The same circumstances which, during the preceding half-year, led to a general diminution in the rate of progress of most new lines, and to an entire suspension of the works of several, have continued in operation, and I have therefore but little to report upon with respect to works in progress. The western division of the Berks and Hants, from Reading The western division of the Berks and Hants, from Reading to Newbury and Hungerford, which was opened for passenger traffic on the 21st of December last year, has been worked since that time with perfect regularity. The works and permanent way are in very good order; some minor details, as forming the surface soiling and dressing the certaworks, pointing the face of the masonry, &c., which had been deferred (owing to the period of the year at which the line was opened being unfavourable for such work), have been completed during the spring and summer; and the bellasting has been formed up to its permanent level. The embankments, having been generally formed of materials of a favourable character, have consolidated equally and well; and the precautions adopted in forming the line through the peat grounds and the somewhat complicated arrangements for preserving the various watercourses (both in conments for preserving the various watercourses ments for preserving the various watercourses (both in con-nexion with mills, and for irrigating and draining) which abound in the Kennet Valley, have been generally successful. abound in the kennet valley, have noen generally successful. The passenger stations have been completed; and the buildings, oranes, sidings and turntables required for goods traffic have been provided at such stations and to such extent as the experience of the working, and the information obtained in the district, seemed to warrant. The works of the Basingstoke line have been carried forward nearly to of the Basingstoke line have been carried forward searly to completion; the arrangements at the junction with the South-Western having been definitely settled, a portion of the chalk cutting which was delayed at that point has been finished, and the permanent way is now being pressed forward all along the branch. The station at Basingstoke is in progress, and the timber-work, which has been framed off the ground, and the other materials are now in course of delivery, so that a few weeks of favourable weather would enable the contractor to have it all rocled in. The crossings, turntables and other materials for the sidings crossings, turntables and other materials for the sidings are in part already fixed, and all in a forward state of are in part already fixed, and all in a forward state of preparation. The other station and junction works are considerably advanced. The ballasting will be completed, and the forming of the line proceeded with as rapidly as the laying and adjusting of the permanent rails will permit. The exact period of opening must now depend upon the weather. Upon the Oxford and Rugby the works were recommenced in April, and the portion of the line on which work has been resumed is chiefly that between Oxford and Banbury. Some work has also been proceeded with between Banbury and the Birmingham and Oxford Junction. In each department the attention of the contractors has been directed to the execution of such works only as it was absolutely department the attention of the contractors has been directed to the execution of such works only as it was absolucify necessary should be completed, such as public roads, river bridges, and culverts in the embankments which had been commenced across the meadows, and the advancement of such considerable cuttings and structures as would, from the time they must occupy, ultimately affect the time of completion of the line, or such as it would be impossible to execute in the winter. No attempt has been made to press on light work, or any such as can be easily completed after the heavier portions of the work are further advanced. The amount of earthwork remaining to be executed between Oxford and Banbury is only about 330,000 cubic yards, and about the same quantity between Banbury and Fenny Oxford and Banbury is only about 330,000 cubic yards, and about the same quantity between Banbury and Fenny Compton. Upon the Monmouth and Hereford nothing is doing. Upon the Wilts and Somerset the works have proceeded slowly; but the portion between Thingley and Westbury is completed, and will probably be opened in two or three weeks. The South Wales, the Oxford, Worcester and Wolverhampton, and the Birmingham and Oxford, are proceeding steadily, but not rapidly.

18, Duke-street, Westminster, Aug.

GREAT NORTHERN. Engineer's Report for the Meeting, Aug. 12, (p. 568).

In reporting progress of the works under my charge now in course of execution under the contracts of Mr. Brassey in course of execution under the contracts of Mr. Brassey and Messrs. Peto & Betts respectively (the former of which extends from Islington to Peterborough, and the latter from Peterborough to Gainsborough on the Lincolnshire or loop line, and from East Retford to a point five miles north of Doncaster on the main or towns line—a length in all of 171 miles), I find myself compelled by the great extent and variety of the operations to avoid entering into details in describing them. On Mr. Brassey's contract the works are proceeding with full vigour throughout the whole distance, with the exception of the distance between Hitchin and Huntingdon, the works on which portion being of a light sive on the rival railway; this, again, the former will have to outbid; and to the process, it is evident, there can be no conceivable limit short of actual ruin on both sides. It is evident that

Digitized by GOGIC

next winter's work, proposing to draft upon it a portion of the force now employed on the London clay district, which by that time will be, I expect, about three-fourths completed. The heaviest works now in progress are the earthworks between London and the village of Potters Bar, and those between Huntingdon and the Fens; and there are also others of considerable magnitude, but in better material, between Haifield and Hitchin. There is also a very considerable amount of brickwork and masonry in viaducts and bridges in course of execution, the principal work being the vinduct at Digswell. All these operations are proceeding under arrangements which warrant the expectation of their completion by the spring of 1850. The operations which are now in abeyance, consisting of the tunnels and the work between Hitchin and Huntingdon above mentioned, will not be allowed (unless by your direction) to remain so longer than is compatible with their completion by the same time. On Mesers. Peto & Betts's contract, the works of the line from the South Junction of the loop, near Peterborough, up to Saxelby, six miles beyond Lincoln, are repully drawing to a close. The earthwork is complete; the bridges and culverts, with few exceptions, finished; the exceptions being Vernative Drain Bridge, which three weeks will complete, the River Glen Bridge, a large sluice culvert at Kirkstead, and a small culvert at Southrey which will require about ten days, and the bridge over the Witham at Horsley Deeps, which will be finished in about five or six weeks from this time. The rails are laid for a distance of 63 miles out of the whole distance of 65; and I see no reason to doubt our having the whole of this portion of the line will be followed, in three months' time, by that of the length between Saxeby and Gainsborough, a further distance of 9½ miles, on which the works are proceeding with great vigour; by far the larger portion being already completed, and all the remainder in a very forward state. The works between East Retford and Rossi

## Brogress of Works.

GLASGOW, DUMFRIES AND CARLISLE.—Aug. 11.—The Government Inspector went over the lower portion and expressed himself in highly favourable terms respecting the manner in which the works had been finished. Trains will commence running for general traffic on the 23rd. There will be a private opening on the 22nd, when a party of the directors and their friends will go down the line, and lunch at the station on their return. The temporary station at Dumfries is almost completed.

LEEDS AND THIRSK.—The Bramhope contract commenced at Carrbridge, near the village of Horsforth, and terminated at the division of the townships of Castley and Weeton, a little to the north of Wescoe Hill. Its length is about six miles. It was undertaken by Mr. J. Bray. The principal works here are the tunnel through Bramhope Ridge, the embankments and viaduct across the valley of the Wharfe, at the north end of the Bramhope tunnel, the short tunnel at Wesco Hill, and the excavations at the entrances of both tunnels, the original quantity of the excavations being no less than 1,411,234 cubic yards. It is not perhaps generally known that the entire length of the summit tunnel on the original Leeds and Manchester is 2,881 yards, 2 ft. 5½ in., whilst the length of the Bramhope tunnel, as first designed, was two miles in length, but is now 3,720 yards, owing to an additional length of 200 yards having been constructed at the south end. Its extreme width 25 ft. 6 in. Notwithstanding the great length of the tunnel it is almost one continuous straight line. On the 27th of July 1846 the first brick was laid by Mr. Bray, and it is expected to be completed within the present year. Next in point of extent and importance are the embankments and viaduct acroes the valley of the Wharfe, which we have previously noticed, at the north end of the tunnel, and which commences not far from the point at which the Wharfedale Junction comes upon the Leeds and Thirsk line. The viaduct is an admirable specimen of masonry. It comprises 21 arches, of 60 ft. span each, and varying in height from 90 ft. to 54 ft., that being the height of the lowest arch at the north end. The Nidd viaduct is another important work on this line; it consists of seven graceful arches of 50 ft. span each, the loftiest of which stands at an elevation of 104 ft. from the foundation. It is built of stone, and the entire length is 448 ft. It crosses the siver Nidd a little below Ripley.

PERTH GENERAL TERMINUS.—Although the building of this station is partially suspended, arrangements have been made, says the Scottish Railway Gasetts, to provide temporary accommodation for the arrival and departure of the trains within the ample precincts of the terminus. A wooden structure is now completed, with offices for booking passengers and goods by the several lines connected at this point. These are the Central, the Midland, and the Edinburgh and Northern. The waiting-rooms are neatly fitted up. In the large room, on entering, is a semicircular range of offices, assigned respectively to the companies, and having an interior communication with each other, to facilitate their operations both mutually and separately. The arrangement appears to be convenient. There is no office for the Dundee and Perth line in the temporary station, as the bridge across the Tay is not expected to be finished for some months.

for some months.

STIRLING AND DUNFERMLINE.—The works continue to make good progress. The directors confidently expect that a considerable portion will be ready by October, particularly the contract from Dunfermline to Oakley, on which the mineral traffic will no doubt be very extensive.

### Accidents.

East Lancashire.—Aug. 4.—At Tunnel End, near Burnley, the driver and stoker of the 'Medusa' locomotive had left the engine in charge of the cleaner. When he was about to take the fire out of the grate some persons in authority came down to the engine, and wishing to go to the tip end at Rose Grove were taken thither. The driver, Whittle, shortly after came down to the works, and finding the engine gone without him determined to place some obstacle on the rails to obstruct the engine. He accordingly got three tail-boards, belonging to the dirt waggons, and placed them across the rails, and fastened them by driving iron picks behind the boards into the sleepers. He then got four iron furnace-bars and placed them across the rails, and afterwards more picks, to the number of eight, were stuck into the sleepers, with the shafts upwards. By this time the engine was returning; the cleaner, accompanied by Mr. Donaldson, the engineer of the line, and other gentlemen, being in the truck of the engine. Before the cleaner could apply the brake, the wheels came in contact with the tail-boards and the man was thrown off upon the line; the engine, too, was at first thrown off the rail, but by some means, after having run a considerable distance, again came upon it. All the gentlemen in the truck fortunately kept their hold and escaped unhurt; but the cleaner was doubled up by the engine, and on being examined was found to have his right arm almost taken off, and both thighs broken. Whittle was immediately taken into custody, and after a hearing before the magistrates he was committed for trial.

LONDON AND NORTH-WESTERN.—Aug. 17.—The train due at Euston-square at 4 45 a.m. did not arrive till 10 a.m. The York train ran into that from Peterborough, a little below Wolverton. The only person seriously hurt was a guard, named Collins, who was brought to town, and now lies in University College Hospital. The general manager at the Euston station has forwarded the following letter:—

nas forwarded the following letter:—

Sir,—I shall be obliged by your giving the following statement a place in your columns:—An accident, happily unattended with serious consequences to the passengers, occurred to the early up mail from York this morning, a few miles north from Wolverton. The branch mail train from Peterborough left Northampton at its proper time, and was proceeding on the main line towards Wolverton, when the connecting-rod of the engine gave way, and the train was brought to a stand. The guard was instantly sent back with fog signals. He had placed one upon the rail, and was proceeding to place another, when the York mail came up. The driver made every effort to stop it, and the speed was greatly reduced; but the rails were so slippery, from the state of the weather, that a collision took place. Several of the passengers were shaken and narmed, but as far as can be ascertained none sustained injury. Two of the carriages were much damaged. Considerable delay occurred in replacing the engine on the rails, which detained the mail. The accident happened at 2 30 a.m.; the night was not dark, but the fog was so dense that the signal could not be seen at more than a few paces' distance. A careful inquiry is being instituted into the matter; but, as exaggerated statements may reach you, I think it right to place you in possession of the facts of the case, as reported to me by the guards and one of the passengers who was in the train. I remain, &c.,

Make Hush.

# Law Intelligence.

PREFERENCE SHARES.—Aug. 9.—In the VICE-CHANCELLOR'S COURT, in re Fielden v. the Lancashire and Yorkshire, counsel moved for a special injunction, the object of which was to restrain the directors of the above-named company from creating and issuing certain shares, called "preference shares," men-

tioned in the bill, or any other shares bearing a fixed rate of interest, or dividend, of 6 per cent. per annum, payable at fixed periods; and also from raising the sums of 150,000*l*. and 575,000*l*., or either of such sums, or any part thereof, except for the purposes specified in, and authorized by, the Oldham Alliance Act of 1847 and the Manchester and Southport Act of 1847, and also restraining the company from carrying into effect certain resolutions dated the 31st of May last, and which were set forth in the bill. The plaintiff was Mr. Fielden, formerly member for Oldham, a shareholder in the amalgamated com-pany. Three proprietors concurring in the resolu-tions complained of were made co-defendants with the directors. The bill referred to eleven or fifteen Acts relating to the Manchester, Bolton and Bury, the Oldham Alliance, the Manchester and Southport, and others, and stated the amalgamation with two of the companies. The bill denied that the works undertaken had been authorized by the Acts, and alleged that by undertaking them, and by other Acts, the defendants had wasted and misapplied the company's capital. The directors, in order to carry out their plans, and to provide for their liabilities, and to avoid the payment of arrears of calls due from themselves, determined to create a number of new shares called "preference shares." At a special meeting, at the Palatine Hotel, Manchester, on the 31st of May 1848, it was amongst other things resolved that 1,055,000*l.*, authorized to be raised by the recited Acts, should be raised by the creation of 105,500 shares of 10*l*. each, and should be designated "guashares of rot. each, and should be designated gua-ranteed 6 per cent. shares," the holders of which should be entitled to a "fixed dividend of 6 per cent. per annum in perpetuity, in preference to the divi-dends payable on the existing shares of the company, but without participation in any surplus dividends, or any future issue of shares or stock, or any other profit or benefit." The resolutions were opposed by Mr. Fielden, upon the ground that they were not authorized by the various Acts, and were illegal and unjust in principle; and he moved an amendment to that effect, which amendment was lost, the original motion being carried. The bill stated, that on the 8th of June last, notice was served by the plaintiff on the company's solicitors of his intention to move for the present injunction; that he subsequently inquired of the company under what Acts they had considered themselves authorized to issue the preference shares, and requesting information as to the names of the directors of the company; and it con-cluded by praying that the Court would declare that shares, or to raise the sums of 150,000*l*. and 575,000*l*. (part of the larger sum before mentioned), except for the purposes of the two Acts specified in the notice of motion, and that the resolutions ought not to be carried into effect.—The Vice-Chancellor said, the bill in this case prays a declaration by the Court on points of law and matters of right, and an injunction founded upon them; but it contains no other specific prayer, It is clear that the motion now before the Court is not the whole cause. Neither, however, is such a circumstance necessarily an objection to the motion. The points raised by it are not points which ought to The points raised by it are not points which ought to be decided now; they are points the decision of which must be reserved for another stage of the cause. If that is so, the only question I have to consider is the balance of mischief, if I may so express myself, likely to result either from interfering at this stage of the cause or refusing to interfere. Much more mischief is likely to be done by interfering upon the present occasion, in a manner from which the Court may afterwards have to depart, than by declining to interfere on this occasion, although it should ultimately be found, as it may be, that the plaintiff is entitled to the interference of the Court, to some extent at least. I am of opinion that the Court ought not to act at present. I do not mean to give any opinion upon the question of right or that of construction. His Honour said he should merely refuse the motion and reserve the question of costs. Aug. 16 .- On the WESTERN CIRCUIT, in the Shriven-

Aug. 16.—On the WESTERN CIRCUIT, in the Shrivenham accident case, George Pargeter, the railway policeman, was tried for manslaughter, in causing the death of Mr. A. A. Lea, on the 10th of May last. The evidence was the same as that given on the recent trial at Reading (see ante, p. 493). The prisoner had neglected to use proper diligence in ascertaining whether the line on the occasion of the accident was clear or in any way obstructed. The witnesses distinctly stated that he might have seen the cattle truck upon the line if he had looked in that direction. After the case had been fully gone into, and the jury addressed on behalf of the prisoner, a verdict of "Guilty" was returned.—Mr. Justice Coleridge proceeded to deliver sentence on the prisoner. In doing so he said he conceived the main object of the parties who instituted this prosecution to be, to let

Digitized by GOGIC

persons filling similar situations to that heretofore held by the prisoner know that if they were guilty of negligence it would not be allowed to pass unnoticed or unpunished. That object having been gained in the conviction now obtained, it did not require that a very heavy sentence should be pronounced against the prisoner. In this case there was an absence of any very aggravating circumstances, and considering this, with the good character the prisoner had re-ceived for previous carefulness and attention, together with the period of imprisonment he had already suffered, he should sentence him to a slight imprisonment. He was therefore sentenced to three months' imprisonment, with hard labour.

# Barliamentary Broceedings.

COMMONS.

Aug. 11.--The London and North-Western Enginedrivers .- Mr. H. BARKLY called the attention of the Government to the dispute pending between the engine-drivers on the London and North-Western and their directors, with the view of ascertaining in how far the public safety was compromised by that occurrence. He was given to understand that accidents were imminent on that line, and one train, he was informed, was no less than an hour behind its time. He therefore wished to know whether the railway department of the Board of Trade had any power to prevent the directors of railways from placing incompetent persons in charge of the engines on their respective lines of railway.—Mr. LABOUCHERE said all he knew of the subject was that statements had been made to the Railway Commission, to the effect that the greater number of the engine-drivers on the London and North-Western had had a dispute with their employers respecting wages, that they were consequently about to leave the employment of the directors in a body, and that the safety of the public would thus be endangered. Those statements had been communicated to the directors, and an assurance had been received from them, in return, that all such measures as were necessary to ensure the safety of the public had been taken. The Railway Commission had no power to interfere further in the matter. He (Mr. Labouchere) had, however, some reason to believe that both parties were in communication on the subject of difference, and he still entertained a hope that this difference would be made up between them, and that the railway would go on as usual.

Aug. 14 .- Mr. THORNELY: Although I am aware it is unusual to put questions at the early sittings of the house, I am anxious on public grounds to put a ques-tion to the hon. gentleman the member for Kendal (Mr. Glyn) with respect to a recent disagreement which has taken place between the directors of the London and North-Western and the engine-drivers and their assistants. I wish to know whether any agreement has been come to between the men and their employers, and, if not, whether any efficient means have been taken to secure the safe working of the line .- Mr. GLYN: I am very glad the hon. gentleman has given me an opportunity for a remark on this subject. I have the satisfaction to inform the house that the directors of the London and North-Western have taken every precaution for the proper working of the line. A very considerable proportion of the old engine-drivers and their assistants have returned to their duty, and with the aid of the ex-perienced men whose services have been obtained from other lines, I am pleased to state that from this morning every train will be worked as before by men fully competent to the discharge of their duty. answer the question with the more satisfaction for I am sure the house will agree with me in thinking that no surrender should have been made on the part of the company to the men who have taken this recent step. The entire affair originated with a club, who sent down their orders last night to the members of the club engaged on the northern portions of the line to quit the employment of the London and North-Western. Owing, however, to the vigilance of the officers of the company the designs of the club have been frustrated, and the men have not left their employment. I could tell the house of many tricks which have been played by the men; but, without entering into those details, I will only assure the house that the public service will be conducted with

its usual punctuality and regularity.

Aug. 16.—Mr. F. O'Connor asked the hon. and learned Attorney-General whether, in consequence of the before-mentioned dispute, those persons who had previously taken season tickets on that line, and who had, since the dispute in question, proceeded to their respective destinations by posting or otherwise, had any remedy against the company, or any redress, or guarantee for redress, for being compelled, either through personal dread or caution, to place them-

selves in that situation 2-The ATTORNEY-GENERAL: My answer to that question, given on the moment, would necessarily be unsatisfactory. More than To give an that, it might be positively injurious. answer officially would require great time; to give it

professionally would require great time; to give it professionally would require greater.

Aug. 16.—Railway Commissioners.—On the vote of 10,670l. for the office of the Railway Commissioners, Mr. WADINGTON complained of the evidence given by Sir F. Smith with reference to railway management, and contrasted the suggestions made by that functionary for the prevention of accidents with the efficient system actually in practice on the leading lines. He also begged to caution the house against the favourite doctrine to which Sir F. Smith had given countenance, that railway directors and railway property should be placed un-der Government control. It was a great mistake to suppose that railway directors did not feel the same interest and anxiety in preserving the lives of their fellow-men as the Government felt. The attempt to interfere unnecessarily with them might have the effect of disgusting railway directors and prevent them bringing their experience to bear upon their improvement, but it would do no good. He considered that it would be better for the Government to come back to the system which was in operation previous to the Railway Commissioners being appointed, and he assured them they would find the authorities ready to pay every attention to the suggestions either inside or outside the house.—Mr. BANKES said, that there was an additional argument in favour of the previous system to which the hon. member referred, and that was, that instead of costing 10,0002. per annum, it only cost 3,0002.; and, as the duties had not been increased since that time, nor, he would venture to say, performed with greater ability, he felt inclined to move that the sum now proposed be reduced from 10,000l. to 6,000l.—Mr. La-BOUCHERE said, that in conjunction with his colleagues, he had applied himself to the reduction of the expense of this establishment, as far as was consistent with true economy and the demands of the public service; and the result was, that the estimate for the present year was 3,000*l*. less than that for last year,—while they expected that the ultimate reduction would be 5,000/l. a-year. He considered that the sum had been reduced as low as was consistent with the public service, and he should therefore deeply regret if the committee adopted the amendment. Any comparison between the amount of business done now and that when the Board of Trade took charge of the railway department would be quite erroneous. If they were to have a railway department, it was right that it should be constituted in such a manner as to enable it rightfully to discharge its duties. He maintained that it was impossible the chief of the Railway Commission could efficiently do his duty without the assistance of a lawyer of high character, and an engineer in whose opinions confidence could be placed .- Mr. GLADSTONE could not help recalling the fact that this commission was constituted before its precise duties were known; but they could not suddenly and without due notice reduce an establishment of this kind; though he believed that if the duties had continued to be discharged by the Board of Trade they would not only have been done equally well, but much cheaper than

at present.—After some further discussion, the motion was withdrawn and the vote agreed to.

Aug. 17.—Paisley, Burrhead and Hurlet.—On consideration of the Lords' amendments to this bill, Mr. F. Maule moved, as an amendment upon those amendments, the insertion of the words "on payment of such reasonable tolls." He proposed the amendment in pursuance of an arrangement, as the forms of the house did not allow a money clause to be moved in the other house.—Mr. F. H. BERKELEY opposed the amendment.—Mr. H. DRUMMOND, Mr. BAILLIE, Mr. DUNCAN, Mr. HUME, Mr. MUNTZ and Capt. Elliot supported the amendment, which was agreed to, and the bill amended accordingly.

Improvement).

### THE STRIKE OF THE ENGINE-DRIVERS.

The negotiations between the engine-drivers and the directors of the London and North-Western have come to no happy result. Several of the oldest servants (as far as we can learn) continue out of employ, and refuse to re-enter the service under the proposed terms of the classification on which they disagreed with their superintendent. At several of their late meetings the men have published accounts of the inefficiency of those engaged to supply the directors, on the other hand, through Mr. Creed, by official notification, and by Mr. Glyn, in his place in the House of Commons, have declared that the public service is competently fulfilled, and that many of the seceders have been induced to resume their work. At the last meeting of the engine-drivers the deputation previously appointed reported that they had waited on the members for Marylebone, and had subse-quently seen Mr. B. Osborne, M.P., Mr. Hume, M.P. and Lord Dudley Stuart. Lord Dudley Stuart told them that he had seen Mr. Glyn, the chairman, and on informing that gentleman that he had, with Sir B. Hall, been waited upon by a deputation from the engine-drivers, who represented the line to be in a condition most dangerous to parties travelling, and that he intended therefore to put some questions to him on the subject, that Mr. Glyn requested he would not do so without giving him notice of the questions he intended to put. They were therefore preparing statements of accidents and delays which had occurred in consequence of the inefficient hands employed on the line as engine-drivers. Mr. B. Osborne urged that the men should do no act which would compromise their characters for respectability, either with regard their characters for respectability, either with regard to the new hands or with the company, and Mr. Hume was particular in inquiring who drove the express and mail trains, as he wished to travel by the line, but was somewhat afraid under existing circumstances .- The chairman then gave a general denial to what Mr. Glyn had stated from his seat in Parliament.—Mr. Marshall and others having read statements of delay on the line said to have resulted from the change of hands, a resolution was come to directing the rules of the clubs to be forwarded to Mr. Glyn and those members of Parliament who had been waited upon by the deputation, in order to disabuse their minds of the statement that the men had resigned in consequence of such influence.

had resigned in consequence of such influence.

Our friend Punch thus expresses the general feeling respecting this dispute:—

There is a little disagreement between these useful functionaries and their employers, the latter charging the former with a desire to drive a very hard bargain as well as a tender, and the former implying that the latter are illustrating the old saying with reference to a certain old gentleman driving when needs must, which is alleged to be the case in consequence of the resignation of the experienced servants. Considering the very powerful engine both parties have in their hands, we hope they will have the good sense to prevent any further collision; and though we cannot precommend, in railway matters, the system of meeting each other half-way, we hope that they will lose as little time as possible in getting into a train of settlement.

At another meeting of the engine-drivers on the

At another meeting of the engine-drivers on the 17th the following resolutions were adopted:

That deeply regretting the serious accident which has occurred this day upon the North-Western, at Ashton Bank [see p. 565], and desirous as we all along have been to prevent any interruption to the business of the line, and any inconvenience to the public, we feel ourselves called upon, in our own defence, to state, in reply to charges of a serious kind which have been included against up that our callin our own defence, to state, in reply to charges of a serious kind, which have been insinuated against us, that our only reason for seceding from our duties on the London and North-Western was because a proposition was made to us most detrimental to our interests. That we have been perfectly satisfied with the amount of remuneration we have hitherto enjoyed. That we only desire to be placed in our former position; and that upon such terms, and upon such terms only, we will most cordially return to the performance of our duties, and will, as herectofore, devote all our skill and considerable invested for expenses and to the sefer of our duties, and will, as heretofore, devote all our skill and energies to the interests of our employers, and to the safety and accommodation of the public. That while we firmly adhere to our determination not to accept of the proposed system of classification proposed by Mr. WConnell, we are at the same time equally desirous of satisfying the public, as well as the proprietors of the London and North-Westers of the justice and also of the moderation of our demonds: and we hereby propose in the event of any difficulty arising

Digitized by **GOO** 

as to the terms of our remuneration, to leave the decision as to the terms of our remuncration, to leave the decision of that question to Mr. Bury, the locomotive superintendent of the Great Northern; to Mr. Gooch, of the Great Western; and to Mr. Madigan, the superintendent of the London and North-Western permanent way, or to any three disinterested and competent men connected with the locomotive management of the railways of the country.

We hope that this proposal, which seems to us very properly fraught with due attention to the company of the country.

pany's interest, at the same time that it does not compromise the self-respect of the engine-drivers, will lead to amicable arrangements with such an old and well-tried body of public servants.

# Reports of Meetings.

### EASTERN COUNTIES.

Aug. 17.—Half-yearly Meeting, London.—Mr. G. Hudson, M.P., in the chair.

Mr. Roney (the secretary) read the Report, as follows :-

The Money (the secretary) read the Report, as follows:—

The directors beg to announce a dividend of &s. per share of 20d. each of the consolidated stock of the company for the half-year ending the 4th of July last. The B quarters of the York extension shares come in for dividend for the first time this half-year, making the number of shares upon which dividend is payable 207,121. The usual half-yearly reports have been received from the resident engineer and from the locomotive superintendent. The permanent way, stations, &c. are in a most effective condition for carrying on the increasing traftic upon the line. The Maldon, Witham and Braintree will open for goods traffic on the 15th inst., and for passenger traffic on the 1st of next month. The Emited and Edmonton line will be completed in the course of the autumn. With the exception of the line of 12 miles in length between Dereham and Fakenham, and the completion of the Lowestoft Harbour, contracted for by the Norfolk, and continued by this company, the directors have received notice from the Great Northern that the northern portion of their line of railway will be opened for traffic at the end of September. Arrangements of a satisfactory character have been made for the use of the Peterborough station by that company, and for the establishment of through rates both for passengers and goods to the Great Northern and the East Lincolnshire Companies.

### For half-year's dividend to July 4.

The CHAIRMAN moved the adoption of the report and that a dividend of &s. per share be paid on and after the 4th of September next.

Mr. Price wished to know how the number of shares stated in the report—namely, 287,121, had been

The CHAIRMAN said that the total number issued was 294,000, but of those shares 7,000 had not yet come in for registration; so that the dividend would be payable on 287,121 shares only. Of the 7,000 shares unregistered, some of the holders had forfeited 10s., others had forfeited 1l., and others had forfeited 2l. per share. The directors had no power to compel those parties to register.

Mr. PRICE had signed the subscription contract, and got his shares. He had been under the impression that he should have paid up the whole amount, and the result was that he had sold many of them at a discount.

The CHAIRMAN said that every share which he held had cost him 23l. In the next report he would have no objection to state how the present number of 287,121 shares was made up. He could not now make such a statement from memory.

A Proprietor thought that it should be stated in

the report on what day the meeting was to be held.

The CHAIRMAN could not have the least objection

to such an arrangement, and would adopt the sug-

A Proprietor wished to know what was the amount of the arrears on all the shares

The CHAIRMAN said that he had not by him, at that moment, the necessary documents to enable him to state the amount. It could not be above 40,000l. or 50,000%.

A Proprietor wished to know if it was the intention of the directors to pay off any portion of the loan capital of 6 per cent. stock.

The CHAIRMAN: Not at present.

A Proprietor asked if the accounts had been audited.

The CHAIRMAN said they had been audited by the directors. But he would that day propose a resolution for the appointment of two gentlemen who would act as auditors in future.

A Proprietor wished to know how it happened that

A Proprietor wished to know how it happened that while their profits amounted to 124,000l., they had only 118,000l. for the payment of their dividend.

The CHAIRMAN said that they had two months' working of the Norfolk, the profit on which they estimated at 6,000l., and that sum they had to pay over to the Norfolk. Those 6,000l. were to be deducted from the 124,000l. of their profits.

A Proprietor wished to know how the company stood with regard to the claims against them for past services, and whether all those claims had been liqui-

services, and whether all those claims had been liquidated.

The CHAIRMAN said that every company had during the last few years been saddled with extra expenses, on which he could never reflect with patience. He had in fact quarrelled with some of the said of these expenses. He

believed that some claims of surveyors and other parties against that company were still in dispute. but he trusted they were in a fair way of settlement. The directors were anxious to clear off all demands, so that they might have no outstanding debt. There had been a triffing expense incurred this year, not in had been a triling expense incurred this year, not in promoting a bill of their own, but in opposing a bill for a line from Hitchin to Cambridge. They had succeeded in their opposition to that scheme, as the proposed line was to stop seven miles from Cambridge. He thought it was but fair to that company that such a settlement of the question should have been come to, as it would have been manifestly under the contraction of the successful the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the second to the sec just to have sanctioned the construction of a second line from London to Cambridge. They had incurred

no parliamentary expense this year except this.

A Proprietor wished to know what was the amount of the bills still unpaid.

The CHAIRMAN could not then state their amount. It was not easy to collect all the claims against a company like that, and when claims were brought forward, it was not always convenient to pay them. Until the directors had got their guaranteed stock, they had been compelled to borrow themselves to meet some of their demands. It was utterly impossible to wind up in a few months all the items of the expenditure incurred in a large company. But the bills against them were at the office, open for the inspection of any proprietor. That company had carried on successfully a severe struggle for this district; and it was not to be expected that they could have succeeded in that struggle without having incurred considerable parliamentary expense, while other companies had expended in the same way no less than 400,000l. or 500,000l. They had also very large bills of surveyors to meet; and there was much dispute as to the amount to be paid by each of the three companies. He could not state the amount of the bills still unsettled, but he thought it would be very considerable.

A Proprietor asked what was the amount of the

parliamentary expenses The CHAIRMAN could not undertake to state the amount. They had had an engineer with whom they had since had a long dispute; and that had not yet terminated. The directors would certainly get their accounts settled as cheaply as they could. They could not have avoided the expenses hitherto incurred, for they had been compelled to struggle for the posses-sion of a district, which if they had not obtained it would have fallen into the hands of other parties. Commercial depression had since visited them; but that was owing to circumstances which no human sagacity could have foreseen. However, with the increase of population, and with the increased desire of accommodation on the part of the public, they would go on steadily recovering themselves, while they avoided being driven into any further follies. He they avoided being driven into any further follies. He did not know that they had constructed any line which they ought not to have constructed, although he believed they might have taken a longer time to complete their undertakings. They had, however, been urged on by competition. But if railway companies had foreseen the French revolution and the restate disease, they might all no doubt have the potato disease, they might all, no doubt, have done better than they had done, and might have constructed their lines at a much smaller cost than

that which they had incurred.

A Proprietor asked if the 8s. dividend was to be

given clear of income-tax.

The CHAIRMAN: No.
The Proprietor: Then I move that it be so.

Another Proprietor seconded the motion.

The Chairman said that the income-tax amounted to about 3,000l. or 4,000l. He would advise the shareholders to await the result of the present halfyear before they determine on paying the tax out of their profits. By pursuing that course they would have a balance in hand of 4,000l. or 5,000l. He would remind them that it was always an awkward thing to go back in a company's dividends. They should bear in mind that the approaching winter might be an unfavourable one, although he hoped that it would not. The weather had of late been bad in the South, but he was glad to be able to state that it had been much more favourable in the North, where they had not had a shower of rain during the last week. The directors had yet scarcely had an opportunity of looking carefully over their expenditure. But he might state that it was their intention to discontinue some of their long trains, and not to run so many trains, for instance, between Cambridge and London. There were at present seven or eight trains running between Cambridge and London, and they proposed to reduce the number to five on the 1st of October, or some time about that period. He had gone carefully with his hon friends around over the various 

Digitized by GOOGIC

They would by that means effect a material reduction in the cost of working their lines.

A Proprietor thought the shareholders ought to receive the largest possible amount of dividend. He would remind the Chairman that he had formerly led them to expect that their dividend would amount

to 10 per cent. on their capital.

The CHAIRMAN said that it could matter little to him personally what decision the meeting might come to upon that subject; but his advice to the share-

to upon that subject; but his advice to the share-holders was to take 8s. without the payment of the income-tax, as they had done last year.

A Proprietor did not see why they should not then receive the proposed dividend free of income-tax. The working of their line during the last half-year had been only 14,000l., while it had last year amounted to 18,000l.

A Proprietor said he could not see any force in the argument brought forward by the gentleman who had preceded him, as it was well known that the York Extension B Quarters had come in for a dividend in the present half-year for the first time.

The CHAIRMAN then put the amendment, that a dividend of 8s. per share, free of income-tax, should be paid for the half-year.

The amendment was rejected by a large majority. The CHAIRMAN next put the original resolution, for the adoption of the report of the directors, and the payment of a dividend of 8s. per share.

This resolution was carried unanimously.

The CHAIRMAN then moved the following resolution :-

That J. Peek, of Finsbury-square, and J. Reeves, o Layton, Essex, be appointed auditors of the company, and that they be allowed 20% each per annum.

A Proprietor wished to take that opportunity of suggesting to the directors the propriety of improving

the station at Colchester, which was at present in a most miserable condition. The CHAIRMAN said he would visit the station at

Colchester, and if he should ascertain that any trifling accommodation was wanted there, he would be pre-pared to supply it. But he should state that he was decidedly opposed to incurring any avoidable expen-diture. He would not lay out considerable sums in improving stations, or in anything else. He was determined to set his face against any such outlay until the proprietors should be better paid for their investments. The directors had lately spent some investments. The directors had lately spent some time in looking over the line, and had effected reductions by the dismissal of some of their servants, although they felt that it was always painful to adopt such a course. His own interest was mixed up with the prosperity of the company. He had purchased about 220 shares when he had first become connected with them, and he still retained every one of those

Mr. PRICE and others said that auditors ought to be appointed by the general body of shareholders, and

not by the directors.

The CHAIRMAN was not acquainted with either of the gentlemen who had been proposed as auditors. He had moved the appointment of those gentlemen solely because he had been informed that they were well qualified.

Mr. Cash knew the two gentlemen in question, and he believed that two more competent persons could

not be selected.

Mr. Waddington reminded those desirous that the selection of auditors should emanate from the meeting, that a gentleman proposed by an individual shareholder would be as unknown to the majority of those present as one recommended by the directors.

Mr. PRICE wished to know if the directors meant

to sell the 6 per cent. guaranteed stock.

The CHAIRMAN said that it would be absurd on the part of the directors to sell that stock at present. The times might improve; and until they should be in want of money they would not bring the stock into a

depressed market.

Mr. PRICE wished to know what was the loss on shares.

The CHAIRMAN said that the amount of that loss was 23,000*l*.

The resolution for the appointment of two auditors was unanimously adopted.

A Proprietor wished to know if there was any

prospect of the Harwich line being made.

Mr. Waddington believed that in the present state

of the market there was very little prospect of the line being constructed.

Mr. Bagshaw, M.P., differed from his friend Mr. Waddington upon that point. He could state, on his own knowledge, that the construction of the Harwich line would be commenced within the next ten days. A Proprietor wished to know what was the amount

to be paid to the Norfolk.

The CHAIRMAN said he believed the amount would be about 30,000l. or 35,000l. for the half-year.

Proprietor wished to know what was the rangement come to by that company with the Newmarket.

The CHAIRMAN said that the arrangement proposed was, that for two years the Newmarket should receive 3 per cent. on their shares, and that they should afterwards be entitled to 31 per cent. in perpetuity, with the exception of the mortgage debt, which the Eastern Counties would deal with as with their own stock. Any negotiations by the directors would be subject to the approval or disapproval of the shareholders.

A Proprietor wished to know when a final settlement with the Newmarket was likely to take place.

The CHAIRMAN believed it would take place very shortly.

A Proprietor wished to know what was the arrangement between that company and the Great Northern.

The CHAIRMAN said that the Great Northern were to travel over a part of the Eastern Counties line, for which they would pay 66l. 13s. 4d. per cent. on their receipts, the remaining 33s. 6s. 8d. being kept by them for expenses. They were to come into the Eastern Counties station at Peterborough on a fixed charge to be determined by arbitration; and that company would receive their traffic at Peterborough until they should have opened their main line. In answer to another Proprietor,

The CHAIRMAN said that company had very little to arrange with the Blackwall.

In return for a vote of thanks, moved by Mr. GREY, and seconded by Mr. CASH,

The CHAIRMAN wished to express, on his own behalf and on the behalf of his colleagues, their thanks for the kind manner in which that vote had been passed. He could assure the meeting that they had passed. He could assure the meeting that they had no other ambition but to merit the confidence of the shareholders. They had been disappointed; they had been too sanguine, perhaps; but it would always be their earnest endeavour to advance the interest of the shareholders as much as possible. "But for my anxiety to meet you to-day, gentlemen (eaid Mr. Hudson), it would have been my mournful duty to pay the tribute due to departed worth in following to the tomb the remains of my respected friend, Mr. George Stephenson, a man whose genius has benefited not the rich only, but the poor also, in opening up the means of obtaining cheap fuel and locomotive facilities; a man who deserves—if any one may—the title of being a benefactor of his species. The de-parture of such a man is to be deplored as a national calamity; and railway shareholders have a special cause of regret, for if it had pleased God to spare him, as we might have hoped, no one could have been more pleased than himself to see them receive a due return for the investment of their capital in those great undertakings which his genius and enterprize did so much to call into existence." In conclusion, he wished again to return his thanks and those of his colleagues for the honour conferred on them by that meeting. He hoped they would always succeed in meriting the approbation of the shareholders, which was the highest reward they could receive for their exertions.

GREAT NORTHERN.

Aug. 12 .- Half-yearly Meeting, London .- Mr. E. DENISON in the chair.

The SECRETARY read the Report as follows:-Since the directors last met the proprietors the works have been steadily carried forward, and from April last advantage has been taken of the fine season to press them on as fast as the means at their disposal would permit; the advantage has been taken of the fine season to press them on as fast as the means at their disposal would permit; the progress made is given in the report of the company's engineer. In accordance with the intention announced at the last meeting, the line from Peterborough to Lincoln will be opened for traffic in September next; and at that period the East Lincolnshire—of which 14 miles from Grimsby to Louth has been opened and worked, with satisfactory results, since the 1st of March last—will be completed and opened throughout to Boston, and will then become the property of the Great Northern Company. An arrangement has been concluded with the Manchester, Sheffield and Lincolnshire Company for running the Great Northern trains by Grimsby to and from the Humber Ferries (opposite to Hull), which will open a new and shorter route south from Hull, and places north of that town; and with the view to open with the least possible delay a continuous line between Lincolnshire and Yorkshire, and to avoid an unnecessary outlay of the company's capital, an arrangement has also been made with the Manchester, Sheffield and Lincolnshire Company for running over that company's lines between Gainsborough, Saxelby (near Lincoln) and Retford; and with the same object the directors have recently contracted with Messrs, Peto & Betts for the works from Retford to Doncaster, which are to be opened early in the summer of 1849, thus establishing Betts for the works from Retford to Doncaster, which are to be opened early in the summer of 1849, thus establishing railway communication from Peterborough into Yorkshire. Between London and Peterborough, upwards of a million has been expended on land and works. The latter are progressing rapidly, and those on the first mile north from King's Cross, which are heavy, have been lately let at very low prices. Connected with this southern portion of the

line, the works of the Royston and Hitchin, forming a part of the Great Northern system, have been let and will be commenced early next year. An extension of that line to join the Eastern Counties' Bedford and Cambridge branch commenced early next year. An extension of that line to join the Eastern Counties' Bedford and Cambridge branch at Shepreth, within 6 miles of Cambridge, has been sanctioned by an Act passed this session. Under the general Act passed in December last, the works of the St. Alban's and Hertford branches, and of the Boston, Staniford and Wisbeach line are suspended till next year. The bill for the Isle of Axholme Extension line, and that for the Lecds Central station, which passed the House of Commons in 1947, and were suspended in the House of Commons in 1947, and were suspended in the House of Lords till the present session, have passed, the former only awaiting the royal assent. The bill for the Doncaster and other deviations, &c., for which application to Parliament was sanctioned by the special meeting in February last, was unexpectedly thrown out on the second reading in the Councons. A clause therein was subsequently inserted in the Isle of Axholme Act, authorizing the division of the present 25d. shares in two slares of 12l. 10s, each, in the mode and for the purpose explained at the February special meeting. This division of the shares was suggested with the object of relieving those shareholders to whom it may have become inconvenient to pay up the remainder of the calls; and, in the opinion of the directors, it will have that effect; and whilst it cannot injure, it may operate beneficially to the interests of the company generally, by tending to increase the number of the shareholders, and to obtain payment of the arrears of calls. The directors, therefore, under the clause in the Act, have resolved to give any sharcholder who has paid up 17l. per share, the option of dividing his slares, and arrangements will be made for carrying out the division, which will be communicated to the shareholders by the 1st of Cotober, to come into operation on the 1st of November next. The plan is as follows:—That ench sharedivision, which will be communicated to the shareholders by the 1st of October, to come into operation on the 1st of November next. The plan is as follows:—That each shareholder shall have the option of dividing his 233, share into two 124. 104, shares, distinguished as A, or deferred, and H, or guaranteed shares, the B (unpaid up) to be guaranteed by the holder of the A (paid up) 6 per cent. per annua; and the A to take the chance of all further dividend or privilege. The B, or guaranteed 124, 104, share, shall be entitled to 6 per cent. per annum on the amount paid up, out of the interest allowed during the construction of the line, and a preference dividend afterwards, up to 6 per cent. per annum before the A shares shall receive any dividend, and shall have the option of paying up the calls in full and receiving 6 per cent. from the 1st of the month after payment. Another obvious and important advantage that will ment. Another obvious and important advantage that will result from this division of the shares is, that the A or paid-up portion can be converted into stock, which course paid-up portion can be converted into stock, which course the directors recommend, and the notice required for this purpose will be given prior to the next general meeting in February, that it may be then carried out. In deference to the wishes expressed at the last meeting, a copy of the balance sheet to the 30th of June, and the analysis annexed balance sheet to the 30th of June, and the analysis annexed of the law, parliamentary and engineering expenses, from the date of the company's Act, was sent to each shareholder prior to the present meeting; and an arrangement is in course of being made for taxing the bills of the solicitors, with their concurrence, for all law business, from the end of the session of 1847. Adverting to the arrears of calls, the directors think it right to state, that since the 30th of June those arrears have been reduced by the amount of \$5,5882. The very small sum, 2,1002, received on loan upon mortgage, requires notice, as at the date of the account, the 30th of June, the company was hardly in a position to exercise its borrowing powers; since the 30th of June the loans on mortgage have reached the sum of 43,7502. The directors recommend that the forfeiture of 865 shares be continued by this meeting, on account of the calls in arrear thereon. This forfeiture of shares is recommended as necessary to enable the directors to issue new certificates, under circumstances similar to those detailed at the last meeting. (For Engineer's Report see Official Papers.)

(For Engineer's Report see Official Papers.)
The statement of accounts showed the receipts at 3,081,006l. 13s. 2d.; expenditure, 2,596,935l. 8s.; balance, 484,07ll. 5s. 2d.; arrears of calls, 501,284l. 5s.

The CHAIRMAN, after alluding to the satisfaction of the directors in presenting the report, said,-Genor the directors in presenting the report, said,—Gentlemen, you are perfectly aware that we have no secrets, for when it is considered that we have above 4,000 shareholders, any one of whom is at liberty to examine the books of the directors, it is perfectly clear no circumstance can be well kept secret from the shareholders or the public. In accordance with a wish expressed at the half-yearly meeting in February in the state of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the said of the s a wish expressed at the half-yearly meeting in February last, an abstract of accounts was circulated among the proprietors two or three days prior to this meet ing, and I hope that it has proved satisfactory. The engineer's report has been read to you. Within the last ten days I have felt it my duty to go over the whole of the line, half-mile by half-mile, and though my experience in engineering is not very great, I think I can with confidence state that the report of the engineer is extremely accurate. Assuming that to be the case, it is clear that before the end of October we shall have open, or be able to open, the line from Peterborough to 6 miles beyond Lincoln, a distance of 65 miles. In addition to that, we have 4 or 5 miles beyond Doncaster, which is now being worked satisfactorily; the East Lincolnshire line, which will be shortly ready for opening, and which then becomes a portion of the Great Northern scheme, of 48 miles; and a line from Grimsby to New Holland, opposite Hull, of 17 miles, over which we have power to work by arrangements with the company to which it belongs, they having power to work on our line. We shall therefore have, in fact, by arrangements with the Eastern Counties and London and

North-Western, who have shown every disposition to act in perfect amity with us, a new line from London through Boston and Louth to New Holland, opposite At New Holland there is an excellent ferry, with a fine jetty extending 400 ft. or 500 ft. into the sea, from which steamers cross to Hull in ten minutes. By that route we shall open a communication between London and Hull, and that part of Yorkshire, infinitely shorter than any other; and as I now see before me many gentlemen from the neighbourhood of Bridlington and Sunderland, I hope that in future they will select that route to London; for, in addition to having the satisfaction of travelling over a part of their own line, they will have a journey 40 miles shorter than the present. In respect to the arrears of calls, let me direct your attention to the fact that, when the line was first broached, both in this com-pany and the Direct Northern, there was a great rush for shares, and the difficulty was not so much the getting of shareholders as the keeping improper parties out. I need not allude to the change in the character of shares within the last two or three years but what I wish to call your attention to is this, that out of 4,000 or 5,000 shareholders it must be naturally expected there will be a large per centage unable to pay up their calls, and who, if we had originally known their real position, would have been shut out. I think that the arrears will not increase, because I believe, and I trust those I am addressing believe so also, that those who have paid up 15l. per share will not lose their shares; but, if they are unable to meet their calls, they will hand them over to other parties, who, buying them at a discount, will be prepared to pay up the calls. So large an amount having been called up, after making every deduction, I consider that we shall be enabled to reduce the arrears. Indeed, I have no doubt the arrears with the consider that we shall be dead and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be considered and I will be consider eventually be considerably reduced; and I may remind you that you have heard by the report that they have been reduced by 55,000l. since June. The next point is the communication between Yorkshire and Lincolnshire, which has been delayed, owing to the fact of the Yorkshire deviation bill being thrown out on the second reading in the House of Commons. I lament the fact—still it is a fact; and the result is, the communication cannot take place so soon as it otherwise would. By amicable arrangements with the Sheffield and Lincolnshire, we shall be enabled to make a considerable saving in the outlay of your capital, they having given us power to run over 9 miles of their line, and we, in return, giving them power to run over ours. The works south of Peterborough, being heavy, could not well be completed sooner than in 1850, as it would not do to hurry them; and I look with confidence that we shall have ample capital to complete them. We shall then give to the public a direct line from London to the North, with the exception of what is called the "towns line," from Peterborough by Grantham to Newark, and which may be fairly left till there is such an alteration in circumstances that we shall not be obliged to give so much interest for money as we now are. confidently look, however, to that line being ulticonidently look, however, to that line being ultimately made, when your railway will become, I will not say one of, but the great highway from London to the North of England. With respect to the future prospects, my opinion has undergone no change, and I believe that when it is fully opened it will be a most valuable undertaking, though, perhaps, it may take some time before the traffic is fully developed. On this subject my attention has been recently called to a pamphlet by Mr. Humphrey Brown (a Member of Parliament). He says that the estimated traffic on the Midland, Manchester and Leeds, York and North Midland, London and Brighton, London and South-Eastern, Great North of England, Great Western and Bristol and Exeter, Laucaster and Preston, and Glasgow and Ayr, was, for passengers, 3,088,7591, and of goods 736,448 tons; and the result, in 1846, was, for passengers, 8,625,3601, and of goods 2,045,255 tons—an increase over the estimates of, for passengers, 8,625,3601, and of goods 2,045,255 gers, 5,536,601L, and of goods 1,306,807 tons; the increase being on passengers 160 per cent., and on goods 170 per cent. I do not know whether the traffic of the Great Northern line has been so estimated as to admit of such an increase, but it is hardly possible to form an estimate of the amount of traffic which may be developed by the line. The other day I happened to meet a gentleman from Lincolnshire, and I asked him his opinion of what would be the value of the railway to that county, when he replied that it would be the greatest possible blessing, and no estimate could be formed of the traffic that would come over it. I do not know that I have any further observations to make; but if any proprietor wishes to ask any questions I shall be happy to answer them.

I beg to move that the report be adopted.

Mr. Packe (deputy chairman) seconded the motion.

Mr. Hughes had a resolution by way of amend-

He would enforce the carrying ment on the motion. on the company with greater economy than hitherto, though in doing so he did not wish to impute to the directors or officers the want of ability, tact, judg-ment or honour; but by showing that the company was conducted economically, to give the public greater confidence in it, as likely to be of advantage to the country and profitable to the shareholders. The amounts taken by the directors, superintendent, secretary and solicitors, ought to be reduced. The remuneration to the directors was 2,500l. per annum, to the superintendent 2,000*l.*, and to the secretary 1,200*l.*, which he thought every one would consider as too much in the state of the money-market, and as too much in the state of the money-market, and with a falling share-market. He should therefore propose that the allowance to the directors be reduced to 2,000*l*., to the superintendent 1,000*l*., and to the secretary 1,000*l*.; and that in future no solicitor's the secretary 1,000*l*.; and that in future no solicitors bill should be paid until it had undergone taxation. He meant nothing offensive to the solicitors by his motion, and it appeared that the bugbear of redelivery and increased expenditure had been thrown to the winds. Neither did he by his motion mean anything offensive to the superintendent (Capt. Laws), but satisfies that the continuous in addition to below but seeing that that gentleman, in addition to being their superintendent, was also a member of their direction, and of the Royston and Hitchin and East Lincolnshire Boards, he thought an allowance of 1,000l. per annum would be amply sufficient.

Mr. BATES seconded the amendment, but regretted that the mover had not proposed the appointment of a committee to inquire into the whole state of their affairs. No company had ever been so victimized by lawyers and engineers. Had the line been let in small contracts of 10 miles in length instead of large small contracts of 10 miles in length instead of large contracts, moderate capitalists would have competed for it, and it would have been constructed many thousands per mile under what it had cost. He condemned the statement of accounts. In it he found the law, parliamentary and engineering expenses for the session of 1847 to be 96,1222. 18s. 8d.; the office the session of 1847 to be 96,1222. 18s. 8d.; the office expenses, travelling expenses, direction and salaries, 19,7732. 17s. 11d.; advertising, printing, &c., 4,454. 8s. 4d.; police—what they wanted with police he did not know—8651. 18s.; Fossdyke and Witham Navigation, 4,5241. 7s.; interest on capital, &c., 93,0491. 14s. 7d.; making a total of about 220,0001.; so that it appeared the calls were only made to meet this enormous expenditure. The public had lost confidence in the line, and the shares, with 17t. paid, were at 9g discount; and it could not be expected that they would regain that confidence so long as they had 45,664 shares on which only 92. 5s. per share had been paid. As a proof that they had lost the confidence of the public, he might instance that the shares of another company similarly circumstanced with themselves were only at a discount of 3§. He begged to ask the chairman four questions, viz.—What addition was proposed to be made to their capital? How much had the cost exceeded the original estimate? What amount of loss did they expect on future calls? And what was to be done with the York Extension

Dr. RYLEY supported the amendment, and com-plained that the calls were too numerous. He thought that it was highly improper that, in a case which took place the other day, relative to a claim of Sir E. Bulwer Lytton for compensation, the company should have to bear the expenses.

Mr. Wootton thought that, instead of paying such large sums for solicitors' bills, it would be advisable to appoint a law clerk. He wished to know how the taxation of the solicitors' bills was to be conducted, for seeing that they amounted to 96,000l. for 1847 he thought they ought to be watched by the proprie tors themselves with extreme jealousy

Mr. GRAVES suggested that the reduction of the salaries should be referred to the directors. With regard to the solicitor, he had no doubt Mr. Baxter did the business as cheaply as any other solicitor would; but he suggested to the directors the appoint-ment of a salaried solicitor, with an establishment of clerks, being convinced that it would be a saving to the company of at least 20,000l. a year. Mr. Chapman was as favourable as any person

could be to the carrying out of a judicious economy, but he begged them to be cautious how they carried it out on a "penny wise and pound foolish" principle. He thought that the amount voted to the directors was not at all too much to induce gentlemen of character and honour to devote themselves to their service. With regard to the superintendent, he thought it most important that the management of railways especially of new companies, should be under the superintendence of gentlemen of well-known and tried ability, and he well recollected when the announcement of Capt. Laws's appointment was made to the proprietors two years since, there was a general expression of feeling in its favour. He thought that

the shareholders ought to leave it to the directors to consider what should be the salaries of the officers of the company, and he understood that it was pro-posed that the solicitors' bills should in future be taxed, they having readily assented to the proposition.
With regard to their shares being at 9 discount, he begged to direct attention to the fact that the London and North-Western shares, which at one time rose up to 250, were now only 130, and yet surely nobody would say that was not a prosperous company.

Mr. MAUBERT, seeing that on the 30th of June they had had a balance in their favour of 484,000t. wished to know how it was invested.

Mr. Hughes must press his amendment, as he could not sanction the screwing down to starving point the subordinate officers—the taking off 10s. a week out of 30s,—while the salaries of those parties with thousands were left untouched.

The CHAIRMAN would endeavour to answer those

questions. With regard to the allowance to the directors, it gave him as chairman something like 2201. a year, for which he had to come to town ten or twelve times a year, in addition to other duties, and his services were surely worth 200l. a year, or nothing at all. Still, if the shareholders wished it, he was perfectly prepared not to take one sixpence from them. The other directors had about 100l. a year, and he was sure they were all indifferent to it, and, if required, would cheerfully resign it. With regard to the salaries to the officers, they were under consideration, and it had been intimated to Capt. Laws and Mr. Mowatt that, under present circumstances, some Mr. Mowatt that, under present circumstances, some reduction must take place, which they had cheerfully assented to, though he (the chairman) believed that they were entitled to all they received, and he would never be a party to screwing any person down to the lowest point for which his services might be obtained. He had never been opposed to taxing the solicitors' bills, but on a former occasion he had said it would be attended with some expense. It was his proposition that the bills should be taxed in future, and with respect to the mode of doing so he might state that respect to the mode of doing so, he might state that a correspondence had taken place with the Lord a correspondence had taken place with the Lord Chief Baron on the subject, and it was proposed to pay a taxing officer a small salary to tax all future bills. The parliamentary expenses had been comparatively little this year, and they would be less next, and he hoped in succeeding years; but the opposition to their branch bills of 1847 had been more virulent than # was even to their obtaining more virulent than & was even to their obtaining their main line. Those branches were most neces-sary to protect their property, and to prevent the line being bled to a caput mortuum by branches proposed from other lines. The construction of the line was conducted under a most experienced engineer, and the contracts were let to Messrs. Peto & Betts and Mr. Brassey, within the parliamentary estimate. He had no reason to believe that the line had been expensively constructed, for though it might have cost a good deal of money, still, if it had been performed cheaper, and they had had in the course of two or three years to expend a large sum of money in consequence of the falling of bridges or slips, they would be fairly open to blame from the proprietors. The works were, however, substantial, and though they might have a few trifling slips, they would cer-tainly not hear of their bridges falling; and then again the nature of the soil in the London district had caused a large expenditure to insure the solidity of the works, and he hoped that it would be ultimately found that not 11. had been foolishly expended. With regard to what Dr. Riley had stated relative to the company paying the expenses on the claim of Sir E. Bulwer Lytton, he begged to answer that in all cases of arbitration by a jury the company were bound by Act of Parliament to pay those expenses. That there was an advantage in sometimes going before a jury was shown by the fact that in one case a claim was made for 27,000*l*, the company offered 11,000*l*,, and the jury awarded 9,000*l*. In answer to the question of Mr. Maubert, he might state that a considerable sum was at their banker's at the time when the accounts were made up, bearing interest, and that the remainder was invested in the shares of and that the remainder was invested in the shares of railways with which they were connected, and which they had bought at a discount. The amount so in-vested was, in East Lincolnshire shares, 68,000l.; Stamford and Wisbeach, 27,000l.; Royston and Hit-chin, 24,000l.; and South Yorkshire, Doncaster and Goole, 29,000l. With regard to the questions of Mr. Bates, he would answer them seriatim. To the first, whether they intended to raise additional capital, he replied they did not. To the second, by what amount had they exceeded the original estimates, he might say they were not exceeded at all, except as pre-viously stated, in the land. To the third, what was expected to be the loss on future calls, he could only reply by referring to what he had stated in his opening speech, that 16t. being paid, he did not believe

that there would be any defaulters in future. And, to the fourth, relative to the extension shares, that they remained in abeyance, and for the present at least there could not be any call upon them.

In answer to other questions, the CHAIRMAN stated that the names of parties in arrear were, in justice to the other shareholders, handed over to the solicitors, who had already recovered 119,000%. Of course they who had already recovered 113,000s. Of course they did not sue those who, upon inquiry, they found were unable to pay. With regard to the extension of the line from Doncaster to York, it was still an open question, the directors not having determined what to do, some urging them to make it and others to abandon it. He was at liberty to state, however, that the chairman of the York and North Midland was disposed to deal with them on fair and reasonable terms. The question was one of considerable importance to the public, and as soon as it was settled the proprietors should be made acquainted with it. The question at present under consideration was whether the whole line to York should be made, or whether a branch commencing 4 or 5 miles beyond Doncaster should be made to run into the York and North Midland line at Burton Salmon.

Mr. CORRIF stated that such a line as that proposed to Burton Salmon would, in the opinion of a great number of persons in Yorkshire, conduce to the public accommodation as well as to the interest of the shareholders.

The CHAIRMAN said that it must be recollected that Parliament had granted their bill on the understanding that they were to construct a distinct line to York, and he did not know that Parliament would allow them to escape from their engagements, except from inability, without some very severe censure In answer to other questions, the Chairman said that the inn at Lincoln cost 6,000l., and had been let on lease, to a respectable tenant, for 300l. the first shares would be all immediately taken up by respectable parties, who would pay the calls, it being necessary to forfeit them in order that the original holders might be registered, the shares having been sold, and the purchasers having neglected to register themselves. If the shares were divided as proposed. the holders of the A shares would not be deprived of dividends if the corresponding B shares did not pay up calls. He did not, however, believe that there would be any difficulty in that respect, as the B shares would bear a preference interest of 6 per cent.

Mr. Graves thought that the proposed option of dividing the shares into A and B shares was most important, and would do much to preserve the property of many poor creatures who would otherwise be ruined. By the plan now proposed, parties would be enabled to sell their guaranteed shares at a good price to others, who would pay up the calls, while they obtained the other half of their property at a loss of 1 per cent. in the dividend, which would be a mere nothing compared with what they might other-

Capt. LAWS, having had considerable experience in arrangements relative to railway stock, believed that no plan could have been adopted more likely to prove beneficial to the proprietors, as it gave every one an opportunity of getting his shares paid up; while the exercise of the option would enable the company to convert the shares into stock. regard to what had been said relative to his salary. he had no wish to appear mercenary or desire to be rich. He had much rather be useful than rich, and he did not wish to make any observation on the proposed reduction of his salary; for even if the proprietors thought fit to dispense with his services he felt he should have no business to make a remark upon the subject. Two years ago, when he was called upon to fill the situation he then held, he was in a position in which he received as much as from that company, and had an offer, with security, to guarantee him the same amount for ten years; but he preferred joining the Great Northern. He had never received one farthing out of their coffers with the one hand which he had not paid back with the other, as calls upon their stock, and he believed his friend Mr. Mowatt had pursued a similar course. able proprietor who proposed the resolution appeared to be under some misapprehension relative to what he received from the situation of director in that and other companies-the fact being that he received nothing beyond the 2,000t. as superintendent of that company. Of course he should submit to anything, with respect to that salary, upon which the directors and proprietors might decide. Whether he was dismissed from their service, or his salary reduced, he should bow to the decision.

After a few further observations, in obedience to loud cries of "withdraw, withdraw," Mr. Hughes withdrew his amendment, and the report was unanimously adopted.

A resolution, approving of the forfeiture of 865 shares mentioned in the report, was then carried.

GREAT WESTERN.

Aug. 17. - Half-yearly Meeting, Bristol.-Mr. C.

RUSSELL in the chair. The CHAIRMAN commenced by expressing his hopes that this would be the last occasion on which he should have to detail an account of their parliamentary proceedings. He observed: We have not introduced one single new measure; we have limited ourselves entirely to revive those measures of the last session indispensable to make good our position against the South-Western. I had before expressed to you the firm conviction entertained by your directors that we should succeed in obtaining our bill for the Windsor branch. We have not been disappointed. We have obtained our bill, and it is our intention to proceed as rapidly as possible in the construction of that short branch. The object of that branch is to prevent our traffic to Windsor being taken away from us by the South-Western; and I believe that it will be effectual for that purpose. I know an opinion is entertained that the extension of the South-Western line to Waterloo Bridge will give them a considerable advantage over us. I do not believe that such will be the case. Every investigation hitherto made dis-tinctly proves that the great bulk of all traffic to the metropolis goes to the west and not to the east of London. Some portion towards Surrey and that neighbourhood—a new traffic—will unquestionably be carried by the South-Western, but my firm belief is, that the great bulk of the Windsor traffic will continue to be, as it has hitherto been, carried by the Great Western. On the other hand, the South-Western have obtained the bill, suspended in the last session of Parliament, for making a line from Salisbury by Yeovil to Exeter. But in these days, the passing and making of a railway are by no means synonymous expressions. A line from Basingstoke to Exeter—and it has all yet to be completed—must embrace a distance of 150 miles. Now putting the cost at 20,000l. per mile, the capital necessary for the purpose will amount to 3,000,000l. I ask you, as rational and commercial men, where will be found the people in these days to make a line, costing 3,000,000l., over Salisbury Plain, and through such towns as Shaftesbury and Sherborne? But even if it should be possible in some remote time, and under some circumstances yet to arise, to get that line made, still I will not believe it would abstract any considerable portion of your western traffic. The Great Western has, in this session, obtained a bill for a line from Hungerford to Westbury; and the Bristol and Exeter has obtained an Act for making a line from Castle Carey to Taunton. By the completion of these two short intervals we shall have a direct line to Exeter, only one mile and a half longer than that of the South-Western, and passing through a densely-populated and fruitful district, and connected with all the adand traction district, and coinceted with all the ad-vantages of speed and power attached to the broad gauge. Gentlemen, I am by no means appalled by the South-Western obtaining their Act for the con-struction of a line to Exeter. The deliberate convic-tion of my own mind is, that if the South-Western should ever be so ill-advised as to proceed to the completion of the line, it will prove more unprofitable to them than even the attempt they previously made with our Newbury and Windsor traffic. I know it will be retorted on us, that if the South-Western have been aggressors in the South, we have been aggressors in the North. It may be asked, what business has a company, calling itself the Great Western, to proceed to Rugby, to Birmingham and to Wolverhampton? I answer that it was against our will, and we never should have gone—we refused going to Birmingham and Wolverhampton till the London and North-Western had concurred with the South-Western in forming lines of narrow gauge through the very heart of our district, by Newbury, by Swindon, by Didcot, by Oxford and by Banbury, to the North. We never should have thought of going to Birmingham if the London and North-Western had not concurred with the Midland in pushing their lines down even to Bristol. I do not advert to these circumstances for the purpose of ripping up old wounds, which I sincerely desire should be healed, but I am anxious on this, the last occasion on which I shall, I hope, ever be called upon to advert to the question, to enter a justification of ourselves against the imputations still unceasingly cast from various quarters, that the Great Western is been the aggressors against the London and North-Western. The Birmingham and Oxford Purchase Bill has now been read a third time in the House of Lords, and awaits only the assent of the Crown, and may therefore properly be considered as having been strengther passed. With that bill an end may be put to the un-

happy dissentions between ourselves and the London and North-Western. Indeed, with the proceedings of this session I think every important point that has been in controversy, not only with the London and North-Western, but with the other of our rivals, has been settled; and I hope we shall all be too wise to revive them. It has been our duty, and it must be our duty, to protect our own traffic; and I say sincerely, on the part of the Great Western, that we are most earnestly desirous to preserve the most amicable relations with all our sighbours and most amicable relations with all our neighbours, and we think that a better opportunity than the present was never yet presented to consolidate our respective interests. Gentlemen, for the state of our internal affairs I refer you to the Report and the accounts, which have been distributed amongst you. It is very true that our receipts are not so large as in seasons of national prosperity; but I think you must regard them as satisfactory, when you consider the late violent disturbances to all the political relations, and utter prostration of all commercial interests. Many lines, in the prostration of the prostration beach. having made large extensions, have had less traffic than before. With many the traffic has remained stationary; with a very few only the traffic has increased. I am happy to say we are in the last category. The extent and details of that increase are stated to you fully in the report which you have received. That increase has unfortunately not been proportioned to the length of the new lines that have been opened; but you must bear in mind that the Hungerford line has been opened for only the very short period of eight or nine months-a period quite insufficient, I think, for the development of traffic, though it has gradually improved from the time it was opened. You must bear in mind also that the line was made, not merely for the purpose of local accommodation, but with an ulterior view—to a contingency (which has arisen) of its being necessary to make a main trunk line to Exeter. Its full advantage cannot be developed while it shall remain a cul de sac, and the benefit from it cannot be known till it forms part of another line which shall be opened at both ends. Our expenditure also has of necessity increased. Establishments of porters, policemen and clerks, must be placed or porters, poncemen and cierks, must be placed upon and along the new lines. Every new line too enters new parishes, and very largely increases our parochial charges. You will observe that the parochial charges for the half-year are heavier than they have ever been before. But these involve an arrear of 3,500%. of claims which were disputed-charges which properly belong to a previous period, and if in our account we have given you credit for some portion of the arrears of the Post-office which belonged to our previous account, that may be fairly set off against the additional parochial charge, which, though now paid, properly belonged, as I have said, to a previous period. With respect to our locomotive expenses, you will see there has not been any increase; on the you will see there has not been any increase; on the contrary, if you compare the amount of expenditure with the work done you will find they have been considerably diminished. The cost of working your line for the half-year which closed in December 1847 was 62,5561.; for the half-year that closed in June 1848, it was 62,5371. The saving, I admit, is very slight—only a few pounds, but your trains have traversed diving the latter provided diving the latter provided diving the latter provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provided of the provide traversed during the latter period a distance of 65,000 additional miles. On making a careful review of our accounts, the directors feel they are justified in recommending you to maintain your half-year's dividend at the rate of 3½ per cent. You are all of you aware that the half-year which closes on the 31st December is always a more productive half-year than that which closes on the 30th of June. It was in consequence of that, as well as in reference to other circumstances, that the directors reserved a large amount of balance on the 31st of December; but if you will take the accounts from the 30th June 1847 to 30th June 1848, you will find that the receipts of that period justify the directors in recommending you the dividend of 7 per cent. for the entire year. The directors are most anxious to reduce the expenditure of your establishment to the lowest possible amount, and a committee is now sitting for that purpose. We are committee is now sitting for that purpose. We are also most anxious to reduce and to delay the expenditure of our contributions to other companies with which we are in connexion, and we have been in communication with Mr. Brunel to ascertain how far that object can be carried out consistently with prudence and good faith. The receipts and expenditure of a company are both, to a considerable extent, dependent upon many causes which are beyond the reach and control of any directors; but whatever can be done ought to be done; and your directors are fully alive to the necessity of devoting all their attention and all their energies (while we are passing through this period of great national difficulty) to strengthen and improve the financial position of your

Digitized by GOGIC

Mr. SAUNDERS, the secretary, then read the report as follows:

Upon a review of the accounts for traffic during the last six months, as compared with the same period of the year 1847, it will be seen that an increase has taken place of about 24,640%, under the following heads of income:

zagozat, unter the following needs of incomer-Passengers, &c. £1,630
Mails, expresses, &c. . . . . . 10,010
Merchandise, cattle, &c. . . . . 9,900

The sum received from the Posimaster-General for the conveyance of the mails includes, however, some arrears for services comprised in the sward recently and the forest for services comprised in the sward recently and the forest for services comprised in the sward recently and the forest for services comprised in the sward recently and the forest for services comprised in the forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest forest f

a letter addressed by the engineer to the directors, which will be submitted to the general meeting. The line of railway from Reading to Basingstoke, and also from the Great Western near Chippenham to Trowbridge, Bradford and Westbury will be finished within a few weeks and opened for traffic. It is the intention of the Board to reduce as much as possible the expenditure on new works, and for the present to arrange for an outlay of money only on such portions as are far advanced, and likely to add to the revenue of the company. The directors have observed with much pleasure the progress of a bill through Parliament during the present session, the object of which has been the reduction of the charges on shipping and goods in the port of Bristol, which is calculated, as they believe, to increase the trade over this line. The impediments which have hitherto existed to the stream of passenger and goods traffic, which onght to flow to and from impediments which have hitherto existed to the stream of passenger and goods traffic, which ought to flow to and from Bristol over your main line and all its branches, have been a source of great regret and solicitude to your directors, but they trust that the time is now come, when the city having recovered the control of its port, its commercial powers will be rapidly developed, from which the proprietors of this company may reasonably expect to obtain some advantage."

The CHAIRMAN moved that the report be adopted. A Proprietor wished to know whether there was ny truth in the statement that had gone abroad that

any truth in the statement that had gone abroad materials the fares upon the Great Western trunk line ought to have been reduced on the passing of the Birmingham and Oxford Act. He believed that the proprietors were aware that a legal question had been raised on this point.
The CHAIRMAN: It is perfectly true, as the hon.

proprietor has stated, that the question has been raised as to the tolls of the Great Western. That question has arisen out of the construction which has been placed on two different Acts of Parliament passed in the year 1847—the one called the Birmingham, Wolverhampton and Dudley, and the other the Great Western Amendment Bill. There is something conflicting in the terms of these two Acts, and out of this circumstance has arisen the question whether the Great Western is or is not liable to an immediate reduction of their tolls. The directors felt it their duty immediately this question was raised to take the opinion of the most eminent counsel (Sir F. Kelly and Mr. G. Turner), both in common law and Chancery. The opinion of both those gentlemen is decided, that the Great Western is not liable to a reduction of their tolls till the Birmingham and Oxford, and the Birmingham, Wolverhampton and Dudley shall be transferred into their hands, and be at work for them. A different opinion has been given by the Attorneyconflicting in the terms of these two Acts, and out of transferred into their hands, and be at work for them. A different opinion has been given by the Attorney-General and Solicitor-General; but, as it is possible that litigation may arise out of this question, and as it is a delicate matter for laymen to interfere with questions of law, it may be desirable that I should not on this occasion say anything more in reference to the legal part of this subject; but as to the question of common sames and common instice Low hard. tion of common sense and common justice I can have tion of common sense and common justice I can have no objection in expressing my opinion. Unquestionably, it was never thought that the Great Western should subject themselves to a reduction of their tolls till they received possession of that which was to be an equivalent for that reduction. Surely it can hardly be said that we are to pay the price for a commodity before that commodity is in our hands. I think therefore that the common sense—the common justice of the question must be clearly, conclusively and decidedly with us; and I can hardly believe that a narrow technical construction of two Acts of Parliament can, by bringing one portion to bear against that a narrow technical construction of two Acts of Par-liament can, by bringing one portion to bear against another, be interpreted in a way to act so injuriously to us. If, however, we should be reduced to the al-ternative, and if we are compelled to lower our fares, I hope the proprietors will not suffer by such a severe and harsh enforcement of the law; on the contrary, I believe the Great Western would, as a mere ques-tion of roofst and loss become gainers by such a contion of profit and loss, become gainers by such a construction and enforcement of the law. You are aware struction and enforcement of the law. You are aware that there is no company in this kingdom (I say so with confidence) that affords so large an amount of accommodation as we do. The number of trains and the number of miles run by us are infinitely greater than those run by any other company whatever—there is no company in this country that gives the same accommodation by express trains, either in the time in which they perform their duty or with respect to the class of persons who are enabled to travel by them. There is no company in the kingdom that time in which they perform their duty or with respect to the class of persons who are enabled to travel by them. There is no company in the kingdom that gives the same convenience to the public in the way of return tickets. Upon other lines, it is true, return tickets may be obtained, but then there are so many difficulties and obstructions connected with it that it is hardly available for the purposes for which it has been obtained—vis., for a single day only. On the Great Western line those who require to travel a short distance have the advantage of travelling by all the trains, while those going a considerable distance have two days, and others going to the further portions of the line are allowed three days for the use of the ticket, exclusive of Sunday. Can it be reasonable or just that a company giving this large amount of accommodation should be compelled, by a mere technicality of the law, to have their fares reduced before they obtain that fair equivalent which a just and common-sense view of the question raised shows that

Digitized by GOOGLE

they ought to receive prior to such a reduction? But in the fares are thus unjustly reduced, what will be the inevitable consequence? We must diminish the number of our trains, and limit within the narrowest compass the accommodation of return tickets. odium and responsibility of this will not be with us, but it will be with those who compel us to resort to

but it will be with knose who compet us to resort to such a diminution of public accommodation.

A Proprietor inquired whether any satisfactory arrangement would be made with respect to the London and North-Western using the Birmingham

and Oxford line.

The CHAIRMAN said that clauses, technically called running clauses, gave the London and North-Western right to use the line. He did not think this would right to use the line. He did not think this would lead to any inconvenience on the part of the Great Western, because he could hardly believe that the former company would be disposed to take traffic from their own line and pay a toll for it on the Oxford and Birmingham. Both gauges were to be laid down, but power was reserved to the Railway Commissioners to remove the gauge which they thought inconvenient to the public. As the line ran out of and into a broad gauge, he thought there would be very little doubt, if either gauge was removed, which of them it would be.

Mr. CROSTHWAITE, in answer to a question from a

Mr. CROSTHWAITE, in answer to a question from a proprietor, explained the amount of borrowed capital on which interest was paid, and the share capital on which the proposed dividend of 7 per cent. would be

appropriated.

Mr. Gore thought, that as the dividend would shortly have to be paid on an increased amount of called up capital, the dividend should be at the rate of 3 per cent. only for the half-year.

The CHAIRMAN said, that any observations on this

subject would better come from the hon. proprietor when the recommended dividend was proposed.

The resolution was then carried unanimously.

The CHAIRMAN next proposed a resolution for the payment of a dividend at the rate of 7 per cent.
The motion having been seconded,
Mr. Gore moved that it be at the rate of 6 per

The motion not having been seconded, the original resolution was, after an explanation from the CHAIR-MAN of the reasons which had induced and which justified the directors in recommending a dividend at the rate of 7 per cent., also carried unanimously.

The CHAIRMAN next moved-

That the directors be, and they are hereby empowered to enter into such agreement or agreements as they may consider expedient for the purchase of lands, and construction of the Windsor, and for raising the requisite capital, under the powers of the Act, intituled 'An Act for making a railway from the Great Western, near Slough, to the town of New Windsor, in the county of Berks,' and for such purpose to create and allot new shares, not exceeding 130,000%, subject to such terms and conditions as may be deemed necessary. necessary.

The motion was carried.

The directors returned to London by special train, in 2 h. 24 m., or at the rate of upwards of 48 miles per hour, including all stoppages.

BIRMINGHAM, WOLVERHAMPTON AND STOUR VALLEY.

Aug. 14. — Half-yearly Meeting, Birmingham. Mr. J. F. Ledsam in the chair.

Mr. J. F. LEDSAM in the chair.

Mr. Morgan, the secretary, read the Report. It referred the proprietors to the report presented at the last half-yearly meeting, when provisional arrangements were stated to have been made by the directors for the leasing of the line to the London and North-Western, and were confirmed and sanctional to the directors the directors the property of the line to the London and North-Western, and were confirmed and sanctional the directors the property of the line to the London and North-Western, and were confirmed and sanctional the line to the London and North-Western, and were confirmed and sanctional the line to the London and North-Western, and were confirmed and sanctional the line to the London and North-Western, and were confirmed and sanctional the line to the London and North-Western, and were confirmed and sanctional the line to the London and North-Western, and were confirmed and sanctional the line to the London and North-Western, and were confirmed and sanctional the line to the London and North-Western, and were confirmed and sanctional the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the line to the tioned by the directors then present. Parliamentary powers had since been obtained, in the bill for forming the Smethwick deviation, for carrying out torming the smethwick deviation, for carrying out the leasing of the line to the London and North-Western. The terms upon which they were obtained were, that they (the Stour Valley) should have the power of leasing their line to the London and North-Western as soon as one half of the capital authorized by their Act to be raised should have been paid up and expended. That proportion of capital having been expended, the directors would be enabled to complete the leasing of the line as soon as the Com-missioners of Railways had issued the certificate

required from them with regard to their expenditure, and which it had not been possible to obtain in time for the present meeting. The Commissioners had for the present meeting. The Commissioners had required voluminous returns of all capital accounts of the London and North-Western and the lines associthe London and North-Western and the lines associated with them, as well as of that company. Under the arrangement, the last call of 1l. 10s., due on the 7th of August, would be a final call, the London and North-Western undertaking to provide all further capital required for the completion of the line. The total amount of work executed was about 120,000l, leaving about 238,000l. to be done. As far as the works had proceeded they had been carried on ustantic the state of the completion of the line. leaving about 238,000%. to be done. As far as the works had proceeded they had been carried on satisfactorily. The tunnel under the town of Birmingham was nearly completed, and the permanent road had through it. The retaining walls at Spor-lane and the two viaducts at Wolverhampton were in a forward state, and would be finished by the end of the present year. The works at Smethwick, the embankment at Bushbury and the excavation at Deepfields were the least advanced. but there was no reason to doubt least advanced, but there was no reason to doubt least advanced, but there was no reason to doubt that the whole line would be completed by the specified time, December 1849. The directors declared 335 shares forfeited, for the non-payment of the second call. The statement of accounts showed the receipts at 650,5051. 18s. 2d.; expenditure, 563,732. 2s. 6d.; balance, 86,7751. 15s. 8d.

On the motion of the CHAIRMAN, seconded by Mr. WILLIAMS, the report was adopted.

The CHAIRMAN next moved that the shares (the numbers of which he read should be declared forfeited, and the directors authorized to sell otherwise dispose of them as they might think fit.

A Proprietor inquired whether, if a defaulter paid up his second call before the directors proceeded to dispose of his shares, he would be allowed to retain

The CHAIRMAN replied that the matter world altogether be at the discretion of the directors

The proposition with regard to the forfeited shares was also unanimously adopted.

[For further Reports of Meetings, see p. 578.]

# Manen Market.

# PRICES OF BRITISH STOCKS.

Sat.   Mon.   Tues.   Wed.   Thurs.   Fri.
--------------------------------------------

* For account, Sept. 7. + Ex Div.

London Stock Exchange, Aug. 18.—The great fears entertained about the harvest, and the disappointment felt at the reports of several of the railway companies, have produced a great depression during the week. The reduction in the dividends for the past half-year has much contributed to increase the disinclination to purchase railway property that has been lately manifested by investors.

Liverpool, Aug. 17.—Since the declaration of the dividend upon the London and North-Western stock our market has been extremely inactive, and prices generally have declined. To day, at the opening, prices were very heavy, but at the close there was a somewhat better feeling. Suplow, Brothers.

Manchester, Aug. 17.—I again have to report a flat

market and lower prices. The reduction of the London and North-Western dividend has had a depressing effect on the shares in almost all other lines.

SAM. GRINDROD.

Birmingham, Aug. 17.—In this market a tolerable amount of business has been done during the week, but to-day prices have undergone another turn downwards. North Staffords were done to-day at 81s. 3d. dis., but it is believed that few of these shares are changing hands at late quotations. Shrewsbury and Birmingham A's have been done at 12s. 3d. dis. and B's at 4s. dis.

York, Aug. 17.—We have few business transactions or record. The weather has been extremely fine for to record. the harvest, and the wheat in this part of the country has begun to be stacked, in good condition.

GRAYSTON & EARLE. Hull, Aug. 17.—Although the business in shares is small, prices remain tolerably firm, notwithstanding the unfavourable weather and the continued reports of the potato disease, both here and on the Continent. The reduction of dividend by the London and North West. North-Western has, on the whole, not had a very erious effect, showing that plain dealing and fair tatements are less prejudicial than promises and

mysterious allusions on the part of directors. North mysterious allusions on the part of directors. North British thirds, subjected to a heavy call, have drooped in consequence, but are now looking better. The following are the latest prices:—Ambergates, 3 dis.; Darwens, 13 dis.; Fleetwoods, 5s. 6d. per share; Great Northern, 5\(^3\) per share; Hull and Selby, 100; ditto, halves, 50; North Staffords, 3\(^3\) dis.; North British, halves, 9; ditto, quarters, \(^4\); ditto, thirds, 2\(^4\). Fint & Tootal.

Glasgow, Aug. 17 .- During the last eight days no Clasgow, Aug. 17.—During the last eight days no transactions of importance have occurred except in Caledonian preferences and Great Northerns; in the latter especially a large business has been done at prices from 9½ to 9½ dis., closing firm to-day at 9½ dis. The tone of the market generally is languid and prices lower than last week. The following are to-day's latest sales—Caledonian preference for 9d day's latest sales:—Caledonian preference, 6s. 9d. prem.; Ayr halves, No. 1, 8 dis.; Great Northern, 91 dis.; North British, thirds, 21 dis.; Paisley, Barrhead and Huelet 11 dis head and Hurlet, 11 dis.

BUCHANAN, AITKEN & Co.

IRON TRADE .- Glasgow, Aug. 11 .- There is little change in our pig iron market for this week-few sellers, and prices firm at 45s. 6d. for No. 1, and 45s. for mixed numbers, cash.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

# Joint-Stock Companies' Gazette.

A bill in reference to joint stock companies received, on Monday last, the Royal Assent.

The dividends on the shares in Waterloo Bridge will shortly be in the course of payment to the holders. The revenue of the proprietors has been greatly augmented by the opening of the new terminus of the South-Western.

A building society has been formed under the direction of gentlemen of business habits and great respectability. The name given to it is "The London and Metropolitan Counties Benefit Building and Investment Society." Its objects are to enable its members to purchase or erect freehold and leasehold property and invest money at compound interest, and there is to be no bidding for shares, no redemptionfee, and no fines on withdrawal.

# Ranks.

A special general meeting of the London and West-minster Bank proprietors was held on Wednesday last, at the offices in Lothbury, Mr. Ald. Salomons in the chair. The object of the meeting was to sanction an alteration in the deed of settlement, clause 57. The resolution was to change the time of the annual meeting to the third Wednesday in January, instead of March, and a half-yearly meeting might be called specially by the directors, either on the third Wednesday in July or any day they might think expedient. This being unanimously agreed to the meeting separated.

Docks. The half-yearly meeting of the SOUTHAMPTON Dock shareholders was held on Tuesday last, at the offices, at Southampton. Col. Barlow in the chair. The report stated that notwithstanding the great depression of trade the business of the company was increasing. The half-year's earnings (to the 30th June last), amounted to 9,351l. 10s. 7d., being an increase over the corresponding period of 1847, of 1,724l. 8s. 8d. After paying all expenses there was a balance left of 3,180l. 13s. 11d., and the directors proposed a dividend of 10s. per share, being at the rate of 2 per cent. per annum. Contracts had been entered into with Mr. White, of Cowes, to erect a ship-building yard of great dimensions, in order to provide accommodation for the repairs of ships of large tonnage. We extract from the report the The report stated that notwithstanding the great large tonnage. We extract from the report the

large tonnage. We extract from the report the following:—
The directors have been much disappointed by the rejection, by the Committee of the House of Lords, of a bill which had passed the House of Commons, for the construction of seven miles of railway between Harrow and Brentford, which would have connected Southampton with the North-Western, the Great Northern, and all the narrow-gauge railways in the kingdom, and would have afforded to the docks an unbroken narrow-gauge communication with the whole of the manufacturing districts. This connecting, link is on every account so important to the interests of the country at large, as well as to those of the port and docks of Southampton, that the directors feel satisfied that the construction must be sanctioned in the next session of Parliament; and, as the works can be executed in less than its construction must be sanctioned in the next session or Parliament; and, as the works can be executed in less than a year, that they may still rely at no very distant period upon the means, without change of carriage or break of gases, of distributing imports to all parts of the country and of bringing down from the North to the ship's side in the docks return cargoes, which are alone wanting to insure a vast increase of trade, and to render Southampton one of the first ports in the kingdom.

In reply to some questions put to the chairman, it

was stated that their dry docks were large enough to take in the Great Britain, or even a 120-gun ship. The report was adopted, the dividend, as proposed, declared, and the meeting separated, after passing a vote of thanks to the directors and other officers of the company.

A bill in reference to the Birkenhead Dock Com-

missioners received the Royal Assent on Monday last. Its object is to transfer certain powers to new commissioners and for effecting arrangements with the

Canals.
On Monday last the Royal Assent was given to a bill for making improvements in the New Grand Canal (Ireland)

The Caledonian Canal bill was read a third time and passed the House of Lords on Friday, last week; and on Monday it received the Royal Assent.

Assurance. On Wednesday last, at the Court of Bankruptcy, a on wednesdy last, at the Court of Bainstriptey, a meeting for the choice of assignees in the matter of "The Merchant Trader's Ship Loan and Insurance Company" was held. Two of the directors, Messrs. S. Price and E. G. Winthrop, were represented by their solicitors. On behalf of certain creditors an application was made to stay further proceedings as steps were being taken in another court to annul the

fat. The Commissioner accorded to the request.

In fire assurance a new feature is to be found. The "British Empire Mutual Assurance Company" have started a "Mutual Fire Assurance" department, the first conducted on the mutual principle in London. The directors of this undertaking are gentlemen of good standing in society and well known in mercantile circles. The profits arising from fire assurance tile circles. The profits arising from fire assurance are large; the mutual system may therefore be adopted with great propriety. It is known that mutual life assurance societies have divided considerable profits, and yet maintained large capitals to fall back upon. It may therefore be presumed that the new candidate for public patronage will be appreciated.

Life assurance is now assuming an important phase. It is a fact that in most of the existing offices, although an assurer might pay his premium regularly for years upon a policy, yet when the time of any fresh payment comes round, if, owing to adversity, he has not the money ready to meet it, his policy becomes void, and he loses all the benefit he had calculated as secured to his family on his decease. The Western Company have adopted the plan of giving the assured the privilege of omitting his payment, still allowing the policy to be in force, on payment of interest at 5 per cent., which is deducted when the policy becomes a claim.

Mines The share-market has lately shown signs of improvement, and the dealings have been more general. The reports from the Cornish districts are very favourable.

# TO CORRESPONDENTS.

# Railway Chronicle.

LONDON, SATURDAY, AUGUST 19.

The GREAT WESTERN declares a dividend of 3½ per cent., an event most gratifying to shareholders, and, in present circumstances, truly characteristic of the management of that company. To triumph quietly in success, and to make light of defeats, is a principle of the Russell-Saunders policy. It is true the South-Western Company has beaten them in Parliament, and got the Act for a rival narrow-gauge line to Exeter; but according to Mr. Russell the line is not made, nor will it be, because it will never pay. This argument, coming from Mr. Russell, who has just been defeated in the attempt to carry a precisely similar line through precisely the same country, is so close an illustration of the fox and grapes proverb that we wonder so old a tactician should have ventured on it. To put against this defeat, there is a couple of miles of line granted from Slough to Windsor, but we don't observe that he mentions that the circumstances attending the grant of this line had gained for the South-Western the very station they wanted up to the town of Windsor and the very gates of the Castle.

So much for the profit and loss of the parliamentary campaign. Now for the profit and loss of working. The increase of traffic arising from the opening of new lines does not amount to 25,000/1, while the additional length opened exceeds 40 miles, -an increase, which less plausible men would have wisely regarded as a deficiency, and the payment of the dividend leaves a reserve in hand of less than 8,000%. But still, with all these discouragements, the Great Western directors are content and hopeful.— The most awkward point in the position of the Great Western Railway affairs is the avowal extorted at the meeting, that it will be impossible for them to work their lines as at present on the same rates as the North-Western Railway, and to which, by Act of Parliament, they are bound to conform. This is an avowal which must tell on the gauge question with great effect. It is now, at last, admitted, however unwillingly, that broad-gauge railways cannot be worked upon narrow-gauge fares. What the prospects of the line are likely to become when the reduced fares shall be compelled by Parliament we leave the shareholders to infer. We must thank Mr. Russell for this tardy admission of a truth which we have always asserted. On the whole, we consider Mr. Brunel's report to contain the most satisfactory part of the half-yearly proceedings. On most of the new lines under his charge very little progress is being made, and on some none at all. On this we unfeignedly congratulate the shareholders.

The SOUTH-EASTERN was another triumphant meeting. It ended with three cheers for the Chairman, who was absent through indisposition, and with the appointment of a committee to ascertain in what manner and to what extent they could best remunerate the directors for their long, successful and gratuitous services to the company. A dividend, moreover, was given, amounting to 6 per cent. on the average price of shares, and 9 per cent. on their present price: being 21s. on the old shares, 15s. 9d. on No. 1 shares and 11s. 8d. on No. 2 shares. The Chairman proceeded to give some very explicit statements on the state of the capital, the probable expenditure, and the balance in hand; and the engineer reported that there would be a saving on the estimates for new works of nearly 250,000%. The prospect of speedily opening the line between Calais and Paris is a favourable feature in the traffic case of the company. The ratification of peace with the London and Brighton Company, and the near completion of the North Kent line were alluded to with congratulation; and on the whole we should do injustice to the chairman and directors of this company, did we not express candidly our conviction that, under difficult circumstances and in very hard times, they have by great diligence and energy and unflagging zeal brought this property round from a most unpromising condition into a state of comparative prosperity.

Mr. Hudson had the difficult task to perform of announcing to the shareholders of the EASTERN COUNTIES a dividend of only 8s. upon the half-year, from which there has to be deducted the income-tax. This he accomplished with his usual tact, and although he was pelted

189,676

275,314

by the shareholders with innumerable questions, he answered them all so well as to carry with him nine-tenths of the shareholders. He concluded by a judicious éloge of the late Mr. Stephenson, of whose long-continued friendship he had just reason to be proud.

The dissentient shareholders of the London, BRIGHTON AND SOUTH COAST, in spite of their long-sounded note of preparation, have met with a decided repulse. From the clear straightforward statement of the chairman the financial concerns of the company promise that ne plus ultra of railway management—a closing of the capital account. This event, though announced after a statement of a similar kind at the half-yearly meeting of the South-Eastern proprietors the day before, is likely to be first realized by the Brighton directors, as they have but a trifling additional mileage to construct. The dividend declared was 13s. per share.

The report and accounts of the GREAT NORTHERN were adopted by the shareholders at the half-yearly meeting; after various pressing remarks to the directors on the necessity of a more stringent economy in the conduct of their affairs. Before October the line will probably be opened to six miles beyond Lincoln. The arrears in the calls are reported to be diminishing, and "each shareholder is to have the option of dividing his 25l. share into two 12l. 10s. shares, distinguished as A, or deferred, and B, or guaranteed shares. The B (unpaid up) to be guaranteed by the holder of the A (paid up) 6 per cent. per ann., and the A to take the chance of all further privilege or dividend."

The directors at the half-yearly meeting of

the TAFF VALE proprietors recommended in their report a dividend of 4l. free of income-tax on each original share of 126l., and a dividend in the same proportion on the quarter and 10%. shares. The works on the East branch have been satisfactorily advanced.

The shareholders of the GREAT NORTH OF England at their half-yearly meeting received the simple and pleasing announcement of dividend on the various shares at the rate of 10 per cent. per annum, less income-tax.

have held their half-yearly meetings and have adopted the reports there presented :-

Cork and Bandon, with a forfeiture of 511 shares.

Newry, Warrenpoint and Rosstrevor. West Cornwall, with a forfeiture of 730 shares.

company, probably in this autumn. We have young and old, a delightful companion. often pointed out the national importance of the work, and this mark of distinction we may assume, conclusively corroborates this view; for it is not likely that the Prince Consort view; for it is not likely that the Prince Consort I suit of his favourite schemes. So great virtues I all will go on again in the usual course. Many would undertake such a mission without first may excuse so small a failing; and it might men who might have waited some years for an inquiring what the Admiralty and other official departments thought of his doing so. The having found himself in the right during a will, in spite of the appeals of Mr. Jonas Brown Admiralty compelled the company to have its thry years' contest with the world, when it is and his confederates, have the discretion, by lock-grates wild appeals to admirable largest thry years' contest with the world, when it is not likely strangely and good conduct to retain the inquiring what the Admiralty and other offi-cial departments thought of his doing so. The lock-gates wide enough to admit the largest thought him in the wrong, he should in the war-steamers which entailed an additional out- a latter part of his life be very little disposed to war-steamers, which entailed an additional outlay of 50,000/. The shareholders may therefore rejoice in this recognition of the nationality of the Docks. It is the beginning of the repayment for the increased expense, to which they achieve by energy, industry and self-education. in their private capacity have been put, for the He has done a hard day's work—he has gone benefit of the public at large.

MB. GEORGE STEPHENSON.

The Father of Railways is dead. After a hort illness, a low fever carried him off on Saturday last, at the age of sixty-seven—a short life, if we measure it by the events it has witnessed and the work he has done in it. The invention of Railways, and especially the invention of steam locomotion as applied to them, were his—if not exclusively, at least his in a greater degree than any one else's. The system which he founded he has lived to see carried out to the highest perfection, - and conferring incalculable benefits on his own country especially, but extensively also on all civilized nations. In George Stephenson our country has lost one of its most distinguished men, and mankind one of its greatest benefactors.

The Liverpool and Manchester Railway was the foundation of Mr. Stephenson's great fame, as it was also the commencement of the modern railway system. The production of this railway will remain on record as one of the most perfect achievements of human intellect: for although the first of its kind, it remains to this day one of the most perfect and successful. It was here that the modern locomotive engine began its career-and to the present day the Liverpool and Manchester continues a pattern railway.

Here, too, it was, under the auspices of George Stephenson, that the school of modern railway engineers was first formed. It will be found on examination that nearly all the most distinguished of our railway engineers are those who were his pupils on this first line. He thus by his own labours founded the system, and by those of his pupils gave its blessings to the world at large.

We all know that it was from the humblest rank of life that his talents had raised him; force of intellect, self-education and hard work were the chief elements of his elevation. All his leisure—if he can be said to have had any—was devoted to self-education or mechanical invention. There is sourcely any mechanical art or invention which he did not at some time or other practise or improve; and it was one of his proudest recollections that by mending and The shareholders of the following companies cleaning clocks in the evening, after his day's work was over, he earned money enough to give his son that liberal University education Airdrie and Bathgate Junction, who are going to which he has since turned to so good an acpride and happiness.

Of his talents as an engineer we shall say no more; but it is perhaps less generally known

In his latter days he has sometimes been accused of unreasonable obstinacy in the maintenance of his favourite dogmas and the pursuit of his favourite schemes. So great virtues latter part of his life be very little disposed to give great weight to competing opinion.

to sleep—requiescat in pace!

The published accounts of the LONDON, BRIGHTON AND SOUTH COAST for the last four half-years tell their own story. The decisive items are clear enough :-

1849,

1847, nett balance—Feb. 137,2231.; August, 85,2324.; total
1848, nett balance—Feb. 103,4594.; August, 77,9784.; total 222.435

181.437 In the gross receipt for 1848, there is an increase of 44,062/. upon 1847—the nett receipt for 1848 is less by 41,0181. than in 1847. is explained by the item of charges deducted, which is more by 85,638l. in this year than in the last; and 40,079l. of the increase will be found at once accounted for by the difference in the charge for loan interest between the two years respectively. Add to this the difference between the total capital in February 1847, 5,178,942/., and in August 1848, 6,310,7761., towards which about a million has been raised, we believe, in calls during the two years, -and we have a plain explanation of the fall of the dividend from 7 per cent. per annum to 21. 12s. in that interval. There is no gainsaying the practical effect of all the expenditure, on new lines and in Parliament, during the past three years, on the financial state of the undertaking; and the proprietors may well be disposed to put some end to a course of proceeding, which, however designed, is evidently rapidly tending to absorb the whole receipt from the only profitable part of the concern-namely, the original line. And they will hardly be blamed for not joining in the regrets expressed in the report, that Parliament has prevented the directors from adding half a million more to the expense that has produced such results as are shown in the figures we have just extracted. They speak so plainly that no further comment is necessary. The new chairman has a difficult task before him:-we hope he may be able to fulfil it with credit to himself and advantage to the company.

Ardre and bathgate Junction, who are going to swinch ne has since turned to so good an actional state of the proceedings.

Birmingham, Wolverhampton and Stour Valley, with a forfeiture of shares.

Bristol and South Wales Junction, who will wind up has obtained was the subject of his greatest as we anticipated it must do. The company has supported Mr. M'Connell, the better adhas supported Mr. M'Connell, the better advised of the old men have resumed their employment, the places of those who have left West Cornwall, with a forfeiture of 730 shares.

Our readers will have observed, in the report there was scarcely a subject of human speculation of the meeting of the Manchester, Sheffield tion or a department of recondite science on Parliament, that such arrangements have been and Lincolnshire last week, an announce—which he had not employed his faculties in completed as would insure the satisfactory ment that His Royal Highness Prince Albert, such a way as to have formed large and original views, and his conversation was so full of withstanding the assertions put forward at the Dock at Great Grimsby, belonging to the tinstruction and animation as to make him, to meeting, that the pernicious influences of various company, probably in this antume. We have young and old a delightful companion. clubs have been at work, and notices had been dispatched to various lines in the North in the hope of a general strike. This folly, however, has not been committed, and we have no doubt all will go on again in the usual course. Many their steadiness and good conduct, to retain the favourable position they have suddenly reached. We are no advocates for screwing down wages; "good hand, good hire" is our rule; but the directors of the London and North-Western, or in fact of any concern, can never allow the dictation of their own servants. The proceedings of the railway employés in France, and the consequences to the service, are rather too

Digitized by GOOGLE

recent not to impress that conviction pretty forcibly upon every reflecting mind, and we need hardly add, that without subordination and regularity it is impossible any industrial undertaking can flourish, least of all a railway. In conclusion we would offer a few words of advice to the men. The course they are pursuing will not tend to their benefit, -they are making statements which amount to little or nothing,—one train was somewhat behind time, another was too soon, one of the drivers did not know the road, another was a man of bad character,-all these may be interesting matters of gossip amongst themselves, but the public will not attach much importance to them,—and every traveller by railroad knows very well that in case of a smash the engineer and stoker generally get the worst of it. Unless therefore the drivers be utterly reckless and set no value on their own lives, they will for their own sakes be careful, and if a man cannot acquire in a few journeys a knowledge of the piece of road he works, and the signals upon it, we can only say his intellect must be very far below the standard that would qualify him to drive a wheelbarrow. The company will use every precaution to prevent accidents for their own credit, and notwithstanding the large traffic on the line, we imagine there is not one in Great Britain where the details are better attended to than on the London and North-Western,-so far therefore the new drivers are well assisted and the public protected. Deputations of the old men, we see, are going about to the metropolitan members to urge on their attention the danger which must result from their non-employment; but unless we greatly err, the real gravamen of the complaint is, that Mr. Jonas Brown and his followers see they have very unwisely thrown themselves out of 8s. a day, which they do not find quite so easy to get at present—they have, in fact, "quarrelled with their bread-and-butter," and the sooner they leave the trade of agitation, which will not pay, and seek other employment, the better. dare say they are good men in their proper place on an engine, or the London and North-Western would not have retained them so long, and they had better now go to work on some other line—they are only biting against a file by persevering in their present policy.

From our official returns it appears that the amount of traffic for the last week, on 4,045 miles of railway, was 237,1941., thus accounted for:—131,5651. for the conveyance of passengers only, 47,6921. for the carriage of goods, and a remainder of 57,9371. for passengers and goods together, not respectively apportioned; being an increase of 20,8511. over the corresponding week of last year, when the mileage was 3,230. The average carnings per mile were 591., whilst in 1847 they were 671.

REAL POINTS OF MOMENT IN THE CON-DITION OF THE LONDON AND NORTH-WESTERN.

As the DIRECTORS of the LONDON AND NORTH-WESTERN have witnessed, in common with all who are concerned in railways, the impression of more than 7 per cent.;—and ascribed this, or desired that it should be thought due, to rumours and calumnies put forth by persons of income.

the Arthur Smith class. This can have been I the only motive for taking up so much of the time of the meeting with a review of the 'Bubble of the Age'—a publication, as we have already remarked, quite undeserving of the importance given to it, and only likely to mislead parties who have no interest in ascertaining the real facts of the case. If anything could raise the credit of a trumpery libel, it would be the emphasis and warmth with which it has been denounced by the London and North-Western Company; -and as we must believe, in spite of Mr. Glyn's "letters from the country and from considerable persons elsewhere," that it has had nothing whatever to do with the fall of the company's stock,-that its decline is due to far more substantial causes, it would, we think, have been better to have adverted to these causes fully and frankly, instead of diverting the proprietors' attention, by fighting with shadows, from realities which have actually produced the effects that Mr. Glyn seems to think unaccountable.

He must know that a calculation of the current rate of dividend, at a given moment, is not all that determines the value of such a stock as The purchaser or holder cannot and ought not to shut his eyes to the past course of the business; and from thence he will draw his conclusions as to what it may be hereafter. This is the process which settles the ruling price of the shares in an established company. If the buyer were certain that any present rate of dividend could be counted upon as a settled thing, he would easily frame his offer accordingly. But it is not very likely that he will have this confidence, from observing what has been going on during the last two years. He has seen a constant increase of expenditure, which is now proved to have been far from productive; + and he now sees unclosed other heavy engagements, the result of which there is no reason to suppose will be more profitable. He perceives that while the receipts per mile have been declining, the only influence exercised by this grave fact has been upon the dividends, the policy which has led to their decline having in no visible way been altered, and no distinct promise given that it will be abandoned hereafter. Under these circumstances he will hardly be persuaded to take for granted the process adopted by Mr. Glyn as the measure of value for the stock:-but, on the contrary, will be apt to think that similar causes will continue to produce similar effects; and observing the rather nonchalant way in which Mr. Glyn comes forward time after time to announce successive descents in the dividend, is tempted to include in his calculations the possibility of a still further fall to be declared with the same urbane composure hereafter.

This apprehension, we say, and not the blundering charges of a vulgar pamphleteer, it would have been most desirable for the chairman to have done something effectual to get rid of;—for this and this alone is the cause of the present state of the company's shares as a marketable property:—a condition, the practical meaning of which—a dead loss of some million in amount to the holders of this stock—may well account for anxiety and discontent, on stronger grounds than Mr. Arthur Smith's pamphlet has produced.

We shall hope that the directors are at last aware of the real bearing of this case; however it may have been avoided in Mr. Glyn's address. It would have been well, however, if some pains had been taken to make this clear to the shareholders. The effect of a plain manly admission of

the fact that the policy of past years-acting, of course, under the external difficulties of the last two-has brought the affairs of the company to their present state; and of an equally plain declaration that a more prudent and moderate course, more suited to this condition of things, will be followed hereafter, would have been far more useful than that of speeches which, however well delivered, said little to the shareholders on the main business they are concerned in. Had this been duly handled at the meeting, and not left to be inferred from some meagre passages in the report and the chairman's brief declaration as to parliamentary business, it is pretty certain that the general feeling produced would have been one of raised confidence, instead of the despondency that the meeting has produced. We cannot therefore congratulate Mr. Glyn on the choice of his topics, or on the manner in which the directors have passed over those which ought to have been prominently discussed. Too much was said on a matter that no one was anxious about, and far too little on subjects which every one regards with the deepest anxiety. Still, we will not take it for granted that because scarcely anything was said on some matters of chief importance, nothing will be done. The directors must be aware of the gravity of the company's situation, and anxious to take some course for its remedy. If they were not so inclined before the meeting on the 11th, we apprehend that the effects of what passed on that day, and the manner in which they will be reminded of its result by the proprietors, will convince them of the necessity of reviewing their opinions forthwith, and of setting themselves in real earnest to the duty before them.

Much stress was laid by Mr. Glyn. too, on the mere rumours concerning the resignation of Mr. Creed. Here, again, he studied to remove impressions that had little weight with the proprietors, while he did not-we sincerely regret to say-take the occasion to announce to them such an arrangement, consequent upon that change, as would have been hailed by all, without exception, as of infinite weight and hopefulness. A deep and natural disappointment was felt on learning that the vacancy at head quarters is not to be filled by placing there the man of all others,-not merely in the London and North-Western service, but in the whole railway world,-the most fit, experienced and able for such an office. Why Mr. Booth, instead of being invited to a station, where his consummate knowledge and known talents would have been most useful and are most wanted, is to be removed, on the centralization of the business, to superintend an outlying part of the concern-everyone has asked and may well ask. The arrangement, unless in compliance with Mr. Booth's positive desire,which we cannot learn is the case,-neither accords with what is due to his unequalled qualifications, nor is likely to promote confidence in the management of the new system. At a time when the affairs of the London and North-Western are in a state far from satisfactory, nothing could have been a more sure and universally welcome pledge that every-thing possible would be done to retrieve them, than the appointment to a station to which he is in every way entitled, of the earliest and the most thoroughly competent, by many degrees, of all railway officers in this kingdom-of one who presided at the birth of the system, settled most of its arrangements, knows every detail of its working, and has continued throughout its advance to occupy, without a question, a place in the first rank amongst practical and scientific authorities,-of one who can be trusted as a wise and careful manager, with a coolness of

[†] For instance, to say nothing of less absolute losses, he will find in the capital account an item of 48,334., charged to the West London, which has never returned a penny of income

head and a compass of understanding that of themselves would give high qualifications for office,—even had he no especial claims from his unequalled experience. To have passed Mr. Booth over, and to place in his stead at Eustonsquare any one less known, would have been felt to be an injudicious proceeding at such a juncture as this: to pass him over in favour of any one whose name even is utterly unknown in the railway world-which we understand is the arrangement contemplated—is a proceeding just now of most unlucky augury indeed. What may have given rise to it we cannot say: but nothing whatever, except Mr. Booth's absolute refusal to serve, can excuse it, or can prevent its depressing the hopes of the shareholders.

Every one feels that this is a time, of all others, when it is necessary to put the best men in the most important places; and every one will feel that if this principle is to be superseded in the London and North-Western by a system, too well known to prevail in this metropolis, of regulating appointments on lower grounds; of letting personal favour, or obsequiousness, or private connexion, overcome the claims of superior merit, its prospects from an entire concentration of the management in London, will be worse-far worse-than the most desponding have yet thought them. On every account, therefore, the arrangement on Mr. Creed's retirement must be regarded as injudicious, unfortunate and ill-timed; we may add that, if it be not settled beyond recall, the directors could do nothing more likely to revive the despondency of all concerned, than re-considering this serious matter, and trying to procure for the most important place in their management the officer whom every one knows to be by many degrees the fittest person to fill it.

There were some other things in Mr. Glyn's address to which it may be proper to advert on a future occasion,—as it must be seen that the whole railway interest is concerned in the proceedings, at this critical period, of its greatest incorporation.

# Carrespondence.

### PRINCE ALBERT'S VISIT TO GRIMSBY.

Your readers in this neighbourhood have observed in the speech of the chairman of the Manchester, Sheffield and Lincolnshire that his Royal Highness Prince Albert is expected to lay the foundation stone of the new docks at Great Grimsby. Can you inform me through your columns whether the line will be opened for the conveyance of passengers on that occasion? Thousands from this town and neighbourhood I have no doubt, would avail themselves of the opportunity to see the ceremony. JOHN BOWDEN. Grimsby, Aug. 16.

We believe the line from Gainsborough to Grimsby will be opened some time in October; but we have no doubt that it will be from Brigg at least. We will make further inquiry. Ed. R. C.]

# CHEAP TRIPS.

On looking over the traffic table for this week I find that the receipts of the York and North Midland are 9,9781, this week, while the receipts for the corresponding week last year were 9,991L, showing a decrease of 131., notwithstanding that there are 50 niles open more this year than the last. How the directors account for this decrease I cannot tell; the state of trade, no doubt, has contributed to it; but in my opinion, the positive refusal on the part of the directors to allow parties to get up cheap trips has contributed more than even the dulness of trade; it is well known that last year many hundreds of pounds were paid into their exchequer by schools and other institutions, as well as private individuals who were allowed to have trips to York, Scarborough, Hull,

hands, and have all the benefit themselves." then, rather than let a school have a trip, (which involves a world of trouble upon the managers of the school), and none comparatively upon the company, and which may yield perhaps 10% or 20% to the school, the directors will sacrifice 1501. or 2001., and in some cases even 300L What is the actuating motive in the breasts of the directors I cannot tell; one thing is quite evident, they have no share in the liberality, which is, to a considerable extent, actuating other companies. I may say it is felt to be a grievance in this neighbourhood; the places I have before named are the only places of pleasure and recreation this part of the country affords; and the masses of the labouring classes are now prevented from enjoying them purely from the conduct of the directors; however, I am glad to find that their narrow-minded policy is affecting their finances; I hope it will continue to do so until they manifest the same liberal spirit which actuates other companies. A Subscriber.

Leeds, Aug. 12.

### Buggin.

The CALEDONIAN and EDINBURGH AND GLASGOW have adjusted their claims by the following arrange-ment. That the passenger traffic between Glasgow and the North of Scotland shall be equally divided, and the whole of the goods traffic shall belong to the Caledonian. The Caledonian have waived all claim Caledonian. The Caledonian have waived all claim to the traffic between Edinburgh and the North of Scotland, so that the Edinburgh and Glasgow shall not book passengers or goods beyond Fife. The north and south traffic is to belong to the Caledonian, and

the Edinburgh and Glasgow are to take no part of it.

The receipts on the DIEPPE portion of the PARIS
AND ROUEN, from the 6th to the 12th of August, were

Mr. Glyn, at the London and North-Western meeting last week, took the opportunity of congratulating the shareholders upon the CONNEXION with the Docks in the Thames, which will very shortly be realized. It is curious to observe how every railway is trying to have its water terminus. Mr. Hudson connects his Eastern Counties at Yarmouth; his Hull connects his Eastern Counties at Yarmouth; his Hull and Selby at Hull; his northern lines at Hartlepool and Sunderland. The Great Western has Bristol, and is looking to Plymouth and Falmouth. The shrewd men of Sheffield were laughed at for seizing hold of dull Great Grimsby; tut every day's experience is proving the wise policy of that step. The Lancashire and Yorkshire have secured Goole; the South Western Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southwestern Southweste Lancashire and Yorkshire have secured Goole; the South-Western, Southampton, &c.; and we have no doubt that in a few years docks will be a feature of every important line. The possession of a good water terminus is like extending the terminus in one sense to all the world.

The subject of the onerousness and injustice of the present system of PAROCHIAL RATING on the various LINES, is being properly agitated. A meeting of directors is to be shortly held, for considering the best means to be adopted in consequence of the great increase in the parochial rates. The directors will of course memorialize Parliament. We have elsewhere

commented on this subject. The committee appointed by the Dover Town Council have received from the SOUTH-EASTERN AND CONTINENTAL STEAM-PACKET COMPANY a distinct assurance of their intention to run steamboats between Dover and Calais, for passengers and merchandise, immediately on the opening of the North of France to Calais. The directors, however, says the Kent and Sussex Advertiser, called upon the deputa-tion of the council to cause all possible reductions in the local dues, in order to promote the common object of making this port the chief point of transit to the Continent.

At a meeting of the directors of the Cornwall, at lymouth, the question as to the further prosecution of the works was considered. It was determined, says the Cornwall Royal Gazette, that, looking at the financial state of the country, it would be prudent to order a temporary suspension of the works. This is probably looked upon only as a temporary measure

The local papers grumble at the delay in opening the new station of the TRENT VALLEY.

The directors of the South Staffordshire lately walked from Walsall to the junction with the Birmingham and Derby, inspecting the works. There is nothing to prevent the opening of the line by the end of the year.

Trial trips have been again frequently made on a acc.; it is well known too that very many applications have been made to the directors this year; but they have uniformly been met with this reply: "The the highway from Harrogate to Knaresborough, and to \$12,903 thalers, leaving a profit of 5×2.886 thalers. A dividend of \$1\frac{1}{2}\$ per cent. has been declared. There the highway from Harrogate to Knaresborough, and the highway from Harrogate to Knaresborough, and to \$12,903 thalers, leaving a profit of 5×2.886 thalers.

directors have resolved to keep the trips in their own : it is expected to be opened for traffic during this month. The viaduct at the Crimple Valley is rapidly approaching completion, when a further distance, extending to Weeton, near Harewood Bridge, will be

ready for opening.

The KILKENNY AND GREAT SOUTHERN AND WEST-ERN meeting was to have been held on the 16th, but in consequence of the number of shareholders in attendance being insufficient to constitute a quorum, the meeting (after sitting one hour, as required by the Act) was adjourned sine die.

The Railway Record reports that the works of the Tunbringe Wells and Hastings line are now proceeding so rapidly that there is a scarcity of labourers. When so many men are out of employment this should

be generally known.

The works of the Aberdeen are again in an active The works of the ABERDEEN are again in an active state. The embankments are being finished with surface earth, and on the large wooden viaducts numerous workmen are employed. These viaducts, says the Glasgow Examiner, could be finished in a few months, and the cuttings and fillings up are in a forward state. The line will be one of the best formed, and it is hoped that it will be finished and are not all less than trailer months from this date. opened in less than twelve months from this date.

As the l p.m. down train of the GLASGOW AND As the 1 p.m. down train of the Glasdow Man Greenoek was proceeding through the Bishopton tunnel on the 10th, and had reached the eye, or, to be better understood, the part of the tunnel which is open to daylight, a passenger in a second-class carriage, observed a child fall from a third-class carriage on to the line. The train was stopped, and on the guard going back, the child, a fine boy of five years of age, was observed running on the line perfectly unhurt. The boy had fallen from the arms of his mother, and luckily escaped the approach of the up train.

The improvement in prices of the shares of the French railways will have been noted by our readers, and we are led to hope from the arrangements entered into with the Northern Company by the Government, for deferring the payments coming due, will lead to still further improvement. The payments are thus fixed:—twelve millions of france during the present year; twelve more next year, and then four millions annually till the whole shall be liquidated. The outstanding call of 75f. is to be modified,— 50f. only are now required, less the amount of interest and dividend due, of 14f. 95c., payable upon the 1st of September. Those shareholders who have paid the original calls, making in all 325f., will also receive, if they require them, provisional bonds for 25f. bearing interest at 4 per cent.

The Paris and Strasburg have issued a notice that in consequence of a large amount of funds being locked up in Treasury bonds, the sale of which would entail a loss at present, a call of 25f. will be made in October, and another of the like amount in February.

The National Assembly have passed the bill for the redemption of the Paris and Lyon. The first three articles form the basis of the arrangement between

articles form the basis of the arrangement between the company and the State:—

Art. 1. declares the Lyon line to have become the property of the State; the execution of all parts of it are henceforth under the direction of the Minister of Public Works; the company is to hand over to the State all the plans, drawings, levellings and surveys, and the contracts entered into for all kinds of stock; the said plans, drawings, levellings and surveys to be submitted to the National Assembly before any of the works are proceeded with.

Art. 2. The State shall enter at once into full possession of the line, land, stock, &c.; also, within three days, of all moneys and securities of every description in hand, with the exception—1. Of certain sums paid over and above the 250t, per share, which are to be reimbursed to the shareholders.

2. The interest due to the shareholders on March 1, 1848, on the instalments which they have paid, amounting to two millions. 3. Indemnities due to engineers and other persons, amounting to 200,000f.

Art. 3. On the execution of the conditions stipulated in the preceding articles, there shall be delivered to each shareholders.

Art. 3. On the execution of the conditions stipulated in the preceding articles, there shall be delivered to each share-holder for each of the 400,000 shares on which the 250f. have been paid up a rente of 5 per cent. stock of 7f. 60c., with full benefit of the interest falling due on March 22, 1848. Art. 4, providing for the interest of shareholders who should complete their payments, was, after dis-

who should complete their payments, was, after discussion, amended thus—
All shareholders who declared their intention to pay the 250f, due before September 1, 1849, should receive in exchange a certificate entitling them to a rente of 25f, with interest from the 22nd of March last; the payment of the 250f, to be effected by fifths at the following dates: the 5th of October, January, April, July, and October respectively, receiving on each payment a coupon of 5f, rente—to be issued at 70f, 5c.

The remaining exticles were voted without discussions.

The remaining articles were voted without discussion: the 7th provided that a credit of 20,000,000f. should be opened for the prosecution of the works.

By the annual report of the Lower Silesian, the total receipts for the year 1847 appear to have amounted to 1,395,789 thalers, and the expenditure

Mr. Herbert (the secretary) read the Report.

Mr. Herbert (the secretary) read the Report.

The accounts of the South-Eastern, for the half-year ending July 31, show that the receipts of the company have amounted, during that period, to 219,353. 55. 6d., and that the working expenses have been 67,1021. 11s. 5d.;—the rates and Government duty 17,970. 6s.;—making the expenditure on revenue account 106,6452.7s. 5d. The balance carried to account of profit and loss is 112,7192. 18s. 1d., and that account shows an amount at the disposal of the proprietors of 108,836. 1ds. 10d. On reference to the statement of receipts and expenditure on capital account during the half-year, the proprietors will observe, that the sum of 713,1461. 13s. 4d. has been received on account of calls; and during the same period the sum of 457,1412. 5s. 1d. has been expended on construction account, and 176,750. for mortgage bonds and loan notes paid off. It will be in the recollection of the proprietors, that the directors, in their last report, stated their unwillingness to urge forward the works at a great speed, being only too sensible of the severity of calls; this will, in some measure, account for the delay in the opening of the North Kent line. The directors, on reviewing the state of the company's affairs, considering that to pay interest on so large a sum of unproductive capital as the No. 3 and No. 4 shares represent is prejudicial to the interests of the company, have resolved on finishing the works with as much rapidity as is consistent with economy and durability. The directors have to announce to the proprietors that they have ample means for completing the whole of the works of the South-Eastern. The agreement made with the L sensibly affected all other countries. In conclusion, your directors have the pleasure of perceiving, that, notwithstanding the disastrous effects which the French Revolution has brought about, the traffic of the South-Eastern has maintained a comparison of mileage with the same period of last year that must be satisfactory to the proprietors.

Receiving the Rememblishers on Capping Account to July 31.

(For Engineer's Report see Official Papers.)

The CHAIRMAN said: Gentlemen, in the present state of distrust in railway property, I consider it my duty to lay before you our financial position, and to call your attention to the prospect of a return for the capital expenditure. I will, in the first place, call capital expenditure. I will, in the first place, call your attention to the capital accounts, which you have in your hands; you will there find the following items:—balance in hand, 279,000*l.*; calls, &c., in course of payment, 385,000*l.*; call due yesterday on No. 4, about 338,000*l.*; total 1,002,000*l.* I hold in my hand a statement, carefully drawn up by Mr. Barlow, showing that the amount required is 825,000*l.* to complete all our works. You will observe the 825,000*l.* is deducted from the sums called up and sums due, and that it leaves a balance of 175,000*l.* in hand. The directors would rather have postnoned the last call on directors would rather have postponed the last call on No. 4 shares, but the fact is, that on the expiration of 1,252 14 0 our parliamentary powers for purchasing land on the

Ashford and Hastings we are obliged to complete all our engagements on that line; and, in order to push forward the North Kent, we have had to pay large sums for the valuable property through which we pass. Within the last fortnight no less a sum than 132,000l. has been paid, and within the next month we shall have completed the purchase of the greater part of land required. The calls noted on the face of the accounts, as being in course of payment, at the first blush appear large: but are coming in satisfacthe accounts, as being in course of payment, at the first blush appear large; but are coming in satisfactorily; and when we consider the pressure necessarily put upon the proprietors, you will agree with me that the calls have been rapidly and well paid up. Our capital, when the whole of our works are finished, and the bonds paid off, will amount to 8,191,000*l*., or thereabouts. I speak without book, but I believe I am nearly correct. Gentlemen, if from the sum of 8,191,000*l*. you deduct 4,546,000*l*. Are infinitely, and the bodies pass, without book, but I believe I am nearly correct. Gentlemen, if from the sum of 8,191,000t. you deduct 4,546,000t, there will remain a sum of unproductive capital amounting to 3,645,000t. And now, gentlemen, comes the most important question—Will the lines which represent this large amount of capital produce an adequate return? I have given a statement of our productive capital, or that which pays dividend, for the enemies of the South-Eastern, by insinuation, through some portion of the press, attempted to cast reflections on the directors, that we have paid, and continue to pay, dividend out of capital. Gentlemen, before you leave this room I will make it perfectly clear that we do no such thing. I recollect what was said some time ago by parties who were no friends to this great undertaking. They said—"Wait until a war comes, and then see where your revenue will be." We have had a French revolution equal to a war, yet our traffic has stood its ground, and can compare with that of the best line in the kingdom. Here is a statement of our present productive capital and capital stock of 1,400,000t. I will now give you a a statement of what our present productive capital amounts to, viz., first capital, 1,400,000t.; second capital, 700,000t.; third capital (No. 2,) 62,000t.; fourth capital (No. 3), 924,000t.; bonds, about 850,000t.; making a total of 4,546,000t. Now, you often hear people say—"we cannot make out from your accounts what amount you pay upon." It is as clear in the official accounts as it possibly can be to any person who understands figures. It is clear that you will find a certain sum charged for interest on clear in the official accounts as it possibly can be to any person who understands figures. It is clear that you will find a certain sum charged for interest on borrowed capital, amounting to 850,000l., applicable to the main line, making a total of 4,546,000l. on which we pay dividends. The first and most important of our lines is the North Kent; and I will claim your attention for a short time while I go through the prospects of the traffic there. You are aware that it is a continuation of the Greenwich. The first place we come to is Lewisham: from this wealthy that it is a continuation of the Greenwich. The first place we come to is Lewisham: from this wealthy and populous district we expect a large accession of traffic; and when opened to this point it will bring into use the Bricklayer's Arms Junction, for the West-end traffic, which is at present used as a goods station only, and which has cost the company upwards of 300,000t. This is a large sum for unproductive capital, but it is included, as you will see, in our statement of productive capital, and forms a large addition to that capital. From Blackheath the line proceeds to Woolwich, where we intend to have quarter-of-an-hour trains, the same as on the Greenwich, and no one can deny that the traffic to Woolquarter-of-an-hour trains, the same as on the Green-wich, and no one can deny that the traffic to Wool-wich is very great. From Woolwich the line proceeds through Plumstead, where we get the traffic from the populous districts of Welling, Bexley and Wickham, and from thence to Erith, Crayford and Bexley Heath, Dartford, Greenhithe and North-fleet, and from thence proceed to Gravesend. The present traffic from London to Gravesend is greater than the traffic was from London to Green-The present traffic from London to Gravesend is greater than the traffic was from London to Greenwich before the opening of the Greenwich; the number of passengers that passed within the last two years over the two piers at Gravesend amounted to 4,000,000,—2,000,000 annually. This is a traffic disconnected with the local traffic of the populous places first named. And now I would ask whether it is unreasonable to calculate on a return equal to the mileage of the Greenwich branches? For my own part. I think it will exceed it: but we will take it at mileage of the Greenwich branches! For my own part, I think it will exceed it; but we will take it at the present mileage of the Greenwich. It must, however, be recollected that you go on through wealthy districts along the line, containing a population of 189,000 persons, and that when we are at Gravesend we get the large additional traffic I have a to the prospects of the traffic. We named. Now, as to the prospects of the traffic. We have the Greenwich boats against us; but then the traffic by these boats is greater than before a line to Greenwich was made; and yet the Greenwich carries 3,000,000 of passengers annually. Therefore, I think this fact fairly yields this conclusion, that the North Kent will realise the same mileage as the London and Greenwich. For my own part I say unhesitatingly that it will far exceed it: you can form your own

judgment, you can look at all the facts, and can draw your own conclusions; for the exercise of your judgment I have allowed a wide range. Take off from this assumed traffic a large deduction, and you yet leave the South-Eastern one of the first lines for traffic. No doubt we have the water to compete with; so we have to Greenwich; but if we put it down at the mileage of that line, say 15,450l. per mile, it will yield a revenue of 494,000l. for passengers, and for goods about 50,000l. I only give you the facts; I state the premises, and you may draw your own con-clusions. We have no wish to conceal or exaggerate anything; we only desire to lay all the facts fairly before you, that you may form your own judgment. The next in importance to the South-Eastern line, is the Tunbridge Wells and Hastings branch line. From this we expect a considerable accession to our traffic. There is already a line to Hastings, vid Brighton; but we calculate on receiving the whole of the Kentish traffic down to Hastings, and also the traffic over the Reading, Guildford and Reigate, which will be an important feeder to this branch, as well as to the main line; for we shall get the Irish and Scotch traffic, the passenger traffic, or those who wish to go to the Continent without coming first to London. When we have opened a line to Hastings, and the traffic has been partially developed, we will meet our neighbour the Brighton, and agree with them as to a division of the traffic; and in the same spirit we shall continue to conduct our affairs towards our neighbours, and render no injury to railway property. Gentlemen, I put down the receipts from this railway from our parliamentary estimates, which will amount to 24,000l. per annum. The next is the Ashford and Hastings, which will complete a coast communication, and unite the watering places on the south-eastern coast from this branch. Here we expect a large traffic in cattle, fish, &c. You will see the Gravesend and Rochester line is not taken into our calculations; but I will give our reason. The Gravesend and Rochester line is not open for the benefit of the company just now; it is open on public grounds. At present omnibuses compete successfully with us, for our line does not go far enough into the town, so we have no traffic worthy of comment, compared to what will be the case in a short time. We shall have a large traffic from Woolwich to Gravesend. But you will no doubt say that we shall have a powerful rival and competitor in the water. Why, we have the same sort of rivalry in the case of the Greenwich line; and if we have competed successfully in a case of 31 miles, how much greater is our chance of successful competition when we have a line to Gravesend and Rochester 32 miles in length! I think the facts I have stated carry a complete answer to this question. It will be seen we have introduced a paragraph, announcing that we have come to an understanding with the Great Northern of France. We endeavoured to arrange with the directors of the Boulogue and Amiens, but we failed to do so, and you will therefore not receive those advantages from that opening we have been led to expect. The Boulogne and Amiens Company send all the traffic, goods especially, by water to London. We have therefore been obliged to make friends with the Great Northern, who will do all in their power to bring traffic on the South-Eastern line. But, gentlemen, the Boulogne and Amiens line cannot exist without us; it is part of our line; but if they will not meet us fairly, then in defence of your interest, we must look elsewhere. The next question is as to the amount of dividend to go to the proprietors. There is a balance of 108,000l. for this purpose. This will enable us to pay 21s. on No. 2 shares. 15, 9d. on No. 1, and 11s. 8d. on the No. 2 shares. If, however, you should wish to receive only a dividend of 10s. we are in your hands. But we have the fullest confidence in the line, and we recommend you to divide the guinea. We have no want of confidence in the resources of the South Eastern line. With some, we all know that the South-Eastern line has been an object of pity; but we shall not need their pity; for we have pursued a different system, and shall rise because we have avoided that system of 'amalgamation under which so many lines are destined to fall. Yes, gentlemen, we have always had a great aversion to amalgamations, on the principle that it was ruinous to railway property. We have steadily carried out our views, and we have avoided ruinous amalgamations. And, gentlemen, if the House of Commons had restored an old order, and had called on companies a year or two ago to prove their traffic, not one-fourth of the bills sanctioned would have become the law of the land. When the Legislature were at a loss for means to stop the current of railway speculation, had they put this law in force, they would have been enabled to throw out seven eighths of the bills which they passed, and thus have prevented a great portion of the disaster which has fallen on railway matters,

Gentlemen, I now beg to conclude by moving that the report be adopted.

Mr. D. SALOMONS had heard the report and the statement of the chairman with great satisfaction, and he congratulated the shareholders upon the prosperous condition of the affairs, which he believed was mainly attributable to the zeal and ability of the directors. He had great pleasure in seconding the motion.

Mr. LEVY expressed his approval of the system of management that the directors had hitherto adopted, and of the course they proposed to take in future. He was well acquainted with the traffic of North Kent, and he was sure that the line through that district would be one of the best paying railways in the kingdom.

In reply to some questions put by Mr. W. JONES

of Liverpool,
The Chairman said that if the proprietors paid up their calls punctually no further calls would be requisite for completing the works. No calls would be made until they were absolutely required. The last of the bonds were not required to be paid off until 1853, so that there was no occasion, as far as the bonds were concerned, to distress themselves. He hoped, indeed he believed, that the South-Eastern would be the first company in the kingdom to close its capital account.

The motion for adopting the report was then unani-

mously agreed to.

Mr. Smale then moved that a dividend of 21s. be paid, 15s. 9d. on the No. 1 shares, and 11s. 8d. on No. 2 shares. He had great pleasure in being able to inform the shareholders that he had seen their friend Mr. M'Gregor, at Harrogate, on Saturday last, and he was nearly convalescent.

A Proprietor: When will the dividend be paid? The CHAIRMAN: To-morrow morning, if you please

The resolution was adopted; as was also a resolution in reference to by-laws with respect to Folkstone Harbour; and one giving power to the directors to receive payments upon No. 2 shares during the next six months; it being optional with the holders of them

whether they paid or not.

Mr. J. Wilson referred to the great exertions of the directors, and moved that the best thanks and continued confidence of the proprietors were due to them for the same: also, that a committee of seven be appointed to consider the best way of remunerating them for their zeal, energy and faithfulness towards the company.

Mr. D. SALOMONS seconded the motion, which was unanimously carried; and the committee having been nominated.

The CHAIRMAN returned thanks for the resolution proposed by Mr. Wilson.

LONDON, BRIGHTON AND SOUTH COAST.

Aug. 18.—Half-yearly Meeting, London.—Mr. J. M. Parsons in the chair.

Mr. Buckton (the secretary) read the report as

In submitting the following Report for the half-year ending the 30th of June, your directors trust it will contain such information in regard to the actual state of the company's affairs, as may enable every proprietor to Judge for himself as to the condition and prospects of his property. The gross earnings of the half-year are 204,334. 4. 11d., being an increase of 21,335. over the corresponding half-year This excess has been obtained on about 374 addiof 1847. This excess has been obtained on about 3/2 additional miles; the average number worked during the present half-year having been 1591, as against 1211. Of this additional mileage, the Keymer and Newhaven branches, amounting together to 15 miles, have been comparatively unproductive. The former was constructed mainly with a view to shorten The former was constructed mainly with a view to shorten the distance to Lewes and Hastings, and the latter to establish an improved communication with the Continent. The Horsham branch, 83 miles in length, was opened on the 14th of February last, and promises to give a good return on the cost of construction. The agreement between this company and the South-Eastern is now completed; by it the Croydon and Greenwich and Bricklayers' Arms lines, respectively, are made free to the two companies from November last, when the heads of agreement were signed. It will enable this company to provide the additional accommodation for their traffic in London, which had become indispensable, at a moderate outlay of capital, as compared with the very heavy cost which had been previously estimated, and to obtain a better goods station, as well as the free use of the pascomprises an area of 4½ acres, on a level, and is 1½ mile from London Bridge, instead of 3½ miles, the distance of the present depot at New Cross. When to these considerations are added the advantages of escaping parliamentary contests, setting at rest the question of a competing line to Crowdon and proteins to the setting at the considerations are added the advantages of escaping parliamentary contests, setting at rest the question of a competing line to Croydon, and returning to a state of amity with a great company, with whom you have so many ties of neighbour-hood and common interest; and when it is further con-sidered that the toll over the Croydon line, which is ceded by this arrangement, might have been lost in a few years, while this company would have continued for ever subject while this constantly increasing amount of toll over the Green-wich line, your directors cannot but believe that the con-clusion of this arrangement must be a subject of congratu-

lation to every proprietor. The toll from the South-Eastern

has been included in the weekly returns during the past half-year, because the final agreement with that company was only completed on the 12th of July, and as this occurred so near the time of this meeting, it was thought better to so near the time of this meeting, it was thought better to continue the returns on the same principle until an opportunity of explanation to the shareholders was afforded; henceforth the weekly receipts will be published exclusive of the toll. The difference between the toll that would have been receivable and payable by this company, for the half-year, amounts to 4,628... and as, owing to the inevitable delay in carrying out the agreement, none of the corresponding benefits have been received during the last half-year, it would manifestly be unjust to throw upon its the loss thus retreascriptly incurred. As by this retreascript. the loss thus retrospectively incurred. As by this agree-ment a very large saving of capital is effected, it is proposed to carry this sum to the credit of the revenue, charging the same to capital account.

The total receipts for the half-year amount to £205,676 16 10 The total receptor wieners year amount to 3.

The total expenditure for the same period has been.—For working expenses, 70,1194. 7s.

11d.; for rates, taxes, government duty, toll, &c., 25,0462. 17s. 1d.; together . . .

95,126 5 0

which gives the amount of nett earnings for the half-year Whereof is appropriated for interest on loan capital, 32,572. 10s. 1d.; for fixed dividend on preferential capital, 16,072l. 7s. 2d.; together Which gives the amount of nett earnings for 110.550 11 10 48,644 17 3

Leaving..

Applicable for interest, at 4 per cent. per annum, on the eighths D, which, from the lat of July last, rank as ordinary stock, 7,3761. 19s. 10d.; and for dividend upon 4,129,238, 13s. 9d. of ordinary share capital, equivalent to a dividend of 13s. per share of 50l., which your directors accordingly recommend, 53,680l. 2s.; together.. 61,905 14 7

.. 61,057 1 10

And a balance will remain to the credit of the £848 12 9 current half-year of being interest upon the expenditure incurred for unhinished works. The whole of the remaining capital expended has now become a charge upon revenue, and this at a period when, owing to the severe and long-continued depression of the times, the traffic upon the main line has not only been arrested in its previous progressive increase, but consider-ably diminished, while that upon the coast lines has not been developed. Proprietors must bear these circumstances in mind, and also the great disproportion which has always characterized the receipts of the first and second half-years. in mind, and also the great disproportion which has always characterized the receipts of the first and second half-years. The receipts of the second half-year are proceeding in an equally satisfactory manner. The works on the Thames Junction and the Hallsham and Eastbourne lines, altogether 3½ miles, which had been suspended, have been resumed; and those at the London Bridge and Portsmouth stations cannot be much longer deferred. It is hoped, however, that owing to the arrangements with the South-Eastern Company, already explained, the cost of the former station may be reduced below the sum of 150,0000, stated in the report of the committee of investigation. The construction of the goods station at the Bricklayers' Arms will be immediately commenced; and the principal contract having been let, the directors do not anticipate that the whole cost will exceed 15,0000; and the outlay will, by developing the goods traffic and saving expense in conducting it, prove immediately productive. In their last report the directors adverted to the condition of the engine stock, and other circumstances, as causing a considerable addition to the working expenses, and expressed their confident expectation that large reductions might be effected. In this they have not been disappointed, as the following statement will show:—

following statement will sho	w :

The increase in the cost of maintaining the permanent way during the two last half-years, is owing to the greater number of miles which had to be kept in repair at the cost of the company, the new lines opened being at the charge of the contractors for the first twelve months. In other respects the contractors for the first twelve months. In other respects the return is astisfactory, as showing that an increased quantity of work has been done at a less expense; and in the item of locomotive power, which is by far the most important, this result has been attained contemporaneously with and mainly owing to a great improvement in the condition and value of the stock of engines during the last half-year. An important saving has also been effected both in the cost and consumption of coke, and it is contemplated erecting addiconsumption of coke, and it is contemplated erecting addi-tional overs at New Cross or Deptford, for the supply of the London end of the line. The directors have every reason to hope that large as the saying in locomotive power has been,

Digitized by GOOGLE

it will be fully maintained. The bill, promoted by the company so far as it related to the subscription to steamboats, after having passed the House of Commons, was rejected by a committee of the House of Lords. The directors regard this result as a serious blow to the proprietary, as by it the expectations of a large Continental traffic are frustrated. The company is now in a worse position even than formerly in respect to this traffic, as the South-Eastern and South-Western Companies (the latter of which has obtained a bill for similar objects) have the advantage of swift packets, of which this company is deprived; and the circumstance is the more to be regretted, as the Dieppe line has just been opened, which, with proper steamers from Newhaven, would have completed the shortest and cheapest route between London and Paris. In consequence of the loss of the bill the boats of the Brighton and Continental Steam-Packet Company have been advertised for sale, and the advance made by this company will be repaid. The bill to authorize a subscription towards the Portsmonth line has also been lost. The proprietors are aware that the committee of investigation, in their report in April last, recommended that this matter should be left in the hands of the directors, who had explained their views with relation thereto to the committee in the fullest manner. The motives which induced the committee to recommend this course, still operate to render it inexpedient to enter into any detailed explanation. The entire number of shares authorized to be raised at the last extraordinary meeting not having been taken up, a second allotment was made amongst the shareholders; but as the directors had in the meantime obtained further loans, it became unnecessary to issue all the surplus shares;—the number unappropriated is 13,801. The amount of mortgage bonds paid off to this date out of these shares is 290,100/A resolution will be submitted to the meeting for the conversion into stock of the consolidated eighth shares, created on the

Mr. LEVY inquired whether the new directors concurred in the report.

Temporary loans ..

The CHAIRMAN replied in the affirmative. There were no dissentients. Mr. Laing was not present; and a greater portion of the report was his composition.

Mr. LEVY said he was perfectly satisfied. The CHAIRMAN, before entering on the general business of the company, would advert to certain resolutions of a section of the proprietors who had assembled at the Hall of Commerce, and who had introduced certain resolutions into the papers that had reflected on their absent chairman, Mr. Grenfell, who was now abroad, with reference to certain statements he had made in the House of Commons on the steamboat question. Mr. Grenfell was quite justified in his view. The question of the steam-boats had been repeatedly mentioned in their reports of 1845, 1846 and 1847; and on one occasion 100,000l. was granted for the purpose; and he took the opportunity of stat-ing that the directors identified themselves entirely with those statements. There was another statement in which he (the Chairman) was implicated, viz., as to in which he (the Chairman) was implicated, viz., as to examination before the House of Lords, during five or six hours. He was asked, "Was it known to the body of proprietors that there would be this advance, until the committee of investigation was appointed, and his answer was, "He was sure it was impossible for him to tell whether the proprietors knew it at all. The fact of an injunction having been obtained was very public, seeing that all these cases were reported in the papers and railway these cases were reported in the papers; and railway companies' affairs were never kept particularly sacred." He was asked, "Did you enter in these accounts anything relating to the 100,000t.?" The accounts anything relating to the 100,000l." The answer was, "That it was for the general service of the company." Another question was, "Was the slightest hint given by which the shareholders could discover it?" and, "Certainly not," was the answer. "Did the same take place on each of the following half-years?" His answer was, "that they had never altered it since the injunction; when the thing became known our accounts were never altered." It appeared added. It was a debt due in point of fact to the proprietors of this company, and connected with the steamboat company, for which they were all along liable; and he need not tell them that it was pretty well secured. he need not tell them that it was pretty well secured The first question appertaining to the report was, the South-Eastern agreement; and in that there had been an unavoidable delay. They were not authorized by the general meeting to enter into negotiations with the South-Eastern until the 18th of April, and it was finally entered into on the 12th July, and he trusted that the ratification of the treaty would form the basis of a lasting friendship. Its advantages were stated in the report, but he might be permitted to state that the directors would distribute among the proprietors the toll receivable from the South-Eastern in the event of no agreement having been made. If no agreement had been made they should

have received the amount of toll which they proposed to distribute among the proprietors on the occasion; but it was not included in the return, because until the Had the agreement gone off, the toll would have been receivable. He had a statement from the superintendent of the goods department at New Cross, intendent of the goods department at New Cross, which showed a saving, not in the gross earnings, but on the charges on those gross earnings, during the last half-year, of 2,200l. nett receipts in the traffic, besides a large accession to the goods traffic by carrying to the Bricklayers' Arms instead of to New Cross. The difference between the toll that would have been receivable and payable by the Brighton Company for the half-year amounted to 4628l, but owing to the delay that had taken place 4,628/., but owing to the delay that had taken place in carrying out the agreement, none of the corresponding benefits had been received during the last half-year; and it would therefore be unjust to throw upon it the loss thus retrospectively incurred. throw upon it the loss thus retrospectively meditive Consequent on their goods station being removed to the Bricklayers' Arms—where they had an area of 4½ acres, distant only 1½ miles from London Bridge, instead of 3½, as was the case at New Cross—their instead of 3½, as was the case at New Cross—their superintendent gave it as his opinion that their goods traffic would be increased 10 per cent. He, the Chairman, however, took it at 7½ per cent., and the result gave them for the last half-year 3,850L of augmented revenue had they carried their goods traffic to the Bricklayers Arms. Owing to a computation of the tall feature approximation would be mutation of the toll future proprietors would be saved a large outlay on capital account, and could they have done it legally, the directors would have recommended them to have distributed the toll over a given number of years, and not have brought it at once to the debit of the present proprietors; but diffionce to the debt of the present proprietors; but dim-culties stood in the way, and they thought it better to cut the Gordian knot. In future, it would be deducted from the regular receipts of the company. The South-Eastern was the first in-stance, he believed, of a railway company diminish-ing its outlay by paying over the capital out of the revenue, and the directors had commuted this toll by the sacrifice of the present proprietors for the good of those who succeeded them. If they had not made the agreement with the South-Eastern, they would, the agreement with the South-Eastern, they would, irrespective of a large outlay at London Bridge, and an expensive system of lifting, have had to pay for the Bricklayers' Arms land, which cost 30,000L, and 23,500L for the third line of rails on the Greenwich, or 25,000L thrown into Chancery, with the costs into the bargain. The next point he had to make allusion to was the small amount of unproductive capital charged in the accounts, only 3,060L, so that everything would now come to the debit of revenue. They had now come to the point to which all other railways must assuredly come, but of which the Brighton Company set the example, that of apthe Brighton Company set the example, that of approximating to the closing of their capital account. They had all suffered from the system of competition that had been established, and by the system of connecting schemes in all directions that obtained in 1845, and which if they had been met as they ought to have been met by Government, would have placed railway property in a very different position. It had always been said by the opponents of the Brighton line, that it was peculiarly open to competition by parallel or competing lines, but not withstanding all this, they had not as yet encountered that heavy infliction. The contraction or close of the capital account in all companies, was really and truly the thing on which they must rest their chances of emancipation from their difficulties. There was no emancipation from their dimcultes. There was no other method of diminishing their outlay upon new lines; the Brighton Company had only 8½ miles of line in progress, and these were all stocked in September last; they had only in addition to this the works to be constructed at the London Bridge station, in which contingencies were involved. With regard to the general expenditure they saw no reason to dissent from the figures given by the committee of investigation, but as far as their knowledge went the estimate would be sufficient for the execution of the works. They also looked forward to a diminution in the expenditure. There had been a vast improvement in their locomotive department. Formerly they were obliged to run two engines with some trains, now one did the work with the greatest facility. The price of their coke was reduced considerably; and, owing to the better condition of their engines, the consumption of the coke was considerably less. Owing to their general efficiency, one engine was now doing the work of two. These were the reasons why there was a great diminution in the locomotive expenditure; such was the efficiency of their engines that the superintendent had told him that he believed they might shut up their workshops for three months or more. The Thames Junction would be an invaluable adjunct to the Brighton. It came to them from the Croydon amalgamation.

