unpleasant facts to sanguine prospects, or dispose proprietors to lose sight of what is real in the present, in the hope of a future which is in the clouds. We have already shown how the only prospects worth pursuing can now be realized: and those who at this time of day can accept new expectations in full of all that actual difficulties enjoin, deserve to remain in embarrassment for ever.

GUARANTEED AND PREFERENCE SHARES. The decided "preference" given of late by investors to the guaranteed and preference shares in our railways, has had the effect of sustaining that class of shares throughout the late crisis in a remarkable manner; for while the old stock of the best line has, during a period of eighteen months, suffered a depreciation of upwards of 32 per cent., shares of its guaranteed line only varied 12 per cent. Cases still more marked occurred with others, the original stock of one falling 33 per cent., while the guaranteed fell only 1 per cent.! of another the old stock sunk 44 per cent., while the guaranteed only fell 5 per cent. We gather these particulars from a pamphlet† by Mr. Whitehead, whose 'Letter on Railway Management' we lately noticed; and we are glad to find that we can now speak far more favorably of his labours than we did on that occasion. We have no hesitation in recommending Mr. Whitehead's work to all who are about to invest largely in the securities of which it treats. He compares those with the Govern-

ment stocks, and gives the former the decided

preference :-The railway guarantee has the security of that which is tangible; the government guarantee has the national faith as its bond, and so long as England shall remain what England is, the security will be ample and complete. Whilst however the governample and complete. Whilst however the government stockholder would, under circumstances of violent political change, suffer more or less as the extent of that change might be, the railway share-holder would feel its blighting effects for a period comparatively brief: the reality of railways would be his safety, their necessity under all states of society his security. Railways would be as necessary to resuscitate the body politic, and elevate it from its suscitate the body politic, and elevate it from its state of pauperism, as they are to conduce to its wealth in its better and happier days. When dynasties and political parties shall have passed away and been forgotten, railways will be, and so being must continue to be, the property of those whose means have been embarked in them. For a time, but only for a time, railway proprietors, under the distrust which civil turmoil engenders, might be deprived of their income, but as out of chaos itself order must some or later suring so political strife ending railsooner or later spring, so political strife ending, railways would be the first to feel that resumption of confidence which would then supervene; and long before the State could have seen its way to meet its daily pressing wants, railway proprietors would have

† Railway and Government Guarantee. Which is preferable? Facts and arguments to show that Guaranteed Railway Stock offers a better Investment than do Government Securities. By John Whitehead.

the payment of those engagements which have the first claim on profits and are known under the general title of railway guarantees.

On their stability and certainty Mr. Whitehead says :--

Whilst however the Government, with the concurrence of the Legislature, have the power in their hands to effect reductions in the rates of interest paid on the National Debt, they have none to reduce railway dividends to 10 per cent., and they may at some future day become possessors, by purchase, of existing railways: when however such epoch arrives, they must take them as they find them, and respect all contracts which shall have been entered into by the several companies with other parties. The railthe several companies with other parties. The railway landlord must under his lease be paid his rent, whether the Government or a mere railway com-pany be the tenant. The railway preference share-holder must in like manner retain his rights; in short, all engagements must and would be held sacred. Finally, with a security, at the least, equal to that of the government funds, railway guarantees offer to an investor an improved means of income, always calculable because always known.

The reader will observe that there are different degrees existing in these guarantees, some taking the first rank as having their rights confirmed by Act of Parliament, but most of them more or less in a condition of tantamount security, as having been recognized by amalgamation Acts, or issued under powers granted to the companies by their own Acts. These are severally treated of and distinguished in the work before us, to which we must refer our readers. Should any question hereafter arise as to the legality of any of these preference shares, there is no doubt that the Legislature would step in to protect the holders; and no court of equity would seek to set aside acts of general meetings, at which, of course, these shares had been sanc-Indeed clauses have been during the last session expressly introduced in railway Acts to protect preference shareholders.

A list of the lines which have issued guaranteed and preference stock is comprised in the above pamphlet, in which all the particulars are given; also tables of each class, with calculations of relative value; and as they are arranged alphabetically reference to them may at once be made. We observe, on going over them, two or three omissions-namely, the Manchester, Sheffield and Lincolnshire quarters (71 per cent. guaranteed for five years), the South Devon, and the York and Newcastle; but perfection was hardly to be expected, and these omissions can be added in a future edition.

While on this subject we direct our subscribers' attention to an improvement we have adopted in our 'Share List'; we had decided on making this change from having received at various times letters of inquiry asking such particulars. To save the time of our correspondents as well as our own, we have introduced a centre column referring to the shares quoted, and giving as much information as our space would permit. This will serve as a means of comparison and calculation, and we hope will be found useful.

RAILWAY PROPERTY: THE CAUSES OF ITS DE-PRECIATION, AND THE REMEDY.

We have now to show the fact that indirect taxes do so enter into the cost of labour in this country as to require a higher scale of price than obtains in other countries not so highly taxed, whether for raw materials produced, for commodities of all kinds, or for railways and other great works combining labour and materials. For instance, in the cost of the principal food, corn; besides the rent of land, there are charges amounting to 25 per cent., viz., the tithes great and small, the poor-rates, the church and highway rates, and labour, itself partaking of taxation to an extent we shall now show; this will best be done by means of a formula which has been supplied by a statistical writer in Hertfordshire who very modestly

withholds his name, but who has thrown considerable light on the bearing of indirect taxation on productive industry. The following is the calculation he has made of the proportion in which taxation enters into the wages of a labourer in our fields who maintains a family of five :--

			Tax	ation
	8.	d.	s.	d.
Bread, 71 loaves, at 6d	3	9	 0	101
Grocery				
Rent (the labour and materials of	•			
erecting the cottage have been taxed)	1	6	 0	41
Fuel (coal taxed in its labour)	1	0	 0	3
Meat (in food and wages)				
Clothes, &c. (taxed in production)				
		_	_	
	10	0	 2	51

This calculation is taken upon 10s. per week, the average scale of wages which obtains among the agricultural labourers of this country,-a scale sadly too much depressed, by the very nature of our currency, as we shall subsequently show, -a scale very much lower than that which ruled for the same class during the war, when a more just currency law existed, as we shall also show,-and a scale, too, far under that which railway proprietors are in the habit of giving to their labourers. It was to the higher and liberal scale of wages under which the railway works were proceeding that the prosperity of 1844, 1845 and 1846 took place; and which, but for the embarrassment occasioned, as it has been proved, by the impracticable monetary legislation of the first-named year, would have continued to keep our manufactories fully and prosperously at work, instead of railways and commerce being exposed to the destructive panics that have been experienced.

If this be the condition of production in this country,-labour taxed at the rate of 25 per cent., whether wages be high or low; because if the higher wages be spent in better clothing and more comforts, all those things are taxed in the labour which produced them in their various stages,—if this be our condition in Great Britain, it is obvious that we require for the interchange of the produce of labour so taxed, a circulating medium at the same level, and not one which cannot represent the same addition as gold at its natural value is unfitted to do. Therefore it has been, in all periods since taxation became so considerable in this country as to add to price, that our silver currency has been circulated as tokens at a lower level than the declared Mint price of the metal. This was the state of things in this country up to 1816, and indeed up to the time the legislative change of 1819 came into effect, first, in the year 1822, then having been alleviated until 1826, and partially until 1829. Gold and silver conjointly were at those periods our standard, relieved still further in their united action, not only by the lower range of silver in conjoint use, but by a sufficient issue of bank notes as low as one pound each and by Exchequer bills.

In 1816, however, almost unperceived, the standard of value was changed to gold alone, at the present Mint price of 31, 17s. 101d. per ounce, silver being permitted only to be a legal tender to the extent of payments of forty shillings. This change was not operative until the subsequent Act of 1819 came into force. Then was the nation made to feel that they had passed under a change paralyzing to its industrial power, and productive of the most fearful panics, which periodically returned, and greatly destroyed the profits of intervening years of industry and enterprize, any manufacturing or commercial man engaged extensively in business, and not possessing a monopoly, before and since 1825, will only have to consult his books to verify what we have said.

That these are not merely individual opinions we have the means of proving by reference to the works of Mr. John Taylor, who, writing on the change effected in 1819, in a pamphlet entitled "Who pays the Taxes?" thus expresses himself .- (We make no apology for this quotation, because everybody who wishes to understand the philosophy of Money must render himself familiar with the writings of Mr. Taylor.)

The law for resuming cash payments, that is, the Act of 1819, is at variance with the principle on which the greater part of our taxation is imposed. When the bill of 1819 was brought in it should have been entitled 'A bill for changing the principle on which taxes on commodities are levied, charging them in future to the poor instead of the rich, for that has been its undeniable operation. Introduced in the sheep's clothing of its present meck title, its real character was by many not suspected. That it has changed the principle.

ciple of taxation will be acknowledged by all who consider

ciple of taxation will be acknowledged by all who consider the natural effect of taxation on prices, which effect is so well described by Mr. Hudson Gurney, late member for Newton, in a tract of eight pages, printed in 1810, during the sitting of the Bullion Committee, that I cannot do better than make it my text on the present occasion. "Every new tax which is imposed to raise the interest on a loan necessarily resolves itself into a creation of paper, representing no real increase of asset, but primarily, the increased price of the article taxed, and secondarily, of all other articles of consumption exchanged against it. A man possesses a commodity worth 1000; it is taxed, say 50, or 61, the purchaser must now pay 1100. for it? this is paid by a bill of exchange for 1100., and this bill splits itself into and carries out 1100. In bank or bankers' notes, on the transfer and security of that which would have carried into circulation only 1000. before—(of course in each case minus the discount). As many of these notes as are become necessary to exchange the fractional parts of commodities at their increased nominal value stay out, but, as no one keeps by him more non-interest notes than he wants for his immediate payments, the rest are inevitably returned on the banker who issued them—very often left with him in the shape of deposit, for which he pays an interest."

According to this most clear and astifactory explanation of the effect of taxation in raising prices, the commodity which was previously worth 1001, being taxed 50, or 61, will be charged to the purchaser 1101; and as many notes only as are necessary to represent that increased price will be retained in circulation, the rest being returned to the banker who issued them. This was Mr. Gurney's statement in 1810. Is it confirmed by facts? Was there such a general and simultaneous increase in the amount of annual taxation, of bank notes in circulation; and of prices of commodities during the late war, as this theory supposes? Taking the vesses of the com

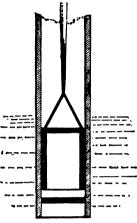

It will hence be apparent that the large sum of annual taxation at present indirectly levied, renders a more expansive and steady currency, than a basis of gold will permit, absolutely necessary for the expansion of prices combining actual value and taxa-tion; and that to deny such a just and reasonable currency, as is done by the Act of 1819 and its complements of 1844 and 1845, is to fix directly upon the producers, whether of commodities or of the railways of the country, the taxation which they are compelled to advance, as it is professed, only as the indirect agents of such taxation. Nothing but a Currency that will admit a fair range of prices incident to the nature of our taxation, and checked only by open competition of the market, can secure permanent prosperity in this country. With succurrency panics would be as "a tale that is told." With such a

FREE-ACTION PUMP FOR COFFER DAMS.

Sir,-At the end of a letter published in the Railway Chronicle of the 22nd Dec., by Mr. Wrighton, on the subject of a "new axle-box for railway carriages," there is a note inserted which will, I trust, afford me a sufficient plea for troubling you with a short description of a Pump which I have been try

ing lately in one of our coffer dams at the bridge over the Trent, now in the course of construction upon the Great Grimsby and Sheffield Junction. The principal features in the invention are_that the action of the pump is independent of the contact of any two solid rubbing substances:-that on this account it is not subject to the derangement to which other pumps are liable, in which water-tight joints of one kind or another are required, and upon the perfection of which, universally, their effectual working, and in many cases, their actual working, depends: that it can be used in engineering works where ordinary pumps would be choked :- and that it can be constructed wholly of wood, in a short time and at a The accompanying sketch shows a trifling cost.

section of the one which I tried, and which discharged as much water (working at fourteen strokes per minute) as a 12-inch circular suction pump. The working part was below the surface of the water on starting the pump, although when once at work it would continue to draw water until the surface fell below the bottom of the main. The bucket, which was a square wooden tube, closed by a common flap valve at the top, was suspended by a wooden rod connected with the rocker above, and worked within another wooden tube 10 in. square inside, open at the top and constituting a main 26 ft. long. bucket worked clear of this main, about 1-16th of an inch on every side, and was 3 ft. long. About 8 in. or 10 in, from the bottom of the main, another valve was inserted, which, together with that in the bucket, opened upwards. The stroke of the pump was 4 ft. The mode of action is clear. As the bucket rose, the water rushed in at the lower valve, and by this means every up-stroke raised the surface within the main, a certain amount—the motion of the bucket and the supply through the lower valve being too rapid to admit of the escape of any significant quantity of water between the bucket and the main. The experiment was exceedingly satisfactory. The pump lifted sand and gravel in considerable quantities, and though scored by the same in the immediate neighbourhood of the bucket, its action was not in the least impaired. I would add that the original idea of this pump was not my own, but was communicated to me by a deceased relative;—but the pump in its present state is mine, and is very much more simple than the original model.

DENZIL J. H. IBBETSON. Engineer's Department, Gainsborough, Dec. 27.

#### Broaress of Works.

DUNDER AND PERTH (Perth Station). - Operations have commenced, says the Perth Courier, to erect a temporary station for the line between Prince's street and the river. This is to be the site of the permanent passenger station, the connexion by the viaduct with the general terminus being intended chiefly for the general terminus being intended cinery for the through goods traffic. An inclined plane has been formed from Prince's-street to the level of the via-duct, which is 18 ft. above the shore road, about the middle of which the offices are erecting. The bridge is completed to the draw, which is expected to be finished in the course of a few days. The draw is to work horizontally, on the principle of the gates at the West Luid Books of London; and it is expected to West India Docks of London; and it is expected to be so easily wrought as to cause little detention, in the event of a passage being required for a vessel.

