#### NEW WORKS.

## Mr. Weale's New Series of Andimentary Works for Beginners.

Mr. Wralk is preparing for publication, in a neat and convenient size, a Series of original and useful Volumes, by the most esteemed writers, forming a Rudimentary Course for the easy comprehension of the leading principles of various Sciences.

It has been remarked that "those who are in the ship of Science ought to remember that the disciples cannot arrive without the aid of boats." Popular treatises are to Science with an imperfect guide. It sometimes happens that popular treatises are made to appear easy by the omission of those very details which are most essential to be known: they state results without going through the necessary processes by which those results are gained; they deal largely in facts, and leave principles untouched.

The only method of avoiding this error is to confide to men, who are masters of their respective subjects, the task of drawing up Popular Introductions to the several branches of Science. The Publisher trusts that the following list of names will be a sufficient guarantee to the Public that what he proposes to attempt in the cause of Popular Instruction will be done well, and that these little treatises will fully answer the purpose for which they are intended, namely, to become convenient and accurate Guide-Books in Government and other Schools, and in Popular Institutions generally, while their low price will place them within the reach of all classes earning their daily bread, to many of whom a knowledge of the elements of Science is a positive gain in the common nursuits of life, away as well as a means of winning from gross tastes, and presenting to the mind noble and worthy objects of of the elements of Science is a positive gain in the common pursuits of life, as well as a means of winning from gross tastes, and presenting to the mind noble and worthy objects of

Study.

The First Series will be comprised in Fourteen Volumes, several of which will be amply illustrated, price 11s. 6d. complete in demy 12mo. cloth; and for the convenience of purchasers, the several Subjects will be published separately at the following prices:—

RUDIMENTARY CHEMISTRY, by Prof. FOWNES, F.R.S. &c., University College, London	VOL.	1. 10d.

SATURDAY, JUNE 24.

#### MEASURE OF VALUE OF THE GAUGE QUESTION.

After all that has been said on the question of relative resistance of trains on broad and narrow gauges, the real merits of the system are to be decided on mercantile principles, even still more than on mechanical ones. Of the greater original first cost of a broad-gauge railway no one entertains any doubt, neither does any one who knows the working of the lines practically entertain a doubt that the current cost of working it is greater, compared with the only standard by which it can be judged,—namely, the narrow. The gross weight to be put in motion per passenger carried, and per ton of paying goods transported, is so much greater than on the narrow that the result of a mercantile comparison is beyond all question in favour of the narrow.

These points have been so well brought out in a letter of Mr. Harding's to Mr. Creed, in 1816, that we think it instructive to reproduce the principal points of that letter at the present moment.

There is one point, not the point at issue in the experiments, and therefore not referred to by Mr. Bidder, to which I take the liberty of drawing the attention of the directors of the London and Birmingham. It has, in my opinion, the most direct bearing on the practical value of the facts, in reference to the comparative power of engines (which had been tried on the two gauges) elicited in the late experiments, when the useful application of locomotive power to the daily traffic upon a line of railway is considered. It was a point also which I found, in the daily conduct of the traffic on the broad-gauge railway, continually forcing itself on the attention. I refer to the much greater gross weight which the broad-gauge railway trains (whether for goods or passengers) are found to attain, as compared with trains on narrow-gauge railways carrying the same useful or profitable load. To show what I mean, it is only necessary to give the following average weight of trains on different lines of railway. I extract the figures from the evidence of Mr. D. Gooch, the locomotive superintendent of the Great Western; they are those on which Mr. Gooch's arguments on comparative economy are based, to which I will presently refer-

	Broad Gauge.		Naurow	GAUGE	
	Great Western.	Grand Junction,	London and Birmincham.	Birmingham and Gloucester.	London and South
Average gross weight of passinger trains in tons, excluding engine and tender	67	43	49	38	36
Average number of passengers at one time in the above trains	40*	50	85*	43	45

The average number of passengers is obtained in the case of the Great Western and London and Birmingham from the detailed statements given in to the Commissioners. * * The general fact indicated by the above figures may be checked by a consideration of the general position of the railways mentioned. * * As regards the goods traffic, the same general result is proved conclusively at Gloucester, where goods are transferred from broad-gauge waggons into narrow-gauge waggons, and the broad-gauge waggons, carrying identically the same goods as the narrow-gauge waggons, are found on the average to weigh at least 35 per cent. more than the narrow-gauge waggons which convey the same goods; this has been now tried for several months, and is always found to obtain. To apply this to the question of locomotive power:—We find the particular engine tried in the late experiment on the broad gauge to

* Instead of 40 say 50; instead of 85 say 75, as these numbers will perhaps more truly represent the average numbers in the trains of these two railways, one half-year with another. At the time this Report was written, there was a difficulty in obtaining the correct mileage of trains and passengers, the evidence taken before the Commis-sioners not being published: these corrections do not affect the argument.

be, as Mr. Bidder proves, an engine of about 10 per cent. more power than the particular engine tested on the narrow gauge; but it seems from the figures I have just quoted from Mr. Gooch, that the average gross train she will have in practice to draw will be 50 per cent. heavier on the broad gauge than on the narrow gauge, not because there are more people to go by the trains, but on account of the construction the vehicles on the broad gauge, and the impossibility of filling them, which is the case in the car-riages of both gauges, but necessarily tells more in the weight of the train with the large carriages of the broad gauge. The additional power, therefore, in the broad gauge engine would thus be all absorbed, and more than absorbed, by the greater weight of its The useful and available power of the large engine would thus be actually less than that of the less powerful engine. The command of locomotive power, which depends on the excess of power as compared with the useful load (of passengers, or whatever else it may consist of) will thus be greater on the narrow gauge, even with an engine in itself 10 per cent. less powerful than the broad gauge. And this is the point which the public and the companies have to look to, as it is this command of power which will affect the punctuality and despatch of travelling.

#### Railway Literature.

Judge-made Law versus the Law of the Land.

This pamphlet aims to show the injustice that has been inflicted on the various parties who unfortunately gave credit to some of the railway schemes of the notorious year 1845; for indeed, what with the contrariety of opinion expressed by the bar and the Judges, and the downright fraud practised by some solicitors connected with these schemes, the tradesman is compelled to suffer the most serious losses, and between these two stools falls to the ground. We have heard of cases where large sums of money have been subscribed by the committee for the purpose of meeting the claims upon the company, but which money, having unluckily got into the hands of the lawyer, has been, of course, swallowed up by him. This he has been enabled to do, and to laugh at all applications made by the creditor, taking advantage of the present bias of the Judges as his medium of escape. Surely it is high time that the ordinary circumstantial evidence of liability, which is at the command of the creditor, should be considered in these cases sufficient; for as it is, although the provisional committeeman may have received his fees for attending in his place, and secured large sums of money besides by selling his allotted shares, the Judges rule non-liability, unless it be distinctly shown that he was a party to the tradesman's instructions. Now, we hold that every provisional committeeman became so for gain, and that on simple justice he ought accordingly to be held responsible for the debts—the profits or losses of the project to which he has attached himself. We believe that, had the common-sense view of the case continued to prevail, long before this nearly every just claim would have been met. It is well known that the provisional committeemen did believe themselves to be liable; and, with the fear of actions before their eyes, were rapidly perceiving the propriety of contributing their 50l. or 60l., as the case might require. We repeat, that had this been permitted to continue, we have no doubt that few indeed would be the claims now unsatisfied; and we should have been spared the litigation that has taken place, and such appeals from the jury as in the case of Barker v. Taylor, before Judge Perrin:-"Must we consider the honesty of the case? for if so, we cannot agree to a verdict for the defendant." In the case of Barker v. Convngham, tried in the Court of Exchequer, it appeared that the defendant positively held the sum of 1,800l. for the purpose of meeting the claim upon the company. The jury not being

Judge, were locked up for five hours, and at last discharged without agreeing to a verdictthe case ending by a juror being withdrawn. We think it well to direct the attention of jurymen to these facts-to call upon them to act with firmness in such cases—to take care that the principles upon which trade has hitherto been conducted shall prevail, and that they will adjust the balance, so that right shall be maintained.

As a specimen of our author's arguments we make the following quotation :-

" For the sake of looking fairly at the subject, let us consider the formation of a company, and the mode of carrying out its plans. The idea, of course, is the production of one head originally; he calls to his assistance one or two others, and they resolve on their proceeding. Then comes the prospectus, containing the names, it may be, of 50, 100 or even 200 highly respectable noblemen and gentlemen, merchants and traders, who give their consent to be placed on the committee. The next thing is to obtain credit with tradesmen and others-one supplies the stationery, another advertises the concern in the newspapers, and thus the public are induced to take shares in the project. Engineers and surveyors are set to work to prepare the necessary plans for Parliament—the stationer prints the share-certificates and supplies the paper—the advertising agent is employed to announce to the world the names of the committee, the objects of the company, and perhaps that no further applications for shares in the "important" undertaking will be received after a given day, &c. The shares are allotted, go into the market at a premium, and all goes on swimmingly: each of the committee helps his friends and himself to allotments, his own claim being seldom less than 200, and often a much larger number, which, during the palmy days of speculation, he usually disposed of, say at 20s. premium, at once obtaining a clear profit of at least The shares in the companies projected in 1845 did not, however, stop at such a premium; there were instances of their coming out at 5l. and going up to 9l., and even a far higher premium, and the committeemen cleared enormous profits. Such an appeal to the cupidity of mammon-hunters was responded to as might have been expected; numbers launched into every project, hoping that these golden days would last; but a change came over the scene. The 25th of October 1845 ushered in the panic in all its terror, the golden dreams of the committeemen vanished, and many of those very gentlemen fled to foreign lands, to avoid the responsibilities they had incurred. Who were the sufferers? The tradesmen, advertising agents and engineers. The secretary had obtained credit of those parties on the strength of the solvency and acknowledged respectability of those whose names appeared on the list of the provisional committee. The day of reckoning came at length; those very gentlemen who had perhaps realized large sums by their connexion with the project repudiated all liability; the parties who gave them credit, and who had paid away large sums of money on their behalf, in the full belief of their solvency and honour, were set at defiance, and the only means left to the unfortunate creditor was to bring actions, and to plunge into a doubtful litigation in order to re-cover the amounts of his fair demands. The Judges now rule that the committeeman is not liable, inasmuch as he did not give the orders to the plaintiffs to do the work, and therefore they must look to the parties who gave them the orders. The secretary and solicitor are then to be attacked, and made responsible for all the debts; men who were, what !— the "servants" of the committee! You might just as well turn round upon your baker, and those who have supplied you with the necessaries you required, and say, "I sha'n't pay; I didn't order control to the party who ordered it—the servant." "I sha'n't pay; I didn't order the bread; look to the party who ordered it—the servant." Is that servant to pay for what you required, and for what you did, or expected to derive benefit from? The thought is preposterous. The judges, then, rule that the committeeman is not liable, unless he gives the orders himself. Well, to illustrate this phase of the affair, let us suppose a company where there were 150 provisionals; 100 out of them happened to live perhaps 60 or 100 miles away from the offices of the company. Were all these men to walk to the tradesmen and request them to do such and such things necessary to bring the affairs of the company to a successful issue. They would have laughed at the idea. They left those things to the secretary and other appointed officers, their servants; and are they, because they were not the parties actually ordering everything, to be let off? Again, the judges rule that able all of them to swallow the dictum of the where there is a managing committee the provisional

committee are not liable! What was the managing committee! The servants of the provisional. whom appointed? By the provisional committee. And then we are told, forsooth, that they (the managing committee) are the parties liable for all the debts of the company!—men acting for others to pay their employers debts! The secretaries, solicitors and managing committeemen were the employes of the provisional committee; and for their acts, in the fair construction of the common law of master and servant, principal and agent, the provisional committee, and every individual member thereof, is committee, and every individual member thereof, is liable. And yet we find judges stating to juries, for their guidance, "that provisional committees were composed of persons who merely registered their approval of the schemes." Would they have been approval of the schemes." Would they have been contented with merely registering their approval if any profit had not accrued? Would they not have gone in for their share? Would they have been satisfied by the company saying "We only had your names as sanctions to our scheme"? No; they would have claimed (as they would have been entitled to do) their dividends, and demanded as a right further large allotments of the reserved shares. employ a servant, I am answerable in law and justice for all his acts as my servant. Hence, if my carter runs over a man and breaks his leg, the injured man has a right of action against me for damages. How absurd, then, appears the ruling of our judges, who de facto assert that the act of the servant is not binding on the master."

#### Official Bapers.

#### SAMBRE AND MEUSE.

[For Meeting, see p. 437.]
The following is an exact account of the state of the works
between Marchienne and Walcourt, and on the Laneffe and between Marchienne and Walcourt, and on the Laneffe and the Morialme branches, as inspected by the engineer and myself on the 11th inst.:—Commencing at the Government line at Marchienne—the junction towards Charleroi is finished, and the rails laid as far as the company's station at Marchienne; the earthworks of the curve towards Marchienne are completed and ready for receiving the rails; it is only 850 metres in length—they will be laid in the course of ten days. At the Marchienne station, the rails are being laid for the sidings, the ground levelled and cleared, and the turntables placed, the station-house is up, and the foundation of the permanent locomotive-house nearly up to the level of the rails; from the station the line is laid and finished up as far as the entrance to the village of Jamioulx. The station of Bommerée is erected, and there remain only the barriers for the level crossings to be placed. From The station of Bommerée is erected, and there remain only the barriers for the level crossings to be placed. From Jamioulx to the entrance of the Laury tunnel the line is laid also, but the rails require adjusting; the masonry of the tunnel itself will be finished in the course of next week, and a few days only will be required to clear it out and lay down the rails. From the south or further end of the tunnel, to very near the mouth of the Ham-sur-leure tunnel, the line is finished; in the tunnel the brickwork is finished within a few yards, and the rails will be finally adjusted and the road cleared at the end of this month. The Hameau station-house is up, the turn-tables placed, and the station will be finished at the same time as the tunnel. Between Hameau and the Berzée station, at the entrance of the lameau and the Berzée station, at the entrance of the Laneffe branch, the line is finished, with some few slight exceptions, and placing the barriers at the various level crossings. The Laneffe branch itself and the station will crossings. The Laneffe branch itself and the station will be completed by the 25th inst. Returning to the main line from Berzee to the entrance of the Jardinet station, the line is laid and ballasted, with the exception of a few yards at Pry, where a viaduct, which was found defective, is being rebuilt; it will be completed in a few days. In the Jardinet station the permanent locomotive-house is up to the level of the rails, the station-house is erected, the turntables placed, and the rails for sidings being laid, no delay will occur here. On the Morialme branch, one or two cuttings between Jardinet and Vogenée are not quite down to formation level, but everywhere else the carthworks are finished. In the Vogenée cutting a considerable quantity of exceedingly hard rock remains to be removed, and I do not think that any exertion that can be made in the narrow space in which the men have to work will clear it in less not think that any exertion that can be made in the harrow space in which the men have to work will clear it in less than two months. From the further side to the entrance of the village of Fraire, the earthworks are up to formation level. In and for a short distance out of the village towards Morialmé, where there is a cutting of some magnitude, considerable time has been lost in litigation, the miners having claimed heavy indemnities for the damage that they alleged would be done to the mines from the railway passing over them. Those questions are now settled, and the cutover them. Those questions are now settled, and the cutting is vigorously attacked, fortunately it is through clay, so that in the end no delay will take place. From this point to Morialme the line is ready to receive the rails, which with the sleepers are being brought from Laneffe to Fraire, and the line will therefore shortly be laid both towards Vogenée and Morialme, so as to be ready when the cutting at the former place shall be finished, which is now the only remaining obstacle. All the minor preparations for opening are proceeding regularly: the engines, carriages and waggons can be got ready at a week's notice; the staff is relected, and several members of it are placed at the various Government stations, to make themselves familiar with the working of the railway. Subjoined is the Engineer's stateworking of the railway. Subjoined is the Engineer's state-ment of the various expenses which have contributed to swell the cost of the first part of the line.

John Piddington, Secretary. Brussels, June 13.

To the Secretary of the Sambre and Meuse. In your letter of the 29th of May you desire me to inform

the Administration in what way the difference has arisen between the cost of the first section and the estimates I made on the 24th of November 1846. In my Report of the 11th of May last, the ascertained excess of expenditure over my estimate of the 24th of November 1846, on the main line from Marchienne to Walcourt, the branch from thence to Morialme, and that from Berzée to Laneffe, is stated to be

In the same Report I stated that to open these portions of the line it would require a further sum of

Total excess . . This excess has arisen from the following causes:

This excess has arisen from the following causes:

1. The question of the cost of the slips in the tunnels of Jamioulx and Ham-sur-Heure having been referred to arbitration and decided against the company, the engineer compounded for .

2. Indemnity claimed by the contractors for payments made by them for severance of lands, &c., and allowed by the arbitrators

3. Expenses caused by the stoppage of mills during the construction of bridges on the line

4. Various surveying operations done by the contractors on account of the company at different times F.73.000

times
The company's proportion, according to agreement, of the extra cost of Ruppelmonde bricks, employed in the tunnels by order of the Government engineers (approximate)

Additional mining, and increased thickness of the nature of the rock, and partly on account of the nature of the rock, and partly owing to the strict requirements of the Government engineers Additional land for enlarging the stations, for spoil banks and side cuttings, for widening the bed of the river in several of the deviations, all of which have been rendered necessary from the nature of the ground and the wants of the various

localities .

8. The quantity and cost of the earthwork has exceeded all calculation, on account of the hard nature and treacherous character of the rocks, which we have encountered everywhere; the slips that have occurred in consequence, and the necessity of giving greater slopes than had been projected, will, by the time the line is opened, have caused an increased expenditure of . .

9. Sundries ...

Increased cost as shown above .. (73,3291.) 1,833,227 Increased cost as shown above .. (73,392), 1,833,227
This increase of cost, the eighth item in particular, will appear, as it undoubtedly is, very large; but it must be remembered that at the time I made my estimate, dated the 24th of November 1846, I could not foresee the difficulties which would be met with in the numerous and very deep cuttings, which for the most part were not commenced. It is only now that they are completed they can be fully appreciated, and the impossibility of estimating them before they were opened understood.

| Agrilington near Walscourt June 1.

Jardinet, near Walcourt, June 1.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE. -The result of the greatest amalgamation effected by one Act since that of the Midland may be seen from the extract of the summary of the capital, shares, loans and mileage of lines held under the Act of union which created the Manchester, Sheffield and Lincolnshire.—"The Manchester, Sheffield and Lincoinshire was formed by the amalgamation of the Sheffield, Ashton-under-Lyne and Manchester, the Great Grimsby and Sheffield Junction, and the Sheffield and Lincolnshire Junction. The Sheffield Ashton-under-Lyne and Manchester was incorporated by an Act. 7 Will. 4, c. 21, and authorized to raise capital to the amount of 700,000l. and to borrow 233,000*l.*; and by six subsequent Acts the company received power to raise additional capital to the amount of 1,171,000*l.*, and to borrow 331,999*l.*; the company had therefore power to employ altogether upon its works 2,405,999l. The Great Grinsby and Sheffield Junction was incorporated by an Act, 8 & 9 Vict., c. 50, and authorized to raise capital to the amount of 600,000l., and to borrow 200,000l.; and by five subsequent Acts this company was authorized to raise additional capital to the amount of 1,275,000L. and to borrow 423,600*l*., or to employ altogether upon its works a sum of 2,498,600*l*. The Sheffield and Lincolnshire Junction was incorporated by an Act

rized to raise additional capital to the amount of 250,000l., and to borrow 83,000l., or to employ altogether upon its works 1,266,333l. By an Act, 9 & 10 Vict., c. 268, these three companies were amalgamated upon equal terms, and now form the Manchester, Sheffield and Lincolnshire, which has therefore received power under former Acts to raise share capital to the amount of 4,626,000l., and to borrow 1,474,932L, or to employ altogether upon their works 6,170,932L. The Sheffield, Ashton-under-Lyne and The Sheffield, Ashton-under-Lyne and

9 & 10 Vict., c. 304, and authorized to raise capital to

the amount of 700,000l., and to borrow 233,333l.; and

by another Act, passed in the last session, was autho-

scription capital by the issue of 12,000 shares of 50l. each, 16,800 of 25l. each, 32,750 of 20l. each, and 16,000 of 12l. 10s. each. The Sheffield and Lincolneach, 10,800 of 22l. each, 32,130 of 20l. each, and 16,000 of 12l. 10s. each. The Sheffield and Lincolnshire Junction created share capital to the amount of 950,000l., by the issue of 38,000 shares of 25l, each. The Manchester, Sheffield and Lincolnshire amalgamated company has therefore a subscription capital bearing the nominal value of 4,696,000*l*., divided into 193,250 transferable shares, by which, when fully paid up, 4,600,053l. 16s. 3d. will have been raised. The Manchester, Sheffield and Lincolnshire have mortgage debts, under their Acts of Parliament, outstanding, to the amount of 579,278l., of which 1,500l. at 4½, and 13,000*l*. at 5 per cent. were contracted under the Acts of the Great Grimsby and Sheffield Junction; and of the remainder, 400*l*. is at 3\frac{3}{4} per cent., 180,992*l*. at 4 per cent., 238,565*l*. at 4\frac{1}{4} per cent., and 144,821*l*. at 5 per cent.; and the whole is intended to be paid off, in sums varying from 2001. to 10,0001., by January 1855. In addition to this, the Manchester, Sheffield and Lincolnshire have borrowed on loan notes to the amount of 104,965l., at 4, 4½ and 5 per cent. interest; of this sum 23,500l. has been paid off; 81,465l. remains outstanding, and is intended to be paid off by January 1851. It is not stated that any special provision has been made for paying off the loans. The present debts of this company on mortgage, debenture and loan notes amount to 660,743l.; and they may, under their present Act of Parliament, increase this debt by 814,189l.; and as 2,831,101l. remains to be paid upon the shares, the company retains power to raise and expend 3,645,290%. The Manchester, Sheffield and Lincolnshire have purchased, under an Act, 9 & 10 Vict., c. 267, the Peak Forest Canal, for a perpetual annuity of 9,3241. 18s., and the Macclesfield Canal for a perpetual annuity of 6,605l.; and the company has been authorized to subscribe 175,000l. to the Manchester, South Junction and Altrincham, by the Act of Incorporation of that company, 8 & 9 Vict., c. 111, and has contri-buted 72,500*l.*, and they have agreed to purchase, in conjunction with the London and North-Western, Lord Ellesmere's share in the Manchester, South Junction and Altrincham."

than the amount due upon them.

Grimsby and Sheffield Junction created their sub-

#### Progress of Works.

GREAT NORTHERN .- The works at Spalding are, according to the Lincolnshire Chronicle, proceeding rapidly. Several workshops and sheds of spacious size have been erected in the station yards, and three locomotive engines daily traverse the line to and from Peakirk with ballast, to raise the line in that locality. The company will probably open the line for goods traffic the latter end of September next. The works at Boston are also rapidly progressing; and after the bridge over the forty-foot river, near the Black Sluice, is completed, the line will soon be united with the portion now completed from Spalding .- The massive iron swing-bridge, now in the course of construction across Brayford-head, will, says the Eastern Counties Herald, be completed in a very short time. It turns on a centre block, and by so doing forms two water-ways for the passage of vessels.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.—The

bridge over the Witham below the locks is rapidly proceeding, the columns being above high-water level. The bridge over the Sincil dyke promises to be an almost endless affair; it is many months since the first coffer dams were constructed, and the base of only one pier is yet finished.

NORTH BRITISH (Hawick branch) .- The works on this branch are reported to be making rapid progress. It is confidently expected that the line as far as Galashiels will be completed and opened in the course of next month.

SCOTTISH MIDLAND AND EDINBURGH AND NORTH-ERN.—Great exertions are making to have both these lines completed as far as Perth during the present month. On the former the embankments of the month. On the former the embankments of the bridges within the last two miles of that town, and on the latter the bridge over the Earn, are the chief works to be finished; and the workmen are engaged night and day in forwarding the operations. Should nothing unforeseen occur, both are expected to be

opened early next month.

SCOTTISH MIDLAND.—The substantial bridge across the Tay, connecting Kinclaven and Cargill, is now approaching completion, and a few weeks more will likely see it finished. It is a skew-bridge, composed of five arches, each arch having a span of 100 ft., and at an elevation of 75 ft. above the river. The pillars Manchester had issued 7,000 shares, of 100*l*. each, 29,500 shares at 25*l*. each, and 41,200 shares at tirely of stone, and the arches which spring from 12*l*. 10s. each; the 100*l*. shares have been fully called up, but only produced 604,053*l*. 16s. 3d., 3,452 shares having been forfeited and sold for less different layers of slabs placed in a curved form, and

Digitized by

then fastened together with bolts, for the purpose of retaining them in that shape—the same, in short, as the arches of the Dundee bridge. The rails are already laid over a considerable portion of the Midland bridge, and when completed it will form an ornamental object in that district.

South Devon.—The trains now stop at Colebrook, Ivybridge and Brent stations. The electric telegraph will be completed to the Plymouth station in the course of next week; communications can then be made throughout the line. The opening of the Ivy-bridge station on the 15th was hailed with much satisfaction by the inhabitants, and the trains were welcomed with loud and hearty cheers by persons who had congregated at and near the station. The day was kept as a holiday, and several parties par-took of the accommodation afforded at the hotel. The station is built to the west of the viaduct, adjoining it, and from its elevated site extensive and beautiful views can be commanded. The drive to the station is round the chapel, but the walk may be taken through the wood skirting the river.

#### Accidents.

EDINBURGH AND NORTHERN.—June 12.—A land-slip took place at the east end of the tunnel at Kinghorn. conjectured that the recent heavy rains had weakened the stability of the retaining-wall, which was about 20 ft. in height, and in consequence a large mass of it was precipitated upon the line, by which it was completely blocked up and the passage of the trains prevented. Immediately after the occurrence the trains due at the point were stopped at some dis-tance, and a large body of labourers employed to clear the line of the rubbish, when, after a delay of about an hour, one line was cleared so as to admit of the passage of the trains in waiting (one from each end and a goods train). Had the accident not occurred during the day the consequences might have been more serious. The embankment at this place gave

way last winter from a similar cause.

MIDLAND.—June 15.—Mr. W. Haigh, 13, St. Mar. tin's-le-Grand, with his wife, child and servant, was travelling from town by the third-class train, which reached the station at Rugby at about 1 50 p.m. Between Willeybridge and Ullesthorpe station the boy fell out of the carriage as it was proceeding. An alarm was instantly made, and the guard went along the tops of the carriages, and having ascertained the cause, stopped the train. A signal was also made to the down mail, which was following, but at once stopped, and the circumstance was telegraphed to the Rugby station. An engine and tender were at once dispatched to find the boy, but before their arrival at the spot he had been picked up by the policeman, and it was soon ascertained that beyond the fright he had only sustained two slight scratches on the forehead and chin. The poor little fellow, who was not more than four or five years old, was taken to Ullesthorpe, and thence, with the father, to Rugby, after which they proceeded on their journey.

WATERFORD AND LIMERICK.—June 11.—The temporary wooden engine-shed at the Tipperary station, which had only been finished a few days previously, was found to be on fire by one of the policemen on duty, and before any efforts could be made to save it the structure was entirely consumed. Considerable damage was also done to the works near the station. The outrage is supposed to have been perpetrated by an incendiary, but will not interrupt the usual transit of goods and passengers to and from Limerick and Tipperary by railway.

#### Law Intelligence.

Costs .- June 16 .- In the Vice-Chancellor's COURT, in re Elliott v. the South Devon, the Court had directed two issues determining the right of the company to alter their level so as to deviate more than a certain extent from the datum line prescribed by the deposited sections, and also to try whether the lands on which the alleged deviation had occurred were "town lands" within the meaning of the Act, which gave less scope for the alteration of the level in such lands than in rural districts. The verdict had been given for the plaintiff on both issues, but as to one of the issues the company had obtained a rule nisi for a new trial. The plaintiff then proceeded to tax the costs of the other issue, and the company now applied for an injunction to restrain the plaintiff from proceeding to execution for such costs. —His Honour pronounced that the probability was that the defendants would have to pay the costs of the issue; still, as it was an issue directed in a particular form under the authority of the Court, it would be proper that the whole matter should be disposed of at once. The execution must be stayed,

but so as not to prejudice the plaintiff or deprive him of the benefit of the verdict in any other respect.

Liability of Provisional Committeemen.— June 20.—In the Court of Common Pleas, in re Tarleton v. King, this was an action for compensation by an agent for taking references to go before Par-liament, against a member of the provisional committee of a defunct railway. At the Warwick summer assizes the jury found a verdict for the plaintiff. In the following term the defendant obtained a rule to set aside the verdict as against the evidence, and for a new trial. The defendant's name appeared in the prospectus as a provisional committeeman, and there was some slight evidence that he was a member of the acting committee. He was, moreover, present at a meeting of the provisional committee, held for the purpose of winding up affairs, when it was resolved the managing committee should draw up a Report. That document stated the liabilities, including the plaintiff's demand, and called upon the provisional committeemen to pay 50L each, in order to liquidate the debts of the concern. According to resolutions passed by the provisional committee when the defendant was present, receipts were issued by the secretary, signed by the defendant among others, to those members of the provisional committee who contributed 501.; and the company's debts were partially paid by cheques signed by the defendant and two others, payable out of the fund so contributed. After being fully argued, the Court were of opinion this rule ought to be discharged. They did not mean to decide that the defendant's name appearing in the prospectus as a provisional committeeman, of itself furnished a case against him, nor was it sufficient to have shown he had taken steps to settle the debts of the concern, if he had so acted under a mistaken notion of his liability; but here the evidence of liability was much stronger against the defendant, and the verdict of the jury was in accordance with it.—

#### Barliamentary Broceedings.

LORDS

June 19.—Railways.—Lord REDESDALE, pursuant to notice, inquired whether it was the intention of the Railway Commissioners to oppose the introduction into any private bill of any provisions for altering the gauge of any railway authorized to be constructed by any Act which has passed prior to the passing of the Gauge Act in 1846; whether they proposed to bring in a bill in the present session to alter and amend the Gauge Act; and whether any report had been prepared by them upon this subject, or whether they intended to recommend that the consideration of the same should be postponed to the next session of Parliament.—Earl Granville was understood to say that there were several bills before Parliament containing clauses authorizing the companies to alter the gauges, which clauses the Commissioners would feel bound to oppose. An experiment was now going on as to a mixed gauge, and the Railway Commissioners would not come to any determination on the subject until that experiment had been fairly tried. Under present circumstances, they were not disposed to introduce any bill on the subject.—In reply to a question, Earl GRANVILLE said that the attention of the Railway Commissioners had been directed to the subject of the necessity of increasing the number of guards on passenger trains, in consequence of the late serious accident at Wolverton; and Capt. Simmons, one of the Railway Inspectors, was now in communication with the company on the subject. The Commissioners had no power to enforce such regulations, but he must do the companies the justice to say that they had attended most readily to any suggestion which had been made to them by the Railway Board.

COMMONS. June 19.—Aberdeen (Capital) Bill.—On the motion that this bill be read a third time, Mr. HINDLEY objected that by this bill it was proposed to raise the capital required by an issue of preference shares at a guaranteed interest of 10 per cent. He would, if competent to him, move that 6 per cent. be substituted for 10 per cent.—The SPEAKER said the hon. gentleman could not make such a motion without giving previous notice.—Mr. Bernal said the remedy for the evil complained of by the hon, member rested with the Commissioners rather than with that house.—The bill was then read a third time and passed.

June 20.—Caledonian (Branch across the Clyde) Bill.—On the motion that this bill be engrossed, Mr. HUME said he felt bound to oppose it, on the ground that it would injure the navigation of the river. The Admiralty had, for three successive years, opposed the passage of the line across the Clyde on that account, and he could not understand why should now withdraw their opposition.—Mr. F. MAULE said that so far from the navigation of the river being

impeded by the passing of the line across it, the first Commission that reported on the subject gave their opinion that it would not be in the least injured. The passage was above Glasgow Bridge, beyond which no craft went.—The Earl of Lincoln believed that the Admiralty must have been under some mis-apprehension when they withdrew their opposition to bill. The gentlemen who reported that the navigation would not be injured by the crossing of the river were not commissioned to report on that subject, but were appointed for another purpose. He thought the bill should be postponed for another year, although he felt bound to confess that those year, although he left bound to coniess that those who commissioned him to oppose the bill had written him to withdraw that opposition.—After a few words from Mr. LOCKHART, the house divided—For the motion, 129; against it, 19; majority, 110.—Great Western Extension.—On the motion for the consideration of the report on the Great Western (loop line for the Birmingham and Oxford Junction through Leamington) bill-Mr. LABOUCHERE presented petitions from Bath and elsewhere, stating that this company had not kept faith with the public in respect to a reduction of tolls, and praying the house to pass no measure relating to the Great Western until such reduction had been made. The hon member said that he gave no opinion on the subject himself, but that he wished to take that opportunity of giving notice that at some future time he might have occasion again to call attention to the subject.—Mr. E. Denison said this bill involved the great principle of the gauge. This measure not only extended the broad gauge, but a xed gauge. He wished to know / marked whether the Government did not intend to interfere. -Mr. LABOUCHERE hoped he was not expected to go into the important question of gauge upon the present occasion. He wished, however, to state that on the third reading of this bill he should move the omission of all clauses permitting a double gauge to be laid down upon this line.-Mr. CHRISTOPHER said that it would have saved a great deal of money and trouble if the Government had stated their intention at an earlier period. He protested also against the course which had been adopted with reference to the report of the committee of that house upon the subject. He thought they had been very unfairly dealt with.—Sir E. HAYES, as chairman of the committee referred to, very much agreed with what had fallen from the hon. member.—Mr. MUNTZ asked the President of the Board of Trade to go down into Gloucestershire and see the working of the double gauge upon one line before he decided upon this important question. He was satisfied it would be for the interests of his constituents and the public if the system were adopted.—The report was then considered, some clauses added and the bill ordered to be engrossed. -London and South-Western.—On the motion for considering the report on the London and South-Western and Southampton and Dorchester amalgamation bill, Mr. Bernal said this bill involved rather a loose principle; namely, the confirmation by the house of the purchase of shares by one line in another. As the committee, however, had passed the bill it was not his duty to do more than call attention to the circumstance.—Report considered, clauses amended and inserted, and bill, as amended, ordered to be engrossed.—Whitehaven and Furness.—On motion to consider the report on the bill for the extension or deviation line from Silecroft to Foxfield,

&c., Mr. Bernal said one of the clauses of this bill was very objectionable.—Mr. Hunson defended the measure as it stood, and the bill was considered, amended and ordered to be engrossed. June 22 .- Great Western (Branch from Slough to

Windsor) .- On the motion for the third reading, Mr. DISRAELI opposed it, on the ground that the line would prove injurious to Eton College. The South-Western had a project for the same purpose, but it was thrown out by the committee on the bill mainly on the evidence of the noble lord, the First Commissioner of Woods and Forest Would the house helieve that Woods and Forests. Would the house believe that, after this, the Great Western were supported by the Would the house believe that, noble lord in a project of the same kind? He was not there to advocate the cause of the South-Western, whose interests had been sacrificed, but he was there to advocate the interests of his constituents and of Eton School, to which this bill would do irredeem-able injury. How was it that the Government gave their support to this bill, whilst they gave the most strenuous opposition to a bill for a similar purpose? Was it because the Great Western had paid 25,000% into the department of the Woods and Forests to disturb the settlement for which the South-Western had already paid 60,000l.? There could be no doubt that the masters of Eton College were opposed to the bill, although they had been entrapped into an agreement for sanctioning it. The noble ford would rely on the two points, that the Crown had given its consent to the bill, and that Eton College did not oppose it. In

Digitized by GOOQIC

reply to that he would say that the Crown had opposed the same project last year, and if the College did not oppose it, it was because it was neglectful of its duties. The hon, gentleman concluded by moving that the bill be read a third time that day six months.—Mr. Campbell seconded the motion. The bill, if passed, would do serious injury motion. to the grounds of the college, and would prevent the boating on the river.—Col. Reid bore testimony to the patience of the committee on the bill, but he believed they came to an unsound conclusion. was sorry to feel obliged to complain of the conduct of a Minister of the Crown on this occasion. He accused the noble lord (Morpeth) of a breach of faith, and of a violation of the agreement which was entered into with the South-Western. Out of consideration to the Crown, the South-Western land of their actions of the specific of the Crown, the South-Western has been doned their actions of the specific of the crown of the specific of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the crown of the c abandoned their original scheme, and paid 60,000l. for works which were performed under the superintendence of the Woods and Forests department. But the house would judge their astonishment when an agreement between the noble lord and the Great Western was afterwards produced, by which the consent of the Crown was—he would not mince the matter—sold for 25,000*l*., to that very project which was opposed in the case of the South-Western, and which they consented to abandon out of respect to the Crown.-Lord MORPETH would leave to those who represented the interests of the Great Western in that house the task of illustrating any antecedents in this question with which that company was concerned, and he would leave the committee who reported on the bill the task of elucidating the details which were brought before them. But as a direct charge was brought against himself individually, inculpating him of breach of faith and trust, he hoped the house would allow him to offer a few observations on the question, both with regard to that part of the bill which related to Windsor, and that part of it which related to the interference with Eton College. But, grave as the charge of breach of faith sounded, he viewed it with little concern, feeling in his own mind perfectly conscious that he had acted with candour, frankness and fairness towards all the parties with whom he had successively to deal. It was not desirable to use the name of the Crown or to represent the private feelings of the Crown in that house. But when a measure was under consideration that involved the personal comfort of the Crown and the beauty of the Windsor domain, he thought the house would treat the Crown with as much respect as any other party whose property had been interfered with by railway companies. The been interfered with by railway companies. The proprietors of Windsor Castle were not anxious for further railway accommodation between London and Windsor; but the inhabitants of Windsor, feeling anxious for a direct communication between their town and the metropolis, and certain improvements for the health and recreation of the Crown being also desired by the same parties, the proprietors of Windsor, through the proper channel, intimated to the Great Western and South-Western that if they would promote the improvements in question, the Crown would withdraw its objections. He had never him-self, in his dealings with one of those lines, at all committed himself as regarded his arrangements with the other. It was said that he had entered into a conclusive arrangement with the South-Western last year. No such arrangement, however, had ever been entered into. He did not disguise, however, that he had anxiously supported the South-Western bills last year. Had he not done so, those bills would never have been passed, and certainly he felt little pre-pared for the return which they were now making him. In his evidence before the committee on those very measures he had distinctly given his opinion in favour of the line proposed by the bill now before the house. [The noble lord quoted his evidence to that effect.] He had distinctly stated on that occasion that this measure should have the consent of the Crown; and yet he was now told by the South-Western that he was guilty of a breach of faith. Now as to the circumstances of this line as they affected Eton College: he hoped he yielded to no one in his reverence for Eton College, not even to the hon, member for Buckinghamshire, over whom he had the single advantage of being an Etonian; but he thought it very possible that the authorities of Eton College, like other learned bodies, were somewhat too timid respecting the approach of any disturbing influence to a seat of learning and of educa tion. Eton College, however, as far as its men of business were concerned, was far from being opposed to the construction of this line. He held in his hand a letter from the College Registrar, repudiating all participation in the opposition to this measure, and thanking him (which was some consolation under these attacks) for the attention he had paid to the interests of the College. On a review of all the circum-

stances he must conclude by saying that he thought this bill had great claims on the consideration of the Crown and on the justice of the country .- Mr. WAL-POLE, as an old Etonian, thought it easy to show that the report of the committee upon this bill ought to be upheld. As the bill was drawn last year, the line would have passed on an embankment over the hockey fields of the school, an arrangement which would have materially interfered with the amusements, the comfort and the well-being of the school. This year in order to obviate that objection, the company had gone to an expense of 20,000l., and the difficulty was altogether removed. They were to erect 1,960 yards of viaduct; they made a considerable détour; they consented to span the river by a single arch, in order not to interfere with the boating; and having done so much, he thought the company were entitled to every consideration.—Lord H. VANE, as chairman of the committee last year, was anxious, first, to exonerate the noble lord from the charge of bad faith to the South-Western, and, secondly, to state that he felt entirely satisfied from what had been said that the interests of Eton College would not be affected by the bill.—Mr. W. E. GLADSTONE said the discussion on this bill had turned upon minute topographical circumstances, with which the majority of members must evidently be unacquainted. But, taking a higher view, let him remark that Parliament last year had given a sort of pledge to the South-Western to put them in as good a position as the Great Western. For the For the sake of their pledge, therefore, Parliament had no right to pass this bill. But looking at the question as one of convenience, was it desirable that there should be two railway termini at Windsor? or was it desirable that they should be obliged, as an act of justice, hereafter to sanction an extension of the South-Western, which would be absolutely necessary if it was to compete with the Great Western line? thought, that as a matter of convenience and of justice, they ought not to pass this bill.—Mr. F. Scott, as a director of the South-Western, wished to say that in 1847 he had pledged himself to pay 60,000l. for the very advantages which the noble lord opposite now proposed to take away from them. The college of Eton was not unanimously in favour of this bill, whilst the school was unanimously against The registrar, whose letter had been referred to, had always been the partisan of the Great Western. The noble lord told the South-Western that the relations of the Crown with the Great Western were precisely the same as last year. But two days after it came out that the Crown had entered into an agreement with that company, the pecuniary satisfaction of which was no less a payment than 25,000l. The Crown would thus profit to the extent of 85,000l. without, as far as the South-Western were concerned, offering any equivalent whatever. If it was not a gross robbery it was a gross breach of faith.—Mr. RICE, as a member of the committee, had always felt that the Great Western had the best claim to the communication with the town of Windsor. The line had been rejected only in consequence of the hostile evidence of the Eton masters. Those difficulties had evidence of the Eton masters. Those difficulties had been overcome, and he hoped that the bill would be passed.—Mr. K. Seymer observed that last year Lord Morpeth had been supposed, even by officers of the Crown, to have given evidence against this bill .house divided—For the third reading, 224; against it, 97; majority for the third reading, 127. bill was then read a third time and passed. Broad and Narrow Gauge.—On the motion that the Great Western (to confer additional powers on the company with reference to the Birmingham and Oxford Junction) bill be read a third time, Mr. LABOUCHERE said he did not rise for the purpose of opposing the third reading, but wished to state some facts. Petitions had been presented from Bristol, Hull, and other large towns, complaining that the Great Western were taking fares that they were not legally entitled to. So soon as these complaints were made he thought it right to communicate them to the company. The Great Western took the opinion of counsel, and at the same time denied that they The Great Western took the opinion were acting illegally in taking those fares. He (Mr. Labouchere) had, however, submitted the question to the law officers of the Crown, and had only that moment received their opinion, and it was in favour of the view taken by the petitioners, and stating that they might be immediately called upon to make the necessary reductions. He might thus feel it his duty to advise the house to refuse their assent to the present bill until they had made the required reductions and carried the law into effect. But considering that the communication had been only just communicated, and that it had not yet been formally laid before the house, he thought such a course would savour of hardship. He was the more disposed to allow the bill to pass since the opinion of the law

officers of the Crown had been obtained, because, if it was clearly shown that they were bound to reduce their fares as the petitioners had stated, the Government had still the means in another place of endeavouring to force them to do that before the final sanction of Parliament had been given to this bill. He now called upon them to reverse a decision which the committee appointed upon the subject of these railways had almost unanimously come to. In consequence of an address to the Crown, which was moved in the House of Lords, the question of the propriety of establishing a double gauge between Birmingham and London was referred specially to the committee to report their opinion thereon. It was thought by the House of Lords that the question was one peculiarly requiring the attention of the railway department of Government. The question was not as regarded this particular railway, but it was one deeply interesting to the whole subject of railway communication. The question of the gauges was not now for the first time brought before the house. Some years ago it was thought that a satisfactory settlement of the matter in dispute had been obtained by the passing of certain resolutions, but he could not say that the attempt had been altogether satisfactory. In the first place, the bill which affected to be founded upon these resolutions differed widely from them, and the result of the subsequent proceedings had been to re-open the question, because Parliament had since then passed bills in violation of its first principles. In calling on the house to rescind the resolution of the committee on this matter he did not do so on the simple ground that it was in contradiction of the Railway Gauge Act, but on the ground that, with their present experience, such an attempt would be injudicious and premature. That was the point on which the Commissioners and the committee were at issue. They objected, and he thought with great propriety, that there would be a great deal of difficulty in carrying out a mixed gauge on this particular line, and in the present state of their railway legislation and experience they believed that it would be altogether unwise and premature. Being himself of the same opinion, which he had entertained when acting as a Commissioner, he felt bound to state his reasons for doing so to the house. The main reason why the Commissioners recommended the postponement of the question was, that the experiment of the working of the double gauge upon a considerable line had never been fairly tried. Opportunities would soon be afforded for trying it, and he therefore did not think it advisable, in reference to public interests, to sanction so wide a departure from the spirit of the gauge resolutions by the passing of this bill without further experiments. There were two lines which had been especially. cially sanctioned by Parliament in which this experiment of the double gauge would necessarily be tried, and the result of their working would furnish them with satisfactory grounds, which they did not at present possess, for forming a sound opinion upon the The two lines in which Parliament had subject. sanctioned the double gauge were the Oxford and Rugby, which was of very considerable length, and which was now being constructed under the guardian-ship of the Board of Trade, and pursuant to the provisions of an Act which instructed the company to lay it down in such a manner as would better test the value of the experiment; the other was the Oxford, Worcester and Wolverhampton, which was also of considerable length, and on which the experiment would be equally well tried. The committee stated that there was already a line in existence, the Cheltenham and Gloucester line, which had been constructed on the double-gauge principle, and upon which trains ran over both gauges; that this line had been worked with the most perfect security; and that therefore they were of opinion that the experiment was sufficiently tested to justify the trial of the mixed gauges upon the present railway. He could assure the gentlemen composing the committee that the case to which they had referred had not been overlooked by the Commissioners. So far from it, it was especially adverted to in their report. They, however, expressed their opinion to be that this instance was wholly inadequate to test the experiment so completely as to justify Parliament in permitting it to be acted upon in respect to such a line. Upon the short line in operation there were none of those difficulties which must necessarily arise on an extensive line. The instance relied upon by the committee was a line of only seven miles in length, which was run over by independent companies. There were no intermediate stations. There were none of the difficulties arising then which must necessarily arise upon a longer line. They were not so much the mechanical difficulties that stood in the way, but many others of such a character as involved great danger and confusion One of the great difficulties was in the procuring of