Digitized by

 $\mathbf{U}\mathbf{U}\mathbf{U}$ 

They had every reason to be satisfied with the purchase of the dock. It placed them on the Thames, with 400 feet of river traffic; there was a wharfage of 500 feet, with room for 15 or 16 vessels, and it would bring a considerable augmentation of the coal traffic. It adjoined the Government arsenal at Deptford, and ran alongside it for 500 ft., establishing for Government and the public a direct communication between Deptford and Portsmouth, by means of the Brighton Railway. By means of this communication, as was proved in committee in the Lords, they would be able to effect a saving of 2s. a ton on coke over their railway, and taking their consumption of coke at the London end of the line at 100 tons a week, a saving would be effected of 1,000l. a year. They were located opposite the East and West India Docks, where the London and North-Western had gone to an outlay of 700,000l. to obtain accommodation. They had 10 acres in extent, with 23 acres of water, and a graving dock, besides depots for coal and general commodities, so that ample accommodation, it would be admitted, would be sup plied for the traffic that streamed over their 160 miles of line. The steamboat question had excited a great deal of angry discussion. The Whitchaven was great deal of angry discussion. The Whitchaven was made, he would not say solely, but mainly, with refer-ence to the traffic from France, and with the view of establishing a rapid means of communication, by means of superior boats across the Channel. He (the chairhad advocated this question since 1843. bill, however, had been lost, and the boats would be sold, and the Newhaven branch would necessarily be a loss to the proprietors. Communications had been made to the General Steam Navigation Company, urging them to come to Newhaven instead of Shoreham, as a superior port; but owing to the secre-tary and directors being on the Continent, no answer had yet been received. The circumstance of the opposition that they had received from the steamboat company would not militate against the making of arrangements on the part of the company to promote the traffic by every means in their power with the opposite shore by means of the boats of the General Steam Navigation Company. They would promote the traffic as they always had done. The bill for the Portsmouth line had been lost, and it was a serious discouragement to the company; but it was satisfactory to them to know that the committee of investigation had cordially coincided with the executive with reference to the merits of that line. He could however assure the proprietors that no more money would be spent upon the Portsmouth line. There was one thing however, and he did not bring it forward as an ad captundum statement, that the excess of receipts over the last half-year, notwithstanding the toll, had been 4,124% in excess of the preceding; and this was a highly gratifying fact when they considered the depressed state of commerce and of the watering-places, for he had been told by gentlemen long resident in Brighton, that they had not known a season in Brighton that had for years been so flat as the last. In 1845, during the railway mania, they had engineers and solicitors and others constantly going down, at any rate they went down on the Saturday, and returned with multitudes on the Monday; but the dearth of parliamentary business had put a stop to all this. He did not wish to draw invidious comparisons, but he thought that the traffic returns on their line might fairly stand in contrast with those of any other in the kingdom. Looking at the depression that had pre-vailed, he thought their return of traffic was without a parallel. They now took in a circuit of territory by means of the Fareham Junction and Weymouth and Dorchester on the one hand to Hastings on the other, and he would leave to the proprietors to calculate what their traffic would be on a return of general prosperity. The hon. Chairman concluded by moving the adoption of the report.

Mr. Crossfield, the deputy chairman, seconded

Mr. Uperoft warned the proprietors against dis-union. It was this that had tended so materially to depress the price of their property in the market.

Mr. II. Davis, in moving an amendment, asserted

that the accounts before the meeting were fallacious. The shareholders had no information save what the directors furnished in their half-yearly accounts. The earnings of the railway here furnished you and the published weekly statements of the receipts for the last six months are all erroneous. The gross earnings stated to be 204,334/, were really only 194,894/, 17s.6d., and an entry of 9,529/, inserted, had never been received. There is but balf the increase in the receipts that are given you. The increase in the six months stated at 21,335/, was really only 11,806/. At the same time that the directors were raising capital at 6 per cent, they were extending the line and leading the proprietors into further liabilities to the

ruin of their affairs. It was strange that Mr. Parsons should congratulate them on the closing of their capital account, when every effort had been made to plunge them into steamboat speculations and Direct Portsmouth schemes. In the past six months the expenditure on capital account had been 196,9871. of this 13,764l. 18s. 2d. had been on the Newhaven branch. 23,785l. 19. 8d. on the Croydon atmospheric. ,753l. 4s. 10d. on the Wandsworth branch, 33,789l. 10s. 10d. addition to plant, 17,616l. 5s. 10d. on main line. The whole of which appears to be far more likely to belong to revenue than capital. This 196,987l. has had to be raised by preference shares guaranteed 6 per cent. Thus had an additional permanent annual charge of 12,000%. been added in six months. How is this met is there any increase to the revenue for it?—No. An abstract of the balance-sheet showed, that at a time when the directors have whipped the shareholders for additional capital, they had been lending 81,031 l. to steamboats, sundry accounts, and cash on loan and interest. Mr. Davis concluded with an amendment, to the effect, that so much of the report be received as recommended a dividend of 13s. and the conversion of the consolidated eighths, but that the remainder of it be not confirmed, the proprietors not having confidence in the directors.

Mr. FLOOD followed, and seconded the amendment in a speech of some energy and length. He affirmed that the system that had been pursued by the Board had unscated former directors. That they had succeeded in reducing their dividend from 30s. to 13s, and the market price of their shares from 80l. to 28l. and if they went on in their present policy both would be reduced to nothing. Neither he nor those allied with him had confidence in the directors—the capital account by all means should be closed. They had increased their capital by propounding new schemes, from 2,000,000l. to 7,000,000l., and they now saw the result in a reduction of their dividend to 13s. He blamed the chairman and directors for leading them into the steamboat and Direct Ports mouth schemes.

Mr. Levy was of opinion that all vacancies at the Board should be filled up by the proprietors, and deprecated the employment of so many third-class

Mr. Whishaw, in reply to insinuations that had been thrown out, explained, that although he now held a seat in the direction he entertained the same objections still to an alliance with the steamboat company, and it was not the circumstance of his having a seat at the board that was likely to lead him to alter his opinion.

Mr. Cash said the fact of his having signed the report on the steamboat question was a sufficient index to his feelings. He thought, however, that the electoral right should be left in the hands of the proprietors of choosing their own directors.

Mr. WILKINSON contended that the present feeling of want of confidence arose from a desire on the part of certain gentlemen, having taken cheap houses at Brighton, to obtain a free passage by the railway, and then entered into some purely personal matters between himself and Mr. Ald. Wilson.

Mr. Ald. WILSON retaliated and condemned the self-elective system on the part of Boards of direction. After some observations from — Messrs. Love, Sterry, Machin, J. Wilson, Stokes and others, Mr. Marriott, one of the auditors, stated that he

and his colleague had thoroughly sifted the accounts, and had found but two errors,—one of 1s. and the other of 2d.; and he could bear testimony that no accounts in the kingdom were kept with greater fidelity, or upon a more perfect system.

The CHAIRMAN observed that this testimony on the part of their auditors was a sufficient refutation in itself that the accounts were fallacious. In reply to some printed inquiries circulated by Mr. Freebody, C.E., the Chairman said that the sum of 33,915L cash and loans, was repaid. When he, the Chairman, joined the directors, the capital was only 220,000L, and not 2,000,000L. The views of Mr. Levy, with regard to third-class passengers were quite in consonance with those of the directors, and last September they had struck off all the third-class trains but two. The rates of the Brighton line were not exorbitant, but he was of opinion that they were not high enough. They were now charging their maximum.

The Chairman, after explaining some items in the account, was asked by Mr. Cours, what had been done with the atmospherie; and, in reply, be (the Chairman) said they had seld four-fifths of the pipes, but had refrained from selling the remainder, in consequence of the low price of iron. There had been a slip or sub-idence at Hayward's Heath, which had been a considerable expense, and had been put to capital account. They had endeavoured to carry out principles of economy in their carriages, and instead

eighty from the South-Eastern during the Epsom races, and were ready to reciprocate the kindness on the occasion of any such emergency. A sum of 3,000l. appeared for blocks and sleepers. This was for maintaining a most important part of the line, though it only consisted of two miles or thereabouts of "block line," out of 160 miles; it was requisite to keep the gauge.

After some desultory discussion, the amendment and original motion were put to the vote, when only five hands were held up in favour of the amendment. as against the entire meeting, which separated with a round of "hurras" for the directors. The dividend

is payable on the 1st of September next.

WEST CORNWALL Aug. 16. - Half-yearly Meeting, London. - Capt.

MOORSOM in the chair.
The SECRETARY read the Report. The Board shortly after the last meeting visited the works in Cornwall, and having examined the condition of that portion between Hayle, Redruth and Portreath, together with the branches to the mines, found that the efficiency of those works exceeded their anticipations. and that this portion, although conveying only a small part of the general traffic of the district, by reason of its inclined planes and want of connexion with the larger towns, appeared notwithstanding to be an important line for the mineral produce of the west of Cornwall, and to be generally in good working order for the traffic now carried over it. The accounts and expenses of this portion of the railway have undergone revision by the local committee of the Board, and some reductions have been made, which, without impairing the efficiency of the staff, would tend to increase the nett returns. The calls already made, when paid up, would sufficiently provide, until after the next half-yearly meeting, for the liabilities falling due. The enforcement of arrears of calls had been proceeded with, and the results were satisfac-tory to the Board without pressing heavily upon individuals. The application of the company Commissioners, for an extension of time for the purchase of land and completion of the works, was still pending consideration. The revenue account, for the half-year ending the 30th of June last, exhibited an increase of carriage as compared with the corresponding period in 1847, giving a total increase on the receipts of 1771. 10s. 8d. The revenue account for the half-year ending the 30th of June last showed the receipts at 8,133l. 6s. 8d.; expenditure, 6,786l. 16s. 8d.; leaving a balance of 1,34dl. 10s. The liabilities of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contract of the contra bilities alluded to in the report of the 8th of February last as being then about 15,000l. were now reduced to 6,000l., including outstanding interest to the proprietors.

The CHAIRMAN, in moving the adoption of the report, stated that since the last meeting the directors had adopted measures to secure local support to the undertaking, and also to facilitate the traffic on the line, by removing impediments, &c., in both of which objects they had been successful. The large sum paid out of the capital of the company for interest had occupied the attention of the directors, and they had appointed a committee to take measures for its reduction or entire removal.

After a short conversation, the report was adopted unanimously.

A resolution was passed, declaring 785 shares forfeited, with the exception of 55, which were particularized.

BRISTOL AND SOUTH WALES JUNCTION. Aug. 14 .- Half-yearly Meeting, Bristol .- Mr. J. GIBBS in the chair.

The CHAIRMAN said although the business to be transacted presented no extraordinary feature he thought he might advert to one important topic. The directors had seen no reason to alter the opinion they had all along held as to the value of the line, but when they looked at the circumstances of the country, and when they considered the market-price of their shares and the general depression of all railway property, it did become them, as business men, to inquire whether there was any fair expectation of their being able to carry out their line. directors had formed their opinion, but before stating it they were anxious to hear the views of the proprietors.

Mr. SHAPLAND, the secretary, read the report, which stated that the Commissioners of Railways had extended the time for the compulsory purchase of land for two years. The cash account showed a balance of 10.316*l*., which had been reduced by payments subsequent to its date to 9.35%.

Some conversation followed in reference to an agreement by the company to purchase the Old or Aust Passage ferry across the Severn, and as to how far the company was liable under the agreement. of having too many, they had absolutely to borrow | And, in reply to questions, the ferry was declared to

Digitized by GOGIC

have been purchased by the advice of the engineer, to avoid competition and to avert parliamentary opposition.

Mr. G. Jones considered the purchase premature, and urged the directors to get rid of a bargain which entailed a liability of 20,000*l*., without any prospective advantage.
The CHAIRMAN stated that the subject was being

considered by counsel.

Mr. Jones hoped that the proprietors would immediately close the concern. He could not himself see the most distant chance of their being able to carry it through. Three-fourths of the proprietors had declined answering the last call, and how were they to get the means of prosecuting the works? They would not be able to do so. But even supposing they could, he felt certain, looking to the expense of working a short line, and taking into consideration the heavy cost of carrying their traffic across the passage, they would not be able to divide 1 per cent. The directors had unfortunately had an idea that the Great Western would purchase their line. He was not speaking now as a director of the Great Western, but as a proprietor of the Bristol and South Wales Junction; but he was convinced that such an idea was never entertained, and that any chance of it, if it ever existed, was now less than ever. He therefore urged the proprietors to come to the resolution to

wind up the concern.

Mr. Bowsher seconded the proposition of Mr.

Jones, feeling convinced, as he did, that while lines which were paying 7 per cent. had their shares at a discount in the market, there could be no chance of

completing that undertaking.

The CHAIRMAN stated the views of the Board as to the difficulties of the undertaking to be consonant with those expressed by Messrs. Jones and Bowsher. They looked upon those difficulties as insurmountable. He recommended, however, that the proprietors should not at once come to the resolution, as there were certain inquiries pending which it would be desirable to bring to a close. The directors would then convene a special meeting.

Mr. Jones, after some further conversation, said he considered the statement of the chairman satisfactory, and he would not therefore press his motion. The report was then adopted.

Aug. 16.—Half-yearly Meeting, Bristol.—Mr. W. Coppin in the chair.

The report stated that the Board felt much satisfaction in announcing to the proprietors that there was a small increase upon the gross receipts for the half-year. Though small it yielded a gratifying proof of the soundness of the undertaking, at a time when the convulsions in almost all the States of Europe had a paralyzed the export both of coal and iron. The income and expenditure of the Aberdare had been brought nearer to each other by an increase in its gross receipts of 563l. in the past half-year. The directors recommended a dividend of 4l. (free of income-tax) on each original share of 126/., and a dividend in the same proportion on the quarter and 10l. shares; and further, that 750% should be carried to the credit of the depreciation fund. The works on the east branch were so far advanced, that very satisfactory trials had been made of the efficiency of the shipping staiths and of the steam crane for landing ballast.

Resolutions adopting the report, declaring the dividend as recommended by the directors, and re-elect-

ing the retiring directors, were then passed.

Mr. J. Poole, a member of the Board, said that
on several former occasions the directors had been charged with having made promises to the proprietary, and held out expectations which had not been realized so speedily as the shareholders had desired. The result of that day's meeting had shown that the directors had not held out those expectations without a sufficient warrant. The expectations which the Board had held out had now been realized, and he did not hesitate to tell the proprietors that he anticipated that they would do much more than they had

Mr. T. Powell, another director, said he might claim to have served them more as a freighter than as a director. He was at the present time paying them for carriage of his coals at the rate of over 20,000% a year, and anticipated that he should yet have to pay them a larger amount than he now paid.

Mr. HALL, in moving a vote of thanks to the directors, said, when he saw that king of railways, the London and North-Western, going back to 7 per cent., he must say that he was gratified at the aspect of their own affairs. It should be remembered that they had not got their seven or eight millions to find the interest for. He frankly avowed that he would not change a Taff Vale share for a London and North-Western share.

GREAT NORTH OF ENGLAND. Aug. 10 .- Half-yearly Meeting, Darlington .- Mr. PLEWS in the chair.

The CHAIRMAN declared the following dividends, viz.:—5l. per share on the 100l. shares; 1l. 6s. 5d. per share on the 40l. shares; 1l. 10s. per share on the 30l. shares—being after the rate of 10 per cent; and 4s. 3d. per share on the 15t. shares—being at the rate of 5 per cent, upon the amount paid up.

The dividends are to become payable on the 17th inst., subject to deduction of income-tax.

AIRDRIE AND BATHGATE JUNCTION. Aug. 9 .- Half-yearly Meeting, Glasgow .- Mr. W.

BANKIER in the chair. Mr. J. Reip, of Berridale, moved that the interim appointment by the directors of Mr. A. Reid, insurance-broker, Glasgow, to act as one of the statutory auditors, in place of the secretary, be confirmed,

which was unanimously agreed to.

Mr. WATKINS, the secretary, then read the Report After referring to the change in the constitution of the board of directors since the last half-yearly meeting, and the consequent change in the management of the affairs of the company, the report proceeded to narrate the different lawsuits pending at the date of that meeting, and concluded by recommending that the lawsuits referred to should now be abandoned as altogether unnecessary in so far as the interests of the shareholders are concerned, and the directors trusted that the shareholders would approve of their proceedings. The directors were proceeding with the outstanding accounts, which had now been reduced to a narrow compass.

Mr. WATKINS read a lengthened report from the law-agent of the company regarding the lawsuits, in which the reasons that had induced the directors to recommend their being abandoned were explained

at length.

The CHAIRMAN said that after the reports, considering the limited nature of their affairs, nothing remained for him to do but to move the adoption of

Mr. FIFE seconded the motion.
Mr. J. L. Ewing moved as an amendment that the

report be not approved of, which was seconded by Mr. J. Ewing. The report was passed. Mr. J. Ewing.

Mr. C. Cunningham was re-elected auditor.

CORK AND BANDON.

Aug. 9.—Half-yearly Meeting, Cork.—Major N. L. BEAMISH in the chair.

The CHAIRMAN thought the difficulty which existed in getting a quorum must have arisen from the satisfaction felt in the proceedings.

The SECRETARY read the Report. By a minute calculation of the expense attendant upon opening the line from Bandon to the Half-way House for traffic, which was now about to be completed, this portion, containing nearly 10 miles, could be opened to the public, including the cost of engines, carriages and all necessary preliminary expenses, for about 96,000*l*., or about 500*l*. per mile, a cost the Board believed below that of any similar undertaking in Ireland. On opening the line to Ballinhassig, the conveyance of all passengers and light goods between that station and Cork should doubtless be undertaken by the company, as the extent of traffic on the Bandon half of the line will be governed by the facilities and accommodation that will be afforded to the public for completing the remaining distance to and from Cork; and with this view, says the engineer, "I would recommend that the most convenient and expeditious conveyances should be provided for performing the road part of the journey between Cork and Bandon. From the extensive traffic existing on the Cork half of the line, I feel convinced that this mode of conveyance alone will be found remu-nerative. The public will then be conveyed the whole distance between Cork and Bandon in less than half the time at present occupied by the several coaches, which will be a most important saving of time and expense. There are now about 600 men daily employed on the works, and according to the present rate of progress I have no hesitation in stating that the works on the whole length of the Bandon half of the line can be completed in October next, so that the opening of this portion of the line for traffic might be accomplished within a short period." The statement of accounts showed the receipts at 92,840L 18s. 8d.; expenditure, 88,258l. 19s. 9d.; balance in bank, 4,581l. 18s. 11d.

Mr. M'MULLEN feared that opening half the line, with all the expenses attendant, would injure the project with the public, and damage the probability of getting money for the rest.

The CHAIRMAN said the decision was founded upon minute calculations of traffic.

Mr. Sarsfield said that the objection had been fully canvassed.

Mr. FITZGIBBON said that the entire traffic along the line would be taken into their hands.

The CHAIRMAN was happy to say that the time had arrived when they had no longer to talk people into a good opinion of the project, for now the directors could confidently point to the works. Several had lately visited the line, and were agreeably surprised at the extent of the works and the execution of them. Opinions had heretofore been expressed in respect to Kilpatrick tunnel, which it was confidently asserted would never be finished, but which was completed at a cost which some eminent engineers pronounced incredible. The Bandon road bridge, which they were told was to be be pulled down by the grand jury, was erected, and instead of being a nuisance was public convenience. The Bandon river bridge, which was declared a gew-gaw, was proved, one of the trusses alone supporting a weight of 26 tons without a deflec-tion exceeding three-eighths of an inch. The post-and-rail fencing had stood the test of last winter's great distress, and its still greater disaffection; and he could not avoid expressing his gratification that the tradespeople and labourers along the works had, at a time when men of property led others away to join their ranks, avoided disaffection, which afforded one of a hundred proofs that remunerative employment was only required to secure peace and tranquillity in this country. This he hoped would not be lost on the Government in inducing them to aid railways, besides the vast advantage they afforded in the transmission of troops. He hoped the next time he should have the pleasure of addressing them would be preparatory to their experimental trip.

The SECRETARY said that 10,000l. would finish the works on half the line.

511 shares were then declared forfeited.

NEWRY, WARRENPOINT AND ROSSTREVOR.

Aug. 15.—Half-yearly Meeting, London.—Mr. Chadwick, in the absence of Lord Newry, from illness, in the chair.

The Report stated that the events on the Continent, coupled with more recent causes locally affecting Ireland, have considerably retarded the progress of the works. They have, however, been proceeded with as expeditiously as the funds at the disposal of the directors admitted. The heavy portion of the work, consisting of the embankment across the Slob-lands adjoining the Newry river, was nearly com-pleted. The contractor was making preparation for the construction of the viaducts, as sanctioned by the Lords of the Admiralty, and when these were pleted little would remain to be done except ballasting and laying the permanent way, the materials for which were ready. An estimate had been prepared of the probable sum required to complete the works and open the line to Warrenpoint, from which it appeared that in addition to what was likely to be paid on calls, the sum authorized to be borrowed would be sufficient. This amounted to 33,000l., of which 3,000l. had been obtained from persons resident near the line. The statement of accounts showed that after the payment of all necessary expenses there was still a balance of 2,9791. 17s. 4d. in hand. The report was unanimously adopted.

NORTHERN COUNTIES UNION.—Aug. 14.—Meeting of Shareholders, Darlington.—Mr. W. Hepple, of Bishop Auckland, in the chair.—The object of the meeting was to determine the course to be adopted at the half-yearly meeting of the company in London, on the 24th inst. The general feeling was in favour of a "wind-up." Ultimately a resolution was adopted to the effect that the shareholders present were of opinion that the company ought to be dissolved. The Chairman and Mr. Monkhouse, of Barnard Castle, were appointed a deputation to the meeting in London with proxies.—Aug. 17.—Leeds.—Mr. Middleton in the chair.—The Chairman said that looking to the difficulties the company had had to encounter in Parliament, and to the onerous terms which it had been attempted to impose on them, he thought it might be desirable that the company should be dissolved .- Letters were read from several large shareholders, who expressed their opinion that it was undesirable to prosecute the objects of the company further. Some resolutions of a meeting of share-holders held at Darlington on the 14th inst. were also read, to the effect that it was desirable to procure an Act of dissolution...-After a short discussion, it was unanimously resolved, on the motion of Mr. Oldenbourg, seconded by Mr. Brayshaw, "That this meeting is of opinion that the interests of the shareholders of the Northern Counties Union would be best consulted by the said scheme being wound up as soon as the directors shall be in a condition to do so." Mr. R. Jackson, of Leeds, was deputed to wait upon the direcparatory to a general meeting Digitized by tors, and to communicate this resolution to them preTONDON AND NORTH-WESTERN RAILWAY COMPANY.

SALE OF NEWSPAPERS, PERIODICALS AND BOOKS AT STATIONS.

PARIS AND LYONS RAILWAY. MR. JOHN CUNINGHAME bogs to inform the Shareholders in this Railway that he is prepared to undertake the transmission of their Shares to Paris, and effect the exchange thereof for inscription in the Government Five per Cent. Stock, in accordance with the law voted by the National Assembly of France.

4, Castle-court, Birchin-lane, London, Aug. 25, 1848.

# PARIS AND LYONS RAILWAY

C. DEVAUX & CO. have the honour to inform the Share-holders in the above Company that the National Assembly of France has passed a law to the following effect, viz.:— "That the Paris and Lyons Railway shall become the property

of the State.

"The holders of Shares 2207 (104) paid up, will for each Share receive a Certificate of French Stock, bearing interest of 77. 80. per annum. They will also have the option of paying up 3207 (104) per Share more, and in that case would receive 56, per annum (instead of 7f. 60c. per annum; hierest, commencing 32nd of March last. Notice of accepting such option must be given to the French Government before ist of September next.

"The 250f. already paid will form a guarantee deposit which will decrease in proportion as the future instalments are made.

"The 350f. remaining to be called up will have to be paid as follows:—

" 50f. on the 5th of October 1849.
" 50f. " 5th of January 18:9.
" 50f. " 5th of April 1849.
" 50f. " 5th of July 1849.
" 50f. " 5th of October 1849.

together 250f.

"On each of these payments being made, the Holder of the Cer tificates above referred to will receive an inscription of Renter

tificates above referred to will receive an inscription of Hentes for 5f.

"The steps to be taken for the execution of the present Deceptionally as regards those Shareholders who shall not have paid up the Instalments at the times stated, will be determined upon by the Minister of Finance."

The Shareholders who have paid up 273f. (or 11L) per Share, are to receive back from the Company 25f. per Share.

C. DRYAUX & Co. are now receiving the Shares in the above Railway for the purpose of exchanging them for Certificates of French Stock, or accepting the option of the French Government.

P.S. A Receipt for the Shares will be given, signed by the Firm, or Mr. R. E. Morrice on their behalf.

PORT OF GREAT GRIMSBY.

# NOTICE TO FOREIGN MERCHANTS

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Pocks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, 8HEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the

And that the Warrants for the payments of such Dividend,
and also for payment of the interest due the 1st of January and also for payment of the interest slue the 1st of angust inst,) in respect of the 12t 10s, or Quarter shares, be issued to the respective Proprietors thereof, who stand registered as such in the books of the Company.

Moved by John Wikhisson, Esq.; seconded by John Bowns, Esq.; and resolved,—

That the through of this Moeting be presented to the Charman and Directors for their continued attention to the interests of the Progretors.

Chairman and inrecors .... the interests of the Proprietors. INCHARD TOTTIE, Chairman.

VATES.—ANONYMOUS LIBELLERS.

TO the SICAREHOLDERS of the CALE-DOMAN RAILWAY.

Gentlemen,—At the last General Meeting of the London and North-Western Company, Mr. Glyn, the Chairman, when commenting upon a pampidet recently published, entailed. The Bubole of the Age, written for the purpose of injuring the credit of Railway Companies, and weeks using public contidence in their stability, said, that had the pumplified been anonymous he would not have note of a rail, in making this remark, Mr. Glyn only stated what must be the rule with every Board of Management, for it they were to deviate from it, they would obviously only encourage fresh attacks and mis-statements from the tribe of scribblers who delight in mischief and calumny, when they can pursuo who delight in mischief and calumny, when they can pursuo

their vocation in concealment; and it would be paying a poor compliment to their constituents, to suppose the possibility of their confidence in the management of their Board being shaken or diminished by statements, however plausi-ble, whose authors dare not give them the sanction of their name, whose courage only supports them to the extent of discharging mud from behind a screen, and who do not feel their bonour compromised by engaging in such discreditable

I am led to these remarks by the base calumnies and mis-statements to which the Caledonian Board of Management statements to which the Caledonian Board of Management has been most vindictively and perseveringly subjected, by a series of anonymous attacks under a variety of signatures, beginning with "Heabare Devining," who, to the discredit of his profession, hired his pen to a rival company, and ending with the man of many aliases—"Waters," Monitor," "C., "C., "a gentleman who, knowing that the Directors would not stoop to answer him under his masque, continued his attacks with so much effortery of assertion that a section of the shareholders in London met to consider them, and a meeting was relied for the same nursos in Edinburgh. section of the shareholders in London met to consider them, and a meeting was called for the same purpose in Edinburgh, got up, or aided in being got up, by a member of the Stock Exchange there, conspicuous for his hostility to the Caledonian Company, as displayed in the struggle they had to maintain for possession of the Scottish Central.

Now, the object of these attacks has been twofold—first, to injure the credit of the company with the public, and increase the difficulties which, in common with all railways, it has had to contend against—difficulties under which it must have such but for the apercy and unprecedented age.

it has had to contend against—difficulties under which if must have sunk, but for the energy and unprecedented exertions of the Directors, by which they were enabled to strucke on till they opened the line, and within the short space of six months succeeded in bringing it to produce a traffic yielding a weekly revenue of between 5,0001, and 6,0001,—a revenue which is not nearly half develope, and to develope which and pay off existing obligations for which the company is bound, the Directors took the only course open to them by issuing Preference Stock, the value of which to your interests, as a measure calculated to enable the Directors to develope the traffic and raise the revenue, is duly appreciated develope the traffic and raise the revenue, is duly appreciated by "Vates" and those he represents, who, accordingly, has been doing his best to obstruct the measure, (without success, I am glad to say), and induce you to withhold your assent. The second ground for attack and censure is the guarantees which your Board has undertaken, and which are described as runnous. As records those to which you become

scribed as ruinous. As regards those to which you have already assented, it is enough to say that they are paying themselves, and that the most important of them form part themselves, and that the most important of them form parties of the main line, and are, therefore, absolutely necessary to its existence. Respecting those to which your assent has not been view, suffice to say that they must in the meantime therefore be harmless, and that it is but fair to ask that hefore you condemn them on the authority of a masked and numeless come, you at least give your Board the opportunity of stating their views, when you can decide for your-selves after hearing them, which I understand you will be afforded an opportunity of doing before your assent is asked. Another object of "Vates" and his tail is to induce you at the approaching General Meeting to turn out your Board, and repeace them by representatives of their selection, an

and replace them by representatives of their selection, an and replace them by representatives of their selection, an operation which, unless the Directors are supported by the shareholders at large, it may not be difficult for a small section to effect, if acting in concert; and which movement, therefore, it concerns your interest to counteract, the this fair prospect we have of a steadily increasing traffic and course, onlying revenue, will be centured to the winds, and the vessel in damer of foundering if committed to new, unpreceded and rash hands. Lonced, I have cause to know that one of those seeking office in this way is a party who has been active in promoting the activation.

that one of those seeking office in this way is a party who has been active in promoting the agitation.

"Vates" nathers counage as be follows up his course of calumny and falselhood, and in the last production 1 mayer seen, ventures on the monstrous instinuation that those behind the scenes have been judding nestures. Now this is going beyond the limits of toleration, and I therefore tell "Vates" that it his remark may be interpreted, he means to insinuate that the Directors who are belief the seems have have upon the right of the limits of the limits of the seems have the production of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limits of the limit

insimate that the Directors who are belief the see has have been practising stock-jobbing. I feel at liberty, in the words of Dr. Johnson, to tell him, "that he lies, and is a scoundrat because he knows he hes." Let "Vates" digest this, and go to dinner with what appetite he may.

It may be asked, who am I who contradict "Vates" so decidedly, and do not add my name as a warrant for my veracity and means of knowledge? This much I answer, that I write without any communication with the Directors, collectively or individually and without their bowhelps collectively or individually, and without their knowledge entirely; that nevertheless I have perfect access to informa-tion, and that the editor of the Scotlish Revivery Greente has ful! liberty to communicate my name the moment that "Yates" drops his mask, and weiter under his real signature. o, he can have no right to call for mine, and will not till then obtain any farther notice from, Gentlemen, your obedient Servant,

SATURDAY, AUGUST 26.

### HEADS OF A SYSTEM OF PRACTICAL REFORM.-No. V.

On considering the several points discussed in former articles under this title, it will be found that they include all the principal objects to which attention must be drawn, with a view to any effectual re-adjustment of the balance between the service performed by railways, and the payment for this service. They determine the ratio of expense to profit in all the most considerable items of charge, which must be deducted in order to arrive at a nett receipt. On the several matters already touched upon depends the more or less of economy in locomotive power, coaching expenses, repairs of carriages, and maintenance of way; which are the chief heads of working outlay in the passenger business; and no attempt to increase the productiveness of that business which does not begin with these first essentials of profit or loss can materially affect its results. This it is desirable to insist upon with particular emphasis just now; as the directors of many of the great companies have found it expedient to employ sub-committees, especially deputed to ascertain what can be done in the way of improvement by means of economy; and have made this known to their constituents in order to allay the natural chagrin produced by the continued and now very serious decline of divi-The topic having thus been openly brought forward-and no proprietor will think too soon-it is necessary to understand as clearly as may be in what manner alone it can be effectually dealt with ;-what must be done, in short, to give a real value to measures of economic reform. There may be various savings made in the details of the business; and of these we intend to speak presently;—but it is above all things important to observe, in the first place, that if nothing be done to cut down the great branches of expense, the utmost paring that can be applied to minor matters will practically amount to little or nothing; except in cases (and we trust there are not many such in railway management) where a system of utter neglect and extravagance may have hitherto been permitted in every part of the establishments. Of course if, in any extant concerns, twenty clerks, or porters, or policemen have been kept to do the work which could be efficiently done by a much less number, considerable savings may be made by reducing the extra staff; and so on with respect to other details. But this class of reforms we do not think it needful to go into, for the plain reason that they require no explanation, and need no arguments to enforce them beyond the mere statement of an obvious duty, the neglect of which we should be loth to impute, on anything less than absolute proof, in any quarter. If extravagance of so blameable a kind has anywhere been committed, the sooner, of course, that it is put an end to the better; but it is clear that on such obvious reforms no committee need be very long occupied. They must be visible nearly at the first glance; and the discovery will at the same time reflect such a light on the heads of the departments concerned, that a change of these for others who will better perform a material part of a manager's duty, would be at once the natural result of the past, and the best means of amendment for future proceedings.

Putting aside such exceptions, as cases of mere mismanagement, it is possible, we repeat, to devise many savings in the details of working, even where the system has already been conducted with a fair regard to economy. But

that determine their amount are not at the same time laid hold of, and brought into due proportion with the receipts of the business. the only process by which the course of unprofitable service can be effectually stayed; and it can merely serve to amuse anxiety for a moment. without removing its causes, to promise favourable results from anything which does not go directly to the roots of all heavy expenditure. There is no use, we say, in encouraging delusive hopes on this chapter; but it will be well that all concerned should perceive, as soon and as clearly as possible, where the real knot of the business lies; and either resolve on untying it, or, if they are not prepared to do this, submit to the consequence of leaving it pressing on every part of the working profits, -and not deceive themselves by expecting from trivial amendments what nothing but comprehensive means can accomplish.

Among such minor savings as we have pointed at, we shall take the earliest occasion to say, we do not mean to count reductions of wages, in whatever part of a railway establishment. The best economy, in a business like this, is to pay such wages or salaries to men fit for the business as will make good men study to deserve their places, and fear to lose them by any default in their duties. The matter of consequence here is not so much the sum paid as the kind of service got for the payment: the evil to be guarded against is far more the admission, whether through carelessness or misuse of patronage, of unqualified servants, than the price which may be given for good ones. If directors and heads of departments are honestly studious, in all appointments, of the one thing needful, and so feel one of their chief duties as to make fitness and merit the sole object regarded in filling up places, there is no fear of the company's revenue suffering by the payment of such wages as will invite and retain fit and meritorious The incompetent are dear at any price whatever; the money laid out on efficient and faithful service is sure to be returned to the employer in a hundred ways. In this department, therefore, we trust that economizing committees will not fall into an error common enough in other quarters, by making reductions inconsiderable in themselves, although serious enough to those who occupy the lower places in the working scale; but will rather turn their attention to the best method of ascertaining that the company receives value for the wages paid-of preventing favoritism or jobbing, of whatever kind, from depriving the company of this value, by quartering incapables upon its funds. This, and not the diminution of wages, is the main thing to be studied here. On the whole, the railway system has hitherto been efficiently manned; and it would be a great misfortune to diminish its efficiency by rendering its various employments less desirable than they now are. If proper care be taken in the exercise of patronage to render it still more efficient, there can be no necessity to lower the scale of payment; and that process will not be found advisable on the score of economy, Careless or discontented workmen and illchosen officers will cost a railway company, by their faults of omission and commission, far more than the amount of their wages; and a saving which tends to lower the inducements to good service, is only less desirable, on merely financial grounds, than the want of principle which could allow deficient service to be palmed off on the company for sufficient payment. It is on the latter point that laxity is most to be apprehended. Our great railway unions are these can be no more than trifles in the total of | now becoming so vast in their outlines, that |

current expenses-provided the main causes | they are apt to grow beyond those wholesome restraints, proper to a business watched over by all concerned,-which have distinguished the private from the public affairs of this country. They are now approaching in magnitude the dimensions of the latter; we trust it may not be to imitate their abuses, in that point of all others which has hitherto been the great advantage of the railway interest, and the strong ground on which it has maintained its superiority to State management—the principle, namely, of employing the fittest men to be found for the work that had to be done;whereas the rule of political appointments is too well known to be framed on a quite different system; with what effects, on the manner in which the State is served, every one unluckily knows, and now may feel in various results, affecting public and private means,-from a resemblance to which railway companies may well pray to be delivered. Let such abuses be avoided, such principles shunned, as fatal to the very life of the system, and it will need no relief to its funds on the chapter of wages and salaries; but will find the money expended on the payment of men properly chosen to be not the least productive part of its expenditure. This we hope may be duly weighed in all plans of future economy-to the success of which it is, perhaps, not less important that a wrong course should be avoided, than that the right one should be taken.

### RAILWAY STATISTICS.

Our readers know how little value the Railway Chronicle is wont to attach to such an array of figures as are often dignified with the title of railway statistics,-figures, which taken by themselves, without a thorough acquaintance of the modes in which they are obtained, and a sound practical knowledge of the relations which the things bear to one another, are continually liable to lead those who trust them into the grossest delusion. The case, however, becomes very different when such figures come to be wielded by a man of practical railway experience, and a sound knowledge of the subject on which he treats. In such hands figures become the representatives of precise ideas, and the deductions that are made from them may safely be used as doctrines of real and practical application. The following paper is eminently distinguished in these respects. It is written by a railway officer of long practical experience in the management of railways, and displays a knowledge of the commercial bearings of such subjects as traffic, fares, tolls, mileages, classification of passengers, &c. as no mere manœuverer of figures could elicit from the most ingenious manipulation. As a railway secretary and traffic-manager Mr. Harding has possessed the means of obtaining correct data, and his deductions are worthy of great confidence. The paper itself is one of the most valuable communicated to the statistical section of the British Association at Swansea, and we shall give from time to time extracts of equal interest with the following:

Facts bearing on the Progress of the Railway System. by Mr. Wyndham Harding.

The modern railway system of Europe may be said to date from 1830, when the construction by the English engineer, Mr. George Stephenson, of the Liverpool and Manchester Railway, with its locomotive engines, was completed. After that date we heard no more of such prophecies as the following (from the Quarterly Review, in 1825), which it is not useless to record as a lesson of caution to us for the future:—"As to those persons who speculate on making railways generally throughout the kingdom, and superseding all the canals, all the waggons, mails

Digitized by **U**(

and stage-coaches, post-chaises, and, in short, every other mode of conveyance by land and by water, we deem them and their visionary schemes unworthy of notice. What, for instance, can be more palpably absurd and ridiculous than the following paragraph,"-in which a prospect is held out of locomotives travelling twice as fast as stage-coaches. "We should as soon," adds the reviewer, "expect the people of Woolwich to suffer themselves to be fired off upon one of Congreve's ricochet rockets as trust themselves to the mercy of such a machine, going at such a rate." The modern railway system has, however, not only done this, but it has given rise to new habits in the present generation, and has proved to be the great mechanical invention of the nineteenth century, as the steam-engine was of the eighteenth century. As it is still in its infancy, it is especially the province of statistical inquiry to watch its growth, so that on the one hand timely remedies may be applied to its defects, and on the other, that free scope may be given to its beneficial tendencies. Valuable papers have been contributed by Messrs. Laing, Porter, Graham and others, ana lysing the traffic on railways during the infancy of the system to the year 1843. Shortly before that period there had been a pause in railways. During two years only five miles had been sanctioned, but the period which has since elapsed comprises the memorable mania years of 1845 and 1846. Under this excitement intelligence and emulation have been stimulated among the managers of railways to the utmost, and the system has rapidly advanced. The consolidation of lines under a few great companies, by the process styled amalgamation, has proceeded; the atmospheric, an entirely new system of traction, has been brought forward;—the electric telegraph, conveying intelligence at the rate of 280,000 miles a second, has been widely introduced :-express trains. travelling at nearly the highest attainable speeds, have been established, and the length of railways in operation has been doubled. It therefore becomes a matter of much interest to inquire to what the results of so active a period point. Have low fares answered?—Has the third-class traffic, the most important to the bulk of the people, been encouraged, and has it been found wise, not only for the users but for the owners of railways, to encourage it or the reverse?-Has the increase of speed been successful, and are we likely to travel faster or slower hereafter ?--How have the receipts kept up while the length of railway has been doubled? Did the first 2,000 miles get the cream of the traffic, as has often been thought, and has the average receipt per mile consequently fallen off?-Should the experience of the past, in short, give us confidence in urging on the system at the extraordinary rate at which we are now doing it, or not?

In the following investigation and collection of facts it has been attempted to throw some light upon these points;-the recent publication of the official railway returns for 1846 and 1847 affording peculiar facilities for the purpose.*

The following paper refers to English, Scotch and Welsh lines only,—the Irish lines are excluded, the economical condition of Ireland being different from that of this country, and there being but few railways open in that country :-

Comparative Lengths of Railway open in 1843 and 1847, and Receipts thereon.

† The lengths of English, Scotch and Welsh railways open June 1843 were ... .. 1,990 + Ditto, open at the commencement of 1848 ... § The gross receipts returned for the year 1842 £4,740,000 || Ditto for the year ending June 30, 1847 .. 8.326.772

After making the necessary corrections in the above figures, the average receipts per mile of railways in 1842 were 2,489*l*.; in 1847, 2,596*l*. We therefore arrive at the important fact that, although the mileage of our lines has been doubled, the receipts have been more than doubled. must be regarded as a very favourable general feature in the state of railways. There was much reason to fear that, as the first railways ran between the great towns or traversed the manufacturing districts, the railways which were next opened would show a great falling off in receipts. Hitherto, then, we find that this is not so, a fact which may give us confidence as regards the great length of railway which has been sanctioned by Parliament but which is not yet open.

Lines sanctioned but not open.-The length of railway sanctioned by Parliament at the commencement of 1848, but not then open, was 7,150 miles.* A considerable portion of this is in progress, more or less rapid. On the 1st of May 1847, 5,209 miles were returned+ as in progress, on which 218,792 persons were employed, or 42 per mile. These new railways are principally designed for the accommodation of the agricultural parts of the country. We will presently refer to the prospects of railways in such districts. When the railways now in contemplation are completed, and it is probable that a greater portion will be so in the course of the next five years, we shall have upwards of 10,000 miles of railway open, on which, judging from the numbers employed on lines now open, + (viz., 14 per mile), 140,000 persons will be permanently employed, at good wages, - representing, at five to a family, three-quarters of a million of the gross population. The importance of this addition to our internal communications will be appreciated when it is remembered that there are only about 4,000 miles of inland navigation and 30,000 miles of turnpike road open for traffic in the country.

### ANALYSIS OF TRAFFIC.

General features .- The gross traffic for the year ending June 30, 1847, was, as we have seen, 8,366,0001. There were conveyed during that year from the returns of the Board of Trade, s in round numbers, 7,000,000 tons of merchandise and goods, 8,000,000 tons of coal, 500,000 horned cattle, 1,500,000 sheep, and 100,000 horses.

Of the gross sum, 8,366,000L, the passenger £5.024.000 receipts were cattle, carriages, parcels, mails, &c. 3.342.000

8,366,000

In every 1001, of receipts, the passenger traffic therefore forms 60 per cent., the traffic receipt from other sources 40. In 1842 these proportions were as 64 to 36. The proportions of traffic receipts from other sources than passengers (being principally goods and cattle traffic) have thus increased since 1842 as 40 to 36, or 11 per cent. The total number of passengers carried in the year (ending June 30) 1847 was 47,484,134, as compared with, in 1842, 22,403,478.¶ The average distance travelled by each passenger was, in 1842, 13 miles; in 1847 it was 16 miles. The numbers and proportions of In 1847. In 1842.

First class 14.2 20·2 45·4 Second class Third class ٠.

Thus, the third-class passengers (which have increased in number since 1842, from 6,000,000 annually to 21,000,000,) now form nearly half of the whole number travelling, whereas in 1842 they formed only about one-third. Only one-third of the third-class passengers have availed themselves of the parliamentary trains arbitrarily (and, as it appears to me, unfairly) imposed upon railway companies in 1844. The following table, comparing the fares of the metropolitan railways in the year ending June 1843, with those in the year ending June 1847, shows the great reduction which has taken place in fares during the last four years.

make the comparison more appreciable, the fares are taken as for 100 miles in pence.

	FARE FOR 100 MILES.													
Railway.*	1st C	lass.	2nd	Class.	3rd Class.									
	1843.	1847.	1843.	1847.	1843.	1847.								
London and North-Western Great Western London and South-Western Eastern Counties Northern and Eastern South-Eastern London and Brighton	3031 8120 2941	274'4 245'0 210'0	241·1 209·5 210·0 227·4 165·8 150·0 225·0	144 6 187 8 168 0 141 5 152 0 171 0	131°9 118°3 120°0 164°7 110°9 87°5 150°0	93°3 100°0 96°0 93°3 90°0 109°0								
Average	303.2	237·4 21·8	2103	160 8 23 8	1986	967 \$50								

This reduction in fares, coupled with the increase in the number of trains, and the speed of travelling, must be regarded as the principal cause of the great increase of the number of passengers since 1843

We have already seen that the numbers in 1847 and 1843 are as 47,484,134 to 22,403,478. If we take into account the number of miles opened at those dates respectively, the annual number per mile was, in 1842, 11,772, and in 1847, 14,806.

### SOUTH WALES.

Engineer's Report for the Meeting, Aug. 23, (p. 607).

The necessity of limiting the expenditure has unfortuy continued during the last, as in the preceding half-and the works have not therefore proceeded more vance of the several portions so as to ensure their simul-taneous completion, and to devote the available funds as much as possible to the more important works and those which must ultimately govern the opening of any portion of the line,—unfortunately however this is not practicable to the extent that may be desired—there are many works which once commenced cannot be much delayed, unless entirely suspended, such as tunnelling, and all other works in which the effects of water have to be encountered, and in which the effects of water have to be encountered, and thus the tunnelling beyond Swansea and the works along the coast at Llanelly, Pembrey, and along the shores of the river Towy towards Carmarthen have absorbed some of the funds which might perhaps have been more profitably em-ployed in rendering available the works east of Swanses. ployed in rendering available the works east of Swanses. The works generally, which are in progress throughout the whole distance from Gloucester to the neighbourhood of Haverfordwest, have proceeded very satisfactorily, excepting as to the rate, for the reasons before referred to; and no new difficulties have been encountered to affect either their cost or efficiency. The destruction by fire of a timber bridge across the Usk, at Newport, will not cause any delay to the works generally; the loss, which (so far as the company is concerned) is borne by the contractor, was covered, or nearly so, by the insurance, which under the terms of the contract he was bound to effect upon all timber bridges during their construction; after completion these structures the contract he was bound to effect upon all timber bridges during their construction; after completion these structures are not exposed to the same risk, being covered with ballast and otherwise protected, besides which it is only while fresh creosoted and covered with tar that they are so inflammable. The contractor is proceeding rapidly with the restoration of this bridge. The works east of Chepstow are in a forward state. The heavy works at Chepstow and at Newport, including the tunnel at the latter place, are in a very forward state; the tunnel last mentioned is completed. The contract for the bridge at Chepstow, which had been postsponed as long as it conveniently could be, is now about to be let. The principal works between Cardiff and Neath, viz., those at Bridgend and Margam, are proceeding rapidly, and be-The principal works between Cardiff and Neath, viz., those at Bridgend and Margam, are proceeding rapidly, and between Neath and Swansea they are very forward; in fact, between Newport and Swansea, if every endeavour were made to expedite the works, they may be completed in ten or twelve months; and east of Newport, assuming the Gloucester and Dean Forest to be completed, the whole might with similar exertion be finished in twelve or fifteen months. Several portions of the line are now, and others will scope he ready for receiving the permanent way, and a will soon be, ready for receiving the permanent way, and a large portion of the rails being in hand and the other materials in the course of delivery, this work will soon be commenced.

I. K. BRUNEL

# EAST LINCOLNSHIRE.

Engineer's Report for the Meeting, Aug. 11, (p. 557).

Engineer's Report for the Meeting, Aug. 11, (p. 557). Since the 1st of March the part of the line between Grimshy and Louth has been open to the public and is now, with the stations and working stock, in excellent condition. By an arrangement with the Manchester, Sheffield and Lincolnshire Company the East Lincolnshire trains have run over the Manchester, Sheffield and Lincolnshire line from Great Grimsby to New Holland, and the Manchester. Sheffield and Lincolnshire trains have run over this company's line between Great Grimsby and Louth. This arrangement has been found very advantageous to both companies, and has been found very advantageous to both companies, and has between Great Grunsby and Louth. This arrangement have been found very advantageous to both companies, and has assisted to an early development of the local traffic. From Louth to Boston the works are so very near completed that a detailed report is unnecessary. On the lst of september the works on the lines and stations will be completed from Louth to a junction with the Great Northern at Roston, so as to be in a condition to receive traffic; but as the Boston station, which is on the Great Northern line, will not be ready before the end of September, it will not be expedient

# Progress of Works.

DUNDRE AND PERTH.—The junction bridge across the Tay with the lines on the south side of the river is in course of rapid execution. It is a substantial wooden structure, says the Scottish Railway Gazette, and presents a striking appearance from the North Inch as well as from the old bridge which unites the town a short way up the river. The line runs behind Marshall-place, one of the finest streets in the city, and joins the other lines in the General Terminus by an easy and short connexion.

EAST LANCASHIRE.—Aug. 17.—The junction be-tween Accrington and Stubbins, completing the chain between Manchester and Preston, was thrown open to the public as expected. This link is about 8 miles in length and embraces some of the most formidable works on the entire line, including an incline of 1 in 78 on the Manchester side of the summit, and inclines varying from 1 in 110 to 1 in 40 on the Preston side, descending into the town of Accrington. According to the local reports, some curiosity was experienced to see how the engines would surmount this difficulty. The 'Zamiel,' a passenger-train engine, supplied by Messrs. Wilson & Co., Leeds, took the first train with seven carriages up the heavy incline from Accrington, at an average speed of 25 miles an hour; the second train was the express, and this was taken up the incline by an engine constructed by Messrs. Sharpe & Roberts, at the rate of 30 miles an hour, which is considered rather a surprising feat, when it is borne in mind that it was an uncoupled engine. The whole distance between Blackburn and Manchester, 26 miles, was accomplished in 50 minutes, exclusive of an unavoidable detention of a few minutes at Bury, for the junction train over the Rawtenstall branch. The whole distance between Manchester and Preston is about 40 miles, exceeding the length of the Lancashire and Yorkshire by about 3 miles, and the London and North-Western route, vid Parkside, over the North Union, by about a mile.

GLASGOW, DUMFRIES AND CARLISLE.—The Government Inspector has testified to the complete and substantial manner in which the works have been finished. On the 22nd inst. the line from Dumfries to Gretna was opened by the directors and their friends. The works were commenced about eighteen months ago. The line itself, which is about 24 miles in length, presents few, if any, engineering difficulties, the pass over Lochar Moss being accomplished with less diffi culty than was anticipated, the moss in many parts turning out shallow, with a good foundation underneath. Here are six stations, viz. Dumfries, Ruthwell, Cummertrees, Annan, Dornock and Gretna. The stations at Annan and Dumfries are nearly completed and will be approximated. pleted, and will be very commodious. The rest have not as yet made much progress. The works were planned and executed under the direction of Mr. J. Miller, the engineer, the contractors being Messrs. Jeffs. Messrs. J. & W. Ruston. Messrs. Ross and Mr. Goslin. The manner in which the line has been made reflects great credit on all concerned. It was found to be in excellent working order, and the carriages ran very smoothly. Shortly after their arrival at Dum-fries the company sat down to a splendid collation,

laid out in the temporary station.

London and South-Western (Windsor and Staines branch).—Aug. 22.—After the Government inspection on the 19th, the continuation line from Richmond to Datchet and the additional line constructed some time since from the junction at Falconbridge to the coke-ovens at Nine Elms, this line was opened for public traffic. The convenience of parties residing near the line is consulted as far as possible, for fifteen trains will leave London daily, and twelve trains will leave Datchet for London. On Sundays there will be an increase of four trains down, but a decrease of

North British (Hawick Extension).—A section of this line, says the Scottish Railway Gazette, was opened some months since to Gorebridge, and more lately to Fushiebridge, about 16 miles from Edin-burgh, comprising nearly 10 miles of new railway, including the portions of the main line to Portobello and the old Dalkeith line, which form integral parts of the Hawick extension. The new line may be pro-perly said to commence at Dalhousie, where it crosses the South Esk by a viaduct of seventeen arches, about

a work of unusual magnitude, and is one of the chief features of the line. The scenery around is replete with beauty and interest, embracing the richly wooded grounds of Dalhousie Castle and Newbattle Abbey, with views of the Pentlands in the distance. The line continues to ascend through a deep cutting of considerable extent. The curves are sharper and more numerous than on almost any other line we are more numerous than on amoust any other line incom-acquainted with; but it is evident, from the irregular and hilly surface of the country, furrowed as it is with ravines and water-courses, intersecting each other most capriciously, that bad curves and gradients could not possibly be avoided at any cost. At Gorebridge the inclination is 1 in 70; but this is the steepest ascent on the line, and it is not of any great length. A succession of short curves next occurs. and the line runs for some space along the banks of the Tyne, which are highly picturesque. The portion opened on the 2nd commences about this point. It is 16 miles in length. The traveller will not fail to have his attention strongly arrested by the beauty of the Tyne valley and the remarkable ruins adjacent. After passing Crichton and Borthwick Castles, the line reaches a most difficult, indeed all but impracticable, country. In one part terrace rises above terrace for several hundred feet, and many hands are busy at work forming slopes and drains along the line. So heavy is the line here that for a short distance only one set of rails has been laid down for the present, every precaution being adopted by slowing the engine, &c., to prevent the possibility of accident. The rise is 1 in 70 through this stupendous cutting, which is succeeded by an embankment of considerable extent, the incline being 1 in 100. The line now passes over the Lammermuirs by a gradual ascent, the average gradient being about 1 in 130. The country is sterile and bleak, no attempt at cultivation country is sterile and bleak, no attempt at cultivation being observable for many miles. The station at Heriot is in the heart of this wild region, and we begin to mark the first traces of the Gala as it emerges from the surrounding hills. The line runs nearly parallel to the course of the stream, crossing it repeatedly over wooden bridges. The next station is Runnboug. The cuttings here are also considerable Burnhouse. The cuttings here are also considerable. the gradient being 1 in 150. After crossing the river we encounter rather a heavy cutting through hard rock, which soon leads us to the station at Stow, one of the most pleasing spots on the Gala. The bookingoffice and waiting-rooms, constructed of the stone of office and waiting-rooms, constructed of the stone of the district, are finished, and appear to be very commodious. We then enter upon another cutting, followed by two short tunnels, the gradients varying from 1 in 150 to 1 in 250, with an occasional run upon the level for some distance. The hilly land through which the line passes for upwards of 15 miles to this point must be of little value, and in this way some compensation will be obtained for the heavy character of the works. About three miles beyond Stow the temporary terminus of the line is placed. At this point the Gala makes a sweep through the valley to find an issue among the hills, which rises on all sides somewhat in the form of a cross-bow, the course of the stream being the stented string, and hence, we presume, the name—Bowland. The engineer had here, to meet the difficulties of the country, three courses before him; first, to attempt a cutting of several miles through a hill of some 200 ft. in height, which would have afforded a straight line to Galashiels; second, to follow the course of the stream, with a circuit of a mile, round a sharp-pointed hill, with a turn like the corner of Cheapside or the Register-office; or, third, to adopt the plan he has taken-strike through the obstructing hill, and then pursue the natural openings. He preferred the last alternative, and has thus avoided some intolerable curves, as well as an incalculable amount of labour; but, in avoiding these difficulties, he has fallen upon one of a character only a little less serious, for the intervening hill is a solid mass of whinstone, about 400 yards in breadth, and this enormous block the contractor is now engaged in perforating, with comparatively few hands engaged upon it, but these are to be immediately augmented, in order to accelerate the work. This tunnel is on the estate of Bowland, the elegant mansion-house and beautiful grounds of Mr. Walker, the proprietor, being in the immediate vicinity. From what we have said it is evident that the line cannot be extended beyond Bowshank, its present terminus, for some time, the distance to Galashiels being about five miles. But the road to that town, Melrose, Hawick, &c., is an excellent one, and the coaches run frequently, so that there can be no lack of conveyance until the completion of the line.

SCOTTISH MIDLAND JUNCTION .- On the previous day to the opening of the valuable line from Perth to Forfar the directors proceeded along the line, acthe South Esk by a viaduct of seventeen arches, about companied by a numerous party of all classes, freely 100 ft. in height from the bed of the stream. This is taken in at every station. The Perth station of the

line, says the Scottish Railway Gazette, forms part of the general terminus in that city, and the train for the preliminary trip was made up under the direction of Mr. Milner, the superintendent, alongside of the platform. The line emerges from the city immediately behind the barracks, and proceeds in a northerly direction, with the Tay on the east. A view of Perth and its amphitheatre of hills is obtained from the line. A short way on, the print-fields of Tulloch, the oldest in Scotland, are passed on the left; the line then skirts the beautiful policies of Scone, with the winding river between. As we pass along, the palace, with its sloping lawn, is distinctly visible from the line, and altogether it makes a beau-tiful and striking picture. The line crosses the Al-mond, and runs upon an embankment of some extent mond, and runs upon an embankment of some extent before reaching the station at Luncarty, famous for the battle between the Scots and Danes. The grounds of Stanley are then passed, and the village of that name is provided with a station, the second on the line, being 64 miles from Perth. From this point the contemplated branch to Dunkeld runs off. The line now sweeps round, and proceeds through Strath-more eastwards. A deep cutting of some extent next more eastwards. A deep cutting of some extent next occurs, but the line generally passes along the surface of the country, keeping the Grampian range constantly in view towards the north, and the Tay close by on the other side. At Meiklour the line crosses the river upon a lofty viaduct a short distance below the junction of the Tay with the Isla. This is perhaps one of the most remantic scenes on the whole haps one of the most romantic scenes on the whole line, rich in all the finest features of river scenery. line, rich in all the finest features of river scenery. Passing the Cargill station, 11½ miles, in the heart of Strathmore, with the range of the Sidlaw Hills on the east, we reach Cupar Angus, 15¾ miles, one of the most important stations, with a considerable population. From a point near this station the branch to Blairgowrie will proceed. We now pass into an old railway country, and here are visible the remains of the obsolete but once useful tram-roads (for they are little else) of the Newtyle lines. The stations are little else) of the Newtyle lines. The stations now passed are Ardler, (181 miles), and Eassie (241 miles). We next reach the station at Glammis, cele brated for its venerable castle, the most perfect specimen of the kind in Scotland. A branch to Kirrie-muir starts a short way north of Glammis. The village is seen on the heights about three miles off. A little further north the proposed extension runs in a direct line to the east, about three miles from For-far, the terminus of the Scottish Midland. Like all the lines laid out by Messrs. Locke and Errington, it is surprisingly free from expensive cuttings, bridges or tunnels. In fact there is not a single tunnel between Perth and Forfar, and the bridges are of a comparatively inexpensive construction. No doubt the country is, on the whole, level; but as we ap-proach Forfar it assumes a more difficult aspect. The engineers, however, have succeeded in making a remarkably straight line, with good gradients, which may be run over with perfect ease and safety at a rate of bu miles an hour. The motion is smooth throughout, with the exception of one part near Cupar Angus, which has not yet settled.

# Accidents.

EASTERN COUNTIES.—Aug. 15.—Mr. W. Busigny, ged 47, solicitor, Stockbridge, Hants, was knocked down and killed by an engine on the Eastern Counties. The deceased, who was residing at the Horse and Groom, Lea Bridge, was of eccentric habits, and had recently exhibited great depression of spirits. He was walking on the up line on the night in question, at about 300 yards distance from the Lea Bridge station, when he was knocked down by engine No. 54. He died the following morning. Three ribs were fractured, and had penetrated both lungs, and he had also received a concussion of the brain. Verdict -"That the deceased died from the injuries received, but whether they were by accident or design on the part of the deceased there is no evidence to show."

LANCASTER AND PRESTOR.—Aug. 21.—A mixed train left the Preston station at 4 p.m. for Lancaster; at the Bay Horse station (about six miles from Lancaster) it stopped to let passengers down. Whilst the station keeper and guard were engaged in removing luggage a train was seen rapidly approaching on the same line. This train proved to be the express train which leaves London at 9 a.m., and which was then nearly two hours after its time. As soon as the engine-driver on the Lancaster train saw the approach of the express he immediately put on all steam to get out of the way, but before he could attain any speed the express came up and dashed right into the hinder carriages. Four carriages were completely dashed to pieces. An engine immediately went forward to Lancaster for surgeons, and on their arrival it was found that although many were much injured, there was only one killed-a woman of the name of Edmondson

from Poulton-le-Sands, near Lancaster, Two men received compound fractures of the skull, and now lie in the House of Recovery at Lancaster. The number of the injured amounts to between ten and twelve. When the engine-driver and stoker on the express train saw what would inevitably happen they jumped off and escaped unhurt. Mr. W. Jackson, of Lancaster, one of the directors, was in the express train at the time, and leaped out unhurt. A little boy about four years old, in the arms of the person killed, received no injury whatever. This is the first collision that has occurred on the line during the ten years it has been opened. Mr. Beckett, ten-dealer, of Lancaster, was in one of the second-class carriages that was smashed to pieces. He fell through the bottom of the carriage when it parted, and escaped without even a mark of injury.

LONDON AND NORTH-WESTERN.-Aug. 15 .- As the train in connexion with the Caledonian was about 4 miles from Warrington, the engine suddenly ran off the rails and dragged the carriages after it. Many of the carriages were severely injured, and several narrow escapes were made by the passengers, but fortunately no one was hurt. Some detention ensued, and it was deemed expedient to procure other carriages to perform the remainder of the journey. On the 17th, Capt. Simmons, the Government Inspector, visited Ashton Bank, the scene of a collision, for the purpose of examining the engine attached to the Peterborough mail, and instituting inquiries Aug. 18.—Another collision occurred at Birmingham. On the arrival of the 9 a.m. express train from London at the Birmingham terminus, a train of first and second class carriages was being shifted on to the main line. The driver of the engine drawing the express train did not shut off his steam in time. ran into the train of empty carriages, smashing three or four of the first class, and damaging more or less nearly all the other carriages. No life was lost.—A driver, named Sands, lately belonging to Woolwich Dockvard, of a night luggage train passing through the Tring cutting became alarmed at finding a deficient quantity of water in the boiler. He attempted to rectify the defect; but he was unable to do so. The train was still proceeding at a rapid pace, when a rush of steam taking place, Sands became alarmed, and threw himself off the engine-plate on to the embankment. The guard and stoker, who were upon the engine with him, retained their places, and in a few minutes brought the train to a stand-still. On returning down the line they found Sands lying on the embankment perfectly insensible. He had sustained a severe fracture of the thigh, close to the hip joint, as well as several extensive scalds about the Aug. 24.—An axle-tree of one of the vans of a luggage-train broke as the train was proceeding from Birmingham to London. The accident occurred near the Marston Green station, a few miles from Birmingham. Two or three of the vans were broken, and the train was thrown off the line, thereby causing some delay to the passenger train which next came up.

LONDON AND SOUTH-WESTERN (Richmond) .- Aug. 20 .- A guard named Gant fell from his seat in a night train in the cutting between Putney and Wandsworth. He was missed at Wandsworth, and when picked up was found to be bruised and much hurt. He died the next day at St. Thomas's Hospital.

MIDLAND (Darfield) .- Aug. 15 .- A verdict of accidental death was returned at the inquest, on the body of a guard, named Oldroyd. He had been in charge of a goods train on the morning of the 12th. He was left behind at the Masborough station, but got on to the engine of another goods train, saying his train had left him, but he would go with them to the Barnsley station, when they should overtake it, having two waggons to leave there. Nothing was said about Oldroyd getting on before reaching Barnsley, and all went right until they reached Darfield Bank, a rise of 16 feet in the mile, and about three quarters of a mile south of Darfield station, where the first train began to slacken its speed, partly owing to the pumps not working properly. The second train then came gently up, assisting the first train up the bank. Turner (the driver) was on the right side of his engine, and had his attention directed to the first train, when, having been pushing about 100 yards, he felt the engine lift, and upon turning round to his fireman, found that Oldroyd had gone over the left side of the engine-frame to the front of the engine, and in attempting to get into the brake of the first train had slipped between it and the engine of the second train, with thirty carriages attached to it, all of which had passed over his head and shoulders.

WEST KENT .- Aug. 24 .- A fire broke out on the

West of England arrived shortly before 3 a.m. Water could not be procured in a sufficient quantity. Plenty of and the flames made at first much havoc. assistance, however, was at hand, and the sleep about 1,000 in number, were saved. The loss will be at least 1,000l. The fire is supposed to have originated in the engine-room.

# Law Intelligence.

Aug. 14.—On the Home Circuit, Guildford, in re Cory v. the Norfolk, the plaintiff sought to recover from the defendants the sum of 1,090... as money had and received by them to the plaintiff's use, upon an account stated. About the time of the railway mania the defendants projected a railway, in conjunction with their general scheme, from Yarmouth to Lowestoff, Halesworth and other places, and another company, called the Waveney Valley, were proposing a line which ran exactly parallel with the one projected by the defendants. The Waveney Valley subsequently agreed to abandon their line to the Norfolk, upon conditions embodied into an agreement on the 26th of October 1846. The Norfolk were to issue 20,000 new shares of 20l. each, and the scripholders in the Waveney Valley scheme were to be allowed to take as many of these shares as they pleased, upon the understanding that 30s. were to be paid upon each share, but credit was to be given them for 40s. and they were, in addition, to be guaranteed 5 per cent. interest either out of the capital or the profits of the speculation. The bill accordingly went to Parliament, a clause being introduced into it authorizing the payment of the guaranteed interest of 5 per cent. out of the capital; but this clause was struck out in committee. The plaintiff had 545 shares in the Waveney Valley scheme, and he exchanged them for the new shares issued, paying the 30s. deposit upon each share, and the present action was brought to recover back 40s. upon each of those shares, amounting to the sum named in the declaration, the case for the plaintiff being that he had no intention to run any risk in connexion with the new scheme, but that, acting upon the faith of the agree-ment entered into by the defendants, and in consideration of which the Waveney Valley scheme had been abandoned, he had invested his money in order to secure the guaranteed interest of 5 per cent., but as he could not obtain it he now sought to recover back his money .- The Chief Baron was of opinion that the case rested upon the terms of the subscription contract entered into by the plaintiff, and that they had nothing to do with any previous transactions. The terms of that contract were that parties were about to apply to Parliament for an Act to enable them to make a certain branch line, and that it was intended to introduce a clause empowering the payment of 5 per cent. interest; but the parties were not to have the 5 per cent. under all circumstances, but they were to have from the nett profits, if any were realized, payment of that amount in preference to other shareholders. The plaintiff had subscribed this contract, and he was therefore of opinion that this action for money had and received was not maintainable.—The plaintiff was accordingly nonsuited.

### THE STRIKE OF THE ENGINE-DRIVERS.

We are glad to announce the confirmation of our wish for amicable arrangements between the engine men and their employers on the North-Western. On the 19th the following official notice was issued:-

London and North-Western, Euston Station, London, Aug. 19.—The drivers and firemen late in the service of this company, having left their case in the hands of the chair company, naving left their case in the hands of the chair-man, unconditionally, and having expressed their "willing-ness to resume their several duties when and under what-ever circumstances their services may be required, they will be re-employed accordingly. In giving this intimation, the directors think it due to the new engine-drivers and firemen to assure them that they shall not be prejudiced as regards their present rates of wages, and that their interests in other respects will be duly protected.-By order, R. CREED, Sec.

On the 19th Mr. Madigan, commissioned by the Board, had an interview with Mr. Brown, on the part of the men, and it was then arranged that the system of classification prepared by Mr. M Connell should be withdrawn, and that the men should return to their employment on the line on the terms which they have hitherto been accustomed to receive. was further understood that any grievances of which the men might have to complain should, in future, be submitted to Mr. Glyn, the chairman of the Board, and not to any of the superintendents. After the disputes were thus regarded as settled, twenty two of the engine-drivers were sent for to arrange part near the tunnel at Charlton. Messengers were sent to London for the engines and firemen, and that they were expected to act with new firemen, those belonging to the London establishment and the drivers who have worked on the line during the

past week being kept in the subordinate capacity. Each dissentient driver was thus to work on an engine with one of the new men in lieu of his old assistant. This was regarded as an infraction of their under-standing with the company, and at a subsequent meeting the men refused to work without their usual assistants. This refusal was, however, met by the assurance of the chairman of the directors that the men should rely on his honour for the redress of their grievances, and the early employment of their fellow-workmen.

Subsequently, at a meeting on the 22nd, it was announced that arrangements had been made by which the whole of the men were to resume their employment, as they felt that Mr. Glyn's character for honour and straightforward conduct was a sufficient guarantee that their interests would be attended to on his giving his word to that effect: it was there-

fore resolved,—

"That while we, the engine-drivers and firemen in the empl-y of the London and North-Western, sincerely congratulate ourselves on the very pleasing and gratifying termination of a dispute which has been, from the first, one of a most painful character to us all, unwilling as we have ever been to place ourselves, even apparently, in opposition to a company in whose employment the greater number of us have passed many years; we, at the same time, gladly avail ourselves of this opportunity to express our grateful sense of the kindness we have experienced at the hands of Mr. Glyn, the respected chairman of the Board, to whom we hereby now make our heartfelt acknowledgments;" and "that deeply sensible as we are of the friendly interposition of Mr. Madican, whose kindness and consideration we have all of us experienced on many occasions, we feel that we cannot separate without expressing the obligations we are under to him, and our acknowledgments for his having kindly contributed to the present gratifying result."

# Reports of Meetings.

MIDLAND.

Aug. 19 .- Half-yearly Meeting, Derby .- Mr. G. HUDSON, M.P., in the chair.

Mr. J. F. Bell, the secretary, read the report, as follows:-

follows:—

It is gratifying to your directors that at the termination of a half-year of peculiar difficulty, they are enabled to announce that the gross receipts from traffic have amounted to 507,17cl. 15x. 3d., exceeding those of the corresponding half of last year by 22,509f., and leaving a disposable balance of 195,460l. 8x. 10d. This will enable you to declare a dividend of 3l. upon each 100l. of Midland consolidated stock: 3l. upon each 100l. consolidated preferential stock; after the same rate of 6 per cent, per annum upon the amount paid (42l. 10x. per share) upon the Erewash Valley shares; and of 2l. 6x. 3d. upon each 100l. consolidated Birmingham and Derby stock. The opening of the Syston and Peterborough was delayed beyond the period contemplated at the last half-yearly meeting, partly from the unavoidable state of the weather, and partly from the inability of the contractors for one portion of it to complete their work, and which the company were obliged to take into their own contractors for one portion of it to complete their work, and which the company were obliged to take into their own hands. It was not opened until the 1st of May. The branches connecting the principal collicries on the Erewash Valley with that line are now in rapid progress. The line from Nottingham to Mansfield, as far as Sutton-in-Ashfield, a distance of about 13 miles, will be opened in a few weeks. Since the last meeting the directors have contracted for the making of the branch from Leicester to the Leicester and Swannington, at Desford, about 6 miles, and the works are Swannington, at Desford, about 6 miles, and the works are progressing satisfactorily. The extension from the Leicester and Swannington, at Long-lane, to Burton-upon-Trent, will be opened during the autumn. Arrangements are making for the junctions of the Manchester, Sheffield and Lincolnshire with this line at Beighton-of the North Staffordshire at Burton-upon-Trent—of the South Staffordshire at Alreat Burton-upon-frent—of the South Staffordshire at Aire-was—and of the Oxford, Worcester and Wolverhampton at Abbott's Wood and Stoke. Mr. Barlow, the resident engi-neer, reports—" That the maintenance contracts on the north branch terminated in the early part of this month, and that this portion of the line is now in the hands of the company. I anticipate a saving of from 60% to 70% per mile per annum will be effected by this arrangement. On the Birmingham and Gloucester 21 miles have been relaid, and the remainder is being actively proceeded with. On the Bristol and Gloucester the improved condition of the line has enabled the company to make arrangements with the contractors, by which the cost of the maintenance is reduced; but I regret to say that the company does not reap the full benefit of this reduction, in consequence of the excessive cost of the repairs and maintenance of the mixed-gauge line between Cheltenham and Gloucester. I have also to report the completion of the following works, viz.—
the passenger station at Nottingham, the branch line to the
docks at Gloucester, and the short branch to the canal and docks at Gloucester, and the short branch to the canal and stone quarries at Little Eaton. The line and works are in a very satisfactory state—they have never since the opening of the line been in better condition and repair than at this time." Mr. Kirtley, the superintendent of the locomotive and carriage department, reports,—"The locomotive plant, carriage and waggon stock are in good condition." The following Acts have received the royal assent:—For making a branch line from Little Eaton to Ripley and the neighboring collieries and also another the converse the converse. bouring collicries, and also empowering the company to improve and enlarge the Derby, Masborough and Burron stations; for an extension, of 7 miles in length, from Glou-ce-ter to Stonehouse, uniting the Birmingham and Gloucester to the Bristol and Gloucester, rendering unnecessary the break of gauge at Gloucester, and extending a continuous narrow-gauge line from Birmingham to Bristol; for

The CHAIRMAN, in moving the adoption of the report, said he would not refer to a publication by a Mr. Arthur Smith, because it had been so completely answered, and the fallacy of his statements had been so well pointed out, by the chairman of the London and North-Western. They would recollect it was and North-Western. They would recollect it was agreed that the 40*l*, shares should come into dividend this half-year. It was however anticipated at the time of agreement, that the line would be opened earlier than had actually occurred. It was not opened for traffic until the 1st of May. And here he would remark that the development of traffic was proceeding most satisfactorily. Therefore as the line had not sooner been opened, the directors thought it fair, in paying the dividend, to debit the construction account with four months' interest on the 40% shares—that was on the 30*l*. paid up. They had also determined that an extra 1 per cent. should be paid to the proprietors on the 40*l*. shares out of revenue, although properly the revenue account ought not to be chargeable for the interest for more than the two months the line had been opened. Accordingly they had charged the revenue for two months of the halfyear at 3 per cent., and 1 per cent. for the other four months, the remainder being taken from construction account, so as to give 3 per cent. for the half-year on those shares. They had, in fact, put the 40l. shares in the same position as the old stock, and that had taken from them a considerable sum out of revenue, which would otherwise have increased the amount of dividend. On the last meeting the directors could not contemplate the events which had since that time occurred in Europe, and had disturbed so much the commercial interests. He would not therefore deny

that they were disappointed in the amount of traffic. They would not be surprised to hear that the passenger traffic had shown a decrease of 7,000l. The receipts from goods and minerals however had increased upwards of 23,000l. The total increase from traffic was 20,000*L*; and had the passenger traffic increased in an equal proportion to the other branches of traffic the dividend might have been equal to that of former years. It was not however to be expected that railways, dependent as they were upon commercial prosperity, would not suffer with the times, or that a diminution of the dividend would not take place when causes were at work disturbing the interests of the whole commercial world. The directors looked forward to the next half-year with the hope that the causes that had led to the recent depression would be removed, and they also hope to do something towards the reduction of their expenditure, because there was no article which they consumed that was not considerably reduced in price. fore hoped to meet the proprietors at their next halfyearly meeting with as satisfactory a dividend as it was possible for them as proprietors to desire. Dur-ing the last half-year the directors had opened 25 miles of new line; they expected to open 41 miles in the next half-year, and there would then only remain about 8 miles of new lines under construction. The directors would certainly not enter into any fresh engagements until they saw their way clearly into the future. With regard to their expenditure, he hoped the directors would be able to make great reductions before they next met them. They had heard from the report that the directors hoped to effect a considerable saving in the maintenance of the way between Derby and Leeds. Their engineer anticipated that the saving would amount to 60*l*. or 70*l*. per mile in the cost of maintaining the permanent way. Contractors usually undertook the maintenance of way, but no person having offered to contract for the whole agreeably to the views of the directors, and feeling that it would probably be better that they should have the maintenance of way in their own hands, they had kept this portion as an experiment, and if it succeeded they may eventually take the whole line into their own hands. The directors would keep careful accounts of their expenses, and he hoped to be able to show that it was as advantageous for them to retain the maintenance of the permanent way, and not let it to contractors. Some items of increased expenditure were very considerable, but he hoped their expenditure would not be increased in the next half-year, while he calculated upon an increase in their receipts of not less than 100,000l. during that period over the present half-year. Their traffic receipts were 500,000l. this half-year; he expected they would be 600,0000. in the next (or current) half-year, and he trusted their expenditure would not be increased by their earning 600,000l. over what they were in earning 500,000l., leaving a clear excess of 100,000l. There was one item of increase of 12,000l in their goods department, which could have been satisfactorily accounted for. The increase of receipts from goods and minerals had been particularly large. On first entering upon the carrying business they had naturally to keep up a larger expenditure and establish ment than they ought to do or than was afterwards found necessary to meet the requirements of the new traffic. They expected to reduce the cost of this branch very much, and every head of expenditure in this department was now undergoing a most careful revision. He had no doubt that next half-year he should be able to show them no increase of expenditure, but much larger receipts. There was one item of expenditure over which the directors had no control, and in which they considered that the proprietors were very unjustly treated. He had in his place in Parliament, and on other occasions, protested against the gross injustice of the mode in which railways were assessed to the local rates.† He had stated in the House of Commons that upon the Eastern Counties the actual charges for parish rates were 8l. per acre. The Midland paid 7l. per acre in parochial rates, and reckoning they occupied 12 acres per mile, they paid 84t. per mile in parochial rates. The present system could not stand long without parliamentary revision. There was some hope that the present Government would take the matter into their consideration, and that relief would be afforded to the proprietors on this score. There was a considerable increase in their assets this half-year on this item, amounting to 4,000l. or 5,000l. over their payments last half-year, and he hoped the day was not far distant when justice would be done them. They saw a bill brought in every year exempting stock in trade and capital invested in machinery from paying poor-rates. Now, the directors of railways did

not wish to be exempt; they were prepared to pay liberally and handsomely to the rates; but Parliament and the public must see that they were most unjustly treated when they were called upon to pay 84l. per mile in parish rates. This was one of the grievances of the railway system. Railway undertakings had struggled through difficulties which would have appalled any body of proprietors in the world except Englishmen—without the assistance of Parliament, save in giving them their bills,-without the assistance of Government, and without any other assistance than the indomitable perseverance of the parties who had embarked their money. They had struggled through a period of great depression, and they had seen their property more depressed than it was now; and the directors hoped that, by a determination to economize the expenditure of the company, by entering into as few engagements as possible, and by always being fair, open and aboveboard in their transactions, theirs, like all other railway properties, would rally and be placed in the position it deserved. He should now be glad to give any information which the meeting might require, assuring them that himself and his brother directors would always feel anxious to promote the prosperity of the Midland.

A Shareholder said there was a report that Mr. Hudson was going to leave the Midland, and he should wish to know whether it was true.

The CHAIRMAN had no intention whatever of leaving the company. He would say further, that so long as he had health and strength and enjoyed the confidence of the proprietors, and until he felt that he could no longer preside over their affairs to their advantage, nothing on earth should induce him to leave them. He had naturally a warm affection for the proprietors of the Midland, from whom he had always received so much kindness and attachment, and he should be unworthy of the feelings of an Englishman if he left the service of a company in which he had been so well received so long as he could be useful in promoting their interests.

In answer to a question,
The CHAIRMAN stated, that the dividend now proposed by the directors would leave a balance of 1,2001. towards the next half-year's account.

In reply to questions from Mr. Brancker

The CHAIRMAN said the whole of the debt owing by the company was charged to revenue. The rate charged for minerals was all that the Act of Parliament permitted, but it was higher than the Great North of England, where a good profit was derived from this source.

Mr. Brancker thought it would perhaps be better to pay a dividend of 52 per cent. per annum, and carry the balance to the depreciation fund.

Mr. WATERS thought something ought to be left for the depreciation of stock, and he would recommend that the present dividend be 21. 15s., and that the reserve balance of 45,000l. should be carried to the reserve fund.

The CHAIRMAN reminded the meeting that they might calculate upon an increase of receipts to the extent of 100,000% in the current half-year, and thought that, under those circumstances, they would not wish to reserve the sum mentioned by Mr. Waters.

A Shareholder inquired the gross amount of share

capital upon which dividend was payable.

The CHAIRMAN: I think about 7,000,000l. altogether.
Mr. IRONSIDE wished that the receipts of the

various lines could be given in the report.

The CHAIRMAN thought it would be more trouble

than profit.

Mr. IRONSIDE inquired whether there was any probability of such a rupture occurring between the directors and their enginemen as had occurred upon the London and North-Western.

The CHAIRMAN believed that the best feelings existed between the directors and the men in their employ; but he would not hesitate to say that rather than be unfairly dealt with by their enginemen, the directors would shut the line up. He thought all combinations like these were most injurious to the men themselves, and if they were submitted to by the public they would hereafter re-act on the public in a manner very injuriously. He knew the engine-men on their line to be a most respectable body of men, and as long as they conducted themselves as servants, and not as masters, they would receive the kind consideration of the directors. But any attempt at dictation on their part would be resisted; and if it were attempted, the Board would call the proprietors together to say whether they would be beaten by a set of men who had combined to coerce them.

Mr. Ellis (deputy chairman) said that, as a director of the London and North-Western, he was prepared to advocate taking off one half the trains if

necessary, rather than give way. He believed however that it would not be necessary to take off a single train, and he had no doubt the directors would be able to conduct the service safely and efficiently without one of the old men.

The CHAIRMAN said the meeting had seen the accounts of the late accident on the London and North-Western. He could assure them that it was one of those casualties which might have happened, and had happened, to one or two of the best enginemen he knew. He was on the spot soon after the accident, and he never saw such a dense fog as there The Peterborough train was stopped from an accident to the engine, and the York train arrived soon afterwards. There was no time to signal it, and the fog being so dense it ran into the Peterborough It was one of those misadventures to which all travelling was subject, and which no human foresight could have prevented.

A Shareholder complained of the inconvenience of fixing the company's half-yearly meeting on Saturday. The CHAIRMAN proposed to alter the day of meeting from Saturday to Wednesday or Thursday.

Mr. WATSON asked who was responsible that some combined effort had not been made to relieve railway companies from the payment of such excessive rates; and secondly, from whom such a movement ought to emanate.

The CHAIRMAN said that perhaps himself and other railway members of Parliament were to blame in not having done something. He had drawn Mr. Buller's attention to the matter, who promised to consider it. He thought that the railway interest in Parliament might introduce a bill inducing some practical settlement of the question. Perhaps some of those gentlemen who had been so much engaged in parliamentary and other legal business for railway companies might meet and concoct a bill as some compensation to the poor proprietors from whom they had received such large sums. Mr. Gladstone, when in office, had promised to take the matter into consideration, and so had the present Government, but nothing had been done. He (Mr. Hudson) would take charge of such a bill if no one else would, and he had no doubt the house would support it if it were framed on a fair principle. He hoped that in the next session they might be able to introduce a measure which would do justice to the proprietors of railways. They should have a petition from every company at their next half-yearly meetings praying for such a bill. The only difficulty was in agreeing upon the principle of the bill. Some mode of determining the nett profits might be agreed upon, but the matter was at present left so much in the hands of the magistrates that railway companies were compelled to pay perfectly extortionate and exorbitant sums, and were left without any appeal on the facts. They could only appeal on the law, and were at present taxed upon what some magistrate might arbitrarily think to be the profits of a railway

Mr. WATSON trusted that the matter would not be left in the hands of the Government.

The motion that the report be adopted was then

carried unanimously.

The CHAIRMAN then moved that a dividend of 3 per cent, upon the half-year be declared, in conformity with the terms of the report.

Mr. WATERS moved as an amendment that 23 per cent. be agreed to.

The CHAIRMAN said that they were drawing more out of revenue than they ought to do to pay the dividend upon the 40% shares, and if this had been the best half of the year, he should concur in the amendment. But as he calculated upon their receipts being 100,000/, additional in the next half-year, and recollecting the extraordinary depression which had prevailed during the last half-year, he thought they would not be departing from any principle in agree ing upon a dividend of 3 per cent. for the half-year. It would make no difference to himself and the other directors whether they received 23 per cent. or 3 per cent. this half-year; but it might be a matter of more consequence to some of the proprietors. He therefore recommended Mr. Waters to withdraw his

amendment. Mr. Ellis did not wish it to be supposed that the dividend of 3 per cent. would be filched in any way from the capital, or that the proprietors were not fairly entitled to it.

Mr. WATERS then withdrew his amendment. The original motion was carried unanimously.

A vote of thanks to the chairman and directors

having been passed by acclamation,

The CHAIRMAN said he could not allow the meeting to separate without adverting to an event which every railway proprictor must have regarded with deep affliction and extreme sorrow. This was almost first meeting of their proprietors at which they had not had the presence of him whom history would

record as a great and distinguished man, and who had so lately been called to the tomb of his fathers. They had almost always had his friend Mr. Stephenson pre sent to witness their proceedings, and to testify to the interest he felt in their undertaking. But it had pleased God to deprive them of him at a time when his friends looked forward to have the pleasure of his society for many years. They must all feel that it was a great alleviation to the affliction of his sorrowing friends that he had left behind him a memory that princes might be proud of, and that the most distinguished man living would be proud to exchange his fame for that which would surround the name of George Stephenson. He had left behind him the character of an honest man, of a sincere and warmly attached friend, of an affectionate husband and a kind father. He could not close the present meeting without expressing the deep sympathy which he was sure they must all feel with the friends of the deceased for the bereavement they were suffering, and their sense of the high estimation in which his character and works would live in after ages in the memory of his countrymen. He trusted that they would all emulate the character which his friend had bequeathed to those who were following him.
The meeting then separated.

YORK AND NORTH MIDLAND. Aug. 21. — Half-yearly Meeting, York. — Mr. G. Hudson, M.P. in the chair.

Mr. GREY, the secretary, read the report :-

MIT. GREY, the Secretary, read the report:—
The directors present the half-yearly statement of accounts up to the 30th of June last, as well for the revenue as the construction account. On the former the receipts for passengers, parcels and mails amount to 94,2004. 194. 3d.; for merchandise and cattle, 104,3271. 10s. 5d.; and for rents and staith dues, 6544. 3s. 5d. The working expenses during the same period amount to 62,843d. 18s. 9d.; and the interest on debentures to 18,6127. 11s. 6d.; leaving a balance the same period amount to 62,844, 18x, 9d.; and the interest on debentures to 18,612, 11x, 6d.; leaving a balance of 133,032, zx. 11d. The receipts on account of traffic have not equalled the expectations of the directors. Event have occurred during the interval which could not have been anticipated, and the traffic on the lines has been very materially affected by the general commercial distress, and more particularly by the impediments to the traffic with the Continent. The directors recommend that a dividend be declared, after the rate of 8 per cent. per annum, on the consolidated stock of the company, and after the same rate upon 11d. per share upon the fast and West Ridling shares, deducting income-tax. The total amount of this dividend will be 99,001d, after payment of which, and of the rent of the Hull and Selby and Bridlington lines, due on the 1st of Augast inst., a balance of 134d, 2x. 11d, will be left to the credit of the company. The directors feel that this company is peculiarly affected by the inequality of the half-yearly amount of traffic. The receipts of the second half of the year have always considerably exceeded those of the first on the whole of the line, particularly to Scarborough, Bridlington and Harrogate, as the summer traffic is very much greater than that of the winter and spring months, without occasioning any material increase of expenditure. The directors have gone into a careful investigation of the expenses, and arrangements have now made by which. without occasioning any material investigation of the expenses, and arrangements have been made by which, without diminishing the accommodation to the public, they have the them the avenue to the lowest mostible scale.

hope to reduce the expenses to the lowest possible scale.

The directors subjoin a statement of the particulars of traffic for the past half-year, together with the statements traine for the past hall-year, together with the statements of the capital and revenue for the same period:—Passengers: first class, 65,796; second class, 125,412; third class, 296,699; Government ditto, 141,551; total, 617,458. Horses, 2,615; carriages, 444; dogs, 1,313. Merchandise: goods and grain, 307,140 tons; coal, 118,223 tons; coke, 74,730 tons; lime, 12,603 tons; total, 512,796 tons. Cattle, 24,460; sheep, 78,777; pigs, 11,765.

The capital account to June 30 showed the receipts from calls, loans, &c., at 4,173,624l. 2s. 9d.; expen diture, 4,179,309l. 9s. 8d.; balance in excess, 5,685l. 6s. 11d.

The CHAIRMAN, in moving the adoption of the report, said—Reference is made to our diminished pros-perity. You will see the causes which have necesperity. You will see the causes which have necessarily led to that diminution—causes which I almost predicted six months ago. But events have occurred to realize my half-expressed fears by the most widely-spread and almost unprecedented disturbances throughout the countries of Europe, which prostrated commercial enterprize, and all but extinguished the trade of this country with the Continent. All have felt the effects, all are suffering from the general depression of trade in the amount of their business returns; and this company, too, like others, must suffer a severe diminution from the large amount of income which they realized last year. I admit that in one sense the diminution suffered in our returns is very severe; but in another view, the returns now reported you must admit to be satisfactory when you recollect the general commercial embarrassments. The receipts are less on the present than they have been on former occasions; but out of these, small as they are, we shall be enabled to make a large divi-dend, and yet have a surplus in hand. With deter-mined views of retrenchment it shall be no intention of ours to impair the efficiency of the works. public are not now so rapacious for extensive, I might say superfluous, accommodation, as they were in the early part of the railway era; they will be contented with a less number of trains—they will not now demand the running of trains at so many different hours a day; and your directors will certainly not fail to consider this. I should mention before resuming my seat, that a negotiation is going on between myself and the Great Northern in reference to the York line; a negotiation which amounts to this (it is not sanctioned yet, and perhaps I might as well have said nothing about it; but I will conceal nothing, and the negotiation is all but sanctioned, that the York should work along to Doncaster, with powers, at the same time, if they chose, to work as far as York on our line. But the understanding amongst us at the present moment is, that they shall work along to Doncaster. The only piece of line which would have to be made in order to accomplish this agreement was but small, and would be worked by us. It would cost no more than 80,000%, and would be finished in a few months hence, say the fore part of next year. This negotiation being once sanctioned, and that piece of line being executed, we may consider hereafter that the York property is invulnerable. You may, after that, entertain a desire to extend your branches beyond the present limit of their run, but such an extension will be no longer a necessity imposed on you by the interest of your property, for the York property is now invulnerable and protected, and no outlay has been made which will not prove remunerative—no portion of the scheme has been acquired which will not be found a paying concern. Your branches in the East Riding are most impor-tant to the prosperity of your lines. We have secured the large supply of traffic which must flow from the port of Hull, to which we have carried down a branch, and which we are about to open in a few days. This, when completed, will become a great feeder to your other lines, securing, as I have said, the immense traffic which will pass in from the port of Hull, and run over the Midland line. Not that I expect that this increase will be sudden and great, for a year or two will no doubt be necessary to the gradual and full development of the traffic, even from such a source as the important port of Hull, with an extensive shipping trade; but I am quite certain, and may assure you confidently of this, that every pound which has been laid out will be repaid with a satisfactory rate of interest. I have said already, gentlemen, that there need be no increase of that outlay for the purpose of protecting the property you already possess; it is safe, and any additional branches that you may ever think proper to extend will be made simply for the accommodation of the district through which they run.

The report was unanimously adopted.

The CHAIRMAN moved the following resolution :-That a dividend be now declared of 4 per cent, upon the consolidated stock, and of 12s, per share on the East and West Riding shares of the company (deducting income-tax), payable on the 5th of September next.

The resolution was passed unanimously.

In answer to questions, the CHAIRMAN said that in the Hull and Selby their company was jointly interested with the Lancashire and Yorkshire; that on certain calls which had been made on preference shares issued in the Hull and Selby, it was merely optional to take those shares under the 10 per cent. guarantee.

A Proprietor asked whether it was the intention of

the Board to proceed as far as Beverley.

Digitized by GOGIC

The CHAIRMAN said-I do not feel disposed to seri ously entertain the proposal to proceed with any works until I see a prospect of the harvest proving better than many of us anticipate. Everything depends on the harvest, and until it is over we cannot see our way. I have much pleasure, though, in telling you that all the arrangements with the landowners have been effected, and that a very large saving will be effected in the estimated amount. The line is only seven or eight miles in length, but I do

line is only seven or eight miles in length, but I do
not like to pledge myself it will be made.
In answer to another Proprietor,
The CHAIRMAN also said that, considering the
times, they had got on pretty well with their calls.
Looking at the commercial embarrassments, the
dividend they declared that day was, in proportion,
quite as good as that declared at the previous halfyearly meeting.

The CHAIRMAN, in his brief but pointed acknow-ledgment of the usual vote of thanks, said he hoped the proprietors would believe that both he and his colleagues felt the greatest anxiety for the success and paid the most unceasing attention to the interest of the undertaking. Every week a full and complete account of the expenditure was laid before him (Mr. Hudson), for he felt, in common with his brother directors, that they could not be too anxious for the prosperity of a line which had such flattering prospects before it, and feared no rival in the country it

## YORK, NEWCASTLE AND BERWICK.

Aug. 21.—Half-yearly Meeting, York.—Mr. G. Hudson, M.P., in the chair.
Mr. Close, the secretary, read the following re-

Aug. 21.—Half-yearty Meeting, Ivin.

Mr. Close, the secretary, read the following report:—

The directors beg to present to the proprietors the usual statement of accounts for the half-year ending the 30th of June last, showing a halance of 193,241l, 3s. 5d. in favour of the company on the revenue account, after deducting working expenses and interest. The directors recommend that a dividend be declared at the rate of 8 per cent, per annum on the consolidated stock and upon 10l, per share of the extension shares No. 1; and that a dividend at the same rate be paid upon 15d, per share of the original Newcastle and Betwick and the North Shields purchase shares respectively, and at the rate of 5 per cent on the remaining 10d, per share of the North Shields shares. After the payment of these several dividends and the half-year's rent of the Great North of Encland, a surplus of 34,650d. 8s. 6d. will remain to the credit of the company. The unsettled state of the Continent has occasioned a very serious diminution in the exportation of coal during the past half-year, and, in addition to this circumstance, the general depression of commerce has operated quite as injuriously upon the York, Newcastle and Berwick, as upon that of any other railway undertaking. It is therefore more satisfactory to the directors to be able to report that the average receipts per mile (including the length of new line opened in the interval) are nearly equal to the corresponding half-year of 1847. It affords the directors much pleasure to announce that the works of the Tyne high-level bridge are so far advanced, that on the 1st of next month a continuous line of railway will be completed from the Gateshead station across the river and through the town of Newcastle. The directors hope that the bridge from Tweedmouth to Berwick will be opened early in October next. During the last half-year the works have been let for the construction of the Alwich and Warkworth branches. The branch from Northalherton to Bedale was opened for traffic in March l

The capital account to June 30 showed the receipts, from calls, loans, &c., at 4,742,217l. 1s. 6d.; expenditure, 5,038,255l. 3s.; balance in excess, 296,038l.

The CHAIRMAN said it is possible that some inquiry may be made as to whether the 5t, paid upon the No. 2 shares is entitled to a dividend or not for this half-year. After looking to what I had said with reference to this matter, and carefully considering its effects, I confess it seemed involved in considerable doubt; and rather than that any difficulty should be experienced, and the more especially as it was a doubtful point, the directors have come to the determination to allow interest on the 5t. No. 2 shares for four months during the present half-year. You are aware, gentlemen, that another 5t. of the original Berwicks will come in for dividend. That is the explanation which I have to give on that part of the

A Proprietor: Do I understand you to say that it was a question of doubt whether the 5l. called up on the No. 2 shares is entitled now to a dividend?

The CHAIRMAN: Exactly; and the directors have determined to allow a dividend for four months. The same dividend applies to the North Shields 15t. this half-year, to the 20% the next, and to the 25% the subsequent six months.

A Proprietor: I understand you intend to pay upon

the 15t., Nos. 1 and 2, subject to a deduction of two months in all those cases where the money had not

been paid by the specified day in July?

The CHAIRMAN: Exactly. The only matter in the report remaining for remark of mine is the Hartlepool Dock, &c. If you sanction the lease, I have not pool Dock, &c. If you sanction the lease, I have not the slightest hesitation in saying that the line passing through that district will not only pay a large rent, but leave us in possession of a dividend: it will more than pay its way. Everything in regard to our affairs is going on well. The directors, it is true, have been disappointed of being able before this to have opened the high-level bridge now in the course of construction. But though disappointed of this, they are happy to inform you that all the difficulties of the construction of that bridge have been surmounted. We are tion of that bridge have been surmounted. above water mark with every pier except one, and that is far advanced; so that in a week's time I may tell you the difficulties of making the bridge are overcome. As soon as this shall have opened a continuous com-munication from North to South, a large increase of the traffic on the line will naturally follow. This facility will induce a considerable augmentation in the coal traffic. It was but lately that we carried a large quantity of coals for Edinburgh, which we were obliged to cart across the Tweed—a most expensive The consequence of opening this commuoperation. ocal and coke to Scotch lines. The rent of the Hartlepool Dock, &c. is 8 per cent. upon 365,000l. of share capital, and about 153,000l. of bonded debt, so as to be enabled in 1851 to capitalize perhaps 75,000l. Such are the features of the arrangement recommended. I have no hesitation in saying that when this is opened it will pay you the sum guaranteed, large as it is, and more; but the agreement is, if you realize 9 per cent., that they shall share it with you. The lease is for twenty-one years, beginning in July last. It were superfluous to enlarge on the great ad-

vantages to be derived from connecting our lines with a port and all the traffic of a shipping. It will recommend itself, I doubt not, to your approbation, as a likely source of that augmentation of traffic which we desire.

The resolution adopting the report was carried unanimously.

The CHAIRMAN then proposed the following reso-

That a dividend be now declared at the rate of 8 per cent That a dividend be now declared at the rate of 8 per cent, per annum on the consolidated stock of the company, on 15th, per share of the North Shields purchase shares, and on 15th, per share of the North Shields purchase shares, and on 15th, per share of the extension No. 1 shares; and at the rate of 5 per cent. on the remaining 10th per share of the North Shields purchase shares; such dividend to be paid, deducting income-tax, on the 5th of September next.

Mr. Love inquired what was the amount of the North Shields and September next of the North Shields and September next.

arrears on Nos. 1 and 2 extension stock, and com- | sure to be the soonest and best rewarded.

plained that a preference had been shown to the latter.

Mr. Burrough said that the company had been borrowing money at 6 per cent., and the consequence was, that owing to those shareholders who were in sustained a loss of 1 per cent., which fell upon the shoulders of those who paid up their calls. Another loss was sustained. Owing to the necessary capital not being paid by the defaulters, the company was unable to purchase shares in the Great North of England, and so defeated its own intentions. He thought the directors had better settle that matter at once, for it appeared to him that owing to its not appearing what had been done with the money which should have been devoted to the purchase of Great North of England shares, the proprietors distrusted the directors, and perhaps undeservedly blamed them. He should like to know whether it was the intention of the directors to create any new capital at present for the purpose of proceeding with the improvement

The CHAIRMAN said that with respect to the prea dividend on the 5t. No. 2 shares, he must say the directors had entertained a doubt of the propriety of doing what they had done; but having taken all the features and circumstances of the case into consideration, they had arrived at the conclusion that it would be only fair to allow the interest. At the last half-yearly meeting he stated that No. 2 Extension stock would receive dividend from the 1st of July stock would receive dividend from the 1st of July last, and from that date No. 2 and No. 1 would be consolidated into one stock. He also at that meeting stated that if they made a call of 5l. on the No. 2 they would pay a dividend on 15l. after July last. The resolution passed at a special meeting of the proprietors convened for the very purpose of confirming the agreement with the South Shields proved that the circulal last a special meeting of the that the original shares were to receive dividend on 15t. on the lat of July last year, on 20t. on the 11th of July 1848, and on 25t. on the 15th of January 1849. The effect of that resolution was that a dividend should be allowed on the shares just as it hap-pened they were paid upon. There was no doubt they might have called upon those No. 2 shares they might have called upon those No. 2 shares earlier, and they frequently contemplated doing so, but as they had not done so, the effect was that there was certainly a preference shown to the extent of somewhere about 8,000%. He fully admitted the fact, belonded to the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of the source of he had no reason to disguise it, and he would tell them fairly, that as the question appeared to him to be involved in some little difficulty owing to the con-struction which might have been put on the agreement, he had thought it better that they should keep strict faith in carrying out the agreement, and at the same time make what might have turned out to be a concession. The directors were willing to meet the responsibility they had undertaken. They would be glad to be relieved from the obligation. However, he would pass on to the remark about the arrears, and would fully admit that the defaulters ought to have been compelled to pay before. However, the directors had ordered circulars to be issued and sent round to every one of the defaulters, who for the future ought to charged 6 per cent. on their arrears.

As to the question about the Great North of England, the books of the North Midland might be inspected, and they would show what the directors had done; they would show that 100,000l. worth of Great North of England shares had been purchased at a time when they were not much in credit with their bankers. However, in order to let them know what the directors had done with the money, he would take care that the accounts should be pub-

lished by the time they next met.

Mr. Burrough expressed himself satisfied with the explanation, and proceeded to bear his testimony to the zeal and anxiety displayed by the chairman and the board of directors.

A Proprietor, connected with the North country, regarded the completion of the bridges and the arrangement with the Great Northern with the greatest satisfaction. They would be the means of bringing an enormous accession of traffic to the North Midland, also to the Newcastle and Berwick.

The Chairman said the directors looked at one object steadily, and that was the interest of the shareholders. They tried every means to advance their undertaking. The potato disease and a variety of painful circumstances affecting the commercial world had seriously impaired the condition of the country, and of course baffled the directors in their efforts to make the most of their line. But he did not despair, but looked cheerfully and confidently to the future. The wealth and energies of this country were next to inexhaustible, and when more prosperous times returned to us, those most patient would be

The meeting was then made special.

The CHAIRMAN then moved-

That the terms of the lease of the Hartlepool Dock, &c., and of the lease of the Great North of England, Clarence and Hartlepool Junction, now submitted to this meeting, be approved of, subject to such alterations as the directors may think desirable.

Carried unanimously.

### HULL AND SELBY.

Aug. 19 .- Half-yearly Meeting, Hull .- Mr. R.

TROTTER in the chair.

The directors' report stated that the balance in favour of the company to the 30th of June last was 32,050*l.*, and after the deduction of 2,912*l.* for interest on the quarter shares, a sum of 29,1381 remained applicable for a dividend. By the gradual accumulation of small balances left after payment of previous dividends the directors were on the present occasion enabled to make a trifling addition to the usual dividend, and recommended that 2l. 10s. per 50l. share and 1l. 5s. per 25l. share be paid, less income-tax, on the 26th inst, leaving a balance in hand of 13l. The revenue account to the 30th of June showed that 38,5911. had been received from the York and North Midland for interest on loans and rent of the Hull and Selby main line and of the Bridlington branch; and the current expenditure was 6,541l., including interest on loans, office expenses and income-tax, leaving the above-mentioned balance of 32,050l. The report was adopted.

### LEEDS AND BRADFORD.

Aug. 18.—Half-yearly Meeting, Leeds.—Mr. J. WADDINGHAM, vice-chairman, in the chair.

Mr. GATLIFF, the secretary, read the statement of capital account from the 31st of December 1847, to the 30th of June 1848. The total expenditure was 1,177,632*l*.; receipts, 1,167,435*l*.; balance due to the

bankers, 10,1967.

The Chairman was happy to inform them that the line would be open to Colne on the 1st of October, so that the shareholders might expect the full dividend (10 per cent.) accruing from the 1st of January following. He hoped that would give satisfaction. The directors had been, like the rest of the shareholders, most anxious to come into the receipt of the full dividend; and although there had been some little delay on that part of the line between Skipton and Colne there had been no delay in the works, looking at them in the aggregate, because there was good deal of work to finish between Shipley and Skipton, and it was no use pushing on the works at the extremity when there was so much to do on the part below Skipton. There was not the least disposition on the part of the Midland to delay the opening of the line, and all that had been said and written to the contrary had been without foundation. He had now to propose that the statement of capital account which had been read be approved and adopted.

Sir I. Morley seconded the resolution, which

passed unanimously.

The CHAIRMAN next proposed a resolution declaring a dividend for the half-year ending the 30th of June 1848, of 11. 5s. per share, less income-tax. Sir I. Morley seconded the resolution, and it was

carried unanimously.

### WHITEHAVEN JUNCTION.

Aug. 22.—Half-yearly Meeting, Whitehaven.—The

EARL OF LONSDALE in the chair.

The directors' report showed the gross traffic receipts at 4,517*l.* 6s. 103*d.*; working expenses, 2,913*l.* 15s. 10*d.*; profit, 1,603*l.* 11s. 03*d.* There was a disposable balance of 530*l.* 12s. 7*d.*, after paying interest on the mortgage capital and on the loan of 17,935/. 15s., advanced by the bankers. A dividend of 2s per share, amounting to 500l., and leaving 30l. 12s. 7d. to the credit of the next half-year's account was recommended. The generally unsettled state of commercial affairs during the last twelve months had operated prejudicially against the traffic, and this depression had been felt more particularly in the passenger traffic. The decrease in the half-year's receipts for goods, compared with the same period of last year, amounted to 200%. An increase, however, in the other merchandise traffic had taken place to the extent of about 400l. The working expenses had been diminished by 374l. 13s. 8d., although a distance of 30,274 miles had been worked in comparison with 25,859 during the previous half-year, and an additional expense incurred in the maintenance of way and the payment of poor rates, the latter having increased from 53l. 13s. 2d. to 120l. 14s. 3d. Two bills had just been carried through Parliament,-one to

Whitehaven, and to form a junction with the Whitehaven and Furness. Under the powers of the first Act the company are authorized to raise 33,000%. by shares, and 11,000l. by loan on mortgage. Under the second they are authorized to raise 30,000l. by shares, and 10,000l. by loan. The directors did not consider it expedient to commence any new work at present, but as the company had already incurred liabilities to the extent of 33,000l., and a further sum of 3,000l. was required to complete the works, it was proposed to raise 25,000l. by the creation of 5,000 quarter shares, bearing a guaranteed rate of interest of 6 per cent. per annum, and 11,000*l*. on mortgage. The report was adopted,

The CHAIRMAN stated that the directors intended to make a reduction of 201. per month, by the discon-

tinuance of one train, put on at first by way of experiment; to abolish the treasurership, and to increase

A dividend of 2s. per share, less income-tax, payable on the 4th of September, was declared, and the retiring directors and auditor were re-elected.

The meeting was then made special, when the directors were authorized to raise 25,000l. by shares, and 11,000% on mortgage.

# NORTHERN COUNTIES UNION.

Aug. 24.—Half-yearly Meeting, London.—MAJOR BERESFORD in the chair.

The directors commenced by alluding to the efforts made within the present session for giving effect to the unanimous wishes of the proprietors, expressed at the extraordinary meeting held on the 17th of February last, for the purpose of removing the restriction imposed by their original Act on the outlay of capital, and of vesting original Act on the outray or capital, and of receiving in the shareholders themselves the power to direct in the shareholders themselves the power to direct in the sharehold be expended. The directors however regret to say that, after considerable discussion, the committee of the House of Commons declined to remove the restriction, and suggested the substitution of a clause to the following effect. viz. :-

That the company be allowed to apply their capital in the first instance to the construction of the line from the lime works at Leyburn to Thirsk and Wath, or to some point in that neighbourhood. That they be prohibited from constructing any portion westward of Leyburn until they have opened the line from Bishop Auckland to Barnard Castle. That upon these conditions being complied with, they be allowed to construct the line from Leyburn to the junction near Kirkby Stephen, but that they be still prohibited from opening their line to Clifton, until the line is finished from Barnard Castle to Tebay.

To this the directors returned the following answer: This Board is willing, on the company's behalf, to give their concurrence to the suggestion of the committee in its spirit and object, but they beg to press upon the committee the necessity of extending the point of construction to Hardraw Scar, High Abbotside township, parish of Aysgarth, as the first spot where the best agricultural lime is found in abundance, and also where the line abuts on a

But the committee, after further discussion, altered their own suggestion for the following, intimating that its acceptance was a sine qua non to any altera-

tion of the clause:-

That the committee are desirous to adhere to the terms That the committee are desirous to adhere to the terms suggested on June 9, with the following modifications:—
1st. That the Wensleydale line be made from Wath only, and to a point above Askrigg, such point to be determined by the expense of construction, as compared with that of the line from Bishop Auckland to Barnard Castle. 2nd. That no dividend exceeding 4 per cent. be paid upon the first above-mentioned line until the line from Bishop Auck-land to Barmard Castle is opened for traffic, and if it be not opened within four years [suggested by the committee] then no dividend to be paid from that time until it is opened.

The directors were of opinion, that by the adoption of this suggestion the company would have been placed in a worse position than they are at present under the original simultaneous clause, and therefore withdrew the bill. The state of the money-market has weighed and continues to weigh most heavily on railways, and the difficulties which the directors anticipated have been realised in the large amount of arrears still due on the first and only call. This call was made in April 1847, and the arrears still due in July 1848, are 37,395l., out of a sum of 89,505l. directors therefore now deemed it prudent, for the present, to curtail all further outlay and to economise every expense. They have already reduced their office establishment to a very low limit, and have terminated their engagement with their late engineer, and now propose to take further steps for lessening the liabilities. They recommend the discontinuance of the remuneration voted to the direchad just been carried through Parliament,—one to enable the company to raise a further sum of money to meet their engagements and to complete the works, the other to extend the railway to the harbour at 11s. 9d.; balance at bankers, 76,791t. 11s. 7d.

The CHAIRMAN, in moving the adoption of the report, regretted, with the proprietors, the decision of the parliamentary committee. Without impugning the motives of the gentlemen composing that committee, he considered that they were quite at liberty to differ with them in opinion. The proprietors were now in exactly the same condition as before they went to Parliament; and at the extraordinary meeting into which they were afterwards to resolve themselves they could come to some decision as to their future course. With respect to the arrears of calls he said he could not but attribute their non-payment to the refusal of the committee to repeal the restrictive clause.

In answer to a Proprietor,-

The CHAIRMAN stated that if all their contracts were enforced against them the amount of their liabilities would exceed the amount in hand, the contracts alone amounting to about 15,000l. The execution of those contracts, however, not having been even commenced, they would of course be compromised. The other liabilities were very small.

A resolution confirming the forfeiture of the 162 shares was then passed, which concluded the regular

business.

The meeting was then made special, in order to take into consideration the future proceedings.

Mr. GLYN moved and Mr. BATLEY seconded a resolution by which the meeting expressed its regret at the decision of the committee depriving the company of a privilege enjoyed by public companies generally, that of expending their funds in a manner according with the wish of the majority of the shareholders.

This resolution was carried.

A motion, proposed by Mr. Hopgson, for the formation of a committee to inquire into affairs and report thereon to a future meeting, gave rise to a discussion, in which some difference of opinion was expressed as to whether such a resolution would imply a want of confidence in the directory.

An amendment was eventually carried, agreeing to previously hear the recommendation of the Board.

The CHAIRMAN accordingly proceeded to state his pinion that there were only three courses open to them—either to make a very heavy call; to suspend the works because they did not choose to face the call; or to endeavour—he used the term significantly —to dissolve. With regard to the first proposition, he considered that there could be only one result that the call to be made would not be paid upon, even to so great an extent as the last. It was therefore his own opinion, and the opinion of the majority of the Board, that a heavy call or any call would be most impolitic. There were many reasons also which rendered it extremely undesirable that they should just now apply for an Act of dissolution. Therefore, the only course which he conceived to be open to them was to reduce the expenditure to the lowest possible extent, to suspend operations, and wait for better days-wait and see what other companies were doing, or willing to do, when they might either dissolve with advantage or rise like a phænix from their ashes, and be yet prosperous. He believed, in thus speaking, he expressed the general feeling of the

Board.
Mr. WYVIL, a director, deprecated the expediency of the proprietors giving up their project entirely, and losing everything that they had paid up. There were four miles on the line, near Bishop Auckland, which, if constructed, would redeem every loss which the company had yet experienced. He dwelt at some length upon the advantages offered by the portion of the line in question in carrying coal and co-operating with neighbouring lines, and concluded by heartily recommending the adoption of this course.

The CHAIRMAN differed with Mr. Wyvil, and expressed a direct opinion against the proposition.

The majority of those present coincided with the chairman

After a long conversation, the resolution for a committee was withdrawn, and on the proposition of Mr. MIDDLETON, seconded by Mr. MONKHOUSE, a resolution was agreed to by which the directors were invested with powers to enter into terms with a view to the suspension, abandonment or otherwise of all the contracts entered into by the company; to enter into such negotiations and agreements as they might think fit—all agreements with other companies being subject to the confirmation of the shareholders; and further providing that the directors should suspend all further operations, and make no more calls for the next twelve months without the concurrence of the proprietors at an extraordinary meeting.

A resolution was then passed by which the offer of the directors to continue their services without remuneration was accepted, with the best thanks of the proprietors.

NORTHERN AND EASTERN.

Aug. 19.—Half-yearly Meeting London.—Mr. R. PATERSON in the chair.

Mr. Bourne, the secretary, read the report, which stated that the dividend for the half-year ending the 30th of June would be on shares guaranteed 5 per cent. per annum, 50l. paid, 1l. 5s. each; on shares guaranteed 6 per cent. per annum, 50l. paid, 1l. 10s. each; 23l. paid, 1ks. 6d. each; payable, less property-tax, on the 2nd of September. The dividend on the quarter shares, payable at the end of November next, will be at the rate of 6 per cent., or 7s. 6d. each, less property-tax. The directors reminded the proprietors of the new shares that an instalment of 11l. per share becomes due on the 27th of September next, and as the money was required for the payment of debentures then falling due, they urged upon the proprietors the necessity of punctual payment. The capital account to the 30th of June showed that 963,612l. had been received, and 961,40sl. expended, including 80,456l. expended on the Hertford and Ware branch, leaving a balance of 2,203l.

Resolutions were passed, adopting the report, approving the dividends, and re-electing the retiring directors, Messrs. E. F. Maitland and H. L. Smale.

Mr. Smale felt great pleasure in re-accepting office whilst they had such an efficient chairman and deputy-chairman. He would mention that Mr. Hudson had intended to state to the meeting of the Eastern Counties held on the 17th that he (Mr. Hudson) did not see anything to despair of in railways, and he believed that very great results would yet be realized from them, particularly in reducing the working expenses; that there was an invention by the engineer of that line (Mr. Samuels) which would have the effect of reducing the working expenses of branch lines to a great extent—perhaps 50 per cent. He understood that the invention would soon be brought into operation on the branches of certain companies. There was an opinion abroad that branch lines had swamped railways, and he wished it to be known that by these means of economy branch lines would become productive and profitable.

Only two shareholders attended—one proposed a vote of thanks to the directors, and the other seconded it, which of course was carried unanimously.

Mr. Bagshawe thought that the fact of only two gentlemen having attended the meeting was a proof that the directors had the confidence of the share-holders.

### NORFOLK.

Aug. 24.—Half-yearly Meeting, London.—Mr. A Duff in the chair.

The directors' report announced that, in accordance with the resolution passed at the last special meeting, the agreement with the Eastern Counties was duly executed and exchanged, and upon the 7th of May all the lines belonging to this company were placed in the hands of the Eastern Counties. A joint com-mittee, composed of three directors of the Norfolk and four directors of the Eastern Counties Board has been appointed, and the directors report that under their management the traffic continues to be further developed, and the working expenses have been considerably reduced. The amount to be received from the Eastern Counties on traffic account, added to the receipts up to the 7th of May, enable the directors to declare a dividend at the rate of 4 per cent. per annum, being at the same rate as that payable by the Eastern Counties for the past half-year. After the present meeting, the proprietors of this company will, according to the terms of the agreement, be entitled to receive the same dividend as shall from time to time be declared upon the Eastern Counties The statement of accounts showed receipts at 1,782,458l. 13s. 4d.; payments, 1,736,208l. 9s. 9d.; balance, 46,250l. 3s. 7d.

On the motion being put for the adoption of the report.

report,
Major Court complained that the accounts had
not been audited, and moved as an amendment
that the accounts be not received.

The CHAIRMAN, as well as Mr. PETO, Mr. KENNARD, and other directors, explained that as the accounts required to be audited by the auditors of the Eastern Counties as well as by those of the Norfolk it was impossible to have it done for the present meeting. They would, however, be presented audited at the next meeting.

The amendment was negatived and the original motion agreed to.

Mr. YATES essayed to enter into the history of the company from its promotion to the present time, but the interruption was put an end to by the meeting adopting a resolution, moved by Mr. KENNARD and seconded by Mr. PHILLIPS, that Mr. Yates was irregular and ought not to be heard.

In answer to questions,

Mr. Pero stated that with the exception of two accounts, which might amount together to about 18,000*l*., all the debts had been discharged: that it was not intended to make calls for any other purpose than to pay off the debentures, which might, during the present year, require about 25,000*l*., and that if the times were hard and the mortgagees chose to renew their loans, no calls would be made now for that purpose.

A resolution declaring a dividend, at the rate of 4 per cent. per annum, payable on the 7th of September, was agreed to.

EXETER, YEOVIL AND DORCHESTER.

Aug. 21.—Half-yearly Meeting, London.—Mr. E. Woolmer in the chair.

The Charman congratulated the proprietors on their success. They had been engaged in one of the most arduous struggles known in parliamentary history. Their success had been most complete because it was free from all obligations, unfettered with any qualifications. The London and South-Western had guaranteed to the proprietors interest at the rate of 5 per cent. per annum during the construction of the line, and 5½ per cent. upon its completion. It was a rate of interest equal to most of the great lines, and above the average income of railway property. No call could be made on the shares till the lat of July 1849: till that period more active operations would be delayed, but it was quite certain the line would be carried out, only they would wait for more favourable circumstances, when the calls should be made.

The directors' report congratulated the shareholders on the change of circumstances since the last meeting in October 1846, when they had to announce the rejection of the bill by the House of Lords. The conditions of the agreement then proposed by the London and South-Western were, a payment of interest at the rate of 4 per cent, from the date of payment, whether on deposits or calls, until the completion of the line, and subsequently the payment of such rental for a lense of the line in perpetuity as would yield an interest of 55 per cent, on the share capital. The directors introduced a bill into Parliament in the early part of 1847, in which they had to encounter a repetition of the same hostility referred to in their last report, not only from the Great Western but also from the Bristol and Exeter, by both of which companies rival schemes were projected; and the procrastination caused by this opposition was so great that it was not until after fifty-three days' contest before the committee of the House of Commons that the preamble of the bill was declared to be proved, at a period too late in the session for the prosecution of the bill in the House of Lords. Under these circumstances, and looking at the depressed state of the money-market, the London and South-Western resolved to offer an additional inducement to persevere in the undertaking; and an agreement was entered into with that company, in which the main points of alteration were the payment of 5 per cent. instead of 4 per cent., during construction from the 1st of July 1848, and an exemption of the proprietary from any call, in the event of the Act being obtained before the 1st of July 1849. Before the committee of the House of Lords the directors had to sustain the same pertinacious opposition previously encountered in every stage of their proceedings; but the decision of the Commons was at length counter feel and the unparalleled opposition which they have had to encounter, it will be thought that the amount expended is not without proper justifi

The statement of accounts showed the receipts at 154,7401., including 27,7271. from the South-Western; expenditure, 100,9621., including 55,6931., the cost of application to Parliament to October 1846, when the bill was rejected, and 45,2691. in the session of 1847 and 1848; balance, 53,7781.

In reply to inquiries, the CHAIRMAN stated that the line was to be leased by the South-Western at 5½ per cent. on the outlay. That company would raise a capital to take up their nine-fourteenths of the capital for which they had provided. The shares of those who had not signed the deed were virtually forfeited, but his impression was they would be repaid 11.55. per share, without interest, and it would be a 11.55. The contract of the substance of an arrangement—which indeed was their right, although not in point of form—will participate in this new stock in so far as they will receive a 10.55 share for every 120.55 share held by them. The Chairman then proposed the approval

question for consideration whether they should be allowed to come in as shareholders.

The SOLICITOR stated that the original estimate of cost was 1,800,000*l*., and it was now calculated that the line could be made for 1,400,000*l*.

The report was unanimously adopted.

Resolutions were passed, appointing two auditors, at a salary of 10l. a-year each, fixing the secretary's salary at 400l. a-year; and, on the nomination of the South-Western, in accordance with the Act, confirming the appointment of the following gentlemen as directors:—the Earl of Morley, the Hon. F. Scott, M.P., Count Eyre, Col. Henderson, Messrs. W. J. Chaplin, M.P., H. C. Lacy, M.P., M. Uzielli, B. E. Townsend, H. K. Seymer, M.P., and W. Reed.

GLASGOW, DUMFRIES AND CARLISLE.

Aug. 17.—Half-yearly Meeting, Glasgow.—Mr. J.

LEADBETTER in the chair.

The report stated that the directors have been enabled to complete the line between Dumfries and its junction with the Caledonian at Gretna, a disce of 24 miles, which will be opened for traffic on the 23rd inst., when the trains will run in connexion with those on the Caledonian and Gretna. The Glasgow and Ayr have provided the plant and will work the line. The profit or loss of conducting traffic on this or any other isolated portion will be-long to that company, seeing that, in lieu of dividend, interest at the rate of 5 per cent. per annum is to be paid until the main line is opened and a thorough amalgamation effected. The progress of the line north of Dumfries has been retarded. The contractors for the Drumlanrig contract, on which the tun-nel, one of the heaviest works on the whole line, is situated, have found it expedient to make arrangements with another party of skill and experience in such undertakings to relieve them of its execution.

The Dalswinton contract from Dumfries to a point within 3 miles of Thornhill, an additional distance of 12 miles, may be completed and ready for traffic in six months from this date, thus giving a continuous line to Gretna of 36 miles, through a populous and important district of country; and with the Cumnock extension of the Ayr now opened, leaving only about 30 miles to complete the direct communication with England. The Commissioners have allowed an extension of time for the construction of the several branches for two years. The Board recommend the early construction of the branch to Annan Harbour, about 14 mile, as well as a private branch to Kelhead Lime-works, 2 miles. The balance sheet for the year ending the 31st of July last, shows that the restricted capital of 433,3331. has now been expended, and in terms of the agreement with the Glasgow and Ayr, the latter have to supply the requisite funds for the completion of the main line. This is now in course of being done by the Ayrshire proprietary, to the extent of 217,000l.; after which assistance the proprietors will be enabled to borrow to the amount of one-third of their capital. A resolution to this effect has been provided by the directors. The statement of accounts showed the amount received and expended at 487,386l. 19s. 11d.

The CHAIRMAN congratulated the proprietors on the speedy opening of the most important part be-tween the town of Dumfries and Gretna on the Caledonian line. The Government inspector had reported that it might be opened when they pleased. On the 22nd the directors would go over the line and satisfy themselves that everything is ready for the public. It was a matter of much satisfaction that the donian were quite prepared to co-operate with them in all the necessary arrangements for carrying on the traffic, and well they might, for this would form a most important branch. It must necessarily do so until the connexion is formed between Dumfries and Ayrshire; for as yet the line is not carried through The difficulty in the way has been the Nithsdale. Drumlanrig tunnel, with which, unfortunately, the first contractors were unable to go on. The directors had, however, made an arrangement with another contractor, and from his capability and experience in works of a similar kind they had no doubt the works would go on with vigour; and trusted that the circumstances of the times would enable the directors to prosecute all the works with every possible expedition. The manner of raising the capital by the Ayrshire had not been fixed, the object of the directors being to take advantage of any favourable circumstance that may arise to regulate the premium. So far as the public mind has been expressed, it points to a 5 per cent. preference dividend, along with some other inducements. The Dumfries shareholders, by the substance of an arrangement-which indeed was their right, although not in point of form -will participate in this new stock in so far as they

of the report-"that from and after the 1st of December 1848, the shares of 81. 6s. 8d. be consolidated into a general capital stock; and that the proposal to offer to the shareholders of this company a proportion of the new stock to be created by the Ayrshire, be accepted as sufficient fulfilment of the agreement entered into between the two companies in 1847.

The resolutions in support were agreed to.

The meeting was then made special, when The CHAIRMAN, after a brief speech, moved "that 433,300% be raised by mortgage, so soon as one-half of the share capital shall have been paid up."

The motion was agreed to unanimously

CALEDONIAN.—Meeting of Shareholders, London.—Mr. L. Jacobs in the chair.—The Chairman said his former opposition to the issue of preferential shares had been withdrawn upon the representation of the directors, and yet the shares had been issued. Another source of complaint was the system of guarantees. He made known the wishes of the English shareholders upon that point, and had pointed out to the Board the fact of nine-tenths of the shareholders

residing in England, which justified them in asking that they should be more adequately represented in the direction, and that the half-yearly meetings should be held alternately in Edinburgh and London. chairman (Mr. Hope Johnstone) admitted this; but with regard to the question of making changes in the direction, he did not think it would be expedient to make such a change till the entire line was finished, which would be in about twelve months. Since he had been over to Edinburgh he had had his attention drawn to the circumstance of the directors intending to convert the preferential shares into quarters, and place them on the same footing as the original 50l. shares. Now, had he been in possession of this information at the time it was proposed to issue these shares, he certainly should not have withdrawn his opposition, but it was now too late to renew the protest against these proceedings, and it was for the meeting to determine what stens should be taken in furtherance of the one object they must all have in view, namely, the improvement of their property. He thought it right to mention before he sat down that he was convinced the Board was composed of men of the highest honour and respectability; and in

RAILWAY CHRONICLE

a letter he had received from the chairman he was told it was not their intention to submit any question to the next half-yearly meeting in reference to the guarantees, nor did they intend to proceed with any branch lines without consulting the shareholders at meetings that might he held in London.—Mr. Tite acknowledged the obligation to the chairman for his acknowledged the obligation to the chairman for his statement; but it was quite clear that the directors were anxious to do their best to meet the wishes of the English shareholders. He would therefore suggest that the meeting should be adjourned until after the next half-yearly meeting had been held. He could at the same time assure the shareholders, that if their direction had been composed of any other than local shareholders, the line never could have been made by this time, while he was equally convinced that the directors had no alternative but to issue the preferential shares which had given rise to so much dissatisfaction.—After a short discussion Mr. Tite's suggestion was unanimously agreed to, and in the meantime the chairman was instructed to communicate with the directors on the subject of further guarantees.

[For further Reports of Meetings, see p. 602.]

NOTES AND EXPLANATIONS.

2. Main line, Carlisle to Glasgow, 194 miles; Branch from Cartairs Junction to Edinburgh, 26; Castlecary branch, 9;.
3. Open to Bangor, 394 miles.
7. Javan to Ely, 26; ; Jyan to Narborough and Swaffham, 14; Vatlington to Wisheach, 19; St. Ives to Huntingdon, 4;. Worked of the Eastern Counties.

watimeten to wisbeach, 19; St. Ives to Inutingaon, 45. worker by the Eastern Counties.

9. Main line, London to Colchester, 51; Stratford to Brandon, 84; Elyto Peterbore, 28; Cambridge to 8t. Ives, 12; St. Ives to Wisbeach, 25; Hertford branch, 6; Woolwich branch, 5; and Norfolk line, 32 miles. The system and Peterbore, 'worked by this company) is the property of the Midland, and is included in their returns.

company) is the property of the Midland, and is included in their returns.

15. Dublin to Thurles, 1104; Limerick & Tipperary Junction, 204, 16. Main line, London to Bitstol, 118, mines; Britstol to I Setter, (lensed at 5 per cent, on 2,000,0004,1754; Tiverton branch 5; Clevedon branch, 4; Swindon to Glonester, 37; Kemble to Ginecester, 4; Glonester to Cheltenham, 74; Berks and Hants, open to Hungerforth, 20; Diddot to Oxford, 10.

19. Manchester and Leeds and Ashton branch, 64; Manchester and Belron, 10; North Union, Rotton and Proton, 20; Preston and Wive, 224; Oldham Extension, 14; Heywood branch extension to Bury, 3; and Wakefield Fonctfact and Goode, 27 miles.

20 London to Burningham, 122; Burningham to Necton, 88; Livernot to Manchester, 30; Manchester and Birmingham, 13; Califordia Macchesteld branch, to, Northampton and Forterboro, 3; Editoria and Birtchley, 108; Leanington and Coventry, 194; Aylesbury, 7;

Bolton and Leigh, 10; Chester and Crewe, 21; Trent Valley, 493, 22; Main line, London to Brighton, 50; miles; Brighton to Portsmouth, 45; Brighton to Hastings, 23; Epsembranch, 95; Keymer branch, 95; Newhaven branch, 54; and Horsham branch, 85 miles, Includes the Croydon truffic. The toll from the South-Eastern ceased July 1.

Includes the Groydon traffic. The toll from the South-Eastern ceased July 1.

23. Main line, London to Southampton, 75 miles; Bishopstoke to Gosport, 16, Bishopstoke to Saisbury, 22; Southampton to Dorchester, 61; Woking to Guidford, 6; Wandsworth to Richmond, 8; Chertsey branch, 3; Poole branch, 2; and Waterloo extension, 2; Capital account, 2,206,948. New lines, 3,31,022.

25. Main line, Ardwick to Sheffield, 49; Abhtenand Staleybridge, 2; Glossop, 1; Thurpoland, 2; and Lincolnshire division, 16 miles, The Sheffield and Manchester No. 1 Quarters bear interest at 75 per cent, for 10 years from Sept. 183.

27. Main line, Rugby to Leeds, 1224 miles; Trent Junction to Nottingham, 9; berby to dit mingham, 41; Hampton branch, 74; Sheffield to Rotherham, 73; Birmingham to Bristol, 94; Nottingham to Linkoln, 339; Fiskerton to Southwell, 2; Leeds and Bindford, 15; Kerchley branch, 64; Skipton branch, 61; Leiesterand Swannington, 19; System to Melton, 3; Melton to Beterboro, 26; Stanmondon, 19; Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capital Capi

calls on original shares, and 6 per ct. on more recent shares.

36. Main line, Londonto Bover, Schilles; Paddock Wood to Maidstone, 10; Ashford to Canterbury and Ramagate, 20; Gravesend to Rochester line, 7; Greenwich branch, 3; Mirster and Deal branch, 9; Margate branch, 3; Minster and Deal branch, 9; and Tunbridge Wells branch, 6; miles.

38. Newcastle and Parlineton Junction, with Durham branch, 22; Males; Durham Junction, 42; Pentop and South Shields, 23; Brandline Junction, 47; Great North of England, with Richmond branch, 57; 19 Jurham and Sunderland, 17; Boroughbridge branch, 64; Newcastle and Berwick line, 65; North Shields and Tynemouth branch, 57; Budale branch, 64; and Hartlepool Railway (and bock), 26; miles.

38. York and North Midland (original line), 274; Leeds and Sethy, 20; Southerough and Irickering, 38; Hull and Sethy, 20; Forthorough and Irickering, 38; Hull and Sethy, 20; Southerough and Irickering, 38; Hull and Sethy, 30; They for the feet means and Filey, 7; Whithy and Pickering, 38; Chief here in 12; Picker of 1846 was 40f. or together, 61f. next, per share, being 12; per cent.

3. The first column contains the total receipts from the lat of July to the date of the present return, and the second the corresponding period of 1847.

4. From May 1, 180; to date of present return.

3. A deduction of 2,722, has been made for collection and delivery. Last year the deduction was 2,150.

4. Exclusive of tollage payable by Edinburgh and Northess.

#### Monen Market.

#### PRICES OF BRITISH STOCKS.

Sat. | Mon. | Tues. | Wed. | Thurs. | Fri. Cons. for Acct. * 86 1 86 1 86 1 86 1 86 2 862 2

* For account, Sept. 7. † Ex Div.

London Stock Exchange, Aug. 25. - The gloom that spread over the share-market during the early part of the week has in a great measure disappeared, in consequence of the reports in connexion with the harvest being of a more favourable character than was anticipated. Very little business has been transacted, however, but an improvement in prices at the close will be observed.

Liverpool, Aug. 24.—We have had very little doing of late, and prices generally are much depressed; we have, however, a better feeling to-day, consequent upon the more settled state of the weather. Sublow, Brothers.

Manchester, Aug. 24 .- Our share-market this week has not evinced that uniformly gloomy appearance it had the week before. Though some shares are lower, others have not only maintained their price but are

higher and in greater demand. SAM. GRINDROD.

Birmingham, Aug. 24.—This market has been flat throughout the week, but to-day business was improving, and prices had an inclination upwards. Shrewsbury B's were done at 33 dis. W. BANKS.

York, Aug. 24.—Our market has exhibited no signs

of improvement during the past week. The dividend on the York and North Midland shares being reduced to 8 per cent. has brought down the price of these shares to a level with the York, Newcastle and Berwick shares, which continue to receive 8 per cent. The meetings of the above-mentioned companies passed off very well, and we noticed that the allusions made by the chairman to an economical expenditure were loudly applauded by the shareholders present, who were both numerous and respectable

GRAYSTON & EARLE. Hull, Aug. 24. - Several meetings have taken place since our last, and we are glad to observe more disposition on the part of the directors to give information to the shareholders than heretofore. This is as it should be, and, unless we are much mistaken, will prove one of the best restoratives to the railway

system. The report of the Brighton, all things considered, is not very unsatisfactory. The communica-tion of the Eastern Counties, in October next, with the northern part of the Great Northern will throw much traffic upon it for a time. The report of the South-Eastern is decidedly one of the best of the half-year, perhaps the best. The directors are evidently economical and energetic, two very good qualities in a board of management. Nothing important transpired at the meetings of the Midland, York and North Midland and York, Newcastle and Berwick. The following are the latest prices :- Ambergates, 8: Fleetwoods, 53 dis.; Great Northern, 93 dis.; Hull and Selby, 100; ditto, halves, 494; North Staffords, 34 dis.; North British, halves, 83; ditto, quarters, 4½; ditto, thirds, 2; New Berwicks, 7 prem.

FLINT & TOOTAL.

Newcastle-upon-Tyne, Aug. 24.—Our market has been very dull this week and shares have declined: though to-day at the close there is a slight appearance of improvement.

W. FORDYCE.

Glasgow, Aug. 24.—An average amount of business has been done here this week without much variation in prices, and the market this afternoon closes tolerably firm. At the Ayr meeting to-day it was resolved to raise 250,000? by the creation of 10l. preference shares bearing 6 per cent. interest for three years and 5 per cent. thereafter in perpetuity. The following are to-day's latest sales:—Caledonian, preference, 4s. prem.; Edinburgh and Perth, 23s. dis.; Ayr, 56; ditto halves, No. 2, 83 dis.; Greenock, 148; Great Northern, 93 dis.; North British thirds, 21 dis.; Paisley, Barrhead and Hurlet, 13 dis.

Buchanan, Aitken & Co.

IRON TRADE.—Glasgow, Aug. 19.—A very flat market for pig iron during the week, but prices continue steady. To-day the quotations are nominally 45s. to 45s. 6d., cash, for No. 1 and mixed numbers. Few transactions, and buyers very shy.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible. j MEETINGS.

AMBERGATE, NOTTINGHAM AND BOSTON .- Aug. 28. Nottingham, at 1.

A meeting was held on Saturday last of the proprietors in the Norfolk Estuaries Company, Lord G. Bentinck in the chair. From the speech of the chairman we glean the following:—The engineers (Messrs. Cubitt and Randall) together with Sir John Rennie, considered the sum of 250,000?. necessary to execute the project for which the company was formed.

considered the sum of 2:00,0000, necessary to execute the project for which the company was formed.

Allowing one-third for excess beyond the estimate, the work would be 302,5000, according to the estimate of the year 18:46, which, subject to 25 per cent. deduction for the reduced price of labour, would leave the cost 279,37,55. Having spent that sum, they would afterwards proceed with the embankments. This would not take place in less than eight years. 154, was the cost per acre of embankment; and this, for 4,000 acres, would give 60,0000, adding one-third for excess over estimate would be 80,0000. The value of the land for sale might be taken, for 4,000 acres in the vicinity of Lynn, at 650, per acre; for other 6,000 acres at 500. The general result of this is, that in 1862 there will be a bonus, after paying 4 per cent, per annum, of 144,0000, viz., the outlay of the company would be 263,0000. the proceeds of the land would be, after the payment of the 4 per cent., 200,0000.; and the company, in 1860, would be in debt only 23,0000, having to start fresh with 6,000 acres, which might be embanked in two years and sold, leaving the 143,0000, bonus in 1862, as above mentioned. A call of 11, 10c, per share would be requisite.

The report was adopted, and Sir John Rennie and Mr. Stephenson were appointed engineers to the company than

Mr. Stephenson were appointed engineers to the company. Both these gentlemen speak favourably of the undertaking.

Banks

The annual meeting of the shareholders of the NORTH AND SOUTH WALES BANK was held last week at Liverpool, Mr. R. Griffiths in the chair. be in the remembrance of our readers that this was one of the banks which suffered by the crisis and panic of last year. The directors and shareholders, by great assiduity, early resumed the business of the bank, and the directors have since been enabled to overcome the difficulties which surrounded them. | pany was held at Liverpool last week. Mr. Booker | successful one. A small increase of traffic was

The advances made to meet the liabilities amounted, on the 23rd of October last, to 750,000l., and, not-withstanding the state of the times, by the 22nd of January they were reduced to 465,000l., a reduction of nearly 300,000l., or two-fifths of the whole, within the space of three months. The circulation of the bank, formerly a large source of revenue, instead of averaging, as heretofore, 55,000l., only produced for the half-year 15,000l. The profit and loss account for the same space of time, after paying all expenses, showed a balance of profit of 1,069l. 19s. 3d.; this, with the profits for the half-year ending December last, which amounted to 11,780%. 4s. 3d., made a total of 12,850%. 3s. 6d. for the year. The whole of that sum has been carried to the credit of the bad debt account. The total liabilities of the bank on the 30th of June last, on deposits, notes, &c., was 299,666l. 14s. 3d. and the assets, after deducting estimated losses, were 449,140l. 0s. 4d.; showing a surplus, represented by proprietors' capital, of 149,473l. 6s. 1d. The capiby proprietors' capital, of 149,473l. 6s. 1d. The capital account showed that 175,827l. 10s. had been paid up, and the balance of bad debts or deficit in capital 26,354l. 3s. 1d. The report was adopted with only one dissentient; thanks voted to the directors, together with 800l. for their services, and the retiring directors were re-elected.

The annual meeting of the NEWCASTLE COMMERCIAL BANKING Company was held at the Banking-house at Newcastle-on-Tyne, on the 11th inst. The Sheriff of Newcastle in the chair. By the report and statements laid before the shareholders, it appears that the proprietors are 175 in number. The bank has been in existence twelve years, and the total profits for this period of time is 104,946l. 9s. 8d. The amount of dividends paid during the twelve years is 45,688l. 10s., and the interest to depositors and customers 26,011l. 12s. 3d. The bad debts are stated to have been 6,435l. 5s. 11d. For expense of management the account in the balance-sheet gives 16,000l. 15s. 7d. and the guarantee fund is 9,000l. The report was adopted unanimously and the thanks of the meeting voted to the directors and managers. The dividend declared is at the rate of 7 per cent. per annum.

The papers from South Australia received this week announce a meeting of the shareholders in the South Australian Bank. The report was highly gratifying. The liabilities on the 12th of October 1847 was a control of the shareholders. gratifying. The liabilities on the 12th of October 1847 were 61,678*l*. 11s. 8*d*., and the assets 187,914*l*. 4s. 4*d*., made up of bills, notes, &c., and 27,858*l*. in specie.

Mines.

The market is assuming a firmer tone, and dealings The market is assuming a firmer tone, and dealings are becoming more frequent. Several good sales of ore have lately taken place; a parcel of lead ore at Holywell fetched from 8l. 12s. 6d. to 9l. 10s. a ton. The Great Wheal Rore Mine have sold a parcel of lead at from 7l. 10s. 6d. to 12l. 12s. 6d. a ton; and at Liskeard, 64 tons went at 17l. 1s. 6d. per ton. Copper to the first have factoring from 2l to 2ll tests. ore at Redruth has been fetching from 2t. to 22th per ton, and the total quantity sold has been 2,222 tons; and at Swansea 3,353 tons have been sold, at prices ranging from 1t. 15, to 21, 22, to 21, 22, to 22, to 22, to 22, to 22, to 22, to 22, to 22, to 22, to 23, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to 24, to ranging from 1l. 15s. to 31l. 8s. per ton. The produce of sales by the Cobre Company have been 12,371l. 8s. Chili Mine sales have returned 7,800l. 3s.

By letters received from Athens it is stated that the emery obtained at Naxos is superior to any other, and improves the more the mine is worked. The whole of this trade is monopolized by the Government, and the emery is sold by auction, at Athens. Last year the quantity disposed of was nearly 30,000 cwt.

On Tuesday a meeting of the WHEAL CURTIS MINING Company was held, to take into consideration the necessity of dissolving the company. The meeting was not attended by a sufficient number of shareholders to make its proceedings legal; but the few shareholders who did attend passed a resolution advising the directors to sell the lease and all the property of the company to pay off the liabilities of the concern.

The Derwent has this week arrived with some produce of the mines the property of the AUSTRALIAN We believe she has on freight 60 tons of Company. emerv.

The report of the South Australian Mining Association, received this week, announces that the annual meeting took place at Adelaide on the 19th of The total amount of ore raised during the year then ended was 13,533 tons. The total number of persons employed at the mines were 567, of various grades. The dividends paid during the nine months then ended amounted to 73,920l. and the directors proposed paying dividends of 200(!) per cent. on the capital stock on the 1st day of every third month. A great quantity of ore was at Adelaide, awaiting

The annual meeting of the ROYAL INSURANCE Com-

in the chair. The receipts of the company from life assurance has sensibly increased, being, for the year ending June 1846, 1,574l.; and in June 1848, 4,568l. For fire insurance, notwithstanding the reduction made in their rates, the amount of premiums received is 34 187l. 55. 5d. being most than 3 (000) above that is 34,187l. 5s. 5d., being more than 3,000l. above that of the preceding year. The losses for the same period being only 12,726l. 5s. 11d. The report, which was very satisfactory, was adopted, and a dividend at the rate of 5 per cent. declared. The retiring directors were again elected, and thanks voted to them and the

## Railway Chronicle.

LONDON, SATURDAY, AUGUST 26.

The South-Western half-yearly meeting did not pass off without considerable opposition from several proprietors, as a motion was made to appoint a committee of scrutiny to inquire into the directors' proceedings. This, however, was at length abandoned, though not without a threat being held out, that if the directors did not improve their policy, it would be brought forward again at the next meeting. The dividend declared is a considerable reduction from preceding years, being only 6 per cent. The traffic receipts of the company had experienced the effects resulting from the commercial embarrassments of the last year, in addition to the great diminution caused by the French revolution, which has materially affected the through-traffic. Mr. Locke apologized for not presenting a report of the state of the works, but said that every means of economy had been used, and that the fares would be raised to the maximum rate allowed by their Act, and trains for third-class passengers would be run separately. He suggested that the appointment of auditors would answer every purpose sought to be obtained by the proposed committee, and eventually, Mr. Hoyes and Mr. Close of Nottingham were appointed to that office. The meeting lasted from one o'clock till seven.

The attendance of proprietors was so unusually large that the meeting was adjourned to a capacious goods shed-where neither table nor chair had been provided for the reporters, and a pile of goods formed a substitute for the rostrum of the honourable Chairman. The business of the Steam-boat Company was necessarily adjourned in consequence of the length of the proceedings.

The proprietors of the EASTERN UNION held their half-yearly meeting yesterday. The receipts for goods and cattle exceeded those for passengers and merchandise by upwards of 800l.; the former having doubled itself during the last year. The total was 29,122l. The fund for accelerating the opening to Norwich justified the accomplishment of this object, and the works were proceeding vigorously. Mr. Field, one of the auditors, expressed his entire satisfaction at the state of the company's affairs. The special meeting for considering the agreement relative to the Stour Valley was adjourned to the 9th of October.

Mr. Hudson's Midland Meeting was a

announced, and a larger for next half-year anticipated. The mineral and goods traffic especially presented symptoms of rapid increase, -an increase which he did not expect would be attended with additional expenses. The Chairman protested against the injustice of the increased assessment to local rates, which amounted on the Eastern Counties to 961. on the mile, and on the Midland to 84l., -an injustice loudly calling for a parliamentary remedy; and we sincerely hope his observations will be followed up by something like a unanimous effort among all the railway bodies to have railways assessed on the same principles as any other trading establishment in the same parishes. The Chairman disavowed any intention of abandoning his place at the head of the Midland Railway, and he concluded a long and interesting meeting with a warm éloge on the character of their late engineer, Mr. George Stephenson, which called forth a sincere response from the whole meeting.