Only one, we understand, has yet passed to the old Coal Shore since the wooden arches were erected; but when the building season again commences several cargoes of Fife and Midlothian free-stone are

several cargoes of Fife and Midlothian free-stone are expected; and so long as that trade continues a frequent use of the draw may be required.

EAST LANCASHIRE.—The last link, of some 90 miles in length, and which, at a cost of between two and three millions, completes the system between Lancaster and Yorkshire, accommodating a population of 400,000 persons, from Burnley to Colne, where the main line becomes connected with the Leeds and Bradford is now ready for opening. Goods trains Bradford, is now ready for opening. Goods trains, to test its structure and consolidate its permanent

way, traverse it daily.

Oxford, Worgester and Wolverhampton.

Owing to the anxiety of the inhabitants of Worcester to have a direct communication with the northern and more populous parts of the country, the opening connecting the line with the Great Western will be made as early as possible.

SHRRWSBURY AND CHESTER (Oswestry Extension) -This branch, connecting Montgomeryshire with Shrewsbury and Chester, and thence by the central network of lines at Crewe and Chester with the manufacturing districts, was publicly opened on the 2nd inst., Capt. Simmons, the Government Inspector, having previously certified its fitness for spector, naving previously certified its notices for traffic, a large proportion of which will consist of mineral produce. All the main trains will be so arranged as to correspond with those on the new extension. Trains filled with passengers have been traversing the line throughout the week.

#### FOREIGN.

BRUNN AND BOHEMIAN TRUBAU.-This section of the Austrian State line was announced to be opened on the 1st inst, whereby the distance between Prague and Vienna will be considerably abridged, the present railway communication being a less direct one.

#### Accidents.

CALEDONIAN.—Jan. 3.—A fire broke out at the Lothian road station, and raged with considerable violence till between 9 and 10 a.m., when it was-extinguished. Since the opening of the line a temporary wooden erection has been used as a booking-office, the permanent offices being in process of building. Two of the new sheds connected with the permanent station have been destroyed also two CALEDONIAN.-Jan. 3.-A fire broke out at the the permanent station have been destroyed, also two brick buildings, and several coaches, together with a quantity of goods. The origin of the fire has not yet been ascertained. The accident will not cause any been ascertained. The accident will not cause any stoppage of traffic. The damage done must be great, owing to the large quantity of goods destroyed, consisting, among other things, of a number of boxes of tea, several bales of Manchester manufactured goods, and packages of provisions: nine third class passenger carriages have also been burned, and six trucks. The officials estimate the loss at between 6,000% and 7,000%.

At the inquest on the body of a labourer killed on the DATCHET line, near Wraisbury, on the 26th ult., a verdict of "Accidental Death" was returned. There was no blame attached to the company's servants.

ROBBERT ON THE GREAT WESTERN .- Jan. 1 .- The ROBBERY ON THE GREAT WESTERN.—Jan. 1.—The up mail, leaving Plymouth at 6 35 p.m., and Exeter at 9 p.m., arrived at Bridgewater at 10 30 p.m. At this station various bags of letters which had accumulated in the Post-office van during the trip were, in accordance with the usual custom of the guard, placed in a tender immediately at the rear of the Post-office van, Tha train in addition to the tender immediately at the rear of the Post-office van, and securely locked up. The train, in addition to the Post-office and tender, consisted of six or seven first and second-class carriages, and left Bridgewater in due course, and proceeded on its journey to Bristol, the run between these two places being timed to occupy 1 h. 10 min., without stoppage at any station. On the arrival of the train at Bristol shortly before midnight, the guard went to the tender in the rear of the Post-office, in order to deliver the Bristol bars, when he office, in order to deliver the Bristol bags, when he discovered that all the bags had been more or less tampered with, some being cut open, and others left with the seals broken and strings untied. He then found that all the money or registered letters, as well as the bankers' parcels, had been abstracted, and without a moment's loss of time he communicated without a moment's loss of time he communicated first with the two travelling Post-office clerks accompanying the mail, and subsequently with the Post-office authorities at Bristol. The guard was quite positive the bags were safe when the train left Bridgewater, and as no stoppage had taken place between that town and the city of Bristol it was suited that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the subsequent that the sub evident that the robbery must have been effected by some parties travelling by the train, and while it was in motion. After a few moments' consultation, it was

resolved to send the metropolitan bags on to London in the state in which the guard had discovered them, and accordingly the train left Bristol on its upward and accordingly the train left Bristol on its upward journey, after a very short delay. On reaching town at an early hour the next morning, the guard proceeded direct to the Post-office in St. Martin-le-Grand, and made a full report. The various bags were immediately examined, when it was found that not only were the whole of the registered letters and bankers' parcels abstracted, but in some cases the bills on which all registered letters and valuable parcels are entered were also missing so that it is impospuls on which all registered letters and valuable parcels are entered were also missing, so that it is impossible to say how far the plunder has extended. Information was then forwarded by the Post-office authorized to the post-office authorized to the property of the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-office authorized to the post-of mation was then forwarded by the rost-omce authorities to the various city banking-houses, so that a check might be put upon the disposal of the contents of the stolen letters. At the same time active measures were taken in order to discover a clue to the deprewere taken in order to discover a cide to the depredators, and in the course of the morning Mr. S. Clarke, superintendent of the Great Western, with two or three officials of the Post-office, left Paddington for Bristol, in order to investigate the affair.

Later in the afternoon information reached town of a second robbery, precisely similar in character, per-petrated on the down mail which left London at 1 55 petrated on the down man which lert London at 1 DD p.m. on the previous evening. In this case the bags deposited in the tender were perfectly safe on the arrival of the train at Brisdon at 1 15 a.m. On the tender being opened at Bridgewater, a scene similar to the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the prope to that previously observed at Bristol presented itself; all the bags were more or less mutilated or disturbed, and the more valuable contents abstracted there The suspected thieves were this time luckily The parties alluded to are two men of arrested. The parties alluded to are two men of respectable appearance, both of whom travelled in a first-class carriage, occupying the next compartment to the Post-office tender. Their implication in the affair is placed beyond doubt by the discovery of several registered letters and money parcels in the carriage in which they rode. Immediately upon carriage in which they rode. Immediately upon their apprehension they were conveyed to Exeter. It is believed that both robberies were effected in the same manner, viz., by parties who rode in a first-class carriage, first contriving to occupy the next compart-

ment to the Post-office tender, and subsequently, when the train was in motion, at the imminent risk of their lives, leaving their carriage, and stepping on to the tender, then traversing the narrow ledge running along that carriage, until they came to the door, which there can be little doubt they were previously prepared to uplost. This does there could be could be a subsequently prepared to uplost. ously prepared to unlock. This done, there could be little difficulty to overcome. The tender is always little difficulty to overcome. The tender is always well lighted by a lamp suspended from the centre of the roof, and having once obtained entrance, an expert thief would speedily abstract the booty. Mr. Barlow, through the information of the guard, had caused the men to be arrested; and, on the 2nd, they were examined before the Exeter magistrates, and

One of the servants of the North British was taken up on suspicion of abstracting a tin box containing 44. from the Edinburgh station. The man was discharged, as the facts were not sufficiently strong against him : in the course of the day he

London Stock Exchange, Jan. 5 .- There is a gra-London Stock Exchange, Jan. 5.—There is a gradually progressive improvement in railway property, and prices are higher. Much damage, however, arises from low-class debentures being offered, to pay from 6 to 9 per cent. The following are the latest transactions in foreign lines:—Boulogne and Amiens, 8; Central of France, 7½; Dutch Rhenish, 1½; Namur and Liége, 5½; Northern of France, 8; Orleans, Tours and Bordeaux, 2½; Paris and Orleans, 28; Paris and Rouen, 18½; Paris and Strasburg, 2½; Tours and Nantes, 1½; West Flanders, ½.

Liverpool, Jan. 4.—Our market has been very strong all the week, with a gradual advance in prices.

strong all the week, with a gradual advance in prices. The following are the actual transactions of to-day, prices firm:—Caledonian preference, \$ pm.; Great Northern, 98 dis.; Lancashire and Yorkshire quarters, Northern, 9g dis.; Lancashire and Yorkshire quarters, 5 dis.; ditto, fifths, 6g dis.; ditto, 822. shares, 7g dis.; ditto, preference, 1g pm.; ditto, West Biding Union, 4g dis.; London and North-Western, 127; ditto, new quarters, 2g pm.; ditto, fifths, 5g pm.; ditto, C quarters, 2g pm.; Midland, 87; ditto, halves, 6g dis.; North Staffordshire, 3g dis.; Scottish Central, 26; Shrewsbury and Birmingham A's, 6 dis.; ditto, B's, 3g dis.; ditto, preference, 9g; South-Eastern, 24g; ditto, No. 2, 10 dis.; ditto, No. 4, 7l. 13s. 9d.; Newcastle preference, 2s. 6d. pm.

Suddow, Brothers.

Suprow. Brothers. Manchester, Jan. 4. - Our share-market has been gradually improving during the week, though no great amount of business has been transacted. To-day shares are rather less buoyant. Actual To-day shares are rather less buoyant. Actual transactions this day:—Caledonian preference, \$\frac{3}{2}\$ pm.; East Lancashire quarters, \$5\$; Exeter, Yeovil and Dorchester, \$\frac{1}{3}\$ dis.; Geat Northern, \$10\$ dis.; Lancashire and Yorkshire \$32\text{.shares}\$, \$7\frac{1}{4}\$ dis.; London and North-Western new quarters, \$2\text{.}\$ 3s. \$9d\$. pm.; Grimsby and Sheffield 50\text{.shares}\$, \$25\frac{1}{2}\$ dis.; Grimsby Docks, \$12\frac{3}{2}\$ dis.; Sheffield and Lincolnshire, \$12\frac{1}{4}\$ dis.; North Staffordshire, \$3\frac{1}{2}\$ dis.; South-Eastern No. 4, \$14\text{.}\$ dis. \$14\text{.}\$ Grimsby Bod. \$15\text{.}\$ A. Grimsbod. 71. 6s. 3d. ex int. SAM. GRINDROD.

Birmingham, Jan. 4.—There has been a good amount of business doing in this market during the week, and prices have greatly improved, with a prospect of a continuance of the rise, holders not ap-pearing disposed to press their stock on the market. The chief business of the week has been in North The chief business of the week has been in Arotan Staffords, which have been sold at 3l. 1s. 3d., dis., but closed to-day at 3\frac{3}{2} dis. Shrewsbury and Birmingham B's were done to-day at 4 dis. and preference shares at 1l. 1s. 3d. pm.

W. BANKS.

York, Jan. 4.— Our market has exhibited more firmness during the past week than for some time previous, but the amount of business transacted is not very large. Our quotations to-day are:—Great Northern, 9l. 6s. 3d.; ditto, halves, B guaranteed 6 per cent., 43; North British thirds, 43; York, Newcastle and Berwick preference, 8 ex int.; York and North Midland preference, 11g cum int.
GRAYSTON & EARLE.

Hull, Jan. 4 .- The share market has been well supported since our last, and in some stocks a fair advance has taken place: there is however still plenty of room for improvement, and we trust the present year will leave more pleasant railway re-miniscences than 1848. North British, North Staffords and Great Northerns are in request at the improved quotations, and there is more demand for low-priced shares. FLINT & TOOTAL.

Newcastle upon-Tyne, Jan. 4. - Our market has assumed a very firm appearance, and prices have risen considerably during the week. North British, and York, Newcastle and Berwicks are in demand; Newcastle and Carlisles have left off to-day buyers at 1 pm. W. FORDYCE. 1 pm.

Glasgow, Jan. 4.—A good business has been done Glasgow, Jan. 4.—A good business has been done this week at steady prices, but the highest rates are scarcely maintained to-day. The Ayr meeting on Tuesday has had a prejudicial effect on the stock which has since been freely offered:—To-day's latest sales are:—Caledonian preference, \(\frac{3}{4}\) pm.; Dundee and Arbroath No. 3, 2l. 14s.; Dundee and Perth quarters, \(\frac{1}{4}\) pm.; Edinburgh and Northern, 12\(\frac{3}{4}\). Dumfries and Carlisle, 5; Ayr, 46; ditto, halves No. 1, 12\(\frac{1}{4}\) dis.; Scottish Central, 26.

Bucharan Attern & Co.

BUCHANAN, AITEEN & Co.

Paris Bourse, Jan. 4.—The market is buoyant, and the following are the latest prices:—Orleans, 720f.; Rouen, 467:50f.; Havre, 250f.; Northern of France, 403:75f.; Avignon, 190f.; Vierzon, 260f.; Basle, 85f.; Paris and Strasburgh, 338f.; Tours and Nantes, 317-50f.

## Joint-Stock & Commercial Gazette.

The half-yearly court of the South Sea Company was held on Thursday. A statement of accounts was laid before the meeting, from which it appeared that the revenue of the company for the half-year ending the 5th of January last was 156,441*l*. 4s. 7d., and the expenditure 91,679*l*. 5s. 9d., leaving a balance of 64,761*l*. 18s. 10d., out of which it was proposed to pay a dividend of 13s. 4d. per cent. for the half-year on South Sea Stock, amounting to 64,098L 14s. 6d., and leaving a balance to the credit of the company of 663. 4s. 4d. It also appeared that the assets of the company amounted to 814,951l. 4s. 11d., and its liabilities to 775,211l. 11s. 10d., leaving a balance in the company's favour of 22,644l. 11s. 1d. The dividend as proposed was unanimously declared, and the thanks of the meeting given to the chairman, Mr. C. Franks.