Digitized by GOOGLE

proper men and signals at the several stations where quick trains passed without stopping. The moment a quick train passed it would be necessary to provide proper signals and other means to prevent accidents, all of which became serious difficulties where the line was a long one of mixed gauges. He thought that upon the Oxford and Rugby line the experiment would be tried under circumstances which would give them a result favourable to arriving at a just conclusion upon the point. This Oxford and Rugby was in the hands of the same company that was pro-moting the line now before the house. They had a great interest in the extension of the broad gauge to other lines, and if it could be seen by them that the passing of this bill at a future time would depend upon their being able to prove the complete success of the mixed gauge upon the line they now possessed, they would have a great inducement to give every facility for the proper working of the line, in the hope of being able ultimately to obtain the present bill. He believed it was the intention of the committee to have a double line impartially and equally used. He must be permitted to doubt that that object would be secured by the bill before the house. If he were asked to frame clauses to secure that object, in the face of a reluctant company, he was sure he should find it a most difficult undertaking. It was his inten-tion to move that certain clauses be struck out: but as it would be necessary for him to give notice of such being his intention, he should conclude by proosing the postponement of the third reading of the bill until Monday next, in order that he should make the motion for the due omission of the clauses.—Sir E. HAYES understood that the Board of Trade would consider it advantageous to have a competing line between London and Birmingham. The committee had examined the most eminent engineers that were known in respect to this question at issue, and the known in respect to this question at issue, and the result of the evidence induced them to think that both gauges might be adopted, under proper regulations, with the most perfect safety. The principal ground for a postponement of this bill was that of time to have the experiment of the mixed gauge properly tested. Now, if the house sanctioned the present bill, the experiment would be fairly tried fully two years before it could be tried on the Oxford and Rugby line, inasmuch as the works were in a far advanced state between Oxford and Birmingham. far advanced state between Oxford and Birmingham. Sir R. H. Inglis said, for the reasons assigned, he should support the postponement of the original motion until Monday next.—Mr. E. Denison had the honour of being chairman of a committee for inquiring into the merits of the Buckinghamshire. That line was passed by the committee upon the distinct understanding that these lines should have a narrow line of gauge to Birmingham. If then the proposition now made be agreed to by the house, the good faith of Parliament would be violated to the Buckinghamshire. He was of opinion that no such experiment as was now asked for should be put in operation until it was further tested. They had the recommendation of the Commissioners against this bill—they had the decisions of both houses of Parliament against it. Under these circumstances, he did not think they would be at all justified in passing the present measure.—Mr. MUNTZ understood it was the general rule of this house to support the recommendation of their committees. He could not therefore see any reason for departing from this rule on the present occasion. How long did the right hon, gentleman want this experiment to be tried! It had already been tried for eight months upon a line of seven miles, and every difficulty, every inconvenience and mechanical arrangement was proved to be in favour of this line. It was too much, after all his experience, to adjourn a debate of so much importance because the right hon, gentleman had not attended to his duty.—Mr. Hubson had the honour of presiding over the line referred to, and he wished to give such information as he was in possession of. From a careful consideration of the mixed gauge, he was of opinion that upon a long line it would be utterly impossible to work it, from the complication of the points. The short line upon which the experiment had been tried was placed under the superintendence of the engineer of the Midland, whose opinion was that great dangers arose at the crossings of the points. It was necessary to have a duplicate set of points. The Midland was not at all interested or affected by this line except so far as the security of the public was concerned. He held in his hand a return made by the engineer of the Midland, by which it appeared that since this line of six miles was formed with the mixed gauge, there had been four accidents, which was nearly one accident per mile; whereas, on the remaining portion of the line the average number of accidents was one to seven or eight miles. He felt bound to communicate these facts to the house, being in possession of them. With

these views he should vote with the right hon, gentleman, the President of the Board of Trade, convinced, as he was, that the public safety was deeply involved in the matter, and believing, moreover, that the proposition before the house would, if carried, lead to a great waste of capital, without conferring any advantage.—Mr. Christopher said that although the committee had not examined the engineer of the Midland, who might be considered a partial witness, they had examined the Government engineer, who was, as a matter of course, an impartial party; and the decision of the committee was an unaninous one in favour of the report that had been presented to the house.—Sir H. VERNEY said that the experiment of the double gauge already tried upon the Gloucester and Cheltenham was not hostile to its being made with success upon a longer line of rail.—The house divided—For the third reading, 147; for postponing the bill, 72; majority, 75.—The bill was then read a third time and passed.

June 23 .- Caledonian (Branch across the Clyde and Glasgow Stations).—On the motion that this bill be read a third time, Mr. WARD could not allow the third reading to pass without taking notice of the unjustifiable attacks which had been made upon the Board of Admiralty, upon a former occasion, by the hon, member for Montrose. Never had a case been more impartially and laboriously considered than this by his noble friend (Lord Auckland) and the other members of the Board : and he only regretted that the hon, member had not given notice that it was his intention to make the observations, that he might have an opportunity of replying. The facts were simply these three years ago a proposition was made to cross the Clyde with a bridge of seven arches, which was opposed by the trustees of the river, the bridge trustees, and indeed by all parties in Glasgow, and it had therefore received the decided opposition of the Admiralty. During the present year, however, every one of the circumstances had been changed. The company now proposed to carry the line across the river in a tunnel, resting upon a single pier in the middle of the stream, or in such other manner as the Board of Admiralty might direct. The only question now left in doubt was, whether there should be one arch or two arches, but the company could not proceed without the consent of the Board. The company had consented to contribute a fund of 12,000l. for the privilege thus granted to them, which sum was to be paid over to the Paymaster of the Navy, and to be applied by the trustees for deepening and improving that part of the river. Those were the facts, and he did not think a more simple or straightforward explanation could be given.

THE SECRET COMMITTEE ON COMMERCIAL DISTRESS. —This committee appointed by the House of Commons on the 3rd of December last, to inquire "into the causes of the recent commercial distress, and how far it has been affected by the laws for regulating the issue of bank-notes payable on demand," has just made its first report. The committee have already examined several eminent members of the mercantile world, including Messrs. Hodgson and Turner, of Liverpool; Messrs. Muntz and Salt, from Birmingham; Mr. Gurney, the bill-broker; Mr. Joshua Bates, of the firm of Baring, Brothers & Co; Mr. Beavan, the banker; Mr. H. Palmer and Mr. Corten of the Bent of Evaluation and Mr. Lored Lord Cotton, of the Bank of England; and Mr. Jones Loyd, Mr. Tooke, and Mr. Taylor, gentlemen who are esteemed as great authorities in monetary matters. These witnesses generally concurred in the opinion that the primary cause of the distress was the deficient harvest and the failure of the potato crop in 1846, and the consequent necessity of providing the means of payment in 1847 for the large imports of corn, &c., from abroad. Other causes mentioned to the committee as having contributed to the result were the deficient supply of cotton, the diversion of capital from its ordinary employment to the con-struction of railroads, and the undue extension of credit, especially in transactions with the East. The committee see no reason to doubt the accuracy of these opinions; the report observes that provision has already been made by Parliament for some of the circumstances referred to, and that it must be obvious that others are beyond the control of legislative enactment. As regards the policy of the Bank of England, the committee express their satisfaction at the recent change in the selection of the Governor and Deputy-Governor, "as calculated to improve the constitution of the governing body of that institution. Many of the witnesses, including the Governor and Deputy-Governor, expressed their belief that earlier steps in the autumn of 1846 and the spring of 1847, on the part of the Bank of England, might have obviated the necessity for the more stringent measures which circumstances compelled the directors to adopt in April, and might thus have prevented the alarm caused by those measures. The evidence adduced as to the effects of the Act of 1844 was contradictory, its beneficial effects, as regards the issues of the country banks, were admitted by many of the witnesses, and although some suggested an alteration of its provisions, very few contested the general principles on which it is founded. The committee, accordingly, after a careful review of all the evidence, report their conclusion that "it is not expedient to make any alteration in the Bank Act of 1844." We may observe, however, that this opinion was only suggested serve, however, that this opinion was only suggested by a small majority; Mr. Hume having moved "That the laws for regulating the issue of bank-notes payable on demand aggravated the commercial distress of Eugland in the year 1847," the resolution was put, and only negatived by a majority of 13 to 11. Messrs. T. Baring, Spooner, Herries, Ald. Thompson, Glyn, Hudson and J. Wilson voted in the minority; and the members of the Ministry, with Sir R. Peel, Sir J. Graham, Messrs. Cobden, Goulburn, J. L. Ricardo and Thornely in the majority. A similar motion, condemnatory of the restrictive clauses of the Act of 1844 relative to the issue of banknotes was subsequently made by Mr. R. Spooner, and negatived by 13 to 10, the difference being occasioned by the vote of Mr. Wilson, who voted in the majority. An attempt made by Mr. Cayley to impute the disasters in the East India trade to acts of the Legislature, which had depressed the price of colonial produce and the value of property in the East Indies, was defeated by a majority of 13 to 8. A third attempt to censure the Bank Act of 1844 was defeated by the same narrow majority of 14 to 10. The report was ultimately carried, in its aggregate shape, by a majority of 13 to 9, the dissentients being Lord

G. Bentinck, Messrs. R. Spooner, Cayley, W. Thompson, Hudson, Hume, Disraeli, Glyn and J. Wilson.-

June 21.—At the Quarterly Court of proprietors, Sir J. L. LUSHINGTON in the chair, the subject of railways in India formed a part of the business discussed.

Mr. SULLIVAN was anxious to know the views of the Court of Directors on the subject of railways in India. Since he had last addressed the Court upon this subject, a year ago, one company had become extinct, and the other two companies were in the agony of dissolution, and there was no greater prospect of having railways in India than there was four or five years ago. A valuable opportunity had been thus lost of introducing British capital into India. It was not by means of a trumpery protecting duty in favour of East India sugar that India could be beneheted, but by giving the cultivators of its produce better means of bringing that produce to market. He hoped the Court of Directors had come to some determination upon this subject, in order that India

might not be behind the rest of the civilized world in the means of intercommunication.

The CHAIRMAN said, in the first place, the information of the hon. proprietor was not strictly correct as to the three companies; two of them were extinct; the third, the Bombay Company, had at this time four months given them to comply with the conditions prescribed by the Government; and it was expected that the money required would be paid on the 24th of this month. No persons could be more desirous that railways should be introduced into India than the Court of Directors, and he thought they were in no worse situation by getting rid of two companies who could not fulfil their conditions.

Mr. G. Thompson said, no one could deny the expediency, if not the necessity, of affording the means of cheap and rapid communication in India, and although the Court of Directors had no doubt acted wisely in not falling too readily into railway schemes, he hoped that in future cases conditions would not be too rigidly exacted, so as to render it totally impossible for private companies to accept the terms offered, or to discharge their duty to the shareholders. Facilities should be afforded to companies formed in

this country, and the East India Company should not take any of those works into their own hands, but leave the construction and management of them to individuals, of course under the control of the Government.

Mr. Twining bore his testimony to the kind and judicious manner in which the Court of Directors had received every proposition on the subject of railways in India; they had, without binding parties to undertakings which they could not carry out, lent every assistance in their power to the promotion of every useful and practicable scheme.

Mr. Brunel is reported to have determined, after a survey of the ruins, on the re-construction in timber of the late bridge over the Usk, which was destroyed by fire. Appliances will, however, be adopted to obviate the inflammability of the material. The expense of rebuilding will not be so great as was originally apprehended, as the abutments on both sides of the river and the piles for the founda-tions of the piers, which formed the most expensive portion of the original cost, will be available for the new superstructure.

#### Money Market.

#### PRICES OF BRITISH STOCKS.

Mon. Tues. Wed. Thurs. Fri. 

* For account, July 14. + Ex Div.

London Stock Exchange, June 23.—The market continues very depressed, and buyers are very scarce, notwithstanding the temptation offered by the very low prices now quoted.

Liverpool, June 22 .- The market continues in a very inactive state, and prices have given way from Suplow, Brothers.

last week's quotations. Suplow, Brothers.

Manchester, June 22.—I can report no improvement whatever in our share-market. Very little business has been done during the week, and prices SAM. GRINDROD.

are still drooping.

York, June 22.—We have little variation to notice in the market. The Rev. C. Nevile's letter, which appeared publicly advertised in the Yorkshire Gazette of last Saturday, affecting the Great Northern, has caused no little sensation amongst the shareholders of that company in this locality.

GRAYSTON & EARLE.

Hull, June 22.- Flatness is the prevailing feature of the share-market, and the reduction of the rate of discount by the Bank of England has had no very perceptible effect. Hull and Selbys have realized during the week 99 and 99). A Dock share changed hands on Monday at 1,400l., which is the lowest price this stock has touched these four years.
FLINT & TOOTAL.

Glasgow, June 22 .- There is no improvement in prices since our last notice, and the business actually prices since our last notice, and the business actually done continues to be on a very limited scale. The following are to-day's transactions:—Edinburgh and Northern, new, No. 1, 45s.: Edinburgh and Perth, 16s.; Dumfries and Carlisle, 6l. 8s.; Ayr. 70; ditto guaranteed, 103; ditto, halves, No. 1, 7\(\frac{2}{3}\); No. 2, 7l. 11s. 6d.; Great Northern, 5\(\frac{1}{3}\): North British, thirds, 49s. 3d.; Scottish Central, 25\(\frac{1}{3}\); Great North of England rugshage 9 of England purchase, 9.

BUCHANAN, AITKEN & Co.

NATIONAL ASSEMBLY OF FRANCE.

June 22.—French Railway Expropriation.—The National Assembly commenced the discussion on this important bill.—M. Moris, the first speaker, contended that the measure was neither just nor useful, and ridiculed the idea of assimilating the companies to aristocratic institutions. The Government had applied in 1838 for the credits necessary to execute the railways itself, but the Chamber had refused this, and decided that they should be constructed by private industry. The Government, he contended, had no right to expropriate the companies until the expiration of fifteen years, granted as a guarantee to capitalists. Whenever the State expropriated a citizen, the price stipulated was paid in money. The mode substituted by the Minister was founded on a false basis, and a violation of solemn contracts. The State increased its debt, the operation was oncrous for the present and doubtful for the future, and would inflict a death-blow on the right of association.

—M. Galy Casalat supported the project, because the companies would be unable at this moment to raise the 500,000,000f, necessary for the completion of the railways. The working of the lines by the State, in his opinion, would not be impracticable, but easier than by the companies. He proposed to declare the resumption of the railways by the State a measure of public utility, and to indemnify the share-holders by means of railway bonds. He divided the lines into three categories. Those in construction on the 24th of February were to receive four-fiths of the capital usefully employed; the second class com-prised those terminated at that date, and producing an interest of 5 per cent. and upwards, the interest and capital of which were to be capitalized, and the amount paid the holders in railway bonds. The lines of which the dividend did not exceed 3 per cent. on the 24th of February are to receive three-fifths of the capital usefully expended. The Government, in order to terminate the railways, to compensate the shareholders, to pay the Treasury bonds and the investments in the savings banks, is to be authorized to issue railway bonds, to an amount to be subsequently fixed, and the revenues of the lines, which M. Galy estimated at 40,000,000f. annually, were to serve to pay the interest on those bonds, 2 per cent. The railway bonds are to be forcibly current for their nominal value.—M. CORDIER combated the measure as a violation of the right of property and of solemn contracts, as immoral, impolitic, improvident, antirepublican, ruinous, as the greatest obstacle to the improvement of the condition of the labourers and the establishment of a real Republic.-M. MATHIEU DE LA DROME supported the project .- (Left sitting.)

Digitized by GOOGIC

TO CORRESPONDENTS

If "An Engineer" will refer to Mr. Rastrick's Report of October 1846, he will there see the facts stated by us. E. M. Colchester. — Unwards of 720 ft. in length. A SHAREHOLDER should not allow any such promises to

deceive him.

A SUBSCRIBER, Enfield, shall receive an answer shortly.

The letter of Scotus (recently received), on the value of
Caledonian stock, is, we conceive, premature. No just estimate can yet be formed of the actual value of a newlyopened line, and which has yet to receive the traffic of
several feeders, however correct the authorities referred to.

Recrived: II. D.—A. M.

# Railway Chronicle.

LONDON, SATURDAY, JUNE 24.

The directors of the LANCASHIRE AND YORK-SHIRE have received the sanction of the shareholders to the immediate consolidation of their share capital. Any means, said the chairman, that could bring up their stock to nearly its proper value, so as to enable those to sell who wanted the money to meet engagements for calls on other stock, would be a great advantage.

At the special meetings of the shareholders of the BIRMINGHAM AND OXFORD JUNCTION and the BIRMINGHAM, WOLVERHAMPTON AND DUDLEY, the bills for confirming the agreement of November 1846, for the sale of the line to the Great Western, &c., and for the loop line from the Birmingham and Oxford Junction,

through Leamington, were approved of.
The shareholders of the WISHAW AND COLT-NESS have specially sanctioned the two bills now before Parliament, for deviations and improvements of the line, and for the sale of their

property to the Caledonian.

The Report of the Arbroath and Forfar set out with allusions to the present working of the line by the Aberdeen. After paying the guaranteed dividend of 5 per cent. on the guaranteed stock of 40,000l., the directors recommended a dividend of 3 per cent. on the other stock of 2,863l.

The directors of the SAMBRE AND MEUSE, in their Report to the half-yearly meeting of the shareholders, explained the causes for the non-realization of the promises originally put forth. The contractors had been obliged, during the commercial distress, to seek relief from the company, towards the prosecution of the works. Besides this, the uncertain character of the works, disputed possession of the land, and the serious depreciation in the Belgian bonds, have for a time sorely disturbed the flattering prospects of the concern. An issue of new shares is to take place at once, in order to obtain the required additional capital, and two tenth preferential shares, to receive 8 per cent., are to be offered to every holder of three original shares. A committee is to be appointed to make those inquiries which the directors in their printed statement appear fully to court. The appointment of Mr. Waddington, of the Eastern Counties, to a seat at the directory, was hailed with applause.

The East India Company agree to allow the directors of the GREAT INDIAN PENINSULAR a period of four months to procure "an efficient list of registered shareholders." The deposit of 30,000l. is to be paid into the hands of the East India Board, and the necessary capital of 500,000/., in shares of 5/. each, is to be at once raised for completing the first portion of the line between Bombay and Callian. This arrangement shows a spirit of concession, which, though fairly deserved, was hardly to be anticipated from the previous hard terms insisted on by the India Board.

In spite of the apparent adverse inclination In spite of the apparent adverse inclination of Ministers on the broad-gauge question, raised 194,693., giving 61l. per mile.

of the Birmingham and Oxford Junction, the Great Western party, it will be observed, carried the day; and so they will ever succeed, while the narrow-gauge champions for the most part look idly on. To our mind it was a sham fight; the tendencies of Mr. Labouchere being sufficiently well known to warrant such an assertion. We shall probably say more about this next week.

The following is the business of the COMMIT-TEES of both Houses carried on during the past week. In the Lords-preambles proved:

Bristol and Exeter (Glastonbury Navigation, &c.). Kendal and Windermere (Amendment).

Manchester, Sheffield and Lincolnshire (Station at Sheffield), (Sheffield Canal purchase), (Ashton Canal purchase), (Midland Junction and Barnsley branch).

Midland (Alterations, &c.).

Newcastle and Berwick (Main line improvement). North British.

North-Western (Deviations, &c.). Vale of Neath (South Wales subscription). Waterford, Wexford, Wicklow and Dublin.

Not proved:

South Yorkshire, Doncaster and Goole.

In the Commons—preambles proved:
London and Blackwall (Connecting branch).
Manchester, Buxton, Matlock and Midlands Junction.
Monkland and Kirkintilloch, &c. Royston and Hitchin (saving the Cambridge exten-

Not proved:

Direct London and Portsmouth (Deviation).

The Secret Committee of the House of Commons on the late commercial distress have just published their first Report; and we congratulate the railway interest on the important fact, that notwithstanding the great outcry which was raised, imputing a large share of that distress to the railway expenditure, the committee have affirmed the contrary to be the case, by a majority of 9 to 6, in the following paragraph: -"That if railways had caused the commercial distress, it could only have been by their absorbing part of the capital usually devoted to manufacturing and commercial production, which must probably have led to a diminished supply of goods, and to a rise in their price, which symptom failed to exhibit itself, notwithstanding a scanty supply of raw materials. Neither did the rate of interest increase until the Bank of England commenced its course of restriction early in 1847, to meet the drain of bullion for the payment of foreign corn; whilst, in contradiction to the hypothesis that railway investments caused the scarcity of money in 1847, there is this remarkable fact, that the rate of interest in the discount market is at this moment only about 3 per cent., in spite of railway calls being as large as ever." This declaration is so confirmatory of our previous conviction on the subject, that we think it desirable to publish the names of the hon, members who formed the majority, viz., Mr. Chancellor of the Exchequer, Sir R. Peel, Messrs. T. Baring, Cobden, Beckett, Labouchere, J. L. Ricardo, Thornley and Home Drummond. We may add, that all the witnesses examined by the committee agree in designating the famine of 1846 as the primary cause of the late convulsions.

From our official returns it appears that the amount of traffic for the last (Whitsun*) week, on 3,807 miles of railway, was 196,954/., thus accounted for:-104,143/. for the conveyance of passengers only, 46,836/. for the carriage of goods, and a remainder of 45,975l. for passengers and goods together, not respectively apportioned; being an increase of 30,843l. over the

on the third reading of the bill for the purchase | corresponding week of last year, when the mileage was 3,016. The average earnings per mile were 52l., whilst in 1847 they were 55l.

> WHAT ARE THE CAUSES OF THE EXISTING DEPRESSION OF RAILWAY PROPERTY?

The aspect of railway affairs has sadly changed since Mr. Morrison propounded his grand scheme for their better regulation. At that period, the most calculating men were fully impressed with the notion that any railway would pay 5 per cent., and the main lines had capabilities of which it was hardly possible to overrate the advantages. The current has now set in an opposite direction, and the same calculators seem equally certain at present that no railway is to pay at all. Shareholders have become panic-stricken, and by their eagerness to sell have made confusion more confounded. No doubt, much of this anxiety to realize was caused by foolish speculation; but it may be well to consider whether there are sufficient reasons for this distrust and suspicion, which it cannot be denied at this moment hang over railway investments. Events totally unconnected with their internal economy have largely contributed in bringing railways to their present position. The autumn of last year witnessed a money pressure of unparalleled severity, and the mercantile part of the community more especially were reduced to absolute prostration. Scarcely was this tyranny overpast, when we were astounded by the political earthquake, and in rapid succession the most firmly-scated Governments, to all human appearance, were either overturned or shaken to their centres; even now it is impossible to form any rational conjecture as to the turn matters may take. External causes therefore appear to have lessened the value of railways to no greater extent than every other species of property which is dependent for revenue upon the prosperity of the country in which it is situate. In France, where the alterations have been most violent, the falling off in the traffic on several of the lines has been appalling, and we must also allow for the apprehensions justly caused by the barefaced attempt of the Government to appropriate these works to their own uses. In Great Britain, however, considering the evil days on which we have fallen of late, there seems no good reason to apprehend dangers which may not be surmounted by energy and prudence. The mainspring of the system seems sound, and if trade revives, a proportionate advance in the weekly returns may be fairly anticipated. We must therefore look for other reasons beyond the accidental pressure of commercial and political excitement to account for the existing collapse. The rashness and indiscreet zeal of Directions we think have greatly tended to produce the suspicions now in exist-We need hardly remind our readers that we long since urged a more active surveillance on the part of shareholders, and pointed out the folly of trusting everything too implicitly to directors, who, it may be, leave all the real working to an acute secretary, a talented but crotchetty engineer, and a clever lawyer. Is such a combination impossible or even unlikely? Can any reasonable man venture to say what amount of damage might not be effected by the misdirected energy of such a body, not only to their own corporation but to every other with whom unfortunately they come into collision? It would be bad enough in the best of times, but if in a period of difficulty and distrust like the present a small company made default, the effect would be disastrous to all, and we need say no more of the necessity of proprietors looking closely to the management of their own interests. Unluckily from apathy,

Digitized by GOGIC

distance from the places of meeting, and many other causes, it is difficult to rouse men, even when their own pockets are likely to suffer, and so the evil creeps on. The grievous expenses already incurred in legal and parliamentary contests and various other ways are irrecoverably gone-they have added so much to the cost of the plant—but to remedy these evils proprietors must bestir themselves and enforce economy with efficient accommodation,-an active and thrifty management is the only palliative for the blunders already committed;—if the returns cannot be increased, the expenditure must be diminished, but still better, if both objects can be carried out. A small portion of the public may be gratified at going 60 miles an hour with leviathan engines and saving halfan-hour in a journey of some hundred miles; but we suspect this system has been suicidal to the true interest of railways, and will ultimately prove injurious to the public themselves; -at any rate, it is a question of grave import, and has not yet received a practically satisfactory answer. May not railways discover too late that with an increased expenditure they have an attenuated exchequer? The creation of preference stock must likewise produce a result that will ere long tell pretty sharply, though perhaps now there is no other mode of meeting debentures and engagements falling due; but the difference between 4 and 6 per cent. amounts to a large item, and is taken out of the cream of the profits; a falling revenue may likewise add to the difficulties; but though we put these facts, disagreeable as they are, fully and fairly before our readers, we still hold that the dangers are to be overcome. If the returns do not justify the present dividends, let them be reduced—we had rather see an honest reduction than an idle attempt to bolster up rates not borne out by the truth. Financial juggling must be discovered sooner or later, and in the end the temporary relief will be dearly paid for. We trust, however, that, notwithstanding the present gloom, a brighter time may yet open upon us, and perhaps at no very distant day. We feel convinced that without any material increase of the working power of the existing railways, a large developement of traffic will be made in various ways; and we look forward more especially to the application of steam locomotion to live stock, agricultural produce, and the interchange of soils and manures, to an extent that has not at this moment been contemplated, and which must tend enormously to the advancement of the national prosperity as well as that of the interest we more particularly advocate.

#### PARISH RATING OF RAILWAYS.

The manner in which railway companies are victimized by landowners, must be tolerably well known to all who have ever locked at the items "land and compensation," in a railway capital account, and "parish rates," in a traffic account. With respect to this latter, I am seriously afraid that unless some alteration be made in the mode of assessment, passenger duty and parish rates together will, in the case of many railways, leave a nett revenue barely sufficient to pay the debenture holders, while the poor shareholders will have nothing left them but the grim satisfaction of having subscribed their money for the benefit of the country at large, and of the landowners along the line in particular. I had, however, no intention of addressing you on this subject, at all events at this moment, but from the circumstance of a visit which has just been made to me. I am connected with a line of railway, 200 miles distant from the metropolis, which on the 1st of May was opened for a portion of its length, more on account of the facilities which it would afford to the local population, than from any emolument that was expected to be derived from it, the

line being a through traffic line-(I need hardly say to you as a railway man, that it is only the surplus beyond a certain amount that forms the profit of a railway, any more than of many other things). Well, sir, just now the overseer of a parish through which this railway passes, called upon me here in London to state that he had been sent up to town officially to arrange with me the amount per mile at which the company should be assessed, as they were about to make a 2s. rate (and I dare say have been deferring the rate in order to give us the benefit of Lord Denman's law). Now it does seem to me passing strange. when directors are studying how to reduce expenditure, by discharging some of their servants and mulcting others of a shilling of their wages—which were little enough at the best—that they should not take some steps to secure a more just mode of assessment than that which now obtains, by which thousands and tens of thousands of pounds would be saved to the company, and which might be expended, rather than in the way it is now done, in better remunerating their servants and in providing for them (by a sick and superannuation fund) something more substantial than workhouse allowance in sickness and old age. There are many plans by which the assessment might be effected, which will suggest themselves to parties interested in the matter. will instance one that appears to me just towards all You are, I have not the least doubt, aware that while a line of railway is in progress of construction, the company are bound by their Act of Incorporation to pay the parish rates for the property taken by them, upon the amount at which it was previously assessed. Here then is a starting point; let the existing rating form the basis of future assessments. So long as shareholders do not derive a dividend exceeding 3 per cent, per annum let the assessment remain at its original amount; when the dividend is at the rate of 4 per cent, let the assessment increase in the ratio of 4 to 3; 5 per cent., 5 to 3; 6 per cent., 6 to 3, or double, and so on. Do, pray, urge upon railway companies the imperative necessity of combining for the purpose, if not of taking up the plan here proposed, of at least seeking some alteration in the grossly unjust plan at present adopted. I will just add with respect to passenger duty that it would be a far fairer mode of taxation than the present one, were Government to make a carrying tax of it, that is, payable upon the nett profits instead of upon passenger receipts_the latter from some of the trains on many lines, especially during the winter months, yielding, not a profit, but a loss. London, June 20.

#### HULL OPPOSITION TO GRIMSBY DOCKS.

Although signally beaten in the Commons Committee, I see the Hull corporation are bent upon another combat before the Lords. Notwithstanding this corporate blindness to its own best interests, I am prepared to show that the feeling of the Hull public towards Grimsby is hourly altering, as the antiquated notions of the people are giving way to wider and juster views. At first it was a feeling of unmitigated hostility—as the project was not thoroughly comprehended. The projectors were thought to be fools—and so were allowed to proceed. Intentions have now become palpable facts; and it is seen that the projectors are neither fools nor The inhabitants of Hull, I believe, are now friends to the scheme, as they see the immense importance the whole system will be to them. There is, however, still an influential party against it_the holders of Hull Dock property. These shares were originally, I believe, 500L each, and have been worth 2,000%. It has long been a favourite investment with the money people there :- and the holders are the persons who fill the civic offices and positions of influence in the town ;-hence the double motivethe interests of the town and the stability of the value of dock property versus the town. Now I am satisfied that these interests are one, and that it was a physical impossibility to protect them otherwise than by the system of railway and docks. For Hull to have stood still would have ruined both-and on the north side of the Humber, Hull could have done nothing. Nature has prevented this,-and, if it had been otherwise, what they might have done would not have availed. In old times, rivers deterwould not have availed. In old times, rivers determined ports—now, railways approaching suitable ment. In this way the lease will be virtually carried

havens on the coast will be equally powerful in determining them; and if the Hull people will only look at the Hartlepool Railway and Docks, on the north, at the railways to Boston, to Wisbech, to Lynn, and other places, on the south of the Humber,-how, I ask, could they have retained their commerce but for the system they oppose? If the commerce of the Humber is to be retained in the hands of the Hull interests, it can only be so by the aid of Grimsby-for the merchants of Hull will be merchants of Grimsby. Hull is treated as the metropolis of North Lincolnshire, and the railway will bring ten customers to the shopkeepers where they had one before. These views are spreading,—and I believe, were the town canvassed, the Manchester and Lincolnshire scheme would have a majority in its favour. But the owners of the dock property, like their dock gates, will only admit ideas of a small size.

J.

#### Gossip.

Mr. Dodd gave notice of a motion in the House of Commons for a return of all the existing railway amalgamations in Great Britain and Ireland, and amagamations in Great Britain and Training, any notices given this session for the amalgamation of companies, and a map, with colours, to distinguish the amalgamation lines.

The Hull papers report the importation of an unusually large quantity of cherries, new potatoes, cucumbers and green peas into that port during the last week, besides the accustomed importations of cattle and sheep. Instead of making the slow voyage up the Humber to Hull, with such perishable articles as fruit, it is expected that the vessels will unload at once at GRIMSBY, as soon as the railway system in connexion with the Midland and other lines is brought to that port. The landing at Grimsby will make, under the most favourable circumstances difference of at least twelve hours in the transfer of fruit, &c. from the port to the consumer.

During the Whitsun holidays the EASTERN COUN-TIES ran excursion trains, filled with the country folks from the East Anglian districts. The train on the 12th inst. was propelled by two engines, and con-sisted of no fewer than fifty-three carriages; of these, seventeen carriages belonged to the East Anglian Company. It is, says the Railway Record, the first thing of the kind carried out by the Board, and we are pleased to see the enterprizing spirit pervading the management of that property, as, by introducing into their locality a taste for the luxury of travelling, the receipts must be gradually increased, and the profits of the shareholders augmented in a like proportion.

It is rumoured by the Liverpool Allion that, as soon as the works in Holyhead harbour are completed, the Admiralty intend that port to be the station for the West India mail steamers, as being the most central in the kingdom, instead of Southampton. This is good news for the enterprizing directors of

the CHESTER AND HOLYHEAD.

The inhabitants of Tiverton already complain of the high fares on the recently opened branch of the Bristol and Exeter.

The requirements of a railway when detailed with any minuteness appear absurd; for instance, three millions of bricks, says the Railway Record, will be requisite in the formation of a viaduct of 300 yards, in progress at Brierly Hill, on the Oxford, Worderter and Wolverhampton line.

The Scottish Railway Gazette, in an article on the adverse decision of the Commons on the lease of the Scottish Central, thus puts the present position of the company. "As far as the Southern Companies on the one hand, and the Scottish Central Company on the other, are concerned, the agreement to lease still subsists, and the agreement to work the line, of course, also subsists. These contracts are held to be independent of any Act of Parliament-that is, legal and valid without an Act, as far as they go. An Act of Parliament is no doubt necessary to complete the lease, and transfer the line; but an agreement is all that is required to bind the Central Company to grant the lease; and this agreement is not affected by the failure of the leasing bill, as it does not in any way depend on such a contingency. Therefore both parties now stand precisely as if no bill had been applied for. As the agreement, however, binds them again to apply for a bill in the next session, the same course which was adopted preparatory to the present session will be taken next year by the contracting parties. The effect, therefore, of the rejection of the bill is simply to postpone the measure for another twelvemonth. In the meantime, the Central line will fall to be worked by the Southern Com-

Digitized by GOGIE

out by the companies, without an Act; so that its advantages may be secured, according to the views and intentions of the parties."

In noticing the disturbance at Drury Lane Theatre, the Commerce asks "What is the motive of so unaccustomed a course of proceeding on the part of our neighbours—we mean of a portion of our neighbours, for all reasonable people in England have hastened to protest against the outrage?" and thus answers—"The motive? Good Heaven, it is simple enough! Vandals, whom we are ashamed to own as our fellow countrymen, drove away, after the 24th of February, hundreds of English workmen from the French railroads. A few still remain, but their turn wi!l probably come to-morrow. Is it surprising, after such acts, that the English think proper to pay us off in the same coin? For our own part, we are only surprised at one thing, highly honourable to England, and that is, that so excellent a system of reprisal has been put off so long. There are in London thousands of French workmen of all classes; only let this Huron liberalism continue a little longer, and we must expect to see them treated like the company of M. Hostein. When, then, will the soi-distant workmen of our country understand that there is an intimate dependence of all nations on each other, and that to injure the interests of a single one is to wish to injure

The line from SYDNEY to GOULBURN, New South Wales, a length of 132 miles, has been surveyed; the cost of construction is estimated at 2,100*l*. per mile.

#### Reports of Meetings.

SAMBRE AND MEUSE.

June 21.—Half-yearly Meeting, London.—Mr. W. P. RICHARDS in the chair.