The York and North Midland Meeting, although less prosperous, was not less unanimous than on former occasions. The dividend of 8 per cent. is not one to be despised in these times, especially when such excellent guarantees for the maintenance of the dividend are offered. With his great enemy, the Northern, Mr. Hudson seems to have come at last to terms at both ends of the line, and he proposes to convey their traffic along his railway from Doncaster to York. This he considers will render the York

property for ever invulnerable.

The York, Newcastle and Berwick was a no less successful meeting; an 8 per cent. dividend being declared. The lease of the Hartle-pool Dock, and of the Clarence and Hartlepool Junction Railway was accepted unanimously.

At the Northern and Eastern half-yearly meeting the report declared a dividend on shares guaranteed 5 per cent. per annum, 50l. paid, 11. 5s. each; on shares guaranteed 6 per cent. per annum, 50l. paid, 1l. 10s. each; 23l. paid, 16s. 6d. each, after deduction of the property-

At the half-yearly meeting of the BLACKWALL a dividend of 1s. 6d. per share, clear of incometax, was declared on the 48,000 original, and the 24,000 new shares, No. 1. The Gravesend traffic has increased in spite of the bad weather. The directors anticipate great things from their connexion with the London and North-Western by the East and West India Dock Junction. The line is to be closed for the introduction of the locomotive system and the change of gauge on the 1st of October.

All the Norrolk lines being in the hands of the Eastern Counties, the directors had merely to declare a dividend of 4 per cent. per annum. For the future, the proprietors are to receive the same dividend as that paid on the Eastern Counties stock.

At the half-yearly meeting of the NORTHERN COUNTIES UNION the directors (after the adoption of the report detailing the parliamentary career of the company) received plenary powers to negotiate respecting the continuance of the project, or otherwise, provided that all operations are suspended for the present, and that no further calls be made within the next twelve

The HULL AND SELBY directors announced at the half-yearly meeting of the proprietors the usual dividend of 10 per cent.

The directors' report to the LEEDS AND BRAD-FORD announced a dividend of 1/. 5s. per share, less income-tax. The line will be opened to Colne in October, and the shareholders may then expect their full dividend of 10 per cent.

The shareholders of the WHITEHAVEN JUNC-

The directors propose to raise 25,000l. by the creation of 5,000 quarter-shares at a guaranteed interest of 6 per cent. per annum, and 11,000l. on mortgage to continue the prosecution of the works.

At last the chairman of the BIRMINGHAM AND OXFORD JUNCTION has declared the passing of the bill for the sale of the line to the Great Western.

The Chairman of the Exeter, Yeovil and DORCHESTER, at the half-yearly meeting, feelingly congratulated the proprietors on their having at last obtained their bill. A fight with, and a victory over, the Great Western interests is no small triumph. No call is to be made until July 1849.

In the LLYNVI VALLEY report presented to the half-yearly meeting of the shareholders the reduction in the monthly revenue was attributed to the depressed state of the iron trade. A dividend of 5 per cent. per annum was declared.

At the meetings of the CORK AND WATER-FORD and the VALE OF NEATH, there being an insufficient attendance of proprietors, the adoption of the reports was adjourned.

The proprietors of the following companies have also held their half-yearly meetings, and adopted the reports presented thereat:-

Buckinghamshire.

East and West India Docks and Birmingham Junction, whose line will be completed by Christmas 1849.

Glasgow, Dumfries and Carlisle, who raise additional capital of 433,000l. by mortgage. Gloucester and Dean Forest.

South Wales, whose guarantee by the Great Western of 5 per cent. on calls from shareholders, though not sanctioned by Parliament, is to be substantially carried out.

Tenby, Saundersfoot and South Wales.

From our official returns it appears that the amount of traffic for the last week, on 4,055 miles of railway, was 234,2481., thus accounted for:-127,157l. for the conveyance of passengers only, 49,412l. for the carriage of goods, and a remainder of 57,684l. for passengers and goods together, not respectively apportioned; being an increase of 23,304l. over the corresponding week of last year, when the mileage was 3,242. The average earnings per mile were 58l., whilst in 1847 they were 68l.

#### THE WORST VIEWED AS A WAY TO THE BETTER.

The effect that has been produced by what is now coming out in the half-yearly reports of nearly all our principal companies, would seem to show how little the railway world at large has hitherto been accustomed to reflect on the nature of what it has been doing for the last three or four years. The mere circumstance, indeed, that it should have been done, had already proved that a very short-sighted view was taken-by all concerned, we may say, with hardly an exception, -of its probable consequences. Now that they are coming to pass in a way that no one can mistake, there is a general sigh of disappointment-a general look of consternation; and people shrink in alarm from the offspring which not long since they one and all took an active share in begetting.

This we have every right to point out, which can be shown by the fact that on the chapter of cause and effect in the whole business we have nothing to unsay: the consequences now becoming visible will surprise no one who attended to our warnings and predictions at a time when all was running, as it seemed, in the most smooth and prosperous way. Having, from the beginning, seen what must be the upshot of the contention, the hasty advance in questionable enterprizes, and the lavish outlay produced by

to mitigate the one, and to point out the risks of the other, while protesting against the extrava-gance to which they jointly gave rise,—we are now entitled to refer, with some emphasis, to the text of our former admonitions, which, like the voice of one crying in the wilderness, no one would turn aside to hear; and, remarking that what is now happening is exactly what we declared was likely to happen, withdraw a little from the general manifestations of chagrin and surprise that the result has provoked.

We cannot, indeed, feel any sudden wonder at a consummation which we have long seen to be coming on; and as our regrets began with the appearance of the causes, we have not now to expend the whole burden of lamentation on their effects. On the contrary, we are inclined to believe that the present appearance of the latter may possibly prove to be the most hopeful circumstance for railway property that has happened for some time past. We hope that the general distress, caused by the depreciation in all ways of this property, may go far to put an end to the system that has long been undermining its value; and believe that nothing less severe and general would have produced this effect, resisted, as it was sure to be, by many special interests, by a great deal of pretension, greediness, ostentation, selfishness, and folly. In this point of view, we can hardly think it a misfortune that the outward troubles and distresses of the last two years should have brought a dangerous malady to its natural crisis more suddenly and universally than could have been the case under ordinary circumstances. It would have been a questionable gain to the railway interest, had nothing happened to check the full developement of the disease until it had had time to get itself diffused throughout the whole body, and paralyze its motions altogether. This, we apprehend, might have been likely enough to happen, had the times allowed the infection to spread more gradually, and consume first one and then another member of the system, instead of striking down all at once. The universal prostration can hardly fail to call for some attempt at a general cure; and we shall not cease to think hopefully of the circumstances that have made this call heard, until we find that it is unheeded. Meanwhile, the heart of the body is yet sound; which would not have been the case, after another three years' course of such dissipation as it has long been indulging in. It will require some rough methods, it may be, for a thorough cure; but it is a great thing that a cure is still possible. And this, we trust, will now be demanded by the universal feeling of the ailment. There is no concealing it-it cannot be salved over, or forgotten-it comes home to every one concerned in railways, in every way in which a consumptive disease of the pocket can be felt; and it is something to have got to a state in which, at all events, this real condition of the affair can be no longer palliated or mistaken. When companies, unable to borrow money, are forced to raise funds for new works by creating preference stock at 6 per cent., while the dividends on money already laid out are falling, at the same time, at the rate of 1, 2 and 3 per cent. per annum, -it is pretty clear that the ambitious and contentious system prevalent for the last four years is on its last legs; and that the question is clearly put, by the circumstances of the case, between changing to something else, or ceasing to exist altogether.

We do not imagine that the owners of our railways, having shown so much energy in making them what they are, will now lie down and die quietly, for want of a little determination to make them what they ought to be; and we are therefore disposed, as we have said, to hope TION receive a dividend of 2s. per share less | both these causes; and having done what we could I that good may arise from the choice between

Digitized by GOGIE

plus and minus being now offered in a way that | tors; whom Mr. Glyn now declares irresponcannot be evaded any longer.

We intend to return to this subject, for the purpose of handling one important condition of all improvement—the determination, namely, to fix a term to capital expenditure—a glimpse of the necessity of which we are glad to see piercing through the confusion in various quarters. We shall be glad to do what we can to throw a fuller light on this cardinal matter.

#### MR. GLYN ON DIRECTORS' RESPONSI-BILITIES.

We have said it would be necessary to return to Mr. Glyn's speeches at the late meeting of the London and North-Western. This we now do, in order to notice a declaration which surprised us at the time, and which we were not less surprised to find reproduced, without a word to qualify or explain it, in the official report sent to the shareholders. We shall quote it verbatim from the latter, where it appears in the following terms:-"You have given us credit," says the Chairman, addressing the proprietors, "for this" ["honesty of purpose," namely, "and the endeavour to conduct the company's affairs with all due economy"]— "knowing that we cannot hold ourselves responsible for the creation of additional capital on the one side, nor for the absence of the increase of revenue on the other." This, we must say, as it stands here, has a strange effect. It is addressed by the chairman to a body of proprietors who have never, since the beginning of the railway, taken a single step which has not been proposed to them by the Board; have never expressed the slightest disposition to act independently of the Board; have scarcely ever ventured in a single instance to suggest a recommendation to the directors on the most trifling detail of the business. Under such circumstances, and reading the words in their usual meaning, the declaration would amount in fact to nothing less than a flat denial that any responsibility exists anywhere. With the proprictors it cannot rest; for the proprietors, as we have said, have done nothing but accept whatever has been proposed by the directors,and this, we apprehend, because they knew, or fancied, that the directors did hold themselves responsible for the propriety of the measures they proposed. So that Mr. Glyn's rejection of the directors' responsibilities brings the account of what has been done to this position; -that what has taken place has been directed by nobody at all in the company-has either happened by chance, or has been altogether imposed by some external force; in the submission to which the Board have exercised no discretion, and for the results of which, consequently, they "cannot hold themselves responsible." This conclusion, which appears to be the only one that can be rationally drawn from Mr. Glyn's speech, as it stands in the official report - taken in connexion with the known facts of the case as we have stated, and, as no one can deny, truly stated them,is the last that could have been expected to be set forth by the head of a Board which has hitherto assumed the credit of managing the company's affairs; -has been placed in office for the sole purpose of managing them, and has never been thwarted in any part of the management by a constituency unusually obedient. It virtually denies the fact that the government of their property has been in the hands of the Board; for if it were, with the Board, of course, the liability must reside—the responsibility of power being inseparable from its exercise. The proprietors, as we have already said, have never exerted their power, but left alone such a plea could be supported; and also it, as they supposed, in the hands of the directhat it is as ill-timed a declaration as could well

sible for what has happened in the way of increasing capital. Who, then, is responsible? by whom has the concern been managed? whose advice has been taken on each successive step? who has devised, matured and proposed for adoption the various proceedings on behalf of which the capital was raised? These are questions, the reply to which may be suspended until Mr. Glyn shall have first informed the proprietors that the directors (for whom, as well as for himself, he spoke, with the official we) have not been the parties to do all or any of these things. But the proprietors already know that the directors have been the authors of each and every one of them; that their own part has been confined to silent approval of all that was proposed, as they believed, on the "responsibility" of the authors. The repudiation of the responsibility, at this late period, now that the measures of past years are bearing their natural fruit, will have taken them by surprise; and the surprise may be attended with other feelings, not the most agreeable.

We have been speaking hitherto of the first clause in Mr. Glyn's sentence, as to the creation of additional capital. On the second part, no better comment is needed than will be found in a passage of his opening speech on this very occasion. "It will be in the recollection of every honourable proprietor," says Mr. Glyn, "that we [the directors, himself included] have always proceeded upon the idea that we should have a gradual increase in our traffic." the receipts [he had said a minute before] have not increased." The gist of this, taken in connexion with the fact, already stated, that the proprietors have never looked through any other eyes, or spoken by any other voice than that of the Board, is perfectly obvious. It means, if words have any meaning, that the directors promoted extensions of the concern, "proceeding upon the idea" that the "gradual increase of traffic" was to furnish a sufficient revenue on the increased capital; and that the event has shown that this "idea" was a mistaken one; that the extensions, in other words, were recommended on the strength of expectations that have not been realised. it is true that no one can think of holding the Board answerable for the facts themselves, which it now appears they miscalculated or did not foresee: but it is equally true that for the miscalculation somebody must be accountable, and it is pretty clear that, whatever delusions may have prevailed in other quarters, the mistake which has vitiated the measures in question can only be fairly imputed in the quarter where those measures originated. The directors would have had the credit if they had turned out well; and can have no right to disavow their chief share in the result which has actually taken place. We cannot, therefore, admit the right to slip out of the business altogether by declaring, what is obvious enough, that the directors are not accountable for the decline of traffic. This is one part of the affair only; the other we have described in Mr. Glyn's own words: it proves that certain measures were founded on erroneous expectations; but it does not get rid of the responsibility of advising those

We should not have noticed this speech, which might have been hastily uttered, had it not been repeated in print, and circulated amongst the proprietors officially. This amounts to an adoption by the Board of the disclaimer put forth by Mr. Glyn on their behalf; and makes it necessary to point out that it is entirely at variance with those matters of fact by which

have been made in such terms at the present juncture. The assertion of the non-responsibility of a Board in the matters over which it especially presides, in the first railway union in the kingdom, could hardly fail, if allowed to pass unchallenged, to act injuriously on the whole system,—and we sincerely regret that the necessity of contradicting such expressions should have been presented, at a time, of all others, when, if directors will not honestly assume the consequences of measures which they alone have originated and promoted, there can be little hope that they will feel themselves bound to do what is necessary to remedy them. Such a conviction would be deplorable enough just now; and we imagine that, had Mr. Glyn reflected a little on the tendency of what he was about to say, the desire to escape from unpleasant reflections would not have prevailed over the obvious consideration of the meaning and probable effect of such unqualified language.

#### WORKS ON THE BAST LINCOLNSHIRE. To the Shareholders of the Great Northern.

Permit me, as an act of justice to all parties concerned, and to prevent an unfair depreciation of an important portion of your property, to correct a mistake into which Mr. Denison was led at the halfyearly meeting on the 12th of August. In alluding to the East Lincolnshire, Mr. Denison said very truly-" It will be an exceedingly valuable portion of the Great Northern scheme, more especially as it comes, as I think, through a very profitable country, and has been constructed somewhat cheaply. And then he added, not truly-"I hope, although I say 'cheaply,' it may not ultimately turn out that they have been 'penny wise and pound foolish' in the construction. I do not find fault with the engineer of the line, as against the engineer of our line, but it certainly is not so well and solidly constructed, in my opinion, as the line of the Great Northern Company, under Mr. Cubitt's superintendence. Mr. Denison has thus fallen into a mistake which, I am sure, he will thank me for correcting-because it is the very reverse of the fact, and it is only proper that it should be put right. On Mr. Denison's part I believe there has, of course, been a mistake purely unintentional. I am sure he will regret it, because he commits an act of great injustice to the directors and other parties concerned in the East Lincolnshire, and damages a property which he believes otherwise to be valuable. The only difference in the character of the works on the Great Northern as contrasted with the East Lincolnshire is the way in which large drains have been crossed. On the Great Northern line, the plan has been to adopt timber piers, or timber girders, as over the Witham at Boston, and at Horsley Deeps; whilst on the Lincolnshire, masoury abutments or piers, and wrought or cast iron girders, have been adopted, as over the Maude, Foster and Hob-hole drains. This subject of increasing the excellence of the works by additional outlay had the special attention of the East Lincolnshire Board; and at my recommendation they decided upon the more solid and more costly works of iron and masonry; and in this really consists the only difference in principle in any part of the engineering works of the two lines. If, therefore, a comparison must be drawn, I would ask leave to state it as follows: ... "On the East Lincolnshire a greater cost has been incurred than on the Great Northern for certain works, in order to make them more permanent; but whether such additional outlay has been judicious or not time only can show." I am sure my friend, Mr. Cubitt, as well as myself, would have preferred the omission of the comparison altogether, and had Mr. Denison contented himself with claiming for the directors and for Mr. Cubitt the credit that is so justly due to them for the excellent manner in which the works of the Great Northern are now being constructed every useful and ordinary purpose would have been served.

J. Fowler, Engineer of the East Lincolnshire.

#### Gossin.

The interment, on the 17th, of the remains of Mr. STEPHENSON was performed amidst every testimony of respect from his friends and the parishioners of Chesterfield, where the body was buried. All shops were closed, and business was entirely suspended during the day. The members of the corporation, with the influential inhabitants of the district,

assisted at the ceremony.

The speedy communication now opened with Ireland by the CHESTER AND HOLYHEAD has induced the by the CHESTER AND HOLYHEAD has induced the Post-office authorities to alter the present arrangement vid Liverpool. After the 18th of September the mail packet for Liverpool will leave Kingstown pier at 4 30 p.m., instead of at 6 30, as at present. The object of this arrangement is to ensure the arrival of the mail from Dublin at Liverpool at such an hour in the morning as to permit it to be forwarded from the latter town to London by the 6 a.m. express train. It is said that, with a view to this as well as other changes, more powerful boats will be put on the line to Liverpool. All the correspondence between Ireland and those places to which Liverpool offers the speediest communication will go this route; all that for London direct and the places on that line will go vid Holyhead.

The Post-office authorities, now that the Central or Castlecary branch of the CALEDONIAN has been opened, have alertly enough determined to send forward the London mails direct to Perth, that is, without passing through Edinburgh. It is probable that before a month has elapsed, says the Aberdeen Journal, we shall have the London mails in Aberdeen in 26 or 27 hours.

The formation of the BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNCTION is to be resumed with vigour. The negotiations with the Chester and Shrewsbury are understood to be at an end. The dock works at Birkenhead are to be recommenced.

We are glad to observe the feeling of the Gilling. ham district so substantially presented to Mr. J. Rutter, the agent of the London and South-West-ERN, in the prosecution of their Salisbury and Yeovil schemes. The inhabitants presented him with a silver salver, to commemorate his activity in promoting their interests by railway communication.
The half-yearly meeting of the NORTHAMPTON AND

BANBURY was advertised for the 12th inst. at Westminster. Mr. E. H. Barlow took the chair. In accordance with the provisions of an Act passed in the early part of the present session the works had been suspended. Only four shareholders having attended, the meeting could not be legally constituted, and after waiting the usual time it was adjourned sine die.

Every one is so practically convinced now of the utter incompetency of Government to meddle with the MANAGEMENT OF RAILWAYS that it might seem the management of maintain and to our examples of its executive inapritude. Public opinion, however, is capricious and veering, and therefore we are indis posed to lose sight of the subject altogether, and extract the following from the Morning Post for reference as occasion may require :-- Among the recent "improvements" in the Irish Post-office management, the following brilliant instance is trium-phantly appealed to:—The mail from Roscommon to Athlone (a distance of 15 miles) heretofore conveyed by car direct in two hours, is, under a recent arrangement, sent by Longford and Mullingar, travelling a circuitous route of upwards of 70 miles, and occupying 17 hours in its transit.

The following is too singular an instance of the

difference of opinion between an arbitrator and unipire not to descrive recording:— The sum of 7,050l. has been awarded to Mr. Warren, of Killiney, for compensation for encroachment upon his property at Killiney Hill by the DUBLIN AND BRAY line, now in progress. Mr. Recorder Shaw acted as umpire in the case. The award of an arbitrator, against which there was an appeal, was 17,000%. The

against which there was an appear, was 11,0006. The company offered about 6,0006.

The Minister of Public Works, accompanied by two engineers and the Prefect of the Cher, visited Vierzon, and there took the sequestration off the CENTRE line.

The opening of the CALAIS TO LILLE, which was to have taken place on the 26th or 28th inst., is post-poned to the 2nd of September. We presume, thereponed to the Znu of September. We presume, therefore, that the South-Eastern proposal to issue return tickets to persons wishing to be present at the ceremony will be made to correspond with this delay.

By a statute, dated the 12th inst., the completion

of the works of the CHARLEROI TO THE FRONTIERS was prolonged to the 21st of May 1850, upon the following terms:—The company is bound to continue the works without any stoppage. Up to the 1st of October next it is to keep continually at work 100

men. From the 1st of November next to the 1st of May 1849 the number of men to be employed is not to be less than 400. From the last mentioned day it is, without any stoppage, to employ such a number of men as the agents of the Government may consider necessary for the due execution of the line and works within the term prescribed. All other articles in the cahier des charges, excepting the changes made by the present law, are to remain in force.

The receipts on the DIEPPE portion of the PARIS

AND ROUEN, from the 13th to the 19th of August, were

In the paragraph relating to the Government scheme for purchasing the PARIS AND LYON, last week, a typographical error made the date for declaring the option of buying up the shares in full to be before the 1st of September 1849; it should of course be the current year—as will be seen on reference to our advertising columns, where the scheme is set out by the London agents.

#### Reports of Meetings.

[Continued from p. 596.]

SOUTH-WESTERN.

August 25.—Half-yearly Meeting, London.—W. Chaplin, M.P., in the chair.

The accommodation at the offices being inadequate for the numerous attendance, the meeting adjourned to the numerous attenuance, the meeting adjourned to the "goods shed," where the accommodation as to room was ample.

Mr. In CAMPBREE, the secretary, read the following

report :-

The directors first request the attention of the proprietors

to the half-yearly account or receipts and the gross income for the half-year ending £218,587 3 61 

99,857 13 11

From which balance there must be deducted interest on borrowed capital, applied to finished lines, 14,570l. 17s. 9d., and 8,000l. nmissied lines, 14,570. 173. m., and 0,000. carried over to the credit of the new capital, 1845, in respect of the company's subscrip-tion thereout towards the Southampton and Dorchester

22,570 17 9

Showing a balance applicable to dividend of £77,286 16 2
Out of this balance the directors recommend the payment of a dividend at the rate of 6 per cent. per annum on the company's consolidated stock, subject to income-tax. There will then remain a sum of 1,235c to. 2d. to be carried to the credit of the current half-year. The Metropolitan Extension line and Waterloo station were opened on the 11th ult. Every exertion had been used in order that these works should be completed at an earlier day, and arrangements had been made in anticipation of the traffic commencing on the 30th of June hast; but an unexpected delay was occasioned by the Commissioners of Railways withholding their certificate, and although the public opening was thereby only postponed a few days, it was a matter of great concern to the directors, on account of its effect upon the interests of a section of the proprietors. Efforts were in vain made to induce the Commissioners to take a more favourable view of the subject: and nothing, therefore, remained but to submit the bridge—of which the possible insufficiency was suggested—to stronger tests, and to finish these varies of the works. the state of which Showing a balance applicable to dividend of £77,286 16 2 favourable view of the subject: and nothing, therefore, remained but to submit the bridge—of which the possible insufficiency was suggested—to stronger tests, and to finish more perfectly those parts of the works, the state of which, although substantially complete, had not been deemed satisfactory. The experiments which followed fully vindicated the judgment of your engineer, and removed all doubt from the minds of the Commissioners as to the perfect stability of the works, whilst a few days' further labour was also sufficient to remove those objections which rested on the real or apparent incompleteness of the line, and the whole, being duly certified, was opened for public use after ten days' delay. The Coast line between Farcham and the Chichester and Portsmouth at Cosham is ready for use, and an increase of east and west going traffic must follow this completion of the coast communication. The Hampton Court branch is in a state of forwardness, and the traffic will shortly commence. The extensions to Farnham, Godalming and Andover are in satisfactory progress, and will before next summer be adding to your revenue. An Act for authorizing the amalgamation of the Southampton and Dorchester with this proprietary has received the royal assent. It authorizes the creation of shares to the extent of 31,350L in this company to replace shares to that extent given in exchange to some of the Southampton and Dorchester proprietors; and this proprietary has received the royal assent. It authorizes the creation of shares to the extent of 31,350L in this company to replace shares to that extent given in exchange to some of the Southampton and Dorchester proprietors; and arrangements having, with your sanction, been already agreed upon, and in part effected, with reference to all the shares in that company, not originally subscribed for out of South-Western capital, nothing beyond matters of form now remains to perfect the union of the two companies. By one of the provisions of this Act, Mr. J. Mills, heretofore a director of the Southampton and Dorchester line, has become a director of the Southampton and Dorchester line, has become a director of this company. The directors congratulate the proprietors that the long-pending contests with respect to the Salisbury and Exeter extension lines have been at length brought to a close. The prudence of continuing in the present session, rather than postponing to a future one the application for these bills, has been amply proved; insamuch as the further contest in the House of Lords was limited to five days only, and the Acts have therefore been obtained at a comparatively slight increase of expense. The proprietors are reminded that no call, beyond the deposit on the capital subscribed for these lines, can

be made before July 1849; no active measures will therefore be taken for the present respecting them. The application for parliamentary powers, in respect of the Taw Vale, and Exeter and Crediton, was not attended with success. It was unavoidably heard in committee before the Salisbury and Exeter lines had been sanctioned, and therefore under circumstances of disadvantage. This company's relations in that district will continue to receive the attentive consideration of the Board; and there is little cause to doubt that, with the continued confidence of their proprietary, the directors will yet be able to obtain results beneficial to the company, and satisfactory to their allies and to the public. Powers have been acquired for making the several minor extensions and improvements mentioned in the last reports, subject to unimportant modifications. After much opposition from existing steam-packet interests, the company have also been authorized, for fourteen years, to purchase and work steam-packets between those ports on the southern coast with which the South-Western is connected, and France, and the Channel Islands. In the Windsor district, the directors feel that the events of the past half-year are very satisfactory. Under their original powers, the Windsor, Staines and South-Western have, with great rapidity, completed their line between Richmond and Datchet; and they are making progress on the loop line by Brentford. The former line has been placed in the hands of this company have become owners of the principal part of the Windsor capital; and as the existing agreement does not provide for the terms on which this company shall lease and work a part only of the Windsor lines, and it is expedient during a temporary arrangement to avoid the keeping of the separate accounts of earnings and expenses incident to the ascertaining of a profit rent, the directors of the two companies have agreed (subject to the approval of their shareholders) that the completed portion of the Windsor capital; and as the convenience be made before July 1849; no active measures will therefore

The CHAIRMAN then rose and spoke to the fol		
effect:—Gentlemen, your having been in pos		
of an analysis of our accounts for some days pr		
to any accompling it may be accomed your		-

to our assembling, it may be assumed your are informed of the position of our affairs. That this, the twenty-eighth meeting of this company, should be so influenced by circumstances in which the manage ment has no part is a matter deeply to be deplored but if it is found that the railways in the North, which traverse districts in which manufactures and commerce abound-if these railways are affected in such times, what must be the case with those whose success, in my opinion, depends mainly on the prosperity of these districts? for if they are not in a fourishing condition, it is impossible that people can afford time and money to visit our districts and to recreate on the coast. This state of affairs is known too intimately by most of us, directly or in-directly, in our several walks of life, to render it necessary for me to dwell on the causes and effects with which we are all unfortunately so well acquainted. Gentlemen, our summer trade has been seriously affected; and our merchandise traffic, which has been dependent, and necessarily is dependent, to a great extent, on the foreign shipments, has altoa great extent, on the foreign shipments, has alto-gether been neutralised this season, and the pro-gressive growth of traffic which we anticipated has been entirely neutralised. We have also, I think, 90 miles of new lines, which have barely been opened 12 months, and, as a matter of course, the traffic on those lines in a year cannot by any means develope their resources. The circumstance of the interruptions internally in the French nation having disturbed a great quantity of our traffic which should arrive by the steamers and the lines I have alluded to, must have seriously affected us; because I believe we may trace the origin of the thing to the scarcity of food; from that we had a general financial derangement, which was succeeded by revolutionary movements throughout all the Continent; and, lastly, we have had a continuance of unfavour able weather, which, as I before remarked, has greatly interrupted the traffic and recreation on which our district so much depends. On the subject of the developement of traffic on the new lines, it is difficult to cite any parallel case, because the circumstances of the different lines in England are so often varied by amalgamation and terms entered into with other companies, that it is almost impossible to make a just comparison; but having had some experience in the Paris and Rouen—84 miles in length—and which has neither been added to nor substracted from. I find, with reference to the growth of traffic, that in 1843 (the first year), the weekly receipts were 3,796*l.*; in 1844, 5,000*l.* per week; in 1845, 5,600*l.*; in 1846, 6,347*l.*; and in 1847, they averaged 7,657*l.* So that

if you take the first figure at 3,796l., and in the fifth year at 7,657l. per week, the traffic is more than doubled. Now, gentlemen, I know not why we should not anticipate the same results; if we have not succeeded so well as we might have done, it is most certain we may calculate in a given time upon a very large increase of traffic on the whole of these new I recollect mentioning at one of our meetings, from my experience in other pursuits, that the number of passengers would increase, and had increased in many parts, and the traffic to all the leading towns will increase to the extent of doubling every seven years. Now, as regards the railways of this country, we find, that in 1843 we had 1,950 miles of railway; now we have 5,016 miles, including what will be completed in 1848: thus showing, that instead of waiting for the increase of traffic and the increase of trade in the country, the extent of railways has gone on faster, inasmuch as in 1843 we have 1,950 miles,—in five years after we have 5,000. Therefore I say it is our fault (if you go with me in this view) if we go in advance of that which is reasonable in the increase of the traffic. Gentlemen, we must wait patiently before the developement of traffic can equal our wants and views in the requirements of the lines we open. I believe it is acknowledged we could not restrain this action; for what with the competition desired by Parliament, the premiums in anticipation, and the desire of shareholders to increase their stock so long as they could participate in high premiums, and also the fear of losing the districts which might be secured by others of less pretensions—I say all these things have acted as a stimulus to going forward faster than our means will allow in our expenditure, and faster than it is possible, in the nature of things, the traffic can accumulate to meet the requirement of these great extensions. But, gentlemen, I consider these affairs are evanescent; for on the 28th of August 1841, the first occasion on which I had the honour of presiding over this com-pany, I find the report of that date states that "the general depression that has existed in every branch of trade, combined with the unfavourable season, furnishes another ground for the reduction in the receipts during the last half-year." Therefore, it seems we have been subject to these things several years ago; but it passed away. We have had our property in a high position since then, and I hope, through the providence of God, brighter days will come, and that these troubles and difficulties will wear away; that the traffic will accumulate in due proportion; and that your wishes, which I am sure are no more than reasonable, will be duly met. Still there is matter for encouragement. I see that in 1841 we found 281,460 passengers on 78 miles of railway—for it was before any branch was opened. Well, then, in 1848, when our operations are extended over 191 miles, we find we have been fortunate enough to obtain up to this time 1,058,734 passengers,—showing that, whereas with 78 miles of line we had 3,608 passengers per mile, over the 191 miles we have had 5,542 passengers per mile. This circumstance ought to be duly regarded, as affordthroughly sound, and that it will progress in due course. We have also to consider the increased expenditure. We have gone from fourteen stations, two or three years ago, to fifty-three. To go into the districts, you must depend upon the villages and the population of the neighbourhood, and you must have more frequent stations to suit their requirements, in order to derive proper support from the district.
We had also a bad time to go through, owing to the disturbances generally throughout the country; and I hope you will agree with the feeling of the directors, that we, finding the trade was exceedingly light, did not choose to discharge the workmen, porters, and policemen, to the extent we might perhaps have done, because we anticipated (more speedily, I admit, than has been the case) the opening of the line to Windsor and the extension to Waterloo-bridge. In reserving, therefore, competent and experienced persons rather than put on fresh ones who were inexperienced, I hope it will not be thought that we have kept a larger staff than under the circumstances of the reduced traffic we were warranted in doing. This reduced trame we were warranted in doing. This brings me to the opening of the Waterloo-bridge extension: it was anticipated that it would be opened at an earlier period; but it did not take place until the Ilth of July; but I feel confident you will give us every credit for our anxiety to have it opened according to the period at which we proposed. I can say that no pains were spared to effect it, and in truth we resorted to temporary buildings, in order that it might be opened at the time stated, so that we might not risk the effects of too much haste in making the permanent works, and therefore we perferred adopting temporary buildings in the place of them. We were naturally anxious for this extension to be

I do not see l

we were placed in obtaining that bill.

our old acquaintance Mr. Hoyes here.

opened because we knew that various sections of the proprietors had money invested in different departments of our stock, and we were also aware that some interests would be prejudiced by the delay in opening. But we could not bring it to bear sooner; and you ought not to throw the blame upon our professional gentlemen, because they did in their power; but you must allow me individually to shield myself from the answers I gave to the inquiries as to when that extension would be opened, inasmuch as those answers may have occasioned some disappointment and vexation; but I shall succeed in shielding myself from the responsibility of my replies, when I state that on the 18th of May I had those assurances as to the state of the works from our professional gentlemen, which led me to expect the promise to open it on the 30th of June would be fully realized. Substantially it was ready for opening at that time, but being in the hands of those appointed by the Government to inspect the works, we had no alter-native but to wait. However, it is now opened, and I have great pleasure in noticing the general expression of the facilities and accommodation which it appears to afford to all classes. I hardly know a more sure test of its utility-although some may say it is a very simple one—but I do not know a more sure test of its accommodation than that the public conveyances going to and from the station do not now meet with their ordinary support, simply from the fact of the facility being such as to admit of persons walking to their destinations. I have read what was stated by our rival chairman as to the trade and business which still worked to Pad-dington, and that the Waterloo Bridge extension was not that desirable point which this company felt it to be. Taking the reasoning of Jeremy Bentham, that human happiness is more diffused than at first was perceived, I am glad to find he is happy that he has not got the station. I anticipate your feelings—that you, at least, are all happy in the enjoyment of it; and one thing more which I rejoice at is, that we shall make the hon. gentleman contented at Paddington, and we shall not be troubled with that which the session before last he endeavoured to make so desirable and necessary: namely, for powers to come over our line with a mixed gauge; and, therefore, I think we are happy in being released not only from the trouble but the inconvenience which is generally under-stood to belong to a mixed gauge. I now come to the Windsor line. I believe you are all aware of the reasons why we went to Parliament for a branch to Slough: it was to meet the views of the higher authorities, the Government and the Woods and Forests. Perhaps I cannot say how far the Court was concerned in the matter; but there was a desire that we should concentrate our influence to go by one route into Windsor. We engaged to do so, and when we got to Parliament, we offered the Slough branch to the Great Western. They declined it, and went They declined it, and went to Parliament, and succeeded in getting those branches of their own apart from us. Having that understanding with the department of the Woods and Forests, they felt the engagements they had made with us, and with the consent of our Sovereign, whose chief desire is to see all her subjects happy, the line was made from Datchet across the Park. Thus we have a most central position in Windsor, bearing upon the traffic of Eton; and with our position at Eton, without a mixed gauge, with the advantages we shall derive at the Windsor end, and with the comprehensive nature of our terminus at this end of the line, I flatter myself you will appreciate the districts we go through, and you will feel that the traffic can be carried out most advantageously to yourselves. are making all the exertion we can to open the loop line by Brentford: it appears we shall open up by that channel a very large population; and I may state, that when a line from Brentford to Harrow was contemplated, it was stated in evidence, which was not contradicted, and therefore I take it to be true, that Brentford of itself produced one-sixteenth of the excisable matter of the whole kingdom; and therefore I think you will admit there is some ground of hope for traffic in that quarter. It appears that that place pays 380,000% per annum for its excisable productions, whilst the average of the whole kingdom may be stated at 1,401,419!. We trust, with the population, and the ground-work of manufactures which exist there, we shall be amply repaid for our investments in that direction. I will now come to the great event of the Exeter That has been a field of large competition, involving considerable expense; but I hope you will feel that the matter has been adjusted satisfactorily, and that we did, as the report states, take the wise

our out acquaintenance. I am here, Sir.] I shall be happy to afford my tribute of praise to that gentleman. What he did was done openly, manfully and publicly; and when our affairs took a favourable turn in the Commons, I must say Mr. Hoyes deserves our thanks in not putting us to the trouble and expense which a peti-tion to the House of Lords would have involved. I thank him kindly, and the directors join with me in that matter. With respect to the line to Exeter, I am quite aware there are some few of the subscribers who held a different opinion on the subject to the great majority. To the majority therefore I would say, the directors view that question in the same advantageous To the majority therefore I would say, the light as they formerly did, and to the minority I would say, I hope they will look at the matter as a means to a great end, and as part and parcel of a large and com-prehensive undertaking. I believe that, in legislating for a railway company, as well as for a nation, there is a moral responsibility beyond that of a pecuniary point of view. I feel strongly it is our duty to secure to the proprietors the best investment we are able, and it is our duty to protect their interests. But there are other considerations. We are more or less responsible for the comfort and due accommodation a large district of country; for in the setting out of this railway you will see the direction of the line was to pass the towns which were influenced by the old coach-roads-such as Yeovil, Shaftesbury, Axminster, Honiton; it was seen by the prospectus and the traffic data that we contemplated occupying that country, and that was the reason why the Great Western went by their circuitous route to Bath and Bristol, leaving the district I have mentioned to us; and the commercial public looked to us to give them the accommodation they require within a given time. There are also points which I hope you will consider in the way of security, for you will recollect an observation made by me, that I considered it our duty to raise our standard at the frontiers of our territory, lest inroads should be made upon us by those who have less pretensions; for, as an instance, I may state we feel the effects of the competition from the Brighton Company having got a line to Portsmouth; and if the Great Western had got the Dorset and the coast lines, I appeal to you whether our interests would not be greatly affected; and therefore I hope you will feel not only as a matter of profit, but for the security of your property, that was and is the wisest course your directors could pursue. And here I would make an observation of gratitude to our professional gentlemen, our engineers and solicitors, and the counsel whom we employed on that occasion. could exceed their devotedness, and their desire to bring about these results. I regret much to state that our respected Secretary has been for a long time confined to his bed, his illness, I believe, having been mainly brought on by the exertions he made on that occasion; and in addition to the pain and trouble that gentleman has endured, a greater onus of responsibility has been thrown upon our solicitors. I take this opportunity of expressing our warmest thanks to our professional gentlemen for their devotedness; for such has been the exer-tion of our staff in the war, that I hope, having now arrived at a successful result, we shall have their assistance and fellow-labouring in the paths of peace and that we shall now have an opportunity of watching over the commercial relations of the country, which will develope new and increasing resources, and also that we shall be able to work them at a less expense wherever we can find the opportunity. come now, gentlemen, to the subject of the steamboats, because you have expressed yourselves so much in favour of that measure. I say, gentlemen, you have passed resolutions upon the subject, and I think that is rather more than a mere expression; and I hope, gentlemen, you will not look at this matter with too narrow a policy. We have Southampton to depend upon for all time—it has its docks, packets and mails-it has the means of fast conveyance by steam to the East and West Indies—to Constantinople as well as to Bremen and America;—and you will feel the great de-sideratum of having large supplies of Continental traffic to the south, in order to take advantage of these far-famed modes of conveyance to distant parts. Now, while we maintain these packets in repute, and secure this tributary stream towards their support, you concentrate the whole of these packets at Southampton. I say if you let these things go, what will Southampton be compared with Liver-pool, with all the vast population of Manchester and Bolton? You have all at Southampton'that can justify the packets going there, with facilities of communication with the metropolis. But the leadcourse to proceed under the circumstances in which ing feature in the subject is, the facilities you have of obligations, neither could they tell the amount

for bringing the whole Continent to hear upon our produce. It was not from an avaricious spirit that ve acted in these affairs, but for the general benefit of the concern, and greater economy would be the result of unity of management with our secretary. I think we have laid such a foundation at the Waterloo terminus, that a superstructure will be raised that will redound to your advantage. Now, if that be the effect upon the extended district, what must be the effect upon the suburban districts? If people have any money left for recreation, I will just draw your attention to a few of the retreats which we open to them. We have Richmond and Hampton Court, and I should mention that this year we have carried 209,404 passengers to Richmond alone, notwithstanding all the unfavourable weather we have been subjected to; and I will just repeat what I before said, that on this, the 25th of August 1848. the number of conveyances upon the high road is double what it was before the railway was opened. Then we go to Hampton Court, and I may say, the conveyances on that road have increased 70 per cent. during the last two years, from the want of a more happy terminus than we had; but now we have arrived at that which we anticipated. Then there is Chiswick, which is visited upon the average by 20,000 persons in the course of the year; at Hampton Court the number of visitants to the palace was 170,000, and 400,000 more to the grounds; at Kew there have been 38,000 persons to the grounds, and 64,000 to the botanical gardens. Windsor Castle has received visitors to the number of 27,142 in the year. With all this district at our command, I say, if there is any money left for recreation, we must take a great portion of it, or I am fatally mistaken. Besides all this, we are, as it were, breeding new settlers in all these districts. Having acquired these districts, it will be our duty to take a deliberate view, to see that we do not spend the money rashly or foolishly. but to turn it to the best account we can. But still we feel there is a population which wants to be tapped at Brentford and Hounslow; but there are some parts of our line on which it will not be necessary to proceed so fast, and if things take a turn by which we shall be enabled to borrow the money complete these works, now that we have finished the Windsor line to Datchet, and completed the extension, we can wait for better times for the remainder of our projects. We have expended 9,388,747*l.*, less surplus property, 200.000*l.*, which leaves you in a position to raise 386,000l. surplus capital, so that we have ample powers to raise more money. Supposing we stand fast at Andover and Southampton, there is 289,812l.; for the London Bridge extension, should it be proceeded with, 489,000l.; and for the Dorchester branch, 200,000l.; making 978,812l. Deduct for borrowed money at 4½ per cent., which, under the circumstances in which we are placed, is a fair average; and our borrowing powers (as we understood the hon, gentleman to say) are rather over 2,000,000*l*. That leaves a total share capital of only 6,209,935*l*. That is the sum you have to deal with as share capital when the whole of our lines are made, barring those we have got this year to Excter, and for that you have 299 miles of railway. Our powers to borrow extend to 2,172,000%, of which there is 562,796% to be yet borrowed, when it may be convenient to obtain it Now, no doubt, what you would best like to know is, what dividend you are to get; but you see that is a difficult thing to state. When a reduction was made, it was found to answer very well for two or three weeks, but it was at a time when a large fleet was lying at Portsmouth, which attracted a great number of visitors to that place; and it was a source of pain and anxiety to the directors that, with the extensions that had been effected, they found (owing to the circumstances he had alluded to) the returns had fallen off. He concluded by moving the adoption of the report.

The CHAIRMAN, in reply to questions from UPCROFT, said they had no intention of going to Parliament next session, and at any rate they should not do so without first consulting the proprietors. It was their desire to progress as speedily as possible with the closing of their capital account, for without they

would not have security for their dividend.

Mr. Baker, of Cheltenham, then proposed an amendment, which he supported in a long speech, to the effect that a committee of inquiry be appointed to investigate the present condition and future prospects of the company. He said he had last year told the shareholders that their dividend must be reduced if the directors persevered in their present course. The accounts only showed what had been spent, and not what had to be spent. They showed the amounts received for new shares, but not the amounts due; neither did they show the number of the shares ac-tually allocated. They showed no mileage, no lists

Digitized by **GOO** 

actually outstanding in debentures, nor the entire cost of the direction. The accounts he thought were most crude and unsatisfactory. He wished to know what the debenture debt was.

Mr. Morgan (the treasurer): It is 711,000l.

Mr. Baker proceeded to put a series of statistical interrogatories, and objected to the reception of the report, on the ground that it did not put them in a position to arrive at any correct knowledge of the company's affairs.

Mr. Hoves seconded the amendment at consider

able length: but the lateness of the hour to which the proceedings were protracted, precludes a specification of the hon. proprietor's complaints.

Mr. Ashton contended that all the items connected

with tributary lines should be set out at length in the

report.
Mr. Puncher supported the amendment, and entered minutely into figures to show that the working expenses had increased considerably over the corresponding period of last year, in the various departments, to the extent of 23,000l. The present state of their affairs, he thought, would not permit them to divide more than 24 per cent. fairly, if they took into consideration the debenture interest of 41 per There was interest to be added to the revenue account of 7,2951., that was unaccounted for. He hoped they would lift up their voice and hands against the extension to London Bridge, against the lines westward to Exeter and against the Steam-boat Company. They were told that the extension to London Bridge would only cost 500,000*l.*, but it would not be accomplished for one million and a half. They should not run third-class trains attached to the mail and passenger trains, but separately, seeing that many who could afford a higher fare availed themselves of the convenience.

Mr. BLACKMORE condemned the accounts, and thought they ought to appoint auditors, totally inde-pendent of the directors, to superintend them. The CHAIRMAN, in reply to the various objectors,

said that the proprietors had in canvassing the accounts arrived at many erroneous conclusions. It was asserted that there were 600,000*l*. in arrears. Now, out of the 148,000 of the 50l. shares there were 7,000 in the coffers of the company, never issued, upon which of course, there must be arrears, including the call due on the 30th of June of 177,000l. The circumstance of their never having any shares to forfeit was sufficient in itself to show the solidity and re-spectability of their shareholders. The calls upon the third shares were fixed by Act of Parliament to be called at intervals, and they could not depart from that arrangement. As regarded the question of goods and merchandise, the Richmond was a line on which it was never expected they would earn a particle of merchandise, as it was as easy to convey market produce to Covent Garden from the suburbs by road as by rail. The warehouses on the Salisbury and Bishopstoke were not calculated for a large merchandise trade. The Dorchester was not a district very fruitful in merchandise traffic, coasters being employed to a large extent at Poole; and as regarded Portsmouth, the Brighton had the advantage over them, from having their terminus in Portsmouth at the water-side. Their system of conducting the carrying trade was similar to that which was found to answer so well in the London and North-Western, Great Western, Brighton and South-Eastern Companies. To show the conduct of the goods traffic, he might mention that during the last halfyear the recognized agents of the company had brought 7,742 tons of goods; other carriers had brought 4,680 tons, private merchants with their own conveyances had brought 16,941 tons, and there had been a cartage by carriers of 16,250 tons carried by water, and brought by lighter to Nine Elms. There were therefore, it would be perceived, five modes of conducting the business, clearly showing that they adopted no arbitrary system of monopoly, but a system of healthy competition. The comparisons made by Mr. Puncher were based upon erroneous premises. He asserted that they had increased their expenses; but at the same time it must be remembered that during the last half-year there had been causes for so doing, since their mileage had increased

correspondingly by the opening of new lines.

Mr. Locke, M.P., said that, although now occupied with legislative duties, he made it a rule never to allow those duties to interfere with or supersede his professional avocations, or with those duties he owed to the proprietors. Though no engineer's report had been presented that day, he might state that all the information that could be required upon engineering matters connected with the line was in the hands of the directors, and would have appeared in the shape of a report, if a wish to that effect had been expressed. With regard to the Windsor, he thought it came with a very bad grace to censure any one who, in the

course of twelve months had opened 15 miles of line. It was true that, owing to an ill-constructed pier, one of the bridges at Kew had broken down, but it was not the fault of the company, seeing that the bridge was constructed from a crazy design drawn out by the Woods and Forests. It had to be rebuilt before the line could be opened, and this was the cause that delayed that opening. He was no ephemeral proprietor, but had been connected with the company as a shareholder with a heavy stake for the last twelve years, and it was always his policy to hold a course that was consistent with the stability of the concern. It was not the intention of the directors to persevere with the London Bridge extension (and a resolution might, if it was desired, be passed upon that subject) until they had practically tried the experiment of the extension to Waterloo Bridge. Not a single notice had been served either for the London Bridge or the extensions westward to Exeter. He would dissuade the meeting from lending their countenance to the amendment, as entirely unnecessary, seeing that they were going to appoint auditors, to whom they could give all necessary instructions. He entirely sided with the shareholders in their desire for retrenchment and economy, and would save a pound where it was practicable. He was of opinion that the appointment of auditors would accomplish all that was required. If there had been an increase in the cost of coke and locomotive power they had run a distance of 147,000 miles more than they had in the corresponding period of last year, which would clearly account for it. He had long entertained the opinion that their reduction of fares was injudicious. Formerly they used to charge a guinea from London to Southampton; it was now only 14s. This was owing to the pandering on the part of Parliament to the taste of the public for cheap fares, and the effect was illustrated in their attenuated dividend. Looking at the permanent interests of the concern, he could not help thinking that there was an indissoluble connexion between fares and dividend. He was happy, however, to announce that the Board had now determined to return to maximum fares, and to run the third-class trains independently of the other trains. They adopted in their carrying of goods the system that had been found to answer so well, and which from the first he had advocated on the Grand Junction, that of the company doing its own business.

After considerable discussion the amendment, at the request of several proprietors, was withdrawn

with applause.
Mr. Hoyes hoped that the directors would in future

draw the calls "mild."

Mr. Drake stated that they had permission to carry their extension through the Home Park without going to Parliament, with the approval of Lord Morpeth.

The Report was then put and carried unanimously, together with a series of resolutions carrying out its recommendations

A long discussion ensued upon the subject of the appointment of auditors. Four, namely, Messrs. Simpson, Close, Baker and Hoyes were proposed; and on being put to the vote, Messrs. Close and Hoyes were declared to be elected.

The CHAIRMAN said that with regard to the fares they would return to the maximum rates as regarded the suburban districts. They would also run parlia-mentary trains, independent of the mail and ordinary trains, and at an hour most convenient for the class

of persons who patronized them.

The meeting then closed with a cordial vote of thanks to the chairman for his able conduct in the chair, and to the directors for their management of the company's affairs.

Mr. TITE, at the termination of the proceedings, announced, that owing to the lateness of the hour and the protracted character of the proceedings, the meeting of proprietors in the Steam-boat Company would stand adjourned.

#### EASTERN UNION. Aug. 25 .- Half-yearly Meeting, Ipswich .- Col. G.

E. PRATT BARLOW, deputy chairman, in the chair. Mr. J. F. SAUNDERS, the secretary, read the report. It stated that the receipts of the line from the 1st of January to the 30th of June were as follows: passengers, merchandise, &c., 14,156l. 11s. 7½d.; goods, cattle, &c., 14,966l. 1s. 6½d.; total, 29,122l. 13s. 2d. The nett revenue had been applied to the payment of interest on debenture and share capital, in conformity with the Act of Parliament. short additional branch of the Norwich as far as Finningham was opened for goods on the 7th of June, and already a considerable traffic existed over it, which had been brought upon the main line without any material addition to the working expenses. The special fund for accelerating the opening to Norwich

had received support sufficient to justify the directors in following up the object. The works were in vigorous progress. Although the passenger traffic had been affected during the summer by the same causes that had operated unfavourably on railways generally, the goods traffic had doubled itself during the last twelve months. The trifting length of line between Haughley and Finningham was the only addition to the mileage worked this year, and yet the traffic in July produced 180*l*. per week more than it did in April. The average of July 1847 was 283*l*.; did in April. The average of July 1847 was 283l.; of April 1848, 40ll.; and in July 1848 it increased to 5871. The directors were fully persuaded that the development of this traffic would continue to progress favourably, even while the line was incomp The locomotive cost for the past half-year had been found to be 9\frac{1}{2}d. per mile. The total number of miles run had been 132,002, and from the report of the superintendent of the locomotive power the stock was in excellent order. There were some arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power arrears of the locomotive power are also power at the locomotive power are also power at the locomotive power are also power at the locomotive power are also power at the locomotive power are also power at the locomotive power are also power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomotive power at the locomoti calls, which were principally due upon the C shares, but of these 16,000 shares had been paid up as far as 151. per share, and on the remaining 4,000 shares a considerable portion of the amount had been collected. On the 3,124 shares, which had not been brought in for registration, and which were now consequently in the hands of the company, 35411.5s. had been received and carried to the credit of the capital account.

Appended to the report was a statement of the capital account, with the receipts and disbursements for the past half-year. The capital account stood thus:—expenditure, stock in land and works, including stations, warehouses, &c., 1,391,2411. 0s. 9d.; locomotive engines, carriages, waggons, &c., 117,6911.
7s. 8d.; estate of the company in lands and buildof the company in faints and united ings yielding rent, 7,300l.; shares in the Colchester and Stour Valley Railway Company, 6,000l.; balance at bankers, 8,624l. 14s. 6d.;—total, 1,530,857l. 2s. 11d. Receipts—shares, 1,657,692l. 7s. 5d.; shares unregistered, 3,541l. 5s.; debentures, 341,882l.; calls in advance, 21,043l. 1s. 8d.; temporary loans, 100,084l. 17s. 10d.; extension shares (to be repaid) 6,613l. 11s. The total receipts to June 30 were 6,613%. 11s. The total receipts to June 30 were 1,622,027l. 2s. 8d., and the expenditure less than that sum by 8,624l. 14s. 6d., already alluded to as being in the bankers' hands.

The CHAIRMAN, after some observations upon the state of the company's affairs, moved the adoption of the report.

Mr. J. FIELD said, that having been appointed one of the auditors of accounts, he felt bound to state his complete satisfaction with the company's affairs, the accounts having been kept with the strictest accuracy. The shareholders would observe that, for the first time, a statement of revenue was laid before them. There were satisfactory as well as unsatisfactory features in those accounts; they were unsatisfactory, inasmuch as in the earlier periods of the company's existence larger outlays were made than were absolutely necessary; but they were satisfactory because the profits had greatly increased, having been raised from 11,000l. to 19,000l. It had been rumoured on the London Exchange that the line was not paying its expenses. His statement of the profits showed the groundlessness of that rumour, and he was glad to say that their returns were not only sufficient to pay the debenture interest but also to carry a material sum to the general fund. The arrears on calls were 50,000l. on the 30th of June, the calls having become due only a few days before that date. Considering the monetary pressure of the times he thought the company would stand in a very favourable light when contrasted with other and more powerful corporations. He advised the removal of the secretary's

office, with its staff of officers, to London.

Mr. Fox observed that the working expenses of the line were 66 per cent. on the receipts, whereas the general amount was 40 per cent., and in many cases not more than 33.

The CHAIRMAN explained that such would not be the case when the line was opened throughout; there was always a heavier comparative expense in working a short and partly unopened line.

Mr. FIELD complained of the want of accommodation provided by the Eastern Counties line to the town of Ipswich. It was impossible for a person to leave London for Norwich until 8 a.m., whereas he ought to be able to leave at 7 at the latest. Then such a person ought to be enabled to leave Ipswich at 7 or 8 p.m., whereas he could not remain in the town later than 5 15 p.m. It was not creditable, on the part of the Eastern Counties, thus to annoy the Eastern Union, in order to destroy their property and to compel them to join that company on unfavourable terms. He wished to say a word on the rate of travelling on the Eastern Counties line, the average rate being less than 20 miles an hour.

The Report was then adopted.

A question having been asked with regard to

The CHAIRMAN said the Act of Parliament gave them power to make a dividend on the capital up to December 1848. The proprietors had agreed to forego a dividend for 1848, or rather had resolved that the dividend should be put to their credit, and paid after the opening of the line to Norwich.

The meeting was then made special, for the purpose of considering a modified agreement with reference to the Stour Valley line and its extensions. It was agreed, however, that the meeting should be adjourned until the 9th of October, to be held in London.

#### LONDON AND BLACKWALL.

Aug. 22.-Half-yearly Meeting, London.-Mr. J. N. DANIELL in the chair.

Mr. KENNELL, the secretary, read the report :-

Mr. Kennell, the secretary, read the report:—

The nett balance on the revenue account amounts to 5,4654, which will admit of the payment of a dividend of 1s. 6d. per share, clear of income-tax, on the 48,000 original and the 24,000 new shares No. 1, which are now entitled to participate in the profits of the undertaking. The directors recommend that such dividend be declared. It is satisfactory to observe that the sum thus applicable to the payment of a dividend is larger than on any previous corresponding half-year, enabling the directors to propose a dividend equal in amount to that paid at this time twelve-month, although the number of shares has been since that period increased by one-half. This result is attributable to the beneficial operation of the conversion of debentures into capital, by which a large and permanent reduction is made in the annual expenses. The comparative passenger traffic shows that for the first six months of last year there were 1,354,629 passengers, producing 22,022d. 15z., and for this year, 1,273,969 passengers, producing 22,02d. 15z., and for this year, 1,273,969 passengers, producing 22,02d. 15z., and for this year less than in the corresponding portion of 1847. This decrease is principally confined to the local traffic; the subject has occupied the attention of the directors, and they are led to believe that it is assignable in a great measure to the continued depression in commercial affairs. In the Gravesend traffic there has been an increase notwithstanding the untoward state of the weather, and it is but reasonable to suppose that the receives from this source the Gravesend traffic there has been an increase notwith-standing the untoward state of the weather, and it is but reasonable to suppose that the receipts from this source would have been much larger had the season been more propitious. The directors have much pleasure in reporting, that the heads of an agreement with the East and West India Docks and Birmingham Junction have been finally settled, the directors of that company undertaking to com-plete a junction with the extension line by the time their own line shall be finished to Camden Town. The clauses own line shall be finished to Canden Town. The clauses in the bill introduced into Purliament this session, empowering the Blackwall to make a junction between the two lines, were consequently withdrawn, and the bill in the form of an amendment Act, authorizing the consolidation of the several issues of shares, and containing power to vary the number of directors, has received the royal assent. The directors are still in negotiation with the Eastern Counties in reference to the use of the extension line; and being as strongly as ever convinced of the great importance of the terminus of the line at Fenchurch-street, they cannot doubt that a common interest must necessarily lead to an arrangement satisfactory to both companies. In their last arrangement satisfactory to both companies. In their last report the directors expressed their hope that no considerreport the directors expressed their hope that no considerable delay would occur in bringing the extension line into operation, and they fully anticipated that by this time the works would have been completed; no effort on their part has been wanting to accomplish this object. Had such, however, been the case, the line could not have been worked to advantage until the gauge on the old line had been assimilated to that on the extension. The bill authorizing the alteration of gauge only received the royal assent on the 22nd of last month, notwithstanding that every exertion was made to press it forward. The season being thus far was made to press it forward. The season being thus far advanced, the directors have thought it prudent not to interfere with the traffic during the present and ensuing mouth, and they have therefore determined to defer closing either of the lines for the alterations necessary to the introeither of the lines for the alterations necessary to the intro-duction of the locomotive system, and the change of gauge, until the 1st of October. In the meantime all requisite preparations will be made, and the directors bave every confidence, from the report of their engineer, that the ex-tension line will be open in November, and that both the lines will be in full operation, under the new system of working, before the close of this year.

The statement of accounts showed the receipts on capital account at 1,147,075l. 16s. 8d.; expenditure, 1,079,169l. 17s. 8d.; balance to credit, 67,905l. 19s.: 26.531l. 12s.; expenditure, 20,904l. 12s.; balance, 5,626l. 19s. 1d. (less income-tax, 161l. 19s. 1d.); nett balance, 5,645l. The extension account shows the total receipts at 174,070l.; expenditure, 220,505l. 10s. 2d.; balance, 46,435l. 10s. 2d. against the company—the amount due on calls being 30,522l. 10s.

The CHAIRMAN, in moving the adoption of the report, expressed his regret that the non-realization of the directors' expectation in the opening of the extension line, and the alteration of the main line for locomotive traffic before the present meeting. The delay arose from the time required to pass the bill authorizing the alteration of the gauge of the line through Parliament, it having only obtained the royal assent last week; and he had no doubt that it would meet with the satisfaction of the shareholders

carry it out, as they would not interfere with the traffic of the line, which is very large during these two months. At one time they (the directors) thought of closing one of the lines, while the other was being widened, but seeing the inconvenience they might be put to if the rope should break, they had determined to postpone it until later in the year. The first point in the report was the agreement entered into with the London and North-Western, or rather with the East and West India Dock and Birmingham Junction. He had said the London and North-Western because the line was promoted by that company. There could be little question but that great advantage would accrue to the Blackwall from that source, viewing it not only with regard to the number of passengers it would bring over the line, but as a means of communication with the docks of the districts on the Birmingham line. At the last meeting of the London and North-Western, Mr. Glyn said, speaking of the East and West India Dock line, "The works were being proceeded with. As to whether the line would pay or not to the extent anticipated was a question which would be very difficult to an-It was however a scheme of the greatest importance to the company, and whether it paid 4 or 5 per cent. it would be invaluable to that company in opening up a communication with the city of London." He thought that opinion very valuable, as giving them a good support in their opinion of the as giving the a good support the Blackwall pro-prietary. The next company with which they had been in communication was the Eastern Counties. Principles had been laid down for certain arrangements, and he believed that ultimately they must be carried out, even in deference to public feeling, which would demand some such arrangement when they had their line opened, as it were, to the doors of the Eastern Counties. He trusted within a very short time to be able to complete the extension line, and at the same time widen the gauge of the southern side of their own line for locomotives, in the meantime conducting the traffic on the north line, perhaps running the trains half-hourly instead of every quarter of an hour, as at present. On the south line being ready for opening, the gauge on the north line could be altered, and thus the traffic would be conducted without interruption. He had no doubt that there would be a considerable saving when the alterations were completed by the use of the locomotive: secondly, that there would be a large increase of traffic from the extension line; and thirdly, that the connexion with the North-Western line would prove very advantageous-though the last circumstance was probably a little distant, but the effects of the other two would be immediate. They had purchased a large quantity of land for little more than what was usually paid for severance, well adapted for frontage for houses and providing adequate station room. There was another source of profit of which they had never availed themselves in the original. He alluded to the arches on which the extension or connecting line was built. It was proposed to let them for conversion into cottages for the working classes, and one was now being fitted up as an experiment to see how it would answer. He thought he had alluded to all the points of importance to their future prospects, and he would therefore turn to their present and retrospective position. During the past six months circumstances had occurred both at home and abroad, which had affected all travelling, while there had seldom been a season so decidedly bad with regard to the state of the weather, and as their's was a fair-weather line. they had of course peculiarly felt it. Taking all these circumstances into consideration, he thought it was matter of congratulation that their position was not worse, the dividend even being better than before; and he had no doubt that, though they had lived in hopes for many years of prospective advantages, they would now in a couple of months be enjoying them. Without taking any credit to themselves for it, he might be allowed to state that ever since the directors had entered office they had looked to extensions as the only means by which any great gain could be made to the company, and they were now on the eve of testing their expectations. Their staff was good and efficient, and their engines, he was told, were valuable as marine engines, and could be turned to good account. The directors had done all they could o promote the interests of the company, and if they had succeeded in obtaining the approbation of the proprietors they would rest satisfied at the result.

Some conversation took place as to the propriety of taking legal steps to enforce the payment of the calls on the extension shares, which, the CHAIRMAN said, in their present depressed price, he did not think advisable, and as to whether the line could be leased to other companies, in which Mr. Ald. SALOMONS and

not be expected that any offer would be made in the present state of railway affairs to lease the line, and the propriety of fairly testing its value when the extensions and East and West India Docks Junction line were opened, before parting with it, though the CHAIRMAN said the subject had not been, and would not be, lost sight of.

The report was adopted and the dividend was declared due on the 4th of September.

EAST AND WEST INDIA DOCKS AND BIRMINGHAM JUNCTION.

Aug. 24 .- Half-yearly Meeting, London .- Mr. T. Young in the chair.

The report stated that the directors had proceeded with the construction of the line more rapidly, the period being advantageous in regard to the price of materials, and as delay would greatly increase the cost of the undertaking. At the meeting in August last they reported that the first contract for 2½ miles had been made. These works were now far advanced, and would be completed by the end of the present year. In April last the directors made a second contract, for the works between Dalston and second contract, for the works between Dalston and King's-road, Camden Town, a distance of about three miles; and they have since been enabled to contract for the intermediate length between the first and second contracts, viz., from Dalston to Homerton. The works now in hand comprise a continuous length of 6½ miles, and from periodical personal inspection the directors can report that they are advancing satisfactorily. A conditional agreement had lately been made with the Blackwall. whereby the use of that line will be secured for the conveyance of the traffic of this railway to or from the City, the London and St. Katherine's Docks, and the Brunswick Steam-wharf at Blackwall. It was thus necessary that this company should construct a short and comparatively inexpensive branch, half a mile in length, to connect the line with the Black-wall Extension line at Bow. The land required for the purpose was within the limits of the Acts of Parliament of the two companies. In return for this outlay the Blackwall are to allow the use of their termini at Fenchurch-street and Blackwall, and of the intermediate stations, and are to construct a branch from their main line to the London and St. Katherine's The statement of accounts showed the total Docks. receipts at 242,1861. 18s. 2d.: expenditure, 234,930L 2s. 8d.; balance in hand, 7,256l. 15s. 6d.

The CHAIRMAN, in moving the adoption of the report, stated that the short line of half a mile to connect this line with the Blackwall could be constructed at a trifling expense, namely, 16,000l. weeks ago he went over the works, and found them

in a very satisfactory condition.

Mr. Londell asked what was the whole length of

The CHAIRMAN replied about 8 miles, of which 6 miles were under contract and would be completed considerably under the estimate of the engineer

A Proprietor asked if there was any specified time

by which the whole line would be completed.

The CHAIRMAN expected it would be at Christmas

Mr. Roz asked if there was any further information to be given respecting the treaty with the London and North-Western.

The CHAIRMAN said there was no treaty, but negotiations had been going on. Nothing had been done since the last meeting. As to the value of their line, he would refer to the speech made by Mr. Glyn at the last meeting of the London and North-Western

Mr. DOBREE inquired if the line would be completed for the million of money they had to provide.

The CHAIRMAN thought 800,000l. would be suffi-

A Proprietor asked how much had been expended in land.

The Secretary replied 182,083l. 8s. 3d.

The CHAIRMAN, in reply to a Shareholder, said they did not intend to run their own engines, as the line would be worked by the London and North-Western.

The report was adopted.

#### BUCKINGHAMSHIRE.

Aug. 25.-Half-yearly Meeting, London.-Sir H. ERNEY in the chair.

The CHAIRMAN said he would wish to address a few observations to the meeting before the report was read. He had heard it said that the present was not a fortunate period for railway speculations, but he was not of the same opinion. It might perhaps be a bad time for those who wanted to sell; but to those who wished to hold their shares or to purchase it was not an unfavourable time; at least he could that the directors had not yet taken any steps to I the CHAIRMAN expressed their opinion that it could | say for this company that it was not less favourably

Digitized by GOGIC

circumstanced at present than when it was first | 25th of August 1847, that if their endeavours to obtain the started. As to the difficulties which some railway companies had of late experienced, his own opinion was, that the result of those difficulties would be of very considerable benefit to those who had experienced them. After speaking in terms of high eulogium of the good conduct of the labourers employed on the line, he spoke in strong language of the pre-judicial manner in which the Legislature had interfered with the management of railway property generally, and concluded by expressing his undi-minished confidence in this line, which he said was

second to none in the country.

The Secretary then read the report, which stated that, owing to the late difficulty of procuring money, the works had been suspended on their cross line, except that portion of it between Banbury and Brackley, but that portion between Claydon and Oxford would be completed by next summer; and the money that had been paid upon the calls made would prevent the necessity of another call before next year. Though the Government had interfered with the gauges to an injurious extent, this company had a clause in their bill by which a narrow-gauge line would be insured between Banbury, Birmingham and Wolverhampton. The capital account showed that from the 31st of December 1847 to the 30th of June 1848, the expenditure was as follows:-Act of incorporation, 41,8381. 12s. 4d.; land and compensation, 169,326'. 6s. 10d.; works of road, 268,218'. 11s. 11d.; engineering, 8,352'. 7s.; office expenses, saleries, &c., 4,250'. 13s. 10d.; direction, 1,162'. 11s.; parliamentary expenses, 6,558'. 12s. 7d.; interest on calls, 11,869'. 19s. 3d.; advertising, and sundry other expenses, making a total of 512,969l. 16s. 6d.; and on the credit side it appeared there was a balance in hand of 121,2611. 18s. 5d.; the amount in arrear was

35,4891. 2s.

The report was unanimously adopted, the auditors and other officers re-appointed, and 1,726 shares, upon which the first deposit only had been paid, were declared forfeited.

It was then moved by the CHAIRMAN, seconded by Mr. PIERREPOINT, and carried unanimously, that the thanks of the meeting be transmitted to the Rev. Mr. Freemantle for the gratuitous assistance he had afforded in promoting measures for the moral and religious instruction of the men employed on the line.

BIRMINGHAM AND OXFORD JUNCTION.

Aug. 21.—Adjourned Special Meeting, Birmingham.—Mr. P. H. Muntz in the chair.

Mr. COLMORE called the attention of the proprietors to their position in connexion with the Great Western. The Act confirming the sale of their line to the Great Western, with certain amendments inserted by the Lords' committee, had passed the upper house of Parliament. He wished to know whether the chairman could state how it was that the bill, with the amendments, had not been introduced for the sanction of the House of Commons

The CHAIRMAN, as well as Mr. WHATELEY, the solicitor, replied to the effect that they possessed no information upon the subject. They were as much surprised as any proprietor could be at the delay which had occurred.

The meeting was again adjourned until the 24th,

at Birmingham.

Aug. 24.—Mr. P. H. Muntz, the chairman, merely announced to the shareholders that the bill for legal izing the sale of the line to the Great Western had now received the royal assent, and that consequently all proceedings connected with this special meeting, convened some months since, were now at an end.

SOUTH WALES.

Aug. 23 .- Half-yearly Meeting, London .- Mr. C. RUSSELL in the chair.

Mr. Armstrong, the secretary, read the report.-Arr. Armstrono, the secretary, read the report.—
The directors, during the continuance of monetary and
commercial difficulties, have confined their operations
within the narrowest limits consistent with their obligations
to the contractors, and with maintaining in good condition to the contractors, and with maintaining in good condition works afready begun, and have only prosecuted the works of the most inaportant portions. They have entertained no new project; they have incurred no new engagements beyond those afready sanctioned; and they have made no application to Parliament, except for a bill authorizing them to pay 5 instead of 4 per cent, on the calls from shareholders. The application for such a bill was indispensable to give effect to the agreement with the Great Western for that purpose, and to meet the wishes and expectations of that purpose, and to meet the wishes and expectations of their own proprietors. Both these companies used their utmost efforts to procure the passing of the bill. The resolu-tion of the two Houses, prohibiting the payment of interest on calls out of capital, did not seem to impose any restric-tion with respect to lines already authorized; but the com-nittee of the House of Commons, of which Sir R. Peel was the chairman, considered that such a bill, if not incon-sistent with the letter, would be inconsistent with the spirit of those resolutions and the bill was thus host. The of those resolutions, and the bill was thus lost. The directors, however, have received from the Great Western

sanction of Parliament should fail, the Great Western would substitute "a full pecuniary equivalent in some other form." The directors have thought it right to con-Newport and Swansea, because it will bring a large and Newport and Swansea, necause it will bring a large and profitable section into early operation; because they are satisfied it will raise the value of the property by giving the most undeniable proof of its capability; and because it will essentially contribute to the reduction of the amount of interest otherwise chargeable against the capital. They will next attend to the completion of the portion connecting Newport with the Great Western at Gloucester, and they will be prepared to resume active operations beyond Swansea as soon as possible. In the session of 1846, when it was proposed that the South Wales should cross the Severn at Hock Crib, the Gloucester and Dean Forest had a bill before Parliament for making a line from Gloucester to a junction with the Monmouth and Hereford, with a branch from Grange Court to Hagloe, a distance of about 7 miles. Contemplating the possibility of failing to obtain the sanction of the Legislature or the Admiralty to cross the Severn in the mode proposed, the directors entered into an agreement with the Gloucester and Forest of Dean, that agreement with the Gloucester and Forest of Dean, that the option should be given this company to become the owners of that branch. The arrangement has been com-pleted, and this portion now constitutes an integral part of the South Wales main line. The directors have confined the South Wales main line. The directors have conlined the calls made on the proprietors within the narrowest practicable limits. Upon the whole, they consider that these calls have been paid with reasonable punctuality; but in some instances they have felt it their duty to press, through the solicitors, for the payment of such arrears as were due, and they think the time is now arrived for them to announce that they will, at the next half-yearly meeting or at some special general meeting to be convened for the purpose, forfeit those shares on which the second, third and fourth instalments shall then be unpaid. The number of shares in arrear was 4,800, and the amount 38,2421. 10z. The forfeiture will not release the proprietors of them from the liability of paying the arrears due, and the solicitors are now taking the necessary legal steps, under instructions from the Board, to recover those arrears. There will still are now taking the necessary legal steps, under instructions from the Board, to recover those arrears. There will still remain unpaid on the fifth and sixth instalments about 65,000%, but as those instalments were only made payable on the 5th of January and the 6th of April in the present year, the directors think it would be harsh and precipitate to proceed to the forfeiture of those shares at the same time. They will, however, use every possible effort to recover the arrears due on them, and will not hesitate to recommend the forfeiture of the shares if the arrears are not paid within a reasonable period. The 5,000 shares not paid within a reasonable period. The 5,000 shares which the Swansea Vale agreed to receive in payment for which the ownless value agreed to receive in payment set the purchase of their line, under the arrangement set forth in the report of the 24th of February 1847, have been placed in trust for that purpose. The directors have obtained authority from the Railway Commissioners to extend the time for the construction of their lines.

The statement of accounts to the 30th of June last showed the receipts at 1,118,284l. 1s. 6d.; expenditure, 1,007,004l. 12s. 2d.; balance, 111,279l.

(For Engineer's Report see Official Papers.)

The CHAIRMAN regretted, with the other directors. the depreciation of the company's shares in the market. Besides the causes which had operated more or less upon every other company, there were other causes which had tended to produce that result. There was no doubt that the railway system had been urged on too far, not by the old companies, but by the country and the Legislature, and the consequence was that a number of lines had been carried through districts never likely to yield a remunerative profit. The South Wales was very far from being included in that number, for its position and character were of a nature justifying the highest anticipations of ultimate success. That success depended not upon obtaining a portion of the traffic of other lines, but upon creating a new traffic of its own. The present state of the country and of the money-market did not, however, enable them to proceed with their under-taking with that speed which was desirable, at any rate as far as the entire line was concerned. But the directors considered that by confining their exertions to the completion of that portion between Newport and Swansea they would be doing the best they could to raise the price of the shares and render a large portion of their capital remunerative. He then alluded to the resolution which had been passed at the last meeting, by which an unlimited guarantee on the amount expended by the South Wales was requested from the Great Western, a guarantee which he thought that or any other company would never be disposed to grant under existing circumstances. He therefore urged the proprietors not to press the point, or indulge in a course of agitation which he was assured would be most detrimental to their interests.

On the motion for the adoption of the report,

Major Court, who stated that he w s a proprietor in the Great Western as well as . . the South Wales, referred to the proposal of a guarantee from the Great Western, and threw out as a suggestion that the Great Western should offer a guarantee of 4 per cent. on the full amount of the capital expended by the South Wales, and that the latter company should a renewal of the assurance contained in the report of the have the benefit of everything up to 5 per cent.

before the Great Western obtained any participation

in the profits beyond that sum.

Mr. MORTIMER said that though he was still persuaded of the justice and beneficial tendency of his resolution with regard to the guarantee, he would withdraw it until he had conferred with the directors.

A conversation then took place, in which several proprietors complained of the terms of the agree-ment between the South Wales and Great Western being prejudicial to the interest of the former.

Objection was made by the Rev. Mr. Spencer and others to the expenditure of 61,306l. for Irish and Welsh railways during the present difficulty of obtaining funds for their own line. The proprietors had only agreed to this contribution on the assurance of receiving a guarantee of 5 per cent. from the Great Western.

Mr. Saunders, a director, said the agreement between the two companies was, that the Great Western took a lease of the South Wales, the latter to pay their proprietors during the progress of the line 4 per cent. on their calls, and that when completed they should have 5 per cent. guaranteed from the Great Western. A modification was subsequently agreed to, that the South Wales should pay to their proprietors 5 per cent. during the period of construc-tion, which should form a part of the eventual guarantee of the Great Western; but as at that time there were several projects before Parliament in which the two companies were to take a common interest, it was arranged that the South Wales were to render assistance to a certain definite amount. He assured them that the Great Western had no intention of departing from their agreement.

The report was adopted.

TENBY, SAUNDERSFOOT AND SOUTH WALES. Aug. 23 .- Half-yearly Meeting, London .- Mr. W. CHADWICK in the chair.

The directors' report stated that little had been done since the last meeting, the Railway Commissioners having granted an extension of two years. A reduction had been effected in the charges of the soli-citor, as per bill delivered. The Saundersfoot and Harbour Company had reduced the interest from 5 The Pembrokeshire Iron and to 4 per cent. Company were proceeding satisfactorily. The directors of the Tenby line had only accepted of one moiety of the 500l. allowed them by the proprietors. The accounts showed the receipts to be 3,034l. 13s. 1d. and the balance in hand 2071. 6s. 5d.

The report was adopted and a resolution was passed for discontinuing the interest to the shareholders.

The meeting was then adjourned.

GLOUCESTER AND DEAN FOREST. Aug. 23.—Half yearly Meeting, Gloucester.—Mr. S. Baker in the chair.

The report stated that considerable progress had been made in the purchase of land. The directors regretted, however, that in some instances the demands were exorbitant, and they were compelled to appeal to juries; in every case the verdicts were less than the sums claimed. They had abstained from making calls beyond their absolute wants, and had transferred to the South Wales the portion extending from the Grange to Hagloe in conformity with the agreement entered into with them. The statement of accounts showed that 80,556l. 15s. had been received and 74,530l. 3s. 1d. expended, leaving a balance in hand of 6,026l. 11s. 11d.

The CHAIRMAN said the bridges across the Severn would be commenced early next year, and the whole of the works would be completed in full time to form the junction with the South Wales line as soon as that line was ready for the traffic.

The report was adopted and the retiring directors were re-elected.

CORK AND WATERFORD.

Aug. 18.—Half yearly Meeting, London.—Mr. T.

The report stated the hopes of better prospects for railway engagements not having yet been realized, the directors advised the suspension of all proceedings until the next half-yearly meeting in February. In the meantime they presented the financial statement for the last six months, which exhibited a balance in hand of 10,303l. 2s. 3d. As to the continuation of the interest on the deposits, the directors were anxious to take the sense of the proprietors. By the cash statement it appeared that the company had received 75,5691. 15s., and that the expenditure hitherto was 65,266l. 12s. 9d., leaving the balance, as above stated, of 10,303l. 2s. 3d.

The CHAIRMAN having waited some time without twenty shareholders appearing to constitute the meeting, no resolutions were come to, and the meeting adjourned.

NOTICE IS HEREBY GIVEN, that the STATUTORY
HALP-YEARLY GENERAL MEETING of the North British
Railway Company will be held in Gibby Royal Hotel, Edinburch, on Wednesday, the 18th day of September 1843, at 12

o'clock precisely.

By order of the Board.

A. GULE, Secretary.

Dated, Aug. 2, 1818.

WESTERN LIFE ASSURANCE
AND ANNUITY SOCIETY.
3, PARLIAMENT-STREET, LOSDON.
NEW AND IMPORTANT FEATURE IN LIFE
In addition to the ordinary plans of Life Assurance, this Society possesses several features which present peculiar and important advantages to the Public Amongst which it is provided,—
"That if a party, from unforescen circumstances, should be UNABLE TO PAY A PRE-MIVEM when it becomes due, by making application to the Directors, he will be allowed once of circumstoid the value of the Policy at the time of the applications of the Premium of the Policy at the time of the application of the Premium of the Policy at the time of the application of the Premium of the Policy of OMITTING THE PAY.

MENT of that Premium privilege of OMITTING THE PAY.

Whole Premiums at least on the Policy of the Policy of the Policy of the Policy of the Policy of the Policy of the Premium on inited were paid, being however charged with a debt equivalent to that Premium, and its interest at 5 per ceut, which will be deducted from the amount of the Policy when the assured dies. The Policy holder shall, however, have it in his power to free his Policy from the debt at any time, by paying the amount due. The great advantages of this feature must at once be seen, since it removes the usual objections to the ordinary system of Life Assurance, by which an Assurer often loses all the benefit he sought in paying regularly the Premiums for many years on a Policy, because, from temporary difficulties, he is unable to pay a Premium when it becomes due, and the Policy obsequently lapses to the Office.

The necessary Forms, with every information as to the mode of effecting Assurances, Endowments for Children, or Provisions for Old Age, may be obtained on application to the Actuary, No. 3, Parliament-street, London, or to any of the Society's Agents in the Country.

EMIGRATION AND COLONIZATION. EMIGRATION AND COLONIZATION—

Zealand, &c., and as the supposed expense of an OUTFIT often prevents individuals emigrating, S.W. SILVER & Co. CLOTHIERS, OUTFITTERS and CONTRACTORS (having a large interest to maintain in those Colonies), have been advised to make known that they can supply a comfortable Outfit, including bedding. for male or female emigrants, from 44 (nett) upwards, or less 32. If needful), and for children in proportion, at 4, Bishopsgate-street Within (opposite the London Tavern), where Lists will be given on application. S. W. & Co. being the makers of nearly every article in all the outfits they supply, and as one of their objects is to promote emigration, they neither receive from agents, nor pay the too usual commission to any person introducing passengers to be fitted out, so that the passage and outfit may be procured at the least possible expense; but they will, on application, divise passengers how to obtain the most economic passes to the Colonies. They have a representative in every Australian colony, to whom they ship clothing monthly—thus they would forward spmall payers, given a subject of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the cont

CHESTER AND HOLYHEAD

OPENED THROUGHOUT TO HOLYHEAD.

LONDON TO DUBLIN IN 13 HOURS.

LONDON TO DUBLIN IN 13 HOURS.

The Chester and Holyhead Railway is NOW OPEN throughout, with the exception of about 4 miles adjoining the Menai Straits, for which the Company have provided properly appointed conveyances, the charge for which is included in the Railway Fare.

The Admiralty and Company's splendid Steam-packets, 670 tons, 370-horse power, run between Holyhead and Kingstown, in conjunction with the following Trains, performing the passage in about four hours:—

LONDON TO DUBLIN.

1. From Eusten-square, London, at a quarter to 9 in the exer-

1. From Euston-square, London, at a quarter to 9 in the evening, with the Irish Mails, and from Chester at a quarter to 4 in the morning, leaving Holyhead for Kinestown (and Dublin) at a quarter to 7 in the morning, and arriving at Kingstown about half-past 11, Dublin time.

2. From Euston-square, London, by Express Train, at 9 o'clock in the morning, and from Chester at a quarter to 3 in the afternoon, leaving Holyhead for Kingstown at a quarter to 6 in the afternoon, arriving at Kingstown about a quarter-past 9, Dublin time.

DUBLIN TO LONDON.

time. DUBLIN TO LONDON.

1. From Kingstown at half-past 8 in the morning. Dublin time, arriving at Chester at 10 minutes past 8, and in London at half-past 10 in the evening.

2. The Admiralty Packet, with the Mails, from Kingstown at half-past 11 in the morning; the Train in conjunction therewith leaving Holyhead at 20 minutes past 6, arriving at Chester at 25 minutes past 9 in the evening, and in London at a quarter to 5 the next morning.

Only the Admiralty Packets and Mail Trains (as above) run on the Sunday.

the Sunday. Aug. 12, 1848.

The HALF-YEARLY ORDINARY MEETING of the Shareholders of this Company will be held at the Company's Offices, 61, Moorgate-street, London, on Wednesday, the 20th day of September, at 10-lock precisely.

The TRANSTER BOOKS will be closed on the 9th day of September, until after the Meeting.

PORT OF GREAT GRIMSBY.

## NOTICE TO FOREIGN MERCHANTS

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d, per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being ac cessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

Safen von Great Grimsbn.

SATURDAY, SEPTEMBER 2.

STRIKE OF ENGINEMEN ON THE LONDON AND NORTH-WESTERN.

The return of the ENGINEMEN to their work on the LONDON AND NORTH-WESTERN will be felt by many to be a subject of congratulation. The accident which unluckily happened during their revolt,-although it was one that might have taken place at any other time, and with the ablest drivers,-was evidently thought by great numbers of the travelling public to have had some connexion with the employment of new hands: and no small part of the sudden falling off in the traffic returns last week, as compared with those of the year preceding, may probably be ascribed to the alarm from this notion. The announcement of the dispute being ended, and of the old men being at work again, will have removed this cause of anxiety, at least: and the effect of its removal will, we hope, be felt in an improvement of the next week's busi-

Still, the satisfaction with which the issue may be regarded is far from being unqualified. We cannot thoroughly approve of the terms on which the dispute is stated to have been arranged. The directors, by giving up Mr. M'Connell's classification, have virtually afforded the men a triumph over their superintendent; which we fear may produce effects more injurious than any panic that could have been caused by their continued standing out. These men will now be apt to think that by quitting their work in a body they can at any time overthrow the declared resolution of the directors by whom they are employed; and it cannot be expected that they will use this discovery with absolute moderation hereafter. We do not see, indeed, how they can be induced on any future occasion to submit to any regulations whatever that it may please them to think at variance with their interests,how it will be possible to prevent them from laying down, on the strength of this first success, whatever conditions they may choose to consider necessary for their own convenience or profit-without bringing the question of obedience once more to trial, and once more facing the worst consequences of the men en masse refusing to obey. Such being the visible upshot of the arrangement of the present dispute as it has been settled, it might, we believe, all things considered, have been better to go through with it once for all, instead of merely putting off the evil day by concessions that may have the effect of requiring all to be done over again on the next occasion, unless it be intended that the enginemen shall become the masters of the London and North-Western Railway. As the matter had gone so far, we think it would have been better to have brought it to a decisive issue, at whatever cost:-not that we underrate the cost of persevering-which the untoward accident at Ashton Bank of course greatly increased,but because we feel that no price is too high for the preservation of that discipline without which no railway can be well or even safely worked; and because we see that if discipline is to be kept up it can only be by determining the question now raised, whether the directors and their officers, or the working men under them, are to have the controlling voice in the arrangements of the line. The effect of patching up a peace at the sacrifice of a clear decision of this question cannot be permanent: and as the point was once mooted, it would, all things considered, have been best, we think, to have disposed of it once for all in the right way. Such was certainly the feeling of the proprietors when they supported the chairman in his assertion of the necessity of resisting the enginemen's dictation:

Since my last report respecting the state of the works on the case title, and which must be settled, in the most positive way, before any safety can be had in the working of the most important of all the internal organs of the railway system. For the moment an encouragement has been given was once mooted, it would, all things considered,

all who examine the bearing of the matter, and weigh the consequences of a want of firmness in so important a crisis.

This opinion, it is clear, cannot be affected in one way or another, by the particular merit of the enginemen's case. There was no longer any time for going into this, after the directors had heard the complaints, been threatened with the consequence of adhering to Mr. M'Connell's orders, and had nevertheless determined to support him, with the strike fully in view. From this moment the question at issue was not the fairness or hardship of the regulations which had provoked, or were declared to have raised the mutiny. It was simply one of the directors' whole authority, which they had chosen, on a sufficient view of the case, to stake on the support of the locomotive superintendent; and they could not from thenceforth revoke that support without compromising themselves. This, we fear, they have done by allowing the original matter of dispute to become a subject of arbitration, at a time when the question really at issue was not whether this matter had been properly determined in the first instance, but whether the determination, formally taken up by the Board, should or should not be overthrown by the menaces of the enginemen being carried into effect. It is clear to us that, under such circumstances, the language of a resolute directory, aware of the importance of preserving its authority, as the first of all conditions. in a matter like this, would have been-" We cannot treat on this subject at all, at this moment, with men in your situation. We have already informed you that we believe Mr. M'Connell to have given you no just reason for complaint, and that consequently we had determined to support him, in spite of your threats to strike work. You are now no longer in our employ; and the first condition on which we can give you the chance of returning to it, must be your willingness to accept what we have already informed you we believe it right to maintain; and we shall not allow any inconvenience or loss whatever, that your combination to quit may inflict upon us, to make us give up what we think indispensable to the proper discharge of our duties both to the proprietors and to the public. These duties we have assumed, and will fulfil at all hazards; and as any treaty with you, on the merits of the case now, would be directly at variance with them, we cannot listen to your proposal, or regard the matter as open to arbitration at all, in its present state. You have chosen to quit the company's service: we have not chosen to keep you on the terms you sought to impose upon us: we shall put no men into places of responsibility who come to ask for them in what is virtually a threatening manner, with conditions of their own framing; but we must do as we can with those who will enter the service on the only terms which it properly admits of. We do not compel any man to stay; we desire to treat fairly all who do stay, and believe that we have so done; but we cannot submit, on the other hand, to compulsion from them-to be ruled by those whom we are responsible for ruling, so long as they remain in our employ."

This, we believe, would have been the proper answer to the proposal of an arbitration; and in so far as the course followed has been in the opposite direction, we must regret its tendency. It is clear that a question has now been started, which no temporizing

and such will be the deliberate conclusion of to exaction sustained by threats of a strike, which is likely to prove a dangerous example; and it would be too much to expect the example will not be followed, and the experiment repeated. Thus it is, that a straight resolute course will, after all, in all cases, be found the best. It is of no use to compromise a difficulty, because it may be exceedingly unpleasant at the moment to face it; if you evade it, it will merely be on the condition of meeting it again, when it will only be more unwelcome and intractable than before. Meanwhile we do not see what means the directors can adopt to rescue Mr. M'Connell from the questionable position in which they seem to have placed him—how they can recover his authority over the men for whose conduct and discipline he is responsible. This difficulty is the first untoward effect likely to result from letting the enginemen's dictation virtually prevail over an authority, which the directors themselves, indeed, were openly pledged to support. We apprehend that it may not be the last; and that the concessions of the Board have opened a chapter of disputes, the settlement of which will not be the easiest of the many tasks that the railway interest has yet to encounter.

#### Official Papers.

CALEDONIAN.

Engineer's Report for the Meeting, Aug. 31 (p. 625).

In the last half-yearly report, we stated that the com-munication between Carlisle and Edinburgh and Glasgow munication between Carlisie and Edinburgh and Glasgow by railway had been recently opened to the public; and on this occasion we are enabled to state that the direct com-nunication to the North has been completed. The works on the Castlecary branch (which connects the Glasgow Fork with the Scottish Central at Castlecary), were suspended with the Scottish Central at Casticeary), were suspended for nearly twelve months after the commencement of the other parts of the line; and although some delay has arisen in the progress, in consequence of financial difficulties, the line was opened to the public on the 7th of August, or within six months of the opening of the main line. This extension, added to the length formerly opened, gives 141 miles of the Caledonian now in operation, and also completes the system of railways from London to Montrose, making a distance of about 500 miles of continuous railway. The only work of any importance remaining to be completed on the main line, is the rock cutting at the Beattock summit. This excavation has been much retarded from the confined space in which the work is necessarily carried on, but it will now be speedly completed. The drainage and solting of the slopes on the main line have been carefully attended to, and the greater portion of this description of work has been completed. The permanent way is generally in good order, but some of the embankments, owing to consolidation, require ballast. All these unfinished works will, under existing arrangements, be completed during the autumn. The sheds for nearly twelve months after the commencement of the ballast. All these unimisting works will, under existing arrangements, be completed during the autumn. The sheds or stations for goods are still incomplete, and more accommodation for passenger traffic is desirable at some stations, especially upon the Castlecary branch; but whenever this requisite expenditure can be properly entered upon, it would be desirable to do so.

Clydesdale Junction.—The works on this line were almost suspended from the date of the last report up to July, but immediately on receiving instructions to proceed, the con-tractor largely increased his force, and the workmen and material that were employed upon the Castlecary branch, have also lately been transferred to this line. The object in view is to connect at the carliest possible period the Cale-donian with the Ayrshire and Greenock, and also to obtain doman with the Ayrshire and Greenock, and also to obtain a station on the south side of the Clyde. There scenes every probability that, with favourable weather, this connexion will be completed this autumn. The preceding remarks apply chiefly to the Motherwell branch. The works on the branch to Hamilton have for some time past been suspended; but as the difficulty in substituting open cutting for the tunnel, alluded to in the last report, has now been removed under the sanction of Parliament, the works will be resumed under favourable circumstances, whenever funds are newighed for the nursons.

funds are provided for the purpose.

Garnhirk Ext. nsion to the Glasgow Station at Buchananstreet.—The works upon this line have been entirely susstreet.—The works upon this one have been entirely sus-pended since February last, with the exception of the tun-nel and the diversion of the Forth and Clyde canal. Three-fourths of the diversion of the Forth and Clyde canal. Three-for the diversion of the Forth and Clyde canal. Three-for the diversion of the Forth and Clyde canal. J. E. EBBINGTON.

Lordon, 11, Adam street, Aug 26.

LONDON AND SLACKWALL. Engineer's Report for the Meeting, Aug. 22 (p. 606). Since my last report respecting the state of the works on

Digitized by GOGIC

Eastern Counties is made, excepting about 100 yards immediately adjoining that railway, and this portion is in progress. The permanent way is laid along the whole line, excepting at the above-mentioned bridges and embankment excepting at the above-mentioned bridges and embankment. In altering the gauge and adapting the old line for the use of locomotives, I have found it necessary to strengthen and otherwise alter some of the bridges, the contracts for which, as you are aware, have been already let. I do not recommend you to commence these works until the end of September or beginning of October, for it will be necessary to stop one line, and thus cause an interference with the traffic which is unusually large about that period. It will take a month or five weeks to alter one line, and by that time the extension may be opened to the public simultaneously with one line of the altered way. In another similar period, say five weeks, the other line of way may be changed, and thus the whole may be in operation by locomotive power before the whole may be in operation by locomotive power before the end of the year. J. LOCKE.

#### OXFORD, WORCESTER AND WOLVERHAMPTON. Engineer's Report for the Meeting, Aug. 25 (p. 615).

Engineer's Report for the Intering, Ang. 25 (p. 015).
During the last six months, for the reasons referred to in
my previous half-yearly report, the works have not proceeded rapidly. A large portion of the funds at the disposal
of the company were necessarily required to complete,
within the time limited by the Act of Parliament, viz., the
4th of this month, the purchase of the numerous properties
for which notices had been served upon the owners, and to
which the general Act for extension of time did not apply.
The whole of the land on the main line and the Stoke The whole of the land on the main line and the Stoke branch and junction is now purchased or agreed for, except as small quantity in the neighbourhood of Woodstock, and the 23 miles near Wolverhampton, which, under the power of our recently obtained Act of Parliament, is to be deviated nearer to that town. For the former of these, and for any additional lands that may still be required, our powers of purchase have been extended two years by the Railway Commissioners under the recent Act, and for the latter we have ample time. Throughout the main line to Wolverhampton and the Stoke branch, a length of about 90 miles, the line is in course of construction, and a large proportion of the works are in an advanced state, and are, for the most part, proceeding satisfactorily; various portions, amounting in the aggregate to a length of 40 miles, are nearly ballasted, and fit to receive the permanent way. The Worcester tunnel is finished, and only a few yards remain to complete that at Dudley. Less progress has, however, been made with the and nt to receive the permanent way. The worester dumins finished, and only a few yards remain to complete that at Dudley. Less progress has, however, been made with the Mickleton tunnel, the heaviness of the ground and the great quantity of water having materially retarded the operations of the contractors, and which, in other respects, have not been satisfactory, but the work is now being carried on from six shafts, and more powerful machinery has been brought on to the ground, and other steps taken which promise improvement, and, unless we are again disappointed, the works may be completed in little more than twelve months, and not retard the general opening of the line. The brickwork and masonry of the viaduets at Blakedown, Hoo Brook, Fladbury and Aldington are almost complete; and at Stourbridge, Coalbourne and Hampton they are very forward. The foundations of the Worcester station are in progress. Of the open work, the Charlbury, Bilston and Kingswinford contracts are least advanced, but they are in the hands of experienced and I think energetic contractors, who can accelerate the completion should it be required. During the last half-year upwards of 2,000,000 cubic yards of earthway have been excavated, 26,000 cubic yards of chriskwest and manors arequeted and 140,000 cubic yards quired. During the last half year upwards of 2,000,000 cubic yards of earthway have been excavated, 26,000 cubic yards of brickwork and masonry executed, and 140,000 cubic yards of ballast spread on the line, and there are now about 3,000 men employed on the works. A considerable quantity of rails is in stock, and the delivery of timber for the permanent way will shortly commence. The surveys for the Wolverhampton station, and the portions of the line connected with it and with the Shrewsbury and Birmingham, for which powers have been obtained during the last session, are being revised, nereparatory to contracts being made for are being revised, preparatory to contracts being made for executing the work.

I. K. BRUNEL

#### 18. Duke-street, Westminster, Aug. 21.

#### WILTS, SOMERSET AND WEYMOUTH. Engineer's Report for the Meeting, Aug. 28 (p. 616).

Engineer's Report for the Meeting, Aug. 28 (p. 616). During the last half-year the progress upon the works generally has been unavoidably small. That portion between Thingley and Westbury has, however, been completed, and will be ready for opening in a few days. It having been determined to open at once to Westbury instead of Trowbridge, a temporary terminal station has been formed at the former place, which will be easily accessible from Westbury, Warminster and Frome. On the Devizes branch the works, although not actually stopped, have been delayed by the difficulty in obtaining possession of the land at the Devizes end. Some of the principal bridges on the line have been commenced; but it would be useless proceeding with these until the earthwork at the upper end is more with these until the earthwork at the upper end is more advanced. The Bradford branch, as at first projected, might have been completed and opened at the same time as the line to Trowbridge; but it was considered desirable to ex-tend the line to the point where the permanent station would ultimately be established, and the works required for this were heavy, and have involved considerable delay. The difficulties which were met with have now been overcome, and before the end of the year this branch may also be opened. Between Bradford and Bath some of the heaviest opened. Between Bradford and Bath some of the fleaviest works, particularly the aqueduct at the crossing of the canal at Avon Cliff, have been completed. This last has been a work of considerable difficulty, and requiring very great precautions. From Westbury to Frome the work is proceeding as fast as possession of the land permits. Between Westbury and Salisbury a considerable amount of work has Nestoury and sansoury a considerance amount or work insue-been executed; but at the lower extremity the work is sus-pended until that near Westbury is more advanced. From Frome southwards, towards Yeovil, nothing has yet been done; but in the neighbourhood of Yeovil the works have been for some time in a forward state. Between Yeovil and Dorchester not much progress has been made since my last half yearly report. At Holywell tunnel we have proceeded

slowly, but so as to secure the completion of this work in time for the rest of the line, should these works be proceeded with more rapidly. In the neighbourhood of Porchester, and thence to Weymouth, where the works are heavy, they have been progressing steadily; and the ltincombe tunnel, which is the principal work, is nearly com-

eted. About 130 yards remain still to be executed. 18, Duke-street, Westminster, Aug. 24. L K. Brunel.

#### LONDONDERRY AND COLERAINE

Engineers' Reports for the Meeting, Aug. 29 (p. 617). I have to lay before you the following report on the state of the works on this undertaking, comprising both the construction of the railway, and also extensive reclamations of waste lands from Lough-Foyle. First, commencing with the railway:—On contract No. 2, (the tunnels, &c. at Downhill,) nothing has been done since my last report; nor do ladvise, for the present, any further prosecution of the works there, with the exception of securing the roof of that part of No. 1 tunnel, which lies immediately under the Temple, in the grounds of Sir H. Bruce. (In contract No. 3 also, no further prosecution of the works has been attempted; but parts of it need much repair. I have already required the compelled to do before the winter sets in.

Contract No. 1. The Reclamation.—It affords me much pleasure to offer my remarks upon the recent experiment you directed should be made at the Longfield embankment, by the contractor, Mr. Webb. The mode adopted by him I may regard as perfectly successful, so far as to establish the practicability of shutting out the water from the chief or central enclosure in eighteen months from the date of again fairly starting the works; indeed, from the progress words in the last month, with all the disedvantages of very Engineers' Reports for the Meeting, Aug. 29 (p. 617).

the practicality of suiting out the water from the date of again fairly starting the works; indeed, from the progress made in the last month, with all the disadvantages of very imperfect machinery, and inexperienced workmen. I believe it could be effected in less time. This may appear so inconsistent with the progress made by your contractors, that I feel it necessary to call your attention to the two modes of proceeding with the works. Eventually the bank will be the same, or nearly so, in shape; but by the present mode of proceeding, a great part of the width of the embankment, on the inner side, may be dispensed with. The mode of proceeding adopted by your first contractors, was to form the embankment by tipping in clay from waggons in the ordinary manner, and securing the material when deposited from the wash of the sea by a pitching or paving of stone;—thus limiting the progress to the rate at which the embankments could be pushed on from each end of the reclamation. The mode adopted by Mr. Webb is to drive a coffer dam, in the first instance, for the whole length of the reclamation, and thus shut out the water, and afterwards form the embankment both on the outer and inner side of reclamation, and thus shut out the water, and alterwards form the embankment both on the outer and inner side of it, leaving the coffer dam as a core or heart of timber and puddle in the centre of the bank, by which it will be so much strengthened that the width may be made much less than what was originally intended. By this mode of proceeding also, the work may be commenced at many points at the same time, an advantage so great that it needs no comment from me.

Derry, Aug. 22.

I regret my engagements did not allow me to go to Ireland before, but I took the earliest possible period; and, accord-ing to your instructions to that effect, proceeded to Lough Foyle, to examine the portion of embankment constructed, and on which my opinion was asked some time since. A considerable length of timber coffer dam has been conconsideration engine of the plans referred to; and the spaces have been filled with earth. A portion of sloped wall has been carried up on the sea-front of the dam; and the work altogether exhibits a great facility of execution, and complete stability when finished. The coffee dam is of itself sufficiently stable to sustain the pressure of water; but as a great advantage and convenience will accrue from the sea slope being carried at the same time, and as the construction of this work will remove all doubt as to any contingency whatever occurring to disturb the equilibrium of the coffer dam, I strongly recommend that the sea front be completed simultaneously with the coffer dam, and filled be completed simultaneously with the coffer dam, and filled with materials. The slope to landward can be finished at any convenient time hereafter, so that it is done before the materials of the coffer dam are decayed. If the sea wall is carried on as now proposed, you will find under the contingency of a storm and very high tide occurring together, and striking the wall, the worst which could happen would be a certain portion of heavy spray which might be carried over the wall; but as the back would be timber, no other disadvantage could be experienced except that of having some salt water thrown over the land contiguous to the bank; but if the back of the bank was made of loose materials, as heretofore, injury might be sustained until the breast wall was put up. But I am assuming that it will be convenient to delay the placing the breast wall in its place until the whole of the land is reclaimed and the water drawn off. I must at all times guard against any inference being drawn, that by what I now say I contemplate any heavy sea in storm-time occurring within Lough Foyle. I do not think there is a place where sea walls may be constructed with greater facility, or where the sea—or, I ought to say, the inland water—can have less chance of destroying the work, if made with moderate care. The bank may be completed, except the breast-work, within eighteen months; but if it except the breast-work, within eighteen months; but if it is a material object to complete it earlier, and the funds are at all times forthcoming, this period might be abridged. I have great pleasure in stating, that your resident engineer, Mr. Hassard, appears to possess all the care and judgment necessary for carrying on a work of so important and extensive a character as this is: and I may say, I know of none which requires a more strict supervision on the part of the engineer than this does. In conclusion, I beg to say, that if the work is continued as it is now being carried on, and completed with the outward front, I have no doubt of its nermagnet stability; and that it will answer all the purits permanent stability; and that it will answer all the poses required.

J. Gu J. G1888.

he directors recommend you to declare a dividend out of this sum at the rate of 6 per cent. per annum, which amounts to.. 57,658 16 0

Leaving a balance in hand of ..

On the works and line Mr. Adle reports as follows:—
"In obedience to your instructions, I beg to report that the whole of the works on the main line are in excellent condition. The Campsle branch has been opened, and may be considered as complete, with the exception of the stations and sidings, and these I propose to construct as cheaply as possible. On the Stirlingshire Midland Junction branch the works are being executed in a substantial manner. Various arrangements for the extension of the station at Glasgow are still under consideration; and I hope that the necessary increase of accommodation may be obtained without much increase of accommodation may be obtained without much encroachment on the valuable property by which the present station is surrounded. The plans for the open cutting of part of the tunnel are in preparation, but I propose to limit that operation very materially; for since the adoption of the fixed engine and wire rope in working the incline plane, so much time is saved in the passage of the trains through the tunnel, that very little inconvenience now attends it. I propose, therefore, in the first instance, to make one open cut only, to give light at the place where the carriages are stopped in attaching the train to the wire rope. By limiting the operations in open cutting of the tunnel a considerable saving will be effected. Every part of the plant has been well maintained during the last six months; and a proof of its efficient state was found in the readiness with which, on a few days' notice, to meet the late competition, eight additional trains were worked dally over the line, at a great speed, with the utmost punctuality over the line, at a great speed, with the utmost punctuality and safety. The heavy locomotive engines which were for-merly in use for working the inclined plane have been altered into goods engines; one of them has been at work for some months, and, from the experience had of its performances, I think that the goods trains will be worked in the winter

I think that the goods trains will be worked in the winter with creat regularity and ease.—Glasgow, Aug. 23."

The directors having considered that the duties of secretary and manager might be conjoined with advantage to the interests of the company, Mr. Wright, not being wishful to undertake the responsibilities of the latter office, has resigned his situation as secretary. The directors regret that a gentleman who has so long and so faithfully served the company should now leave it; and recommend you to vote the sum of 750L, to be presented to Mr. Wright as a mark of esteem and respect. Mr. Latham has been appointed the secretary of the company, in addition to his former duties, secretary of the company, in addition to his former duties, at the salary paid to him previously as manager. In accordance with the powers entrusted to them your directors cordance with the powers citrusted to them your directors withdrew their application to Parliament for all the new branches, and for the extension of the Edinburgh station. The powers asked for the improvement of the tunnel and station at Glasgow were cranted, as was also an extension of capital. The amalgamations of the Wilsontown, Morningside and Coltness and the Edinburgh and Bathgate with your line were lost on Standing Orders—one-half of the capital not having been raised and expended. But power was given to hold the shares you possess in the Edinburgh and Bathgate; and there is no doubt that when the requirements of the Standing Orders are compiled with the and Bathgate; and there is no doubt that when the re-quirements of the Standing Orders are complied with the amalgamations will be completed. The lease of the Scottish Central to the London and North-Western, the Laucaster and Carlisle and the Caledonian, was unanimously rejected

Digitized by Google

upon your opposition. The recent competition attempted by the Caledonian fully justifies the course recommended by the Board, and adopted by you at the last meeting. Had this company not been so well prepared to maintain such a contest, the consequences might have been very disastrous; but it resulted in each party proving that it possessed the means of injuring the other, without any benefit accruing to itself. Such a state of things could not be of long continuance; and your directors are happy to state that the heads of arrangement between the two companies have been agreed upon, by which it is hoped that all such contests will be avoided in future. The reduction in fares commenced by the Caledonian has already been stopped; and more general arrangements, by which each company is restricted from booking in competition with the other, will commence on the 1st of September. The rates charged by the Caledonian between Edinburgh and Glasagow will then be raised and regulated by the mileage of that company; and at the same date your Board proposes to raise the rates charged by the express trains to 10s, for the first-class passengers. With amicable arrangements thus made with neighbouring lines, and looking at the symptoms of returning activity in trade, the directors have much confidence in the future prospects of your property.

The CHAIRMAN, in moving the adoption of the

The CHAIRMAN, in moving the adoption of the report, alluded with regret to the diminished receipts on the line, which was entirely owing to the general commercial distress. The severe pressure on all mercantile affairs very much lessened the rate of travelling. Fewer passengers travelled when trade was bad. Some small increase had taken place on the goods traffic, from the arrangements which had been made to carry them more satisfactorily than been made to carry them more satisfactorily than before. Although a great decrease had taken place in the passenger traffic, they had all been carried with great regularity and without the occurrence of a single accident. In the last session they had been partly successful. They did not get all the capital which they wanted, but still they got as much as would enable them to hold their debentures. By powers recently obtained to raise 397,000L, they would be enabled to close the capital account, with the exception of the extension of the Glasgow station and the improvement at Cowleirs. They required to and the improvement at Cowlairs. They required to pay 5,000l. for the Shields line, 10,000l. for the new Edinburgh station, 23,000l. for the Campsie line, 30,000l. for additional plant, which latter would be requisite to work the new Stirling and Dunfermline line. They also intended to expend 5,000l. in building workmen's houses, which would be a profitable investment. There were, on the other hand, debts due to the company to a large amount, including 20,000l. owing by the Wishaw line, 10,000l. by the North British, for their share of the Edinburgh station, and 40,000l. for lands, &c. Their total capital would then amount to, as near as may be, 2,600,000l., when the capital account would be finally closed; or whatever was afterwards required would be taken from revenue. The directors also intended to raise the fares between Edinburgh and Glasgow by the express train, from 8s. first-class to 10s., and on second-class, from 6s. to 7s. 6d. Parties who travelled by express should pay an additional sum for it. On the ordinary trains they intended that the fares for the first-class should remain & as at present, but they intended to raise the second-class rates from & to & & & . 10d. to & . The parliamentary trains at 1d. per mile would remain as at present. Even at the advance the rates would be lower than those on most of the English lines. The extension to North Bridge, in Edinburgh, for instance, had cost about 200,000l., and they had never charged anything additional on account of this increased mileage and comfort, by which carriage and omnibus fares were saved. They had come to a cordial arrangement with the Caledonian, the basis of which was, that that company should not interfere with the Edinburgh and Glasgow traffic, and the Edinburgh and Glasgow should not interfere with the north and south traffic of the Caledonian. He hoped that they would soon also be able to enter into an amicable arrangement with the Canal Company. He then detailed the reasons on account of which

He then detailed the reasons on account of which the directors proposed a grant of 750t. to Mr. G. Wright, the late secretary of the company.

A long and desultory discussion followed, in which the Rev. Mr. M'NDUHTEN, Dr. M'FARLANE, and Messrs. BLACKADADER, MEADOWS, DRYSDALE and OPENSHAW took part, as to the state of the accounts and the lowering of the fares, which measure was

opposed by many of the shareholders.

Eventually the report was approved of, and a dividend at the rate of 6 per cent. per annum for the half-year was declared payable on the 18th of September.

Sir A. Agnew renewed his motion to memorialize the Postmaster-General against the company being compelled to carry the mails on Sunday.

STOCKTON AND DARLINGTON.

Aug. 21.—Annual Meeting, Darlington.—In the absence of any authorized report, we hear the

directors' statement alluded to the dulness of trade, stated the traffic had increased, and that the usual dividend might be paid: but as the new lines (those deased, we suppose, are meant) had not come into full operation, a dividend of 10l. 10s. per share (100l.) would be declared, clear of income tax.

MIDDLESHOROUGH AND REDCAR.
Aug. 25.—Half-yearly Meeting, Darlington.—Mr.
J. C. HOPKINS in the chair.

This line is leased in perpetuity to the Stockton and Darlington, at 6 per cent.

The business was merely to declare the dividend of 11. 10s. per share for the half-year ending the 30th of September next, which is to be payable (less income-tax) on the 18th of October to all registered shareholders on the 30th of September.

HUDDERSFIELD AND MANCHESTER. Aug. 23.—Half yearly Meeting, Huddersfield.—Mr. W. Aldam, jun. in the chair.

The report stated that 132,652 passengers were conveyed over the line during the past half-year; the receipts, 2,915.; merchandise, 460l.; the weight conveyed, 11,417 tons; that the traffic on the Huddersfield and Sir J. Ramsden's canals had exceeded that of the previous half-year by 807*l*, and that a very considerable saving had been effected in the expenconsiderable saving had been effected in the expenditure for lock-keeping, which amounted for the half-year ending June 1847, to 571L, and this half-year to 344l. The directors acknowledge the prompt response of the shareholders to the calls. The total arrears to this date amount to only 22,205l, and of this sum 6,602l are arrears upon the last call. The loan came in but slowly, only amounting at present to 167,511l.

The report of the engineer stated that the portion of the line open between Huddersfield and Cooperbridge is in a very fair condition. The small branch at Cooper-bridge has been delayed, as it cannot be used to advantage until the West Riding Union lines are completed. The bridges, viaducts and tunnels on the unfinished portion of the line are in a forward state.

state.

The CHAIRMAN moved the adoption of the report,

which was carried unanimously.

A resolution was passed confirming the forfeiture of 181 original shares and 54 third shares.

WEAR VALLEY.

Aug. 25.—Half-yearly Meeting, Darlington.—Mr.

H. Stobart in the chair.

The report stated that the calls made during the half-year had been freely responded to; the full amount of the 50l. shares has been called up, and the amount of the 50t. shares has been called up, and the sum of 10t. per share on the 25t. shares has been called during this and last year, which includes the call payable by instalments of 25t. per share on the lat of September, and 20t. per share on the lat of November. No further call will be made this year, and in 1849 the amount cannot exceed 5l. per share, as stipulated. The contract works are completed,

and the contracts in course of being wound up.

The report was adopted.

The following dividends, at the rate of 6 per cent.

per annum were declared:—For the half-year ending
the 30th of September next, to be paid on the 18th
of October to all who stand upon the register on the 30th of September, 1l. 10s. on the 50l. shares paid in full, 15s. on the 25l. shares paid up, 1l. 9s. 2d. on the 50l. shares with the calls duly paid, 6s. 3d. on the 25t. shares with 9th can bury party. 25t. shares with 10t. September, and 6s. 32d. on the 25t. shares with 10t. paid up on that day. The dividends are subject to income-tax.

The line is leased in perpetuity to the Stockton and Darlington.

WEST DURHAM.

Aug. 22.—Annual Meeting, Gateshead.—Mr. G. Hudson, M.P., in the chair. This is a coal line of four or five miles in length. It

was projected in 1838, and lately incorporated with the York, Newcastle and Berwick, being one of Mr. Hudson's purchases. Some time ago it was in a bad financial condition, but under new management it is rapidly improving. The accounts for the present year showed a profit of 700l., which it was agreed to apply to the reduction of the debt of the company.

Last half-year's traffic was reported to be equal to that of the twelve months of 1847. Mr. Allport stated that he had examined the line, and mentioned some particulars in the charges for traffic.

Messrs. G. Hudson, J. Richardson, N. Plews and N. Wood were elected directors. Mr. W. Richardson was appointed auditor, and Mr. Close secretary.

WHITEHAVEN AND FURNESS JUNCTION. Aug. 29. Half-yearly Meeting, London. - Earl of London in the chair.

en kept within limits so as to avoid Before next half-yearly meeting, the works had frequent calls. however, the directors hoped to open the line as far as Braystones (or to Ravenglass if the funds were sufficient), the former a distance of 8 miles, the latter of 17. There were three alternatives in considering the question of a partial opening, viz., from Whitethe question of a partial opening, viz., from White-haven to Braystones, being 8 miles, at a cost of 9,500l.; from Whitehaven to Ravenglass, being 9 miles more, at a further cost of 26,000l.; from Whitehaven to Bootle, being 6 miles more, at a further cost of 22,000l. The second is the one which it is believed can be accomplished during the ensuing half-year, with a further call of 1l., payable in December. Upon the southern portion the directors hope to effect a saving of 37,000l. under an Act obtained this ses-sion, which authorizes the crossing of the Duddon sion, which authorizes the crossing of the Duddon river where it is only about a quarter of a mile wide. instead of by a crossing a mile and a half in length. A special meeting will be held in about a month hence, when the forfeiture of shares will be completed, and the directors will ask for power to dispose of them at any time for an advantageous offer. They continue to believe that the undertaking will realize the expectations hitherto entertained of the value of the property. The engineer's report stated that the Sea Mill and Netherton contracts have been completed, and two fresh contracts entered into, viz., Coulderton contract, about 1 mile 10 chains in length, let for 3,500., and Braystones and Seacale contract, 51 miles in length, let for 17,281., the works upon which were in such a state of forwardness that, if thought desirable, a portion of the line, about 8 miles in length, from Whitehaven to Braystones, might be opened for coal traffic in three months. The remainopened for coal trains in three months. The remaining portion, up to Ravenglass, could be completed in six months from this time. The statement of accounts, to the 30th of June last, showed the receipts at 136,679!. 1s. 6d.; expenditure, 134,008l. 4s. 3d.; balance, 2,670l. 17s. 3d.

The CHAIRMAN said that the contemplated line would not cost more than 10,000l. per mile, and would therefore be constructed at a cheaper rate than

any railway in the kingdom.

The report was adopted, and the retiring directors and auditor were re-elected.

LIVERPOOL, CROSBY AND SOUTHPORT.

Aug. 30 .- Half-yearly Meeting, Liverpool .- Mr. W. NICHOLL in the chair.

The SECRETARY read the report, which stated that the line was opened to the public on the 24th of July, having been completed in less than four months from the commencement. The attention of the Board was early directed to the omnibus communication between Liverpool and Waterloo, and finding complaints from all quarters of the overloading and inconvenience of the accommodation in most of the omnibuses then on the road they made an arrangement with other parties to provide conveyances for all the first and second class passengers booked through between Southport and Liverpool. The directors would not at present make any recommendation as to the con-tinuation of the line, being of opinion that it was more prudent to wait until the receipt of some portion of the proposed calls, required to satisfy the existing liabilities of the company; and the directors recom-mended that the following calls should be made next year, to meet the payments to the contractors and on the lst of February, 21. 10s. on the lst of May, and 21. on the lst of August. The accounts of the com-2l. on the 1st of August. The accounts of the company showed that the entire receipts on capital account amounted to 39.347l., and the disbursements and liabilites to 116,995l., leaving a balance to be provided for of 77,647l., which it was proposed to raise by three calls of 2l. 10s. The cost of making the line from Southport to Waterloo, including stations and maintenance of way for twelve months, was 77,284l., or 5046 per pulse. The account of the or 5,945l. per mile on 13 miles. The arrears of the first call amounted to 4,600l.

The CHAIRMAN, in moving the adoption of the report, stated, that the traffic since the opening of the line had exceeded expectation, notwithstanding the bad weather. He then commented on the favourable prospects of the line and its advantages to Liverpool and the neighbourhood.

Mr. H. HORNBY seconded the adoption of the re-

Some discussion, originated by Mr. Longsdale, took place in reference to the purchase of land, the en-gineering expenses and the expenses of working the line.

The CHAIRMAN, and Mr. BIDDLE, the engineer, stated that the expenses would be under 40 per cent., which was less than most other lines. The report was then adopted.

An allowance of 400%. was granted to the directors.

BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNCTION.

Aug. 26 .- Half-yearly Meeting, Birkenhead .- Ald.

J. BANCROFT in the chair. The SECRETARY read the report, which stated that they had obtained during the past half-year an increase of traffic of 8 per cent. on the passenger receipts, and 20 per cent. for goods, as compared with the corresponding period of last year; and relying on the development of traffic on the Holyhead, the Shrewsbury and Chester and the Shrewsbury and Birmingham lines, which would shortly be opened throughout, together with the improved arrange-ments now being made for the more efficient working of this line, they confidently expected a further in-

or this line, they connectify expected a further increase in their income. The working expenses have been reduced to the extent of 5 per cent., as compared with the corresponding period of 1847, and of the sum of 800L as compared with last half-year, although the general amount of traffic has been larger. The directors have, as previously intimated, revised the staff of officers, the result of which is a serious interest and control of 1902. saving in the engineer's department of 2034. per annum, and in the general office of 1904.; making a total saving of 3934, per annum. These reductions may be carried further, but at this season it was not considered expedient to make more extensive changes. The proprietors may however rely upon the expenditure being reduced as far as possible without impairing the efficiency of the staff. The proposal of the bondholders to obtain powers to levy rates upon goods at the docks at Birkenhead, at variance with

the understanding upon which this company has expended a large sum of money, was in fact an attempt to levy rates upon the railway company; consequently the directors, although anxious to avoid measures which might be regarded as hostile to that interest, considered it their duty to offer the most strenuous opposition to the bill, and it will be satisfactory to learn that their opposition was successful. The

Board has been completed by the election of Mr. I. Taylor, Baron Goldsmid, and Mr. R. Garnett. The directors recommended the payment of the half-year's interest due on the 1st of July last to the holders of the 27l. 10s and 22l. shares, and which will be payable on the 25th of September next; and that interest at the rate of 4 per cent. per annum be paid to the shareholders who shall have paid 10*l*. per hare on the 311. shares on or before the 17th of 8

tember next, which last-mentioned interest is to be payable on the 25th of September next. The revenue account to the 30th of June last showed the receipts by parcels, passengers and mails, 16,441l.; goods, 2,955l.; live stock, 180l.; carriages, horses, &c., 182l.; rents, &c., 309l.; interest, 142l.; total receipts, 20,251l.

The disbursements on revenue account were stated at 11,627*l.*; leaving a balance on the half-year applicable to dividend of 8,623*l*. The line was stated by the engineer to be in a very satisfactory condition. The CHAIRMAN, in moving the adoption of the

report, said the reason why no printed report had been submitted was, that negotiations had been going on up to a late hour on the previous afternoon, and it had been thought better to confine the statements in it to the Chester and Birkenhead part of the undertaking, than for the directors to commit themselves by reducing to writing any statements relative to the Cheshire Junction portion, at present. The Board had only that night decided to allow the 5 per cent. to the holders of the old Chester and Birkenhead shares. As to the proposed allowance of interest on the Cheshire Junction shares, the Board had found that of the last call 66,631*l*. remains unpaid, and they were of opinion that if interest were allowed on the calls parties would be induced to pay the money, and a considerable amount would be realized. interest of 4 per cent. on the Cheshire Junction was therefore proposed to be allowed. Up to the present time the negotiations for the disposal of the line had not resulted in anything of a definite character. An attempt had recently been made to collect funds to proceed with the completion of the whole Cheshire Junction line. The request by the directors with this view had not been responded to, owing, he believed, to the commercial embarrassments. Parties who had a railway system in connexion with their own, had felt anxious on the subject of an extension of time for the completion of the works; an application was still before the Railway Board, and it was for this meeting to determine what should be done. Some companies had offered to execute particular parts of the Cheshire Junction line; for instance, a certain company were willing to take powers to construct the line from Warrington to Stockport with all its advantages and responsibilities. Instead of dividing the Cheshire Junction shares for this purpose, he should propose that the 31*l*. 10s. shares should be reduced about one-half; as 10*l*. had been already paid, the remainder might be expected

to be subscribed forthwith, and the whole scheme of railway might then be made throughout. The chairman also intimated that if one of the negotiations in progress was concluded, the arrangements which yould have to be made might lead to the repeal of the amalgamation between the Cheshire Junction and the Chester and Birkenhead Companies.

Mr. MALLABY protested against a phrase in the report, and also in the chairman's speech, in which it was stated as a matter of "discretion" on the part of the directors, whether or not they would allow interest on the Chester and Birkenhead shares. The Act of Parliament compelled the payment of that interest, even out of the capital, if need be. He, trusted, however, that the meeting would not see the propriety of paying interest on the Cheshire Junction calls till the capital was paid up and the line in a working state, earning something. He minutely discussed the bearings of the agreement between the two companies at the time of amalgamation.

Mr. Brown read the 17th clause of the Act in confirmation of Mr. Mallaby's view.

The CHAIRMAN explained that what he had meant by discretionary power was, that at a former meeting, from the resolutions come to, some such power was lodged in the hands of the directors.

After some minor questions, Mr. Webster moved that the report be received and its consideration adjourned. He suggested to the proprietors of shares in the Chester and Birkenhead section of the undertaking, that it might be expedient and wise to relieve the Cheshire Junction shareholders from the payment of interest for a time, in order that arrangements might be made for going on with and completing the whole line.

The CHAIRMAN thought that the resolution should be amended thus, "That the report be received and its consideration postponed, except the part relating to the payment of interest, the appointment of directors and an auditor.'

Mr. W. Jackson, M.P., expressed an opinion that the whole business might advantageously be adjourned.

The CHAIRMAN thought the works should be at once proceeded with. All that could be gone on with winter would be the tunnel. He and his colleagues had gone over the proposed line, and from his own experience in these matters he was convinced that on 71 miles alone a saving of 20,000l. could be effected, and between Warrington and Chester much more. The sections had been laid down in the most expensive manner, at a time when railway property was different from what it was at present.

Mr. Mallaby proposed that a committee of four shareholders should be appointed to aid the directors in the negotiations. He named Messrs. Webster, Benton, Catterall and Brown.

After some discussion the CHAIRMAN said he felt so bound to defer to the wishes of even a single shareholder, that he would pledge himself that he and his colleagues would conclude no arrangement without consulting with the gentlemen named.

Mr. Webster's motion (amended by excepting the question of interest from postponement) was carried, and the meeting was adjourned till Friday, the 29th of September.

FLEETWOOD, PRESTON, AND WEST RIDING JUNCTION.

Aug. 30 .- Half-yearly Meeting, Preston .- Mr. T. ADDISON in the chair.

The report of the directors stated that during the past half year considerable progress had been made in completing the first contract, which extends from the Maudland station to Grimsargh, and effects a junction between the Longridge line and that of the Preston and Wyre; and expressed a hope that the revival of trade would permit the completion of the undertaking, and of those adjoining to it with comparative ease. The statement of accounts to the 30th of June last showed receipts at 104,773l. 3s. 10d.; expenditure, 93,069l. 11s. 9d.; balance at bankers, 11,703L 12s. 1d.

The CHAIRMAN alluded to the disappointment

which the shareholders must feel at the rejection of their application to Parliament for their Burnley branch, and suggested the desirability of obtaining the co-operation of other interests in the neighbour-hood, especially of the Duke of Buccleuch and the owners of collieries, who would, he contended, receive benefit from the opening of that line.

The Rev. W. BIRLEY proposed that the report should be merely received, and that the directors be requested to invite the co-operation and advice of Messrs. Newbrey, Westhead, Sanders, Greig, Cutterall and Birley, upon the several subjects therein contained, and to report the result at a future meeting, which was agreed to.

LIVERPOOL, MANCHESTER AND NEWCASTLE JUNCTION.

Aug. 28.—Half-yearly Meeting, Manchester.—Mr.

W. FFRANCE in the chair.

The report was read. It expressed the regret of the directors that the dissolution bill had not been carried. During the autumnal months the directors would endeavour to effect an arrangement with other companies to dispose of the line, or some portion of it, to the best advantage. If they should fail it might be desirable to renew the notices for next Parliament to pursue the dissolution bill. They recommended in the meantime the reduction of the current expenses from 850l. to 500l. The statement of accounts, to the 30th of June last, showed the receipts at 182,628l. 18s. 6d.; expenditure, 108,749l. 2s. 6d.; balance, 73,879l. 16s.

The Chairman entered into an explanation of the

proceedings in London, and concluded by moving the report, which was seconded by Mr. Plews.
Mr. Leeman moved, as an amendment.—

That it is highly desirable to reduce the expenditure to the lowest possible amount, and that the meeting therefore concurs in the adoption of that portion of the directors report which recommends a reduction of expense to not exceeding 500%, per annum; that it is also most desirable to exceeding 500% per annum; that it is also most desirable to suspend any operations in the construction of works, or making of calls, until the same be authorized by a general meeting of the shareholders, and that the directors be requested to convene a special general meeting, at an early day, to take into consideration the propriety of returning to each shareholder a proportionate amount per share of the said paid-up capital until required for the purposes of the railway; that the adoption of the accounts now presented be deferred until such extraordinary general meeting.

Mr. CURENNARY seconded the amendment.

Mr. Courtenay seconded the amendment. Mr. PARSONS moved a second amendment, "That the report and accounts be printed and transmitted to the proprietors," and adjourning the meeting to ptember 19, at the London Tavern, London. Mr. C. Gibson seconded the motion.

These amendments were withdrawn, and another substituted by Mr. Parsons, for calling a meeting in London on the 26th of September, the directors to ascertain the power to return a portion of the deposits back to the shareholders for the present.

Mr. LEEMAN moved that the meeting be in Manchester.

By mutual concession on the part of these gentlemen, the adjourned meeting was fixed for the 3rd of

BIRMINGHAM AND OXFORD JUNCTION. Aug. 30 .- Half-yearly Meeting, Birmingham .-P. H. MUNTZ in the chair.

The report was read. It commenced by recording the satisfaction of the directors in reporting that the disputes of the shareholders are finally settled, and that the agreement for the sale of the line to the Great Western will be carried out in its full integrity, under the authority of an Act which has passed both Houses and only awaited the royal assent. The Act contains definite powers for the future management contains definite powers for the future management of the company; for the laying down the broad gauge, in addition to the narrow gauge; and also for the issue of the coupons to the shareholders, which will be attended to as soon as practicable after the passing of the Act. The Great Western have also obtained an Act to make the deviation line in the town of Leanington. The statement of accounts showed the receipts at 301,570l. 12s. 2d.; expenditure upon land, 79,131l. 3s. 4d.; works, 81,000l.; engineering, &c., 3,915l.; law and parliamentary expenses, 14,405l. 1s. 4d.; advertising and printing, 135l. 14s. 6d.; a balance in hand of 40,527l. 3s. 2d.

The CHAIRMAN remarked that since the last meeting, and after a good deal of negotiation, terms had

ing, and after a good deal of negotiation, terms had been agreed upon between the dissentient share-holders as they then were and the Great Western; these had been embodied in a bill, which had since passed both Houses, and he had now to congratulate the shareholders on the fact of all differences being at an end. He could not refrain from bearing a tri-bute of respect to the Great Western for the honourable manner in which they had carried out the agreement. There was a misconception abroad with respect to the payment of interest, in consequence of some words uttered by Mr. Russell having been misreported. This was to the effect that the dissentient shareholders would not be entitled to interest in consequence of their not having paid up the calls at the time they were due. The answer to this was that the warrants for payment of interest would be issued forthwith to all the shareholders.

Mr. HADLEY inquired why the engineers had not

reported with reference to the progress of the works.
The Chairman rejoined that this was partly accidental, but that in fact the Great Western had now the sole control of this matter; he might, however, state that the works were proceeding rapidly, and that a great deal had been done.

Mr. COLEMORE, solicitor, remarked that as the shareholders received their coupons for 30l. 5s., the rate at which the works progressed was a matter of no importance to them.

In reply to another proprietor,

In reply to another proprietor,
Lord HATHERTON said that the Great Western
would afford every facility to shareholders for obtaining their coupons; that, in fact, arrangements
for that purpose were in progress which shortly
would be made public.
The propert was adopted.

The report was adopted.

CHELTENHAM AND OXFORD. Aug. 26.—Half-yearly Meeting, Chellenham.
The meeting was adjourned sine die, from the insufficient attendance of proprietors.
The directors' report stated that, in conformity

with the feeling expressed at the last meeting, the commencement of the works had been suspended, and the expenditure kept within the narrowest possible limit. An extension of time had been obtained from the Commissioners. This had enabled the directors to avoid making any calls. The sum expended up to the present time is within 30,000*l*. At the last meeting it was reported by the directors that only three-fourths of the shares had been allotted. Application had been made for the issue of further shares to parties whom the directors considered to be ineligible holders, and therefore they were refused. The remaining fourth of the shares are still un-allotted. The line will be 38 miles in length, on the broad gauge.

OXFORD, WORCESTER AND WOLVERHAMPTON. Aug. 25.—Half-yearly Meeting, Worcester.—Mr. F. Rufford, M.P., in the chair.

The report stated that their two bills for the com-pletion of the line at Wolverhampton and for the joint station there had received the royal assent. The difficulty of raising loans on debentures having continued, your directors have had no alternative but to make the calls they were empowered to make under the Act of Incorporation. The last call will be payable on the 20th of September next. The financial position is now of the utmost importance. The subject is under the especial consideration of your directors, in conjunction with the directors of the Great Western, and the proprietors may rest assured that the most full and mature deliberation will be given to the entire question. In any arrangement that may be made for raising further capital the rights and interests of the existing shareholders will be faithfully maintained. A negotiation was unsuccessfully entered into with the Midland for opening the loop line to Worcester, or a portion of it, and the subject is for the present postponed. The statement of accounts showed the receipts at 1,278,766l. 7s. 1d.; expenditure, 1,234,944l. 14s. 1d.; balance in hand, 43,821l. 13s. The profits on the Stourbridge Extension Canal had been 762l. 11s. 8d. for the half-year, and the loss on the Stratford and Moreton 580l. 8s. 3d.

(For engineer's report see Official Papers.) The CHAIRMAN said the bill which had been introduced into Parliament this session had received the royal assent only a fortnight since, and the directors had since been in communication with the directors of the Great Western as to the mode to be adopted for raising the additional capital. He was not in a position at the present moment to state in what manner the money would be raised, but in any arrangement which might be made, the existing shareholders would be paid their interest as at shareholders would be paid their interest as at present upon all the money paid up at 4 per cent, and after the completion of the line 4 per cent, and last surplus profits was guaranteed by the Great Western. The shareholders therefore must give the directors credit for being desirous to raise the additional capital in the best way it could be raised, and it was their desire to open the line throughout as early as possible, and until it could be opened throughout to open such part as would be profitable to the open such part as would be profitable to the shareholders.

Mr. JESSEL asked what were the existing guarantees between the company and the Great Western as to securing the payment of the interest on the capital

paid up.
The CHAIRMAN replied that the guarantee was 4 per cent. and half surplus profits on the cost of the line, including all monies necessary for the construc-tion of the line. The interest payable during the construction of the line would form part of the expenditure on account of construction. He had no hesitation in saying that the future interest would be regularly paid.

The report was adopted, and the directors were authorized to pay interest after the rate of 4 per cent per annum for the half-year just ended, such interest to be payable on and after the 10th September next.

The forfeiture of 120 shares (mentioned in the report) was also confirmed.

BIRMINGHAM, WOLVERHAMPTON AND DUDLEY. Aug. 30.—Half-yearly Meeting, Birmingham.—Mr. W. Mathews in the chair.

The report was read. It stated the satisfaction of the directors in reporting the successful termination the directors in reporting the successful termination of the long-pending disputes relative to the Birmingham and Oxford line, the possession of which has been finally assigned to the Great Western, with powers to extend the broad gauge from Fenny Compton to the Oxford, Worcester, and Wolverhampton Railway at Priestfield. The Act for the confirmation of this arrangement awaits only the royal assent. This just issue places the directors in a position to proceed, under the agreement with the Great Western, with the construction of the line uncertainty. fettered by any other considerations than those which relate to the advantage of all parties interested. The further progress of the works will be influenced by the degree of celerity with which those on the ad-joining lines are prosecuted. The engineer's report only stated that the works had proceeded slowly, with the exception of the tunnel at Hill Top, near West Bromwich, with which considerable progress had been made. The statement of accounts showed the receipts at 42,995*l.*; expenditure, 38,911*l.* 13s. 8*d.*The CHAIRMAN moved the adoption of the report.

He adverted to the fact of their having hitherto rie adverted to the fact of their having litherto sailed in untroubled waters, despite the storms which had beset their ally—the Birmingham and Oxford Junction; and the bill conferring powers to enable these two companies to lay down the broad gauge from Fenny Compton to Priestfield having passed the two Houses, he expressed a hope that all differences were at an end, and that the two lines would prove as advantageous to the Great Western as they could not fail to be to the trade of the district.

The report was adopted.

SHREWSBURY AND BIRMINGHAM.

Aug. 29.—Half yearly Meeting, Shrewsbury. W. O. Gore, M.P., in the chair.

Aug. 29.—Half yearly Meeting, Shrewsbury.—Mr. W. O. Gore, M.P., in the chair.

The Secretary read the report, which stated—
That during the six months since the last half-yearly meeting considerable progress has been made in the works. The portion from Shrewsbury to Wellington, which belongs jointly to this and the Shropshire Union, will be completed in the early part of next year, and will then be opened, together with the remaining portion of that company's line to Stafford. The directors intend to open, at the same time, the line from Shrewsbury to Oakengates—a distance of 13 miles; and arrangements were in progress with the Shrewsbury and Chester (which line will be opened throughout on the 1st of October) to work the same till such time as the remainder of the line is completed, which the directors have no reason to doubt will be within the time specified by the contractors, viz., the 1st of May next. The directors have under consideration how far arrangements, mutually advantageous, may be made for a joint working of the Shrewsbury and Birmingham and Shrewsbury and Chester lines. The directors have had to consider what is the best course to be adopted in order to raise the capital required for completing the main line. The sum expended up to the 3oth of June last, from Shrewsbury to Wolverhampton, was 404,341/. 1s. 7d.; there has been paid since, 53,448/. 14s. 5d.; making the expenditure up to the present time, from Shrewsbury to Wolverhampton, 457,788/. 16s. The sum required to complete the main line is estimated at 370,000/.; low-level station and fork line, 30,000/.; plant to work 50 miles (Shrewsbury to Birmingham and branch), 175,000/. Final call, Stour Valley Company, 41,629/.; high-level station at Wolverhampton (additional), 30,000/.; further sum required to complete the main line and branch to Coalbrook Dale, and to opening of the line 280,000/.—and subsequently 250,000/.

The statement of accounts showed the receipts at 607,198/. 4s. 3d.; expenditure, 584,848/. 2s. 11d.; balance at bankers and o

607,1981. 4s. 3d.; expenditure, 584,8841. 2s. 11d.; balance at bankers and on loan, 22,314. 1s. 4d.

The CHAIRMAN, in moving the adoption of the report, congratulated the shareholders on their favourable position.

The Hon. R. H. CLIVE, M.P., seconded the motion, which, after some remarks from Mr. R. A. SLANEY, M.P., Sir B. Leighton, Bart., and others, was carried.

A prolonged discussion then took place, in which Mr. SLANEY, Mr. G. B. THORNEYCROFT, mayor of Wolverhampton, Mr. SPARROW, and other gentlemen took part, on the proposal brought forward by the directors to raise a sum of 155,000l. by the creation of pre-ference shares, the said sum of 155,000l. to be divided into 15.500 shares of the nominal value of 10l. each, to be entitled to a fixed dividend out of the nett disposable revenue of the year, at the rate of 8 per cent. per annum for a period of ten years, and afterwards at the rate of 6 per cent. per annum on the amount actually paid up.

Messrs. SLANEY, SPARROW and several other Share holders opposed the issue of preference shares, as being an injury to the original shareholders and calculated to depress the value of the shares in the market.

The SECRETARY stated that circulars had been sent

to all the shareholders, to ascertain their opinion as to the issue of preference shares, and the majority of them had expressed themselves favourable. He had sent a stamped paper to a number of shareholders for the purpose of obtaining their proxies, and he now produced those proxies in favour of the creation. Several shareholders expressed their disapprobation

of this announcement.

After some discussion it was agreed to adjourn the meeting for a fortnight, to give the shareholders an opportunity of expressing their opinion.

SHREWSBURY AND CHESTER.
Aug. 30.—Half-yearly Meeting, Chester.—Mr. W.
O. Gore in the chair.

Mr. Roy, the secretary, read the report. It stated the satisfaction of the Board at the continued increase of the mineral traffic, especially the export trade from Saltney, and that to complete the works for opening throughout to Shrewsbury and to Oswestry, including stations along the line and the two general stations at Chester and Shrewsbury, and to provide sufficient plant for working the present and prospective traffic, there was still required a sum of not less than 261,443*l*. To meet this the company have provided, at the date of this report, 44,945*l*.; the arrears amounted to 37,119*l*., and the loans to be effected under the powers of their Act to 122,0221.; the remainder, amounting to 57,3571., required to be made up by further calls on the old stocks. The directors have accordingly resolved to make an equalizing call, payable on Friday, November 3, of 1l. 15s. on the 20l. shares; of 1l. on the North Wales Mineral shares of 26l. 13s. 4d., and of 10s. on the 13l. 6s. 8d. shares, amounting together to 49,375l. 131. 6s. 8d. shares, amounting together to 49,3731. And in case loans were not obtained soon afterwards, they have resolved to make a further call, payable on Friday, the 5th of January, of 1l. on the 26l. 13s. 4d. shares; of 15s. on the 20l. shares, and of 10s. on the 13l. 6s. 8d. shares, amounting together to 34,000l. They have also considered it their duty to place the arrear list in the hands of the company's solicitor, with instantiant to the company's solicitor. with instructions to recover or forfeit the shares in arrear

The CHAIRMAN, in moving the adoption of the report, said he did this with the greatest pleasure, since the proceedings which were there recorded were as prosperous as any in the kingdom, and since this would be the last half-yearly meeting that he would have the honour of so doing previous to the full completion of the line. Their coal trade was daily increasing, both to Ireland and the Isle of Man. The first shipment to a foreign port was being now made at Birkenhead of 300 tons of coals for the

West Coast of South America. The report was adopted.

The CHAIRMAN moved that 6,750l. be appropriated to the payment of a dividend on 216,000l., at the rate of 10s. on 16l. paid, and 5s. on 8l. paid.

This was also carried unanimously.

The CHAIRMAN then moved that the number of directors be reduced to twelve, and their remuneration from 800l. to 500l. per annum.

Mr. TREVOR, supported by Sir C. MALCOLM, moved

that it be 600l.

The original motion, thus amended, was carried. Sir R. Jenkins, Messrs. Dixon and W. Wardell were re-elected directors, and Mr. Hill an auditor of the company.

SHREWSBURY AND HEREFORD.
Aug. 30.—Half-yearly Meeting, Chester.—Mr. O. GORE in the chair.

Mr. ROBERTS read the report, which stated that the directors had confined their operations to the works at Shrewsbury, which were especially valuable from their anticipated connexion with other lines. An extension of time had been granted. The directors were enforcing the payment of the arrears on the were emoting the payment of the arread on the first call. The statement of accounts showed the receipts at 50,217l. 8s. 2d.; expenditure, 47,220l. 3s. 5d.; balance, 8,997l. 4s. 9d.

The Chairman said they had not proceeded with

the construction of the line; they could not do so without making calls, and that course, in the present was exceedingly disagreeable. The shareholders had approved of this course when it was proposed at the last half-yearly meeting. It would not, however, suit the interests of the company to remain idle from half-year to half-year. The general feeling along the line was that it should be made; that it would not merely accommodate the country, but be remunerative to the proprietors. What pained him was that their quiesence had given rise to a number of rival projects; and just before leaving London he had been requested to become chairman of one of these. The Shrewsbury and Chester would be opened about the beginning of October, and would increase the traffic which must flow along the Hereford line.

Digitized by GOOQIC

Mr. Moore moved that a committee be appointed to investigate the share-list, and that this meeting be adjourned till that committee are ready to report. He did not disapprove of the report, which was therefore unanimously adopted by the meeting. Mr. Taunton then seconded Mr. Moore's reso-

lution.

Mr. Scott was interested in this line being made, as a shareholder of the Shrewsbury and Birmingham line. They had already heard it was im-portant to the Shrewsbury and Chester, but very much more important was it to the Shrewsbury and Birmingham, as nothing would more naturally increase the traffic of that line than a railway passing over a rich agricultural country through Shropshire, and carrying the produce into a manufacturing district like Stafford. There was, besides, another line, the Newport and Abergavenny, of the Hereford shareholders. They would certainly not be justified in constructing their line without the Hereford. He (Mr. Scott) was not surprised to hear it, for he could not conceive of their going on unless this line was made. This line would throw a large traffic also on the North Wales line, to be carried into the district peculiar to it. He did not deny (it was useless) that there was several bad names on the share He had, however, investigated the list for himlist. self, and the result satisfied him that they had the necleus of a respectable and solvent proprictary. He was convinced that even part of the Hercford line might be made, with the greatest advantage possible to the shareholders, from Shrewsbury to Ludlow, at a very small cost and with a certainty of a good return, since it would thus serve the Shrewsbury and Birmingham and the Shrewsbury and Chester. recommended therefore making that portion in the meantime.

The CHAIRMAN regretted that such a motion had been made, as it implied a dereliction of duty on the per mane, as it implied a derentation of duty on the part of the directors. The proposed committee of investigation, however, had nothing to do with making the railway. He had already spoken his opinion of the propriety of doing so; a letter from the deputy-chairman (Mr. Bailey, jun., M.P.), then absent, assumed that it could not be possible for a shareholder who had paid his calls to wish the line to be abandoned, and as for those who had offered a different calls in the day why the opened speciety of the section. opinion that day, why, the one was registered for five shares and the other for three—a registry just enough to allow of their making this proposition at all. As for making the line immediately or not, he hoped the prudence of the directors hitherto was a guarantee of their future conduct. The Shrewsbury and Chester might find it to their interest to help them, and might come in and buy up their men of straw who had been alluded to. He hoped there was no reason for appointing a second directory, which this committee would be, and that the directors would receive the approbation of the proprietors as they were proud to have received on former occasions.

It was then put to the meeting, and the result was three for and twelve against it, the Shrewsbury and Chester shareholders, many of whom were in the room, refraining of course from voting. The motion was therefore lost.

Sir R. Jenkins, Messrs. J. Laird and D. Harrison were appointed directors, and Mr. T. Hill auditor.

#### NORTH WALES.

Aug. 31.—Half-yearly Meeting, London.—Mr. W. Chadwick in the chair.