The following American public institutions have declared half-yearly dividends. Western Railroad Company of Massachusetts, 4 dols. per share; Albany and Schenectady (Mohawk) Railway Company, 3½ per cent. out of earnings; and Ætna Insurance Company of Hartford, 10 dols. per share.

Banks. A second dividend on Messrs. Clayton & Co's. estate is expected to be paid next: month the amount will be 1s. 8d., making altogether 5s, in the pound paid. The estate it is expected will realize a little

more than 10s. in the pound. The business of this firm was carried on at Preston.

It is mentioned, in advices from Madrid, that the Minister of Finance had completed his plan for reorganizing the Bank of San Fernando.

Assurance.

The ordinary annual meeting of shareholders in the City of London Assurance Society was held at the offices on Wednesday; Dr. Bennett in the chair. Mr. D. LEEKS read the report for the past year. The document stated that-

Mr. D. LEERS read the report for the past year. The document stated that—
During the last year 190 proposals had been accepted by the directors, assuring a total of 74,0121.15z. 3d., and producing an additional income of 2,0741.3z. 7d. They had declined policies to the amount of 18,1002. Since the accounts had been audited they had completed twenty additional proposals, assuring 7,9962; making the gross annual income 6,4241.13z. 5d., and showing, on comparison, the increase of income this year to have exceeded last year's increase by the sum of 4402. Proposals had also been accepted, but were not completed, for assuring an aggregate of 4,5504., at premiums amounting to 1281.19z. 5d. per annum, and these applications are now under the consideration of the directors, as are also ten other proposals for assuring a total of 2,2502. The balance-sheet, made up to 31st of October last, showed, on the debtor side, a total of 16,3202. 15z. 7d., the principal items composing which were—balance from last audit, 9,6212. 11z. 5d., and life premiums 5,9712.8z. 10d.; on the creditor side the chief items were—charges of management, 2,1782.10z. 5d.; incidental expenses, 923.18z. 8d.; dividend to proprietors, 2663.3z. 4d.; and balance (including amount on mortgage, exchequer bills, cash at bankers &c.), 12,6482, 11z. The report was unanimously received and adopted, the dividend declared, and the retiring directors re-

On Wednesday, the third annual meeting of the proprietors of the Sovereign Life Assurance Company was held at the Thatched House Tavern; Lord A. was held at the Thatched House Tavern; Lord A. Lennox in the chair. The report (which was read by Mr. H. D. Davenport, the secretary,) stated that during the past year 191 proposals had been made to the Board, in respect of which 107 policies had been granted, covering assurances to the amount of 53,700l. and yielding in renewal premiums an annual income of 3,501l. 4s. 5d. Many of the policies effected in the Sovereign were issued in connexion with leans. After some discussion in reference to with loans. After some discussion in reference to the balance-sheets,—the report was adopted, the re-tiring officers re-elected and a dividend at the rate of 4 per cent. declared, to be paid, clear of incometax, on and after the 15th inst.

Docks.

The half-yearly meeting of the London Dock Company was held on Tuesday. Mr. Powles (the secretary) read the report for the half-year ending the 30th of November last, which stated that—

of November last, which stated that—
The number of loaded ships from foreign ports which entered the London Docks during the six months was 983, measuring 234,426 tons; the number for the same period of 1847 was 988, measuring 260,972 tons, being a decrease of 26,366. The decrease was in proportion to the decrease experienced by the other docks. The amount of earnings during the last six months was 234,390. 4st. 1d., against 229,1444. 5st. 4d. in the similar period of 1847. The amount of expenditume for the last six months had been 132,9971. 1st. 9d., and for the corresponding six months of 1847, 132,8711. 4st. 5d., including the payment of income-tax. There was now standing to the credit of profit and loss 228,494. 12st. 9d., out of which the directors recommended the proprietors to declare a dividend of 2½ per cent. on the company's stock for the half-year, amounting to 90,957. 12st. 4st., leaving a balance in favour of the company of 137,527. 0st. 5d. Of the balance standing to the credit of profit and loss the sum of 196,152. 11st. 2d., consisted of the amount of outstanding charges due to the company on goods in the warchouses. The stock of goods in the warehouses on the 36th of November last was 122,504 tons, and at the same period last year it was 113,835 tons.

The new warehouses and alterations proposed and being made will cost about 20,000. The report was

being made will cost about 20,000l. The report was adopted, the dividend declared, and a vacancy in the direction filled.

Steam Navigation. The advices from Cuba state that the company of the Guadalquivir had determined on establishing a line of Spanish Transatlantic steamers to run between the Peninsula and its colonies.

Mines

The half-yearly meeting of the Santiago Mining Company was held at the office, Broad-street Buildings, on the 4th inst.; Sir I. L. Goldsmid in the chair. The Secretary read the report, which declared that—
The directors had stated at the last meeting, that operations had been organized for developing the lodes which, tions had been organized for developing the lodes which, during the last year had been proceeding with activity. The shaft of the Trevense mine had been sunk to forty-three fathoms, and the level extended a considerable distance, and the last letters reported that there was an improvement in the lode, and a change of strata. There had been no material change in the Des Cubierta mine. The company material change in the Des Cubierta mine. The company had lately denounced (i.e. opened) Pertinencia, which appeared to give indications of mineral, and late letters say the lodes contain ore of a coarse quality. The accounts showed the expenditure for the half-year ending the 31st of August to be 9.138. 19a. 3d., a large portion of which had been expended in developing the lodes of the Des Cubierta, Trense, and St. Patrick mines. The quantity of copper ore produced during the six months was 500 tons, which was

shipped in November. The stated value of this was 3,800?, which, with interest on the employed capital, gave a receipt of 4,114. 2s. 11d. for the half-year. Two months subsequently 240 tons were raised, and the letters stated that it was contemplated that 130 tons per month would be continued to be raised for the next five months, exclusive of what might be produced from new discoveries. It was expected that the ore raised, as stated, would be sufficient to pay the current expenses, and the directors believed they were not too sanguine in anticipating a dividend next half-year. The accounts showed the assets of the company to be 33,240. 19s. 4d., of which 24,817. 15s. 12d. was money at interest. The report was adopted. The chairman stated that their prospects were greatly improving. Thanks were voted to the chairman.

The Callington mining company held their quarterly meeting on Wednesday; Mr. R. Hodgson in the chair. The accounts laid before the meeting showed, chair. The accounts laid before the meeting showed, on the credit side, receipts from silver lead ore, 3,8751. 11s. 3d.; copper ore, 812l.; Kelly Bray cost (deducting 812l. for copper ore), 360l. 3s.; balance from last account, 220l. 14s. 4d. Expenditure: cost at mine, 5,467l. 5s. 4d.; interest and discount, 22l. 17s. 9d.; directors' attendance and London management, 112l. 10s.; making a total of 5,603l. 13s. 1d.; leaving a balance against the company of 335l. 4s. 6d., as a set-off to which there were 10 tons of bunt ores, estimated at 150l. and subsist (or money advanced to the miners) for September, 190l.; together, 340l. The mines are stated to be looking more favourable. The report and accounts were adopted and thanks voted to the chairman. and thanks voted to the chairman.

The advices from the National Brazilian mines are

to the 17th of October, and represent the returns for ten days from Cuiaba to be mks. 5 1 6 55, which is

considered satisfactory.

The St. John del Rey advices are to the 18th of October. The accounts are for ten days' working; the quantity stamped was 2,027 tons of stone, calculated to be worth 6,290 oits. The supply of ore from these mines seems inexhaustible; and the new discovery is going on satisfactorily.

The two-monthly account meeting of the East

Wheal Rose adventurers was held on the 25th ult., when a dividend of 30t. per share was declared.

The Anglo-Mexican letters are to the 6th of No-

vember; the report shows a loss of 198 dol. on October month working.

The Bolanos report for October advises a remit-

tance of 33,264 dol

The United Mexican advices are to the 6th of November; the mining report presents a very satisfactory prospect, whilst the increase of October ores over the preceding month appears to be about 784 cargas.

North Pool bi-monthly account meeting was held on Tuesday last, when a dividend of 17L per share was

Wheal Benny and Lamherooe Wheal Maria meetings were held on Thursday, at the offices. The statement of accounts in the former shows a balance of 55l. 7s. 3d. in favour of the mine, but a call of 1l.

per share was deemed necessary.

The Morning Chronicle states that in America the gold fever was raging more violently than before; 80 yessels were laid on at New York alone for California, Sal of which were advertised to sail for San Francisco between the 20th of December and the 10th of January. The offices of the steam-packets connected January. The offices of the steam-packets connected with the line to Chagres were besieged with people eager to secure passages; every berth was already taken in the vessels appointed to sail during the next two months; and the steamers to San Francisco were likewise full up to the 1st of March. The Government are going to send ships of war to protect their import rights. There were several projects for the formation of a railroad across the Isthmus of Panama. The object had met with high favour. A vessel arrived at Boston, from the Sandwich Islands, reported the place as almost depopulated owing to the rapid tide of immigration to the gold regions of

California.

The following is a summary of the last sales of copper ores by ticketing, for the current quarter, at Swansea and in Cornwall, on the 28th ult. The Swansea and in Cornwall, on the 28th ult. The quantity of ores sold in Cornwall during the quarter ending December 24, 1848 has been 35,972 tons, realising 176,833*l.* 0s. 6d., being a decrease from the previous quarter of 3,234 tons, but an increase in money of 1,223*l.* 4s.—the quantity sold in the quarter ending Sept. 1 being 39,026 tons, and realising 175,609*l.* 16s. 6d. The total sales at Swansca have amounted to 13,689 tons, realising 167,877*l.* 15s. being a decrease, as compared with the last quarter, of 1.724 tons, and an increase in money of 6,292 10s. of 1,724 tons, and an increase in money of 6,2931. 19s.

The transactions this week have been principally in Australian, Bolanos scrip, Brazilian, United Mexican, and Real del Monte unregistered. St. John del Bey and Australian shares are at a premium of 21.

IRON TRADE.—Glasgow, Dec. 30.—This has been a brisk week, says the Times correspondent, in the iron trade, and extensive transactions have been entered into at from 2s. to 2s. 6d. per ton of advance. Mixed numbers are quoted at 44s. 6d. per ton nett cash, free on board. No. 1 Gartsherrie is quoted at 45s. to 45s. 6d. cash. Bars are from 5l. 5s. to 5l. 15s. per ton, and the market steady. During the year just closing the average price of mixed numbers has been 21. 4s. 4d. per ton, free on board. The average for 1847 was 3l. 5s. 4d. The computed make of pig iron in Scotland for 1848 is 580,000 tons, against a make of about 480,000 in 1847. The stock in stores and in the 480,000 in 1847. The stock in stores and in the maker's hand at this time is estimated at nearly 100,000 tons, being an increase of 18,000 tons as compared with the similar period last year. From the closing of the Continental markets and the cheapness in price, the exportation of pig iron from the Clyde to the United States has been more than double that of any former year. At present there are 103 furnaces in blast in Scotland, and 35 out of blast.

TO CORRESPONDENTS. M. J. T .- The payment was made about January. Write

to the local agent whom you mention.

R. R. is referred to the advertised offers of the company.

RECRIVED: H. S., Cheltenham.

## Railway Chronicle.

LONDON, SATURDAY, JANUARY 6.

The silent march of Time has now placed us within the threshold of a new year; and 1848, with all its disasters and changes, has passed away. Never surely did a few short months present such a series of events! The commercial pressure of the latter part of 1847 appeared to be diminishing, and men reasonably expected that matters were to resume their ordinary course, when the astounding intelligence reached England that the sagacious and powerful king of the French had abdicated his throne, and was a fugitive before his enemies. There is no romance like that of real life, and none of the ex-king's escapes in his long and adventurous career were more remarkable than this last, in which, with his queen, he reached in safety the shores of England, almost penniless, and destitute even of a change of raiment. It would take up more time than our space will afford to trace even an outline of the various convulsions which followed that in France;—the recollection of them is too recent to require more particular allusion, but we cannot forbear congratulating our readers on the manner in which the insane endeavours of some mischievous and misguided men were met by the majority of their resolute and well-disposed countrymen. The chartists in England and the rebels in Ireland were effectually put down, and, happily, almost without bloodshed! Such events, however, could not but act injuriously on Commerce; and we have probably gone through as severe a crisis as ever occurred in Great Britain; -nevertheless we have great reason to be thankful that we have not suffered to anything like the extent that our neighbours across the Channel have done, where credit has been annihilated, and trade all but destroyed. Germany and the rest of Europe, excepting Russia, have been convulsed politically and commercially nearly as much. The interest to which we more particularly devote our columns has been very freely blamed as the great and crying evil which occasioned the commercial crisis; -but from this we differ. No doubt too large an amount of capital was devoted to the construction of railways,-too many were commenced at the same moment, and speculators who undertook to provide thousands, where they should only have promised hundreds, have ruined themselves in the crash their rashness produced, and brought the value of railway property to the lowest ebb. The tide, however,

steadily on the turn, and unless politics interfere to check its onward progress we look forward with hope and confidence to the future. We are far from wishing to buoy up vain expectations; but if railways are prudently conducted, -and surely directors have had such a lesson lately as ought not to be forgotten,-they will yet pay a remunerative interest, and, in spite of the burdens which have been imposed upon them, benefit the shareholders, who though it has been the fashion to abuse them, are still entitled to some consideration. Let us now look a little at the advantages they have spread through the length and breadth of the land. To those who travel, either on business or pleasure, their value in money, time and safety is beyond calculation; and whether it is the sovereign or the subject, all in their respective positions are reaping the fruits of the spread of railways. To the consumers and merchants the facility and cheapness of communication afforded by the iron roads is enormous. Manufactured goods are delivered at every considerable town in England or Scotland, a few hours after the order is received in Manchester, Birmingham, or Glasgow; coals are brought to the door of the hall or the cottage, and delivered in many places at less than one half their former cost, in all at greatly reduced rates, and an important addition to health and comfort brought within reach of the poorest. These are only a few of the advantages which railroads have introduced amongst us, and yet the capital laid out on their formation has been denounced by some writers as valueless: - their construction has been compared to that of the Pyramids, or Versailles; and the national loss assumed to be equally great. Such exaggerated statements would hardly deserve notice if they had not been made from quarters which command attention. We think, however, that better days are coming, and heartily trust that this time next year may prove the correctness of our views. When we look at the enormous aggregate which has been received every week during the past year, even in our worst periods of cruel and trying adversity, we see sound grounds for assuming that more prosperous times must bring with them a corresponding increase to the internal traffic of the country, which must, of course, re-act to the material advancement of railway property.