Mr. CUMBERLAND, the secretary, read the Report, which stated that the directors have the satisfaction of announcing that the Belgian Legislature has granted an extension of time, till the end of the year 1851, for the completion of the Sambre and Meuse. The com-pany are thus relieved from the obligations of the original concession to complete the same in March 1849. While the directors acknowledge this favour conceded by the Belgian Government, they cannot conceal from the shareholders their difficult position from recent Continental events. Although in Belgium the existing liberal institutions of the country have been maintained in a most patriotic spirit, it is impossible to deny the commercial difficulties, the suspension of industrial enterprizes and the suspension of public as well as of private credit, which have been produced by political events in adjoining countries. As these most unforeseen events have occurred since the last half-yearly meeting, when the country was beginning to recover from a financial crisis, the directors must claim some indulgence if their expectations have not been fully realized, and for the present disappointment to the shareholders The undertaking was originally based upon plans and estimates furnished by Belgian Government engineers; the present contractors, from whom the grant was purchased, agreeing to complete the works according to the original plan, at a cost which, with the plant, interest of capital and other contingencies, amounted to 620,000l., to which sum the capital was limited. Mr. R. Stephenson, however, suggested many important alterations, in order to give full development to the resources of the country. These changes were proposed and adopted at a time when there were prospects not only of a large and increasing local traffic, but of the line becoming a great trunk communication from Belgium and Germany to the north-eastern provinces of France, which sub-sequent events have postponed. The alterations consisted chiefly in making a double instead of a single line over a great portion, the substitution of locomotive power on the branches destined in the original project to be worked by horse power, the improvement of the curves and gradients, the adoption of much heavier rails and of a more substantial character of work in the bridges, viaducts and works of art. These alterations were, together with the increased estimates, formally sanctioned from time to time. The directors therefore continued to employ the capital as called up in such a way as they con ceived most conducive to the interests of the com-pany, devoting it mainly to the execution of the works on the first section; but, under the impression that no impediment would occur in the completion of the whole line, a sum of 80,000l. was expended on the heavy works of the second section. Had the directors anticipated the financial difficulties of the past year, or the late political events, they would have regulated in a different manner the distribution of the funds. The alterations in the construction unavoidably led to a change in the arrangements with the contractors. The first contract for the

execution of the works at a fixed sum was altered on equitable terms into one of measure and value, the schedule of prices being based on those of the original contract, and hence has frequently arisen the difficulty of forming exact calculations of the expenses, until ascertained by actual execution of the works. The agreements with the contractors have been further modified on different occasions. The last important alteration was effected in January of this year; at that time, owing to various disappointments occasioned by the retarded operations, to the numerous failures and the consequent withdrawal of banking facilities which the contractors had hitherto obtained, they found themselves in an embarrassed position, and, without the intervention of the company would have been obliged to suspend their payments The directors made a careful investigation into their financial resources, and having received an estimate from their engineer of the cost of completing the line to Morialmé, considered that they had sufficient funds, after granting the required assistance to the contractors, to open the first section for traffic. They then investigated the securities offered by the contractors for the advances required, stipulating for the abandonment of two objectionable clauses in the contract, and the repayment of the advances at a period when it was probable the works on the section would be These transactions were submitted to, and their adoption, for various reasons, strongly recom-mended by the best legal advice in Brussels; and in following this course, the directors believed that without incurring any undue risk they were avoiding a catastrophe which would have been most prejudicial, and indeed almost fatal. The directors have no reason to doubt the soundness of this arrangement, or its ultimate advantage to the company, although it has proved in the result, that such advances having been made, they have not, by reason of the increased ex-pense beyond the estimates submitted to them, and other circumstances, the means of completing the line without further capital. Owing to the heavy and uncertain character of the works, the cost will exceed the estimate; moreover, the extra expense consequent on the slips in the tunnels, and some other matters in dispute, have, by the decision of the arbitrators, been thrown on the company, contrary to expecta-tion. These expenses, together with the serious de-preciation in the value of the Belgian bonds held by the company, have not only absorbed the surplus expected after opening the first section, but it will require a sum of about 20,000L, beyond the funds at actual disposal, to complete and open this part. The Board are therefore under the necessity of now raising additional capital, which they had hoped to be able altogether to postpone until after the opening to Morialmé. In order to raise the sum required, and at the same time leave a disposable margin, it is proposed to issue to the holders of existing shares, two-tenth shares for every three original shares. That such tenths shall be issued on payment of 1l., and shall be liable to further calls to the extent of 1l. more; and that they shall be entitled to a preferential dividend of 8 per cent. on the sum paid upon them in priority to the original shares. The directors, in conclusion, have to state, that if it would be a satisfaction to the shareholders to appoint a committee to examine the accounts, and to report more fully on their position than can be conveniently done at a general meeting, they will meet such a committee in a friendly spirit, and afford every possible facility to their inquiries.

Attached to the directors' Report is one signed John Piddington, the secretary in Belgium, which estimates that the traffic return on the first section of 24 miles will be 315*l*. per week, from which is to be deducted for working expenses and maintenance of way 190*l*.; and proportion of expenses now forming part of the construction account, but eventually to be carried to debit account, 30*l*. weekly, making 220*l*., leaving a weekly surplus of 95*l*., or 4,940*l*. per annum.

(For Engineer's Report sec Official Papers.)

The statement of accounts showed the receipts at 624,686l. 12s.; expenditure, 568,748l. 15s. 10d.; balance, 55,937l. 16s. 2d.

The Chairman said that, unfortunately, the anti-

The CHAIRMAN said that, unfortunately, the anticipated results had not yet been realized, but the same elements of success remained—there was the same ironstone and the same coal to be carried through a most populous and industrious district; and if Belgium were restored to its former prosperity, he saw no reason to doubt that all would be realized. As in all cases cause was followed by effect, so it was to be hoped as the causes of depression were temporary, the effect would be so also. Belgium had been visited by a severe famine, which was followed by a monetary crisis, felt everywhere. Then came the French revolution, which was so sudden and unexpected that no person could prepare for it, in-

volving in ruin and bankruptcy many of the largest houses in Belgium. The contractors found they must altogether cease the work or that the directors must endeavour in some way to render them assistance, in order to insure their further prosecution— and the directors felt that they had better adopt the latter course, feeling assured that that would be a steadiness of the people might be relied upon. The country had shown itself loyal to its constitution—the people had steadily followed their work—and the erality with which the monarchical Government of Belgium had treated the railways contrasted with the act of confiscation and spoliation about to be attempted by the republican Government of France. and augured well for their future prosperity; because if, under present circumstances, that Government was disposed to render them every assistance he was sure that they need never despair of its being con-tinued. There were present in the room three Belgian shareholders, who were anxious to take part in the proceedings. He believed that there had never been any great works carried forward in which they did not have to regret that there had been some things done which ought not to have been done, while others which ought to have been done had been left undone; and that was more particularly the case where the works had to be carried on in a foreign country, and the directors were consequently compelled to rely on the reports of others. Agents were apt to be too sanguine, and, taking a great interest in the progress of the works, were not so careful in sending information as they ought to be, while the contractors, being on the spot, and acquainted with the laws of the country, were prepared to take ad-vantage of every circumstance that might arise in their favour. He admitted that errors had been committed, but he believed that their extent had been much exaggerated, and if the shareholders appointed a committee to inquire into their affairs, as the directors invited them to do, it would be seen how much they were amenable to blame in the course they had pursued. He certainly saw that they would have done better if, when they had determined to enlarge their railway, they had also resolved on en-larging their capital. He believed that they were also wrong in the first instance in having a prejudice in favour of the employment of an English engineer. At the time when that officer was appointed there was great difficulty in obtaining one, and the gentle-man who was selected—though he was highly recommended and was most industrious and painstakingproved not to be equal to the task he had undertaken, neither was the gentleman who was sent out as his assistant. In consequence, a great deal of valuable time was lost, and, after the lapse of nearly a year, it was determined to appoint M. Grandvoir, a Belgian engineer, who had often been mentioned in that room in terms of praise. M. Grandvoir was not only an engineer of eminence, but he was well acquainted with the habits of the people among whom the works were to be carried on, and he (the Chairman) believed that had he been appointed in the first instance, many thousands of money, besides much time, would have been saved. The main objects a committee would have to inquire into, if appointed, he expected would be, the causes which had led to the postponement of the opening of the first section of the line, and the difficulties in which they were placed with respect to the want of capital. They would also ascertain what would be the cost of working the first section of the line, and the tolls to be expected from it; and also what would be the estimate of working the whole line, and the tolls to be expected if they should be led hereafter to complete it, and Belgium resume its wonted prosperity. With regard to the opening of the first section, the directors had been misled—had been misled by the contractors and agents on the spot—but it was but justice to say that the slips in the tunnels and the greater expenses of the earthwork than had been expected, which had embroiled them in disputes, could not have been anticipated. That great difficulty had been overcome, but the extra expenses it had imposed, and the difficulties of the times, had prevented the opening of the line to Morialme, as had been expected. With regard to their financial difficulties, when the directors received the statement of M. Grandvoir of the extra expenses which would be incurred, they were taken by surprise, as they had received no com-munication from Brussels to lead them to suppose that they would be necessary; and when the directors visited Belgium in January last, they had every reason to suppose that they had ample funds at their command to finish the line, and had they not thought so, they would not have allowed any expenses to be incurred on the other sections. They had now stopped the further prosecution of all works except on the

first section, so as to concentrate their difficulties.

Digitized by

There was one point to which he would now allude. The first section was nearly completed with the exception of the hard cutting at Vogence, and, small as that was, they had not the money to complete it; and unless the proprietors could be induced to come forward with the necessary funds, it would be found that all the capital hitherto laid out was dead and useless. If the money could be obtained, they would be enabled to complete the first portion of the line, of about 24 miles in length, and bring into immediate or about 24 miles in length, and oring into immediate working the best portion for mineral traffic. When that portion was completed, they would have the opportunity of pausing for a time, and considering what was best to be done with regard to the remaining part of the line. The directors had always had it in contemplation to make that pause, with a view of seeing what inducements the traffic on the first portion would hold out to the public to induce them to find the money to go on with the remainder. Seeing the necessity there was for raising additional capital, the directors proposed that it should be done by preference shares; and he hoped that the pro-prietors would see the necessity of assenting to the proposition, as the property could not be brought into profitable working, and the whole 20*l*. per share already paid must remain unproductive unless the small additional sum now required was raised. He could not conclude his observations without expressing his regret that they had not been so successful as they had anticipated; but he did not think their position by any means hopeless, as the elements of traffic were still in existence, and they only wanted the means of opening the line to bring them into operation. Before he sat down he had to observe that the directors had elected Mr. D. Waddington, of the Eastern Counties, as a member of the Board, in the room of Mr. Hayter. He moved that the Report be received.

In answer to questions from Mr. FISHER-

The CHAIRMAN stated that the last half-year's interest had not been paid to the shareholders upon the capital called up in consequence of there not being sufficient money in hand to pay it with. The directors had, however, been paid their allowance to the 31st of March—the period when the payment of interest was stopped—but they had received nothing

since that time.

Mr. Fisher thought that the directors ought not to have taken their allowance when they could not pay the shareholders their interest. It appeared almost as if the last call had been obtained under false pretences, for the interest had been paid until the full amount of 201. was called up, and then it

ceased.

Mr. Craddock wished to know what was the aggregate amount paid to the directors, and whether that amount included travelling expenses. The Chairman replied that the travelling expenses

was a separate item, and, as far as concerned the directors, was very small, as that item, of course, comprehended the expenses of all those travelling on the business of the company. The annual amount paid to the directors, of whom there were seven, was ,500l., but 800l. of that sum was paid to Mr. Cubitt, the resident director.

In answer to a question of Mr. Lindo

The CHAIRMAN said that Mr. Cubitt had also 800t.

a year as resident director to the West Flanders, but
he was not aware that he was a director of any
French company. The engagement of Mr. Cubitt French company. The engagement of Mr. Cubitt was only for a limited time, and would expire in November next.

Mr. LINDO must oppose the reception of the Report in consequence of its being so inconsistent with that presented to them at the last meeting. It was then stated that they had 36,000l in money, while it would require 58,000l to complete the line, so that a portion of the last call would be wanted. Now, the whole of that call had been paid, and it was found that there would not be sufficient to complete the line without creating new capital. At the last meeting, too, they were told that there would be no loss to the company from the falling in of the tunnel beyou a delay of thirteen weeks in the opening, while it now appeared, from the Report of the engineer, that it had cost the company 73,000f. Again, it appeared that they had had to pay extra to obtain better bricks than those originally employed by the contractor. Could be accounted that the directors. contractors. Could it be conceived that the directors —as men of business—knowing that the work was to be done under the inspection and to the satisfaction of a Government Inspector,—could enter into contracts without providing that if bad workmanship or had materials were completed as a part to meet or bad materials were employed, so as not to meet with the approbation of the Inspector, the loss should fall upon the contractors? But such appeared not to have been the case; and the directors, with that bon-homie which distinguished them, had come forward to bear a portion of the loss.

Mr. Copping must protest against the reception of the Report. Before agreeing to raise an additional 40,000l., he thought they ought to look at the position in which they now were. 520,000/, had been already expended on the first section of the line, and an addiexpended on the first section of the line, and an additional 20,000*l*. was now required to complete it. In addition to that, 80,000*l*. had been expended upon the second section, so that they would have a total expenditure of 620,000*l*., for which it was proposed to open 24 miles, or a little more than one-third of the line. He thought it but fair, before calling upon them for additional capital, that the directors should furnish them with something like an estimate of what would be the cost of the whole line. It appeared to him that a more unsatisfactory statement than the Report presented that day had never been brought before any meeting; and that after subscrib-ing the additional capital they might hope to have traffic sufficient to pay them the 8 per cent. preference dividend, and no more. If the line was completed, and it cost 1,000,000l., as it was fair to presume it would, he could not see that they could ever obtain a traffic to pay them over 1 per cent.

Mr. Waddington wished to explain to them how it was that he appeared before them that day as a director. Up to February last he was totally unconnected with the line, but he was informed by a friend of his in the direction that they were about to open to Morialmé, and he was asked to join the direction, with a view of going over to Belgium and giving the benefit of his experience to consolidating the working staff. Being assured that the directors had plenty of funds in hand to complete the line to Morialmé, he thought he should be placed in an enviable position in being allowed to assist in developing a large traffic; and, after thinking over the matter, he consented to join the direction and to go over the line. He had not received 10l. on the whole from the funds of the company, and he was determined (and he thought he might speak also for his colleagues) not to receive any further sum until the line was completed and the traffic consolidated. Having joined the direction, he proceeded with Mr. Anderson and Mr. T. Hankey to Belgium, and went over the line to Morialmé, and that portion of the second line on which the works had been prosecuted, and the result was, that he told his colleagues that the line could not be opened for the sum first stated, and advised them to obtain a further estimate from the engineer, and the result was the estimate which they were called upon that day to consider. With regard to the traffic to be expected upon the line, it certainly appeared that there was a considerable quantity of ironstone at Morialme which was required at the manufacturing district of Charleroi, and that coal must be had for the manufacture of the iron, so that there would be unquestionably a large mineral traffic; but whether there would be sufficient to prove remunerative, he was not prepared to say. It appeared, from the estimate of the engineer, that for an additional sum of 20,000l. they would be enabled to open about 24 miles, so as to test the real traffic, and that it would give them a return of from 5,000l. to 6,000l. a year towards paying 8 per cent. interest on that additional capital. Now, the real question to consider was, whether they would raise that extra sum, with a view of developing a line upon which they had already spent between 500,000l. or 600,000l., or whether they would say that they had had enough of it, and endeavour to sell, for under the statutes that was the course they must under the statutes that was the course they must pursue, before it became forfeited to the Belgian Government. He went on to recommend the payment of the 20,000\ell., the estimate of the amount required being 17,000\ell., but to confine the directors to that sum if they saw fit. At present the directors proposed to take power to raise 40,000\ell., in case the 20,000\ell. should not be found sufficient, but the shareholders, whether they appointed the committee or not, must take care that not one penny was expended not, must take care that not one penny was expended for any other object than that of developing the first portion of the line. With regard to his own position as a director, he might observe that, though he had consented to join them, he had not taken his seat when the French revolution broke out, and he could therefore have declined to do so under the altered circumstances in which the company were placed. He, however, felt bound in honour to take it, lest it should get abroad that, having inquired into their affairs, he had refused to join it in disgust, and thereby hurt its position, being content to run the risk of the extra responsibility, and explain his original position. original position. He should now be glad to be released from the direction, but it should never be said that he deserted a sinking ship, and if it was the pleasure of the shareholders that he should continue, he would do his best to bring their property into a fair position. It was no use indulging in recrimination upon what was passed, but he again called upon them to bear in mind that unless they sub-

scribed the additional 11. per share—and he thought they might fairly confine it to that amount-the whole sum already expended was no more to them than a blank sheet of paper, from which they could gain no result. He therefore called upon them to subscribe the 1l. per share, and then to appoint a committee of practical men to go to Belgium and see how far the views of the directors were likely to be carried out.

Mr. WEBBER had been over the railway about ten days since, and could add nothing to what had been stated by Mr. Waddington, but would suggest that the English committee should be joined to a Belgian committee in making an inquiry into the affairs of

the company.

Mr. Sheward believed that they had all been too sanguine relative to the line, and did not wish to cast any imputation upon the directors, but he called upon the shareholders not to grant one shilling additional capital until the committee to be appointed had made a report on the subject. They had spent between 500,000*l*. and 600,000*l*. on one-third of the line, and only 80,000l. on the rest; and he wished, before he subscribed any further sum of money, to know what was to be the total cost of the whole line, or whether it was to be abandoned.

Mr. PINCHBECK, in conformity to a notice by letter, begged to move that a committee be ap-pointed to inquire into the whole affair. He found that the expenditure had been much beyond the estimate, the rails having been estimated at 36l. per ton, whereas they had cost 68l. With regard to the of the tunnel, he considered that the cost ought to have fallen on the contractors, and not on the company. He proceeded to argue upon the expenses having exceeded the estimate, which was explained to have arisen from the directors, under the best advice they could obtain and with the consent of the company, having abandoned wooden bridges, light rails and other works as originally proposed. Mr. LAMERT denounced the conduct of the direc-

tors prior to Mr. Waddington joining them as repre-hensible, but advised that they should not delay the raising the additional capital pending the inquiry of the committee. Mr. Waddington had, by his exer-tions, gone far to place what, at the time he joinedit, was considered a very sinking concern-the Eastern Counties—in a good position, and he trusted that they would have the same result in that company. He would therefore second the appointment of the committee, on the condition that the 11. per share be allowed to be called for in the interim.

Mr. Fisher took the same view as Mr. Lamert, and only regretted that Mr. Waddington had not been in the direction during the last three years.

Mr. Moyse opposed the creation of any additional capital until affairs had been thoroughly inquired into; and he therefore begged to move that a committee of seven, with power to add to their number, be appointed to examine into all the affairs of the company, and to report to an early meeting of the shareholders.

Mr. Moxon suggested that if a committee was to be appointed it would be desirable not to enter into a discussion of affairs until they had reported their

inquiries.

Some further discussion ensued, in which the CHAIRMAN regretted that Mr. Lamert should have been led to apply the terms he had to the conduct of the directors; and Mr. Buttershaw expressed his concurrence in the resolution, and regretted that the interest had not been paid to the shareholders.

In answer to questions the Character said that

In answer to questions, the Chairman said that they could not compel any person to pay the extra sum of money required beyond the 20*l*. per share; but he believed that they could not go on with the works, even for a month, while the committee were making their inquiries into the affairs of the company, without additional capital.

Ultimately Mr. Pinchbeck's resolution was unanimously account to the could be added to the could be a solution.

mously carried, that being the only one that could be

mously carried, that being the only one that could be legally put, no notice having been given to the direction of the intention for the others to be proposed.

Mr. Pinchbeck, engineer, holding 20 shares; Mr. Sheward, gentleman, 100 shares; Mr. Crake, gentleman, 100 shares; Mr. A. Deveau, foreign merchant, 160 shares, and Mr. Brookes, gentleman, 20 shares, were then appointed the compilies with power to were then appointed the committee, with power to add two to their number if they thought fit.

Mr. Coppock then moved that the directors be requested to refund the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control

quested to refund the money they had received since

the last meeting.

The motion having been seconded, Mr. T. HANKEY (a director) trusted that gentlemen would pause and wait for the report of the committee before they came to a decision of that sort, and thus prejudge the conduct of the directors. If the comprejudge the conduct of the directors. If the committee considered one item of the accounts disgraceful he hand the conduct of the accounts disgraceful he hand the conduct of the accounts disgraceful he hand such ful, he hoped they would report so; but should such

Digitized by Google

a resolution as that now proposed be carried, he could not consent to sit at the Board and await the report of the committee. The whole amount divided among six directors for the time alluded to was only about 3001., and he should no more have thought of declining to receive 50l. or 60l., or ask any of his colleagues to do so, than he should to call upon a clerk in a merchant's house to forego his salary. At the time the money was divided they had the fullest impression that they had funds sufficient to complete the line, and it was only the unfortunate circumstances in which they had been unexpectedly placed that had prevented them doing so.

Mr. Fisher begged to call attention to the fact that the shareholders were also entitled to their interest, and that many parties were almost entirely dependent upon it for support, having embarked their money in the full confidence of receiving it.

Mr. Lamert begged to state, that in using the term "disgraceful to the management," he had never intended to apply it to the monetary affairs or any jobbing. He trusted that the directors would of themselves decline the salary under present circumstances the more especially as it was so small that it could not be of consequence to men of property.

Mr. MATTHYSSEUS said that he had attended the meeting with two gentlemen as a deputation, with a view of making a report from the Belgian shareholders to the English proprietors; but as a committee had been appointed to inquire into the affairs, they would lay the report before that body.

The resolution of Mr. COPPOCK having been with

drawn,—
Mr. FISHER moved that the appointment of Mr. Waddington as a director be confirmed, which was seconded by Mr. CARVALHO, and carried by acclamation.

Mr. CARVALHO then attempted, amidst interrup tions, to again propose a vote of censure on the directors for taking their salary; and having been compelled to desist, it was resolved that the meeting should be adjourned until the 17th of July.

#### GREAT INDIAN PENINSULAR.

June 20. - Adjourned Meeting, London .- Lord WHARNCLIFFE in the chair.

The following is the appendix of the Report as read to the meeting:—"The provisional directors have further to submit to their shareholders, that they have subsequently received from the Court of Directors a reply to their letter of the 6th inst., referred to in the preceding Report (see ante, p. 422). In this letter, referring to the assurances required from the Court respecting the time to be allowed for procuring an efficient list of registered shareholders, the Court say, 'that in the event of the payment into the company's treasury of the stipulated deposit of 30,000l. within one calendar month from the 24th ult., the same will be returned to the railway company at the expiration of the further period of one calendar month, with interest at the rate of 5 per cent. per annum, unless in the meantime it shall be shown to their satisfaction that the railway company will be able, through their registered shareholders, to raise the necessary capital so as to carry on their undertaking without delay.' As it would be scarcely possible to prepare the deed of settlement and afterwards to obtain its execution by the number of share holders requisite for effecting the complete registra tion of the company within the short period proposed by the Court of one month from the 24th inst., and, as it would be desirable to give to the subscribers in India a due opportunity for uniting their interests with those of parties in this country, in furtherance of such a step, the deputy-chairman, as stated to the meeting on the 13th inst., at once wrote to the Court to point out those circumstances, and to urge the inexpediency of the very short limitation of time proposed. The provisional directors therefore hope that the Court will, upon the deposit being paid and an assurance added of a fair prospect of the future stability of the company, be induced to accept the explanations offered in the deputy-chairman's letter as still entitling the company to its favourable consideration and to the advantages held out in the guarantee and the other concessions in favour of the company's undertaking.

The CHAIRMAN said they had, since the last meeting, been informed by the Hon. the East India Company that a period of four months would be allowed them for procuring an efficient list of registered shareholders. They must bear in mind that they had been offered a guarantee of 5 per cent. for twentyfive years on that portion of the line being made, the estimate of which was 500,000l., and that he had informed them that parties were willing to come forward and pay the 30,000t. required to be deposited with the East India Company before the 24th inst. He could only now recommend them to embrace the proposal made, as it was the only way of making the 2,000% already expended of avail to the shareholders. The period of four months allowed by the company would be employed in arranging the detail of the agreement.

Mr. Anderton asked what the arrangement was between these parties spoken of.

The CHAIRMAN replied that the contract was made with some highly respectable ironmasters, who would engage to supply them at the fair market price, and with articles subject to their approval. They had also agreed to take 6,000 shares in the company. These privileges were given them, and they, on the other hand, made up the deposit of 30,000l.

Mr. FIELD laid great stress on the advantage of lowering the amount of the shares.

The CHAIRMAN said the new deed would limit the responsibility of the shareholders to only 5l. per share, and to the original outlay of 500,000l. for the construction of the line between Bombay and Callian.

Mr. Anderton thought the better way would be at once to reduce the shares to 10l., as there might be a difficulty in getting them taken up.

The CHAIRMAN saw the advantage of it, and promised the attention of the Board to the subject.

After some discussion, power was given to the directors to arrange for the payment of the deposit of 30,000%; also for entering into an arrangement for the continuation of the line when it might be deemed requisite; and for taking measures for raising the necessary capital of 500,000l., by limiting the shares to 5t. each, for completing the first portion of the line between Bombay and Callian (35 miles).

We feel bound to disregard our usual course of not noticing the usual complimentary vote of thanks, and to record that special votes were passed to the engineer and the manager as well as to the chairman.

BIRMINGHAM, WOLVERHAMPTON AND DUDLEY. June 21 .- Special Meeting, Birmingham .- Mr. P. H. MUNTZ in the chair.

This was a meeting in obedience to Lord Wharncliffe's order, for the purpose of sanctioning two bills now before Parliament—the first, for confirming the agreement of November 1846, for the sale of the line to the Great Western, and the laying down of the broad with the narrow gauge from Fenny Compton to Wolverhampton; and to enable the Great Western to construct a loop line from the Birmingham and Oxford Junction through the town of Learnington, and for other purposes.

Confirmatory resolutions were passed.

BIRMINGHAM AND OXFORD JUNCTION.

June 21 .- Special Meeting, Birmingham .- Mr. P. MUNTZ in the chair.

Two resolutions were passed supporting the bills alluded to at the meeting of the Birmingham, Wolverhampton and Dudley shareholders.

In the course of a brief discussion, the CHAIRMAN said that he was happy in being enabled to congratulate the shareholders on the fact that there was now a probability of all their differences being settled.

Mr. HALL, of Warrington, inquired whether shareholders who had been in arrear for three months in the payment of their calls would therefore be de-

prived of their coupons for 30%. 5s.

Mr. Peyton said a statement to that effect had appeared in Herapath's Journal, but it was erroneous, as might be seen by reference to the clause in the Act of Parliament. All shareholders who had paid up the full amount of their calls (201. per share) would be entitled to the coupons for 30l. 5s., with 5 per cent. from the time of their receipt on 20l., and interest at the same rate on 101, 5s, from the 1st of July 1850, to all shareholders who had not been in arrear of calls for three months, but that shareholders who had been in arrear would not be entitled to interest on the 10l. 5s. on that day.

The CHAIRMAN said that this difference would not operate to the disadvantage of the shareholders who had been in arrear, as in all probability the whole amount of the coupons would be payable by reason of the opening of the line before that day.

The meeting was adjourned until the 3rd of July. It was stated that Mr. Mozley was absent on account of indisposition.

Adjourned Special Meeting .- A resolution was passed further adjourning the meeting to the 3rd of July, at the King's Arms, Palace-yard, Westminster. The Half-yearly Meeting was also again adjourned to the 31st of July, at the Royal Hotel, Birmingham.

#### LANCASHIRE AND YORKSHIRE.

June 21.—Special Meeting, Manchester .- Mr. Ent-WISLE in the chair.

The CHAIRMAN explained the circumstances under which the directors desired the prosecution of a bill to modify their present capital. They had joined the

Scotch companies in soliciting a loan from Government to complete the works, with the understanding that they would only accept the loan provided it was granted to the others, and had not succeeded, but had obtained leave to seek the modification of their capital by the means now to be laid before the meeting, which was by calling up certain portions of each description of shares, and consolidating them into paid-up stock. The public at present are deterred from investing in their stock because of nearly all descriptions of that stock being subject to further calls. He instanced as illustrative of the deterioration their property underwent on this account the large discount at which their stock generally was selling (including even the fifths, which were entitled to a bonus of 2 per cent., besides dividend), whilst the sixteenth shares, being the only description of stock paid up, were selling almost at a premium. Any means that could bring up their stock to nearly its proper value, so as to enable those who wanted the money to meet engagements for calls on other stock, would be a great advantage, and this scheme in the present condition of the money-market would be a great relief to the shareholders. The mode of consolidation was not intended to increase or diminish the responsibility of any portion of the shareholders with regard to the amount of their calls, or give any one of them advantages at the expense of the others. The proposed mode of consolidation was as follows :-

as follows:—

The old 100L shares, on which 86L had been paid, were to be converted into one share each of 75L paid up, with two shares of 12L 10s. each, on which 5L 10s. each would be considered to be paid; the half, or 50L, on which 43L had been paid, would be converted into one share of 37L 10s. paid up, and one share of 12L 10s., on which 3L 10s. was paid; the 23L, or quarter shares, on which 18L was paid, would be converted into one pand-up share of 12L 10s., and one share of 12L 10s., with 3L 10s. paid; the sixteenths, or 6L 5s. shares, being paid up, would remain unaltered; the Bolton shares of 100L, on which 93L is paid, would be converted into one share of 87L 10s. paid up and one share of 12L 10s., of which 5L 10s. is paid; the Liverpool and Bury 50L, on which 43L has been paid, into one paid-up share of 37L 10s., and one 12L 10s. share, with 3L 10s. paid; the Pomfret and Goole 50L being paid up, would remain unaltered, and the 25L shares the same; the Leeds fifths, or 20L shares, on which 9L, is paid, would be converted into one share of 7L 10s., paid up, and one share of 12L 10s., with 1L 10s. paid, the bonus to remain with the 12L 10s. with 1L 10s. paid, the bonus to remain with the 12L 10s. with 1L 10s. paid, the bonus to remain with the 12L 10s. with 1L 10s. paid, the sould be, that they would have a capital of 4,340,000L paid up, and 85,700 shares of 12L 10s., on which 5L 10s. is paid, and 119,800 shares of 12L 10s., on which 1L 10s. only is paid. The Hudwick better. The old 100% shares, on which 86% had been paid, were to

of 12l. 10s., on which 1l. 10s. only is paid. The Huddersfield and Sheffield shares are all to become stock on the opening of the line. The extension shares and West Riding shares were not to be converted into paid-up stock; but it was proposed to take powers to delay calling up the remainder of capital for portions of the works not actually commenced, till 1851, in a certain proportion, that proportion being equal to 61. on the West Riding and 101. on the extensions.

Mr. W. Rawson urged that the directors could avoid calling up any further portion of the capital without the least injury to the general interests.

The CHAIRMAN admitted this, but said this was the extent of power they sought to take by the Act; if private arrangements could be made with the shareholders to further delay, that might be done notwithstanding the present proceeding. He concluded by moving a resolution to the effect that the meeting approved of the bill (the catch lines and principal clauses of which had been read), and of the proposed consolidation of shares into stock; and the motion having been seconded, it was carried.

In answer to a question, he stated that no portion of the West Ridings could be converted into stock, it was feared, because there would not be the same security for the payment of the other portion of the shares which there was now.

#### WISHAW AND COLTNESS.

June 15. - Special Meeting, Glasgow. - Mr. A. GLASGOW in the chair.

The Secretary submitted drafts of the following bills introduced into Parliament:-1. A bill to enable the Wishaw and Coltness to deviate and improve certain portions of their line. 2. A bill to effectuate the sale of the Wishaw and Coltness to the Caledonian.

Resolutions in support of these bills were unanimously approved of.

#### ARBROATH AND FORFAR.

June 12 .- Annual Meeting, Arbroath .- Mr. W. T. L. CARNEGIE in the chair.

The Report stated that the line was leased to the

Aberdeen, who were put in possession of it on the lst of February last, and were now working the line in connexion with the portion of the Aberdeen opened

Digitized by GOGIC

for traffic. The cost of the line, including working plant at the commencement of the lease, was stated to be 211,848/. In consequence of the heavy engines to be 211,3481. In consequence of the heavy engines required for the traffic, the old rails were found to be too light, only weighing 48lb. per yard, while rails of 65 lb. were necessary. It was agreed between the directors of both companies to allow a year for the completion of the alterations, ending the 1st of February 1849, when the additional cost will be added to the above amount, and the guaranteed annual rent of 5½ per cent. be paid for the current year, commencing on the 1st of February last, upon the cost already ascertained. After the 1st of February 1849 when the cost shall have been fully February 1849, when the cost shall have been fully ascertained, the guaranteed rent will be payable on the full amount expended, and for all future years, provided it does not exceed the sum of 250,000l. The statement of accounts from the 15th of April 1847 to the 1st of February last, showed the receipts at 10,281*l*.; expenses, 5,253*l*., leaving a disposable balance, including, 32*l*. from the last account, of 5,040*l*. After paying the guaranteed dividend of 5 per cent. on the company's guaranteed stock of 40,000l. up to the 1st of February lust, 1,600l., the directors recommended a dividend at the rate of 3 per cent. per annum on the other stock, amounting to 2,863*l.*, leaving a balance of 577*l*.

It was likewise proposed, to meet the additional expense occasioned by the heavy rails being used, and other charges, to borrow 30,000*l*., the Aberdeen agreeing to pay 4 per cent. upon this additional

capital.

The Report was unanimously adopted, and a reso lution sanctioning the latter proposal agreed to.

GREAT NORTHERN.—June 17.—Meeting of Inhabitants, Gainsborough.—Mr. T. A. Farmer in the chair. —The following resolutions were passed:—I. That the meeting had heard with feelings of regret and surprise that it was the intention of the Great Northern to make such alterations in their original scheme as would inflict a permanent injury on the inhabitants of Gainsborough and the neighbourhood, by depriving them of a direct communication north and south. 2. That, from the contiguity of Gainsborough to the river Trent, and its importance in a commercial and agricultural point of view, besides its being in one of the finest levels in the heart of the kingdom, it was entitled to participate in the the kingdom, it was entitled to participate in the benefits which would accrue from the fulfilment of the project as at first announced by the Great Northern. 3. That the proposed alteration by the directors of the Great Northern was a breach of faith, both their prospectus and their private Act having held out the assurance that the line would cross the Trent at some point near the town of Gainsborough. 4. That the inhabitants of Gainsborough, being aggrieved and disappointed by the intended alteration, they felt themselves justified in offering all the opposition they could to the proposed change in the Great Northern line; and that for such purpose a petition be forwarded to the House of Lords, entreating them not to sanction any bill proposed by the Great Northern Company, unless it should contain a provision making it compulsory upon that company to afford to the people of Gainsborough and the district the advantages embraced or promised in the original scheme.

OUVAIN à la SAMBRE RAILWAY,

(Direct to NAMUR and to CHARLEROY.)

The Directors beg to inform the Shareholders that, preparatory
to the above General Meeting, which must be holden in compliance
with the Statutes of the Company, a MEETING of the SHARKEHOLDERS will take place at the Queen's Hotel date Bull and
Mouth, opposite the General Post-office, St. Martin's-le-Grand,
London, on Monday, the 20th of June inst, at 2 o'clock p.m.; and
the Directors carnestly request that all those who are interested in
the success of this line will attend the said Meeting.

JOHN BARNES, President.

GEORGE DANCE, Secretary.

24. Threadneedle-street, June 12, 1849.

I OUVAIN A la SAMBRE RAILWAY (Direct to NAMUR and to CHARLEROY.)

OUVAIN A R SAMBRE KAILWAI

Olivect to NAMUR and to CHARLEROY.)

The Directors bee to give notice that the THIRD ANNUAL
(GENERAL MEETING of SHAREHOLDERS, to be held at
Brussels, will take place at their others. No. 146. Rue Royale, on
Monday, July 19 proximo, 188, at 12 o clock noon precisely, on the
General Business of the Company.

JOHN BARNES, President.

GEORGE DANCE, Secretary.

N.B. The attention of the Sharcholder is invited to the following extracts of the Statutes of the Company:—

Article 36.—Every holder of five shares shall have a right to
attend the general needing wetther and ordinary or a spirit
unless he be a sharcholder holder of five shares shall have a right to
attend the general needing wetther harcholder or appropriate of the share shall be determined by the Council of Administration.

Article 37.—In order to be admitted or take part in the general
meeting whether ordinary or special, every owner or holder of titles
shall be bound to deposit them with the Secretary of the Company,
or the person delegated for that purpose by the Council of Administration, at least ten days previously.

The parties persent at the general meeting who are the holders
of powers of attoricy must also deposit their powers within the
same period; and the Secretary, or aforesaid delegated person, will
give a recept for the same to deposit their powers within the
same period; and the Secretary, or aforesaid delegated person, will
give a recept for the same to deposit field property of the Council of Administration, and the Secretary,
Brussels, June 12, 1848.

#### PORT OF GREAT GRIMSBY.

#### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d, per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accossible at all hours, except a couple of hours at low-water sp ing-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, BHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom,

PORT OF GREAT GRIMSBY.

### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnige.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

SATURDAY, JULY 1.

#### DOCKS AND RAILWAYS.

THE THAMES AND THE EASTERN COUNTIES-THE BALTIC TRADE AND GREAT GRIMSBY.

When it was first proposed to connect Liverpool and Manchester by railway, the principal object in view was the transport of cotton from the port of Liverpool to the spinning-mills in Manchester. This species of goods traffic, in particular, was at the base of all calculations of profit. To the surprise of the projectors, the traffic returns soon proved that the chief portion of the revenue arose not from goods, as was expected, but from passengers. No doubt it has been a discovery that passenger traffic has thus far been the main source of profit to railways,-but it remains yet to be seen whether the expectations of the original founders of the railway system may not be fulfilled, and whether the transport of goods may not become at least an equal source of prosperity as the carriage of passengers.

Our summary of weekly traffic shows that the average receipt from goods is less than a third of the whole receipts; and if we glance over the traffic-table in detail we find few railways where the same usual proportion does not obtain. Many reasons for this disappointment of the hopes of the railway pioneers may be found in the very imperfect arrangements for the transport of goods-and the want of practical working of goods—and the want of prices of union between railways and the great depots the ports or elsewhere. The for goods, whether at ports or elsewhere. want of positive and unbroken connexion between the warehouses at Liverpool and the railway, is a great hindrance to the use of the latter. If you have to cart goods from the ship or warehouse to the railway, an impediment is practically interposed, which in many cases renders the use of the railway absolutely valueless. The same absence of united working may be said to exist in a greater or less degree in all existing ports-in London, Bristol, Hull, Yarmouth, &c.; and until it is remedied, the real results of what goods traffic may be will never be manifested. That the original idea of the great importance of goods traffic, notwithstanding the partial success hitherto, is really a truth, and constantly present to the minds of railway politicians, we see constant evidences in the attempts to bring ports and railways into close and immediate contact. The railway goes direct to the docks at Birkenhead, and it is this very week about to do so at the Thames; and Mr. Hudson knows the value of such close connexion at Hartlepool, at Hull, &c.

But the instance where the value of goods traffic must receive perhaps the most ample fulfilment will be with the Manchester, Sheffield and Lincolnshire Railway in connexion with its Grimsby Docks. Here the two great agencies have been planned in concert, and are so mutually related, that neither can or ought to exist without the other. Without docks—in other words, without goods traffic of the greatest extent—the Manchester, Sheffield and Lincolnshire ought never to have gone to Great Grimsby. Upon the perfection of the system of working the goods traffic the success of that great scheme therefore essentially depends. The prize of this railway must be the goods traffic of the Baltic; and we say this in no disparagement of the traffic of the richest agricultural county in England which it will command. The export and import German trade is a traffic worth having, sure enough; but it is only to be gained by the completeness of the measures taken to secure it. Trade flows as naturally to the point of its own interest as the needle is attracted by the loadstone. From all we know thus far of the plans of Mr. Rendel

and Mr. Fowler, in their mutual arrangements of the docks and railways, we have confidence that everything that the best experience can devise will be accomplished. Great Grimsby is at the mouth of the Humber, open to and yet protected from the sea. At the earliest moment the vessel lands its cargo, coming immediately from the open sea into dock, exempt from the dilatoriness of any river navigation. The railway trucks will stand ready at the wharf's edge, and the same crane will hoist the goods from the ship into the truck, and vice versa. In such a case, it would seem that the minimum of labour, and therefore of cost, has been attained. Nothing short of this unity of action, in this and analogous cases, whether connected with land or water arrangements, can perfectly develope the full effect of goods carriage on railway traffic.

#### THE TUBULAR BRIDGE CONTROVERSY.

We regret to find that the tubular bridge controversy has not been settled, as we thought it would have been, by the letter of Mr. Scott Russell, inserted in our columns (see ante, p. 395), and by those of Mr. Fairbairn and Mr. Stephenson (ante, p. 412). The state of feeling which exists on that subject may be inferred from the following letter from Mr. Bateman, accusing ourselves of partiality in a matter on which we have scarcely done more than leave our columns open to discussion; yet we are accused of a wilful omission.

To the Editor of the Railway Chronicle.

Sir,—May I request you to insert in your next publication the accompanying letter from Mr. Fairbairn, which appeared in the Manchester Guardian of the 10th inst. The omission in your journal of this letter, after the publication of Mr. Stephenson's reply to me, is scarcely consistent with the parade of impartiality with which Mr. Scott Russell opened the discussion in your columns.

J. F. BATEMAN. Manchester, June 26.

We must leave Mr. Scott Russell to put up with the "parade of impartiality" here attributed to him as he best may; but for ourselves, we beg to say that we have nothing whatever to do with the insertion or omission of any documents referring to the subject. A correspondent sent us the Manchester Guardian, with Mr. Bateman's letter marked in ink as worthy of attention. We thought it so, and reprinted it. Mr. Scott Russell sent us his letter, which we also thought worthy of insertion, and we printed it. We next received from a correspondent another copy of the Manchester Guardian, containing Mr. Stephenson's letter and Mr. Fairbairn's, and we inserted them in like manner as soon as they came to hand. We have no means of knowing who was kind enough to send us the papers. We certainly attributed the favour to either Mr. Fairbairn or Mr. Bateman. That, however, is of no consequenceonly, if it were either of them, then we should have been still more obliged if they had sent us this third letter, which now, at last, Mr. Bateman has enclosed, but with such imputations as somewhat diminish the obligations which we always feel, and are happy to express, to those who take the trouble to transmit to us valuable information.

If, therefore, we have not earlier inserted Mr. Fairbairn's letter, Mr. Bateman alone is to blame, for not having communicated to us a document in the insertion of which he takes so much interest. It now affords us great pleasure to give it insertion:-

To the Editor of the Manchester Guardian.