The report stated that the directors had withdrawn their dissolution bill in consequence of the threatened opposition of a noble lord, and also of Sir J. Rennie. The directors had since been threatened by Mr. Jackson, the contractor, with a suit in Chancery for damages to the amount of 4,000l. The directors caution the shareholders against the various rumours respecting the line. They recommend a dissolution of the company and an early division of the remaining funds. The statement of accounts showed receipts at 46,850.; expenditure, 25,782.; balance in

favour, 21,077%.
The CHAIRMAN said that in spite of all those claims the directors were actuated with only one wish, that was to return as quickly as possible the funds to the

shareholders. The report was adopted.

The meeting was then made special, and after a long personal discussion, it was resolved that the directors be authorized, as the compulsory powers of taking the land had expired, to wind up the affairs of the company, and after making due provision for their liabilities to divide the assets among the shareholders. It was resolved that the costs incurred by one of the directors in an action of libel, arising out of a report of the proceedings of one of the meetings of the company, should be defrayed from the general

NEWPORT, ABERGAVENNY AND HEREFORD. Aug. 29 .- Half-yearly Meeting, London .- The Hon.

apt. FITZMAURICE in the chair. The report stated that on the expiration of the period of the suspended contract with Messrs. Rennie & Logan, the directors were again in treaty. The further instalment of the purchase money of the Hereford, Grosmont and Llanvihangel Tramroad Companies had been paid, with interest on the balance due. A nad been pand, with interest on the balance due. A considerable amount had been received since last meeting for past due calls, but there was still a large amount in arrear, and as further payments to the tramroad companies would fall due in October next the directors trusted the proprietors would forthwith liquidate the amounts respectively due, and save legal proceedings. The directors are in daily expectation of receiving the certificate granting an extension of the period for compulsory purchase of land on the main line to August 1851, and for completion of that line to August 1855; whilst for the extension line the time has been extended to 1852 for the purchase of land, and to 1856 for completing the line. The stateland, and to 1856 for completing the line. The statement of accounts to the 31st of July last showed the receipts at 85,275l. 7s. 8d.; payments, 79,647l. 11s. 8d.; balance in hand, 5,627l. 16s.

The CHAIRMAN, in moving the adoption of the report, pointed out the advantages on the completion of the two great lines from Liverpool to Shrewsbury, and from thence to Hereford, which would render this line more than ever essential. Meanwhile they should remain in abeyance till such time as they could find their own proprietary in a condition to promote the undertaking or a more favourable chance for letting it to others. The directors would economise the expenditure in every way possible.

Mr. Spackman asked what was the cost of the tram-

roads they had purchased.

The CHAIRMAN replied 54,000l., but they had paid

off 17,000l., leaving still due 37,000l.

Mr. Spackman wished to know if the revenue of 7831. was for the six or for the twelve months.

The Secretary said it extended from October 4.

1846, to March 31, 1848, a period of about eighteen

The CHAIRMAN said there was a necessity for them to take these tramroads in order to get their Act. It must be borne in mind that there was land as well, and property upon it, which the company could sell.

A Proprietor recollected it was stated that the land

was estimated at about two-thirds of the purchase

money.

The CHAIRMAN had no fear of an immediate call for the purpose of paying the balance for the tramroads; but he trusted to the good sense of the shareholders to pay up their arrears.

SPACEMAN considered it was impossible to raise the capital to complete this line when the public were to be called upon to contribute at least 117,000,000t. beyond the 150,000,000t. already subscribed for railway purposes. Until that pressure was relieved he did not see a chance for the minor Until that pressure lines

A Proprietor asked if there were any outstanding claims.

The CHAIRMAN replied that on the last occasion he stated there was about 7,000l. or 8,000l., but it had now been reduced, as stated, and another portion of it had been kept over merely that several hundreds might be taken off, which was the cause of its not coming into the account.

The report was, after some further discussion, adopted.

#### VALE OF NEATH.

Aug. 23.—Half yearly Meeting, London.—Mr. F. P. BARLOW in the chair.

After waiting an hour, the CHAIRMAN announced to the few proprietors present that as according to the requirements of the Act twenty proprietors had not assembled, he was obliged to declare the meeting

adjourned sine die.

The directors' report, which was circulated at the meeting, stated that they were able to report satisfactorily upon the general progress. The whole of the line extending from the town of Neath to the top of the Neath Valley was in course of formation, and the directors would use their best endeavours to obtain the completion of that portion of it as speedily as possible, in order that it may be opened for traffic, simultaneously with that part of the South Wales communicating with the ports of Neath and Swansea. The shafts and headings of the Merthyr tunnel had been commenced, and it was the intention of the directors immediately to let the complete the commu-ditional six miles, which would complete the commudirectors immediately to let the contracts for an adnication between Neath and Hirwain. The pro-prietors would recollect that at the last half-yearly inceting allusion was made to a bill which the directors had thought it right to introduce into Parliament,

for the purpose of legalizing the subscription by the South Wales towards this undertaking. That bill had now been sanctioned by Parliament, and the subscription by the South Wales was thereby confirmed. The Commissioners had granted an extension of time of two years beyond the time limited by the Act. Advantage has been taken of the present low price of iron to contract for the supply of 2,000 tons of rail. The contract has been entered into with one of the most extensive and eminent rail makers in the principality, and upon very advantageous terms. The statement of accounts showed the receipts at 108,004*l*.; expenditure, 45,667*l*. 9s. 2d.; balance in hand, 62,336*l*. 10s. 10d.

LLYNVI VALLEY.

Aug. 21.—Half-yearly Meeting, London.—Sir R. Prick, Bart. M.P. in the chair.

PRICE, Bart. M.P. in the chair.

The report stated that, as compared with the average monthly receipts of the previous five months (viz., from July 1847, when the amalgamation took place), the proprietors would observe a considerable reduction in the monthly revenue of the last half-year from the depressed state of the iron trade. More than half the furnaces in the Llynvi Valley district were at this time out of blast. The nett profit for division amongst the proprietors (including a sum of 2600. 13s. 4d. brought forward from the account ending on the 31st of lacember last) was 2 1081 15. 5d. ing on the 31st of December last) was 2,1081. 16s. 5d. The directors recommended a dividend at the rate of of the company, and amounting to the sum of 1,981l. 10s., viz.:—On 2,500 shares, 20l. paid up, 1,250l.; on 8,360 shares, 3l. called to the 31st of March, and 4l. called to the 30th of June, 731l. 10s.; total, 1,981l. 10s.; leaving a surplus of 127l. 6s. 5d. to be carried to the credit of the current half-year's account. The repairs charged under the head of the breakwater in the present and preceding revenue accounts had been found to answer their object, and there was every reason to expect that the permanent works would be considerably benefited by the partial completion of that structure, and that a considerable completion of that structure, and that a considerable saving would be effected in the expenses and risk to which this portion of the property had been hitherto exposed. The statement of accounts showed the receipts at 111,916′. 9s. 5d.; expenditure, 108,198′. 1s. 6d.; balance, 3,718′. 7s. 11d. The revenue account for the half-year ending the 30th of June last exhibited receipts at 4,108′. 1s. 5d.; expenditure, 2,259′. 18s. 4d.; leaving a balance of 1,848′. 3s. 1d.

On the Chairman moving the adoption of the report—

Mr. Knight complained that the direction of affairs was almost entirely in the hands of the new company and of gentlemen resident in London, who knew but little of what was going on in Glamorgan-shire. The directors should be increased in number by the addition of some of the old company. If this had been done long since, certain monetary difficulties which had taken place would have been avoided.

Mr. Malins concurred in what had fallen from the last speaker, and expressed a hope that Mr. Knight, who resided on the spot and had the railway under his constant notice, would come forward for a seat at the Board at the next half-yearly meeting, when the directors would be chosen.

Mr. KNIGHT expressed his readiness to do so, and to lend his best assistance to promote the general interests.

The resolution was then agreed to, as also one declaring a dividend at the rate of 5 per cent. on the capital stock, payable on and after the 29th of September next.

Mr. W. Shadbolt was elected an auditor, in the room of Mr. Schneider, who retired.

WILTS, SOMERSET AND WEYMOUTH.

Aug. 28.—Half-yearly Meeting, Bath.—Mr. W. ong, M.P., in the chair.

The report stated that at the meeting in February last it was intimated that the northern portion between the Great Western and the town of Westbury would be opened for traffic in the course of the summer. The directors have now to announce that this part has been inspected and approved by the Commissioners, and will be opened to the public on Tuesday, the 5th of September. By the terms of the agreement existing between this company and the Great Western, each successive portion of the line, so soon as it is completed, is to be transferred to the Great Western, and to be worked by them according to the general stipulations of the lease. The directors regret that, owing to the depressed condition of railway property generally, they have not been able to avail themselves, to any material extent, of the com-pany's powers of borrowing. They have therefore continued the prosecution of the works and the purchase of the land with less rapidity than would have

been desirable under other circumstances. But the heavier works are making a steady progress, so that the company will be in a position to take full advantage of the first favourable opportunity that may arise for carrying on the formation of the line on a more extended scale. Although the shares, in common with those of all other railway companies, are considerably depreciated, yet the payments on account of the last call have been made with much regularity. Of the 150 shares in arrear on the fourth instalment (10% having been paid on them), and which were stated to be in a doubtful position, the directors hope that fifty will ultimately prove good; and they do not anticipate any loss to the company from arrears upon subsequent instalments. The statement of accounts to the 30th of June last showed the receipts at 936,910*l*.; payments, 871,583*l*. 7s. 6d.; leaving a balance in hand of 65,326*l*. 12s. 6d. (For engineer's report see Official Papers.)

The report was adopted unanimously.

Mr. Heroes asked, in reference to the terms of agreement between this company and the Great Western, whether, when the portion of the line to Westbury was opened, the shareholders would receive any additional per centage

Sir J. Awdry said there would be no such advantage, because the Great Western were not receiving more than 7 per cent. If they were receiving more, the proprietors of the Wilts and Somerset would share the addition with them. On the other hand, however low the Great Western might be, the shareholders of this line would still receive their 4 per cent

Mr. HEDGES asked how many miles of line would be opened on Tuesday next.

Sir J. AWDRY : Thirteen

The Rev. T. Spencer believed that when this portion was opened the traffic would astonish even the

proprietors themselves. Mr. BOURN, of Bath, asked whether there was any truth in a report which had appeared in a local journal, that a considerable portion of the railway now partly constructed from Fisherton to Warminster by this company would be given up to the Salisbury and Yeovil.

The CHAIRMAN said he had heard nothing about it

COLCHESTER AND STOUR VALLEY.

Aug. 29. — Half-yearly Meeting, Colchester.— Mr. T. L. Ewing in the chair.

The report stated that during the past half-year the works between Marks Tey and Sudbury had been rapidly carried on; and there was every reason to believe that this portion would be ready for opening during the present year. The most important point for consideration was the leasing the line to the Eastern Union. The existing agreement between the companies, dated the 8th of June 1847, the directors eve to be and are advised to regard as already conclusive on both companies; but some doubt on this point was raised by the body of the shareholders of the Eastern Union, by whom the agreement was deemed objectionable on account of the large amount of capital over which the Eastern Union's guarantee of interest would be necessary. Negotiations then took place, which have been conducted without prejudice to the legal position of either company under the existing agreement, and these negotiations have resulted in an arrangement, and these negotiations have resulted in an arrangement for a provisional agree-ment, by which the amount of capital to be guaran-teed by the Eastern Union would be considerably diminished, and the extent of liability consequently Last week the directors were informed that, in consequence of the Eastern Union Board having been requested by some of their shareholders to give longer time for the consideration of this question, they felt it necessary to postpone their intended meeting. meeting. Such meeting was therefore held only proforma, and adjourned to the 9th of October next. The directors, in consequence, proposed to adjourn the special meeting till the 17th of October next. The statement of accounts showed the receipts at 108,105*l.* 8s. 7d.; expenditure, 103,552*l.* 14s. 7d.;

108,1054. 8s. 7d.; expenditure, 100,0024. 12s. 14s.; balance, 4,4524. 14s.

The CHAIRMAN said that since the last meeting the directors had unceasingly attended to the subject of leasing to the Eastern Union, which formed the principal topic of the report. To accomplish the object they had in view he had personally attended two meetings in London and one at Ipswich, where he expected that satisfactory arrangements would have been made. The directors had insisted upon the Eastern Union holding a special meeting, and he felt some surprise that at their last half-yearly meeting on the 25th inst. that special meeting had been adjourned. There was, he found, something like a tone of asperity in the remarks of the Eastern Union directors-a circumstance which he could not but regret when he remembered that both companies were linked together for mutual advantage. On the part of the directors he expressed a hope that they might not be called upon to explain the provisions of the pending negotiation. The result he had no doubt would prove satisfactory to them. He concluded by moving the adoption of the report.

A Shareholder inquired what was at present the amount of calls unpaid.

Mr. HAWKINS (one of the auditors) said about per cent. upon the whole amount. The per-centage was less than it was at the last meeting. Every ex-

was less than to was at the last neeting. Every exertion had been made to get in the calls.

Mr. Goodhay inquired what had been the amount
of payments since June. His impression was that
the amount of money paid upon the calls since that
time was very small, and he knew that such an impression very generally prevailed.

Mr. BAWTREE (the secretary) replied that he could not answer the question accurately, but he thought it

was between 2,000*l*. and 3,000*l*.

Mr. Goodhay suggested, with regard to arrears, a course to prevent so great a falling off in future. He (Mr. Goodhay) was in arrear himself, but it was not from inability to pay. On the contrary, he would pay the amount of his calls directly a certain mist in which he was now involved was removed. There was an impression abroad that some large sums were unan infression around that some tage sums were the paid in head quarters, and that the deficiencies, whatever they were, owed their origin to those who had the greatest interest in the undertaking. He wished that the registry of shareholders and the cash books should be laid before the meeting, or that a committee of five gentlemen should be appointed to examine them.

Mr. Delf supported Mr. Goodhay. He declared that he would not pay another shilling on his calls

until he was fully satisfied on these points.

The suggestion was opposed by the directors, and a long and acrimonious discussion ensued. At length, however, certain clauses in the Act of Parliament were read, from which it appeared that any shareholder could claim to see the cash-book a certain number of days before and after a general meeting There was, however, nothing definite with regard to the registry of shares.

Mr. Goodhay claimed to see the cash-book at that

moment. He had called at the office three days be fore the meeting, for the purpose of inspecting it, but was refused by the secretary.

The Directors said it would be inconvenient to ex-

hibit the cash-book during the meeting. Mr. Goodhay might see it at the close of the proceedings. Another long discussion ensued, in which Messrs.

WALTON (mayor of Colchester), Delf, Hawkins, Coleman, Wayland and others joined.

Eventually the report was adopted.

The meeting was then made special, to consider the leasing of the line to the Eastern Union, but under the circumstances already mentioned the meeting adjourned till October 17.

#### THAMES HAVEN AND DOCK.

Aug. 28. - Half-yearly Meeting, London. - Mr. CHADWICK in the chair.

The report stated that the directors had abstained from making any call on the shareholders, in consequence of the continued depreciation of railway stock and railway property in general; and they were consequently constrained to limit their operations to the excavation required for constructing the tidal dock, as the only means of economizing expenditure. The statement of accounts showed the receipts at 12,803l. 16s. 6dd.; expenditure, 5,142l. 2s. 10dd.; leaving a balance in hand of 7,661l. 13s. 8d.

The report was unanimously adopted.

#### LONDONDERRY AND ENNISKILLEN.

Aug. 29.—Half-yearly Meeting, London.—Mr. G. TYRREL in the chair.

The directors' report stated that the amended Act as approved at the special meeting in March, had received the royal assent. The line was thus limited to Omagh; the capital reduced to 340,000*l.*, power being given to alter or divide the amount of shares, and to arrange their distribution in such manner as may be agreed upon at a general meeting, and further power given, with the consent of such meeting, to make a portion of the capital entitled to a preferential dividend. The report also stated that the claim of Mr. Leishman, amounting to 43,737l. 13s. 10d., having been transferred for arbitration to Mr. Locke, that gentleman had given his judgment, awarding 34.8741, 12s. 3d, to Mr. Leishman, and had fixed the 1st of October as the day of payment. The directors therefore recommended an adjournment of this

in the completion of the line to Derry. Essential as this was considered to success, they were not prepared, under existing circumstances, to recommend its commencement until such time as it might be accomplished without any heavy pressure on the shareholders. Exertions were made for a better development of the traffic, by inducing arrangements for additional passenger communication with the adjacent country, and a strict supervision was continued to be exercised over the working expendi-ture. The capital account to the 31st of July last showed the receipts at 155,211. 4s. 8d.; expenditure, 154,643l. 8s. 5d.; balance at bankers, 567l. 16s. 3d. The revenue account for the past half-year ending the 31st of July exhibited receipts at 4,266l. 12s. 6d.; expenditure, 3,896l. 16s. 8d.; balance in hand, 369l. 15s. 10d.

The report was adopted, and the officers who went out by rotation were re-elected.

On the motion of the CHAIRMAN, the meeting was adjourned to this day three weeks, for the purpose of laying Mr. Leishman's proposition before the shareholders.

#### LONDONDERRY AND COLERAINE.

Aug. 30 .- Half-yearly Meeting, London .- Mr. FRITH in the chair.

Mr. F. H. HEMMING, the secretary, read the report. Referring to the former report, as giving a full state-ment of the company's position, and to the deputations which visited the works in the spring, (whose report was published in the Railway Chronicle, ante, p. 397) the directors had sought the best means of carrying out the recommendations of the committee, and a plan was submitted to them by a contractor, which would serve to reclaim the land at an earlier period, and at a much smaller present outlay than would be required by the original mode of structure. Feeling the speedy reclamation of the land to be the primary desideratum with the company, they at once took steps to ascertain the merit of the plan thus proposed; and having taken the advice, not only of their own, but of other engineers, they were perfectly confirmed in their favourable opinion as to its feasibility and advantage; but, before submitting it to the proprietors, they determined to test it practically; and for that purpose directed a sufficient portion of the work to be at once undertaken as an experiment, the work to be at once undertaken as an experiment, and they are pleased in being able to state that the result appears fully to have justified the favourable opinion they had formed of the plan, in confirmation of which they refer to the engineers' reports (see Official Papers.) If the works be prosecuted on the proposed plan, it appeared that the water may be shut out of the central enclosure in 18 months from the time of the works being resumed, and at a cost of 70,000l., leaving the further outlay necessary for completing the undertaking as a permanent work to be spread over an extended period; and the contractor proposed to shorten even this period of shutting out the water, upon being remunerated for the additional outlay. The directors have recently effected arrangements respecting 4,000 acres of land which were reserved for the original undertakers, whose representatives stipulated that the reclamation should be completed by the 4th day of August 1849. This quantity was to be taken out of the centre reclamation. By one of such arrangements, 2,000 acres of that land, estiof such arrangements, 2,000 acres of that fails, countained at 100,000*l*, will become the available property of the company upon payment of 20,000*l* and interest in instalments, terminating at the end of next year, by which that liability will be removed, and the ultimate advantages to the company greatly increased. To carry out this arrangement, it will only be necessary to make calls of 2l. 10s. per share, payable in two instalments between the present time and the next half-yearly meeting, which, with the arrears now due, will also enable them to carry on the works advantageously up to that period. The the works advantageously up to that period. The representative of the other 2,000 acres has offered to limit his claim to 1,000 acres out of the centre inclosure, postponing the other 1,000 acres to be provided out of future reclamation, upon the understanding that the reclamation be immediately prosecuted. The result of these united arrangements will be, that when the middle enclosure is completed, there will be land, at a moderate estimate, of the value of 350,000*l*., upon which to raise the funds towards the entire completion of the whole undertaking. With respect to the arrangement of capital, authorized by the amended Act, the directors suggest that the existing 50*l*. shares, with 27*l*. 10*s*. paid, shall be divided into one share of 25*l*. with all paid; and two half-shares of 12*l*. 10*s*., with 1*l*. 5*s*. paid upon each: and that only such shares be made preference meeting for the purpose of negotiating an arrangement with Mr. Leishman. There was a slight increase in the weekly receipts, but the directors were satisfied that a profitable traffic must be sought

Digitized by GOGIC

in proportion to the number held by them; and in the event of their not being so taken up, to be disposed of by the directors. The directors are still advised that Mr. Dimsdale has no maintainable claim; but that even were it possible for him to succeed in establishing the claim put forward, it would extend over a very small portion only of the reclamation now being carried out.

The statement of accounts to the 31st of July showed the receipts at 221,092l.; expenditure, 220,606l.; balance, 465l.

The CHAIRMAN, on moving the adoption of the report, said that if the proprietors had any doubts with respect to the plan proposed for reclaiming the land, they could appoint a deputation to inspect the works. It was approved of by Mr. Gibbs, the engineer, who has had great experience of such works in Holland. He had been told by Mr. Dargan, the contractor, that it could be easily and rapidly executed.

Mr. Waley said their great object would be to raise the money. He did not think that a call of 2l. 10s. per share would be sufficient; it would not do more than raise half the money they required. He thought that companies in their position were

deserving of Government aid.

Mr. R. Hall supported the views of Mr. Waley, and urged that the works should be proceeded with.

Mr. Cross (one of the late deputation to the works)

strongly advocated the prosecution of the works. The report was unanimously adopted.

After some conversation it was agreed that a call of 2l. 10s. be made, and that 20,000l. be paid for the land mentioned in the report. Two of the three retiring directors were re-elected: the other director never having attended, it was considered useless to Mr. Waley, the auditor, was re-elected. re-elect him.

The meeting was then made special, and a resolu-tion passed authorizing the directors to divide the

shares as recommended in the report.

A vote of thanks was passed to Mr. Cross and Mr. Gladdish, the members of the late deputation to the Thanks were also voted to the chairman, and the meeting separated.

#### NEWRY AND ENNISKILLEN.

Aug. 30. — Half-yearly Meeting, London. — Mr. Chadwick, in the absence of Lord Newry, in the chair.

The report stated-

That the bill for amending the company's Acts, and authorizing arrangements with other companies, after en-countering considerable opposition, had received the royal assent. The restriction imposed by the Act of 1847, requiring them to complete and open the direct line between Newry and Armagh before any other portion should be constructed, has been repealed, and the company are em-powered to enter into arrangements with the Dublin and Belfast Junction, the Ulster, and the Newry, Warrenpoint, Belfast Junction, the Ulster, and the Newry, Warrenpoint, and Rosstrevor, with reference to the joint use and working of their respective lines. Powers have also been given to the company to hold their meetings at such places as the directors shall from time to time think fit; at the same time the company are not deprived of any of the powers they possessed under their former Acts. For a considerable time past the directors have been fully impressed with the importance of avoiding, if possible, the expense of constructing the direct line between Gorah and Armagh; and with a view of making arrangements with other companies, whereby this expense might be saved, they considered it right not to act upon the resolution of the general meeting in August 1847, by purchasing the land between Gorah and In August 1847, by purchasing the land between Goral and Market-hill, until every effort had been made to get rid of the restriction which was imposed on the company by the Act of 1847, and to enable the several companies befor ferred to to enter into arrangements mutually benef The directors recommend the forfeiture of 4.805 shares.

The statement of accounts showed receipts at 95,176l. 18s.; expenditure, 82,958l. 7s. 8d.; balance at bankers, 12,217l. 10s. 4d.

The CHAIRMAN said that they had gained a considerable benefit by going to Parliament, if it was only to do away with the useless expense of carrying out a direct line, which would have incurred great expense, without affording any prospect of a corresponding advantage.

A Proprietor asked whether there was any pros pect of a negotiation with any other company.

The CHAIRMAN said that there was no immediate prospect. He believed that some gentlemen had held a conversation with Sir J. Macneill on the subject, who stated that it was of great importance that a line should be carried out between Dublin and Belfast, and that when the proper time came it would be easy to enter into a negotiation.

The report was adopted

On the motion of Mr. SPACKMAN, the following resolutions were sanctioned :-

50 utions were sauctioned:—

1. That it is the opinion of this meeting that any intention of making a line from Gorah Wood to the town of Enniskillen ought not to be entertained in the present state of railway property generally.

2. That no further outlay or expense be incurred on that portion of the line already made between the town and Gorah Wood without the con-

sent of the proprietors, to be given at an extraordinary general meeting especially convened to consider and decide on the same. 3. That no call shall be made on the shareholders for either of the objects set forth in the foregoing resolutions without their consent, to be given at the extraordinary meeting. 4. That the directors be empowered to negotiate with other companies for the sale or amalgamation of the interests of this company; such agreement being, however, subject to the confirmation of an extraordinary meeting of the shareholders.

It was also agreed that the directors should be authorized to lend the funds remaining in hand to the Newry, Warrenpoint and Rosstrevor, or any other company which would give ample security and in-

WATERFORD, WEXFORD, WICKLOW AND DUBLIN. Aug. 30 .- Half yearly Meeting, London .- The Earl of Courtown in the chair.

Mr. NASH, on behalf of a body of shareholders, handed in a protest against the legality of the meeting, and also against the affixing the company's seal to the register.

The report was read. It stated that-

Since the last half-yearly meeting the directors have entered upon the construction of those portions of the work only between Dublin and Wicklow which, from their work only between Dubin and Wicklow which, from their difficult character, would necessary govern the completion of this important section. They have thus limited their expenditure to the available resources at their command, and within bounds which have hitherto precluded the necessity of their adopting any measures of undue pressure necessity of their adopting any measures of undue pressure upon the shareholders in arrear, during a period in which monetary and commercial embarrassment has continued to be severely felt; while, at the same time, the heavy works, the most tedious in their operation, have been steadily progressing. Under ordinary circumstances it would have been gratifying to the directors to have been whiled to recommend to you assume that the recommendative assume that the recommendative assume that the recommendative assume that the recommendative assume that the recommendative assumes that the recommendative assumes that the recommendative assumes that the recommendative assumes that the recommendative assumes that the recommendative assumes that the recommendative assumes that the recommendative assumes that the recommendative as the recommendative assumes that the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendative as the recommendativ would have been gratifying to the directors to have been enabled to recommend to you a simultaneous proceeding with the works uniting the Irish South-Eastern at Scarashash Bridge, near Enniscorthy, with their line to the South Bay of Wexford; but the difficulties of the present period have obviously manifested the impolicy, not to say the impracticability, of extending their works beyond the section which promises to yield the earliest return; the efforts, therefore, of the directors have been concentrated on the works between Dublin and Wicklow, as calculated, when completed, to produce this result, and to develope the valuable and remunerative character of the undertaking. The bill introduced into Parliament for the undertaking. The bill introduced into Parliament for legalizing the subscription of the South Wales to this undertaking, to an extent not exceeding 250,000%, having passed into a law in the present session, it was incumbent, under its provisions, on seven of the directors to retire, to give place to a similar number, as representatives of the South Wales. By the arrangements between the two companies, the construction of the latter portion of the line was panies, the construction of the latter portion of the line was forthwith to be commenced and proceeded with. The directors have fulfilled this part of their engagement, by the contracts they have entered into for the Killiney and Bray Head works, which are proceeding to their satisfaction.

The statement of aucounts to the 30th of June last

showed the receipts at 130,451%. 6s.; payments, ,3471. 1s.; balance in hand, 33,1041. 5s

The CHAIRMAN moved the adoption of the report. Mr. NASH, after a long and somewhat personal attack upon the directors, moved as an amendment that the question of the adoption of the report be adjourned to this day month, and that it should not be received until it had been investigated and its accuracy ascertained by a committee of five shareholders He also read a lengthy report, and having adopted it as part of his speech, moved the amendment.

Mr. J. REYNOLDS, M.P., opposed the amendment, and declared his confidence and that of his country-men in the noblemen and gentlemen who had the management of affairs. Their position was not so bad as the anonymous persons who instructed Mr. Nash sought to make out, and he (Mr. Reynolds) was satisfied that the line would not only be profitable to the shareholders, but would be productive of great national advantages. He could not but deplore the angry feeling by which the property of the shareholders was sought to be depreciated.

After a discussion of no public interest, the amendment of Mr. Nash was negatived by a large majority.

Mr. NASH demanded a ballot, but in the end consented to allow the decision of the meeting to pass, under protest on behalf of himself and those whom he represented.

The original motion for the adoption of the report was then agreed to.

Mr. NASH next proposed to move a resolution, the object of which was to reduce the salaries of the secretary and officers of the company; but the CHAIRMAN, on the advice of the solicitor to the company, held that without notice it was not competent to entertain such a proposition, and after a warm debate the Chairman declared that the business for which the meeting had been legally convened having been disposed of, it was now dissolved,

WINDSOR, STAINES AND SOUTH WESTER? Aug. 26.—Half-nearly Meeting, London.—Mr. H. C. LACEY, M. P., in the chair.

Mr. HORN, the secretary, read the report, which

announced the completion of the main line between Richmond and Datchet, and its opening for public traffic on the 22nd inst. To effect the completion of this portion within a twelvemonth of the passing of the Act of incorporation great exertions were made, and it was a source of much disappointment to the directors that a sinking of the foundation of a portion of the viaduct in Kew Park, and circumstances connected with the possession of land, over which they had no control, prevented their succeeding in that object. The works for the bridge across the Thames at Barnes, for the loop line, were commenced, and great progress had been made in the purchase of land for that portion, which would be completed for traffic with all due expedition. The proceedings in Parliament, though they have resulted in the rejection of the application made by this company for powers to extend their line to Slough, and in the affirmation of the competing line of the Great Western, could not be regarded as unsatisfactory, inasmuch as the directors were induced to withdraw their opposition to the Great Western bill in the House of Lords, upon being assured, that, in the event of that bill passing, her Majesty would most graciously concede to this company an extension of their line from Black Potts, across the Home-park into the town of Windsor. The directors have summoned a special meeting of the proprietors for the purpose of considering terms, as embodied in a memorandum of agreement, which (subject to their approbation) they have entered into with the London and South-Western, with a view to the present profitable use of such portions of the line as are and may be available for traffic previous to the completion of the entire works. This arrangement does not, however, in any manner effect that part of the existing agreement which gives an option shares at 4l. premium per share. The terms which the directors have made are, as before intimated, temporary (for one year), and are in their judgment very favourable to the proprietors, being 5 per cent. per annum, payable half-yearly, on the amount of the paid-up capital: the first payment falling due on the 22nd day of February next. The statement of accounts showed the receipts at 392.3421. 13s. 1d.; expenditure, 373,7511. 8s. 8d.; balance, 18,5911. 4s. 5d. The Chairman moved the adoption of the report.

A Proprietor asked the meaning of "calls in advance," which he saw stated in the accounts at 8921. Was there interest paid on those calls?

The CHAIRMAN answered in the affirmative. Dr. Longstaff, Mr. Onslow, and several other proprietors, complained of having been misguided as to the nature of the agreement with the South-Western. They had been led to believe, by the chairman and Mr. Chaplin, at the last meeting, that as soon as one-half of the subscribed capital was paid up the South-Western would become purchasers of the line. Under this impression-although no pledge was given by either the chairman or Mr. Chaplin—several gentlemen had paid up on their shares, and were now told that the matter was still left to the option of the South-Western. During the discussion it was also urged that the permission of the South-Western proprietors having been obtained, that promise ought to be fulfilled.

Mr. Chaplin, M.P., said that there was still a great disinclination among the South-Western proprietary to purchase the line; and on that account, and because it was otherwise inconvenient to them.

they had not as yet done so.

The CHAIRMAN said he had not the control of the South-Western, nor had Mr. Chaplin; and he thought that the proprietors had attached too much impor-tance to loose words which had been dropped by Mr. Chaplin and himself as an opinion rather than a promise.

Mr. Locke thought that instead of making useless complaints the proprietors should call upon their directors, considering them as belonging only to the Windsor and Staines, and having no connexion with the South-Western, to call on the latter company to fulfil their original agreement, and purchase the line.

Several Proprietors stated that on the faith of what had been promised they had bought shares in the company at 3l. premium.

In answer to a question,
The CHAIRMAN said he could not give an assurance
that the line would be eventually purchased; nor was it in the power of Mr. Chaplin to do so.

The report was then adopted. The CHAIRMAN then moved-

That the meeting requested the directors to take such steps in reference to and to make such arrangements for the execution by that company, or the London and South-Western, of the proposed extension from the Black Potts town of Windsor as to the directors should seem expedient.
The resolution was agreed to.

The CHAIRMAN said they would now resolve them-

Digitized by GOOGLE

selves into a special meeting, for the purpose of considering the terms embodied in an agreement, subject to approbation, with the London and South-Western, with a view to the present profitable use of such portions of the line as were or might be available for traffic previously to its completion.

Mr. DRAKE read the agreement. The South-

Western should work the line now finished, and pay a rent of 5 per cent. on the deposits. The rent would commence from the 22nd inst., and be paid half-yearly. The South-Western would work the line until It was completed, and then the shareholders would be able to begin on their original basis.

Mr. Onslow did not wish them to work it. If the

tine were shut up they would give the 4l. premium.

The CHAIRMAN: That would not do. The lin

must be worked: the Act of Parliament is imperative on that point.

Mr. Onslow: We can run one carriage, and evade He would not consent to the agreement unless they had a definite promise from the South-Western that they would give them the 4l. premium. If the shareholders did not protest strongly against the conduct of the directors they would never purchase

and give the 4l. premium.

Dr. Longstaff said a certain impression had been made some time ago that it was the intention of the South-Western to take up the shares at 41. premium, and some had been sold at 31. premium. He did not sell his shares, and would be satisfied at receiving 42 per cent. interest and half the profits, for it was his firm opinion that that branch would become the best feeder of the South-Western. Could not some best feeder of the South-Western. Could not some limited period—say two years—be held out when there would be reason to think the South-Western would take up the few straggling shares at 4l. premium? He thought the speculation would ultimately realize 8 per cent., and the South-Western would have a capital bargain by purchasing at 41. premium.

The CHAIRMAN: I think so too. I am afraid to

ay anything about holding out a period for the purchase at 4l. premium. I think the shareholders will be much better off in getting the 5 per cent.

Mr. Onslow moved a postponement of the agreement, which, not being seconded, fell to the ground.

Two resolutions were agreed to:

That the agreement which had been made with the London and South-Western for working the completed portions of the line between Richmond and Datchet be approved of, and that the directors be empowered to carry the same into effect. And-

That the directors be authorized to borrow, at such time and upon such terms and conditions as to them may seem expedient, all or any part of the sums which that company was authorized by its Act of Incorporation to borrow.

Dr. Longstaff asked if the directors gave up all

control to the South-Western as to the time, &c. the

trains were to run.
The CHAIRMAN: Entirely.

Dr. Longstaff suggested several improvements in the hours of running the trains, for the convenience of persons requiring to be in London early. He also

recommended the issuing of season tickets.

Mr. Chaplin said Mr. Stovin, their manager of traffic, was present, and would, no doubt, pay every attention to those recommendations.

EAST INDIAN Aug. 30.—First Half-yearly Meeting, London. Mr. Aglionby, M.P., in the chair.

Ang. 30.—First Half-yearly Meeting, London.—Mr. AGLIONBY, M.P., in the chair.

The report was read: it stated.—
That in pursuance of the resolutions passed at the special meeting, held in June last, the directors made a cull of 22 per share (in substitution of that cancelled), payable on the 10th of August. Of the amount paid on the cancelled call. 7,7524. has been reclaimed and repaid, with the interest due thereon. The sum of 10,3062, has been transferred to the call due on the 10th inst, by desire of the contributors; 1,1602, remains in suspense, and 1102, has been paid by parties who had not responded to the previous call. The funds then at the command of the directors left the sum of about 6,5002, short of the amount required to make the deposit with the East India Company. The Board however, assured in the policy recommended to their proprietors, and entertaining an unabated confidence in the merits of the undertaking, arranged amongst themselves and other shareholders for the advance of the sum of 14,0002, thus enabling the Board to make the deposit of 60,0002, with the East India Company, bearing an interest at the rate of 5 per cent. per annum, and to retain a balance in hand for general purposes. Since the last meeting, the directors have employed themselves in making reductions in the establishment, which the nature of the company's proposed operations both admitted and required. By these measures the annual Indian expenditure will be reduced from 16,6204, to 6,4904, on the termination of the engagement of Messrs. Adams, Beston and Daniel; and a still further reduction, to the amount of 2,0002, is contemplated on Mr. Stephenson's return. The report then referred to various documents, both anonymous and otherwise, circulated and advertised in the public prints, to the prejudice of the undertaking. The directors state that having made the deposit of 60,0002, with the East India Company it remains to satisfy the Court of Directors of the means of the company to raise a capital of 1,003,000.

Company it remains to satisfy the Court of Directors of the means of the company to raise a capital of 1,000,0000, sterling, and to discuss with that company what portion of

the great line from Calcutta to Delhi shall first be undertaken, and the terms of the contract. On matters connected with this object the Board anticipate much from the in-formation which the managing director will be enabled to bring to bear on the subject on his return to this country bring to hear on the subject on his return to this country, which may be expected in October. The first and essential object, meanwhile, is to comply with the condition precedent of the Fast India Company, to show a capability to expend the necessary amount. The directors recommend, accordingly, subject to the necessary legal forms, such arrangements in part of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of th accordingly, subject to the necessary logal forms, such arrangements in regard to the capital as they anticipate will effect the object desired, and meet the views of the proprietors generally. 1. That no further call be made on the 37.449 shares now subscribed in the company without the consent of a special general meeting. 2. That 26,000 shares be issued, credited with 11.5s, paid on each, the amount paid on the forfeited scrip, and that these shares be offered rateably to the shareholders who shall have duly paid the call of 21, per share, now due, on or before the 10th of September, with the privilege of having them placed in their own names or those of their approved nominees. 3. That the calls upon these 26,000 shares be limited to 100, per share. 4. That the subscribers for the said shares have the option of paying up 48. 15s, at once, to complete the payment of 100. 4. That the subscribers for the said shares have the option of paying up \$4.15a. at once, to complete the payment of 10\ellipse.

per share. 5. That of the remaining shares so many be issued as in the judgment of the directors shall be necessary to make up the capital, the calls on which shall be limited to 10\ellipse. per share, a like option being given to parties to pay up the whole at once. The Board also desire to express a hope that they may calculate on the advent of times and auspices more favourable to the objects of this undertaking than they have experienced for the last two years. The than they have experienced for the last two years. than they have experienced for the last two years. The interest of the public in favour of the introduction of rail-ways into India has been shown by the progress recently made by the Great Indian Peninsula, and that of the East India Company and the Government, by the modification recently admitted into their proposals to suit the state of the times. In England the capital for such undertakings is still circumscribed, in consequence of the undue speculation of the year 1845, and the subsequent depression to which it led. But it india the tandangs of capital has been to accourage. But in India the tendency of events has been to encourage the disposition to invest money in such undertakings; and the Board have every reason to anticipate an increasing desire on the part of the residents there to take shares in this company so soon as its prospects are assured. By the mo-dification agreed to by the Fast India Company of their first proposal, the obligation of this company is reduced to a comparatively small sum, and their operations are brought within narrower limits. But the directors are assured that, when once the terms of a contract are arranged with the East India Company, there will be no dearth of money to complete the first section of the great trunk line from Calcutta to the north-west provinces on terms very easy to the present proprietary; and that when that acction is opened, there will be no want of capital to enter on the succeeding portions of the line.

The statement of accounts, including a balance in hand of 43,673*l*. 10s. 4*d*., showed receipts at 71,144*l*. 6s. expenditure, 15,676*l*. 8s. 4*d*.; amount in course of payment, 9,361*l*. 2s. 3*d*.; balance, as per assets and liabi lities, 46,106l. 15s. 5d.

The CHAIRMAN then moved a resolution, being somewhat in the light of a modification of the report. His recommendation was that the report be received, and that the Board be requested to proceed to discuss with the Court of directors of the East India Company the portion of the line to be commenced upon, and the terms of the contract, and that the result, with full particulars of the cost and traffic of the suggested line, be submitted to the proprietary at a special meeting. He then alluded to the statements which had been circulated in the papers, and avowed his readiness to answer any questions which might be addressed to him on the subjects there discussed, of which he had hitherto refrained to take any notice from a disinclination to engage in a paper warfare.

In reference to the sum which had been raised to

complete the amount of the deposit with the East India Company, to which the CHAIRMAN made some allusion, a Proprietor denied the right of the directors to borrow money without the consent of the proprietors. The question, however, was settled by Mr. Freshfield, the company's solicitor, who read the clause in their Act empowering the company to

Mr. Highest seconded the resolution. He thought the recommendation of the directors pointed out the best course which could be taken; but at the same time he considered that the line could only succeed as a trunk line.

Mr. Bowman supported the resolution.

After some discussion, Mr. LAMBE urged the necessity for securing the 5 per cent. guarantee from the East India Company, without which he prophesied the entire ruin of the company.

The CHAIRMAN expressed the desire of himself and the directors to secure that guarantee if possible, being well assured of its importance to their interests

Mr. Edlin, having just returned from India, thought it his duty to let the proprietors know what he thought to be the best portion of the country for the line. He had come to the conclusion, from the observations he had made, that the best paying portion would be from Allahabad upwards towards Delhi, where the traffic was so large and the difficulties so very small compared with the interest

which must be returned. The country was a perfect level, with as beautiful roads as they could wish to see. So great was his confidence in the resources of the country, that if he had 10,000% he would gladly invest it all in Indian lines.

Capt. BARBER saw no credit in the accounts for any sums which must have been received from the Great Western of Bengal. He wished to know what had become of those sums of money.

The CHAIRMAN stated that the agreement with the Great Western of Bengal had never been perfected, and that therefore no money had been received.

Capt. BARBER had understood that the Great Western of Bengal was defunct.

Mr. Andrew said the directors of that company had

had the same opinion of the East Indian, and therefore did not conclude their agreement.

The resolution was adopted unanimously.

After a short address from the CHAIRMAN, in which he urged the expediency of the proprietors paying up their call, in order to establish their character with the India House and the public,

Gen. M'LEOD moved a vote of thanks (seconded by Mr. Andrew) to the Chairman for his able and courteous conduct.

The meeting was about to separate when Capt. HENDERSON moved a resolution for a statement of the original issue of shares, in a tabular form; and also a short abstract of the deed of settlement.

The feeling of the meeting, however, being against the resolution, it was withdrawn.

ORLEANS AND BORDEAUX.

Aug. 24.—Annual Meeting, Paris.—The Duke de

ORLEANS AND BORDEAUX.

Aug. 24.—Annual Meeting, Paris.—The Duke de Mouchy in the chair.

The report stated that—
The directors had few new facts to add to those given in previous reports. The service, comprising as it did only the first section—that from Orleans to Tours—presented merely details and results of the working. The directors had lowered the tariff for passengers, but finding this sacrifice of no profit, they had resolved to restore it to the annount originally fixed. The following have been the working results:—From July 1, 1847, to June 30, 1848, the receipts of our traffic produced 4.004,396. 14c.—viz. 425,341 passengers, producing 1,878,6387, 75c.; 125,141 tons of goods, 1,728,1437, 29c.; 147,915 head of cattle, 397,616f. 10c.
The 425,341 passengers were divided annongst the different classes as follows:—1st class, 77,643, or 18725 per cent.; 2nd class, 165,071, or 38*31 per cent.; 3rd class, 165,071, or 38*31 per cent.; 3rd class, 165,071, or 38*31 per cent.; 3rd class, 165,073, or 42*42 per cent. The produce of 1,878,638 f. 75c. was subdivided in the following manner:—1st class, 776,1196.
65c., or 38*10 per cent.; 2nd class, 704,140f, 95c., or 37*48 per cent.; 3rd class, 458,378f. 15c., or 24*42 per cent. We have transported 5,908,592 kilogs, of parcels and light goods, which produced 160,929f. 55c. This result gives us over the preceding year a profit of 95 per cent. in the tonnage, and 81 per cent. in the receipts. The articles of value specially confided to us for transport give an augmentation as to value of 61 per cent., and as to receipts of 63:34 per cent., over the preceding year. We have transported 116,303,472 kilogs, of heavy goods, producing a receipt of 1,421,580f. 24c. The excess over the year 18467 is here, for the tonnage 38*21 per cent. and for the receipts 63 per cent. The account of the receipts and expenses of the working is balanced by an excess of receipts and expenses of the working is balanced by an excess of receipts and only 1,525,3146f. 8c.; from which instead the pre

distress from the revolution and the refusal of the bankers to meet their engagements. It continued—

bankers to meet their engagements. It continued—
At our meeting of the 17th of August 1847 you authorized
us to demand from the Government—I. That our shares,
which are nominative, should be converted into shares to
bearer after the payment of the first five-tenths.—2. That
the profits should be devoted to the reserve fund, in the
proportion of one-half during the working of the section
from Orleans to Tours, and in the proportion of one-quarter
when the section from Tours to Poictiers shall be open to
circulation, and until the entire completion of the line as
far as Bordeaux. The demand was on the point of being
decided by the Government at the moment when the revolution of February broke out. Since then we have renewed

have obtained a solution. The board of directors now ask
of you to approve of the dividend resulting from the accounts which have been distributed to you; and faithful to
the promise made at a previous general meeting, it asks you
to appoint a committee to verify the accounts of the present to appoint a committee to verify the accounts of the present

The statement of accounts from July 1, 1847, to The statement of accounts from July 1, 1841, to June 30, 1848, showed the receipts at 4,130.764f. 3c. (165,2304.); expenditure. 2,567.618f. (102,704L); leav-ing a balance of 1,563,146f. (62,525L). The CHAIRMAN said the directors, deeply sympa-

thising with the position of the shareholders, in con-

Digitized by GOOQIC

sequence of the general depreciation of industrial property, had come to the determination of giving up for the present, until an improvement should mani-fest itself, 90,000f. out of the annual sum allowed to them for their management. The Board had expected to open part of the line towards Poictiers, between Tours and Chateauroux, about the spring of 1849; but they had lately received intimation from the Government that the Minister of Public Works with a view to aid metallurgical industry in France and to give employment to as many workmen as possible, had determined to urge on railway works with the utmost energy. The Board now conceived that the portion just named would be opened to the that the portion just named would be opened to the public about the end of the present year. As however the rails, chairs and other metallic articles were paid for at least one-half in cash, it would be found necessary to make a call of 25f., which would probably take place about the month of October. He concluded by saying, that the meeting now had to proceed to the nomination of a committee to verify the accounts of the current year.
Some voices here cried out that the Board could

themselves suggest the persons for that purpose, but this was declined by the Chairman

After a short conversation, MM. Lajoie, Laclef and Daly were nominated for the purpose, the latter gentleman being the representative of upwards of 6,000 English shares, of which 5,600 belonged to the Edinburgh Bank.

The accounts were then approved of unanimously and the dividend of 1f. 44c. per share declared.

Paris and Lyon.—Aug. 23.—Meeting of Share-holders, London.—Sir I. L. Goldsmid, Bart. in the chair.—Mr. C. Devaux, one of the directors, had addressed a circular to the English shareholders, stating that the National Assembly of France had passed a law to the following effect, viz.:—

That the Paris and Lyon shall become the property of the State. The holders of shares of 250!. (10!.) paid up will, for each share, receive a certificate of French stock bearing interest of 7t. 60c. per annum. They will also have the option of paying up 250f. (10l.) per share more, and in that

case would receive 25f, per annum (instead of 7f. 60c. per annum) interest, commencing 22nd of March last. Notice of accepting such option must be given to the French Government before the 1st of September next. The 250 francs already paid will form a guarantee deposit, which will decrease in proportion as the future instalments are made. The 250f. remaining to be called up will have to be paid as follows:—50f. on the 5th Oct. 1849; 50f. on the 5th July 1849; 50f. on the 5th Oct. 1849; 50f. on the 5th July 1849; 50f. on the 5th Oct. 1849: together, 250f. On each of these payments being made the holder of the certificates above referred to will receive an inscription of rentes for 5f. The steps to be taken for the execution of the present decree, especially as regards those shareholders who shall not have paid up the instalments at the times stated, will be determined upon by the Minister of Finance. The shareholders who have paid up 275f. [11].) per share are to receive back from the company 25f. per share.

The Chairman stated they intended to have memorialized the Foreign Secretary (Lord Palmerston) on

rialized the Foreign Secretary (Lord Palmerston) on the subject, but as the Act had passed the National Assembly, such a step had been thought useless. The memorial, however, embodied the opinions of those with whom he (the chairman) acted, and he would therefore read it to the shareholders now assembled. therefore read it to the shareholders now assembled. The memorial stated—That the company was formed in 1845, for constructing a line from Paris to Lyon, with a large capital, to which English capitalists were invited to subscribe, and did largely subscribe, relying on the good faith and honour of the French nation. That the memorialists, and a large number of shareholders in this country, have paid calls equal in amount to 50 per cent on the amount of shares for which they subscribed. That upwards of 100 miles have been either executed or are in the course nor which they subscribed. That upwards of 100 miles have been either executed, or are in the course of being completed, by means of the funds contributed by the shareholders. That the affairs have been conducted by a board of directors in Paris, and, diving the recent country in the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of the course of t during the recent events in that country, the French during the recent events in that country, the French proprietors generally were, as the memorialists understand, unable to meet the calls made. That the directors, without having called any public meeting of the shareholders to authorize such a step, have thought fit to propose a sale of the undertaking to the French Government; but, at the same time, as the memorialists are informed, they stated to the said

Government that they had no authority from the shareholders to make such a proposal. That the French Government have resolved to take the line into their hands upon the terms of giving to the everal shareholders—defaulters and non-defaulters. without any distinction—an amount of French rentes equal only at present prices to 9.20ths of the amount actually paid up by them; and which amount of rentes would not, moreover, at any period since the formation of the company, have been sufficient to produce the amount so paid up. These terms, how-ever justifiable they may be considered with regard to non-paying shareholders as a penalty for their default, will operate as a grievous wrong and injustice upon those who have made no default, and who are upon those who have made no default, and who are ready to pay all future calls. That the memorialists and the shareholders generally have not been offered an opportunity of assenting to, or dissenting from, the surrender of the undertaking upon the terms proposed. That some of the English shareholders have expressed their willingness even to pay up their proportions of the remaining capital, though not yet called up, but the only answer they had obtained has been an offer of stock for such payment at about the present market price had obtained has been an oner of stock for such payment at about the present market price—Mr. Devaux detailed at considerable length the circumstances attending his mission to France on behalf of the shareholders, and his interviews with M. Goudchaux, the Minister of Finance.—After a protracted conversation, in which Mr. Herapath and other shareholders took part, the following resolution

other shareholders took part, the holdering resonance was unanimously adopted:—

That it is the opinion of this meeting that an opportunity should be afforded to those shareholders who are willing to proceed with their engagements to do so; and that for this purpose a committee should be formed to negotiate with the Government of France, and to take such measures at may be necessary for ascertaining whether sufficient funds can be obtained for the completion of the undertaking. A second resolution was carried nominating the following contlement the committee:—Messre they following gentlemen the committee: "Messr chapman, Devaux, Sir I. L. Goldsmid, Bart., and Mr. Powles, with power to add to their number.

* For account, Sept. 7.

London Stock Exchange, Sept. 1 .- During the week there have been several symptoms of improvement in the share-market; but the latest news from the Continent has produced an ill effect. More business on the whole has been transacted.

Liverpool, Aug. 31 .- The market continues very inanimate; prices, however, may be quoted firmer.
Sublow, Brothers.

Manchester, Aug. 31.—Our share-market has undergone but little alteration during the week; but the improvement in the weather furnishes anticipations of an improvement in shares.

Sam. Grindrop. York, Aug. 31.—This market continues very dull, with scarcely any business doing. The fine weather during the last few days has been very seasonable, and we understand a great quantity of corn in this district has been got in, uninjured by the previous GRAYSTON & EARLE.

Hull, Aug. 31.—Since our last there has been more passing in railway stocks; this may in some degree be attributed to the favourable change in the weather. The meeting of the Chester and Birkenhead weather. The meeting of the Chester and Birkenhead passed off satisfactorily; compared with the corresponding period of last year the passenger traffic showed an increase of 8 per cent., the goods traffic of 20 per cent., whilst the working expenses had been reduced 5 per cent. At the Leeds and Thirsk meeting it was determined that no call should be meeting it was determined that no call should be made on the new preference shares until power was obtained to pay them 6 per cent. These shares will not exceed 25t. per share; at the present price they ought to be worth notice. The consideration of the proposed amalgamation with this company and the East and West Yorkshire was postponed, the Thirsk to work the line in the meantime. The following are the latest prices:—Ambergate, 5s.; Darwens, 133 dis.; Fleetwoods, 6s.; Great Northern, 9§ dis.; Hull and Selby, 101; ditto, halves, 50½; Leeds and Thirsk, new,

234 dis.; North British, 194; ditto, halves, 84; quarters, 48; thirds, 40s.; North Staffords, 4 dis. FLINT & TOOTAL

Glasgow, Aug. 31 .- The market has been flat this week, and most shares are quoted lower, the unsettled state of the weather having been the principal cause. To-day has been remarkably fine, and the demand for shares is much better. The following are the latest prices:—Caledonian, preference, 3s. 3d. prem.; Edinprices:—Caledonian, preference, 3s. 3d. prem.; Edinburgh and Northern (Newport), 6 dis.; Dumfries and Carlisle, 5g; Ayr, 61; ditto, halves, No. 1, 8g dis.; Greenock, 14½; Great Northern, 9g dis.; North British, thirds, 53s. dis.; Paisley, Barrhead and Hurlet, 30s. dis.; Scottish Central, 24.

BUCHANAN, AITKEN & Co.

IRON TRADE.—Glasgow, Aug. 25.—Reports show no improvement in price nor transactions for pig The market is dull, at 45s. to 45s. 6d. for No. 1, cash.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

MEETINGS.

Derby, at 2.

#### DIVIDENDS.

DIVIDENDS.

EASTERN COUNTIES.—8s. per share, now payable.

GLASCOW, PAISLEY AND AYR.—At the rate of 4 per cent. per annum, payable Sept. 25.

GRBAT NORTH OF ENGLAND.—5l. on the 100l. shares; 1l. 6s.

5d. on the 40l. shares; 1l. 10s. on the 30l. shares; and 4s. 3d. on the 15l. shares, now payable.

GRBAT WESTERN.—At the rate of 7 per cent. per annum.

HULL AND SELEY.—2l. 10s. on the 5dl. shares, and 1l. 5s. on the 2sl. shares, now payable.

LANCASTER AND CABLISLE.—1l. per whole share, and 4s. 6d. ner third share.

LANCASTER AND CARLISLE.—14. per whole share, and 45. 66., per third share.

LEEDS AND BRADFORD.—11. 55. per share.

LUNNON AND BLACKWALL.—12. 65. per share.

LONDON AND BLACKWALL.—12. 65. per share.

LONDON, BRIGHTON AND SOUTH COAST.—135. on the 501.

London, Brighton consolidated stock

LONDON AND NORTH-WESTERN .- At the rate of 7 per cent. per annum. ONDON AND SOUTH-WESTERN .- At the rate of 6 per cent,

per annum, now payable.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.—At the rate of

MANCHESTER, SHEPPIRED AND LINCOLSSHEE.—At the rate of percent, per annum on the 100 shares, and 73 percent, per annum on the Sheffield and Manchester No. 1. quarter shares, now payable.

Middand.—6 percent, per annum on the consolidated stock, on the consolidated preferential stock, on the 421. 102. shares and the Erewash Valley shares, and 24. 63. 34. on the Birmingham and Derby stock, all payable Sept. 4.

NORFOLK.—At the rate of 4 per cent. per annum on the capital stock, and 2s. per share on the new 20l. shares, payable Sept. 7.

NORTH STAPFORDSHIRE.—4s. per share.

NORTHERN AND EASTERN.—1l. 5s. on the 50l. shares, guaranteed 5 per cent. per annum; 1l. 10s. on the 50l. shares,

guaranteed 6 per cent. per annum; 18. 30. 301 to 505. Share on the 235. paid on the new shares. South-EASTRIN.—215. on paid-up shares, 15s. 9d. on shares created March 19, 1848, and 11s. 8d. on shares created November 7, 1844.
South Yorkshire, Doncaster and Gools.—At the rate of

G per cent. per annum.

TAFF VALE.—4l. on the 126l. original shares.
WHITRHAYEN JUNCTION.—2s. per share, payable Sept. 4.
YORK, NEWCASTLE AND BERWICK.—At the rate of 8 per cent.
per annum on the consolidated stock, on 15l. of the Newcastle and Berwick original shares, on 15l. of the North
Shiddle numbers and et the water of 5 per cent. Shields purchase shares; and at the rate of 5 per cent. per annum on the remaining 10t. of the North Shields purchase shares.

YORK AND NORTH MIDLAND.—4 per cent. on the consolidated stock, and 12s. on the East and West Riding shares.

#### CALLS.

CALEDONIAN.-21. 10s. on the 10t. preference shares, due CALEDONIAN.—26. 102. on the 102. preference shares, due Aug. 21.
CRYLON.—5s. due Aug. 21.
DUNDALK AND ENDISKILLEN.—22. 10s. due Aug. 12.
DUTCH-REBRISH.—10s. due Aug. 15.
EAST AND WEST INDIA DOCKS AND BIRMINGHAM JUNCTION.—

2l. 10s. due Aug. 31.

## Joint-Stock Companies' Gazette.

On Tuesday the half-yearly meeting of the CHARING CROSS BRIDGE Company was held, the Earl of Devon in the chair. The meeting was very well attended by the proprietors. The receipts, as stated in the report, for the half-year ending the 31st of July, amounted to 3,068l. 3s. 7d., permitting of a dividend at the rate of 4 per cent. being paid. The receipts were not so large as in the corresponding half-year of 1847; but the opening of the Waterloo Station of the South-Western, it was expected, would cause a great increase in the traffic and income of the company. Three new directors were elected in the room of those retiring; and Dr. Moore proposed to elect four additional directors to the number already in office. A long discussion took place, as to the legality of such a step, and it was finally resolved that the matter should be referred to counsel and a special meeting convened. The resolutions adopting the report, declaring the dividend, and thanking the chairman, were unanimously agreed to. The dispute with the Market Company has been amicably arranged, the Bridge Company paying the former the sum of 1,000*l*. and taxed costs, in full of all demands.

The IRISH WASTE LAND IMPROVEMENT Company

held their half-yearly meeting on Thursday. It appears that the sum of 1,285t. still remains due upon the call made in July 1847, the non-payment of which was accounted for by the commercial distress and the general state of affairs in Ireland. The construction of the mill and pier at Kilkerin was proceeding. It was much feared that the company's estates would suffer, as the potato disease was spreading; but provision had been made to compensate for any that might arise from that source. From the balance sheet it appears, that on the 30th of June last, the amount in hand was 308l. 4s., and the total assets were 14,984%. 10s. The report was adopted and the meeting terminated.

Steam Navigation.

The half-yearly meeting of the GENERAL STEAM NAVIGATION Company took place on Tuesday at their offices, Mr. Wilkin in the chair. The report was highly satisfactory. Notwithstanding the great depression of the times, the revenue of the company allows of the usual dividend, free of income-tax: the amount is 14s. per share for the half-year, leaving a good balance to be carried to the next account. The shareholders separated, after thanking the directors and managers and declaring the dividend.

Docks.

The fourth half-yearly meeting of the proprietors of the PLYMOUTH GREAT WESTERN DOCKS took place at Plymouth on Monday, Col. Harris in the chair. The report was read, from which it appears that the Amendment Act, authorizing the subscription of the agreed portions of the capital by the Great-Western, South Devon and Bristol and Exeter Companies, had Gregson had been accepted, for executing the works of the Inner Basin, including a graving dock and two locks at the entrance, and the contract made with Messrs. Harvey had been transferred to Messrs. Gregson. The South Dock wall was in course of formation; 500 feet had been completed, and the remainder was in a forward state. About 400 yards of rock have been excavated, and the large coffer dam for the works has been commenced. The receipts for the works has been commenced. The receipts amounted to 15,690l. 15s., and the disbursements to 14,460l. 5s. 4d., leaving in the hands of the bankers 1,230l. 9s. 8d. The report was adopted, and thanks were voted to the chairman.

Mines.
The shareholders of the ASTURIAN MINING Com pany will peruse with interest the following document, forwarded to the board of directors by Mr. Lambert, their manager in Mieres; it was addressed to him from the Government Department of

When I had, in the end of June last, the high gratification of inspecting the interesting iron works which you manage in a manner so satisfactory, I addressed a report to the Direction General of Mines, with details of the establishthe Direction General of Mines, with details of the establishment, comprising its resources, workshops, &c., together with my opinion regarding the scientifical, mechanical and economical management under which the whole is conducted. And the Direction General, having presented my report to Government, have ordered me to communicate to you that Her Majesty the Queen, persuaded of the important influence towards general prosperity and the advancement of industry created by such establishments, has been pleased to manifest by royal order of the 29th of July last the high consideration in which she holds them, and that she is inclined to favour that which is under your management by every protection compatible with law and good government, in order to its rapid development and success. (Signed) WILLIAM SCHULZ.

A special meeting of the shareholders of the REAL DEL MONTE was held on Monday last, at the offices

of the Company. Sir R. Price in the chair. object of the meeting was to discuss the judiciousness of disposing of all the company's interest and effects, if possible, to parties in Mexico. The report stated that the returns of the mines were far under the expenditure, and the loss by the last advices received were at the rate of 2,000 dollars weekly. The amount due to creditors in Mexico was 80,000 dollars, and a larger sum to the loan-note holders in England. The directors therefore think it more prudent that the shareholders should not incur further liabilities, and that it would be better to dispose of the mines to capitalists able to develope their resources. The mines are still being worked in hope of better pros-pects. The value of the works and materials was estimated at 80,000l.—After a discussion of nearly two hours' duration, it was resolved that the meeting should stand adjourned till the 25th inst., to allow of a more mature deliberation upon the course to be pursued.—Thanks having been voted to the Chairman the meeting separated.

On Monday last an adjourned meeting of the share-holders of the NATIONAL BRAZILIAN MINING ASSO-CIATION took place at the London Tavern, for the purpose of considering the report of the committee which had previously been appointed to investigate the affairs of the company. Mr. Deputy Corney occupied the chair, and stated that the committee had been very anxious to effect an amicable settle-ment of the disputes which had taken place among the directors. It will be in the recollection of our readers, that Mr. Collett, the chairman of the company, had been to the Brazils to investigate the posi-tion of the company there, and that three or four of the directors differed in the views held by Mr. Collett as to the proper course to be taken, to promote the interests of the shareholders. An arrangement has been come to which will close the breach in the unison of the Board. Mr. Collett has resigned his seat in the direction owing to his required absence in Ireland on business matters, and Mr. Hartley has been elected to fill his place. Mr. Collett, who has taken a great interest and much trouble in the affairs of the company, was thanked by the shareholders, and 500l. was voted to him for his past services. The company is to be managed by two directors till the next meeting, which is to take place in May 1849. The resolutions authorizing the payment of the calls, &c. having been passed, the meeting separated, after a vote of thanks to Mr. Deputy Corney.

The market this week for every description of shares

has been dull, and very little doing.

Further advices are anxiously expected from South

#### TO CORRESPONDENTS.

E. J., Boston.—Probably the amount only up to the 30th June last; this you can ascertain from the solicitor. A PANIC SUPPREER is certainly mistaken. Neither the chairman nor any one of the directors made such an offer. Received: E. M. — A Shareholder in the Grimsby Docks.—A Leeds Surschiber.

## Railway Chronicle.

LONDON, SATURDAY, SEPTEMBER 2.

The directors of the CALEDONIAN received the warm approbation of the proprietors for their conduct of affairs at the half-yearly meeting. In spite of various unfavourable contingencies, the weekly receipts show an advance of upwards of 30 per cent. since the 30th of June; and the prospects of the company on the completion of the various extensions promise, in the words of the report, an ample return. All the shares paid in full are to be converted into stock. The requirements of the London shareholders met with an immediate and favourable response from the chairman; and the meeting, by the re-election of the retiring directors, manifested its confidence in the present managers of the company.

The MEETINGS OF THE WEEK have been numerous. The BIRKENHEAD, LANCASHIRE AND CHESHIRE has strengthened its direction, and seems to have improved its prospects. The CORNWALL is in a state of suspended animation; its rival no longer threatening hostility, but its friends having withdrawn support. The WIND- SOR AND STAINES held a long argument as to the terms of purchase by the South-Western, in which the hostile party did not take much by his argument. The LEEDS AND THIRSK reported progress, but postponed the proposi-tion of taking the East and West Yorkshire at 6 per cent. The Glasgow, Kilmarnock and AYR announced a great diminution of traffic in all branches, and a deduction of dividend to 4 per cent. The fact that 200,000l. had recently, in two years and a half, been spent in law expenses excited much discontent. A 6 per cent. stock for three years, with 5 per cent. in perpetuity, is to be raised, to the extent of 250,000l., which it will be observed is not much more than the amount of the aforesaid law expenses. In our judgment this seems an unprofitable investment of money. Scotchmen must be even fonder of law than we fancied, to provide, by raising a 6 per cent. preference stock, for the indulgence of this national luxury. Many other meetings will be found in our columns of the week, which we have not space here to particularize; but if there is any feature in their reports worthy of notice, we shall probably offer our observations thereon on another occasion. One fact above all was remarkable, and that was the unanimity with which both shareholders and directors preached and promised economy in the future management of affairs.

Amid the general discontent produced by falling dividends, it is consoling to be able to note symptoms of good management in some palpable spots. The EASTERN COUNTIES and the BRIGHTON show the following result:-that while nearly all other great lines have expended during the year more new capital than their increased revenue can pay for, these two companies have, on the contrary, expended less. If therefore their dividend has fallen, it is from foregone errors, not from present mismanagement. Shareholders must therefore unite with directors in regretting past extension of responsibility, and in reforming and retrenching expense; but in attributing blame they will do well to discriminate carefully the quarter to which it ought to be laid.

Among the many plans which these pinching times of poverty have suggested for the retrenchment and economy of working expenses, one of the most curious and important seems to be the LILLIPUTIAN SYSTEM of Mr. SAMUELS and Mr. ADAMS, now about to be fairly tried in working the branch traffic on part of the Eastern Counties and of the Bristol and Exeter. To diminish the uprofitable weight of a train to the utmost, and to increase the tractive power of that weight, are the objects of this invention. They propose to form a single large carriage, like those at present made by Mr. Adams for the North Woolwich branch of the Eastern Counties, capable of carrying sixty passengers, and to carry on the front of it a small locomotive engine. The tender will form part of the carriage. Of course the weight of the whole is to be placed extremely low. There will also be a small additional carriage, so as to take on the whole 100 or 120 passengers, with engine and tender. The weight of engine and carriage will not exceed some 12 to 15 tons, and, with passengers, will weigh perhaps 20 tons. We have seen one of these Lilliputian trains in process of construction at the works of the Eastern Counties Railway, and in the workshops of Messrs. Adams & Co. The wheels are so placed as to throw a great part of the weight of passengers on the driving-wheels. By this means they will receive additional adhesion, with additional load. The design seems ingenious, and the workmanship good. The experiment on the whole is promising, and

Digitized by GOO

highly interesting. The advantage of working small or branch traffic in this way will be its economy. The light weight of engine and train will diminish wear and tear, as well as coke and other working expenses. At present these are so high as to render branches in many cases unprofitable. It is proposed also to run light expresses in this manner. Any plan that proposes important economy does, in these pinching times of poverty, demand immediate attention from railway companies; and we shall therefore watch the progress of these experiments with interest.

A correspondent has written us the following angry letter,-regarding Mr. Locke's observations concerning the BRIDGES AT KEW. It seems those bridges were imposed on the line by the Woods and Forests; and, though built under Mr. Locke's superintendence, were designed by the Woods and Forests. We leave Mr. Locke to answer for himself if he thinks proper; but in the meanwhile we may observe, that the evil of divided responsibility is always great in railway works; and as it is quite necessary that all the circumstances of each case should be studied before settling the nature of such a construction, we can quite conceive the original design to have been ill suited to the soil and the situation, although sufficiently picturesque. It is better that railway works should be left to the design of the engineer who has to construct them.

The statement made by Mr. Locke at the recent meeting of the South-Western, as reported in the last number of the Railway Chronicle, that "it was true that, owing to an ill-constructed pier, one of the bridges at Kew had broken down, but it was not the fault of the company, seeing that the bridge was drawn out by the Woods and Forests," renders it necessary, in order that the public generally, as well as the shareholders in that railway, should not be deceived, that a correct statement of the cause of the failure to which Mr. Locke alludes should be laid before them. The arches in which the settlement took place form the approach to the bridge, carrying the railway over the Thames, and being situated in Kew Park, the Commissioners of Her Majesty's Woods and Forests furnished the company with a design for the elevation of the viaduct. It was, however, nothing more than a drawing, showing what the Commissioners wished to be its external appearance and decoration, and in no way whatever did it even indicate the manner in which it was to be constructed. Neither did the Commissioners in any way dictate to, or control the company in any of the matters relating to its construction. Of all these circumstances Mr. Locke, as a matter of course, was perfectly aware when he made the statement quoted above, because it was himself who either furnished, or ought to have furnished, the constructive drawings, and it was his own assistants who superintended the execution of the work. Of the true cause of the failure of these arches-namely, insufficient depth for the foundation of the piers, and the use of bad material-Mr. Locke is as well aware as he is of his sole responsibility in all that relates to their giving way. The foregoing statement of the facts of the case are sufficient for the right information of the public, and it is quite unnecessary to make any comment upon the feelings which prompted Mr. Locke to endeavour to thrust upon the shoulders of others blame which should be borne by himself.

From our official returns it appears that the amount of traffic for the last week, on 4,110 miles of railway, was 225,801/., thus accounted for:—119,402/. for the conveyance of passengers only, 48,450l. for the carriage of goods, and a remainder of 57,949/. for passengers and goods together, not respectively apportioned; being an increase of 11,528l, over the corresponding week of last year, when the mileage was 3,296. The average carnings per mile were 55l., whilst in 1847 they were 65l.

EAST INDIAN RAILWAY.

The half-yearly meeting of this company, held on Wednesday last, (the proceedings of which will be found in p. 619,) manifested a disposition to give a careful consideration to the various points which we have lately been endeavouring to elucidate. The question of the nature of the guarantee offered by the Hon. East India Company was discussed by several speakers; and the directors' report, instead of being pressed upon the meeting for adoption, was received conditionally, a final decision upon the matters referred to in it being reserved for a special general meeting. The directors are in the meantime instructed to communicate with the India House respecting the guarantee, and the locality of the railway which is to be constructed; and when full information is obtained upon these points, the proprietors will be in a position to decide upon some definite course of action. We are gratified to find that the efforts we have made, to exhibit clearly to the shareholders the uncertain basis upon which they were proceeding, have met with so great a measure of success. It is better that an unpleasant revelation should be made now, when amendment is still possible, than to delay the appreciation of the truth until its disastrous consequences were irretrievably incurred. It is better for the shareholders to lose their capital already subscribed, than to prosecute an undertaking which would not be remunerative, and would be a perpetual drain upon their resources. The existence of the company now hinges upon the nature of the guarantee; and if our interpretation of it be correct, the dissolution of the company is inevitable. Such is the decision unanimously arrived at by the meeting; and, much as such a consummation is to be regretted on public grounds, the in-terests of the shareholders render any other course totally inadmissible.

ANSWER TO MR. LOCKE'S LETTER ON THE MIXED GAUGE.

The Morning Herald has this week opened its columns to a long anonymous reply to Mr. LOCKE'S published Letter to the Premier on the mixed-gauge question. The only thing of consequence we discover in this essay—which contains a great deal of irrelevant matter and not a few perversions of the facts of the gauge caseis the proof it affords of a certain effect being apprehended from Mr. Locke's public remontrance on this occasion. The apprehension is natural enough. The main outlines of a very serious evil were traced in the letter to Lord John Russell, briefly indeed, but with sufficient clearness and emphasis to produce a strong impression. We believe the effect has been to convince many who were heretofore indifferent to the subject, or unacquainted with its bearings, that the matter in question is of greater moment in a national point of view than as connected with any special dispute between rival railway interests. This is, indeed, the most important aspect of the case, as now complicated by the inconceivable folly of the Railway Commissioners; and the impression likely to be produced on impartial judgments by a duc exhibition of the consequences of their want of wisdom may well alarm the party whose interest it has been to lead incapable officials to the commission of a serious error. Those who wish to preserve the railway system of this country from the mischief which the Board at Whitehall threatens to inflict upon it, can desire nothing better than that public attention should be called to the subject. The more it is discussed, the more evident the danger and the needless expense of a mixed system must become; and what is most to be feared is the indifference of the public to

deeply concerns the nation than the railway interest at large. The danger to the State, indeed, is owing to the very circumstance of a few only of the companies owning lines on the standard scale being immediately threatened, and to the apathy with which the rest have witnessed the progress of the mischief. This has enabled a single active body, representing a mere fraction of the railway body,—favoured by the selfishness of the majority of that body, and aided by the zeal of certain influential partisans on the one hand, and on the other by the readiness of all the enemies of railways to forward whatever promises to ruin the property invested in them, -to carry its detrimental plans so far as it has already done. The sooner, therefore, the public are made aware that this is a national quite as much as a railway question, the better. The more the subject is debated the more clearly will this circumstance become visible; on which account, we say, we hope it may be again and again discussed.

We shall only further advert to the pamphlet just published in the Morning Herald for the purpose of noticing the reappearance there of that unlucky letter of Capt. Huish's in 1845, in which he was instructed by the then directors of the Grand Junction to commit the worst error that has ever yet taken place in railway affairs, in the shortsighted view of a hostile object. Amongst the manifold evil consequences that have up to this time been produced by the quarrels of rival companies, this must take precedence; and if proof were needed of the irreparable mischief of a single wrong step taken to serve a temporary purpose, it would be sufficiently given by the use that has been made of this unwise production. every discussion of the gauge question it springs up afresh against the promoters of uniformity; and is thrown by the Brunel party in the teeth of the very interest that is now most directly concerned in maintaining the national standard. Nor can there be any doubt whatever that, but for the policy which gave birth to this insidious circular, the broad gauge would never have ventured to show itself in the district it has since invaded. Thus it is that great evils may be produced by the most petty means; while the consequences of error outlive the objects to promote which it may have been committed.

We shall possibly, before long, set down a few practical considerations on the subject of the broad gauge ;-not for the purpose of converting its partisans, who are not likely to listen to argument while they are still heated by contest, -but in order to put on record, as is our wont, what we believe to be a true account of the matter, as it affects the proprietors' interests. The national side of the question we must leave to those whose business it is to study the public

THE LEEDS AND THIRSK AND ITS PROSPECTS.

This railway has been retarded in its progress by the nature of the soil near Ripon, and some of the piers and small bridges have had to be rebuilt. ne, including the branches to Harrogate and Knaresborough, is about 41 miles long, and it will probably be opened to within 8 miles of Leeds about the middle of next month, and has only been delayed by the sinking of the peaty ground above alluded to, between the River Ure and the town of Ripon. The completion of the Bramhope tunnel may be looked forward to about the end of next year, or perhaps earlier, when this line will be found a serious rival to Mr. Hudson's York lines for a great deal of the Northern and Laneashire traffic. A large quantity of water will be derived from cutting the springs in the tunnel, which will be conveyed to Leeds, where it is much needed, the existing supplies being inadequate to the wants of the place. The northern end of the line, from Thirsk to a temporary a question which, as we have said, far more station near Ripon, is now in operation, a distance of

Digitized by GOOGIC

about 8 miles. On such a length it is not likely that any large amount of traffic can be developed, but the necessary plant is all ready for operation on a larger scale, and may serve as a model to the old companies. The locomotives are of great power, with all the recent improvements :_the first-class carriages, with due regard to expense, as good as need to be,-the second-class excellent, with glazed windows and cushions, and the third-class equal to any of the second-class carriages on the old lines, roomy, comfortable and well defended from the weather. It is curious to observe the effect this partial opening has had on the price of coals at Ripon, although the accommodation is now far inferior to what it will be for this traffic, as well as all other heavy goods: but on the day when north-country coals were brought in by locomotives the price fell from 18s. to 10s. 6d. per ton! A further reduction will take place when the West Riding coals come in from the Leeds end; and before many months have elapsed the "carrying of coals to Newcastle" may not be an occurrence of such great wonderment as it appeared to our ancestors. The communication with the York and Newcastle Railway is by a fork on the level, enabling either engines or waggons to work on both lines with perfect facility. The Northern Counties Union will be a feeder, and most likely will become an integral part of the Leeds and Thirsk.

#### Correspondence.

#### DIAL PLATE FOR TIME OF TRAINS

If a dial plate to show by day and night, with hour and minute hands, without the going part, were to be placed at each station, simply for the purpose of indicating the time that the preceding train had passed, this would inform the engine-driver and guard when caution was necessary. For instance, suppose the dial plate were fixed at 1 20, and the engine driver and guard's watches were then 1 30, they would then know that they were within ten minutes of the preceding train; and so on. A person at the station should alter the hands as each train passes. J. C. B.

#### DUBLIN, BELFAST AND COLERAINE.

You may possibly be enabled to give information relative to the Dublin, Belfast and Coleraine, which has been lost to the public for some time. Being a holder of a considerable number of scrip shares, I am anxious to know if any steps are being taken to wind up this concern, or if it is the intention of the hon. chairman to prosecute the work. A SUFFEBER. August 31.

#### Gossip.

The secretary of the Stock Exchange Committee has addressed a letter to the superintending director of the Great Indian Peninsula, respecting doubts as to the construction to be placed on the guarantee by the East India Company of 5 per cent., and whether it contemplated a positive stipulation to guarantee for twenty-five years the dividend stated, or was to be interpreted merely as an aid to that extent, which, in the eventuality of a loss in working the line, might after all result in no security of such nett dividend at all to the proprietary. Mr. Nichol-

nett dividend at all to the proprietary. Mr. Nicholson, in reply, wrote—

I beg to forward you a verbatim copy (in the court's own words) of the terms guaranteed by the Hon. East India Company to the Great Indian Peninsula. There is no such contingency or possibility contemplated as a loss in working the railway after it is constructed. And it would be doing the court equal dishonour to imagine, either that they are incapable of providing for all possible contingencies, or offering the terms of a guarantee in language of equivocal construction:—"The court will guarantee, on the part of the East India Company, an interest or dividend for twenty-five years, at the rate of 5 per cent, per annum on such sums not exceeding, in the whole, 500,000%, for the construction of the work, as shall be paid into the East India Company's treasury by the railway company, within three years from the date of this letter, provided that the interest does not commence until 30,000%, shall have been so paid."

[Our opinion of this guarantee is already on record.]

Mr. Barlow, C.E., of Derby, has patented his plan

Mr. Barlow, C.E., of Derby, has patented his plan for securing the rails from becoming loose in the chairs, by contracting in dry weather, by impregnating the keys with matter insoluble in water, so as nearly to prevent expansion and contraction. The materials which the patentee prefers are—4 gallons of creosote, 1 of naphtha, 24lb. of pitch and & a gallon of boiled linseed oil, mixed together—one gallon of the mixture to each cubic foot of wood. The wooden

considerably; they are then taken to the drying stove, and, while hot, subjected to the saturating process, either by simple immersion, from 16 to 24 hours, or by exhaustion and injection. He recommends that they should be subjected to pressure, in the usual manner of compressing railway keys.

The Weekly Share List gives the following tabular statement of the rates of dividend paid during the last four half-years by ten of the principal railways:

	Divi		e <b>r ce</b> nt num.	. per
	1846.	18	47.	1848.
	2d halt	ist half	2d half	ist half
Eastern Counties	63	5 8	4 7	4 7
Glasgow and Ayr		7 9	6 8	7
London and South-Western Brighton	9 <del>3</del>	9	8	4 7 6 21
MidlandSouth-Eastern	7 6:34 10	6·34	6:34	6.34
York, Newcastle and Berwick		10 9	10 9	8

The South-Eastern is therefore the only company which has maintained the same rate of dividend for the past four half-years; and the Eastern Counties and Great Western the only two which have paid the same dividend for the first half of 1848 as for the second half of 1847. A reduction of 1 or 2 per cent. has been made by all the others for the past halfyear; and by some it will be seen that during the two years referred to, there have been reductions amounting to 3, 4 and even 41 per cent.

Some of the engine-drivers on the YORK AND NORTH MIDLAND are reported by Herapath to have followed the example of the men on the London and North-Western, and to have stood out for some grievance against their employers. We have no sympathy with this system of intimidation, which in nine case of ten is wrong; and we hope the authorities in this latter instance will rigidly exclude those who are at

the head of the movement. A Mr. Cosgreave, a shareholder in the Dundalk and Enniskillen, last week summoned the book-keeper of the company to the Dublin police office for refusing an inspection of the shareholders' ledger book. The company, through their counsel, declared that all the account books were open for inspection by any shareholder, but the directors had prohibited any admission to the ledger in question. The magistrate, in summing up, said, "The only question I have now to consider is, whether the book in question, and called the shareholders' ledger, is to be considered one of the account books. What is the account book re-quired by the statute? 'It is,' says the 115th section, a book containing a full and true account of all the sums of money received or expended, and of the matters for which such sums of money have been received or expended.' The shareholders' ledger contains no such thing, but in fact an entry of transferred shares. It is not kept as a book of debit or readily but only as a book of debit or credit, but only as a book of entries, for the convenience of the office itself, giving information at one time when the pass-book is at the bank, and at another as to the number of shares which may be transferred. I cannot hold, then, that the refusal of the defendant to permit the plaintiff to inspect this book is an offence against the statute words. I consider that the plaintiff is thereby debarred of the right the statute gives him to inspect the books of account of all moneys received and expended, because that these very sums of money paid at the bank are all entered also in the general ledger, which is open for his inspection, and from the inspection of which he was not debarred, and the transfers are also carried forward into the same book. The defendant, then, in refusing the plaintiff the inspection of that book, refused him in fact nothing; and in affording him the means of inspecting all the other books, viz., the account books, into which the entries of that book account books, into which the energy of that book were carried, among other things, gave him his full and statutable right. The plaintiff has then no legal right to complain. I therefore dismiss this summons."

The GREAT SOUTHERN AND WESTERN will be opened.

to Buttevant (County Cork) on the 1st of November. Mr. Dargan, the contractor, being under a penalty to deliver to the directors the entire line to the river's edge, at Penrose's quay, Cork, by that day twelve-

So strong was the wind during the 23rd inst., that the Lincolnshire Chronicle declares that some horse boxes, unlocked at the Newark station, were impelled above a mile along the rail, at a rate which rendered it impossible for a man to overtake them. On the keys, after being cut to the desired form, are dried by steam for four hours, which causes them to shrink spatched to bring back the runaways.

The Western Luminary asserts that notice has been given of intended legal proceedings to compel the opening of the Exeter and Crediton for public use. What sort of festivities should take place at the

The meeting of the Swanska Valley proprietors was adjourned in consequence of a sufficient number

of proprietors not having been present.

The inquest on the LANCASTER AND PRESTON col-

lision not being terminated, we postpone our report

of the proceedings.
The Great Western Docks at Plymouth are reported to be progressing. The inner basin, or floating dock, is to contain ample wharfage for twelve steamers of the largest size, a number said to be equal to that accommodated by the great basin at Portsmouth, recently opened. There will be two entrances to this basin, says the *Devonport Chronicle*: one will admit merchantmen of the largest size, and steamboats of ordinary dimensions, for two or three hours before and after high water; through the other the largest screw steamer can pass at high water. The area of the outer basin will be nearly 30 acres. If this basin should be deepened to the extent proposed, vessels can enter and be afloat in it at all times of the tide without the delay of passing through a lock. The entire extent of wharfage will exceed a mile, and the area of ground for stores is adequate to the greatest possible trade.

The receipts on the DIEPPE portion of the PARIS

AND ROUEN for the week ending Aug. 26 were 359l.

L'Emancipation Belge has the following remarks
on the Belgian lines. When Belgium has undeniably experienced such great benefit by the early
and extensive establishment of railroads, almost taking the initiative in the grand improvement of the day, it surprises us that a second line between Ghent and Ostend should so long remain unaccomplished. Rapid intercourse between the north and south of Europe and Great Britain, by the route of Belgium, was the primary object of the enterprize; and how greatly this is impeded is too apparent. The English mail now quits Dover as soon after midnight as the tide will permit. If the packet arrives at Ostend before 6 30 a.m., the letters are received in Brussels before mid-day, but if the mail arrives only half an hour later at Ostend, the letters do not reach Brussels until from 4 30 a.m. to be not not permit and the letters of the letters do not reach Brussels until from 4 30 a.m. to be not not permit and the letters do not reach Brussels until from 4 30 a.m. to be not not permit and the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not reach Brussels until head of the letters do not re from 430 a.m. to 5 p.m., and are not delivered before 7 p.m. The Brussels post for London being closed at 530, the power of replying by the return mail is in the latter case lost. The transit from Ostend to Brussels occupying but four and a half hours, the additional rail would enable persons resident in Antwerp and Brussels to receive their London letters on the following day, with few exceptions, if the mail bags did not frequently, for want of a second line of rails, remain four and half hours in Ostend. Again, were there a double line from Ghent to Ostend there is no reason why the London post should be closed at 730 p.m., so that an express train could arrive in Ostend by midnight, and give the correspondents here two hours longer in which to answer their London letters. These arrangements, taken one with another, would save a day in the intercourse between Brussels, Antwerp

#### Reports of Meetings.

CALEDONIAN,--(BY EXPRESS.)

Aug. 31. — Half-yearly Meeting, Edinburgh. — Mr. J. J. H. Johnstone, M.P., in the chair.

Mr. Gibson, in the absence of Capt. Codrington, the secretary, from indisposition, read the Report as follows :--

the secretary, from inusposition, read the keppers as follows:—

At the last half-yearly meeting the directors congratulated the shareholders on the completion of the line from Carlisle to Edimburgh and Glasgow, and held out the prospect of an early opening of the Castlecary Branch, which, by connecting your line with the Scottish Central, affords an outlet for the traffic of the whole North of Scotland. The continuance of the financial pressure prevented your directors from urging forward the works with the rapidity which was then contemplated; but they have been enabled, by great exertions, to bring them at length to a successful termination. The Castlecary branch having been opened on the 7th inst. a communication is thus established by the Caledonian, and the lines in alliance with it, from London to Stirling. Perth, Dundee, Arbroath, Forfar and Montrose. But the value of this extension cannot be fully estimated until the connexion is formed through the town of Perth with the Dundee line, and until the trunk line is completed to Aberdeen. The directors are assured that both of these objects will be effected before they meet the shareholders at the next half-yearly meeting. Within the same time they confidently anticipate the completion of those works connected with your own line which they have always considered essential to the developement of the traffic, viz., the extension of the Garnkirk line into Glasgow, and the completion of the Clydesdale Junction line, and its connexions with the Greenock, Barrhead and Ayrshire lines, and through the General Terminus with the larbour of Glasgow. Barrhead and Ayrshire lines, and through the General Terminus with the harbour of Glasgow. When these lines are

In operation there can be no reason to doubt that the shareholders will receive an ample return for the money which they have invested. Even in the present imperfect state of the undertaking the receipts have considerably exceeded the anticipations of your directors. The shareholders of the Clydesdale Junction will henceforth be entitled to a preferential dividend of 27,000% a year, being 6 per cent. on their capital of 430,000%, but the great resources of that line, passing through a rich and populous district, abound-ing in mineral wealth, hold out the prospect of a consider-able surplus beyond the amount guaranteed. The Glasgow, able surplus beyond the amount guaranteed. The Glasgow, Paisley and Greenock line will shortly be amalgamated with the Caledonian, on terms which can hardly fail to be benefithe Caledonian, on terms which can martiy fan to be beneficial to this company. The gradual increase of the receipts has already enabled the directors of the Greenock line to make a dividend at the rate of 4 per cent, being the amount guaranteed; and it cannot be doubted, that when that railway, hitherto isolated, is brought into connexion with the great system of communication, not only in Scotland but in all parts of the United Kingdom, its revenue will be greatly augmented. The local traffic of the districts intersected by these lines holds out every prospect that this company will be relieved from any loss on account of the arrangements which have been entered into with them, whilst a great additional amount of traffic along your main line, which was all along the chief object, cannot fail to be secured by the uninterrupted communication thus established with the counties of Ayr and Renfrew, and the additional facilities afforded of access to the Western Highlands. It is with much satisfacaccess to the Western Highlands. It is with much satisfaction that your directors intimate that they have at last succeeded in effecting an arrangement of differences with the Edinburch and Glasgow, upon terms which they consider equitable. They had hoped to lay before you the particulars of this arrangement; but although a satisfactory settlement has been effected, there are some matters of detail which require the sanction of the Southern Companies, who are co-partners in the lease of the Scottish Central, before these particulars can be officially announced. The arrears on the several classes of shares at the present time are as follows:—on 50t, shares 31,110t.; Clydesdale Junction, 4,826t.; half-shares, 193,648t. 5s. The shareholders will perceive that whilst the arrears on the 50t, and Clydesdale Junction shares have been reduced to a small and Clydesdale Junction shares have been reduced to a small amount, a very large arrear remains upon the half-shares nor have the directors by their utmost exertion been enabled. nor have the directors by their utmost exertion been enabled, in the present depressed position of monetary affairs, to enforce further payments. This has induced them to recommend the adoption of a proposal made to them by many of the shareholders, for the restriction of the half to quarter shares. They believe there is no other course by which the arrears on these shares can be realized. The revenue account, after making provision for the dividends on the Garnkirk and Wishaw stocks, exhibits a balance of 21,4001. 192. 1034d, which, as applied to the capital chargeable to the part of the line in operation for the four months up to the 30th of June last, shows a return at the rate of 2½ per cent. per annum. The directors, however, are of opinion that it would not be prudent to make a dividend for this broken period, and they therefore recommend that the above balance should in the mean time remain at the credit of revenue account. With your railway opened for public traffic at an unfavourable season of the year—with imperent station accommodation for passengers—with very inadequate facilities for conducting the goods and mineral adequate facilities for conducting the goods and mineral traffic—and with your line, to the period to which these accounts are made up, only in operation for about four counts are made up, only in operation for about four months, your directors consider the result to be highly encouraging. Notwithstanding the continuance of most of these disadvantages, the weekly receipts have gradually increased, and at the present time show an advance of upwards of 30 per cent. since the 30th of June last. The directors recommend the conversion into stock of all shares paid in full. This measure will have the effect of enabling the holders of the shares so converted to transfer their interest therein to whatever extent may be convenient, without reference to the number or denomination of the shares. It is a measure which is generally adopted, and has been found of considerable advantage in other companies. Mr. Masterman, one of your generally adopted, and has been found of considerable advantage in other companies. Mr. Masterman, one of your
directors, having resigned his seat at the Board, the directors filled up the vacancy by electing Mr. J. H. Maxwell, of
Dargavel The following directors, who retire by rotation
at the present meeting, in terms of the Act, viz., Messrs.
Hastie, Anderson, Houldsworth, Col. Macdonald, and Mr.
Maxwell, offer themselves for re-election. In conclusion,
the directors beg to refer the shareholders to the Report by
the engineers on the state of the works.—(See Official Papers.)

The statement of gavited account showed the se

The statement of capital account showed the receipts at 3,655,8381. 14s. 9d.; expenditure, 3,993,7311. 15s. 1d.; balance against the company, 337,8931. 0s. 4d.

Mr. JULOT. Manchester, moved that the registry

Mr. KYNASTER seconded the motion, and said his object was to ascertain the stake the directors had in the company.

Mr. J. Hodgson Hinde, M.P., of Acton House, said, that so far as the directors were concerned, they had no desire for concealment, but they would be abusing their trust if they consented to expose to every shareholder the amount of their interest.

Col. Graham supported the motion of Mr. Julot;

and Mr. HILDRITCH, Manchester, opposed it, as involving a breach of trust.

Col. Macdonald, of Powder-hall, assured the meet

ing that some of the directors held more and none them less than necessary to their qualification.

The motion was dropped. The CHAIRMAN said the connexion of the Caledonian with the Scottish Central, by the Castlecary branch, was completed on the 7th of August. Although that was admirably fitted, in conjunction with other northern tributaries, to enlarge the traffic of the Caledonian, still the arrangements for working it were not sufficiently forward to afford anything like an approximate estimate of the traffic that might eventually be expected. The weekly returns, therefore, of the Scottish Central would give no indication of what it would presently possess. Both the Scottish Central and Midland were as yet in an incomplete condition. At the meeting of the latter, held the other day, it was stated that no attempt had been made to carry goods, and there was at present no connexion between it and the Central. The manufacturing trade of Arbroath, Dundee and Montrose going over these lines to Edinburgh, Glasgow and London was immense, and though the obstacles to a full developement of all this were very great, arrangements were being made that would secure to the Calcdonian almost the sole conveyance of this traffic. The proceeds of the Glasgow and Greenock line, even in its insulated condition, nearly amounted to the sum guaranteed by the Caledonian; and last year it actually reached that amount. He would eschew actually reached that amount. He would eschew entering on the differences that had existed between them and the Edinburgh and Glasgow. Suffice it that an amicable arrangement had been entered into with that company, proceeding upon just and equitable terms to both, and calculated to secure a large amount of traffic, which would legitimately flow along the various lines with which the Caledonian was connected from the North of Scotland to Glasgow and England. Soon he hoped to be able to give ample details thereupon. Meantime, the great important point was secured, namely, the whole traffic to the North of England, to Glasgow and the West of Scotland, which would be secured to the Caledonian. while that to Edinburgh would go exclusively to the Edinburgh and Glasgow. This was the important phase of the transaction. There was, he believed, a difference of opinion as to the proposed restriction of the half to quarter shares, it being apprehended that it would give an undue advantage to the holders of half-shares. It was impossible, however, for them to postpone their decision with regard to the issue of the preferential shares. Liabilities had been incurred, works were about to be suspended, and great injury would have been done to their property if that decision had not immediately been come to. They had therefore no alternative but to give the shares apportionately to parties as they appeared upon the register. After all, there was not so much as at first sight appeared in the question. It so happened that these shares had not gone into the market at any considerable premium; and the amount of injury, if any injury there was, to which the holder of any original 501. share was subjected, was only the difference between the share at par and the amount at which it could be purchased in the market. Of these halfshares a very considerable proportion—one third he thought of the whole—were held by the proprietors of 501. shares. When they considered the position in which they were placed with regard to the arrears on these shares, amounting to about 192,000l.; that there was still a call to be made of about 176,000l. to bring them up to 12l. 10s., making altogether a created stock of 370,000l., he trusted that taking into account that during the half-year they had called up I thought it was not to the interest of the company

250,000l. of these shares, and were only able to realize 50,000l., they would be of opinion that looking altogether to the interest which the 50% share-holders had in the concern, it was worth their while to make a small sacrifice, so as to secure the realization, within a moderate space of time, of the sum of 300,000l., in order to carry out the remainder of the works. The utmost to which it could amount was the difference between the share at par and the sum of 3s. 6d. at which they could be purchased in the market. They could be but at 4s. premium now, and he trusted no one would think his interests seriously compromised as set against the advantages he would prospectively enjoy. He would now refer to a subject that had for a considerable time occupied the attention of the shareholders-he alluded to the subject of guarantees. The directors had had under their most serious consideration the most advantageous method in which that subject could be brought forward for the discussion and decision of the shareholders; and they had determined upon calling a meeting as soon as arrangements were fairly in shape—not, it would be understood, that they were going to take any step that would commit the company a whit beyond the extent to which they were already committed; but he would remind them that they would be just in the same position, and as free to judge of these transactions, when they were submitted to them as they were at that present moment. Anything in the arrangements they carried out Anything in the arrangements they carried out would have the effect, to a considerable extent, of limiting and restricting the liability of the company—if liability they chose to take upon themselves, eventually—but he thought that instead of going into an imperfect argument on the matter now it would be more advantageous that they should hold a meeting, special notice being given on the subject, in London, and that they should furnish the shareholders beforehand with a printed programme of all the circumstances connected with it. so that they might judge fairly of the question and make up their minds as to whether it was a transac-tion with which they should go on or not. That was the most satisfactory arrangement for all parties. It was the wish of the directors that the subject should undergo the fullest investigation; and unless should undergo the fullest investigation; and unless they could make out a case to satisfy the minds of the shareholders, they deserved to be censured for the course they had taken in going so far into the transactions. If the engagements were binding, they were binding now. With the approbation of the meeting, he would avoid going further into the subject then. There was another matter to which he had to allude—the constitution of the board of directors. Just now they had a vacancy in their direction; and feeling that the present state of the works required the almost daily attention of the works required the almost daily attention of the directors, and especially in the neighbour-hood of Edinburgh, they had thought it meet for the interest of the shareholders to select a gentleman resident there to fill the va-cancy, well qualified by his talents and personal habits and readiness to devote much time to their concerns. In doing so they had selected Mr. H. Maxwell to fill the vacancy. The directors, moreover, were free to confess that they had thought they ought, at an early period, to elect two gentlemen to represent the English shareholders in the direction, and they would submit and select two gentlemen at no distant period, who they thought, from their station, business habits and general knowledge, were well qualified to represent the shareholders in England and to support them by their advice. They also were anxious to have most live from time to have most live from time to have most live from the time. anxious to have meetings from time to time in London, and without being able to say which of the alternate half-yearly meetings should be so held there, because he must say it would necessarily involve a great deal of inconvenience and expense in coming up to London and bringing the whole staff there; still he thought, that in questions where great points of policy were to be discussed that the meeting should be held in London. Their object would be to give the fullest possible information, and in a manner that would be most convenient to the shareholders. Within an hour of his entering the room a series of questions, some of them involving matters of great detail, and applicable more properly to future meetings, had been put into his hands, signed J. C. Julot. One of the questions was with reference to the amount of stock which had been held, and was held, by the Caledonian in other lines. Now he, the Chairman, wished to state that the directors, in the exercise of their discretion, had thought fit to hold, and did hold, a considerable amount of shares in other companies, and had taken them for several purposes; in some few cases for the purpose of protecting the interests of the company at a time when hostile steps were taken against it by other companies. Still he

Digitized by GOOGLE

that the amount of these shares should be made The directors could have no interest in this apart from the interest of the proprietors. The whole of the transactions had been undertaken in the most bond fide spirit. They might be wrong in the course of policy they had followed; when that policy was fully laid before them, it would be for the shareholders either to condemn or approve of it; but he said, without hesitation, that the affairs of the company would in all probability be very much embarrassed and the proceedings of the directors defeated in objects that were most essential to the interests of the company if the shareholders persisted in calling for disclosures of that kind. He had no hesitation in throwing himself upon the meeting and asking them for support in the course they had pursued. At a future time it would be better, as they would be then able to have a full and faithful instead of, from the circumstances of the case. a necessarily partial statement. He must therefore decline to answer those questions. There was another question he could not answer in detail relating to the probable expenditure of the works. Every one familiar with railway matters knew that questions of reference arose after works were executed; and until these works were finished and the reference was made and decided it was impossible to say exactly how far the estimates might be exceeded. He did not believe they would be seriously exceeded. There was always a margin left of 10 per cent., but Mr. Errington their engineer, who was present, would give the information. Another question related to the arrangement of how far the Caledonian participated in the guaran-tees made by other companies. He could say there was none. It was possible other companies might be concerned hereafter in the guarantees that might be made; but the Caledonian were not parties to any other guarantees into which other companies had entered. They were aware that a feeling of very great anxiety existed with regard to the present state of railway enterprize throughout the country; and he did not wonder at it, when they had witnessed the great reverses that had taken place within the last twelve months. He could not object to shareholders requiring any information that could be given consistently with the interests of the undertaking, or to that which had been designated a salutary control over the directors; on the contrary, both he and his brother directors would ever, with the most respectful attention, listen to every suggestion. They would weigh and consider well every one of these suggestions, but they could not consent to be the subjects, or to enter the lists of anonymous correspondents. Great injury, he thought, had been done to their property by the gross. anonymous and unmanly attacks that had been levelled at their undertaking. Anything that was anonymous he held to be unmanly, and prejudicial and unfair to the proprietors. He would also remark, that probably had less attention been paid to these attacks the evils they had produced would not have been so serious. He trusted however that better times were in store, and that when the mercantile community of this great country was restored to its wonted state of activity, they would receive an ample return for their investments. The Caledonian had been a great undertaking, conducted under circum-stances of extraordinary difficulty. It was now rapidly coming to a state of advancement and perfection, when its value might be fairly tested. Let them wait another year, let the arrangements now in progress be carried out, and they would see an amount of traffic on their line that would give them not only an adequate return but something more than the money they had invested. Looking at the difficulties by which they were encompassed, he hoped that, if by which they were encompassed, he hoped that, if not at present, they would ultimately be prepared to repose entire confidence in the Board, so as to enable them to carry out in all their ramifications the great

engagements into which they had entered.

Mr. BLACKADDER observed that in the report the arrears were stated differently to the statement in

the second page.

The CHAIRMAN said that the two statements referred to different periods—that in the capital account being the amount of arrears on the 30th of June last, and that in the body of the report the amount at present.

Mr. BLACKADDER should like to know the amount

of their capital.

The CHAIRMAN replied that their authorized capital would be quite sufficient to complete all their works. It was impossible to state exactly the capital, but it probably would amount to nearly 5.000.000L

Mr. BLACKADDER said he did not observe in the revenue account the return agreed to at the last half-yearly meeting of the amount of sabbath traffic, &c.

The CHAIRMAN said that was an omission, but he

held in his hand the receipts for the six months ending 30th of June, showing the total number of Sunday passengers thus carried at 7,577, and the total proceeds 2,269l., exclusive of revenue from the mails.

Mr. BLACKADDER questioned the return just read. The SECRETARY remarked that Mr. Blackadder's motion was not carried at the last meeting. That

explained the omission in the report.

Mr. BLACKADDER insisted that the chairman agreed to produce the returns.

The CHAIRMAN said that though he was of opinion that Mr. Blackadder's motion was not agreed to at the last half-yearly meeting, he would give all the in-formation. The number of people employed on the Sabbath, with the exception of the station waiters and hirelings or porters at the stations, was exactly the same as that for the conveyance of the mails, if there

was not a single passenger.

A Shareholder hoped that Mr. Blackadder would renew his motion for a full and complete return.

Mr. KYNASTER observed the working expenses amounted to 45 per cent. upon the receipts. Would that ratio leave a dividend? He believed that the average expenses on the principal lines in England amounted to 37 or 37 per cent. upon the receipts. In the agreement with the Dundee and Perth the directors limited themselves to 371 per cent.

Mr. ERRINGTON, one of the engineers, said, where the line was new they could not calculate exactly the ratio of working expenses. Probably during the first month after the opening of the Caledonian line the working expenses amounted to 60 or 70 per cent. working expenses amounted to 80 or 70 per cent. upon the proceeds, but that ratio was rapidly decreasing, and they might hope to work their line at the rate of 37 per cent. There was only one feeling expressed hitherto among the directors, that not one unnecessary penny should be expended. When last in this city he sat down with one of the directors, and reduced the expenses to the very lowest point. and reduced the expenses to the very lowest point compatible with safety.

Mr. Julot asked the amount of working expenses

per mile.

Mr. Errington believed the locomotive expenses had been 81d. per mile. He had not been able to ascertain the expense of the goods trains; all their trains would be worked quite as cheap as those of any other

company.

Mr. Tite having pledged himself to the meeting in London for the honour of the directors, wished now to ascertain distinctly their position. Did the chairman say, with regard to new guarantees, that no new guarantee would be given until they received the consideration and sanction of a special meeting in London?

Mr. TITE: Had the directors filled up one vacancy by a local gentleman, because they required at the present moment local attention and local superintendence, intending shortly to appoint certain English shareholders to represent English interests!

The CHAIRMAN: Yes. Mr. TITE: And such meetings as the directors might consider important, without pledging them-selves to an alternation of meetings, were to be held in London?

The CHAIRMAN: Yes.
Mr. TITE expressed himself satisfied with the manner in which the directors had redeemed the pledge given to the London shareholders. He felt anxious for the honour of one gentleman, Mr. Jacobs, of London, to state that he was no party to those anonymous attacks in the public papers, and which, almost more than anything else, had injured the property of the Caledonian. He believed firmly in

the good prospects for railway property.

Mr. CAMPBELL regretted that the directors had sent out circulars, stating that if the shareholders exercised their undoubted right to vote against them they would retire. He wished to ask if the auditors held themselves responsible for the accuracy of the

accounts?

The CHAIRMAN replied in the affirmative.

Mr. CAMPBELL said that the loss connected with the special trains to Glasgow having compelled the Edinburgh and Glasgow and the Caledonian to come to a mutual understanding, he wished to know if both companies had agreed to an equitable apportionment of the traffic through the lines from the Scottish Central.

The CHAIRMAN replied in the negative.

Mr. CAMPBELL: Then where is the use of the
Caledonian involving itself with the Scottish Central and other lines to the north?

Mr. TITE: That is the question of guarantees.

Mr. CAMPBELL asked the amount of traffic on the Castlecary branch.

The CHAIRMAN was not in a position to answer these questions of detail, and besides the whole subject of guarantee was for a special meeting.

Mr. CAMPBELL observed there could be no objection to furnish a return, previous to the special meet-

ing, of the amount of traffic at Castlecary.

The CHAIRMAN, without pledging himself to produce the return, would endeavour to afford the required information.

Mr. CAMPBELL asked what had been the cost of sending out the proxies for the present meeting.

The CHAIRMAN really could not answer a question

given without notice. The directors were quite entitled to send out proxies.

Mr. CAMPBELL was gratified that a special meeting was to be held regarding the guarantees. He should there submit a motion, to the effect, that as Parliament has refused to permit the Edinburgh and Glasgow to lease the Scottish Central, and has also refused to permit the Caledonian to do so, and seeing that those two companies might come to some understanding in regard to an equitable apportionment of the traffic from the Scottish Central, it is therefore expedient to drop all further proceedings with reference to the lease of the Scottish Central at 7 per cent., the Dundee, Perth and Aberdeen Junction at 8 per cent., and the Scottish Midland at 6 per cent.

Col. GRAHAM complained of the delay in circulating the printed half-yearly reports. He knew of many distant proprietors, who having been unable to attend the meeting were called upon by proxies to vote for the approval of the report without having seen it.

The report was then approved unanimously.

The CHAIRMAN moved the third resolution for the consolidation of the 50l. ordinary shares.

Mr. KYNASTER asked if the resolution would interfere with the number of votes held by the 501. shareholders.

The CHAIRMAN said it would make no difference whatever in that respect.

The resolution was agreed to.
The CHAIRMAN submitted the fourth resolution calling up 12l. 10s. on the new 25l. shares and for calling up the remaining 131. 15s. per share by two instalments, and for consolidating the said shares.

Col. GRAHAM remarked that the half-shares were

raised for constructing branch lines, the sum required being, he understood, about 2,000,000*l.*, but the result was, that the sum raised by the half-shares and the 10t. guarantees was within a small amount expended upon the main line.

The CHAIRMAN agreed that a considerable sum had been expended on the main line, but it could not be denied that when half the shares were raised they

were made general stock.

Mr. KYNASTER remarked that in a short time the shareholders of the Clydesdale Junction could demand the sum of 675,000% from the Caledonian. How was that sum to be raised?

The CHAIRMAN said, that after 1850 the shareholders of the Clydesdale Junction were entitled to 675,000l. in instalments extending over four years, but there were powers under the Act to create and issue stock, for the purpose of repaying the company. The resolutions were then agreed to.

The CHAIRMAN then put the resolution declaring the forfeiture of certain shares on which calls had not been paid: and in answer to a request of Mr. KYNASTER, it was stated that there were 400 of the 50l. shares thus situated, on some of which almost all the calls were due, while on others only the ninth and tenth calls were unpaid.

Mr. KYNASTER said the statement showed that on the shares about to be forfeited the directors had received an average of 35l. He deprecated warmly this forfeiture.

Col. MACDONALD: It was at the request of many of the parties themselves that these shares were forfeited.

Mr. HILDITCH, for his part, while others had spoken of the hardships to be sustained by those who had not paid their calls, must testify as to the hardship which their conduct had inflicted, by delaying the completion of a line, on those that had. The re-sult was that the hardship in the one case was an unjust one, and in the other a just one.

Mr. Hodgson Hinde wished merely to say that the directors were anxious to carry out the instructions of the meetings, but the meetings should be consistent. At the last half-yearly meeting Col. Graham made a motion, unanimously concurred in, that the directors should stringently compel payment of all arrears. The directors had used every means in their power to obtain payment of the calls on the shares proposed to be forfeited, but without any result. They were most reluctant to act harshly, but they had no alternative left them.

Col. MACDONALD: Had it depended on the promptitude of the shareholders in the payment of their calls, the line would not have been opened yet. was entirely owing to the personal exertions of the directors that the line had been completed so soon.

Digitized by **GOO** 

The CHAIRMAN again put the resolution, which was unanimously adopted

The CHAIRMAN then submitted the next resolution, that Mr. Hastie, M.P., Lord Provost of Glasgow, John Anderson, Esq., merchant, Messrs. J. Houlds-worth, Cranstounhill, Col. Macdonald, of Powderhall, and Mr. J. H. Maxwell, of Dargaval, the directors who retire by rotation, should be re-elected.

Mr. M'MIKEN moved as an amendment, that Col. Graham, Sir W. Jardine, Bart., Mr. Little, barrister, and Messrs. Houldsworth and Hastie, should

be substituted.

Col. GRAHAM begged to make a few observations. He admitted that the existing directors were men of high honour and high position in society, but still that did not make them good directors. Two were that did not make them good directors. members of Parliament, and both highly useful and ornamental. They should be retained. Others were men of business, who had to attend so much to their own concerns, that they could give but little time to the business of the line.

Mr. J. Douglas asked Col. Graham to name those to whom he alluded.

Col. GRAHAM declined to name. The chairman was very constant in his attendance, but had only a few gentlemen to support him. If he (Col. Graham) was wrong, allow the attendance book of the direction to be placed on the table; if it was denied, he would venture to say that what he had stated was pretty nearly the truth. He held 10,000% of stock in the line, and he was often reminded that he was one of the original promoters, -one of those that held out the prospect of a return of 7 per cent. He was on the first list of direction under the Act. But in the original prospectus and Act they were empowered to make a line from Carlisle to Edinburgh, to Glasgow and to Castlecary; there was no power to construct a line to Greenock, Perth and Barrhead, and if such a proposition had been held out in the prospectus, would people have taken the shares? He himself would not, on such conditions, have held a single share. The shareholders sanctioned the same but who led them on? He himself conscientiously objected to every guarantee proposed. He was reminded of the Clydesdale Junction. That line was originated at the same time as the Caledonian, and long in trouble—being able to raise no money,—so that the Caledonian was frequently requested to make it an integral part of their line. That was not done, and consequently the stock rose; and then the Clydesdale Junction shareholders saw their advantagement of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of th tageous position, and said they would not give it to the Caledonian at par, but must have a premium. He was then in the Caledonian direction, and happened to be in London. When he returned from thence he found the guarantee settled, and he had nothing to do with it; he had always advocated the plan of the Caleledonian getting the use of that line on paying a certain toll for five years. As to the Greenock line, it had been paying 14 per cent., when it was proposed suddenly at the Board to guarantee it 4 per cent. His protest was now in the books of the directors; because if that Greenock line had been let alone it would have fallen into the common stock of the Caledonian as would the Garnkirk, and as would the Wishaw and Coltness. He had left the Board under peculiar cir cumstances. He was opposed to all amalgamations, and every expense that could be avoided; and his sentiments did not suit the general feeling of the Board. But he repeated he had no wish to join the Board again unless he was leagued with several gentlemen who entertained the views that he had expressed

The CHAIRMAN: Col. Graham has stated that if we had left the guarantee alone, these lines would have fallen into our hands.

Col. GRAHAM: I said, eventually.

The CHAIRMAN: But at the time there was an offer by the Edinburgh and Glasgow for the Garnkirk line, precisely the same as our own, and had we not formed the connexion that very evening, it would have taken place with the Edinburgh and Glasgow line; and an arrangement was actually concluded between the Wishaw and Coltness and Edinburgh and Glasgow; but, in consequence of the new direction of the Edinburgh and Glasgow repudiating it, the matter was again opened up, and the Caledonian succeeded in forming the connexion. The same would have been the result with regard to the Greenock line; if they had abstained from entering into terms, the Ayrshire would. The shareholders should not be allowed to go away under the misapprehension that those lines would have eventually fallen into the hands of the Caledonian if they had been let alone. What, he might add, would have been the position of the Caledonian if they had not obtained the Wishaw and Coltness on a guarantee? Col. Graham alluded to the payment of a toll for the use, which was once deemed a prudent arrangement; but he would put

it to Mr. Errington, that if they had not the complete control they would not have been able to run a single passenger train over those lines, so crowded would they have been with mineral traffic. would have had to make a new line of 20 miles, down to Glasgow, through a very difficult country, and at the cost of not less than 800,000*l*.; and they would have made it without the chance of obtaining that traffic which they now had on the Garnkirk, which was laid out to accommodate passenger traffic. result would have been an expenditure of 800,000l., and in return they would not have had more than paid their working expenses. Let them take the worst possible view they could of the connexion with those lines, he would say that they had saved thousands a year by it.
Sir W. JARDINE also declined to act on the direc-

tion. He thought a new infusion into the direction would be advisable, instead of too great an adherence

to the system of re-election.

Mr. M'MIKEN had no objection to amend his motion, to the effect of leaving the directors to nominate the new directors.

The CHAIRMAN would rather take the sense of the meeting on the original motion, because he could not be a party to setting those gentlemen aside with whom he had so cordially acted, without appearing to cast some slur upon them.

The Hon. BENTLEY JOHNSTONE, as having a very large stake in the company, said he was speaking the sentiments of the majority of those present when he expressed the most perfect confidence in every individual connected with the Board. They had spared

no trouble in forwarding the interests of this great and stupendous undertaking, and he maintained it was the duty of every one in this room to return thanks to those directors, and maintain them in their

office.

Mr. ERRINGTON might explain, in reference to the Garnkirk and Wishaw lines, that he was a party to the arrangement, and entirely approved of it, and believed it utterly impossible to carry on a traffic without the control, unless with a degree of danger to the public which Col. Graham would be the last man to desire. They could not have got on without the entire possession of those lines, and he believed that not only were these arrangements essential to the prosperity of their line but they were good money ngements.

The CHAIRMAN then put to the vote the resolution recommending the re-election of the directors who went out by rotation, and the amendment of Mr. M'Miken, when the vote stood:—For report and resolution of directors, 28,086 shares—11,617 votes; against 185 shares—127 votes: majority, 27,901 shares—11,490 votes. The above include the votes left at the discre tion of the Board.

Sir A. Agnew, in a lengthened speech, brought forward his motion for the suppression of all systematic and premeditated work on the Sabbath.

Mr. CAMPBELL, after some observations, moved as an amendment that the resolution adopted by the shareholders at a former meeting be adhered to.

Col. Graham withdrew the amendment of which

he had given notice.

Considerable discussion ensued, after which the meeting divided, when there appeared in favour of the motion, 27; against it, 24. The following is the state of the proxies:—For Sir A. Agnew's motion, 3,654 shares—1,683 votes; against it, 22,013 shares—8,903 votes; majority, 18,359 shares—7,220 votes.

Sir A. AGNEW renewed his notice of motion in the same terms for next meeting, and Mr. BLACKADDER also renewed his notice of motion for returns connected with the traffic along the line on Sundays.

Col. GRAHAM moved a vote of thanks to the chair man and directors, which was carried by acclamation, when the meeting separated.

#### SCOTTISH MIDLAND JUNCTION.

Aug. 28. - Half-yearly Meeting, Perth. - Mr. H. WATSON in the chair.

The report was read

It congratulated the shareholders on the opening of the It congratulated the shareholders on the opening of the main line from end to end, uniting at Perth with the Scottish Central, and the Edinburgh and Northern in the general station, now in progress of completion; and at Forfar, with the Arbroath and Forfar, which again united with the Aberdeen line, now open to Brechin and Montrose. There was thus an unbroken line on the same gauge, from London to Perth, and thence by this line to Forfar, Brechin, Arbroath and Montrose, by which the same carriages and waggons may pass without a ferry, and without a break, from the Euston Square station to all these northern towns. Neither the goods or mineral traffic has yet been commenced: neither the goods or mineral traffic has yet been commenced; neither has the connexion with the Dundee and Newtyle line been completed; and the line, since opened, has been under other disadvantages beyond those usual on opening; but these disadvantages were now nearly overcome, and the directors expect that by the 1st of September all would be in order Satisfactory arrangements have been entered into with the

Scottish Central and Edinburgh and Northern for conduct-Scottish Central and Edinburgh and Northern for conducting the Perth traffic, each company booking through by the other; and they have also effected arrangements with the Aberdeen, which they trust will be found as convenient under the present circumstances, for the traffic between Perth and places north of Forfar. But the communication between Aberdeen and the south cannot be completed until the straight line originally projected for the through communication between Aberdeen and the south be finished. The directors have the pleasure of announcing that the bill for the improved branch line to Dunkeld has been passed, and they look forward to the execution of this and other and they look forward to the execution of this and other branches as soon as they find their finances suitable. Hitherto, though in the late time of financial embarrassment the directors have not been without difficulties, they have been enabled, chiefly through the promptitude of the share-holders in meeting the calls, to uphold their credit without resorting to any extraordinary means. They have 150,000%, of capital remaining to be called up, and the borrowing powers leave 180,000%, to be borrowed, making in all 330,000%, subject however to the payment of the balances due to the bankers and other parties. There appeared in short to be subject nowever to the payment of the balances due to the bankers and other parties. There appeared, in short, to be ample capital for the branches yet to be executed. The deeds for finally closing the agreement with the Caledonian have not been adjusted, but the directors have not failed in watching over this company's interest in the matter to the utmost of their power, and will continue to do so, and, they have being all to exhibit our result. trust, bring all to a satisfactory result.

The statement of accounts showed the receipts at

465,594. 12s. 9d., less the balance due to the company's bankers of 12,882l. 8s. 9d.; expenditure in making the main line and stations, as well as in acquiring land for the branches, &c., at 465,594l. 12s. d. The total arrears of calls amounted to 25,6471. 10s., for which securities have been lodged to the extent of 14,617l. 10s. Since the date of the balance there has been received on account of arrears of calls.

2,850/

The CHAIRMAN said the business had been so fully detailed in the report that it would be imprudent for him to offer any observations on the subject further than to congratulate them on their very favourable position. The line was opened and had been worked satisfactorily. He had been told by competent parties that there was not a line in the United King so perfectly complete as the Scottish Midland Junc-He hoped that when a little more time tion was. was given to develope the traffic, they would be able to make a most satisfactory statement to the next meeting of shareholders. He moved the adoption of the report.

Mr. A. BUTLER seconded the motion, which was unanimously agreed to.

#### LEEDS AND THIRSK.

Aug. 28.—Half-yearly Meeting, Leeds.—Mr. H. C. MARSHALL in the chair.
The SECRETARY read the report, which stated that

the receipts on the portion of the line beyond Ripon, recently opened, were 1,822l. 5s. 5d.; leaving a profit of 856l. 13s. 9d. beyond the expenses. The receipts from the River Ure Navigation purchase amounted to 12,095l. 15s. 8d., and the balance of profits was 1,704l. 13s.3d., which would pay, as anticipated, about 5 per cent. on the purchase-money. That portion included in the Ripon, Nidd and Pannal contracts would be opened in two or three weeks, and then 28 miles from Thirsk would be available to the public. The Bramhope and the Leeds contracts were in a state of great forwardness, and it was expected that they would be opened early in the next year. The Bramhope tunnel was now so far advanced that only 100 yards of new ground remained to be penetrated. Owing to the monetary depreciation the company had not been able to take up much money on loan; the calls had therefore been made rapidly, yet they had been very well met. The arrears of calls at the end of June last were only 18,560l., besides 33,802l. of arrears on shares forfeited, but on which 6,112. had been previously paid. As to the borrowing powers of the Acts of 1846, it was now competent for the company to capitalize 159,933L, the amount authorized to be raised under these Acts, and the directors recommend that they should be authorized to capitalize that sum, upon such terms as may be thought desirable to the shareholders. The Acts to which parliamentary sanction had been given during the present session authorized the raising of capital to the extent of 387,000l., and the directors, as authorized by the half-yearly meeting held in August 1841, propose to fix the amount of the new extension shares at 251., crediting that sum with the 31. 10s. paid on issuing the scrip; but the directors could not finally determine the amount until the registration The report then referred to the was completed. provisions which had been introduced into the recent extension Acts, prohibiting the creation of any guaranteed or preferential shares, and stated that, in order to carry out the original engagement with the holders of preference scrip, it was intended to apply to Parliament for powers to give that guarantee when the original line was completed. In conclusion, the directors stated that they had the same confi-

dence as ever in the success of the company, and they hoped to be able, at the next half-yearly meeting, if not prevented by monetary difficulties, to congratulate the shareholders on the opening of the line from Leeds to Thirsk. The engineer's report stated that the Pannal, Nidd and Ripon contracts were all but completed, and that the 5th of September was fixed for the Government Inspector to view those parts of the line, and it was expected that they would be opened in about a fortnight afterwards. The stateopened in about a fortnight afterwards. The statement of accounts showed the receipts, including loans, preferential deposits, &c., at 1,346,509l. 19s. 10d.; expenditure, 1,323,531l. 1s. 6d.; balance in hand, 22,978l. 18s. 4d.

The CHAIRMAN, in moving the adoption of the report, adverted to various passages, especially that which referred to the proposal to capitalize the sums they were now empowered to borrow. The directors were about to take counsel's opinion upon a proposal to adopt a plan which had been followed by some other companies for keeping faith with the holders of preference scrip, and it might therefore be advis-

able to adjourn this meeting to a future day.

A Shareholder inquired if any calls would be made upon the preference shares before power was obtained from Parliament to pay a preferential

dividend.

The CHAIRMAN said it would be necessary to make a call before the proposed Act was obtained, on ac-count of the Leeds Central Station, and of the branches for which bills had been obtained during the present session.

A gentleman, representing 2,000 shares, objected to any further call on those shares until the proposed power was obtained, as at present they were deprived not only of any preferential dividend, but of interest

Other shareholders thought that such a course would be inimical to the interests of the holders of these shares, if the directors did not put them into the same position as the holders of original scrip.

The CHAIRMAN said the directors would not call for more than was barely necessary, and that the conditions had been explained at a former meeting.

After some discussion, Mr. APPLEBY suggested the adoption of a resolution, declaring that no further call should be made until Parliament had sanctioned

the preference dividend.

The CHAIRMAN said if such a resolution was proposed the directors would not oppose its adoption, on the understanding that the shareholders should send in scrip for registration, and should assist in the proposal to be made for capitalizing the sum that they were authorized to borrow.

The report was adopted.

Mr. APPLEBY then moved-

That no call be made upon the preference shares issued for the extensions and other works authorized by the Acts passed in the present session of Parliament, until parliamentary sanction for giving a preference dividend of 6 per cent. has been obtained and such a guarantee has been

Mr. EARP, of Derby, seconded the motion, and after some further discussion it was adopted.

The CHAIRMAN then proposed a resolution, authorizing the directors to take such measures as they might deem necessary, parliamentary or otherwise

for protecting their interests.

Mr. H. B. Benyon seconded the resolution, and after some objection by Mr. Shaw, it was adopted.

The directors were empowered to vote not exceed ing 2001. for moral and religious instruction of the labourers on the line, and in subscriptions to hos

In answer to Mr. FLINT,—

The CHAIRMAN explained at some length the proceedings with the Clarence before the House of Lords and the Court of Chancery; and he submitted a resolution declaring that the shareholders fully approved of the proceedings that had been taken by the direc tors with respect to the Clarence Amalgamation Bill. and which was founded upon terms of purchase that had not been sanctioned by the shareholders, which was pressed forward without the consent and contrary to the desire of this company; and especially they approved the act of the directors in presenting a petition to the House of Lords under the common seal, as necessary for the protection of their interests.

Mr. W. Brown seconded the motion.

After some lengthened observations by Mr. R. W JACKSON, solicitor to the Stockton and Darlington, the resolution was carried almost unanimously.

Another resolution was also submitted, empowering the directors to resume the negotiations, if proposed subject to the approval of the shareholders.

This was carried unanimously.

The meeting was then made special, for the purpose of taking into consideration the provisional agreement entered into with the directors of the East and West Yorkshire, for the purchase of that property, under the provisions of an Act passed during the present session of Parliament, entitled the Leeds Thirsk (Harrogate and Pateley Branch and East and West Yorkshire Junction Amalgamation Act) when the conditions of the purchase were to be laid before the shareholders, to receive their approval, or to be otherwise dealt with as may be determined by the shareholders.

The CHAIRMAN stated fully the negotiations and agreement with the East and West Yorkshire for the purchase or leasing of their line from Knaresborough to near York, now nearly completed, except be-tween Hay Park and Knaresborough, and explained the reasons of the directors not submitting any formal resolution for adoption, but preferred leaving it to them to form an independent judgment upon it.

Mr. Dent, of Ribstone Hall, the chairman of the

East and West Yorkshire, strongly advocated the confirmation of the agreement, which was opposed by Mr. Shaw, of Huddersfield, and supported by Messrs. Farsyde, Naylor, Wilson and others. Eventually, Mr. Baker moved—

That the proposition to take the East and West Yorkshire at 6 per cent. as soon as that railway is completed is reasonable and fair; and this meeting pledges itself to carry out the agreement as soon as the East and West Yorkshire line is certified by the Railway Commissioners.

Mr. SHAW moved the postponement of the agreement

ment.

About a dozen hands were held up for the amendment, and nearly twice as many against it.

Mr. Shaw demanded a poll.

The taking of the poll occupied the meeting till some time after 6 p.m., and the numbers were declared to be—For Mr. Shaw's amendment, 411; against it, 297; majority for the amendment, 114.

In taking the poll, the CHAIRMAN decided that those proxies which had been forwarded to the office against the amalgamation must be reckoned in favour of the amendment, as it would give an opportunity

for again considering the question.

It was then further resolved, on the motion of the CHAIRMAN, seconded by Mr. NELL,—

That in the meantime the directors of the Leeds and Thirsh be authorized and empowered to find working stock and to work the East and West Yorkshire, so far as it is ready for use, on such terms as may be agreed upon by the

The meeting then adopted a resolution empowering the directors to borrow 159,939l., as authorized by the several extension Acts of the company of 1846, on such terms and in such sums as they may think fit with power to pay off any part, and to re-borrow not exceeding that amount.

The CHAIRMAN announced that a special meeting would be held in about a month.

AMBERGATE, NOTTINGHAM AND BOSTON AND EASTERN JUNCTION.

-Half-yearly Meeting, Nottingham .- Mr.

W. F. N. NORTON in the chair.

The report stated that the directors had confined their operations to the works between Bulwell and Grantham. At the last half-yearly meeting the directors held out a hope that the line from Notting-ham to Grantham would be opened in the spring of 1849, and they regret that their expectation in this respect will not be realized. Had the very moderate calls recommended by the committee been responded to the works would have been in a much more forward state; but the exertions of the Board having been concentrated at the heaviest points, a few months will suffice to complete this portion, whenever sufficient funds are provided. The affairs with the Grand Union Company are approaching completion; a sum of 1,307l. 19s. has been received, and the Board anticipate receiving shortly a further sum in settle-ment of all demands. The directors reduced the staff and office expenses during the past twelvemonths by an amount of 3,550%. per annum. They have to call upon the meeting to confirm the forfeiture of 495 The statement of accounts to the 8th of August showed the receipts at 292,1424. 16s. 10d.; expenditure, 282,7984. 9s. 7d.; balance, 9,3444. 7s. 3d. The engineer reported that the works had been prosecuted as vigorously as the state of the company's finances would permit.

The reports were unanimously adopted. Resolutions forfeiting the shares mentioned, were lso unanimously carried.

The Secretary read letters from Messrs. Langworthy and Ingram, declining their position as

Mr. BRAITHWAITE moved that no retiring directors be appointed, but that the number be reduced to ten; which was met by an amendment from Mr. WYLES,

that the number be reduced to twelve, and that the After a lengthened discussion, a show of hands was

taken, when the original motion was carried by a majority of one, and a ballot was demanded by Mr. Barges. The result was: — For the amendment,

Mr. J. Swain, of Nottingham, was unanimously appointed auditor, in place of Mr. C. Middleton,

resigned.

Two directors were appointed.

EAST ANGLIAN.

Aug. 30 .- Half-yearly Meeting, London .- Mr. H. BRUCE in the chair.

Aug. 30.—Half-yearly Meeting, London.—Mr. H. BRUOE in the chair.

The report was read. It stated that—
At the date of last meeting the traffic upon the railways realized 423L per week; the present weekly revenue averaged 600L, being an increase of more than 40 per cent. These results (taking into consideration that a large portion of the ordinary goods traffic has during this month been suspended by harvest operations) were conclusive of the fact, to which the directors on that occasion adverted, that the district traffic was at that time entirely undeveloped, and that no just judgment could be formed of the capabilities of the lines, and of their probable results, from the returns then exhibited. And as to the half-year then ended, so in the past half-year, the bulk of the produce of the country and of the imports of Lynn has not found its way to the lines. The resources of the undertaking, therefore, remain yet to be tested. The interests of the company have been, and continue to be, seriously affected by the non-completion of the line between Ewaffham and Dereham—a portion which the directors regard as likely to be very productive. They are happy to state that this line will be ready for public use in the course of a few days, and the communication between Lynn and Dereham, and thence to Norwich and Yarmouth, will thereby be completed. Some further time, however, must elapse before adequate provision can be made for the goods traffic. The additional capital created under previous resolutions, so far as it has been yet taken, was in course of payment, and the directors were availing themselves of the portion of these receipts, applicable to improvements, to more satisfactorily arrange their business sfiairs. They have also directed particular attention to the subject of coal traffic, and they believe that applicable to improvements, to more satisfactorily arrange their business affairs. They have also directed particular attention to the subject of coal traffic, and they believe that by the arrangements now in progress, a very satisfactory business may be done in this department. Active measures were being taken by the company incorporated under the Norfolk Estuary Act, in conjunction with the authorities at Lynn, and other influential interests, to give effect to that Act, whereby the channel will be greatly improved and deepened, and Lynn will be rendered accessible to vessels of very large burden. This measure, when carried out, will render Lynn the most advantageous port for vessels plying to and from all the northern parts of England, Scotland and the Continent, and will have a most important inland and the Continent, and will have a most important in-fluence upon the interests of this company by adding largely to its revenue.

The capital account, to the 30th of June last, showed receipts at 1,176,263l. 7s. 9d.; expenditure, 1,167,104l. 9s. 11d.; balance at bankers', 9,158l. 17s. 10d. The traffic account, from the opening of the lines to the said period, showed receipts at 20,398l. 8s. 5\(\frac{1}{2}d.\); disbursements, 11,31ll. 0s. 9d.; balance in hand, 9,087l. 7s. 8d.

The CHAIRMAN wished to advert to the proceedings of the proprietors resident in London, Manchester, Hull, &c., who, until some explanations from himself and Mr. Wheeler, had impugned the amount of traffic as being small, from the want of energy in the directors. These gentlemen had been, however, per-fectly satisfied. Having called their attention to what had taken place at Manchester, he would now, with their permission, move the adoption of the report. In the report which was presented to the share-holders in February last, the directors took the first opportunity that was afforded to them of submitting to the proprietors their real financial position. The directors then showed them that it would require at least 131,000l. to enable them to put the line in a position to accommodate the traffic of the various districts through which it passed—that was to say, they would require that sum to supply the locomotive power, carriages, goods sheds, sidings, and other accommodation necessary to develope the traffic. In order to find the sum required the directors recommended the creation of a new stock, amounting to 150,000*l.*, bearing a preference interest at the rate of 7 per cent. per annum. The total amount of that stock that had been taken up was 71,000t.; but the amount received up to the 30th of June was only 25,000l. The shareholders would see that the amount received,—or, indeed, the whole amount subscribed for,—would never enable the directors to carry out plans involving an outlay of at least 130,000L He did not wish to blame the proprietary for not having taken up these shares, as they had, no doubt, had their fair share of monetary difficulties to contend with, but he wished to bring prominently before them the fact that the directors had not the means at their disposal which they considered necessary for showing the real value of the line. They had, however, made the best of the limited means at their command, having made considerable pro-

Digitized by GOGIC

gress with the harbour branch, which they believed to be of inestimable value to the company. In addition to the difficulties resulting from their financial position, the shareholders must recollect that during the spring of this year the directors had to contend with uncontrollable difficulties of the season-the whole of the four districts having been under water throughout the months of March and April—and they would perceive by the agricultural reports from the district that the farmers could not get on their land until the month of May. They must therefore not judge of the value of their railway from the receipts of the last half-year. He was happy to announce that the line from Swaff ham to Dereham was ready for opening, and had been inspected by the Government inspector the previous day (Tuesday); and it was the intention of the directors, if they received the permission of the Railway Commissioners in time, to open the line on Monday next. On the opening of that line they expected to obtain a large coal traffic between Lynn and Dereham, in addition to the advantage they would receive from through passenger traffic to Norwich and Yarmouth. During the past six months the directors had used great exertions to discover the most advantageous description of traffic to which to direct attention; and he could assure the proprietors that no description of traffic had yet been half developed on the line. There was one description of traffic peculiar to their line, viz., that of chalk and lime from the Swaffham cutting, so useful for construction of roads. There was also a large traffic on the line in gravel, which paid them as well as many articles of more extensive value. The directors were now making arrangements for economising the working expenses by taking the carting establishment under their own management, and by which they expected a considerable saving would be effected. They also expected that the farmers and merchants in the district would be induced to send the grain direct down to the harbour branch, whereby it could be at once shipped, and thereby reduce the expense of its transit by at least ls. per ton. At present was a good steam communication between Hull and Lynn, and the directors had reason to hope that, before long, a great number of persons would adopt that route for travelling between London and Hull Arrangements were now being made for extending similar means of communication between Lynn, Newcastle and Leith, and they had very good promise of being enabled fairly to carry out the scheme. There was one branch of the Wisbeach to which he thought it right to call their particular attention. It was originally intended that that line should communicate with the Midland by means of the Stamford and Wisbeach line, the capital of which was raised under the guarantee of the Great Northern, and which line it was intended to proceed with in the early part of next year. The completion of that line would make the Wisbeach branch of that (the East Anglian) company the great channel of communication between the Midland Counties and Norfolk and Yarmouthin fact, he might say it would become the high road between the latter places and the great manufacturing districts of the empire. The sharcholders must bear in mind that but a small portion of their line was yet opened, and that only in one direction, while it was to the completion of their whole system that they must look for such a development of traffic as would give them a profitable return for the outlay of their capital.

Mr. Puncher complained of the manner in which the accounts were laid before the proprietors. revenue account as laid before them included the receipt and expenditure from the date of the opening up to the 30th of June, the receipts being set down at 20,295*l.*, and the expenditure at 11,208*l.*, leaving a balance in hand of 9,087*l.* But the proprietors ought to recollect that it was acknowledged at the last half-

affairs were so satisfied that they had doubled their

On the amendment being put to a show of hands, it was negatived by a majority of 16 to 9. The original motion for the adoption of the report was

DIRECT LONDON AND PORTSMOUTH.

Aug. 29.—Half yearly Meeting, London.—Mr. W.

A. WILKINSON in the chair.

The report was read. The directors regretted the loss of the bill to enable the London, Brighton and South Coast to hold shares in this undertaking, in accordance with the arrangement sanctioned by the proprietors of both companies. The directors, however, hope that they may still be able to effect some arrangement under existing powers, which will enable this company to commence the construction of the this company to commence the construction of the first portion of the line, namely, that between Epsom and Dorking, upon terms which will remunerate the proprietors, not only for any further amount which may be required for such purpose, but also for the capital already expended. The directors have been enabled to compromise the most important of several heavy claims, which existed under contracts for the purchase of land and compensation, which were made during the progress of the bill in Parliament, the conditions of which the company were bound to fulfil within a certain period of the passing of the Act.
The expenses have been reduced to the lowest possible scale, no remuneration is paid to the directors, or auditor, and the only officer is the secretary, whose salary has been reduced one-half. The statement of accounts to the 30th of June last, showed receipts at 125,254l. 19s. 1d.; payments, 92,759l. 7s. 5d.; balance, 32,495l. 11s. 8d.

The CHAIRMAN, in moving the adoption of the report, stated that no steps would be taken by the Board in reference to the line, until they had taken the opinion of the proprietors (to be convened for that purpose) on the subject.

After a desultory conversation, the motion for the adoption of the report was agreed to, and the four retiring directors, viz., Messrs. C. S. Crowley, E. Crowley, J. Nix and J. M. Parsons, as well as Mr. H. Lacy, as auditor, were re-elected.

BRISTOL AND EXETER Aug. 31 .- Half-yearly Meeting, Bristol .- Mr. J. W

Aug. 31.—Half-yearly Meeting, Bristol.—Mr. J. W. BULLER in the chair.

The report stated that the amount of rent and share of toll stated by the Great Western to be due to this company for the half-year ended on the 13th of June 1848, was as follows:—viz., half-year's fixed rent from December 14, 1847, to June 13, 1848, at 71,957l. per annum, 39,978l. 10d.; tollage on 298,703 passengers conveyed over 9,061,897 miles at ½l. per mile, 9,439l. 9s. 6d.; tollage on goods, 68,447 tons, conveyed 2,995,794 miles at ½l. per ton per nile, 3,026l. 17s. 4d.; together, 12,466l. 6s. 10d., making a gross total of 48,442. 16s. 10d. The increase over the corresponding half of last year was 991. 14s. 5d., arising from 23,796l passengers conveyed 588,347 additional miles, and 4,878 tons of goods conveyed 588,347 additional miles. This result in the least productive half of the year, and under circumstances gers conveyed 598,347 additional miles, and 4,878 tons of goods conveyed 583,705 additional miles. This result in the least productive half of the year, and under circumstances of extraordinary difficulty and depression in the connucrcial world, was very satisfactory. The clear disposable balance of the revenue account was 29,9331. Is. 6t., which provided for the usual dividend of 44 per cent. per annum on the 15,000 whole shares on which 85l. had been paid up, and left a reserve of 1,305l. 11s. 6d. to be carried to the next half-year. It was therefore in their power to declare a dividend of 1l. 18s. 3d. per 100l. share, free of income-tax, for the half-year ended on the 30th of June 1848, and a resolution to that effect would be submitted to them. The dividend warrants would be forwarded with the charges for interest on third shares and on anticipated calls before the end of September, payable in the month of October. The Royal Assent had been given to Acts for the branches from Tannon to Castlecary and from Bleadon to Wells, Glastonbury and Street, on the 22nd of July. The expediency of obtaining power to construct those lines was now made evident by the passing of the bill promoted by the London and South-Western for completing narrow-gange communication from Salisbury through Yeovil to Exeter. The Royal Assent had been given to the Act for the practical scene that libraries here into the Act for the practical scene that libraries here sieve the Act for the practical scene that libraries here sieve the Act for the practical scene that libraries here sieve to the Act for the practical scene that libraries here sieve to the Act for the practical scene that libraries here sieve to the Act for the practical scene that libraries here sieve to the Act for the practical scene that libraries here sieve to the Act for the practical scene that libraries here sieve to the Act for the practical scene that libraries here sieve to the Act for the practical scene that libraries here sieve to the Act for the practical scene at 20,295L, and the expenditure at 11,208L, leaving a balance in hand of 9,087L. But the proprietors ought to recollect that it was acknowledged at the last half-yearly meeting that several thousands of the expenses had been excluded from that account and placed to the capital account. If these sums were carried to the revenue account, as he contended they ought to be, they would find the balance materially reduced and see that the working expenses amounted to nearly 80 per cent. on the receipts. He concluded by moving that a committee of five shareholders, not being directors, together with the chairman and one other director, be appointed to investigate the accounts, and that the committee be empowered to call for books, vouchers, &c., and that they report the result of their investigation to a special meeting of the shareholders to be called for the purpose.

Mr. Colder seconded the amendment, and a long discussion ensued, in the course of which the Chair.

Man explained the various items alluded to by Mr. Puncher, and a Shareholder stated that a committee of Manchester proprietors having inquired into the

Great Western, which expires in May next, and the engineer was engaged in preparing plans for workshops, and other necessary conveniences

The statement of accounts to the 30th of June last showed the total amount of expenditure on account of the main line at 1,985,053*l*. 6s. 1d.; outlay on account of the main line at 1,900,005t. 0s. 1a.; Outlay on account of the branches and for parliamentary and other expenses at 274,184t. 1s. 5d.; payments on account of South Devon and Cornwall shares and the Plymouth and Great Western Dock shares at 277,8122. 0s. 10d.; and balance in hands of bankers (exclusive of the 1,000l. deposited with the treasurer of the county of Somerset) at 77,962l. 3s. 6d.

The CHAIRMAN, in moving the adoption of the re-

port, alluded with pleasure to the increase in the amount of rent and tolls over the corresponding period of last year, and said the directors were exerting themselves to ensure safe and economical working on the termination of the lease to the Great Western. He was sure they would be ready with the locomotive plant by the appointed time—the 1st of May 1849.

On the motion being put for the adoption of the report, a lengthened discussion arose as to the cost of the locomotive plant, which was stated at 200,0002, and as to the advisability of re-opening negotiations with the Great Western, resolutions in favour of which were proposed by Mr. AVERY, and seconded by Mr. Scott.

The CHAIRMAN having stated that the ultimatum of the Great Western was a renewal of the lease upon the same terms as the present one, with an equitable adjustment for the branches, said that the directors, as well as himself, were unanimous in deprecating

any re-opening of the negotiation at present.

The resolutions were then withdrawn.

A dividend of 4½ per cent, was declared and a resolution passed empowering the directors to declare all shares in arrears on the 1st of November forfeited.

SOUTH DEVON.

Aug. 30 .- Half-yearly Meeting, Plymouth .- Mr. T. GILL in the chair.

T. GILL in the chair.

Mr. WOOLCOMBE read the report. It stated—
That the completion of the line to the immediate vicinity of Plymouth had opened an important source of remunerative truffic, but that it had been too recent to influence the present receipts. A considerable amount in the receipts is under arbitration being due from the Post-office. The disadvantages under which both the atmospheric and the locomotive systems were applied during the gradual introduction of the one and the discontinuance of the other over different sections and while it was only open to Totres. advantages under which both the atmospheric and the locomotive systems were applied during the gradual introduction of the one and the discontinuance of the other over different sections, and while it was only open to Tones, have necessarily and extraordinarily affected the working expenses of the past half-year. In regard to the cost of working the atmospheric system upon the upper portion, it has been, throughout the whole of the period to which the accounts refer, so much greater than the directors had reason to anticipate, that although certain reductions have subsequently attended the progress of the experiment and others to a considerable extent might probably be relied upon, yet the directors found it necessary to refer the investigation of the whole of this momentous subject to the special consideration of a committee. After most earnestly balancing the various circumstances and considerations resulting from the labours of that committee, the directors, without pronouncing any judgment as to the ultimate success of the atmospheric system, and whilst they are prepared to afford to the patentees and other parties interested in it the use of their machinery for continuing their own experiments, have agreed with Mr. Brunel, that it is expedient for them to suspend the use of the atmospheric system until the same shall be made efficient at the expense of the patentees. The Board have arranged for supplying locomotives from the date of the suspension of the atmospheric system. Delays, which no exertions of the directors could prevent, have involved vexatious postponements in the realization of expected revenue. It was with much regret that in the estimate of the limited means remaining at their command for the attainment of those objects the directors were compelled not only to defer the present consideration of proceeding with the remaining works, but most reluctantly to propose also the postponement of as short for the interest upon shares which will become due in October next; but with the assurance that e

The balance-sheet, as per capital account, exhibited an expenditure of 1,820,577*l.*, and a balance in the hands of bankers of 31,227*l.* The revenue account for the half-year showed a receipt of 29,269l. and a balance carried to profit and loss of 2,487l.

The CHAIRMAN, in moving the adoption of the report, commented considerably on its topics. The directors thought that in opening the line to Laira, the large outlay previously expended would no longer be required. The line was opened on the 5th of May last; and it had been resolved to open the line to Plymouth, as well as opening the Torquay branch as early as possible. The engineer had already been instructed to carry out those two objects without delay; that to Torquay would be opened in two or three months, that to Plymouth would not exceed six months. The directors had been applied to on the part of the mercantile interest of the neighbourhood

not to delay any longer the erection of a goods station, in order to afford them as soon as possible the accommodation they naturally expected to have in the opening of the line to Laira. The atmospheric system had been worked under great disadvantages. He alluded to the expenses of fitting up and maintaining in work so many station establishments on the line. and concluded by hoping that as the directors were determined to retrench the expenditure as much as possible the shareholders would have perfect confidence in them.

A lengthened discussion between Messrs. Dunn, WOOLCOMBE and others, then ensued respecting the at-

mospheric mode of traction.

Mr. Ellis, deputy-chairman of the Midland, said there was great reason for dissatisfaction with the manner in which the directors had played with that expensive bauble the atmospheric system. There were many who had long thought the resolution now come to ought to have been earlier adopted.