We hear that the GREAT WESTERN, in spite of their protest on the Windsor extensions, during the late abortive treaty of amalgamation, have given up the design of "op-posing to the uttermost," as they threatened to do, the London and South-Western project; which, accordingly, we presume, will now go through Parliament without resistance in any quarter,-the consent of the Woods and Forests having long since been formally given. There can be no doubt that in coming to the more pacific resolution, the Great Western have acted wisely. Under the circumstances of the case, which were fully discussed by us at the close of last session (see Rail. Chron. 1848, p. 531), there could have been no chance of success to the opposition, which must, in common fairness, have been discountenanced by the chief authority and party in this affair—the office, namely, representing the Crown. The only result would have been a fresh expenditure of money, which neither party can well afford to throw away, and which the Great Western Company are certainly in no condition to squander in vain for the mere pleasure of distressing a rival. That some consideration of this kind has promoted the change of purpose we have little doubt; and it is a sign of promise in any concern in times like these, when such considerations begin to prevail. To damage a competitor is but a which receded so rapidly, appears now to be silly satisfaction, when it can only be done by

injuring oneself; and this process has already been carried on by the parties to the gauge dispute to an extent and with consequences that may well impose a limit to so ruinous a pastime.

One would like to see the wisdom which adversity is said to teach applied to a wider field than the Home Park of Windsor. The gauge contentions on the northern verge of the Brunel system have led, and are still leading, to a sad waste of capital; which even yet might be reduced to less mischievous proportions by the exercise of common sense, and by a perception of the common interest of both parties to this contest. We observed, while the triple negotiations were pending, that its only fea-sible objects were not necessarily dependent on a positive combination of the broad and narrow gauge companies; and further, that if there were any sincerity or rational purpose in that scheme, it might be exhibited with every effect that the circumstances and interests of the respective parties rendered practicable, in peaceful arrangements as between company and company. We have not heard, since the treaty was broken off, that any movement has yet been made in this direction; but we shall not at once give up all hope that something may yet be attempted in the way of adjustment between the wide and standard gauge companies, in the district where both are now spending enormous sums of money, and where both, if really actuated by the motives on which the treaty was ostensibly based, might probably, by an amicable process, still effect savings of easy adoption and of large amount. It has been observed, that the conduct of the parties in this respect would absolutely test the character of the late negotiations proposed by the Great Western; and we shall be glad to see something calculated to accredit its design applied to the debateable ground of the gauges north of Oxford. The object is one which neither company is in a condition to disregard, least of all the Great Western; while the state of its neighbours on both sides is such as to insure, one would hope, a willing reception to any bond fide proposal calculated to diminish expenditure; of which a large proportion has been in the nature of mere waste begotten of inconsiderate strife, and of which some part might yet be saved by a more rational view of the common interests of the rival bodies. Are they each waiting for the other to make the first move? or have they not yet learned to feel uneasy under a process by which each is a loser? These are questions which a little time must decide; but if any good is to ensue from an improved temper and a rational love of peace, they must begin to act without delay. When the money is all spent, it will be too late to wish that it had been saved.

The shareholders and the directors of the South Devon have both been holding their meetings respecting Mr. Gill's late pamphlet recommending the re-adoption of the atmospheric. The committee appointed by the directors deny the points advanced by Mr. Gill both as to the practicability and the further expenses of the apparatus; and the shareholders at their meeting resolved to support the continuance of the locomotive traction.

The shareholders of the TAW VALE elected two additional directors at their special meeting. The chairman stated that they had received altogether 44,000% on the last call.

The shareholders of the ABERDEEN, after a discussion conducted on both sides with considerable ability, resolved to support Mr. Spicer's list of directors, who will upset the agreement with the southern companies. The sitting occupied seven hours, and the various charges respecting the contracts on the line, and the late

exercise of the borrowing powers of the company were thoroughly investigated and set before the meeting.

The special meeting of the GLASGOW, KIL-MARNOCK AND AYR, to guarantee the debentures of the Dumfries and Carlisle to the extent of 433,000l., was adjourned for ten days, after a very acrimonious and personal discussion.

From our official returns it appears that the amount of traffic for the last week, on 4,246 miles of railway, was 202,428l., thus accounted for: — 99,847l. for the conveyance of passengers only, 53,041l. for the carriage of goods, and a remainder of 49,450l. for passengers and goods together, not respectively apportioned; being an increase of 25,174l. over the corresponding week of last year, when the mileage was 3,342. The average earnings per mile were 47l., whilst in 1847 they were 53l.

PRACTICAL LESSONS FOR THE PUBLIC ON CERTAIN RAILWAY QUESTIONS.

The state in which the railway interest now is, and the effect that this condition is likely to have on its councils for some time to come, will tend to clear up some points in its relations to the public, which it has been convenient for the latter to overlook, while the promoters of railways, in more sanguine times, were far too prone to allow it; and on which it may be to the advantage of both hereafter that there should be a better understanding. The proportion between a service undertaken, and the payment for it; and the principles by which a business, created by the funds of private persons, with a view to profit, must be regulated, have been too generally thrust out of sight; but the pressure of necessity is now compelling railway companies to be guided by them in proceedings which they ought to have determined from the beginning.

The agitation of the fare-question, for instance, can only result in a discovery, that the public have but themselves to blame if they have not made it long before now. They will find it of no use whatever to contend with the plain fact, that men who have laid out their means in a business, intended to profit themselves while benefiting their customers, will not and ought not to be expected to give up their share of gain of this bargain, in order that the other party may enjoy the whole of it. It will also follow from this discovery that it will not pay in the end to treat the railway body as a general butt for every one to shoot at; and that if the public will have cheap and luxurious conveyance, it must see what can be done to make it worth the while of those who supply it to afford this kind of accommodation. An interest assailed on the one hand by costs in Parliament, and land-owners' extortions; by the State demands of gratuitous service, and penny trains; by poor rates levied in defiance of all equality of assessment, and by the extravagant verdicts of juries, whenever a chance of punishing a railway is afforded, will not continue for ever, on the other hand, to make needless sacrifices in those parts of its administration where it is still free to observe the natural laws of traffic. It will be found that if the screw presses too hardly in one quarter, there must be some relief sought in another; and that nothing short of despotic rule will compel men to let themselves be plucked and pinched without seeking some compensation for it. If, therefore, the public desires more advantage in the service, it will have to remove some of the disadvantages hitherto imposed on those who have performed it. This, we say, is a matter hitherto greatly misunderstood, which the present tenor of events will help to place on its true footing.

In other ways the same lesson is beginning | treat them solely as matters of business!

to be taught. We perceive that in more than one district the residents are wishing for new lines and branches, and casting about to get them undertaken by other means than their own. In former years a public meeting of such enterprizing minds rarely failed to draw in some adjacent railway company, foolish enough to give them what they sought, receiving nothing in return but a string of resolutions; nay, often enough, the very parties who had thus got the scheme taken up, afterwards fastened themselves on the project the instant its promoters had gone too far to draw back, with extortionate claims for land, compensation for altered roads, damage to house property, occupation-bridges, &c. Of the character of this system we took frequent occasion to speak while it was at its worst height; and never failed to expose the emptiness of the usual promises of support, and the absurd pretensions founded upon them by local gatherings convened to declare in favour of this or against the other new line,-the friends or enemies of which had no assistance or hindrance to offer, but a string of ill-written resolutions. This kind of nonsense, we hope, has been finally exploded by the change that has come over railway affairs. The gentlemen who used to find it easy to inveigle the companies that were madly fighting with each other, into making branches for them, in return for what they chose to describe as "local support," will now have to learn that they can no longer, turns this kind of paper-currency into rails and earthworks. If they want such conveniencies they must support their construction in a more substantial way. The extant railway bodies have had enough, and more than enough, of the local "encouragement," for which in past years they were fooled into sinking vast capitals in unproductive undertaking.

There was a meeting at Faversham on the 26th ult., at which the new state of things became apparent. It was reported in the Railway Chronicle last week:—

FAVERSHAM AND CHILHAM .- On Tuesday a public meeting was held at the Town-hall, Faversham, Mr. C. J. Ililton in the chair, to consider the propriety of co-operating with the promoters of the proposed line of railway from Faversham to Chilham. The meeting had been adjourned from the previous Thursday, in order to obtain some definite information from the South-Eastern, as to the extent to which they would assist the project. A letter was now read from those gentlemen, stating their willingness to afford every facility to the undertaking, but it was totally out of their power to furnish any portion of the capital necessary to be raised for such a purpose. The attendance was exceedingly limited, but after the reading of a great deal of statistical information by the Right Hon. S. R. Lushington, and a protracted conversation, the gentlemen present passed resolutions to the effect that the proposed line is likely to confer great benefits on the town and neighbourhood, and it is desirable that subscriptions should be raised, in order to meet the expenses hereafter to be incurred in promoting the bill, for which notices have already been given; also that the Mayor be requested to call a general meeting of the inhabitants of the town and neighbourhood for the further consideration of this matter early in the ensuing month.

This reads pleasantly enough: especially the passage we have marked with Italics. It is amusing to observe how the tables have turned. The railways are now taking the very part which used to be exclusively played by the local worthies, in "demonstrations" of this kind. Plenty of civil words, but no capital—every "facility to the undertaking," of course, so long as you do not make any drain on our purses. This is just as it should be; and it is a great pity that it should only be getting into practice at the eleventh hour. What a mint of money would the railway interest have saved, could it only have learned in due time to look at such propositions in a common-sense point of view, and to treat them solely as matters of business!

We wish the Faversham gentry joy of their | time; and to act upon such return by proposing a new position, and of the wholesome lesson which they are now in a fair way of learning. When they begin to "raise subscriptions" in the "town and neighbourhood" they will take the first step towards understanding the nature of railway projects, and of the conditions on which they are to be promoted. If they go further, they will learn a little more; and should the "consideration of the matter" produce the funds required to make the line to Chilham, they will have a fair chance of being completely enlightened on a subject, in which "will" and "have" are not exactly convertible terms. If the railway will pay, it is exceedingly well that they should have it, -and make it. If it will not, they may still construct it, if they please; but the experiment must in either case be their own. The time for getting such trials made, at no cost to themselves, by the extant railway companies, is over, and will never, we trust, return.

From this time forth, indeed, it is to be hoped that the true nature of such projects will be understood, as also the value of local de-mands for their adoption. The test of both will plainly be, -is the line worth making? and of the affirmation of this, the only sufficient proof for some time to come will be, -will you make it? Those who form the extant railway body have their hands full enough of schemes taken up on a different principle, and feel pretty sorely the effect of taking them up on less solid grounds. For the future, the honour and advantage of such experiments may safely be left to the gentlemen who love to congregate at town-halls in Faversham and elsewhere: and whether they proceed or stop short in them, the result of the change of parts will, as we have said, be to instruct them in some matters of fact, which it is very proper that everyone in this country should understand.

#### MOMENTOUS QUESTIONS.

Sir By way of preparation for the forthcoming meetings, I beg to call the attention of the railway world to two subjects now enveloped in obscurity and I hope many shareholders competent to the task may be induced, by this letter, to require the necessary information upon them; they are both so important as to be worthy of introduction in February, by leading and influential men, and I rely that such will not be wanting to bring them forward: -- What becomes of unclaimed dividends? That they must amount to enormous sums, upon the great and old lines, is proved by the state of the published returns of the Bank of England and by that of the Suitors in Chancery Fund, yet though sixteen years have elapsed since the opening of the Liverpool and Manchester, and ten since the Birmingham began working, not a syllable has transpired nor a figure been set down in the accounts of any railway, save the Greenwich, showing their existence; upon that line, however, of 34 miles, 1,0001, was stated to be in hand eight or ten years ago, and that sum must now be greatly in-creased. To deny that upon every dividend-paying line there is such a fund, the boldest railway assertor, -and we have some daring hands at assertion, will not venture; and, forestalling the admission, I require to know the amount of unclaimed dividends upon every line in the kingdom as it has annually accrued, how it has been employed and where it now is? My impression is, that upon the great metropolitan lines there must be disposable on this account, leaving always undisturbed the last six years' unclaimed, being the period fixed by the Statute of Limitations, enough to pay a year's, or perhaps double that, extra dividend, at this moment. The withholding all mention of this reserve is not creditable to directors; if they "have nothing to conceal" why conceal it until it is drawn from them by public inquiry? The item is of too large dimensions to remain hidden in the secret recesses of office, and directors will do wisely, without more ado, to come forward at the next meetings with a return of the sums in hand from the dividends halfyearly, from the first dividend payment to the present

resolution that the fund up to 1842 shall be divided amongst the proprietors and paid with the February dividend. The next point upon which I require information is.—What security have we that the traffic returns are true? How do we know that 45,000L was the amount received upon the Birmingham last week? The receipt at each station is, I suppose, made up daily and paid in by the clerk in charge to provincial bankers or forwarded, as may be, to the central office: at the end of the week the amount of receipt at each station and the goods' money due are added together at the chief office, and the aggregate should be the sum of the newspaper return sent publicly forth. Now, who makes that addition? a finance committee? a treasurer? a secretary? is it done by one person or by many? If 1,000l. were weekly abstracted from each of the great lines for purposes of those lines respectively, or for private purposes, should we or could we know anything about it? It will be useless to meet me with the stale cry of confidence for my confidence is gone, and nothing will satisfy me but information and proof that the whole receipts find their way into the exchequers, of which, though I cannot prove that they do not, I SCRUTINEER. have strong misgivings.