Sir,-It is with feelings of sincere regret that I conceive myself called upon to reply to a letter of Mr. R. Stephenson's, which appeared in your paper of Saturday last, in answer to a previous communication from Mr. Bateman. To the latter gentleman I construction, and on the approval of the plans by the am deeply indebted for the zeal with which he has Railway Commissioners, the works will be carried

voluntarily come forward in defence of my reputation with reference to the construction of the Conway and Britannia bridges, and I cannot but lament the necessity which existed for his friendly interference. The statements contained in Mr. Bateman's letter of the 24th ult. are perfectly correct, and, whenever the time arrives for such a purpose, can be distinctly proved. Mr. Stephenson's extract from my letter of October 27, 1846, fully confirms that part of Mr. Bateman's which accords to him the merit of the "original idea." Here I must, however, stop, and in justice to mysels maintain that the working out of the idea, and the developement of the principle, as well as the greater portion of the construction, are the results of my labours. In corroboration of these facts I may further state, that the original idea was a cylindrical tube, to be supported by chains, to which I was always opposed, and which, I think, can be proved would not have succeeded. In fact, it was only by a long series of inductive reasoning, founded upon experimental research, that the present strength and form of the Conway and Britannia tubes were established. That these researches are my own, and that the conclusions based upon them have been acted upon, cannot be denied; and I am satisfied that if Mr. Stephenson would reconsider the matter, and allow his feelings fair play, he would admit the fact. The publication of the correspondence, should such a step be found necessary, will, however, prove the accuracy of these statements, whether admitted now or not. As respects that part of Mr. Stephenson's letter wherein he states "that the company looked to him alone as responsible," I have only to observe, that I was appointed by the directors joint engineer with Mr. Stephenson for the construction of the bridges. The risk which an engineer runs in incurring responsibility is the loss of his professional reputation: I am bold enough to imagine that I am not without one; and surely, if the bridge had turned out a failure, my reputation would have suffered as well as Mr. Stephenson's.

W. FAIRBAIRN.

Manchester, June 7.

It will be seen from this letter that Mr. Scott Russell has been mistaken in supposing that his view of the question would be equally satisfactory to all parties. It is plain that Mr. Fairbairn does claim for himself everything but the "original idea"-the mere notion of a tubular bridge: "the working out of the idea, and the developement of the principle, as well as the greater portion of the construction, are the results of my labours." The correspondence has the merit of becoming defined, and Mr. Fairbairn has now put in a claim, which must be substantiated or refuted by other evidence, for which, it appears, we must wait.

#### Railway Literature.

Irish Wants and Practical Remedies. By H. Brown, Esq. M.P. [Second Notice.]

We shall select from time to time the various traffic results collected from the stores of the writer's experience, and those who, like himself, are well versed in detailing the unceasing benefits of the railway system—results exhibiting to the most ignorant and prejudiced such past, present and prospective advantages to all, as no other commercial transactions of the present age can supply. We shall conclude our notice here with the writer's own proposal for Government assistance, in a form which he hopes will sufficiently conciliate all parties :-

"It is proposed that a loan shall be raised yearly by the issue of Exchequer bills, to be applied to the to be such as are likely to make a return of at least 4 per cent. on the outlay. The lines chosen are to be such as are likely to make a return of at least 4 per cent. on the outlay. The interest to be guaranteed, in the first instance, by the Consolidated Fund; and after each railway has been open three years, if there should be any deficiency in the amount applicable to payment of interest, then half by the Consolidated Fund, and half by a cess to be raised on the counties, baronies, or districts through which the railway passes. The fund of railway revenue to be created, above 4 per cent., to be applied to the guarantee of further loans, or to the redemption of those already created. The baronies through which a line

out. Supposing that 1,000,000% is applied in the first year to the construction of railways, the distribution will be as follows:—

| Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Programmer | Pro

"It has been already shown that the cost of the land, 170,000l., would entail a mere-transfer of capital, and could not greatly affect the money-market, and a portion of the charge for interest would be of the same character. As the ironmasters are overstocked, the supply of rails would also be free of the objection of influencing the money-market would therefore be for a sum of about 600,000l.; but even this has to be reduced, because a great part of the supplies for labourers already exist in Ireland, and because there is also a surplus of capital yearly created in Ireland, for investment in Government securities."

And in his summary of contents he remarks:

"By selecting the most profitable line to begin with, the risk of loss will be further reduced, but the several facts, already adduced, show that the establishment of a railway system in Ireland, 1, will not press on the money-market; 2, will entail little risk to the Government; 3, will entail little risk to the Government; 3, will entail little risk to the rate-payers; 4, will be accompanied by a large amount of traffic; 5, will be accompanied by a large amount of saving. It has been shown that the following interests in Ireland will be greatly benefited:—agriculture, grasing, mining, the fisheries, and trade. It has been shown that Government will derive great advantages from railways. As a means of relieving the population of Ireland, none can be suggested more effective than the construction of railways. As a temporary relief, the money is expended in the proportion of more than 50 per cent. in the direct employment of common labour. As a permanent relief, a number of men are employed, equivalent to one-twentieth of those temporarily employed. Experience has shown that such works, by improving the condition of the working classes in Ireland, likewise promote voluntary emigration."

#### Proceedings of Bocieties.

Institution of Civil Engineers. - June 20. Ceneral Meeting.—Mr. J. FIELD, President, in the chair.—The paper read was 'On Harbours of Refuge,' by the Right Hon. the Earl of Lovelace.—It consisted chiefly in a succinct review of the Reports of the Commissioners on Shipwrecks and on Harbours of Refuge, giving the opinions of the naval officers and civil engineers on the necessity for harbours in certain situations, and the naval qualities possessed by those positions, the possibility of constructing har-bours in them, and the nature of the structures. The necessity for harbours on our coasts capable of sheltering fleets from storms in peace and from the enemy during war, appeared to be admitted, particularly at the present moment when the disturbed state of the Continent and the restless character of our near neighbours was considered. It was stated that of various situations pointed out, that of Dover was the only one yet decided upon, although great works are contemplated at Portland, where, from Mr. Rendel's designs, a system of construction would be adopted which would be both economical and stable, and at the same time would afford employment to a class of persons whose labour it had been difficult hitherto to use efficiently. The various projects of floating breakwaters and other artificial shelter for vessels were then examined, and were generally condemned, as entirely inefficient for the objects proposed. The questions relative to the movement of sand, the drifting of the shingle and the deposit of silt in Dover Bay and other places, were treated at great length, and reasons given for the various forms of construction and of the projects for meeting the difficulties induced by these circumstances. The next question was the place of the harbour and the mode of construction of the works. After quoting all the authorities on both sides, including the naval officers, the Commissioners, the civil engineers and the scientific writers, the preference was given to a large harbour with two entrances, so placed as to allow a sufficient run of the tide through it, to prevent any very considerable deposit of silt, but so constructed as to afford shelter to the vessels within. The pier walls enclosing the harbour to be built vertically up from the bottom, or with a very slight inclination in their height, instead of throwing in masses of rubble stone to find its own angle of repose, which it was shown was not less than four or five to one, and that it only

attained solidity after a lapse of many years, even with a due admixture of small materials to fill up the interstices, and after constant supplies of stone to replace that which the seas removed. The reports of Capt. Washington were quoted to prove the failures that had occurred at certain harbours in Ireland, where it was stated that the long slopes had been destroyed by the sea and had ruined the harbours they were intended to protect. The proceedings at Cherbourg and Plymouth were followed in great detail with a view to deducing arguments against the long slopes and in favour of vertical seawalls. The protest by Sir Howard Douglas, in favour of long slopes was examined at great length, and the arguments used on both sides were analyzed with skill and candour. Col. Emy's theory of the effects of the "flot du fond" was carefully examined, and without going the entire length that he did, it was admitted in many cases the effects produced were as he described them, and that the subject as he had brought it forward was well worthy the attention of civil engineers. The placing a vertical wall upon a substratum of rubble in the form of a long slope was shown to be pregnant with mischief, and had never been successful, and that the adoption of that system at Cherbourg had been a matter of necessity rather than of choice. Mr. Alan Stevenson's clever experiments on the force of waves striking opposing bodies were given, and it was urged that the force shown to be developed by a breaking wave could not act upon a vertical wall, up and down which it would merely oscillate, whereas may fall with all its accumulated force upon a slope, upon which it would naturally break. In conclusion it was urged, that although for Dover, which was the spot whereon to mount guard over the Channel, in order not only to prevent invasion but to maintain our present naval supremacy, it might be permitted to spend a large sum of money, yet it would not do to have several Dovers, and therefore it behoved the authorities to consider carefully the site, the plan and the method of construction before commencing works in which, in the present state of engineering science, the experience of the past should be used to avoid the errors that had occurred in former and similar works. In the discussion which ensued, and in which the principal civil engineers engaged on great hydraulic works took part, after justly complimenting the Earl of Lovelace for the very able and impartial analysis he had made of the evidence contained in the Government reports and the documents in his possession, the speakers ex-plained most satisfactorily the actual circumstances and conditions of the works which had been in-stanced as failures, and it was shown that, far from being expensive or useless works, they had been completed within the original estimates and that wherever the construction had required restoration or addition it had arisen from the use of defective materials, which being on the spot it had been obli-gatory to employ, and not from the use of the long slope, which as compared to vertical walls in similar situations was shown to be more durable and to have been in many instances successfully substituted for vertical walls after they had been succumbed to the assaults of the raging billows. The discussion was stopped prematurely by the adjournment of the meeting at the usual hour, but was announced for renewal at the next meeting.

#### Official Papers.

PAROCHIAL DEBTS AND AUDIT BILL.
Objections on behalf of the Associated Railway Companies to Clauses 2, 3 and 4 of this Bill.

Clauses 2, 3 and 4 give power to a majority of any parish vestry, or of any board of guardians of any union, to repay out of the parish funds, to any person, no matter who, any money disallowed by the auditor, which such person may have illegally expended on behalf of, or for the benefit of, the parish, at any time between the passing of the first Poor law Act in 1834 and the passing of this bill in 1848—a period of thirteen years,—if the Poor Law Commissioners think it fit to make an order sanctioning such payment.

1. The clause tends to reverse all the principles on which the Legislature, and the courts of law and equity, have hitherto decided the application of parish rates. It amounts to a reversal of those decisions.

Tates. It amounts to a reversal of those decisions.

2. On judicial grounds the clause is objectionable.

Numerous decisions have been pronounced by the Courts of Chancery and Queen's Bench against collateral payments being made out of the parish rates, though sanctioned by the vestry. This clause will, in effect, reverse those decisions, or give a reviewal. Other cases are now pending in the superior courts of law for decision on payments made out of parish rates, and on payments disallowed by

auditors. This clause will interfere with such cases, and render the decisions null. It will make an export facto law for non-legal expenditure, arising from personal, or political, or other motives. It will place the decision in the hands of a few parishioners, or a clique.

3. The extent to which it makes the present and future parishioners liable for other persons' debts or conduct cannot be calculated. The fact of a clause in the Act of 1844, giving the Commissioners power over the balances then struck and due from any parish officer, and the cases to which it has been applied, are submitted to be no justification for extending that power, but, on the contrary, if the operation of such clause had been understood at that time, it is doubtful whether it would have passed. Besides, it was of a very different nature to the present clause; its operation has been scarcely known to the parishioners.

4. Under the present law the auditor exercises a discretion as to many payments not strictly legal, and there is a power of appeal against his decisions. This clause will override and render nugatory his decisions and those powers of appeal in existing Acts.

5. The very principle of parish rating is its prospectiveness; and the Legislature, as well as the law, has frequently defeated all attempts to give them.

5. The very principle of parish rating is its prospectiveness; and the Legislature, as well as the law, has frequently defeated all attempts to give them a retrospective operation. This clause gives thirteen years' retrospection for any person's expenses, of any nature—thus making the present parishioners bear the burdens and acts of their predecessors, and seriously increasing the present grievous amount of local taxes.

6. In those parishes where railway companies are parishioners, they do now, under the present oppressive system of rating, contribute a great proportion of the whole parish rates in respect of the least proportion of property in the parish;—in effect, they would have to bear a great proportion of those thirteen years' illegal expenses, which might be sanctioned unknown to them, and arise, as in the cases pending in the courts, from the illegal, unjustifiable and indeed criminal conduct of the parish officers. Companies have only twelve votes in a vestry meeting, whatever amount of rates they pay.

7. So little importance has been attached to vestry

7. So little importance has been attached to vestry meetings, and so sacred has the law viewed parish rates, that the law has over and over again refused to sanction matters sanctioned by vestry meetings,—and has disallowed many payments out of parish moneys for matters sanctioned by even special vestry meetings,—whether for the general benefit of the parish or not.

8. If we consider the clause further we shall see that upon public principle such a clause is also open to great objections:—The poor's rates were created by statute for particular purposes connected with the poor, and the law has ever been most jealous of their application and increase. Lord Denman and other Judges have frequently laid down that "it is a statutable fund, and that they will not allow any charges upon it but those expressly sanctioned by statute as parish objects," and those expressly defined payments were in respect of necessary matters incidental to the poor (such, for instance, as the burial or removal of paupers). Notwithstanding that strictness of the law, a great amount is yearly expended for other objects than the relief of the poor, as has been shown by the Parliamentary Papers.

9. The clause in question in effect gives a section of the inhabitants of a parish,—or of guardians of a union,—an arbitrary power to pay any expenditure incurred—during the last fourteen years—by any individual, whether parish officer or not,—if they can plausibly show that it was expended on behalf of the parish. It is not limited as to mode of obtaining assent, time of application, or nature of expenses.

10. No special meeting of the inhabitants is required; no special notice of the intended application to the vestry or Board is required to be given to the parishioners; nor is any special vestry meeting required. There is no check provided on the parish vestry or union board. Parish vestries are usually called by a written notice on the church door, which few stop to read, where it is readable. Sometimes such notices specify one only of the objects of the meeting (being those cases which are specially required by statute to be specified). Under this clause, moneys may be voted away at a simple meeting to elect parish officers, or other formal matter. Every one who has taken the trouble to attend parish meetings knows that there are seldom more parishioners present than the officials themselves. Indeed, few parishioners, except the officials, know of vestry meetings—still less of board of guardian meetings, which they have no power to attend—and yet the boards of guardians are to have this power over the funds, without any controul from the parishioners.

Digitized by Google

11. There is no limit of time within which the application for the allowance of expenses is to be It may be made at successive vestries or Boards, it may be tried at meeting after meeting, until it is passed—during the next six years as well as the next six months. There is no finality to it. It may be attempted in the absence of and unknown to the body of the parishioners, because no special notice

the body of the parishioners, because no special notice is required. A parishioner must watch every parish meeting and every board of guardian meeting, or he may have a vote passed authorizing the payment.

12. Its nature and objects are so undefined and comprehensive as to be unlimited. It may apply to past expenses in lawsuits, lawyer's bills, damages in cases of excess of duty, parliamentary expenses, or any other matter that a section of the parishioners may fancy to be "on behalf of the parish or union." There is nothing to exclude personal or political expenses on the individual expenses of a sincle parish. penses, nor the individual expenses of a single parishioner; for instance, in opposing railway bills which
touched his property in the parish, and which may
be said to have been "on behalf of, or for the benefit
of, the parish." The words are so large as to admit
of every description of expenses being included. It
is true that the bill gives the Poor Law Commissioners a discretion in sanctioning the payment; but
those who have had experience in parish matters
know the effect of an application by a vestry or board
to a public body for a formal assent, where there is
no opposition to the application present. penses, nor the individual expenses of a single parishno opposition to the application present.

#### WATERFORD AND KILKENNY.

WATERFORD AND KILKENNY.

Burgineer's Report for the Meeting, May 17 (p. 858).

I beg to report that since the latter part of last year the works of this railway have been advancing as speedily as the funds admitted. The way and works between Kilkenny station and Lyrath Junction, which were completed in August last, have been maintained in good order, and sundry conveniences, which further consideration pointed out, have been added to the station, which has now been placed in the hands of your experienced traffic manager, and has elicited his approbation for convenience of working the public traffic. The works from Lyrath Junction to Thomastown station (in the hands of Messrs, Hammond and Murray) have been carried to completion so far as to be ready for public traffic whenever you desire to open the line; and the Government Inspector, having inspected all the works. has expressed himself in satisfactory terms as to their condition. The ballast trains which have been running since the lat inst. between Kilkenny and Thomastown, have shown that the permanent way is perfectly steady; the motion is smooth, and your engines promise to be economical in construction and easy in their action on the road—the latter of which is of no small importance in the present day, when we see such vast expenditure involved by the attainment of excessive speeds with heavy engines. Your engines and carriages are all at Kilkenny, and, although probably sufficient in number for the immediate traffic on opening the line, I have no doubt your stock must shortly be increased for heavier goods traffic than you have contemplated. The excessive rains which fell in this country between December and April, while they retarded our progress, have much consolidated the earthworks; and, after a careful inspection of the state of the embankments and cuttings, as well as of the ballast, I am inclined to think you will find the maintenance of the earthworks; and, after a careful inspection of the state of the embankments and cuttings, as well as of the per mile as that which has been experienced upon the Great Southern and Western, and which will afford a fair remune-ration for the outlay.

W. S. Moorsom.

#### KILLARNEY JUNCTION.

The following is the Engineer's Report which was repared for the intended half-yearly meeting on the

prepared for the intended hair-yearry meeting on sill 15th of May:—

I beg to send you the following Report on the present state of the works: The works on that portion of the line which has been already commenced on the first 10 miles out of Killarney, have been carried on during the winter months in a very limited manner, in consequence of the very wet and unfavourable weather which was so general over every next of the country. Since the fine weather has very wet and unfavourable weather which was so general over every part of the country. Since the fine weather has commenced, the contractor has made fair progress in the earthwork; 35,000 cubic yards having since then been removed, the total quantity being now about 350,000 cubic yards. 16,000 lineal yards of fencing have been completed. 5½ miles of the line have been brought to the formation

level, partly to the full width, and, in some of the cuttings, a guilet only has been cut. One mile has been ballasted, and is ready for the rails. The masonry is in a forward state: 37 lineal yards, of 6 ft. culvert, are bullt; 114 yards of 4 ft., and 162 of 2 feet; besides these, some of the side drains are completed. Four farm road bridges are built; ten road bridges are in a very advanced state; No. 6, 7, 8 and 10 are almost completed; No. 9 is in a very advanced state; the approaches to No. 10 are completed, and the traffic turned under it. A very large quantity of plant, consisting of rails, sleepers, waggons, barrows and planks, are provided, and on the ground; so that the work may, in future, if required, be carried on with great energy. I am happy in being enabled to state that the works already completed have not in the slightest degree suffered from the severity of the weather during the last winter; and that all the culverts and water-courses were found to be more than sufficient to discharge the unusual floods that were experienced in that part of the country last season.

J. MACNRILL.

GREAT LUXEMBOURG.

Engineer's Report for the Meeting, May 17 (p. 391).

During the past year the progress of the works upon the line between Brussels and Warve has been uniform and satisfactory. The station in the quartier Leopold and the square in front thereof, called the Place de Luxembourg, as well as six streets intersecting the building ground adjacent to the station, have been levelled by the removal of 127,816 cubic metres of earth. The streets have been paved, and a ready communication has been established between the land ready for sale, and the quartier adjacent to the Boulevards. On the first section, out of fourteen works of art (consisting of viaducts and bridges), nine are completed, and the remainder will be finished by the end of June. Of the total quantity of earthwork, viz. 437,000 cubic metres, 206,100 had been completed at the end of April, and the remainder is in active progress. The second section is yet more advanced, in consequence of the land having been obtained at an earlier date. The earthwork required was 350,000 cubic metres, of which 285,000 have been completed. The works of art, which are thirteen in number, and similar in character and dimensions to those upon the first section, are almost entirely finished. These two sections—being together about 7 miles in length—terminate at the Station de Waterloo. Great delay has arisen from the legal process of expropriation of land, but ample compensation has resulted from our firm resistance to exorbitant demands on the part of the proprietors. Upon the third section of 44 miles in length, about 80,000 cubic metres of earthwork, and a viaduct of 25 ft. opening, and some smaller works, have been executed. A strong force is now employed on this section, and the number of men may be increased on the completion of the first and second sections. The definitive plans of the fourth section (about 34 miles in length) have long since been laid before the Council of Ponts et Chaussées, who wait for information from the Louvain a la Sambre Company

#### Brogress of Warks.

ABERDEEN. - Operations in this neighbourhood, says the Montrose Standard, are progressing in a very languid manner. All the way from the Limpit Mill to Aberdeen, a distance of about 13 miles, there is not one labourer or tradesman employed on the whole line. The piers which were erected last season in the river Dee, and were damaged with the floods of that river, still remain in that ruinous condition. is said there has been a meeting of the shareholders in Aberdeen to seriously consider the state of affairs.

EAST LANCASHIRE (Blackburn and Accrington) .-EAST LANCASHIRE (Blackburn and Accrington).—
The portion which connects Accrington with Blackburn has been inspected by Capt. Wynn, who was accompanied over the line by Messrs. T. Dugdale, R. Hacking and Perring. The Inspector expressed himself as perfectly satisfied with the works, and arrangements were made in consequence for the opening of this portion of the line on the 19th. The day proved appricious, and a great influx of passenday proved auspicious, and a great influx of passen-gers resorted to the different stations. Several of the rains were well filled, and the day passed off without accident. The trips to Accrington were generally accomplished in about 15 m., including the stoppages at the Richton and Church stations, and the trains returned to Blackburn in from 10 to 12 m. The line through Ormskirk to Liverpool is expected to be opened in the course of next October, when the distance from Blackburn to the latter place will be run

Lea by a novel iron swing-bridge, enters the docks by the extensive pepper warehouses, which the company have purchased. By this line, vid Peterborough, goods may be removed, without break of carriage, from this important depot of East India produce to the Mersey, Humber, Tyne, or any point in the manu-

facturing and northern districts.
GLASGOW, DUMFRIES AND CARLISLE. on the Dumfries section, says the Scottish Railway Gazette, are proceeding with great rapidity, and it is confidently expected that this part will be opened for public traffic in a few weeks. Our readers are aware that it joins the Caledonian at Gretna, proceeding thence to Carlisle. The completion of this branch therefore will bring Dumfries into the circle of railways compunication to the heaft not only of the way communication, to the benefit, not only of the other lines, but of the valuable and populous country through which the branch passes.—The North British Mail declares the results of a late inspection British Mail declares the results of a late inspection of the line between Annan and Dumfries, and of receiving, from well-informed parties, information regarding the progress of the works south of the former town. From all that we have thus been able to learn, we think there exists a great probability that the railway, from Dumfries to where it joins the Caledonian line at Gretna, will be ready for opening about the middle of August next, if not before. Proceeding northwards from Gretna, we find that several bridges and cattle-creeps are still in a rather backward state; but, apart from these, the permanent iron pathway has been generally laid down. The mason work on Mr. Ross's contract, which extends from a little below Annan to Cummertress, is all but finished; and the station at Annan will soon all but finished; and the station at Annan will soon be ready for the roof. This part of the line, we are assured, could be made ready for the trains in less assured, could be made ready for the trains in less than three weeks from this date. Mr. Ritson's contract, the next we come to, is not quite so far advanced. The rest of the line up to Dumfries is being formed by the Messrs. Jeff, and is, in all respects, nearly completed. A temporary station, near Dumfries, is to be commenced immediately, which will be superseded in due course by a large and magnificent fabric. North of Dumfries, operations are going forward in a languishing manner.

London and South-Western (Waterloo Bridge Extension).—This undertaking was commenced in July 1846, the contract having been taken by the Messrs. Lee, who engaged to complete it by the 1st of July 1848. The length of the new line is nearly 2½ miles. The first quarter of a mile is carried over an embank-

The first quarter of a mile is carried over an embankment, then succeeds a viaduct, consisting of six massive iron girder bridges and 300 arches (exclusive of those forming the present station in the Waterlooroad). These arches, which are expected to form a road). These arches, which are expected to form a very considerable item in the receipts of the company, have been so carefully constructed as to be easily applicable to various purposes, and their perpetual dryness has been insured by the application of the Seyssel asphalte, which has rendered them impervious to wet. There are four distinct lines of rail, and the quantity of iron alone consumed in laying down what is technically called the "metals" is at least 1 200 tons, independently of short 800 tons. is at least 1,200 tons, independently of about 800 tons weight consumed in the erection of the bridges. In weight consumed in the erection of the bridges. In the construction of the viaduct and station in the Waterloo-road, upwards of 80,000,000 of bricks have been consumed; and the present terminus, which is all on arches, covers a space of three-quarters of an acre of ground, its width being 260 ft. The major part of the present terminus has been coated with the appliale, so that the arches on which is the asphalte, so that the arches on which it rests may with safety be made use of as storehouses, &c.

The whole of the permanent way is laid down and ready for the trains to traverse: but the stations, both at the Waterloo-road and Vauxhall, are not thoroughly completed, although, being for the most part wooden erections, their completion may be considered as certain at a short lapse of time. To the present terminus in the Waterloo-road there are no present terminus in the waterloo-road there are no less than four approaches for carriages and foot-passengers, the pedestrians having in each approach paths 8 ft. in width. At Vauxhall station there will only be two entrances. The stations at both Water-loo-road and Vauxhall will be only temporary. The fares on the main line are to be increased as follows:

—First-class, 6d.; second-class, 4d.; third-class, 2d. The trains will run at the present fixed times. Nine Elms station is to be closed entirely to passenger traffic.

MANCHESTER AND ALTRINCHAM .- The Manchester Guardian states:—At a recent meeting of the directors it was determined to proceed with the works to tance from Birckourn to the latter place will be run in about an hour.

EASTERN COUNTIES.—Within the last few days a single branch line has been opened, which connects the East India Docks with the Eastern Counties. It branches off just below the Barking-road station of the North Woolwich branch, and, crossing the river tors it was determined to proceed with the works to completion, and that the works will be re-commenced with the works to completion, and that the works will be re-commenced with the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works will be re-commenced with the works to completion, and that the works will be re-commenced with the works to completion, and that the works will be re-commenced with the works to completion, and that the works will be re-commenced with the works will be re-commenced with the works to completion, and that the works will be re-commenced with the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to completion, and that the works to complete with vigour in a few days. There are several bridges to finish, and a good deal of ordinary earthwork to get through the works to complete with vigour in a few days. Lincolnshire lines in Manchester with the Liverpool and the Bolton lines is not expected to be opened till about Christmas, and the opening of the Altrincham line depends upon, and must be subsequent to, the opening of the South Junction, which gives it its Manchester terminus and stations, it will, in all probability, be early next year before the Altrincham

line can be opened through.

WAKEFIELD, PONTEFRACT AND GOOLE.—Capt. Binstead, the general manager of the Yorkshire and Lancashire, has been engaged inspecting the new line of communication recently opened in connexion with their line. He paid a visit to Doncaster, and expressed himself highly satisfied with the result of traffic since the opening of the line; indeed, there can be no doubt that the opening of so small a section of the Great Northern to Reedholme, thus forming a connecting link with the manufacturing districts, has created a traffic which did not exist before. As an instance, says the Doncaster Chronicle, whilst the traffic to Swinton has not been materially diminished, the number of passengers conveyed by the omnibus to Stockbridge has been almost equal to those conveyed to Swinton. The superior accommo-dation provided for second and third-class passengers will no doubt induce many parties to take trips of pleasure during the summer months; but when the line is opened through to Doncaster, which it is confidently expected will be in August next, a permanent and increased traffic will no doubt be the result. Capt. Binstead, while in Doncaster, expressed the readiness of the company to consult the requirements of the town of Doncaster, and will be happy at all times to receive any suggestion, and, where practicable, to act upon it, to promote the convenience of the inhabitants.

#### Accidents.

LONDON AND SOUTH-WESTERN (Waterloo Bridge Extension).—June 23.—As some workmen were engaged at the terminus, a man fell from a ladder a height of about 40 ft. He was taken up insensible, and conveyed to Westminster Hospital.

Norrolk.—June 18.—A collision took place at the Thetford station. The up goods train was slowly moving out, when a heavy cattle train came up at full speed, the driver not observing the caution on Croxton Bridge. The hindermost truck of the goods train was destroyed; one pair of its wheels and axle were thrown to some yards distance, taking with them part of the gate, the lamp-post and cautionlight.

#### Law Entelligence.

ENTRY ON LAND .- June 28 .- In the LORD CHAN-CELLOR'S COURT, in re Baker v. the North Staffordshire, this motion was to discharge an order. The plaintiff is proprietor of salt works at Sandbach, Cheshire, and he got notice from the defendants that they would require ten closes of his lands; they afterwards refused to take more than eight. The plaintiff filed his bill to restrain them from proceeding with their works unless they took the whole of the lands com-prised in their first notice. An injunction was granted. The plaintiff afterwards filed a supplemental bill for a further injunction, to restrain the defendants from entering on his land at all, unless they consented to take his salt factory also, according to the 92nd section of the Act 8 & 9 Vict. c. 18, called 'The Land Clauses Consolidation Act, which section is to the effect, that no person should be required to sell to any company part only of a house or other building or manufactory, if he was able to sell the whole. question was made on the motion for this injunction whether the salt pits and place where the making of salt was carried on came within the description of "manufactory." Vice-Chancellor Knight Bruce granted the injunction, subject, however, to the opinion of a court of law. The learned counsel in support of the motion contended that the sort of buildings on this land did not form a manufactory. The brine was in some saltworks abroad brought from a great distance to the place of evaporation. There as no necessary connexion between the salt pits and the buildings used. The injunction in its present form was injurious to the defendants themselves. because, if allowed to stand, their works also must stand until the opinion of a court of law can be taken on the question.-Counsel now in support of the injunction contended that the pits which supplied the brine were so closely connected with the buildings and machinery for evaporation, that they all formed but one manufactory.—The Lord Chancellor was of opinion that the injunction could not stand. When a party applied to the court for such a summary relief he was bound to come quickly, and he was bound also to make out a case free from the suspicion

year the plaintiff had notice that the company required ten closes and no more. There was a contest on that subject which terminated in the plaintiff's favour, and the company were led to believe that the only thing in dispute was, whether they had to take eight or ten closes of land. The plaintiff, however, came by supplemental bill with an entirely new claim. That was a practice the Court could not sanction: for, if it did, the plaintiff might make twenty other new cases in the course of the proceedings. On that ground of practice, namely, the keeping back of part of a case until the other part was disposed of, his Lordship thought he consulted the general interests of the suitors by refusing to support the injunction. But there still remained the prin-cipal question—were the premises and land a manufactory? In the 92nd clause of the Act the word "manufactory" was coupled with the word "building." His Lordship here found that the plaintiff, in ing. his affidavit, had himself expressly drawn a distinction between the land and the buildings, by stating the property as composed of a building and the adjacent pits, thereby showing that he did not then consider it inseparable as a manufactory. In addition to that, there were the affidavits of great numbers of persons engaged in the salt business of the district, which clearly bore out the assertion that there was no necessary connexion between the pits and the place where the process of conversion into salt was carried on. That evidence was not contradicted: and as the case now stood he could not compel the defendants to take all that the plaintiff required them to take.—The injunction was dissolved.

Account of Deposits.—June 28.—In the Vice-Chancellor's Court, in re Jones v. the Earl of Charlemont, this bill was filed by certain share-holders in the Newry, Armagh and Londonderry Junction, on behalf of themselves and all other the shareholders, except the defendants, against the members of the provisional committee, for the purpose of obtaining an account of the funds subscribed. The project was commenced in the year 1845, but the requisite amount of shares not having been dis posed of, the bill was withdrawn before it had passed the third reading. The bill charged neglect and mismanagement on the part of the provisional committee, and alleged that the undertaking ought to have been stopped and the affairs wound up under the Act of Parliament. A demurrer was put in on the ground that the plaintiffs themselves might have taken measures for winding up the affairs of the company, and that other shareholders ought to have been made parties to the bill. The denurrer, for want of parties, was taken ore tenus. The question was argued entirely upon technical points.—The Vice-Chancellor overruled the demurrer upon the general ground, but allowed the demurrer ore tenus.—No order was made as to costs.

LIABILITY OF DIRECTORS. - June 29. - In the COURT OF QUEEN'S BENCH, in re Drayson and an other v. Clarkson, this was an action against the chairman of the managing committee of the Direct London, Chichester, Portsmouth and Direct Ports mouth and Chatham, to recover the sum of 3,8751... the balance of an account due to the plaintiffs as engineers. The scheme was registered in the month of September 1845, but was abandoned in the following November, as the allottees did not pay up their deposits. The defendant had taken a very active part in the affairs. Several witnesses proved that they had been employed by the plaintiffs to survey, and also to take the levels on the line in question, and that Messrs. Drayson acted in every respect as the authorized engineers to the company. It was agreed that if the jury should determine that the defendant was liable, the amount should be settled out of court .- Counsel for the defendant said that he should be able to prove that the line in question had been promoted by the plaintiffs themselves, and that all the engineering had been done before any managing committee was appointed. As early as the month of July 1845, the scheme had been first started by the plaintiffs, and was called "Drayson's line," and on the 8th of September 1845 the line was registered in the names of R. Chapman, Esq., J. Scales, Esq., and F. Drayson and H. E. Drayson, engineers. On the 24th of September, Messrs. Pontifex & Moginie were named as the solicitors to the company, and the plaintiffs appointed the committee, who selected them as engineers. The plaintiffs had given a letter indemnifying the members of the managing committee.—A letter dated the 25th of November 1845 was then put in and read. It was signed by the plaintiffs, and by it they agreed to hold the managing committee harmless from all liability, and acknow ledged that they had received 1,400l. from the com-

of an intention to mislead. In the autumn of last | jury was whether the plaintiff s agreed to do the wor in question on the responsibility of the managing committee or on the probability of the scheme succeeding .- The jury immediately returned a verdict for the defendant.

June 26.—In the Court of Exchequer, in re Smith v. the London and North-Western, this was an action under Lord Campbell's Death by Accident Compensation Act. The damages were laid at 10,000l. We give the whole particulars of this case, as it was the first awarding suc lheavy damages under the new law. The present action was brought by Mrs. Smith, as administratrix to a gentleman named Henry Smith, as well as on behalf of her infant son, for the injury which she and her son had sustained by the death of Mr. Smith, under the following circumstances:—On the 5th of June last, Mr. Smith took his seat in a second-class mail train from Eustonsquare to Birmingham. The train proceeded on its journey till it arrived near the Wolverton station, when the person in charge of the siding turned the train off the main line into the siding. The consetrain off the main line into the siding. The consequence was, that the train came into violent collision with several waggons then standing on the siding, which resulted in the death and serious injury of various persons, amongst others of Mr. Smith. With respect to the cause of the accident, he believed no question would be raised, as the coroner's jury returned a verdict of manslaughter against the person in charge of the siding, who was afterwards convicted. Witnesses were then called in support of the plaintiff's case. Mr. J. S. Gent, a surgeon, and who was a passenger on the occasion referred to, described the accident. He had no doubt that the death of Mr. Smith was caused by the collision. Mr. T. L. Burney, linen merchant at Kirkham, was well acquainted with the late Mr. Smith, who married his wife's sister. Witness was a part proprietor and one of the managing committee, and one of the auditors, of a company, owners of various steam-vessels plying between Fleetwood and the North of Ireland. Mr. Smith was the general manager of the company, and received a per centage on the cargoes of the vessels. In 1845 his earnings were 1,049t. 15s. 2d.; in 1846, 1,100l. 19s. He had been engaged from the formation of the company—about five years. He was a man of great experience, and his position was likely to be permanent. He was in the 51st year of his age, and was married on the 9th of July 1846. Mrs. Smith was 33 years of age, and the child was posthumous, and born on the 13th of October. Mr. Smith was a frugal man, in good health, and of temperate habits. He was employed by various railway companies as a traffic statist, and in addition held the appointment of Government inspector of steam-boats for the district, which yielded him about fifty guineas a year.

—In cross-examination by Sir F. Kelly, the witness stated that Mrs. Smith now resided at Kirkham. She had 2,000l. settled upon her at her marriage, and she has besides about 2,000l. of her own. He should suppose she possesses an income of from 150l. to 200l. a year. Mr. Smith held some shares in the Prince Wales steamer. Mr. Smith's accounts with the company were settled every six months, at the meetings in April and September. The half yearly meeting took place after his death, and there was no settlement of the last six months' account. At the half-yearly meeting the proprietors gave Mrs. Smith time to pay the amount. From 2001. to 3001. remain unpaid, and there is a sum due from the Fleetwood Railway Company which will more than cover it. Mr. Smith left property which has not yet been realized. Witness supposes that at the time of his death he was worth from 1,000l. to 2,000l. over and above that settled on Mrs. Smith. Since the death of Mr. Smith the commission on the outward voyages was reduced one half, namely, to 2½ per cent. He had an agency office also at Preston.—Stephen Burridge, chief clerk to Mr. Smith, proved the above facts, and stated that he had no reason to believe that his income would fall off, but the contrary. He was much respected by the inhabitants of Fleetwood, and his services were in great request as a railway statist. In cross-examination he stated that the deductions from Mr. Smith's income were about 210l. for clerks and office rent.—Mr. J. Bray, of Preston, solicitor; Mr. Robins, of Clitheroe, solicitor; and Mr. Main, parliamentary clerk to the Messrs. Bannatyne, of Glasgow, railway solicitors, severally stated that they had availed themselves of Mr. Smith's services before parliamentary committees on railways in 1845, 1846 and 1847; and they were of opinion that 300l. was a fair estimate of income from this source.-Mr. Morgan, actuary to the Equitable Life Assurance Company, said he calculated the value of an annuity on Mr. Smith's age of fifty of 1,200% at about 13,000%. He calculated it at 4 per cent .- Sir F. Kelly (for the mittee, which they spoke of as a loan.—Mr. Justice defence) said he had one or two points of law to Wightman, in summing up, said the question for the submit to the Court before the case went to the jury.

Digitized by GOOSIC

He would submit, in the first place, whether the case of a posthumous child came within the meaning of the Act .- The Chief Baron thought there could be no doubt on the subject after the celebrated decision of the House of Lords, which was given in opposition to the opinion of all the judges. The child was as much in esse as if it had been born.—Sir F. Kelly thought that the very fact that the opinion of all the judges had been in favour of the point justified him in submitting it. There was another point to which he wished to direct the attention of the Court, viz., that there was no evidence in support of the allega-tion of the declaration that Mr. Smith had met his death from want of care on the part of the company.

The Chief Baron said that the fact of the train, instead of going straight on, had run into the siding, showed that there must have been negligence. The company was bound to have some person to take particular care and direct the carriages into the static He therefore thought there was a sufficient case for the jury.—Sir F. Kelly then addressed the jury in mitigation of damages. This, he contended, was not the case of a person with a permanent income, but one uncertain in the extreme. He remarked that no evidence had been given to show what Mr. Smith's circumstances were anterior to 1845, and concluded by observing that he thought that three, or at most four years' purchase, would be amply sufficient as compensation.—The Chief Baron having briefly sum-med up, the jury, after a short deliberation, returned a verdict for the plaintiff, damages, 2.000L, which they apportioned thus—1,200L for the child, and 800L for Mrs. Smith.

RAILWAY ENGINEER .- June 19 .- In the INSOLVENT DEBTORS' COURT, Mr. G. Pilkington, the late engineer DEBTORS COURT, Mr. G. Pilkington, the late engineer to the CENTRAL OF SPAIN, appeared to obtain relief from his liabilities.—In reply to questions from the opposing counsel, the insolvent denied that he had ever received so much as 20,000l. from the Central of Spain. The whole amount he had received was, as stated in his schedule, 9,350l.—Mr. E. H. Lindo was then called, and stated that he had unfortunately been a shareholder in the Central of Spain, and formed one of the committee appointed to investigate the affairs of the concern, which the body of the shareholders considered to have been badly conducted. He had made a copy of the company's cash-book, which showed that insolvent had been paid 12,900% in cash, and 8,000% in shares—that was to say, 4,000 shares were given to him, on which the company paid the original deposit of 2l. a share.— The insolvent said he had never received all the sums entered in the cash-book; and as for the shares, he had sold them at prices varying from 5s. to 15s. a share.—The Court considered that the balance-sheet must be amended, and adjourned the case for that purpose.

#### Parliamentary Proceedings.

LORDS.

June 27.—Returns ordered.—On the motion of the Marquis of LONDONDERRY, the following returns were ordered: return of the names and additions of the provisional directors of the Lancashire and North Yorkshire, with the names of the solicitors, engineers and other officers; return of the provisional directors of the Liverpool, Manchester and Newcastle-upon-Tyne Junction, with their several additions, with the names of the solicitors, engineers and other officers; return of the number of shares allotted to each director or other officer of the above-mentioned companies, and the date or respective dates of each allotment; return of the number of shares registered by each and every of the said parties acting under by each and every of the said parties acting under the Act incorporating and amalgamating the said two companies; return of the various transfers of shares by each or any of the said parties, since the said registration, either by way of purchase or sale, with the market prices of said shares on the date of each transfer; statement of the number of shares now held by the said several parties or any of them; the names of the present directors of the company, and names of the present directors of the company, and when the same were appointed; copy of the several half yearly and other reports issued by the directors to the shareholders, and copies of the reports of a committee of investigation appointed the 25th of July 1846, and of another committee of investigation appointed the 8th of February 1848; copies of all correspondence between the directors, or any of them, the solicitors or secretary of the company, and Messrs. Meggison, Pringle and Shum, relative to a certain bill now pending in Parliament for the dissolution of the said Liverpool, Manchester and Newcastle-upon-Tyne; and the abandonment of the rail-way; that the said last-mentioned bill be not proceeded with until the said several returns be made.

ceeded with until the said several returns be made.

June 29.—Liverpool, Manchester and Newcastleupon-TyneJunction.—The Marquis of Londonderry
not proved.

moved, pursuant to notice, that a select committee be appointed to inquire into the circumstances connected with the Liverpool, Manchester and Newcastle-upon Tyne Junction which caused the abandonment of the railway and the dissolution of the company.—Lord Beaumont said it was most unusual for landowners to present petitions (which they had just done through the noble marquis) against the dissolution of a railway company. Such a petition should properly come from the shareholders.—The motion was understood to have been agreed to.