Mr. Brunel said that any apparent demolition, or what was called "honeycombing," of the sea-wall at Dawlish was a mere deception, as everything was

thoroughly sound.

Mr. Sirsum deprecated the atmospheric system. They had already expended from 300,000l. to 400,000l. Mr. Brunel had received warning on the bubble. upon warning from engineers as eminent as himself, but he had recklessly entered upon this extravagant expenditure. not at his own expense, but that of others—at the expense of widows, and many who had invested all their property in the enterprize.

Mr. Woolcombe thought that it was altogether unfair to attack Mr. Brunel's general reputation when, owing to peculiar circumstances, he had not the liberty of vindicating himself. It was only right they should suspend their condemnation until the thing

was fairly before them. Mr. Ellis having denied that there were sufficient stations materially to add to the expenses of the lines.

Mr. PRIDHAM said he wished to know whether the present number of directors was not unnecessarily farge.

The CHAIRMAN replied that at present the number was according to the Act; but the directors were ready to reduce them if such was the wish of the proprietors. The sum of 1.925/, for salaries of officers, clerks, &c. was debited to capital account, seeing that it was customary to place to that account all items which arose out of the construction instead of the working of the line.

Mr. GILES hoped reduction would be made in the

large amount for surveying.

A Proprietor wished to know whether the directors intended to defer the payment of interest on all the shares, because he understood that the one-half shares were guaranteed 6 per cent.

The CHAIRMAN said they would not be thrown

overboard, but all that the directors asked was that

they might defer the payment for the present.

Mr. MOORE was of opinion that the number of directors should be reduced, and that the sum allowed was too much to divide among them, particularly in their present insolvent condition.

The CHAIRMAN hoped that now they had arrived at Plymouth, the travelling expenses would be brought

to within 500l. a-year.

Lord COURTENAY, a director, congratulated the meeting on the forbearance it had shown relative to a difficult and delicate point as to the continuance of the atmospheric, and he cordially reciprocated the sentiments of Mr. Ellis and other shareholders on the necessity of reducing the general expenditure.

The report was then carried unanimously.

Mr. SALTER alluded to an inconvenience that was encountered by third-class passengers. A poor man got as far as Exeter by third class, but there, owing to the arrangement of the trains, he had frequently to stop all night in Exeter, or go on in a second-class

carriage.
The CHAIRMAN said that point rested with the

Great Western, who ordered the trains.

A long discussion then ensued as to the propriety of electing two directors into the Board to represent the interest of the Midland, who are holders in the South Devon to the extent of 70,000*l*.

The CHAIRMAN said that on the next election of directors in January two gentlemen from the Midland would be admitted.

A resolution, proposed by Mr. Joseph, and seconded by Mr. Moore, was passed, to the effect that the directors take the earliest opportunity of calling in two directors of the Midland, duly qualified, on behalf of the shareholders.

A Proprietor wished to know whether, if locomotive system were adopted, it was contemplated offering the line to either the Great Western or the Bristol and Exeter.

The CHAIRMAN said either company could have it that was prepared to pay them for their outlay.

EXETER AND EXMOUTH. Aug. 29 .- Half-yearly Meeting, Exeter .- Mr. E. WOOLMER in the chair.

The report was read. It stated that the Act for construction was passed in 1846; but by the 37th clause the powers of the Act were not to take effect until the Exeter, Yeovil and Dorchester bill, then before Parliament, had passed. Such had been the protracted deliberations before Parliament, and such unparalleled opposition evinced by the promoters of competing lines, that it was only a few weeks since that the restrictions of the exercise of power under the Act for the Exeter and Exmouth line were removed by the royal assent being granted to the Exeter, Yeovil and Dorchester line. Upwards of two years having passed without the possibility of any active measures being taken for carrying out the undertaking, and referring to the depressed state of the money-market, which would further retard any immediate operations, the directors introduced a bill into Parliament during the present session for extending the powers of the Act, with a view to postpone as long as may be found convenient the outlay of capital in the purchase of land for the construction of the line. This bill had passed both houses, and was awaiting the royal assent. In accordance with the 7th clause of the Act, interest at the rate of 4 per cent. on the deposits would be paid from the commencement of the company up to the 30th of June last, being at the rate of 2s. 4d. per share. The statement of accounts showed receipts at 17,1677., payments 9,1321., leaving a balance in hand of 8,0351. The report was adopted.

TAW VALE.
Aug. 31.—Half-yearly Meeting, London.—Mr. E. COOPER in the chair.

Mr. HARRIS, the secretary, read the report. It stated that the progress of the works had been limited to a comparatively very small amount. Those shareholders who had made advances to the company in anticipation of calls required those advances to be applied to calls, and declined to make any further payment until the other proprietors had been called upon to contribute rateably with them. Under these circumstances the directors were obliged to make a call upon the shareholders of 2l, per share, which was payable on the 30th of March last; and they have made a further call of 2l. per share, payable on the 10th of October next. The directors congratulated the shareholders on the success of the application to Parliament, by the South-Western, for extending the line from Salisbury by way of Yeovil to Exeter; but they had to regret that the bill for leasing the line to the South-Western, and the bill for forming a junction from the South-Western central station at Exeter to Cowley-bridge, on the Exeter and Crediton line, had cowley-bridge, on the Exeter and Crediton line, had not received parliamentary sanction. The statement of accounts showed receipts at 133,591l. 1s. 1d.; expenditure, 132,504l. 5s. 7d.; balance, 1,086l. 15s. 6d.

The Chairman, in moving the adoption of the report, remarked that unless the decision of the Rail-

way Commissioners (which Parliament and the Commissioners themselves now strenuously supported in opposition to the wish of the shareholders) relative the gauge of the line were got rid of there was little prospects of its being made, and the shareholders

must determine what course to adopt. In reply to Mr. DAVY-

The CHAIRMAN said that the South-Western had paid 46,800*l*. of the total assets, 41,100*l*. being calls on the shares they held, and 5,700*l*. as calls in advance.

Mr. DAVY said that the South-Western represented the amount in their balance-sheet to be 98,970l.4s.7d. He did not think there was any prospect of the company fulfilling its engagement with this company. He should therefore move an amendment, empowering the directors to lease the line to the Bristol and Exeter .- No one having seconded the amendment it fell to the ground.

A lengthened discussion then took place as to the course which it would be most desirable to pursue, and it was at length agreed to adjourn the adoption of the report till the 17th of October next, a committee of shareholders to be appointed in the meantime to negotiate the sale or lease of the line, subject to the approval of the shareholders in general.

The directors were then authorized to pay 5 per cent. interest on the paid-up capital.

A committee, consisting of Messrs. R. W. Cowden, J. D. Williams, J. Hill, G. H. Hay, and W. M'Marray, was also appointed.

CORNWALL Aug. 26 .- Half-yearly Meeting, Truro .- Mr. J. T. TREFFRY in the chair.

Mr. BOND read the directors' report. In conse-

quence of the continued depression in monetary affairs the Board had deemed it right to give directions for the suspension of all further operations by the contractors for the present. The directors of the Great Western, Bristol and Exeter and South Devon had withdrawn the bill empowering them to contri-bute additional capital. The land for 7½ miles of the line had been purchased, and satisfactory progress made in the works under construction. The calls now due would be enforced, and it was anticipated that the amount derivable from this source, with the balance in hand, would be sufficient to cover all outstanding liabilities. The directors, since March last, had declined to receive their remuneration. Although they have temporarily yielded to the pressure of circumstances, yet their confidence in the soundness of the undertaking is unabated, and they hope, ere long, to prosecute the works with renewed ardour. The statement of accounts up to the 30th of June last showed the receipts at 193,995l. 18s. 4d.; expenditure, 173,655l. 1s. 6½d.; balance in hand, 20,340l. 16s. 9 d.

The CHAIRMAN congratulated the proprietors on the termination of their opposition to the Cornwall Central scheme by the withdrawal of their opponents, and observed that that opposition had cost them at least 100,000t. In speaking of the suspension of the works he observed that to continue to carry on the construction on the most moderate scale it would be necessary to keep an engineering and office staff almost as expensive as would be required if the works were actually prosecuted, and that therefore it had been thought most prudent and most economical to suspend the contractor's operations altogether, with After some further one or two trifling exceptions. After some further observations, the Chairman concluded by moving the adoption of the report.

Mr. R. O. Job asked if there were any liabilities beyond what might be met by the balance of about 20,000l., to which allusion had been made.

The CHAIRMAN said there had been liabilities incurred since the 30th of June. The balance in

hand and the arrears on the call now due would, however, meet these liabilities.

In reply to a question, the SECRETARY stated that the arrears of nearly 22,000l. on the call had relation to 5,534 whole shares and 4,314 half-shares. This was the number at present, and not on the 30th of

Mr. Tweedy explained that the solicitor had written to the parties who had not paid up the call, and that further necessary steps would be taken.

The resolution was adopted.

Mr. TREGELLIS moved a vote of thanks to the

directors for giving up their payments from March last.

#### Progress of Works.

SHREWSBURY AND BIRMINGHAM. -The viaduct in Shiffnal on this line, says the Shropshire Conservative, is now coming rapidly to a finish. There are twelve large arches of a 6ft. pier and a 40ft. opening, the arch being the segment of a circle; a bold string of Grinshill stone runs along the viaduct, surmounted by a parapet about 3ft. high; next to the street is a small opening, with a simicircular arch, on a strong pier; the opening across the street is 80ft between the piers, which has a rustic stone point, is 12ft to the springing of the arch, and 24ft from the centre of the street to the crown of the arch, which is a segment of a circle, and, according to the plan, is a light and open construction of iron-work, highly ornamental, and no doubt will have an imposing and pleasing effect when finished.
SHREWSBURY AND CHESTER.—The ceremony of

keying the last arch of the Dee viaduct at the Vale of Llangollen, says the Shropshire Conservative, took place on the 28th inst., in the presence of the directors and their friends. The length of this unrivalled viaduct is 1,508ft.; the height, 147ft.; the number of arches nineteen; and the span of each arch 60ft.

#### Law Intelligence.

Aug. 26 .- At the Middlesex Sessions, M. Levy, a German Jew, was indicted for stealing a carpet-bag and its contents, value 81., the property of the London and North-Western. A Mr. Smith came to London by the 9 p.m. train, on the 2nd ult., when on arriving at Euston-square station he missed his carpet-bag. The prisoner was observed by a person, who had heard of the loss, to run quickly from the platform with a carpet-bag, which he threw upon the footboard of a cab, and then endeavoured to get into the vehicle. The witness stared the prisoner very intently in the face, upon which he turned round and ran off. prisoner was found guilty, and sentenced to three months' hard labour.

#### BRISTOL AND EXETER RAILWAY.

At the HALF-YEARLY GENERAL MEETING of this Company, held at the White Lion Hotel, in the city of Bristol, on Thursday, the 31st of August 1848,—

JAMES W. BULLER, Esq., in the Chair,-

JAMES W. BULLER, Esq., in the Chair,—
It was resolved,—
1. That the Report of the Directors now read be received and adopted, and that they be requested to send a copy thereof to every registered Proprietor.
2. That a dividend of 1l. 18s. 3d. per whole share, free of income-tax, for the half-year ended on the 30th of June last, be declared payable to the proprietors of all such shares standing registered on the 21st of August, and not being in arrear on the 21st of September.
3. That the Directors be, and they are hereby instructed either to forfeit all shares that may, on the 1st of November next, be in arrear for any call hitherto made, or to take legal proceedings against the parties, as the Directors may consider to be most conducive to the interests of this

Company.

4. That the best thanks of the meeting be given to the Directors for their able management of the affairs of this Company.

JAMES W. BULLER, Chairman.

The Chairman having quitted the chair, it was resolved

by acclamation,—
5. That the best thanks of this meeting be given to James Wentworth Buller, Esq., for his able and judicious conduct in the chair.

#### SCOTTISH MIDLAND JUNCTION RAILWAY COMPANY.

PROCEEDINGS of the HALF-YEARLY STATUTORY MEETING of the Scottish Midland Junction Railway Company, held within the George Hotel, Perth, on Monday, the 28th of August 1848,—

28th of August 1848,—
HUGH WATSON, Esq., of Kelllor, Deputy-Chairman, in the Chair.
The Secretary read the Advertisement calling the Meeting; and the Common Seal of the Company was affixed to the Register of Shareholders, in terms of the Act.
The Haif-yearly Report by the Directors was submitted to the Meeting, when the following Resolutions were proposed and unanimously agreed to:—
Moved by the Chairman, and seconded by Archibald Butter, of Paskally,—
1. That the Report now read be received and adopted, and that the same be printed and circulated among the Shareholders.

Sharcholders. Moved by the CHAIRMAN and seconded by Sir James

RANSET,—

2. That Mr. Charles Graham Sidey be appointed one of the Auditors, in room of the late Mr. Robert Macfarlane,

Moved by DAVID CRAIGIE, Esq. and carried by accla-

mation,—
3. That the thanks of the Shareholders be given to the Board of Directors for their important services during the past half-year, and to the Chairman for his conduct in the chair.

HUGH WATSON, Chairman. ROBERT D. KER, Secretary.

Worcester, Aug. 8, 1848.

MIGRATION AND COLONIZATION.

Immigration being much required in Australia, New Zealand, &c., and as the supposed expense of an OUTFIT often prevents individuals emigrating, S.W. SILVER & Co., CLOTHIERS, OUTFITTERS and CONTRACTORS (having a large interest to maintain in those Colonies), have been advised to make known that they can supply a comfortable Outfit, including bedding, for made or female emigrants, from 44, thetti upwards, or less 12. If meelfull, and for children in proportion, at 4, Ilishopsgate-street Within topnosite the London Tayern), where Lists will be given on application. S. W. S. Co. being the makers of nearly every article in all the outfits they supply, and as one of their objects to promote emigration, they metither receive from agents, nor pay the too usual commission to any person introducing passengers to be fitted out, so that the passage and outfit may be procured at the least possible obtain the most economic passage to the Colonies. They have a representative in every Australian colony, to whom they ship elothing monthly—thus they would forward small parcels free of expense. Naval and military officers, midshipmen, cadets, civilians, Indies, &c. are outfitted as heretofore, at the Cabin Passenger Outfitting Warchouse, &c. and outfit on the Imigration Outfitting being exclusively at 4, Bishopssate-street Within), London; and each branch at 84. George's-crescent, Liverpool.

#### SUMMARY OF THE PROSPECTUS. The principal features and conditions of this undertaking are as

follows:—
The Company will be incorporated by Royal Charter or Act of Parliament, and the Hon. the East India Company guarantee 5 per cent. as a minimum dividend for twenty-five years, besides making a free grant of all lands necessary for the railway and

making a free grant of all lands necessary for the lands works.

The shares will be limited to 52, each, and be applied to the section from Bombay to Kallian. The calls will extend over three years, and not exceed 10a at any one time, and the 5 per cent, will commence at once, and be payable half-yearly upon the calls as respectively made. If the whole sum be paid at once, full interest will be allowed. Where the shares are fully paid up, interest coupons will be attached, payable to bearer; and in every case the utmost facility will be given in the payment of dividends. In the event of any obstacle to prevent the constitution of the Company, the deposit moneys will be returned to the contributors, the interest being estimated as sufficient to cover current expenses.

expenses.

The Cantion Money (30,000), has already been duly lodged with the East India Company, and interest is meanwhile accruing upon

expenses.

The Caution Money (30,000L) has already been duly lodged with the East India Company, and interest is meanwhile accruing upon the same.

The Line commences at the port of Bombay, where there is a population of 300,000 inhabitants, and proceeds 33 miles towards the producing districts of the interior, by Tannah to Kallian, places of considerable population and resort, on the route of one of the greatest channels of traffic in India.

The gradients being for 8 miles level, and the remaining 27 miles averaging only 1 in 1203, the cost of construction and expense of working will be necessarily light.

The original scrip shares, already issued, upon which 5x, per share working will be mecessarily light.

The original scrip shares, already issued, upon which 5x, per share wholly not appliance of the following before the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the

PORT OF GREAT GRIMSBY.

# NOTICE TO FOREIGN MERCHANTS

The Ducs for Vessels entering the Docks at Great Grimsby have been reduced to lock per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the

President of the Board in New Brunswick. John Wilson, Esq., Judge of the Common Pleas, St. Andrews. Solicitors-Messrs. Goodwin, Partridge, Williams & Edwards.

Secretary-William Bridges, Esq. The following are the advantages offered exclusively to English

The following are the advantages offered exclusively to English shareholders:—
Until the opening of the first section of the line, which is expected to take place in the latter part of the year 1849, 6 per cent. on deposits and calls will be paid half-yearly, at the Company's Offices in London. After the opening of the first section, a minimum dividend of 6 per cent, is guaranteed by an Act of the Legislature of New Brunswick, sanctioned by Her Majesty in Council, and which directs the necessary sum to be paid during a period 25 years, out of the public revenues of the province, which guarantee has been duly assigned over to the shareholders in Class A by those in Class B.

In addition to this, the Class B have made over to the Class A a preferential dividend of 1 per cent, which will secure to the Class A a certain minimum dividend of 7 per cent, during that time.

time.
On the expiration of the 25 years the produce of the line will be set apart towards a dividend in perpetuity of 7 per cent. on the capital of the Class A shareholders.
After the shareholders in New Bruswick have received a similar dividend of 7 per cent. an equal division of surplus profits will

After the shareholders in New Bruswick have received a similar dividend of 7 per cent. an equal division of surplus profits will take place.

A free grant of a belt of land, 400 feet in width, has been ceded as a site for the milroad, for the whole extent of the Crown territory through which it passes, with additional blocks, 500 feet long and 300 feet wide, at each station; together with all the timber struction of the ratheody of the convention of the ratheody of the stationary of the first struction of the ratheody of the first struction of the ratheody of the first struction of the ratheody of the first struction of the ratheody of the first struction of the ratheody of the first struction of the ratheody of the first struction of the province of the first structure of the line, ideaed in the hards of the Company, for sale to emicrant actual settlers, at the upset price of 200 her acre, undrawing about 100,000 acres; and also the rath of making branch lines through any portion of the province of Now Brunswick, without the necessity of obtaining fresh lexislative powers, and with similar privileges in recard to land, timber and materials tarbose granted in respect of the section from St. Andrews to Woodstock.

A deposit of 20, per share will be payable on allotiment, and no call will exceed that amount; and there will be an interval of at least three months between each call.

Prospectuses and forms of application for shares, and all other information, may be obtained at the Offices of the Company, 37, Walbrook, London.

# CHESTER AND HOLYHEAD

OPENED THROUGHOUT TO HOLYHEAD.

OPENED THROUGHOUT TO HOLYHEAD.

LONDON TO DUBLIN IN 13 HOURS.

The Chester and Holyhead Railway is NOW OPEN throughout, with the exception of about 4 miles adjoining the Menai Stratts, for which the Company have provided properly appointed conveyances, the charge for which is included in the Railway Fare.

The Admiratly and Company's splendid Stran-packets, 670 tons, 370-horse power, run between Holyhead and Kimpstown, in conjunction with the following Trains, performing the passage in about four hours:

LONDON TO DUBLIN.

1. From Euston-square, London, at a quarter to 9 in the evening, with the Irish Mails, and from Chester at a quarter to 4 in the morning, leaving Holyhead for Kinsstown (and Dublin) at a quarter to 7 in the morning, and arriving at Kingstown about half-past 11, Dublin time.

2. From Euston-square, London, by Express Train, at 9 o'clock in the morning, and from Chester at a quarter to 3 in the afternoon, leaving Holyhead for Kingstown at a quarter to 6 in the afternoon, arriving at Kingstown about a quarter past 9, Dublin time.

time.

DUBLIN TO LONDON.

1. From Kingstown at half-past 8 in the morning, Dublin time, arriving at Chester at 10 minutes past 5, and in London at half-past 10 in the evening.

2. The Admiralty Packet, with the Mails, from Kingstown at half-past 11 in the morning; the Train in conjunction therewith leaving Holyhead at 20 minutes past 6, arriving at Chester at 25 minutes past 9 in the evening, and in London at a quarter to 5 the next morning.

Only the Admiralty Packets and Mail Trains (as above) run on the Sunday.

Aug. 12, 1848.

# DUTCH-RHENISH RAILWAY

COMPANY.
SIXTH CALL of 10a, PER SHARE.
The English Directors have been authorized, by a communication received from the Head Direction, to announce that, relying on the arrears of former Calls being now paid up, the payment of the above Call of 10a, per Share will not be demanded until the financial requirements of the Company render it absolutely

financial requirements of the Company reader is accessary.

The English Directors feel it incumbent on them to urge the immediate Payment of the Third, Fourth and Fifth Calls, not only as a measure of justice to those Proprietors who have already paid, but also in order to prevent the Forfeiture of the Shares.

By order of the London Direction.

JOHN C. JANSON, Secretary.

SATURDAY, SEPTEMBER 9.

#### HEADS OF A SYSTEM OF PRACTICAL REFORM.—No. VI.

Continuing our attention, so far, to the passenger business, we shall not, however, dwell at much length on the various savings that may be made independently of those larger economic measures we have already discussed. These, as we have said, are the material aids by which alone any considerable effect can be produced by the managers of the system on its profits, in this particular way of reform. The others are neither so comprehensive in their operation, nor so apt to be brought within a general view as the principal heads or causes of expenditure. They must be sought by the directing parties in each department, amongst the details of which they lie, as it were, scattered here and therethe main thing, in order to find them, being the sincere determination of those parties to allow no useless expense to pass through their hands, on whatever pretext. The subjects are so various, and must differ so much on different railways, according to the particular business and conditions of each, that it would be difficult to propose a scale of expense for one that might not be in some way unsuitable for We can therefore do little more than point out in general to all concerned the urgent necessity of applying with respect to all such details, without exception, the strictest possible economy, whether in attendance, labour, or materials. It must now be perceived that a cheap system of fares-which has partly been forced upon railways, partly adopted by their managers in an expectation that we have from the beginning seen to be fallacious demands a corresponding scale of cheapness in all things which can be made less costly without impairing the security and due performance of the business. The service was established on a footing which, even at the rates at first charged, in many respects bespoke rather the liberality of the promoters—desirous, as we well know they were, of signalizing the character of their undertakings by the handsomest way of dealing with the public-than the economy of men chiefly intent on making the business they had undertaken as profitable as it might be made. The return for this generosity has been what we all know. Instead of receiving any credit for expenses and arrangements of which no small part were absolutely in the nature of extras offered to their customers gratis, without even a wish to profit by them, the members of the railway system met with nothing but jealousy, dissatisfaction, and abuse in all quarters. They have been systematically held up to the public aversion as greedy, selfish "capitalists," intent on nothing but plundering the "innocent people" by their odious "monopolies"-at the very time when the principle of all they did for the public was to spare no expense to render it convenient and agreeable, if not sumptuous. This was the penalty they paid for being thought the owners of profitable undertakings. No one asked what they had done before arriving at their profits-who else had gained, and profited infinitely more than the railway promoters, by the new system: it was sufficient that it appeared to be greatly thriving—this was viewed as a kind of crime-and all else went for nothing. Hereupon arose the pressure for cheaper fares in and out of Parliament; while at the same time the utmost encouragement was given in all quarters to set up rival undertakings, with the declared object of pulling down the "monopolies." A season of plethora in the money-market aggravated the mischief; and tempted the railway body, in part on notions of self-defence, but far more by the entire delu- farcs and profits. On the contrary, every new

sions which prevailed as to the unlimited prospects of the gain from further enterprize, to expose itself in every way to the attacks of its enemics. The success of these attacks, together with the consequences of this imprudence of the railway interest itself, we now see; but instead of lamenting over them in vain-the time for such regrets being past-it will be well to try what can be done to redeem the property that has been thus seriously injured.

This, it is quite clear, now that rates have been cut down, and much unprofitable service imposed by the State in various ways, cannot be made to pay on any but a strictly frugal system. The notion of having everything as handsome as possible must once for all be given up; and the care must henceforth be not to spend a penny on mere decoration, show, or embellishment of any kind whatever. We have long since uttered warnings on this chapter, at a time when the movement to a lower scale of fares began, side by side with the State exactions, of which the Gladstone bill gave the first notable example. The certain effect of this, and the altered system of management that prudence would then have suggested, we early saw, and took various opportunities of urging. But no one, it seems, could then perceive what was coming, or be made aware of the necessity of timely retrenchment in the mode of providing for and working a worse-paid business, until its effects had already been felt in successive dividends. We do not now speak of those indiscreet people, outside of the railway interest, who at the very moment when these blows were falling upon it, were besieging it on all hands with every kind of suggestion, of things to be done out of the railway funds, that could be devised by that sort of liberal zeal which is boundless in its magnificence at other people's expense. We need not recall the proposals to turn railway stations into picture-galleries-schemes for covering entire lines with glazed roofs, &c .the endowments, and contributions, and other inane or greedy demands, current little more than a twelvemonth since,-all of which were to be executed, at the bidding of dilettanti or literary projectors, by this unlucky body of proprietors. But we must observe, that within that body itself, the state of the matter, and what it enjoined, were not at all perceived; nor indeed, up to the present moment, can we see that an adequate notion has been formed of the necessity of an absolute change in all that relates to the mere extras of the system. While the fares, as we all know, have been cut down, and all but a few express trains are provided with second-class carriages, the comfort of which is sufficient to tempt numbers to prefer them, at the lower charges, to the higher class; while this may be seen to be working at both ends at once against coaching profits, we see nothing done to reduce a single penny of the lavish cost literally thrown away on making the first-class carriages as luxurious and showy as possible. It is not long since we had occasion to say something on this kind of extravagance on a new railway (the North Staffordshire), of all that we know, perhaps, the least suited for such wasteful fopperies; and before this, had spoken on the same subject, in reference to the upholstering zeal of some one who made himself busy in extolling the waste of ornament in certain French railway coaches, as a thing to be imitated, or, if possible, surpassed, by the coach-makers of the London and North-Western. This kind of idle vanity, we fear, has received no check from those concerned in preventing it; nothing, that we can see, has been done to introduce in this respect a soberer fashion, suited to the present state of railway

first-class coach turned out appears to have some new fitting or decoration, finer and more uselessly expensive than had been seen before. The master-builders vie with each other who shall finish the handsomest carriages; and no one seems to think it necessary to ask what their mere decorations cost; nor to remember that in the present times, and the future prospects, as well, of railway business, the outlay on this class of objects is quite unjustifiable; that it is so much waste of the money of those who can ill afford to spare it now, and who are now receiving far less than they ought for what they have laid out already.

This item is by no means so inconsiderable as may be fancied. To new companies now about to stock their lines, the waste of 15l. or 201. per coach-which we believe may be set down as a very moderate estimate of the difference between the cost of such as are now turned out and that of a plainer vehicle, sufficient for all the essential uses it has to serveought not to be a trifling matter; nor should it be thought so by the established companies, who are constantly building, to provide for the new lines they are opening,—at no profit whatever, it seems, to the proprietors. But it is not merely the first cost of mere finery that renders it wasteful. It must be kept up, too; and as, like all other frippery, it is the first thing to show wear, it will be found that its maintenance in a tolerable condition is no small item in the cost of the current repairs. The plain and positive rule to be followed, as we have said, in the smallest items, being, that no useless expense, of whatever kind, shall henceforth be incurred, it is clear that in this, which is by no means a small one, there is a great deal to be done. The duty, therefore, of economizing directors will be to instruct their coach-builder for the future to prove his ability, not in trying how to outbid the glitter and cost of former specimens of such work, but in making the cheapest carriage that can be constructed for the real purposes of its use; and in providing for these, and these only, with the most substantial work and the plainest materials that will suit the object. That he must, once for all, make an end of gilding and silk-fringing, tassels, French-polish, and heraldpainting, which do not render the coach more durable or more substantially convenient, but which take money out of the pockets of those who pay for the coaches, not one farthing of which those who are to ride in the coaches will re-pay. This is what would be said and strictly enforced by directors who are in earnest on questions of economy, in a part of the business not the least expensive; and in which hitherto all the tendencies have been, while profits have kept falling, to proceed from one extravagance to something still more extravagant.

THE ATMOSPHERIC ON THE SOUTH DEVON, AND MR. BRUNEL'S POSITION IN REGARD TO IT.

Last week we gave a summary of the remarkable proceedings of the SOUTH DEVON meeting. The facts reported on that occasion, concerning the falling through of the atmospheric system, are of a peculiar character. It appears that the expenses of working the traffic by Mr. Samuda's process have so far exceeded the whole receipts, as to leave the company minus the sum of 2,489% in the half-year's account; and the directors hereupon have, naturally enough, resolved to get rid of the apparatus which is found so ill-suited to the pecuniary objects of the company. This, it is true, will be no trifling sacrifice-the cost of the experiment, which has now been condemned, having been not much less than half a million sterling; which must be written off, on the return to the ordinary method

Digitized by GOOGIC

of working by locomotives, as a total loss; to say nothing of what it will cost to adapt the line to its new conditions, and to furnish it with the moving power in lieu of the stationary, This, we apprehend, may be regarded as a final blow to the atmospheric system. It has been tried on the South Devon with all the advantage that previous attempts on other lines could give to its promoters; and it is declared by the directors to have proved altogether wanting in the qualities on the assumption of which it was applied. The running of the trains, it is well known, has been anything but exemplary; and the expense of running them by this means exceeds the whole receipt by nearly 10 per cent. on the gross earning. It is not likely that any company will hereafter have the courage to venture on resorting to a principle which has been followed with such unlucky results, in this notable experiment of Mr. Brunel's.

It will be remembered that we have always viewed the fate of the system as dependent on its economic results. The value of the principle, for practical uses, must, as we said long since, be ascertained, not by its mechanical operation merely, but by the degree to which it should be found, under ordinary circumstances, more or less expensive than thelocomotive. It can hardly be said that the trial has not been sufficiently complete in this instance; at all events, whatever the friends of the system may say with a view to diminish the weight of the evidence afforded by the South Devon experiment, the practical by-stander will take it as conclusive. He has seen the atmospheric method, after many trials, disappear in every instance where it has, so far, been adopted in this kingdom; and in this last case, where the promoters were bound, as it were, in a heavy penalty to give it a full trial, and have nevertheless been unable to keep it any longer, he will regard their determination as leaving no further doubt of its practical unfitness for the business of an ordinary line.

It cannot, we say, have been abandoned on light grounds by the directors of the South Devon. The line, it is well known, was laid down on a profile exceedingly unfavourable for the locomotive; and its bad gradients were confidently fixed upon by Mr. Brunel in the certainty that the system, adopted on his recommendation, would thoroughly answer. He is now persuaded, as the directors' report informs us, of its failure, and advises that the line shall hereafter be worked by the usual method. How far the railway will be fit for such a change it remains to be seen. Its levels were adapted to a mode of traction supposed to be independent of steep inclines; now that they have to be faced by the locomotive it may be feared that the line, which it seems the atmospheric cannot serve with advantage, will be scarcely better adapted, in its present state, to give the rival principle a fair working chance, as far as its profits are concerned.

We cannot leave this subject without observing that it marks a feature in Mr. Brunel's professional career, that certainly must be said to distinguish him above all his contemporaries. He has now tried, on the grandest scale, and with the most undoubting resolution, various experiments, on the several railways entrusted to his care; and so far they have mostly proved enormous failures. For the experience which he gains by each new display of his inventive—we will not say eccentric—genius, the parties who supply the funds for the several undertakings on which he is wont to exercise it have had to pay on a scale without example in the history of railway engineering. We do not speak of his grand invention, the broad gauge—the failure of which, as a more profitable means of work-

ing, some persons may yet consider open to dispute. But the annals of the Great Western will supply some notable cases, within the limits of that system itself, of the magnificent disregard of expense with which Mr. Brunel has indulged himself in making experiments that have turned out in a mere loss of the sums laid out upon them; and the list of his attempts in this way is now crowned by the South Devon atmospheric failure—the largest, we believe, that has yet been incurred by any railway company on the express recommendation of the engineer, whose opinion they have trusted against the dictates of railway practice in general. One of the speakers at the meeting on the 30th ult. commented on this in terms sufficiently emphatic. "On the system which is now to be abandoned, he said, "the company have already expended from 300,000l. to 400,000l. Mr. Brunel had received warning upon warning from engineers as eminent as himself, but had recklessly entered upon this extravagant expenditure, not at his own expense, but that of others—at the expense of persons of small means, widows and others, who had invested their all in such enterprizes, and who could ill afford to pay the cost of his playing in this manner with their property. This is no trifling charge, when it can be brought with any show of reason against an engineer, whose business it is to redeem the confidence imposed in him by the owners of the money laid out on his plans, as well as to gain himself a reputation for daring and novel inventions; and we do not see how Mr. Brunel's friends can reply to it.

#### Mr. WYNDHAM HARDING'S FACTS AND PROGRESS OF THE RAILWAY SYSTEM.

We continue to-day our extracts from this valuable and practical paper; and we commend it to the more especial attention of railway sharcholders at the present moment, as it exhibits strongly the inherent virtues and continual progress of that system, notwithstanding the vicissitudes of mercantile and monetary affairs, and will tend to give us confidence that the return of financial prosperity and the enactment of rigid economy will yet render a property, so useful to the public, remunerative also to the proprietors.—

The proportion of third-class passengers has, we have seen, thus satisfactorily increased between 1842 and 1847. The third-class traffic has, however, developed itself very differently on different lines; and it may be well to inquire into this. The statement subjoined shows the third-class traffic of two metropolitan companies (the Eastern Counties and the Great Western)—two North of England companies (the Lancashire and Yorkshire and the Newcastle and Berwick)—and two Scotch companies (the Edinburgh and Glasgow and the Glasgow and Greenock).

Year ending June 30, 1847.

Name of Railway.	Length in Miles.	Number of Third-class Passengers conveyed.	Proportion in every Hundred of Third-class Passengers.
Glasgow, Paisley and Greenock Newcastle and Berwick Edinburgh and Glasgow Lancashire and Yorkshire Midland Eastern Counties Great Western	654 46 109 285 177 2404	957,534 944,891 836,025 2,090,624 2,366,899 1,044,158 419,863	83'3 79'5 72'8 72'3 65'4 50'3 14'6

From this it appears that while the Great Western Company, on a line 241 miles long, have only carried 419,663, the Edinburgh and Glasgow Company, on a line 46 miles long, have carried 836,025; the Midland Company, 285 miles long, 2,366,892; and that while on the Great Western only 15 out of every 100 passengers conveyed are third-class, on the Eastern Counties 50 out of every 100, and on the Glasgow, Paisley and Greenock, 83 out of every 100 are third-class passengers. Although it is true that the different character of the population and other circumstances will affect to some extent the relative number of third-class passengers on different lines,

the disparity here is so great that we can come to no other conclusion than that the arrangements of such a line as the Great Western as to third-class passengers must be such as to preclude hundreds of thousands of third-class passengers yearly from using the railway who, with greater facilities, would be glad to use it. I say this with confidence, because as manager of the Glasgow and Greenock Railway, where the thirdclass system has been more developed than on any line in the country (and where we carried passengers at a profit for one farthing a mile), I had an oppor-tunity of observing the real advantage and comfort which very cheap travelling is to the working class. As the results of the working of that line afforded a remarkable instance of the effects of low fares, I have thought that it might not be uninteresting to record them. The River Clyde runs beside the Glasgow, Paisley and Greenock Railway, which is 23 miles long. The steamboats have long afforded 23 miles long. The steamboats have long afforded an excellent mode of transport between Glasgow and Greenock, the fares by boat before the railway opened being from 1s. to 2s., and the time occupied was about two hours. Glasgow, with a population of 274,000, was at one end of the line, Greenock, with a population of 36,000, at the other end of the line, and various summer watering-places lie at the mouth of the Clyde, below Greenock. On the line were Paisley (population 60,000) and Port Glasgow (population 7,000). Between Glasgow and Paisley was a canal on which there were passenger-boats drawn by horses at a speed of 6 miles per hour. These facilities gave rise to a great traffic before the railway was opened,—the yearly number travelling along the course of the railway being 1,185,340, and the average fare 1s. 4d. Notwithstanding this, after the railway was opened (in 1843) the numbers travelling by all means of conveyance were found to exceed 2,000,000, or to have increased 100 per cent., the average fare having in the mean time fallen to 10d. This was the gross reslut; but the fares of the railway (originally 2s. 6d. first-class and 1s. 6d. second-class for 23 miles) were varied from time to time; and as I closely observed the effects of these variations, having caused an account to be taken of the number travelling by steamboat and canal as well as by railway, it may be well to state the results of these variations of fares .-

First alteration.—In 1842, uncovered, open, thirdclass carriages, at a fare of 6d. for the 23 miles (or about \$\frac{1}{2}d\$, per mile), were introduced on the railway between Glasgow and Greenock, whereupon the annual number of railway passengers between those places increased 224,000, being an increase of 32 per cent. of the total number travelling (either by railway or steamboat). The number of first and second class fell off at the same time 30 per cent., the passengers having transferred themselves from the higher class carriages into the open third-class carriages, tempted by the difference of fares be-tween \( \frac{1}{4}d. \) per mile and \( \frac{1}{4}d. \) per mile. The gross receipts, however, increased simultaneously 15 per cent.; the working expenses on the other hand, did not appreciably increase, although the average number of passengers per train increased from 72 to 117. Second alteration. The third-class fares were subsequently (in 1843) raised from 6d. to 1s. with the hope of increasing the revenue. The whole number travelling by railway and steamboat immediately fell off 18 per cent. The first and second class railway passengers increased by 10 per cent., but the gross receipts fell off more than 10 per cent. The effect was also tried of making the third-class carriages more comfortable by covering them in. This was found not to increase the number travelling, but it did reduce the number of first and second-class passengers by 16 per cent., and therefore caused considerable loss to the company. The same experiment was repeated on the second-class carriages: they were made more comfortable by inserting glass windows instead of wooden shutters and by carrying the interior partition higher. The number of first-class passengers shortly fell off by 12 per cent., but beyond this the second-class passengers did not appreciably increase; this experiment, therefore, also resulted in loss. The results of these experiments were then-lst. That a reduction of fares to  $\frac{1}{2}d$ , per mile even from so low a rate as 1d. per mile increased the number travelling by nearly a quarter of a million or by two-thirds of the whole population of the district. As these people

were generally of the less affluent classes, it appears that they were actually drawn out of the noisome streets of Glasgow to the North of the Clyde by the temptation of a very low fare, and immediately that the fare was raised they were driven back again into the city. 2nd. That under the circumstances of the line in question, cheap and rapid travelling increased the number travelling; but improving the lower priced carriages did not, however, appear to act in the same way, but merely tempted passengers from the higher class carriages-those from the secondclass into the third-class carriages, and from the first to the second class: -- of course it by no means follows that similar results would ensue on lines in other localities; each case must be determined by its peculiar conditions. 3rd. That no limit can be assigned to the number of travellers which cheapening and quickening the means of conveyance will create. The introduction of the railway, even where steamboats already afforded a most pleasant, rapid, and cheap communication, increased, we see, the number travelling from 110,000 to 2,000,000— 2,000,000 being 5 times the whole population of the district. I doubt whether either at home or abroad so large a proportion of travellers to the whole population is to be found. The traffic between Glasgow and Paisley is probably the most remarkable instance on record of the increase of travelling caused by increased facilities. In 1814 there was only one coach a week between Glasgow and Paisley, conveying about 2,000 passengers per annum; if we multiply this by 5 to allow for the greater number of gigs and private vehicles then in use, we only get 10,000 passengers per annum conveyed between the two places. In 1842 the numbers travelling by public conveyance between Glasgow and Paisley were upwards of 900,000. Now as the population between 1814 and 1842 had only about doubled itself, while the traffic, as we see, had multiplied itself ninety-fold, it follows that the increased facilities of transport had increased the number travelling relatively to the population 45 times: that is to say, that for every journey which an inhabitant of Glasgow or Paisley took in 1814 he took 45 journeys in 1843. These results, I conceive, place it beyond a doubt that we should spare no effort to make railway travelling cheap and within the reach of all classes.

Now there is only one true way of encouraging cheap travelling, and that is by keeping down the original cost, and the annual expenses of railways. All the other contrivances which the public are inclined to trust, such as legislative restriction on profits, and so on, are mere quackery. Even competition is inapplicable to railways, and is not to be relied on. Mr. R. Stephenson, the engineer, put the whole case into one sentence when he said, to have combination is practicable, competition is impossible. The experience of all railway competition shows that this is true; when, therefore, under the plea of competition unnecessary outlay is being incurred, the public may rest assured that they will ultimately suffer for it in the charges they will have to pay.

Mr. Hill Williams, the actuary, has compiled some useful + tables, to show arithmetically "how far a remunerative charge for the conveyance of passengers and goods on railways is modified by the original and other circumstances.

The following is an extract showing the effect of increased cost of construction...

Total yearly traffic, number of passengers or tons

	f goods, E	10,000.		
	tion £15,000	Original cost of Construction £20,000 per mile.	cost of Construc- tion £25,000	Original cost of Construc- tion £30,000 per mile.
Fixed charge per mile on every passenger or ton of goods requisite in order to give com- mon interest, 5 p. cent., on the outlay.	đ 1.00	d 133	d. 1.66	d. 200

We see from this that the fixed charge on every ton of goods or passenger must average 2d. per mile to return common interest on a railway costing 30,000l., whereas if the railway cost 20,000l. 13d. per mile would be sufficient, and if it cost 15,000l. 1d. per mile would be sufficient.

#### Official Papers.

#### Engineers' Reports presented to Half-yearly MEETINGS.

LANCASHIRE AND YORKSHIRE-Sept. 6 (p. 649). Since my last report many of the works under my charge have been retarded from the state of the money-market; and the rate of proceeding on different portions of the works having (under your instructions from time to time) been modified in accordance with circumstances, will account for the relative degrees of advancement on the different lines.

Ashton Branch.—Some further progress has been made in ridening this branch for the additional line of way; about 25,000 cubic yards of earthwork have yet to be removed. The connexion between this branch and the Huddersfield and Manchester line at Ashton has not been proceeded with

and Manchester line at Ashton has not been proceeded with for want of the requisite powers.

Extension of the Heyncood Branch to Bury.—This extension, and the connecting line at Blue Pits, were opened for passenger traffic on the 1st of May last. A warehouse and sidings for goods are nearly completed. The extension of this line under the East Lancashire at Bury to its junction with the Liverpool and Bury, is rapidly proceeding, and notice is given to the Rallway Commissioners to open it at the end of next month.

notice is given to the Kanway Commissioners to open it as the end of next month.

Burnley Branch.—The works on this line are far advanced. One tunnel is completed; of the other two tunnels only six lengths remain to be executed. The arches of the Nott Wood viaduct are being turned, and about one-half of the permanent way is laid. Although the works are exe-cuted for two lines of way, only one line of way is being laid

down at present.

Ardwick Branch.—The Ardwick viaduct is completed. Ardusick Branch.—The Ardwick viaduct is completed, with the exception of fixing the girders at the junction with the Manchester and Birmingham at Chancery-lane. The tubular girders over the Medlock and the Ashton-road are fixed and completed; and with the exception of 25,000 cubic yards of earthwork and three-fourths of a mile of permanent way, the other works are finished. This line may be opened in October.

yards of earthwork and three-fourths of a mile of permanent way, the other works are finished. This line may be opened in October.

Wakefield, Pontefract and Goole.—The main line from Wakefield to Goole was opened for passengers on the 1st of April last, and the Askern Branch was opened for passengers on the 6th of June last. The arrangements for traffic in merchandise are nearly completed, and some of this traffic is already on the line. The works on the Methley branch are proceeding, and it may be opened about April next.

Liverpool and Bury.—The viaduct at Liverpool is complete, with the exception of five arches over the dock property. The Walton and Upholland tunnels are finished, and all the bridges between Liverpool and Wigan are built; the double way is laid and ballasted for that distance. From near Wigan to the junction with the Bolton and Preston the bridges are all built and a portion of the permanent way laid down, and only a few thousand yards of earthwork have yet to be removed. The large viaducts near Bolton are in a forward state, that at Bolton being finished with the exception of the planking. The masonry of the Darcy Lever viaduct is complete, and two-thirds of the ironwork is fixed. The stone viaduct at Bury is finished. The permanent way (double line) is laid through between Darcy Lever and the Bury viaduct. Several of the platforms and stations are built and the signals are now being put up; and should the weather be favourable, the line may be opened for passenger traffic in October next.

Hudderfield and Sheffield.—About 90,000 cubic yards of earthwork remain to be removed. The Penistone and Denby Dale viaducts are completed. Four arches of the Lockwood viaduct are turned and the remainder are in progress. The arbitration on the land for the Paddock viaduct has been concluded, and the commencement of the works is waiting possession of the land. About six miles of the permanent way remain to be laid.

works is waiting possession of the land. the permanent way remain to be laid. About six miles of

Holmfirth Branch .- About one-third of the excavations are executed. The foundations for the timber viaduct are put in, and a considerable portion of the timber is on the ground. Five of the road bridges are completed and two more remain to be built. The laying of the permanent way

has been commenced.

West Riding Union.—The Cleckheaton and Mirfield conhas been commenced.

West Riding Union.—The Cleckheaton and Mirfield contracts, forming together the line from Mirfield to Low Moor (7½ miles in length), were opened for passenger traffic on the 18th of last July. The arrangements for goods traffic will be made as speedily as possible. On the Bradford contract 80,000 yards of earthwork have been removed, two-thirds of the fencing is erected, and many of the culverts are built. At the Bowling tunnel, 1,628 yards long, the eight shafts referred to in my last report have been sunk to the formation level, and two additional shafts are proceeding; 1,300 yards of heading are finished, and 80 yards of the tunnel is completed. On the Halifax contract 359,230 cubic yards of earthwork have been removed. The following progress is made with the tunnels:—Beacon Hill tunnel (1,100 lineal yards long), all the shafts are sunk; 915 yards of the driftway are driven.—Hipperholme tunnel (length 387 yards), both shafts are sunk to the formation level; the shaft tengths, 22 ft. in length, are completed. At op heading is driven through the whole length of this tunnel.—Wike tunnel (length 1,360 yards), all the shafts are sunk to the formation level; 1,184 lineal yards of driftway are completed. Bix public road bridges, ten occupation bridges, and all the principal culverts, are completed; and the piers of the Hall Bottom viaduct are built to a height of 30 ft.

Manchester and Southport.—That portion of this railway (3 miles in length) near Wigan, which, with the Liverpool and Bury line, is required to form the continuous railway between Manchester and Liverpool, is nearly completed, and will be opened for passenger traffic at the same time as the Liverpool and Bury line.

J. HAWKEHAW.

Manchester, Aug. 28.

#### LEEDS AND THIRSK-Aug. 28 (p. 628).

LEEDS AND THIRSK—Aug. 28 (p. 628).

In former reports drawn up for the general meetings of this company, I described the several divisions into which the main line between Leeds and Thirsk had been contracted for. These were—the Leeds contract, which extends to 5½ miles; Bramhope, 6 miles; Pannal, 6½ miles; Nidd, 6½ miles; Ripon, 6½ miles; and Thirsk, 9½ miles. The principal works on the Leeds contract were stated to be—the viaducts over the river Aire, and the Leeds and Liverpool canal; and the Leeds and Bradford turnpike-road, west of Whitham's foundry; the cutting near Burley, and a short tunnel at St. Ann's-lane; and the excavation at Hawksworth Wood. The excavations measure 689,539 cubic yards, 550,000 of which have been executed. What remains to be done is chiefly in the Hawksworth Wood cutting: and the done is chiefly in the Hawksworth Wood cutting, and the whole of the Armley cutting, a considerable portion of which consists of sandstone rock. The tunnel at St. Anni-lane is completed, except the masonry at the south entrance. The bridges and culverts are all but completed. All the lane is completed, except the masonry at the south entrance. The bridges and culverts are all but completed. All the arches of the viaduct over the river and valley of the Aire, west of Whitham's foundry, are turned, and the other parts of this structure are considerably advanced. Nothing has yet been done to the works between Castleton Retreat and the Leeds station; but arrangements are being made which it is expected will insure their completion with the other portions of the Leeds contract. In former reports I mentioned, that the principal works on the Bramhope contract were—the tunnel through Bramhope ridge, the embankments and viaduct over the valley of the Wharfe, and the short tunnel at Wescoe Hill, with the excavations at the entrances of both tunnels. During the last six months the works on the Bramhope tunnel have been proceeding in a very satisfactory manner, although not so rapidly as I could have wished. On the 15th of this month the works were going on at twenty-four different faces, and there was then completed 2,605 il lineal yards, leaving only 10694 yards to execute; but of this distance the headings have been driven, and other works executed to the extent of 969 yards more, so that 100 yards only of new ground remain to be penetrated, which distance should be executed in the course of eight or ten days, when a clear ventilation of the tunnel throughout will be effected. The short tunnel at Wiscoe Hill is finished. The works of the Wharfe viaduct have all, during the last six months, been proceeding in a very existence were the contract of the extent of the value and the work of the wharfe value that all during the last six months, been proceeding in a very existence were monther. The leat each of it was leaded on the Hill is finished. The works of the Wharfe viaduct have all, during the last six months, been proceeding in a very satisfactory manner. The last arch of it was keyed on the 24th of July, and the workmen are now going on with the superstructure. The embankments are also in a very advanced state. That at the north end is now completed forward to the abutment of the viaduct, and that at the forward to the abutment of the viaduct, and that at the south end of it is so far advanced as that it may easily be finished by the end of September. With respect to the Pannal, Nidd and Ripon contracts, which embrace nearly 18 miles of line, I have much pleasure in being now able to state that they are all but finished, so much so, that the 5th proximo is the day proposed for the Government inspector going over the line, preparatory to its being shortly thereafter opened for passenger traffic. The Thirsk contract, which embraces about 10 miles of the line, and includes a branch to the York, Newcastle and Berwick, was completed and opened for traffic some months ago, and is now in excellent condition. On this portion of the line is now in excellent condition. On this portion of the line a considerable extent of accommodation has been provided for mineral and goods traffic; and the lodges and gates for the level road crossings are in a very complete state.

Hartlepool Extension.—In my last report I stated, with reference to the Yarm contract, that two occupation bridges and three culverts had been completed. Since that time the works have been carried on but slowly. The contractors for the viaduct over the river Tees at Yarm, are proceeding with the works; but the instructions of the are proceeding with the works; but the instructions of the directors to limit the expenditure have rendered it necessary to restrict the speed at which the works are to be carried on. No necessity at present exists for pressing on the southern portion of this extension, as the works are very light, and there will be ample time to complete the Northallerton contract by the time the Yarm contract is finished. From what is above stated, as to the completion of the Pannal, Nidd and Ripon contracts, it will be observed that the line from Pinon to the vale of the Wharfor of the Pannal, Nidd and Ripon contracts, it will be observed that the line from Ripon to the vale of the Wharfe, near Castley, will be open for traffic early next month. The time for opening the line into Leeds will depend very much on the sum provided for the contractors for the Bramhope and Leeds contracts, but were they allowed to carry on the works with the rapidity at which railway operations are generally conducted, that portion of the line might be in a very advanced state in the course of five or six months.

very advanced state in the course of five or six months.

The greater part of the rails, sleepers and chairs for the permanent way have been provided, and about 28 miles of double line laid down. A considerable quantity of working plant has been delivered since the date of last report. There are now four locomotive engines on the line, and other three are to be so early next month. There are also now delivered 14 first, 12 second, 2 composite, and 12 third class cartiages; and 251 coal waggons, and 181 trucks for the general traffic, a portion of which are now at work upon the line, and in leading coal from the Durham colleries. In conclusion, permit me to observe that though the operations upon the whole may not be quite so far advanced as was anticipated, a great deal of heavy works has been executed during the last half-year, and if more has not been done, it is chiefly owing to the limited expenditure, which the pecuniary affairs of the company for some time rendered necessary.

Edinburgh, Aug. 94.

^{*} Evidence Select Committee on Railway Act Enact-

ments, 1846.
† Appendix No. 7, Select Committee on Railway Act Ennts. 1846.

EAST ANGLIAN-Aug. 30 (p. 629)

The whole of the way and works upon your lines now open to the public are in a perfect state of repair. The additional works which have been completed during the last half-year works which have been completed during the last half-year are the junction with the Eastern Counties line at Wisbeach—the engine-shed at Lynn—goods sheds, cattle-pens and sidings at Downham, Narborough and Swaffham—sidings at St. Germans, Denver, Hilgay and Sporle—and additional accommodation at the harbour station at Lynn. Similar conveniences are required at all the other stations along the line, and would tend materially to increase the traffic on the railway. The opening of the portion of the Dereham line extending from Sporle to Dereham has been delayed rather longer than I had reason to expect, but the works are now so far completed as to admit of the line being opened to the public so soon as the sanction of the Railway are now so far completed as to admit of the line being opened to the public so soon as the sanction of the Railway Commissioners is received. The Government Inspector has arranged to examine the line on Tuesday next, the 29th inst. If the certificate be received during that week, the line may be opened for traffic in the week following. Some works of minor importance—such as dressing and soiling the slopes of cuttings and embankments, putting on the copings to the bridges, planting the quick borders, &c.—remain unfinished, but these can all be proceeded with after remain unfinished, but these can all be proceeded with after the line is opened.

J. S. Valentine. the line is opened. Engineer's Office, Lynn, Aug. 25.

#### SHREWSBURY AND CHESTER-Aug. 30 (p. 615).

SIREWSBURY AND CHESTER—Aug. 30 (p. 615). Since I last had the honour to report to you, the progress of the works has been so directed that they might be completed simultaneously with the Dee and Chirk viaducts. The earthwork is, I may say, completed throughout the line, and there only remain the dressing up and finishing the slopes of the heaviest cuttings. A line of permanent way is laid up to the Dee viaduct from the Ruabon end of the line, and to near Chirk for a continuous distance of 20 miles from Shrowellurs at the other and of the line. end of the line, and to near Chirk for a continuous distance of 20 miles from Shrewsbury at the other end of the line. An engine has been running over that portion of the line for the last six weeks. Of the whole distance from Shrewsbury to Chester, the only portions of permanent way not closed adjoin the Dee and Chirk viaducts, and in all do not amount to one mile. The stations at Presgwyn, Gohowen, Whittington, Sutton, Baschurch and Leaton are almost completed, and the Shrewsbury station will be so far ready as to accommodate the traffic of this railway at the opening. The construction of the branch to Oswestry has been de-layed from our not having obtained possession of the land; wet weather, has prevented the opening of the line early in autumn, as intended. The day by which it appears to me the railway will now be ready for opening is the 2nd of October; but if the weather continues as unfavourable as it has been, this period may be postponed for a few days later. On the portion of the line now opened the permanent way is in excellent order, and the stock of engines and carages is in a most efficient state. Chester, Aug. 28. II. ROBERTSON.

### SHREWSBURY AND BIRMINGHAM-Aug. 29 (p. 615).

We have much pleasure in being able to lay before you a satisfactory account of your works between Shrewsbury and Wolverhampton, with the exception of the tunnel at Onkengates and the Shiffnal embankments, which are not in so forward a state as we anticipated they would have been by

Shrewshury and Wellington Contract. - On these works Shrewshary and Wellington Contract.—On these works there has been great activity shown during the summer. Upwards of three-fourths of the brickwork and earthwork are completed, and by the end of the present month 5 miles of permanent road will be laid down. The station at Shrewshury is progressing rapidly; and the road stations at Upton, Walcot and Wellington have been decided upon, the land purchased and the works commenced; and the contractors fully expect to have this section of the line [10] miles in length; ready for public traffic early in the appairs were. length) ready for public traffic early in the ensuing year.

Shiffnat Contract.—In our report in February last we stated

Shiffnat Contract.—In our report in February last we stated that the tunnel at Oakengates and the Shiffnal embankments were the most backward, which unfortunately still continues to be the case; for owing to the very unseasonable weather during the last few months the contractor has not been able to recover the time lost. He is, however, using every exertion, by working both night and day, to expedite these works as much as possible; and at your recent meeting at Shiffanl he assured you it was in his power to have the line finished by May 1849. The other works on this contract are in a satisfactory state, particularly that portion between Wellington and Oakengates, which if requisite could be finished earlier.

Wolverhampton Contract.-The works between Shiffnal Wolcerhampton Contract.—The works between Shiffinal and Wolverhampton are proceeding in a very satisfactory manner, and with sufficient activity to insure their being finished by the same period as the works on the adjoining contracts, viz., May 1849. About two-thirds of the earthwork and brickwork are completed, and a portion of the permanent road already laid. The land for the Shiffinal and Wolverhampton and the other smaller stations is purchased, and the buildings will be contracted for in a few weeks. We may here take the opportunity of grains that in convermay here take the opportunity of stating, that in conse-quence of the unavoidable delay in giving the contractors possession of the land, the time for the completion of the possession of the land, the time for the completion of the Wolverhampton and Shiffnal contracts has been prolonged from December 1843 to May 1349.

R. STRIHKSSON. R. STEPHEN W. BAKER. Birmingham, Aug. 21.

#### BRISTOL AND EXETER-Aug. 31 (p. 630).

Since the last half-yearly report the Tiverton branch has been completed, and the line opened for traffic on Whit-Monday. The works on the first contract of the Yeavil branch have been continued at a reduced rate during the

half-year. Several of the locomotive engines are close upon completion, and there is no doubt of your being able to obtain the amount of carriage plant which you have ordered by the time you will require it. I have been engaged in the preparation of the necessary arrangements for engine and carriage shops: no work has been commenced on the ground, but you will have no difficulty in completing all buildings which may be required for the light repairs of new stock.

C. H. Ggracost. C. H. GREGORY.

Delahay-street, Westminster, Aug. 26.

#### SOUTH DEVON-Aug. 30 (p. 630).

My report on the present occasion will be limited to a very short reference to the works only of the line, as the subject of the atmospheric apparatus has been under the consideration of a special committee of your directors, with whom I have been in constant communication. Since the last half-yearly report the line has been opened to Lairalast nail-yearly report the line has been opened to lairiagreen, and the works generally upon the whole extent are in a very satisfactory condition. The Torquay branch, on which the works had been postponed, is now so far completed that the laying of the permanent way is commenced, and, with the small station at Torquay, it may very shortly have the conditions of the permanent way in the small station at Torquay. be ready for use. The extension into the permanent station at Plymouth is now also in progress, the difficulties attending the obtaining the possession of the land having been removed, and I trust that before six months are over this very important extension may be completed. Aug. 29.

SCOTTISH MIDLAND JUNCTION-Aug. 28 (p. 628). At the date of the last report about 140,000 cubic yards of earth remained to excavate, several road bridges to build and nearly half the permanent road to lay. Considerable exertion was required to complete this work so as to open the line for the autumn traffic. The requisite effort, however, was made by the contractors, and the line opened throughout to the public on the 2nd of August. On a recent inspection we found the works generally in good condition. inspection we found the works generally in good condition. The permanent way, especially, was in a very satisfactory state for a new line. The ballast is of excellent quality, and the drainage has been carefully attended to. The Midand trains are accommodated in the general station at Perth, and the requisite sheds at Forfar have been already provided. The road-side stations for goods and minerals are not yet complete, but every exertion is making to open them for traffic. The working contract for locomotive power and carriages by the Central, has been carried out in a highly satisfactory manner. satisfactory manner.

#### WATERFORD AND LIMERICK-Aug. 31 (p. 644).

The report which I have the honour to submit to you The report which I have the honour to submit to you chiefly relates to the trimming up and completion of the line between Limerick and Tipperary, and the maintenance of the permanent way lately given into my charge. The fences generally speaking are in very good repair, but it will be necessary to have those parts which require looking after made up during the ensuing month, particularly at the station ground at Limerick and Cross. The courtact lately entered into for widening and finishing Cross embantment is pregressing settificatily, and I expect will be bankment is progressing satisfactorily, and I expect will be completed next month—3,500 cubic yards have been added to it on the south side, and but 3,000 remain to be done. to it on the south side, and but 3,000 remain to be done. The portion required to widen Oola embankment, preparatory to the second track being laid, will be commenced in a few days, and completed in about three weeks. The balasting and laying of the second tract, from Cross to the junction with the Great Southern and Western, has been commenced, and the double line of rails between those points will probably be laid by the 1st of November next. The accommodation bridge to be built at Bohererow has been commenced, and those which remain to be erected I will be prepared to put in hand as soon as I receive instructions to do so. The approaches to Kishyquirk Bridge, which were left unfinished by the contractor, have been taken off his hands, and tenders are now being received for re-letting the portion of work remaining to be completed, which will be commenced and finished with as little delay as possible. The coping of the bridges at Cross, Miltown, Cluggin, Ballyfoncen and Oola shall be put in hand and completed before the winter sets in. The several bridge approaches along the line which are to be kept in repair by the company will shortly be let by contract; and from the tenders received, I find this will be a cheaper mode of having them kept in proper order than any other which can at present be adopted, and the contractors are not to receive payment until they pass the contractors are not to receive payment unit they passes the inspection of the county surveyor. The road diversions at Dromkeen and Castle Lloyd shall shortly be put in such a state of repair as to enable the company to have them taken off their hands. The road which has now been opened for traffic for some time has not given way in any part, and continues to be perfectly safe—six up and six down trains pass over it daily, and sufficient proof has now been had of the solidity of the works, and with a little more trimming up, ballasting and draining the permanent way may be heaply maintained. Waterford, Aug. 26. A. STEWART.

#### Progress of Works.

CALEDONIAN AND DUMBARTONSHIRE JUNCTION .-The heaviest part on the works extending from Bowling Bay to Balloch, which is the centre of the operations, somewhat curtailed for the present by the state of the money-market, is the viaduct across the river Leven, at Dumbarton, which is now all but finished. This consists of a beautiful bridge of five arches composed of stone and timber, but so constructed that some thirty years hence, when the wooden part may be expected to show symptoms of decay, it can may be expected to show symptoms of decay, it can be replaced by new material of a like description, or, should it be deemed advisable, stone or iron arches st. Omer and other points the National Guards were

may be substituted, without any interruption what ever to the traffic. From this bridge, says the North British Railway Gazette, the line passes through a beautiful country, almost, it may be said, on the surface of the ground, thus giving the passenger an opportunity of commanding a view of the Vale of the Leven and of the Benlomond hills, till it reaches Rendon, where the works, for a distance of a mile, are rather more severe but not of any serious nature. Leaving Renton, it again emerges into an open country, and so on to Alexandria, after passing which village, the works become altogether easy and unimportant till it reaches Lochlomond, where the railway terminates with a pier. The portion betwixt Dum-barton and Bowling Bay has not yet been commenced; but as this distance is almost entirely surface work which will be constructed without the necessity of much cutting or embankment as far as Dunglass, it is not necessary that any movement should be made with regard to it till the crops are off the ground.

EDINBURGH AND NORTHERN.-Aug. 31.-Another portion, says the Scottish Railway Gazette, was opened for general traffic. It includes the valuable and important branch from Thornton to Dunfermline, so far as Crossgates, on which the passenger traffic will be very considerable, while the trade in minerals from

the district will be extremely large.

NORTHERN OF FRANCE.—Sept. 2.—Amidst the pomp and ceremony with which our French neighbours are so apt to herald such occasions, the inauguration of the remaining principal branch, namely, from Lille to Calais, took place. According to the announcement in the *Times*, a special train left Paris at 6 p.m. on Friday and reached Lille at 12 30 a.m. The train the terminus at St. Pierre lez Calais, 13 mile from this city, at 12 30 p.m., nearly two hours later than the time anticipated. The delay seemed unavoidable, partly from caution on the newly-formed road, on which for a considerable distance there is yet only a single line laid down, and partly from the necessity for renewing the supply of water at a point where the machinery for that purpose was not complete. Moreover, at Bailleul, at Hazebruck, and at St. Omer respectively, the progress of the train was also suspended for the usual compliments between the authorities of those places and the administration of the railroad, represented by Baron J. De Rothschild. At the terminus near Calais were to be seen a large body of troops and of National Guards with the authorities of the city of Calais, deputations from many of the neighbouring towns and districts, and even from Dover, and, above all, on an elevated estrade, covered with scarlet cloth, the clergy in considerable numbers, having at their head the venerable and respected Cardinal Latour D'Auvergne, Archbishop of Arras. The population of Calais and of the country for many leagues round were present. After some military salutes the Cardinal Archbishop commenced by blessing the opening of the line. His eminence, a man of 80 years of age, then read in a sonorous voice an address, in which he alluded to the progress of science, and its immediate benefit for Calais, as developed especially in the railroad then before them. Salutes and cheers followed. Cardinal then entered his carriage, and, leading the way, returned to Calais. Then commenced, says the writer of the account in the *Times*, the march on foot in a broiling sun of the immense majority of those present, the dozen omnibuses in attendance having been kindly forestalled—they call it here "reserved"—for the administration and the special friends and favourities of the magistracy of Calais. On arriving in the city we found the principal and many collateral streets festooned with flowers and evergreens. The church bells were ringing merrily, and muskets were momentarily discharged. There was no cheering, but everybody looked gay and happy, and with good reason, for this event is perhaps the only one that could rescue Calais from the misery and desertion under which it has suffered for a quarter of a century. At 3 p.m. the whole of the Grand Place was laid out with tables, on which dinner was served for the National Guards, a portion of the troops of all arms, and of the hourgeoiste of Calais. The repast was frugal except in respect of wine. They wound up the evening in the cafes and at a grand ball, in which the absence of female partners was the theme of their regrets. About 4 p.m. the dinner of ceremony took place at the "Establishment," where the Mayor of Calais presided, being supported by various minis-terial authorities and the directors of the line and their friends.—On the 3rd, the portion between Hazebruck and Dunkirk was also opened, amidst greater rejoicings and manifestations of public feeling than at Calais. A special train left Calais at 8 a.m.

Digitized by GOGIC

drawn up on the platform, and military bands played the 'Marseillaise' or the 'Girondins.' Tricolor flags ornamented the different buildings of the company along the line. The line itself is remarkably smooth along the line. The line itself is remarkably smooth and straight. The whole length is over a dead level, or very nearly so, and the earthworks are therefore unusually light. The stations, though sufficiently substantial, are economically constructed. Those at Calais and Dunkirk are still incomplete, and the rails terminated at the foot of immense decorated platforms surmounted by canopies covered with red cloth. The progress of the train along the new line was exceedingly slow, and about the arrangements generally there appeared to be a want of system. sengers were allowed to scramble about the line and do nearly as they liked. At every station the want of attendants, punctuality and order was obvious. Not one locomotive on the line looked as if it was well and tidily kept. No burnished brass, no shining machinery, nor any trace of that conspicuous clean-liness which marks the English steam-engine. The carriages, however, are very commodious, and the manner in which they are fitted up met with general approbation. The train arrived at the terminus at Dunkirk shortly after 1 p.m., and there the Cardinal Archbishop of Cambray, surrounded by his clergy, blessed the undertaking. Having solemnly pro-nounced his benediction upon it, the venerable Archbishop read an address appropriate to the occasion.

A large concourse of all classes had assembled to witness this interesting ceremony, and the effect produced was singularly striking. The National Guards and troops of the line mustered more than 2,000 strong. The party which had arrived by the train was a very large one, and among the number were several members of the Administration and deputies of the National Assembly whose names recent events have made famous. Mixed up with the masses of people were to be seen pompiers of the National Guard, with stupendous belinets-officers of the line, conspicuous by their red trousers or facings, youths dressed in the uniform of the Polytechnic School, a few whose dress denoted that they belonged to the marine department of the service. the railings which fence in the property of the company the humbler classes of the district were collected, all bent on enjoying the fete which was about to commence. The Cardinal Archbishop, in his pon-tifical robes of scarlet, and surrounded by his clergy upon the elevated estrade, beneath a hand somely decorated canopy. The ceremony of the bene-diction having been brought to a close amidst the discharge of cannon, the vast concourse of people, troops of the line, National Guard, ministers, deputies, officials, visitors, marched along the streets of Dunkirk in procession. A band of musicians led the way. Then came the dignitaries of the church, with crosiers and other insignia of their sacred office. Next followed the Mayor and corporation of Dunkirk, the Ministers and deputies present on the occasion, the directors of the company and a small party sion, the directors of the company and a small party of directors of the South-Eastern, who were invited guests. Bodies of National Guards and troops of the line closed in the rear of the procession. Each division of the force was led on by a drum-major, whose own leviathan proportions were exaggerated by a tremendous bearskin-cap and a huge silver-headed cane. Altogether this procession was one of the most striking parts of the day's proceedings, for the streets of the old town are very spacious. lation is said to live in comfort, if not in atfluence and there being not only great facilities for display, but also the means of indulging in it, the most strenuous efforts were made to give the Great Northern a grand reception. The windows of the houses all along the route of the procession were thrown open and filled with ladies. In one street long lines of tricolored flags were disposed in regular order along the walls, hanging there with as much precision as those in any well-decorated Gothic hall. In other streets huge banners were stretched overhead, some reaching straight across, some crossing each other like the letter X; some arranged in ele gant curves of a catenary with pendent ornaments of gain curves of a factoriary with pendent ornaments of stained glass from their centres, and green boughs gracefully disposed at intervals between. At each turn in the route of the procession some new device riveted the attention, and when at last the immense mass of people entered the Place Jean Bart they found that fine square fitted up with an elegance of taste which marked that there the ingenuity of the inhabitants had been most lavishly expended. A drapery of blue and white extended from window to window all round the Place, hanging in graceful and well-contrasted festoons, with little tricolor ban-nerets between. At one side of the Place a huge stand had been erected for the musicians who were in the evening to perform in an alfresco concert. at once novel and extensive. In a very few minutes executed entirely by private companies; and however This was profusely decorated with flags, and added the train arrived in safety at the Manors station of bad the legislation might be, there was an elasticity

to the general effect. Soon after 5 p.m. all who had received invitations assembled in the Ecole to partake of a banquet, provided for the occasion by the Mayor and corporation. The dinner was served in admirable style, and at its close several toasts were proposed, among them "the National Assembly of France," which was enthusiastically received. M. Marie responded to the toast. In the evening an open air con-cert was given in the Place Jean Bart, every part of which was of course crowded. The houses in the Place were all illuminated with coloured lamps arranged in the windows with perfect taste. To stimulate the excitement attending the fete, blue lights were occasionally burned in the centre of the Place and cannon The cates, too, were open and thronged with people, and no means appeared to have been neglected by which the public could be enabled to show their gratification at having railway communication secured to the town of Dunkirk. The fete was continued the next day, and various popular amusements were provided for the insatiable people. The inhabitants of Dunkirk are reported to have spent 4,000l. in giving the directors of the Great Northern and their friends this splendid reception.

SOUTH-WESTERN .- Sept. 1 .- The branch to Cosham, five miles from Farcham, was opened—the first train from London reaching that village at 10 20 a.m., drawn by the engine "Aurora," driven by Mr. Naylor, the engineer, who is generally appointed to convey her Majesty the Queen down the line. This branch is an exceedingly pleasant one, and through a beauti-

ful country.
Wilts, Somerset and Weymouth.—Sept. 2.-The directors, accompanied by their friends, made an experimental trip from Thingley to Westbury, preparatory to the opening for general traffic on the oth. A special train left Bath at 12 noon, driven by Mr. Gooch, superintendent of the locomotive department, assisted by Mr. Brunel. At Mclksham the train was received with loud cheering from the assembled populace, flags waving and bands of music playing. At Trowbridge also there was a great assemblage of people, and salutes of cannon were fired from the iron-foundry of Messrs. Kaven, Woodfin & Co. At Westbury, the Mayor presented the directors with a congratulatory address, to which a suitable reply was returned by the chairman of the Board, Mr. W. Long, M.P. After partaking of some refreshments the directors and their friends returned to Melksham, where a very elegant dejeuner à la fourchette was served up in the Town Hall, Mr. J. L. Phillips presiding, supported by the Earl of Shel-burne and about 100 other gentlemen.

York, Newcastle and Berwick.—Aug. 26.— Some interest was excited by the appearance, for the first time, of a carriage (third class) on the temporary wooden bridge across the Tweed. The carriage, filled with people, was pushed to and fro several times along with people, was pushed to and ito several times along the bridge—even the dizzy height from the river not preventing many from hanging round it. The temporary bridge, says the Brevick Warder, is ready only across the river; the communication with the embankment behind Tweedmouth is not yet. formed. It is anticipated, however, that this will be made by the 1st of October, when the trains will pass without interruption, and the delay and expense of omnibuses for passengers, and carts for goods, coke, &c. will then be avoided.—Aug. 29.—The opening of the high-level bridge between Newcastle and Gateshead was celebrated by the chief railway authorities of the district. Mr. Hudson, M.P. and his friends arrived at Gateshead about 2 p.m. They were met at the station by the Right Worshipful the Mayor of Newcastle (Mr. S. Lowrey), the Mayor of Gateshead (Mr. J. Potts), and a great number of the aldermen and councillors of those respective corporations, besides many others of the gentry of Newcastle, Gateshead. North and South Shields, Sunderland and other places in the district. A train, consisting of nine carriages and a luggage-van, and preceded by a powerful engine, was speedily filled by the party assembled at the station. One of the compartments of a first-class carriage was occupied by a party of of a first-class carriage was occupied by a party of ladies. Another carriage was occupied by the band of Messrs. Hawks & Crawshay. At 2 30 p.m. the train started, and upon entering the bridge, was greeted with a loud discharge of artillery from the Castle and various other places. The bells of St. Nicholas then commenced a merry peal, and the most deafening cheers were given by the congregated thousands on every side, as the train, smoothly and unjustly at a moderately guids note and without the quietly, at a moderately quick pace, and without the slightest interruption or accident, glided from Durham to Northumberland. The train, in traversing every portion of the immense viaduct on the north both westward and eastward, afforded the passengers a view of the ancient town of Newcastle,

the North Shields, where Mr. Hudson and his friends alighted, and proceeded to the Queen's Head, where an entertainment had been provided for them by the Mayor of Newcastle. Upwards of seventy gentlemen sat down to luncheon, the Mayor presiding. After the usual loyal toasts, the health of Mr. Hudson was proposed, in connexion with success to the York, Newcastle and Berwick.—After thanking the company, Mr. Hudson assured them it was the anxious wish and study of the directors to make the undertaking in which they were associated beneficial to the public and advantageous to the shareholders. Although the occasion was one which gave him great pleasure, he could not forget that his late friend, and who was once the near neighbour of those he addressed, was no more. He could not but regret that they were deprived of the smiles and the congratulations by which the event would have been hailed by that distinguished individual, whose wisdom had carried him to the highest point of reputation for engineering excellence;—he alluded to his late friend Mr. G. Stephenson, who was the originator of this undertaking. But, although they might repine and feel distress at that melancholy event, yet he Was sure the projector of this undertaking would live, not only in the recollection of parties who knew him personally, but of generations yet to come; he would be regarded as one of the greatest benefactors of his species. It was a remarkable fact that in passing upwards of 200 properties, and having upwards of 200 parties to deal with, he had been able, with only three or four exceptions, to deal with them on terms which he hoped were as satisfactory to them as they were to the company, and they had not been required to call for the intervention of a jury, nor have recourse to a reference. This fact spoke as much for the honour and integrity of the inhabitants of Newcastle and the district as any event that could be recorded; and it was also honourable to the company. He claimed no merit for himself beyond that of having pursued a straightforward and honest course in conducting these undertakings, and in dealing with the immense capital intrusted to his care. It was to his friend, Mr. Stephenson, and his colleague, Mr. Harrison, that he was chiefly indebted for the efficiency with which his undertakings had been executed. He could assure the Mayor that he had received with the most cordial feelings of satisfaction the entertainment which his worship had so kindly provided; and he would also assure the inhabitants of Newcastle he should do all in his power to promote their accommodation, and give them all the advantage which this undertaking was capable of affording .- Mr. Harrison said, it had been to him a source of the highest gratification that, with the assistance of Mr. Stephenson, with whom he was proud to be associated, he had been able to bring this work to its present state. Mr. Allport, the manager of the York and Newcastle, believed that the great work which was now so far completed would be of immense advantage in that district .- Mr. Hudson gave "The health of the Mayor and Corporation of Newcastle."-The Mayor, in the name of the corporation, begged to thank Mr. Hudson for the high honour he had conferred upon them in meeting them that day.—Mr. Plewsproposed "The health of the contractors, Messrs. Rush & Lawton and Messrs. Hawks & Crawshay." Every gentleman who viewed the manner in which the bridge was executed would give the highest credit to those gentlemen who had undertaken the designs of their able engineer.-Mr. Crawshay returned thanks. He said, whilst they had been ably supported by their men they had also been financially well supported. In times like those through which they had lately passed, it was no slight praise to Mr. Hudson that in no one instance had a work with which he was connected been suspended for want of funds.—
The Mayor proposed "The health of Mr. R. Stephenson."-Mr. Hudson, in the absence of Mr. Stephenson, acknowledged the toast. Those who knew Mr. Stephenson well could testify that no individual ever deserved better the compliment which had just been paid to him, for a more high-minded and honourable man and one more deserving of respect did not exist anywhere. His friends around him knew that on behalf of the companies over which he presided, in the months of October and September, about 400,000, had to be repaid to the Bank of England, which had been borrowed of that establishment. He had been able to fulfil that engagement, besides carrying on the works. He believed there was an elasticity in the English character that could surmount all difficulties. Works had been executed which would have appalled any but Englishmen, and which could not have been executed by any other private companies in the world. Nothing surprised foreigners more than to see works of such magnitude

in the country which could baffle it all. So long as in the country which could baffle it all. So long as the same indomitable and enterprising spirit existed amongst our commercial men, we could not fail to have prosperity. He concluded by proposing the health of the artisans and labourers who had been employed in constructing the high level bridge.—After various other complimentary toasts, the company separated. The numerous workmen employed on the works at the high level bridge, to the number of 1,100, were liberally entertained by the contractors, Messrs. Rush & Lawton. The cost of the entertainment was 200L of which sum Mr. Hudson had subscribed 50L. scribed 501.

#### Accidents.

CHESTER AND HOLYHEAD .- Aug. 30 .- At the CONWAY station the porters were pushing a first-class carriage across the down line when the express train from Chester was observed to be coming at full speed; the men, to avoid the danger, left the carriage, and, as it afterwards appeared, before it was quite clear of the line.
Mr. R. Stephenson, in company with a friend, Mr.
Lee, had previously seated himself in the vehicle. In
a few seconds the Chester express train came up at great speed; the engine caught the projecting corner of the carriage, throwing the whole about a yard from the rails, and smashing the wheels, glass doors, and a portion of the frame-work. Immediately after the concussion Mr. Stephenson was seen descending the steps, and was observed to fall on his back. It was found that he was much stunned, and rendered almost unconscious by the shock and fall, but in a short time was able to walk. Next morning he left for Chester. Mr. Lee was not injured. Seeing the train approach, he pressed his back and feet to the

sides of the carriage and escaped.

LANCASTER AND CARLISLE.—Aug. 31.—The passengers of the express train from Carlisle, at 1 27 p.m., gers of the express train from Carlisle, at 1.27 p.m., arriving at Garstang about 4 p.m., were alarmed at finding the red signals up, and all the passengers of the penny-a-mile train, which had preceded them, out of their carriages, and standing on the line. The rails in the Barnacre cutting were nearly 2 ft. deep in water, for the space of about a mile, by which no than five trains were prevented from pursuing their respective journeys; and it was several hours before this extraordinary flood subsided sufficiently to let them pass, in doing which the greatest caution had to be used. The water is supposed to have come from the Bleasdale Fell, over which a violent thunder storm, accompanied by torrents of rain, had burst but a short time previously to the line being immersed

in the water. LONDON AND NORTH-WESTERN .- Sept. 2 .- The Birmingham portion of the 5 p.m. express from Liverpool, consisting of three carriages and a luggage van, when about 300 yards south of the Newton-road station, mounted the rails, crossed both rails of the down line, and, dragging with it the tender and luggage van, ran into the down spoil bank, where it buried itself up to the bottom of the boiler. The tender was thrown upside down close by the side of the engine, and the brake van had one end foul of the down line. From the point where the engine left the line the chairs and rails were more or less displaced, the ballast was thrown up, and some of the stone sleepers broken and thrust over upon the down line. The rails of the down line were displaced for about 50 ft. by the train engine crossing over to that side. Some of the rails were beat in the sample.

B. The carriages were not dragged on to the down line, but went off on the left of the up line, and were thrown upon their sides into a ditch. From the fact of the coupling between the leading carriage and the guard's van having given way, and the off safety chain being also broken, the pull by the safety-chain thraw them, fortunately, into the ditch. Before a signal could be got out, a pilot, or special engine, bearing Mr. Trevithick, the locomotive superintendent of the northern division of the line, running high velocity and ran into the guard's van. obstruction threw the pilot or special engine off the line, and the engine ran for about 120 yards across the up line. It was stopped by being thrown upside down into the ditch on the left of the up line. The passengers injured were Mrs. Pemberton, of Birmingham, who was cut about the head, Mr. Shuard, of Somerlayton, whose left leg was broken, and Col. Baird, who, after an attack of paralysis, has died. Mr. Shuard was sitting in an end compartment of one of the carriages; this being stove in, he fell out, and, the carriage going over upon its side, he was held down by it. Some 10 or 12 minutes clapsed before Mr. Trevithick and Mr. Matthews, the driver of the

were thrown off the engine, but not severely hurt Sept. 5.—Near Leighton the engine of a Rugby goods train ran into a train of ballast trucks which was on the line. The hindermost truck was smashed, the carriages being at the time forced completely across the line, and several of them broken to pieces. Many passengers were injured, some of them being wedged in the carriages, and others lying underneath them. The driver of the mail train was thrown to a consi-derable distance from the line, and seriously shaken. Shortly after 3 a.m. the Manchester and Liverpool train came up, and, from some cause or other, it not stopped, and consequently the engine ran into the train lying across the line. The effect of this second collision was to throw the engine and tender of the mail train across the down line, and to crush several of the succeeding carriages. The driver and stoker had a narrow escape. The former was severely injured, and is now lying at Leighton; but the stoker appears to have been thrown by the force of the concussion completely over the ruins of the broken carriages and waggons—described by an eye-witness to have been between 20ft. and 30ft. high—on to the embankment on the down line, where he alighted comparatively unhurt. The first carriage behind the tender in the York train was a Midland Company's brake or parcel van, which was crushed to pieces, and Tucker, the under-guard, remained buried in the ruins for more than two hours, in spite of every effort made to extricate him. His strength was kept up by the administration of stimulants until his extrication was at length accomplished. The first compartment of the second-class carriage which followed the parcels van was entirely destroyed, but a man and woman with two children in it, were preserved. The passengers in the train all suffered more or less with a few cuts and bruises. The driver subsequently proceeded with the ballast engine, the only one uninjured, to Wolverton, to procure assistance, and before 5 a.m. Mr. M'Connell, the chief of the locomotive department, Mr. Bedford, the chief of the police of the Wolverton division, and several other officers returned to the spot with engines, carriages and labourers, to assist in clearing the line. Assistance had previously arrived from Leighton, and all those persons most shaken had received attention at the station. necessary precautions were taken to stop both the up and down trains, and the traffic on the line was altogether suspended for several hours. So complete was the wreck that the active exertions of the multitude of labourers employed had failed to clear the line when the 6 15 a.m. train from London arrived at the spot, and as the only means of keeping up the communication, the passengers on that train were conducted over the scene of the accident to the York mail; those who travelled by the latter coming on to town by the 615 a.m., which returned to the Euston station. The guard of the ballast train thus explains the first collision:—We left Weedon station, where we had been to unload some rails, about 1 a.m., and arrived at Leighton about 2 40 a.m. At this station we crossed over, in order to load a trip of ballast for Berkhampstead relaying. On arriving at the Linslade ballast pit, our driver found it necessary to uncouple his engine and fetch out some waggons which stood in our road. When we passed the police-man on duty at the north end of the tunnel I saw him proceed back with the danger signal, with a view of protecting our train. Not feeling that confidence in another, however, that I do in myself, and thinking that more time was being occupied than on other similar occasions, I went back and found the policeman with the red signal on, at a distance of about 300 yards in the rear of our train. On reaching him, he imme-diately observed that he heard a goods train ap-proaching in the distance. He then directed me to go back to within sight of my own train, and give him the "all-right" signal when the line was clear, while he proceeded forward to meet and stop the coming train. I did so; but before the line was clear the 12 30 a.m. down goods train came at a great speed through the tunnel, ran into our train, smashed the brake, and one waggon, threw their own engine off the rails, and obstructed the up line; while at the same moment the up York mail came up, and ran into the goods train with a tremendous crash. I immediately ran to Leighton, stopped the approaching coal train, got her waggons shunted, and sent her back to Tring in order to give telegraphic information to Wolverton and London. The driver of the lug-gage train then passed the station at full speed, and had entered the tunnel before he observed the danger signal of the second policeman, whose post of duty is at its northern extremity. He immediately reversed his engine; but the train consisting of 40 loaded waggons, its speed was not perceptibly diminished before he egressed from the tunnel, when he imme-

of being able to avoid the collision, when, most unfortunately, the engine, already reversed, flew into forward gear, and carried the train directly into the The mail train into London was detained upwards of five hours, the letters arriving at the Postoffice about 11 a.m. instead of 5 a.m.

#### Parliamentary Proceedings.

LORDS.

Sept. 4.—North Wales.—Lord MONTEAGLE rose to complain of the conduct of the chairman and secretary. Their lordships had issued an order to the effect that Mr. W. Chadwick, the chairman of the company, and Mr. J. Marriner, the secretary, should attend and produce contains. attend and produce certain accounts in connexion with the company's affairs. These parties had neglected to comply with the order of the House, and inasmuch as he understood they were not now in inasmuch as he understood they were not now in attendance, he thought that unless their lordships took some steps with regard to the matter their authority would suffer.—Lord CAMPBELL thought that in accordance with the rules of the house, summonses for attendance should be personally served.—Lord MONTEAGLE begged to ask whether the next is summoned in the case had been dely the parties summoned in the case had been duly served and were in attendance—The Messenger of the House was called, and having stated that the summonses were left at the residences of the parties,

Summonses were left at the residences of the parties, said that they were not in attendance.

Sept. 5.—Lord MONTEAGLE moved that the messengers who had been directed to summon Messrs.

W. Chadwick and J. Marriner to attend their lordships should be called to the bar.—The messengers having been called to the bar, stated, in answer to questions from the LORD CHANCELLOR, Lord CAMPBELL, the Earl of MINTO and LORD MONTEAGLE, that they had called the previous night at the respective they had called the previous night at the respective residences of Mr. W. Chadwick and of Mr. J. Mar-riner, and had been told that both gentlemen were out of town, and consequently they had been unable to make personal service of the summonses.—Lord Monteagle believed that as no personal service had been effected, it would not be legal to order that these persons be taken into custody. He would therefore move that William Chadwick and William Marriner be ordered to attend the bar of their lordship's house on the first Monday after the commencement of the next session; and he intended to follow that up by moving for the production of all documents and accounts relating to the affairs of the company.—
Lord CAMPBELL supported the motion. He believed these persons were purposely absenting themselves. The method proposed to be adopted by his noble friend to enforce their attendance was slow but sure. He would support the motion.—The motion was then agreed to.

#### Reports of Meetings.

SCOTTISH CENTRAL.

Aug. 30.—Half-yearly Meeting, Perth.—Lord Dun-CAN, M.P., in the chair.

The CHAIRMAN was happy to say that since he last had the opportunity of addressing them, the Central had been completely opened from Perth to Greenhill Junction. Commercial and other circumstances had prevented the developement of the traffic to that extent to which he could have wished. There was no question that they had very great advantages. It was no question that the town of Perth, from its po-sition in the centre of Scotland and in the heart of a very fine agricultural district, was an excellent terminus. With respect to Greenhill it was somewhat peculiarly situated. The only line which was in connexion with them at the opening was the Edinburgh and Glasgow. He would not revert to the subject at any great length, but from circumstances of hostile opposition in which the Edinburgh and Glasgow were placed towards them at the time of opening, a reat many impediments were thrown in the way of opening, other lines had been opened in connexion with the South; they could not therefore at present form a criterion of the amount of their traffic. respect to the northern side of the Tay, the Scottish Midland had been opened, and consequently they might there expect a large acquisition of traffic; and when the junction to Dundee was made across the Tay, he expected they would receive a large increase in passengers and goods. In respect to the goods traffic, he stated his own candid opinion when he said that the board of directors had every reason to be satisfied with the management of that traffic. With respect to the passenger traffic they had been anxious to make every arrangement, in order that all the 'Colonel,' were able, by the use of a screw-jack, to diately saw the red lamp at the rear of the empty railways meeting theirs might be amply accommorelease him. Mr. Trevithick and the driver and stoker ballast waggons. At this moment he had great hope dated. They had also endeavoured to secure as large

Digitized by **GOO** 

a portion of the goods and coal traffic as their ar-rangements would admit of. But he was not ashamed to say, that on opening a railway it was necessary to perform the promises made to the public. It would have been unwise in them to have invited as much goods to their line as it was possible to get, before they could provide reasonable facilities. Had they done so they may have injured their prospects.

Parties who would be large carriers along their line had paved the way for a large traffic of goods on the Central. Their servants had attentively performed their duty in a manner satisfactory to the directors and the public. Above all things, they had the safety of the public in view; and in running express trains and all operations on their line they had effected it without having any accident of any kind whatever. This was satisfactory when they considered that it was the first line opened in this district. Much credit was due to the engineers in chief, Messrs. Locke and Errington, and to Mr. Tasker, the resident engineer, and every one connected with the line, that no injury had been sustained by any one individual. He might state that the general traffic, up to the present moment, had been greatly increasing. They had had at the same time, adverse circumstances to contend with; and they must recollect also that the present season was one in which a great number of strangers were travelling in Scotland. It would be exceedingly difficult for any one to arrive at ultimate conclusions as to their prospects. When the directors met last April, they were instructed by the meeting, which was attended most numerously, and at which a large number of proxies also appeared—they were instructed (he said) by an overwhelming majority to endeavour as far as they could, to agree to the arrangements with the London, Caledonian and Southern Companies. The directors accordingly named a deputation in London, and when the bill was solicited gave them every co-operation. That bill was rejected. Certain circumstances were stated in regard to the rejection of that bill which the directors took into consideration. This was done without at all impugning the decision of that committee. They were all aware that committees on these subjects very frequently came to different conclusions. He thought that they were perfectly authorized to go to Parlia ment and get a different result. They were justified in doing so, being aware that the London and North-Western had been allowed by Parliament to extend their connexions, and that Mr. Hudson's line had been allowed to do the same. The South-Western also had been allowed to extend its connexions to Exeter. He thought therefore that they were completely justified in going to Parliament, and asking them to sanction a bill to enable them to travel to London by the shortest and most direct route. was unfortunate, but he was still of opinion that it would be differently viewed by other gentlemen than those who had attended the committee. Their differences were also happily to be all settled,—and this announcement he made with great satisfaction. He might say that as one entrusted with the very valuable property which had been committed to his charge, he heard the tidings with great joy.

Mr. KER read the following reports:—

Mr. Ker read the following reports:—

Mr. Ker read the following reports:—

The directors are happy to announce to the shareholders that on the lst of March the southern portion of the line, extending from Stirling to its junction with the Edinburgh and Glasgow at Greenhill, was opened to the public for passenger and parcel traffic, and the entire line on the 22nd of May. The number of passengers conveyed along the line, from the opening to the 31st of July, amounts to 129,842, entirely free from accident of any kind; and, in addition to this cause of congratulation, the directors are happy also to state that the trains have worked well, and kept time in such a manner as to secure the confidence of the public in the excellence of the line and the general arrangements of the company. It is not to be expected that in such a case as the Central, which is dependent on another line to carry its traffic beyond its own boundary, that irregularities can be altogether avoided. The meeting at the junction with the trains of the Edinburgh and Glasgow has not always been effected at the times stated in the bills, and disappointments arising from that cause have been occasionally expebeen effected at the times stated in the bills, and disappoint-ments arising from that cause have been occasionally experienced by the passengers of the Central—a corresponding loss of time being incurred when arriving at the terminit to that which is lost at the junction. Your directors are glad to say, however, that an arrangement has now been entered into between the companies, by which such delays will in future be avoided. The amount of receipts to July 31 arising from treffic is as follows wit future be avoided. The amount from traffic, is as follows, viz.-

From passengers, parcels, horses and car-£9,066 6 31 .. 987 14 41 21 17 0 •• Goods, cattle, &c. Interest .. 10,075 17 Total receipts ...

4,584 12 6

Deduct working expenses ...

£5,491 5 Leaving exclusive of the cost of maintenance of way. It is to be observed that but a very small proportion of this revenue is derived from the conveyance of goods, the traffic of which may be said to have scarcely commenced, as the unfinished state of the line for some time after opening did not admit

or carrying on goods and mineral traffic to advantage; but as the goods sheds are now far advanced, and the sidings nearly finished at most of the stations, that important branch of traffic will now be prosecuted to the utmost pos-sible extent. The coal traffic will also now come into opera-tion both from the northern and southern extremities of the tion both from the northern and southern extremities of the line, which will form a valuable item of the company's revenue, and from which a material reduction in the price of that indispensable article of consumption will accrue to the inhabitants of the district. Considering the circumstances under which the opening traffic of the Central has commenced, and to those who are acquainted with the nature of the country, the amount of traffic which the gradually developing resources of the railway have yielded up commenced, and to those who are acquainted with the nature of the country, the amount of traffic which the gradually developing resources of the railway have yielded up to the present time will appear satisfactory. The opposing efforts of contending parties to obtain possession or control of the Central have operated most injuriously on its traffic; but now that these disputes are in prospect of being terminated, hopes may be entertained that a harmonious cooperation will take place between the different parties whose interests are involved in the prosperity of the line, undisturbed by those hostile influences which have diverted the traffic of the district from its legitimate channel, and been employed in endeavouring to force it into other directions. The following is the engineers' report:—

"The expectations held out to you in our last report were fulfilled by the opening of the line to Stirling on the 1st of March, and by the completion throughout to Perth on the 22nd of May. At the time of the last half-yearly meeting a considerable amount of cutting had still to be removed near Perth. The tunnel faces were not built, and a large proportion of the permanent way remained to complete. It required, therefore, some effort to open the line in good order for the public traffic at the time above stated. The works of the Central are heavy, and therefore the more liable to contingencies; but on a recent inspection we found them in proper condition throughout. Great progress has

liable to contingencies; but on a recent inspection we found them in proper condition throughout. Great progress has been made in trimming off and soiling the slopes and in making the drainage perfect. The stations along the line did not at first admit of carrying on goods or mineral traffic. They are now completed to the extent at present contemplated for this purpose, but have been so designed that each station can be extended as the requirements of the traffic may from time to time demand. With regard to the general station at Perth, the circumstances under which the works were suspended are explained in the last report. The opening of the Edinburgh and Northern and the Midnah has caused some inconvenience in conducting the has caused some inconvenience in conducting the iand has caused some inconvenience in conducting the traffic at this station; and it is already apparent that more accommodation is requisite. It is desirable that the full extent of platform and shed which your funds enable you to provide at present should be completed as early as possible. The works on the Alloa branch have, according to the instructions of the Board, been commenced, but suffireport necessary.

"London, Aug. 26."

"J. E. ERRINGTON."

"London, Aug. 26."

The want of a continuous connexion between the Central and the Dundee, Perth and Aberdeen Junction, has given to the former but a fraction of traffic from the busy district to which that railway furnishes the means of transit. In the course of a few weeks the bridge across the Tay, now in the course of completion, will supply the connecting link between the city of Perth and the town of Dundee, when a great accession of traffic may be expected to flow into your railway from the large and dense population of Dundee and the thickly inhabited country of that neighbourhood. The Scottish Midland Junction was opened on the 2nd current, extending northwards from its connexion with the Central to Forfar through the fertile district of Strathmore, where scottish midiand Junction was opened on the and current to Forfar through the fertile district of Strathmore, where it joins the Aberdeen line. From this source also a considerable amount of traffic will be made available to the Central. In compliance with the instructions given at the special meeting of the company held on the 20th of April last, your directors gave their strenuous support to the bill introduced in the present session of Parliament for leasing the Scottish Central line to the London and North-Western, Lancaster and Carlisle and Caledonian; but they regret to state that a measure which in every point of view would have been so beneficial to the interests of the shareholders and of the public was lost, in consequence chiefly of the opposition given to it by the Edinburgh and Glasgow. The shareholders will be glad to learn, however, that more recently an arrangement has been come to between the southern companies on the one hand and the Edinburgh and Glasgow on the other, whereby the differences hitherto existing between these great interests have been accommodated or all but accommodated. The effect of this arrangeexisting between these great interests have been accommodated or all but accommodated. The effect of this arrangement your directors confidently trust will be to obviate the chief difficulties which have presented themselves in carrying out your arrangements hitherto, as well as to secure that harmony and good understanding among neighbouring lines which, without being detrimental to the interests of either, may be found mutually advantageous to the railway companies themselves and beneficial to the public. In the meantime your directors have entered into a working agreement with the southern companies, in terms of the instructions given to them at the last general meeting of shareholders.

The capital account to July 31 showed the receipts at 1,268,242l. 8s. 5d.; expenditure, 1,245,495l. 17s. 3d.; balance, 22,746l. 6s. 2d.

The CHAIRMAN moved the adoption of the report The Marquis of BREADALBANE entered into a justification of the policy he had pursued as chairman of the company. His views as to the lease to the Caledonian had been supported by the unanimous decision of the House of Commons. The policy on which he had grounded these views had also been justified by the fact that the directors were at present engaged in negotiations by which the Edinburgh and Glasgow would be admitted to a share of their traffic—which was the policy he had always advocated. Although, however, he was glad that such a course was now adopting, he was not sure if he could approve of the details of the new agreement, but at present he was not sufficiently informed on that point. He read a letter from Mr. Dundas, brother to the Earl of Zetland, urging the impolicy of completing any agree-ment by which the intercourse by the Central to and from the South should be restricted to the western lines. Ultimately the eastern lines would offer the shortest route to London, and it was injudicious to adopt any policy by which the opposition of the companies connected with these lines could be raised.
Mr. Dundas also considered that looking to the gradual development of the traffic on the Central as well as of railways generally, he thought the company ought not to bind themselves down to 7 per cent. with half surplus profits, but that, in the event of the pro-fits exceeding 11 per cent., the Central shareholders should exclusively have all beyond that limit. The Marquis said he quite concurred in these views, and that his approval of the report of the directors was with the reservation of his opinion upon the negotiations now going on until the actual terms were decided on and published.

Some discussion arose as to the actual position of the company with regard to the leasing with the London and North-Western and other companies.

Mr.MEADOWS, of the Sheffield and Lincolnshire line. while anxious to avoid entering prematurely into the discussion of details yet undecided, counselled caution in agreeing to terms of an exclusive nature in favour of certain companies.

Lord Duncan, in answer, stated that the southern companies were still bound by the agreement under which the leasing bill was applied for; and of course the directors would not lose hold of that deed until a satisfactory arrangement was come to as to the new.

EAST LOTHIAN CENTRAL

The report was adopted.

Aug. 30 .- Half-yearly Meeting, Edinburgh .- Mr. DAVIDSON in the chair.

Mr. DREW, of Glasgow, protested against the seal of the company being affixed to the register, in con-sequence of the scripholders not being recognized. The seal was affixed, and the dissent recorded.

The SECRETARY then read the report : Under the Chancellor of the Exchequer's Act, the directors were precluded from taking steps for the execution of the works for twelve months from the passing of the Act. The directors have taken certain steps for the protection of the shareholders. In consequence of the protest by Mr. Drew against the completion and authentication of the register, in terms of the statute by including in the register. register, in terms of the statute, by including in the register the names of the original allottees of the scrip, which had not been sent in for registration, the directors obtained a further opinion from the Lord Advocate before issuing cernot been sent in for registration, the directors obtained a further opinion from the Lord Advocate before issuing certificates. This opinion entirely approved of their course, but recommending the adoption of certain legal proceedings before the Court of Session, for the purpose of having the question, under Mr. Drew's protest, judicially determined. Meanwhile a note of suspension and interdict was presented to the Court by a scripholder, for debarring the directors from issuing to any third party sealed certificates for stock upon the scrip which he held. This application having been opposed by the directors, the Lord Ordinary refused the note of suspension, and the Inner House, in a reclaiming petition, confirmed the decision. Upon the issue of this case, and as advised by counsel, the directors immediately raised an action of declarator, for the purpose of having the validity of the proceedings taken for authenticating the register declared by a deliberate judgment of the Court, and their sanction obtained to the issue of sealed certificates to the parties entered in the register, against the scrip-

Digitized by GOOSIG

holder in question, and the original allottees of the scrip as defenders. To this action the scripholder gave in no de-fences. The allottees, however, lodged defences, in which tences. The anottees, nowever, longed detences, in which they contended that they were not responsible as share-holders, and could not properly be included in the register; but the Lord Ordinary, on the 19th ult., pronounced an interlocutor, repelling the defences, and discerning and ordaining in terms of the conclusion of the libel. The liability of shareholders is thus fixed on the original allottees, espect of the shares for which scrip was not sent in for in respect of the shares for which scrip was not sent in for registration, and, as a necessary consequence, to authorize the issue of the corresponding sealed certificates. This decision of the Lord Ordinary has, however, been reclaimed against; and although the directors feel assured that it will be confirmed by the Inner House, following up their decision in the note of suspension and interdict, they are reluctantly compelled to suspend the issue of scaled certificates to the shareholders who were not in possession of scrip. tantly compened to suspend the issue of seased errinates to the shareholders who were not in possession of scrip, until the decision of the Court is obtained. Sealed certificates have therefore only been issued to the shareholders who duly sent in scrip for registration; but, in the meantime, in accordance with the opinion of counsel, and of the judgment lately obtained, the directors are prepared to the real shareholders. An extension for two years of the time for the completion of the works has been complied with by the Commissioners. By this extension, the delay in proceeding with the works will be more than compen-sated. In these circumstances it will be for the shareholders to consider whether any instructions should be given at the present meeting for commencing operations. The provisions of the Chancellor of the Exchequer's Act of this session prevent anything being done until the 20th December; and looking to the present uncertain prospect of trade, and the still-continuing difficulties of the money-market, the directors beg to suggest that the consideration of the future policy or proceeding should be delayed until the next stated meeting. The funds of the company are deposited in the Exchange Bank of Scotland, bearing interest at 5 per cent. In conclusion, the directors have only to say, that if the shareholders continue them in the possession of their confidence, they shall, as hitherto, devote their best attention to the interests of the company, and until the general meeting take only such steps as are indispensable for their

To a question from a shareholder,

The CHAIRMAN said that their amount of funds in the bank was 12,298l. 17s. 9ld.

Mr. Drew asked the name of the scripholder who had prosecuted.

The SECRETARY replied it was Mr. Ross.

Mr. Drew wished to know if the funds necessary for the prosecution referred to in the report were taken from the funds of the company.

The SECRETARY said the expenses of the defence ere paid out of the funds.

Mr. Drew wished to ascertain whether the scripholder in question was really a bond fide prosecutor or not. He now wished to know if any sums were taken from the funds of the company to carry on the

Prosecution mentioned in the report.

The CHAIRMAN replied that no money belonging to the company had been taken to conduct the pro-

Mr. Lyon, stockbroker, moved the adoption of the report, which was seconded by Mr. H. RAEBURN, and agreed to, Mr. Drew dissenting.

Mr. Lyon proposed the names of Messrs. J. Aitchison, of Alderston, and T. Toddrick, banker, Haddington, as directors.

Mr. Drew moved, as an amendment, the appointment of Messrs. J. Orr and P. Dougall, jun.

Mr. RAEBURN, without any disparagement to the gentlemen proposed, could not say that their nomination was better than those previously named. As to the expediency of delaying the works, it was to be borne in mind that the report stated they would not be pushed forward till the money-market warranted such a proceeding. With respect to the value of the line itself, any one who held shares in it had himself to blame; but he thought that it would prove an

excellent one, and highly remunerative.

Upon a vote being taken, the original motion was carried by a majority of 666 shares.

#### STIRLING AND DUNFERMLINE.

Aug. 31 .- Half-yearly Meeting, Glasgow .- Mr. J.

Anstruther in the chair.

The report was read. It alluded to the very near prospect of part of the line being opened for traffic, and of the whole line under contract being opened to the public. The only portion that remains un-contracted for is from Stirling to Alloa, a distance of about five miles; and from the level nature of the country the works are exceedingly easy and could be completed within about six months. The bill for the deviation from the point where the line crosses Lord Elgin's private railway to the station in Dunfermline has very recently received the royal assent, and this part of the scheme will now be proceeded with. directors anticipate that it will be completed by the time the Edinburgh and Northern branch to Dunfermline is ready, so that the junction between the two lines will then be formed for the interchange of traffic between Fifeshire and your district, besides

opening up additional communication between the North-east of Scotland and England, and the West of Scotland; and as the station at Dunfermline is to be mutual every facility will be afforded for free intercourse between the districts. In the meantime and until other means of transit are open an access will be obtained to the shipping port of Charleston by means of Lord Elgin's private railway, for the ship-ment of goods, and the managers of that line have expressed their willingness to give every facility for the conveyance of traffic from your railway to the sea. In this way you have, in the meantime, access of a shipping port at Charleston on the east, while similar accommodation at Alloa on the west has already been secured. The Scottish Central are now in course of forming a branch from their main line near Larbert to Alloa Ferry, by means of which the communication between your line and the south and west will at this point be effected. The directors regret that there is a considerable arrear on the last two calls, and that they have found it necessary, in several instances, to raise actions before the Court of Session to compel payment. The directors beg to call attention to the entry stated in the last abstract of their accounts, as shares purchased from the Edinburgh and Glasgow, and as the directors request their special opinion upon this point, they have to reca-pitulate the circumstances:—While the bill for incorporating this company was in Parliament, the then directors of the Edinburgh and Glasgow purchased up a considerable quantity of scrip of this company. Last year a bill was introduced into Parliament by the Edinburgh and Glasgow for sundry purposes, and inter alia for the purpose of enabling them to hold stock in this company to an extent not exceeding a half of the whole of the shares, as well as to enable that company to purchase this undertaking, and thereafter to sell or lease the same. This bill was introduced without the knowledge or consent of this company, and your directors resolved to oppose it. As however the Edinburgh and Glasgow held so large a proportion of shares, their directors objected meeting. Your directors therefore called a special meeting and obtained authority for opposing the bill. This was successfully done. The directors of the This was successfully done. The directors of the Edinburgh and Glasgow then declared they could not pay any calls on the shares held by them: and your directors were also distinctly informed that, from the preponderating influence which that company held it was in their power to counteract any resolution and the anxiety shown by them to obtain an Act to compel a sale of the line, was sufficient evidence of desire to swamp this company altogether. Your directors were thus placed in a very difficult position, as they saw that the safety of this company was at stake; and as the Edinburgh and Glasgow had stated their inability to pay calls, they, in a letter from the chairman, requested your directors to make any suggestions which might occur to them, by which they might be relieved of the amount of stock held by The directors considered themselves under no obligations to make any such suggestion, but being of opinion that the only way of placing you in safety was to divest the Edinburgh and Glasgow of these shares, they made an offer to the directors to purchase them for this company. After considerable negotiation a purchase was arranged, the price being below the then selling price of the day and under par-At the meeting in March last, the directors brought this subject prominently before the shareholders, both in their report and in their abstract of accounts. and that meeting, by a majority of 1,254 to 195 votes adopted the recommendation of the directors. Following up this resolution, the directors immediately paid the call then due, and they have since paid the call which became payable on the 5th of June last. Since that time some of the shareholders have declared their intention of repudiating the resolution, as not being within the powers of the company's Act, and therefore not binding on the minority. The directors have therefore resolved to bring this subject again before the shareholders for their deliberation,

The statement of accounts showed the amount of deposits, 1st, 2nd, and 3rd calls, interest received in advance of calls, and fees for recording transfers, 181,169*l.* 2s. 1d.; balance in hands of secretary and bankers, 3,917*l.* 6s. 3d.

After a lengthened conversation, in which Messrs. JOHNSTONE, of Alva, W. RAMSAY and BUCHANAN took

Mr. Тномson, advocate, Edinburgh, then moved that the meeting approve of the report of the directors submitted to the meeting, on the understanding and condition that the assurance given by the chairman, that the shares purchased from the Edinburgh and Glasgow shall be taken up by the directors themselves, is fulfilled, and that the price of these shares shall be paid by the directors into the funds.

Mr. M'INTYRE seconded the motion.

Mr. Paton was prepared to follow tion made at last meeting, that the transaction with the Edinburgh and Glasgow was illegal and not binding on the shareholders; but the directors having agreed to take up these shares, and to pay into the fund of the company the money misappropriated into the Edinburgh and Glasgow, he would not carry out his intention, but he wished it to be understood that the company was entirely free from that transaction.

Mr. JOHNSTONE defended the conduct of the directors. It was his impression, as well as that of many other persons, that the directors had saved the com-They had carried on the works for a year on their own responsibility, without asking any assistance from the shareholders. In common sense and justice they were entitled to claim the assistance of he shareholders.

The motion was then unanimously agreed to.

#### DUNDEE AND PERTH.

Aug. 29 .- Half-yearly Meeting, Perth .- Lord Kin-AIRD in the chair.

The report stated that there had been an increase of from 100t. to 150t. per week on the revenue as compared with the corresponding period of last year, while no additional extent of railway had been opened The income now was five times the amount of that derived from the Dundee and Arbroath line during the first year it was open, both lines running through a precisely similar district.

The CHAIRMAN said that the bridge at Perth was expected to be completed, along with the line into Perth, by the 1st of October. They had at present only the conveyance of local traffic, and in consequence of not being able to cross the river they were deprived of the conveyance of coals, lime and the through traffic. There was no coal north of the Tay, and as Dundee consumed more than 100,000 tons annually this traffic was very important. By an agreement with the Caledonian, independent of that to lease the line, the latter company are to work the line and provide the working stock for one-third of the gross traffic. This arrangement of itself would on the completion of the line produce a dividend of 8 per cent. In consequence of the opening of a portion of the Aberdeen line the traffic on the Dundee and Arbroath had increased considerably.

Resolutions were passed adopting the report, and authorizing the directors to borrow the money specified in the Act.

#### CALEDONIAN AND DUMBARTONSHIRE.

The Half-yearly Meeting of this company was to have been held at Glasgow on the 28th ult., but a sufficient number of shareholders not having attended it was adjourned sine die.

The report stated that the works on the line from Dumbarton to Loch Lomond, 8 miles in length, were in course of construction; the whole of the rails for this portion being on the ground, and the sleepers in course of delivery. The directors propose completing the line in the first instance from Loch Lomond to Dunglass, which is estimated to cost 136,350l. statement of accounts showed the receipts at 49,4201.; expenditure, 38,026l.; balance, 11,394l. at the bank. The arrears on two calls amounted to 35,940l.

#### GLASGOW, KILMARNOCK AND AYR. Aug. 24.—Half-yearly Meeting, Glasyow.—Mr. J.

M'CALL in the chair.

The SECRETARY read the report. It stated that—
The revenue had suffered in all its subdivisions, and there
was a deficiency of 9.7.5%. as compared with the corresponding six months of last year. A part of the receipts
being derived from mineral traffic, the directors hope that
there are various causes in operation which will soon give
an increased activity to this trade,—and this is especially
to be hoped for in the Ayrshire district. They have caused
a minute inquiry to be made into the company's scale of
charges for minerals, and finding the rates to have been in
most instances under those fixed by other companies, they
were increased on the 1st of August current. The directors
have spared no exertions to limit their expenditure, without
impairing the efficiency of the establishment. The traffic
account showed a next profit of 19.187, 5s. 10d. on the 31st
of July last, and the Board now recommended a dividend at
the rate of 4 per cent. per amum, payable on the 25th of September next, under deduction of income-tax. The total receipts for the half-year were \$4.7884, 7s. 8sl. Notwithstanding
the general embarrassments over all financial operations, and
the impediments to the operations of the several contractors
aused by the excessive wedness of the weather in the early The SECRETARY read the report. It stated thatthe impediments to the operations of the several contractors caused by the excessive wetness of the weather in the early part of the year, the directors have been enabled to complete the Cumnock Extension, and its principal tributary branches, within a brief period after the time indicated in the last report. The line between Kilmarnock and Auchinleck, 134 miles—the branch to Mnirkirk, 104 miles—and the branch to Galston from the Cunnock Extension, 34 miles, were opened for public traffic on the 9th inst. The Irvine and Busbie line, 54 miles, was opened on the 22nd of May last,—thus making, together, 33 miles additional. The continuation of the Galston branch to Newmilus was expected to be completed in December next. The directors the impediments to the operations of the several contractors expected to be completed in December next. The directors

Digitized by GOGIC

have also obtained a two years' extension of the time for completing their branches, &c. The Caledonian have now obtained an Act for crossing the Clyde, and this company have been allowed by Parliament the right to use their have been allowed by Parliament the right to use their viaduct, and participate otherwise in the scheme, on certain conditions. If this project had embraced a connexion between the lines on the respective sides of the Clyde, or had admitted of an extension hereafter, so as ultimately to accomplish this object, and thus secure a certain benefit and convenience to the public, the directors would not have hesitated to co-operate with other companies in carrying out so desirable an object. But looking at the depressed state of railway stock generally, and believing that this scheme must in all probability cost half a million, that it does not give the desired connexion between the northern and southern lines, and that participation in it will burden the revenue with an annual charge of above 12.000/.. the directors have come to the conclusion that it Laborator to decline to exercise the powers conferred by the Caledonian Company's Act. The directors had to submit a series of resolutions for the creation and issue of 250,000. additional capital. In order to avoid the necessity of any separate stock being created by the Dumfries and Carlisle, under the agreement entered into with them in August 1847, a rateable proportion of this new stock will be offered to their shareholders; and this arrangement has already 1847, a rateable proportion of this new stock will be offered to their shareholders; and this arrangement has already been approved of by the half-yearly general meeting of that company. This stock will be divided into shares of 10%, each, giving one new share for every entire amount of 120%, of capital stock of the two companies. In the present depressed state of monetary affairs it will be necessary to confer on these shares such preferential advantages as shall secure their being universally taken up by the proprietors. This the directors have endeavoured to effect as far as possible without injury to the other stock. They believe that the new shares will enjoy a fair marketable value, when it is kept in view that the capital jointly expended by the Ayrshire and Dumfries Companies is now nearly 3,000,000,..., that the loan capital is comparatively small in amount,—and, what is especially of importance, that the only other guaranteed stock of the companies does not exceed 156,250%, on which a minimum dividend of 5 per cent. only is secured,—thus making the proposed new shares a safe and valuable investment of a permanent character. In recommending the creation of a preferential stock, the directors have deemed it advisable to make its amount as limited as possible. Whenever 217,000% have been paid, the borrowing powers, under the Dumfries and Carlisle Act of incorporation, to the extent of 443,333%, may then be legally exercised; which, it was hoped, would enable the whole line to be completed, without making further additions to the capital of the amalgamated companies.

The capital account showed the receipts at

The capital account showed the receipts at 2.340,560l. 8s. 4d.; expenditure (including the various branches already named), 2,150,075l. 5s. 11d.; balance (exclusive of sums paid for shares in the Glasgow Dumfries and Carlisle and other lines), 54,210l. 3s. 2d The revenue account showed the receipts at 54,7881. 7s. 8d.; expenditure, 36,013l. 9s. 1d.; balance (including rent from Renfrewshire road trustees, &c.). 19,997l. 5s. 10d. The traffic account of the Glasgow and Paisley showed the receipts at 7,438l. 7s. 2d.; expenditure, 1,820l. 2s. 2d.; balance divisible, 5,608l. 5s.

The CHAIRMAN regretted that the state of revenue did not admit of the directors proposing a higher dividend than at the rate of 4 per cent. The passenger traffic had decreased from the corresponding last half-year by 50,000 on the main line, and 24,000 on the joint line to Paisley; and goods and minerals are also largely reduced. This can only be ascribed to the miserable state of the mercantile and manufacturing interest in the West of Scotland. I have long felt (he continued) that very low charges on either passengers or goods, for the purpose of creating a traffic, will not pay the heavy expenditure, though no one can more deprecate over high charges. The directors have therefore raised slightly the charges on minerals, which we hope will reduce to a certain extent the heavy per-centage in the working of our line, while the rates charged cannot, on any fairness. be objected to, being still much under what is charged on many lines, and not more than what I consider absolutely necessary to give our company a fair but very reasonable profit. Our line has been very lately greatly extended by the continuance to Auchinleck (about two miles from Cumnock), with branches to Galston, Irvine and Muirkirk, all of which go through mineral countries; and though it will require some time before any great return can be expected, we may confidently expect a considerable inmediate traffic from Auchinleck, Galston and Muirkirk, where works are already crected and others in progress. have now to call your attention to our powers through an Act of Parliament obtained by the Caledonian, to cross the Clyde, by which we are entitled to have a station in Dunlop street. This was at first objected to by the Caledonian, who, we understand, would be better pleased that we did not take advantage of the Act in our favour. The great object which your directors had in view in crossing the Clyde was to have a connexion with the Edinburgh and other lines on the north side of the river; but this would not be obtained by crossing at Dunlop-street. The only other object was to have a more central station, to enable us better to compete with any line the Cale-

donian might join or aid. Your directors felt that the mania for competing railways and railways which could not possibly pay the proprietors has got a pretty good check. And they also felt persuaded that the Caledonian and ours are now perfectly satisfied that peace between the two companies is much more adwantageous to both. We now propose a special meeting, for the purpose of raising 250,000l. of capital in the Dumfries and Carlisle. According to the agreement entered into with that company, 900,000l. of the stock was appropriated to this company, and we are now called upon by the Dumfries Board to fulfil that arrangement. Of the 900,000l. it is expected that under 700,000l. will be required to complete the line from Cumnock to Dumfries; and in raising the 250,000l., we shall be enabled to raise the remainder by debenture loans. The railway from Dumfries to Gretna being completed, was on Tuesday opened to the public for passenger traffic-plant being supplied by this company,—and the receipts will be placed to your credit. I have little or no doubt that this line will immediately become productive, but the traffic on your line, from Kilmarnock to Cunnock, can derive little or no benefit from each other till the line is opened from Cumnock to Dumfries. I am sorry to say the depressed state of railway property precludes our raising this stock without giving a guarantee; and your directors have this day come to the resolution to propose that it shall be issued to the proprietors at a fixed dividend. And, in proposing these terms, your directors expect that the stock will command a considerable premium, the security being so undoubted—for few, if any, railway companies stand on a more secure or sound footing than we do. Our loans are reduced to under 337,000l.; and the only stock of any kind for which we are under guarantee is only to the amount of 156,250l. given to our proprietors at 5 per cent., at an early period, when your line was unproductive; and I have great pleasure in stating that all the new lines for which we have made contracts, are nearly

Mr. Burns said, in looking over the report, he was astonished to see the amount of parliamentary and law expenses during the last two years and a half at 134,000l., and when they added the expenses of the Glasgow, Dumfries and Carlisle line it was nearly 200,000l., entailing an annual charge of 10,000l. He had no wish to reflect upon the directors, who, he had no doubt, had acted as they thought for the interests of the company; but more discretion would be necessary in this and other matters. There was a large amount of interest upon unproductive lines added to the capital account. He should like to hear some explanation of it.

The CHAIRMAN did not doubt the extravagance of the law expenses; but they had been incurred principally from parliamentary contests in self-defence. He hoped that they would not require to go to Parliament again.

Mr. Cullen asked if the parliamentary and law expenses were taxed.

Mr. SMITH stated that the accounts were submitted to the finance committee, who consulted him as to the correctness of the professional charges. With regard to Mr. Burns's question respecting the amount of interest put to the capital account, it had been done at the request of several shareholders, who objected to its being put in the revenue account, as was done Mr. G. Wein asked what amount would be re-

quired to finish the lines in progress.

Mr. Smith said the paid-up capital was about 2.500,000*l*., and 330,000*l*. in borrowed money. When the calls were paid up they would have sufficient to complete the lines in progress and pay off the borrowed money

After several other unimportant questions,

Mr. DENNISTON said there was one point in the report on which he should like a little information it was with regard to the crossing of the river Clyde to which they had that day to express their assent or dissent. The expense of that crossing would be enormous, and he trusted it might be avoided.

The CHAIRMAN would be very glad if Mr. Denniston would move a resolution that they should not join in the crossing. He did not know the exact amount which it would cost, but he knew that it would cost them 12,000*l*. a-year to have a station in Dunlop-street, and he thought that by saving that 12,000*l*. ayear they would be able to compete with any line having the advantage of a station on this side of the Clyde, as it would enable them to reduce their fares necessary.

Mr. J. ROBERTSON asked what was the estimate of the traffic of the Muirkirk when they went to Parliament? It had been very expensive; he should like to know its prospects.

The CHAIRMAN said that line was entirely a defen-

sive line, but they expected to have a very considerable traffic in minerals from that district to Troon.

Mr. W. H. CRAWFORD said undoubtedly the line, a the chairman had stated, was at first projected as a protective line, on account of the threatening of the Caledonian to extend their main line through Muirkirk down to Ayr. With respect to the prospect of remuneration for the outlay, he might state, in the first place there were extensive iron-works now in operation—the Lugar Iron-works, which were connected with the line by a branch. There were also extensive iron-works in Muirkirk, and the whole country was full of coal and black band. The Portland Iron-works, now in course of erection, near Kilmarnock, must draw all their minerals from beyond Auchinleck, so that they would have the advantage of that traffic, not only on the Muirkirk line, but along the main line to Kilmarnock. He also understood that the coal in that district was of such good quality that some of the coal-masters propose to send it up the line as far as Paisley.

Mr. ROBERTSON moved that a statement of the liabilities incurred by parliamentary and law expenses, and debts of any kind, should be made out with every half-yearly report.

The motion, having been seconded, was agreed to. The CHAIRMAN then moved the adoption of the report, which was carried unanimously

A special meeting was afterwards held, at which it was resolved to create 250,000l. of new stock, with a guarantee of 6 per cent. for three years, and 5 per cent. in perpetuity.

DRUMPELLER.

Aug. 30.—Half-yearly Meeting, Glasgow.—Mr. J.

The reports of the engineer and directors, which recommended a short extension of the line southwards and the execution of branches to the adjacent coal-pits, was read.

The CHAIRMAN shortly stated that the directors felt the times to be such that they required to exercise very great caution in proceeding with any further works. They had been endeavouring to make arrangements with the Monkland Canal Company, and for that purpose had sent a memorial to the council, to which a favourable answer might shortly be expected. On account of circumstances, the directors could hardly recommend a dividend at present, but next year they would be enabled to see what their prospects were. Were the extensions carried out which were proposed in the report, a dividend of 7 or 8 per cent. might be realized. The Chairman or 8 per cent. might be realized. The Chairman moved the adoption of the report, which was agreed to.

MONKLAND.

Sept. 6. - Half-yearly Meeting, Glasgow .- Mr. T.

GRAHAM in the chair.

The report stated that at the meeting of shareholders in March last the then directors of the Monkland and Kirkintilloch, Ballochney and Slamannan were authorized to apply, during the past session, for an Act of amalgamation, which had been pro-Under this Act, the old shares in these companies have been converted into consolidated stock as follows:—221. 16s. 10d. for each share of the Monkland and Kirkintilloch; 40t. 10s. 10d. for each share of the Ballochney; and 22t. 15s. 10d. for each share of the Slamannan. The traffic account for the six months ending the 31st of July last showed a balance of 9,530l. 5s. 5cl. applicable to dividend, being at the rate of 6 per cent. per annum. The directors recommended, however, that a dividend at the rate of 5 per cent. per annum only should be declared, and that the balance 1,283/. 5s. 11d., less income-tax, be carried to reserve account. During the past six months the traffic account exhibited an increase of 1,735l. 12s. 4d. over the preceding half-year. The Board had been able to reduce the working expenses from 15,198*t*. 14s. 4d. to 10,741*t*. 8s. 10d., thus effecting a saving on the half-year of 4,457*l*. bs. 6*d*. From the opening of new lines an increase of traffic was anticipated. At the last balance, 32,308l. 3s. 8d. stood at the credit of revenue account: and it was then anticipated that it might be desirable to create additional capital to pay off that sum and other debts. It was subsequently thought more advisable to write off that sum entirely, and confine the capital to be created to the amount absolutely necessary for the other purposes at the present time. The Board recommended that the sum of 32,308l. 3s. 8d. should be extinguished, and that the new capital to be created be limited to 55,000l., which would give one share of 25l. for every 150l. of old stock, the holders of the new shares to be guaranteed 6 per cent. per annum, on condition that in the event of the dividend upon the old stock exceeding that per centage, the holders of the new shares should not participate in the excess of dividend, unless they relinquish their guarantee. The capital

Digitized by GOOS

account to the 29th of March last showed that account to the 29th of March last showed that 328,461. 5s. had been paid up, and 148,4461. 17s. 6d. borrowed, exclusive of 32,3081. 3s. 8d. due to revenue. The amount expended was 509,2161. 6s. 2d. The revenue account for the half-year ending the 31st of July last showed receipts at 23,9811. 12s. 4½d.; expenditure, including interest on loans, 14,4511. 6s. 11d.; balance, 9,5301. 5s. 5½d.

The report was unanimously adopted.

The CHAIRMAN then proposed that the seal be affixed to the register of proprietors of consolidated stock, and that the directors be authorized to take measures for disposing of fractional parts of the said stock, less than 10*l*., so as to combine such fractions under the authority of the shareholders individually; which was carried.

It was also proposed that the sum of 32,308l. 3s. 8d. standing at the credit of revenue account on the 31st of January last, be not divided among the share-holders, but carried to the proper accounts for en-

larging and reparing the works.

This motion gave rise to some discussion.

It was proposed by Mr. D. Bannatyne as an amendment that the sum be not divided, but carried to suspense account.

The amendment having been seconded, the vote was taken and the motion declared carried.

It was then resolved that the sum of 8,2461. 19s. 6d. At was then resolved that the sum of 8,246f. 19s. 6d. should be divided among the shareholders of the consolidated stock as a dividend, at the rate of 23 per cent. for the half-year, payable on the 1st of November next, without deduction of income-tax. After the appointment of directors and auditors, the meeting was made special, when the directors were empowered to raise new capital to the extent of 55 000. 55,0001., with a guarantee of 6 per cent.

#### WATERFORD AND LIMERICK.

Aug. 31.—Half-yearly Meeting, Waterford.—The Rev. J. T. MEDLICOTT in the chair.

The report stated that several reductions had been made in the expenses; that the amount of traffic on

the line between Limerick and Tipperary averaged 270l. weekly, exclusive of parcels and mails from Dublin. The progress of the works on the line from Tipperary to Caher, Clonmel and Waterford, was postponed until the realization of the directors ex-pectation of Government aid, or until such other means be placed at their disposal as will enable them means be placed at their disposal as will enable them to resume operations. The length of line in operation was 25 miles, 16 of which consist of a double line. By the proposed forfeiture of shares the number will be reduced to 10,000; and to enable the holders to retain these shares a further sum must be paid of 92,000l., making a total of 545,000l., and yielding a bonus of 45,000l. to those who have paid up their calls to the extent of 500,000l. The statement of accounts showed the receipts at 453,143l.; expenditure, 450,728l.; balance, 2,415l. in hand.

(For engineer's report, see Official Papers.)

The CHAIRMAN moved the adoption of the report. Mr. MADDY moved an amendment, "that it be rejected as an unsatisfactory statement of their present position.

Mr. J. Wills, of Liverpool, represented many thousands in the capital of the company. The Eng-lish shareholders believed that affairs had been grossly mismanaged, and they had no confidence in the directors. He complained that the report gave no information of the terms entered into with the Great Southern and Western. The capital, which should have been husbanded to make the line remunerative and to carry on the works now suspended, had been squandered in a most extravagant manner; in the premature purchase of rails alone there had been a loss to the company of at least 60,000l. He contended that the line for its success wanted prudent and economical management.

Mr. T. S. HARVEY also supported the amendment. He was firmly convinced that the directors would never carry forward the project to completion. had voted for the suppression of the report of the committee, because there were circumstances stated in it which would have had a most injurious public effect. He perceived that 471,000l. had been spent;

and the engineer had stated that only 150,000l. had been expended in his department. He wished to know where the rest was gone. In 1846 the engineer stated that the expense of the first section would be 9,000*l*. per mile, and it had cost 17,000*l*.

The CHAIRMAN said that Mr. Willis's observations referred to the former directors, who certainly mismanaged the affairs, and he did not attempt to justify their conduct.

Mr. HARVEY said his remarks did not refer to the present Board, and censured the manner in which the funds were expended for the benefit of Limerick.

The CHAIRMAN explained at some length various transactions of the Board, and stated that the office transactions of the Board, and stated that the office expenses had been reduced from 1,850*l*. to 859*l*. per annum. The traffic department had been reduced by the sum of 910*l*., and the office department 350*l*.: they had dispensed with a locomotive manager at a salary of 300*l*., and the rent of the offices had been reduced from 297*l*. to 70*l*. per annum. In the mechanics' department they had effected a saving of 1,736*l*. The whole of the savings effected by the present directors during the three months they were present directors during the three months they were in office was 6,667l. They had served notices of forfeiture, and no less than 3,000l. had been paid within the last few days. By former forfeitures and within the last lew days. By former forfeitures and those proposed the number of shares would be reduced to 10,000. There was every reason to expect that their annual receipts would be 21,000L, their expenses 10,000L, and for wear and tear about 3,000L, leaving a surplus of 7,600L, which would allow of a dividend of about 12 per cent.

After a long but unimportant discussion the amendment was withdrawn, and the report was unanimously

ment was withdrawn, and the report was unanimously

The meeting was then made special, and the for-feiture of 1,943 shares was confirmed. Resolutions were passed for discontinuing the payment of interest on calls, and for the reduction of the secretary's salary. The secretary gave notice of leaving by the next half-yearly meeting.

[For further Reports of Meetings, see p. 649.]

### * For account, Sept. 7, and † Oct. 17.

London Stock Exchange, Sept. 8 .- The whole week has been characterized by a great want of confidence and general depreciation in the share-market. At the close of to-day there was a slight gleam of improvement.

Liverpool, Sept. 7 .- The market is in a very depressed state—scarcely any business doing. A considerable decline in prices has taken place during the Suprow, Brothers. present week.

Manchester, Sept. 7.—Our business in shares has been very limited this week: buyers are anticipating SAM. GRINDROD. lower prices.

Birmingham, Sept. 7 .- There has been scarcely anything done in this market, but there appears little disposition to press stock on the market. North Staffords closed to-day at 48 dis. W. Banks.

York, Sept. 7 .- The prices of shares in our market this week have experienced a further depression, with but little business doing. We have had exceedingly fine weather for the harvest, which is progressing satisfactorily; and should Continental affairs become more settled, and the favourable accounts of the harvest become generally known, we think there will be reason to look for an improve-

ment in railway stock. Grayston & Earle.

Hull, Sept. 7.—Most of the railway meetings of
the half-year are now over, and we think, as previously stated, they have not been of a more unsatisfactory character than might have been expected from the nature of the times. The market remains inanimate, with, at our present writing, a tendency to decline, notwithstanding the fine weather; which is rather singular. North British stock, the meeting of which company, on the 13th inst., is looked forward to with some degree of anxiety, is comparatively firm.

FLINT & TOOTAL.

Newcastle-upon-Tyne, Sept. 7.— Business in our market has been extremely limited during the week, and prices have, in despite of the favourable harvest weather, continued to decline. W. FORDYCE.

Glasgow, Sept. 7.-The market this week has again Glasgow, Sept. 7.—The market this week has again been flat, and the quotations are, in almost every instance, lower. The following are to-day's latest sales:—East Lothian Central, 1½ dis.; Edinburgh and Northern, Newports, 6½ dis.; Dumfries and Carlisle, 5½; Ayr, halves, No. 1, 9½ dis.; ditto, No. 2, 9½ dis.; Great Northern, 10½ dis.; North British, thirds, 5½. 163. 6d.; York and Newcastle preference, and Newcastle preference, and Newcastle preference, and Newcastle preference, and Newcastle preference. prem. BUCHANAN, AITEEN & Co.

TRADE .- Glasgow, Sept. 1.noticeable improvement in the market for pig iron. At the same time, there is no worse feeling, and prices are firm at from 44s. 6d. to 45s. 6d., according to the numbers required.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

### MEETINGS.

CHESTER AND HOLYHEAD.—Sept. 20. 61, Moorgate-street, at 1. CHESTER AND HOUTHRAD.—Sept. 20. of, Moorgate-street, at I. Edinburgh and Northern.—Sept. 9. Edinburgh, at I. Edinburgh and Northern.—Sept. 9. Edinburgh, at I. Great Southern and Western (I).—Sept. 19. Dublin, at I. North British.—Sept. 13. Edinburgh, at 12. Shropshire Union.—Sept. 14. Shrewsbury, at 12. South Staffordshire.—Sept. 11. Walsall, at 1.

#### DIVIDENDS.

BIRKENHEAD, LANCASHIRB AND CHESHIRE.—Interest at the rate of 5 per cent. per annum on the 27t. 10s. and 22t. shares, and 4 per cent. on 10t. paid on the 31t. shares, pay-

able Sept. 25.
Bristol and Exeter.—11. 18s. 3d. per share, payable Sept. 20. DUNDER. PRETH AND ABERDEEN .- At the rate of 8 per cent.

per annum, payable Oct. 2.

EASTERN COUNTIES.—St. per share, now payable.

EDINBURGH AND GLASGOW.—At the rate of 6 per cent. per annum. Glasgow, Paislet and Ate.

-At the rate of 4 per cent.

GLASGOW, PAISLEY AND ATR.—At the rate of 4 per cent. per annum, payable Sept. 25.
GREAT NORTH OF ENGLAND.—51. on the 1001. shares; 11. Gs. 5d. on the 401. shares; 11. 10s. on the 301. shares; and 4s. 3d. on the 151. shares, now payable.
GREAT WESTERN.—At the rate of 7 per cent. per annum.
HULL AND SRIBY.—21. 10s. on the 501. shares, and 11. 5s. on the 251. shares, now payable.
LANCASTER AND CARLISLE.—11. per whole share, and 4s. 6d. per third share.
LEEDS AND BRADTORD.—11. Ss. per share.

per third share.

Lerds and Bradford.—11. 5s. per share.

Letnyl Valley.—At the rate of 5 per cent. per annum.

London, Brighton and South Coast.—13s. on the 50t.

consolidated stock.

London, And Norman, Warners — At the rate of 5 per cent.

LONDON AND NORTH-WESTERN .- At the rate of 7 per cent. per annum. LONDON AND SOUTH-WESTERN.—At the rate of 6 per cent.

per annum, now payable.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.—At the rate of 5 per cent. per annum on the 100% shares, and 7½ per cent.

er annum on the Sheffield and Manchester No. 1. quarter

per annum on the Shemield and Manchester No. 1. quarter shares, now payable.

MIDDLESBOROUGH AND REDGAR.—At the rate of 6 per cent. per annum, payable Oct. 18.

MIDLAND.—6 per cent. per annum on the consolidated stock, on the consolidated preferential stock, on the 422. 102. shares and the Erewash Valley shares, and 23.63.40 on the Birmingham and Derby stock, all payable Sept. 4.

NORFOLK.—At the rate of 4 per cent. per annum on the capital stock, and 22. per share on the new 201. shares, payable Sept. 7.

NORTH STATEFORDSHIRE.—42. per share.

payable Sept. 7.

NORTH STAFFORSHIRE.—4s. per share.

NORTHERN AND EASTERN.—1s. 5s. on the 50s. shares, guaranteed 5 per cent. per annum; 1s. 10s. on the 50s. shares, guaranteed 6 per cent. per annum; and 16s. 6d. per share on the 23s. paid on the new shares.

Oxford, Worcester and Wolverhamfton.—Interest at the rate of 4 per cent. per annum; now payable.

Shrewsbury and Chester.—10s. on 16s. paid, and 5s. on 8s. naid.

paid.

SOUTH-EASTERN.—21s. on paid-up shares, 15s. 9d. on shares created March 19, 1848, and 11s. 8d. on shares created November 7, 1844.

SOUTH YORKSHIRE. DONCASTER AND GOOLE .- At the rate of

SOUTH YORKSHIBS, DONCASTER AND GOOLE.—At the rate of 6 per cent. per annum.

TAFF VALE.—41. on the 1261. original shares.

WEAR VALUET.—At the rate of 6 per cent. per annum, payable Oct. 18.

WHITHHAVEN JUNCTION.—22. per share, payable Sept. 4.

YORE, NEWCASTLE AND BERWICK.—At the rate of 8 per cent. per annum on the consolidated stock, on 15t. of the Nowcastle and Berwick original shares, on 15t. of the North Shields purchase shares; and at the rate of 5 per cent. per annum on the remaining 10t. of the North Shields purchase shares; and at the rate of 5 per cent.

purchase shares. York and North Midland.-ORE AND NORTH MIDLAND.—4 per cent. on the consolidated stock, and 12s. on the East and West Riding shares.

### CALLS.

BELFAST AND COUNTY DOWS.—11. 10s. due Sept. 1. BOLTON, BLACKBURN, CLIPBERGE AND WEST YORKSHIRE.—11. on the "A" shares, due Sept. 1. CALEBONIAN.—21. 10s. on the 10s. preference shares, due

Aug. 21. CENTRAL OF FRANCE .- 11. due Sept. 7.

CENTRAL OF PRANCE.—11. due Sept. 7.
CNYLON.—51. due Aug. 21.
COBK AND BANDON.—11. 52. due Sept. 12.
EAST LANCASHIRE.—21. on the preference quarter shares, due Sept. 1.
EAST AND WEST INDIA DOCKS AND BIRMINGHAM JUNCTION.—

EAST AND WEST INDIA DOCKS AND BIRMINGHAM JUNCTION.—
21. 102. due Aug. 31.
GLASCOW, PAISLEY AND ATR.—32. on the new preference
shares, due Sept. 14.
GLASCOW, PAISLEY AND GREENOCK.—22. on the preference
shares, due Aug. 22.
GREAT NORTHERN.—22. due Aug. 31.
IRISH SOUTH-EASTERN.—14. due Aug. 21.
LEEDS, DEWSBURY AND MANCHESTER.—22. 10g. on the balf
shares, due Sept. 4.
LONDON, BRIGHTON AND SOUTH COAST.—11. on the 6 per
cent. preference shares, due Sept. 8.
NEWCASTLE AND CARLISLE.—104. on the new 1001. shares,
due Aug. 21.

## Joint-Stock Companies' Gazette.

We noticed in a former Gazette that an Act of Parliament affecting joint stock companies had received the royal assent. It has just come into force, and is entitled, 'An Act to amend the Acts for faci-litating the winding up the Affairs of Joint-Stock Companies unable to meet their Engagements, and also to facilitate the dissolution and winding up of Joint-Stock Companies and other Partnerships.' The Acts referred to by this statute (11 & 12 Victoria, c. 45) are the 7 & 8 Vict., c. 111: the 8 & 9 Vict., c. 98; and the 9 & 10 Vict., c. 28. The Act is to apply to all companies within the provisions of those Acts, and also those registered under 7 & 8 Vict., c. 110, and to mining companies, and to building societies not inrolled. On a creditor obtaining a judgment or order for payment, an application can be made by petition to the Lord Chancellor in a summary manner, where no fiat in bankruptcy has been issued, and the Court can order a dissolution of the company, and appoint an "official manager" to wind up the affairs, with full powers to act for the benefit of the parties; the same result to follow a declaration by a company of its insolvency. The Act contains 128 sections of its insolvency. The Act contains 128 sections (arranged in sixteen groups), with a schedule of forms, and many of the clauses have reference to the power of the Court of Chancery, and to the duties of the "official managers," whose appointment are vested in that court. By the 123rd section, district commissioners of bankruptey and judges of the courts are constituted western as transfillery. county courts are constituted masters-extraordinary in Chancery, and matters may be referred to them, and they are to have the same powers as masters in Chancery, to whom petitions under this Act are to be referred, and they are to appoint, after hearing the parties, the "official managers." In all proceed-ings the new law is to be termed 'The Joint-Stock Companies Winding-up Act, 1848.

The New Zealand Company are freighting some splendid ships to take out emigrants to their settlements. Within the last few months five or six ships have been despatched. The letters received from some of the passengers in the previous ships speak very highly of the treatment they received, as regards both accommodation and provisions. Emigration to New Zealand and Australia is greatly increasing, and the number of emigrants will be large this year. Several of the leading shipbrokers in the City now run regular packets to the above colonies, one or two vessels always leaving weekly. The average price of passage in the steerage is to the Cape 12L; to Port Adelaide or Sydney 15L per head.

#### Banks.

The half-yearly meeting of the British Guiana Bank was held at Demerara on the 31st of July last. The statement of accounts laid before the shareholders showed a balance of 140,237 dollars, which owing to the very depressed state of colonial affairs, was considered very favourable. The dividend declared was at the rate of 4 per cent. for the half-year, leaving 17,633 dollars to be carried to the reserve fund, which then amounted to 119,326 dollars. The report further stated that "the directors fairly claimed for the institution an acknowledgment of its great utility to the colony, in the existing crisis, for affording every reasonable accommodation to the mercantile interest, and also a sufficient supply of specie for payment of wages on the estates of those planters who had the means, through the hypothecation of their produce or otherwise, of satisfying the bank of the safety of its advances."

#### Docks.

The half-yearly meeting of the SUNDERLAND DOCK Company was held last week. The report was very encouraging. The dock will be ready for the reception of ships by the end of next year. The receipts for the half-year ending June last amounted to 40,351*l*. 6s. 1d., and the disbursements to 24,741*l*. 2s. 11d., leaving a balance to the credit of the company of 15,610*l*. 3s. 2d. The total receipts from the

commencement are 80,846l. 13s., and the total expenditure 65,236l. 9s. 10d., leaving the balance stated. The report was unanimously adopted and thanks voted to Mr. Hudson, the chairman. The meeting then terminated.

The most active preparations are being made for the construction of the BIRKENHEAD Docks—an Act relating to which received the royal assent two weeks since. Under the new trust, arrangements have been made to provide the requisite capital to carry out the formation of these docks. One important feature for the future revenue of the Dock Company is that coal from the Welsh mines can be brought and shipped for exportation at the Birkenhead Docks at less cost and with greater facility than from the coal fields of Lancashire.

#### Mines.

The total quantity of ore sold last week was 4,228 tons; 340 tons of fine copper ore produced 17,916*l*, 18*s*.

The advices received from America state that a very valuable mine of iron has been discovered in the State of Massachusetts.

Letters from Assam, received by the last India mail, mention that measures were being taken for the immediate working of the coal mines on the banks of the Dekhoo. At the depth of 10 ft. the coal is found 10 ft. thick in stratum, giving 4 ft. of pure coal. The want of conveyance for the coal would greatly impede the successful working of the mines, which are considered very important when the extension of steam navigation and the introduction of steam machinery into India are considered. The Benares Gazette suggests that tramroads should be constructed in order to convey the coal to the required places. This could be easily done, for timber is to be had all along the line. The coal is stated to be in inexhaustible abundance, and pronounced to be of very good quality. Without a railway or tramroad, the resources of this and the mines at Mirzapore can never be developed, the latter being situated in a country surrounded by sands and hills.

In reference to the discovery of valuable mines in California, the Morning Chronicle of Thursday last contains some interesting facts in the form of a letter, which we give as being important.—

Montercy, California, April 30.—Having heard a few days ago of the excitement existing in the town of San José de Gindaloupe, situated in one of the northern districts of Upper California, about the discovery of many different classes of minerals, I made it my business to pay a visit to that place for the purpose of searching into the truth or falsity of the many reports in circulation concerning these mines. On my arrival there I was greatly surprised to find that nothing had been exaggerated with respect to the richness of the quality of the many species of rich metallic ore reported to have been found in the neighbourhood. Almost every man I saw there, native or emigrant, had in his possession one or more specimens. Silver, quicksilver and zinc appear to be the most abundant. I visited several of the places from whence these specimens, as I had been informed, had been taken, and gathered several pieces of minerals, some of which I tested myself, whilst others were tested in my presence by persons more intelligent in the business, and I can with all safety affirm that there is scarcely a hill or a low mountain with which the valley of the town of San José de Guadaloupe is bounded on its eastern and western sides that is not capable of producing immense quantities of rich minerals. As to gold, it is said that several mines containing this precious metal exist in those places, but I am not able to authenticate the report.

The silver mine discovered by Mr. Reed, in the valley of San José, is described as having an uninterrupted run east for 3 miles; the vein is 3\frac{1}{2} ft. broad; the depth was then unknown. The ore is described as very fine and easily procured, several tons having been obtained after a few hours' labour. The expense for smelting would be comparatively trifling. In the vicinity of Clear Lake, north of the Bay of San Francisco, large beds of copper ore and caves of sulphur and saltpetre had been found.