#### HOW TO MAKE #500.

Sir,-From this date, henceforth and for aye, the original Newcastle and Berwick shares receive the same dividend and are in all other respects on the same footing as the old York and Newcastle shares, and vet the latter stock is regularly sold in London for 14 a share more than the former. The only difference in value between the two stocks at this moment is, that for the half-year ending the 31st of December last, the Berwicks get dividend on 201. and 5 per cent. interest on the remaining 5l., while the Yorks get a dividend on the whole 25l. The dividend for that half-year must be either 7 or 8 per cent. per annum; but take it at 71 per cent., and 1s. 3d. a share is the nett difference between the York and Berwick income. Even that difference after this day ceases. Now, suppose a York holder sells 1,000 shares at 281., and replaces them with 1,000 Berwicks at 271., he would clear after paying London brokerage, stamp and registration, no less than 10s. a share, or say 5001. This ought to be as plain to everybody else as it is to A. B. C.

#### Anggin.

The new year has ushered in some important alterations. The mails will henceforth run through from London into Lincolnshire, both by the North-Western and Eastern Counties routes, over the newly-opened Great Northern and East Lincolnshire, and will consequently be much accelerated. Passengers by these mails will also have the option of travelling either by the London and North-Western or Eastern Counpurpose on the latter line, which was felt to be in-convenient. On the Great Western, in compliance with the requisition of the Post-office, the mail from Exeter will leave for the intermediate towns and London at 245 p.m., instead of as formerly at 320 p.m. On the London and North-Western the trains, both on the northern and southern division, have been accelerated, i. e., their arrivals and departures at the termini are earlier.

Mr. Dockray, of the London and North-Western, has received a very gratifying testimonial of the esteem and respect of his brother officers and friends, in the presentation of a silver tea and coffee service, a centre-piece for flowers, and a massive salver, seven pieces in all, together worth about 200 guineas; also 500%. stock in the London and North-Western, purchased at par, now worth 625t., and a well painted half-length portrait, by Mr. Phillips. The subscribers are to have a copy of the portrait, which is now being engraved for the purpose. The inscription on the engraved for the purpose. The inscription on the plate recorded the date of the gift and the motives of the donors.

Money is reported to continue sufficiently easy, and at the Bank of England no want of confidence is exhibited for the future. According to report in well accredited quarters, that corporation has recently making advances of several hundred thousands of pounds on RAILWAY DEBENTURES or other preference securities, at the rate of 5 per cent.

A requisition has been sent to Mr. Josiah Wilson

(who is chairman of a committee of shareholders of the South-Eastern to consider the remuneration to

be awarded to the directors), for information respecting rumours of a division asserted to exist in the board.

The SALOON CARRIAGES are now being introduced both upon long lines and lines of pleasure. They have been launched on the Caledonian for the convenience of travellers in a continuous journey of between 400 and 500 miles in or out of London. The interior is divided into two parts by means of a sliding panel, on which are placed two large mirrors, and it is seated with two roomy and easy arm chairs and two sofas covered with morocco. In the centre there is a folding table, and room is left to pass round it. Each division forms a comfortable little parlour. The hangings are of dark blue edged with white, and the windows are ornamentally stained. Outside the carriage and at either end, a short platform is fixed upon which travellers may stand and enjoy the scenery as the train passes on. They are painted a rich lake colour, with the company's arms in the centre. Beds or couches may be made up as they are on shipboard.

We have already introduced to our readers the novelty of LIGHT LOCOMOTIVE PASSENGER CARRIAGES: and our present Number includes in its pages a representation of that built by Messrs. Adams. detail of its advantages for Branch traffic will be found accompanying the engraving; but the cursory reader will be glad of the following summary.

1st. A diminution of dead-weight as compared with pro-

2nd. A saving in fuel.

3rd. A diminution of expense in "maintenance of way."

4th. A diminution of capital in rolling stock. 5th. Increased accommodation to the public.

6th. Increased safety by facility of starting and stopping

to avoid danger.
7th. Increased safety by lowered centre of gravity, en-

abling the carriage to become a self-retarding sledge in case of a wheel breaking.

8th. Power of increased speed without damage to the rails

or roadway.

9th. Facility for the cheaper structure of rallways.

Application to Parliament it is said will be made by the READING, GUILDFORD AND REIGATE in the ensuing session, to extend the line and form a junction with the Great Western at Caversham; to accomplish which they must pass under the Great Western by a tunnel,—a proposition under the consideration of the Railway Commissioners.

There has not been any return of traffic from the GREAT NORTHERN since the opening; but the average traffic is reported at about 1,300l. per week, including passengers and goods. The traffic between Lincoln and Hull is the most remunerative. The Christmas conveyances from Louth and Spalding were very The Christmas great; 25 tons of poultry came over the line to London, from the former, and 30 tons from the latter place. The company, it is rumoured, will apply to Parliament in the next session for an alteration their tolls, or, in other terms, for power to raise the charges upon passengers and goods.

So increasing and extensive is the CORN TRAFFIC on the York and North Midland, that the company are said to want 10,000 corn sacks.

The directors of the BLACKBURN, BOLTON, CLITHEROE AND WEST YORKSHIRE have come to the determination, says the Preston Chronicle, to push on the opening of the Clitheroe branch as quickly as pos-sible, and in order to do so, have determined to complete a single line of rails, and to economize the expenses of bridges, station-houses, &c.; and what is most important to friendly societies not enrolled, they have relaxed a rule formerly adopted, of not borrowing money in sums under 500t., but to accept

smaller sums at 5 per cent.

The directors of the Monmouthshire having succeeded in raising their loan of 45,000l. for the New-PORT line will shortly resume active operations.

The shareholders on the East LOTHIAN intend to apply next session to Parliament for a dissolution of

their company.
Since the meeting of the 27th ult., at Wakefield, of the shareholders of the SHEFFIELD, ROTHERHAM, BARNSLEY, WAREFIELD, HUDDERSPIELD AND GOOLE, the directors, as agreed upon, issued on the 31st ult. a financial statement of the affairs, from which it appears that the total payments, as per statement to 78,738l., last half-yearly meeting, amount together with subsequent payments of, 21,420% or a total of 95,158%. The future liabilities of the company, under contract, are as follows:—
Messrs. Miller and Co.'s contract for works, including all contingencies, 146,254*l*.; less amount paid, 54,412*l*.; total, 91,841*l*.; to which are to be added, land agreed for, 4,201*l*.; material for permanent way, timber, rails, &c., 21,691L; interest on shares, 4,583L; directory, 900L; engineering 4,790L; making a total of 127,967L. The estimated future liabilities, not under contract, are :charges, 900%; land not agreed for and conveyancing, 11,881l.; office charges, 550l.; materal for permanent way and cost of stations, not contracted for, 15,000l.; total, 28,331l. The directors observe that in this exposition they have distinguished the liabilities which are of a certain amount, from their being under special contract, from those to which some contingency may attach. The amount of items under the latter head is so comparatively small, as to afford them every reason to expect that the estimated capital of 260,000l., on which the Lancashire and Yorkshire Company's guarantee of 5 per cent. and half profits will be more than sufficient for the completion of the entire works of the railway, which they calculate the contractor will have no difficulty in accomplishing by December next, if supplied with the necessary funds.

the necessary funds.

The Scottish Mercury notices the case of a Mr. Wilson, dentist in Edinburgh, who on the 17th of October, in last year, was killed at the Trinity station by falling down a stair. This stair led immediately from the station-room down to a cellar, being separated only by a door which Mr. Wilson had opened, supposing he was entering a passage leading to another apartment. Mr. Wilson left eight children, and an action was raised in their name against the Edinburgh and Northern, concluding for 8,000l. damages. The case was set down to be tried by a jury on the 27th ult.; but after the court had met, a compromise was agreed to, by which the company bound themselves to pay to the children of Mr. Wilson the sum of 1,100l., each party paying their own

expenses.

We regret to state that what we have anticipated from the first, in regard to Indian Bailways, is more and more confirmed by the latest accounts from Bombay:—There seems much reason to apprehend, says the Bombay Times, that we shall for the present have no railways in India; the Court of Directors seem resolved not to guarantee a dividend of 5 per cent., which some parties had expected they would have done, besides making good all risks should the income fall under the expenses of working.

On the 27th, the Minister of Public Works with-

On the 27th, the Minister of Public Works withdrew the bill relative to the working of the Paris and Lyons, by the Government. This result has for

some time been apprehended.

The Chemins de Fer notices the general meeting of the shareholders of the Tours and Nantes, who merely passed the accounts, in spite of the opposition of M. Sebille, which prevented the discussion of either the present or future condition of the enterprize.

By the decision of the Central Railway Committee of the French National Assembly, the various companies are for the future to use the system of communication established on the Orleans and Vierzon, between the conductors who sit behind and the enginemen in front. This consists in placing behind the tender a special conductor, fronting the diligences and waggons, with whom the other conductors, placed at the extremity of the train, are to correspond by means of a flag during the day and a coloured lantern by night. In case of any signal of an accident, the conductor near the tender, and consequently close to the engineman, can ring an alarm bell.

The circulation on the LOMBARDO-VENETIAN from Mestre to Vicenza has been re-opened.

Various suggestions have from time to time presented themselves for establishing some form of ASSURANCE AGAINST ACCIDENTS BY RAILWAY. It seems that this idea is about to be realized, as a company has been formed with this express object. Some particulars of the scheme will be found in our advertising columns, and we may take another opportunity of noticing it more at length.

#### Reports of Meetings.

ABERDEEN.

Dec. 27.—Adjourned Meeting, Aberdeen.—After two meetings of the directors, relative to the refusal of the reception of the 20,000l. instalment from the Edinburgh and Northern and other companies, against which the representatives of those companies protested, the present meeting was held.

Mr. A. PIRIE was called to the chair.
Mr. SPICER said the feeling of the London share-holders against the minority of the directors was participated in in all parts of the country. He did not think anything of the services of these gentlemen. The shares they had assumed, and with which they now wished to saddle the company, would have been gladly taken by London shareholders at 2l. more than had been paid for them. Of the 150,000l. to be advanced by them to the company only 40,000l. had been received, and for that sum, which had been advanced by Messrs. Blaikie, brothers, a sufficient quid pro quo had been received in the shape of a preference for the works on the line, while the money had all been repaid in three instalments, with interest, in the

course of eight months. The contract that these gentlemen entered into was most disadvantageous. Mr. Spicer here read a schedule of prices made out by Mr. Locke, by which it appeared that, on work done to the amount of 80,000. the amount over the prices fixed on by Mr. Locke was 18,000. at the rate of 22 per cent. upon the whole. Mr. Spicer then entered into a statement respecting charges made by Messrs. Adam & Anderson, and respecting the sum of 11,723. charged by these gentlemen for general expenses, but for what services remained to be found out. He concluded by proposing the following gentlemen as directors, but without including any of the members of the southern companies:—Lord J. Hay; Messrs. P. Davidson, A. Stuart, A. Thomson, C. Lumsden, A. Pirie, G. More, J. Miller, J. Pritchard, Col. Fraser, W. Gibson, J. Atkinson, and J. Birnie. Mr. F. PIRIE seconded the motion.

Mr. J. BLAIKIE, advocate, stated that a far greater sum had been advanced than 40,000%, and that advance had much benefited the company when it was given to put them in a position to borrow the sums necessary for carrying on the works. He complained of the manner in which he and his friends had been misrepresented, and said the colouring that had been given to their conduct accounted for the decision that he easily saw the present meeting would come to. He denied that he had ever made any claims. They had merely submitted to the directors whether or not, the circumstances, they conceived they had grounds for preferring a claim. The 110,000t. had been made a bugbear. He defended his relatives the gross and deliberate misrepresentations' of Mr. Spicer. They had obtained a simple preference for work, at prices fixed by Mr. Cubitt, as eminent an engineer as Mr. Locke and Mr. Gibb, the engineer for the company, and the gentlemen of the majority were parties to the arrangement. As to the prices being unfair, he might mention the case of one of the articles alluded to, being iron chairs. Mr. Richmond, in Hull, offered to supply the company with these articles at 81.5s. exclusive of freight, while 81. was the price at which they were supplied by Blaikie, Brothers, and they were not, perhaps, aware that they were paying 10th per ton for rails to Mr. Scholefield, notwithstanding the prices that, according to Mr. Spicer, Mr. Locke had fixed as the value of these articles. As to the charges urged against Messrs. Adam & Anderson, the agents, they were all well aware of their zeal and energy, and of the money that they had disbursed in promoting the works; and he thought Mr. Spicer ought to have had more confidence in his friends in the majority than imagine that whatever he may believe the other party would have done they would have submitted to any of the insinuated extortions. He asked the secretary to whom these matters were referred.

The Secretary: To the law committee; and several of the accounts lie still undecided upon.

Mr. BLAIKIE: If anything be objected to, why not get the accounts taxed at once, and then they would see who was to blame?

Mr. Anderson explained that 6,000% of the money was for disbursements made by his firm from the time of the passing of the Act up to 1846. The sum of 2,875% had been expended in compensation to the proprietors of land along part of the line, and the rest for similar expenses, detailed in the accounts. They had conducted the business of the company in the most economical manner possible, and he would ask them, where was there a line to be found where so little litigation had taken place. They had carried it over miles of ground, and only 35s. had been expended in anything in the shape of legal proceedings. Their personal and pecuniary risk had been great. It was not as now, when the deposits offered a guarantee; for he was safe to say, that had they failed in the undertaking, the provisional committee would not have allowed them a single sixpence as compensation.