COMMONS. June 26. — Railways in India. — Lord MAHON wished to put a question to the President of the Board of Control with respect to the proposed extension of railways to India. He should be glad to know how far that project had been affected by the financial distress prevailing in that country as well as in this; also, what were the lines that had been abandoned, and what prospect there still existed of securing to some portion, at least, of India, the benefit of railway communication. - Sir J. C. Hobnouse had to remark that he could not give a very satisfactory answer. A meeting had lately taken place, at which all the circumstances relative to the condition of the proposed railways in India had been stated by the chairman of the board of directors. Railways the chairman of the board of directors. Railways had been projected by three companies—the Madras, the Bengal and the Bombay. The Madras had dissolved itself, after having found it would be impossible to proceed with its proposed line. With respect to the Bengal, he was sorry to have to state that that company also seemed to be unable to carry out the project it had undertaken. After the period for the payment of its deposits had been reportally postproyed it could only raise for these period for the payment of its deposits had been repeatedly postponed it could only raise for those deposits a sum of 60,000L, while the required sum amounted to 100,000L; and it further appeared that the company had solicited not only an extension of time for the payment of the deposits, but that it also solicited a guarantee of more than 5 per cent., and a continuance of the agreement for more than twenty-five years. The board of directors had found themselves unable to comply with those demands, so that the project was interrupted for the present. He was the project was interrupted for the present. He was happy to be able to inform the noble lord and the house that there were very good prospects of the line of the Bombay being carried into effect. The board of directors had most considerately consented that the time fixed for paying the deposits of that com-pany should be prolonged for four months; and he believed there was every reason to expect that they would be paid before the expiration of that time, and that the project could afterwards be proceeded with. He had only to add that the Board over which he had the honour to preside felt most anxious that as many railways as possible should be constructed, whatever rumours might prevail of a contrary dispo-

whatever rumours might prevail of a contrary disposition on their parts.

June 28.—Roilway Commission.—Mr. Bankes said he had given notice of his intention to move for leave to bring in a bill to repeal the Railway Commission Act. On Friday he should ask if the Government would allow him to bring in that bill.

June 30.—Lord J. Russell, in answer, said it was

the intention of the Government to oppose the motion for leave to bring in a bill to abolish the Railway Commission, but it was not the intention of the Government to keep up the Commission with Commissioners having salaries.

NATIONAL ASSEMBLY OF FRANCE.

June 23 .- French Railway Expropriation .resumption of the debate was commenced by M. MATHIEU (de la Drome), who maintained that the railway lines had originally been conceded by most unjust and profligate partiality. A vast number of deputies in the former Chamber had been connected with the railway lines, and had found it their interest to vote as favourable conditions as possible. Consequently, the State was acting with great pro-priety in now interfering and putting a stop to the injustice produced by those concessions. Any property in the country, the hon, representative maintained, could be expropriated, could it be shown that there was a real public utility in the case, but it was evident there was decided utility in two points of view; one, because it prevented aristocratic associations of capital, which allowed the railways to prescribe their own terms to the working classes whom they employed; and next there was material utility, because, in years of scarcity, the State, when holding the railways in its own hands, could insure at a very slight expense an ample supply of provisions to every part of the country. What was to prevent the rail-way companies, he would ask, from realising immense sums of money at the expense of the poor at such moments of difficulty!—[A Voice: How could they do that when the tariffs prevented it?]—But the measure which was proposed to the Assembly would be found of still greater utility, should France be engaged in war. Steam had changed all the tactics of modern warfare. The great force of armies was in the rapidity of their movements, and why should not the State ensure so great an advantage by becoming possessor of all the railwaylines!—[A Voice: But they are obliged to carry troops when the State demands it.]—Still it was better that the State should have the power in its own hands. The lines of electric telegraphs which followed the directions of the railways were also to be taken into account. In a short time they would bring all the departments of France, as it were, at the door of the Minister of the Interior. And yet, for all these advantages, it was proposed that the State should be dependent on the companies! The hon, deputy concluded by saying that he considered the bases of the transaction as proposed by the Minister of Finances as perfectly just, and should therefore give the measure his fullest support.—Count de Montalembert, who spoke at great length, said he would not follow the hon member who had last spoken in his financial view of the question, but should merely regard it socially and politically. He was decidedly opposed to the measure under consideration, as he considered it a most deplorable one. It was a war declared on liberal principles in the name of Republican ones, and which would be most disastrous to the interests of the Republic. The illustrious philosopher (M. Arago) who had been placed at the head of the Executive Government had himself, on a former occasion, maintained the system of association against governmental monopoly; and M. Garnier Pages, the brother of their hon. colleague, was of the same opinion. The hon. deputy here read the opinions

expressed by those gentlemen on the occasions alluded to, and added that he had only brought them forward now as the sentiments of men who supported the true principles of liberty. The hon, gentleman concluded by saying that he regarded the measure as illiberal, unjust and impolitic, as well as an attack on

the spirit of association and on property, and in that view he should give it his strongest opposition.

[This debate having been interrupted by the deplorable events of the 23rd ult., and a change of ministry having succeeded, it is not likely to be re-

sumed, except to abandon the scheme.]

RAILWAY CAPITAL .- One of the great causes of error, in investigating the operations of capital in railway investment, evidently arises from the inability to distinguish between circulating or floating capital, and fixed capital; the boundaries of which are, it is true, uncertain and ill-defined, but between which, true, uncertain and ill-tenned, but between which, too commonly, no boundary at all is allowed of. Thus the whole expenditure upon English railways, the whole 109,528,800l., has been by the two great parties of railway economists, though from different motives, put down to the account of floating or cir-

culating capital - a deduction so monstrous, that those who made it ought at once to have hesitated before they adopted it. One side contend that it is an entire sum of a hundred millions of floating capital, or money, as they will have it; the others hold that the hundred millions is the perpetual reproduction of some assumed smaller sum, which has been in constant circulation.—Irish Wants and Practical Remedies.

CONTINENTAL LINES. — Some recently published statistics regarding the Continental lines place Germany in the van of those who, during the past year, have most cultivated railway communication. France, at the close of the year 1846, maintained in active operation 1,017 miles, which, with the addition of works completed and opened for public use in the course of the following year, constituted at the end of that period a total length equal to about 1,395 miles. At the end of the year 1846 Germany possessed about 3,096 miles, completed and in operation, and in the course of the following year 795 miles additional were opened; so that at the close of 1847 the total extent in that country amounted to 3,891 miles. Belgium, in December 1846, possessed 456

miles, and in 1847 the completed quantity of new miles, and in 1847 the completed quantity of new undertakings was 90 miles, making a length in active operation at the end of the last-mentioned year of 546 miles. The length opened in Holland at the close of 1846 was 168 miles; in 1847 only 15 miles additional were completed, so that at the close of that year about 183 miles were altogether in operation. Denmark at the end of 1847 possessed 158 miles in active operation. Switzerland figures for a small extent. In 1846 not more than 3 miles of line were completed. This was increased in 1847 by the opening of about 16 miles of the Zurich and Basle. of about 15 miles of the Zurich and Basle, making the total about 18 miles. In Italy at the end of 1847 the length in operation was 183 miles. In 1846 about 159 miles had up to that date been opened. Hungary possessed at the commencement of the present year 165 miles in active work. At the close of 1846 about half that extent had been completed. It is stated that Russia in 1846 had only 20 miles carried out. In 1847 this amount was increased to 51 miles. In the kingdom of Poland 159 miles were completed by the close of 1846. In 1847 a further extent of 54 miles was accomplished, making the total length 213 miles.

#### Monen Market.

#### PRICES OF BRITISH STOCKS.

Sat. Mon Tues Wed Thurs Fri. 

* For account, July 14. + Ex Div.

London Stock Exchange, June 30. - The share-market has experienced a decided change for the better during the last two days. There has been more business transacted, and on improved terms. The inquiry for preference shares and stocks has increased, and some very large operations have been effected in the Lancashire and Yorkshire guaranteed

Liverpool, June 29.—Our market has somewhat recovered from the depression caused by the state of affairs in France, and to-day prices generally are higher, and the demand for good stocks is greater than the supply.

Suplow, Brothers.

than the supply.

Manchester, June 29.—We have experienced some fluctuation in our share-market during the week; but no great amount of business has been transacted, and present prices are but little better than last week's quotations.

Sam. Grindrod.

Birmingham, June 29.—The market has been dull during the week, without, however, much disposition to press sales, and to-day prices have somewhat improved. North Staffords were done at 23 dis.

W. BANKS.

York, June 29 .- The market is firmer, but few shares are passing hands at the present quoted prices. GRAYSTON & EARLE.

Hull, June 29.—The events of the week in France have disturbed the share-market, but it is now more tranquil. The public are taking small amounts of stocks for investment, but not speculatively. Local stocks remain unaltered. The nominal rates are those of last week, there not having been sufficient business to vary the quotations except in a slight degree. FLINT & TOOTAL.

Newcastle-upon-Tyne, June 29.—Railway business was a little more active yesterday, but to-day it has resumed its ordinary quiet tone. A good deal of stock is in the market, but owners do not force sales. There is little or no speculative business; indeed, buying orders are few, but there are some parties who take the opportunity of the low prices to quietly cull amongst the favourite lines. Shares this evening leave off firmer.

W. FORDYCE.

Glasgow, June 29.—The dealing in this market has been principally confined to Ayr, which dropped to a low point on the 26th inst., chiefly owing to the Paris news. On Tuesday, however, and since, there has been a marked rise in this stock, and the different classes of it continue in demand. There is very little doing in the other lines. The following are to-day's latest prices:—Aberdeen, 20; Caledonian, new, \(\frac{1}{6}\); Glasgow and Ayr, 72: ditto, guaranteed, 1024; ditto, halves, No. 1, 78; ditto, No. 2, 74; North British, thirds, 23.

BUCHANAN, AITKEN & Co.

The insurrection in Paris, which has inflicted such dreadful sacrifices on the whole population of that ill-fated city, has necessarily put a stop to all trans-actions on the Bourse, and deprived us of our usual weekly returns of prices and the traffic of the French lines, with the exception of the Amiens and Boulogne. The Bourse has been closed during the whole of the week. We can only hope that, now that the crisis has passed, affairs will take a more favourable course for the future.

RAILWAY PATENTS .- Amongst those lately enrolled Fielder's Improvements in Iron Beams or Girders are noticeable. The improvements described relate, firstly, to the construction of beams or girders, com posed partly of malleable iron and of cast iron, which the patentee terms "compound girders or beams." The lower, or tension flanges, are made wholly or partly of malleable iron, while the centre ribs and upper, or crushing flanges, are wholly or partly of cast iron, according to the duties they may have to perform. For instance, the lower flange may be made of or strengthened by the addition of malleable iron and the centre rib and upper flange remain of cast iron; or the upper and lower flanges may be of or strengthened by the addition of malleable iron, united to the centre cast-iron rib, and further strengthened, when exposed to vibration, by angle iron; or the perpendicular ribs may be also com-posed of malleable iron, when exposed to violent concussions. The malleable iron is united to the cast iron by hot rivetting, and, in all cases, in such proportion that it shall be able to support, alone, the estimated weight to which the whole girder may be subjected, and so prove efficient, in case of fracture of the cast-iron portion. Secondly, in the application of the preceding principle of construction to the strengthening or repairing of existing beams or girders, with such variations of detail as the particular case may suggest. Thirdly, to the construction of beams or girders composed entirely of malleable iron, in which cases the flanges are united to the centre rib by angle iron, the coupling-joints headed, and the whole fastened together by hot rivetting .-We also observe Heaton's Improvements in Locomotive Engines, which consist in the application of counter-balance weights, moving in an opposite direction to the pistons of the steam cylinders, in order to prevent the oscillation and uneasy motion to which locomotive engines have hitherto been subjected. The mode of applying those counter-balance weights preferred by the patentee, but to which he does not confine himself, is as follows:—On each end of the axle of the driving-wheels is placed a crank, to which is united a connecting-rod, attached at the other end to the counter-balance weight, which is suspended between two rods, so as to swing readily to and fro, or held between fixed guide-rods, to admit of its sliding easily. The position and arrangement of the counter-balance weight in respect to the pistons should be such that they should always move in the direction opposed to that of the latter, and should, moreover, be equal in weight to that of the pistons and gear for working them.

IRON TRADE. - Glasgow, June 23 .- Large parcels of pig iron were offered, but no buyers appeared at 43s. per ton. Much less must be taken just now, though a few small lots brought 43s. cash.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

#### MEETINGS.

BELGIAN EASTERN JUNCTION.—July 5. London Tavern. BIRNINGHAM AND OXFORD.—July 3. Birmingham, at 1. CHARLEROI AND ERQUELINES.—July 4. Brussels, at 12. Liverroot. Manchester and Newcastle-on-Tyne.—Jul London Tavern, at 12.

LONDON AND GREENWICH.—July 4. Coleman-street, at 1. LOUVAIN A LA SAMBRE.—July 10. Brussels, at 12. SAMBRE AND MEUSE.—July 19. London Tavern, at 1.

#### DIVIDENDS.

Arbroath and Forfar.—5 per cent. on the guaranteed stock, and 3 per cent. on the other stock.

CONTRACTS.

GREAT NORTHERN.—20 first class, 40 second class and 40 third class carriages; 20 luggage-vans, 6 horse-boxes and 6 carriage-trucks, July 5. Works between Copenhagen Fields and King's Cross, July 24. SHREWSBURY GENERAL STATION.—Turntables, switches, crossings, tanks, &c., July 4. SHREWSBURY AND WELLINGTON.—18,000 sleepers, July 3.

# Railway Chronicle.

LONDON, SATURDAY, JULY 1.

At the annual meeting of the LANCASTER AND PRESTON there was no final decision announced of the Chancery suit between the shareholders of the railway and the canal, though the chairman stated that the amount in hand would more than cover the expected expenses. The Report, which declared that the revenue account would be found much as usual, was adopted.

The shareholders of the Louvain A LA SAMBRE received the Report from the directors, announcing the forced suspension of the works, through the commercial distress. The Belgian Chambers have granted an extension of the time until May 1851, and the directors say they require about 40,000l. for the completion of the line. As no definite suggestion was made as to how this sum should be raised, the meeting was adjourned for three months.

The following is the business of the COMMIT-TEES of both Houses carried on during the past week. In the Lords-preambles proved:

Arbroath and Forfar (Additional capital).

Drumpeller.

East Lincolnshire (Alteration of Great Grimsby branch).

Edinburgh and Glasgow, No. 1 (Branches). Edinburgh and Glasgow (Amendment of Acts and

branches). Leeds Central Station.

Leeds Central Station.

Leeds and Thirsk (Harrogate and Pateley branch),
(Alteration of levels of the Leeds and Hartlepool).

Manchester, Sheffield and Lincolnshire (Station approach at Manchester), (Crossing at Sheffield-street,
Manchester).

Strathtay and Breadalbane.
Waterford and Kilkenny (Act Amendment).

York, Newcastle and Berwick (Deviation and abandonment of part of the Thirsk and Malton branch).

In the Commons—preambles proved: Edinburgh and Glasgow and Edinburgh and Bath-

gate (Amalgamation). North Wales (Dissolution).

Not proved:

London and South-Western (Exeter and Cowley Bridge Junction).
London and South-Western, Exeter and Crediton,

Taw Vale and Dock and Bodmin and Wadebridge (Arrangements).

Taw Vale and Dock (Suspended bill).

Dr. Johnson was wont to say he had as soon a man should knock him down as talk of the second Punic war. The same dread seems to pervade the railway authorities and the Legislature whenever the gauge question is brought forward. The golden opportunity, when a definitive settlement was practicable, has been suffered to pass, and the matter now drags on with every appearance of never being settled at all. In the recent debates, Mr. Labouchere declared himself bewildered, and did not appear to derive much consolation from the confident, off-hand assertion of Mr. Muntz, who referred triumphantly to the working of the double gauge between Cheltenham and Gloucester as a satisfactory solution of this much-vexed question. Now, we really think the line so boldly instanced is no criterion whatever; and Mr. Hudson, no mean authority, holds the same opinion. The distance is only six miles, or thereabouts-

there are no intermediate stations, there is consequently no multiplication of points which there must be on a longer line; and this bit is worked with great caution and at only moderate speed. So far certainly the system itself has occasioned no accidents, but the risk on a greater extent must inevitably be increased. and we defy either Mr. Brunel or Mr. Saunders to prove the contrary. Shareholders are surely entitled to look for a probable remuneration, and before embarking in such gigantic experiments they ought to consider how it can be possible, at a time when the most cheaply worked rails are complaining, for them to make a profit under such an outlay as must inevitably be entailed upon their proceedings with the additional cost of a double gauge. No doubt they may run opposition to mutual disadvantage, but the grand element of successcheapness in construction and working-will be obliterated, and the public, who were to have been the great gainers, will have to pay for this insane rivalry, which to the companies will cause an immense loss, and must then be followed by a compromise. Has not the anticipation of such a state of things had some share in lowering the prices of both the great rival lines? What an amount has already gone in legal expenses alone, and to what a fearful abyss is this contest leading the combatants! It would surely be more prudent in the Great Western, before attempting to extend their dominion, to finish the undertakings to which they are already committed. We can hardly fancy, with the South Wales on their hands at its present discount, besides two or three other snug things, that the public will be very ready to come forward with money for enterprizes which may turn out equally disastrous; but the policy of this company has always been a bold one, and we do not doubt they will make the attempt.

From our official returns it appears that the amount of traffic for the last week, on 3,877 miles of railway, was 216,820/., thus accounted for:-119,724l. for the conveyance of passengers only, 44,347l. for the carriage of goods, and a remainder of 52,749l, for passengers and goods together, not respectively apportioned; being an increase of 39,986l. over the corresponding week of last year, when the mileage was 3,025. The average earnings per mile were 56l., whilst in 1847 they were 58l.

### RAILWAYS IN INDIA.

We last week published a summary of the debate on this question at the quarterly Court of Directors, when it was stated by the CHAIR-MAN that one company only survived out of the three projects originally brought out, namely, the BOMBAY; and the extension of time allowed to make the deposit of 30,000/., required by the India Board to insure the guarantee, having expired on Saturday last, we are glad to find that the money was provided in time and depo-sited on that day. There is now no doubt the sited on that day. scheme will be forthwith carried out, and which may eventually induce fresh companies to come forward for the other two presidencies. On this subject, Lord Manon asked a question of the President of the Board of Control on Monday night in the House of Commons, and Sir J HOBHOUSE, in answer, referred his lordship to the statements above alluded to.* At the time of the publication by an Engineer of a pamphlet bearing the title at the head of this notice, we gave extracts from it, with an accompanying commentary; † and as the subject is now revived, we may again have recourse to it for one or two passages. The following relates to the

pp. 941, 966, 987.

expenditure and the means of providing for the people to be employed in the construction of the line

It may be expected that most of the money invested in railway works in India will eventually find its way back to this country for the purchase of manufactures; but it is not so obvious that any sudden abstraction of a large sum of money would not give rise to serious embarrassment. Fortunately, however, the peculiar conditions involved in the formation of Indian lines are such, that the exportation of any large quantity of bullion may be dispensed with. As far as regards the iron and the engines, it is clear that no export of bullion is involved in the purchase of them: and the only other large expenditure against which it is necessary to provide, is the labour of the natives employed in the formation of the railways. Now it appears very clear, from the peculiar habits of the appears very clear, from the peculiar haots of the Indian people, that the whole of these native labourers must be supplied with food and clothing by the railway companies. The natives of the country villages would not sell their corn on any terms, as they would thereby be reduced to starvation themselves; for such are the difficulties of transport in India from the badness of the roads, the heat of the climate, the absence of bridges over the rivers and other impediments that there may be, and often has been. a famine in one part of the country—when mothers, even for a mouthful of food, have been driven to sell their children—and unbounded plenty not many miles distant. It will be necessary therefore for the railway companies to collect grain and other articles of consumption in depots along the line of country the railways traverse; and it does not appear impossible so to arrange that this grain shall for the most part be paid for in manufactures. If then this be done, and the labourers are paid in part upon the truck system—under such precautions, however, as would prevent it from becoming a grievance-it does not appear probable that any considerable export of bullion from this country would be necessary. The railway labourers would be paid partly in food and partly in clothing—the former having been previously purchased with British manufactures, and the operation of the measure would be to retrieve to some extent the disasters that have afflicted the manufacturing districts in consequence of the late deficient harvests. The necessity for providing manufactures, moreover, would facilitate the collection of the capital; for subscriptions in merchandise might be got where it would be impos-sible to get subscriptions in money; and it would signify nothing in what species of coin the instalments were paid, provided they were all equally effectual in accomplishing the formation of the railways. The Indian railway companies indeed would become large consumers of British manufactures at a time the markets are failing in other quarters; and by the time the consumption ceased from the completion of the railways, new fields would have been opened up, by the accessibility of which a still larger consumption would be occasioned.

The following practical observations regarding the preservation of the timber to be used in the construction of the works, may not be uninteresting to our engineering readers:

It appears to be indispensable that the timber employed in railway works in India, whether for sleepers or viaducts, should be so prepared as to prevent decay, and to be capable of resisting the attacks of the white ants. There are several known means by which both of these ends may be attained; but it is important to ascertain how the required immunity may be reached with the least expense. Payne's and Kyan's processes for preventing rot of every kind in timber are largely employed in this country, and are known to be effectual; and in India kvanized timber has been found to be exempt from the attacks of the white ants, if it has been thoroughly penetrated by the preservative solution. A curious illustration of the efficacy of Kyan's process is recounted in Mr. Stephenson's Report. Some pieces of prepared wood, which had been received several years previously by one of the builders in Calcutta, were found, after long exposure, to be entirely eaten out in the inside by the white ants, while the exterior, so far as the preparation had penetrated, remained perfectly sound and untouched. By the use of hydraulic pressure, the wood is now penetrated throughout; but the apparatus is cumbersome and costly, as it requires to be very strong to withstand the pressure. The cost of preparing timber in this country, according to Payne's process, is 14s. per load, or upwards of 3d. per cubic foot; and although in India the cost might be less, yet it is to be apprehended that the cost of Payne's or Kyan's process would amount to a very large sum where the preparation of so large a quantity of tim-

Digitized by GOOGLE

ber was necessary. It is worthy of consideration whether Boucherie's method of preparing timber, which has been much used in France, would not be preferable for Indian purposes to any of those proesses which involve the use of hydraulic pres By Boucherie's plan, the preservative liquid is intro-duced into the trunk of the live tree, which, by the action of its capillary vessels, sucks the liquid up, and diffuses it throughout the entire substance of timber. If this plan were adopted, it would only be necessary, after selecting the trees in the forest, to bore through the trunk of such as are to be cut down as near the ground as convenient, and to run a wide saw cut from the hole towards each side, leaving timber enough uncut to maintain the tree in the perpendicular position. In this cut, the preservative liquid is to be kept for a few days by any suitable arrangement; but if kept too long it will penetrate to the twigs and leaves, and thereby occasion a waste of the preservative material. Pyrolignite of iron prevents every kind of rot, but coal tar appears to answer the same purpose, and it is both a cheaper material and one to which the white ants appear to have a great antipathy. The white ants will not touch the iron wood of Moulmien, they do little or no damage to teak, and there are various other woods which resist their attacks. The Englishman of March 1, 1845, says—"It is an utter mistake to suppose that timber cannot be found to resist white ants; there is abundance in this country that will, for a period as long, if not longer, than the common pine timber used in England, resist the weather of that climate." There is no doubt that the difficulty presented by the white ants has been much exaggerated; it is found that they do not attack timber over which there is any traffic, and the vibration of a railway train, it has been alleged, would deter them from committing ravages upon the timber employed in railway con-structions; but nothing must be left to chance in so momentous a question, and it appears desirable that the whole of the timber should either be Kyanized or impregnated with tar by Boucherie's process, both as an antidote against the white ants and as a pre-servative against decay. It may perhaps be found expedient to construct the piers of the bridges over the Nuddea rivers of iron or stone, instead of timber to obviate the attacks of worms which some rivers contain; but this course would not be necessary in the case of the Saone bridges, except perhaps in one or two of the central piers, as the whole of the other piers would rest on dry land, except during the winter floods.

#### EXTENSION OF THE SOUTH-WESTERN TO WATERLOO BRIDGE.

The South-Western is the first of our main trunk lines that has literally lodged itself in London. That which for years was a felt necessity is now an accomplished fact, since, by means of its Extension adjunct of 2½ miles of line, from Nine Elms to Waterloo-road, it has now centralized itself, with its tributaries spreading over an area of 250 miles, almost on the threshold of the Strand. This has been accomplished in about two years, at immense cost and labour. The company, and the community for whose more immediate advantage this extensive work has been brought to a close, may be congratulated on its completion, seeing that it will confer on the commercial transactions of both facilities hitherto unattainable, when the inconvenience and inaccessibility, if we may so speak, of the old quarters at Nine Elms, are taken into consideration. Now, more complete than any of our arterial lines for the purposes of through transit, the City or suburban passenger may shortly take the train at Waterloobridge and be wasted away, without the intervention of either cab, omnibus or steam-boat, to Windsor— Richmond—or Southampton Water, "without break of gauge," or any such impediment, from the very centre of the Metropolis. While the improvement will conduce much to the comfort and convenience of passengers of every class, it will materially add to that important item in the element of revenue, the short pleasure-traffic. As the event is one of the first of its kind, it may perhaps be not uninterest-ing to observe that this Extension is about the only one out of nineteen or twenty candidates that came before the Metropolitan Railway Commission, appointed in 1846 for inquiring into the expediency of establishing termini in the vicinity of the me-tropolis, that was not tabooed by the Commission, and it then very naturally stood its ground as a scheme of practical utility, as interfering less with crowded thoroughfares and as less destructive of property than any other that was then propounded.

The truth of what Mr. Chaplin set forth at the

their mercantile office in Cornhill, or which would, probably, be more agreeable, from the Bank, after they had received their dividend in 1848. and. looking through the horoscope of their future prospects, he would proceed with them to the foot of London Bridge, where they would join the trains that were to convey them to the South-west of England, without any of the complicated machinery now involved in the system of omnibuses and cabs. After witnessing the quantities of merchandise shipped and unshipped for all parts of the world in their own wharves, -after sceing the innumerable quantity of passengers coming from all parts of the metropolis, with those arriving by the boats from Chelsea, who, he had no doubt, in 1848 would be conveyed at a \(\frac{1}{2}d\). per head per passenger—having placed all these comfortably in the caravansaries destined for the south-west, he would then ask them whether they would prefer going to Southampton vid Kingston, or by Kew, Brentford and Isleworth vid Richmond. Speculating on the probability of their preferring the Richmond route he would promise to shoot them off, in some of their best carriages, buoyed along by Beattie's patent wooden wheels, running over the rails noiselessly and without dust, with spring and wire blinds, from Battersea to the Richmond line, in their transit over which they would pass through the pleasant suburban villages of Wandsworth, Putney, Barnes and Mortlake." This will now soon be realized.

On Wednesday, when the Government Inspector

went over the line with Messrs. Chaplin, Locke, Ker, Stovin and Taunton, Mr. Beattie's new carriages were in readiness at Nine Elms. They are altogether an improved structure, greatly in advance of the old style. There is an air of lightness and cheerfulness about the interior, arising from the decorated roofs, some of those intended for the pleasure traffic having a cloud-coloured ceiling and being ornamented with representations of gentlemen's seats that diversify the line. The works, constructed by Mr. Locke, under the immediate superintendence of Mr. C. Ker, his acting engineer, are of a somewhat remarkable order. The entire Extension is on a lofty viaduct from Nine Elms to Waterloo-road, and consists of 300 arches, like those upon the Greenwich line. Proceeding from the Nine Elms station the first object of attraction is the bridge over the Wandsworth-road, which is formed of large iron girders of 70 ft. span,—a really handsome and solid structure. Nothing of importance intervenes to view until you reach the bridges over Lambeth-road and Kennington-lane, which are of a description similar to the Wandsworth one, excepting that the one at Lambeth is constructed on three arches, one over the main road, with two side arches for foot-paths. Between these two bridges is situated the Vauxhall station, abutting close upon the Vauxhall Gardens. The extent of platform room at this station is altogether about 300 ft. Only certain trains will stop at Over Church-street, in the vicinity of Lambeth Palace, the bridge consists of two iron arches, with piers in the centre of the road. These piers were the subject of much controversy with the parish authorities, and they were conceded them by the engineer to meet the preference they gave to them over the construction of a bridge with three arches. The principal bridge is that over the Westminster Bridge-road, and its singularity consists in the greatness of its skew span, which, at a stretch of 90 ft., compasses the whole road. Messrs. Lee & Co. deserve all credit for the way in which they have carried out the permanent way and works. The extent of room at the Waterloo station is at present 5 acres, but the company have purchased ground to the extent of 12 acres, so as to provide for their own future accommodation, and that of the South-Eastern, the Brighton and South Coast, or any other line that may ultimately join them. The whole of the land from Nine Elms to Waterloo Bridge has cost 500,000l., and the total sum for the construction of the entire extension is estimated at about 2,000,000l. booking-offices and waiting-rooms are only temporary, but the sheds, engine-houses and other appurtenances are permanent. In a short time a substantial terminus, under the superintendence of Mr. Tite, the company architect, will be commenced upon a large scale, and from suitable designs. The total length of the present iron-roofed platform—which reminds one forcibly of that at Derby in its style and extent—is 300 ft., but when completed it will be upwards of 600 ft. Its full width is about 154 ft. Here all the trains will be marshalled; and for carrying this out with greater convenience, there are six lines of rail, and at 250 yards beyond there are four lines of rail, two for the Richmond and Windsor, and two for the main line traffic, the whole way to Nine Elms station, which will be half-yearly meeting in 1847 may now soon be tested, when he invited "the proprietors to accompany him in imagination, by an ordinary train either from views of St. Paul's that can be had in the metro-

polis is presented to the traveller on arriving at the Waterloo-road station. Standing high above the level of the adjacent houses, the cathedral is in front of it. No increase in the company's staff consequent on the extension will be required, the whole process being merely tantamount to removing, bodily, the colony of officers and handicraftsmen from Nine Elms to Waterloo Bridge, the goods business remaining undisturbed, by the river. advantage to be derived from the present extension will be the avoidance of the notoriously obnoxious tolls to Nine Elms station over the bridges; and it is calculated that to passengers travelling by the South-Western this alone will be a saving of some thousands per annum.

The property disturbed in carrying out the present extension has, we understand, been very considerable—between 600 and 700 houses having been purchased; but the effect of it has been to raise the rents in the neighbourhood between 30 and 40 per cent.

As a general principle, the trains will leave the Waterloo station at the same time as they have been accustomed to leave the Nine Elms, while the relative distances and time occupied will be materially re-The distance to the new terminus from the Bank will be something less than two miles, instead of four, as formerly, and correspondingly so to other quarters of town. The company, amongst their other arrangements, have determined on conducting their cab and omnibus service on the same principle as that pursued by the North-Western and the Great Western; and with this view 100 cabs, in addition to omnibuses and hackneys, will, on its opening, commence running from the station.

#### Carredpandence.

#### HOW TO EFFECT UNIFORMITY OF GAUGE.

The unsettled state of the Continent, and more especially France, ought to force public attention to some effectual settlement of the gauges. The dangerous delay that in a time of emergency must necessarily arise from the break, has been too fully shown by the evidence of our best military authorities, to need any further comment. The only question seems to be the means which are to carry out such a desirable uniformity. The enormous amount of mileage of the narrow lines clearly prohibits altering them to a broad gauge, if that were desirable, which I much doubt, for many reasons. The other alternative seems therefore to be, to change the broad into the narrow; and I will assume this may be done at an expense of one million, or thereabouts, for permanent way and locomotive stock. It is very clear, I presume, that Parliament would not sanction a payment to that amount out of the national funds; but if they made a temporary advance for the purpose, the repayment might easily be made by a small fractional charge per mile on every narrow-gauge passenger, which would hardly be felt. and the difficulty, which is now daily increasing upon us, would be cleared away. This may not be strict justice, but it is, I think, practicable, and would, I have no doubt, cause an advance in the value of X. Y. Z. both descriptions of railway stock.

#### June 29.

#### WELSH MIDLAND.

On the 29th of January 1847 I received a return of 15s. per share, on eighty shares I had the misfortune to hold in the above railway. A hint was given that there would be a further return. I presume there is no prospect of it: possibly you can inform ONE OF THE LEGION OF VICTIMS. me?

Liverpool, June 26.

[At the time the 15s. per share was paid on the shares in question, a certificate was issued entitling the holder thereof to "such further return in respect of such shares as the committee for winding up the affairs of the company may hereafter find desirable, after discharge of all claims." And in pursuance of the notice therein given, the directors, on the 28th of August last, issued circulars to all the parties to whom, or their agents, these certificates had been delivered, intimating that a further dividend of 4s. per share would be paid on the transmission of such certificate per post to their late Secretary, at 46, Parliament-street. We advise our correspondent to take that course, and prompt attention will doubtless be given to it.—Ed. Rail. Chron.]

#### LARNE, BELFAST AND BALLYMENA.

You will do a very great favour to many in the above scheme if you will enable us to recover what part of our deposits remain. This line never even got into Parliament, so far as I recollect; but, at all events, it is numbered among the exploded concerns of 1845, so far back as October 1846. Now, nearly two years past the shareholders, at a meeting of the company and after due information, resolved that 15s. per share should be returned. The directors, however, would not agree to name any particular sum; as they then said that the lawyers and they were disputing about the amount of the law accounts, exorbitantly large. These accounts, I understand, have been long since settled, as well as all others, and yet no return is made to the shareholders Pray urge on the directors to call a meeting and declare and pay us the return speedily. If not, the shareholders must call a meeting, but as men of business the directors should do so, and ought long since to have done so. ALPHA.

#### AMALGAMATION OF CONTINUOUS LINES.

The following remarks of Mr. Austin, who was retained by the London and North-Western companies to obtain the approval of the lease of the Scottish Central by the Commons committee, are, we think, very standard arguments against the outcry so frequently raised as to the monopoly from amalgamation of large railway interests. The preamble of the bill was, however, not proved.

I will take the liberty of reading a passage from the Report of the Board of Trade on the subject of amalgamations. I am aware that my learned friend Mr. Hope has quoted it before; but I may be excused if, considering the paragraph at the highest value, as coming from unimpeachable authority, I read it again. Speaking of the public requirements, they say this—" For instance, when two or more lines form continuous portions of what is evidently for permanent public purpose one great line of commu-nication, or whenever, in fact, there can be no reasonable doubt that if the whole system was proposed for the first time, an integral source would obtain a preference over separate and unconnected portions, we think that the benefit which we have already pointed out as likely to ensue from unity of management, may be considered as sufficient to jus-tify the sanction of amalgamation under proper guarantees and conditions." The promoters of the present bill are seeking to carry out the views embo-died in that Report—"whenever, in fact, there can be no reasonable doubt that if the whole system were now proposed for the first time, an integral scheme would obtain a preference over separate and unconnected portions." Do, I pray you, observe that it is almost conclusive of the question. "We think that the benefits which we have already pointed out as likely to ensue from unity of management may be considered as sufficient to justify the sanction of amalgamation under proper guarantees and condi-tions." That principle is strictly and clearly laid down in the Report of the Commissioners. The principle contained in that short paragraph ought to carry our bill. Mr. Adie has admitted, that what, for the purposes of this committee, we may term the North-Western system, is better and more efficiently worked under its united management than it was while the several companies were disunited. Now, just look at this long line, at present under one management, and break it down into its several portions—the London and Birmingham, the Grand Junction, the Preston and Lancaster, the Lancaster and Carlisle, the Caledonian, the Scottish Central, and the Perth and Northern lines. This long line is divided into seven separate parts, all harmoniously worked under one management. But dissever them— let the London and North-Western resolve itself into the London and Birmingham and the Grand Junction Companies again—let there be no union between the Preston and Lancaster and the Lancaster and Carlisle-let the Caledonian stand by itself, totally unconnected with its present allies to the South, and what a state of things you will have! The communication to Scotland will be for every commercial purpose broken up—facilities for communication will no longer exist—the public interests will suffer—disorder will usurp the place of order—and dissatisfaction will prevail among the proprietors.

The passenger for the North will meet with an interruption, at Birmingham another, a third at Lancaster, and so on till the end of his journey. Let the com-

mittee only consider the delay that will follow. question scarcely admits of argument. I have no doubt that Mr. Adie himself has a different opinion this morning from that which he yesterday expressed before you; and when we get up to the House of Lords, I intend to call Mr. Adie as a witness in support of the principle of amalgamation. It is manifest, from the evidence of everybody, that you cannot work disunited bits of lines with the same ease and economy that you can work an entire line; and again this contend is in favour of what I call an equitable railway monopoly. There is no fear of the monopoly which my learned friend Mr. Watson referred to. It is a raw-head-and-bloody-bones, intended only to frighten old women and children. Monopoly in some degree you must and you will have. The question is, how shall that monopoly be worked with the companies and advantage to the public? That is to be done by combining a number of lines forming a continuous route from one point of distance to another point under one management, one head, one set of engineers, engine-drivers, one set of officials from the highest to the least, one staff, one set of engines and waggons, and a general understanding throughout the whole line;—not one set of rules on one part of the system, and another set of rules on another part. A monopoly conducted on this principle will have all the advantages of free trade. Whatever may be your advantages, be they ever so great, under no circumstances. however favourable, can you accommodate the public so conveniently, so satisfactorily, and most certainly not so cheaply, as by this system. This general principle should determine you. Some member of the committee, I know not which, threw out a hint in the earlier part of this case that this was a case, not of evidence, but of argument. With great deference, I would say that it is not so to the full extent, because the evidence in this case is also important But the hon. member is right so far, the real tion is one of principle. I am sure you will not allow your minds to be influenced, your decision to be guided by the words "free trade and monopoly." Out upon the words! I treat them with, as I hold them both in, contempt, when they are made the vehicles for disguising facts and arousing prejudices. There ought not—there is not—there cannot be any competition on railways. It is a thing that cannot exist—it is a popular error—a legal fallacy. Competition is a widely different thing, and exists under very different circumstances. ought to be no law to interfere between two grocers. They have entered into a commercial speculation and they must win or lose, as fortune and their own good or bad management wills it. But in the case of railways, the principle of competition is comletely displaced, and I have no doubt that before many sessions shall have passed, we shall have a law introduced for the purpose of preventing what, in the absence of a better word, I must call private competition in matters of railways. You must there-fore drive what my friend Mr. Watson calls competition—what I pronounce ruin—off the lines, by joining railways together. I am not afraid to lay down these principles; they are familiar to my mind in the shape of exposition, and I feel and I know that the principle of competition cannot apply in the case of railways

#### COMMUNICATION WITH GUARDS.

The Builder has the following remarks on the often-suggested plan of providing a passage from one carriage to another as a sure means of help in case of accident or interruption of a train.

Amongst the multitude of suggestions out of which directors might choose, we have seen none to excel, or even to equal, our own, in matter-of-fact practical bility and in varied utility, namely, that a freedom of personal movement along a train, on a regular beat either outside or in, should be afforded to the guards. so that either driver or passenger might be promptly reached on accidental occasion, or at short and pointed intervals. In such a case as that which occurred the other day, when a turbulent, insane or drunken person presented a pistol at the head of a fellow passenger, the most prompt aid might thus be afforded; or in cases of sudden insanity, which so often and so oddly occur in transit; or in an emersuch as that in which both driver and stoker lay dead drunk on the engine while it was rattling along at the rate of 50 miles an hour, with a coming train on the same line of rails; or, in short, in a multitude of unforeseen circumstances, in which cords and pulleys, or any other means of communication whatever between guards, passengers and drivers, would either be useless, annoying or imprudent,—by the simple means alluded to everything necessary could be promptly done, and any intimation to the driver to stop, &c., made by the same mode, over and above, as in the case of an axle breaking, or a carriage run-

ning off the line, in any part of a train, however short or long, by one or other of the guards or watch-men from either end of the train. This one suggestion, in short, appears to afford a remedy or preven-tion for a greater number of possible or actual casualties in transit than those offered or afforded by any one suggestion we recollect of, and it is therefore entitled to marked consideration as one of the most economical and useful, as well as practical, amongst the multitude of suggestions heretofore advanced. Perhaps the best possible argument in its favour, and evidence of its prospective utility, is in the fact that in various circumstances the nearest possible approximation to its rough practice, suggested by necessity or impelled by peril, has been naturally and almost instinctively resorted to by the guards in the dangerous, uncertain and most unofficial and reprehensible practice of crawling along the tops of the carriages, whereby, nevertheless, as in one case just alluded to, the lives of hundreds were saved from inevitable destruction, though at the double hazard incurred by the very want of a proper gangway or connected line of foot-boards. Even the other day, too, the practical working of this same rude and perilous substitute naturally displayed itself in circumstances of alarm, arising from the fall of a child out of a carriage in transit. The attention of one of the guards was attracted by an outcry of one of the passengers, and, helpless as his position was, and a mockery his office, to all but a guard possessed of a reckless and ultra-official daring, for which the railway management is most blameable, in thus morally compelling its necessity, by not practically obviating it, as they can so easily do—anxiety to ascertain the cause of the outcry, and it may be even fear of the personal as well as other consequences if he hesitated, irresistibly prompted this guard also (in the proper and paid for exercise of his calling was it?) to crawl along the tops of the carriages, in order personally to communicate with the parties sounding the alarm, and then, on thus personally ascertaining the urgency of the case, to cause the driver to stop the train, when instantly measures were taken, by telegraph or otherwise, to prevent the running of other coming trains until the child was found, which it accordingly very soon was, and was restored, too, almost entirely unhurt, to its proper owners. Neces sity therefore may be said to be at least a helpful foster-mother to the simple invention which we have so perseveringly, but fruitlessly, thrust upon the notice of the public and the proper authorities; and we do hope at length to see either it, or something equally good, and as variously available, if that be possible, broughtinto practical maturity and general

#### RAILWAY SIGNALS.

The Count D'Orsay has been publishing the following letter respecting Railway Signals:—

I have more than once urged upon the directors of railways the necessity of placing the guards of a train in direct and easy communication with the drivers of the engine, and if the simple suggestion I threw out more than three years ago in connexion with this subject had been generally adopted, many fatal accidents which have since occurred might certainly have been prevented. I now beg that you will allow me to direct public attention to the fact that Mr. Tattersall, of Newmarket, though appa-rently unacquainted with the details of the scheme I had proposed, has lately taken out a patent for a signal on the precise plan suggested by me. It has been repeatedly tried, that gentleman informs me, and is found to succeed perfectly. It is now in daily use on the Eastern Union line from Bury to Colchester, has the merit of extraordinary simplicity and inexpensiveness, and has been approved by all practical men who have seen it. The invention simply consists of the adoption of a cord, spring and winding apparatus passing through open rings upon the edges or tops of the carriages. Once more, then, I would earnestly press upon every railway direction in the kingdom the imperative duty of making trial of an invention involving little or no expense, and fraught with comfort and security to all railway travellers throughout the kingdom. The managers of the vathroughout the kingdom. The managers of the various companies can hardly hope to escape responsibility for future accidents, if it can be proved that these would in all probability have been averted by the adoption of the simple precautionary measure above described.