The MEXICAN AND SOUTH AMERICAN Company's directors have forfeited more shares upon which the calls have not been paid, owing to the depressed state of the times and other circumstances.

Two furnaces at the BLAENAVON mines have been put into blast this week, and were to commence cast-

ing on Friday.

The latest intelligence from the SOUTH AUSTRALIAN mines, is to April 7th, from Port Adelaide. This company at that date had a stock of 4,500 tons of Burra Burra ore ready for shipment, and large quantities of ore were arriving weekly. The greatest drawback is the want of shipping. Only one vessel was loading when twelve were required to take away the ore lying there. The emigrant ships will be sure to meet with good return freights on their arrival out.

The share-market has remained this week in much the same state as last, very few transactions having taken place. TO CORRESPONDENTS.

E. M., Walbrook.—The fifth half-year's interest.
F. S.—Scrip shares, on or before the 10th of January.
A Suppersum.—It is not in our province. Besides, you do not give the names of the parties complained of.
RECRIVED: A PUBLIN SUBSCRIBER.—A LANCASHIRE SHARE-HOLDER.—E. M., Leeds.

THE

# Railway Chronicle.

LONDON, SATURDAY, SEPTEMBER 9.

The proceedings at the half-yearly meeting of the Lancashire and Yorkshire were of no very cheering character. The refusal of the chairman to explain the losses and other details on the purchase of shares by the Board,-the assertion by the engineer "that to finish the lines between Halifax and Bradford it would take 61. 10s. per share of the West Riding stock, and 3l. 15s. 10d. of the extension stock, and to abandon it would cost 4l. 2s. of the former, and 2l. 8s. 6d. of the latter."-the announcement of the reduced dividend of 6 per cent., - and the declaration by the chairman that he himself had sold whole shares at 69l. to pay his calls; all these facts, together with the want of a chairman and deputy-chairman of the Board, weighed heavily on the spirits of the shareholders.

The report of the Manchester, Buxton and Matlock, after adverting feelingly to the death of the engineer of the company, Mr. G. Stephenson, declared that the directors would immediately authorize the works on the line to Rowsley, if approved of by the half-yearly meeting. No further call is to be made this year, and the arrears are to be strenuously enforced.

The decrease of 2,433l. in the revenue account of the MARYPORT AND CARLISLE was partly attributed to the unsettled state of Ireland. An arrangement has been made with the Carrining their boats in connexion with the line between Liverpool and Maryport. A committee was appointed to negotiate with the York, Newcastle and Berwick, for a sale or lease of the line. Mr. Hudson has lately been inspecting the property, with views probably having the same end.

The reports and accounts of the following companies were adopted at their half-yearly meetings:-WHARFEDALE;-NORTH-WESTERN; SHEFFIELD, ROTHERHAM AND GOOLE; -BLACK-BURN, BOLTON AND WEST YORKSHIRE, the directors of which declared their satisfaction at the traffic receipts already produced;—the WEST London, the directors of which announced their disappointment at the non-fulfilment of the powers obtained by the London and North-Western and Great Western; consolation was, however, afforded in the assurance from a shareholder that the works would eventually be carried to the Thames, as the London and North-Western wished for a connexion with the London and South-Western.

Of the Scottish half-yearly meetings we have to declare the adoption of the reports by the proprietors of the following: — The EAST LOTHIAN, Mr. Drew of Glasgow protesting against the whole proceedings; the STIRLING AND DUNFERMLINE, part of whose line is shortly to be opened, the whole being under contract save the portion from Stirling to Alloa; —DRUMPELLER, who postpone their dividend; — DUNDEE AND PERTH, in which, strange to say, there is an increase of from 100% to 150% per week on the revenue, compared with the corresponding period of last year; —the MONKLAND amalgamated companies, who announce a dividend of 5 per cent.,—and the Scottish Centrale. At this latter, the chairman intimated his satis-

Digitized by GOOSIC

faction at the gradual increase of their traffic since the opening of the entire line, and the hopes of the Board of a harmonious co-operation with the different parties interested in the project to retain the traffic of the various districts.
The completion of the Tay Bridge will much help this, and the favourable arrangements with the Edinburgh and Glasgow will no doubt have their influence. The southern companies will of course abide by the agreement under which the leasing bill was applied for.

After much prolonged talk, and many personal attacks, by no means new, nor (let us hope) true, the shareholders of the most important of the Irish half-yearly meetings received their various reports from their directors, viz., DUBLIN AND DROGHEDA, who await the completion of the viaduct over the Boyne, for the developement of their passenger traffic: -- WATER-FORD AND LIMERICK, whose works beyond Tipperary are postponed for Government assistance :- BELFAST AND COUNTY DOWN, who anticipate much from the opening of their Holywood branch ;- Dublin, Dundrum and Rathfarn-HAM, the dissentient shareholders of which wish to wind up the concern; -KILLARNEY AND VA-LENTIA, whose liabilities are reduced to 2.7871. -SLIGO AND SHANNON, who are still sheltered under the Extension Act from proceeding with their works :- DUBLIN AND BELFAST, the directors of which are authorized to borrow 316,666l. for the completion of the works ;-and the Dun-DALK AND ENNISKILLEN, who furnish separate answers for all the recommendations forwarded to them by the committee of inquiry.

From our official returns it appears that the amount of traffic for the last week, on 4,044 miles of railway, was 219,625*l*., thus accounted for:—115,113*l*. for the conveyance of passengers only, 47,972l. for the carriage of goods, and a remainder of 54,640l. for passengers and goods together, not respectively apportioned; being an increase of 13,3881. over the corresponding week of last year, when the mileage was 3,231. The average earnings per mile were 55l., whilst in 1847 they were 64l.

#### SECRETARYSHIP OF THE LONDON AND NORTH-WESTERN.

We have already said what we think of the importance to the interests of the London and NORTH-WESTERN of the subject on which we are asked for further information in the following Letter of a "Proprietor,"-who, we may add, has furnished us with his name and with the particulars of his stake in the concern, both entitling him to be heard with attention in a case like the present. The crowded state of our columns last week will have already explained to him the delay in inserting his note, to which we could not then, for want of room, have added the reply he wishes to obtain. We fear that our answer to his inquiry will scarcely be more satisfactory to any proprietor than the occasion which has furnished it has been to ourselves :-

The account you gave in the Railway Chronicle of the 19th as to the manner in which the secretaryship is to be filled on Mr. Creed's retirement, took me by surprise. I had already heard that that gentleman would probably leave us before long. but looked as a matter of course to his place being filled by Mr. Booth, of whose superior qualifications you have not said a word too much. Nor am I the only proprietor who conceived the best hopes from the expected advantage of his experience and ability employed at head quarters. The arrangement, indeed, was so obviously suitable that it is hardly conceivable how it could be passed over. Here is the oldest in date of service and ablest of all existing secretaries in the railway world already in the employ of our company,—at a time, too, when

while to go out of the company's staff, if need were, to seek for a person thoroughly fit for the situation, as successor to Mr. Creed. And this officer, whom we have, the very man whom on such an occasion it would be an object to bring in to our service at any price, is, you tell us, to be excluded from the place he is better qualified than any one else to fill, in favour of some one "whose name, even, is utterly unknown in the railway world." Who is the gentleman thus favoured? As I am not just now within reach of any of the directors, I cannot address my inquiry better than to you;—as it seems you are already in the secret, which has been disclosed in a way most unwelcome to me; and I think it will be so to many other proprietors in this company. There are not a few of the original shareholders still belonging to it, who know what the railway system owes to Mr. Booth,—who know, indeed, that for many years he acted altogether in the capacity of one of its most considerable founders,—that he had been a principal agent in completing the first passenger railway and in laying down all parts of the scheme for the working of such lines that has since been followed, - years before gentlemen in London would condescend even to hear of railways, and long enough before our present eloquent chairman had given them the benefit of his countenance. If Mr. Glyn has not sufficiently heard, there are many who can tell him, what Mr. Booth did before his time to make railways what they are. Why, sir, the wonders of the locomotive are scarcely more Stephenson's creation than his,-for the tubular boiler, which has rendered the machine available for high speed, was Mr. Booth's sole invention. Nor is this the only instance of what he has contributed in the way of mechanical improvement-to say nothing of all the general details of the system, scarcely one of which does not bear the mark of his hand. The screw-connecting chains that so completely fasten our carriages—the very grease that oils their axles, we owe to his ingenious and active mind. The "rules and regulations" drawn up by him for the working of the Liverpool and Manchester, form to this day the basis of all the important manuals under the title of instructions to enginemen, guards, pointmen and station-keepers on every line in this kingdom. Their main substance and their entire principle will be found to have been taken from the model which Mr. Booth had to frame for himself, without any such assistance to guide him. This capacity in the stricter course of a secretary's duties is known to all who have had any occasion to study the railway system. Throughout a period of more than twenty years, all who sought for help or information on the subject, __not in England only, but in Belgium, France, Germany the United States,-have gone to Mr. Booth as the undoubtedly first authority on all matters of railway administration. I should have thought it mere waste of time to name these well-known facts a month since. They must have been known-one would have thought to all at least who sit at railway Boards ; and if known, what second name even of known railway merit could they allow to be proposed for secretary in place of Mr. Booth's It seems that our Board in London either do not know what his qualifications are or do not think qualification any merit for such a place. There is no escape from one of these alternatives, unless, as you say, it is Mr. Booth who refused to come to London, and not the directors who have declined to invite him to come there. One is naturally anxious to know what are the claims that can have prevailed over such as I have stated above. Pray help me to understand them. Yours, &c., A PROPRIETOR.

Cheltenham, Aug. 24.

On the chapter of claims, we cannot profess to afford our correspondent any information. What we have heard we shall tell him. But, indeed, it would in any case be idle to speak of any one approaching Mr. Booth in point of experience and all that implies a superior capacity for the office in question. The directors, it would seem, have not thought it necessary to make even a show of taking these points into consideration in appointing to the office which Mr. Booth has not been called to fill. The

destined to a gentleman of the name of Stuart or Stewart (he must excuse us if we do not vet know the right spelling, as his signature has not yet appeared, we believe, in any public railway document). Mr. Stuart's connexion with railways is said to be of about two years' duration. Before his introduction, in some supernumerary if not subordinate capacity, to the office at Euston-square, he was, we are told, Sir Henry Pottinger's private secretary in China ;-and we cannot learn that in any previous stage of his education railway business had been an object of his study or practice. Whatever he may have learned to fit him for the place of the chief officer of the greatest railway body in this kingdom. must, therefore, have been acquired during the two years of employment, in one way or another, at the office, since 1845. This is all we can say in reply to the "Proprietor's" question: and we are heartily sorry that we have to say anything so entirely decisive of the character of the designed appointment. The choice is too extreme to leave even a place for comparison or comment. It is sufficient to name the two parties, one who ought to have been, the other who it seems is to be appointed; -Mr. Booth, with his twenty-five years' experience of a system he had a large share in creating: Mr. Stuart, arrived from China (we suppose) scarcely two years since, and now furnished for railway business with what he has been able to pick up in a few months' sitting at Mr. Creed's table! To heighten such a contrast by anything we could add would be impossible.

A NATION OF TRAVELLERS.

The number of passengers, according to the return recently published, who have travelled by railway during the half-year ending on the 30th of June last, amounted to 26,330,492,which is just about the population of England, Scotland and Ireland,—and some idea may be formed of the tide of human beings who have passed over the country, as Mr. Locke says, by means of two parallel pieces of iron, when we reflect that the official numbers actually represent the transmission of every man, woman and child in the United Kingdom, a certain distance, within the short period of six months, at a speed previously unattainable, and with a reduction of danger, considering the mass of human beings thus transferred, almost infinitesimal. Archimedes is recorded to have said, if he had standing ground he could move the globe, and though our modern engineers have not exactly attempted to work out that problem, they have satisfactorily solved another, which a few short years since would almost have been thought as visionary. The number of accidents figure as 189; 90 resulted in death, and 99 in injuries more or less severe. Of passengers, 6 unfortunately were killed and 60 hurt from no fault of their own-a wonderfully small proportion when we consider the enormous aggregate who now use this mode of locomotion; the remainder of the casualties is made up from accidents to railway servants. labourers on the lines in construction, and persons who have taken this novel mode of committing suicide, by precipitating themselves from trains or into their way, but who, in fact, have as much to do with the safety of railway travelling as a man blowing out his brains has to do with the safety of fire-arms. Of the accidents to those regularly employed by the companies, a large proportion seems to have arisen from the carelessness of the men themselves, and we have no data as to the per-centage, nor of the labourers; but, when the nature of their work is taken into account, we are surprised that there have not been more deaths; and we have little doubt that many other employments the state of the concern would make it worth our place, we are told, has for some time been would give a much higher rate of mortality and

recollected that when finished a great cause of damage is at once cut off, which just now, whilst so many are employed on the lines in construction, must largely increase the average. We make these remarks without any wish for concealment of the number of accidents, and merely to call public attention to the real state of a question all are interested in. We urge no relaxation of any precaution that can tend to preserve life and limb; but when railways and their directors are held up as a sort of public executioners, it becomes our duty to place the matter in its true light, and we boldly assert that the statement from which our figures are taken is a wonderful evidence of the comparative safety with which one million of people shift from town to town and from village to village every week, or, to bring the numbers to lower denominations, a host of 144,000 souls is daily on the move.

# THE COMMISSIONERS OF WOODS AND FORESTS AND THE KEW VIADUCT.

We printed last week a letter from a correspondent acquainted with the official affairs of the Office of Woods and Forests, in which he stated that the entire responsibility for the stability of the bridge of the Windsor, Staines and South-Western Railway, as where the line passes through the Deer Park at Kew, lies with Mr. Locke, and not with the engineer or architect employed by the Commissioners of Woods to give the design for the bridge. We expressed our opinion that this was one of those cases of divided responsibility, in which we generally find that between two stools the work falls to the ground. Our correspondent "H. L." however, stated that "in no way did the Commissioners dictate to or control the company in any of the matters relating to its construction' on Mr. Locke he throws "the sole responsibility in all that relates to its giving way.

To this letter we have received no reply, excepting that the plans have been sent to us, which were furnished by the Commissioners, and also the agreement of the Commissioners with the railway company. We are left to form our own judgment in the matter. The second clause in the agreement provides as follows :-"the railway and works (in the Deer Park, namely) shall be made and constructed by the said railway company, according to the plans, section, and elevation, Nos. 1, 2, and 3, which were supplied by the Commissioners, and appended to the report. The fourth clause provides that "a superintendent shall be appointed by the said Commissioners, at the expense of the company, to secure the due performance, so far as relates to the work and the park, according to the plans hereto annexed."

Now, we must confess that, when the Commissioners furnish plans, section and elevation of a viaduct, and also appoint an inspector to see it properly executed, there appears to us a pretty good share of responsibility taken by the Commissioners. We are at a loss to see how else the company or their engineer could proceed than simply to place the drawings in the hands of the contractors, and direct them to execute the work to the satisfaction of Her Majestv's Inspector. This having been done, we should have thought the company and their engineer absolved from all responsibility. We cannot see how they have failed in their duty.

The bridge, however, has failed. Looking at the plan given by the Commissioners, we think it very ill suited for the circumstances, and very likely to give way at the foundation in a treacherous soil. We feel quite sure of this, that neither Mr. Locke nor any other engineer we know would have designed such a bridge

mutilation than railways, and it must also be for such a place. We certainly think it the last ] we should have adopted.

In these circumstances, we are of opinion that the Commissioners' bridge, built from the Commissioners' plans, elevation and section, under the Commissioners' own Inspector, should carry with it whatever reputation may attach to the work, whether good or bad. In their anxiety to impose their own plan on the company they have absolved the company and their engineer of the chief if not the whole responsibility.

#### Correspondence.

PRINCE ALBERT'S VISIT TO GRIMSBY.

I see it is announced that the Prince Consort is to honour Great Grimsby in the autumn by laying the first stone of the new docks. I dare say the works will be ready; but as the main line from Sheffield cannot be completed by that time, but will be, I imagine and hope, in the spring, I would suggest that this important ceremony should be delayed till the spring. Such an occurrence is a rare thing indeed for these parts, and the more people that can enjoy it the better. I believe thousands would go from this neighbourhood if the railway were completed, but who will not if there be no railway.

A SHAREHOLDER IN THE DOCKS.

Worksop.

#### Saggin.

The directors of the Eastern Counties, with a due regard for those living in or near the district, who may wish to attend the Festival at Norwich, intend to run special trains from Yarmouth at 9 a.m. to arrive about 10 a.m., and from Norwich at 12 noon. Visitors from Yarmouth and the intermediate country will thus be enabled to attend the performances and return home the same night. It is suggested that special trains should also run to and from Dereham and Cambridge. With great liberality also, the directors will issue return tickets to all the performers in the orchestra, which will take them back to London any time in the week.

A correspondent, who had occasion last week to travel over 2,000 miles of railway, with only that fit-ful sort of sleep obtainable in a train in transitu, suggests the desirableness of establishing, in cases where the journey is a prolonged one, what he calls "railway hammocks," or something in the shape of a couch, for sleeping accommodation, to be specially set apart, as are the apartments for ladies, either for invalids or for those who like to pay for the convenience, rather than suffer that continuous cramp consequent on a constrained sitting of twelve or fourteen hours, on a journey from London to Edinburgh and Perth. The comfort of the thing would be amazing—to say nothing of the chances of escape in case of accident -and be well worth the cost of a few extra shillings on the fare. The only thing that at all approaches the proposed convenience is the portable pillow and mattress; and our correspondent says he knows a director of the Great Northern who travels much and makes himself as comfortable by this means with his slippers in the capacious carriages as though he were in a bed. Another suggestion for the convenience of commercial and literary men and gentlemen of the press, is the constructing of a carriage with writing conveniences. In the express train between London and Liverpool, which is occasionally more of a counting-house than a mere travelling conveyance, such an appendage would be highly advantageous.

We are always glad of the opportunity of noticing

the interchange of good feeling between the various railway officers and servants. On the 28th inst. a meeting of the guards and porters of the EASTERN COUNTIES took place at the White Hart Tavern, Shoreditch, to present Mr. Grimshaw with a gold watch, on the occasion of his retiring from the appointment of station-master at the London terminus.

If the caterer of every railway refreshment room gave a breakfast as substantial and comfortable as mine host at the Carlisle station, there would be no outcry of extortion. Those at Derby, Wolverton and Swindon cannot do better than pay an early visit

mation committee, appointed at the half-yearly meeting, are to meet on the 14th inst.

The half-yearly meeting of the PORTBURY PIER

proprietors was to have been held at Bristol on the 2nd, but a sufficient number of shareholders not having attended to constitute a meeting, it was adjourned sine die. The report stated that the Comjourned size die. The report stated that the Com-missioners had granted an extension of time for the completion of the works. The financial position remained nearly the same as at last meeting; no further engagements have been entered into. A considerable sum had been paid on the new call, and some arrears of the former call had been collected. The directors fear they will be compelled to take proceedings for the recovery of the arrears. They have determined to suspend the works until after the February meeting in 1849.

The works on the under part of the Kelso and Sr. Boswell's branch seem to be making little progress, except the bridge over the Teviot, at Roxburgh, which is now so far advanced that the important operation of "casting the arches" has commenced. Great numbers of permanent rails, says the Kelso Chronicle, are laid down by the side of the line, which augurs more expedition for the future. More time

augurs more expedition for the future. More time has already been spent on these two miles than would be required to construct a line five times the distance. We postpone the proceedings of the inquest on the death of Col. Baird (who died from the effects of the accident on the London and North-Westers on the 2nd inst.) till the proceedings shall have termi-

The approaching inauguration of the Tournay and The approaching inauguration of the TOURNAY AND JURBISE, which will probably take place in the course of October next, will greatly abridge and facilitate the relations between London and Brussels, by Calais to Lille on the newly opened portion of the Great Northern. The majority of the travellers, who are now obliged to submit to the discomfort of the passage from Dover to Ostend, will then, no doubt, prefer the route by Calais, whence, by means of the Lille and Tournay and Jurbise lines, they will reach Brussels

in a few hours.

The receipts on the DIEPPE portion of the PARIS AND ROUEN for the week ending Sept. 2 were 3971.

The following decree respecting the Paris and Lyon, appeared in the Monitur of Monday:—"The holders of shares in the Paris and Lyon shall be allowed until the 15th of September inst., at 6 p.m., to

allowed until the 15th of September inst., at 6 p.m., to declare their intention of paying the 250f., forming part of their engagement."

The correspondent of the Daily News furnishes the following notice of some of the German lines:—
During the first six months of 1848 the total receipts of the Berlin and Stetrin line amounted to 249,901 thulers, being a decrease of more than 13,000 thalers thalers, being a decrease of more than 13,000 thalers compared with the corresponding period of 1847.—
The total receipts of the Mekklebburg during the month of July last were 6,430 thalers. The section from Schwerin to Wismar was opened only on the 12th of that month, since which date the receipts have more than quadrupled. The recently published report of the Analt Course (Bernburg) shows report of the Anhalt Cothen (Bernburg) shows that the receipts do not cover the expenditure; the receipts being 23,191 thalers, and the disbursements. 35.909 thalers.

It would seem, says the Irish correspondent of the Daily News, we don't know how to keep our own time here—a circumstance which is often very serious. Between the time indicated by the clock at the Kingstown railway station, at Westland-row, and that by our Post-office, a difference of two minutes prevails. Each insists his own clock is correct, but the result to the public is often very inconvenient. Is not this an argument for the observance of the Greenwich time so loudly inveighed against !

#### Reports of Micetings.

[Continued from p. 644.]

LANCASHIRE AND YORKSHIRE.

Sept. 6.—Half-yearly Meeting, Manchester.—Mr. H. Houldsworth in the chair.

The CHAIRMAN said that it was only at the urgent request of his colleagues that he took the chair, it having been out of his power, arising from his engagements elsewhere, to pay any direct attention to the business for some time past; and therefore should any question arise, he should avail himself of the presence of those directors who had daily attended

Swindon cannot do better than pay an early visit to the spot, and reform their purvey, by adopting Carlisle fare and Carlisle tariffs. A breakfast to your heart's content may be had for 2s.

Mr. Hudson, M.P., is reported to have been on a visit of inspection of the Newcastle and Carlisle and Alston branch. The local papers assert that his visit is presumably indicative of his desire to effect a purchase of the latter undertaking. The amalga-

In comparing the receipts from goods, it should be borne in mind that although the company had already, in the corresponding part of last year established themselves as general carriers upon their own line to some extent, yet that a considerable increase in that department of their business a considerable increase in that department of their business having been made, the additional expense of that service has to be deducted in order to show the true result, which can be more easily obtained from a comparison of the actual mileage of tons conveyed along their line. The total gross receipts on the company's lines during the last half-year (excluding the Wakefield, Pontefract and Goole line, amount to 249,7314, compared with 231,7897 during the corresponding period of last year. In accordance with the principle laid down in the two last reports, the separate revenue accounts of the Manchester and Bolton, North Union, and Preston and Wyre lines are postponed until the conclusion of the whole year, when the balance will be struck and brought into the account as in March last. The balance of nett income on the Manchester and Leeds line proper, applicable to dividends and interest, together with the balance brought forward from last half-year, amounts to 114,0525, 6s. 8d., as shown in the subjoined account, out the balance brought forward from last half-year, amounts to 114,055. 6s. 3st., as shown in the subjoined account, out of which the Directors recommend that a dividend be declared at the rate of 6 per cent. per annum, clear of income-tax, leaving a balance, after payment of interest and income-tax, of about 1,000% to be carried forward. The capital tax, leaving a balance, after payment of interest and incomerax, of about 1,000%, to be carried forward. The capital account subjoined shows an additional receipt of 822,303%, 164. 104., of which 703,6194. 184. 446. have been received on account of calls and arrears, and 113,6382, 184. 64. from loans on mortgage, the latter being the balance of mortgages issued beyond those falling due and paid off by the company during the half-year ending the 30th of June last. The arrears of calls still outstanding are 300,7704., and the directors regret to say that, all other means having failed to reduce this large amount, they have been compelled to resort to legal proceedings, which have accordingly been commenced against those shareholders whose arrears were of the longest standing. It is satisfactory to add, that in many cases the arrears are in process of liquidation, and the directors hope that the comparative facility with which money can now be obtained, will obvinte any injury that might be apprehended from this source. The bill for the consolidation into stock of a portion of the paid-up capital of the company and for assimilating the remainder into shares of an equal denomination, has received the royal of the company and for assimilating the remainder into shares of an equal denomination, has received the royal assent; and it is the intention of the directors to proceed immediately, under the powers of that Act, to call meetings of proprietors, before whom their propositions will be submitted in detail. The Leeds Central Station bill, in which this company is interested, together with the Great Northern, London and North-Western, and Leeds and Thirsk Companies, has also received the royal assent. The bill for the dissolution of the Liverpool, Manchester and Newcastle Impetion in which this company holds 6638 stores in Junction, in which this company holds 6,668 shares, in accordance with their Act of Parliament, has been rejected by the House of Lords; but as the ultimate prosecution of the line, if decided upon, is so remote as to render further notice at present uscless, the directors have only to say that it will receive their careful attention whenever the question shall assume such a shape as to render the intervention of this company, in right of the shares held by them, requisite this company, in right of the shares held by them, requisite to secure their interests. With regard to the progress of the various works towards completion, the directors have to report that, since the last half-yearly meeting, the Wakerfield. Pontefract and Goode line, including the Askern branch to its point of junction with the Great Northern line near Doncaster, has been opened to the public, and that the traffic is increasing in such a manner as to hold out every expectation that the estimate of profit from that undertaking will be fully realized so soon as adequate provision shall have been made for its accommodation. This vision shall have been made for its accommodation. This subject has lately engaged much of their attention, and arrangements are in progress with various parties anxious to avail themselves of Goole as a port of export and import for goods. This line, however, must be considered as only for goods. This line, however, must be considered as only partially completed until the opening of the Methley branch to Leeds, of the line from Horbury into the Barnsley and Silkstone coal-field, and of the extension of the Great Northern line into Lincolnshire. It will not be until these connexions are formed that a fair estimate can be made of the remuneration to be derived from this undertaking. The contract for the Mothley branch was let in April last, and

the directors intend to push it forward so as to be completed simultaneously with the continuous line of the Northern into Lincolnshire. The Barnsley line is not under the control of this company, but the directors have agreed upon terms to secure its completion in about fifteen months; and they have every reason to expect that the Great Northern will at an early period urge forward the execution of their line from Doneaster southwards, so as to secure a communication with Leeds and the West Riding by that route, as it appears by their report that a length of about 65 miles, from Peterborough by Boston and Lincoln, will be opened to the public in the course of the ensuing month. That portion of the West Riding line from Mirrield by Cleckheaton to Low Moor and Bradford, which formed the original project of this company in its bill of 1844, has now been opened as far as Low Moor. The remainder of the line to Bradford, though short, being about three miles in length, comprises some very heavy work, including a tunnel 1,628 yards long, and the directors cannot at present speak with certainty as to the time of its completion. The Burnunder the control of this company, but the directors have 1,629 yards long, and the directors cannot at present speak with certainty as to the time of its completion. The Burnley branch has been restricted for the present to one line of way, which is expected to be completed in the month of October next. The land and works have been purchased and executed for a double line, which will be laid down whenever the trade of that town and district shall require whenever the trade of that town and district shall require it; but in consequence of the want of connexion with the East Lancashire Company's line at Burnley, where little or no progress has yet been made by that company towards effecting a junction, the directors do not think it necessary to proceed immediately with the second line of way. The extension of the Heywood branch to Bury, completing the communication with the Liverpool and Bury line, has also been opened, with the exception of a short junction line under the East Lancashire at Bury. The proprietors will remember, that when in the report of last March it was recommended that the dividends to the Liverpool and Bury shareholders should commence from the 1st of July in this year, the directors expected to be able to open the line for traffic as far as the borough gaol in Liverpool during that month; but from the previous delay in the proseduring that month; but from the previous delay in the prose-cution of the works, consequent upon the pecuniary pressure of the last twelve months, and from the adverse state of the weather during the summer, it has been found impracticable to fulfil that expectation. The line is expected, however, to be opened for passenger traffic in October next. With to be opened for passenger traffic in October next. With the Tithebarn-street extension into Liverpool the directors have not thought it desirable to proceed, although the sanction of the proprietors was obtained to their so doing, as they preferred to concentrate their means and attention upon those works which could be brought at the earliest period into profitable operation. The Ardwick branch will be opened in October, according to notice already given to the Railway Commissioners; and from the direct communication of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the be opened in October, according to notice already given to the Railway Commissioners; and from the direct communication thus established between their Yorkshire district and Stockport, Birmingham, the Potteries, and the whole of the South-west of England, the directors believe that an increased traffic will be derived over their main line fully adequate to the outlay. For the precise state of these, as well as the remaining works, the directors beg to refer to the engineer's report. By the above it appears that the whole additional mileace opened during the present year will be equal to 91½ miles, viz.:—Wakefield, Pontefract and Goole line and Askern branch, 37½ miles; Cleckheaton line, 7½; Liverpool and Bury line, 32; Burnley branch, 3½; Bury and Ardwick branches, 6. And it may be proper here to observe that the Liverpool and Bury line, as now constructed, includes three miles of the most costly portion of the Manchester and Southport line through the town of Wigan, after which outlay the cost per mile of the remaining portion of that line, when executed, will be small, as the works are of a light and inexpensive character throughout. By taking these data in conjunction with the statement of cost furnished in the capital account, the proprietors will have, to a considerable extent, the means of forming their own judgment as to the probable results to this company cost turnisated in the capital account, the proprietors winhave, to a considerable extent, the means of forming their own judgment as to the probable results to this company during the next twelve months; and although the accession into the receipt of dividend of so large a proportion of new lines, whose resources can only be fully developed by time, may seem at first sight to render speculative and uncertain that which was previously ascertained and definite, there are yet some observations which may serve to modify or correct that impression. On the Wakefield, Pontefract and Goole line the nett earnings from the list of April to the 30th of June last will be carried forward in aid of the receipts during the current half-year, when the shareholders become entitled to dividend; and this, as well as the Cleekheaton line, can only be considered as partially opened for traffic, so long as they are unable to afford sufficient accommodation for the traffic in goods. The shareholders in the Liverpool and Bury line are only entitled to dividend at a rate of I per cent, below the current rate paid by the company for a period of two years; and on the Burnley, company for a period of two years; and on the Burnley, Bury and Ardwick branches, the capital for which was in-cluded in the creation of the fifths shares, the cost will become a charge upon revenue at the rate of 5 per cent, only, the difference between that rate and the dividend of the company having been always borne by revenue. The last remark applies also to that portion of the Wakefield and Goole capital which has been contributed by the fifthand toole capital which has been contributed by the intra-shares of this company. The amount also raised by mort-gage in each case may be looked upon as a fixed charge at the average rate of interest actually paid by the com-pany, which is at present about 42. 72. 64. per cent and will probably vary little for the next one or two years, after which time a considerable reduction in this item may be confidently expected. Having thus adverted to the chief points of interest connected with the internal progress and prospects of the company, the directors will congress and prospects of the company, the directors will con-clude their report by assuring the proprietors of their continued attention to their external relations both to the public and to the neighbouring railway companies, with both of whom it is their constant endeavour to maintain the most friendly terms. At the same time, they hold it right to add that they recognize as their primary duty that towards the proprietors, by whom they have been entrusted !

with the management of their property and the controul of a vast expenditure; and they consider that, so long as they shall comply with the conditions attached to the powers granted by the Legislature, they are bound to make a full and fair remuneration to the proprietors their main object. Railways are often spoken of, and even openly claimed, as the property of the public; and, unfortunately, have been too often dealt with as such, instead of being regarded in their true light,—that of a private commercial enterprize, depending for its success upon the amount of benefit conferred upon the public. If conducted with this view, your directors are firmly convinced that the undertakings of this company will deserve and will command an ample return for the outlay.

The capital account showed the receipts up to the present time at 8,448,579.; expenditure, 8,242,627l.; balance in hand, 205,952l. A sum of 645,010l. has been expended on capital account in the last half-year, the principal items in which are 68,692l. for stock in land and works; 88,488l. for locomotive engines, carriages, waggons, workshops, &c.; 46,715l. for the Burnley branch; 29,445l. for the Heywood extension; 21,769l. for the Ardwick junction; 97,582l. for the Uwkefield, Pontefract and Goole; 168,625l. for the Liverpool and Bury; 38,830l. for the Huddersfield and Sheffield; and 108,497l. for the West Riding Union lines.

#### Nett Revenue Account.

Surplus brought forward from half-year ending
Dec. 31, 1847
Balance to credit of revenue account for halfyear ending June 30, less 20,353. 34, 8d., interest on loans for same period . 80,422 9 10

Surplus, subject to income-tax on dividend £3,716 13 11

The CHAIRMAN rose to move the adoption of the report, and in doing so would not detain them at any length. It could not be expected, under the circumstances of the half-year which had just passed, that the report could contain anything very con-gratulatory; but he felt sure that if it was viewed correctly, nobody could draw conclusions from it which should lead them to despair of their position. There was a predisposition in the public mind to undervalue railway property, which was a natural consequence of the excitement which existed in its favour two or three years since. He saw no reason why the Lancashire and Yorkshire should despond at the present moment as to the future returns upon He had always maintained that the their capital. line did not fairly earn more than 6 per cent., and he saw no reason to change that view, even when all the branches and extensions of the scheme should have been completed, however unprofitable some parties seemed to think they would be. The actual mileage belonging to the company at present earning revenue was 64 miles, and the total amount of capital absorbed in it up to June was 4,373,000l., and the revenue from it for the year could not be taken at less than 380,000*l.*, or about 5,300*l.* per mile, which was 6 per cent.; and successful as the Lancashire and Yorkshire scheme was once estimated, it had never actually earned more than 64 per cent.; so that they could not be surprised now that the fair honest dividend declared should be no more than 6 per cent.; and there was a time when a 6 per cent. dividend was considered equal to a very considerable premium on their stock. During the present year, 1848, they would have opened 91‡ additional miles, the estimated cost of which (and a considerable portion had been paid) was 3,000,000/. To be able to continue to pay 6 per cent. upon that additional amount of capital they would require an average receipt of 2,900% per mile;

Digitized by Google

that is, if they got little more than one-half more than they were deriving from the 64 miles now working, they would not be bringing any additional weight upon the old concern. Then there were 27½ miles more in progress of formation, to be completed at some later period; and these formed the heaviest portion of all their undertakings, as they would cost 1,600,000l. Besides this there were also 42½ miles which would require 1,000,000l. more capital, not yet begun, but which it would be advisable to begin as soon as possible. Taking these together they would form 161 miles of railway, and to maintain a dividend of 6 per cent. on all the additional capital would require that their earnings should average a total of 3,100l. per mile per annum, or only about half the receipts per mile that they at present derived from their 64 miles now open. Under these circumstances he augured that the present would be a minimum dividend. There are some other points connected with this subject. I think we may rely with confidence upon the data we have in the amount of capital already in operation. We are not now arguing as the urgent promoters of new schemes, but we have certain data to go by; having sunk more than one-half of our old capital, and that capital yielding a certain amount of profit, and yielding it, too, at this particular time. I have more than once alluded to the difference in the receipts of companies like this in adversity and in prosperity. In the years 1842 and 1843, after our railway had been opened for twelve months, our revenue was stationary or nearly so for the two years. It was 228,000%. the one year, and 240,000% the next. During that period our trade was depressed. In 1843 things began to mend; and without the addition of a single mile of railway our income rose 47,000l. in one year, and the next year it was 47,000l. more. So that in two years it rose 94,000l. above the 228,000l. I am anxious, if I can, to impress upon the shareholders that we are upon a sound foundation. I am rather endeavouring to keep down than to excite expectation in your minds. I will not shut out from view that there are new lines to be opened, which must necessarily take a portion of our traffic, and that is a point that ought to be noticed. The Huddersfield and Manchester line is one that appears most likely to affect us—it must take off some our traffic on the one hand, but on the other hand it must also operate as a feeder, and a very important one, to many of our lines. In all quarters where we have seen that rival lines have been opened, the whole apprehended deficiency has since vanished, and I believe it will do so in this instance. There is another cause in operation, silently and slowly contributing to our success. There is in all this district a natural disposition for capital to be sunk in buildings near the lines of railway. We never set up a wooden box, to form a station, but we almost immediately find houses beginning to be crected near it, and there is no doubt that two-thirds of the increased population will, in a few years, be located in dwellings concentrated upon the lines. Now looking to all these things, I say we have no reason to despond with regard to our undertakings. There may be patience required, but our concern is sound; or if ours is not sound, the whole amount of railway expectation is a delusion and a snare. I am sure there is no railway enterprize rests upon a surer foundation than that in which we are connected, and the directors in this company being the largest shareholders at the present day, it bears testimony to the fact that such is our conviction. He concluded by moving the adoption of the report.

Mr. G. Parsons seconded the motion.

A SHAREHOLDER said it was stated in the report that the Liverpool and Bury shares would come into dividend from the commencement of July last,-now, he wished to know whether that proprietary were to be paid that dividend out of the revenue or out of the

capital of the company.

The CHAIRMAN: The question of a dividend to the Liverpool and Bury proprietors did not form any portion of our business to-day. The dividend of the Liverpool and Bury, as arranged with a deputation of the company, began to accrue on the 1st of July, by which time it was anticipated the line would have been opened, but unfortunately the directors had been disappointed.

Mr. H. RAWSON said: I wish to ask a somewhat difficult question. In the report of the last half-yearly meeting there was a statement that the directors had purchased shares in their own and in other companies, including shares in the Manchester and Leeds, created, but not issued, 7,450; since purchased in the market, Leeds Extensions, 2,282; Liverpool and Bury, 906; and Huddersfield and Sheffield, Huddersfield and Manchester, Manchester and Southport, Liverpool, Crosby and Southport—in all 8,490 shares. Are these shares still held by the directors? And as there must be an enormous amount of loss on these purchases, I

wish to know if the directors have estimated the | amount of such loss, as well as the authority for the purchases.

The CHAIRMAN: The shares are still held, but the proprietors are aware that a question of considerable importance has been raised with regard to our preference stock; and under such circumstances, pending that litigation, it is not considered expedient for the interest of the company that the details of this question be at present entered into.

Mr. H. RAWSON: With all respect, that is not a satisfactory answer; because whatever legal points may arise, there cannot be the slightest doubt that all these matters must be brought before the court to which reference has been made; and the shareholders should not be kept in the dark. They ought to know the worst, if they do not know it already, though, so far as the price of the shares in the market is concerned, I think we can scarcely be worse. The statement of accounts is very unsatisfactory. The chairman has said we must form our own judgment as to the probable results for the next twelve months; but it is impossible from this statement of accounts for any man to form an opinion. And this brings me to another question, and it is this—that as there is no credit given in the statement of capital account for shares purchased, to what account has the purchase-money been placed, and what class of shareholders have paid and are to pay the future calls on these purchases? That is important, in consequence of the Leeds stock being so divided into classes. The company is divided into a great number of interests, and this question must be solved some time or other—the sooner the better, because we shall then know whether any class of shareholders has a preference over another.

The CHAIRMAN (after a long conference with the other directors): I can assure the shareholders there is no part of our duty more disagreeable than that of withholding information asked for by the proprietors; but we are bound to look after what we think best for the general interest. This is a question of confidence in the Board, and so long as the shareholders think fit to give us confidence, we think we are justified in withholding any information cal-culated to damage the general interest. We stated in the last half-year's accounts the full amount of shares we held. They are there specified; the obligations upon them are all simple matters of calcu-lation, and with regard to our having applied the funds of this class of shareholders or those of others to improper purposes, or having done damage to any particular class for the benefit of others, I must say we throw ourselves upon the shareholders to believe that we are incapable of doing so, and that in the extraordinary circumstances in which we are placed, by your railway property being so depressed, we have done that which we believe to be right for the shareholders, and that we feel we shall be proved to have done right when circumstances no longer require that the details shall be withheld.

Mr. H. RAWSON: I think you said that a full statement has been made of the number of shares held: now no statement has been made of the cost of those shares, nor do they appear in any of the capital accounts. Will you tell us the cost of those

The CHAIRMAN (after another consultation): A question of this kind is of course an appeal to the shareholders, and we shall be guided by the result of such an appeal. If the shareholders say it is desirable, the answer shall be given; but on conferring with my colleagues I find they still remain of opinion it is expedient for the interests of the company to keep secret the details of the question just now. already been more or less mixed up with legal proceedings, and on that ground alone the legal adviser is of opinion it ought not to be gone into. It is not for the purpose of concealment, but the contrary. However, it may lessen the anxiety of the hon. gentleman, and other shareholders who do not take a right view of this matter, to explain that a considerable portion of these shares in our own stock are shares which have remained in the hands of the company, not having been claimed by those who were entitled to them, or are surplus and fractional por-tions after the allotment of the stock to the shareholders, as far as we were able to divide them. I would state that the larger portion of the remainder were bought by funds arising from the sale of shares in another company, which we were bound to sell by the terms of our arrangement on amalgamating with other lines.

Mr. H. RAWSON: I did not allude to the fractional portions of stock left after division among the shareholders, or to the shares in other companies, when I put that question, but to Leeds Extension stock, and which I think is an unjustifiable appropriation of capital, unless the directors had the consent of the press the question further now; but there is another point;—it was stated that you had resigned the office of chairman, and I am told that for some time past we have been without a chairman or deputy-chairman. Perhaps you can inform the meeting if it is probable that these appointments are likely to be soon filled up?

The CHAIRMAN: The only reason I can give that we have not been able to fill up these appointments is, that we have not been able to prevail upon any member of the Board to accept the office. One reason for this may be, that our field for selection is exceedingly limited, and the management of the concerns of a large company like this cannot be properly conducted without daily and almost hourly attendance on the part of the chairman. It was that conclusion that drove me from the chair. I found that my engagements would not allow me to devote the time which I had hitherto done, and I felt it would be an injustice to the shareholders to continue a sort of nominal chairman.

After some further conversation, Mr. Rawson said: I myself did not take any part in opposing the issue of the shares for a million sterling; but I should like the proprietors who are not professionally in the company, or the company's servants, to know one fact—whether, if this million sterling is allowed to be raised for finishing lines which are nearly complete, and which have been so far completed out of West Riding Extension shares and other stock, when it has been expended will the directors have additional power to raise money to go on with the new ones! I held for a long period of years hopeful views of our future prospects, but I see that, step by step, you have lately been losing ground, and that public confidence in you as a Board is gone. Look at the West Riding shares, with 61. paid up, selling in the market at 11. And I say it is one of the best criteria by which you can judge of your position. I say if you agree to let the directors have this million sterling, it may be they will then raise 5,000,000% more, or 8,000,000% more, for, let me tell you, they have power to raise as much as 14,000,000l. There is nothing like taking the bull by the horns, and staring your affairs in the face. What I ask you is, not to blame the directors for the past, but to have a searching investigation into our present condition, and what is the value of the lines which remain at present to be made. My own opinion is, that the twelve miles on the Halifax and Bradford branch, if you allow it to be finished, will entail a loss of 50,000l. a-year upon the proprietors. I have no objection to what has been done, because it is past; but I implore you not to go forward without inquiring where it will lead you.

The CHAIRMAN said it was extremely difficult to reply to such observations, feeling as he did the force of Mr. Rawson's views on some points, and disagreeing with others, and feeling a difficulty in stating the question as he could like, from not being acquainted with the details. He believed there were some portions of the West Riding Union so expensive, owing to the nature of the country, that looking at them per se they could never be remunerative, and it was only by merging the whole system into one that they could feel justified in making them. The population of Halifax was probably 60,000 or 70,000, that of Bradford 100,000, and then there was the still larger town of Leeds; so that there was in the course of 14 or 15 miles three of the most populous towns in the kingdom. And it would, at first sight, looking at this portion, be impossible to believe that a line accommodating three such towns could not be remunerative; but he agreed as to some portion of the line, between Bradford and Low Moor, that were it not for other lines in connexion with it, it could not pay, and that it would be undesirable to make it. But what was their position! They were not commencing any new lines; and so great was the responsibility of raising money in these times, that the directors said they would not incur the responsibility of making new lines. He would not turn up a sod more than they had money to pay for.

Mr. HAWKSHAW: The figures he was about to read were intended to show what the whole cost of the West Riding and extension lines would be to finish, and what they would cost if they were abandoned: and in taking the last item he had consulted the solicitor as to what they would have to pay on various portions of the work to get rid of their liabilities. To finish the lines between Halifax and Bradford, it would take 6l. 10s. per share of the West Riding stock, and 3l. 15s. 10d. of the extension stock; and to abandon them it would cost 41. 2s. of the

former, and 2l. 8s. 6d. of the latter.

A Shareholder: What! more than they have paid already?

Mr. HAWKSHAW: Yes; so that it is a question whether you will make your proprietors pay 41. 2s. shareholders, and not even then. I certainly shall not land not have either line or dividend, or pay 64. 10s.

Diaitized by  $\mathbf{U}\mathbf{U}\mathbf{U}$  and have the line with the dividend of 6 per cent. upon the whole expenditure, including 64. already

paid and the 6l. 10s. to pay.

Mr. W. Rawson said Mr. Hawkshaw's views might be right if his facts were correct, but he disagreed with him entirely as to his facts, and he pledged himself to prove that they would save 50 per cent. by

giving up the West Riding scheme.

Mr. W. Evans said that the reason that Lancashire and Yorkshire stock was at such an awfully low price in the market was, first, the uncertainty that pre-vailed respecting its future dividends; and secondly, the doubt as to the calls which would be made, otherwise it never could be at such a ruinous price as it was. People only knew that a short time ago they had 8 per cent. dividend, which came down to 7 per cent. It was now 6 per cent., and there was no knowing, unless some steps were taken to correct this downward tendency, whether it might not go down to 4 per cent. If there could be an assurance that to a per cent. It there could be an assurance that it would go no lower than 4 per cent., the prices would rise. Only think of stock like this being at 20l. discount, and extension stock, on which 13l. was paid, being sold at 9l. and 10l. discount. A chief rent of 4 per cent. was worth par at this moment.

In answer to a question from Mr. Evans,

The CHAIRMAN said legal proceedings were being taken against directors for arrears of calls as well as other shareholders. He believed one director had paid upwards of 50,000l. recently at a considerable sacrifice, and he himself had sold whole shares at 69l.

to pay his calls, and did not owe a farthing.
The resolution was then put and carried.
The next resolution was for a dividend of 6 per cent. which was also carried without opposition.

SHEAFFIELD, ROTHERHAM, BARNSLEY, WAKE-FIELD, HUDDERSFIELD AND GOOLE.

Aug. 30.—Half-yearly Meeting, Wakefield. E. B. BEAUMONT in the chair.

The Secretary read the report, which embodied the engineer's report, which after describing the present state of the works stated that an arrangement had been made with the contractors, Messrs. Miller & Son, to complete the works on a scale (except as to the bridges) that would admit of a single line being opened before the 31st of December 1849, for the sum of 146,254. The directors' report stated that between Horbury and Barnsley the Board had actively pressed on the works, consistently with their promise at the last meeting to limit the calls to 51. per share during the present year, an amount which they considered sufficient for the due prosecution of the undertaking, having regard to the financial diffi-culties under which all classes of the community have been labouring. The expenditure on the south-ern district has been delayed until the works can be more economically carried out. A difference of opinion had unfortunately taken place with the proprietors of the southern portion, arising from the different positions in which the proprietors of the two stocks were placed; those connected with the morthern division wishing the scheme to be carried out in all its integrity, and the southern proprietors deeming it of too great a magnitude to justify the heavy outlay that its immediate formation would in-As one result of these differences the directors believed they might congratulate the company on an arrangement which would secure the formation of the line at a diminished cost, by reducing the original scheme to a single line of railway throughout. As regarded the northern division of the line, the effect would be such as to reduce the 25*l*. shares to 18*l*. 10*s*., which, with the 7*l*. 10*s*. already paid, would leave only 11*l*. per share still to be called for; and upon this diminished amount of 18*l*. 10*s*., the original guarantee of the Yorkshire and Lancashire would still be continued, namely, 5 per cent. and half profits. In the arrangement referred to, a stipulation was inserted that the line be handed over to the Yorkshire and Lancashire, and be ready for traffic on or before the 31st of December 1849, the guarantee in that case to extend over 260,000l., should that sum be necessary, or such less sum as the line may cost; on the other hand, failing the completion of the works by the stipulated period, the guarantee is to be limited to 250,000l., the estimated cost only, the company to find any requisite excess on that sum. From the forward progress of the works the directors do not anticipate the least difficulty in carrying out the agreement; in fact, both engineer and contractor agree in the possibility of completing the works in the course of the ensuing summer, if it were desirable to do so. As regards the southern division, the directors, having given the subject their most mature consideration, are of opinion that the formation of a single line to join the northern portion at

best calculated to increase the value of the stock. The report concluded by stating that the directors had obtained from the Commissioners an extension of time for completing the works for two years. The statement of accounts showed the receipts for the half-year at 2,370. 13s. 1d.; expenditure, 797.10s. 8d.; balance, 1,572l. 2s. 5d.; leaving a total balance in hand of 4,950l. 18s. 3½d.

The CHAIRMAN, in moving the adoption of the report, said that in consequence of the monetary pressure, it had been understood that the proprietors at the south end were desirous to suspend their works; but the directors, thinking that that would be disadvantageous to the success of the whole undertaking, had remonstrated against such a course, and it had resulted in an arrangement which he thought would be advantageous to the shareholders. The agreement entered into with the Lancashire and Yorkshire, in the altered circumstances of the line, was considered satisfactory, and he trusted that the shareholders would enable them to complete the line by the time named. Though some persons had com-plained of the amount of the calls, he had received plained of the amount of the calls, he had received letters from various gentlemen of the proprietary, who thought that it was a hard thing that they should be kept out of the legitimate profits of the concern by the difficulties and delay in paying their calls of parties who had only speculatively entered into the concern.

The report was unanimously adopted. A resolution declaring the forfeiture of a small number of shares was also passed.

#### NORTH-WESTERN.

Aug. 80.—Half yearly Meeting, Skipton.—Mr. P. Dawson in the chair.

The report stated that the line between Lancaster and Poulton was opened on the 12th of June last, and the traffic had already been such as to give a re-turn of 5 per cent. on the cost after paying the working expenses. A considerable part of the line from Skipton would be ready for opening in the spring of 1849. The directors had devoted the whole of the resources to the construction of the works on the main line from Skipton to Orton, and almost exclusively between Skipton and Clapham. Mr. Stephenson had recommended, instead of the completion of the main line to Orton, the immediate construction of the Lancaster branch, which would have the effect of reducing the present outlay of the company from 1,100,000l. to 750,000l. Should that be adopted, the capital of the company may be reduced from 55,000 shares of 20l. each to 50,000 of 15l. each, of which 101. per share has already been called up; the remaining 5l. per share, being according to the estimate, amply sufficient to complete an entire through line of 42 miles in length, connecting the lines on the east and west coasts, and presenting the shortest railway communication between the West Riding of Yorkshire and the west coast, the Lakes, Carlisle and Glasgow. The directors confidently expect from these facilities to insure a good traffic. Should the arrears be reduced to the extent contemplated by the directors it will be unnecessary to make any further call during the present year; and the directors trust that the borrowing powers of the company, which they expect will be brought into operation in the early part of next year, will enable them materially to lighten future calls upon the shareholders.

The CHAIRMAN having moved the adoption of the report, several shareholders expressed themselves rongly in favour of the plan proposed by the directors. The report was adopted.

The meeting was then made special, and the for-feiture of certain shares was confirmed.

#### MARYPORT AND CARLISLE.

Aug. 31.—Half-yearly Meeting, Maryport. — Mr. F. L. B. DYKES in the chair.

The CHAIRMAN, in opening the proceedings, remarked, that owing to the state of the money-market, the directors had been compelled to increase the rate of interest upon loans which they had been forced to contract to carry on the works. The total amount required to be paid under this head for the half-year was 6,558l. 9s. 2d. He (the chairman) had still the greatest confidence in the soundness of the undertaking, which he believed would shortly be a good

paying property; but at the present time they did not feel warranted in paying a dividend. Mr. C. H. Sale, the secretary, then read the re-port of the directors:—The gross revenue for the half-year ending June 30 was 13,641l., showing a decrease of 2,433l., as compared with the corresponding half-year of 1847, which was principally in the revenue received from coals, and might be partly attributed to the unsettled state of Ireland. The

In adverting to the subject of expenditure, the directors observed that considerable reductions had been made under the heads of maintenance of way and ecomotive power, the working expenses for the past half-year being lower than for any previous one. On the other hand, however, principally owing to the state of the money-market, there has been an increase in the item of interest, making the total expenditure for the half-year 13,825t. The directors had entered into an arrangement with the Carlisle and Liverpool Steam-packet Company, for running their boats in Steam-packet Company, for running their boats in conjunction with the railway between Liverpool and Maryport. The revenue account for the half-year was as follows:—66,127 passengers, 5,3741. 5s. 8d.; coal and coke, 5,2171. 10s. 10d.; parcels, goods and cattle, 2,9011. 10s. 2d.: making the whole receipts for the half-year, 13,6581. 6s. 8d.; and the expenditure for the same period amounted to within 10d. of that sum. The total receipts from all sources up to the present time were 421,524l. 1s. 2d., and the expenditure 443,974l. 7s. 7d., being 22,450l. over the receipts.

The report was then adopted.

A committee was appointed to negotiate with the York, Newcastle and Berwick, for the sale or lease of the line to that company, and a vote of thanks to the chairman closed the proceedings.

BLACKBURN, BOLTON AND WEST YORKSHIRE. Aug. 31.—Half-yearly Meeting, Blackburn.—Mr. W. H. Hornby in the chair.

The report stated that the most difficult portion had been completed, as also the communication be-tween Blackburn and Manchester; and that the goods traffic had not been yet developed. The directors considered the receipts had been satisfactory, considering the general depression and the incomplete state of the traffic arrangements. The directors expect a material increase in the traffic from the opening of the Liverpool and Bury. The works on the line between Blackburn and Clitheroe had made considerable progress, and they are of opinion that every exertion should be made to complete this portion as soon as possible. The report concluded by stating that Mr. Flannagan, the engineer, had been appointed general manager, and that the directors had for the present relinquished the 1,000% a-year voted to them for their services. The accounts showed the receipts on calls and premiums on shares at 660,281*L*; disbursements, 657,916*L*; balance, 2,365*L*. On revenue account the receipts at 2,096*L*; expenditure, 1,095*L*; leaving a profit of 998*L*; and a nett balance of profit since the opening to Darwen in December last, of 1,9971.

The CHAIRMAN moved the adoption of the report.

Mr. W. MARSHALL did not think that in the present state of the times it was desirable to proceed, except slowly, with the unfinished works.

During considerable discussion, as to the expense of completing the Clitheroe portion of the line, the CHAIRMAN stated that he hoped it would be effected for another 5l. call upon the shares. Loud complaints were made as to the sum expended on the station at Blackburn, amounting to 20,000l.; 5,000l. would have built a station sufficiently large, and the rest would have been better expended in making the Clitheroe

Mr. MARSHALL, and other shareholders, considered that the station was not too extensive for the requirements of the company.

The report was then received and adopted; and the directors were authorized to borrow on bond, under their Act of Parliament, any sum not exceeding 200,000%.

WHARFEDALE.

Aug. 23.—Half-yearly Meeting, Skipton.—Mr. F. BILLAM in the chair.

The report stated that an extension of time had been granted for the purchase of land and the completion of works. The directors have abstained from any active prosecution of the works. They have thought it advisable to discontinue the payment of interest to the shareholders, and to reduce their staff and estab-lishment to the lowest possible point, and the ordinary expenses of the company are now under 100%. a-year. They express however unabated confidence in the soundness of the undertaking. The statement of accounts showed the receipts at 64,960*l.*; expenditure at 41,889l.; balance, 23,071l.

The report was adopted.

MANCHESTER, BUXTON, MATLOCK AND MIDLANDS
JUNCTION.

Sept. 7.—Half-yearly Meeting, Derby.—The Hon. G. H. CAVENDISH, M.P., in the chair.

Mr. WRAGGE, the secretary, read the report. Since Barnsley would be sufficient for the wants of the district, while the saving to be effected thereby will be attributed to the unsettled state of Ireland. The general commercial depression had also affected the saving to be effected thereby will be attributed to the unsettled state of Ireland. The general commercial depression had also affected the saving to be effected thereby will be attributed to the unsettled state of Ireland. The general commercial depression had also affected the saving to be effected thereby will be attributed to the unsettled state of Ireland. The general commercial depression had also affected the saving to be effected thereby will be attributed to the unsettled state of Ireland. The general commercial depression had also affected the saving to be effected thereby will be attributed to the unsettled state of Ireland. The general commercial depression had also affected the saving to be effected thereby will be attributed to the unsettled state of Ireland. The general commercial depression had also affected the saving to be effected thereby will be attributed to the unsettled state of Ireland.

Digitized by GOOSIG

science a larger developement—to laborious industry fresh sources of employment—and to the operations of commerce, and the varied intercourse of social life or commerce, and the varied intercourse or social mere renewed energy and a more facile enjoyment. Under the distressing feelings connected with this event—the more distressing because unlooked for—it is a source of satisfaction to the directors, as guardians of the interests of this company, to be able to announce that Mr. R. Stephenson has expressed his willingness to undertake the office of engineer, to which his father had devoted so large engineer, to which his lather had devoted so large a portion of his time. The Act to authorize a deviation, which was submitted to the proprietors at the special meeting in July last, has received the royal assent. By it the capital is reduced from 1,850,000*l*. to 1,320,000*l*., and the shares from 20*l*. to 16% each; and the necessary powers are obtained for constructing the line in its improved form to Rowsley. To the completion of that portion of the railway the directors propose to devote their immediate attention; and as the works are of a very easy character, and will involve a very slight outlay, which will practically bring into operation nearly five additional miles of line, it has been thought advantageous to proceed so far with the undertaking. Beyond this point, having regard to the severe depression of railway property, the directors enter-tain unanimously the opinion that they will not at present be justified in advancing; and it is not therefore their intention to enter into any further regagements, or to let any contract, without the previous sanction of a majority of their proprietors. No further call will be made during the present The report of the engineer confirms the year. year. The report of the engineer commissions are expectation already held out to the proprietors, as to the time at which the line of railway to Rowsley may be opened. The directors do not purpose to incur any expense in providing stock for working, the Midland having expressed their willingness to work the line upon most advantageous terms. The statement of accounts to June 30 showed receipts at 266,535*l*. 11s. 2*d*.; expenditure, 219,300*l*. 0s. 8*d*.; balance, 47, 235*l*. 10s. 6*d*.

The CHAIRMAN, in moving the adoption of the report, feelingly referred to the death of Mr. Ste-

phenson. He anticipated that the deviation lines would greatly improve their prospects. The directors did not intend carrying the line further than Rowsley at present, owing to the depression of the times; and it was under consideration whether they should even go on to Rowsley; at any rate, the directors would not take any further steps without obtaining the sanction

of the proprietors.

The feeling of the meeting appeared to be in favour of going on to Rowsley.

The CHAIRMAN said if the company would grant the money they would go on, but the difficulty of obtaining the calls was so great that it was desirable to proceed with circumspection. The arrears upon the first call amounted to 8,000l.; upon the second call, 21,000l. The directors intend carrying out economy, and as an evidence of the fact the Chairman stated that they had reduced their salaries from 1,500l. to 750l., from last June. The directors were in favour of continuing the line to Rowsley, but they first wished to ascertain the probable expense, and see if parties would under-take to execute the works for that sum.

The shareholders urged the directors to enforce

payment of the arrears.

The reports were then adopted.

WEST LONDON.

Sept. 7 .- Half-yearly Meeting, London .- Mr. H. H. GROUNDS in the chair.

The SECRETARY read the report, which declared that the urgent request of the directors made to the London and North-Western and Great Western, to carry into effect their powers for altering and enlarging the line, had been ineffectual. They expected that the extensions would be carried out when the proper time had arrived, but in that they had also proper time and arrived, but in that they had also been disappointed. Both companies expressed their intention to carry into effect their powers, but they both agreed that in the present position of railway property they would not be justified in calling upon their proprietors to raise the necessary capital. Causes were now in operation, however, which the directors hoped would compel both companies for their own interest to carry these was a sixty of the companies for their own interest to carry these was a sixty of the companies for their own interest to carry these was a sixty of the companies for their own interest to carry these was a sixty of the companies for the companies for their own interest to carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry that the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry the carry directors hoped would compel both companies for their own interests to carry those measures into effect. A large accumulation of mud had taken place in the Kensington Canal, to remove which a contract had been entered into. There had been a small in-crease in the tonnages on the canal, but a trifling diminution in the receipts. The line still remained in the same unproductive condition. The lessees de-clined to work it to a greater extent till it was ex-tended to the Thames, when a more considerable

ments, 1,547l. 16s. 9d. The total receipts amounted to 279,285l. 13s. 9d., which, after the expenditure, left a balance in hand of 1.417l. 10s. 3kd.

Mr. RIGBY asked how it was they had to pay 668l. 8s. 8d. for the Knightsbridge extension.

The SECRETARY said the matter had been settled by a reference to Messrs. Glyn. Hudson and Stephenson, who awarded this sum to be paid by the West London. The 130l. 1s. 2d. for the Thames extension was paid by this company, but the expenses were borne by the London and North-Western.

Mr. RIGBY asked what became of the sum sub-

scribed for the Knightsbridge extension.

The Secretary replied that it had been returned to the shareholders, and the expenses now fell upon the proprietors.

long discussion then took place as to the right of claiming compensation from the lessees, or an efficient working of the line, which was supported by the opinion of Mr. Walton, the solicitor, and that

of two eminent counsel.

Mr. Thompson stated that he had an interview Mr. THOMPSON stated that he had an interview lately with Mr. Creed, who assured him that the directors would eventually work the line. He had also assurances from Mr. Glyn and Mr. Parker, that the works would be carried out to the Thames, as there was a great desire to connect the line with the South-Western. He had also the same assurance from Mr. Saunders, of the Great Western.

After some observations from the CHAIRMAN, the

report was adopted.

DUBLIN AND DROGHEDA.

-Half-yearly Meeting, Dublin.-

MURLAND in the chair.

The report stated that during the six months ended The report stated that during the six months ended the 30th of June 188,067 passengers were carried, and the receipts were 14,412*l*. In the corresponding period of 1847 211,695 passengers were carried, producing 14,980*l*. The receipts for merchandise during the half-year ending the 30th of June last amounted to 3,945*l*., and for the corresponding period of 1847 to 4 477. There was a progressive increase in the to 4,477l. There was a progressive increase in the traffic up to the end of 1847. On the last half-year there was a deficiency of 1,095l. as compared with the corresponding period of 1847, the receipts for the last half-year being 19,488*l*., while those for the half-year ending the 30th of June 1847 were 20,583*l*. The section of the Dublin and Belfast Junction which is about to be opened will to some extent increase the traffic, and facilitate the communication with Belfast and the North of Ireland. But until the viaduct over the Boyne be built, and the line between Dundalk and Portadown completed, the passenger traffic with the North of Ireland will be but imperfectly developed, and the goods traffic must continue to go by sea. The directors also anticipate an increase in the receipts by the carriage of mails. The amount is to be settled by arbitration. The directors confidently expect that a much larger sum will be awarded to them than they have hitherto received, as the sum of 1,600l. per annum is totally inadequate to remunerate them for the expenses incurred in the mail service. The directors state they have acted upon the suggestions of the committee of inquiry as far as they thought advisable, particularly in carrying out a system of strict economy in every branch of the expenditure; and in consequence thereof the working expenses of the half-year are less than those of the preceding half-year by 1,189*L*,, and the diminution will be still greater for the current half-year. The various items of reduction in expenditure amount to upwards of 3,000l. per annum. With regard to the capital account, no new liabilities whatever were incurred. The list of charges for goods was revised, and some slight inequalities removed, but generally they were found to be as moderate as those on any With regard to the passenger fares the directors have arranged that immediately after the opening of the Belfast Junction line there shall be a uniform rate of charge for the first and second class passengers by all trains, and that return tickets shall be given to and from all stations at one and a half fare. The third-class fares will remain unaltered. From the state of the works on the Navan branch it will not be delivered up to this company before the end of the year. The directors are of opinion that when this branch is prolonged to Kells it will be of great advantage. The balance to the credit of the revenue has been lent in aid of capital to pay out-standing liabilities, for it was not considered right or prudent to raise money either by the sale of forfeited shares, by loans or preference shares. The directors regret they should be obliged a second time to recommend the postponement of a dividend. Having regard to additional sources of revenue which are likely to tended to the Thames, when a more considerable traffic would arise. The statement of accounts showed the receipts at 2,417t. 12s. 1d.; disburse-

diture at 774,875l., including 11,044l. taken from the revenue account during the past year. The revenue account stated the receipts at 19,4881.; expenditure, 15,131l., including 5,001l. for interest on loans; leav-

ing a balance of 4,357l.

Mr. Kennedy said it had occurred to him and his brother auditors that several items had not been charged under the proper heads. They considered that 41.5s. a week was a large sum for the supply of water to twelve engines, and that one-half of the salaries of the clerk, the superintendent and the other officers ought not to have been charged to the capital account, as they had been, instead of to the revenue account. On the whole of these items the sum of 5144. 15s. 6d. had been charged to the capital account which they thought should have been charged to the revenue account. The speaker then alluded to the salary of Mr. Leish, the resident engineer, having been put under the head of capital instead of being charged to the revenue; and as to the salary of Mr. Kane, the attorney of the company, it was not charged to either capital or revenue.

The CHAIRMAN did not regret the course taken by Mr. Kennedy. The directors desired that the accounts should be strictly investigated. He had expected that Sir J. Macneill would be present; if he were, he would tell them that there was not a line in the United Kingdom in a better state. There had been a diminution in their profits, but it was impossible that they could have escaped in a season of such great depression. It had been reported that the receipts had not diminished so much as those on most other lines, when their increased mileage was most other lines, when their increased innegge was taken into account. For the purpose of bringing this circumstance plainly before them, he had calculated the mileage falling off on some of the English lines. From this calculation it appeared that there was a From this calculation it appeared that there was a falling off of 16 per cent. between the weekly receipts in 1847 and 1848 on the London and North-Western in the months of May and June. He adduced this calculation to show that the falling off on their line might naturally be expected. The Ulster line was a well-managed line; it was one of the most prosperous, as and when trade improved would be a prosperous as and when trade improved would be as prosperous as any line in Ireland—it had suffered in common with any line in Ireland—it had suffered in common with others. He had been speaking of the account to the end of the 30th of June. Their mileage fell off 15 or 16 per cent. in July and August. In July and August their receipts were unusually great; a good deal had been made from various pleasure trips to Howth, Malahide and Balbriggan. They might remember that the months of July and August 1847 were uncommonly fine, while the same months in the were uncommonly fine, while the same months in the present year were very unfavourable, there having been scarcely one fine day. Having said thus much as to traffic, he would make a few remarks as to their finances. Owing to the state of the monetary affairs and the delay which had taken place in the completion of their tributary lines, they felt that it might press heavily upon the company if they were obliged to repay to Government the instalments of their loan. They considered that they had a claim to press for a They considered that they had a claim to press for a longer period to enable them to pay the amount; and it was satisfactory for them to know that they would not be called upon to pay any portion of the principal. There was also a matter to which he wished to allude, as misrepresentations had been made in reference to it. It appeared by the statement of accounts that upon the 30th of June a balance of 25,804l. was due by the company; since that period they had paid off 4,534l. 2s. 7d., and still owed 21,270l. The sum of 9,000l. was lent to them for a definite period, and would not be payable till August 1849. It would be satisfactory to know that their funds were quite sufficient to meet their liabilities. The directors had not accepted any remuneration. They would not accept any whilst the proprietors went without their dividend. He moved the adoption

of the report.

Mr. Workman seconded the motion.

Mr. French observed that the statement just made by the chairman could not fail to prove most satisfactory to the entire body of shareholders.

Mr. MACAETNEY at some length, amongst other topics, adverted to the falling off in the returns arising from the passenger traffic—a circumstance that he attributed, not to the state of the country, as the directors had alleged to be the cause, but to the largeness of the farcs they were latterly in the habit of charging.

The CHAIRMAN admitted that the fares had been

raised, but supported such a step as beneficial.

Dr. Atkinson observed that although the line had suffered from the depressed state of the moneymarket, a good deal of the decrease in the funds was attributable to the mismanagement by the directors. He did not speak of them individually, but as a body. If the whole of the highways and byways were placed in their hands, they were bound to afford increased

accommodation in every locality. It was well understood that whatever benefited the country also served the company. What he complained of was that the company had not acted upon this principle; for instance, return tickets were given from Drogheda to Laytown, but none from Laytown to Drogheda, and of this the public had reason to complain.

Mr. GARTLAN alluded to what he conceived to be the unsatisfactory statement of the accounts. He did not agree with the gentleman who sent over a petition to the House of Commons as to a station at Bettystown, as the Parliament was not the best authority or tribunal to decide the question. The Board was the proper tribunal, and if they did not comply with the wishes of the shareholders, the public meeting was the proper place to discuss the subject. The refusal to place a station at Bettystown had given great dissatisfaction. Many persons had subscribed to the line in expectation of a station at Bettystown; and it should be remembered that it was an improving town, and needed such a station. He did not concur in the general condemnation of the management of their affairs by the directors, for their abandonment of personal profit was the best proof of their desire to attend to the interests of the company. There could be no doubt that there had been great extravagance in much of their expenditure: for instance, in the matter of legal expense, nearly 60,000*l.*, or 3,000*l.* per mile, had been expended. It might be said that other companies had expended large sums unnecessarily, and therefore they should be excused. This was the excuse of the drunkard, and was not tenable. He wished to know from the chairman what amount Mr. Kane was to receive for his services. He was prepared for some announcement on the part of the directors as to an amalgamation of the other lines with that line, for it was monstrous to suppose that they could continue to carry on the separate lines with three secretaries, three solicitors, three sets of directors, and three distinct engineers, and that upon a line of 50 miles-from Castleblaney to Dublin. He would leave in the hands of the Drogheda gentlemen the proposition as to the formation of the station at Bettystown.

The CHAIRMAN observed that the proprietary might confidently expect that as soon as the branch line was completed the directory would be enabled to pay them a respectable dividend. Whether other companies would take the same course he was not prepared to say, but of this he would assure them, that the Dublin and Drogheda would pay a considerable dividend whether an amalgamation was effected with other lines or not. With reference to their legal expenses, he had no hesitation in saying that they were very little beyond the average. He considered that there could be no subject more advantageously laid before the House of Commons than the enormous expenses heaped on railway companies in the shape of

legal and parliamentary costs.

The report and statement of accounts were adopted, and auditors were re-elected.

#### DUBLIN AND BELFAST.

Aug. 30 .- Half-yearly Meeting, Dublin .- Mr. J. BARLOW in the chair.

The directors' report stated that the line from Drogheda to Dundalk would not be opened for some is, in consequence of the unusual floods in the White River having carried away the bridge near The accounts relating to this portion of Dunleer. the line had not been made up; but the directors were of opinion that its cost, including stations and exclusive of the working stock, would not exceed 10,000t. per mile for a single line, with the land purchased, and the earthworks completed for a double the Navan brunch, and prevented the immediate completion of it. The engineer reported that it would take two months to finish, when it would be handed over to the Drogheda, pursuant to the agree ment made with them. The recommendation at the last half-yearly meeting, that the works should be confined to the line between Drogheda and Dundalk and to the Navan branch had been attended to, with the exception of the necessary expenses for fencing off the land purchased for the company on the remaining divisions, and a very small expenditure on the contract immediately adjoining Dundalk towards the north. The statement of accounts showed the receipts during the half-year, on account of calls, at 105,043l. 1s. 9d., of which 17,315l. belonged to the arrears due on the 31st of December previous; expenditure, 115,020. 14s. The directors continued to pay unremitting attention to the collection of arrears, which were gradually diminishing. In April last, the Board being desirous of completing the line to Portadown, if it could be accomplished without pressing severely on the shareholders, applied to her Majesty's Government for assistance by loan, proffer-

ing ample security on property wholly unincumbered. Though favourably received by his Excellency the Lord Lieutenant, the application was not acceded to. It was not the intention of the directors to have re-newed the application until the half of the subscribed capital had been paid up, but the extreme severity of the past summer, and the apprehensions entertained of some of the growing crops, have made it imperative on them again to solicit that aid which, if granted, will enable them in some degree to miti te the evils threatening the country, by providing daily employment to many thousands of labourers in those parts of the line upon which the earthworks have as yet been scarcely commenced. With the calls already made, this company will soon be in a position to exercise its powers of borrowing, and the directors recommend a resolution authorizing a loan of 316,666l.

(For engineer's report see Official Papers.)

The CHAIRMAN said that a letter had been received from Lord J. Russell. His lordship stated that in the present state of the Treasury and the country he could not ask Parliament for the sum required; but he added that when it became necessary from the state of the country to call Parliament together to consider whether any fund should be placed at their disposal to be expended upon the country, the application made by the directors would be entertained in

conjunction with the applications of other lines.

Mr. French asked Sir J. Macneill if the entire of the line was ballasted strictly according to the speci-

fication.

Sir J. MACNEILL replied in the negative, and stated that so far as ballasting went the work was not onethird finished.

Mr. Lund asked if it would be possible to open the

line on the 7th of September.

Sir J. MACNEILL replied in the affirmative, and added that the ballasting would go on after the line was opened. The line at present laid down was in such a state that it could be safely run over at the rate of 50 miles an hour.

The CHAIRMAN had no doubt that the line from Drogheda to Dundalk would be open upon the 5th of September, and he did feel that they were in a position to open the line; if not, he would have been

greatly misled.

Mr. W. LUND, an English shareholder, said that as the shares were very widely spread, and many of them held in England, he would propose the following resolution-

That the report of the directors be circulated among the That the report of the directors be circulated among making shareholders one week previous to the half-yearly meeting in February 1849. That a copy of the list of registered shareholders, with their names and addresses, and the number of shares held by each, and amount paid thereon by each shareholder, be circulated with the said report.

The CHAIRMAN said that the subject of the circula tion of the report and accounts came before the last meeting, and it was then decided that they should, if possible, be circulated a short time previous to each half-yearly meeting. The accounts were circulated, but it was found impossible to send the report, in consequence of the accident which happened after it was drawn up—namely, the falling of the bridge—and the bridge-and which rendered it necessary that the report should be drawn up anew. The subject, however, of the circu-lation of both the report and the accounts would receive the best attention of the directors; for his part, he saw no objection to its being done. The other part of the proposition however, relative to the circulation of the names of the shareholders with the number of shares held by each, and the amount paid up on them, was attended with more difficulty. Many shareholders, not amongst the class to which Mr. Lund particularly referred, would not wish to have their names and their number of shares published to the world.

Mr. Lund: I cannot understand that. I hold a

hundred shares, and have not the least objection to that fact being known.

The CHAIRMAN said that, notwithstanding the state of the times and the commercial difficulties, the entire amount of arrears due at that moment upon the very large sum which they had to collect, amounting to between 300,000l. and 400,000l., did not amount to more than 100,000l. Of that, 40,000l. at least belonged to the seventh call, which he might say was only in course of collection, and, as to the remaining 60,000l. of arrears, they would use their utmost en deavours to reduce it, therefore he did not think their position was so startling.

Mr. LUND: There are numbers of persons to whom we can never look for the payment of their calls.

The CHAIRMAN put the resolution of Mr. Lund, the part requiring a statement of the amount due on the shares held by each proprietor being omitted, and it was adopted.

In reply to a question, the CHAIRMAN stated that as soon as the works of the Navan Branch were com-

pleted and handed over to the Dublin and Drogheda, the proprietors of the former would be paid 4 per cent. outlay for the first twelve months; and at the end of that period the rate of interest would be increased to 5½ per cent., to which the Drogheda were bound by a deed.

The meeting was then made special, when the directors were empowered to borrow a sum not exceeding 316,666l.

#### BELFAST AND COUNTY DOWN.

Aug. 81 .- Half-yearly Meeting, Belfast .- Mr. W. J. ALLEN in the chair.

The directors' report stated that the directors have been pushing on the construction of the line as rapidly as the means at their disposal enabled them. The Holywood branch was arranged with Mr. Dargan to be opened by the middle of June, provided he could be supplied with a certain amount of funds. With the view of carrying out this arrangement, steps were taken for the purpose of collecting the arrears of calls then due; the appeals of the directors were, however, comparatively ineffectual, and they were reluctantly compelled to place the matter in the hands of their solicitor. Finding, however, that in spite of all their efforts the arrears were paid up too slowly to enable them to keep their par the engagement with the contractor, and being desirous to do so, as far as in their power, the directors were obliged on the 4th of May to make a further call of 4l. 10s. per share, payable in three instalments of 30s. each, on the 1st of July last, and 1st of September and 1st of November next. call has been answered, as will be seen from the accounts, by some shareholders. Notwithstanding, the arrangements made with Mr. Dargan could not be fulfilled, and the directors were much disappointed that the Holywood line could not be opened so soon as was expected. They were, however, able to proceed so as to have that branch completed, and with temporary office accommodation, opened on the 2nd of this month. The works of this short line are substantially constructed; the traffic is carried on with the utmost regularity, and so far as an opinion may be formed from the short experience the directors have had the returns promise to fulfil all their anticipa-tions. There can be little doubt that when the facilities for access to the excellent sea-bathing of the southern shores of Belfast Bay afforded to the inhabitants of this great town by this short line come to be duly appreciated, the traffic upon it will go on steadily increasing, and that with economy in working it will prove highly remunerative. The directors hope the arrears will be paid so as to enable them to meet the necessary demands. With regard to the works on the Comber and Newtownards line, comparatively little has been done during the past halfyear, owing to the causes already referred to; the directors, however, trust that they will be enabled to proceed with that portion, so as to have it ready for traffic in the course of the ensuing summer. The application to the Commissioners of Railways for an extension of the time limited by the company's Act of Incorporation for the completion of the line referred to in the last report, has been complied with. directors do not at present contemplate proceeding with any works beyond those already contracted for. Four directors were now to be elected in the room of Messrs. J. Bristow, W. J. C. Allen, W. Coates and T. S. M'Collough, and one auditor in the room of The engineer's report stated that the Mr. A. Hill. Holywood branch is now working with regularity and economy. The contractor is proceeding with the works on the main line to Newtownards with as much expedition as the circumstances of the company will admit. The bridges across the Con's-water and Eular rivers have been commenced, as also those over the turnpike-roads to Holywood and Comber. These bridges are among the heaviest portions of the works, and must necessarily be completed before the earthwork can be much further proceeded with.

Mr. Allen moved that the report read be adopted. Mr. Keown would not move an amendment to the report, as he felt quite satisfied with it; but in reference to that part of it which alluded to those shareholders who had not come forward to answer the calls made upon them, he wished to suggest that the names of those parties who had not paid up should be sent in, so that they might thereby be enabled to instruct the directors to sue them.

Mr. Allen stated, in reply, that the subject was at present occupying attention.

Mr. KEOWN said his reason for bringing the matter before their notice was on account of a party who took shares, and who said he never had paid a nor did he ever intend to pay; and this individual—he (Mr. Keown) was not at liberty to mention names was more solvent than he was.

Mr. Allen said the suggestion of Mr. Keown was

a good one, and no doubt would receive the attention of the directors.

The report was then passed unanimously, and four directors were elected.

DUNDALK AND ENNISKILLEN.

Aug. 31. — Half-yearly Meeting, Dublin. — The Earl of Roden in the chair.

Mr. Nugent and Mr. Dunlop objected to the affix-

ing of the seal until the list of shareholders was ascertained to be a correct one.

After some discussion the directors refused an ex-

amination of the registry.

The directors' report stated that considerable progress had been made towards the completion of the line from Dundalk to Castleblaney, which was ex-pected to be opened in time for the harvest traffic. The report of the shareholders' committee, adopted at the adjourned special meeting on the 1st of May last, contains the twelve following recommendations:

1. That it is expedient that the directors be reduced in 1. That it is expedient that the directors be reduced in number to ten or twelve, the former being the minimum prescribed by the Act of incorporation; that said reduction be effected by the present Board, and that they bring in three shareholders to form part of the said reduced Board. Answer: The directors have given their utmost attention for carrying out this recommendation by amicable arrangement, and the result has been the reduction of the Board to fourteen, in which number are included three gentlemen breastly in four the Act of the Section 1. to fourteen, in which number are included three gentlemen brought in from the shareholders committee. At or before the next half-yearly meeting the directors contemplate effecting a further reduction, —2. That a committee of directors be appointed by the reduced Board under the Companies Clauses Consolidation Act, 1845, for the purpose of maintaining a constant and vigilant superintendence over affairs. Answer: Such a committee has been appointed. —3. That for the present the sum of 4000, per annum be allocated for direction. Answer: This measure was adopted before last half-yearly meeting.—4. That an arrangement on a more economical basis should be entered into with the solicitor. Answer: The directors having felt it their duty to change their solicitor at the expiration of his agreement with them, the salary of Mr. Macrory, the gentleman appointed in his room, has been fixed at 300 instead of 1,0000, per annum.—5. That the line beyond Castleblancy should to change their solicitor at the expiration of his agreement with them, the salary of Mr. Macrory, the gentleman appointed in his room, has been fixed at 300 instead of 1,000. per annum.—5. That the line beyond Castleblancy should not be proceeded with this year, nor at any future period, without sanction obtained at a regular convened meeting; but that the lithographed ground plans, as well as the necessary working plans, be deposited in the office of the company, with a view of carrying out the line to Clones as soon as expedient. Answer: The line will not be proceeded with beyond Castleblancy until the directors shall have met the shareholders at the next half-yearly meeting, or at an extraordinary meeting convened for the purpose, and shall have ascertained their sentiments. But the directors would fain entertain a hope that at some period not distant the circumstances of the money-market or the prospect of aid from Government may warrant their proposing to you the carrying out of the original undertaking. The necessary working plans, as far as Ballibay, are prepared and deposited with the company by Sir J. Macneill: and the Board will take care to cause the plans for the remainder of the line to Clones to be deposited with them also with as little delay as possible.—6. That the opening of the line from Dundalk to Castleblancy should be made to depend in point of time on the opening of the Dublin and Belfast Junction between Drogheda and Dundalk. Answer: This recommendation will be strictly attended to.—7. That an equitable arrangement should if possible be entered into with the Dublin and Belfast Junction, by which both lines should be worked by one company, either entirely or jointly, subject, however, to future consideration as to the policy of working the line by contract. Answer: The directors have made all possible exertion to carry the recommendation into effect, but they regret to say as yet without success.—8. That the immediate construction of the Boyne viaduct being of vital importance to the int success.—8. That the immeniate construction of the laying viaduct being of vital importance to the interests of the company, the earliest attention of the Board should be given thereto, in conjunction with the directors of the Dublin and Drogheda. Answer: The directors entirely concur with the shareholders' committee in the opinion of the importance of this viaduct, but are not aware of any means at present within their power for promoting, still less for compelling, its construction.—9. That the qualification of directors should, in amount of capital, be in concation of directors solute. In amount of capital, he in con-formity with the spirit of the qualification required by the original Act of incorporation. Answer: The directors will use their best discretion in filling up vicancies so as to promote to the utmost of their power the views and interests of the shareholders.—10. That immediate and earnest at-tention should be paid to the collection of the large amount or the sharehores.—10. That immediate and earnest attention should be paid to the collection of the large amount of arrears due, without distinction as to what particular calls remain due. Answer: The most unremitting attention of the directors continues to be paid to the subject—a considerable amount of arrears has been collected, and the directors will not fail, in the next term, to take active compulsory steps for the enforcement of full payment from all solvent parties.—11. That until such arrears shall have been collected, it is not expedient (unless circumstances occur which your committee do not anticipate) to make any further call, the committee being of opinion that the amount of recoverable arrears will prove more than sufficient to open the line to Castleblancy. Answer: The directors having made all possible exertion, and having found it impracticable to realize in sufficient time the necessary funds for meeting their liabilities, have unwillingly adopted the only remaining alternative.—12. That all shares upon which arrears of calls are now due, and are ascertained to be in insolvent hands, should be immediascertained to be in insolvent hands, should be immediately placed in course of forfeiture. Answer: A great number of insolvent shareholders have consented to transfer the shares standing in their names in trust for the com-

pany, which will obviate in these cases the necessity of forfeiture. Where this arrangement cannot be effected, the directors will take measures to have the shares forfeited under the provisions of the Act. In conclusion, the directors congratulate the proprietary on the speedy opening of your railway, which they will endeavour to make simultaneously with that of the Belfast Junction.

From the statement of accounts, it appeared that 152,484l. 8s. 9d. had been received, and 139,251l. 4s. 1d. expended, leaving a balance in hand of 13,233l.
4s. 8d. The arrears of calls, at the end of 1847, amounted to 79,290l., of which 11,635l. had since been received in cash, and 3,004l. in bills, and arrange ments had been entered into with parties for the

payment of arrears by instalments. The CHAIRMAN, in moving the adoption of the report, said the present was an undertaking which he was convinced would repay those who were engaged in it fully as well, if not better, than any undertaking of the kind. He would only mention that he had not less than nine or ten times that year come over from London for the purpose of attending meetings of the Board. Without troubling the meeting with any remarks as to those matters connected with the line which were treated of in the report, he would allude to others which had taken place last week, and to which he could not help referring. The Chairman then proceeded at some length to vindicate himself and the directors from attacks made upon them in a pamphlet published by Mr. D. Dunlop, accusing them of creating faggot votes, and causing the line to diverge to suit private interests. The falsehood of these charges had already been shown, and his lordship now gave them the most direct contradiction, and, as far as he himself was concerned, had sub mitted to his legal adviser whether proceedings should not be taken against the author of the libellous publication.

The Hon. Mr. Lucas also defended the director from the aspersions of Mr. Dunlop, and a lengthened and warm discussion ensued, in which Mr. DUNLOP repeated his assertions as to the insolvent condition this project.

An amendment for an adjournment having been put and lost, the original motion for the adoption of the report was carried.

DUBLIN, DUNDRUM AND RATHFARNHAM. Aug. 29 .- Half-yearly Meeting, Dublin .- Sir G. Preston in the chair.

The report stated that the directors, being in expectation of receiving from the Commissioners a grant for an extension of time to purchase land and complete works, and from the state of the money-market, have not proceeded actively with the works. In order to preserve the undertaking, the directors must now proceed to secure the possession of land required for the line, and have other works completed within the time limited by their Act. them to carry this project into effect they have no doubt they will be aided willingly by such of the shareholders as embarked in the undertaking with the bond side object of carrying it out, and whose interests the directors feel bound to maintain. statement of accounts for the half-year showed the receipts at 1,949*l*.; expenditure, 1,137*l*.; balance in

The CHAIRMAN having moved the adoption of the report. Mr. KENNEDY moved an amendment, to the effect that the report was a mockery and delusion. After a long discussion the amendment was negatived.

It was understood, though not definitively resolved upon, at the conclusion of the business, that a deputation from the dissentient shareholders, including Mr. Kennedy, should wait upon the directors and explain their views. The dissentient shareholders are anxious to abandon the undertaking, and to enable the directors to discharge all claims and wind-up.

KILLARNEY AND VALENTIA.

Aug. 30.—Half-gearly Meeting, London.—Viscount INGESTRE, M.P., in the chair.

The report stated that in accordance with the

resolution adopted at the last meeting, the directors the 30th of Scptember next, and on its being responded to they would take the necessary steps for commencing the works. From the balance-sheet it appeared that the liabilities of the company had been reduced to 2,7871. The report was adopted.

The CHAIRMAN then said they must now form themselves into a special meeting, for considering what they should do with the unregistered scrip. This scrip being liable to forfeiture, he trusted the meeting would have no objection to that, seeing that the shares would fall into the hands of solvent proprictors.

After a short discussion, it was agreed unanimously, "that the directors be authorized to dispose of the unregistered scrip in such way as can be done legally.

It was stated that the directors of the Great Southern and Western of Ireland looked with interest on the formation of this line to Valentia Harbour, and were disposed to aid in its promotion.

SLIGO AND SHANNON. Aug. 31 .- Half-yearly Meeting, London .- Mr.

ALT in the chair.

The meeting was a mere formal one, to justify the acts of the directors. A short report was presented, announcing that the directors had no intention of proceeding with the works until the expiration of the time allowed under the Suspension Act, in accordance with their statement at the meeting in February.

Indian Railways.—(From the Deccan correspondent of the Times.)—I have been very anxious in regard to the issue of the railway questions, and very sorry to see them in so weak a condition, that even the 100,000l. required as deposit, or rather permanent or actual subscription, should not be forthcoming when needed. True, it is a season of unparalleled mercantile and monetary embarrassment; and people hesitate, apparently, to begin in earnest an undertak-ing of which they cannot see the end, or draw from the reports sufficient encouragement for the outlay of their capital. But methinks it is just at a period of their capital. But methinks to guest at a period like this when a great government should, casting aside all mistrust, embark boldly in this enterprize itself, and by devoting a portion of its own capital to the undertaking, secure benefit to its realm and ultimate profit to itself. It is possible now for Government to purchase the whole of the shares under payment of the deposit, and take the whole affair off the hands of the company in whose possession it is strug-gling for further existence. This is a precious time, therefore, and should not be let slip. Every part of India languishes for want of means of rapid transport, and must inevitably languish until it is supplied. Suppose, for a moment, that the whole of England or Europe were deprived at once of all proper highway roads, cross-roads and railways,—that nothing existed but bare tracks across the face of the country,
—what a return to poverty and stagnation would you not experience, your agricultural produce and manufactures, your imports and exports, crawling from point to point on the backs of bullocks, or on crazy carts at the rate of 8 miles a-day! Yet India is precisely in this case, if a few roads are excepted, and yet you are indifferent! yet Government hesitates to strike out boldly in a new enterprize which the experience of your countries has proved so greatly assists every exertion of which man is capable and is itself of profitable character. If Government undertake railways, it has certainty of return in two ways-first, from the returns of the transport, and again from the increased value of districts with which a railway can have communication. To aid the dispelment of apprehension, we learn that a noble field of coal of the first quality exists on the Nerbudda, in the very heart of India, sufficient for the consumption of a railway to the north or to the south; here is one great cause of anxiety in regard to paucity of fuel removed. The forests and jungles need not be cut down to supply fuel, nor the country denuded of that vegetation which is proved attracts moisture and a needful supply of There are many other high considerations which present themselves continually to any reflecting person which I need not repeat here, and which hav been ably argued both in England and in India. All that is required now is, that if the public will not advance in the matter Government should, not only for the advancement of the civilization of this noble realm, but the security and facility which this means of transport affords for military purposes. With it fol-low the electric telegraph, and all the important considerations which it supplies, with which, in a comparatively few hours, the political necessities of the north-west can be answered from Calcutta-the two extremities of the kingdom united. It is difficult, indeed, to overstate the advantages of such an artery for traffic and intelligence through the heart of India, and while Government and the public are supine, time passes, as years have passed, and brings no result. Is this to continue !

LANCASTER AND PRESTON .- Sept. 6 .- The sapient jury who were summoned on the inquest on the pasjury who were summoned on the inquest on the passenger named Airev, who died from the effects of the late collision near to Bay Horse station, have separated without finding a verdict. The following evidence was given as to the circumstances attending the

accident.

On the 21st of August the express train was 1 h. 10 m. late at the Preston station, and the ordinary train, stopping at all the stations between Preston and Lancaster, was not started from Preston until 3.59 p.m., its proper time being 3.45 p.m. The deceased and the other injured parties were passengers by this. In the journey to Lancaster some time was lost, and on the arrival of the train at the Retime was lost, and on the arrival of the train at the Hay Horse station, the fireman of the engine procured a "cob"

Digitized by GOOGIC

departure of the above train, the express train from Preston proceeded at its usual speed of from 35 to 40 miles an hour, until it got near a bridge called the Fox Holes Bridge, about 519 yards from the Bay Horse station. of coal to generate the steam quicker. In 26 m. after the departure of the above train, the express train from Preston proceeded at its usual speed of from 35 to 40 miles an hour until it got near a bridge called the Fox Holes Bridge, about 519 yards from the Bay Horse station. Here having received orders to keep a good look out, Morris, the driver of the express engine, looked over the side rails, and saw a train in the station; but the smoke and steam were so thick that he could not see the signal. The whistle was blown—steam abut off, and the engine reversed, and, everything done to avert the collision, but without effect. The last carriage was shattered to pieces, and the wreck of it forced beneath the next carriage, in which the passengers were, and the whole of the flooring forced up. The deceased was found lying beneath the step of one of the broken carriages, whilst the engine of the express train was upon the end of it. When the driver of the Preston train first heard the whistle of the express, he remarked to the guard, Dickenson, "the express was coming." Dickenson, instead of telling the driver to gon, replied, "Then, they will wait until we are ready." But when it was too late to prevent a collision, he gave the order to "Go on." The Bay Horse station, is situated on a curre, and, instead of the signal being seen for 600 yards, in which distance an engine-driver is enabled to pull up his engine, it can only be seen for 519 yards. At this station there are a level crossing and five sets of points. The signal, a red flag, by day, is made to serve for both the up and down line, and is kept up for five minutes after the departure of a train. When the wind blows from the south a stick has to be run through the end of the flag to keep it stretched out; but when it blows from the north no stick is necessary. The whole duty of attending to the signals, points, &c., devolves upon one man, who acts as station—master as well.—Mr. T. Mitchell, the superintendent of the Preston station, who started the express train, said, if signals of a proper description, had been the signal, with a flag. If the latter course had been adopted, although the rails were slippery, the train would have been stopped and no accident have taken place. The fact of the driver keeping his position on the engine-plate, when the collision took place, shows that he had done everything to check the speed. He attributed the accident to-first, the trains being out of time; secondly, the slippery state of the rails; thirdly, the want of due and proper signals; fourthly, the Lancaster and Preston train not moving when the express whistle was first heard; and lastly, the state of the carriages themselves, the wood of which was old and rotten. On the opening of the Lancaster and Carlisle line a complaint was made of the inefficiency of the signals to Capt. Coddington. If the engine-driver of the Preston train had moved when he first heard the whistle he would have had moved when he first heard the whistle he would have got 140 yards from the station, and so out of danger. The signals on the Lancaster and Preston line were sufficient for the local traffic, but certainly not for any other.—Mr. N. Worsdell, superintendent of the carriage department at Crewe, under the North-Western, examined the fragments of the carriages broken by the collision, and found the main timbers, or frame-work, in an advanced state of decomposition. If the last carriage had been of sound wood, the accident could not have been so serious. The express train was not, at the time of the collision, going at greater speed than from six to eight miles an hour, and from the last carriage in the Preston train being in such a bad state it was broken up. The wreck of that carriage being forced beneath the other caused an undue strain upon that carriage, and was the cause of the carriage itself being broken up. If the last carriage had been sound the line of resistance by the buffers would have been maintained. The serious aspect of the occurrence would have been changed, and no life lost.

The Foreman said there was not the slightest chance The Foreman said there was not the slightest chance of their ever coming to any decision; and he, on the part of his brother jurors, begged of the coroner to use his prerogative and discharge them.—The Coroner ordered the jury to be locked up. After a detention of an hour and a half they were again summoned, and there being still no chance of their agreeing in a verdict, the coroner bound them over in the penalty of 101. each to appear at the next general session of assize for the northern division of the palatinate, there to make further inquiry.—Capt. Laffan, in his official report, makes the following observations:—

cial report, makes the following observations:—

So many causes combined to produce this catastrophe that it is not easy to determine to which to give the precedence. I should say that those causes were—1. The lateness of the express train, and its starting so soon after the slow local train. 2. The inefficiency of the signals on the line. 3. The local train not keeping its time and taking no precaution when they knew they were late, and that the express was behind them. 4. The uncertainty as to who is the rightful possessor of the line. 5. The want of a proper understanding between the Lancaster and Carlisle and the lessees of the Lancaster and Preston. 6. The rule which allows an express train, which often runs at the rate of 45 miles an hour, to pass a station only five minutes after a miles an hour, to pass a station only five minutes after a slow train. 7. The want of sufficient station accommodation at Preston, causing all the trains to the North to start late. at Preston, causing all the frains to the North to start late. I would suggest that the two companies should come to a good understanding, and that every effort should be made to determine the right ownership of this railway—that the signals be immediately replaced by others of a better description. That the express be not allowed to pass till ten minutes after the starting of a preceding train, and that means be taken to ensure, as far as possible, greater punctuality in the times of starting from the Preston station. PRESENTS FOR WEDDINGS, BIRTH-DAYS, AND ALL PESTIVALS.

## FELIX SUMMERLY'S ART-MANUFACTURES.

Designed by the most eminent English artists, executed by the first English manufacturers, and sold by all respectable dealers in town and country.

#### POR USE.

Salad Spoon and Pork, in Carved-wood, 21. 2s. the pair; Ivory and Silver, at various prices.

Bread-Knife. Carved-wood Handle, 14s. Carved-ivory

Handle, 24s., and upwards.

Bread Platter. In Carved-wood, 25s. to 42s., and Porcelain, 12s. to 45s.

Cheese-Knife. With Carved-wood Handle, 17s.; Ivory Handle, 27s. Cheese-Dish. With Carved-wood Border, 42s. and

Butter-Dish. In Carved-wood, with lining of Glass or

China, 21s.

PORT OF GREAT GRIMSBY.

# NOTICE TO FOREIGN MERCHANTS

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accossible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The y communication, by means of the MANCHESTER. SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

# CHESTER AND HOLYHEAD

### OPENED THROUGHOUT TO HOLYHRAD.

OPENED THEOUGHOUT TO HOLYHEAD.

LONDON TO DUBLIN IN 13 HOURS.

The Chester and Holyhead Railway is NOW OPEN throughout, with the exception of about 4 miles adjoining the Menai Straits, for which the Company have provided properly appointed conveyances, the charge for which is included in the Railway Fare.

The Admiralty and Company's splendid Steam-packets, 670 tons, 770-horse power, run between Holyhead and Kingstown, in conjunction with the following Trains, performing the passage in about four hours:

LONDON TO DUBLIN.

1. From Euston-square, London, at a quarter to 4 in the morning, leaving Holyhead for Kingstown (and Dublin) at a quarter to 7 in the morning, and arriving at Kingstown about half-past 11, Dublin time.

2. From Euston-square, London, by Express Train, at 9 o'clock in the morning, and from Chester at a quarter to 6 in the afternoon, leaving Holyhead for Kingstown at a quarter to 6 in the afternoon, caving Holyhead for Kingstown at a quarter to 6 in the afternoon, caving Holyhead for Kingstown at a quarter to 6 in the afternoon, caving Holyhead for Kingstown at a quarter to 6 in the afternoon, caving Holyhead for Kingstown about a quarter to 6 in the afternoon, caving Holyhead for Kingstown about a quarter to 6 in the afternoon, caving Holyhead for Kingstown about a quarter by 5 in the afternoon, caving Holyhead for Kingstown about a quarter by 6 in the morning, and the morning and the Morning Holyhead for Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a quarter by 6 in the Morning arriving at Kingstown about a q

time.

DUBLIN TO LONDON.

1. From Kingstown at half-past 8 in the morning. Dublin time, arriving at Chester at 10 minutes past 5, and in London at half-past 10 in the evening.

2. The Admiralty Packet, with the Mails, from Kingstown at half-past 11 in the morning; the Train in conjunction therewith leaving Holyhead at 30 minutes past 8, arriving at Chester at 25 minutes past 9 in the evening, and in London at a quarter to 5 the next morning.

Only the Admiralty Packets and Mail Trains (as above) run on the Sunday.

Aug. 13. 1848.

Aug. 12, 1848,

DUTCH-RHENISH RAILWAY

SIXTH CALL of 10s. PEB SHARE.

The English Directors have been authorized, by a communication received from the Head Direction, to announce that, relying the shore Call of 10s, per Share will now paid up, the payment of the above Call of 10s, per Share will not be demanded until the dinancial requirements of the Company render it absolutely necessary.

financial requirements of the Company of the mocessary.

The English Directors feel it incumbent on them to urge the immediate Payment of the Third, Fourth and Fifth Calls, not only as a measure of justice to those Proprietors who have already paid, but also in order to prevent the Forfeiture of the Shares.

By order of the London Direction,

JOHN C. JANSON, Secretary.

No. 4, New Broad-street, London, Sept. 2, 1848.

# HEADS OF A SYSTEM OF PRACTICAL REFORM.—No. VII.

Having touched on the chief points admitting of direct practical suggestion, for the improve-ment of profits from the passenger business, we shall now proceed to say a few words on the traffic in merchandise. This department, however, does not present so many tangible points for special remark as the other. The service is far from being uniform in its character; and must be adapted in each instance to the particular demands and nature of the trade in question; which vary too much, in the several districts now connected by the railway system, to allow of uniform rules being applied to it in matters of detail. The general and supreme law of strict economy can only be carried into effect here by the vigilance and judgment of those who conduct the business; and we shall not therefore attempt to propose any new plans of internal arrangement as suitable to the system at large; being sufficiently acquainted with its working to know that in order to be of real use, the scheme of reform must be framed according to the conditions of each particular class of traffic, on each of the several divisions of every railway. Our remarks will be confined to a few general principles, which may be equally applied to all; their reduction to practice being a matter of administration that must be left to directors and officers in charge.

From this condition of a very considerable branch of revenue, we may observe, the importance of having efficient officers to conduct it will be seen to derive peculiar weight. In a business where nearly everything that can act on profits depends on the judgment, attention, and probity of the superintendent, it is indispensable to its welfare that it should be entrusted to one of due experience, of tried energy, and with a strict sense of his duty to those who employ him. And the first thing to be studied by directors anxious to obtain for their constituents the best possible results from this part of the business, is to procure a manager endowed with these good qualities. The next thing, obviously, is so to arrange the conditions of a manager's engagement that he may have every inducement to do his best: and, above all things, that nothing may arise from the terms of his appointment to establish a shade of difference between his pecuniary interests and those of his employers. This caution is by no means a superfluous one. whether as regards the principal superintendent or the local managers of goods traffic; inasmuch a s principle of making their salaries partly de pendent on its increase has been applied in var ious quarters in a way that may tend to create the very division of interests to which we have beet 1 alluding. We mean the system of adding to the fixed salary a bonus of so much per ton on the quantity of goods carried, or on any excet is in the weight carried above a given limit. The principle, so far as it offers an inducement to inc rease the traffic, is good; but its applica-tion to gross tonnage, without any reference to the me ney re ceipt from it, is open to the objection we have stated; and for that reason ought on no account to be permitted. It tends to make the caterer for the business indifferent to its profi ts, and ze alous to add to its bulk only, which he may in some cases be tempted to do at a post tive loss to his employers. For although the good s business demands cheap rates, and is fostered 1 by them, there is a limit beneath which. even for this business, the gain ceases to repay the c ost of conducting it; and it may be added, the at the efforts made to bring quantities

of goods upon a line by extreme offers of cheapness, are not always injurious only to the income from the particular class of traffic, thus forced, as it were, on the concern. They are apt, in a business like this, to act prejudicially on the rates receivable for other kinds of merchandise, that require no such extra allowance, but for which it is pretty sure to be claimed when great sacrifices are known to be made in favour of other hranches.

A care on this head, it must be seen, is recommended by its tendency to preserve from every sinister influence the character of the managers of the traffic; on whose efficiency and regard for the interests they ought to serve, the profits, as we have said, must always in a great measure depend. Of course such men must be chosen as are not likely to yield to temptation of any kind-and we are confident that many can be found above studying their personal gains to the possible detriment of the company; still the rule obviously is in this, as in every other kind of affairs, to do all that can encourage, nothing that can possibly tend to make an effort needful to preserve the right course; and the plain application of this sound principle will evidently exclude the scheme of bonus arrangements we have been discussing. But what is good in them it would on no account be desirable to lose; and this may be preserved by a different adjustment of the terms, so as to include a consideration of the money receipt as well as of the weight carried. A bonus which shall rise in amount in due pro-portion to the profits of the business, and shall be dependent on these, is clearly something very different in effect to an increase of salary following a mere increase of tonnage: the one identifies the interest of the manager with that of his employers, in a business which must to a great extent be committed to the discretion of the former; the other may be apt to introduce an opposite interest to theirs, which in such a business would be especially objectionable.

The rule which thus enforces the former instead of the latter of these methods, becomes more necessary as the course of railway practice departs further from the true system of fixed and uniform charges, and approaches the old com-mon-carrier method of varying rates according to bargain with customers, or with reference to the quantity of the merchandise they may bring. This variable way of doing business is attended with many grave objections; of which perhaps the most serious are, the latitude it opens to abuses of trust; and the difficulty it throws in the way of controlling them. In the papers we wrote on the merchandise business some time since, † this point was illustrated in sufficient detail; and we shall beg leave to refer those who are sincerely desirous of studying the welfare of the railway system to what we then said on this topic; as we see no reason now to alter any of the conclusions formerly laid down on this important subject. It may perhaps serve to dispose some few of our readers to take this trouble, if we remind them of the manner in which circumstances have now proved the truth of what we then advanced on another branch of the same subject. At the time when our essays on goods traffic were written, we pointed out the impolicy of giving the common carriers a lion's share of the profits from it, and especially warned the directors of the then London and Birmingham Company-who were the founders and tenacious advocates of this mischievous system-that a time was coming when they would regret the loss of the income they had so imprudently thrown away, and would find all the profit they could earn from all their business little enough for the maintenance of their divi-

† See Bailway Chronicle for 1844 and 1845.

We apprehend that no one will now dispute the accuracy of our foresight on this chapter; and while we refer to it, as likely to win some attention to what we have said on other parts of the business, we may also take occasion to remark that the subject itself ought to keep a foremost place in the eyes of all companies that have not yet reformed their system; and also of those who are about to organize the goods traffic on lines not yet open for merchan-dise. One of the only important general cautions, indeed, which we have yet to add to those already laid down, is, that every company shall retain for itself the whole profits of the business it transacts, instead of allowing them or any part of them to be abstracted by another party—as is always the case when the common carrier is allowed to conduct his traffic on a railway. Since we first attacked this fatal mistake, it has been abandoned—as far perhaps as was practicable at the time, and under the injurious pressure of those rivals whom the erroneous system had introduced—by the company that was most forward in promoting it, as well as by others who had followed the bad example. But the wound which it still continues to inflict on the profits of the London and North-Western goods traffic is deep enough to warn all who have their plans to frame against exposing their business to this evil,—which it is far easier to exclude at first than to eradicate afterwards.

Meanwhile, returning to what we said of the particular importance of regulating the bonus system, where a discretion is allowed in the matter of charges,—we may repeat, that our views of the expediency of keeping to fixed rates and uniform charges are not altered in any way; but that we must deal, for the present purpose, with the system as we believe it is now generally worked, on a far looser plan. And it is clear that the more discretion is left to the several managers, (and in this mode of charging all must have a share of it,) the more expedient it is to guard the exercise of their powers from the influence of erroneous tendencies; as also to fortify it by every inducement that can be given to endeavours which may promote the employer's interest. How this rule bears on the subject of remuneration by a scale of percentage or tonnage bonuses, we have already pointed out.

The other subjects we thought to name, are the control, as far as possible, of dead weight in the luggage trains, which must be particularly checked in the local and branch traffic; and the savings in porterage and on the items of collecting and delivery. To the last-mentioned topic we may possibly return, as it is one of great moment to all railways having London termini; the others we can only generally commend to the vigilance of managers and directors; as it must be left to them, after all, to perform what is needful in order to make a difference in this part of the business between actual loss and considerable profit.

#### OUR SURVEYS.

Under this title we purpose giving, from time to time, some brief notes we have made whilst personally examining the progress of various works. We make a beginning at Manchester.

No. 1.—The South Junction at Manchester, &c.

A railway to connect Manchester with Sheffield was one of the late George Stephenson's earliest projects. The present line was not laid out by him, but by Mr. Vignolles, and completed by Mr. Locke and Mr. Jee, the present engineer of it. The line seemed so impracticable, that when George Stephenson heard of it, and its summit tunnel three miles long, he yowed he would eat the first locomotive that

passed through the tunnel!-and parliamentary counsel, when they wished to irritate and shake the testimony of the veteran pioneer of railways, used to ask him if he had fulfilled his rash vow. To bring two such towns into contact—the one with its half a million and the other with its 100,000 people-would seem to be a sufficient warranty for making a railway; but this line has proved that it is not population alone at the termini of a railway that will insure its success. Manchester and Sheffield have comparatively few wants which each can supply; the through passenger traffic between the two places is trifling; and the goods traffic is not of greater value. It may be doubted whether such a line, which has been a very costly one to make, would ever do much more than pay its working expenses. Before the railway a single coach and two carriers did all the travelling work which the towns of Manchester and Sheffield demanded between each other. It did not take long after the opening of the railway to prove that there had been a mistake. But as commerce in this great commercial country always rights itself, so the old Manchester and Sheffield line found out speedily that in order to pay, it must be part of a much larger scheme; and accordingly it is now but the link in a chain which extends from the Mersey to the Humber. and is known as the Manchester, Sheffield and Lincolnshire Railway.

This system of east and west railways therefore begins at Liverpool and ends at Great Grimsby; but the Liverpool and Manchester line, although in harmonious working and to be actually united with the Manchester, Sheffield and Lincolnshire, is not in actual partnership with it. Had the Lincolnshire schemes been practically and fully matured at the time when it was engulphed by the enormous system known as the London and North-Western, it would probably have belonged to them rather than the London and North-Western.

Looking to the number of the competing railway interests which terminate in Manchester, it would seem better for all parties that the theory of a central station should not have been realized, as in fact it has not. The theory was not coincident with actual wants; and the wants of the place have resolved that there should be no central station. There are now stations at both the north and south sides of Manchester. By means of the South Junction, the Liverpool and Manchester is united with the Manchester and Birmingham, or London station, and also with the station for Sheffield and other south-eastern lines; and we may expect the latter to become the station for departure for Liverpool rather than that at the north side of the town. If this should be so, the Liverpool station will have been changed three times in the course of a dozen years-each change promoting increased public accommodation.

The Birmingham and the Sheffield and Lincolnshire being unconnected with the Liverpool

This junction has been made by the London and North-Western in half partnership with the Lincolnshire lines. It will cost a good deal, but would have been much dearer had it been on the north side of the Rochdale Canal, and in the more closely built part of Manchester. It is constructed wholly on arches. which may be expected to pay a rental as warehouses. Before it reaches the goods station it branches south-west to Altrincham, twice crossing the golden waters of the Duke of Bridgewater's canal—a distance of eight miles. The object of this branch is chiefly for passenger traffic, extending into a suburb which the Man-chester men delight to inhabit.

#### Official Bapers.

DUNDALK AND ENNISKILLEN. Engineer's Report for the Meeting, Aug. 31 (p. 655).

Inad hoped that I would have been enabled to report to you at this half-yearly meeting that the line would have been ready for opening in a few days; the state of the weather, however, for the last six weeks, has been so wet and unfavourable for work, that we have been considerably retarded in the progress that would otherwise have been made towards completion. I am happy, however, to be enabled to state that neither the embankments, the masonry, nor the portions of the line through the bogs, have, in the slightest degree sufficed from the heavy rain and unprenor the portions of the line through the bogs, have, in the slightest degree, suffered from the heavy rain and unprecedented floods which have recently taken place; the culverts have been found to be of ample size, and in every way sufficient for the drainage of the country. On the first contract, which extends from the quay of Dundalk to Enriskeen, all the culverts and drains are built, all the cuttings and embankments are completed, with the exception of the removal of about 5,000 yards of rock for the second line of rails, which does not, however, interfere or stop the completion of the single line. The slopes of the embankments and cuttings are not yet dressed down or soiled. This is but a minor work, and, though necessary to be done, yet it does not impede the opening of the line; & miles are ballasted and ready for receiving the permanent way; 5½ miles are laid, and the locomotive engine and trucks constantly at work over them, taking out material for the miles are laid, and the locomotive engine and trucks constantly at work over them, taking out material for the permanent way, and carrying ballast to the station at Dundalk; the remaining portion of this central 1½ miles will be ballasted in the ensuing week, and the permanent way laid in a fortnight from this. The fencing, except a few detached portions, is completed, and these portions are now being made up. All the bridges are built except two—one of these is over the Louth-road, near Dundalk, which, however, is in an advanced state, and the other, a farm-road bridge, that will probably be dispensed with; all these bridges have been completed some time, with the exception of some coping and pointing, and making up the approaches and dressing them properly off. When the centres were removed from one of these bridges, that across the Ardeeroad, a very trifling settlement appeared in the arch. Although it was so minute as scarcely to be perceived even by a practical eye, and did not in the slightest degree by a practical eye, and did not in the slightest degree interfere with the stability of the structure, Mr. Donegan, interfere with the stability of the structure, Mr. Donegan, the contractor, with his usual promptness to remedy any defect that may appear in his work and render it unexceptionable, at once, on my mentioning the circumstance to him, had the arch taken down—though he certainly could not have been called on to do so—and it is now nearly rebuilt and will be completed early in the ensuing week. The second contract extends from Enniskeen to Castle-blayney. This contract is not in so forward a state as the first contract; yet there is nothing to prevent its being completed in six weeks. There is not more than 36,000 cubic yards of earth and soil to be removed, and this in several detached places, so that any number of men can be employed upon it. The embankments on this contracturned out most expensive and troublesome to the contractors, from the nature of the country. In one embankment in particular, which was only 16 ft. high, earth has been thrown in that would have raised it nearly 60 ft. in height had the ground been firm and solid. All these difficulties, however, have now been overcome, and the embankments are all finished in a firm and permanent manner, with the The second contract extends from Enniskeen to Castleare all finished in a firm and permanent manner, with the exception of two—one of which requires about 2,000 cubic yards of earth, and the other about 6,000 cubic yards. The The Birmingham and the Sheffield and Lincolnshire being unconnected with the Liverpool line, led to great inconveniences and cost, which were felt more especially by the latter. Not only was it necessary for the Sheffield and Lincolnshire to cart all their goods through Manchester, at a cost of 300% a week, or 15,000%. a year, but this very necessity prevented great quantities of traffic from coming on the line at all. It was, on the whole, more convenient that manufacturers themselves should cart their own goods through Manchester, direct to the Liverpool goods station. The South Junction, now rapidly advancing, will virtually complete the circuit of railways round Manchester; for the Manchester and Leeds have a junction with the Birmingham and Manchester at Chancery-lane, just at the point where the Lincolnshire and the Birmingham lines

proceeded with, as all the materials are provided and ready for the work; an engine-shed is built at the terminus at Dundalk for holding two engines; the carriage-shed is com-Dundalk for holding two engines; the carriage-shed is commenced and the sidings and plants and crossings are being put in; a turn-table is being put in at Castleblayney, and a cattle platform and shed for two engines will be commenced immediately. Two locomotive engines and tenders and several waggons and trucks have been delivered and are on the line. Two more locomotives are in a forward state, at the factory of Messra Grendon, at Drogheda, which will be delivered in the course of a month, and in sufficient time for the opening of the line, which will take place by the middle of October, if some unforescen accident does not occur, or the weather prove so unfavourable as to place by the middle of October, if some unforescen accident does not occur, or the weather prove so unfavourable as to prevent the prosecution of the works. Having thus laid before you a general statement of the present state of the works, I shall be ready at the meeting of the shareholders to answer any question or give any information that may be required from me on any particular point, as can also the committee of works, who walked over the whole line with me on the 17th of last month, and also on Friday last.

#### Brogress of Works.

GREAT NORTHERN.—The progress recently made on the Great Northern in Doncaster, says the Doncaster Chronicle, is very great, if not unparalleled. In the short space of a few weeks a handsome and In the short space of a few weeks a handsome and commodious station, of a temporary character, has been erected, extensive platforms built, rails laid, turntables put down, the station-yard levelled, approaches made, lamps and signal posts put up, the station-yard enclosed, and in fact, the whole of the site of the station and ground adjoining has been completely transformed in a really incredible manner. completely transformed in a really incredible manner.
On the 5th the Government Inspector, Capt. Wynn, arrived in Doncaster, about 5 p.m., from Masborough station, and immediately inspected the line. On the 6th one or two engines were sent down the line with the new guards, for the purpose of making them familiar with the route. An engine, the 'Irwell,' raminar with the route. An engine, who arrived at the station between 7 and 8 p.m., bringing with it a number of first, second and third class carriages. The engine was then run back to Stockbridge, water tank at Doncaster station not being quite ready. The time for the departure of the first train from Doncaster was fixed at 7 30 p.m., on the 7th. Before that period, however, the platform at the station was well filled with the inhabitants of the town, who were anxious to witness the departure of the railway train. An engine, the 'Calder, and four-teen carriages were drawn up at the station, and a considerable number of people entered the train as passengers. At Stockbridge, as we have already observed, between forty and fifty got out of the train, and walked along the line to Doncaster.

LEEDS AND THIRSK.—The portion which was formally inspected on the 8th by Capt. Wynne, R.E., between Weeton-lane, near the river Wharfe, and the city of Ripon, was opened for traffic on the 14th between those places, making 28 miles (from Thirsk

to Weston) now available for public use.

LIVERPOOL AND BURY.—The viaduct at Liverpool is completed, with the exception of five arches over the dock property. The Walton and Upholland tun-nels are finished, and all the bridges between Liverpool and Wigan are built; the double way is laid and ballasted for that distance. From near Wigan to the junction with the Bolton and Preston, the bridges are all built, and a portion of the permanent way laid down, and only a few thousand yards of earthwork have yet to be removed. The large viaducts near-Bolton are in a forward state, that at Bolton being masonry of the Darcy Lever viaduct is complete, and two-thirds of the iron-work is fixed. The stone it duct at Bury is finished. The permanent way (do at le line) is laid through between Darcy Lever and the Several of the platforms and stations Bury viaduct. Bury viaduct. Several of the platforms and s' atic ins are built, and the signals are now being put v.p; s ind

Digitized by GOGIG

may cause its resumption—first, if the patentees choose to work the plant on their own account, charging the company a specific sum for the same, (very much lower, of course, than it has hitherto cost); or, secondly, if the patentees should perfect the system so as to make the working efficient and cheap. In the meantime they are to be allowed the use of the machinery for their experiments. The contractors are progressing fast with the works between Laira and this town, and have begun to lay the rails for the permanent way. The houses in Union and Bucklandstreet, in the route of the line, have been cleared away, and on the 6th the levelling of the field behind the Union Baths, in which is to be the terminus, was commenced. In six months, it is said, the line will be opened into Plymouth; but Midsummer next is looked upon by the less sanguine as the more probable period.

#### Accidents.

GREENOCK .- Sept. 3 .- A fire at the station originated in the turning-shop, under which is a furnace. About 4 a.m., the watchman, observing a light, immediately awoke the superintendent, Mr. Symington. Water being at once procured, the progress of the flames was stopped. Had the fire been half an hour longer in being discovered, it would have spread to the whole of the Caledonian's works, and the conflagration would have involved a serious destruction

of property.

LANCASHIRE AND YORKSHIRE.—Sept. 6.—As a train on the Ashton and Stalybridge branch was passing the Ashton station, from the neglect of W. Howard, the pointsman, to lock the points which should have allowed the train to go forward to Stalybridge, it ran allowed the train to go forward to Stalybridge, it ran into a siding. The engine and some carriages were injured. Howard was taken before the magistrates at Ashton next day, and committed for trial at the eessions.—Sept. 7.—Several labourers on the Bury branch were returning in waggons to Heywood, pushed along before the engine, on arriving at an incline about a mile from Heywood the engine slackened pace, when the carriages in front went forward down the incline, till, coming in contact with some carriages left in the way, a collision threw the men out. One of them. W. Taylor, had both legs nearly severed, and died. The others were much bruised.

London and North-Western.—Sept. 9.—About 3 a.m., a mail guard, named Hare, had left Manchester by the mail train which forms a junction at Crewe with the mails from Liverpool, Chester and Holyhead, on their way to London. It was his duty to remain at the Crewe station till the down mail from London arrived, a little after 3 a.m., and then return to Manchester with bags from that train, and also sith the these contents of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state also with the bags previously brought by the Chester and Holyhead up trains for Manchester. The guards have a room at Crewe in which to lock their bags during the five hours they wait there for the down mail, and Hare having waited till within a few minutes of the time the train was due, was carrying his Chester and Holyhead bags across the line in readiness to start for Manchester, when a luggage train suddenly came upon him, the engine of which knocked him down on one of the rails, and the wheels of the engine and waggons on that side went over his body and head, crushing them. Hare was a tall and body and nead, crusning them. I have was a tall and rather fine-looking man, well known on the road between Leicester and Manchester for many years before the London and North-Western was opened, as the guard of the old four-horse London and Manchester mail on that part of the journey .- Sept. 11. A poor woman met her death at noon, at Stetchford station. She was waiting to proceed by one of the trains to London, and, mistaking the down ex-

press train for it, was knocked down in crossing the line and killed on the spot.

Newcastle and Berwick.—According to a correspondent of the Edinburgh Witness, the express train to London took fire on the 11th inst., when about fifteen miles to the south of Berwick. The passengers to the rear of the carriage on fire smelt the burning wood, soon after which they saw a brilliant glare of light. The alarm having been immediately given, by passengers in the different carriages shouting to the engineer and waving their hats from the carriage windows, the train was brought to a stand, and the fire, which had assumed a formidable appearance, extinguished by water from the tender. The fire took place in the roof of a first-class carriage, and was caused, it is supposed, by a cinder from the engine, as cinders were flying past the carriages in immense quantities all the way from Berwick to Newcastle, the fire-box appearing insufficient.—On the same evening the axletree of one of the carriages in the train to Berwick took fire, when about a mile south of Morpeth. The fire was immediately discovered by the guard and got under before any serious damage was done.

Lam Intelligence.

Sept. 14.—In the SHERIFF'S COURT, in re Davies v. the Eastern Counties, a writ of inquiry was executed to assess the amount of compensation to be awarded to the plaintiff, a tobaccopipe-maker, near Shore-ditch, by the Eastern Counties, his premises being required under the Enlargement Act obtained by the company.—Counsel for the claimant said it had been arranged that the claimant should be paid 2,900l., consisting of two sums, 2,350l. as the purchase-2,500c., consisting of two sums, 2,500c. as the purchase-money for the property, and 550l. for damages. The learned Under-Sheriff explained to the jury that they had merely to assess the damages for the amount agreed upon.—The Jury assessed the damages in accordance with the arrangement made, and the matter terminated.

LONDON AND NORTH-WESTERN INQUEST. Sept. 6 to 13.—The inquest on the body of Col. Baird, who died from injuries received on the northern division of the line, near to Newton, on the 2nd (ante, p. 640), was commenced by the depositions of the surgeon and valet of the deceased, which threw no light upon the cause of the accident.—Mr.

Parker, the locomotive superintendent, stated :-I was a passenger by the express train leaving Liverpool at 5 p.m., and was in the last compartment of the last carriage. We were behind time at Wolverhampton about 15 minutes. At Willenhall (three miles from Wolverhampton) I observed that the wheels struck against the body of the carriage. I looked out of the window. The noise under the carriage ceased, but in a few minutes it commenced again. carriage ceased, but in a few minutes it commenced again. This was at the Newton Bridge station. I then suddenly found that the leading wheels were off the line. We came to rest in about a quarter of a minute. I heard the noise of the pilot engine going by, and saw it fall over about 110 yards from the spot where the accident occurred. I inspected the line immediately afterwards; the rails and chairs were ripped up where the engine and carriages left the line. The pilot engine did not touch our carriage at all; nor do I believe it touched any of the carriages. The result of my inspection was that the last carriage first got off the line; from this the engine ran off the line, though the engine, road and speed were quite safe. There were result of my inspection was that the last carriage first got off the line; from this the engine ran off the line, though the engine, road and speed were quite safe. There were only three carriages in the train; the pilot engine did not touch either of them. When I looked I found their engine standing 6 ft. from the down line on the western side, rather nearer to Birmingham. The engine front was embedded in the soil of the cutting quite tight, to the depth of a few feet. The tender lay upside down across the down ralls, about 6 ft. from the engine. The guard's van lawy on its right side on the ground, its front end upon the tender on one corner, with its tall end upon the line completely broken to pieces. The impression witness then received from the inspection as to the cause of the accident was that their (the last) carriage had got off the line, whence he believed that the engine got off, and then the whole train, and by that the carriages were overturned, throwing the guard's van across the line, from which cause, or from the damage done to the line, the pilot engine was upset. He did not consider himself unsafe until they reached the Newton station, when he heard the wheels strike three times, and immediately they went off the line. After this he proceeded to shovel sand on the fire and to assist in various ways. The springs being weak and the other disadvantages combined, no doubt rendered the carriage unsafe. The carriage he was in was not one of the London company's. It was one of the Scottish Central.

Mr. R. S. Norris, Warwshik, testdent engineer and out-door superintendent of the northern division of the line, was called up between 1 and 2 a.m. on Sunday. Got an engine, waggon and tools and went to the scene of the accident. After looking after the engines and carriages he examined the rails. On the down line, 30 or 40 ft. from the guard's

waggon and tools and went to the scene of the accident. After looking after the engines and carriages he examined the rails. On the down line, 30 or 40 ft. from the guard's van, three lengths of both rails were bent and torn up. Followed the track for nearly 100 yards. About 140 yards from the guard's van the west rail of the up line was more or less torn or cut, just as if it had been done with a pair of shears. It was also displaced. Two or three lengths of rail then intervened which were undisturbed and uninjured, and then from that point three or four lengths were torn up and very much bent. The bent rails were lying under the then from that point three or four lengths were torn up and very much bent. The bent rails were lying under the engine as though they had been torn up by the front part of it. From this point to a distance of about 30 yards, perhaps, the rail was very little damaged. This referred to the west rail of the up line. There was a mark in the ballast, as of carriage wheels, between the rails of the up line and also on the outside of the west rail. Commencing at the engine, this track was about a foot from the rail, and went gradually nearer until it got close to and on to a rail, along which it proceeded for about a length. From that along which it proceeded for about a length. From that point he examined the line very carefully for more than half a mile, and could not find any disarrangement. He half a mile, and could not find any disarrangement. He was satisfied, from observation, that it was at the south end of the rail last named, and so marked, that the vehicle first left the line. He took the crippled engines to Birmingham. On examining the engines and carringes afterwards, he found the coach (No. 2:6) next the guard's van, at the top of the leading end, broken in, and the near hind wheel broken. It was also strongly marked, as if by coming in contact with a stone. The leading axle was also a little strained. The next coach (No. 3:7) had the leading end completely knocked in, and was otherwise slightly damaged. The next coach (No. 18) had a small mark on the bottom panel of the leading end. On examining the under side of the found that in consequence of the floor of the coach coming very near to the periphery of the wheels, it had become necessary, to allow full play to the springs of the carriage, to cut away a portion of the floor of the coach carriage, to cut away a portion of the floor of the coach over each wheel. Sufficient had not been cut away to allow

free play to each or any one of these wheels, as on examination the carriage exhibited marks of friction and loss of substance at each end and side of each opening. There were also deep marks on the frame of the under side of the carriage, which had evidently been made by the very severe thumping of it upon the nuts of a strap, which fastens the spring plates together. The coupling chain which connected the guard's van with coach No. 236 was broken, and the safety chain on the near loading end was also broken. The marks on the ballast, north of the pilot engine, as well as those on the rail and chains, were evidently those of a carriage, being too light to be made by an engine. There was no doubt that some of the wheels of coach No. 18, if not all of them, were scotched in the cuttings under the floor, made for them, or at all events that their motion was retarded. That coach belonged to the Scottish Central. He considered this as a sufficient reason to cause a carriage to run off the line; that is, that if the motion of the wheels were retarded by not having sufficient play, a check would be given which would throw it off the line. In his opinion the springs were weak. Under ordinary circumstances, he ne given which would throw it on the line. In his opinion the springs were weak. Under ordinary circumstances, he should consider it a safe carriage, if only with an ordinary load—he should say with not more than nine passengers. It was built for eighteen. He should have no fear of that carriage at any speed with nine passengers and the ordinary quantity of luggage.

carriage at any speed with nine passengers and the ordinary quantity of luggage.

Capt. Huish, general manager, explained the manner in which the carriages of different companies arriving at different junctions, and of different constructions, were amalgamated into one train. It was impossible with express trains to survey minutely their fitness for the journey on their joining the train, but it was presumed that their having been in a train before was a sufficient proof of that, and they were generally permitted to proceed with the pasengers and luggage they contained. There was a slight deviation in the build of the carriages, the strength of the springs, &c. It was the practice to consider a carriage professing to carry eighteen passengers sufficient to do so. He had said a minute survey, but he might state that at all the junctions and stations a partial survey is made, a person being appointed to go round the train, examine the axies, &c.; but it is not that minute examination which would detect a flaw in the construction of a carriage. At the place where the accident occurred the rails were in a good state. good state.

Several passengers here deposed as to the rocking of the carriages, but declared that no one had ex-

of the carriages, but declared that no one had expressed any fear as to the speed at which the train was travelling.

Mr. F. Trevithick, superintendent of locomotives on the northern division of the line, left Birmingham on a pilot engine on Saturday night, the 2nd inst., at about 7 45.

Told Joyce, the engineman, to take out his engine. Had asked him previously whether it was possible for him to catch the express train, which had been gone twenty minutes; he replied that it was not. Started five minutes afterwards, and without any intention of coming up with the express train, at the rate of 35 miles an hour. On entering the Newton cutting the engineman shut off a portion of his steam: no remark was then made until the engine turned over on its side. Witness remarked that there had been no signal out; ran back and saw an engine with her front end towards Birmingham, on the right hand side of the down line. The driver, who was standing near. with her front end towards Birmingham, on the right hand side of the down line. The driver, who was standing near, said that they had left the rails. The pilot engine had gone off the line in consequence of the rails having been removed. The rails were very much torn up for 10 or 20 yards. Between Birmingham and Liverpool there are ten search engines at work as occasion may require, night and day; there is generally one every 30 miles. Such engines are safe to run 50 miles an hour. I don't think it possible for them to run 60 with a train on a narrow-gauge line. These are the outside cylinder engines. I don't think oscillation will occur at any speed at which they can run unless there is something in the road. A minute scrutiny of engines takes place every other day. At the time I started on the pilot engine it was not with the impression that there had been any accident to the express train. Supposing in this accident the last carriage to have gone off first, the engine was precisely in the same position I should have anticipated. have anticipated.

L. Gibson, a fireman, came up with the express train from Liverpool, which was drawn by the 'Colonel' engine.

I do not exactly know the time we left Stafford or Wolverhampton. It is not usual for the firemen to take the I do not exactly know the time we left Stafford or Wolverhampton. It is not usual for the firemen to take the time. The engine ran perfectly steady from Wolverhampton to Newton-road station, where the accident occurred. My place on the engine was on the right-hand side, on the footplate. I remained there from Wolverhampton. The first thing I noticed before the accident occurred, was a sudden jerk on the right-hand side of the engine, as if something snatched her back. The engine then took a sudden reel to the left-hand side, and immediately ran off the line to the right. I instantly put the brake on the tender. I have no distinct recollection whether I then jumped from the tender on to the foot-plate, or whether I was thrown from it, but I found myself between the fire-box and framing, lying on my right side, with my left lip cut through. While lying down something kept beating against the left side of my jaw, but I cannot say what it was. It might have been the whistle. I also received several blows on my chest by some portion of the machinery. In a short time I looked up, and saw the tender lying with her wheels uppermost. The engine ran into the embankment on her wheels. The driver, J. Matthews, stood on the foot-plate with me for some time, but I do not know what became of him. I rather think he was pitched into the hedge. The steam was shut off a few yards before we came to Newton-road station. There is a bridge which we have to pass over. There the steam is always turned off by the driver of a fast train. It is usual to turn off all the steam, or nearly all, when we are turning curves. All the drivers slacken speed when they arrive at a curve. It is laid down in the rule-book that the drivers a to the steam of the read of the pass over. arrive at a curve. It is laid down in the rule-book that the drivers should do so. We were running at the rate of We were running at the rate of

Digitized by GOGIC

about 40 miles an hour on the straight length. The shutting off of the steam before we came to the Newton-road station would make a great deal of difference in the speed. I do not know exactly what difference, but perhaps three or four niles an hour. There is a slight inclination a few hundred yards from Newton-road station. When I ran to put on the brake we were off the road. When at Stafford I examined the engine minutely, and oiled her well, and she was all right. I did the same at Wolverhampton, and there was nothing broken belonging to the engine. I have often been on an engine when a spring has broken. There is not much danger in such a case. It has frequently happened that a spring has broken and remained so until the train stopped, without the driver or firenan noticing it. Sometimes a train will run at the rate of 35 miles an hour with a spring belonging to the engine broken. He could not account for the accident. about 40 miles an hour on the straight length. The shutting count for the accident.

account for the accident.

Mr. Trevithick re-examined: I produce a time-table, a copy of the drivers' rules, and a correct map of the Liverpool and Birmingham. I have slightly examined the 'Colonel' engine since the accident. None of her springs are broken, but the buckle of the leading spring is gone. I have since examined carefully the Scottish Central carriage, No. 18. I placed weights in that carriage, to the amount of about 1 ton 13 cwt. The bottom floor of the carriage was then brought into contact with the flange of the wheel. I then increased the weight to 2 tons 3 cwt. The bottom of the carriage ten pressed so heavy upon the carriage was then brought into contact with the flange of the wheel. I then increased the weight to 2 tons 3 cwt. The bottom of the carriage then pressed so heavy upon the wheel that it prevented its free action in an indent which had been previously made in the floor of the carriage. The other three wheels were free from the floor of the carriage. I could not have embarrassed those wheels except by increasing the weight. With the weight I mentioned, one end of the carriage fell 1½ in., that end then being hard on the flange of the wheel. The other end of the carriage had fallen three-quarters of an inch on the same side. The first-named weight (1 ton 13 cwt.) is equal to a carriage about one-half or two-thirds loaded. Supposing each passenger to have his 100 lb., about fifteen passengers would be sufficient when the train is at rest. I reckon every passenger to weigh about 150 lb. The distribution of the weight in the carriage was equal. The carriage with the 1 ton 13 cwt. fell, I should say, about an inch. I did not measure it. The second weight (2 tons 3 cwt.) would be equal to a proportioned number of passengers with their luggage. The indent I speak of seemed to have been caused by the flange of the wheel. I judged that the indent had been recently made. I saw no dirt on the part, as would have been the case if the indent had been recently if it was in motion. I heard a witness state there was a humping in that particular carthe flange, or sink considerably if it was in motion. a witness state there was a bumping in that particular carriage. I believe that such bumping caused the indenta For many years we have been obliged to caution brakesmen from putting on their brakes auddenly.—By Capt. Simmons: If the driver perceives danger, and he calls the attention of the guard, is it not the custom to apply the brake sharply? I am not aware that such is the custom. The brake is al most universally applied to both wheels.

most universally applied to both wheels.

Mr. Parker re-examined: I have minutely surveyed the 'Colonel' engine since the accident. Two of the plates of the leading spring are lost. We found the buckle belonging to the leading spring. It was picked up where the 'Colonel' rested in the embankment. The springs of the engine are not injured. The flange of the right-hand leading wheel is much damaged. I could put the engine right again in a couple of days. I produce the buckle of the spring I spoke of. It is injured on its front in two places. I have no doubt the flange of the wheel caused the injury to it. It is my conviction that the carriage (18) getting off the line was the first thing. I judge the train passed the Newton station at the rate of from 40 to 45 miles an hour. The injury was done to the 'Colonel' engine after she ran off the line. I cannot tell the number of passengers in the Scottish Central carriage.

Mr. W. Parry, a passenger, deposed as to the bumping of

in the Scottish Central carriage.

Mr. W. Parry, a passenger, deposed as to the bumping of the train near the tunnel. The bumping continued all the way to the Newton-road station. About half a mile from Newton-road the humping became louder, and the carriage rocked considerably. After we left the tunnel oscillation commenced, and continued all the way. I was quite alive to our danger directly we left the tunnel. I have travelled a word deal and Lena say Invasa travelled foster then I did to our danger directly we left the tunnel. I have travelled as good deal, and I can say I never travelled faster than I did in the express that evening. It is fully my impression that we travelled at the rate of 60 miles an hour after we left the

tunnel.

T. Holland: I was guard on the express train on the night in question. I came up with the train from Stafford. I sat in the van next the tender. We travelled at our ordinary speed. After passing the Newton-road station I felt a kind of drag. I immediately applied my brake, and in a few moments I was knocked insensible. When I came to myself, I found myself lying on the rails, but whether on the up or down line I cannot say. I consider we were travelling from 40 to 45 miles an hour. We were going at

the up or down line I cannot say. I consider we were travelling from 40 to 45 miles an hour. We were going at our ordinary speed. The speed was not accelerated between Wolverhampton and Newton. I am quite sure we were not travelling at the rate of 50 miles an hour. I did not notice any rocking. The van went as well as a van could go. We were 23 minutes behind our time. We did not attempt to make it up, having no orders to that effect.

Capt. Simmons, Inspector of Railways: I have examined that portion of the line where the accident happened, but the road had been repaired when I visited it. When I made the inspection of the place and carriages I instructed nine men to get into the carriage, No. 18, and I found their weight to bring down the leading springs three quarters of an inch. There was no luggage put on the train. I agree with the description of the engine given by Mr. Parker. I, however, did not remark the damage done to the strays of the plummer blocks; but such injury might have existed without my seeing it. Not having made a survey of the line, I am unable to say whether the gradients and curves inserted in the map of the Grand Junction are correct, but I have no reason to doubt their accuracy. I examined the

railway a quarter of a mile south and half a mile north of the Newton-road station. There is a curve near the station, after a mile at least of straight road. There is a decline in the vicinity of the station descending towards Birmingham the vicinity of the station descending towards Birmingham. In my opinion a falling gradient tends to increase speed. The exact rate of the increase is of course mere speculation. The inclination, I am informed, is 1 in 522. If so, it would not be necessary to slacken the usual speed of an express train. To the best of my judgment the bottom of the last carriage which produced resistance to the motion of the wheels, was not so strong as to throw the carriages off the line. The substance of the resistance was an inch deal heard and that in my opinion, would have been driven out the line. The substance of the resistance was an incided board, and that, in my opinion, would have been driven out or broken through before the carriage could have been thrown off. If the carriage got off the line, I do not think it would throw the engine off. It might, but I do not think it would throw the engine on. It might, but 1 o not think it would necessarily do so. The things are so broken up it is difficult to get at the cause of the accident. It must be conjectural. Unless the train was travelling rapidly, with a great deal of motion upon it, I cannot see how one carriage getting off the line should draw the engine and other riage getting off the line should draw the engine and other carriages off also. I have known a case in which a light carriage attached to an express train ran off the rails and continued running on the road for nearly two miles, without dragging the other carriages off the line. I think in the present instance the speed must have been high, and the train moving unsteadily, for two reasons. If the carriage came from Stafford to Wolverhampton without bumping, and humping took place between Wolverhampton and the Newton-road station, it was prima facie evidence that either the road from the latter-named place was bad, or the speed high. Taking the 7 miles in 10 minutes spooken to either the road from the latter-named place was bad, or the speed high. Taking the 7 miles in 10 minutes spoken to by Mr. Osborne, the speed must have been upwards of 50 miles an hour, for it would take a mile and a half to get up a speed of 45 miles an hour. It is a difficult question to say whether 50 miles an hour is unsafe travelling on that portion of the line. I have been carried over it at that pace.

After the close of the evidence, John Matthews, the driver of the express train, was called into the court, and briefly addressed by the Coroner, who said it was not his intention to administer the usual oath to him as a witness, because it was impossible to say how far the verdict of the jury might affect him. His evidence might be used against him, and he therefore thought it right to inform him that he need not make any statement unless he thought pro-per. Having given him that caution, he would hear any account of the accident he might wish to give.— Matthews had no account to give of the occurrence. He could not tell how the accident happened, but he knew it was not caused by over speed. going at no more than the usual express-train speed when the affair happened.

The Coroner read over the evidence. Before, how ever, he got through half of it, the jury expressed themselves quite satisfied, and said it would be unnecessary for him to go through all the details. The Coroner then briefly addressed the jury upon the

various points in the evidence requiring explanation.

The Jury consulted for an hour, and returned a verdict of 'Accidental Death,' accompanied by an expression of doubt as to the safety of the Scottish Central carriage.

#### Reports of Meetings.

EDINBURGH AND NORTHERN.

Sept. 9 .- Half-yearly Meeting, Edinburgh .- Mr. J. BALFOUR in the chair.

The following report was read:-

In laying before the proprietors the half-yearly statement their affairs, the directors will, as on former occasions, commence their remarks by adverting briefly to the state of the railway works. Since the last meeting the whole of the line to Ferry-Port-on-Craig on the one hand, and to Perth line to Ferry-Port-on-Craig on the one hand, and to Perth on the other, has been by degrees opened for traffic. The first 11 miles of the Dunfermline extension was on Monday last opened for passenger traffic, leaving little more than 3 miles of that line unthinished. The works at the Tay Ferry have been proceeded with vigorously, in order to insure permanent accommodation for at least a portion of the Dundee traffic in the course of the present autumn. The branch to Kirkaldy Harbour is nearly completed, and the works at the Granton station are so far advanced as already to afford greatly increased facility for conducting the traffic in connexion with the pier and ferry. On all works at the Granton station are so far advanced as already to afford greatly increased facility for conducting the traffic in connexion with the pier and ferry. On all these points the directors beg to refer more particularly to the engineer's report. With regard to the parliamentary proceedings of the past session, your directors deemed it the most prudent course to drop their proposed branch to Queensferry, at the same time that the Edinburgh and Glasgow and Stirling and Dunfermline abandoned their schemes in the same direction. The expense of a parliamentary contest was thus avoided, and all parties were left precisely in the same position as before, without any advantage having been gained by one over another. The bills for extending branches into the various coal districts and for improving the harbour of Burntisland were proceeded with successfully; and although your directors cannot recommend that these works should be proceeded with at the present moment, still the company is placed in a very advantageous position by the powers acquired, and they entertain no doubt that hereafter the construction of them will add greatly to the revenue. Negotiations with the Dundee and Arbroath enabled your directors to secure to this company terms which they believed sufficient for the security of their traffic in connexion with the Dundee and Arbroath, under its lease to the Dundee and Perth. The financial position of the company has occupied the anxious

The great depression on the value of all kinds of railway securities has placed difficulties in the way of realizing, with punctuality, calls upon capital, and of obtaining loans on debenture. The demands on the and of obtaining loans on debenture. The demands on the proprietors have been made with great reluctance, but the circumstances with which the directors have had to deal have admitted of no alternative. The suspension of the works, after nearly a million and a half had been expended, would, in their opinion, have been most unjustifiable, inasmuch as such a step would have sacrificed indefinitely the interest of the older and by far the larger portion of the proprietors, many of whom had paid up their shares in full, and would have rendered dormant this large amount of capital, although requiring but a comparatively limited additional outlay to bring it into productive operation. The railway has now been opened for partial traffic both to Perth and Dundee; but, in the absence of accommodation for goods and minerals generally, especially at the Tay Ferry, the present returns afford no fair criterion of the real value of the line; and it is with a firm conviction that though inconvenient to many it is for the substantial good of all concerned that the necessary parts of the works rethough inconvenient to many it is for the substantial good of all concerned that the necessary parts of the works remaining unexecuted should be proceeded with and completed, that your directors must urge upon the proprietary the expediency of enabling them to carry on the Tay Ferry works to that stage at which they can be made available, to complete the remaining link of line between Crossgates and Dunfermline, and to provide such accessories to the undertaking as are absolutely necessary. Since the opening of the line to Perth the average weekly receipts have been 2,295L, of which 1,800L arises from passenger traffic alone. Looking to the inconvenience to which the communication with Dundee is still subject, and that the populous town of Dunfermline has not yet been reached, your directors cannot but consider the state of passenger traffic to be most satisfactory. It exceeds their expectations, while the comparatively small revenue from goods and minerals is clearly to be attributed to the almost total want of accommodation tively small revenue from goods and minerals is clearly to be attributed to the almost total want of accommodation for those branches of traffic at any of the termini. The goods traffic to Dundee may be said to be excluded until the Tay Ferry works are further advanced. The same cause operates as effectually against the coal traffic in that quarter, and the want of station accommodation at Perth has hitherto and the want of station accommodation at Ferm has intervo prevented its being carried on in that direction. When it is considered that these two points command the channels by which the land supply of coals to the North of Scotland must be conveyed, and that the supply will be derived chiefly from this railway, the necessity of proceeding with works that will render this important source of revenue available smit become apparent to every one. Your directors are satisfied that when these impediments to the full development of the traffic are removed by the completion of the works, the receipts will amply justify their previous expectations. With these views they request that the power of making further calls, of proceeding against defaulters, and of raising money by loan on debentures, may be given to them, and left to be exercised as shall appear to them most advisable. Your directors do not propose at the present time to commence the execution of any of the branch lines hitherto suspended, nor of those works for which legislative powers were obtained during the late session of Parliament. The financial statement appended to the previous report was given with more than usual detail; and as it is proposed to afford similar details at the close of each yearly balance, the present statement has been more generalized than formerly. The statement of the capital account of the late Edinburgh, Leith and Granton does not accompany the present report, the accountant in whose hands the books and accounts were placed having requested more time for their audit. It is scarcely necessary to observe that the partial opening of any railway can never be very remunerative; and this line, while it continued so, laboured under disadvantages peculiar to itself. Till the last forthight of the half-year the communication to Perth was incomplete. and the receipts for the early portion of the period necessarily continued low, while the expenses were proportionally large; but with the increased receipts a different result will be produced. The revenue monthly during the half-year stood thus:—

attention of the directors.