Sir J. D. ELPHINSTONE explained the whole history of the question, as well as the efforts he used to obtain the assistance of Government to enable them to finish the line. He warmly blamed the majority for depriving the company and the public of the prospect of the speedy opening of the railway, which, he said, was this day bankrupt. The chairman declared that diligence had been taken against him on a bill for 20,000l. He condemned the majority for breaking off arrangements entered into with the southern companies, and proposed a resolution, in which the names of the minority and six members of the southern lines were included. The line had the other day the best prospects of any railway in Scotland, and only 31,000l. of arrears. Now it was in a pretty mess; and the gentlemen who had placed it in that condition would be required to extricate it as they best could.

Mr. Stewart, of Auchineart, impugned the conduct

of Messrs. Blaikie and others for the reasons stated by Mr. Spicer. There was no immediate hurry to complete their arrangements, and he himself was just now unprepared to accept the offers of the southern companies.

Mr. Mungo ridiculed the idea of a merely routine Board, when two meetings were held in one day, and a cab despatched for the chairman, to give one party a majority in the afternoon, by which they might overturn the decision of the other party at the forenoon meeting. Unless unanimous they would see their property continuing to lie waste, daily deteriorated by the frost and the snow, and the company involved in irremediable bankruptcy. The late chairman (for chairman he neither is nor ought to be) had said that there was diligence against him for a bill of 20.000l.. a circumstance that never would have occurred under the wise management of the late directory. The agents had always proved themselves zealous in defence of the interests of the line, energetic and untiring as promoters, and in other circumstances very dangerous opponents. What have the gentlemen to complain of? There is not a line in Britain, the law business of which has been conducted at so little expense. The expense of law pleas amounted to 30s., while in many cases, in lines of less magnitude, they had amounted to 30,000l. He alluded to the other charges of Mr. Spicer, remarking that there was often much fraud in general statements; and even were there any foundation for the charges brought forward, why include in them Sir J. Elphinstone, who had nothing to do with the proceeding complained of, or Mr. Westland, who had only been for three months connected with the company? He explained the arrangement by which the minority assumed the liability of 110,000l. in anticipation of calls, and of which 40,000l. were advanced by Blaikie, Brothers, showing that these advances were made at a time when the company were not in a position to borrow money and could not procure it by any other arrangement. The southern companies would not renew their offer.

Mr. N. CAMPBELL had heard no justification of Mr. Blaikie and his confederates, who had attempted to turn to their own personal profit the matters committed to them as trustees for the shareholders.

Mr. Anderson (of Adam and Anderson) stated that, when he and his partner undertook to find the sum so often alluded to, they did not see how they were to keep their ground; and as for the interest in this matter, he admitted these gentlemen who had incurred so heavy liabilities had done so chiefly at their inducement, and they consequently felt interested in their obtaining relief from liabilities so incurred. With respect to the proxies—his application for proxies had been made in his private capacity, and before there was any division at the Board.

Some other gentlemen spoke, after whom Mr. E. Ellios, M.P., spoke, first in his capacity as representative of the Edinburgh and Northern, and secondly, as an Aberdeen shareholder. Speaking for the Edinburgh and Northern, he had simply to do with the subject of the agreement. He had been one of the first to promote that agreement, and subsequently he was himself so convinced of its fairness to the southern companies and its advantage to the Aberdeen that he had not allowed difficulties to deter him from doing his best to carry it through. It was doubly mortifying to him, therefore, to be obliged, on the present occasion, to announce, on the part of the Edinburgh and Northern, and his friend Mr. Davidson would do so on that of the North British, that they considered the refusal of the Aberdeen directors to receive the first instalment of 20,000L, and to allow them to have a voice in the election of new directors, as a fatal breach of the agreement. It had been stated that the reason of the Aberdeen directors for refusing the money, was the absence of the formal deed of contract between the companies. Now, everyone knew that the original deed of agreement had only to be stamped to render it as legally binding on all parties as any subsequent document could be. It was well known that to enter into any such agreement was legally ultra vires of the Edinburgh and Northern, or any other company, without the sanction of Parliament; and therefore any agreement of the kind on their part would not be legally binding. The best security, and that which he on his part was content to abide by, was his knowledge of the parties he had to deal with, and a confidence that with them there would be no difficulty in carrying out the agreement. There was also a security exclusively in favour of the Aberdeen,-a security at least which had been offered to them, but refused. It was the payment of the 20,000l. So large a sum once handed over committed the southern companies to the performance of the whole of their agreement, or to the loss of their money. Another gentleman had insinuated that there was some understanding as to Mr. Blaikie's claim be-

tween the minority of the Aberdeen Board and the Edinburgh and Northern. He begged in the strongest terms to repudiate such an insinuation. A state ment had formerly been made by Mr. Spicer that two of the Edinburgh and Northern directors were cognizant of and favourable to that claim. this had been disposed of in the letter which Mr. Baltour had addressed to Lord J. Hav; but in order to prevent the possibility of a repetition of such unfounded allegations, the subject had been introduced at the Edinburgh and Northern Board, and that Board at once had come to the resolution that the matter was one solely affecting the Aberdeen shareholders. Mr. Learmonth quite coincided in their view. The sole motive of the southern companies in wishing to have a voice in the election of new directors was a desire to ensure the carrying out of the agreement in a spirit fair and just to all parties; and, considering that, taking the value of the Aber-deen shares at the price of the day, the southern companies, if they had taken the preference stock, would have been proprietors of more than a third of the real capitalhe did not think their demand. even although obligatory under the agreement, unreasonable. As an Aberdeen shareholder, his stake in the company might not be so large as that of many others present, but such as it was he was desirous of protecting it. As regarded Mr. Blaikie's affair, his (Mr. Ellice's) only means of judging of it was derived from the printed circulars that had been issued, and anything more unsatisfactory than those ex parte statements he could not possibly conceive. It seemed to him that the majority of the directors had all of a sudden chosen to constitute themselves into court, judge and jury, and to condemn a gentle-man whose character he had reason to know stood as high in the estimation of those who knew him as that of any in that room. As regarded the share transaction, he did not feel himself competent to judge upon the evidence that was brought forward. In many respects the statements were unintelligible to him; but taking all the transactions of the Board at that particular time into view, and considering that, even now, were parties in a similar state of necessity, they might possibly agree to a similar transaction, he was disposed to think Mr. Blaikie had made out a prima facie case, upon which, as matters stood, he should be sorry to express any more decided opinion. They should have remitted the matter to parties experienced in railway transactions, whose opinion and judgment would have been universally respected. and then have reported the whole to the general body of shareholders. He could only say now, that if the majority of the directors would buy up and pay in advance upon the preference stock of the company, he would as a shareholder willingly consent to make it a matter of account with the company for a certain period, allowing them to pocket any profit in the mean time; and consenting, on the other hand, to relieve them if ultimately they should appear to have been subjected to a loss. Mr. Spicer would doubtless be glad at once to conclude such an agreement, so that they lost the southern com-panies. But it appeared that there was a determination at all hazards, and regardless of all other considerations, to eject a certain party from the direction. The hon, gentleman then went into a minute examination of the charges against Mr. Blaikie, which he declared in his opinion unfounded He continued,—The allegations made against Mr. Blaikie could not, at all events, be urged against Sir J. Elphinstone and others who had been eminently useful; yet it seemed that Sir J. Elphinstone must also be put out, and all the proceedings tended to one point, the allegations against the minority. The refusal of the money of the southern companies seemed to be in pursuance of the same object-that day's triumph of the majority over the minority. In his opinion, it would be much better for the share holders to have got rid of Lord J. Hay's list and Sir J. Elphinstone's list, and any other list, and to have asked Mr. Hudson, Mr. Learmonth and Mr. Balfour, to take charge of their concern, and to advance the requisite supplies for completing the line. It would have been better to have trusted to those gentlemen doing their best for all parties, than to allow them-selves to be made the tools of party dissensions, which appeared too likely now to be the case. It was true that he individually was better off than many others, inasmuch as his shares were bought at a low price, but they had been bought in anticipation of the agreement with the southern companies being carried out. As it was, the majority of the directors had depreciated them in his estimation to zero. They might have some plan of entering into arrangements with some other party.

Mr. Campbell denied any imputations against the

southern companies. He considered they had surprised the Aberdeen.

The CHAIRMAN said that the minute of the 19th of December, which was the asserted means of breaking off the agreement, showed that two gentlemen came to the Board without producing their credentials, offered the money, and then entered a protest. Lord J. Hav had handed him a letter from Mr. Hudson disclaiming any part in this communication.

Mr. INGLIS had received a general authority from Mr. Hudson to act and generally to attend to his interest.

Mr. Spicen: Mr. Blaikie has said there was no claim put forward. If there was no claim, of course there could be no withdrawal. Now, Mr. Blaikie did withdraw his claim. With regard to the 2,654 shares

upon which the claim was founded, taking them at their present market price, the claim would amount to 92,000L, and the amount was therefore 90,000L or 100,000L. The shares purchased to assist the company were a positive injury. They might have gone into the London market, and would have been taken up, and increased our constituency, instead of being lodged in banks. The contract appears to have been intended to provide for the whole works. This was most injurious. The idea of entering into contracts for the whole line, with only half of the capital paid up, was not judicious, but a speculation. He was glad Sir J. Elphinstone now allowed that there was legal claim. I have listened to the speech of Mr. Ellice. With the introduction to it I was well pleased, because I was sure that the gentlemen in the southern companies, when they became acquainted with the circumstances of the case, would not allow themselves to be identified with any particular party. It was the shareholders, the whole company, and not single individuals, who were to be amalgamated. I could not agree with Mr. Ellice's remarks with regard to Mr. Blaikie. Mr. Ellice, I must observe, is quite unique in his opinion. Had I been in Mr. Ellice's place, I would have kept back, and would not have stated that there appeared a prima facie case in favour of Mr. Blaikie. I have now less hesitation in proposing my resolution.

Mr. Ellice: As to my corroborating any statement of Mr. Spicer's, I distinctly repudiate having received or had any communication with any party. My sole knowledge was from the printed papers before me, and neither Mr. Blaikie, nor anyone else, ever before knew my opinions. I spoke in two dif-ferent capacities—as a representative of the Edinburgh and Northern, and as representing my own interest as a shareholder.

Mr. BLAIKIE: I must correct Mr. Spicer as to what he said about the loss amounting to 90,000l. or 100,000l. Supposing that the claim were to emerge at this moment, taking the purchase price of the shares in connexion with the present market prices, the amount would be as stated by Mr. Spicer. But I never proposed that the claim should emerge just now, but that, if there should be any ultimate loss the parties should have a claim for relief to the extent of ten, twenty, or fifty thousand pounds, as the case might be. When Mr. Spicer denounces the conduct of certain parties, he certainly knows that the majority, though great advocates of economy and retrenchment, also were present and took part

in the proceedings.

Mr. Spicer: I think that the question was put in this way—I find that the party with whom you are connected formed the larger majority on that occasion. The whole business was, in fact, managed by you. I have been told, with regard to the earthwork, that in the specification it was mentioned that the whole of the implements which form the plant of the contractor were to be furnished by the company Now, Mr. Ellice will inform you that such a course is not known. The intention of adopting it was obviously to throw into the hands of Messrs. Blaikie

Brothers, the supplying of the temporary rails, &c.
Mr. Ellice: That arrangement is quite a common

Mr. Spicen: I am told, on the contrary, that we thus lose the benefit of offers from larger contractors,

who have all these things on hand.
Sir J. Elphinstone: With regard to the Board which I have the honour to propose-if we take Mr. Spicer's mode of calculating the respective stakes which they have in the concern, the market value of our shares this morning is about 15l. Taking the works of the line, therefore, at about one-third of their cost price, our property may be worth about 400,000. with which property you are in a fix and cannot possibly go on. The southern companies cannot possibly go on. The southern companies offered you 276,000!. of hard money, your property being worth 400,000!. I ask you, is six an unreason. able number of gentlemen to place in your company to represent so large a proportion of capital? with reference to the shares on account of which I and others are to be expelled from the direction. When was in London the shares were run up from 181. to

241.: but what is Mr. Spicer's guarantee that they will be worth 5l. when he returns to London? I should be very glad indeed if I could speak along with him. I look upon the undertaking now to be in a position from which you cannot extricate yourselves. The moment that it is known that this agreement is broken off, where is your stock? Sir James concluded by moving, "That the meeting be adjourned, for the purpose of endeavouring to return parties representthe different shades of opinion among the shareholders, and by whom the arrangement with the southern companies might yet be carried out." He also protested against the motion for the election of an entirely new Board being put from the chair, inasmuch as it was illegal to transact any business but that which had been announced in the advertisement calling the meeting; and further protested, that parties who might be elected to the Board at the present meeting should be held responsible for acting in contravention of the Act.

Mr. MACNEIL, advocate, Edinburgh, seconded the motion, and supported Sir J. Elphinstone's protest. No matters, except those specified in the Act could be taken up at an ordinary meeting, without special notice being given of such business. Mr. Macneil proceeded to point out the clauses of the Act which he considered supported his objection.

Mr. Spicer's motion was then put in a modified form, adapted as much as possible to the circumstances on which objection had been taken, and was adopted without a vote;—Sir J. Elphinstone and his party protesting against its reception on the grounds expressed in Sir James's motion, and thereafter leav-

ing the room in a body.

Mr. SPICER made a motion expressive of the gratitude of the shareholders to Lord J. Hay and the majority of the directors, for the excellent and economical manner in which they had managed the

Mr. Munno protested against such a resolution, as one that the present meeting was incompetent to entertain.

The CHAIRMAN concurred in the opinion of Mr.

Munro, and declined putting the motion.