ELECTRIC TELEGRAPH.—Mr. Whishaw has been issuing invitations for inspection of his own inventions to those interested in the discoveries connected with the telegraph. His inventions consist of a new hydraulic telegraph, which can be worked with either circular or horizontal dial-plate, an air, or speaking telegraph, an arrangement attached to a

Digitized by GOOGIC

chronometer for ascertaining and reading off at sight the speed of trains or other fast moving bodies, with several other important inventions and improvements connected with telegraphic communication. His code of signals is as follows:—The letters of the alphabet are placed on two sides of a square—the left-hand column and the top line—and lines are drawn through the spaces intersecting each other, and forming 676 compartments, in each of which is written a word, sentence, sum of money, or weight, or any other signal which may be agreed on. By employing the letters—Roman and Italics, capitals and small letters, and printed in black, green, blue, &c.—an innumerable quantity of these codes, of 676 signs in each, can be produced; they, too, are most simple and easy to be understood. Thus the compartment where B and k intersect, may be "1,000k, or "the 10 o'clock train has started;" L and P ma Land P may be, "send an express train," or "73 tons," and thus in endless variety; and, by having each numbered as code 1, code 2, code 3, &c.—it would be scarcely possible to make a mistake so common in spelling On his circular dials he employs three signals. hands, having as many alphabets in circles, with circle of figures, &c., and over which is placed, in another circle, a variety of questions usually asked day after day, with appropriate answers. Other removeable codes are ready for various trades, as coal, timber, iron, &c. The hydraulic telegraph is entirely on the principle of water finding its own level. The air telegraph consists of a coil of pipe of gutta percha, 200 ft. long, through which a whisper can be heard perfectly distinct; and during the experiments, which have been followed up by Mr. Whishaw, he has ascertained that a speaking tele-graph of this description can be used for a distance of three quarters of a mile, and it must prove invaluable in a large factory for carrying messages from one part to another. A tune can be played on a flageolet at one end of the 200 ft. tube, by blowing in at the other, just the same as blowing into the mouth-piece. For communication between driver and guard, he conveys one of these along the train, with a whistle at one end, which calls the attention of either of them -the whistle unscrews, and they can then converse and ascertain when danger occurs. The whole of the various codes of signals can be employed on any kind of electric, or other description of telegraph.

# Gossip.

Since Wednesday, the SOUTH-WESTERN have issued a notification to the effect that the PUBLIC OPENING of the EXTENSION TO WATERLOO BRIDGE is postponed until they shall have received the Government Inspector's certificate.
The Manchester, Sheffield and Lincoln-

shire, after a contest which has jasted for five years, have succeeded in obtaining their Barnsley branch, which opens all the extensive coal-fields of that neighbourhood to Manchester. The inhabitants of Barnsley rang the bells and made a general festival on hearing the good news.

The absurd RUMOURS regarding the LONDON AND NORTH-WESTERN being about to create a large amount of new preferential 6 per cent. stock, and that the money was wanted for the repairs of the works, have been contradicted officially by Mr. CREED. The works are asserted to be in the best condition, and the company have neither the intention nor the occasion to create new stock.—While on this subject, we may add that the secretaries and accountants at Euston-square have been duly installed in their new apartments, and that the new booking-offices will also shortly be occupied.—The report that Mr. CREED had resigned the office of secretary is not without foundation, but it has not as yet been accepted; consequently, the new arrangements said to have been made have not taken place.

Certain parties in Hull seem very averse to the improvement of the Humber Ferries and having an easy access to the Metropolis, and if possible are resolved to struggle to maintain the existing satisfaction of reaching the steam-packet in the river by means of open boats exposed in all weathers, rather than of a sheltered pier. We observe that the Hull Town Council have held a special meeting to consider whether the opposition to this measure should be carried into the Lords. It appeared that the opposition in the Commons had cost the Corporation 1,200%, to 1,300%, and the Dock Company an equal or larger sum. The Aire and Calder Navigation are to sition in the Commons had join in the opposition in the Lords. The chief grounds of opposition in the Lords will be the projec-The chief tion of the proposed pier at Lime-Kiln Creek beyond the Admiralty's original line, and the appointment by the Manchester, Sheffield and Lincolnshire of an officer subject only to their control, who is to have authority over a water space of five acres, extending

fifty vards in every direction from the said pier. A public meeting is to be held at the Town-Hall, to consider the best course to be adopted. We shall be surprised if the townsmen do not prove themselves to be wiser than their councillors.

The definite terms of amalgamation for a lease of the NEWMARKET AND CHESTERFORD to the Eastern Counties are now said to be, for the first three years, at 3 per cent., and in perpetuity thereafter at 34 per cent

The new railway station at STAMFORD was opened to the public on Monday week. There is a great saving of distance as compared with the old station.

The crossings of the GREAT NORTHERN and the GRIMSBY lines over the high road near the Durham Ox in Lincoln have been effected; the Grimsby line intersects the other just outside the road. For some days, says the Cambridge Advertiser, there was a race to obtain the level; the Northern engineers beat, and consequently the others have had to come to their level. The Grimsby line bridge over the Sincil-dyke is again delayed by the flood of water, which has risen above the piers. It is stated that the part of the Great Northern line from Lincoln to Saxilby is to be opened very shortly, and that negotiations are going forward for the purpose of getting

The Brighton and South Coast we see are making an effort to share the Isle of Wight traffic with the South-Western :- trains are now to go to Portsmouth in three hours, and immediately after their arrival the steamers will leave both piers for Ryde

Some speculators have announced a series of excursion trains, for the purpose of affording a week or a fortnight's sojourn in North Wales;—they are said to be sanctioned by the London and North-Western Company,—and cannot fail, we should think, if properly conducted, to be very popular,—for the great engineering wonders of the age-the tubular bridges -must prove very attractive objects, to say nothing of the picturesque country now opened up to the railway tourist.

The excursionists who left Edinburgh on the 16th. on a pleasure trip to London by the CALEDONIAN returned on the 20th. When the train arrived at London, on Saturday, it was composed of no fewer than fifty-six carriages, all filled with passengers. The excursion seems to have yielded high gratifi-

The LONDON AND NORTH-WESTERN have just issued a new time-bill, in which we see the energy of the management displayed-several of the trains are to be still further ACCELERATED, especially the morning and evening express trains to and from Liverpool and Manchester, besides other convenient arrangements.

The directors of the MANCHESTER AND SOUTHAMP Ton, according to the Manchester Examiner, have unanimously agreed to dissolve, and in this decision they have been supported by a large portion of the shareholders. They will retain the completed plans, sections, &c., in case any more favourable state of monetary affairs should make it desirable to prosecute the scheme; in which event, the claims of those who have hitherto promoted and supported them will have priority of consideration by the directors, in whatever benefit a revival of the company may offer. An immediate return of 8s. 6d. per share will be made, with a further return of about 6d. on the complete winding up of the company's affairs.

The House of Commons (on the motion of Lord

Dudley Stuart) has ordered to be laid on the table "a copy of the two memorials of Mr. Charles Nash and a committee to the Lords of the Treasury, detailing the circumstances connected with the prosecutions of gangs of railway depredators, and his exertions, &c., therein, and praying an investigation and the appointment of a public prosecutor.'

There is a useful kind of telegraph for passenger at the Portobello station, Edinburgh. It is a tall pillar, on which is a ball, so contrived as to ascend slowly, beginning to fall ten minutes before the trains for Edinburgh are due, so as to reach the base by their arrival

The steam-ships of the various railway companies using them will soon form a fleet unequalled for their power and speed. The steam-ship Anglia, 700 tons measurement, 350 horse-power, built by Mare & Co., engines by Maudslay & Field, intended for the Holyhead station, to run between Holyhead and Kingstown in conjunction with the CHESTER AND HOLYHEAD trains, has lately been tried between Gravesend and the Mouse Light, and performed as follows:—Gravesend to the Mouse, with tide, 90 m., equal to 19:574 statute miles per hour; Mouse to Gravesend, against tide, 120 1-6 m., equal to 14-690 statute miles per hour; Gravesend to the Mouse and back, 210 1-6 m., equal to 16 978 statute miles per hour. Measured mutical miles, slack tide, 4 m. 11 &s.,

equal to 16.489 statute miles per hour; against tide, m. 39 s., equal to 14.863 statute miles per hour; two miles, 8 m. 504 s., equal to 15.635 statute miles per hour.

The Lord Lieutenant of Ireland will honour the directors of the Cashel with his company to-day. His Excellency was present at the opening of the extension to Thurles, and made an admirable speech on the occasion.

The deposit of 30,000l. required by the India House from the GREAT INDIAN PENINSULAR as a condition of the grant of the guarantee, as mentioned in the report of the meeting last week, was duly made on Saturday last.

During the late insurrection in Paris, the attention of the insurgents does not appear to have been directed as before towards the special spoliation of the various lines. Beyond some sharp fighting at the termini where the rails were torn up, the service of the lines has been preserved. The Provisional Government having anticipated providing for the soldiers who were in the capital had issued orders to the suburban districts to send a certain quantity of loaves to Paris. These orders were immediately obeyed. The termini of the Rouen, Versailles, Orleans, &c. were literally full of loaves. The Governments of Prussia and Saxony are

reported to have entered into an arrangement which will bring about a direct railway communication between Berlin and Dresden. It is resolved to construct a line which on one side will effect a junction at Juterbogk with the Berlin and Anhalt, and on the other, near Roderau, with the Leipsic and Dresden. The new line, it is agreed, will be completed, at the latest, towards the end of October.

# Reports of Meetings.

LOUVAIN A LA SAMBRE. June 26 .- Meeting of Shareholders, London. BARNES in the chair.

The following Report was produced:—You are aware that it is at this period that we hold our annual general meeting of the shareholders. By law this meeting must take place at Brussels, but the committee have on each occasion of its recurrence thought they were exercising a proper discretion in calling together in London, some short time before the date fixed for the legal assembly in Belgium, such of the shareholders as should desire to know fully, and to discuss freely, the actual circumstances of the company, and yet to whom it might be highly inconvenient, not to say absolutely impossible, to make for that object a journey as far as Brussels. This plan has invariably met with the approval of those for whose convenience and advantage it was intended, and we have conceived that if on ordinary occasions and under ordinary circumstances this has been the case, such a measure could not now fail to give increased satisfaction, peculiarly and eventfully placed as both the company and the committee are by the actual pecuniary and political state of public affairs. There is, however, a reason stronger and more cogent even than these which has prevailed with us to adopt this course in the present instance, and it is as follows:-It cannot have escaped the memory of those who composed the meeting called at the special instance of certain shareholders, and held at the London Tavern, on the 16th of March last, that, after many propositions and much discussion, it was then and there resolved that the call of 11. per share originally made due on the 20th of November 1847, and subsequently extended, by desire of the shareholders, to the 20th of March 1848, should be finally made payable on the 1st of May then following. We at the same time stated to you our doubts that we had sufficient funds to continue, even with the closest economy, the due administration of the affairs until the period named; but we added our conviction that, failing in obtaining a satisfactory response to that call, we should not be enabled, beyond that time, to carry on the concern. A strong hope, however, existed in our minds, and we believe in the minds of most of those then present, that the result of the proposed appeal would be such as to put us in funds that would go a great way towards accomplishing the execution of that portion of the line, which all agreed it was to our interest to get open for traffic at the earliest possible period, and which, when once so accomplished, and bringing in, as it is universally confessed it would, a considerable return. would by that very circumstance make more likely the ultimate payment of all our calls, and thus secure the final execution of the entire of the line. call was, in consequence of this, immediately advertised, but we grieve to say that the attempt was so nearly abortive as to justify us in styling it a complete failure. On the 1st of May, and even on the 1st of June,—the latest period to which the right of

 $\mathbf{U}$ 

payment can be legally claimed,—the entire sum | sums had been expended in the purchase of railway received scarcely exceeded 1,000*l.*; and having chairs and sleepers when there was no line to put therefore thus carried out the desire of the meeting | them upon; that one of the contracts had, according held on the 16th of March, and having awaited the full time during which there could remain any reasonable hope of that measure resulting in any serviceable accession of funds, it has appeared to us that our sole and clearly remaining duty was to summon you together, as we here have done, to state to you simply and candidly the above facts, and to see whether, in the truest spirit of sincere and active cooperation, any plan can be lighted upon to save this most promising undertaking from destruction, and its shareholders from that heavy loss and grievous disappointment to which it would be truly a thousand pities to see them doomed. That some exertion should be made to avert such an evil appeared to be the general feeling of the meeting held on the 16th of March last; and if that were the case then, it surely should be much more so now, seeing that, on the said 16th of March, although we had every moral certainty that we should shortly obtain the prolonga-tion of our term, which the minister had assured us would pass the Belgian Chambers, yet it might have then been replied to us—and, indeed, it was so—that the law of extension in question was not actually in our possession. Now, however, every possibility of doubt or error on this important head is removed by the appearance, in the *Mondeur Belge*, on the 17th of the present month, of the decree granting us until the month of May 1851 for the execution of the main trunk of our line.

A Proprietor said he could not, from the Report. understand what opinion the directors entertained with respect to the course that ought to be pursued by the company in its present unenviable position. Judging from what was stated in the Report, he thought it exceedingly desirable that the affairs should be at once wound up.

The CHAIRMAN said they would be compelled to wind up unless funds for the continuance of the works were supplied by the shareholders. Nearly the whole of the company's funds had been expended.

The Proprietor: What is the amount already expended?

The CHAIRMAN: About 200,000l.

The Proprietor: And what funds have you in hand?

The CHAIRMAN: I think none.
The Proprietor: What will you do with the rails,

sleepers and chairs that you have purchased!

The CHAIRMAN said the directors would endeavour to get what they could for them, if the shareholders would not contribute any further sum of money for the prosecution of the works.

A Proprietor: Then the works are stopped?

The CHAIRMAN: The works have been suspended from the inability of the directors to supply money to the contractor. They two months since wished the contractor to suspend the works, but he refused to do so until he found the directors were without funds.

The Proprietor: Then the thing is going to ruin? The CHAIRMAN said this was not so, as no dilapidation would ensue from a suspension of the works. About 40,000l. was required to complete the first section of the line.

Mr. Morgan said it could not be completed for less than 120,000!. He was in possession of the Engineer's

A Proprietor: Have you any money lodged in Belgian bonds?

The CHAIRMAN: We had, but we were obliged to sell the bonds.

The Proprietor: At a great loss?
The CHAIRMAN: Yes, at a considerable sacrifice.
The Proprietor: But you do not tell us what course you mean to pursue for raising this 40,000l.

The CHAIRMAN observed that the directors wished suggestions on the subject to emanate from the share-

The Proprietor must say that this was in itself a strange suggestion from a board of directors, who from their position were the very persons peculiarly qualified to point out the best course to be pursued.

The CHAIRMAN said the matter had been discussed by the directors, and their notion was that the money might be raised in this way:—For every share on which 7l. had been paid, 6 per cent., instead of 4 per cent., should be allowed; and that on the shareholder paying 1l. more per share he should be considered to have paid up 12l. per share. This would, in fact, be a bonus of 4l. per share.

Mr. Morgan said it was perfectly absurd to suppose that the 72 mile section of the line which it was proposed to complete could be made to pay 6 per cent. even on the sum absolutely necessary for such completion.

It was here stated that the entire affairs of the company had been sadly miscalculated; that large by a large majority.

to the evidence of the Inspector of Public Works in Belgium, been let at 50 per cent. higher than the rates charged to the Government for similar works; and that the mass of plant carried to spots where it was not required, was the laughing-stock of every person who saw it.

The CHAIRMAN said the contract in question was let at one of the lowest tenders sent in.

It was answered that such a contract ought never to have been made; that, in fact, the undertaking itself never ought to have been gone into; that the whole of the line, with the branches, would cost 1.400.000\(ldot\). while the nominal capital was only 400.000\(ldot\). another shilling upon the concern.

Several of the Shareholders expressed anxiety respecting the disposition of the directors on the question of forfeiting the shares on which 61. had been paid. They said it had been strongly rumoured that some person or persons had been purchasing shares at 2s. and 2s. 6d. a share. If this were the fact, and the few persons who had paid up 71. per share chose, at the approaching meeting to be held at Brussels, to forfeit all those on which 64, had been paid, the line might be sold for a considerable sum,

and the general body of proprietors thus sacrificed.

The CHAIRMAN said the directors would not original nate any resolution to forfeit the shares.

Mr. Sherman (one of the directors) said it would be another thing if the shareholders at the Brussels

meeting chose to forfeit the shares.

To this it was observed by several shareholders that only about 1,000 shares had had 71. per share paid on them; that of these, 300 were held by three of the directors, and that, in fact, the directors had it entirely in their power to prevent the forfeiture of

A Proprietor said there was no doubt the directors could prevent the forfeiture of the shares, and he thought that under the circumstances they ought to pledge themselves that they would do all in their power to do so.

The Chairman and Mr. Castendieck, two of the three directors who have each paid the 7l. per share on 100 shares, were understood to pledge themselves that they would vote against the forfeiture of the shares.

Mr. Sherman, the other of such three directors, admitted that he had bought shares at a very low figure, but said he would not pledge himself to vote against the torfeiture of the shares. He would, when the question arose, do what he thought best for the

interest of the shareholders.

It was then resolved that the meeting should be adjourned for three months.

# LANCASTER AND PRESTON.

June 29 .- Annual Meeting, Lancaster .- Mr. J. BUSHELL in the chair.

The Report stated that the revenue account would be found much as usual, leaving a small surplus, after paying all necessary charges. The balance of 4,504*l*. 19s. 3*d*., with its accumulated interest, placed at their disposal by the late committee of manage-ment, was still intact, and they recommended the shareholders, for obvious reasons, to keep it still at command. 189 Lancaster and Carlisle shares had been disposed of at a considerable premium, and the proceeds applied in liquidation of the outstanding calls due to the above company. A bill in Chancery had been filed by the canal company against this company, to enforce what they claimed to be their rights, to which bill the directors, under the conviction that such claims were not well founded, and with the sanction of the shareholders, had put in their answer, so that the matters in dispute would be decided by a competent tribunal.

The Report was adopted and confirmed.

The CHAIRMAN said Chancery suits were generally understood to be interminable and expensive, but he had pleasure in informing the meeting that the expense of the one they were engaged in with the canal company would be more than covered by the balance in hand, and that, in whatever way it terminated, it would be for the advantage of this company.

On Messrs. Baker, Kay and Satterthwaite, the three outgoing directors, being proposed for reelection.

Mr. Brancker, of Liverpool, proposed Mr. Grundy, chairman of the East Lancashire, in the room of Mr. Satterthwaite, on the ground that the latter was a large proprietor of canal stock, and it was desirable to neutralize the canal influence at that Board.

The amendment was seconded by Dr. Cowan, of Wigton, Cumberland, but was ultimately negatived

Mr. BRANCKER then demanded a scrutiny, stating that he had a considerable number of proxies to hand in.

Two scrutineers were accordingly appointed, and the meeting adjourned for an hour.

On the shareholders re-assembling, it was announced that the election had fallen on Mr. Grundy by a majority of 581.

RAILWAYS AND AGRICULTURE IN LINCOLNSHIRE. [Continued from p. 424.]

As I pursued my way along the line of railway from New Holland to Grimsby, and from Grimsby to Louth, part of the direct highway to London-a track I afterwards rode over on horseback-I found the same character of country prevailing, and which prevails as far as the fen district near Boston. A broad belt of rich alluvial soil, bounded by the river and sea banks on the one side, was for the most part divided by canal-like drains, as well as with (on new enclosures) double post and rail fences—on old, by hedges of blackthorn—into large fields entirely employed for pasture. On my first day's trip, by rail, I saw a shepherd, on a pony, counting his sheep in a field, near Louth, nearly as large as a western farm. This gave me an idea of the scale of agricultural This gave me an idea of the scale of agricultural operations in this part of Lincolnshire. On Dartmoor, Salisbury Plain, or any moorlands, a pony would be a natural assistant, but here it is a sign of miles of fences under one holding. The alluvial pasture part was generally bounded or narrowly intersected by the railway. Parallel with the railway, filling up the intermediate space between the pastures and the upheaved chalk ridge known as the ' intervened a part composed of unequal portions of strong clay, light loam and silty sand. An eminent Lincolnshire farmer guessed the proportions for me at five-tenths strong clay, four-tenths light loam, and the remaining tenth silty sand. The range of wolds bounded the westerly horizon. The intermediate belt is the oldest corn land, and has been in cultivation since Saxon times. The wold farmers, I was told, like to have some of the rich pasture to finish off in summer the stock they have fed on cake and corn all the winter. Ancient stone churches were numerous, although small. Where did the stone come from? The county produces none; when they were built there were no roads. Most of the modern churches are built of brick. Along the line tew houses or villages occurred: in the far horizon peeped out many farm buildings, for it is here the fashion, as often as possible, to place the house in the centre of the holding. Five miles from a post-office is considered among the farmers a sort of next door. It will be well to establish receiving boxes for stamped and unpaid letters at every station on the line, because they must inevitably become the central points toward which a local circle of traffic will flow. All the towns of any importance being passed, there is nothing to rival the railway stations. The population here is curiously arranged; each farm forms in its many labourers a small community. The cottages and villages are pitched in all manner of out-of-the-way situations, not planted in reference to highways, but to the agricultural employment that originally called them into existence. As I passed along, the question constantly arose, who ploughs and sows and reaps these fields, and trims these fences so neatly? The question was answered when the railway opened for general traffic on a bright day, and all the peasantry came flocking down to see the wonder—a goodly show of handsome faces and athletic forms; and when, too, I had an opportunity of meeting on a market day the stream of horsemen, waggons, carts, gigs and vehicles of every kind, with farm servants, male and female, dropping into the main road like Robin Hood's hidden men at the sound of his bugle, the secret of the desert appearance of the county seemed half explained; when cantering along, some days afterwards, to an early breakfast with a fox-hunting farmer, I met labourers on donkeys emerging from out-of-the-way cottages to proceed to work. The distance and the difficulty of finding house-room must be the cause of such a waste of time: the expense is nominal, for the lanes and even main roads are almost all bordered by more than ordinarily fine turf, short and sweet. Nowhere else do I remember finding five miles on end of springy, galloping ground alongside a highway road. On these borders the donkeys find ample feed, although no doubt they would be turned to other uses if our laws of settlement did not discourage the building of labourers' cottages. These long distances lead many farmers to feed their labourers-a wholesome custom, too much out of fashion in other parts of England. On the whole, the labouring population seems barely equal to the agricultural wants of North Lincolnshire. The crops are got in by the indispensable aid of travelling bands, who make their way from south to north, proceeding on to later seasons

Google Diaitized by

in Yorkshire, and so on. In this respect, again, railways will confer a benefit on the district. In Liver pool, in the season, it is not unusual for Irish havmakers and reapers to charter trucks at a rate which is cheaper than walking to the best station in an agricultural county. When the railway opens, no crops need suffer for want of hands; cargoes of reapers may be imported at twelve hours' notice, and divided among a parish or lordship. I made my head quar ters at Great Grimsby—a port, until within the last five years, so obscure, that it probably owes its place in maps and topographical dictionaries to its privias a parliamentary and municipal borough The Reform Bill mercifully placed it in schedule B.
The Municipal Reform Bill gave some extension to a corporation dating from the time of Edward III. But these important and much envied privileges have not preserved Grimsby from the decay that has fallen upon many and greater seaports, from Tyre and Sidon down to our deserted cinque-ports, Hythe, Sandwich and Romney. Standing as it does at the mouth of the Humber, sheltered by the land of the opposite shore from the storms of the German Ocean, Grimsby was resorted to from the earliest Saxon times by ship ping from the North Seas, and maintained an impor-tant position, in common with many other towns upon the coast, until improved means of inland communication drained away population to safer and more favourable sites. Some of the earliest Danish and Saxon colonists and conquerors landed at Grimsby it was natural that many should settle there, because it afforded a convenient harbour for communication with the Continent; but as soon as inland communi-cation became of importance, Hull rose upon the Humber, and was enabled, when canals began to supersede rivers, to add that link to the chain of civilization and commerce. Great Grimsby declined for many centuries, having neither manufactures for exports nor means of forwarding imports to the in-terior—Hull taking its place as a foreign port, and Gainsborough as an inland port. It seems at first sight extraordinary that the most fertile county in England, the greatest producing county, with the exception of giant Yorkshire, should be unable to support a port of more importance than Boston. But the fact is, that while, previous to the reign of George II., we were exporters of corn, this part of Lincolnshire grew very little grain; and before Lincolnshire had become a great grain growing county, England had become an importer of that article. The want of manufactures and of canal communication to manufacturing districts, has prevented the favour-able position of Grimsby, sheltered in a river and yet on the sea, from attracting any important share of our daily increasing commerce. Within the last few years a succession of events have tended to make the name of Great Grimsby less absurd. The increased use of bones, rape seed, oilcake and other tillages largely imported from the North of Europe—the reduction of the timber duties-the alteration in the corn-laws—the general reduction of tariff on Baltic products—and lastly, and chiefly, the rapid advance of railway communication,—have all tended to revive the decayed fishing village toward a position commensurate to its armorial and genealogical claims. The importation of timber for railway use has quite cast into the shade the profits formerly netted from contra band trade; and the two railways (the Manchester Sheffield and Lincolnshire, and the Great Northern which meet here promise to add a large foreign corntrade to the moderate business now done in home produce on market-days by a few dozen farmers in front of the principal inn. It is well known that for many years the turnip culture of light soils was confined to Northumberland, a small district of Yorkshire, East Norfolk, Nottinghamshire and North Lincolnshire. During this period the home market supplied bones enough for home consumption, but as farmers grew wiser in their generation, our merchants had to search the whole world for manures, and the Baltic supplying a large proportion of this kind of import, Hull naturally received a great quantity for distribution, not only locally, but far inland by river, canal and railway communication. Great Grimsby being now provided with the last and best means of transport, and standing some hours nearer to the sea will, doubtless, intercept many more cargoes of the manures which cause grain to grow, as well as of grain, than it has hitherto done, having an excellent market at its back for both commodities. Hence I anticipate that warehouses, and steam-mills for grinding British and foreign wheat, for crushing oilcake, and sawing timber, will shortly rise up along the lately dreary quays of Grimsby, to keep company with the piles of railway timber which have raised the customs' dues five years from 3,000l. to 70,000l. a year. The railway company—with the view of drawing upon their line a passenger traffic through first-class steamers between Grimsby and Hamburgh and the

Baltic ports, as well as an import trade in raw materials, wool for Yorkshire, Swedish iron and copper for Sheffield, and an export trade in manufactured goods from Manchester, Sheffield and Leeds in return, beside grain for all England, and coals, timber and tillages for all the localities to which railway transit can afford to carry them—are pressing on one of the most complete and extensive docks in the kingdom, from designs by Mr. Rendel, the engineer of Birken-head docks. The railways from London, Manchester head docks and Sheffield will run up to the extremity of the quays and piers of nearly 50 acres of water basins, alongside proportionate warehouses. It is not my task now to describe these works in detail, but it is necessary to note the fact that that part of Lincolnshire which is most dependent on foreign impor tations for its fertility, is about to be gifted with a port of the first class, open all hours of night and day to ships and steamers of the largest size. After examining these works, and a railway map, including not only England but the opposite shores of the German Ocean, it was impossible to doubt that rail-way enterprize would make Grimsby a great cornmarket and a great seaport. I took an early oppor tunity of riding up to see the celebrated wolds which the wise liberality of landlords, and the skill and industry of tenants, have converted from wild moor lands into farms, the admiration of all agriculturists. As, however, I must not presume that every one interested in my special vocation—the agricultural bearing of railways—has read the tours of Arthur Young and the report of Mr. Pusey, it will be better Young and the report of Mr. Pusey, it will be better to describe what I went to see. Two ranges of chalk hills, ranning in almost parallel lines, disturb the even levels of Lincolnshire. The wolds, which from Barton-on-the-Humber and Barrow to Spileby, upwards of 70 miles, with an average breadth of 12 miles, and the cliff commonly known as Lincoln Heath which extends for some miles beyond Victor. Heath, which extends for some miles beyond Kirton to Lincoln, and after breaking off in the valley of Lincoln, through which the Witham and the Ouse find their way to the sea, recommences and runs on to beyond Corby. These hilly parts remained open moors, covered with gorse and fern, harbouring only game and a few wild, half-starved sheep for centuries after the lowlands had been cultivated, and even after thousands of acres of fen land had been reclaimed from the overflowing of rivers and sea. In the lowlands, especially round Lincoln, and in the northern parts near Grimsby and the sea, the great religious houses introduced excellent agriculture. Thornton Abbey, the ruins of which may yet be seen in passing by the railway between New Holland and Grimsby, was one of the great prizes in Henry the Eighth's confiscating Reformation, and derived the whole of its revenues from farms lying along the line of the railway. About the middle of the eighteenth century turnip culture came into use in England. Under this system light soiled districts, with the assistance of manure-sometimes chalk or lime, sometimes bones, generally both, were made to grow turnips. These turnips were fed off on the land by sheep penned daily within a narrow section; and it was found that the manure and treading of the sheep gave sufficient richness and consistence to previously poor land to enable it to bear at first oats, barley and clover, and eventually wheat instead of oats. The introduction of oilcake for feeding cattle and sheep, which increases manifold the value of the manure—of rapedust as a manure for turnips, barley and grass seeds, and of many other improved tillages and implements, has by degrees given increased fertility to light land, and secured it the attention of the best farmers, thus far outstripping in produce and rental the once favourite clay lands. In Northumberland light lands increased 400 per cent. in value, while clay land only increased 18 per cent. The heaths and wolds of Lincolnshire, as well as certain blowing sands in the forest district of Nottinghamshire, also traversed by these new railways, were just of the quality suited for the improved cultivation. By degrees, under the liberal auspices of wise and wealthy landlords, farmers of capital and skill spread all over the county, inoculating all with whom they came in contact with their skill and enterprize, so that at this day these heaths and wolds, acre for acre, import more foreign fertilizers and raise more meat and grain than any other one district of like extent. When Arthur Young first visited this county in 1760 there was scarcely a turnip to be seen, and the few sown in the whole county unhoed, except here and there by a gentleman, and it was all warren on the wolds from Spilsby beyond Caistor. In 1799 he found the same district feeding twenty sheep, by means of turnips and seeds, where only one was kept before; but still found large tracts-as, for instance, from Louth to Caistor, were let for rabbit warrens at 2s. an acre. Being much in advance of the farmers of the day, he protested against such neglect on seeing it, "the land

being a dry friable loamy sand, on a flinty loam, and under that chalk everywhere," but was answered,
"Oh, it is good for nothing but rabbits; what would
you do with such poor land, two or three miles from the farms?' Lincoln Heath had made more progress at that period, and grew barley and oats, but no wheat. When Mr. Pusey visited the same districts in 1842, he found on the wolds, where Mr. Young had passed through gorse for miles, 30,000 acres of good turnip land, all the estates divided by clipped hedges of thorn, fine farm buildings, and the rental raised from 5s. to 25s. an acre. This change having been effected by tenant farmers holding at will (but with perfect confidence in their landlord) at a cost of 81. per acre, expended in grubbing up fern, paring and per acre, expended in grubbing up fern, paring and burning peaty grass, laying on chalk at the rate of 60 cubic yards and bones at 60 bushels to the acre. "Bones," Mr. Pusey remarks, "were cheap in those days." Mr. Pusey describes Lincoln Heath, where Dunsten Pillar, a land lighthouse employed within the memory of living men to guide the benighted traveller across the garage-grad wastes. veller across the gorse-covered wastes, remains a monument of agricultural progress, "Farm succeeding farm, each appearing to be cultivated by the owner for example, not, as was really the case, by the tenant for profit; and so for miles on through fields of turnips, without a blank or weed, on which thou-sands after thousands of long-woolled sheep were feeding in netted folds, on turnips, so large and regular the rows, that the lower halves which remained in the ground seemed to pave these sheepfolds. Every stubble field clean and bright, and the hedges kept low and neatly trimmed—every farmhouse well built. with spacious courts, and surrounded by such rows of high, long, saddle-back ricks, as showed that the land did not forget to return in August what it had re-ceived in December. Yet this land, so loaded with roots, showed no marks of natural fertility.

IMPROVEMENTS IN WROUGHT-IRON -We extract from the Mining Journal the last recorded improvements in wrought-iron :- The patentee, in describing his mode of treating wrought-iron, commences by stating that he takes scraps, or pieces of wrought-iron, and melts them in a cupola furnace with a soft fan-blast, or in a reverberatory furnace, in the same manner as pig or cast-iron is melted. If small quantities are required to be melted, a pot or crucible-furnace will be most convenient; and having moulded the article to be made in the manner usually practised in iron-foundries, he pours the molten iron into the mould. The article thus made being hard and brittle, and deficient in the malleable property, Mr. Rocke proposes to treat, or anneal, in a furnace, such as is used for converting bar-iron into steel, or other convenient furnace, or kiln, in which the heat can be regulated, so as to restore the malleable property; and the articles to be so treated he places within a box of iron, surrounded by bricks, or within a casing of bricks, leaving space to surround it with Cumberland red ore, or other iron ore, or charcoal, mixed together, and ground fine; or the articles may be covered with this mixture without such casing, and in this state he submits them to a sufficient degree of heat to restore the malleable property; and to determine the state of the process, the patentee employs a trial bar, which may be withdrawn from time to time, to ascertain the degree of malleability which the mass has attained. For making articles which do not require to possess the density and texture of wrought-iron alone, he mixes therewith cast-iron in various proportions, according to the nature and requirements of the article, taking care that the proportion of the cast-iron, in no instance, exceeds the weight of the wrought-iron; and in making articles which require to take the nature and temper of steel, he mixes with the wrought-iron steel in various proportions, according to circumstances—the proportion of the steel never exceeding the weight of the wrought-iron; and he pours the molten metal into moulds, and subsequently submits it to the annealing process in the manner before described. In conclusion, he states that, having described the nature of his invention, and the manner in which the same is to be performed, he does not claim the melting of wrought-iron, as that has already been practised to a limited extent; but what he claims as his invention is the treating and applying wrought-iron, by melting the same by itself or with cast iron and steel, and the reproducing malleability in the castings of the molten iron, by annealing the same as above de-

PORT OF GREAT GRIMSBY.

## NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

SATURDAY, JULY 8.

# RESISTANCE TO BROAD-GAUGE TRAINS.

Our remarks on the experiments adduced in the Morning Herald with the design of establishing the existence of a resistance vastly less to a broad-gauge train than a narrow-gauge train, have offended the dignity of the personage on whose authority these experiments were then published. We stated, that in so far as these experiments proved anything, they led to conclusions exactly the reverse of those drawn by the writer from his experiments. We say so still. Nay, we say more—that the weakness of the argument and the demerits of the case are further displayed in this reply than either in the original statement of the case or our comments upon it. The author of that paper must have felt the extreme weakness of his case, and the completeness of our exposure, or he could not have allowed himself to assume the angry tone he has exhibited in his reply. man is shown to be wrong, he is rather apt to fly into a passion. On the plea, therefore, of haste or anger, we overlook some rather awkward expressions employed in the following reply to the Railway Chronicle by the Morning Herald of July 1:-

The insincerity and dishonesty with which the question of "resistances to railway trains at certain velocities" is discussed by some of those who assume that a greater uniform velocity than 36 miles per that a greater uniform velocity than 36 miles per hour cannot be maintained by force of gravity down an incline of 1 in 100, are painfully exhibited in a notice which the "engineering" editor of the "scien-tific" organ of the "high resistance" advocates, the Railway Chronicle, has, in one of the numbers of that journal, taken of the experiments made by us down inclined planes, and the details of which were pub-lished in the Morning Herald of the 8th ult. The object of the publication of those experiments was to prove that, even upon curved portions of the Great Western inclines of 1 in 100, a uniform velocity of 57.1 miles per hour can be maintained with unequally weighted carriages, and that, under similar disadvan-tageous circumstances, the velocity of an ordinary train had, by force of gravity, increased from 36.3 to 42.4 miles per hour down 1 in 120. In describing our experiments down the Wootton Bassett incline, we stated most distinctly that the fall of 1 in 100 commences a few chains beyond the 85 mile-post, and To the commencement, or top of the incline, the steam was kept full on, and the exception to this was carefully noticed by us in giving the results of the fifth experiment, where we stated "that the steam was not lead to the fifth experiment, where we stated "that the steam was not shut off in this case until the engine was within a few chains of the 85, mile-post." In fact, the very rates of speed given in each experiment show, in the clearest possible manner, that the steam must have been kept on to the top of the bank. But the "engineering" editor of the Railway Chronicle, with a perfect know ledge of this, endeavours so to mystify the matter by confounding steam power with the force of gravity, as to convey an impression that in the experiments where a high uniform velocity was maintained, the very reverse was the fact, and that the velocity was a rapidly retarded one. Let us at once proceed to prove the "dishonesty" of this writer. The first experiment made by us was given as follows:-

-	•	_		
	Time 7	er Quarter-	mile	
Mile-posts.	i	n Seconds.		Miles per Hour.
843		15 <u>3</u>		58-1
85		15		60
85}		151		58-1
85≨		$15\frac{7}{4}$		59
85∄		164		54.2
86		16₹		54.5
861		16⅓		54.5
86∳		16}		53.7
963		17		59-0

"This first experiment," says the "engineering" editor of the Radlway Chronicle, "proves precisely the recerse of the theory of the writer, in so far as it proves anything. At 85, near the commencement of the incline, a quarter of a mile is done in 15 seconds: at 861, near the foot of the incline, it takes 161 seconds, being a velocity rapidly returned, instead of seconds, which is transcribed to mile the seconds. seconds, being a velocity raphily returned, instead of uniform, which is precisely as might have been expected." Now, the "engineering" editor knew very well that the "quarter of a mile near the commercement of the incline" was "done in 15 seconds" with the steam full on, and yet he has the dishonesty to

assume that because the 864 mile "near the foot of the incline," had, by force of gravity, taken 164 seconds to run over it, the velocity, by force of gravity, was therefore retarded from 60 to 52.9 miles per hour. He dishonestly measures the velocity by force of gravity over the last quarter of a mile down the incline of 1 in 100, by the velocity attained with the full steam-power of the enjoire over the quarter of a mile immediately preceding such incline. And it is in this manner that the "engineering" cilitor of the Railway Chronicle proceeds to prove that the high uniform velocities obtained by us down inclined planes upon curves, with unequally-weighted carriages, in unfavourable weather, were, in fact, only rapidly-retarded rates of speed. Such, we repeat, is the mode in which a journal, assuming to represent the railway engineers of the country, attempts to falsify matters of great importance to the railway world. These endeavours to get rid of results the correctness of which do not admit of disproof, tend to bring discredit upon railway-engineering science, and to sink the characters of practical men to the level of those of mere theorists, tricksters and charlatans.

Before replying to this, we premise that the italics are the author's own, not ours. There are some writers who know no better substitute for forcible expression and powerful argument than the mechanical succedaneum of prominent Had the arguments been printed in capitals, they would, on this system, have been still more cogent.

We think the article here reproduced so completely answers itself, that we shall occupy no great space with a reply. The question at issue is very simple. It has been proved by former experiments on narrow-gauge lines, that when railway trains at high speeds-such as 40, 50 and 60 miles an hour-are made to run down inclined planes of 1 in 100, that instead of accelerating their velocity, as the abstract theory of gravitation and the old laws of resistance supposed, their motion is gradually retarded, and they at last, if the inclines be long enough, come down to about 36 miles an hour. In order to prove that their resistance is vastly less than the amount which such facts prove, the broad-gauge advocates asserted that they had made experiments showing that there was on their railways no such retardation, but on the contrary a perfectly uniform motion, even at 50 or 60 miles an hour. Of this their experiments show precisely the reverse, as we said. We still say so. We appeal to any one in the habit of drawing inferences from columns of figures, whether the whole experiment here adduced does not exhibit a continual diminution of speed from 60 miles an hour downwards? If this be so, then all question is ended. The velocities which ought, according to them, to be accelerating, are retarding. Thus the experiments, in so far as they are capable of proving anything, prove exactly the reverse of the author's theory. This is what we said before, and still cannot cease to believe. Herald's experiments refute the Herald's arguments.