Four weeks ending 26th of February £2,703

Four weeks ending 26th of February £27,703 1 11

25th of March ... 2,790 15 8

22nd of April ... 4,678 10 4

20th of May ... 5,112 15 2

17th of June ... 5,979 17 0

15th of July ... 5,931 6 8

During the four weeks subsequent to the completion of the line the receipts amounted to 9,1817. 19s. 1d. The number of passengers carried during the half-year (the directors are hanny to say without accident have been — first class.

of passengers carried during the half-year the directors are happy to say without accident) have been—first class, 46,848; second class, 161,961; third class, 289,362; fourth class, 55,414; total, 547,585. The free revenue, including the balance at the 31st of January last, amounted to 19,9485. St. 105. This sum the directors would propose should remain as a loan to the capital account till the close of the current half-year. From this adeduction has to be made for interest on a portion of the loans to Whitsunday last; and the shareholders in the late Edinburgh, Leith and Granton are entitled, as stated in last half-yearly report, to receive a small sum as the proceeds on their line from the 1st of February to the 15th of May last, during which period the Edinburgh and Northern proprietors of shares of 1845 and 1846 received interest upon their paid-up calls. To simplify the share account, the directors propose the conversion of the paid-up shares into stock. the paid-up shares into stock.

The statement of capital account to July 31 showed the receipts at 1,394,435*l*. 2s. 6d.; expenditure, 1,722,213*l*. 8s. 5d.; balance, due to bankers and others, 327,778*l*. 5s. 11d.

£19,948 5 10 The SECRETARY then read the report by Mr. Grainger, the engineer, which stated that the permanent way of the whole line opened was in good, and in many parts in excellent condition, and that, from the substantial manner in which the works had been exe cuted, the expense of their maintenance might be expected to be as low as, if not lower than, upon any other line with the same extent of traffic. With respect to the Dunfermline branch, the works upon it from Thornton to the great north road at Cross-gates were all but finished, and the line had recently been opened for traffic; and with respect to the con-nexion of the main line with the collieries, branches to Dysart, Dundonald and other collieries, and to the iron works at Lochgelly, had been made. The works at Kirkaldy Harbour, being well advanced, might be opened for traffic next month; and with reference to the passenger stations, those upon the main line were in a perfect state to Cupar, beyond which they were merely of temporary construction. The same obsermerely of temporary construction. The same observation applies to the goods, mineral and passenger traffic upon both sides of the Tay, where operations were at present being carried on for the improvement of the landing-places; and when the barge now building by Messrs. Napier was completed, great facilities for the method of the traffic at this point would lities for the working of the traffic at this point would be afforded. At the station in Edinburgh no new works of importance were going on, except the construction of a terrace and staircase from Prince's street, by which a direct communication would be obtained to the station, chiefly in connexion with the

Dunfermline; and, upon the whole, the traffic on the main portion had been such as, he thought, to realize their utmost expectations with regard to the traffic in passengers. The Scottish Central station at Perth gave them fair accommodation so far as passengers gave them fair accommodation so far as passengers were concerned, and they had nothing to complain of on that account. The branch line to Dunfermline had only been opened within the last week, and he did not expect that they would have any great addition to their passenger returns from this branch until the connexion was completed to Dunfermline. But on the whole he might say, without hesitation, that the traffic in the last few months gave promise of their being able to meet all their repeatedly and long promised assurances of success. The works at Perry-Port-on-Craig were undoubtedly large; and they would enable them to carry on a considerable export trade in coal, and also to place the goods traffic on an efficient footing. With regard to their station at Perth, their goods traffic there had been exceedingly limited. In fact, although they had had an opportunity of carrying coals into Perth ever since the line was completed, they had not as yet carried a single ton of coals into that district, simply carried a single ton of coals into that district, simply because they were not in a state to receive them at that station. The control of that station was in the hands of the Scottish Central, and therefore they were in a manner obliged to submit to their arrangements. Negotiations were now going on, and he had no doubt, by a little management, they would be enabled to have matters satisfactorily arranged. The bills for extending the branches into the coal districts, and for improving the harbour of Burntisland, had been carried through successfully. He thought that these bills would place them in an advantageous The negotiations with the Dundee and position. Arbroath had been carried on by a committee of the directors in London, and they had terminated satisfactorily. Arrangements and negotiations were at present going on with a view to the amount of the toll that was to be charged by the Scottish Central, and he trusted that they would be able to come to terms without any expense in the way of reference. They would meet the question fairly, and he had no doubt that they would meet with equal fairness on the part of the Scottish Central directors. In conclusion, he had only to say that the attention of the directors resuld in States he account addressed. directors would in future be confined to decreasing the expenses of the line, to the completion of the works already in operation, and to rendering the works already in operation, and to rendering the capital hitherto expended as productive as possible, and the property as safe as possible. The directors would carry on the affairs of the company with the utmost zeal in their power; and he had to inform them that it was their resolution to close the capital account at as early a date as possible. The Chairman then proposed a series of resolutions to the effect man then proposed a series of resolutions to the effect that the report and accounts be approved: that the directors be empowered to borrow on mortgage or debenture, on such terms as they might consider proper, the sum of 126.685l; and that the 20l and 25l. shares paid up be converted and consolidated into capital stock; and with regard to such shares on which the arrears of calls had not been paid up, that the stock is like pushes converted and consolidated conthat the same be in like manner converted and consolidated into stock from time to time as these arrears

Mr. MACINTYRE expressed his satisfaction with the exercise of economy in the management, and com-plained that there was not a fraction of interest added to the revenue account in the report. The whole of it went to the capital, for which no less a sum than 28,977l, of interest was payable for the half-year, and the weekly receipts being on the average 2,295l., more than half of it would be required to pay the interest. The interest on loans amounted to the sum of 8,593L, and to shareholders, 15.219L.

The CHAIRMAN said that the interest paid to the shareholders was in lieu of a dividend, and had always been paid out of the capital.

Mr. MACINTYRE referred to the account for coals, which amounted to 6,900l, for the half-year, which was much larger than the items charged for the same article on other railways. He next adverted to the purchase of shares in the Stirling and Dunfermline by the directors, and asked how many were held.

The CHAIRMAN said, with regard to that subject, that it remained exactly in the same position as at last meeting, when it was before them, and the report by the directors agreed to. It was their intention to go to Parliament to obtain power for the com-pany to hold those shares for which 17,000!. had been

that a perpetual interdict had been granted by the Court against the payment of the calls upon the stock held by the company in the Stirling and Dunfermline. The directors, having made such an unwarrantable investment, were personally responsible, and must replace the funds, as no approval of the transaction had taken place at the last meeting. The question was not now as to the future calls, but how and in what manner were the funds which had been already misapplied to be got back. He (Mr. Robert-son) hoped that if a strong representation were made to the directors personally, this glaring illegality would be so clear as to induce them to replace the funds. He was quite prepared to agree to whatever was necessary to obtain reparation, but he thought that strong measures should be avoided, if possible. He then referred to some irregularities in the arrival of the trains on the Edinburgh and Northern. The line was of a peculiar character, and if they wished it one was of a peculiar character, and if they wished it to be managed with punctuality, they must have a person resident at Burntisland, who would see that it was properly worked. Mr. Monro concluded by asking if any interest or dividend was to be given by Martinmas

Mr. KINNEAR said that the accounts had been made up in rather a novel manner, fallaciously. When a railway was opened, either completely or partially, the revenue accounts were debited with the partially, the revenue accounts were debted with the interest of the capital laid out upon the portion of the line yielding the revenue. But, in the accounts before them, that had not been done, though the line had been open for nearly a year. He denied that the sum of 19,948., stated in the report to be clear revenue, was such, for it did not exist; and he thought that the accounts were not such as could be approved of, having been made up upon a totally fallacious principle. With regard to the contemplated applica-tion by the directors to Parliament, for authority to apply 60,000%, of the funds for the shares purchased in the Stirling and Dunfermline line, it was one of the most extraordinary things he had ever heard of; and he would say that if they did so, most decidedly it would be opposed.

Mr. Lyon, stockbroker, maintained that the pre-

ceding speaker had failed to show in what respect the accounts were fallacious. He thought that the directors had acted wisely in obtaining an influence in the Stirling and Dunfermline line, and that it had been cheaply purchased by the investment of a sum of 60,000l., which would yield as good a return as the same amount of capital expended on the Northern line. He trusted that they would adhere to their resolution to go to Parliament to complete the trans-

action. Mr. E. Ellice, jun., M.P., said that some difference of opinion might exist as to the mode in which the accounts had been made up, but he hoped that every proprietor would acquit the directors of any wish whatever, not to deceive, but even to mystify them. With reference to the Stirling and Dunferm-line, Mr. Kinnear was quite consistent in the part he had taken, because he had protested against the transaction at the last meeting, and had since instituted proceedings against the directors. But he could not say so much for Mr. Robertson, and he really did not know how to characterize his conduct in writing the letter that had been read. The report of the directors was adopted at the last meeting, after a full discussion, and with the exception of protests by Messrs. Smith and Kinnear, it was adopted unanimously. Mr. Robertson took part in the proceedings, and spoke more than once during the debate; but he was the very gentleman who had now come forward to repudiate what he had then done, and desired to make the directors responsible, after telling them that he was willing to relieve them from the liability. With regard to the Stirling and Dun-fermline he would say that from all that had passed since the last meeting, his opinion of the expediency of the transaction had been more and more confirmed. With reference to the management of the line he thought it was saying a great deal in its favour that they had carried half a million of passengers without a single accident. The line was certainly subject to more unpunctuality than other lines in consequence of the ferries, and the less they said consequence of the ferries, and the less they said about it the better; but in spite of that they had carried a large and safe traffic. That company was one of those which had agreed to have a closed capital account. They were not to be one of those having an unlimited power of creating new stock, but with a partial, defined and limited power of raising capital and issuing debentures for loans, and he thought that they would be enabled to limit their capitalts 2 250 000%, including the Leith and Granton. obtained to the station, chiefly in connexion with the short trains.

The CHAIRMAN said that since last meeting great progress had been made towards the company to acquire an interest in the Stirling and Dunfermline. No funds had, however, been applied to the payment of the calls since last meeting.

The main line, extending to Perth on the one hand, and to Ferry-Port-on-Craig on the other. The line also had been partially extended in the direction of

168,000l. a year, or just 3,250l. a week. Now they received at that moment 2,300l. a week, without having carried a single ton of coals or any minerals whatever either to Dundee or Perth. Without taking credit for any increase in the number of passengers, or in the transit of goods, or even for the new line they had opened to Dunfermline, but merely taking credit for the coal traffic, which, at a very low estimate, he was instructed by competent authorities would be necessary for Dundee and Perth, he brought up the traffic at once to 3,021l. a week. They would have to supply Perth and Dundee, including the shipping there, to an unlimited amount, perhaps, for which he would allow 250,000 tons a year, which, at the rate of 3s. per ton, or about 1d. a mile, gave 37,500l., or 721l. a week, and that without calculating a single sixpence for the increase of the passenger or goods traffic, or for the Dunfermline branch. He had great confidence in the capabilities of the line, and with decent economy and care it would prove as remunerative as any in Scotland, and had already surpassed the expectations he had formed of it as regarded the passenger traffic.

In answer to Mr. Munro,

The CHAIRMAN said that the interest had been paid up to Whitsunday last, and that no dividend would be declared until Whitsunday next, or at least till after next half-yearly meeting.

Mr. J. Aytoun bore testimony to the admirable manner in which the line was managed. Of course, as they had to cross two ferries, they must to some extent be subject to delays; but he understood it to be a stringent egulation by the directors that when any delay did occur, no attempt should be made to make it up by increased speed; and it was owing, perhaps, to that prudent rule that no accident had occurred on the line, notwithstanding their immense number of passengers. With regard to the estimate of the traffic made by Mr. Ellice, being a coal-master himself, he was sure that it was far below what the coal interest in Fife believed it would be. He was

convinced that the traffic with Dundee and Perth in that single article would be at least 500,000 tons annually; and as the hon. gentleman had not taken credit for any increase of passenger traffic, he (Mr. Aytoun) felt convinced that they had every reason to believe that the revenue of the Edinburgh and Northern would yet be 4 000% aweek

Northern would yet be 4,000l. a-week.

The Hon. A. LEBLIE MELVILLE said that he had come to the same conclusion as Mr. Ellice with regard to their capabilities. He had tried to calculate the amount of the receipts per mile, and the amount of capital expended, and the result had been that he had purchased more shares in the concern. As to what had been said regarding the Stirling and Dunfermline line, when he saw the directors in the country guaranteeing dividends to the extent of 6 per cent. upon many lines which he believed would never yield one-half of that amount, he looked to the directors of their own line with confidence, when he saw that they had made no guarantee of any sort, and thought that it was for the shareholders to support them. He had observed at a distance the progress which had been made in different ways, and he had noticed repeatedly the efforts made by Mr. Ellice, one of the directors, in Parliament, in their behalf, and the success which had attended his very judicious exertions; and when he saw these things, he thought it was a satisfactory and good investment. One reason why they did not stand so well in the market as they might do, was the fact that the line was a purely local one, confined to Edinburgh and its immediate neighbourhood.

Mr. IRELAND, banker, St. Andrews, travelled upon the line once a week, and had never seen a railway so well worked.

The resolutions were then put seriatin to the meet ing by the Chairman, and unanimously adopted.

Mr. BLACKADDER having given notice at last meeting of a motion to the effect—"That no traffic be done on the railway on the Lord's Day," said, that as the line was confined to a certain locality, namely, the kingdom of Fife, he thought it would be better

for a gentleman from Fife to move the resolution. Mr. Blackadder then presented two memorials against Sabbath trains, one from the Free Church congregation at Strathmiglo, signed by 231 persons, and the other from Ceres, to which 476 names had been adhibited.

Mr. M. Herior, of Ramornie, said it appeared to him that there was no distinction between one, two or twenty trains; and he entreated them to consider the question, because he looked upon it as a very serious one, and involving important consequences to this country.

Major STUPART, Trinity, seconded the motion.

Mr. P. DRUMMOND, Stirling, and Mr. G. MILER respectively addressed the meeting for and against the motion.

Prof. DICK moved the previous question.

An amendment by Col. Grahams, of Mosknov, of which notice had been given at last meeting to the effect, that when a question had been decided by a general meeting it should not be competent for reconsideration, except at a special meeting called for that purpose, not having been moved, it fell to the ground.

The vote was then taken, when there appearedfor Mr. Blackadder's motion, 33—142 votes; for the previous question, 55—404 votes; majority, 22— 262 votes.

Mr. DRUMMOND gave notice of a motion for next meeting, requiring a return of the number of passegers carried on the line upon the Sabbath-day size the line was opened, the amount of profit and los arising therefrom, and also the number of persons employed upon the line on that day.

The CHAIRMAN said that he would be prepared at next half-yearly meeting to give such information on the subject as he should consider right, when, if the hon. proprietor were not satisfied, he might bring forward his motion.

#### * For account, Oct. 17.

London Stock Exchange. - Sept. 15 .- A more unfavourable state of the share-market has to be reported. Many reasons are suggested for the great depression. but nothing seems to stop the alarm in the minds of those who seem determined to sell however frightful the sacrifice. Hopes were entertained at the begin-ning of the week that prices were at the lowest, but the close of the market shows still a decline, which may perhaps induce those who are not pressed by absolute necessity to forbear from pressing still more on the market, as it is hoped there are many buyers, who only want confidence. The following are the latest prices in foreign lines:—Boulogne and latest prices in foreign lines:—Boulogne and Amiens, 5\frac{2}{2}; Dutch-Rhenish, \frac{1}{2}; Namur and Liége, 3\frac{3}{4}; Northern of France, 6\frac{3}{4}; Orleans, Tours and Bordeaux, 1\frac{1}{2}; Paris and Lyon (11l. paid), 5\frac{1}{2}; Sambre and Meuse, 2\frac{1}{2}.

Liverpool, Sept. 14.—There is no very material change in the state of our market; the amount of husiness transacted continues very limited and prices

business transacted continues very limited, and prices generally have a downward tendency. To-day we have had great depression.

Suplow, Brothers. Manchester, Sept. 14 .-- Our share-market is still depressed and gloomy; little business doing and

prices drooping.

Birmingham, Sept. 14.—There has been very little business done in the market during the week, and very few shares are offering.

To-day prices have
W. BANES.

W. BANES.

given way considerably. W. Banks.

York, Sept. 14.—The market seems unaccountably to have given way, and the sellers greatly preponderate. We look for more firmness in a few weeks. At the North British meeting a committee of the directors were appointed to confer with Mr. Hudson with a view to a lease to him of the North British line. The meeting stands adjourned for five weeks, when the report of the negotiation will be received. Salutary reforms in the shape of retrenchments were urged upon the directors.

GRAYSTON & EARLE. Hull, Sept. 14.—The business passing in shares continues to be of the most limited nature; there are few buyers, and no inducement to sell, except the pressing one of want of money on the part of weak holders perplexed with calls.

FLINT & TOOTAL. Glasgow, Sept. 14 .- In the early part of this week a better feeling prevailed, and a considerable business was done at improved prices. The demand having since ceased, while sales were still pressed, a daily fall has been the result. The decline appears to have been materially hastened by parties interested in bringing down the market. The following are today's latest sales:—Caledonian preference, † dis.; Ayr, 60; ditto, halves, No. 1, 9\forall dis.; ditto, halves, No. 2, 9\forall dis.; Great Northern, 10\forall dis.; North British, thirds, 5\forall ; Scottish Central, 22\forall .

BUCHANAN, AITKEN & Co.

IRON TRADE. - Glasgow, Sept. 8. - There have been more buyers and a greater demand for pig iron this week; and prices are firm at 45s. 6d. for mixed numbers—almost nothing offering for sale. Below are the shipments, furnished by the North British Railway Gazette, for last month:—

From Broomielaw		1847. 11,244 tons. 15,579 tons.
Total	22,657	26,823 tons.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

BIRKENHEAD, LANCASHIRE AND CHESHIRE.-Sept. 29. Bir-

CHESTER AND HOLYHEAD.—Sept. 20. 61, Moorgate-street, at 1. GREAT SOUTHERN AND WESTERN (I.).—Sept. 19. Dublin, at 1. ROUEN AND HAVE.—Sept. 30. Paris, at 2.

#### DIVIDENDS.

## Joint-Stock Companies' Gazette.

The first meeting of the Timber Preserving Com-pany was held on the 8th inst., when the direction was formed, and resolutions passed for the successful carrying on of the business of the company. carrying on of the business of the company. We have before alluded to the objects for which this company was originated, viz., the rendering every description of wood uninflammable, and causing the common deal to be greatly hardened so as to admit of its being polished as beautifully as other woods.

The papers received from Western Australia this week state that the exports of the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the colonial wood to the co

China and India had met with success, and had given China and India had met with success, and had given the colonists great encouragement, so much so that a company had been projected with the view of carrying on an extensive trade. A lease of good timber land had already been granted, and it was expected that the company would be in full operation by the middle of next year. One tenth of the shares were to be reserved for the colonists.

Docks. Several meetings have lately taken place at the Town Hall, Liverpool, in reference to the BATING of the docks. A special meeting of the Town Council was held on Wednesday last, when, after a rather long discussion, it was resolved by a majority of five votes that the docks should be rated.

Canals.

The annual meeting of the Commissioners for the Improvement of the Navigation of the River Severn was held at Worcester on Monday last, Lord Hatherton in the chair. From the report we glean the following facts:—Only 2201. had been spent in the maintenance of the improved navigation between Worcester and Stourport, where weirs and locks had been erected, while upwards of 2,500l. had been spent in the maintenance of the works below Worcester, where no locks or weirs had been placed, and they were obliged to resort to dredging. The report of the engineer stated that the works had maintained their original state of stability unimpaired. The efficiency of the weirs had been established by the fact of the meadows above them being less liable to flood than those below. The traffic on the river during the last year had shared in the general depression of commercial affairs, but latterly a decided and general improvement had taken place. The financial statements showed that from the passing of the original Act in 1848 down to the 1st of July 1848, the sum of 203,500l. had been raised on mortgage of the sum of 203,500l. had been raised on mortgage of tolls, and that receipts from other sources swelled the amount to 204,076l. 15s. 2d. The balance in hand was only 9l. 8s. 2d. By the account of receipts and payments for the year ending the 1st of July last, it appeared that the tolls amounted to 11,336l. 6s. 8d.; the expenditure had been 13,537l. 14s. 2d.; leaving a deficiency of 2,190l. 11s. 1d., which had been received from the Staffordshire and Worcestershire Canal Company, who had guaranteed the mortgages. After some discussion the report was adopted, together with an amendment by Mr. Sturge, to the effect that, protesting altogether against any further application to Parliament, the meeting was of opinion that any such application should be made on the principle that no weir should be erected below Worcester. and that the exemption to the Shropshire trade should be continued in its full integrity. Mines.

Last week several meetings of the proprietors of the Cornish mines took place. Dividends were de-clared at the following:—South Wheal Frances, 5l. per 124th share;—EAST WHEAL ROSE, 25l. per 128th share, reserving a balance of 2,694l. 19s. 5d.;

Digitized by GOOGLE

produced 9,340l.;—West Caradon, dividend of 2l. 10s. per 256th share; the profits for the two months were 846l. 18s. 6d.; after paying the above dividend there remained in hand the sum of 1,619l.

At the Wheal Mary Consols meeting, the balance in favour of the adventurers was 223l. 10s. 3d., and the report stated that the mine was being satisfac-

torily worked.

Calls have been made by the following companies The Wheal Mary, 10s. per share, to pay off liabilities and provide funds for the continuance of the working. At the meeting of the holders in the Gona-mena the report showed a balance of 651. 12s. 11d. against the mine, and a call of 30s. per share was therefore made to provide capital. per share has been made in the CRADDOCK MOOR Company; the balance in favour of the company was 81.17s. 2d. At the CARWINNING HILL meeting 10s. per share was called for. Six tons of ore has, since the meeting was held, been shipped to Liverpool. The total quantity of ore sold last week was 1,923 tons, producing 9,8477.0s.6d. per share has been made in the CRADDOCK MOOR Com-

At the Wheal Sisters meeting the accounts showed a balance of 7l. 11s. 8d.

The sales of copper ore at Swansea last week amounted to 2,139 tons, producing 22,750l. 16s. 6d.

The Morning Chronicle of Tuesday contains the following news from Australia:—An important communication has been made to Messrs. Elder & Co., touching a recent discovery of Mr. Finke and his miners on the Mount Remarkable Survey. All that is known at present is that a new and valuable lode of three or four feet in bigness has been ascertained and that decisive intelligence of a highly favourable kind may be shortly expected.

The want of labour and capital was much felt at Sydney; the coal mines there are entirely at a stand-still in consequence. Should steam navigation be prosecuted to Australia, steps must then be taken to supply the coal which will be required. Mining operations were still being prosecuted in Western operations were still being prosecuted in messen. Australia, by the last accounts, but no certain particulars respecting the quality or quantity of the minerals are given. The valuable coal mines discovered in the north, remained neglected. Attempts were being made to discover coal nearer to the town of Perth, but hitherto they have been unsuccessful.

The transactions in shares have not been extensive this week, and the market has assumed a downward

tendency as regards prices.

TO CORRESPONDENTS.

A CITIZEN should send to the chairman of the company. RECEIVED: A MANCHESTER READER—R. D. E. N., Dublin—One in the Nobth.—Railway Investments.

# Railway Chronicle.

LONDON, SATURDAY, SEPTEMBER 16.

The directors of the EDINBURGH AND NORTH-ERN, after alluding to the progress of their works and the results of their parliamentary applications during the session, in the report received by the shareholders at the half-yearly meeting, urged the expediency of completing the works at Tay Ferry, which comprise the final link with Dunfermline. Since the opening to Perth, 1,800l. per week has been taken for passenger traffic. No dividend is declared,— the directors retaining the amount of free revenue as a loan to the capital account.

According to the report of the North Bri-TISH there is ample promise of an increasing revenue. The 17 additional miles on the Hawick branch have quite equalled all the expectations of the directors. Under their Act for an augmentation of capital of 600,000l. the directors intend to issue shares proportionally to such of the holders of the Carlisle extension scrip as shall claim them, credit for the deposit of 12s. 6d. per share, which was paid on that scrip, being to be given to the parties who shall so take the shares, and those holders of the extension scrip who do not exchange it for new shares will receive back about 4s. 3d. per share. All parties appear to be willing for

the sales of lead by this company for two months arrangements with Mr. Hudson for a sale or lease of the line.

At a special meeting of the Shrewsbury AND BIRMINGHAM proprietors the proposal of the directors for creating preference shares was carried. The original resolution was altered by dividing 155,000l. into 19,375 shares of 8l. each, instead of 15,500 of 10l. each.

The shareholders of the SOUTH STAFFORD-SHIRE adopted the report and accounts presented at the half-yearly meeting. The portion between Walsall and Bescot has fully answered the anticipations of the Board. A fourth call, limited to 1l. per share, is payable in a few days. The proposal to publish the names of defaulters was rejected by the chairman, who also declared that the company were open to treat for the sale of the line.

We have inserted elsewhere the comments of "An EYE WITNESS" on the SUSPENSION OR ABANDONMENT OF THE ATMOSPHERIC SYSTEM on the South Devon Railway, which it appears took place last Saturday." his statement it would seem that the accounts given by the directors of the working of the system and the cause of its abandonment are not correct. The respectability of the "Eye Witness," who has sent us his name and address, does not permit us to doubt the truth of his statements. From these it would appear that the present acts of the directors are inconsistent with their own and their engineer's recent professions. About six months ago the directors and their engineer reported that they had every reason to be satisfied with the regularity and good working of the atmospheric, considering the incompleteness of the general arrangements, the want of telegraphs, &c.; and they properly enough inferred that until all the arrangements of a mechanical nature were complete, no judgment could be formed of the cost of working. Now, the "Eye Witness" declares that the system has worked during the last half-year more regularly, more economically and more satisfactorily than in the previous half-year; that the incompleteness of the arrangements being taken into account. and allowed for, the ordinary working expense of the atmospheric has been one-fourth less than the locomotive expense, per mile run; so that the future expense might be calculated safely at two-thirds of the cost of locomotive power. These are startling statements, and it is difficult to reconcile them with the sudden resolution of the directors to abandon the system. Our correspondent states that the smallness of the traffic on the line, and not the nature of the power, is the cause of the disastrous financial results of the half-year. These are assertions which demand the gravest inquiry; and we are quite sure that those shareholders who thought the directors and their engineer somewhat rash in adopting the system, will think them still more rash if they have hastily abandoned an experiment that had just begun to be worked successfully. The case is one which demands immediate and energetic inquiry on the part of every shareholder.

From our official returns it appears that the amount of traffic for the last week, on 4,060 miles of railway, was 221,867l., thus accounted for:—119,126l. for the conveyance of passengers only, 47,805l. for the carriage of goods, and a remainder of 54,936l. for passengers and goods together, not respectively apportioned; being an increase of 14,280l. over the corresponding week of last year, when the mileage was 3,188. The average earnings per mile were 54l., whilst in 1847 they were 65l.

HEADS OF AN INQUIRY INTO THE PROFITS OF THE WIDE-GAUGE SYSTEM .- No. I.

We intend to set down for future reference a few practical notes on the broad-gauge system, as affecting the profitable returns of money invested in this class of railways. Two years ago such considerations would have had little chance of gaining attention in any quarter. The idea of counting the cost of a particular line, or of this or that way of constructing a given line, in fact, scarcely entered as a decisive notion into the agencies then promoting railway enterprize. The universal assumption was, virtually, that railways were desirable things, in whatever direction or however they were to be made; and the question therefore was, who should get the first hold of any district in which it was still possible to make a new one. Hence the rivalry on all sides for the possession of open country; and as the position of the broad-gauge system naturally gave this competition a sharper point, that system was promoted far more as a means of securing territory than as offering, by its special properties, a preferable view of the gain to be made by laying out money to extend it. The effect of this contest, in which, on both sides, the main question-of what profit was to be made by the new outlay?-was overlooked, is now beginning to be so far apparent, that we may return at last to an inquiry which ought to have preceded the several enterprizes in the first instance. It must be seen that to have got power to make a new line is by no means identical with getting a certain promise of advantage from making it. This will depend upon what it is to cost in its structure, what its working will cost, and how far the traffic it can obtain at such rates as can be levied upon it will produce a per-centage of nett profit upon the expenses on both heads. The course of circumstances having already brought, and being likely to bring still nearer, to all concerned this practical test of the value of railway undertakings and of the methods by which they are to be completed and made to yield a revenueit may be possible, we say, to obtain a hearing now for considerations of this class, in reference to the Brunel system, which had no chance of being seriously entertained at a time when in no part of the railway world they had any substantial weight on the determinations of projectors.

It is clear that in any inquiry into the value, as a means of profit from railway investments, of the system we intend to discuss, it would only be fair to distinguish between those qualities which belong to it absolutely and those which have been given to it accidentally, by the particular dispositions of the engineer who has been its sole author. This distinction, at all events, is indispensable to a just theory of the effect of the broad gauge, in so far as it differs from the national system, on the results of expenditure. It is evident that in testing the capabilities for profitable use of the one method as compared with the other, by the virtual qualities and conditions of each, it would not be reasonable to take as necessary consequences of the gauge adopted by Mr. Brunel all the processes through which it has been carried into practice by that enterprizing engineer. A great deal of the expense which now lies heavily on the neck of the Great Western Railway and its tributary concerns had no necessary connexion with the width of their rails; but is simply owing to the special fact that a determination to be singular is not the only noticeable feature in the professional course of the founder of a new system. It might have been carried out with much less expense than has actually attended its progress:—and as the object we have here in view is rather to ascer-

Digitized by GOGIC

tain data which may be useful for future decisions than to stir up questionable matter in what has already been done past recall, we need not dwell upon the costly way in which the principle seems to have been hitherto carried out,—in so far as the cost may be due less to any especial properties of the wide-rail system per se than to the liberal tendencies which have had full scope in its establishment hitherto. In a practical view, on one side, indeed, it may be said, these tendencies can hardly be overlooked,-inasmuch as the wide gauge and Mr. Brunel are one; and for the present, at least, we cannot calculate on the advance of the system under any other engineer,—so that the more or less of economy in its founder is a matter affecting its prospects hereafter so long as it is by him only that it will probably be conducted. Still this is a matter which, however it may influence the views of loss or gain at a particular time, must be regarded as temporary and accidental; and it may be added, that it does not follow, even, that because Mr. Brunel may have been magnificent in his expenditure in flourishing times, he will therefore necessarily be so in all times; -whereas the weight of such considerations on future measures would at once be annulled, were he to take a sudden resolution to distinguish himself henceforth by economy, as he may have done heretofore by the grand scale of his works and ex-periments. What we are desirous of discussing must depend on the permanent features of the system ;-and the inquiry will accordingly be, in what respect does the wide gauge, as such, offer more or less of a reasonable prospect of profit to the investors in it, than the national system? Is it cheaper in construction?—is it more frugal in working?-or, if not, is any difference in either way compensated or not by such greater inducements to customers on the whole as may bring a greater amount of profitable revenue to the owners of the railway? Such are the practical questions to which we propose to apply ourselves.

"REASONABLE" ACCOMMODATION IN RAILWAY COACHES.

It will perhaps have been noticed, as a coin-

cidence from which sundry conclusions may be drawn, that in the last number of our paper, which contained some editorial reference to various claims made against railways on behalf of "the public," there was also noticed the desire of "a correspondent" to have sleeping and writing accommodation furnished for travellers in the carriages. The nature and the grounds of the suggestion are both of them significant enough, and prove many things:—amongst which two at least may be noted;—the first, that "the public" is as much inclined as ever to regard the conveniences already given by railways as insufficient, and to expect that more shall be given by the owners, however poorly they may now be paid for what is already afforded :-- the second, that the effect of the comfort bestowed by railway conveyance as it is, has been to obliterate all memory of what travelling was before railways were. Nothing but such an oblivion of the past could have allowed any "correspondent" in his senses to state as a "suffering' "the continuous cramp consequent on a constrained sitting of twelve or fourteen hours on a journey from London to Edinburgh and Perth." To any one who could recollect what time was in the coach journey between these points; what the space allowed in the best coaches for the "constrained sitting"; what the price paid for the right to such constraint;—the comparison between these items, and railway despatch, railway carriage space, and the charge for both, would have suggested a rather different strain of remark, after any such journey: -especially at a time when the business now carried on with such infinite increase of comfort to the traveller is in many cases barely paying the original investor a 3 per cent. dividend on the money spent in affording this advantage.

But there is, it seems, no end to forgetfulness, and no limit to unreasonable expectation. In the very same note it comes out that what we have already been describing is not enough for our "correspondent." Not only must railway coaches become dormitories, but they must be fitted up also as offices for "commercial and literary men and gentlemen of the press," to whom the convenience of travelling swiftly and cheaply is not sufficient, so long as it is possible to conceive that the power of transcribing their lucubrations en route would be "highly advantageous." It is really wearisome to repeat the answer to such unreasonable proposals; - and scarcely worth while to do so, from the very circumstance that they are put forward without reason, and are therefore little apt to be silenced by it.

The answer, however, is, that such arrangements will not pay those who are asked to make them. To establish them, for regular use, when wanted, would cause a great deal of expense, and much interfere with the ordinary business; and the public would not regularly make use of them at any charge which could compensate for these objections. The only practical result of attempting to supply them would very shortly be that travellers in general would either take no advantage of them, or would expect to have them for nothing. This was found years ago in the case of the mails fitted up with the so-called "bed-compartments:" and so it will be found in any further attempts of the kind. The bulk of those who travel will travel cheaply; and the very few who may now and then be willing to pay for extra accommodation do not come often enough, nor would they consent to pay enough to meet the charge of providing such extras so as to to be always ready when occasionally wanted. It is quite time that it should be clearly understood how this matter now stands; and that new luxuries and conveniences, never dreamed of till now, cannot be expected, in addition to the substantial improvements already made in travelling by railway, at the prices beyond which the majority of railway travellers will not consent to go, and which prices are now far from returning a sufficient profit on all the works by which the travelling public is benefited.

#### Correspondence.

ATMOSPHERIC ON THE SOUTH DEVON.

The observations in your paper of the 9th inst., on the suspension of the atmospheric system on the South Devon line are such as the extraordinary proceedings at the meeting of the shareholders of that company and the report of the directors then adopted might suggest. Having lived near to the line, I have had frequent opportunities of travelling by the atmospheric trains, of watching minutely its general working, and of obtaining much information regarding the details from those engaged on it. I, in common with many others, much regret that this important resolution should have been come to by the shareholders with so little, if any, explanation from the directors; and it shows a rare instance of continued faith in those directors who for three or four years, even so late as the February meeting of this year, continued to hold up the system as most satisfactory, both in its present and future prospects, __it having at that time been at work twelve months, partly experimentally and partly for the purposes of carrying the traffic, and who now demand its sudden suspension. So far as the public is concerned, however, I cannot but think that some explanation is due ;-because, simultaneously with the suspension of the working of the line atmospherically, the publimpossible, owing to the want of the telegraph com-

lic are deprived of the accommodation it afforded in the great number of trains. Five of these are now taken off, and the whole of the travelling is to be performed on a single line of way, by locomotives, where, in case of any derangement of the telegraph, the danger need not be enlarged upon. The landowners and public of the county of Devon were applied to by the promoters of this railway, to allow an ordinary double locomotive line to traverse this district, and Parliament passed the Act on the assurance that it would be so constructed. The atmospheric system then presented itself, and on the recommendation of the engineer and the directors, sanctioned by the unanimous vote of the shareholders, the public were offered a single line of atmospheric way instead. The advantages of this system were represented as being more than an equivalent for traversing the country with only a single way,increased safety, the impossibility of collision from trains meeting on the road, was strongly urged why the danger of the ordinary locomotive single line was not to be apprehended, and the increased amount of accommodation, certain to result from that mode of traction, inasmuch as it possessed the capability of running many more trains each day than the locomotive, and, in fact, would be most economically applied when working many light trains, - starting frequently and running quickly, instead of a few heavy trains with long intervals between them. The public looked, therefore, to their wants and the interest of the railway company being identical. Now it must be content, for the present, at all events, to accept a single line of locomotive railway, and to put up with a large diminution of accommodation, while this atmospheric suspension exists. Has the working of the line justified this change? Are the public rightly informed as to its working, or has the peculiar position of this portion of line worked over by atmospheric traction (being as it is a small link in a great chain) had to bear the brunt of most of the irregularities of the whole machine, and consequently obtained a reputation for want of punctuality it did not deserve? My observation goes to confirm this latter supposition. Though in the early application occasional delays did take place, yet they appear from an analysis given by the directors in February last to have resulted as follows: Out of 884 trains, which had then been run, 790 had either gained time, or performed the journey in the exact time. Of the remainder, 70 lost from 1 to 5 min.; 14 from 6 to 10 min.; 3 from 11 to 15 min.; 7 from 16 min, and upwards. This will scarcely be objected to as irregular working by the most sceptical. It is to be regretted that a similar analysis was not presented at the last general meeting, because every observer, however casual, could not have failed to perceive that a great improvement in the working was gradually taking place from week to week; and that for the last three months an irregularity of even a few minutes was difficult to point out. The report of the directors is wholly silent on this subject, and it may therefore be inferred, that no ground of complaint or justification for suspension existed from this cause. The chairman, in fact, from his official seat, made a statement which set any such supposition at rest. The cost of working is the only matter there referred to on which they ground their proceeding; and here the report so ambiguously weaves together expenses at different stages of completeness, as to leave the shareholders uninformed of the cost of present working, as contradistinguished from that incurred from the arrangements of the line being incomplete, and consequently the most important information of all __ the probable cost of future working is necessarily excluded from the information supplied. That the incompleteness of the arrangements exercised a very material and injurious influence on the working expenses, is clear from Mr. Brunel's report to the shareholders in February last, where he says, "Notwithstanding numerous difficulties, I think we are in a fair way of shortly overcoming the mechanical defects, and bringing the whole apparatus into regular and efficient practical working; and as soon as we can obtain good and efficient telegraphic communication between the engine-houses, and thus insure proper regularity in the working of the engines, we shall be enabled to test the economy of working. At present this is

pelling us to keep the engines almost constantly at work, for which the boiler power was not intended, and is insufficient; and the consequence is, that we are not only working the engines nearly double the time that is required, but the boilers being insufficient for such a supply of steam, the fires are obliged to be forced, and the consumption of fuel is irregular and excessive." At the time of this report two months had passed out of the six for which the accounts in question have just been made up, and even at the time of suspension these causes had not been entirely removed. An examination of the extent to which this incomplete state of the farangements influenced the ordinary working expenses would have shown that about one-third of the whole working expense was attributable to it, and that the ordinary atmospheric working expense relieved from it was, for the average of the half-year, about one-fourth less per mile run than the locomotive expense for the corresponding period; and that a considerable reduction had taken place between the working cost during the preceding half-year and the one just passed, and also that month by r ionth a gradual reduction was being The chairman's observation supported this fact, and even went to the extent of showing that the future expense might be safely relied on as beirig only two-thirds of the locomotive cost. The pparent large per centage of the working expen' es arises from the unusually small receipts, whilst an accommodation has been afforded which ▼ ould, at nearly the same cost, have served a much larger traffic. The weekly receipts are only 30*l* to 35L per mile, while on the Great Western and its other branches collectively they are about 801. per mile. The present undeveloped state of the traffic may be a sufficient cause to account for this, and is an essential element in the consideration where a comparison in the per centage of receipts and working expenses is made. Under these circumstances it is most surprising that a recommendation is made, which if persisted in involves the withdrawal of the test considered desirable by those opponents of the system, Mr. Hudson and Mr. Ellis, viz. its application on the severe inclines below Newton. The absence of it, or some more certain means than the locomotive engine employed there, has I believe operated most injuriously on the character of the atmospheric, which, as I before showed, was constantly rated on its upward journey for delays on those inclines and before the train was handed over to its charge, and I do not find that any experience on other lines leads to the impression that any improvements can be hoped for in the locomotive. All these circumstances, and the peculiar difficulties both as regards costs and works, which beset the conversion of a line from a single road, as now made, into a double one, sea-bound as it is on one side, and coming in contact as it must with valuable property, roads and cliffs on the other, lead to the conclusion that the decision is as bad for the interests of the company as for the public, and that this conviction must follow a careful analysis of all the circumstances. AN EYE WITNESS.

#### NEW DISTANCE SIGNALS.

The SOUTH-WESTERN has hitherto been acknow ledged to be the safest of the metropolitan lines.

A fresh instance has occurred of the desire and attempt on the part of the officers of the company to inspire confidence in the minds of those travelling on the line, and much pains have lately been taken to find out a plan or method to signal an approaching train, when in danger of its running into other trains preceding, or there being any accidental obstruction, or if the shunting of a slow train at any of their stations has not been completed, when an express or fast train becomes due—such as at Kingston-upon-Thames, where the Guildford 5 15 from London has arrived—the express ditto for Southampton following arrived—the express ditto for Southampton following five minutes afterwards. At this station the first or second class ordinary train has to be moved or shunted to let the express train go by; and many passengers going by those trains at that hour of the day get out of the carriages until the fast train has gone by, expressing their fears that some time or other a most serious accident must occur. This induced Mr. C. Stovin, the general manager of the traffic department, to try and find out some method of prevention. In this effort that gentleman has been fortunate enough to succeed, and at the present moment a new distance signal is being fixed up by Mesers. Stevens

& Son, ironfounders, of Darlington works, Southwark | 120 ft. between the bearings. Bridge-road, London. It is so constructed that a man at the station will be enabled by means of a crank, easily worked, fixed to a wire, similar in thickness to those by which the electric telegraph is now worked, to give the danger signal instantaneously at a distance of at least 600 yards from where he is placed; that signal to be clearly observable at a further distance of three-fourths of a mile, so that on a fast train approaching a sharp curve, the driver will discover the danger, and have ample time to stop before he reaches the obstruction or danger. As it frequently happens such curves are near to stations, this invention will be of great use. The machine, or signal, stands about 20 ft. from the ground, being made secure to a strong frame, firmly fixed; on the sides are fastened connecting rods and other works; at the top the usual colours are painted for day, and similar colours reflected from a lamp by night. When it will colours reflected from a lamp by night. When it will be required to stop a coming engine, the red will be instantly displayed; when to slacken speed, the green is shown; and when to pass, the white is conspiculously observed, the one required being shown in the segment of a circle. The whole is expected to be up and completed for use in a day or two. Similar signals are now making by the same firm, to be fixed at the Weybridge, Farnborough and other stations on the South-Western line, where such curves are. The men who are to be appointed to work these signals will have additional wages paid them, and are to be chosen from the most steady and experienced The worker of this machine servants on the lines. will be enabled instantly to discover whether the proper light or colour is reflected by night, observing the same colour he wishes to show reflected through a round aperture in the centre of the reflecting hamp. Mr. Rettie, C.E., is said to claim the merit of the invention.

#### Anssin.

Preparations of no ordinary character have been made for the files which are to take place next week at Boulogne. The SOUTH-EASTERN announce that fourteen trains will run daily from London to Folkstone, and that the fast and noble sea boats of the South-Eastern and Continental Steam-packet Company will run in connexion with the trains twice a day throughout the period of the fetes. pany act wisely in thus facilitating the efforts of pleasure seekers at this period of holiday making.

The facilities of leaving the centre of the metropolis by the Waterloo Extension of the South-Western appear to be duly appreciated. The new extension to Datchet of the Richmond line also has, it is reported, materially increased the number of visitors to the State apartments of Windsor Castle. Ever since its opening the applicants per day have averaged from 400 to 500, and last Tuesday the first train brought down nearly 700, and every successive train throughout the forenoon added some-thing to their number, until the lower ward of the Castle, the North-terrace, &c. were crowded like a fair with men, women and children, each party furnished with its basket of provisions.

The long-pending negotiations for leasing the Scottish Central have been brought to a close at a meeting of the London and North-Western Board. The Edinburgh and Glasgow have joined the Southern companies in the lease, which is at 7 per cent. and half profits in perpetuity. The Scottish Central have therefore now the guarantee of four companies for this arrangement, viz., the London and North-Western, the Lancaster and Carlisle, the Caledonian, and the Edinburgh and Glasgow.

The committee recently appointed at the halfyearly meeting of the MARYPORT AND CARLISLE to negotiate with Mr. Hudson for the lease or sale of the line, have agreed to let that gentleman, acting either for the York, Newcastle and Berwick or the Midland, have the property, with all its liabilities, at 4 per cent., with the proviso that, should these lines return to their old dividend (reduced lately), then the present proprietary of the Maryport and Carlisle to be entitled to 5 per cent., or Mr. Hudson to be at liberty to take the whole line at par. A special meeting will be held on the 23rd inst. to give a formal sanction to this arrangement, to which no opposition is anticipated.

The LEEDS AND DEWSBURY SECTION is announced to be opened throughout for passenger and parcel traffic on the 18th inst.

One of the new wrought-iron bowstring bridges constructed for the BLACKWALL extension line has been tested at the works of Fox, Henderson & Co., at Smethwick, near Birmingham, in the presence of Mr. Muntz, M.P., Capt. Simmons and other railway officers. The bridge, as erected on an open space near the London works, presented a clear space of

It is constructed entirely of wrought-iron, and consists of an arch of boiler plates and angle iron, tied across at the ends by horizontal bars, the tie being cemented with the arch by vertical standards and by a double system of diagonals, which have the effect of distributing over the whole curve of the arch the action of weights placed on or passing over any part of the bridge. The ribs are adapted for large spans in cases where either headway is of importance, or where sufficient abutment cannot be obtained without a great outlay. The ribs are supported in such a manner as to allow not only for expansion and contraction, but also for motion under a heavy weight. On this occasion the bridge was loaded with 240 tons of rails and bars, double the load which the bridge can under any circumstances be required to bear. The trial gave satisfaction to all concerned.

It is stated that the expenses caused by the late accidents on the London and North-Western line, including all claims, will amount to about 2,600L. The relatives of the late Col. Baird have intimated their intention not to make any claim on the com-

So unremitting has been the attention shown to Miss Baird by the officers of the London and North-WESTERN, since the death of her brother, Col. Baird, from the effect of the late accident on the 2nd inst. that at the last sitting of the inquest, in the course of the day, Col. Nicholls, an intimate friend of Col. Baird and his family, specially presented himself and said that he was requested by Miss Baird, who had sustained a deep loss in the death of her only brother, to express her thankfulness to the company and to to all connected with them for the attention the deceased had received since the unfortunate occurrence.

We hear with pleasure that the Suburban VILLAGE Association (which, as our readers may be aware, has for its purpose the building of villages suitable for the residences of persons of limited income near railway will, ere long, make use of the South-Western line. The whole of the neighbourhood of the branch down to Staines is eligible for the views of the society, and the weekly increase of the short passenger traffic there especially shows this.

Some workmen employed on the NORTH-WESTERN line in excavating a water course on the eastern side of the Ladies' walk, Lancaster, says the Manchester Courier, came upon an old Roman pavement, about

4 or 5 ft. from the surface.

The Premier received, during his late visit to the Lord Lieutenant of Ireland, a deputation from the authorities and leading men of Connaught, respecting a loan to the MULLINGAR line, as a means of providing for the district poor during the approaching winter. The High Sheriff of Galway forcibly pointed out the railway from Galway to Dublin as a work calculated to give both relief to the able-bodied and security for the re-payment of the necessary adsecurity for the re-payment of the necessary advances. Taking for granted that advances must be made, he insisted on the benefit to be derived from the expenditure on a reproductive work like the railway. Lord J. Russell assented to the advantages derivable from railways, but inquired whether they were as well calculated as other undertakings to give the relief required by the persons of the class who seek relief as being destitute; and then stated the low state of the Treasury as a reason for having, on many former occasions, refused aid to railways. It was then stated by his lordship that Mr. Ennis, chairman to the Mullingar, had that day told the deputation. that if Government would guarantee 5 per cent. interest for a sum, suppose 500,000*L*, to enable the line from Galway to Athlone to be constructed, such a guarantee would ensure the obtaining of funds from the public. It was also explained to his lordship that such a guarantee (in this case 25,000%. per annum), would in fact be no risk at all on the part of the Government, as the company were ready to give the security of the entire line for the punctual payment of this interest,—a line just about to be opened in a few days all the way to Mullingar, a distance of 52 miles, on which from 700,000l. to 800,000l. has been already expended, and the company likely to be able, with their own means, to get to Athlone. It was in fact shown that it would be impossible to find better security than is here offered. Documents were here handed to his lordship demonstrating that the revenue increased in an extraordinary degree from such large outlay on public works, so that, instead of crippling the assources of the state, such expenditure was calculated to increase the revenue. The subject was presented to the Premier also in another light. It was urged that, as the public money was largely invested in the Shannon improvements, and about to be on the Western lakes, as also upon a barrack and other works at Galway, it was a pity not at once to construct a railway for which an Act of Parliament

 $\mathbf{U}\mathbf{U}\mathbf{U}$ 

had been obtained, communicating between the garrison town at Athlone and these barracks at Galway. In answer to a remark from Lord J. Russell, that expenditure in railways required a larger sum for other than labourage works, it was observed that, in the first instance, the under works were well calculated to give employment to able-bodied labour-ers, who, if employed, would support their families upon it; and thus if a number of the able-bodied were so employed, it would give an opening for the ordinary labour of the country being done by the less able-bodied portion of the distressed population. On the whole says the (we fear too sanguine) reporter of the interview, the deputation were received so courteously, and Lord J. Russell appeared to pay so much atten-tion to the remarks of every gentleman who addressed him, that the deputation were impressed with the hope that, if it can be done consistently with his duty, Lord J. Russell will consent to the prayer of the deputation to give the guarantee required; though, as Lord John remarked, such guarantee, to be of any avail, would require an Act of Parliament; but, as was well observed, a hint from his lordship of such intention would do much to give confidence to capitalists.

In a reply to an inquiry as to whether Lord G. Bentinck was about to visit Ireland, his lordship thus fairly reminds his correspondent of the nationality of the Irish members on the IRISH RAILWAY LOAN debate:—"It was not so much through the hostility of the English members as through the hostility of of the English members as through the hostility of the Irish members (many of them repealers), that in February 1847 Ireland lost the opportunity of ob-taining a loan of 16,000,000. of English gold, at 31. 7s. 6d. per cent., to stimulate the construction, by private enterprize, of railways in your country. Unanimous in Palace-yard, on one Tuesday, in favour of the proposition I then brought forward, on the Thursday se'nnight the same sixty gentlemen, hav-ing seen the Prime Minister at the Foreign Office in the interval world two to one in the House of Comthe interval, voted two to one in the House of Commons against giving railways to Ireland. Out of 105 representatives which Ireland possesses, 28 only, if my memory serves me correctly, would vote for that loan to Ireland. Two-thirds of the Irish representatives present declined the measure—the rest took care to be non est inventus at the division, which was the hour of Ireland's n ed."

The City article the Daily News has thus noticed the last report of the WATERFORD, WEXFORD, WICKLOW AND DUBLIN:—As a matter of money concern, and bearing upon the money-market, it may be shortly dealt with here. In evidence of some former observations some time since under the railway observations some time since under the railway heading, about the non-return upon calls made, it may now be stated, on the authority of the report published by the directors themselves, that of 113,000. paid on the first call, and the same amount called up last June but one, only 17,500. has been paid upon. The directors nevertheless have proceeded, under these descrete circumstances to make a upon. The directors nevertheless have proceeded, under these desperate circumstances, to make a further call, and to threaten proceedings against former defaulters. The proprietary refuse to pay up, on the conviction that the directors were not warranted in proceeding with the undertaking in view of the small amount originally realized upon the first and second calls. The proceedings of the directors were on that and other heads protested against accordingly. The accounts rendered present the following accordingly. The accounts rendered present the following particularities:—law expenses, Act of Parliament or incorporation, about 42,000/.; other law and ment or incorporation, about 42,0000.; other law and parliamentary expenses, about 9,0000.; for works, 17,0000.; land and compensation, 7,6000.; engineering expenses, 6,7000.; Dublin and Kingstown, 7,2500.; office expenses and direction, about 4,0000., of which 1,000. falls to the share of the secretary. A correspondent on this remarks, "it will add considerably to the appreciation of the affairs to state that of the original capital of 100,000 shares only 73,000 shares original capital of 100,000 shares only 73,000 shares are alleged to have paid the first deposit of 30s., that a call of 18s. was made in March 1847, which only yielded 11,800l. (or 24,000 shares); a call in March 1848 of 20s. only yielded 5,600l. (or 5,600 shares). It is alleged that the South Wales have taken 12,000 shares, in order to 'promote a line for the Great Western to Ireland.' The 'report of the share-bulders' committee' discloses some astrongians. western to rretand. The 'report of the share-holders' committee' discloses some extraordinary proceedings as to the allotments of shares and the buying up scrip, and other acts of the great committee.

"What's one man's poison is another man's food." A gentleman advertises that persons wishing to clear themseives from all responsibility in respect of being proprietors in railways, can do so upon application by letter to the Post-office of the district where the advertiser carries on business.

The works at the NEW DOCK AT SUNDERLAND are advancing without delay. The sea has been effectively banked out of the tidal basin and nearly the whole

length of the large dock; and it is even expected that the works will be finished considerably within that the works will be finished considerably in the estimated cost. The progress made during the short time since the foundation stone was laid, is creditable to Messrs. Craven, the contractors. The late call of 3\(ldots\). 10s. makes the amount paid up half of the estimated capital. The works begin to have a very noble appearance, and when finished will be the grandest undertaking of the kind in the kingdom.

grandest undertaking of the kind in the kingdom. A dock of this magnitude, gained from the sea, within the range of the tides, is an enterprize now proved to be practicable, and a safe undertaking.

At the quarry belonging to Mr. T. Gill, at Millbay, there have of late been several blasts of large masses of limestone rock, for the works of the GREAT WESTERN DOCKS. One took place last week. The hole for blasting was bored with a four-inch bit, the largest ever used says the Demonstra Chronick, in hole for disating was pored with a four-men on, one largest ever used, says the Devonshire Chronicle, in this part of the country, as we are informed, and it occupied the men four days and four nights to make the rock fit to receive the gunpowder. The quantity the rock fit to receive the gunpowder. The quantity of powder used was 135 lb., and the weight of rock separated was about 3,000 tons. The largest stone was 14 ft. long, 11 ft. wide, and 9 ft. thick.

ersey to New York on the bed of the river.

The Continental lines are suffering from commercial evils worse than even our own. The receipts of the TAUNUS line for the month of August were less by 20,000 florins than those of the corresponding month of last year.

month of last year.

We extract the following from Pwnch's obituary:

—Died last week, the Atmospheric Railway. Its
death is supposed to have been hastened by want of
breath. When the tube was opened it was found
quite gone. Its loss is deeply regretted by a large
circle of India-rubber buffers. A stone will be
erected to mark the melancholy fact, with the following epitaph:—"The earth hath'bubbles, and this
is one of them" lowing epitaph:is one of them."

### Reports of Meetings.

[Continued from p. 664.]

NORTH BRITISH.

Sept. 13.—Half-yearly Meeting, Edinburgh.—Mr. E. Henderson in the chair.

Sept. 13.—Half-yearly Meeting, Edinourgh.—Mr.

E. Henderson in the chair.

The Secretary read the following report:—
The revenue account shows a free balance of 24,448.

12s. 11d., from which the directors recommend that a dividend, at the rate of 5 per cent. per annum for the half-year, be declared and paid on the original and Dalkeith branch shures. This will leave a balance of 488l. 12s. 11d., to be carried to the credit of the current half-year's account. As compared with the corresponding half-year in 1847, the revenue of the by-gone half-year shows an increase of \$3.00.7 a. 6d. This has arisen chiefly on the goods traffic, which, notwithstanding the depressed state of trade, is continuing stendily to advance. The recent opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the bridge across the Tyne, and the opening of the trade in the cost of working and management, give ample promise of the revenue progressing, so as to improve the future dividends, even when the additional capital which has been created comes into operation. The completion of the Hawick branch has been deleved much layer than the directors articipated working and management, give anipe prunise of the revenue progressing, so as to improve the future dividends, even when the additional capital which has been created comes into operation. The completion of the Hawick branch has been delayed much longer than the directors anticipated. The sole cause of this has been the difficulty of getting money. The directors have been using every means which they prudently could to overcome this, by enforcing payment of the arrears due on calls. By their proceedings they have reduced the arrears from 131,8291, 5s., which was the amount due at the 31st of July, to 112,1121, which is composed of arrears on original stock, 2851.; half shares, 61,0271, 10x.; quarters, 24,3071, 5x.; thirds, 31,4921, 5s. Were these arrears, and the final call which has been made on the third shares, promptly paid, the whole of the branch would be opened early in 1849. In the meanwhile, 17 additional miles of it (making in all 20 miles) have been opened, and it is satisfactory to have to report that, as far as it has gone, the traffic has equalled the expectations of the directors. The completion of the works, however, will entirely depend on the promptitude with which the calls are paid, and as there is a large sum already expended, which must lie nearly dornant until the line is fully opened, the directors earnestly urge on the shareholders not to delay the payment. Had the completed portion of the Hawick branch been opened as soon as the directors at one time hoped it would have been, they could have proposed a specific plan for putting the holders of the third shares, on which no interest is at present paid, on a somewhat more equal footing with the other shares than they have heretofore been. They have not, however, had sufficient experience of the working of that part of the line, to enable them to do more than suggest timt the free revenue from it for the current half-year should be divided among those holders of third shares who shall have paid their calls. This will not do injustice to the their interest until the branch is completed; and it will, in the only practical manner, relieve the holders of third shares to a certain extent from the hardship under which they have laboured in not having yet got any interest or dividend

on the sums paid by them. The other branches are being proceeded with as fast as the funds at the directors disposal will allow. The Tranent branch is all but finished, and the greater part of the Dunse branch will be opened within three months. The Kelso and North Berwick branches are not in so forward a state, although they are also well advanced. They will be pushed on as soon as the directors are put in possession of funds for the purpose. The bill which was applied for last session, by authority of the shareholders, for the enlargement of the Edinburgh station and the improvement of the branches to Leith and the town of Dalkeith was lost on the second reading (without the merits having been gone into), in consequence of the opposition of the magistrates of Edinburgh and one landowner. The director's regret this, as they consider both objects to be of the utmost importance. In particular, the trade with Leith is increasing so much since the partial opening of the Hawick branch, that it will be next to impossible to work it on the existing horse branch, except at very great inconvenience, delay and cost to the company and to the public. The directors, therefore, recommend that they be authorized to renew it, application to Parliament for an Act to carry out the same objects as those contemplated in the bill which was rejected last assign. ment for an Act to carry out the same objects as those contemplated in the bill which was rejected last session. The other Act for which they applied, to enable them to raise an additional capital of 600,000, 1 or completing the works, was passed. And in conformity with the instruc-tions of the shareholders, the directors in end at the first works, was passed. And in conformity with the instructions of the shareholders, the directors in; end at the first favourable opportunity to issue the shares authorized to be created under it, proportionally to such of the holders of the Carlisle extension scrip as shall claim them, within a time to be specified by the directors—credit for the deposit of 12s. 6d, per share, which was paid on that scrip, being to be given to the parties who shall so take the shares. Should any of the shares not be taken up by those parties, within the specified time, such shares will then be issued as may be directed by the company; and those holders of the Carlisle extension scrip who do not exchange it for new shan. will receive back the deposit paid on it, minus the expensa incurred in regard to the bills which were presented for authority to make that line. The sum to be repaid would be about 4s. 3d. per share. The new stock, when paid up, will take dividend along with the other stocks, on the line and branches being completed. The directors had intended to have proposed at this time that the different classes of shares should have been at once converted into 25t. stock. Such a measure, while it would have simplified the books and saved expense, would also have been convenient to the shareholders. They are obliged, however, to postpone this, in consequence of the calls not having been all paid and of the works not having been completed. They will bring it forward as soon as they are in a position to do so with effect.

The capital account showed the receipts on shares, debentures, &c., up to Jan. 31, at 2,633,2171.; on shares during half-year, 266,5871.; on debentures ditto, 52,3001.; from sundries and from bankers and atto, 52,500.; From sundres and from oankers and others, not during half-year only, 377,495l.; total, 3,329,599l. The expenditure to Jan. 31 at 2,800,748l.; during half-year, 362,702l.; arrears of calls, 131,829l.; balance due from Halbeath Company, 12,653l.; balance due from bankers, 21,667l.; total, 3,329,599l.

The CHAIRMAN, in moving the adoption of the The CHAIRMAN, in moving the adoption of the report, referred to the progress of the line during the past half-year. By a comparison of the revenue derived from passengers it appeared that in the half-year ending the 31st of July 1847 the amount realized was 28,321l., while for the corresponding period of 1848 the amount was 30,057l., being an increase of upwards of 1,700l. The number of passengers compared to the progression of 1848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the second of 1,848 the secon sengers conveyed during the same period in 1847 was 567,716, while in 1848 the number amounted to 531,887, being a decrease of 35,829. Notwithstanding

Digitized by GOGIE

that large decrease there had been an increase in the revenue. The goods traffic, he was glad to say, showed revenue. The goods trame, he was giad to say, showed a similar result, there being an increase of 6,499*l*. over the corresponding period of last year. The directors anticipated that by the opening of the bridges at Berwick and Newcastle they would be able to make a large deduction in the price of coke; namely, from 18s. 4d. to 14s. 3d. per ton, thereby making a difference of 2,500*l*. in the yearly expenditure for coal. The ribraries expected to the making a difference of 2,500% in the yearly expenditure for coal. They likewise expected to effect a large saving by making the Berwick station a road station. They had only about one-half the authorized mileage in operation when the last accounts were made up. Along the Hawick branch they had lately opened 17 additional miles; and he had the satisfaction of saying that since these 17 miles of the Hawick line had been opened, the traffic was exceedingly promising, and he was confident that it exceedingly promising, and he was confident that it would turn out to be a most advantageous line. The Dunse branch might be considered a very important one, and they believed that in four months they would be able to onen it very nearly to that town. With respect to the Carlisle extension, he intended to move a resolution upon which the shareholders could give their opinion. The last thing which he had to men-tion was a subject about which there had been a good deal of talk. It had reference to Mr. Hudson coming forward to make an offer for the North British line. Till this morning the directors were not aware that any communication would be made upon this subject. would be recollected that two offers had been already made from the same quarter. The first was unanimously refused. The other, made three or four days afterwards, was one which the directors thought it unnecessary to call the shareholders together to ask their opinion about, and of course refused. Had the directors foreseen then, what has taken place since in railways, that offer would not have been rejected. All he could say was, that the directors would not lose any opportunity to encourage any lease of the line either by Mr. Hudson or any other party, so as to secure an advantageous return for their capital. He would conclude by moving the adoption of the report, in agreeing to which the shareholders would pledge themselves to nothing but a general approval, as he intended subsequently to propose a series of re-solutions relative to the special matters it contained.

Mr. MACINTYRE complained of the manner in which the accounts were made out, and moved as an amendment that no dividend be declared till next half-year, which not being seconded fell to the ground.

Mr. P. Brough, Paisley, expressed himself favourable to any arrangement by which a fixed dividend would be secured to the shareholders. Neither the directors nor the shareholders should throw any obstacle in the way of securing such an arrangement; because he considered that if they were to go forward on their own independent footing they were not at all likely to have better prospects than at present. If they got an offer of 6 per cent. it would, considering the present price of stock, be equal to 8 per cent.; and he need not tell them that a guarantee of 8 per cent., without any contingency, was as good as 10 per cent.

Mr. WILSON said, as he understood that there was

Mr. WILSON said, as he understood that there was a probability of some offer being made on the part of the York, Newcastle and Berwick, he thought they should hear what it was before proceeding any further with the discussion.

The CHAIRMAN would state as distinctly as he sould what had taken place. At half-past 11 that forenoon, half-an-hour before the meeting, several gentlemen waited on the directors, representing an influential body of English proprietors, and mentioning that as they were anxious that an arrangement should take place for the sale or lease of the line to Mr. Hudson, it was their intention at this meeting to move for the appointment of a committee of shareholders, conjoined with a committee of directors, for this purpose. The directors and these gentlemen parted, as he thought, upon a very trifling matter. As he considered it to be due to a body of gentlemen who had so long taken charge of the affairs of the company, and had given their own responsibility for a large sum of money, that they should be trusted in a matter of this kind, he stated to the deputation that the directors could not agree to the committee of proprietors. The directors, however, pledged themselves to appoint forthwith a committee of their own number to open a communication with Mr. Hudson, or any other gentleman. The deputation replied that they would nominate the consent to, and he hoped that they would not disturb the unanimity of the meeting by any such proposal. He could assure them that nothing would give him and his colleagues greater satisfaction than to enter into such an arrangement, either with Mr. Hudson

or any other party, as would be for the advantage of the North British shareholders.

Mr. Wilson, at great length, reviewed their affairs. If, said he, they looked to the line when completed, what did it show? It showed, that supposing the branches to Tranent, North Berwick, Jedburgh and Selkirk completed, and supposing that they yielded a revenue equal to the present line, they would only have 5 per cent. to give to the holders of debentures, while they would have but about 2½ per cent. to divide among the shareholders. In a conversation which he had had with Mr. Hudson, that gentleman had indicated an opinion that he would give the shareholders of the North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle share for two North British one York and Newcestle shares are the York and Newcestle shares are the York and Newcestle shares are the York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and York and

castle share for two North British shares.

The CHAIRMAN said that he had never seen such attempts made to sacrifice their property as was done

in that room.

Mr. W. Gillow, Liverpool, thought Mr. Wilson had made anything but a correct representation of their prospects. He urged the necessity of economy, and recommended that an inquiry should take place into the salaries of their officers. He said it was out of the question to give 1,000l. a-year to the secretary and 1,200l. to the engineer. He then argued that they did not require to be at the mercy of Mr. Hudson inasmuch as he was convinced that by entering into an arrangement with the Edinburgh and Glasgow and the Caledonian companies they would be able to maintain their position and to realize a good dividend. Mr. Hudson's anxiety to get possession of the line showed that it was not such a bad concern as some thought.

After much discussion the Chairman's motion was agreed to, in so far as it went to approve of that part of the report which recommended that a dividend of 12s. 6d. should be paid on the 25t. original shares, and 2s. 6d. on the 5t. shares.

Resolutions were also passed, authorizing the directors to appoint a committee to negotiate with the York, Newcastle and Berwick; for the lease or amalgamation of the North British; and postponing the consideration of the report till the 18th of October, when the result of the negotiation, and the documents referred to in it, shall be laid before the company.

The meeting adjourned accordingly.

SHREWSBURY AND BIRMINGHAM.

Sept. 12.—Adjourned Meeting, Shrewsbury.—Mr W. Ormsby Gore, M.P., in the chair.

Our readers will remember that at the half-yearly meeting much divided opinion was expressed by various shareholders touching a series of resolutions brought forward by Mr. G. B. Thorneycroft, one of the directors, to the effect that it was expedient to raise the sum of 155,000L, by the creation of preference shares, in order to enable the directors to open the line next spring. At that meeting an amendment was moved by Mr. Thorne, of Leamington, that no preference shares be issued, but that the directors should enforce the payment of all arrears of calls due on the original shares.

The CHAIRMAN said the directors had in the whole proceedings studied to the utmost the wishes of the shareholders. Many gentlemen who attended the last special meeting seemed to entertain an idea that undue influence had been used by one of the officers of the company in obtaining proxies in favour of the preference shares, in consequence of which it was agreed that proxies should be sent to every individual shareholder, to enable him to vote as he thought proper. He could state that the imputation against their officer was not deserved. The officer had no private views whatever in the matter.

The SECRETARY having read the resolutions and amendments.

amendments,
Mr. J. H. EDWARDS said it was his decided opinion
that the directors had no power whatever to issue
preference shares, and it was his intention, even if
he should stand alone to apply for an injunction.

he should stand alone, to apply for an injunction.

The CHAIRMAN stated that the directors had consulted a legal opinion on that point.

Mr. CASTELLS thought a step between the two projects now produced might be taken, which was to the effect that it would be desirable to strike 4l. off each share, which had been paid on class A shares to the Stour Valley line, and which formed no portion of the main line of this company, whereby the A and B shares could be consolidated.

The CHAIRMAN very much feared this proposition could not be legally carried out.

Mr. Phillips read a memorial praying the directors to create preference shares, and which was signed by a large number of London shareholders.

by a large number of London shareholders.

Mr. SLANEY, M.P., said, with every deference to the directors, he thought it would be better to try first the effect of calls, and if that failed to have another meeting, and then adopt preference shares.

Mr. Sparrow, at considerable length, deprecated the creation of preference shares.

After some further observations by Mr. THORNEY-CROFT and other gentlemen, the meeting (which had then been sitting three hours) became impatient to put the question to the vote.

The CHAIRMAN said parties who had not paid up their calls would not be allowed to vote. He then stated that the directors had received 5,831 answers from shareholders in favour of the issue of preference shares, and 4,263 in favour of calls, leaving a majority of 1,568 in favour of the preference shares. He proposed that Mr. Sparrow, jun. and Mr. Phillips should act as scrutineers to examine the proxies.

The CHAIRMAN next put the amendment, that no preference shares be issued, but that the directors make such calls as may be necessary to enable them

to raise the money required.

On a show of hands, there appeared 40 in favour of the amendment and 8 against it; upon which the scrutineers retired to another room to examine the proxies, which occupied several hours, the scrutiny not being complete until after 12 o'clock at night.

scrutineers retired to another room to examine the proxies, which occupied several hours, the scrutiny not being complete until after 12 o'clock at night. Sept. 13.—Mr. Gore again took the chair, when the scrutineers reported that there were—Against the amendment, 6,322; for the amendment, 5,401; majority in favour of preference shares, 921.

The original resolution was then put by the CHAIR-MAN and having heap altered so as to divide the

The original resolution was then put by the Chairman, and, having been altered so as to divide the 155,000. into 19,375 shares of 8l. each, instead of 15,500 of 10l., and thus allow one preference share for every five original shares, it was unanimously carried.

SOUTH STAFFORDSHIRE.

Sept. 11.—Half yearly Meeting, Walsall.—Mr. C. J. Forster in the chair.

Mr. Barnett, the secretary, read the report. It stated that the directors are enabled to state that the same active prosecution of the works to which they took occasion to advert in their last report has been persevered in to the present time. By these means the early completion of the main line from Walsall to the junction with the Midland, near Alrewas, and the the junction with the Midland, near Airewas, and the consequent opening of that portion of the undertaking in the course of the present year, are now secured. Further particulars will be found in the accompanying report of the engineer. As part of the arrangements rendered necessary by the approaching working of the line, the directors have obtained tenders and have subsequently entered into contracts on highly satisfactory terms, for the supply of various descriptions of stock. That portion of the line between Walsall and Bescot, which has now been worked nearly a year, testing the traffic of the district, has fully answered the expectations of the directors. The directors have found it necessary to guard against the hazard of delay in the completion of the remaining works on the score of want of funds by making a fourth call, which will be payable in a few days, but which they have limited to 1l. per share. This call will enable the directors to complete the line from the junction with the Midland to that with the London and North-Western. A careful estimate of the past and future expenditure has been recently completed, and this justifies the Board in the belief that an additional outlay of 2. per share, to be called for in such proportions and at such periods as the necessary progress of the works may require, will be sufficient to complete the entire main line, including stations, working plant and other contingencies. The statement of accounts showed the receipts (with the balance in hand at last account of 40,454l. 15s. 7d.) at 161,340l. 12s. 8d., inclusive of 1,541l. 14s. 8d., the profits arising from the portion of the line already opened. The expenditure under the usual heads included 39,283*l*. 16s. for land; 57,902*l*. 5s. 5d. for works; rails, &c., 18,600l.; balance in hand, 34,777l.

The CHAIRMAN moved the adoption of the report.

The CHAIRMAN moved the adoption of the report. In answer to Mr. Johnson and other Shareholders, the CHAIRMAN and Mr. BARNETT declared that the arrears on the three calls already made are 43,7584. 10s. 9d., the total amount payable on the three calls being something under 300,000t., and the number of shares on the register, 78,750. The great companies connected with this concern have paid up their proportion of the amount due from them on these calls; further, it is estimated that 8t. 10s. per share will complete the undertaking; twelve months since it was anticipated that 7t. would be sufficient, but 50,000t. having been or about to be expended in working stock, and the landowners having had (according to the chairman) an immense idea of the value of their land, this larger sum was required.

Mr. J. WILLIAMS, the ironmaster, suggested that

Mr. J. WILLIAMS, the ironmaster, suggested that the names of parties not paying their calls should be published, and that great parties as well as small ones should be rigorously proceeded against. He had no sympathy for defaulting parties in high stations who refused to pay the calls justly due from them.

In this the CHAIRMAN concurred, but he demurred to the proposal to publish their names.

There was another question raised as to the number of shares held by the directors, to which the CHAIRMAN replied by referring the querist to the

company's books.
In answer to a Proprietor, the CHAIRMAN said that they were still to be sold, and that the Board was not pledged to narrow-gauge interests.

Mr. J. WILLIAMS raised another discussion as to whether a portion of the directors in this concern had not, prior to the final amalgamation with the Trent Valley Midland, pledged themselves to some arrangement with the Birmingham and Dudley, by which the latter was to be accommodated to convey their traffic over a portion of the line from Dudley to Great

Bridge, independently of all considerations of gauge.

The CHAIRMAN intimated that whatever agreement had been entered into, it was such as had been deemed at the time mutually advantageous, and he, for one, would not consent to depart from it. He denied, however, that it had been entered into under other than honourable circumstances.

The report having been adopted, it was announced that interest on the 5t. 10s. shares paid up would be payable in the course of the next month.

LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION.—Sept. 8.—Meeting of Shareholders. Manchester.—Mr. T. Peet in the chair.—During a somewhat lengthened conversation, it was asserted that there was something better than 60,000l. in hard subject to liabilities of shout 9,000l. hand, subject to liabilities of about 9,000l., leaving 50,000l. to be awarded among the shareholders, provided they could stop the further proceedings the directors were taking to spend more money by giving notices for another abandonment bill, the last having cost altogether 9,000l. The general feeling appeared to be that the last dissolution bill might have been carried, had they who promoted it worked it properly. So long as there was any money left, there would be no cessation of the strife now carried on at the expense of the shareholders; and the only way therefore to make peace, was for the independent shareholders to assume a position that would induce the directors to divide the remaining funds, without a dissolution bill, leaving sufficient in hand to liquidate liabilities. If they feared to do that, because of the responsibility they would incur, let them resign; for there were men to be found ready to take upon them-selves any risk that might follow such a step. The meeting in London, it was declared, was nothing more than a scheme to get together a power to turn out all the north directors, and appoint others residing in London, who would then do as they liked with the funds. The directors were taking measures to apply for another dissolution bill; and though it was stated at the half-yearly meeting that no notices except those in the Gazette would be necessary, such was not the fact—all the owners, lessees and occupiers of land was not the fact—all the owners, lessees and occupiers of land upon the line must be served with notices at a great expense. One gentleman present stated that he be-lieved the whole of the agreements with the landowners might have been settled for 1,500l., and the project abandoned, while 9,000l. had been spent on fighting a dissolution bill, which was eventually lost. Ultimately a resolution was passed approving of Mr. Leeman's motion, because it declared the intentions of the dissentient shareholders; and a committee, consisting of Messrs. J. A. Hobson, H. Rawson and — Peel, was appointed to assist in carrying the same into effect. The second resolution was -

That this meeting views with great alarm the proposal of the directors to make another speculative application to Parliament in the ensuing session, especially considering the great waste of money already incurred in the recent fattle proceedings; and this meeting pledges itself to use every means in its power to induce the directors to forego any such application. any such application.

A third resolution recommended the preventing of any further unnecessary expenditure, and that each shareholder be requested to express his assent to or dissent from Mr. Leeman's resolutions.

SOUTH-EASTERN (Tunbridge).—MYSTERIOUS ROB-BERY OF A CASH-BOX.—A cash-box has been abs-tracted from the railway station. The box, which contained papers and between 20l. and 30l. in cash, was placed as usual in the safe on the 8th, and the head clerk took the key. On the 9th, he discovered he had lost or misplaced the key, but did not mention it to the station-master till Sunday afternoon, when after consultation with the superintendent, the safe was opened, and it was found that the cash-box belonging to the goods clerk had been stolen. An immediate search was made in every direction for the box, which was at last found in the closet belonging to the porters, with a hole broken through the top with some sharp instrument, the money all gone but the papers not touched.

Immigration being much required in Australia, New Zealand, &c., and as the supposed expense of an OUTFIT often prevents individuals emigrating, S.W. SILVER & Co., CLOTHIERS, OUTFITTERS and CONTRACTORS (having a large interest to maintain in those Colonies), have been advised to make known that they can supply a comfortable outfit, including bedding, for male or female emigrants, from 44. (nett) upwards, or less (2. 16 medful), and for children in proportion, at 4. Bishopsgate-street Within (opposite the London Tavern), where Lists will be given on application. S. W. & Co. being the makers of nearly every article in all the outfits they supply, and as one of their objects is so that the configuration, they nether receive from agents, nor pay of the configuration, they nether receive from agents, nor pay of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configuration of the configu

'HE TIMBER PRESERVING COMPANY. At the FIRST GENERAL MEETING of the Company, held at the Company's Offices, Whitehall Wharf, Cannonrow, Westminster, on Friday, September 8, 1848,

GEORGE BURGE, Esq., in the Chair,-

The Secretary having read the advertisement convening the meeting, the following resolutions were unanimously

adopted:—

1. That the Common Seal of the Company be affixed to

the Register of Shareholders.

2. That the following gentlemen be the Directors of the Company, viz. :--

George Burge, Esq. Henry Hitchens, Esq. Frederick Hitchens, Esq. Edward Loder, Esq.

Charles Payne, Esq. Charles Browne Smith, Esq. John Neville Warren, Esq. William Warren, Esq.

That the annual sum of 436L 16s, be paid to the Directors for their services, as from the lat of May 1848, and that such sum be apportioned among them in such manner as they may think 8t. they may think fit.

3. That Mr. William Bridges and Mr. William Bunce Greenfield be appointed Auditors to the Company, and that they be paid the annual sum of ten guineas each for their trouble.

That the Directors be authorized to appoint a Secretary, and to pay him such salary as they may think fit, not ex-ceeding 4001. per annum.

ceeding 4001. per annum.

5. That the Directors be authorized to order the common Seal of the Company to be affixed to the deeds and instruments necessary for vesting in the Company the letters patent, warehouses, workshops, yards, premises, machinery, plant, materials, stock, property and effects purchased on behalf of the Company from Messrs. Payne & Loder, and for securing to Messrs. Payne & Loder the purchase-money or other consideration for the same.

GEORGE BURGE, Chairman.

That the thanks of the meeting be given to the Chairman That the thanks of the meeting be given to see for his able conduct in the chair.

R. C. DUKE, Secretary.

### EDINBURGH AND NORTHERN RAILWAY.

At the HALF-YEARLY GENERAL MEETING of the Edinburgh and Northern Railway Company held within the Royal Hotel, Edinburgh, on Saturday, the 9th day of September 1848.

JOHN BALFOUR, Esq., of Balbirnie, in the Chair .-The Advertisement calling the Meeting having been

That the Common Seal of the Company be affixed to the Register of Shareholders. Which was done accordingly.

2. That the Report of Directors and Statement of Accounts now submitted be received and adopted.

counts now submitted be received and adopted.

3. That the Directors be empowered to borrow on Mortage or Debentures, at such rate of interest and for such pare or Debentures, at such rate of interest and for such periods as they consider proper, the sum of 126,6853. 13x. 4d., under the authority of the Company's Acts, initialed respectively, 'The Edinburgh and Northern Railway (Burntisland Pier and Ferry) Act, 1847, 'The Edinburgh and Northern Railway (Improvement of the Ferry between Ferry-Port-on-Craig and the North Shore of the River Tay) Act, 1847, 'The Edinburgh and Northern Railway (Dunfermline Branch, Deviation and Extension, &c.) Act, 1847, 'The Edinburgh and Northern Railway (St. Andrews and Nowburgh Inarbour Branches and Road Crossings, Newport Railway Extension) Act, 1847, 'The Edinburgh, Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton Railway (Leith and Granton R

Junction) Act, 1847,' and 'The Edinburgh and Northern Railway Company and Edinburgh, Leith and Granton Railway Company Amalgamation Act.'

Raliway Company Amalgamation Act.

4. That the Company's 20t. Shares and 25t. Shares, in respect whereof the whole money subscribed has been paid up, be, and the same are hereby, converted and consolidated, with the conditions severally attached thereto, under the various Acts of Parliament, into capital stock; and that the same be divided amongst the Shareholders according to their respective interests therein; and with regard to such of said Shares as may be in arrear of the calls made thereon, the same shall in like manner be converted and consolidated into stock, from time to time, when and so soon as such arrears thereon respectively shall be paid.

A motion by E. I. W. Hesick Exc. of Parassis (1975).

A motion by F. L. M. Heriot, Eq., of Ramornie, "That there be no traffic on the Railway on the Sabbath-day," was negatived on a division, in favour of the amendment of the previous question.

JOHN BALFOUR, Chairman.

It was thereafter unanimously resolved that the thanks of the meeting be given to Mr. Balfour, for his conduct in the chair.

HENRY LEES, Secretary.

Edinburgh, Sept. 9, 1848.

### SHREWSBURY & BIRMINGHAM RAILWAY.

At an EXTRAORDINARY GENERAL MEETING of At an EATRACHEMARY USERGAL MEETING OF the Shareholders of the Shrewsbury and Birmingham Rail-way Company, held at the Lion Hotel, Shrewsbury, on Tuesday, the 29th of August 1848, and afterwards by adjournment, on Tuesday, the 12th of September 1848,— WILLIAM ORMSBY GORE, Esq., M.P., Chairman, in the

Cha 50.Y.-

1. That the said sum of 155,000l. shall be divided into 19,375 Shares of the nominal value of 8% each, to be called "Preference Shares."

2. That the New Preference Shares shall be entitled, on the amount actually paid up, to a fixed dividend out of the next revenue of the year, at the rate of 8 per cent. per annum, for ten years, and 6 per cent. per annum, in perpetuity thereafter.

3. That the Dividend on the New Preference Shares shall be calculated from the time of the opening of the Main Line from Shrewsbury to Wolverhampton.

4. That the New Preference Shares shall be offered to the Shareholders, in the proportion of one new Share for every five Shares held by each Shareholder in the undertaking, according to the register on the 23rd day of September nert.

5. That there shall be no allotment of New Preference Shares to any Shareholder, in respect of any Shares of the Company on which any call now due shall be in arrear on the said 33rd day of September, unless otherwise ordered, under special circumstances, by a Resolution of the Di-

6. That a deposit of 2l. per Share shall be paid on each new Share on the 30th day of September next, and the remainder of the Preference Capital (without further notice) shall be called up as follows:-

21. on the 31st of October next: 21. on the 30th of November next 21. on the 30th of December next.

- That the allotment of new Shares shall be conditional. on the payment of such Deposit of 2i, per share on or before the said 30th day of September; and in case any Shareholder shall fail to pay the same accordingly, the allotment shall be cancelled, and the right of such Shareholder to the New Preference Shares shall be absolutely forfeited.
- Preference Shares shall be absolutely forfeited.

  8. That in case any of the Shareholders shall neglect to pay either of the last three instalments on the days they become due, interest at the rate of 5 per cent. per annum shall be charged on the Instalment or Instalments in arrear until payment; and the dividend of 8 per cent. shall, for such period as any Instalment shall have been in arrear, be absolutely forfeited; but this shall not prejudice the right of the Directors to declare forfeited any shares on which the Calls may be in arrear for the period prescribed by the Companies Clauses Act.
- 9. That the new Shares remaining in the hands of the Company after the distribution among the Shareholders as hereby authorized, shall be disposed of by the Directors for the benefit of the Company, on such terms and in such manner as they may determine. And the Company doth give all such powers and authorities to the Directors of the Company as may be necessary to enable them to carry into effect this Resolution.

WILLIAM ORMSBY GORE, Chairman. GEORGE KNOX, Secretary.

MARK HUISH, General Manager, Leeds, Sept. 8, 1848.

CIVIL ENGINEERING.—A young Engineer having lately completed the Superintendence of a Branch Railway, wishes for another Engagement, either under a Charon or Resident Engineer, at Home or Abroad. Amount of Salary no great object. Good references can be given. Address C. E., Postoffice, Brighton.

DICTORIAL HISTORY OF ENGLAND.—
The STANDARD EDITION of the PICTORIAL HISTORY of ENGLAND is now completed (with the exception of an INDEX to the whole, which will make a separate Volume). The Works to the whole, which will make a separate Volumes, which are constantly keep pages to hand of the Eight Volumes, which are constantly keep pages to hand to be a constantly keep pages.

War in 1815, and partially to the End of the Reign of George III.

A CONTINUATION of the PLOTORIAL HISTORY OF ENG-IAND was commenced two years ago, and Two Parts, at 4s. cach, have appeared, which bring down the Narrative to the Accession of George IV. The Publisher deeply regrets that unforcesen circumstances have interfered with the continued publication of this work. But he has now the pleasure to announce that he has made arrangements with MISS MARTINEAU for the completion of this undertaking. The Publication of

### THE HISTORY OF ENGLAND

THE THIRTY YEARS' PEACE
WILL BE RESUMED on the 1st of October, and continued
Monthly, in Haif-Parts, at 2s. each, and in Parts, on alternate
Monthly, at 4s. each. The whole Work will be comprised in Eight
Parts, at 4s. each. Thad II. will be kept constantly on sale, so
that the Subscribers to the Standard Edition of the Pictorial
History of England, now completed, may proceed regularly with
the Continuation.

Pictorial Bible.—The INDEX is preparing for immediate Publication, when the Work may be had complete, in Four Volumes, cloth boards, price 3t. London: Oharles Knight, 90. Fleet-street; and sold by all Booksellers in Town and Country.

# TO RAILWAY CONTRACTORS, TIMBER MERCHANTS, BUILDERS, IRON FOUNDERS, STONE MERCHANTS, BROKERS, CARRIERS, FARMERS AND OTHERS.

TO RAILWAY CONTRACTORS, TIMBER MERCHANTS, BULLDERS, IRONFOUNDERS, STORE MERCHANTS, BROKERS, CARRIEES, YARMERS

AND OTHERS.

MR. WILFRID KIRKUP has the honour to announce that he is favoured with instructions from Mesers. JURN STEPRESSON & C.O., Railway Contractors, (in consequence of the completion of the Lancaster and Carliale and Caledonian Railways.) to offer for SAILE BY AUCTION, on Monday, Tuesday, Wednesday and Thursday, the 9th, 10th, 11th and 19th days of October next, 1948, punctually at 13 o'clock in the Morning of each day, at the spacious premisse, ST. NICHOLAS, CARLISLE, in the County of Cemberland, the entire of the most extensive, important and valuable IMPLEMENTS, MATERIALS and EFFECTS, of which but a partial description can be given in the limits of an Advertisement; comprising several hundred thousand feet of Flanking; an importance of the most extensive, important and valuable IMPLEMENTS, MATERIALS and EFFECTS, of which but a partial description can be given in the limits of an Advertisement; comprising several hundred thousand feet of Flanking; an importance of the most of the second of the most of the limits of an Advertisement; comprising several hundred thousand feet of Flanking; an importance of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the secon

pre-paid. Carligle, Sept. 11, 1948. Digitized by GOGIC PORT OF GREAT GRIMSBY.

### NOTICE TO FOREIGN MERCHANTS

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive sels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

Hafen von Great Grimsbn.

### Anzeige an Rausseute und Waaren-Ablader im

Daß die Abgaben für Schiffe, welche bie Docken ju Great Grimabs einlaufen migen, auf 10 pence per regiftrire Ton niedergefest worben find. Aller Stwartung nach werben biefe neue Docken gegen bas Ende bes Sabre 1849 ben nichtigen Erad von Bequemlichkeit und Bollenbung erreicht haben, um Schiffe aufzunehmen.

Diefe Doden werben ben großen Borgug vor ben meisten andern englischen baffen anerbieten, bas fie zu allen Beiten, ausgenommen ein paar Stunden bes niedrigem Waffer nach ben Springflätigen, juganglich fenn merben.

Der hafen bietet eine Buflucht gegen Ungewitter von allen Seiten und ber Bertehr mit ben Manusactur-Gegenden und mit allen Theilen bes vereinigten Konigreichs wird mittelft die Gisenbahne von Manchester, Sheffield und der Graffchaft Lincoln, ergänzet und complet sebn.

PORT DE CREAT GRIMSBY.

A VIS AUX NEGOCIANTS, AUX ARMATEURS ET AUX CAPITAINES DES NAVIRES ETRANGERS.

Les droits de tonnage sur les Navires qui entrent les assins à Great Grimsby, ont été reduit à 10 sols Anglais ar tonneau de registra.

On compte que les nouveaux bassins seront prêts à recevoir s vaisseaux vers la fin de l'année 1849.

Ces bassins offriront des avantages bien decidés sur la plu-part des autres ports de Mer de l'Angleterre en étant acces-sibles à toute heure, excepté pendant une couple d'heures à la marée basse, en tems de maline.

Le Havre présente un abri en tout tems. Les communica-tions par l'entremise des Chemins de Fer de MANCHES-TER, de SHEFFIELD, et des Lignes du comté de LINCOLN, seront ouvertes avec tous les districts manufacturiers et avec toutes les parties de la Grande Bretagne.

### EASTERN COUNTIES

The THIRD CALL upon the SIX PER CENT. GUAHAN-TEED SHARES of this Company will be due, and should be paid, on the 36th inst. Interest on all arrears will be charged at the rate of 5 per cont. per annum, and the interest on previous Calls will cease during the continuance of such arrears.

By order, C. P. RONEY, Secretary.

Bishopsgate Station, Sept. 15, 1848.

#### CALEDONIAN. RAILWAY GOODS TRAFFIC.

J. & P. CAMERON respectfully inform their Friends and the Public throughout Scotland that GOODS TRAINS are now run-ning Dally to and from EDINBURGH, GLASGOW, DUNDEE, PERTH, STIRLING, ARBROATH, FORFAR, MONTROSE; also LONDON, LIVERPOOL, MANCHESTER, BIRMING HAM and CARLISLE.

HAM and CARLISLE.
Information as to Rates and the forwarding of Goods throughout Scotland and England will be given on application to Chaplin & Horne and Pickford & Co., London; the Lancashire and Yorkshire Railway, Salford Station, Manchester; S. Eborall, Esq., Railway Station, Birmingham; Braithwaite Poole, Esq., Liverpool; Mr. Christopher Johnstone, Goods Manager, Calcionian Railway, Edinburgh; Mr. Robert Small, Dundee, Perth and Aberdeen Junction Railway, Dundee; Mr. D. Cameron, Scotlish Central Railway, Perth; and at J. & P. Cameron's Warehouses in Edinburgh, Glasgow, Leith, Granton, Dundee, Perth, and at the various Railway Stations.

54, Lothian-street, Edinburgh, and Cochran-street, Glasgow, 1848.

### GREAT NORTH OF ENGLAND BAILWAY.

THIRD CALL ON THE \$40 SHARES.

At a MEETING of the Directors of this Company, held at Darlington, on Tuesday, the 19th day of September 1848,—

Darlington, on Tuesday, the 19th day of September 1848,—

NATHANIEL PLEWS, Esq. in the Chair,—

A Resolution of the Joint Committee of the Directors of the
York, Newcastle and Berwick Hailway Company and the Great
North of England Hailway Company (pursuant to, and in accordance with, the provisions of the Deed of Contract and Agreement
between the said Companies, for the Lease and Sale of the Great
North of England Railway) was received and read, requiring the
Directors of this Company to make a further Call of 104, per Share
upon the Shares of 404, each, created by this Company.

It was resolved .--

It was resolved,—
That a Call of 10t, per Share be, and the same is hereby made upon the Holders of the 40t, Shares in this Company, to be paid on or before Friday, the 13th day of October next, to the York Union Banking Company, at York; or to Messra Glyn, Halifax & Co., Bankers, London.
Interest at the rate of 10 per cent, per annum will be charged by the Bankers on all Galls unpaid after that day.

J. M. SPARKES, Clerk to the Company.

Railway Office, Darlington, Sept. 19, 1848.

LONDON, SALISBURY AND YEOVIL

The London and South-Western Railway Company having arranged to pay the See per Share due on the Certificates granted by the Directory of this purpose, we have a reason to the Holders of moh. Company, by Two Instalments of 15a cach, the Holders of moh. Company, by Two Instalments of 15a cach, the Holders of moh. Company, by Two Instalments of 15a cach, INSTALMENT of 16a per Share are informed that the FiRST INSTALMENT of 16a per Share are received on any Monday or Wednesday after the Sind of Septemer, when the four of the Darkon and South-Western Railway, in York-road, the Control of the Secretary for this purpose by post, are recommended to write across them "Forwarded for payment of First Instalment of 15a," and add their Signatures.

The day for payment of the Second Instalment in Laurent.

The day for payment of the Second Instalment, in January next, will be duly advertised.

By order, L. CROMBIE, Secretary. London, Aug. 21, 1848.

EMIGRATION AND COLONIZATION

Immigration being much required in Australia, New Zealand, &c., and as the supposed expense of an OUTFIT often prevents individuals emigrating, B.W. SILVER & Co., CLOTHIERS, OUTFITTERS and CONTRACTORS (having a large interest to maintain in those Colonies), have been advised to make known that they can supply a comfortable Outfit, including bedding, for melecula and for children in proportion, at 4 Bishopsate-street Within, and for children in proportion, at 4 Bishopsate-street Within and for children in proportion, at 4 Bishopsate-street within the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subjec

### LONDON AND NORTH-WESTERN

The Directors of the London and North-Western Railway.

TENDERS FOR STORES.

The Directors of the London and North-Western Railway Company are prepared to receive TENDERS FOR STORES for their several Departments, viz.:—

LOCOMOTIVE STORES.—Anvils and vices, axles, brass and copper, and brass-work; baskets and bags for coke; balances (pering), brass tubes for locomotives; crucibles, files, iron, steel, ironwork, oil, tailow and wate; sundries, lead, timber, tim.

CARRIAGE STORES.—Colours, oil, varnishes, &c.; brushes and pencils; brass and brass-work; carpeting, cloth, canvass, silk, &c.; castings (various), carriage fittings, iron and ironwork, steel springs, lamps and lamp fittings, leather, sundries, timber.

WAGGON STORES.—Axles, brake blocks, castings (various), colours, &c., files, iron and iron-work, oils, steel springs, timber, wheels.

CLOTHING.—For superintendents, inspectors, policemen, porers, ticket collectors, gangsmen, guards, bankriders, brakesmen, ters, ticket collectors, gangsmen, gu enginemen (great coat only), firemen.

ters, ticket concevers, gangsmen, guarau, sammuers, massemmers, enginemen (great cost only), firemen.

GENERAL STORES,—Chandlery and small stores, carpenters and joiners work, hardware, cil, grease and cotton waste, canvass and tarpaulins, leather, coal.

Specifications, showing the quantities and descriptions of articles required, will be deposited for inspection and may be seen between the hours of 10 and 1 o'clock, from Monday, the 9th of October, to Monday, the 16th of October, inclusive, at the Company's Offices, Euston Station, London; at Lime-street Station, Liverpool; at London-road Station, Manchester; and at the Office of the Superintendent, at the Station, Birmingham; and parties of the Superintendent, at the Station, Birmingham; and parties desirous of tender and printed conditions on application, in writing, to the Secretary, Euston Station, London.

No Tender will be received after the 1st of November.

By order of the Directors,

MARK HUISH, General Manager.

Euston Station, London, Sept. 15, 1848.

# TO RAILWAY COMPANIES, CONTRAC-TORS AND OTHERS. ELECTRIC TELEGRAPH WIRES.

A CATALOGUE, with Twenty-four Designs, sent by JOSEPH CUNDALL, 12, Old Bond-street, on receipt of three postage stamps. Country orders executed on receipt of a post-office order. (1000le

SATURDAY, SEPTEMBER 23.

### HEADS OF A SYSTEM OF PRACTICAL REFORM .- No. VIII.

We have now pretty nearly reached the term of our endeavours on this head; that is to say, we have handled, in a summary way, most of the chief matters on which anything effectual can be done to raise the financial condition of our working railways. There may be one or two points which we shall perhaps find it neces-sary to take up hereafter: but what has already been said will be found to embrace the principal causes that determine questions of profit and loss; and to indicate the direction to be followed, in the more detailed operations of the system, by those who are really in earnest in a wish to improve the one and avoid the other. Before concluding this series of essays, however, we have a few words to say on two points of general consequence, the mention of which it seemed best to defer till we had gone through the various suggestions that were to be made on the internal management of the system.

The first of these is the closing of capital expenditure; which must be regarded as one of the prime elements of any effectual reform; not merely as directly removing what is now the heaviest burden pressing immediately on shareholders,—namely, the ever-growing want of fresh funds to meet the growing outlay,—but also as a condition which is more or less indirectly bound up with every one of the special improvements we have hitherto been discussing and recommending. On both these grounds it may be seen that this object therefore is one to be strenuously pursued. We are persuaded that it is attainable; and also that its attainment will render certain many improvements that are somewhat doubtful under any other condition of things. We desire it, indeed, more strongly on this account than for the sake of the more immediate and apparent benefit likely to attend it. We have now been watching the railway system for a period of many years; and the result of observation and of experience has been, that so long as the capital account of any railway company continues growing, the enterprize for which it has been founded can never be said to have found its proper bearings; and, what is more, that the principles that ought to govern it-those, without the control of which it can never become a sound and healthy undertaking—will never be brought into proper operation. Such being our deliberate opinion, it may be seen that now, above all other times, we must desire to enforce it. The present deep decline in the value of railway property is of a nature that bespeaks something far more than the operation of general depressing causes. The price of shares in the dividendpaying companies is no longer rated by the per-centage of their incomes; but has sunk to a point that shows how far the character of railway property has fallen in public confidence, quite as much as the distress of those who hold it, and the difficulty with which they now make head against the calls for new capital. It is therefore particularly important now to study the means of a change for the better in both these respects; and to attempt to restore the value of railway property by bringing it to the condition of a clearly ascertainable liability, and also to make it an investment of which the conditions are open to no question. This can only be done by the method we have named.

The process, of course, applies to the lines really completed, but which hitherto directors and their officers have never yet been willing to

bearing on the new works undertaken, as well; inasmuch as no small amount of the money professedly raised for the latter is intercepted by the claims for outlay on the older parts of the system, which have been undertaken without any specific fund being provided to meet it. The consequence is obvious. While the expenditure is swelled on the opened portions, the money intended to open others does not go so far as it ought to have done; and this is one cause of ways and means being continually in arrear. And so they will hereafter continue, unless a term is fixed peremptorily and positively beyond which nothing more shall be written up to capital. So long as directors and managers have money within reach, they will be sure to discern occasions for spending it; and they will never feel as they ought to do the strict need of economy, until they are so placed that every deviation from it must be declared at the end of the half-year in the items of current expen-

This we have, indeed, said years ago; but few ears were open to listen to such warnings at that time, or at any time, indeed, until lately. It is not long since that Mr. Glyn, at a general meeting of the London and North-Western, openly denied the possibility of ever closing a capital account; and based his argument against it on the position that railway traffic is a constantly increasing quantity; and that consequently no limit can be fixed to the means required for its working. Since this speech was delivered, Mr. Glyn will have seen occasion to discover-he has, indeed, publicly admitted-that he was somewhat in error in assuming the constant increase as a matter of course. The returns for the last two years of the company he presides over have shown him that it does not by any means form a certain condition of the system in its present circumstances. Indeed, this argument against balancing the accounts of our working lines may be seen to fall through everywhere. number of new channels opened for traffic abstract from those first made quite as much as the additional growth of the system will bring: and there is evidently a pause in the vast excitement which new conveniences gave to the travelling movement; while the generally lower state of the nation keeps both passenger and goods business on a scale far below what it amounted to per mile three years since. There is no pretence now for keeping any capital account open, on the score of an expected growth of business to such an extent as may outstrip the means already at hand for conducting it. The means of most extant companies are greatly in excess.

But there will always, as we have said, be enough found to do, if it is to remain open; and there will be found, also, if it be once for all closed, that a company whose line is complete can very well do without any other new expenditure but such as rightly belongs to income. When this term is once reached, the process of rectification will be ensured in real earnest;—the business will fall under the wholesome conditions that regulate the transactions of the prudent and industrious in smaller affairs; and all acts bearing upon profit and loss will be carefully weighed, and checked, as soon as it is known that the bearing must be instantly shown in the accounts. There is no guarantee for internal improvement, indeed, that can be compared to this for an efficacy at once simple and irresistible.

It is a subject, we know, which directors are extremely loth to have handled. They have regard as complete. And it has a considerable | Fortunatus, that it will not be pleasant to them | given, as the want of such a safeguard would

to be led back into those stricter limits which control the affairs of private men. But for this very reason it is one on which the proprietors should have a decided will, and should also express it in a thoroughly decisive manner. This they will be the more induced to do the more they study the nature and effectual operation of the process; which alone may be regarded as likely to do more for railways than any other we have yet discussed :-not, indeed, because it will directly produce reform in the matters touched by those, but because it will virtually render the neglect or postponement of these and all other improvements next to impossible. It will act beneficially on directing bodies themselves, by bringing them back from the way in which they have been spreading themselves somewhat too far, to more moderate and regular courses, and by daily reminding them of some things which it is very important they should remember, and which they have seemed of late to have pretty nearly forgotten altogether. Of such, one, and perhaps the most considerable, is the reason why railways were made; another, by whom they were made; and a third, the duty of those who preside over them to carry out the one for the benefit of the other; -not merely to have great accounts at their bankers, great transactions in Parliament, and connexions with great men, who make great demands on the property of the very small people called railway share-

#### INDIAN BAILWAYS.

Mr. Nicholson, the superintending director of the Great Indian Peninsular Railway, has just published a letter addressed to the chairman of the India House, touching the claims and merits of the Indian Peninsular scheme. We should have had more faith in this production if it had emanated from Mr. Chapman, whose published representations (such at least as we have met with) are singularly ingenious and well considered, whereas Mr. Nicholson's sophistical letter to the secretary of the Stock Exchange, in reference to the guarantee, must deprive him, we fear, of that prestige of sincerity which Mr. Chapman has acquired, and make a narrower investigation of the facts imperative than might otherwise have appeared essential. We shall first recapitulate the material statements of Mr. Nicholson's letter, and then add the few remarks which at present occur to us on the subject.

Mr. Nicholson, in the first place, acquits the directors of the India House of the anathy or hostility in reference to railways which has been imputed to them in some quarters. On the contrary, the whole of the transactions of the India House with the railway company have manifested, he says, a sincere desire to promote the successful accomplishment of the undertaking; and the same cordial feeling, he anticipates, will mark the future acts of the Indian authorities which has characterized their proceedings heretofore. Experience has however shown that unless the guarantee be made absolute the list of shareholders cannot be completed; for while the daily average of shares applied for previous to the publication of Mr. Slaughter's letter was 640, it has since dwindled to 77, thus proving that unless the guarantee be made an unconditional one there can be no hope of the shares being taken up. As this is found to be the case, and as an unconditional guarantee is indispensable to the progress of the railway company's operations, Mr. Nicholson infers that the authorities of the India House, to prove their sincerity, must give the guarantee required. been accustomed so long to treat the railway It would no doubt be prudent, he admits, to limit exchequer as if it were a bottomless purse of the amount of capital on which a guarantee is

mismanagement; but he maintains that an absolute guarantee can be given without risk, as the hypothesis that the railway may not pay is wholly chimerical. He then goes into calculations to prove that the proposed line between Bombay and Callian will pay from 7 to 9 per cent.; but although a loss is impossible, he maintains the necessity of the risk pertaining to that alleged impossibility being borne by the Government, the public being too ignorant of the merits of the undertaking to understand whether there is a risk or not. Mr. Nicholson adds that it is not to be supposed the Government would allure the public into an undertaking incapable of returning its expenses, and the refusal of an absolute guarantee would be an acknowledgement that such a state of things might possibly arise.

We believe it will occur to most persons that the India House has been placed in a most difficult position by these Indian railway companies. If it gives a guarantee, it is accused of a design to entrap the public into a losing speculation; if it withholds a guarantee, it is straightway accused of secret hostility or supineness. If an attempt is made to protect the interests of the Indian community against the demands of the railways, then the battery of the public press, threats of exposure in Parliament, and of a hostile attitude in reference to the renewal of the East India charter are brought to bear against the delinquents,—all proving, certainly, the justice of the instinct which suggests the dangers of such companies existing at all. If it be a consequence of the institution of Indian railway companies, that on every occasion of dissatisfaction, or altercation with Government, the questions of the charter and the whole of our Eastern policy are to be dragged before the public for purposes of systematic vituperation -if the India House is to be threatened or coerced in its privileges or politics by a league to extort financial concessions, which a regard to the public interests had compelled it to deny, then we must maintain it to be impolitic and improper to call into existence such nurseries of agitation. The iniquities of Sattara would be aggravated or renewed by the accident of a dispute respecting a railway, and the Government would either be driven into improper compacts, or be harassed in the proportion of the inflexibility of its virtue. We do not think such propensities the inevitable concomitants of an Indian railway company; but we think the past experience of the India House relative to existing companies must have disclosed dangers and delinquencies enough to inspire and justify circumspection.

But whatever importance may be due to these considerations we are not sure that it is necessary to ascend to them in order to form an estimate of the value of Mr. Nicholson's present production. The sincerity of the desire of the India House to establish his company is one of the postulates on which he rests his case: and because the authorities at the India House were willing to promote the establishment of the company upon a certain prescribed basis, Mr. Nicholson infers that they must be equally willing to promote its establishment upon any basis which he may maintain to be necessary; and that the test of sincerity lies in such an unconditional acquiescence. But the co-operation of a railway company, like everything else in creation, surely has its price; and the India House may reasonably stand excused if it holds that such co-operation may be too dearly purchased. An unconditional guarantee involves an unlimited responsibility; and as the shareholders would always be sure of a dividend, however grossly the undertaking might be mis-

operate as a premium upon extravagance and | managed, its operation would certainly be to weaken those inducements to activity and economy which ought to preside over all commercial undertakings, and to hold out a premium to supineness and peculation. It is not by limiting the amount of the capital that an antidote can be obtained to so vicious a system; for the self-same evils would exist whether the capital were large or small, and the only security lies in providing that if mismanagement arises those shall alone be the sufferers by it who have the power of rectification in their hands. The effect of an unconditional guarantee would be to compel the India House to pay an indefinite sum of money yearly, in remuneration of an undertaking over the management of which it had no effectual control; and which would probably be futile for all purposes of locomotive accommodation, just in the proportion of the expense it occa-

> The western coast of the Indian Peninsula, on which Bombay is situated, runs nearly north and south; and the communication between Bombay and the interior is chiefly maintained by two roads-one running south-east towards Poonah, and the other running north-east towards the district of the Nerbudda. The proposed line of the Great Indian Peninsula Railway Company runs nearly due east, for about 100 miles, where it splits into two branches—the one leading towards the north and the other towards the south, so as to reach the districts traversed by the roads. The section of the line at present proposed to be made, leading from Bombay to Callian, is 35 miles in length; and as it runs from Bombay nearly due east, it is necessarily out of the present track of commerce, which follows the course of the diverging roads. Callian itself is a place of no commercial importance, and there is good water carriage all the way from Callian to Bombay, whereby goods may be conveyed much cheaper than would be possible by a railway. A barge leaving Bombay can reach Callian in two tides, without requiring to resort either to sails or oars; and the cost of conveying goods in this way does not exceed  $\frac{1}{2}d$ . per ton per mile, while the sum Mr. Nicholson reckons as receivable by the railway is 23d. per ton per mile. There is very little inducement however to convey goods to Callian at all, as there is no eligible mode of carrying them from thence into the interior, except by getting them again upon one or the other of the diverging roads—the nearest point in either of which, at 35 miles from Bombay, is a considerable distance from the railway. A line there from Bombay to Callian would be a mere cul de sac, with the additional disadvantage of competing water-carriage all the way: and instead of returning 7 or 9 per cent., as Mr. Nicholson estimates, it would be impossible for such an undertaking to return anything at all. Mr. Nicholson commits the double error of reckoning the traffic existing on the present diverging roads as being available for the support of a fragment of railway lying between them, but communicating with neither; and of taking the tariff of charges as high as if there was no competition of water carriage—fallacies which are no sooner corrected than the whole fabric of his reputed profits spontaneously melts away. We are glad to find that the directors of the company are not answerable for the doctrines Mr. Nicholson has put forth; but wherefore do they lend their names to so hollow a project? They have latterly, we fear, fallen into the crooked ways of the East Indian Railway Company; and from such a policy they need not expect either credit or success.

### CHESTER AND HOLYHEAD.

Engineer's Report for the Meeting, Sept. 20 (p. 686).

CHESTER AND HOLYHEAD.

Engineer's Report for the Meeting, Sept. 20 (p. 686).

The only works now remaining to complete are the following—I. About two miles of the Bangor contract. 2. The second tube of the Conway Bridge. 3. The Britannia Bridge. The completion of the Bangor contract has been much delayed by the want of arrangement on the part of the contractor, together with the circumstance that the three tunnels, although constructed in hard rock, have, since the exposure to the action of the atmosphere, indicated the necessity of arching being introduced; this is now in a forward state. In the Llandagai tunnel about 80 yards will require lining to be made perfectly safe. In the Bangor tunnel about 140 yards of side-walls and 400 yards of arching yet remain to be done. In the Belmont tunnel, out of the entire length (700 yards) about 200 yards will require lining. The other works of this contract are very inconsiderable, and consist only of a portion of permanent way, dressing slopes, and finishing the entrance to the tunnel. In the course of November all may be completed. The construction of the second tube of the Conway Bridge is far advanced; the castings at the ends are partly inserted, preparations are being made for floating it into its place, and there is no doubt that it will be ready for removal by the middle of October. The pontoons have been strengthened, the capstans re-erected, and every other arrangement in forward state for that purpose. The state of progress in the misonry of the Britannia Bridge will be gathered from the following statement:—Carnarvon and Anglesea abutment finished. Carnarvon tower—stone set at present date, 19,351 cubic feet; required to complete, 131,332 cubic feet. Anglesea tower—stone set at present date, 189,182 cubic feet; required to complete, 42,590 cubic feet. Taking the progress which is now making as the guide—and I do not think that it can be materially accelerated—we may reckon upon being ready for lifting the first tube in the course of March or April. The iron

heavy storms, and will, I have no doubt, continue to do so. The daily passage of heavy trains through the Conway tube for four months, together with a series of careful observations as to the effect produced, have completely established the correctness of the views upon which the designs for this and the Britannia Bridge were based. I regret that the cost of these structures has very much exceeded what I originally calculated upon: on reconsidering, however, the whole subject, and taking into account also the numerous suggestions that have been made for carrying a railway across the Menni Straits, I am satisfied that the method which has been adopted in the present state of our knowledge is certainly the most eligible, if not the only practicable one.

R. Sefflenson. the only practicable one. R. STEPHENSON.

### 24, Great George-street, Westminster, Sept. 19.

### SHROPSHIRE UNION.

Engineers' Report for the Meeting, Sept. 14 (p. 680).

We have much pleasure in handing you our half-yearly report on the state of the works between Shrewsbury and Stafford, more particularly as during the last few months the contractors have made considerable progress on most parts of the line. The whole of the brickwork and masonry will be finished by the end of the present year, and the excavations and embankments are in a very satisfactory state, upwards of 21 miles out of 22½ (the distance from Shrewsbury to Stafford) being ready for the permanent road, a portion of which is already completed. At the present time there are employed on these works 3,300 men and 230 horses, besides one locomotive engine; and, after carefully examining the different portions of the work, and finding that their advanced state prohibits the chance of any serious impediment to their speedy completion, we feel no hesitathat their advanced state prohibits the chance of any serious impediment to their speedy completion, we feel no hestation in saying that the whole line from Shrewsbury to Stafford will be ready for opening early in the ensuing spring and in our report in February next we fully expect to be in a position to name the precise date when the railway will be ready for public traffic. The joint station at Shrewsbury, the road-side stations, and the bridge over the Severn, will in all probability be completed by the end of the year, so as to admit of the whole line being ready for the conveyance of passengers and merchandise at the same time.

11 STEPPENSON

R. STEPHENSON. W. BAKER.

### Progress of Works.

EAST LANCASHIRE AND LANCASHIRE AND YORK-SHIRE.—The Burnley branch, about seven miles in length, leaving the trunk line at Accrington, is now completed; and it was expected that Capt. Laffan, the Government Inspector, would pass over it on the 16th inst., with a view to its immediate opening. The Lancashire and Yorkshire branch to Burnley is also expected to be complete in about a fortnight, (thus connecting the town by two distinct routes with Manchester and the South,) and to be thrown open for traffic simultaneously with the Liverpool and Bury line which is caughly near completion.

and Bury line, which is equally near completion.

EASTERN UNION (Norwich).—The works are reported to be satisfactory. The bridges and the heavy works are proceeding in their construction with rapidity, and every opportunity is taken of the present favourable weather for bringing the whole to a speedy termination. It is said that the Norwich line will doubtless be substantially constructed and ready for opening in the early part of next year. The most productive agricultural districts will then be accommodated by railway communication; and as this is the only line for the entire county, and as it connects the county towns of Colchester and Bury St. Edmunds, and the ports of Ipswich and Yarmouth with the city of Norwich, there can be no doubt entertained of this undertaking becoming very remunerative to the shareholders. The present traffic on a portion of the line now opened is sufficiently indicative of the ultimately successful revenue to be derived from this line. The spacious and roomy buildings, now the property of the Eastern Union, situated in the Victoria Gardens, at Norwich, (the site of the Norwich station,) can be, with trifling and inexpensive alterations, well adapted for the first two or three years for the station of the Eastern Union for that city.

city 4
GREAT NORTHERN.—The opening of the loop is to be deferred until about the 15th of October. The directors, says the Nottingham Journal, with the Government Inspector, will go over the line from Lincoln to Peterborough on the 28th inst., and it would be a great public benefit if the line could be opened for public traffic in time for Peterborough fair, on the 2nd of October. The station at Lincoln is progressing; it is in the Elizabethan style.

HUDDERSPIELD AND MANCHESTER.—The central

HUDDERSPIELD AND MANCHESTER.—The central portion of the Huddersfield station is now so far completed as to be roofed for the reception of slates. As this portion approaches completion, the fitness of the whole design becomes more and more apparent. The local papers declare that it will assuredly be one of the finest stations in the kingdom, whether considered in reference to design and execution, or in reference to commodiousness, taking into account the relative size of the town and the amount of anticipated traffic. Built of fine-faced clean-looking blocks of ashlar stone, with bold porticos, fluted columns, richly ornamented capitals and cornices, it will be by far the most important public building in Huddersfield

LIVERPOOL AND BURY.—The works are now progressing rapidly to completion, and, with the exception of the terminus, in the Borough Gaol-field, Great Howard-street, will, says the Liverpool Standard, in all probability, be in a working state by the middle of October next. The platform for a temporary station at Love-lane, near St. Matthias's Church, is just completed.

MANCHESTER, BUXTON, MATLOCK AND MIDLAND.—The contractors are actively pushing on the works. There is a communication between the north and south ends of the northern High Tor tunnel. The tunnel, says the *Derby Mercury*, is on a somewhat difficult curve; but on the workmen meeting, it was found to have been set out with such accuracy that the centres of the two portions where the miners met, on being proved by the surveyor, Mr. J. Wheateroft, were found not to vary half an inch laterally.

SHREWSBURY AND CHESTER.—The Liverpool Mercury claims attention for the great viaduct now in course of completion across the valley of the Dee, in the vale of Llangollen, the dimensions of which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the principle which the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the principle which the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from this, as a substitute for the moden one, which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from the in the wooden one, which the trains daily pass; the span of the principle is in course of being constructed on the old line, a few yards from the load line, a few yards from the load line, a few yards from the substantial block of salary makes, the principle is in course of being constructed on the old line, a few yards from the line for interest of the bridge which the

Stockport viaduct, and 34 ft. higher than the Menai It is supported by nineteen arches, of 90 ft. span, and its length is upwards of 1,530 ft. or nearly one-third of a mile. The outline of the structure is perhaps one of the handsomest that could have been conceived, both as regards its chaste style and attractive finish; and its general appearance is considerably enhanced by the roundness of the arches, which are enriched by massive quoins, and the curvilinear batter of the piers: this style of architecture imparts a grace and beauty to the structure without impairing its strength. The greatest attention seems to have been paid to the abutments—the only part of the erection in reality where any deco-rative display could be made. In the middle of both, on each side, are beautifully executed niches in the Corinthian order, in addition to some highly finished masonry. The piers are neatly wrought at the angles, and nearly at the base of each there is a bedding of upwards of 460 square feet of masonry. With the exception of the entradoes of the arches, which are composed of a blue sort of brick, the whole structure is built of beautiful stone, if not as durable, equal in richness and brilliancy to that of Darly Dale. The viaduct has an inclination from end to end of 10 ft., and connects that part of the line between Rhos-y-Medri and Chirk. Viewed from between Knos-y-Medri and Chirk. Viewed from beneath, the vast structure presents a noble appearance, and its bold proportions with its height cannot fail to call forth admiration from the most indifferent While the view below developes what art can accomplish, that from the summit surpasses in richness of the picturesque any landscape in the kingdom. It is situated in the middle of the farfamed Vale of Llangollen. On one side are bold and famed Vale of Llangollen. On one side are bold and swelling hills, on the other a plain teeming with luxuriance far and wide. Within view are Castell Dinas Bran, or, as it is commonly called, "Crow Castle," which is situated on the crown of a conical hill; the glaciated rocks; Winnstay, and Ponty-Cyssyllte, and the Dee aqueduct. This last structure, which conveys the Ellesmere canal, is within a short distance from the righter and from its heavity and distance from the viaduct, and from its beauty and extent imparts additional interest to the locality. The viaduct has been erected by Messrs. Makin Mackenzie and Brassey, contractors, at a cost of upwards of 100,000l., being upwards of 30,000l. more than the Stockport viaduct. The cost of the timber required to form scaffolding &c. for its erection was 15,000l., and between 300 and 400 masons alone were employed during the whole time of construction. The only accident that has occurred during its erection was that lately of some scaffolding falling upon a workman and killing him. Within a few miles distance there is another viaduct in course of building across the valley of Ceiriog. This structure will be upwards of 120 ft. high, and will have ten arches of 45 ft. span, and one of 120 ft. The entire length will be at least 850 ft.

YORK, NEWCASTLE AND BERWICK .- Of the junction newly opened the Newcastle Journal gives the following particulars :- The new works leave the line of the old Brandling Junction at the bridge over the High-street, Gateshead. Thence the line is carried on an embankment, supported by retaining walls, for a distance of 160 ft., when it crosses the new street leading from West-street to the Half Moon-lane, by a skew bridge of about 40 ft. span upon the square at the height of about 24 ft. from the surface of the road. It again runs along a short piece of embank ment with retaining walls, to the Half Moon-lane, which is crossed by means of a bridge of new con-struction, the roadway being supported by three girders made of half-inch boiler-plate, about 7 ft. in height. Upon each of these girders rest a cast-iron beam, through which cast-iron bolts of large size pass, descending through the girder, which forms a kind of hollow box, about 15 in. in width, and giving support to iron transverse girders, upon which the roadway is laid. This bridge is 37 ft. span on one side, and 75 ft. on the other, the height to the level of the rails being 19 ft. Another bridge on the same principle is in course of being constructed on the old line, a few yards from this, as a substitute for the wooden one, which the trains daily pass; the span of the latter bridge will be 100 ft. Leaving the girder bridge above described, the line is carried upon nine arches, of 20 ft. span, with stone coignes, the interior being of brick and cement—which arches terminate in a substantial block of ashlar masonry at the point where the high-level bridge may be said to commence, the works already described constituting the approach thereto from the south. The line is thence carried over a platform supported by cast-iron pillars, which rest partly upon sleeper walls, carried up to the height of the carriage roadway, and also upon three semicircular arches of 22 ft. 9 in. span, and one of 36 ft. 3 in., the north abutment of the

cast-iron arches of the bridge spring:—the cast-iron pillars are bound together at the top by longitudinal and transverse trough-girders. this point and the river pier on the south side, the cast-iron arch and roadway are nearly completed, and the second arch will be in progress in the course of a few weeks. From the middle of the first arch the line curves to a temporary timber viaduct erected along the west side of the intended bridge. The height of this viaduct is 120 ft. to the level of the rails. It is built upon piles, which are driven between 30 ft. and 40 ft. into the bed of the river. Its stability was sufficiently tested on Monday, when Capt. Laffan, the Government Inspector, examined it preparatory to the opening. On that day two powerful ngines, weighing upwards of 70 tons, traversed it at different degrees of speed for between two and three hours; the weight would be about one ton to a foot, being four or five times greater than the temporary structure will ever be required to bear, and the result was in the highest degree satisfactory. On reaching the north side of the river the temporary line is curved into the permanent line at the bridge over the Close, which is similar in design to those on the south side already described, there being a strong abutment, from which the cast-metal arches spring. The height of the arch over the Close is 103ft. to the level of the rails, and the span is 36ft. 3 in. This is level of the rails, and the span is 36 ft. 3 in. This is the highest point on either the south or the north shore. The line then curves to the west, being carried upon three stone arches, of 20 ft. span, along the south side of the Castle Garth, one of these arches being a skew one over Queen-street; it then runs on an embankment supported by retaining walls to Clavering-place, which is also crossed by a skew bridge, and there is another skew bridge over the deviation of the Postern, the roadway of the latter resting upon cast-iron girders, the space between being turned with rings of bricks set in cement. The retaining walls of the embankment here form one side of the Postern and Bailiff Gate. The permanent line will run westward into the general station at the Forth as soon as it is completed. There is room all the way along this part for five lines of railway. The junction between the temporary and the permanent line is a little west of the Norman Keep, by the north side of which the permanent line proceeds eastward. After leaving the embankment just described, which at this point is made of considerable width, the line again passes over Queen-street by a bridge with two arches, of 25 ft. span; then it is carried by a castiron arch of 60 ft. span over the proposed new street to be formed from the end of Collingwood-street to the Newcastle terminus, of the carriage-way of the high-level bridge. It runs then upon six 23-ft. arches, with stone coignes, the interior being brick and cement. One of these arches carries the line over the street leading from the Black Gate into the Castle Garth to Dean-street, which is spanned by a magnificent arch of 80 ft., the height from the surface to the level of the rails being also 80 ft., and there being three arches of 25 ft. span on each side of the main arch. All these arches are elliptical; the rise of the large one is 27 ft., and of the small ones Next follow six arches of 20 ft. span, which carry the line to Pilgrim-street, which is crossed by a skew bridge of 30 ft. span, having 6 ft. rise. Then follow fourteen arches of 20 ft. span, which join the bridge over Manor-street, of 35 ft. span and 7 ft. rise, the abutment being lightened by two semi-circular arches of 6 ft. span. The height from the street to arches of 6 ft. span. The height from the street to the level of the rails at this point is 58 ft. Then there are four more 20-ft. arches, over which the line is carried to the bridge over a proposed new street leading from Manor-street to Trafalgar-street; this is a skew bridge of 50 ft. span upon the square, the rise of the arch being 12 ft. This is followed by an embankment supported by retaining walls, and the line is carried over the Gas House upon a platform supported by trough girders; between that point and the bridge over Trafalgar-street it rests upon an embankment. In order to cross Trafalgar-street, the original bridge which carried the North Shields was widened 112 ft., and the foundation not being good, the piers of the bridge were strengthened by means of inverted arches constructed below the surface of the ground. From Trafalgar-street the line runs on to the embankment of the Berwick, the junction of the line being a short distance eastward of the station. Some idea may be formed of the magnitude of these works by the statement that there are upwards of 1,200,000 cubic feet of masonry. Messrs. Rush & Lawton are the contractors for the high-level bridge and the viaducts on the north side of the river. and the vigour with which they have prosecuted the undertaking may be estimated from the fact of their having set as much as 22,000 cubic feet of ashlarin a week, a feat unprecedented. It may be added also that,

Digitized by GOOGIC

which occurred in getting possession of the ground—there being upwards of 200 parties to treat with—it was found necessary to set out the works in detached portions; yet, so accurate were the plans drawn and the calculations made, that on these various detached portions being fitted together, it was not found necessary to alter or re-construct a single point, so admir-ably did the whole fall in; and further, so well was the original plan considered and laid down that it has not been requisite to deviate from it in any respect whatever.

FORRIGN.

FRANKFORF AND HANAU.—The works are actively progressing. The line will be opened for traffic before winter arrives.

GREAT LUXEMBOURG.—The immense arch of the bridge-tunnel on the way from Etterbeck to Ixelles has been commenced. In the pond valley at Etterbeck the great squeduct is nearly completed; this work is spoken of as a master-piece of masonry. Further on, under the Audergherm-road, a viaduct is begun which will have a length of more than 40 metres, and is partly constructed on a rocky soil. The works are continued actively on all the other uncompleted portions.

#### Accidents.

GREAT WESTERH.—Sept. 15.—Near the Hatherley Bridge station, between Gloucester and Cheltenham, three men were killed and several others shockingly injured. This portion of the line is used in common by the Great Western (broad gauge) and the Midland (narrow gauge) Companies, a line of 4 ft. 9 in. rails being laid within the broader ones. In the course of the afternoon, a number of men in the employ of Mr. Blinkhorn, contractor, were removing old and laying down new ballast, and in consequence of the almost constant traffic of the two companies passing over this particular part of the line a vigilant look-out is necessary for the safety of the men thus employed. necessary for the satety of the men that compared a lad to attend to the important duty, and to ring a bell on the approach of the trains. About 4 p.m. a train of the approach of the trains. About 4 p.m. a train of about sixty luggage trucks, on the narrow-gauge line, passed by. The bell was sounded as usual, and five of the men stepped back on to the broad gauge, and Whilst they were so engaged, the Great Western train which left Paddington at 12 noon appeared in sight. The boy rang the bell, and the driver of the engine 'Firefly' opened the alarm whistle, repeating the bell, and the driver of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of engine 'Firefly' opened the alarm whistle, repeating it as loudly as he could, but the poor fellows seemed not to hear it, for they did not make the least attempt to get out of the way. The driver of the engine, perceiving the fate that awaited them, endeavoured to bring up the train by reversing the engine and putting on the brakes. All, however, had but little effect. The 'Firefly' reached the spot where the five men stood, and in an instant they were struck to the ground. The mutilated remains of three of them were on the permanent way. Their names were were on the permanent way. Their names were John Waits, John Newman and Henry Paul; they were quite dead, their deaths having been instantaneous. The survivors, when asked how they came to remain on the line, knowing, as they must have done, the near approach of the Great Western train, said the large number of trucks attached to the narrow-gauge train so attracted their attention that they altogether forgot the other trains.—Sept. 16.—At the inquest, after the examination of several witnesses, a verdict of "Accidental death" was returned.

Sept. 13.—About 6 30 p.m. the goods train from Peterborough to Leicester had just been brought in to the Leicester station, and the guard, named Walker, had shunted the luggage waggons, and was uncoupling the brake from the engine, to place that on the siding for the engine to go into the engine-sheds, when by some means he fell down between the two, and the engine going on at the time, and the driver not seeing that the guard had slipped, the engine went over the man's body, the ash-pan crushing him to death instantly. The engine is one of kitson's, of Leeds, and it seems unfortunate that the fire box and ash-pan should have been made on such a principle. On comparing this carriage with one of Bury's and one of Sharpe's, it was found, says the Nottingham Journal, that in the latter there were about 12 in. between the fire and ash pan and the ground, giving about 7 in. more than Kitson's. A man falling under those engines and lying flat on the ground would escape with his life at all events, and probably not be much hurt. Several lives have already been sacrificed by these low ash-pans.

LONDON, BRIGHTON AND SOUTH COAST .- Sept. 18. At 8 30 p.m., just after the arrival at Brighton of the first express train from Portsmouth, a man knocked him down, ran over him and crushed him in a dreadful manner, so that he subsequently died.

### Law Intelligence.

ELBOTRIC TELEGRAPH.—Sept. 20.— In the CITY SMALL DEBTS COURT, in re the South-Eastern v. Smith and another, this was an action to recover the sum of and another, this was an action to recover the sum of Messrs. Smith & Atkinson, solicitors. Mr. Rush, the manager of the electric telegraph at the London station, proved that on the 20th of May Mr. Atkinson gave him a message for Messrs. Laver & Cresswell, Folkstone, to go to the station there to communicate with him (Mr. Atkinson). The message was transmitted at 4 48 p.m., in two minutes; of course there would be no answer unless sent by Messrs. Laver & Cresswell. Two hours afterwards, at 6 14 p.m., defondant requested to know whether the messages defendant requested to know whether the messenger had been to Messrs. Laver & Cresswell, and in two minutes he returned an answer in the affirmative, but that those gentlemen were not at home. The above charge was then made, but which Mr. Atkinson refused to pay. Witness admitted that there was no scale of charges that the public could see, but any person applying could have one. He refused Mr. Atkinson admission into the telegraph room on a general rule, as there are frequently secret communications.—The clerk at the Folkstone station proved the receipt of the message, and that he delivered it to the first person who came to the station to be spoken with.-Mr. Atkinson said he had been detained two hours, and then had to send a clerk the same night to Folkstone. He complained of the delay, and denied giving any order for the second message, and had been waiting for the answer to the first.—Mr. Rush said it was a mere direction, and the message having been delivered the matter rested with the parties.—His Honour said it would be difficult to say what was a fair charge, it depended so much upon circumstances; but in this case he thought the com-pany had performed their contract, and that their charges were fair.—Judgment for 11. 7s. 6d.

At the MARYLEBONE POLICE COURT, Mr. J. Marchant and Elizabeth his wife, residing in Marylebonelane, Oxford-street, were charged with having tra-velled in a first-class carriage from Slough to Paddington, they having only a second-class return ticket, and refusing to pay the extra fare.—A fine of dos. was inflicted, together with the additional 3s. demanded by the company, and 4s., the costs incurred at the Court for summonses.—[This evil is becoming very general, and should be carefully looked after. Ed. Rail. Chron.

### Reports of Meetings.

GLASGOW, PAISLEY AND GREENOCK.

GLASGOW, PAISLEY AND GREENOCK.

Sept. 15.—Half-yearly Meeting, Greenock.—Mr. J.

TASKER, deputy-chairman, in the chair.

Mr. Anderson read the Report:—

The directors beg to submit the usual statement of accounts for the half-year ending the 31st of July last, showing a nett balance of 14,57%. 6s. 7d., at the credit of revenue account. They therefore recommend that after providing for the interest on learns and the dividend of 6 per cents. a nett balance of 14,57%. 6x. 7d., at the credit of revenue account. They therefore recommend that after providing for the interest on loans, and the dividend of 6 per cent, on the preference shares, a dividend of 5x. per share on the 25t. shares, and 2x. 6d. per share on the 12t. 10x. shares, should be declared payable on the 29th inst. The general stagnation of trade and tightness of the money-market which has increased the interest on loans, have produced an unfavourable change on the revenue of this line for the last half-year, in common with every other railway in the kingdom, and have compelled the directors have, notwithstanding, to remark that the goods traffic continues gradually to increase, and now exceeds that of the corresponding half-year in 1847. But this increase is much more than counteracted by the falling off in the number of passengers—especially the first-class—which shows the pressure of the times. The committee appointed to watch over any questimes. counteracted by the falling off in the number of passengers—especially the first-class—which shows the pressure of the times. The committee appointed to watch over any questions which might arise with the Caledonian, agreed to a material change in the terms regulating the amalgamation of the two companies, which has been confirmed by the directors. The shareholders will remember that by the Act of Amalgamation it was declared optional to the Caledonian, within five years, to put an end to the guarantee of 4 per cent. on the ordinary stock of this company, and to incorporate it with the stock of the Caledonian. That option the Caledonian have renounced the right to exercise, whereby the guarantee of 4 per cent. has become absolute; and in lieu of the right of the shareholders of this company to participate in the profits of the amalgamated companies, the shareholders of both companies are mutually to participate in the profits of the amalgamated companies, the shareholders of both companies are mutually to participate in the profits of the amalgamate dompanies, the shareholders of both companies. It is satisfactory to state that the bill for the short branch to connect this line with the Ayrshire Company's, west of Paisley, passed through Parliament without opposition.

The capital account showed the receipts at 819,5531.

The capital account showed the receipts at 819,5531.

revenue account of the joint line showed the receipts by passengers, parcels and luggage, &c. at 7,428.
7s. 2d., one-half whereof is 3,714l. 3s. 7d.; of the Dy passengers, parceis and luggage, &c. at 7,4281.

78. 2d., one-half whereof is 3,7141. 3s. 7d.; of the through line, balance from last statement, passengers and parcels, (haulage of passengers carried in excess by the Glasgow and Greenock beyond the Glasgow and Ayr, 347l. 1s. 7d.), &c., at 26,086l. 2s. 3d.; total, 29,800l. 5s. 10d. Total expenses of the joint line, at 1,820l. 2s. 2d., one-half whereof is 910l. 1s. 1d.; sum set aside for supposed proportion of maintenance of way and works, 450l., making a total of 1,360l. 1s. 1d.;—expenses of the through line, 13,866l. 1s. 2d.;—balance, 14,573l. 6s. 7d. Interest account, 6,151l. 3s. 10d.; proposed dividend on 25l. and 12l. 10s. shares, 5,000l.; on 7l. 10s. (preference) shares, 3,212l. 3s. 5d.; balance, 209l. 19s. 4d.

The CHAIRMAN apologized for the absence of the chairman of the Board, whose public duties had called him to Ireland. I have very little to add, said the hon. gentleman, to the report which has now been read to you; unless I give you some more dealis as to the falling off in the passenger traffic in the last half-year as compared with the corresponding half

last half-year as compared with the corresponding half of last year. On the joint line the falling off in numbers is 9 per cent., and on the through line 7 per cent.; together it is 7½ per cent. But this will not account for the falling off in money. On the joint line the first-class passengers have fallen off 25 per cent., and on the through line 22 per cent. The first indicates the state of trade in Paisley; the last I can account for in a great measure without recard to account for in a great measure without regard to the state of trade: last year there were six steamers each way per week between the Clyde and Liverpool, one of them going and returning direct from Greenock. This year there are only four steamers each way per week; and the average number of passengers by each of these four steamers is, I understand, considerably forces the steamers is, I understand, considerably forces the steamers. by each of these four steamers is, I understand, considerably fewer than the average by each of the six of last year. A large proportion of those passengers travelled by railway, and were chiefly first class. They now go by the Caledonian, so that it may not be all lost that a friend gets.

Mr. M*LEAN inquired when the guarantee by the Caledonian would companie.

Caledonian would commence.

The CHAIRMAN replied that some arrangements

had yet to be made. They might rest assured that the guarantee would commence as soon as the di-rectors were able to bring matters to a settlement. No time would be lost. As far as he was informed, the Caledonian were just as anxious as themselves

Mr. M'LEAY then asked what progress had been made with the Clydesdale Junction line, and whether

a junction would soon be effected.

The CHAIRMAN: I am informed that there is a large force working on the Clydesdale Junction, and that it is confidently expected to be opened in November. I however fear that we shall be very ill prepared to take advantage of its opening.

prepared to take advantage of its opening.

Mr. Maclure: Is there proper accommodation for the large traffic expected when it is opened?

The Chairman: It has all along been expected that a very large local and mineral traffic would come from that line for export, as well as coal. Provision was some time ago made for the export trade, as far as getting an Act to make a pier at Cartsdyke. The state of the money-market has prevented this being proceeded with, beyond the purchase of a few small properties on the line of it. To the Caledonian the export of minerals is not of the same consequence, as they have access to the mineral terminus near the Broomielaw, where a very large sum is now being expended on wharfs and other accommodation for shipping. Arrangements are also making for the erection of a wharf at Port Glasgow. It however occurred to our directors, that as our goods depot here was limited and inconvenient, an extension might be made so as to form a better connexion with the new harbour, and it might answer in the meantime for the pier at Cartsdyke, besides being more suitable for the local traffic. The engineer's atten-tion was directed to this, and a plan was sent show-ing, that by crossing the Back Walks on the level, and obtaining a lot of land on the south, a goods depot would be obtained to answer both the purposes required. This plan was submitted to the Provost and magistrates, and their sanction asked to the crossing on the level. They remitted it to a committee, who reported against its being granted, saying that access could be had to the land by arches for the one line and a tunuel for the other. Our engineer, after deliberation, stated the extra expense of this would not be less than 8,000l. This was again submitted to the authorities, as a bar to the execution, and it has been again refused. Application was made to Sir M. S. Stewart for the land, but some of the feuars had petitioned him to refuse it, and he named Grover, a coach-trimmer, was leaving a shed on the Shoreham branch, when the engine No. 80 848,328l. 1s. 6d.; expenditure, land and compensation, &c., declined treating till the objection was removed. I shall refrain from remarking on the opposition this

scheme has met with beyond the fact of its being un-expected, after the working of the rails on the level of Dellingburn-street and across Rue End-street, which is the greatest thorough fare in Greenock, and which has not been either dangerous or inconvenient. The crossing asked for is on a street which has not been opened, and on which carts have not hitherto been allowed to pass. It appears to me there are three parties interested in this subject—the Harbour trustees for the export, the inhabitants for cheap coals, and the railway company—and, instead of working cross to each other, it will require their combined efforts to maintain the trade of Greenock. On the coal traffic I may now state that within these few weeks a coal-master came here to see our accommodation, telling me that when the junction was made with the Clydesdale, they were prepared to send to Greenock 1,000 tons of coals a day, if we could take oreeneck 1,000 tons of coals a usy, it we could can them. He is only one of many others who have pits within six or eight miles of our Glasgow station. On inquiry of this gentleman as to the present prices at inquiry of this gentleman as to the present prices at the pits, I found, with a full rate for railway carriage, they will not cost within 15 to 20 per cent. of the present prices here. The gentleman said farther, that they could afford to sell for less than present prices, and that they would not allow coals by the river to compete with them. We have never yet carried by the railway a fourth part of the coal consumed by Greenock, and we cannot, with our present accommodation, carry a much larger quantity. So that it was for the interest of the community that this

scheme should be carried out.

Mr. Maclure said it might be of advantage to appoint a committee to co-operate in endeavouring to get their object accomplished. It was certainly very extraordinary that the town of Greenock should refuse the request. It should not be forgotten that in a season of unexampled mercantile distress the Caledonian supported a great number of artizans.
When that circumstance was taken into account, he thought it would ill become the town to put obstacles in their way, for it was a matter of life and death to get a great mineral depot established in Greenock. It was that which had raised Glasgow so far beyond Greenock, and in their competition with Glasgow it was obvious that if Greenock did not put her shoulders to the wheel and co-operate with the Caledonian, her prosperity would be looked for in the history of the past. If they co-operated heartily with the Caledonian, the traffic would not go to Glasgow or Port Glasgow, and Greenock would be the sole outlet of the traffic from the Caledonian. The great benefit expected from that junction to the community was that they might compete with Glasgow; for had it not been for their railway they would have lost all the shipping they possessed—at least a great proportion of it. And if they did not do what they could to get this port made the shipping port of the mineral traffic, they would have lost the last chance left of becoming a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great companying a great company becoming a great commercial community again. He

would propose the appointment of a committee.

The CHAIRMAN remarked that the directors had done everything in their power to accomplish their object; they had done it collectively and individually, but they had hitherto failed. He was sure the directors would have no objection that a committee of shareholders should be appointed to co-operate.

Mr. J. TURNER concurred with the chairman's re marks, that no blame could be attached to Sir M. Stewart in this matter; yet it must be apparent that it was of so much importance to the town of Greenock and to his (Sir Michael's) own individual interests, that he ought himself to give the ground required by the company. The ground was not a street—it was merely a place for drying clothes, and was, in fact, of no earthly use to the town of Greenock. It was quite obvious that if there was not a proper depot at Greenock for coals and minerals, Glasgow or Port

Glasgow would get the preference.

The CHAIRMAN said it was right to state that so In CHAIRMAN said it was right to state that so far from Sir Michael being opposed to the scheme, Mr. Crawford, his agent, had done everything in his power, and was now working with the convener of the committee appointed by the council, and with the feuars, to prevail on them to give up the opposi-tion. He saw Mr. Crawford himself present, and he could explain anything further.

Mr. Crawford said it would have been too much

for Sir Michael to have agreed to the request of the company in the face of such strong opposition. But Sir Michael was most anxious to enter into an arrangement as to the desired accommodation. He (Mr. C.) suggested at the last meeting of feuars that they should consult some neutral engineer, who might propose a third method by which the crossing could be obtained. As he had said before, Sir Michael was as anxious as any gentleman in the room that the company should cross the Black Walks, but he could not overlook the strong opposition raised against it.

Mr. A. Anderson said there should be no objection the crossing when horse power was employed on it. Bailie PATERSON said the committee appointed by the council on this subject brought up a report, and he understood that it was a mere matter of pounds, shillings and pence on the part of the company. He thought the company so full of money, that the expense was not of the smallest consequence to them.

Mr. MALUUR then proposed the following committee, viz.: Messrs. G. Blair, Donald M'Donald, W. Rodger, Capt. Hamlin, Capt. M'Gill, Capt. Kincaid, and Mr. W. Walker, to co-operate in endeavouring to remove the objection to the company's getting the access they require to the ground south of the Back

Mr. MACLURE was added to the committee named,

and appointed convener.

Mr. A. Gardner, of Paisley, understood by the report just read, that the Caledonian had not power, on giving three months' notice, to put an end to the guaranteed dividend of 4 per cent. and to amalgamate the two companies.

The CHAIRMAN: It has been explained that, by the original bargain made between the two companies, and confirmed by Act of Parliament, the Caledonian had the power to put an end to the guarantee of 4 per cent. by giving three months' notice. Now, however, they had executed a deed

giving up that option.

Mr. GARDNER: Would the directors have any

objection to that agreement being read?

Mr. TURKER said the shareholders would be called on by-and-by to confirm the deed. Under this deed the Caledonian had renounced for ever the right to make the stock of the Greenock Caledonian stock; so that the guarantee of 4 per cent. became an absolute guarantee to that extent. Any profits made on this line beyond 4 per cent. would be divided between the two companies. By the Act of Amalgamation the Greenock were entitled to a share in the Caledonian profits beyond 5 per cent. But in lieu of that the Greenock shareholders would get half the profits of their own line exceeding 4 per cent. profits of their own line exceeding 4 per cent. guaranteed. The dividend to the shareholders would never be less than 4 per cent.; it might be more, provided the profits exceeded that.

Mr. Gardner: The chairman said that certain

arrangements were required to be completed before the guarantee commenced; might he ask what these

Mr. Turner said it must be very obvious that they would not make over their line to the Caledonian till the agreement was confirmed by an Act of Legislature. The moment they made over their line to the Caledonian they ceased altogether to be a company.

Mr. GARDNER: Then do I understand that the

uarantee cannot commence till you get an Act of

arliament?

Mr. TURNER: I do not say that. It will commence as soon as the directors see that they can with safety and propriety, and without detriment to the share-holders, make over their line to another company, and no sooner.

Mr. Gardner understood that the guarantee was

to commence whenever the Caledonian line was

The CHAIRMAN: That is part of the agreement.

Mr. Gardener wished to know how the calls on the preference shares had been disposed of; they applied specially to the Greenock line, but he had heard that they had been paid over to the Cale-

donian.
The CHAIRMAN: Not at all.

Mr. GARDNER: Can the directors hold out any time when the guarantee will commence?

Mr. TURNER could not mention any time at this moment; but it was no doubt for the interest of the directors and shareholders that it should be given as

soon as possible.