Mr. Munro moved a vote of thanks to the Chairman for his excellent conduct in a most difficult position; which was agreed to.

GLASGOW, KILMARNOCK AND AYR. Jan. 2 .- Special Meeting, Glasgow, for the provision of funds for discharging the engagements completing the main line of the Glasgow, Dumfries and Carlisle; and if thought expedient with that view, for authorizing the directors to make the company parties to the debentures to be granted by the Glasgow. Dumfries and Carlisle, under their borrowing powers; and to undertake when these debentures became due, to guarantee the payment thereof, by raising, if necessary, a further portion of the 900,000l. authorized by the Act 10 & 11 Vict. cap. 183 to be contributed by the company to the completion of the said railway, or to take such other steps and give such other directions in the premises as shall be thought expedient.—Mr. J. M'CALL in the

The report by the directors stated,—
That the recent creation of 255,000L of preference stock had enabled the works of the Dumfries to be so far proceeded with. The line between Gretna and Dumfries is had enabled the works of the Dumfries to be so far proceeded with. The line between Gretna and Dumfries and already open for traffic, and the line between Dumfries and Closeburn (near Thornhill) may be opened in the course of a few months. The rest of the works are less advanced, and it is proposed either to stop them entirely, until a revival of trade shall have bettered railway property, or to carry them on very slowly. The expenditure upon the works of the original capital of 433,000U., and of the new preference capital of 250,000l. entitles the Dumfries to raise upon loan the farther sum of 433,000U, which will go far to complete the main line from Gretna to Cumnock. This last-mentioned sum it would be difficult to borrow at prelast-mentioned sum it would be difficult to borrow at pre-sent on the credit of the Dumfries as a separate undertaking: and as the employment of it is a measure intended to relieve this company from the necessity of raising more preference stock at present, and as the amount borrowed will at any stock at present, and as the amount borrowed will at any rate become a debt of the Glasgow and South-Western on the amalgamation, it is proposed (under the advice of counsel), that this company should now, in order to give confidence, undertake to create stock when the debentures become due, should money then be required for the purpose of repaying them. There are several considerations for this, Although the works on the Dumfries, north of the town of Dumfries, have for some months past been kept back as much as was practicable, without involving the Dumfries in claims of damages, yet there are debts now outstanding for these works, which it will require a part of this loan of 433,000% to repay. Many of the parties to whom loan of 433,000l. to repay. Many of the parties to whom these debts are due have intimated their willingness to take the Dumfries Company's debentures, if recognised by the Ayrshire, in payment of their claims. It is obviously expedient to complete, without loss of time, the main line from Dumfries to Closeburn, a distance of 12 miles. The opening of this small additional and continuous portion of line will add to the receipts (as soon as business shall have resumed its usual course in Dumfries), without adding much to the current working expenses. But the directors Digitized by

have no reason to doubt that it is also the opinion of the Ayrshire shareholders that it is the interest of this company that the remainder of the main line, from Closeburn to Ayrahire shareholders that it is the interest of this company that the remainder of the main line, from Closeburn to Cumnock, should now be completed at as early a date as is consistent with the avoidance of any further pecuniary sacrifices by them; so that the large capital at present sunk in these works may be rendered productive. At this moment the interest of the original capital of 433,000d. payable to the shareholders of the Immfries, is being debited to capital, while the guaranteed dividend of 6 per cent. on 250,000d. of preference stock lately created must form a charge on the Ayrshire company's separate revenue, until the line and the amalgamation are completed. The income from the portion now open is still so small, and the proportional expense of working so great, as to afford no material alleviation of this burden. The whole of the capital thus expended may therefore be said to be up to this time nearly unproductive. On the other hand, should the Dumfries line be completed, as contidently expected, for 1,270,000d., an average gross revenue of 200, per mile per week, between Gretna and Cumnock, and an additional revenue of only 50, per week between Cumnock and Glasgow, would produce to the Glasgow and South-Western an annual income of 80,8600, which, after deducting 40 per cent, for working expenses, would yield nearly 4 per cent, on the above capital. The average income of the Ayrshire line, including branches, was 430, per mile per week in 1847, and gradually rose to that amount from the date of the opining between Glasgow and Ayr, in 1840, when it was 220, per mile per week. In and Ayr, in 1840, when it was 22?, per mile per week. In the meantime there is nothing to prevent the interest on the money, which it is now proposed to borrow, from being debited to capital account, so long as the line is unpro-

During a long discussion, Messrs. Burns, G. Wein and others, stated that these preference shares and the guaranteed debentures for the Dumfries, would weigh down the original shares so heavily that they would become waste paper, and they might throw them into the ditch as soon as they liked. Large sums of money had been placed in the hands of the directors, which might have nearly completed this Dumfries line, but the money had been fruitlessly

The CHAIRMAN, Mr. BANNATYNE and others stated that the Ayrshire was identified in interest with the Dumfries line, with which it would eventually be amalgamated, and that until the completion of the line a very large amount of capital would remain wholly unproductive, which would ultimately become highly remunerative. The Dumfries was so much in want of funds that it was threatened with prosecution by the contractors.

oution by the contractors.

Mr. Hodoson, M.P., recommended a negotiation with the Caledonian, with the view of transferring to them that part of the Dumfries line from Gretna to Thornhill, already nearly completed. He would be ready to get rid of the Dumfries line at a loss of 200,000l. or 300,000l. The Ayrshire would then return to its pristine prosperity.

After several motions and amendments had been proposed and withdrawn, it was finally resolved, on the motion of Mr. H. Brock, that the meeting should adjourn for ten days, and that in the mean time every information should be given to a committee of shareholders on those points on which a difference

The meeting then adjourned.

TAW VALE.

Jan. 2 .- Special Meeting, London .- Mr. E. Cooper in the chair.

The CHAIRMAN said the meeting had been called in consequence of a wish expressed on the part of some of the proprietors that a change should be made in the direction. Those who had paid the calls to which others had objected wished to be more fully represented, and this had led the directors to examine the subject. The result was that they found they had overlooked a clause in the Bideford and South Molton Branches Act, by which they were required to have the Board constituted of twelve instead of ten members. The business of the meeting would therefore be to carry the 12th clause of the Act (10 & 11 Vict., c. 73) into effect, by electing two additional directors possessing the requisite qualification of holding twenty shares in the company.

A Proprietor inquired how the directors would be paid.

The CHAIRMAN replied that the directors received, by the grant of the proprietors, 1,200l. a-year; but, on turning to the financial account, they would find they only received 600L instead of the 1,200L. They had reduced it to 600L themselves; and the proposed had reduced it to 600%, themselves; and the proposed addition of two directors to the Board would cause no increase in the charge. The proprietors had always to vote the remuneration. The Chairman then moved that Mr. W. J. Chaplin, M.P., should be elected a director of this company.

Mr. H. C. Lacy, M.P., seconded the motion, which was covered appringently.

ment from office by rotation was also determined

A Proprietor inquired what amount had been received upon the last call.

The CHAIRMAN answered that, although the question was irregular, and not incident upon the business of the day, he would just mention that they had received 16,000l. upon the last call, and the full amount, when all paid up, would be 44,000l.

South Devon .- Jan. 2 .- Special Meeting of Directors, Excter, for the purpose of receiving a report from the committee appointed on the 5th of December, to take into consideration the statements published by Mr. Gill, the late chairman.-Mr. Woollcombe in the chair.—The Chairman remarked that Mr. Gill, the late chairman, having published a pamphlet on the subject of the atmospheric system, which was calculated to produce erroneous impressions on the minds of the proprietors, Mr. Russell, Mr. Buller, and himself, had been appointed a committee to consider and report to the Board on the proper steps to be taken under the circumstances. committee had drawn up their report. This document was read to the meeting by the secretary. It went at great length into an examination of Mr. Gill's assertions.—The report first referred to the statements of Mr. Gill, which urged the continuance of the atmospheric system at a cost of 6s per share. The committee observed—that the directors were not enabled to test the facts on which Mr. Gill based his opinion—that they had discovered the defect in the apparatus of the longitudinal valve, a defect which appeared remediless-and that the report obtained from Mr. Brunel was entirely adverse to the economical continuance of the atmospheric. The committee reminded the directors of their determination to suspend the use of it till it had been made efficient at the expense of the patentees and Mr. Samuda. The committee impugn the assertions of Mr. Gill as to the working of the system-its reduced costrepairs and mileage cost. No sufficient remedy for the defects has been proposed. Mr. Samuda's offer of relaying the valve did not include the cost of all that had been required. Such are the points of a that had been required. Such are the points of a very long document which concludes as follows:—
On a review of the whole question the committee find that of the two men most deeply concerned in the further trial of any reasonable experiment to perfect the atmospheric system, that one, Mr. Brunel, disapproves of the proposal for the purpose, as insufficient and unsatisfactory; the other, Mr. Samuda, had not sufficient confidence in the result, or in Mr. Gill's estimates for its accomplishment, to offer the only security which would justify the company. With reference to the atmospheric system generally, continues the report, we can come to no other conclusion than this: that it is quite out of the question to extend it the whole way to Plymouth; and to resume it, even with a tolerable prospect of success on a portion of the line, at the termination of a long locomotive line from London and in connexion with a short one to Plymouth, would be to combine able prospect of success on a portion of the line, at the termination of a long locomotive line from London and in conexion with a short one to Plymouth, would be to combine every evil of both systems without securing the advantage of either, and to perpetuate that ruinous state of things which swallowed up the whole proceeds of the six months ending the 30th of June last, and which, although now fortunately stopped, will yet cut very deeply into the revenue account for the current half-year. The only way in which we can think it possible that the atmospheric system could ever be successfully applied on the South Devon line would be as an assistant power on the inclines; but to prove this, much expense must be incurred, and a condition precedent must be that perfect longitudinal valve which it is clear we have not yet obtained; and therefore although we are fur from wishing to set bounds to the mechanical skill which may possibly produce it in course of time, we are quite sure that the company can now no longer afford to spend money in search of it, and cannot justifiably embark in any such experiment unless secured azainst loss in case of failure. For these and other reasons we consider it to be established, and we recommend that it be submitted at the ensping special general meeting,—that the suspension of the atmospheric system on the 9th of September last was a prudent and necessary step; that nothing has since occurred to justify its resumption; that, incamuch as no offer has been made to perfect the system at the risk of other parties, prompt measures should be taken to realise for the company the atmost value of their atmospheric property; and finally, that the immediate and earnest attention of the Board should be directed to the best means of reducing the charge for locomotive working to the createst extent which circumstances may permit—(Signed) T. Woolltombe, C. Russell, J. W. Buller, — Jan. 2, 1849. Jan. 2, 1849.

Mr. Brown moved the adoption of the report, and

Mr. Brown moved the adoption of the report, and that a resolution in terms of the recommendation by the committee be submitted to the special general meeting of proprietors, to be held on the 6th inst.—Lord Courtenay, M.P., seconded the motion.—Mr. T. Gill moved the following amendment; "That all the words of the resolution after the word 'resolved' be omitted, and the following words be substituted: 'That the report now presented, if circulated, be so with the omission of the last two sentences containing the recommendation to be submitted to

seconded the amendment. - The amendment and the resolution were then severally put, when the latter was carried by a majority of thirteen. The amendment was therefore lost.—Some routine business having been transacted, the meeting separated. A special meeting of shareholders will be held on the 6th, to confirm or reject the resolution of the Board.

SOUTH DEVON.—Dec. 29.—Meeting of Shareholders, Bristol.—Mr. J. Chilcott in the chair.—The Chairman The Chairman explained the circumstances which had led the Bristol committee to call the meeting, and suggested that a committee of inquiry ought to be appointed with authority to attend the approaching special general meeting.—Mr. F. Fry called the attention of the meeting to the point which he considered should form the most important subject for discussion at Exeter, namely, whether they should give up the system of atmospheric traction and adopt that of locomotion, or whether they should adopt the course recommended in the pamphlet recently published by their ex-chairman Mr. Gill.—The Chairman said the point referred to by Mr. Fry was one which had engaged much anxious attention and which had indeed been anticipated by the requisitionists. One of the requisitions required the special meeting to be convened for the purpose of ascertaining "what mode of traction is most suitable for working the South Devon, and whether any person is willing to enter into a contract with the company for working the line in the manner which shall be deemed to be most conducive to the interests of the company and to the safety and convenience of the public."— A Proprietor recommended that before taking any steps the shareholders should await the publication of the statement of the chairman and directors, which was expected every day.—The question of the atmospheric system was then brought before the meeting, and a lengthened discussion arose as to the policy of abandoning it, as resolved upon, by the advice of the directors, at the last half-yearly general meeting .- Mr. Fry recommended that the decision of the meeting should be abided by, and that a vote of confidence should, without any inquiry, be passed in the directors, and the locomotive system adopted, as resolved by them.—Mr. Wilkinson opposed this view of the case at some length, contending that the atmospheric system had been adopted upon the strong recommendation of the board of directors and of their engineer, Mr. Brunel,—that its adoption had been attended with a very large expenditure, and that it ought not to be abandoned unless, after a fair and sufficient trial, strong reasons for the change could be adduced. It was stated that a pamphlet would be issued in a day or two by which the statements contained in that of Mr. Gill would be entirely refuted.—Ultimately a resolution thanking the directors for having complied with the wishes of the shareholders by convening the meeting was resolved upon, as was another declaring that a committee of inquiry should be appointed.—Adjourned Meeting—Jan. l.—Mr. J. Chilcott in the chair.—Prior to the commencement of the proceedings the reporters were requested to explain that Mr. Woolf-west and the last meeting the state of the process of the last meeting the state of the last meeting the state of the last meeting the state of the last meeting the state of the last meeting the state of the last meeting the state of the last meeting the state of the last meeting the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state combe (chairman) was not present at the last meeting; but that it was Mr. Seccombe, who had at the meeting client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking client of the weeking cli meeting given a statement on the part of Mr. Wooll-combe.—The Chairman commenced the proceedings by saying that their last meeting had been for the purpose of appointing a committee of inquiry to attend the special general meeting to be holden at Exeter on the 30th ult., convened in consequence of Exeter on the 30th ult., convened in consequence of the requisition to the directors, to take into consideration the statements contained in the pumphlet of Mr. Gill, the late chairman of the company. It had been necessary to adjourn on the 20th ult. meeting to the present day, for the purpose of receiving the directors reply to Mr. Gill's pamphlet. It now, however, appeared that that reply was not yet ready, and that it would not be out till the 3rd inst. He had therefore only now to remark, that at the last meeting there were two resolutions, the first of which had there were two resolutions, the first of which had beed passed nemine contradicente; the other resoluoccu passed nemine contradicente; the other resolution, for the appointment of a committee of inquiry, was however still open.—Mr. Fry, formerly one of the board of directors, wished to explain the reasons why the directors' reply to Mr. Gill's pamphlet was not yet out. He had received a letter from Mr. T. Woollcombe, the chairman of the company, who stated that it was onite impossible for them to have stated that it was quite impossible for them to have the report ready until after the 2nd inst.; that since had been in London he had been engaged with other the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control o Mr. H. C. Lacy, M.P., seconded the motion, which was carried unanimously.