# Railway Literature.

The Commercial Consequences of a Mixed Gauge on our Railway System. By S. Sidney.

In this pamphlet Mr. Sidney has followed the consequences of the mixed gauge to their ultimate practical result in a brief series of facts and arguments, arranged neatly, tersely and forcibly. He is not strong on either the scientific niceties or the party bearings of the case, but inquires minutely into the value of the system as affecting the public convenience and

He commences by asserting what is undoubted-that the narrow gauge is practically cheaper both to make and to work than the broad gauge; and that the mixed gauge is

presently quote, he affirms that the fares of the broad-gauge Great Western are 30 per cent. dearer than the other metropolitan narrowgauge railways. If he had compared the goods traffic, the comparison would have been still more in favour of the narrow gauge. Turning, then, to the passengers, he shows that it is part of the system of the broad gauge to exclude the labouring classes from railway conveyance, by providing for them only that bare accommodation enforced by statute; and that while the narrow-gauge lines, traversing districts inferior in population to that intersected by the Great Western, derive half, and more than half, of their passenger traffic from third-class passengers, attracted by frequent trains at convenient hours and speed, the Great Western appears to have narrowed the conveyance of labouring men down to less than a sixth of their gross passenger traffic.

After considering these facts, Mr. Sidney comes to the conclusion that the great body of the public will be best served by the narrow gauge. He admits that the Great Western express trains exceed in speed those of the narrow gauge. We presume he makes this admission in order to simplify his argument; because it has been proved that even over more trying gradients the South-Western express trains are actually as speedy as the broad-gauge Great Western. He then proceeds to inquire whether, as the narrow gauge has the advantage in fares for all classes of passengers, and in the accommodation it provides for the labouring classes, as well as in convenience for coals, ores, agricultural produce and merchandise generally, it is worth while to incur any expense in trying to add broad-gauge express trains to the economy and convenience of narrow-gauge lines. A calculation is quoted from 'Mr. Ste-phenson's Observations,' showing that the cost of adding the mixed gauge to the broad gauge, and working it effectually, would amount to nearly 20,000l. a mile. Several illustrations are given of the advantage that might be derived by the public from the expenditure of such a sum in the reduction of the charges on thirdclass passengers, on coals, minerals, iron, &c.

After putting this part of the subject in a shape that no one can misunderstand, Mr. Sidney proceeds to show, that after all the large expenditure, the breaks of gauge, which form the pretext of this mixed gauge, will not be cured, but increased in number (see a diagram in the pamphlet); that the liability to danger will be increased, while no counterbalancing advantage can be assumed for the conveyance of traffic.

All this is done calmly, seriously and logically, in an earnest style, befitting the gravity of the subject, without any of those outbursts of jeering sarcasm or indignant declamation with which our occasional correspondent has hitherto been in the habit of seasoning his essays on railway questions. In the last pages only the old fire seems to blaze out again, as the writer winds up with a scornful attack on the Railway Commissioners, in which he gives a few new reasons for the contempt with which all men, of even elementary knowledge of our railway system, observe their ignorant, imbecile mismanagement.

The following extracts will sufficiently show the quality of this, the last, and perhaps the best, work of a writer distinguished as much for the practical soundness of his views on railway policy as the original vigorous and picturesque style in which he gives currency to such views:-

"Commercial Results of the Mixed Gauge.-It may be asked—Of what consequence is it to the country if the Great Western choose to spend or waste their broad gauge; and that the mixed gauge is money in making a mixed instead of a simple gauge dearer than either. By tables which we will railway, or in any other folly —I answer—Without

Digitized by GOOGLE

dwelling on the increased dangers of the mixed gauge; its complication and unsuitability for mineral and agricultural traffic; without laying any stress on the false pretences under which the broad gauge has the raise pretences under which the broad gauge has been extended; even for the moment admitting (what is a perfect fallacy) that the mixed gauge dis-solves the barrier of the break of gauge;—still I answer that, in a commercial point of view, the waste of capital involved in the mixed gauge, or any other useless undertaking, is a most serious national evil. From 1839 to 1843, select committees of the House of Commons were constantly engaged in considering how the advantage of railway conveyance might be secured to the labouring population. The cheap parliamentary trains were the result of these investigations. When the railway department of the Board of Trade, from which emanated the Railway Com-mission, was instituted, it was expected that successive reductions of railway fares and rates would take All the advocates of cheap and frequent trains for the benefit of our peasant and mechanical population consider the high fares and limited third-class accommodation of English railways the result of the excessive cost of their execution. It is quite certain that extravagant expenditure involves either high fares or low dividends to shareholders. An unprofitable railway not only discourages railway investment, and acts as a beacon to affright those who would otherwise confer the benefit of railway communication upon new districts, but invariably conducts its affairs in a niggardly, dangerous and unsatisfactory manner. Foreigners, especially Americans, are astonished at the manner in which we waste capital on luxuries, and tax the fares of working men. An American railway director, in his letter from England, observes:—'The masses are denied the privilege of travelling by railway, in the hope of extracting from the few what would be cheerfully paid by the many,' and that 'our (the American) policy is not to punish travellers for their poverty, capital on luxuries, and tax the fares of working but to give them comfortable accommodation. out to give them comfortable accommodation." * * "The Mixed Gauge Theory reduced to Figures.—To relieve the oppression that reigns over the industry of the country, new sources of wealth should be developed, and means adopted for stimulating our languishing commerce. Railway conveyance has already been of great service to our manufactures, to our sea-ports and to our mines; it has done less for our agriculture. It has been an impressed accommendation of the service to our sea-ports and to our mines; it has done less to our sea-ports and to our mines; it has done less to our sea-ports and to our mines; it has done less to our sea-ports and to our mines; it has done less to our sea-ports and to our mines; it has done less to our sea-ports and to our mines; it has done less to our mines. for our agriculture. It has been an immense economy and luxury to our aristocracy and middle class; it has done less, comparatively, for our labouring classes. The amount of conveyance to be derived by first-class passengers—I mean by that class which formerly travelled by post or inside the mail—is not much affected by price. The highest fares on a railway are much cheaper than the inside of a fast coach. Those whose rank compelled them to use four posters now effect an enormous economy. duke, who formerly came up to town with at least two carriages and eight horses, now contents himself with a first-class seat for himself, and a second class for his servant. To second-class passengers railways are frequently a valuable part of their stock in trade; certainly a saving over coach travelling in cost, as well as a money gain in time. Third-class passengers stand in a very different position. They have frequently no choice between an early parliamentary train at 1d. a mile and walking. The mechanic, train at 1d. a mile and walking. The mechanic, haymaker, ploughman or drover, who has not 8s. 4d. to pay for a journey of 100 miles, or who has arrived in the town too late for the solitary daily train, must walk, and, perhaps, lose a day's labour and a day's pay. What would 20,000% a mile—the cost of converting the broad-gauge line into a mixed gauge, that verting the oroac-gauge line into a mixed gauge, that is to say 20l. a week per mile—saved or expended in lowering fares, do for these people? Are the labouring classes the least valuable portion of our community? and is the power of distributing labour where it is required the least valuable power of a railway? The goods traffic, may be broadly classed in the same way. Merchandise, silks, tea, &c., can bear heavier rates than timber, agricultural produce, live stock and coals. On cheap coals rest the basis of our manufacturing pre-eminence. On the cheap conveyance of their corn and cattle, of lime and manures, our agricultural counties depend, to enable them to sustain foreign competition. When I state that the railways between Sheffield and the north coast of Lincolnshire, intersecting some of the most produc-tive land in the kingdom, will be completed and opened for traffic, engine and carriage stock included, at a cost of 20,000l. a mile, it will be seen that the mixed gauge system involves a sacrifice equal to the complete construction and stock of a first-rate narrow-gauge line.

Tables showing the proportion of third-class passengers, and the average fare paid by each passenger for 100 miles:—

Name of Railway.	Total Number of Passengers.	Number of 3rd Class Passengers.	Proportion in every lot Passengers of 3rd Class Passengers, gettern gers.

* That is dividing the sum total of fares by the sum total of passengers.

t In this calculation the average is obtained in the correct manner, viz., by dividing the sum total paid by each class of passengers by the total number of each class travelling.

OPENING OF THE GREAT SOUTHERN AND WESTERN (IRELAND).

Amidst all her intestine troubles, Ireland is gradually recognizing and encouraging the efforts of the railway capitalist. Whilst the agitation for Government assistance is progressing, private enterprise is quietly producing its fruits. We remark this whilst recording one of the most important events in the social history of Ireland, which took place on the 1st, in the opening of the railway communication between the metropolis and the city of Limerick. The event was celebrated in a manner worthy of the company and of the circumstance. It was generally rumoured that the Lord Lieutenant would not honour the festival. The rumour was ascribed to a hesitation on the part of his excellency to try the disposition of the peasantry. His excellency did try it, and he has every reason to be proud of his reception. Not the least instance of insult occurred along the entire line, and at the point of junction with the Limerick Railway he was received with repeated rounds of acclanation from an immense number of workmen, who stood, spade on shoulder, drawn up in front of the train. The file of carriages, containing nearly 600 guests, started from Kingsbridge at 10 a.m., and reached Dundrum at 3 p.m. Whispers were circulated early in the day that the train would not proceed to Limerick. In the progress of the journey the report acquired confirmation from the statement of the chief engineer. The imperfection of the journey was caused by some deficiency at the point of junction. Returning to Dundrum, the seat of Lord Hawarden, his excellency went to see the mansion, with which he was much gratified, and returned to enjoy his lunch.

The feast was spread in tents pitched in a large field at some distance from the house. About 600 persons were present at the banquet. A company of infantry and a squadron of cavalry were stationed to the south of the encampment, and a military band, which came from the Royal Barracks, enlivened the entertainment. On the right of the chairman sat the Lord Lieutenant and Lord Hawarden; on the left several of the London directors, Lord Cosmo Russell, of his excellency's household, and other high personages.

high personages.

The lunch having been concluded, the Chairman (Mr. G. Carr), the chairman of the company, proposed the health of the Queen, Prince Albert, the Royal Family, &c., all which were received with the usual honours. The Chairman next proposed the

health of the Lord Lieutenant, who had that day honoured them with his presence, and with his name he coupled the toast of prosperity to Ireland. The toast was drunk with all the honours.

His Excellency rose amid loud cheers, and said. amidst several interruptions of loud applause,-My lords and gentlemen,—I can assure you with perfect truth, and not as an ordinary form of expression. that I feel great embarrassment in returning to you my hearty thanks for the honour you have done me in drinking my health, and the kind manner in which you have responded to the toast proposed by Mr. Carr. If it be not too great a presumption on my part, I would beg to constitute myself the organ of this distinguished assembly, and to express in their name the unmingled pleasure and satisfaction which we have derived from this excursion, and our warm thanks for having been invited to an entertainment so worthy of the event which it is intended to cele-brate. Gentlemen, admiring as we must all have done the country through which we have passed, the admirable speed at which we have travelled, the order and excellent arrangements that have prevailed every where, I am sure we must all have felt that this is really a great day for Ireland—and that by connecting the metropolis with the city of Limerick, connecting the metropous with the city of Limerica, by bringing, if I may so speak, into juxtaposition the east and south-west of Ireland, an impulse will be given to Irish progress and Irish prosperity, of which it is impossible to estimate the extent or exaggerate the importance. It is impossible, I say, to exaggerate the importance of it, because we know, exaggerate the importance of it, because we know, from statistical information, that in last year, the year 1847, a year of very general depression, upwards of sixty millions of passengers, upwards of twenty million tons of goods, and upwards of three millions of animals for human food were conveyed on the railways of England and Scotland. We know that vast tracts of land have been fertilised in consequence of the cheap conveyance of manure, and we have ascertained from statistical returns that an agricultural population travels far more than the people of manufacturing districts. I say then, it is impossible to overestimate the importance of railway communication to a country essentially agricultural as Ireland is, and to a country essentially agricultural as Ireland is, and not to regard those who promote such undertakings (although labouring, and I trust successfully labouring, for their own interests) as great public benefactors. I have no doubt that the success of this line will be as complete as it is well merited; because railways, like great arteries, pass through a country, conveying vitality and dispensing health, and filling the people with that hope and contentment that spring from progress and improvement. I say it is impossible to over-estimate the advantages of railways impossible to over-estimate the advantages of railways to an agricultural population, because we know, from the best authorities, that an immense saving can be effected by using railways for conveying cattle, instead of driving them by the roads to market. I say the farmers will be able henceforth to procure that which the Irish tenant farmer stands so much in need of—the materials for thraining and farm cultivation; but I think there is one branch of native industry to which more benefits will accrue from railway communication than any other—I allude to the fisheries of Ireland. That mine of wealth has hitherto been unexplored, for want of a market; but, when you call to mind that, up to a few years ago, the use of fish, except as an article of luxury, was unknown in the interior of England, and that the annual amount now conveyed exceeds 30,000 tons, we must all rejoice in feeling that bright days are about to dawn for the Irish fishermen. In short, gentlemen, so great is the variety of benefits which Ireland is peculiarly adapted to receive from railway communication, that every well-wisher of this country must burn with impatience to see them rapidly completed; and although, for my own part, I am well content to leave these matters entirely to private enterprise in England, where capital and confidence, and the spirit of association exist to a greater extent than in any other country, yet, looking at the circumstances, unfortunately different in Ireland, I own myself, although I may sin against strict economic principles in so saying—I own myself under certain limits, and upon certain conditions, an advocate for ample public aid to railways in Ireland. The embarrassed condition of our finances has, unfortunately, retarded this experiment during this year, but I hope that better times are in store for us, and whenever the Chan-cellor of the Exchequer is a freer agent than at present he unfortunately is, I shall hope for better things; and, whether in office or out of office, I shall things; and, whether in omce or out of omce, is main equally endeavour to promote assistance being given to railways in Ireland. Gentlemen, I will only, before I sit down, beg to propose a toast, which I am sure you will all drink with great pleasure, it is "Mr. Carr, and success and prosperity to that real friend of Ireland, the Great Southern and Western."

Digitized by Google

After various other toasts, the entertainment was concluded amidst much hilarity, and the company reached Dublin on their return at 11 30 p.m.

# Brogress of Works.

ABERDEEN.—Operations, says the Scottish Railway Gazette, have been resumed on several parts of this line. It is understood, as we have elsewhere noticed that the company have obtained a considerable advance of funds, and we have reason to anticipate therefore that the works will now proceed with spirit and energy. The resumption of operations spirit and energy. The resumption of operations will be productive of the most beneficial effects throughout the district of the line, and we should be glad to learn that the wealthy proprietors, who are deeply interested in the state of the population, had seen the expediency of affording their substantial aid to the directors in procuring the means of carrying on operations so as to complete the line as rapidly as possible. The security which the stock presents for any such advance is undoubted, and we believe the value of the large tract of country which it opens up will be multiplied fourfold on its completion. The line will probably be opened to Stoneliaven in September, and to Aberdeen early in January next. There are now about 3,000 people employed at the

Fouth end of the works.

Edinburgh and Glasgow.—June 28.—The Camp sie branch was officially examined by Capt. Simmonds Government Inspector, preparatory to its opening for passenger traffic on the 3rd inst. It is almost needless passenger traffic on the 3rd inst. It is almost needless to enlarge upon the attractions which, at this season of the year especially, are presented by the opening of the above branch. Campsie Glen is celebrated for its scenery, and, during summer, has long been a favourite resort. The opening of this branch will afford additional access, at a cheap rate and easy mode of travelling, to this romantic spot, one of the most beautiful in the vicinity of Glasgow. The opening of the line will also give increased accommodation ing of the line will also give increased accommodation to the inhabitants of Kirkintilloch.

GLASGOW, PAISLEY, KILMARNOOK AND AYR.—The North British Roilway Gazette, in speaking of the prospects of the line, despite its present depressed value in the share-market, observes:—The iron-works will shortly be numerous along the line and its branches; at Glengarnock we lately noticed seven furnaces in blast; a little farther on are the extensive works of the unfortunate Ayrshire Iron Company, which, we hope, will soon be again in active and profitable operation; and a few miles nearer Ayr, at Kilwinning, the Eglinton Iron-works are beginning to show some life. Again, the Portland Iron Com-pany, at Hurlford, on the Cumnock extension, and near the junction of the Galston line, are making active preparations for bringing traffic on the line. The Muirkirk and Lugar Iron-works are each said to be ready for blast, whenever the branch line is opened for the conveyance of their respective products. new and influential company, the Nithsdale Iron Company, have established themselves near New Cumnock; while the Dalmellington Iron Company, a little to the southward of Ayr, are erecting extensive works, and to accommodate them the railway company are making the line between their pits and the works, a distance of about 2½ miles. An improvement in the trade of the country must immediately impart full life and vigour to all these undertakings. We have heard it stated, that each furnace in blast should, under ordinary circumstances, contribute traffic to the railway company to the extent of 80l. or 100l. a month. We lately noticed a little town of 150 or 100 houses, which has risen up near the Eglinton works; 200 houses are being erected for the workmen at the Dalmellington works; and at Lugar a beautiful little village has sprung up on the banks of the Lugar water. Again, at Dalry and Kilbirnie the population is rapidly increasing, from the number of new houses building. All these sources of revenue must, and will soon, greatly augment the traffic. The last half-yearly report stated that the Cumnock extension would be opened in May, and we have been disappointed at the delay which has taken place, as we had promised ourselves, ere now, a visit to the men at the Dalmellington works; and at Lugar a we had promised ourselves, ere now, a visit to the celebrated bridge at Ballochmyle. In order to make this article as correct, in detail, as possible, we applied to the Secretary for some explanation of this delay, and were informed that it chiefly arose from the excessive wetness of the spring, which greatly retarded the works, and tried the embankments and cuttings; this, however, will be fully compensated by their greater stability; and the requisite notices have been already given to the Commissioners, that the branch between Muirkirk and Auchinleck, the Cumnock line between Murkirk and Auchinieck, the Cumnock line and Alagneourg, for export, will then be transmirted, will soon produce a great improvement, and create a fence which, without any ditch, will be almost imbranch to Glaston, will be ready for inspection on the 14th inst., and the intervening portion of the Cumnock line, from Hurlford to Auchinieck, on the Cumnock line, from Hurlford to Auchinieck, on the Cumnock line, from Hurlford to Auchinieck, on the Cumnock line intervening portion of the Cumnock line, from Hurlford to Auchinieck, on the Cumnock line intervening portion of the Cumnock line, from Hurlford to Auchinieck, on the Cumnock line intervening portion of the Cumnock line, from Hurlford to Auchinieck, on the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening portion of the Cumnock line intervening land line intervening the cumnock line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line intervening land line in

4th of August. These branches and extensions, being in connexion with the main line, ought to be worked at a comparatively cheap rate, and should bring a great increase of traffic on the trunk line. The pasenger revenue on the Galston branch will be considerable, while the valley intersected by it is understood to be one of the richest mineral districts in Ayrshire.

GREAT NORTHERN .- The works, according to the repeated statements of the *Doncaster Chronicle*, are progressing satisfactorily. A communication has been effected between the goit under the Balby-road and the works in the Carr. The company are making arrangements with the trustees of the Doncaster and Tinsley-road for the erection of the bridge, and the work will be commenced as speedily as possible. The junction between Stockbridge and Doncaster is rapidly progressing. Should no further obstacle arise, there will be no difficulty in completing the line by the 5th of August.— During the week the works between the proposed terminus at King's Cross and Copenhagen-fields, and between Barnet and Finchley have been resumed, having been discontinued during the monetary panic of 1845. A considerable portion between Peterborough and London is exerepeated statements of the Doncaster Chronicle, are tion between Peterborough and London is exe-cuted, the heavy parts, that if altogether sus-pended would have materially retarded the opening pended would have materially retarded the opening of the through line, having been carried on. The line from Gainsborough by Lincoln, Boston to Grimsby, and between Doncaster and the West Riding of Yorkshire, are nearly complete, and are expected to open for public traffic during the present month. A great many of the navvies (1,200 in number) who were so suddenly thrown out by the water breaking into the excavations for the Sunderland docks are now fluiding employment on this line.

docks are now finding employment on this line.

GREAT SOUTHERN AND WESTERN (I.).—The works on the portion extending from Cork to Mallow are proceeding with great activity. Some of the embankments are of a most stupendous description. One crosses a ravine near Blarney at a surprising height. Looking at its immense elevation, one is not strongly prepossessed in favour of railway travelling. To an unprofessional eye, the base of many of the embankments would appear scarcely wide enough to support such a weight on the summit as that of a full train in motion. The regularity and solidity of these works must have the effect of improving the skill of the labouring population in the districts through which they extend. But it is to be regretted that neither caution for their own safety, nor the example of casualties which have happened to others, has prevented the continued occurrence of accidents among

LONDON AND NORTH-WESTERN (Euston-square Station).—Vast and increasing are the improvements at the London terminus. When finished, the station will be one of the most complete and, considering the extent, the most compact in the world. New openings have been made into Seymour-street and other streets for the arrival and departure of goods and passengers; and no less than four new platforms, making five altogether, are arranged for departing trains, divided according to their destination; so that trains may be started every two minutes if required, and the extraordinary capabilities of the line thereby be nearly quintupled, it not being the railway, but the departing station which limits the business. The arriving platform will be the same, but lengthened to some 900 ft. The station is widened by additional lines of rails and turn-tables, to facilitate the clearing off of the empty carriages. In fact, says *Herapath*, very properly, every contrivance that could be suggested has been adopted to accommodate the public, increase the capabilities of the railway without confusion, and concentrate and facilitate the business and require

concentrate and facilitate the business and requirements of the company. It is designed to be, and probably will be, a model of capacity, compactness and convenience for a railway station.

SOUTH YORKSHIRE.—The works present a very forward appearance. The great embankment at Warmsworth is progressing satisfactorily, whilst the works at Conisborough, Mexborough and Swinton are in an early forward confliction. in an equally forward condition.

FOREIGN.

BERLIN AND COLOGNE.—The communication by railway between Berlin and Cologne was completed on the 23rd of June by the opening of the bridge over the Elbe at Magdeburg. Thus the treaty concluded by the directors of the lines between Berlin, Leipsic, Hamburg, Bremen and Cologne comes into operation which will greatly facilitate the interchange of commerce between the main mercantile towns. All the goods coming from these stations, as well as from Dusseldorf, Dusburg, Minden, Hanover, Brunswick and Magdeburg, for export, will then be transmitted, within the space of three or four days, to the most

reduced. It is expected that there will be an increase in the transmission of goods at the rate of 600,000 cwts. in the course of the year

GREAT LUXEMBOURG.—At the Place de Luxembourg, the site of the proposed Brussels station, the ground is ready for being built upon, and some new streets are marked out. From the Place de Luxembourg the direction is pointed out which the short junction line will take, in order to place the Brussels terminus in immediate communication with the Belterminus in immediate communication with the Bel-gian State line (the Northern), terminating at the station outside the Porte de Cologne and at the one near the Allée Verte. This short line (about an English mile) will place the Luxembourg in un-broken communication with the lines from Ostend, Bruges, Ghent, Antwerp, and the North of France. Proceeding down the line in the direction of the vil-lage of Ixelles, the first tunnel is reached under the road from Brussels to Wavre. Here a number of men are at work making the necessary excavations, and at the other side another body are removing a large mass of earth, and judging from the activity with which the works are carried on, it will soon be com-pleted. Further down the line, in the vicinity of the village, is a long viaduct, on which the masons are still engaged; near the village of Etterbeck is an open cutting ready for the rails, and a little further on a vast number of men are at work intersecting a mass of earth near the road between Watermael, Boisfort and Ixelles. Advancing, several small viaducts are completely finished, and many tracts are ready for laying down the rails. In the vicinity of a hamlet roads are about being turned into one, in order to avoid building two viaducts. Leaving the hamlet in avoid building two viaducts. Leaving the hamlet in question some heights are reached, on each side of which cuttings are being made which will require somewhat more than a month to finish. Further on the line, as far as the Waterloo station, the road is quite ready for the rails. Near the village of Boitsfort there is a viaduct and aqueduct; then comes a long tract of earthwork which is ready for the rails, and from thence to Groendael it is expected the various sections will be ready for laying down the rails by the end of this month. Judging from appearances, the whole of the line from Brussels to La Hulpe, where the line at present terminates, will be ready for laying down the rails in August next.

## RAILWAYS AND AGRICULTURE IN LINCOLNSHIRE. [Continued from p. 494.]

Before proceeding to see what railways may do to advance the highly-cultivated tract which so justly excited Mr. Pusey's admiration, I could not pass over the intermediate belt lying between Great Grimsby, a line from Great Grimsby to Boston, and the Wolds. This belt, as I have before observed, has been under cultivation from the earliest ages of which we have any record, at periods when whole counties of England, now fertile and populous, were mere wastes of wood and water. The character of the soil and its proximity to the pasture land near the sea enable the farmers to breed a large head of stock, and the strong clay land only requires a sound system of draining and subsoil ploughing to produce never-failing crops of wheat of the finest quality. In making my way across it toward the foot of the Wolds, a distance of about 8 miles, the neatness of the general cultiva-tion was as remarkable as the great size of the farmtion was as remarkable as the great size of the farm-buildings. The gates, always a test of neatness, were universally in good order. The corners of the fields evenly worked up, not presenting, as is too often the case, a heap of weed-growing rubbish; but then, to be sure, great pains seemed to have been taken to make each field square, avoiding those crooked corners which no plough can get at. The hedges were closely and carefully trimmed. In many days' riding in every direction I did not see one of those thick covert hedges that disgrace so many of our counthick covert hedges that disgrace so many of our counties. Still there was a great difference in the style of trimming hedges. There can be no question that the Scotch style is by far the best; by which, on first planting, each quickset is treated as a separate tree, and set at a distance of at least 10 inches, protected as usual by a strong double rail fence, but no ditch. As soon as sufficiently grown, it is cut, not with shears or a clumsy bill, but with a sharp small tool at the end of a pole, with a clean upper cut, into the shape of a horse's hogged mane, so as to admit as much light and air as possible, and prevent the upper branches from dripping on the lower, than which nothing can be more injurious, even on old hedges. Trimining on what I call the hogged-mane principle, will soon produce a great improvement, and create a

> $\mathbf{G}\mathbf{U}\mathbf{U}$ Digitized by

for a few years in this style, it presents a bulfinch so high, thick and strong that it takes a very first-rate hunter to get over it. This style of growing hedges is much extending in North Lincolnshire, introduced from Scotland, I believe, by that celebrated cattle breeder and excellent farmer, Mr. William Torr, late of Riby, now of Aylsby—at any rate, I saw the best specimens on his farms. Perhaps a fine growing fence is one of the first steps towards a good farm, once up, and a little clipping keeps it a laways in order at small and calculable expense. The drill system for grain-sowing seemed all but universal, and the wheat looked well, running for miles in mathematical lines from the hedgerows. Although there are un-doubted advantages in the broadcast system, especially in very dry seasons, there are two points in favour of drilling or other regular mechanical mode of sowing which must cause it in this country to become universal. First, from the facility it affords for cleaning the crop of weeds, by harrowing; and secondly, the power it gives for regulating and economizing the distribution of seed. It is a beautiful sight in the spring of the year to go into a wheat field and see the admirable case and regularity with which a boy with a light harrow, drawn by a steady horse, cleans the weeds from between the rows of wheat, stirring up the soil, and giving the green expanse the fresh trimness of a Among other signs of good farming I found on most establishments the best modern implements in use. Crosskill's clod-crusher was to be found in use. That most useful instrument, the everywhere. scarifier, was also nearly as common as the harrow. The wheelwright's shop has quite a scientific effect, from the number of patent tools to be found there for repair. Steam-engines, known by their chimneys at a distance, were to be found on large farms; and I am informed that when the railway opens, and brings down the price of coal, they will become much more numerous. Two other points cannot fail to strike the most careless passer-by through this district—the stately appearance of the lofty corn-ricks, well built and thatched in fine open yards, and the well-furnished look of the cattle-yards and pens which are attached to every farm. Every farmer in this district, whatever the value of his farm, feeds some number of horned beasts for the sake of manure. You always find the cattle in fair condition, and plenty of straw under their feet. It is a melancholy sight in many yards—I particularly noticed it in Gloucestershire, when there last winter—to find fine beasts wandering about ill-paved yards, covered with about 6 in. of mud, when they might be converting two yards deep of straw into fine oil-cake manure. The riding horses here are generally superior. The farmers as well as the gentry are all sportsmen, and the backs and barness horses have a good stamp and some breeding about them; but the cart-horses I met on the road and saw at work in the fields were by no means of first-rate quality either in appearance or action. They struck me as being small and slow. It is rather dangerous to found a theory on these cursory impressions, but it occurred to me that the value and comparative deficiency of pasture land might have something to do with it. The farm servants are a fine race, tall, well made and ruddy, for the most part fair-haired, but, although civil, not over acute beyond matters of daily routine, and strangely defi-cient in the rudiments of education. During several days in which I passed over the country in every direction, I was much impressed with the generally high tone of intelligence pervading among the farmers, who seem to hold feelings much the reverse of the same class in most counties. I had a good opportunity of hearing many opinions as I followed the Brocklesby hounds on several cold scenting days, and talked to every one, according to my custom. In many counties, the farmer who purchases new implements, tries new manures, or ventures on new experiments, is looked upon with pity, not unmixed with contempt. These sort of speculations are considered only proper for landlords indifferent to profit and fond of agricultural fame. Such is not the case in the districts round Grimsby and Brocklesby; an account, even from a stranger, of any recent invention, or seed importation, bearing upon agriculture, is listened to with attention, and the tenant farmers most noted among the scientific agricultural world for their ingenious investigations, are also the most highly esteemed among their Lincolnshire neighbours. I ought to have mentioned when describing the horses that a very clumsy four-wheeled waggon, drawn generally by three horses, is very much in use. The roads are excellent and the turnpikes few and far between, or these conveyances must have been improved long since. On a good many of the clay and low-lying farms between the sea and the Wolds, which are really in many respects farmed well, with a fair course of crops, a tolerable mount of live stock, and a liberal outlay in manures,

I found wanting good drainage and the subsoil plough. Of all the improvements effected in agriculture in the 19th, if not in any century, certainly Deanston draining and the subsoil ploughing are the greatest, and also perhaps those which it is the most difficult to bring rapidly into general use. Draining is in great part a landlord's business, and until all landlords learn how much their own interests are concerned in this question no great advance will be made. Subsoil ploughing, as we all know, requires care; if performed hap-hazard it may fail, and bring the improvement into disrepute; and it not unfrequently requires lime to correct the sourness of the virgin soil. The farmers in the lowlands, as I will call them in contradistinction to the Wolds or highlands, learned most of their improvements from the Wold farmers, and it is not improbable that the Wold farmers re-invented or re-discovered many improve-ments known to those excellent agriculturists, the monks of the 12th, 13th and 14th centuries. But the Wold farmers have no need to drain, Nature does that for them; while in the fen district the draining is something quite different to Deanstonising. In this matter, again, railways will exercise an improving influence, by cheapening coals and circulating draining-tiles. A coal-yard, a cornm-ill, and a tile-stack must be the surrounding features of convenient stations on the Lincolnshire lines. On several estates I found preparations commencing for draining on a large scale, and judging by the progress which every sound improvement has made in the light lands, we may expect that scientific draining will soon become the rule on the clay farms of Lincolnshire. There is nothing very picturesque in the country lying between the Humber and the Wolds, which is generally flat and squarely divided in a monotonous manner, which does not conduce to pictorial effect, although of the utmost possible use in assisting the farmer to comparisons and calculations of the produce of each field. An ill-cultivated country affords better studies for the artist than the results of careful agriculture. Banks covered with luxuriant weeds. broom and yellow gorse, corn-fields full of poppies, and pastures intersected by quaint irregular hedgerows dotted with trees—these are the bits the painter delights to dwell on, and these are just the beauties he will rarely find in North Lincolnshire, although there are not unpleasing studies of another kind. Some new agricultural feature constantly suggests ideas of energy, skill and industry applied to produce fertility and advance civilization. But I must own that my eye was vexed with much unnecessary ugliness and architecture. Mansions, farm-houses and cottages are mostly built on one uniform and frightful plan: bare brick, without ornament in stone or wood, after the model of a deal-box, with square holes for doors and windows. Among other foreign importations, it is to be hoped that railways will bring a few architects with eyes for simple unexpensive effects. Beauty of form and arrangement is often quite as cheap as ugliness; and the great size of the farm buildings, with the steam-engine chimneys, would afford scope for considerable taste and ingenuity, especially when stone and timber, steam conveyed, become cheaper. At Aylsby—a parish with a pretty stone church, held almost entirely in two farms I visited a farm, which I examined again two months after, and which well deserved more time than I was able to bestow on either occasion, as it affords a specimen of the average soils of the lowland district, which, after being for years under a very decent sort of rule-of-thumb system, had just then fallen into the hands of Mr. William Torr, certainly one of the first practical and scientific agriculturists in the kingdom, as well as a celebrated breeder of short-horns and pure Leicesters. He had some of the est of the late Lord Spencer's breed of the one, and thirty of the finest ewes in the kingdom, purchased at the sale of the celebrated Mr. Bakewell's repre-sentative. This farm consists of about 240 acres of strong clay, of which he has cleared several fences and hedgerows, and divided it into twelve fields; 200 of a lighter loam, divided into eight fields; 60 acres of silty sand, divided by fences into two enclosures, but, in regard to crops, into four divisions; and, in addition, of about 800 acres of good pasture at a little distance from the first 500 acres. A good deal of the arable land required draining, which Mr. Torr was preparing to do at 40 in, deep and 10 yards apart, with a tile and sole. For that district, with the average fall, he thinks and finds any increased depth beyond 40 in. a useless expense, or at any rate not sufficiently beneficial to pay for the extra expense. Some pasture on gravel he was engaged in draining at a depth of 30 in. only. I cannot help thinking that the love of singularity has led some of our farming friends too far into the bowels of the land for profitable returns; and I agree with Mr.

may be overdone. I hope on a future occasion to be able to produce a design for an improved drainage tile, from the workshop of my ingenious friend. new plough (also marked with the initials "W." new plough (also marked with the initials will, will probably be ready for the exhibition of the Royal Agricultural Association in July. We passed over a large piece of pasture intended to be broken up, and about to be burned as soon as dry. "It is not," said Mr. Torr, "correct on scientific principles to destroy so much of the fertilizing principle by burning the turf for the sake of the small residuum in the ashes; but, in practice, I find that burning this turf will destroy a quantity of wireworm and larvæ of destruc-tive insects, which would otherwise more than appropriate the results of the fertility I shall destroy by burning." Some of the ploughed fields were already in very fine order, after a course of double ploughing, harrowing and scarifying, at a most lavish expense for labour; and the wheat, in spite of heavy rains, was looking well. But there was one field, about 50 acres, in which the conjunction of strong soil and heavy rain had defied every effort to pulverize: it was sown with spring corn, and would have been a melancholy prospect to a tenant who had no other acres to fall back upon for a general average. Next year draining will tell quite a different tale. farm, under its new management, is expected to carry about 1,000 sheep, 100 fat beasts, and all the young stock of a considerable breeder, beside the wheat to pay the rent. The cost of bones, guano and other tillages will not be under 1l. 10s. a year per acre, and perhaps double that sum for the first two years; and here, again, the tenant counts on advantages from being within two miles of a railway station.

# Barliamentary Proceedings.

LORDS.

July 4.—North Wales.—Lord Monteagle presented a petition from a shareholder, complaining of the conduct of the directors. The noble lord said that the bill had been passed in the year 1845. The directors, instead of at once applying to the construc-tion of the line the money that had been subscribed by the shareholders, had lent that money to certain directors of the London and Richmond, on the individual security of the directors, for the purpose of constructing the London and Richmond, with which the North Wales line was manifestly totally unconnected. But this was not all. The Richmond having sold their line at a profit to the South-Western, had returned the money advanced to them by the directors of the North Wales; but even then that money had not been devoted to the construction of the North Wales line. It had, on the contrary, been lent to private individuals on their own security. The principal complaints contained in the petition resolved themselves into two heads—namely, misappro-priation of the funds of the North Wales, and the objectionable manner in which their accounts had been kept. Under the circumstances of the case, he thought their lordships and Parliament were bound to inquire into the facts stated in the petition, which were, as he understood, admitted by all parties. These facts implied a direct departure from the law of the land; and it was because he felt impressed with the importance of the subject that he had thought himself justified in bringing the matter under the notice of the house.—Earl Granville said from the circumstances disclosed in that case he thought their lordships had reason to congratulate themselves on lordships had reason to congratulate themselves on the support which they had given to the bill of the noble lord who had just sat down for the regulation of railway accounts management.—Lord Wharn-cliffe thought their lordships were bound to do all in their power to put an end to such disgraceful proceedings as those complained of on the present occasion.—Lord Repesdale regretted that the bill of the noble lord for the auditing of railway accounts had not been successful in the other house. Every one would admit that the time was now fully arrived when steps ought to be taken to compel those bodies of directors to render satisfactory accounts of their proceedings to their shareholders.-The Marquis of ANSDOWNE also expressed his regret that his noble

July 6.—Liverpool, Manchester and Newcastleupon-Tyne.—The Marquis of Londonderry had
given notice of the following motion:—"That the time for presenting petitions against this bill for the dissolution should be enlarged until the 11th of July inst., and that the second reading of the bill should be postponed until after that day." He now begged to withdraw that motion, and would substitute the following:—"That the petition of Mr. Moss and others on the subject of this bill be referred to the committee."—Agreed to.—North Wales.—Lord committee."-Agreed to.-

Torr that on old pasture on gravelly soil draining | Monteagle presented a petition from Mr. W. B.

Hughes, M.P. for Carnarvon, and formerly chairman of the board of directors of the North Wales, confirming the allegation in the petition which he had presented on Tuesday, that the money of the North Wales had been lent to individuals on the security of their notes of hand.