Mr. Whitmore: By the original agreement the Mr. Whitmore: By the original agreement the guarantee was to commence after the opening of the line. I apprehend that if we should say to the Caledonian—" We are prepared to give the necessary notices to get rid of our corporate functions and to unite ourselves with you, then the guarantee would immediately commence in the ordinary nature of things. But, as has been stated by our legal adviser, we do not deem it desirable to give up our corporate rights to the Caledonian till the agreement sealed by both companies is confirmed by Act of Parliament. both companies is confirmed by Act of Parliament. I think it is of infinitely greater importance for the Greenock to attend to the security of their capital in making it over to another company than to look after 1 or 2 per cent. during next year. So that it is in truth of more consequence to us to look after our capital for twelve months, till an Act of Parliament for our new agreement is obtained, than to secure 4 per cent. of a dividend next year.

The CHAIRMAN then moved-" That the report and balance-sheet now read be received, adopted and circulated among the proprietors, and that the dividends therein recommended be paid on the 29th inst.'

Mr. G. Blair seconded the motion. He regretted they could not afford a larger dividend than 2 per cent. this half-year, and in these circumstances it might appear somewhat ungracious in him to propose an addition to the salary given to any of the com-pany's servants. But looking at the length of the services of one of them, he did not think he was so well paid as his labours merited. The gentleman to whom he referred had been with them since the com-mencement of the undertaking, and his attention to mencement of the undertaking, and his attention to his duties had been most unremitting. Taking all circumstances into account, he would propose for the consideration of the directors, the claim their friend Mr. Anderson had on them. He thought an addition should be made to his salary, either in the way of a yearly allowance or a gratuity. He had no doubt this proposal would meet with the warm sanction of all the proprietors, and he would leave it in the hands of the directors.

The CHAIRMAN said the subject had already been under the consideration of the directors. They had not only kept the matter in view, but it had been entered

on the minutes.

Mr. BLAIR then referred to the pleasing observance of the Sabbath on this railway. He hoped that, in all their arrangements with the Caledonian it would be made a sine and non that the Greenock should be shut on the Sabbath.

The CHAIRMAN had no doubt the directors would

pay every attention to the subject; but as to making the shutting of the railway on the Sabbath a sine and non with the Caledonian, he was afraid that was out of their power

The approval of the report was then agreed to.

EDINBURGH AND BATHGATE.

Sept. 15.—Half-yearly Meeting, Edinburgh.—Capt. Stewart, of Binny, in the chair.

The Secretary read the report. The directors, in consequence of one-half of the capital not having

been raised and expended, were unable to carry the bill for amalgamating with the Edinburgh and Glasgow. With the approval of the Edinburgh and Glasgow they had succeeded in converting the bill into one legalizing the holding of stock in the Edinburgh and Bathgate by the Edinburgh and Glasgow, thereby enabling them to raise money for payment of the calls on the large amount of shares held by them. This bill had now received the royal assent. The Edinburgh and Glasgow were thus relieved from the position in which they were placed by holding shares for which they had no legal contract, and the directors of the Edinburgh and Bathgate were freed from the difficulty in recovering payment of the calls due on those shares, which had materially impeded the progress of the works. The bill for the deviation of the Uphall and Binny branch, with powers to extend their Whitburn branch to the Benhar coal-fields, had also been sanctioned. By this deviation a considerable saving was effected, and an increase of capital was required for the extension. The financial position had occupied serious attention. Though aware of the continued depression in the monetary world, and the burgh and Bathgate by the Edinburgh and Glasgow, continued depression in the monetary world, and the difficulty experienced in raising money to complete the various lines throughout the kingdom, they did not feel justified in unduly postponing the completion of the works, seeing that the undertaking would shortly become remunerative from the prospect of an early junction with the Wilsontown, Morningside and Coltness, whereby the resources of an extensive and valuable mineral district would be opened up, and a new line of communication effected betwixt Edinburgh and Glasgow. A reference to the state of the accounts made it obvious that another call of 22. 10s, must immediately be made. The advantages of promptly responding to this call were apparent, as the amount it might be the means of realizing, together with the arrears and sums paid in anticipatogether with the arrests and same paid in abustion of calls, would place the company in a position to exercise their borrowing powers. Looking to the mutual advantages to be derived from an early junction and simultaneous opening of the Wilsontown and Bathgate lines, the directors of the Bathgate, in conjunction with the Wilsontown and Edinburgh and Glasgow directors, considered it essential vigorously to force on the completion of a single line of rails meanwhile, leaving the double line to be completed meanwhile, leaving the double line to be completed as circumstances and the funds of the company would permit. It was the confident hope of the directors that the shareholders, by cordially seconding their exertions in paying up the arrears and calls, would enable them to open the line for traffic early in the ensuing summer. The report of Mr. Grainger, the engineer, stated that on the Clifton contract, extending to 4½ miles, there were five road and two water

bridges, all of which had been completed except one water bridge, which was in progress. Nearly half a mile of the double line of the permanent way was finished, and about the same distance of the single line. Of the whole works on this contract about onefourth was completed. On the Houston contract,
which was 2½ miles in length, two of the bridges
were completed and the other one was in progress; while, in regard to the works as a whole, they might be said to be half finished. On the Bathgate contract, extending to 33 miles, all the road bridges had been completed, while in regard to the other works they might be said to be about two-thirds finished. On the Uphall contract, extending to about 2 miles, one the Uphall contract, extending to about 2 miles, one road bridge, one water bridge, and two of three culverts were completed, but nothing was done to the permanent way. The works on the Whitburn branch had been marked out, and were ready for being commenced. Of rails for the permanent way, 1,261 tons had been delivered, in addition to 536 tons of chairs, and 27 901 sleaners part of which were already laid. and 27,291 sleepers, part of which were already laid. The statement of accounts showed the receipts at 94,543l. 6s. 11d., including 25,000l. for deposit; for three calls, 53,920l.; for payment in advance of calls, 13,470l.; and for interest, 2,106l. To this sum of 94,543l. there fell to be added 21,080l. of arrears the second and third calls. Expenditure, 84,9991.; balance in hand, 9,5421.

The CHAIRMAN, in rising to move the adoption of the report, said it contained all that was necessary for him to say in regard to the undertaking. He considered that all amalgamations should be based on the principles of equity, moderation and mutual advantage. Such he hoped would be the result of their position in connexion with the Edinburgh and Glasgow. He was of opinion that the present state of matters in the commercial world would not be of long continuance if peace was preserved; and he was confident that with the return of confidence the depression in railway property would disappear. He trusted that the shareholders would promptly respond to the call which was about to be made upon them of 21. 10s. per share, as it was absolutely necessary that

the works should be proceeded with without delay. They would all eventually get a fair return for their

Mr. BLACKADDER asked the amount of the arrears upon calls.

The CHAIRMAN said the arrears came as near as could be to 20,000l.

Mr. BLACKADDER urged the necessity of steps being immediately taken to have these arrears called up.

Mr. HILL said these arrears had very much arisen from the position which they held in connexion with the Edinburgh and Glasgow; but now that that company had obtained authority from Parliament to hold shares in the Bathgate line that difficulty was

Mr. BLACKADDER presumed, from what Mr. Hill had just stated, that the arrears were chiefly due by the Edinburgh and Glasgow.

The SECRETARY replied in the affirmative, and stated, in answer to another question from Mr. BLACKADDER, that of the 20,000l. of arrears, 5,000l. only were due by parties distinct from the Edinburgh and Glasgow.

Mr. Jamieson, accountant, said that arrangements were making with the Edinburgh and Glasgow for payment of their proportion of the arrears, amounting to somewhere about 15,000l. or 16,000l., by the 1st of October.

Mr. HILL mentioned that several parties in arrears made the non-payment of the Edinburgh and Glasgow an excuse for not paying the arrears on their own calls; but now that the cause for this excuse was about to be removed, the directors would take measures to

The CHAIRMAN remarked that the small amount of the arrears showed the great confidence of the share-holders in the undertaking; and one gratifying circumstance he had to mention was that the company

were not, and never had been, in debt.

Mr. Blackadder was perfectly satisfied with the explanations which had been given, and had much pleasure in seconding the motion of the chairman, that the report should be approved of.

The motion was unanimously carried Mr. A. Borthwick, accountant, of Edinburgh, was then re-elected as one of the auditors.

#### SHROPSHIRE UNION.

Sept. 15.—Half-yearly Meeting, Shrewsbury.—The Earl of Powis in the chair.

The report stated that the works from Shrewsbury to Stafford have been so far advanced as to enable the directors to speak with confidence of the line being opened throughout early next spring. The bill authorizing the purchase of the Shropshire Canal was withdrawn, with the concurrence of the canal company, owing to the new Standing Orders, and an agreement was entered into which carries out, for a

agreement was entered into which carries out, for a limited period, the terms originally agreed upon. (For engineers' report see Official Papers.)

The capital account to the 30th of June last showed the receipts at 603,073*l*. 15s. 2*d*.; payments, 382,032*l*. 10s. 9*d*.; balance, 221,041*l*. 4s. 5*d*. The abstract of balance-sheet showed a total amount on the debtor side of 258,842*l*. 8s.; on the creditor side the debtor side of 253,8421. 8s.; on the creditor side there appeared, balance of capital account, 221,0411. 4s. 5d.; balance of canal revenue account, 3,3631. 10s. 8d.; interest, &c., unpaid, 30,1201. 12s. 4d.; advances from the railway departments to the canals, 5401. 19s. 4d.; amounts due to other canal companies, 3,7761. 1s. 3d.; making a total of 258,8421. 8s.

The CHAIRMAN, in moving the adoption of the report, congratulated the shareholders on their prospects. Shrewsbury would by this line be once more placed in its former position on the high road to London.

to London.

The motion was seconded by Mr. J. P. WESTHEAD,

M.P., and carried unanimously.

The CHAIRMAN then brought forward the agreement alluded to in the directors' report between the Shropshire Canal Company and the Shropshire Union for 21 years, at a rent equal to 5 per cent. on the value of what the latter company were to pay for purchase-money.

This agreement was sanctioned.

* For account, Oct. 17.

London Stock Exchange, Sept. 22.- Much of the gloom that pervaded the market last week has been dispelled, and the exaggerated alarm has disappeared; and although the prices marked do not display great improvement, there is a much better and more healthy tone in every description of shares. The fol-lowing are the latest transactions in foreign lines:— Boulogne and Amiens, 5\(\frac{1}{3}\); Central of France, 6\(\frac{1}{3}\); Northern of France, 6\(\frac{1}{3}\); Orleans and Bordeaux, 1; Paris and Lyon, 4\(\frac{1}{3}\); Paris and Rouen, 16\(\frac{1}{4}\);

Paris and Strasburg, 12; Rouen and Havre, 74.

Liverpool, Sept. 21.—Our market has somewhat recovered from the extreme depression existing at the opening of the present account. To-day there

the opening of the present account. 10-usy there has been a decided improvement — more business doing and higher prices.

Sublow, Brothers.

Manchester, Sept. 21. — The appearance of our share-market has been less discouraging during the week. We have more inquiry for shares, and prices in many instances are improved; in but few instances are they lower. SAM. GRINDROD.

Birmingham, Sept. 21.—This market has been dull throughout the week; very little stock offering, and purchases still more limited. To-day a re-action has taken place, and prices have gone up considerably.

York, Sept. 21.—Several transactions in shares have occurred in our market of rather an extensive nature. We expect the market will become better supplied with purchasers should the prices for shares continue low.

Grayston & Earle. continue low. Grayston & Earle.

Hull, Sept. 21.—The share-market continues in the

same dull and uninteresting state, and since our last prices have again declined to an extent sufficient to exhaust the patience of the most sanguine holders. There is a slight change for the better to-day, but we cannot report any disposition to buy, either for investment or speculation. We believe the North British will get the same terms as the Newcastle and Carlisle, that is, 6 per cent. for three years and 7 per cent. afterwards. FLINT & TOOTAL.

Glasgow, Sept. 21.—Our market, although firmer for the last day or two, has not yet participated in the improvement in prices which is perceptible in the south. Sellers however are fewer, and the business done consequently limited; purchases to any ness done consequently limited; purchases to any extent could scarcely be executed without causing a material rise. The following are to-day's last sales:—Caledonian preference, 7 dis.; Edinburgh and Northern, 13½; Ayr, 60½; Ayr halves, No. 1, 9l. 13s. dis.; Ayr halves, No. 2, 9½, dis.; Ayr preference, par; Great Northern, 11l. 1s. dis.; North British thirds, 5½; Paisley, Barrhead and Hurlet, 1½ dis.; Scottish Central, 23; York, Newcastle and Berwick, extension, No. 2, ¾ dis.

Buchanan, Aithen & Co.

IRON TRADE. - Birmingham, Sept. 15 .upon a slight improvement, the men have petitioned the masters for a return to the old rate of wages.

The ironmasters have held two meetings, here and at Dudley, where they ultimately resolved that, in the present uncertain state of trade, the advance could not be submitted to. The men have agreed to rest content with their present condition for a while. The coal miners have given notice for an advance of 6d. per day, but the result of their application has not reached us.—Glasgow, Sept. 16.—The market for pig iron continues in the same state as last week; prices are firm, but little doing. No. 1 may be quoted at 46s. 6d.; mixed numbers at 46s.; and No. 3 at 45s.

[Secretaries of companies are requeated to forward notices of Meetings, and closing of Contracts, as early as possible.] MERTINGS

### Joint-Stock Companies' Gazette.

We would particularly call attention to the intelligence respecting the mining interest of South Australia and New South Wales.

Banks.

At the general meeting of the proprietors of the BANK OF ENGLAND, on Thursday, the directors recommended a dividend of 3½ per cent. for the half-year, agreeably with the profits made, but the general body of the proprietors desired 4½ per cent. The matter is to be decided by ballot—either in confirmation of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors' practition of the directors and the directors are directors.

tion of the directors' proposition, or a dividend to that amount with a bonus of 1 per cent. added.

During the week a dealing in the shares of the National Provincial Bank of England has taken place

at the price of 33.

The Graham's Town Journal of the 8th of July, received on Thursday, contains the annual state-ments of the liabilities and assets of the Eastern Province, the Commercial and Agricultural and the Port Elziabeth Banks, all of which are in a prosperous condition.

Steam

Peninsular and Oriental Steam Company shares have been dealt in at 57.

Cape of Good Hope papers to the 19th of July notice the establishment of the line of sailing packets between England and the colony, with feelings of lively satisfaction. It is observed—"This is another step in the onward path of prosperity."

Mines.

The following particulars respecting the local prices for shares in the South Australian mines is extracted from the City article of the Morning

Chronicle of yesterday:—
The value of the shares in the Burra Burra Mine had fluctuated from 140/t to 150/. The latest quotation is given on the 10th of April, when it was firm at 140/. Dealings had been done in the shares of the Princess Royal Mine at 38/. 10s. to 40/.; Adelaide Mine, 3t. to 3.5.s.; Royal Mining Company, 14s. to 15s.; North Kapunda, 15s.; Enterprize Company, 2f. 10s.; Greenock Creek, 6d.; Montacute Mine, 55/.; and the Paringa Mine, at 3l. 10s. With respect to the Adelaide Mining Company's affairs, a productive lode, superior to anything previously found there, had been just discovered. The ore, it is said, is rich sulphuret, and likely to be very profitable. The affairs of the Wheal Acraman are reported also as exceedingly favourable. On the section Chronicle of yesterday :to be very profitable. The affairs of the Wheal Acraman are reported also as exceedingly favourable. On the section of 200 acres, which is situated near the Riversedge Mine, a promising lode of copper, 3 ft. big, was being opened upon. Almost all the varieties of ore have been found in this section. That which prevails in the lode above mentioned is the red oxide, and it is considered likely to make a valuable mine. The price asked for an interest in the undertaking is at the rate of 10,000L for the section, and the value in which it is held by the proprietors is substantiated by the declaration of some disinterested judges of the property. Mr. Hardy's new lead mine, near the toll-bar, Glen Osmond, had been leased to a company. A lode carrying galena had been discovered on cutting the road across the creek. This is in addition to the one previously known to exist, and which contains carbonate of lead. Spirited operations would be commenced forthwith.

Mr. Wentworth's mine, near Molong, has produced some Mr. Wentworth's mine, near Molong, has produced some exceedingly fine specimens of copper from a lode recently opened under the superintendence of Mr. Passmore. This discovery was made on a different part of the sett from that on which the workings were commenced. Should the lode prove of the same quality as the specimen we have seen, we may shortly expect to hear that the mine is working with success. We understand Mr. W. H. Suttor has discovered a lode of lead of a very superior quality on his estate near Bathurst. On the adjoining estate of Mr. J. B. Suttor a lode of the same description has been discovered.

At the Par Consols meeting a dividend of 50l. per share arounting to 6400l. was declared, leaving a

share, amounting to 6,400*l.*, was declared, leaving a balance in hand of 480*l.* 10*s.* 10*d.* 

The GREAT MICHELL CONSOLS have made a call of

5s. per share.

The sales of British ores during the week have not

been of importance.

The dealings in the mining share-market during the past week have been very limited. Australian at 4 and British iron at 7.

The miners of the Lower Ward of Lanarkshire, who were last week on strike for a slight advance of wages (6d. per day), have obtained their demand, and are all again at work with the exception of the colliers connected with two establishments in the vicinity of Classon.

vicinity of Glasgow. At a meeting of the creditors of the Polberrow CONSOLIDATED MINES on the 20th inst., a full explanation of the state of the mine and of its monetary affairs was given, after which the creditors agreed to accept 10s. in the pound, instead of 15s., as proposed at the last meeting. Arrangements have been made for payment of the composition on the 23rd inst., after which immediate possession of the mines will be had, and their working resumed. Much praise is due to all engaged in bringing this transaction to so satisfactory an issue. To many of the creditors large amounts were due, and they consequently must have made large sacrifices for the sake of the mining labourers of the district.

The Moniteur of Paris publishes a decree of the Executive Government, removing a duty imposed by a decree of the Executive Committee on the 17th of June 1848, on iron castings of all kinds, and on copper and zinc.

The French manufacturers of bronze have addressed a petition to the French Minister of Commerce, praying that for some time a premium of 10 per cent. on the exportation of their articles may be allowed. They also intend to demand to be permitted to form a lottery, similar to that now getting up by the booksellers, in order to dispose of the goods which

encumber their shops.

The merchants of Leipsic intend petitioning against the adoption of the new ZOLLVEREN TARIFF, as published in the Prussian Gazette of the 10th inst. The

Institute in the Francian Gazette of the 10th inst. The following supplemental decree has since been issued:—
Upon the under-mentioned foreign goods, which will be imported, or upon which the duties will be paid from the 15th of September up to the 31st of December this year, the following duties will be levied, in addition to the tariff of 1816-181;

		t. duti	dditional
Silk goods and hosiery			
Ditto, if mixed with cotton, wool, &c.			10
White woollen yarns, three or four fold, camel yarns, woollen yarns mixed			
with silk, and all dyed yarns	- 8		2

Printed woollen goods, all sorts, and fancy and embroidered woollen goods	l		
not fulled	50		10
Plain woollen goods not fulled			1
Woollen varns, single or double, ex-			
cepting English worsted yarns		lber- chen.	9 & 1 silber

The Cologne Gasette publishes a royal decree, dated the 28th of August, sanctioning the establishment of the society formed for conducting the business of the firms of Schaffhausen & Co. for a term of twenty years. The capital of the company, formed, it will be remembered, out of the assets of the estate, amounts to 7,522,000 dollars. Each creditor will have two classes of shares delivered to him; one series will bear a fixed dividend of 4½ per cent. guaranteed by the State, the other series of shares will bear a dividend proportioned to the profits of the company, and the capital of which is likewise guaranteed by the State.

Accounts from Carlsruhe announce also that the affairs of Messrs. Kesseler & Co. have been arranged on a similar basis. The creditors have formed themselves into a company—the Manufactory of Machinery of Carlsruhe, with a capital of 2,500,000%.—

for a term of twenty years.

DISTILLING FROM SUGAR.—On the 4th inst., an Act

is repealed, and also part of 4 Geo. 4. c. 94, and 6 Geo. 4. c. 80. It is now enacted that licensed distillers may distil from sugar only, or from potatoes only, or from molasses only, or from treacle, or from any of these materials, and from matt or grain mixed. In the annual account of duty, when sugar only is used, the charge may be made on the distiller, but when other materials are mixed, then a different mode is to be adopted. These is a cleaned in the Ast discating that adopted. There is a clause in the Act, directing that no sugar or molasses shall be received by distillers, except from the Customs warehouse, and must be in the same state as when cleared on the payment of duty, and to be accompanied with a certificate from the proper officer of the Customs. Treacle and molasses to be used for the purposes of distillation are to be kept in storehouses until used, to prevent adulteration. Notice is to be given to the officer of the removal of materials, and scales and weights are to be provided for his use. Distillers are to make declarations to claim the allowance, and are to

deliver an account of the quantity of the articles used.

The directors of the Cusroms Fund and patentees for publishing the bills of entry having laid before the Board an extract of a new patent, and requested, in virtue of the powers therein granted, that di-rections may be issued to the officers, to afford patentees the information requisite for carrying the purposes of the patent into execution, directions have been given for an extract of the said patent to be delivered to the proper officers at the port of London, and transmitted to the collectors and comptrollers at the several outports, with instructions to afford the patentees or their deputies a convenient place in the Custom-house for the transaction of their business, and allow them free access to all books, bills, warrants, certificates, ships' entries and contents of ships, general lading and other books, as shall be kept at the Custom-houses of their respective ports.

The Gateshead Observer records the fact that the coal exports continue to cut a respectable figure, and to contrast, consequently, most conspicuously with the exports generally of the kingdom. The coal exports of the month ending August 5, 1848, amounted to 106,052*l.*, whereas those of the corresponding month of 1847 only amounted to 84,576*l.*, showing an increase on the month of 21,477*l.*

# Railway Chronicle.

LONDON, SATURDAY, SEPTEMBER 23.

In the report of the directors of the CHESTER AND HOLYHEAD much stress was laid on the confirmation by Parliament of the powers of the company for their steamboats across the Irish Channel. The transit had been repeatedly made in an hour and a half less than the time anticipated. The chairman stated that when the line was opened they would have a traffic of 5,000l. per week. At present the returns are about 2,207l. weekly. The Britannia bridge is perfectly satisfactory. Payment of the calls in arrear (70,150l.) is to be immediately enforced. The Mold line, when completed, is to be purchased. The issue of debentures, in lieu of the preference shares not taken up, amounting to about 150,000l., was authorized; and a dividend was declared of 4s. 11d. per share on the preference shares.

The KENDAL AND WINDERMERE report presented to the adjourned meeting of the proprietors announced that no definite arrangements for the lease of the line to the Lancaster and Carlisle had been effected. By an issue of 101. preference shares, the directors are authorized to raise 50,0001. at an interest of 6 per cent. per annum. The directors intend to

instead of Lancaster so as to shorten the distance from the manufacturing districts.

At the half-yearly meeting of the shareholders of the Glasgow, Paisley and Greenock, the report was adopted after a discussion on various topics of local interest to the company. After a dividend of 6 per cent. on the preference shares the directors proposed a dividend of 5s. per share on the 25l. shares and 2s. 6d. on the 121. 10s. The goods traffic appears to have increased in spite of the bad times. The guarantee of 4 per cent. from the Caledonian is to continue—all extra profits will be divided between the two companies.

The EDINBURGH AND BATHGATE report and accounts were adopted at the half-yearly meeting of the shareholders. The directors obtained legal sanction for the Edinburgh and Glasgow to hold stock in the Edinburgh and Bathgate, as the bill for amalgamation was not passed. The payments of calls by the Edinburgh and Glasgow will be probably completed by October 1. A call of 2l. 10s. will enable the company to exercise their borrowing powers. The line it is to be hoped will be opened in the

Authority was given to the TAFF VALE directors, at a special meeting, to borrow 72,000l., so as to prevent further calls on the shareholders.

The report of the Shropshibe Union declares that the line will be opened throughout early next spring. The Shropshire Canal is leased at a rent of 5 per cent. on the intended purchase-money. No dissent was shown either to the adoption of the report or the agreement at the half-yearly meeting of the proprietors.

Great credit appears to be due to the directors of the GREAT SOUTHERN AND WESTERN (I.). The works have been economically, yet expeditiously constructed; and a special approbation of the whole of the line already executed, by one of the first railway officials of the day (Mr. Dockray), was produced at the half-yearly meeting. The arrears of calls have been limited to 17,000l. in addition to 235 forfeited shares. The balance account for the half-year shows a profit of 34,433l. 4s. 1d. The line will be within 30 miles of Cork by Christmas.

The directors of the LONDONDERRY AND Enniskillen have made final arrangements with Mr. Leishman. The existing 50l. shares are to be divided into one 25l. share fully paid up, and two half-shares of 121. 10s. each; the last call of 5l. to be appropriated in moieties to each half-share. This arrangement was sanctioned, after some opposition, at the adjourned half-yearly meeting.

The half-yearly meeting of the South-East-ERN AND CONTINENTAL STEAM-PACKET COM-PANY was held on Tuesday last; and the statement of its affairs contained in the directors' report, as well as the declaration of the chairman respecting the course to be pursued on behalf of the company, may be noted as thoroughly illustrative of what we have advanced from time to time on the subject of railway steamboat undertakings.

This company, it is scarcely needful to observe, is perhaps in the most advantageous position which can be conceived possible for a steam-packet business,—as also the business itself may be said to lie more obviously within reach of the railway from and to which it brings travellers, than in any other case of a chanuel crossing. It commands the shortest route to France; and has enjoyed a practical monopoly of nearly all the passenger traffic with that country during the last twelvemonths (11 & 12 Vict. c. 100) was passed to permit the distillation of spirits from sugar, molasses and treacle in the United Kingdom. The Act 10 & 11 Vict. c. 6, bring their line to Sedgwick or Crooklands, and strong; and consequently have the best in

Digitized by GOGIC

every way of all that is going. Let us now look at the result.

During the last half-year, on a capital account of 121,777l., which is exclusive of a reserve fund of 10,619l., there has been a gross earning of 10,759l., and an expenditure to be deducted from it of 7,811l. 13s. 9d.; the balance, applicable to dividend, 2,948l., or a little more than 2 per cent. on the capital and reserve. This may be regarded as a result as favourable, on the whole, as can be fairly looked for in this class of business under present circumstances. It is true that the directors complain of a falling off in traffic arising from the Continental disturbances, and express hopes of a revival when this shall subside: the contingency, however, it must be observed, lies in the very nature of the enterprize, and it may be added, that expectations founded on any chance of a speedy return to such a state of Continental affairs and foreign travelling, as existed last year, can hardly enter into the calculations of prudent men who have an eye to the future. Seeing what has taken place in France, especially, and what political changes have already done to destroy those of its features which invited the mass of tourists,-to say nothing of what scenes may yet have to be played in the great drama, of which the first act is scarcely yet closed in that country-the estimate, we should think, might reasonably be framed on prospects of a decline rather than of an increase in the business, for some time to come.

However this may be, one thing is clearly declared by the directors. They are not satisfied with the late results of their working; and, what is more, are resolved to seek for compensation for the disappointment from the South-Eastern Railway Company. The chairman repeated more strongly the opinion expressed in the report, to the effect that the steamboat company have "a claim against the South-Eastern for having kept their boats running during the last six months;" and added, "that it was the intention of the directors to bring their claim forward at an early day." So that the practical working of the business is thiswhen the trade becomes unprofitable, or less profitable than was looked for, the railway company are to be called upon to make up the loss, or to maintain the expected rate of profit; and this always in a state of things which has at the same time reduced the railway earning from the traffic in this quarter. The latter thus is made to suffer for the steamboats, while it is suffering from a certain decline in its own trade. This way of working out the operation exhibits in as clear a light as we could desire the practical bearing of such communications when wholly thrown upon a railway company. They will be sufficiently taken up by independent parties, whenever the circumstances are such as would make it profitable for a railway to take them in hand; where the contrary state of things exists-(and this, it would seem, will be the general rule, if we can judge from the outcome of this, the most favourable experiment possible)—the onus on the railway fund for the packet account will increase in a proportion corresponding to that of the decline of its own earnings from traffic produced by the packets. How such a process can be for the advantage of the former, we have never been able to discern; and the instance before us, which certainly throws some light on the question, will probably be thought illustrative of the very contrary.

From our official returns it appears that the amount of traffic for the last week, on 4,063 miles of railway, was 229,272/., thus accounted for:—122,148/. for the conveyance of passengers only, 51,202/. for the carriage of goods, and a remainder of 55,922/. for passen-

gers and goods together, not respectively apportioned; being an increase of 23,191*l*. over the corresponding week of last year, when the mileage was 3,221. The average earnings per mile were 56*l*., whilst in 1847 they were 64*l*.

HEADS OF AN INQUIRY INTO THE PROFITS OF THE WIDE-GAUGE SYSTEM.—No. II.

Having already stated the essential points to which the present inquiry will be restricted, and the reasons for so restricting them, we may now proceed to take them in the natural order of their occurrence. And first, as to the cost of constructing a railway on the broad gauge. This need not occupy us very long; for there is no question, we apprehend, as to the matter of fact that a line intended for wide rails must, cæteris paribus, be more expensive in its formation than one designed on the national system. We say all other things being equal, which of course is the only way of comparing the two systems. It may, for instance, be asserted that the quantity of land required, and the width of cuttings, embankments, bridges and tunnels, need not be greater on the one than on the other. But the equality in this respect must then be brought to pass by some difference in others,—by leaving a diminished space, for instance, between the rails, or by allowing a scantier margin from the outside of the line to its boundaries on either side:-and this, it is obvious, will so far impair the character of the railway in some points of practical importance. So that if the same quantity of land and the same dimensions of general profile are made to suffice for the wide-gauge works, it must be by placing them, as far as the particulars in question are concerned, on an inferior scale of proportion. Then, as regards all the accessaries required for working — such as turn-tables, sheds, engine and carriage building shops, and station room generally-there must be an absolute difference that cannot be got rid of in the same way as works on the main line may be kept down to the standard level of cost. In every one of the items named there must be a greater space and larger and more expensive implements provided, which implies a special increase of first cost in articles taking up no inconsiderable per-centage on the whole of the capital required to make a railway.

The same position is true as regards the moving stock, with a qualification, however, that shall be presently noticed. The prime cost of every wide-gauge engine, tender, carriage, horse-box truck or waggon is, beyond question, greater than that of the similar articles of each class respectively on the standard lines. Here, however, it will be urged that the difference is compensated by the greater quantity of work to be got out of each; so that the total cost of an establishment of moving stock required for the working of a certain amount of traffic will not be greater in the one case than the other :nay, it has, we know, been asserted that in this department the advantage of economy is in favour of the wide gauge. The discussion of this point, it will be seen, belongs to a later stage of the inquiry, as it is from an investigation of the working process alone that we can obtain any certain conclusions on the matter; and we shall not, therefore, insist at present upon the prime cost of the moving stock as an item affecting the amount of capital expenditure. There remains the article of rails; and here, again, we shall not assert any decisive difference. Proceeding on the fair principle of assuming that other things are equal, or that nothing shall be brought to bear on the comparison which is not essential to the several systems compared, we do not find sufficient of rails. It is true that the engines which ply on the wide gauge are so much heavier that it would seem a necessary consequence that they should demand a heavier rail; but as this is said to be compensated by the manner in which a wide bearing relieves the track, and as we need not insist in this division of the inquiry on any disputed items, we shall not include the permanent way among the particulars in which the first cost of a wide-gauge line must necessarily exceed that of the national class. It is sufficient for our purpose-which is more practical than polemic-to have laid down, on the basis of facts of the case not open to question, the position that the whole cost of making a broad-gauge railway ready for work, mustother things being equal — exceed that of a standard line under the same circumstances.

It would, indeed, be enough for us to establish that the capital required for the former will not be less; -which none but the extremest zealots for the exceptional system, we apprehend, would venture to dispute: for the main bearing of the inquiry—as to the profits to be gained on the money thus invested-concerns the working far more than the first expense of forming the railway. We are indeed persuaded that the capital outlay per mile will always be found greatly to exceed what would have sufficed for a narrow-gauge line; and this not by a mere calculation of the actual cost of railways which Mr. Brunel has constructed, but on a view of the essential conditions which belong to the principle of his system. Nor are we at all moved by the attempts to prove that this item can be so managed and that point so arranged as to come within the limits of the usual expense attaching to the railways of the national dimension. There remains behind all these, not only the strong notorious fact that all the broad lines have been more costly in their structure, -- which may be, and we have no doubt is to some extent, attributable to circumstances independent of their special difference,-there is, we say, not this fact only, but that other, which is quite independent of merely accidental conditions, — that everything is necessarily framed on a larger scale; and the assertion that this can be accomplished, on the whole, and throughout the entire body of the works, without an inevitable increase of the whole outlay. is simply repugnant to common sense on any practical view of the subject at large; while it is refuted by every examination of its details which comprehends the whole of the particulars included in the capital expenditure on a new line. We have no wish, however, to overstate the argument; and shall leave the chapter of capital outlay, in order to proceed to an examination of the matters that influence working profits, taking with us as a certain fact that the cost of making a wide-gauge line must at all events be as heavy as that of one of the ordinary class in many respects, and that in some of considerable importance it will undoubtedly be heavier.

Before we enter upon the question of working, it must be observed that the inquiry here concerns the character of the system as more or less apt for profitable use generally;—not the aptitude of the system in certain special and exceptional circumstances. It must be shown, in order to vindicate the claims of its promoters to supersede the national scale, that it is better for general use than that scale. We do not say in order to justify the slightest pretence of deranging the system that is already established over nine-tenths of the country,—but in order even to make its rival claims good, were the two systems now to be tried on a blank map for the first time,—it must be shown, we say, that generally, and for the average requisition of railway

Digitized by Google

business throughout the island, the wide is better than the narrow system. In considering the conditions peculiar to its working, we must therefore bear in mind the ordinary circumstances of traffic and the features of this means of communication as available for an entire series of roads; -not composed of main trunks only, frequented by a vast concourse of passengers and immense quantities of goods, but including the branches to these principal arteries, on which also the business must be conducted; with more or less profit in proportion as the system is more or less fit to work it profitably. This is indispensable to a thorough view of the question we have attempted to inquire into; and it will be found that the more we regard the broad gauge as applied to a varied scheme of lines, and the demands of an unequal traffic, the less will it be found to suit the conditions on which alone a profit can be made by railway business. This it is needful to keep in view; as the matter in question here is not what may be gained by using the broad gauge on a single metropolitan or other line of great traffic, but how far it may be more or less advantageously applied to railway lines in general;-to such, in short, as now alone remain to be laid down in this kingdom. This is the proper gist of the inquiry; although it will, we apprehend, be shown from an inspection of the business on the Great Western itself-on a line which, if any can, possesses favourable conditions for trying the experiment of extra dimensions—that the traffic is unprofitably conducted; that is to say, less profitably worked than the same traffic might be but for the extra dimensions of the line. Our view therefore shall be taken from this starting point, and the argument will be as follows: - If it appears that, with the special advantages possessed by this particular railway, its traffic, as conducted on the wide system, is relatively less profitably worked than it might be on the narrow; and that the features of the method of working in which this defect appears are precisely those which must occur in larger proportions on any line destitute of those special advantages-on any average line, in fact,-and still more on branches and communications of minor trafficthe fair conclusion will be that the wide gauge cannot be wisely applied as a means to secure profit from railway investments. This is the result of our inquiry into the matter; and we shall set down such particulars of the Great Western plan of working as seem to us to establish its soundness.

### SOUTH DEVON ATMOSPHERIC.

The statements of "An Eye Witness," and our comments of last week, seem to find confirmation in the following letter of a local correspondent in Felix Farley's Bristol Journal. He seems to be one of those shareholders whose interests would, as we suggested, be materially affected by the suppression of the atmospheric.

The suspension of the working of the atmospheric system of traction on the above railway, involving as it will do the total annihilation of my property embarked in it, calls for some remarks, the justice or injustice of which I leave your readers to appreciate. Can any of your numerous readers tell me why the shareholders are called upon to sanction this course, when the chairman states, " I am a dissentient; I could give you reasons which would exonerate me from any blame in the matter, and convince you of facts which you have not the remotest idea of;" and after bearing testimony to the regularity of the working of the trains, adds, "that while locomotive traction may be taken to cost 2s. 3d. a mile, the atmospheric mileage may be reduced to 1s. 6d., assuring the meeting that he does not make this statement without sufficient grounds"? With such elements, economy and regularity

minor matters, or hidden policy, surely ought not to be allowed to influence us, and annihilate our prospects. Let us pause, before we convert this suspension into an abandonment let us have the most searching inquiry, so as to lay bare "the truth, the whole truth, and nothing but the truth," and having arrived at the facts which led to the commutation of the atmospheric, leave the public to judge for themselves whether they outweigh these statements of the chairman—bearing in mind that we must be content to remain with an inefficient locomotive line, or raise an immediate additional capital (at an awful sacrifice to the original shareholders) to render it efficient.

A SHAREHOLDER WHO BOUGHT AT 16 PREM. Bristol, Sept. 12.

### Correspondence.

### KILLARNEY AND VALENTIA.

May I be allowed, through the medium of your paper, to inquire the reason of delaying the performance of the promise made by the directors of this line to the shareholders at their half-yearly meeting held in last May, at which they declared their intention of immediately laying out the line ; and yet now, after a lapse of four months, I learn that the engineer has not even commenced operations? Will not this delay, if continued much longer, involve the shareholders in considerable expense, by commencing the work in winter, as, according to competent authorities, such operations cost much more than if commenced earlier in the season? the engineer is so busy that he cannot attend to the company's business, why not at once engage the services of another person, as there are numbers of professional men now at liberty? I confess I cannot conceive why there is such an unaccountable delay, when I learn that the directors alone hold nearly 7,000 shares, and that nearly 4,000 more shares were disposed of lately in Ireland, at 11. per share, upon the faith of the works being proceeded with forthwith, making a total of more than 11,0001. while the entire cost of laying out the line, as stated by the engineer in May last, would be about 3,500*l*. Believing that a railway to Valentia Harbour (which I am well acquainted with) would not only be of national importance but likewise a profitable undertaking to capitalists, I became in 1845 a holder to some amount of the now forfeited scrip, and very lately some friends in England have endeavoured to induce me to resume my position as a shareholder; but before I attempt to involve myself in further responsibility I wish to see some real activity among the directors, devoid of that procrastinating spirit, as shown to our loss in the session of 1846, and for which near 50,000t. has been already ex-HIBERNICUS. nended.

### BAILWAY CAPITAL AND H.M. WOODS AND FORESTS.

The Daily News has commenced a series of honest, vigorous and spirited attacks on the present expenditure of public money in the various Government departments. It has especially noticed the proceedings of that inert and good-natured division which is said to superintend the public Woods and Forests. But much as we sympathize with the economical spirit which attacks Government mismanagement and extravagance, we should have silently witnessed its effects, had we not lighted on the following appropriation of money obtained from the pockets of railway shareholders. The whole case is one so illustrative of the principle of "victimizing the company," which generally governs bargains with the Government, that we give it in the apt and descriptive words of our contemporary:—

apt and descriptive words of our contemporary:—
In 1846 the Commissioners of Woods and Forests received from the Southampton and Dorchester Railway Company a sum of 12,000l., which was paid on account, or as a deposit, for the land in the New Forest purchased of the Commissioners, subject to an arrangement as to its price, which was declared by the company to be unreasonably large. It would seem that a question arose as to the appropriation of this considerable amount; and as the Commissioners have informed the public, it "was their wish that the money should be applied generally to the advantage of all parties concerned or interested in the Forest, and that the crown and the commoners should be mutually benefited." So laudable a desire deserves every commendation. It was the depth of winter.

London was enveloped in a November fog. White hall-place was damp and unwholesome. "My lords," as they tried to warm themselves by the fire of the board-room, thought of the bucks and does in the New Forest. They thought how uncomfortable they must be with so much swampy ground about them. They then thought of those troublesome fellows, the directors; then of their 12,00%; then of the best way of using a sum of money so delightfully avail-able. Could they not make the deer more comfortable? To be sure they could : how stupid not to have thought of it before—they might drain the forest! No sooner said than done. On that same 28th of November 1846, a letter was despatched to Mr. Josiah Parkes, 1846, a letter was despatched to Mr. Josiah Parkes, the celebrated engineer, who lives hard by, requesting him forthwith to inspect the forest with a view to its drainage, "to state the extent and probable cost, and advise generally on the means of effecting the same; together with the nature of the supervision he might suggest for executing the work." Mr. Josiah Parkes, of course, received the letter and instructions with unlimited satisfaction. He is the last man in the world to lose time. Off he started to the New Forest per express train, and knowing last man in the world to lose time. Off he started to the New Forest per express train, and knowing very well that there is "nothing like striking the iron whilst it is hot," within a fortnight he had returned, prepared and sent in to the Commissioners one of the most delightful reports they ever read—a report the more peculiarly satisfactory because fully confirmatory of their own views. Mr. Parkes directly nevered that there were restricted to the second started the second started the second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second second tinctly proved that there were various parts of the forest that required drainage. There was no difficulty whatever about that. He then proceeded to state that Col. Thornhill, the late deputy-warder, was anxious that the drainage should commence on a large oran lawn or for form his house, a desire that large open lawn not far from his house—a desire that was most natural, and of which Mr. Parkes judiciously and unhesitatingly declared "that a better selection could not be made." The report then discusses briefly the general character of the morass in the New Forest, and the means of effecting its drainage. To effect this work, said Mr. Parkes, would take time, and of the cost he "would not pretend to give an opinion." He is very decided, however, as to the mode. It must be done by a deep and complete under or nipe drainage and he is of oning. large open lawn not far from his house—a desire that ever, as to the mode. It must be done by a deep and complete under or pipe drainage; and he is of opinion that the pipes should be made on the spot, and that a "tilery" should be erected, if suitable clay and a favourable site can be obtained. "I have been fortunate," says Mr. Parkes, "in both. The flat summit of Pignell Hill presents to me all that can be desired for the works," and "on sounding this hill, clay of excellent quality for pipe-making was found." Mr. Parkes, then goes on to descant on the salubrity of Parkes then goes on to descant on the salubrity of Piguell Hill, the fitness of the clay, and the advan-tages of pipe-making. He thinks he could promise tages of pipe-making. He thinks he could promise to make pipes so cheap there that the Commissioners might ship them to any other of her majesty's woods—that they even might be delivered in Dublin at a price less than Irish pipe-makers are able to charge for the Phœnix Park drainage. He then proceeds to make "Observations on the railway traversing the Forest as it affects the means of drainage and the facility of transport." He finds that the engineer of the railway did not construct his culverts so as to suit the purposes of forest drainage (which was extremely likely), and advises him, rather colly, "to re-examine the whole subject." He then proceeds to observe that "there is another matter of no little importance," which is "well worthy careful prevision." It is, that the railway should cause "a siding to be constructed as near the tilery as possible." sion." It is, that the railway should cause "a suring to be constructed as near the tilery as possible;" otherwise, says Mr. Parkes, "the railway will be useless for purposes of traffic in the forest"! Mr. Parkes then proceeds to "the momentous question"—"the supervision." He states his own customary practice: "In the event of the erection of a tilery than the states have together with the being committed to my charge, together with the working or mounting it, I furnish the plans and a proper person to superintend the erection, order the machinery, and supply a tilemaker well skilled in the art." Mr. Parkes is fortunate here also: "I have in my service a workman of intelligence, who is equally capable to direct a tilery and superintend a drainage.

I could destine this man for such double service."

The writer then proceeds to expose the iniquity of the job as shown in the utter inutility of the tile-draining, specially exhibited in the very approaches to Mr. Parkes's tilery. On an examination before Lord Duncan's committee, it is ascertained that no return is expected from the part of the forest so drained, in fact, that the money has been clearly and thoroughly thrown away:—

And now (continues our contemporary) we venture to submit, ought not all this work to be immediately suspended, until at least time be given for inquiry by competent parties? It is evident the Woods and Forests know nothing about these sort of things.

Digitized by GOOGIC

They had no right whatever to embark money in any such operations. With characteristic laxness one of the Commissioners admits that they do not know and cannot tell what proportion of the 12,000l. has been spent. Mr. Milne is asked:—"What has been the expense of erecting the tilery!—Answer: I cannot say.—Was it paid out of the 12,000l.—Yes; the whole expense will be paid out of the 12,000l.—Is the whole 12,000l. expended!—No, not half of it." Then, in the name of the public, we lay an embargo on the unexpended half at least. Lord Duncan, we believe, is virtually in charge of the forest, and we urge him not to lose one moment in stopping the urge him not to lose one moment in stopping the expenditure of a single additional shilling of this money. He must be quick about it, for on the 19th of June last the engineer applied to the Woods and Forests for permission to extend his operations very considerably, and no one knows or can pretend to determine to what extent that department may authorize him to go if the brake is not at once applied.

### Gossip.

The national Feres at Boulogne are announced to have gone off with great éclat. The daily papers notify the establishment of a good understanding between the directors of the South-Eastern and between the directors of the South-Eastern and the Bouldons and Amens, which was cemented by a dinner given by the latter at the Hotel du Nord to some of the directors of the South-Eastern Company. The number of visitors was rein-forced not only by arrivals by the usual boats from Folkstone, Dover and London, but by boats which specially came for the occasion from Margate and Ramsgate. Numbers of the National Guard in uniform visited London during the week. On both sides of the Channel the arrangements of the South-EASTERN directors appear to have given thorough

The share which Norfolk and Suffolk take in sup plying the inhabitants of the metropolis with food, will best be shown in the following return of cattle, grain, &c. over the EASTERN COUNTIES line, for the week ending Sept. 16:-

The alacrity with which the guards and brakesmen of the London and North-Western undertook the duty, of instructing the new drivers with the various curves, gradients, &c. in the line, during the late curves, gradients, &c. in the line, during the late dispute with the old engineers, has met with its reward from the directors. It was resolved at a meeting of the Board, "That this Board has much pleasure in recording its sense of the excellent conduct of the guards and brakesmen during the period of the line being worked by the new drivers. That the ready and cheerful manner in which the whole of them undertook the duty suddenly imposed upon them merits the approbation of this Board. That the freedom from accident, in the conduct of the service during the period alluded to, is in no slight degree to be attributed to the active assistance of this class of their servants; and that their attention to orders, under very peculiar circumstances, deserves this tes timony from the Board in corroboration of that general good conduct which has so long characterized them as a body. That a gratuity be given to each man employed in this extra duty. That the minute be printed, and that a copy of it be given to the guards and brakesmen, with the name of the party to whom it specially applies." It is stated that nearly 2001. have been thus distributed among the guards and brakesmen.

At a meeting of gentlemen connected with South Australia, Mr. Parker one of the committee for promoting a line to PORT ADELAIDE, South Australia, detailed the result of the correspondence with Earl Grey. The proposals of the committee had been met in the best possible spirit, and the projected railway with the greatest encouragement. Earl Grey, in reference to the applications for a grant of the requisite funds, had stated "that as regards the disposal of the public land necessary for the undertaking, he entertained no objection to the proposal of the committee," consequently the outlay of the company would consist of rails, sleepers, engines, carriages,

and other incidental expenses.—After some remarks from Mr. Hunt and other gentlemen, it was resolved that the company be formed, and a provisional com-mittee having been selected the meeting broke up.

The NEW DOCKS AT LEITH are progressing rapidly, and before winter sets in, Mr. Barry, the contractor, expects to have the whole space inclosed with the outer wall, so that operations may be carried on inside during the winter. A good number of men are employed on these works, and when the present part is finished a great many more will be required, chiefly labourers. Tavelling stages move about the largest labourers. stones with the greatest ease, and drop them any spot required. A steam-engine turns four large mills, which grind and mix the mortar; and other two engines, situated 300 ft. from where the men are working, pump out the water, and keep the

place dry.

At a petty sessions at Swindon, a distress warrant, according to the Bristol Journal, was ordered to issue against the GREAT WESTERN, for the non-payment of poor-rate, in the parish of Highworth, amounting

A correspondent of Herapath declares that an instrument similar to the NEW DISTANCE SIGNAL which instrument similar to the NEW DISTANCE SIGNAL which we noticed as having been brought into use upon the South-Western line, has been long in use on the Midland. It was prepared by Messrs. Stevens & Son, has been at work for two or three years on the Midland, and was there fixed by Mr. Barlow, the resident engineer, and the working carried out under the superintendence of Mr. William T. Adcock.

The EDINBURGH AND GLASGOW have made their advantageous purchase of the Union Canal, the terms being that the canal stock be converted into railway shares in the proportion of three of the canal to one of the railway. The company will thus obtain virtuof the railway. The company will thus obtain virtually a monopoly of the whole goods and the cheap passenger traffic between the east and west of Scotland, with the exception of the more bulky commodities, such as corn &c., which will still be conveyed by the Forth and Clyde Navigation.

We copy from the advertisement columns of our contemporaries the following modest announcement:-The proprietors of an invention for which patents have been already secured for the United Kingdom and the Continent, invite the attention of capitalists to carry out this undertaking, into which the strictest investigation is earnestly desired. None but gentlemen of high standing will be treated with, and, to prevent trouble, an advance of at least 10,000l. will be necessary.

The Railway Record reports that an eight-wheeled engine of Stephenson's, on the long-boiler and outside-cylinder principle, has recently been put upon the London and North-Western for the heavy passenger trains between London and Birmingham. The engine has a 7-ft. driving wheel, an 18-in. cylinder, and, we believe, about 1,200 ft. of heating surface. During a trip with her a few days since, she was found to be equal to a speed of 52 miles per hour, with 110 tons, down an incline of 16 ft. per mile. The average consumption of coke by this engine will probably not exceed 40lb. per mile with the heavy trains on the London and North-Western. The engine weighs

between 32 and 33 tons, in working order.

The Minister of the Interior, says the Boulogne Gazette, consulted by the Mayor of Boulogne, as to whether the engagement contracted August 9, 1844, by the municipal council of this town, to guarantee to the shareholders of the BOULGGRE AND AMIENS, holding the first three millions subscribed, a minimum interest of 4 per cent. was obligatory, has answered in the affirmative.

The following notice by the Minister of Finance has been circulated for the information of the shareholders:-" From the 16th of this month and until further orders, the payments by anticipation on the certificates delivered in exchange for the shares of the Paris and Lyon, and the certificates of the loan, will be admitted at the treasury, with a discount allowed of 4 per cent. No discount will be allowed on anticipations of less than thirty days."

### Reports of Meetings.

[Continued from p. 680.]

CHESTER AND HOLYHEAD.

Sept. 20.—Half yearly Meeting, London.—Mr. W. R. COLLETT in the chair.

The CHAIRMAN would only observe that since his return from abroad he had been frequently over the line, and he had been attending to the developement of the traffic at the other side of the Channel. The line had been recently inspected by the directors, and they were satisfied with the state of the works and with the progress of the local traffic. The bill au-thorizing their steamboat establishment had received the sanction of the Legislature. It was stated by Sir

Robert Peel, when the arrangement was being made by the Government, that the distance from London to Dublin would be performed in 143 hours, which was then much doubted; but although they had a break in the line of 4 miles in length, they had performed the distance in little more than 13 hours. He hoped that Ireland would soon be in a more satisfactory condition, and that the company would have the whole trade between Ireland and this country. They could not fail to have a large traffic, sixteen millions of people being on this side, and eight millions on the other. For the conveyance of the mails they would have 30,000% ayear, and they were in treaty with the Admiralty for the Post-office service. When the line was opened throughout he expected that the traffic would produce about 5,000% a-week, and pay a good dividend on the shares.

Mr. GIFFORD, the secretary, read the report, which stated that-

On the 1st of May last the line was opened for the conveyance of passengers between Chester and Bangor. On the 1st of the following month the carriage of goods was undertaken; and on the 1st of August the whole line from Chester to Holyhead was brought into use, with the exception of a break of about 4 miles at the Menai Straits. Simultaneously with these operations, the directors were engaged in carrying through Parliament a bill empowering the company to run steamboats from Holyhead to Dublin. On the 22nd of July last the royal assent was given to their bill. The vessels having been prepared, in anticipation of this successful issue of their endcavours, the directors were enabled to begin running them on the 1st of August, on which day, and since, the entire journey between London and Kingstown has been performed with regularity in little more than thirteen hours. The efficiency of the steamboats built for the service of the company has greatly contributed to these thirteen hours. The efficiency of the steamboats built for the service of the company has greatly contributed to these satisfactory results. Their speed and accommodation have fully realized the promises of their builders, and the expec-tations of the directors. At last half-yearly meeting it was stated that the tube through which it was intended to pass the line across the river at Conway, had just been floated to the foot of the piers prepared to receive it. It was placed in its proper position without any accident or difficulty; and from the 1st of May last the whole traffic has passed through it. No deflection has taken place. The passenger is not sensible of the slightest vibration, and the noise of the transit does not exceed, if it is equal to, that experienced in an ordinary tunnel. The directors therefore have the gratification to be able to report that the issue of this remarkable experiment has been successful, and such as to justify the most perfect confidence that the same method of gratuation to be able to rejort that the issue of this remarkable experiment has been successful, and such as to justify the most perfect confidence that the same method of transit which it is intended to employ, upon a much larger scale, at the Menai Straits, will equally answer its important ends, and raise still higher Mr. Stephenson's character. The tubes for the last-mentioned structure, and the stupendous plers of missory intended to support them, are advancing to their completion simultaneously, and as rapidly as is consistent with the safety of such a work; and the directors trust that early in the ensuing spring the passage across the Britannia bridge will be open. When this object has been achieved, and the magnificent structure placed on its site, the natural beauty and grandeur of which admirably suit it for the location of one of the greatest works of art, they are satisfied that it will become an object of the highest interest to men of science in all parts of the world. Her Majesty's Government having commenced the line for carrying the stone from Holyhend Mountain to the Harbour of Refuge and packet pier, the directors expect to be called upon shortly for the science in an parts of the world. Her Majesty stovernment having commenced the line for carrying the stone from Holyhead Mountain to the Harbour of Refuge and packet pier, the directors expect to be called upon shortly for the first instalment due from this company on account of these works; but they do not intend to proceed with the extension to the new packet pier until some considerable progress shall have been made in the works undertaken by the Government. Respecting the receipts and disbursements of the company, which had been for some time in the hands of the shareholders, it would be perceived that whilst the latter amounted on the 30th of June last to 3,007,101. 18s. 9d., the receipts fell short of that sum to the extent of 24,8271. 10s. 4d., being only 2,982,2744. 8s. 5d., which amount included the whole of the subscription the London and North-Western were authorized to make, both in the original and the preference shares. Of the 42,000 preference shares created under the resolution passed in August last, only 31,256 have been taken up. The directors estimate at 200,000. the sum that will be necessary during the next six months, over and above what may be raised upon the original shares, to meet the liabilities already incurred. Of this sum the London and North-Western have undertaken to advance 120,000., being the amount they are further authorized to subscribe by the Act of this session. The remainder the directors trust to be able to provide either by the issue of debentures or by the further sale at pur of the preference shares already sanctioned: a price at which they would certainly have been eagerly sought for, but for the unexampled depression of railway property, in common with all commercial investments. Should it be found expedient to issue debentures instead of these preference shares, the directors now solicit the sanction of the shareholders to their taking that step. The results as to traffic of the partial opening of the line have been satisfactory to the directors. As long as the lin and the company's tast steam-vessels had not been placed upon the passage across St. Goorge's Channel, the traffic was almost purely local, the original parliamentary estimate for which was as follows:—Passengers, 900l, per week; merchandise and agricultural produce, 100l.; minerals, 100l. This estimate, the directors are happy to report, was exceeded within eight weeks of the opening of the line, under all the directors are happy to report, was exceeded within eight weeks of the opening of the line, under all the disadvantages inseparable from first operations, having amounted, from that period to the end of July, to an average of 1,205% 46.9%, per week. On the lat of August,

Digitized by GOGle

as above stated, the line was opened through Anglesca, and the steamers were placed upon St. George's Channel. From that date the accession of through traffic has been enthat date the accession of through traffic has been encouraging, the whole returns having averaged, during the weeks from the 1st of August to the 9th inst., 2,2071.13s.8d. per week. The full advantages of the line cannot, of course, be appreciated, nor its value ascertained, until the improved means of intercourse which it affords are more generally known—until the considerable break at the Menai Straits is filled up—and until the mineral traffic has been in some measure developed. With a view to the latter important object, the directors have made arrangements with the Mold Company to become the purchasers of that line after its completion. Hitherto the traffic in minerals can hardly be said to have commenced, the first consignment of slates having been brought upon the line only at a yery recent be said to have commenced, the first consignment of slates having been brought upon the line only at a very recent date. The sums above given as the results of the traffic neither include any payments from Her Majesty's Government on account of the Post-office service, nor from the Shrewsbury and Chester on account of toll. The contract under which Her Majesty's Government is to pay 30,000. per annum for a term of years on account of Post-office service will not, it is believed, commence till the line is opened throughout. Meanwhile the amount which the Post-office is to pay for the single mail carried daily each way is to be settled by arbitration. At present the passage between Holyhead and Kingstown and Kingstown and Holyhead are limited to two each way daily—one journey between Holyhead and Kingstown and Kingstown and Holyhead are limited to two each way daily—one journey being performed by the Admiralty vessel which carries the mail, and the other by the vessels of the company. Negotiations are pending with the Admiralty for undertaking the whole Post-office service between the two countries by the whole Post-office service between the two countries by the Holyhead route, including the transfer to the company of the establishment connected with that service. After a full consideration of all the bearings of the case in respect to the claim of the original shareholders for interest for the period during which the line has been partially opened, the directors deem it equitable that such interest should be con-tinued until the line is opened throughout, being the same construction as has been put by Her Majesty's Government upon the Post-office contract. The stipulated interest upon upon the Post-office contract. The stipulated interest upon the preference shares of course commenced on the lst of April last. For the sake of convenience the directors recommend that the payments to both classes of shareholders should be brought down to the same date, namely, the 30th of June last. If this recommendation be sanctioned by the meeting, it would be necessary now to declare a dividend of 4s. 1½d. per share on the preference shares, which the directors recommend to be made payable on the 25th inst. The payment of interest on the original shares to the 30th of June last they propose to make payable on the same day of June last they propose to make payable on the same da as last year, namely, the 10th of October next. The direct tors, deeming it necessary to take steps to compel payment of arrears of calls—amounting in the aggregate to 70,150.— and being desirous to act with impartiality towards all partice in default, have issued circulars to all shareholders parties in default, have issued circulars to all shareholders who are in that predicament, apprising those who have been long in arrear that unless payment be made on or before the 10th of October, the directors will be compelled to put in force the powers of forefiture with which they are invested, as well as other measures they may be advised to adopt, in order to compel payment. The shareholders who have not been so long in default have received notice that their arrears are likewise required to be paid immediately to prevent the forfeiture of the shares. to prevent the forfeiture of the shares.

The report concludes by expressing the confidence

of the directors that the completion of the line and the revival of trade will realize the expectations of those who planned the undertaking.

(For engineer's report see Official Papers.)

The statement of accounts to the 30th of June showed the receipts at 3,014,602*l.*, including an advance from the bankers of 32,327*l.*; expenditure, 3,007,102*l.*, including 156,712*l.* paid for interest on shares and debentures, and 136,879*l.* for steamboats; balance, 7,500l.

The CHAIRMAN having moved the adoption of the report, several questions were asked by Messrs. TAYLOR and LETOHWORTH, in answer to which it was stated that the amount of arrears due up to Tuesday the day before the meeting, was 70,150%;—that three steamboats were now running, and another would be ready in a fortnight; they were paid for, and cost the company about 35,000*l*. each. They would require 200,000*l*. during the next six months to meet their liabilities, towards which the London and North-Western had advanced them 120,000l. The question of removing the offices to Chester and dispensing with their resident director would be considered at their next meeting. The amount they were authorized to raise was 3,696,3321., and he believed their expenditure would not exceed that sum beyond 50,000l.

It was stated, in explanation to Mr. Letchworth, that the 30,000t. allowed by the Government was for five years certain from the opening of the line throughout, and for seven years beyond that period if the nett returns should not exceed 5 per cent. In case the traffic should pay more than 5 per cent. per annum to the shareholders, a proportionate deduction will be made from the Government allowance; but in no instance is that allowance to be reduced below 7,912t. per annum. The line was worked by the London and North-Western at about 33 per cent.; their receipts were now more than 2,100%. per week and the working expenses were 700t., which was near the amount mentioned.

In reply to Mr. WILLIAMSON.

The CHAIRMAN said that Mr. King, their late secretary, had resigned chiefly in consequence of domestic affliction: that he had been pressed to remain by the directors, but, much to the regret of every gentleman at the Board, he resigned.

The report was then unanimously adopted.

Resolutions were passed authorizing the issue of debentures in lieu of the 11,000 preference shares not taken up, and approving of the dividend on the pre-ference shares of 4s. 13d. per share.

KENDAL AND WINDERMERE.

Sept. 11.—Adjourned Meeting, Kendal.—Mr. J. GANDY in the chair.

The report stated that since the last meeting the

directors, assisted by the committee, had endeavoured to effect an arrangement for the lease of the line to the Lancaster and Carlisle, but they regretted to state that their proposals had not been accepted, although they received repeated assurances of the friendly feeling of the Lancaster and Carlisle towards them. The directors trust they will be enabled to make a saving of some importance in the working expenses. They have every confidence that on the return of prosperity to the country their situation and prospects will be greatly improved.

Resolutions were passed adopting the report and authorizing the directors to raise 50,000l. by the issue of 10t. preference shares, bearing interest at the rate of 6 per cent. per annum in perpetuity; the calls not to exceed 1l. per share each, nor to be made at shorter intervals than four months.

During a short discussion, it was proposed to ex tend the line by means of an incline to the edge of the lake at Miller-ground, but it was thought advis-able not to take any steps with regard to it at present.

Mr. BENTLEY expressed himself strongly in favour f soliciting the directors of the himself. of soliciting the directors of the Lancaster North-Western to bring their line to the Lancaster and Carlisle at Sedgwick or Crooklands, instead of at Lancaster, as projected, and recommended in the seport of Mr. Stephenson, and thought that it would be advantageous to all parties, and greatly shorten the distance from the manufacturing districts of the West Riding, to the Lakes and to Scotland.

Several directors expressed their concurrence, and requested Mr. Bentley to submit it to the directors of the Lander North-Western and to Mr. Stephenson, the engineer.

Mr. J. Wilson was appointed vice-chairman.

TAFF VALE.
Sept. 14.—Special Meeting, Bristol.—Mr. J. Jones in the chair.

The directors were authorized to borrow upon debentures a sum not exceeding 72,000l. It was stated that half the capital had been paid up on the 10%. shares, and the raising of the money by loan was to prevent the necessity of making calls on the ahareholdera.

LONDONDERRY AND ENNISKILLEN.

Sept. 19 .- Adjourned Half-yearly Meeting, London Mr. J. G. FRITH in the chair.

The CHAIRMAN stated that since the last meeting they had had an interview with Mr. Leishman, and had come to the arrangement to pay him 15,000l. as early as possible; to give him 20,000l. upon debentures at 5 per cent. interest, payable at three, five and seven years; and that, upon 15,000% being paid, a fresh contract would be entered into with him. upon terms to be hereafter settled, for the extension to Derry.

Some conversation then ensued with respect to the arrears of calls, and Mr. VANDEUT complained that sufficiently stringent measures had not been adopted

for their recovery.

Mr. Bates complained that the promises held out as to the reduction of the working expenses had not

The CHAIRMAN said that the attention of the direc tors had been directed to that subject, with a view to tors had been directed to that subject, with a view to effect the utmost possible reductions; and he had the satisfaction of stating that Mr. Hemming, their present secretary, was about to assume the management at Derry, which he was confident would result in a considerable saving to the company.

A resolution was then passed, confirming the arrangement with Mr. Leishman on the terms above

stated.

The meeting was made special.

A resolution was submitted calling in the existing 501. shares, each to be exchanged for one 251. share fully paid up, and two half-shares, of 121. 10s. each, the last call of 51. to be appropriated in moieties to each half-share. This measure was objected to, on the ground that parties would retain their 25% paid-up share, and transfer their half-shares to men of straw, and then get rid of their present liabilities.

This was met by the addition of a clause to the resolution, declaring that no one should transfer any shares till the calls now due by him were paid.

Mr. Clay, M.P., was of opinion that the plan of

dividing the shares, as proposed, would be the means of inducing the shareholders to pay a considerable portion of the arrears now due by them.

After an amendment in opposition to the measure having been negatived, the original motion was carried, with the additional clause mentioned.

GREAT SOUTHERN AND WESTERN (I.).

Sept. 19.—Half-yearly Meeting, Dublin.—Mr. E. MACDONNELL in the chair.

The report stated that-The report stated that—
There was a balance of profit for the past half-year of 34,433. 4s. 1d. The line from Thurles towards Cork has been proceeded with as expeditiously as a prudent consideration for the state of the money-market and other circumstances would admit of. About 20 miles to the junction with the Waterford and Limerick, near Tipperary, were opened on the 3rd of July last, with a single line for passengers, and the second line has since been added. The engineer and Mr. Dargan assure the Board that a further portion of about 30 miles, to Charleville, will be ready for passengers, and the second line has since been added. The engineer and Mr. Dargan assure the Board that a further portion of about 20 miles, to Charleville, will be ready for public traffic by the middle of November, and to Buttevant, a town in a district of great importance, within about 30 miles of the city of Cork, by Christmas next. Sir J. Macneil was confident of being able to open the line to Mallow by the 1st of March next, and to Blackpool or Kilbarry, within the suburbs of Cork, by the 1st of July. The tunnel from that point to the river Lee would then be the only engineering portion of this great work unfinished. The traffic showed an increase from the previous half-year of 6,556. us. 6d., and since the opening to Limerick there had been a further improvement, raising the average weekly receipts to 3,332. being at the rate of 2d. per mile per week, as compared with 2l. per mile, as stated in the last half-yearly report. This increased revenue has happily been obtained at a very small additional cost of working, so that the directors have every reason to hope that the next half-yearly statement of traffic will show such a nett profit as will be adequate to cover the interest on the cost of the 130 miles now in operation—a position on which they sincerely congratulate their proprietors, and one which they have reason to believe was never before attained by any company which had yet 60 miles of its line to make before reaching one of its principal termini. This being attained during a period of unexampled depression proved the rich sources of the local traffic of the district through which the line passes, and which in times of ordinary tranquillity and prosperity would have considerably augmented the revenue. sources of the local traffic of the district through which the line passes, and which in times of ordinary tranquillity and prosperity would have considerably augmented the revenue. The directors have so regulated their expenditure as to avoid any further calls on their proprietors during the present year; and it will be their endeavour to consult economy of expenditure in every department. But they must rely on the continued support of their proprietors to enable them to render remunerative the large capital aircrafy invested, and which can only be effected by the completion of the trunk line to Cork, the great anticipated source of their southern traffic. The amount of arrears on all calls made prior to the 1st of June last has been reduced to about 17,0004; and the directors hope has such shareholders as 17,000£; and the directors hope that such shareholders as are still in arrear will see the necessity of their prompt liquidation, and not force the directors to resort to measures of severity. Besides those arrears the company also holds 586 shares, which have been forfeited or surrendered by insolvent proprietors. The arbitration with the Post-office has been terminated by the award of an umpire, selected by the arbitrators, and the amount of such award paid to the company. The Irish South-Eastern line, from Carlow to Kilkenny, the hear agreed as the Carlow to the company. by the aroutants, and the amount of such award paid to the company. The Irish South-Eastern line, from Carlow to Kilkenny, has been opened as far as Bagnalstown, a dis-tance of 10% miles; and it is expected the remaining portion to Kilkenny (about 10 miles) will shortly be completed. This company has undertaken to furnish the carriage and anis company has undertaken to furnish the carriage and moving power for working that traffic, on terms mutually agreed on. The directors have also made arrangements with the Waterford and Limerick, for an interchange of carriages and traffic between their two lines, on the terms and conditions usual in similar cases on English lines.

The statement of accounts showed the receipts to the 30th of June 1848 at 2,846,697l. 10s. 8d.; expenditure to the 31st of December 1847 at 2,306,053l. 16s. 7d.; to the 30th of June 1848 at 497,817t.
9s. 10d.; total, 2,803,871t. 6s. 5d.; from the 1st of January to the 30th of June 1848, the expenses of the locomotive department, of the traffic, police, including sundry charges, amounted to 30,8854.18s. 4d., while the receipts during the same period by coachwhile the receipts during the same period by coaching and post-office service, merchandise and cattle, amounted to 65,319*l.* 2s. 5d., showing a balance in favour of the company of 34,433*l.* 4s. 1d.; and the total number of passengers who travelled on the line during the half-year ending the 30th of June 1848 was 252,330; the amount of their fare, including carriages, horses, dogs, parcels, &c. was 54,404*l.* 13s. 1d.

The CHAIRMAN, in moving the adoption of the report, said, at former meetings, when the works were only in progress of construction, or the line partially opened, it had been the duty of the chairman to hold out hopes of future traffic and prosperity, to prevent many from sacrificing their shares and to induce all to pay up their calls cheerfully. But now that the line was opened to one of its great termini, Limerick, he thought it his duty to show them that those promises had been realized; and that taking into account the disastrous times they had passed, their affairs exhibited as healthy a state as any infant line pos-

They had stated their profit for the sibly could do. half-year to be 34,433*l*, after deducting for working expenses 46 per cent.; and it should be observed that they had included in these working expenses the salaries of all their officers, police, &c., much of which should have been charged to construction as well as to traffic. That amount of profit which he assured them is taken, in his opinion, under the real amount, would pay 4 per cent. on the line to Thurles, or 3½ per cent. on the line to the Limerick junction, supposing the cost of the line to be 17,000l. per mile. The report also stated their average weekly receipts since the opening to Limerick to be 3,332l.; but in these receipts there was scarcely anything as yet included for goods and cattle; for, owing to there being but one line of rails from Thurles to Limerick, they had not yet been able to thoroughly work the goods and cattle traffic. He was happy to tell them that the state of the line and the works generally reflected the greatest credit on their engineer-inchief, Sir J. Macneill, showing, as it did, after an experience of two years' working, that his mode of solid construction, and method of laying his rails, not only conduced to the safety and comfort of the public, but was certain ultimately to prove a source of great economy. If, as was promised, they opened to Buttevant next year, they should have completed 160 miles in four years, a thing unknown in the railway world, and which, he trusted, would show their English as well as Irish proprietors that no exertions were wanted on the part of the direction to carry out the trust reposed in them; and to prove what hitherto, he was sorry to say, had been a problem, that if their limited Irish capital was only backed from the superabundance of English capital, they had within them sufficient enterprize to carry out so gigantic an under-taking as the Great Southern and Western.

Messrs. Perry and Adair complained of the limited adoption of third-class carriages. Much loss accrued from this, and many of the lower classes were obliged to travel, to whom a very trifling differ-

ence of expense was an object.

Mr. BOOTHBY defended their present arrangements, which had fixed the rate of payment at \(\frac{1}{d}\). per mile less than the maximum fixed by Act of Parliament.

After some further conversation, Mr. BOOTHBY said he would make a few remarks on what was rumoured with regard to the cost of the construction of the line. It had been said in England that if this line had been constructed at the rate of 17,000*l*, per mile, it must be a very imperfectly constructed line; but the more general impression was, that when the accounts came to be made up the cost of construction would be found to amount to 27,000.

instead of 17,000. That feeling existed generally, and it arose rather from the mismanagement which had occurred on English lines than from anything in the manner in which railways had been conducted in that are the structured in the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of the structure of t conducted in that country. It was his opinion that this line was the best conducted in all its parts and appointments of any he had ever witnessed. He stated it to his friends and colleagues in England on the London and North-Western Board. They de-spatched their resident engineer to this country to examine the line and to report to them any suggestions of improvements which he might receive, in order that they might adopt them if they thought fit in the new lines which they were constructing. That gentleman inspected the line in company with Sir J. Macneill, and he made a report to the London and North-Western, which he (Mr. Boothby), as director of that company, saw. It was of a most favourable character; but being a document prepared for the information of the London and North-Western only, he had not been at liberty to produce it to that meeting. But he requested Mr. Dockray to give him his own cardid only in ord the hard liberty to produce it to that his own candid opinion of their line, and in compliance with that request he had addressed to him the following note, which he had received his permission to read to the present meeting :-

Engineer's Office, Euston Station, Sept. 6 .- Dear Sir,-Engineer's Office, Euston Station, Sept. 6.—Dear Sir,—I have been to Ireland, by direction from the Committee of Works, for the purpose of inspecting the permanent way of the Great Southern and Western. I have made my report to them, but as you are on the direction of that line, I think that you will be glad to know that I found the establishment in the most efficient order. The permanent way is excellent, the drainage good, and the works generally well designed and well executed. There is no anywarrage of designed and well executed. There is no appearance of extravagant expenditure, at the same time nothing is wanting to contribute to the stability and permanence of the works. I observed that an unusual care appears to have been bestowed upon the details, which I have no doubt will exhibit itself in the low rate at which the works will be maintained. The locomotive establishment is arranged with inducent with consumer and other than the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same and the same an manualed. The locomotive establishment is arranged with judgment, with economy and with due regard to any future extensions which the traffic may require. On the whole, I have never seen a line constructed in a more efficient manner for carrying on a large traffic with economy. R. B. DOCKBAY.

Mr. Bootuby, in continuation, said there was every

probability that the line would be carried the entire way to Cork at a cost of not more than 17.500l. per mile. He concluded by saying that he thought they had just and reasonable grounds for believing that when their railway was completed their receipts would, in the course of two or three years, be doubled. After some observations from Mr. PERRY, on the

subject of cheap fares,
Mr. BOOTHEY said that the point at issue was no longer a matter of opinion; it had been completely decided. The English lines had reduced their fares largely in the hope of a large increase of revenue; and most of them were now returning to the higher rates of fare which the Acts of Parliament permitted them to charge. The London and South-Western, for example, was about to return to its maximum

The report was adopted.

The CHAIRMAN mentioned that the question as to the best hours for starting the trains continued to occupy the serious attention of the Board. It had been found a most difficult matter to arrive at a satisfactory conclusion upon it,—hours fixed upon for the starting of trains, which had at first been considered ill chosen, having afterwards turned out to be most suitable and convenient.

Resolutions were then passed re-electing the retiring directors, Messrs. Ball, Sherrard, Hutton and Macdonnell; and Mr. J. Haughton as auditor.

SOUTH-EASTERN AND CONTINENTAL STEAM-PACKET.

Sept. 19.—Half-yearly Meeting, London.—Mr. M. L. PRITCHARD in the chair.

The following report was submitted, and after a few remarks by the CHAIRMAN, unanimously car-

ried:—
The accounts show an amount received on traffic account during the half-year ending the 31st of July 1848 of 10,759. 19s. 7d., from which is deducted 7,811. 12s. 9d. for repairs and working the vessels, leaving a balance to be disposed of by the proprietors of 2,948. 5s. 10d. The sum of 2,780. 10g. will enable the proprietors to divide 5s. per share, and leave a surplus of 167t. 15s. 10d. On reference to the company's accounts for the last half-year, the proprietors will observe that the sum of 14,172. 2s. 1d. was received on traffic account, and during the present half-year the sum of 10,7594., showing a decrease of 3,512. 2s. 6d. Your directors consider the falling off attributable to the French revolution and the commotion caused thereby in all the Continental States; but they have the satisfaction of informing the proprietors that recently the traffic has improved, and they trust that ere long the advantages so long looked for from increased intercourse will be realized. The company having been established to assist in the developement of the traffic of the South-Eastern line, your directors consider having been established to assist in the development of the factors consider that they have a just claim on that company for the risk incurred and services performed by this company; and it desirable that the subject should be brought under the consideration of the South-Eastern at an early date; for which object your directors have taken the necessary steps.

A second resolution, authorizing the payment of a dividend of 5s. per share on the 3rd of October, was also unanimously passed.

### Alidcellanea.

CLIPTON SUSPENSION-BRIDGE.—Upwards of 40,000l. have already been expended upon this undertaking, and no more money being forthcoming the works are now at a stand-still. One single bar of iron sweeps across the gulf; and on this fragile-looking thread a wicker car travels from side to side with visitors who are courageous enough to trust themselves in it, and the journey is quite as fearful as it looks. A little wooden house is built on the edge of the cliff to keep the car in, and from this spot the adventurer starts. To sit in the basket, says the Wills Standard, whilst the men are preparing to let go, and to look along the line, dropping in the centre as it does some 50 ft., is enough alone to make one slightly nervous; but when the cry comes "hold fast," and with the speed of light you rush down as you fancy for the moment into eternity, the stoutest gripe the sides of the wicker car with a convulsive strength, and lift themselves as though the world was falling from beneath them. As you get over towards the middle of the passage the speed decreases, and after rising up for some little time on the other side the car comes to a stand-still; and now, being half-way over, and the strange feeling which the rush down the wind has given you having a little subsided, leisure is afforded to gaze about, and if you have courage to look down, some idea of the height at which you hang suspended may be gained by the flights of rooks that, frightened from their holes in the rocks by the passage of the car, whirl far beneath you. A rope attached to the basket pulls it up the ascending bar to the landingplace on the other side.

### CHESTER AND HOLYHEAD RAILWAY. OPENED THROUGHOUT TO HOLYHEAD.

OPENED THROUGHOUT TO HOLYHEAD.

LONDON TO DUBLIN IN 13 HOURS.

The Chester and Holyhead Railway is NOW OPEN throughout, with the exception of about 4 miles adjoining the Menai Straits, for which the Company have provided properly appointed conveyances, the charge for which is included in the Railway Fare.

The Admirally and Company's splendid Steam-packets, 670 tons, 370-horse power, run between Holyhead and Kingstown, in conjunction with the following Trains, performing the passage in about four hours: about four hours :-

about four hours:

LONDON TO DUBLIN.

1. From Euston-square, London, at a quarter to 9 in the evening, with the Irish Malle, and from Chester at a quarter to 4 in the morning, leaving Holyhead for Kingstown (and Dublin) at a quarter to 7 in the morning, and arriving at Kingstown about half-past II, Dublin time.

2. From Euston-square, London, by Express Train, at 9 o'clock in the morning, and from Chester at a quarter to 3 in the afternoon, leaving Holyhead for Kingstown at a quarter to 6 in the afternoon, arriving at Kingstown about a quarter-past 9. Dublin time.

time.

DUBLIN TO LONDON.

1. From Kingstown at half-past 8 in the morning. Dublin time, arriving at Chester at 10 minutes past 5, and in London at half-past 10 in the evening.

2. The Admiralty Packet, with the Mails, from Kingstown at half-past 11 in the morning; the Train in conjunction there with leaving Holyhead at 20 minutes past 0, arriving at Chester at 25 minutes past 9 in the evening, and in London at a quarter to 5 the next morning.
Only the Admiralty Packets and Mail Trains (as above) run on

the Sunday,
Aug. 19, 1848.

WESTERN LIFE ASSURANCE

AND ANNUITY SOCIETY.

3, PARLIAMENT-STREET, LONDON.

NEW AND IMPORTANT FEATURE IN LIFE

In addition to the ordinary plans of Life Assurance, this Society possesses several features which present peculiar and important advantages to the Public. Amongst which it is provided,—

"That if a party, from unforcesen circumstances, should be "That if a party, from unforcesen circumstances, should be "That if a party, from unforcesen circumstances, should be "That if a party, from unforcesen circumstances, should be "That if a party, from unforcesen circumstances, should be "That if a party, from unforcesen circumstances, should be "That if a party, from unforcesen circumstances due by making application to A Beith 10, when it becomes due by often and the property of the application penuit tit, to have the privilege of OMITTING THE PAY-MENT of that Premium (provided he has already paid three whole Premiums at least on the Policy); and his Policy will be endorsed to the effect that it continues in force, as if the Premium omitted were paid, being however charged with a debt equivalent to that Premium, and its interest at 5 per cent, which will be endorsed from the amount of the Policy had the abetter disc. The Policy holder shall, however, have it in his power to free his Policy from the debt at any time, by paying the amount due. The great advantages of this feature must at once be seen, since it removes the usual objections to the ordinary system of Life Assurance, by which an Assurer often loses all the benefit be sought in paying regularly the Premiums for many years on a Policy, because, from temporary difficulties, he is unable to 13x a Premium when it becomes due, and the Policy consequently lays to the comes and and the Policy consequently lays to the comes due, and the Policy consequently lays to the surface. Endowments for Children, or Provisions for Old Age, may be obtained on application to the Actuary, No. 2, Parliment-street, London, or to any of the Societ

### CHESTER AND HOLYHEAD

FINAL CALL of 2: 10e, PER SHARE,
Making the total amount called 50l, per Share.
In pursuance of a Resolution of the Board of Directors, Shareholders in this Company are required to pay, on or before Saturday, the 31st of October next, a CALL of 2: 10e, per share, to either
of the under-mentioned Bankers:—
London—Messrs. Glyn & Co., Lombard-street.
Liverpool—Liverpool Borough Bank.
Chester—Messrs. Dixons & Wardell.
Bangor—Messrs. Williams & Co.

Interest at the rate of 5 per cent. per annum will be charged on all Calls remaining unpaid on the said 21st of October. Ly order,
ANDREW G. GIFFORD, Secretary.
61, Moorgate-street, London,
Bept. 28, 1849.

THE ACCOUNTS of the above Railway Companies were dissected in the Loading Articles of the LONDON WEEKLY RAILWAY SHARE LIST, issued under the authority of the Committee of the Stock Exchange, on the dates set against each.

The Quarterly Railway Intelligence for the Quarter ending September 30, will be published on Thursday, the 5th of October. Subscriptions, including both Weekly and Quarterly Publications, 30a per annum. Single Weekly Lists, 6d. cach.; Quarterly, 1a. each. Apply at the Publishing Office, 11, Warnford court; or to Mr. Perks, Rewscader, 111, St. Martin's lane.

#### THE EDINBURGH REVIEW, No. CLXXVIII., is this day published.

### GREAT NORTH OF ENGLAND

THIRD CALL ON THE \$40 SHARES.

At a MEETING of the Directors of this Company, held at Darlington, on Tuesday, the 19th day of September 1848.—

Darlington, on Tuesday, the 19th day of September 1848.—
NATHANIEL PLEWS, Esq. in the Chair,—
A Resolution of the Joint Committee of the Directors of the
York, Newcastle and Berwick Hailway Company and the Great
North of England Railway Company (pursuant to, and in accordance with, the provisions of the Deed of Contract and Agreement
between the said Companies, for the Lease and Rale of the Great
North of England Railway) was received and read, requiring the
Directors of this Company to make a further Call of 10t, per Share
upon the Shares of 40t. each, created by this Company.

upon the Shares of 404. each, oreated by this Company.

It was recolved,—
That a Call of 104, per Share be, and the same is hereby made upon the Holders of the 404 Shares in this Company to be paid on or before Friday, the 13th day of October next, to the York-Union Banking Company, at York; or to Messra. Glyn, Halifax & Co., Bankers, London.

Interest at the rate of 10 per cent, per annum will be charged by the Bankers on all Calls unpaid after that day.

J. M. SPARKES, Clerk to the Company,

Railway Office, Darlington, Sept. 19, 1848. Digitized by Google

#### PORT OF GREAT GRIMSBY.

### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Ducs for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accossible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the

## A VIS AUX NEGOCIANTS, AUX AR-MATEURS ET AUX CAPITAINES DES NAVIRES ÉTRANGERS.

Les droits de tonnage sur les Navires qui entrent les basins à Great Grimsby, ont été reduit à 10 sols Anglais par tonneau de registre.

par tonneau de regustra.

On comple que les nouveaux bassins seront prêts à recevoir les vaisseaux vers la fin de l'année 1849.

Ces bassins offriront des avantages bien decidés sur la plupart des autres ports de Mer de l'Angleterre en étant accesables à toute heure, excepté pendant une couple d'heures à la marée basse, en tems de maline.

Le Havre présente un abri en tout tema Les communica-tions par l'entremise des Chemins de Fer de MANCHES-TER, de SHEFFIELD, et des Liques du comté de LINCOLN, seront ouvertes avec tous les districts manufacturiers et avec toutes les parties de la Grande Bretagne.

### TO THE SHAREHOLDERS OF THE MADRID AND VALENCIA RAILWAY

Gentlement,—in answer to many inquiries, and to the reports which appeared in this morning's papers, referring to a Meeting of the Scripholders in this Company, I beg to call to the attention of the shareholders that in the order made by the Court of Common Pleas in the action of "Paterson v. Chadwick," no reference whatever was made to the claims of the concessionaires, and in fact that subject escaped the attention of all parties, and, notwithstanding the Directors are most anxious to carry out the arrangement entered into, they cannot be expected, in justice to themselves, to incur the responsibility of returning 20v. per share without some guarantee from responsible parties. This obstacle has been communicated to some highly respectable gentlemen connected with Mr. Harvey's party, and an offer made to pay the 20v. on the Directors being guaranteed. Those gentlemen, however, declined to incur the liability referred to.

Under these circumstances, and the uncertain state of the law concerning railways, the Directors see no other legal means, as a present advised, but a reference to the Court of Chancery.

With respect to the report that 28v or 30v could be im-

of Chancery.

of Chancery.

With respect to the report that 25s. or 30s. could be immediately divided, the fact is, that if the claims of the concessionaires are compiled with, taking those claims already made as a basis, there would not be a larger sum to divide than 15s. per share. The Scripholders will therefore easily conceive, without an unquestionable guarantee, the Directors could not be reasonably expected to pay back 30s. to the shareholders, and be left to fight the concessionaires and others having claims against the Company without the means of doing so.

other having claims against the Company without the means of doing so.

With regard to the statement made by Mr. Lindo, "that he had information from the best authority that concessionaires had 1,000 shares given them, and that they had no further claim on the Company," I beg to assure the proprietors that the concessionaires did not receive the 1,000 ahares referred to, or any other number whatever; so far from this being the fact, they actually took a large number, and paid the full deposit on them.

It is only necessary to add, that those parties have given notice that they will resist any dissolution of the Company or distribution of its funds.

I have the honour to remain.

tribution of its funda
I have the honour to remain,
Your obedient servant,
W. CHADWICK.

#### THE CHEAP FARE QUESTION.

The reference to all our past course of remark on railway topics,—which comes upon us at every stage of the present, as one point after another on which opinions have been uttered in former years by this journal is determined by experience of matter of fact,-is singularly uniform in its character. It shows the Railway Chronicle laying down principles and stating opinions always in advance of, often directly in opposition to, the prevailing notions of the day; and the successive vindication of both by the irrefragable evidence of results. Of many such instances few have more strongly exhibited this character than the course and issue of the cheap fare question; on which a notable occurrence took place last week at the meeting of the Great Southern and Western (Irish) Railway.

It will be remembered that the Railway Chronicle has from the beginning denounced the erroneous notions that were for a time prevalent on this subject. When Mr. Hill was urging his experiments within the railway body. and Mr. Laing was enlightening select committees with his wisdom on this subject from without, we did what we could to discourage a movement that we saw must lead to serious consequences. We pointed out the disadvantage to the capital of a system, which has been founded on private means, and-thanks to the State patronage of every kind of extortion at the expense of the founders, and of everything likely to impair the prosperity of the systemexpensively founded,—from extremely low rates of charge; and gave our reasons for distrusting the effects of those reductions, which unluckily were advocated by individuals of more influence and in a less hostile attitude to the interest than were Mr. Morrison and his followers in public business. The tide, however, set too strongly in a direction contrary to our warnings and doubts. In some cases the experiment was voluntarily tried, in the belief that it would be profitable. In others it was inflicted on companies that applied to Parliament, as the condition of the grant of what they were seeking; or was offered to Parliament by promoters of amalgamations or extensions, as a bribe to purchase its consent. In one way or another it has been pretty extensively carried out;—all the great railway bodies, with the exception of those headed by Mr. Hudson and Mr. Russell, having made considerable sacrifices in this way. Last week we had an account of their effect from one acquainted with the results.

Mr. Boothby is a director in the London and South-Western, and also in the London and North-Western Company,-both of which have greatly reduced their charges since 1845. He is also a director of the Irish railway company which met on the occasion above alluded to; when a certain Mr. Perry came forward to advise the application of the cheap fare system to that concern. Mr. Boothby's answer was more than usually emphatic, and is worth noticing. On the sagacity and depth of that gentleman's views in general we might hesitate to place implicit reliance; but no one can deny that he is, at least, a competent witness to matters of fact, in cases where the experiment has been tried on a most extensive scale, embracing every class of circumstances that can be required for its thorough developement. Let us hear now what Mr. Boothby has to say on the subject, when Mr. Perry appeals to him as a witness in favour of very cheap rates. We extract from a pretty full report of the proceedings of the meeting the following passage. Mr. Perry concluded his speech by declaring that "Mr. Boothby would bear him out in the assertion

that scarcely in any instance had increased | accommodation and reduced fares been given to the public, without an increased remuneration being thereby secured to the railway (hear, hear). All the reductions which the Grand Junction and the London and Birmingham lines had made had been followed by an increase ot revenue."—Mr. Boothby: "By ruin." And when Mr. Perry's unwillingness to admit the of revenue."-Mr. Boothby: "By ruin." fact called for a less laconic expression of its results,-in answer to the superficial remark (which also, as far as it bears on this matter, involves a begging of the question) — that, "whatever arrangements would give the company the largest amount of gross revenue would give them the largest amount of nett profit,"—Mr. Boothby said that "the point at issue was no longer a matter of opinion; it had been completely decided. The English railways had reduced their fares largely in the hope of a large increase of revenue; and most of them were now returning to the higher rates of fare which the Acts of Parliament permitted them to charge. The South-Western in England, for example, was about to return to its maximum rates of fares."

On this concluding announcement there may yet be something to be said. This is a new experiment, not wholly without its disadvantages. It is one thing to adhere to a reasonable scale of charges; and another, far more difficult, thing to return successfully to that scale after the rates have been long reduced to an unprofitably low one. The effects of the operation, it will be seen, may be questionable in more ways than one at any time, not to say at a time like the present. Still it must be felt that those companies which have the power of returning to a somewhat higher level, are in a better condition, on the whole, than those which have had a low maximum imposed on them beyond recall.—as is the case with another company at the Board of which Mr. Boothby has a seat. And this, at all events, is evident; that what is now felt and declared by those who have ventured upon very reduced charges, must warn all who have not yet run this risk, and who are not compelled to hazard a trial of it-to hold fast by the tariffs they are now charging; and thereby escape the odium sure to be provoked by every attempt to establish higher charges after they have once been considerably lowered. This is the lesson we fain would have impressed three years ago on those very companies that are now repenting their error, and that are sure to incur some ill-will by attempting, in those cases where the attempt is still possible, to rectify it.

### HEADS OF A SYSTEM OF PRACTICAL REFORM.—No. IX.

It may be as well, before closing our survey of this topic, to recapitulate the several points to which attention has been called by it. They

The regulation of the departures, so as to prevent the running of too many trains with an insufficient number of passengers.

The control of the booking-through system, so as to check the increase of dead weight by sending half-filled or less than half-filled coaches on for long distances.

The cessation, once for all, of attempts to accelerate the speed of trains, which hitherto has gone on increasing to a degree that more than absorbs the benefit of improved machinery and of a more economical consumption of fuel; while in order to accomplish it the weight of the locomotive has been aggravated, to the serious detriment of the permanent way.

capacity, and the discouragement of favouritism and jobbing in such appointments;—as also the sufficient payment of properly-chosen officers and servants; whose well-paid efficiency will be cheaper to their employers than the most reduced establishment of inferior men at inferior wages.

The control of extravagance in all that belongs to the merely ornamental parts of the service; which has been conducted hitherto on a scale far too sumptuous for the actual conditions of the business, tending as it is, and is still more likely to descend, to the lowest possible terms of cheap travelling; not only by the reduction of fares in all classes, but by the growing practice of travellers to use the inferior description of carriages only.

The introduction of economy in the merchandise business; to which end reform must begin by a careful choice of its managers, and must proceed by adjusting the conditions of their appointment on terms calculated to give them an interest in well serving their employers; as also by abolishing such arrangements as have an opposite tendency. To this chapter belongs, also, a caution against the error of allowing those who have no interest in the concern to share in its profit, as was done by the admission of canal carriers to the railway merchandise traffic.

The closing of capital accounts; by which, independently of the direct relief thereby given to the over-burdened shareholder, the more important benefit will be secured of enforcing, by the strongest practical influences, a due regard to all the previously enumerated points of economy and improved arrangement.

To which we shall merely now add, what is, indeed, a corollary to the last clause, or rather involved in it-the determination to keep aloof from Parliament until, at least, the wounds that parliamentary expenses have made in the system -and, what is worse, the blows that its enemics have taken occasion to inflict on all companies appearing in Parliament-have been in some measure healed. This shall be our closing piece of advice, on a subject which no one, we apprehend, will now be disposed to say has been prematurely handled by the Railway Chronicle.

When we look over the statistics of the expenditure on which we now see the per-centage of profit continually falling, and perceive that something like 10 per cent. of the whole gross amount has been laid out in counsels' fees and agents' bills, witnesses' expenses, surveys and mapping, and travelling and deputation charges, -of which two-thirds have been as merely temporary and useless in their effect as they were extravagant in amount—when we see this, and feel its consequences, we may well repeat, with all the emphasis we can use, - keep out of Parliament. This class of evils, however, is not the only one belonging to the polemic system that has crowded the Private Bill office. It has kept up a ruinous competition on all hands, through which the material of one controversy has become the parent of others; and so utterly interminable is the nature of this process, that we may see it at this moment brought to a stand-still, not by any settlement of any one of the rivalries or disputes through its agency—the matter of these being as abundant as ever, or rather, indeed, multiplied in their points of contact-but simply by the temporary exhaustion of all parties in the unprofitable contest. They will, we trust, at least read a lesson of some instruction in the weakness it has produced; and not be so easily tempted to renew a career that has pretty nearly reduced the combatants to a state in which the value of what they proposed to The appointment to all places and employ- secure by fighting has well-nigh evaporated in ments on the sole and simple ground of merit and the process.

Whatever be the issue, we have done our duty as advisers of the railway interest. We have not cheered it on when the mischief was being done, to complain of its effects when done. What we now say is in full accordance with what was urged by us, and vainly urged, at a time when every one else was in ecstacies at the flourishing progress of railway affairs; while proprietors were to the full as eager as directors, engineers, and lawyers for the increase of those obligations which the former now would be glad to see wiped off at whatever cost. Our counsel, therefore, is not new; but it may have a chance of being listened to, which it had not at a time when foresight alone, and not the pressure of actual difficulties, dictated its tender.

COMPARATIVE SPEED AND POWER OF NARROW AND BROAD GAUGE ENGINES.

The following is a very curious and characteristic extract from the engineering experience of the editor of the Morning Herald. After what preceded it on broad-gauge engine performance, the professional engineer will be amused: so we give it without comment.

amused; so we give it without comment.

A few days since we noticed the working of the cight-wheel outside cylinder locomotive, constructed on Stephenson's patent, and expressed our belief that she would not be equal to more than 43 miles per hour, with 100 tons, up a gradient of 16 ft. per mile. That opinion was, as we stated, founded upon the information furnished to us that the heating surface of the engine was 1,200 ft. only. We were quite satisfied that the 18-inch cylinder of a passenger engine could not be economically or properly supplied from such an amount of heating surface. We find that the information given to us was incorrect, and that the heating surface is about 1,450 ft. We are still of opinion, however, that even with 1,450 ft. of heating surface an 18-inch cylinder is too large, and that the engine would work much better and cheaper with a 16-inch cylinder. The engine, nevertheless, as we are about to show, works exceedingly well with an 18-inch cylinder. We went down with her yesterday to Wolverton with the 10 a.m. mail train, consisting of fourteen carriages, weighing about 70 tons. As far as the 18th mile-post the speed was the fastest that has ever been maintained on the narrow gauge with an equal load. The train did not leave Eustonsquare till 10h. 14 m. 13 s., in consequence of the lateness of the mail-bags. The following is the working of the engine up to the 18th mile-post:—

The gradients of the line from the 3rd to the 18th mile-post are as follows:—From a little beyond the 3rd mile to a short distance beyond the 4½ the gradient rises 1 in 590; there is then a level for about 1¼ mile; then a fall of 1 in 1402 for about threequarters of a mile, followed by a rise of 1 in 350 for upwards of 5 miles—viz., from just beyond the 71 mile-post to about the 123 mile-post. The speed over this rising gradient averaged 53 miles per hour. The next two miles are on a rising gradient of 1 in 330. A level for about 13 mile follows, and we then have two short falls of 1 in 440 and 1 in 520. The remainder of the distance is on a rise of 1 in 406. The 11 miles from the 6th to the 17th mile-post were performed in 12 min. 37½ sec., or at the average velocity of 52.9 miles per hour. The 2 miles from the 18th to the 20th mile post (including the Watford tunnel) were gone over at the rate of 48.6 miles per hour. From the 20th to the 28th mile-post the speed averaged 48 miles per hour. The gradients over this portion of the line are but a trifle heavier than those over the previous portion, and as we did not on this ride upon the foot-plate of the engine, we occasion are unable to state whether the reduction of speed arose from want of power—or from the driver (Matthew Hall, a careful and experienced man) perceiving that he had been running at a rate that would carry | in enforcing economy.

him a few minutes too soon into Wolverton. This performance is a very considerable improvement in the speed and power of the narrow-gauge engine. The engine was to have gone out with the 10·30 a.m. train, and the consequence of starting half an hour earlier was that she started with the water in her tender nearly cold. The weather was fine and the rails dry.

#### Mr. WYNDHAM HARDING'S FACTS AND PROGRESS OF THE RAILWAY SYSTEM.

We continue our extracts from Mr. Harding's excellent paper. The next is on the theory and practice of railway charges:—

There is a mischievous notion abroad, which has been countenanced even by some railway companies that the public can be secured against high charges by some possible machinery of legislation or means other than strict economy in the original construction and the subsequent working of railways. To support this view, the case of the Blackwall is quoted, which cost 287,000l. per mile, and only charges 1.6d. per mile for the first-class and 67d. per mile for the second-class, and, compared with other lines, such for instance as the London and South-Western, which cost only 28,000L per mile, or one-tenth of the Blackwall, and yet charges 1d. more than the Blackwall; and it is attempted from this to show that the original cost of a line has nothing to do with the fares subsequently charged. Now nothing can be more fallacious than this, as a very slight consideration of the principles which determine railway charges shows. If railways were perfectly unchecked, monopolies restricted by no fear of competition or restrictive legislation, each company would then have to seek that fare which will produce a maximum revenue (that is, the fare of maximum effect), and this theoretical fare would, it is true, have no relation whatever to the original cost. This is what railways did when the system began, just as a patentee of a new invention guesses at a charge for the use of his patent which shall produce him most money; and they fortunately found that a fare about half that of the stage coaches is that fare of maximum effect, and accordingly charge that fare. But the condition of unchecked monopoly could only obtain in the infancy of a system. The success of the invention once established, railways have become like any other mercantile undertakings, and the return on the capital laid out on railways has been, from that moment, determined solely by the peculiar risks or advantages attending the investment comparatively to other investments. Immediately that this was so, the theoretical fare of maximum effect disappeared from the scene, and railway companies could only—and can now only, looking at the question broadly—make such charges as will secure to them the rate of profit which trade sanctions in this particular investment. The more, therefore, railways cost the greater will be the capital on which such average return or profit will have to be earned, and the greater the returns required the higher necessarily the charge to those who use the railway. To take a case :- If a certain number of miles of railway cost in consequence of the expenses thrown upon them by Parliament or the folly of their constructors, fifteen millions, which need otherwise have cost only ten millions; and if 6 per cent, be the ultimate average rate of profit for which people are willing to invest capital in constructing railways, it is clear that the public using this railway must pay more (by 300,000*l*. a year) to pay 6 per cent. on fifteen millions than on ten millions. The same fact is presented in another shape by Mr. Williams's table before given (ante, p. 637).

From what is stated above as true in the general it is not to be inferred that economy in railways does not concern the companies as well as the public; the effect of extravagance of course falls first most heavily on the owners of the railways; and although the laws of trade must ultimately vindicate themselves, and the charges be determined on the principles explained above, the first projectors of the railways may be ruined in the meantime. The success and profit of each individual railway company will therefore depend mainly on the economy of construction and working,—but both the public and the proprietors of railways are alike concerned

Having considered the subject of fares, we turn to

Working Expenses.—In estimating the probable profits on railways, it is customary to take the working expenses at a certain per centage (generally about 40 per cent.) of the receipts. This mode of estimating is fallacious, as the following statement + shows. The lines selected represent different classes of railways, namely, railways terminating in London, as the London and South-Western and Great Western; railways in the manufacturing districts, as the Manchester and Leeds and two Scotch railways:—

Railway.	Length.	Working Expenses per Mile.	Per-centage of Working Expenses to Receipts.
London and South-Western	99 226 61 65 51 15	£. 981 1,481 1,525 517 711 234	26 9 36 5 32 0* 39 3 40 0 29 0

* Ten Miles on the Midland Railway.

It will be seen, that while the working expenses of the Glasgow and Ayr are only 7111. per mile, they amount to 40 per cent. of the receipts; whereas those of the Manchester and Leeds, amounting to 1,8251.per mile, are only 32 per cent. of the receipts. An estimate of working expenses on the principle of per-centage of the receipts is therefore unsafe. amalgamations which have taken place to so great an extent of late years, that there are now only about fifty nominally distinct companies, may be considered to have had some effect on the working expenses; and the first consequence of consolidating two or three companies, each with an independent head office, into one, is undoubtedly to reduce expense. But as these concerns grow they become, in the course of time, cumbrous, and a subdivision into departments becomes requisite, each of which must have a staff; so that it may be doubted whether, as a mere matter of economy, centralization will succeed, when carried to such an extent as to make it impracticable for any one or two chief officers to exercise personal control over the system.

We will now consider some of the more prominent points of interest connected with the working of railways during the last three years, commencing with

Speed....which has attracted much public attention. The following tables show the increase of speed in the express, and the average as compared with 1843. The lines are arranged in the order of their speed:...

Express Speeds on the Mctropolitan Railways. In 1843 (July).

	4 .0 .0	(0 = 1,) /1
Name of Railway.	Speed in Miles per Hour.	Remarks.

Railways	No. of Trains.	Miles per Hour.	Remarks.
Great Western Lond, & SWestern. Eastern Counties. London & Brighton. South-Eastern Lond. & NWestern	8 6	25'4 23'9 23'3 23'1 22'7 22'4	Broad gauge—one 3rd-class. Narrow do.—two do. trains. Ditto one do. Ditto two do. Ditto two do. Ditto one do.

I have distinguished in the column of remarks the broad-gauge line (the Great Western), from the others, because there appears to be an impression on the part of a portion of the public, that the rate of travelling by express trains is greatest on that line—this opinion, it will be seen, is not borne out by the facts. It should be borne in mind, in con-

[†] Appendix to Report of Select Committee on Railway Acts Enactments (687).

sidering this question, that speed, as measured in the usual way of so many miles per hour, becomes of less value as regards saving of time as the velocity increases; for instance, the difference (3 miles per hour) between 50 and 53 miles per hour, only makes a difference of seven minutes in accomplishing a journey of 100 miles; but the same difference of 3 miles per hour, between 20 and 23 miles per hour. makes a difference in the same journey of 100 miles of no less than 39 minutes.+

#### Official Papers.

GREAT SOUTHERN AND WESTERN (I.). Engineer's Report for the Meeting, Sept. 19 (p. 687). Having, during the last week, carefully inspected the whole of the works in progress of construction between Thurles and Cork, I am enabled to report fully to you on

Inuries and Cork, I am enabled to report fully to you on their present state and condition. From Thurles to the junction with the Limerick and Waterford, near Tipperary, a distance of 20 miles, was opened for public traffic as a single line on the 3rd of July; since then the second line of rails has been laid, and the lattice-bridges over the Multeen and Clodagh rivers have been completed, and there now only remain two county road bridges over the line near Dundrum to be finished, road bridges over the line near Dundrum to be finished, which will occupy about a fortnight, in order to render this division of the line ready for final inspection, and the opening of the second line of rails for public traffic. At Thurles the station-house, platforms, engine-sheds and goods warehouses, with all the necessary points, crossings and sidings, are very nearly completed. At Dundrum the station-house, platforms and goods warehouse are all in a very forward state of completion, and at the junction of the two lines, near Tipnerary, a temporary shed is exceed and prepare.

state of completion, and at the junction of the two lines, near Tipperary, a temporary shed is erected, and preparations are making for the permanent buildings, which will be immediately commenced.

From the junction at Ballykisteen, near Tipperary, to Charleville—which comprises the third and fourth divisions of the Cork extension (a distance of 21 miles)—would now have been ready for opening one line of rails, had it not been for the incessant rain and unfavourable state of the weather for the last three months, which rendered it wholly impossible to carry on with satisfaction even the ordinary description of earthwork, much less the masonry or laying description of earthwork. cription of earthwork, much less the masoury or laying the foundations of the bridges over the Loobagh and Star rivers, which, up to the present time, have been swollen much above their ordinary level. Notwithstanding this great delay and unavoidable interruption to the works, very considerable progress has been made since the contractor was put in possession of the land in June last, as will appear from the following statement of the works which have been executed since that period.

on the following statement of the works which have been resecuted since that period.

On the first 10 miles of these divisions 130,000 cuble yards of earth and rock have been removed, and 12,000 from side cuttings. The greater portion of the fences are made, all of which are in excellent order. The ballasting has been commenced, which is extremely difficult to procure in this locality. A considerable quantity of good broken stone, however, has been procured in the quarries, and is ready to be carted on the line, for which purpose a large number of carts are now engaged; and as 6 miles are quite ready to receive the ballasting, it will be carried on with expedition if the weather will permit. The laying of the permanent way has been commenced—a continuous line of rails has been laid as far as the cutting in Gottinstown, a distance of about three-fourths of a mile; and in a few days, when this cutting is completed, the laying of the permanent way will be carried on uninterruptedly at the rate of a mile per day. There are only four public road bridges on this division. The culverts are all completed. They are very numerous, and some of them of large dimensions, such as 4, 5 and 6 ft. span: 709 lineal yards have been built; two culverts, of 10 ft. each, remain to be finished; but they are in a forward state, one being ready for the arch, the other has the abutments nearly finished. All these culverts have been found to have ample water-way, and to be more than sufficient for carrying off the greatest floods that have been found to have ample water-way, and to be more than sufficient for carrying off the greatest floods that have been found to have ample water-way, and to be more than sufficient for carrying off the greatest floods that have been found to have ample water-way, and to be more than sufficient for carrying off the greatest floods that have been found to have ample water-way, and to be more than sufficient for carrying off the greatest floods that have been found to have ample water-way, and to be more On the first 10 miles of these divisions 130,000 cubic vards

portion of this quantity is contained in two hills in which waggons are at work, the whole excavation will soon be finished. All the culverts but four are built. There are six public roads, four occupation and two river bridges on this division: the first bridge over the line is near Elton Crossroads; one-half of the abutments are built, and the approaches finished. The bridge over the Morning Star river has not yet been commenced, as also the one over the river Loobagh. The abutments and approaches of the bridge which carries the Tipperary and Kilmallock road over the line are nearly finished. The public road bridge at Mount

† Express trains have been generally introduced (perhaps indeed too generally of late), for it is notorious that a train travelling at a much higher speed than that of the other trains, is of all other arrangements that most likely to cause derangement and accidents. On almost all lines on which there are express trains, ordinary trains have to wait at a siding to let the express pass, if the express is late, as is every now and then the case, on a long line of railway, there will be two or three trains, containing passengers and merchandise, kept waiting in sidings for it, and the whole regularity of the traffic for hours will be derauged. It is evident that in such cases express trains, far from adding evident that in such cases express trains, far from adding evident that in such cases express trains, far from adding to the aggregate accommodation afforded by the railway, must diminish that aggregate. Still an English public will always feel an interest in anything like a race, and we accordingly find the different rates of the express trains a common subject of interest. coote has the abutments built and the approaches nearly completed. The bridge of Kilmallock station, which carries the Limerick and Fermoy road over the line, has the arch nearly finished and the approaches in a forward state. The Bridge at Emmett's Cross-roads has the abutments completed and one-third of the approaches formed. None of the occu pation bridges have as yet been commenced. A short portion of this division has been pitched, and preparations made for ballasting for a single line of rails.

On the fifth division, which extends from Charleville to Buttevant, a distance of 8 miles, the fences are completed, and nearly the whole of the earth and rock cutting has been removed. Two bridges have been built, and the abutments removed. Two bridges have been built, and the abutment of five others are ready for centres and girders. There are twenty culverts completed, of the following dimensions—namely, eight 2 ft., five 3 ft., one 6 ft., nine 10 ft., two 12 ft. There are and three 4ft. All the approaches to the public road level crossings are finished, and the greater portion of the bridge approaches are formed. About 2 miles of this division are ballasted, and 3 miles more will be formed and ballasted for a single line of rails in a month.

The sixth division commences at Buttevant, and extends The sixth division commences at Buttevant, and extends to Goold's Hill, two miles south of Mallow, a distance of nine miles. The fences are nearly completed, about one-seventh still remaining to be done. The earthwork on this division is in a very forward state; not more than one-third remains to be done. Great progress has been made with the Mallow embankment for the last two months; 4,000 cubic yards of stuff per day from side cutting and from the cuttings in Goold's Hill and Walshe's Hill have been run into it in both of which the men are employed day and night it, in both of which the men are employed day and night.

There are twelve contract bridges on this division, including
the Blackwater viaduct, six of which are complete and four others in hand. The abutments and six of the piers of the Blackwater viaduct have been carried above the water level; the three remaining piers will be commenced immediately. There are two cattle passes under the railway, both of which are finished. The culverts and drains on this division are all completed.

all completed.

Of the seventh division, which commences at Goold's Hill and extends to Kilmona, a distance of 9½ miles, the fencing is nearly completed; the earthwork and rock cutting on this division is more than half done. There are ten contract bridges on this division, of which one is completed, and five others in hand. There are eight cattle-passes under the railway, all of which are completed. The culverts and drains are all finished.

Of the eighth division, which commences at Kilmona and extends to Blackpool, a distance of 9½ miles, the fences are nearly all completed. About 300 men are daily employed

extends to Blackpool, a distance of 9½ miles, the fences are nearly all completed. About 300 men are daily employed in Rathpeacon cutting; the heaviest work on this division is the embankment at Ballynaraha; but a large quantity of side cutting has been procured, and between 3,000 and 4,000 cuble yards can be run into it per day. There are two viaducts and ten contract bridges on this division. Kilnap viaduct has not been yet commenced. The north abutment of Whitechurch viaduct is up to the springing, and the foundations of two of the plers are laid. The excavations for the other foundations are prepared. Over Kilbarry-road the masonry of this bridge is completed. There are five cattle-passes under the railway, four of which are finished. The culverts and drains on this division are all completed except one 6 ft. culvert.

On the ninth division, which extends from Kilbarry to the terminus at Penrose Quay, including the tunnel at Rathmore, the total quantity of earthwork is 11,169 cubic yards, and of rock cutting (exclusive of tunnel) the quantity is 13,256 cubic yards; of the earthwork, 7,895 cubic yards have been excavated, and 10,483 yards of the rock. The heading of the northern end of the tunnel has been driven 305 ft., and taken out to the full height and width for a distance of 185 ft. Shaft No. 1 is to its full depth, 118 ft., and the heading has been driven 32 ft. each way from it. Of shaft No. 3, the total depth is 166 ft.; present depth, 105 ft. Of shaft No. 4, the total depth is 156 ft.; present depth laght. The heading of the southern end has been driven 23 ft., and the tunnel in a fortnight. The heading of the southern end has been driven 233 ft., and the tunnel taken out to its full height and width for a distance of 150 ft. There are three contract bridges on this division—that which carries the line over Spring-lane is completed; the other two, for Dublinstreet and Glammire-road, have not yet been commenced. over Spring-lane is completed; the other two, for Dublin-street and Glanmire-road, have not yet been commenced.

street and Glanmire-road, have not yet been commenced.
Having thus given a correct statement of the works which
are already executed, and carefully considered what yet remains to be done, I am of opinion, taking all the circumstances into account, and providing we have weather at all
favourable for work for the ensuing two months, that a
single line will be ready for inspection as far as Charleville
by the middle of November, and opened for traffic in a few
days after; but as the continuation of the line to Buttevant,
R miles resert to Cork will be ready in a month after (that days after; but as the continuation of the line to Buttevant, 8 miles nearer to Cork, will be ready in a month after (that is, about the middle of December), it may be worth considering whether it would not be better to postpone the opening to Charleville for one month, in order to open at once to Buttevant; that, however, is a subject on which you will be better able to decide than I can. From Buttevant to the station at Mallow will certainly be ready for opening in March next, and the whole way from Mallow to Kilbarry, or Blackpool in Cork, by June or July next; for the contractor, having discovered a quarry in the neighbourhood of Blarney, which will produce stone of the requisite quality and dimensions for the Kilhap viaduct, will be enabled to proceed rapidly with that work, and have it ready by the time the rest of the works up to Ikathpeacon, where it was the intention some time ago to open to in the first instance, will be completed. This arrangement will be much is was the intention some time ago to open to in the risk instance, will be completed. This arrangement will be much better on many accounts, as it will enable passengers to drive or walk from the temporary station to the hotel in a few minutes, instead of coing from Rathpeacon, which is nearly 3 miles from the town, besides having to pass through a toll-bar; expense will also be saved by this arrangement, as permanent points, crossings, sidings and turntables must be constructed at all events at Kilbarry, on the north entrance to the tunnel, which will accommodate

the traffic without the necessity of erecting temporary sheds, crossings, or sidings that would otherwise be required, in the event of stopping at Rathpeacon. The time at which the tunnel will be completed, and the traffic carried through it to the permanent station between the Glanmire road and the river, will depend, in a great measure, on the strata to be worked through in the different shafts, and at each end of the tunnel; where the miners are now at work it is of the hardest description. They are not enabled to advance above 3½ ft. per week, working day and night, and in one of the shafts not so much; at this rate of working it will take sixteen or eighteen months to complete it, if worked from each end, and from four shafts, as originally intended; but Mr. Dargan proposes, if it be at all practicable, regardless of the expense, to run a level drift from the quarry in the low ground west of the barracks, at right angles into the side of the tunnel, by which means two other faces may be worked, and the stuff run out with greater expedition; if this be done, it will save at least six months in the time of completion. I may here state that I have consulted Mr. Pargan as to these periods for the opening of the line to the different points above mentioned the traffic without the necessity of erecting temporary have consulted Mr. Dargan as to these periods for the opening of the line to the different points above mentioned—namely, to Charleville, in November; Buttevant, in December; Mallow, in March; and to Killbarry or Blackpool, in Cork, in July next: in all of which he fully concurs, and pledges himself that no expense or exertion shall be spared to accomplish it. It will be satisfactory to the shareholders to know that the whole of the line from Dublin to Tipperary, and the branch from Kildare to Carlow—a distance altogether of 137 miles, is in very perfect order, with the exception of some portions which have not as yet been taken off the hands of the contractors. The culverts and waterways have been found more than sufficient to vent all the waters of the late unprecedented floods; no slips or subways have been found more than sunched to vert an one waters of the late unprecedented floods; no slips or subsidence has taken place in any of the embaukments or cuttings, and the permanent way is in excellent order, requiring some ballasting only on the eighth and ninth contracts, between Ballybrophy and Thurles. The whole of the masonry is sound and perfect in every respect. I have not been able to discover the slightest indication of failure in any instance along the whole line.

### MIDLAND GREAT WESTERN (I.).

Lord Oranmore, and several other proprietors of land in the county of Galway, have offered to give for nothing the land required for the extension of this The noble lord, through whose estates the proposed line will run for 4½ miles, has written a letter to Mr. Blakeney, of Galway, in which he says:—

to Mr. Blakeney, of Galway, in which he says:—
I agree entirely with every word of your letter, particularly that the landlords will make no sacrifice whatever in giving the land required for the railway. I therefore promise you, that any interest in the lands of my estates through which the railway passes is freely given, and that I shall do my utmost to prevail on tenants, and others having liens thereon, to act as I do.

Lord Clancarty, in answer to an application for a

Lord Clancarty, in answer to an application for a free grant, writes the following very fair reply:—
I beg, in answer, to say that there is no one more desirous than I am to see the intended railway completed, and that every reasonable facility shall be afforded on my part to enable the company to execute their undertaking; but the application for a gratuitous grant of land, however disposed I might be, as strict tenant for life, to accede to, does not appear to me to be a very equitable proposition. To some landlords, indeed, the sacrifice of the land required might be very trivial compared with the object to be gained by it—upon others it might bear heavily, with no corresponding advantage. The citizens of Galway, of whom I presume the meeting chiefly consisted, would reap by far the greatest amount of benefit, for as the railway would not pass into or beyond the town, they would have no land to give up—and the terminus being at Galway their properties would be much enhanced. Their position would be the same as that of the inhabitants of Athlone or of Ballimasloe, supposing the railway terminus were, for want as that of the inhabitants of Athlone or of Ballinasloe, supposing the railway terminus were, for want of traffic further westward, to be fixed at either of these towns. It is only by the construction of the railway westward of Ballinasloe that it would run through any part of my property. As, therefore, I am invited by the citizens of Galway to make a sacrifice of property for their advantage, I feel myself warranted in observing that it is incumbent upon them, while they call upon the landlords of the interior to give up their land, that they should, on their part, make some exertion to render railway communication with rior to give up their land, that they should, on their part, make some exertion to render railway communication with their town of some corresponding value. Galway is, unquestionably, from its geographical position, the legitimate terminus for the Midland Great Western; but the value of its extension so far west, except to the citizens of Galway themselves and to the population around, must depend upon the manufacturing and commercial enterprize of its inhabitants, and upon the developement of those great natural resources which would create a traffic of immense value to the inhabitants of the interior. At present, in speaking of the importance of Galway as a commercial scaport, reference is made rather to what it ought to be than to what it is, and its wast resources are known rather as hidden what it is, and its vast resources are known rather as hidden what it is, and its vast resources are known rather as indeen treasures than from any benefit the public have yet derived from them. No town, I believe, in Ireland possesses such valuable lake, river and deep-sea fisheries as Galway; yet the most ordinary supply of fish, fresh or cured, cannot, under present circumstances, be counted upon from the Galway market. This has been a most serious loss to the country during the period of famine occasioned by the failure of the potnoes; for if due exertion had been made, the fisheries might have produced an abundant supply of cheap and excellent food, thereby lessening the dependence of the population upon a single article of grain, the produce of America, and rendering the diet of the poor both more wholesome and more palatable. A valuable trade might thus have been established with the interior enriching the fishermen of Galway, instead of their being allowed to become—at a season when their active services

Digitized by GOGIE

might have been of so much avail—the idle recipients of a public charity. A railway would have been no remedy for this. Neither is it for want of a railway that for almost every article of consumption, which in the county of Galway might legitimately be looked for in the capital of the west, recourse must generally be had to Dublin, for as yet there is railway communication neither way. I carnestly desire to see the railway to Galway completed. It will be no less evidence of, than a means to improve our It will be no less evidence of, than a means to improve our country; but there is not less need of industrial and commercial enterprize on the part of the citizens of Galway than of co-operation on the part of the landed proprietary, in bringing about so desirable an object—for money will not be invested in railways without a well-guaranteed traffic. On the part of the proprietors and occupiers of land, however, I conceive that the best co-operation they can afford, where they have not money to invest in railway shares, is to labour in the developement of the agricultural resources of the country. If exertions he duly made by all resources of the country. If exertions be duly made by all, in their several stations, who are interested in the Western, to make it a profitable investment to the shareholders, it would unquestionably be the duty of the Government, in the present peculiar circumstances of the West of Ireland. to afford such assistance—either by a direct loan of money or by guarantee—as would enable the company incorporated for the purpose to set as promptly as possible to work at the completion of the whole line to Galway. CLECARTY.

### Brogress of Works.

EAST LANCASHIRE .- The King-street branch, at Blackburn, is 24 chains, or 528 yards, in length with a curve of 10 chains, and is intended principally for the carrying of coals to the numerous mills, &c. in the vicinity of the King-street terminus. The line, it may be recollected, branches off at Accrington,—the right branch proceeding on to Bury and Manchester, the left to Burnley, whence it will proceed to Colne, and there join the Leeds and Bradford extension, and thus in effect, a sort of trunk line from Blackburn to the North. Immediately on leaving the Accrington station, says the *Blackburn Standard*, the rails to Burnley run over a curved viaduct of twenty-one arches, which extends from the station to the Whalley turnpike-road. These arches are of 40 ft. span each 60 ft. in height from the level of the canal water to the rails, and have a curve of 40 chains. The viaduct is composed of what is technically termed "block in sidered to be one of the finest in the country. A short bank connects the viaduct with a bridge which crosses the Whalley turnpike-road on the skew, at an angle of 72 degrees, and is composed of three arches, of 35 ft. span each. At this point there is an open and pleasant view,—the town of Accrington, with Accrington House, park and grounds, the seat of J. Peel, Esq. (cousin of Sir R. Peel), being the objects which more immediately attract the attention. Shortly after leaving Whalley-road bridge the line enters a deep and long cutting of rock and shale, of nearly 200,000 cubic yards, and which runs through the lands of Mr. J. Peel and Mr. J. Worsley. At the east end of the cutting fine views are to be obtained to the right and the left;—on the former side, of the line of Hamilton Hills or Heights; and on the latter, of Pendle Hill, and the town of Whalley in the distance. Half a mile further on another deep and very long cutting, of nearly 200,000 cubic yards, is entered About half-way through the cutting is the Huncoats station, which is nearly 2 miles from Accrington. A fine flag-quarry was found here by the contractors on Mr. Townley's land. The village of Huncoats lies close to the line on the right hand. Leaving the cutting and coming on to an embankment a beautiful view opens out of Pendle Hill, Padiham and the various gentlemen's seats, &c. The next point is Castle Clough, a short but deep embankment of 70 ft. under which is a 9 ft. culvert. A straight run of 1 mile, with good gradients, brings us to the first crossing of the Leeds and Liverpool Canal. The line passes over the canal by means of a wrought-iron tubular girder-bridge, of 64 ft. clear span, and which is very much askew. There are three girders on this bridge; between the centre and the outside ones each line of rails passes. Immediately after and connected with this bridge comes the Bentley Wood embank-ment—one of the most difficult undertakings the engineers and contractors have had in hand. Several ingenious plans were resorted to, with an intention of making this embankment, which is 330 yards across and 70 ft. deep, stand, but without effect, till rock and shale were brought from the first cutting in Mr. Peel's land and mixed with clay from the Burnley side; a solid and excellent bank was then formed, and one which will seemingly bid defiance to time and wear. At the other end of this embankment the line for a second time crosses the canal (which makes a sort of circle sweep from one side of the embankment to the other) on wrought-iron girders of 45 ft. span. The maker of the tubular girders used in the construction of the bridges is Mr. Fairbairn, of Manchester. Directly after leaving the second bridge over the canal there is another deep cutting, of nearly the supply of coals and lime, the demand for which

In the centre of this cutting is [ 100,000 cubic yards. e Grove station, for the accommodation of the inhabitants of Padiham, and for the convenience of the large number of persons connected with the extensive print-works and mills of Messrs. Dugdale, of Lower House. Padiham is rather less than, and Lower House about, half a mile from this station. A straight line, of easy gradients, takes us from this cutting to the large colliery belonging to the Hon. Col. Scarlett and the Rev. W. Thursby, and from thence to Gannow, where a branch of three-quarters of a mile in length turns off to join the Todmorden line. From Gannow the main line proceeds through the Barracks cutting, between 40 ft. and 50 ft. deep, and of nearly 200,000 cubic yards. Three remarkably fine bridges span this cutting, which is 60 chains curve. One of these bridges, which is of three arches, carries the Padiham turnpike-road over the railway; the second, which is also of three arches, connects the Barracks with the turnpike-road; and the third, which is a strong cast-iron girder bridge, continues the Enfieldroad over the railway. On passing the last-mentioned bridge we come to the Burnley Barrack station, situ-ated at the west-end of the town. The main station will be over the Burnley viaduct, and about half a mile from the present one. It is being constructed on a similar design to those at Baxenden and Haslingden. but of course much larger.

EAST LINCOLNSHIRE.—It is confidently stated that the line will be fully opened in October, as the line was last week completed from Boston to Louth. The great demonstration is to be reserved till the opening of the Great Northern, about the middle of the same month.

GREAT NORTHERN.—The works are proceeding vigorously near Doncaster. The pile-driving for the permanent bridge is not yet completed. The span of the bridge, says the Doncaster Gasette, will be 70 ft., and the bridge itself will, we are informed, consist of a wrought-iron tube, constructed on the plan of the Menai Straits bridge, in Wales. It is, at present, being manufactured at Manchester, from which place it will arrive here in a week or two. The bridge over the road to the Marsh is all but completed, and beyond it, in the direction of the river, a platform is being made, to facilitate the erection of the bridge across

LEEDS AND BRADFORD EXTENSION.—The remaining portion of this line, extending from Skipton to Colne, a distance of 11 miles, will be opened next week. a distance of 11 miles, will be opened near them.

The works are not heavy, and have been constructed at a moderate cost. The line of railway in connexion with the East Lancashire, which it joins at Colne, opens a new communication from Leeds and the West Riding of Yorkshire to Liverpool, Manchester, Preston, Lancaster and the West of Scotland, and will afford great accommodation to the district through which it passes by the conveyance of coals, cattle and limestone.

LEEDS AND THIRSK .--Sept. 8.-Of the branch between Weeton and Ripon, opened on the 14th for public traffic, no important works occur between Weeton and Starbeck, with the exception of the Crimple viaduct, a substantial stone structure of arches. A portion of the line south of Pannal is only single as yet, but the second line is far advanced towards completion. The remainder of the line northward to Ripon is laid double, and the road is in excellent condition. A small but neat station has been erected at Starbeck, for the accommodation of the Harrogate and Knaresborough traffic, which is expected to be very considerable. The other stations, with the exception of the coal-staiths, are only temporary, but quite sufficient for abundant accommo-About two miles north of the Starbeck station, the line, as our readers may recollect, crosses the river Nidd on a substantial and elegant stone viaduct of seven arches, erected by the Messrs. M. Faviell & Son. The view from the viaduct in crossing is extensive and beautiful. Indeed, this line throughout presents a succession of picturesque land scapes. The line from Nidd to Ripon passes through a rich and fertile country, beautifully wooded, several noblemen's and gentlemen's seats being seen on either side of the line. Newby Hall, the seat of Earl de Grey, is a striking object, some three miles off; and shortly after passing through the heavy limestone cutting at Monckton-ridge, the cathedral city of Ripon comes in sight. The masonry is substantial, and the embankments are neatly finished. viaduct in this contract is the timber bridge across the Ure at Ripon. The heavier works occur nearer Leeds, the most important viaducts being those across the Wharfe and the Nidd, the former of which will be completed, and the road open for traffic to Poole, near Otley, in about two months. The inhabitants of the district traversed by this line are said to esteem

is very large, as well as for the more ready access which it will afford both to the north and the south, but more especially to Leeds and the manufacturing districts of Yorkshire and Lancashire.

MALDON, WITHAM AND BRAINTREE. within the last few days, been travelled over by Mr.
Moseley, the general manager, and other officers, and is pronounced to be in excellent condition. It be regularly opened for passenger traffic, says the Essex Herald, on the first Monday in the ensuing month .- A meeting of the parishioners of Braintree was lately held, in the vestry of the parish church, to take into consideration the propriety of making a tram-road from the Braintree station, to part of the Pound-field, near the Pig-market. The proposition to make the road was rejected by 12 to 5.

MIDLAND GREAT WESTERN (I.).—Sept. 20.—The extension from the Kinnegad station to Mullingar

was inspected by Capt. Wynne, R.E., previous to its opening for public traffic on the 1st of October. The inspection was very satisfactory, Capt. Wynne having expressed himself in very favourable terms as to the

stability and safety of the line.
NORTH STAFFORDSHIRE (Uttoxeter to Burton-on-Trent) .- Running through a picturesque and fertile district, these 13 miles constitute the southern portion of the Churnet Valley line; and although double tracks of rails are laid, only one of them will be used until the completion of the entire undertaking next spring. The line, says the Derby Mercury, is carried upon an embankment its whole distance, with the exception of passing through one cutting. The materials for the embankment were obtained from side ditches, which in many places resemble canals running parallel with the line. The embankment is, of course, raised above flood-level, the valley of the Dove, down which the line runs, being subject to frequent inundations. Owing to the nature of the strata, which is chiefly marl and gravel, the earthwork has not been particularly heavy. Generally speaking the gradients are about 1 in 600 or 800, Generally keeping the gradual fall of the valley. The cutting to which we have already alluded runs near the intersection of the road from Rolleston to Derby. about 11 mile in length, and rather deep midway through, the sides exposing strata of red, yellow, green and white sand and marl, with an intermixture of gravel. Another peculiarity is, that although the line is crossed by several important turnpike-roads and many accommodation roads, it has been considered necessary to erect only two bridges. One of them is a three-arched structure, of blue brick, for the use of the Rolleston and Stretton road, just where the line emerges at the northern end of the cutting; and the other a wooden bridge, for foot-passengers, over the deepest part of the cutting, some half-mile or so nearer Uttoxeter. The river Dove and some of its tributaries are repeatedly crossed-in two or three instances by viaducts of timber, or, as it is technically termed, "wood gearing," of a very substantial description. At present the only stations are those at Sudbury and Tutbury; but it is intended to open more as the principal points of traffic become developed. Both the stations and the lodges at the level crossings—of which there are several—are built of red brick, with ornamental tile roofing; and the Elizabethan style of architecture has been adhered to throughout. The junction with the Midland line takes place about half a mile from the previously existing station at Burton, which will serve the purpose of both companies.

SOUTH-EASTERN.—Sept. 20.—The works at London Bridge for enlarging the station and widening the Greenwich viaduct, suspended during the monetary panic of 1847, were resumed. The bridge to cross Bermondsey-street is rapidly progressing. Travesend branch is also in a very forward state. is expected that it will be opened for public traffic

early in the spring.

The Border Advertiser notifies that the large bridge over the Tweed, about one mile below this town (Galashiels), is now nearly completed, all the arches being finished, and the centres mostly removed. The bridge is about 300 feet long, and consists of five arches, two of which are dry ones. The railway works between Galashiels and Melrose are now nearly completed, there being no other heavy undertaking between the two towns

### Accidents.

LONDON, BRIGHTON AND SOUTH COAST .- Sept. 22 .-About one mile from Hayward's Heath station a portion of the tire of a wheel of the engine of Brighton express became loose, which crushed the fire box of the engine, causing the four following carriages to be thrown in disorder against each other and off the rail. The four carriages were much damaged, but the engine, which fortunately broke

Digitized by GOOGLE

loose, escaped destruction. The accident occurred on an embankment, and one of the carriages was alone prevented from rolling down by the steps having become entangled with the buffer of the next carriage, to which it hung. The moment of the first impediment the guard gave a shrill whistle, but so much dust arose that he could not ascertain the cause of the accident. He jumped off and was somewhat injured. Some of the passengers and the injured man were sent back to Brighton, but the majority, after an hour's delay, were forwarded to town. The company's servants at the station were very active. They procured a surgeon and above 100 labourers in a very short space of time, and, dispatching them to the spot, they took forward, by the Hastings train, those who were desirous of proceeding to London, where the train arrived safely in 1h. 30 m. after the usual time.

MIDLAND.—Sept. 20.— The mail train from the North left Chesterfield about its usual time (9 52 p.m.), and proceeded at the usual speed to Clay Cross, thence through the tunnel to Smithey Moor (a small penny-a-mile train station in a deep cutting), when suddenly the engine stopped short. The telegraph was set to work to communicate with Derby. All the proper signals were hoisted to prevent trains, whether mineral or goods, from running into the stopped train. Towards 12 p.m. a pilot engine arrived from Derby.

### Law Intelligence.

YORK AND NORTH MIDLAND.—Sept. 21.—An Irish reaper was brought before the sitting magistrates at the Leeds Court House for travelling on the line without paying his fare. The prisoner had arrived that morning by the Government train from York, the fare for which was 2s. 6d. He had no ticket, and when the fare was demanded of him he said he had no money.—The witness, a ticket taker, added that instances in which the company had been similarly defrauded by Irishmen had been very numerous of late. Their mode of escape was leaping out of the carriage immediately on the arrival of the train.—The prisoner was searched, by order of the Bench, but all that he appeared to possess was 4d.—He was convicted in the penalty of 20s., and in default of payment was sent to the House of Correction for eight days.

RAILWAY DIVIDENDS.—We extract from the Daily News the following table, showing the real returns of interest per cent. per annum upon public and some leading railway securities, if purchased for investment at the average prices. For the amount of capital paid up on railway shares in each case the railway list may be consulted. In some instances the present prices rule at so much discount upon the paid-up sums. Where the asterisk (*) is placed, it is to be understood that the rate of dividend is less the income-tax.

RAILWAY TRAVELLING .- Moved doubtless by the readiness with which our daily contemporaries pounce upon any "alarming or fearful accident" by railway, the Scottish Railway Gazette has the following sensible remarks, the tone of which has been frequently seen in our own columns:-The railway mode of travelling is not merely a cheap and expeditious, but by proper care may be made a safe mode of travelling. Every style of locomotion has its peculiar accidents. A man travelling on foot is exposed to broken limbs, and in some cases to death by cold. If curiously adventurous about natural objects, he may break his neck in falling over cliffs, or wander into wilds where, the victim of cold and hunger, he will be dead for months before his body be discovered. We need not expatiate on the perils of the sea, whether arising from tempests, leakage or fire—whether the navigation be in vessels large or small—propelled by the winds or by steam. Of one kind of casualty incident to the sea, the fate of the Ocean Monarch forms a terrible example. The accidents by stage-coaches, gigs, and even horsemanship are known to be numerous and often fatal. That some serious accidents occur on railways is true, but the amount is wonderfully small, all things considered. A considerable part of the number are chargeable upon the recklessness or ignorance of the sufferers, and of course cannot be laid to the charge of the

accidents, we find mention of deaths produced by falling from trains-by missing footing on the lineby neglecting to leave work on engine approachingby walking on top of train;—and one poor woman was killed the other day by rushing from the passenger room across the rails, believing the train in which she was to be a passenger to be that approaching. Parties too frequently act on railways as they would not venture to do if seated on a stage-coach or riding a horse. One of the principal causes of accident of this stamp is the temerity of parties leaping out of carriages before the train has stopped--a measure of madness, of folly, or criminal daring. There would be fewer accidents were passengers after entering the carriages to sit still till not only the station ing the carriages to sit sent and her all and was reached but the officers of the company required tham to alight at the proper landing place. This is them to alight at the proper landing place. the grand rule of railway travelling and the person who violates it is in reality a kind of suicide. As regards the accidents which usually occur, and which really result from collisions, &c., we trust that, by judicious regulations—by bringing every lesson of experience to bear on future conduct—and by the employment of experienced, sober, steady men—they will become less and less, and that the sense of confidence engendered in the public mind will become as absolute as is possible under the circumstances of the case. It is pleasing to notice here, that on some lines not one accident, fatal or otherwise, has occurred since they were opened to the public. This, we believe, is not a mere piece of good fortune occurring in spite of defective arrangements, but is a mark of painstaking vigilance, meriting high eulogy.

EXECUTIVE APTITUDE OF GOVERNMENT .- Account Keeping .- The following examination passed in the committee on navy estimates :- Messrs. Murray & Atherton, the engineers of factories at Portsmouth and Woolwich, are under examination.-Sir J. Graham: You have stated that the form of your accounts enables you only to give to the Admiralty an aproximate idea of the state of the account, and that since you gave your first return to the Admiralty you have amended it by that last return which you have now read; do you think that that is a satisfactory state of accounts which enables you only to give an approxi-mation to the actual outlay and the saving upon the work of the yard —Decidedly not. With a greater amount of labour and time I might have gone somewhat closer than I now have. I do not say that this is satisfactory, because I think that balances ought to be strictly kept.—Do you think it is a good mode of keeping an account to debit the ships and not to debit the whole establishment year by year, taking stock from year to year, which would enable you to give an accurate account instead of an approxima--I do not profess to be an accountant, but I know when I am satisfied with accounts myself; and I do not think that the accounts are kept in such a manner as would be satisfactory to a mercantile establishment.—If this committee were to send an accountant to look at the state of that account, according to strict rules, would it be satisfactory to that accountant?—I think the accountant would say that there was a deficiency as regards the accounts not showing precisely what was the state of the transac-tions during each current year.—In the absence of any such account as enables you clearly to show the transactions of each year, are you confident as to your estimate with respect to the cost of the boilers? Boilers are about the most definite things which we have to do with; the workmanship is kept precisely; and we know pretty precisely the cost of the materi als. We might not be able to tell with absolute precision, but we could tell very closely.— Never taking stock you do not know, with reference even to plates what the actual expenditure has been !-We know what the absolute expenditure is from the weight of the boiler itself when finished. all we take the plates in detail, and then the boiler itself is a check as to the quantity of materials used. -If there should be any frauds committed by the workmen, or any abstraction of your material, you could not ascertain and check that!— Without a correct balance there might be frauds committed .- And you are not sure that they are not committed, because you do not take stock?—Of course not.—(Mr. Murray): I have taken stock monthly in my brass foundry since I went to Portsmouth. The other accounts I have not yet opened, my establishment being quite young. I state this to show that I am quite alive to the importance of taking stock, and the necessity of it, and I have always been so since I entered the service.

some serious accidents occur on railways is true, but the amount is wonderfully small, all things considered. A considerable part of the number are chargeable upon the recklessness or ignorance of the sufferers, and of course cannot be laid to the charge of the system. Thus, in the recent statistics of railway

one victory of the Sabbatarians was gained through the aid of Englishmen, and shall briefly narrate some events which have followed it, begging English holders of Scottish railway stock to keep them in mind as a warning for future guidance. On the Edinburgh and Glasgow the Sabbatarians were in a miserable minority. It happened, however, that a dispute arose regarding some guarantees, and one of the parties hired the assistance of the Sabbatarians, the parties nired the assistance of the Saboratainana agreeing, if they could, united, command a majority in the directory to aid their views, to vote for the closing of the line on Sundays. Our readers may possibly have a faint remembrance of the hot constitution of the closest terms of the saborate states and the saborate states and the saborate states and the saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborate saborat troversy which accompanied an appeal to the share-Marshalled by the Scotsman, the press of the North, with the exception of the special ecclesiastical organs, lifted its unanimous voice against this act of spiritual despotism, which was emphatically condemned by all the town councils and other public bodies connected with the districts traversed by the line. On the other hand, the church courts, of the various denominations with which Scotland swarms, gave forth a host of pompous-looking ecclesiasticoofficial manifestoes, issuing from spots with which the most accomplished geographer was unacquainted. This clerical outcry had its effect. The English shareholders believed that the Scotch were a parcel of bigots who must be humoured. The closing of the line was carried by a small majority, but when the lists were scrutinized it was discovered that the majority of Scottish shares was on the other side, so that the proceeding exhibited the phenomenon of Englishmen voting for the closing of a railway on Sunday, and Scotchmen voting against it. battle was on the North British, where the Scottish feeling on the subject was allowed to take its natural direction, and the Sabbatarians were beaten by large numbers. They resolved to carry on a new and determined war on the ground of the Edinburgh and Northern line, and they boasted that whole presby-teries had become shareholders for the purpose of voting. But the holders generally consisted of Scotchmen—individuals connected with the country through which the line passed, and on a first attempt the Agnew band were defeated by seven to one; on a second, it is believed that they had not much more than a twentieth of the votes. At the half-yearly meeting of the same company, on the 9th inst., another attack was made, under circumstances very unfavourable to the friends of toleration. It is a fixed principle with the Sabbath alliance that no railway meeting shall take place at which they omit to bring forward their great project, however often it may have been defeated, and however slight may be its chance of adoption. This policy has at least one chance in its favour—it tires out the indifferent. On the occasion of the meeting on the 9th inst. to which we refer, the directors thought the expense of producing proxies might be spared, and there was therefore an opportunity for the party having the greater quantity of zeal to give a false and exaggerated indication of its strength in a personal vote.

Though the effect of this deceptive influence was aided by the departure of many who had more distaste for Sabbatarian eloquence than zeal for a tolerant majority, yet we are happy, for the credit of sound sense in Scotland, to hear that there was a

majority of some four to one against the pharisees. ITALIAN AND AUSTRIAN.—An auction of nearly 1,000 Shares in this company having been announced in the Florentine Gazette of Sept. 20, the said shares being declared forfeited by the local direction, a numerous body of British holders thereof assembled at the board-room of the station in Florence, to oppose what they conceived to be an arbitrary confis-cation of their property. There were present—Baron French and M. Maquay (bankers), MM. Vansittart, E. Murphy, Dr. Harding, C. Lever (Lorrequer), Elder, W. Barron (attache), Storey, Babbage (engineer), &c. M. Bonfils, the local manager, who is well known in London, and has been created Cavalier di St. Georgio by the grand duke, for his activity in getting up this line, which is neither "Italian" nor "Austrian," but simply a 10 mile line to the little town of Prato, being requested to preside, declined that honour, as he could not recognize the meeting, however respectable, in his official character. Hereupon the assembly voted M. Vansittart into the chair, and several shareholders addressed their aggrieved brethren on the impolicy and injustice of the forfeiture of shares (on which 25 per cent. had been paid up, and which had been mainly established by British capital) without any meeting of the holders, or any communication with the chief director, Mr. Jackson, of Birkenhead. The speeches were interrupted by the introduction of an Italian lawver, who harangued the assembled Britons

Digitized by Google

**[SEPT. 30]** 

made by the local directors, and which certainly bore out the legality of the business. M. Bonfils supported the lawyer, and said that the meeting had no business under consideration save and except the sale of the shares, which he would be happy to get a bid for; any other topic was disorderly.—Dr. Harding said that a caricature had appeared in the early French that a caricature had appeared in the early French revolution, representing Necker convoking the States-General in the character of a cook assembling a lot of turkeys (galinacci) to ask them what sauce they would like to be cooked up in; and when they objected to be cooked at all, "rows sortes de la question" was all they could get out of their president. Maquay (banker), after a violent speech, wound up the product of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the conduct of the by saying that the conduct of the company was dishonest and disreputable, whereupon M. Bonfils, in very indignant language, said he felt this imputation on the society he had the honour to represent in Florence as a personal insult. He had kept his temper up to this moment, but he would not tolerate the aspersions of M. Maquay, were he the highest financier in the country, much less when he was

nothing but a "jobber in lodgings, bad wines and worse bills." A perfect storm ensued, and M. Vansittart had to separate the belligerents, some sort of apology being ultimately tendered. The auction, apology being ultimately tendered. The auction, however, did not take place, no bidder having had the courage to show under the strong protest of all present. An emphatic remonstrance on the whole affair will be forwarded to Mr. Jackson, of Birkenhead, in whose equity and business habits the fullest confidence is reposed.—Daily News.

St. Andrew's and Quebec .- The following letter from the Colonial-office respecting this undertaking has been received by the directors

has been received by the directors:—
Downing-street, Sept. 18.—Sir,—Referring to what passed at the interview with Lord Grey, granted to the deputation of the board of directors of the St. Andrew's and Quebec on the 14th inst., I am directed by his lordship to inform you that whilst it is out of the power of her Majesty's Government, without the authority of Parliament, to grant to the promoters of that undertaking any pecuniary assistance, either directly or indirectly, and although his lordship cannot encourage the expectation that, even when Parliament re-assembles, her Majesty's Government would feel

themselves justified in recommending that such assistance should be granted, since, by so doing, applications of the same nature from the various British colonies would be encouraged to an indefinite amount, he has great pleasure in so far complying with the request made to him by the deputation as to communicate to you in writing the opinion he has formed of the undertaking. I am accordingly directed to inform you that in Lord Grey's judgment the projected railway has been judiciously planned, and is likely, if completed, to prove of great national importance, and also that there appears to him to be no reasonable ground for doubting that the resources of New Brunswick are far more than sufficient to enable that province to fulfil the guarantee given by the Legislature for payment of the interest on the capital of the company, or that both the Legislature and the people of the province will respect the engagements into which they have entered. Lord Grey considers the inhabitants of British America to be entitled by all their past conduct to be relied upon for a punctual discharge of the obligations which they have contracted. This must, however, be regarded merely as an expression of Lord Grey's opinion, and it must be distinctly understood by those persons in this country who may take shares in this undertaking that her Majesty's Government cannot become in any degree responsible for the fulfilment of the expectations by which they have been induced to do so.—H. Merivale. themselves justified in recommending that such assistance