The election of Mr. M. Uzielli as a director was also unanimously adopted.

It was next resolved that four directors should constitute a quorum; and the order of their retire-

not received the requisition of the Bristol shareholders. -The Chairman thought they had been very long about it.—Mr Fry said they should remember that the Board only met once a fortnight.—A Shareholder the Board only met once a fortnight.—A Shareholder thought they could meet oftener if they chose, on such an occasion.—The Chairman said, the excuse which had been just made by Mr. Fry for Mr. Woollcombe was rather extraordinary. Mr. Gill's pamphlet had now been for upwards of two months before the public; and if, as Mr. Woollcombe, the chairman of the company, had said, all the figures used in Mr. Gill's pamphlet were founded on fallacies, he thought that it was triffing with the shareholders to find that that it was trifling with the shareholders to find that there should be a pamphlet published more than two months unanswered, and the reply to which cost the chairman so many sleepless nights in preparing, but which the shareholders were not to have placed in their hands more than a day or two before the general meeting.—Mr. Hutton, as executor for a deceased shareholder, said he thought the most important matter for the general meeting would be their financial condition. They should know the whole of their cial condition. They should know the whole of their liabilities. It was currently reported out of doors that the company was indebted to Mr. G. Hennett in a large sum, which did not appear in their last statement. He should certainly call upon them to say whether this liability had been incurred since that statement; he should also call upon them for a full statement of their financial position, and for Mr. Hennett's account. -Mr. Fry said he believed these were disputed accounts, which were under investigation.—After some further observations the meeting was adjourned to the 4th. After the adjournment the Chairman stated that he After the adjournment the Chairman stated that he had written to Mr. Gill, who had sent him a most complete answer as to the charges made at the late meeting.—Jan. 4.—Adjourned Meeting.—Mr. J. Chilcott in the chair.—Mr. T. R. Hutton, as executor for a deceased shareholder, stated that he had been to Plymouth to inspect the books. The secretary being absent, the clerk could not give him permission, and although not able to inspect the books, in order that he might ascertain the amount due to Mr. Hennett, he had learned from him the fact that Mr. Hennett had never delivered any account at all, although he had received 300,000% for works on the line, and he also understood from him that there was no contract whatever. He had further ascertained the deficiency on calls to amount to 33.0121. He wrote these facts to the secretary, who replied that he could give him no information on the topics of his letter, as private concerns were mixed up in his questions. He thought they had a right to know whether they owed a man they had a right to know whether they owed a man 70,000*l*, or nothing.—A long conversation ensued upon Mr. Gill's pamphlet and the directors' reply, in which it was stated that they, the shareholders, had nothing to do with personalities, but that they wished to ascertain their assets and habilities and if possible to retrieve their property;—that they should go to the meeting on the 6th inst. determined to know their financial condition; and if they were outvoted they would take other measures to obtain the object in view.—Mr. Hutton further stated that he should go at once to Plymouth, with a clerk, to inspect the books, and that they would appoint a committee of inquiry, with a view to the economical working of the line. and reducing the number of directors from nineteen to eleven, and also reducing their remuneration.

BRITISH RAILWAY ASSURANCE ASSOCIATION .- Dec. 30 .- Meeting of Promoters, London .- Mr. C. R. Carter in the chair.—The resolutions agreed to at the last meeting having been confirmed, Mr. E. W. Cobb stated that, in accordance with the instructions contained in the fourth of those resolutions, he had addressed a circular letter to the superior officers of the leading companies, and had received several communications in reply, the whole of which approved generally of the objects of the association. He had also seen Capt. Huish, who said he could not attend the present meeting, inasmuch as his doing so would go forth to the world as an admission that a mere pecuniary consideration would induce a greater amount of care and diligence on the part of railway servants so far as the public were concerned; at the same time he offered no objection to the proposition, and the general tone of his remarks seemed to imply that it was only required that the public should express their sense of the necessity for such an assopress their sense of the necessity for such an asso-ciation. The replies to the circulars included letters from officers of the South-Western, the North-Western, the Great Western, the London and Brighton, one of the Irish lines, and some of the Scottish lines; and it appeared that the objects of the proposed association were so fully comprehended and appreciated by all parties—companies, railway servants and public, that as soon as the resolutions already adopted should be acted upon, they would find not only no indisposition but a strong desire to

carry out their wishes. Mr. Cobb had also communicated with gentlemen engaged in the commercial world, and their replies were equally decided in approving of his scheme. In no instance, indeed, had an objection been urged against the principle upon which it was sought to establish it.—Mr. Cross, said there could be no doubt whatever as to the desirability of establishing such an institution as that proposed, and as little doubt that, when all the data were before the public, it would be universally supported. If Mr. Cobb's calculations were founded ported. If Mr. Cobb's calculations were founded upon a correct basis, he might be confident as to a successful result.—Mr. J. B. Walker, as one who considered that it was the duty of all who were accustomed to railway travelling to make provision for their wives and families, in case of accident, expressed himself as decidedly in favour of the scheme brought forward by Mr. Cobb in so lucid and busi-ness-like a manner. He himself did not travel more than three or four months in the year; still he might be the victim of a railway accident, and it certainly would prove a subject of consolation to him to know, that, if such an event happened, by a comparatively trifling subscription to a society like this, he could put a certain sum of money at the command of his representatives for the use of his wife and family. He should therefore give the proposed association his unqualified support; and he hoped this attempt to establish it would prove successful.—Mr. Coy announced that is was his intention to take 100 shares.—Mr. Mannett followed Mr. Walker's example in recommending the institution to the support of commercial men; and a provisional committee was appointed, with power to add to their number such principals or representatives of commercial houses and officials of railway companies as might be willing to co-operate for the purpose of carrying the plan into practical operation.

Ancient Modes of Travelling.—Equetrian Travelling.—Those who are not tolerably familiar with the memoir literature of the sixteenth and seventeenth centuries will have some difficulty to comprehend how our ancestors moved about from place to place, and carried on the business of communication with distant inland parts. The mode of conveyance was so universal and so established, that it rarely offers itself to any especial notice. Till the beginning of the eighteenth century we were almost wholly an EQUESTRIAN people. Harrison describes "the excellent paces" of our saddle-horses as peculiar to those of our soil; and says that "our countrymen, seeking their case in every corner where it is to be had, delight very much in this quality." From the days of the Wife of Bath, "girt with a pair of spurres sharp," to the days of Queen Elizabeth, we have scarcely a trace of ladies accomplishing their peregrinations in any any other manner than that which Chaucer has recorded:—

"Upon an ambler easily she sat." Luxury had its appliances ready for this almost exclusive mode of travel. "A lover of his country," who in 1673 saw that coaches would be the ruin of the kingdom, says, "before these coaches were set up travellers rode on horseback; and men had boots spurs, saddles, bridles, saddle-cloths and good riding suits. * * Most gentlemen, before they travelled in their coaches, used to ride with swords, belts, pistols, holsters, portmanteaus and hat cases; for when they rode on horseback they rode in one suit, and carried rode on horsenack they rode in one suit, and carried another to wear when they came to their journey's end, or lay by the way. * * And if they were women that travelled, they needed to have safeguards and hoods, side-saddles and pillions, with strappings, saddle or pillion cloths, which for the most part were either laced or embroidered. The saving of much of this expenditure by travelling in coaches, the writer holds, is the ruin of trade. "For, formerly, every man that had occasion to travel many journies yearly, or to ride up and down, kept horses for himself and his servants, and seldom rid without one or two men." In 1526, the Earl of Cumberland rode from Skipton to London with thirty-three servants (Whitaker's Crawn.) In 1582, the Earl of Shrewsbury writes to a dependent: "I think my company will be twenty gentlemen and twenty yeomen, besides their men and my horse-keepers. I think to set for-wards about the 11th of September, from Wingfield to Leicester, to my bed, and to make but four days journey to London. (Lodge's Illustrations.) In 1640, the wife of the last Earl of Cumberland rode from London to Londesborough, having thirty-two horses in her train; and the journey occupied eleven days. These slow progresses were the relics of the old times of sumpter-horses, when princes and nobles travelled with vast cavalcades, like an oriental caravan. We must not imagine that all equestrian travelling was at this slow rate. James I. of England was indeed nearly five weeks on his padded saddle, in his royal

progress from Edinburgh to London; but Sir Robert Carey, determining to be the first to tell James that he was king of England, stole out of Richmond Palace at 3 clock of the morning of Thursday the 24th of March, and reached Edinburgh on the night 24th of March, and reached Edinburgh on the night of Saturday the 26th, the king having gone to bed by the time he had knocked at the gate. This ride of 400 miles in seventy hours, gives one an elevated notion of the travelling accommodations of two centuries and a half ago. But it must be borne in mind that such instances were the exceptions to the rule of slow travelling. Although the Post was not established by law, there were post-masters at the end of the sixteenth century on all the great line of roads; and, for a sufficient consideration, they would furnish such a traveller as Sir Robert Carey with abundant horses, that he might ride till they dropped. abundant horses, that he might ride till they dropped, as indeed he records one of his horses to have done. Then, again, although the roads were bad, the eques-Then, again, although the roads were bad, the equestrian had many a mile of the smooth turf of an unenclosed country to gallop over. Let it not be forgotten, that if Sir Robert Carey rode from London to Edinburgh at the rate of six miles an hour, keeping on night and day, with relays of horses, the general communication of the country was so slow, that although Elizabeth died at 2 o'clock of the morning of Thursday the 24th of March, and James was proclaimed king, at London, on the same morning. "yet of Intring with 23th of March, and James was pro-claimed king, at London, on the same morning, 'yet the news of it reached not the city of York until Sunday, March the 27th." (Continuation of Stow's Annals.) The days before the Post were days when those who left their houses for distant parts of England were more separated from their friends than the North American emigrant of our own times. transmission of intelligence across the Atlantic is now an easier thing than the old conveyance of a letter 200 miles upon a cross road. The historian of Craven, speaking of 1609, says, "at this time the communication between the North of England and the universities was kept up by carriers, who pursued their tedious but uniform route with whole trains of pack-horses. To their care were consigned not only the packages, but frequently the persons of young scholars. It was through their medium also that epistolary correspondence was managed; and as they always visited London, a letter could scarcely be exchanged between Yorkshire and Oxford in less time than a month." I. seems, in 1635, to have resolved to remedy this evil by the establishment of the home post-office. In his proclamation of that year he says that there had been no certain intercourse between England and Scotland; and he therefore commands a running post to be established between London and Edinburgh, to go thither and come back again in six days; and for other roads there are promised the same advantages. In 1660 the General Post-office was established by Act of Parliament; and all letters were to be sent through this office, "except such letters as shall be sent by coaches, common known carriers of goods by sett by concines, common known carriers of goods by carts, waggons and pack-horses, and shall be carried along with their carts, waggons and pack-horses respectively." The Post-muster General and his deputies, under this statute, and no other person or persons, "shall provide and prepare horses and furniture to let to hire unto all thorough Posts and persons vising in Posts and persons the control of the control of the control of the control of the cartest wagger than the control of the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger than the cartest wagger tha sons riding in Post, by commission or without, to and from all and every the places of England, Scotland and Ireland, where any Post roads are." We find, by various clauses of this Act, that the Post-master was also to furnish a guide with a horn to such as ride Post,—that he was to furnish horses within halfan-hour after demand,-and that if he could not accomplish this, persons might hire a horse where they could, and sue the Post-master for a penalty. The country Post-master was an ancient functionary, who had long been in the habit of attending to the wants of those who bore letters inscribed "haste, Taylor, the water poet, in his "Pennyless Pilgri-mage" from London to Scotland, in 1618, has described one that might rival any Boniface on record : "From Stamford, the next day, we rode to Hunting-don, where we lodged at the Post-master's house, at the sign of the Crown; his name is Riggs. He was informed who I was, and wherefore I undertook this my pennyless progress; wherefore he came up to our chamber and supped with us, and very bountifully chamber and supped with us, and very bountifully called for three quarts of wine and sugar, and four jugs of beer. He diddrink and begin healths, like a horse-leech, and swallowed down his cups without feeling, as if he had the dropsy, or nine pound of sponge in his maw. In a word, as he is a post, he drank post, striving and calling by all means to make the reckoning great, or to make us men of great reaching. But in his payment he was tired like. reckoning. But in his payment he was tired like a jade, leaving the gentleman that was with me to discharge the terrible shot, or else one of my horses must have lain in pawn for his superfluous calling and unmannerly intrusion. — The Land we Live in.