COMMONS

July 4.—The Railway Commission.—Mr. BANKES rose, pursuant to notice, to move for leave for a bill to repeal the Railway Commission Act. It had frequently been said by more than one of the present Ministry that the House of Commons was entirely to blame for all extravagant expenditure. It was there fore time for the house to redeem its character, and if that accusation was true, to exercise a greater degree of vigilance over the public expenditure. Suggestions were often thrown out to the Government, but the mode in which those suggestions were acted upon was to be charged entirely upon the responsibility of the Government. The supervision of railways, as originally authorized by Parliament, might certainly not have worked satisfactorily either to the companies or to the public, and it was perfectly true that the hon. member for Montrose ( Hume) had recommended some change in that respect, but still that hon, member, though he made the suggestion, was not chargeable for the lavish expenditure consequent upon his recommendation. At all events, supposing it had been right to make the experiment, he (Mr. Bankes) submitted that, it having now been tried for two years without any benefits arising at all adequate to its enormous cost, he had a right to submit his present proposition. The original institution of a check or a guardianship of railways by the Government was by an Act passed in 1839, and that guardianship continued from 1842 to August 1844, and during that time it was conducted at an annual charge of 1,370l. Afterwards, when railway interests had greatly increased, it had been found necessary to give further powers to the authority already constituted in the Board of Trade : and from 1844 there had been established an organized plan at a cost of 3,302l. per annum. This charge so remained until the year 1846, when the new Board, to which he had to call attention, was created by a bill brought in at the very end of the session of that year. On a former occasion, the right hon. the Chancellor of the Exchequer stated that the bill had met with the full and entire approbation of the house. On referring to the records of Parliament, he found that the only discussion on the bill took place on the 21st of April 1846, when certainly the greater part of those who spoke objected to the measure; but it was intimated that at the then late period of the session there would be no use in going to a division, and therefore, though a division had been called for, none took place, the numbers in the house at that moment being 66 members. received the royal assent on the last day of the session (the 28th of August 1846), and it could not be said, seeing the mode in which it had been introduced and carried, that he (Mr. Bankes), in seeking to repeal the Act, was going against the deliberate decision of Parliament. He had already shown that the cost of previous superintendence had been at the rate of 1,370l. and 3,302l. respectively, and yet the next estimate referring to the matter which had been laid before the house showed a charge of no less a sum that 17,000l. for a period of one year and a quarter, and in the present estimates, namely, from the 1st of April 1848 to the 31st of March 1849, the department was charged at 13.522l. 10s., including 2,000. for the President. The noble lord at the head of the Government had, undoubtedly, said it was not his intention now to fill up the vacant office of President, but he had not understood the noble lord to state that he considered the office as abolished.—Lord J. Rus-BANKES: That would make a reduction of 2,000l., which still would leave the charge at upwards of 11,000l. The Government must justify this expense, now that the duties of the railway department had gone back to the Board of Trade. He (Mr. Bankes) offered no excuse for again bringing this subject under consideration. The question was ecosubject under consideration. The question was economically of importance. It had been said that but little had been done this session by the House of Commons, and he was afraid that the charge was generally but too true, but the blame rested not on his but on the other side of the house. Those on his side had not failed in their duty. They had induced the Government to depart from their proposition of a 5 per cent. income-tax. That was something done; they had also induced them to revise the expenditure, by which a reduction had been effected of 500,000l. without infringing upon the efficiency of the national forces, and he should be happy further to reduce the

expenditure by carrying his present measure. Board had only produced a blue book, containing a mass of valueless matter, which might have been compressed into ten or twelve pages; and he defied the Government to refer to a single page which could offer any rational opposition to the motion he had to submit. But the Report stated that the Commissioners had prepared a bill in 1847, but which had been prevented by the pressure of public business This was not from being taken into consideration. the fact. The bill had been considered, but was found to be so injudiciously framed, so grievous in its operation, not only on railway companies, but upon landowners and the public generally, that it met with universal opposition, and was, after an attempt to amend it, withdrawn. Since then nothing had been done, and no other measure had been offered as the fruits of the labour of the Commission. He therefore called upon the Government to make out their case for the continuance of a Commission to discharge duties which before had been as well performed at one quarter the expense. As to the Reports of the Commissioners, even when, after a delay of some three or four months, they were presented, they made the least possible impression upon the house. With reference to the Commissioners themselves, they might be very clever persons in their way, able lawyers, and so forth but they had not that scientific character which could alone give weight to their opinions. The operation of the Board, in relation to the enforcement of the various railway Acts, had amounted to very little of practical importance, although this was one of the objects which Government, in urging the adoption of the measure had most earnestly insisted upon. All the real work assigned to these Commissioners might very well be transferred to the Board of Trade, and therefore in asking the house to repeal this particular Act he was, in point of fact, only asking them to repeal the heavy expenditure it occasioned on, gentleman then moved for leave to bring in a bill to repeal the Railway Commission Act .-Mr. LABOUCHERE said that, although the subject was in itself of a somewhat dry nature, yet as it was also one of much national importance, he must detain the house for a few minutes while he replied to the hon. gentleman's speech. The hon, gentleman had applied himself to the question principally in an economical point of view. He (Mr. Labouchere) valued at least equally with the hon. member, the importance of sound economy: but there was another element in Government of not less importance than economy, and this was efficiency. Even as to economy, how ever, the hon, gentleman had not stated the case quite correctly, the fact being that the expense of the present establishment was not more than 10,700l. Now, although the cost of the department of the Board of Trade which used to superintend railways had not been, he believed, more than about 4,000% per annum, it could not be suggested that, were the business of this department transferred to the Board of Trade again, as suggested, the cost would now not be more than 4,000l. a year. Since that time the business of the railway department had most enormously increased. He had, on a former occasion. given the details of this increase under its various heads. In the article, for instance, of inspection of railways previous to their opening, there had been a large extension of business. The number of miles of railways opened in this country up to the end of 1847 was 3,816; since that date 600 more had been opened, and before the close of the present year it was cal-culated that the number of additional miles opened would not be under 1,200. The labours of these inspectors had been most valuable in another way, for he had reason to know that the suggestions made from time to time by the inspectors to the various companies-received, let him add, in a most excellent spirit by the latter-had been greatly instrumental to the fact that the number of accidents upon railways had materially diminished of late, and that the safety of the lines, and the consequent security to the community, had in an equal proportion been increased. Under the heads of by-laws, of cheap trains, of miscellaneous superintendence, the duties of the officers had also very considerably increased. In the enforcement of the various railway Acts, the Commission, he begged to say, had been of most useful operation, having brought to an amicable settlemany disputes which would have otherwise involved a heavy expenditure in litigation. The hon. gentleman had suggested that lawyers were of no utility in those Commissions. In reply to this pro-position he begged to express his conviction that the services of eminent lawyers had been found most beneficial upon the Commission. The acute mind and profound acquirements of Sir Edward Ryan had been applied with assiduous care to the determination of many points of high importance arising out of the disputed construction of Acts of Parliament.

and which none but a lawyer could have adequately decided. Only men of the very highest attainments could properly fulfil such duties; and it was precisely to the circumstance that under the former system gentlemen of a second order of attainments only were engaged that he attributed the fact that under that old system those duties were not satisfac-torily fulfilled. The questions referred to the railway department were not merely questions of the greatest nicety, of the greatest difficulty, requiring the highest scientific and legal knowledge for their elucidation, but they were also questions affecting to an enormous extent the property of the community; and the community, therefore, it was natural to expect, would, under such circumstances, be satisfied with the decisions only of men of the highest authority. Even under the able administration of Lord Dalhousic, the decisions of the railway department of the Board of Trade were frequently set aside by decisions of committees of that house-a circumstance clearly attributable, in his opinion, to the fact that the gentlemen constituting that department under the noble lord were not of the elevated standing which could alone give weight to their judgments In illustration of its important jurisdiction, the right hon, gentleman referred to the settlement by the Commission of the broad and narrow gauge question, -a settlement which had been distinctly confirmed by the Legislature. As to the disregard in which the hon, gentleman stated the Reports of the Commission to have been held by the house, the hon. gentleman was altogether mistaken—the fact being simply this, that the hon, gentleman had confounded the Reports of the Tidal Harbour Commissioners with those of the Railway Commissioners. There had been but one instance in which a Report of the Commissioners had been set aside by the house. He trusted that the house would not consent to the premature and unadvised proposition before them .- Mr. GLADSTONE said it was very manifest, and indeed admitted, that the whole idea upon which this Commission had been founded had melted away into thin air. It therefore seemed to him that for the house to sanction the continuance of a heavy outlay upon a Commission without duties, would be flying in the very teeth of its own economical spirit. As to the cost of the Railway Commission, after deducting the salary of the chief Commissioner, it amounted not merely to 10,700l. per annum, but to 12,000t, for the right hon gentleman had omitted from his estimate just given that the officers were upon rising salaries, and that the engineer officers engaged received their military pay as well as their official salaries, other officers, meantime, filling their places in the engineer force right hon, gentleman seemed to have an indifferent opinion of the qualification of the officers who were employed under Lord Dalhousie, but the fact was that the qualifications of those gentlemen were every bit as high as those of the gentlemen now employed; the only difference was, that the latter received twice as much pay as the former, for doing, in point of fact, much less. Gen. Pasley, for instance he rather thought, whose qualifications were tolerably good—received only 800l. a year, and Sir F. Smith only 600% a year, for the same range of services for which Capt. Alderson now received 1,200l.; while Capt. Harness—an officer, let him most fully admit, of very great merit—would have readily accepted 400l. with his military pay of 200l. as an assistant inspector, and who now for his secretaryship received 600l. a year, with his 200l. a year pay. Capt. Harness was to be congratulated on the fortunate chance which had carried him beyond the niggard rule of Lord Dalhousie to the golden harvest of the economical ministry now in office. As to the amount of actual business to be done, there might perhaps be a few more letters to write now, but of really difficult and delicate negotiation there was not by any means so much to be done now as in the time of Lord Dalhousie. The Report of the Commission itself, though clever, of course, in parts, afforded some, in them-selves amusing, illustrations of the mode in which a Board, which had comparatively nothing to do, could manage to put in an appearance of work. Nearly one whole page of the Report, for instance, was occupied with the details of a great case, in which the Cale-donian had been brought to account, by the immense energy of the Commissioners, for having attempted to make a private in the Sappers and Miners corps pay 2d. for an extra quarter of a hundred weight of luggage, in the shape of professional implements, which charge of 2d. the Commissioners repudiated as an extortion, and a detailed case was put to the law officers of the Crown, whose grave judgment was carefully set forth in the Report—the grand result being a decree against the company. This great case would have been quietly settled under the old system by a couple of letters between the secretary and the company. - Lord J. Russell said that before the house

Digitized by

divided, he wished to state how far he agreed with the this motion, and with the right hon gentleman the member for Oxford University. He agreed that the Board, as at present constituted, and with its present amount of business, was more expensive than it per-haps ought to be; and, unless some considerable alter-ation took place in the extent of its business, a material reduction both in its numbers and in its cost must be adopted. He did not believe, however, that the work could ever be done by persons at a less scale of salary; for the nature of the duties devolving on of salary; for the nature of the dubes activing on the Board was such as to require the employment of gentlemen of the highest attainments, who conse-quently required high remuneration. He did not deny that several of the gentlemen formerly engaged under the Board of Trade had received lower salaries; but the Board of Trade had received lower salaries; but the very fact of their high qualifications, coupled with the fact of their being inadequately paid, had caused the public to lose their services. He might mention the case of Capt. Coddington, an officer of the highest efficiency, who, in consequence of his being inadequately paid by the Government, had trans-ferred his services to a company who had offered him two thirds more than the Government paid him. Mr. two-thirds more than the Government paid him. Mr. Laing had also found it more advantageous to assume his professional robe, and transfer his abilities to the committees. Before the house came to any decision respecting the Railway Board, he thought it would be desirable, first, to wait and see what were likely to be the ultimate duties thrown upon the department; and secondly, to see the evidence taken by the committee on the miscellaneous estimates.—Mr. Bankes having briefly replied, the house divided—For the motion, 62; against it, 73; majority against it, 11.

## COMMITTEES ON OPPOSED BILLS.

LORDS.

GROUP 2.

BRISTOL AND EXETER (Branch from Bleadon to Wells), (Taunton and Castle Cary Extension).—Decisions.—July 5.—Preambles proved.

MIDLAND (Gloucester and Stonehouse Junction) .-Promoters' Case .- Evidence .- July 5 .- District witnesses in support.

Decision .- July 6 .- Preamble proved.

#### GROUP 3.

GREAT WESTERN (Extension of the Berks and Hants line from Hungerford to Westbury, and to Devizes).

—Promoters' Case.—July 3.—Counsel showed nature of the scheme.

Opponents' Case. - Evidence. - July 4. - Landholders contended that the line was not only unnecessary, but that it would never yield an adequate return for the outlay, while the Salisbury and Yeovil, which they say is a cheap line, would take a far more preferable route, and was much more calculated to serve this district of country.

Decision .- July 5 .- Preamble proved.

LONDON AND SOUTH-WESTERN (Salisbury and Yeovil). Promoters' Case.—July 3.—Counsel at great length declared objects of the bill.

Evidence.—July 3, 4.—Local and landholders' testimony in support.—Mr. Locke, M.P. as to engineering features.

Opponents' Case. - Evidence. - July 5. - Landholders and others considered the scheme unnecessary.

Decision .- July 7 .- Preamble proved.

EXETER, YEOVIL AND DORCHESTER. Case.—July 6.—Counsel declared that this bill was to authorize an extension of the Salisbury and Yeovil scheme from Yeovil to Exeter, with a branch to Dor-

Evidence.—July 6.—Testimony similar to that adduced on the Salisbury and Yeovil.

Opponents' Case.—July 6.—Several landholders whose property would be intersected by the proposed

Evidence.-July 6.-Mr. Brunel, the engineer, to show that the district would afford a better route, and enable the promoters to avoid the estates of the opponents.

Decision.—July 7.—Preamble proved.

GROUP 4.

GREAT NORTHERN (Isle of Axholme Branch). Promoters' Case. - July 4. - Counsel opened the merits of this bill.

July 4.-Local and other witnesses in Evidence. support.

Decision.-July 6.-Preamble proved.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE (Humber Ferries Improvement).—Promoters' Case.—July 6.
—Counsel affirmed that the bill was to authorize the construction of several extensive ferries across the Humber at Hull and New Holland.

Evidence.-July 6.-Mr. Cubitt and other witnesses in favour.

Opponents' Case. - Evidence. - July 7. - Hull Corpo-

* For account, July 14. + Ex Div.

London Stock Exchange, July 7 .- During the past week the business transacted has been of an incre extent, and marked with a decided improvement in price. This has been produced mainly by the rise in price. This has been produced mainly by the rise in Consols, caused by the satisfactory statement made by the Chancellor of the Exchequer, and the increased confidence felt by the public in the resources of the country. The demand for guaranteed shares has been very general, as shown by the improved prices noted in the list. The market is not quite so firm at the close, but there is not much stock offering, and a slight demand would cause considerable improvement. able improvement

Liverpool, July 6.—There has been a considerable advance in our share-market within the last few days, an increased demand having sprung up, and stock by no means plentiful; the advance has been chiefly in the old lines. Suplow, Brothers

Manchester, July 6.—Our share-market has improved considerably during the week. More business has been done, and the prices of shares generally are higher. In some lines the advancement is great. SAM. GRINDROD.

ork, July 6.-Little business transactions occur, and there is as little disposition to offer stock, arising from the combination of favourable circumstances.

GRAYSTON & EARLE. Hull, July 6 .- The market has been gaining strength since our last; and this morning's price of Consols, 865, if supported, will, doubtless, draw up shares after it. With a good harvest and more economical management on the part of the various lines, the share-market will yet right itself.

FLINT & TOOTAL. Glasgow, July 6.—A very decided improvement has taken place in this market since the 29th ult., particularly in Ayrs, which have changed hands to a considerable extent, and are still in good demand, although the prices of the different classes of the

stock have rather receded from the highest point. The dealing has been much more general than for The dealing has been much more general than for some weeks past, and altogether a better feeling pervades the market. The following are to-day's latest sales:—Clydesdale Junction, 59½; Edinburgh and Perth, halves, ‡ dis.; Dumfries and Carlisle, 6½; Ayr, 75½; ditto, halves, No. 1, 7 dis.; ditto, No. 2, 7 dis.; Great Northern, 8½ dis., ex int.; North British, thirds, 1½ dis.; ditto, new quarters, 8s. dis.; Scottish Central, 25½; Great North of England purchase, 1½ prem.

BUCHANAN, AITERN & Co. prem. BUCHANAN, AITEEN & Co.

IBON TRADE.-Glasgow, June 30 .- The market for pig iron has remained steady; there appears a fair demand still for export, and the quotation is 43s. 6d. per ton, cash.——Birmingham, July 1.—The correspondent of the Morning Herald gives a lamentable account of the present halting trade. "The depression in the South Staffordshire district, and, I fear, throughout the whole of our mining counties, has ended in a very serious reduction in the price of iron, to be followed by another fall in the wages of all those engaged in the manufacture of it. The demand during the past few months has been comparatively nominal, and so entirely below the powers of production, that it has been found impossible to maintain the prices and wages of last quarter, and a reduction of 30s. per ton upon the quotations of March last has been de-cided upon. This resolve was come to at a private preliminary meeting of ironmasters held at Stewpony. The state of the Continent, and its effect upon our best markets, was felt to be serious; and in the absence of any reasonable hopes of a favourable turn in foreign commercial matters, it was deemed advisable to submit to such a reduction as might lead to an increase in our home demand, prevent the furnaces from being blown out, and save a vast number of workmen and their families from pauperism and commotion. Notice of a reduction of wages will therefore be given immediately to the mill-men, furnacemen, miners, forge-men and colliers; but how it will be received by them, coming so quickly after their recent long strike and eventual submission to a considerable reduction, remains to be seen.

MEETING.

LONDON, SATURDAY, JULY 8.

NARROW-GAUGE TRIUMPH IN THE WEST.

The narrow-gauge railway in extension of the South-Western to Yeovil and Exeter has just received the sanction of the Lords' Committee. There is to be a narrow-gauge railway direct from London to Exeter, in competition with the Great Western, and by many miles shorter. This is a result of broad-gauge policy which will do more to settle the question of uniformity of gauge against that party than any event of railway legislation which has recently taken place.

The Committee of the Lords decided yesterday that the preambles of the Yeovil and Exeter South-Western lines were both proved. They also decided on the rejection of a mixed gauge clause, which the Great Western tried to force into the bill. These are great steps in favour of uniformity of gauge, and that uniformity on the narrow gauge, not on the broad.

More and more, therefore, in this direction the broad gauge is becoming the exceptional gauge. The South-Western Company have fought their battle nobly, and we congratulate them heartily on this well-merited triumph; it proves, what we have all along said, that the narrow-gauge cause, in order to be triumphant over the broad, requires to be fought only with the same unity of executive, the same concentrated responsibility, and the same energy and talent, to be everywhere triumphant. Hitherto in the North the broad-gauge party has been successful: we have always said that the North-Western, with the best possible case, has fought in the worst possible manner, and therefore always lost, as it deserved to do.

There is another party also to be congratulated on the rejection of the mixed gauges clause. With it the Great Western could have got rid of the Bristol and Exeter line; or, with two strings to their bow, would have got the best terms from either party. As it is, they are shut up into the Bristol and Exeter, and must therefore give them fair terms. So much the better for Bristol and Exeter shareholders!

The future consequences of this defeat upon the policy of the Great Western must be pretty evident. Deprived for ever of the monopoly of their own peculiar district, they must look now for traffic to a much wider field; they must therefore either adopt the narrow gauge on their own lines, so as to draw traffic from all the surrounding narrow-gauge districts, or extend the mixed gauge all over the country. It remains for the folly and feebleness of their neighbours in the North to suffer the latter, or by energy and wisdom to compel the former of these alternatives. The South-Western have shown how the battle can be fought, and how

The following is the business of the COMMIT-TEES carried on during the past week. In the Lords-preambles proved: Aberdeen (Additional capital).

Bristol and Exeter (Branch from Bleadon to Wells), (Taunton and Castle Cary Extension).

Dundee and Arbroath (Dundee Junction).

Dundee and Perth (Dundee Junction).

Exeter, Yeovil and Dorchester. Glasgow, Paisley and Greenock (Amendments and

Great Northern (Isle of Axholme branch).
Great Western (Extension of the Berks and Hants line from Hungerford to Westbury, and to Devizes). London and South-Western (Salisbury and Yeovil). London and South-Western and Southampton and Dorchester (Amalgamation).

Londonderry and Enniskillen (Abandonment of line from Omagh to Enniskillen)

Manchester, Sheffield and Lincolnshire (Sheffield Canal Purchase), (Ashton Canal Purchase).

Midland (Gloucester and Stonehouse Junction). Midland Great Western (Deviation in line from Mul-

lingar to Athlone). North Staffordshire (Deviation at Wellington), (Ashbourne branch).
Scottish Midland Junction (Amendments and Branch).

Strathtay and Breadalbane (Extension).
Whitehaven Junction (Extension and alteration of

branches). York, Newcastle and Berwick (Great North of England, Clarence and Hartlepool Junction).

At the half-yearly meeting of the London AND GREENWICH a resolution was passed for paying 3s. 9d. a share on the unprivileged shares; the amount of which will be made up by 333l. from the undivided assets.

Two shareholders still persist in their dissent to the dissolution bill of the LIVERPOOL, MAN-CHESTER AND NEWCASTLE-UPON-TYNE, which has passed the House of Commons. At the special meeting they offered an amendment, which was rejected by 16 to 2, on the resolution sanctioning the bill. At the adjourned halfyearly meeting the election of auditor took place. The special meeting was adjourned to the 20th inst.

We have only to record a further adjournment of the BIRMINGHAM AND OXFORD shareholders till the 19th inst.

The shareholders of the EDINBURGH AND BATHGATE unanimously sanctioned their two bills before Parliament, for the extension of their Whitburn branch, the deviation of their Uphall and Birnie branches, and for the amalgamation with the Edinburgh and Glasgow.

The shareholders of the Belgian Eastern JUNCTION have sanctioned the loan of the caution-money to the Namur and Liége, at 10 per cent. Should these terms not be accepted, the amount is to be devoted to the construction of the line between Manage and Seneffe. All shares allotted not exchanged for certificates within ten days are to be for-

Mr. Gladstone was happy the other evening in his slight analytical notice of the labours of the RAILWAY COMMISSIONERS. So frequent, so various, so incessant and so universal have been the attacks justly made upon the valueless fruits of the Commission, that we are almost ashamed of again alluding to the want of shame on the part of its members in not attending to the generally expressed wish for their retirement and the dissolution of the Board. But the illustration afforded by the late Colonial Secretary is too significant to be passed by without

notice. In alluding to the contents of the Railway Report, Mr. Gladstone said,—

The Report of the Commission itself, though clever, of course, in parts, affords some, in themselves amusing, illustrations of the mode in which a Board that had comparatively nothing to do, could manage to put in an appearance of work. Nearly one whole page of the Report, for instance, was occupied with the details of a great case, in which the Caledonian had been brought to account, by the immense energy of the Commissioners, for having attempted to make a private in the Sappers and Miners corps pay 2d. for an extra quarter of a hundred weight of luggage, in the shape of professional implements, which charge of 2d. the Commissioners repudiated as an extortion, and a detailed case was put to the law officers of the Crown, whose grave judgment was carefully set forth in the Report—the grand result

being a decree against the company. This great case would have been quietly settled under the old system by a couple of letters between the secretary and the

Now where, let us ask our readers, is there a more "ridiculous mouse" than this? Let us hope that Mr. Bankes, with the assistance of the real friends of the railway and public interests, will in the end be the Mahomet to move this mountain into the sea.

The Irish Government has wisely, in the person of its chief, acknowledged the great boon conferred on the West of Ireland by the opening of the Great Southern and WESTERN to Limerick. Amidst the hubbub and threatened horror of a civil war the enterprize and commercial spirit of a comparatively few individuals have put in action another arm of the most powerful modern organ of civilization and commerce. Everywhere its products are those of peace,—cheap food, cheap fuel, cheap clothing,—indeed, all the necessaries of life, at a vastly reduced price, follow in the train of the railway; for it stimulates, revives and creates traffic, labour and its fruits, wherever it goes. And these well-known facts we should not have here glanced at, but that we wish to impress on those about us the real and lasting benefits to a community which a Government confers when it lends its encouragement and assistance to such undertakings (especially in poor Ireland), instead of endeavouring to suppress by penal enactments and meddlesome representatives the growth and advance of the whole railway system. The details of the opening will be found in another part of our paper, and we venture to commend with much earnestness the manly, statesmanlike and generous conduct of the Lord Lieutenant throughout the whole events of the day. His speech, too, is honest, and to the purpose; sensible, and free from the trammels of office.

From our official returns it appears that the amount of traffic for the last week, on 3,892 miles of railway, was 206,803l., thus accounted for:—110,790l. for the conveyance of passengers only, 47,296l. for the carriage of goods, and a remainder of 48,717l, for passengers and goods together, not respectively apportioned; being an increase of 22,124/, over the corresponding week of last year, when the mileage was 3,054. The average carnings per mile were 53l., whilst in 1847 they were 60l.

VETO AND SANCTION OF THE RAILWAY BOARD TO THE SOUTH-WESTERN EXTEN-SION OPENING.

Our readers may generally know that the opening of the South-Western Extension to Waterloo Bridge was to have taken place on the 30th ult., but that it did not. They possibly may wish to know the reasons which operated in both cases.

The following were the simple reasons why it was wished and intended to open the railway before the beginning of July :- First, Because the line was ready to be opened, and had been run over for a couple of days by locomotive engines; and, second, Because it was most desirable for the public that the change of station should take place at Midsummer, when the great increase of traffic begins, and when, also, the time-bills are usually altered for the enlarged traffic. There was another reason, not unimportant to the shareholders, for wishing to open the line. It was arranged, -and, if we mistake not, settled by Act of Parliament, but at all events agreed and settled by the parties,that the shareholders in this extension line to Waterloo Bridge should not be entitled to dividends until the date of the second half-yearly dividend accruing after the opening of the railway; so that unless the railway were opened prior to the 1st of July 1848, the shareholders could receive no dividend until July 1849, instead of receiving it, as in fairness they ought to do, in January 1849, when this extension will, in fact, have been earning dividend throughout nearly the whole of the half-year. We are not sure that these are exactly the reasons; but they indicate pretty nearly the spirit of the reasons which induced the directors of the South-Western Railway to make no inconsiderable efforts and incur no slight expense to open their line on the 30th of June, for the benefit of the public and of those shareholders who have been for so long a time deprived of the use of their money.

We come now to the second question-why the railway did not open. About this there is a certain mystery which we are not quite sure that we can perfectly clear away. What does appear is this,-that during the 28th and 29th of June immediately preceding the proposed opening, a certain Mr. or Capt. Laffan, a young military officer, was seen upon the railroad performing some minute and curious calculations, with very nice microscopic mechanism, capable of showing quantities so minute as the thousandth part of an inch; and it further appears that the result of these laborious researches was the discovery of the important fact that the bridge over Westminster-road, of massive iron arches no less than 90 ft. in span, was found to be deflected or slightly curved, on the first passage of a locomotive engine over it, by no less a quantity -will the reader believe it?—than the FIFTEEN-THOUSANDTH PART OF AN INCH!!! further happened upon this wonderful discovery is not precisely known. Whether it appeared to the wisdom of this young gentleman that the bridge had deflected one-thousandth part of an inch more or one-thousandth part of an inch less than it ought to have done, we cannot tell; suffice it to say, that in the alarm and consternation resulting from the discovery, he fled back to the head quarters of the Railway Board in Whitehall, and that thereupon there issued from that Board this august fiat-that their lordships could not sanction the opening of the line! We wish we could give some more rational report of so important a measure as the interference of the Government of England, as represented by the Commissioners of the Board of Trade, to stop the opening of a great public communication; -but great events are often the results of small causes: indigestion from a tough cutlet is said to have lost Napoleon the battle of Waterloo: a glass of water awkwardly spilt cost the Duchess of Marlborough and her Ministers their places, and turned at a critical period the destinies of the British empire; and so have little Mr. Laffan and his microscopic fifteen-thousandth part of an inch brought down on the South-Western the terrors of a Government veto, and deprived the poor shareholders of six months' dividends on more than a million of money.

To crown the farce—on Friday the 7th of July, precisely eight days after, the business having been brought to a stand-still for a week, and without cause assigned — without any change in the bridge—without rhyme or reason, the veto is withdrawn! With the same bars of iron which bent a fifteen-thousandth part of an inch in June still bending a fifteen-thousandth part in July, the line is sanctioned! Jupiter nods assent. The line may open.

Such is the miserable trifling which costs the tax-payers 13,000/. per annum in salaries, which has caused the public the loss of a great convenience, and deprived the unfortunate shareholders of their dividend on a million of stock!!!

PRACTICAL SCHEME FOR EFFECTING UNIFORMITY OF GAUGE.

Our correspondent "X, Y, Z," threw out a suggestion last week on the attainment of uniformity of gauge which we think is well deserving of attention. The plan he proposes is to charge all the railways in England and Scotland with the amount of cost incurred by altering the broad into the narrow gauge. We readily admit this scheme is not strictly just to the lines on the national standard, but a settlement is so desirable that even a heavy sacrifice ought to be cheerfully made to bring the question to an immediate and amicable termination. That an enormous amount would thus be saved in the cessation of legal and parliamentary expenses no one can doubt, and we believe the profit to accrue to the railway interest will be so great as to make the money payments a very secondary consideration:this is, however, placing the matter on too narrow a basis; it is a question of national and vital importance, and the country might fairly be called upon to second the exertions of the companies by making some outlay towards its completion; the collateral benefits which must follow the settlement will amply repay the temporary advance from this quarter. In the present position of railway property any measure which could be prudently adopted to assist in relieving the depression would be gratefully received by hundreds, who, though largely interested, are still so situated as not to be able to make much exertion for their own advantage, but are forced to look on passively at the insane struggle which is now jeopardizing their property. It will not be necessary to go into a long detail of figures to prove our position, but the amounts involved are enormous, and when we consider that this system is only of a few years' growth, we are lost in amazement at its prodigious developement. We need hardly remark that the treatment which it has hitherto received from both Government and Parliament is little in accordance with what ought to have emanated from enlightened statesmen; if the object in view had been to increase expense and lessen efficiency, we can conceive no plan more likely to succeed than that which has been followed:-where we ought to have had decision we have had vacillation and a peddling interference with details from a set of officials who totally neglected or were incapable of taking a comprehensive view of the whole, and have suffered the crying evil, for which we are now seeking a remedy, to reach its present height. Every day's delay is rendering the settlement more tangled and difficult; but it must ultimately be met, and had better be done now than after an outlay and contest which will waste thousands. Mr. Brown estimates the amount now invested in railways at the enormous sum of 109,000,000/.; the number of miles in active operation is 3,877, and the returns of last week gave 216,820%, being an increase on the corresponding week of 1847, when 3,025 miles were open, of nearly 40,000/. These earnings are made, be it recollected, in a time of unexampled commercial depression, and there is every reason to anticipate an increase in a period of greater prosperity; but from the opening of new lines we may assume that a large addition will be realized every month, independently of the chance of improvement. Caledonian, only just opened, is contributing a quota of 4,000% and upwards per week already -and it is well known that it requires some months to get a line into full working order. We will, however, take the last return as the average, and we have for the year a gross sum of 11,274,640l., and an increase, supposing the

over two millions on this, as compared with last year's receipts-which, by the way, include the amount taken for both passengers and goods— we will presently show that a very trivial charge on the former only will liquidate the expense in the course of a few years, without pressing onerously on any one. The million, which we will assume to be the sum required for the proposed change, might be advanced by a loan of Exchequer bills from Government; -and unluckily, many millions have found their way out of the Treasury on errands of much more questionable character than this which we now suggest. The narrow-gauge lines would thus incur a charge for interest of about 35,000%. per annum, to be apportioned amongst them according to their mileage and capital. It would likewise be necessary to provide for the repayment of the loan; and from 1,500/. to 2,000/. per week would liquidate both principal and interest in a few years. But when the great national benefits directly, and still more collaterally, involved in a settlement are considered, it might not be unfair or unreasonable to demand from Government, in return for this outlay by the companies -occasioned, be it observed, by no negligence or oversight of their own-that the loan should not carry interest. This would lighten the burden materially, and is a boon to which they are entitled. We have at hand only a return from Tuck's 'Manual' for 1847 of the number of passengers carried on sixty of the principal railways during the year ending on the 30th of June 1845. The increase since that time is no doubt very large; but this statement will serve our purpose equally well. It amounted to very nearly 23,600,000 persons; consequently, a poll-tax of 1d. would produce about 100,000/. per annum, and pay off the loan, without interest, in ten years. No doubt a more elaborate mode of charging might be made, so as to take it by the mile; but for a hasty sketch of the scheme, the penny-post system will answer, and we think would not be felt. All the railways would be benefited by the change; and to none, we imagine, would this radical reform be more advantageous than to the Great Western itself.

THE BATTLES OF 1848.

The present Parliament has granted a boon to the manufacturers and agriculturists of the district in according the branch to the great coalfields of Barnsley. Last session the bill for this extension was suspended, after passing through the House of Commons. In three previous sessions various accidents defeated the promoters. The demand of Manchester for coals is ceaseless; and this new supply will be a valuable addition to the raw material, on which the manufacturing interest depends for its continuing prosperity.

The Manchester, Buxton, Matlock and Midlands deviation of this session is a curiosity in its way-one of those whims of eccentric genius that sometimes startle and puzzle us. It is the one line-the Benjamin of Mr. George Stephenson,-and now makes its third appearance in a new shape, which makes one wonder why it should retain its present title. In 1846 an Act was obtained for a line under this name, which, commencing at Stockport, passed through Whaleybridge, Buston and Ashford to Matlock, thus intersecting in its main route the most delightful scenery and most famous watering-places of Derbyshire, and laying them open to Lancashire and Cheshire at one extremity, and to all the districts radiating from Derby at the other. In 1847 another deviation was applied for and obtained, by which better gradients were secured, at the expense of a slight circuit more to the South. This year another deviation has relative proportions continue to hold good, of been applied for, and successfully in the Com-

Digitized by GOOGLE

mons, in an exactly opposite direction—towards the North. Buxton, the principal town in the route, is put on a branch of a mile, with a gradient of 1 in 20, proposed to be worked by stationary power; while the main line, after piercing a tunnel two miles in length, proceeds through the Duke of Devonshire's grounds, within sight and hearing of his mansion of Chatsworth, as if toward Sheffield, but suddenly halts, and drops down towards Matlock. It cannot be denied that a line which runs through the lawn before a nobleman's house, dashes through an unnecessary tunnel of two miles, at an unnecessary expense of 250,000l., and places the principal town from which it derives its name upon a branch with a gradient of 1 in 20, is a railway curiosity. It is impossible to look at the map without seeing that there is a good deal of unnecessary competition in this line, which for part of its route runs parallel with another line, and for another part deviates, for some mysterious object, out of the way of the district it was originally intended to accommodate. Looking at the country and at the lines already sanctioned, it would seem to us that the country might be better accommodated and a considerable amount of capital saved by forming a junction between the Manchester, Sheffield and Lincolnshire to Buxton, and another junction between Chapel-le-Frith and Stockport, and for the rest following the line of 1847. Certainly there is no capital in the country to spare for this competition at present.

#### A PLEA FOR A LOAN TO BAILWAYS.

The Times once wittily observed that holding railway shares on which calls were payable was something like keeping a tiger and feeding him on legs of mutton. Of course the loss is so much greater if the expensive pastime of keeping the tiger cannot be rendered less a burden by the privilege of exhibiting him for a profit—in other words, if all the calls are made to a sinking fund from which no return is obtained. The condition of many railways is now one of most serious depression. Lines are nearly constructed, vast sums have been expended, and the undertaking is not completed for want of funds;-applications have been made to Government for assistance, and the petition has been re-fused. The railways are thus thrown on their own resources, and some of them are about to issue preference shares, with high guaranteed dividends, which will be a permanent clog on the profits of the original subscribers, for the purpose of raising the requisite funds to finish their lines. It is doubtful how far even this expedient will give them the requisite funds. I confess it does appear to me that looking at the aspect of the times, considering the vast numbers of workmen which would be employed on railways in full work, and the undoubted security which most of the lines applying for assistance can offer, the Government would have done wisely to accede to the application. What is wanted?-Not money so much as credit-the support of the credit of the Government. The mere announcement that the lines were promised such support would nearly suffice to render many of them independent of the necessity for it. The case is very similar to the causeless panic of last autumn, the announcement that Peel's notable Currency Act might be set at nought sufficed to remove the panic. The bandages were taken off, and the patient walked with ease and without any bad effects. A great deal of nonsense has been talked and written about the supposed conversion of floating into fixed capital effected by investing in railways, and some persons have repeated this as if they really were giving utterance to a clear idea, which explained the depreciation of railways. What unmeaning twaddle! A merchant who takes 10,000% out of his business to buy land may, I suppose, be considered to change floating into fixed capital,—but what if he sells the land the next day, where is the supposed fixedness of the capital, or if the vendor

embarks the 10,000l. in business, where is, still, the fixedness? In order to follow out this chace after fixedness, we should inquire in all cases what becomes of the money paid, because if it becomes absorbed in business, this supposed fixedness is at an end. If I become a subscriber for railway shares, and pay calls, all that I pay becomes employed and absorbed in business. On the other hand, I may sell my shares. This prattle about fixed and floating capital seems to me very childish stuff. What is then the cause of the depreciation of railways, especially of new lines? Beyond all doubt it is the excessive strain upon credit, which they have caused, and are causing. The panic of 1825 was comparatively temporary. Money was wasted in all sorts of schemes, but the crash came, and there was an end of the loss. Here the cause is a continuing one. The strain upon credit is still almost daily in operation by the demands made for calls and loans. The case is precisely one, the cure or mitigation of which is in the power of the Government. In the last century, the excessive strain upon the Bank of England was got rid of by the Bank Restriction Act. The curtailed credit of the present day might be relieved, if necessary, by resorting to a similar expedient. I do not say any such expedient is necessary; but I have no hesitation in saying that the national prosperity would be increased by granting the proposed loans to railways, and by resorting again to a Bank Restriction Act, if from that, or any other cause, the Bank of England should sustain a drain of gold. We paid twenty millions to the West India planters without causing any derangement of our monetary system. It has not, I think, sufficiently attracted attention, that Peel's Currency Act is at the bottom of the chief part of the suffering caused by the strain upon credit by the artificial restraint which it has imposed upon credit. Whenever unfavourable times appear, its operation is to starve the banking department of the Bank of England into a state of insolvency, by depriving it of the use of its capital. Hence we have a panic. I fear we shall never witness a re-action from the present generally depressed state of things until our legislation is directed to the object of supporting instead of cramping credit.
London, June 29.

## THE LAST RAILWAY REPORT.

In some general remarks on the character of the Railway Commissioners' Report, the *Daily News* exhibits the plain straightforward sensible view which it has frequently published on railway topics.

Whoever (says that journal) looks closely into the Report and appendix—we will not say with a special knowledge of the subject itself, but even with the mere capacities of ordinary common sense be much at a loss to know in which of the above characters the Railway Board is therein exhibited. The peculiar defect of its constitution may be seen In nearly every point to which its Report adverts.

There is a wide surface of business superficially handled, but no single part of it efficiently disposed of. Except in a few special instances, the subject of the Board's proposals will be found to fly off in general suggestions that this should be looked at, and that closely watched, &c., most of which recommendations refer to something to be done by other parties (as, for instance, committees of Parliament), and which, in fact, may be something or nothing, according as those other parties choose to read it. In the special instances excepted, where a decision has been particularly entrusted to the railway department in matters of detail, it is again not the Board itself, but an officer employed by it, who virtually does the work. The same, it is clear, might just as well be done without the ceremony of its adoption by a body of well-paid gentlemen sitting at Whitehall; and as for the character of the work, how it has been done may be known by a reference to such egregious decisions as we had lately to com-ment upon in the case of the Taw Valley gauge. We had on that occasion to point out—what the Report to the Lords on the gauge question has since abundantly confirmed—that in the only practical matter which really demanded official interference, the Board has exercised it in a way that, if ratified would tend to hopelessly confuse the whole railway system of this country—and this not for the pro-prietors' uses, but for the welfare of the nation at large; by doing its utmost to promote the expensive folly of setting up double gauges all over the king-dom, whereas its interest demands that no money

should be thus wasted; and, where this does not take place, by inflicting on its traffic multiplied breaks of gauge, which these very Commissioners now de-clare to be the worst evil that can befall the railway system. Such is the manner in which the Board does its business, when, by a singular chance it has arrived at any practical performance whatever. On going over the various heads of the Report, it will be seen that what the Commissioners have done in most cases is anything but practical. Accidents they never attempt to obviate till they occur; and it may be affirmed that not a single precaution has resulted from their interference after such casualties that would not have been certainly applied without— while it must be remarked that the only measures worth anything in this way have emanated from the railway companies themselves. How, indeed, should it be otherwise, seeing that the officers of the Board, from their want of practical experience, can only learn the business from those actually engaged in it? With respect to the official inspection of lines before opening, the case is no better. It gives no security at all. Nay, the Commissioners themselves had to make this very declaration in a special minute (see p. 11), when the accident on the Dee bridge called public attention to the fact, that the road on which that bridge gave way had been duly examined and pronounced quite fit for work by the Whitehall deputy.

And in conclusion, the writer tersely says,—
The plain fact is, that there is nothing to justify the great expense of this commission; and it may be added that from what it has done, whenever it has acted at all, it may be seen that, if it must be kept up, the cheapest course for the nation would be to pay the salaries and other expenses—and forbid the Board or its officers to say or do anything whatever in railway business.

#### Gossip.

The best body guard that the Lord Lieutenant could receive on his visit to the Great Southern and Western was afforded him in the assemblage of the navigators of the line. A heavy shower of rain fell as we reached the junction, says the Irish Railway Gazette, where the labourers of the company were drawn up in a line parallel with the railway, with their spades and picks on their muscular shoulders. They received the Earl of Clarendon with a loud and hearty cheer, which was raised with the strength of non-consumptive lungs again and again. Mr. Dargan was also there with his able staff, and from all I could learn was one of the most popular men in that centre of disturbed and fiery spirits. One of the strong-shouldered troop of workmen told me, "He is worth, Sir, a hundred landlords." Next to Lord Stanley he is, perhaps, the best-beloved man even in the golden vale.

The revival of the COVENTRY PAGEANT—the procession of the Lady Godiva—on Monday week must have been very productive to the railway, as there were upwards of 15,000 visitors in Coventry on that day. This hint might be improved upon by those companies whose lines touch the localities or scenes of ancient revels;—by promoting a healthy revival of those festivals and sports so interesting to the population generally, great good would result, besides that of helping to fill their treasuries. It is only this week we have had something of the kind in the neighbourhood of the metropolis, where rural sports have been revived at a suburban fair, and the wonted harmless gaiety of such scenes obtained a renewed existence.

We undertand that Mr. Walter, the manager of the South-Eastern, has resigned his appointment, and will be succeeded by Mr. Finnegan, late the head superintendent of police.

We last week mentioned the speculation of EXCURSION TRAINS to North Wales; since that announcement, the scheme has been extended to embrace a good many other places, including even the Highlands of Scotland, by way either of Edinburgh or Glasgow. We can only wish the enterprising parties success. There is no doubt the Highlands will be more visited this year than at any previous period, and this will lead to improved means of accommodation for the visitors, which has all accounts have been long called for

which, by all accounts, have been long called for.
We notice with pleasure the establishment at
Rugby of a RAILWAY MECHANICS' INSTITUTION for
the use of persons in the employ of the railway companies. It is under the presidency of Mr. J. Ellis,
and the usual officers and members of the committee
are chiefly the heads of the several departments, Mr.
Lea, the station master, being the honorary secretary.
The subscription is very moderate, and the privileges
are various, to embrace the member's family. Persons not in the employ of the railway companies are
admissible on paying an increased subscription, but

Digitized by Google

With a library, a news-room, cannot hold office. lectures and classes for instruction in various branches of knowledge, it cannot fail of being useful. We hope to see these institutions carried out at all the chief

The Board of the ABERDEEN is reported to have been remodelled. Lord J. Hay (a member of the Errol family) has accepted the office of chairman. Though only a fortnight has elapsed since the reconstruction of the directional body, they have already made arrangements for raising the sum necessary to complete the line, which will be opened to Stone-haven in August, and all the way to Aberdeen by the end of the year.

We regret to copy the following instance of the severe commercial pressure, which has been practically teaching high and low the necessity of stringent economy. The wages of the officials belonging to the EASTERN COUNTIES, where they exceed 1l. per week, says the Essex Standard, have been reduced. The reduction varies from 1s. to 2s., 3s., 4s., and upwards, per week. This comparatively small reduction will effect a saving of several thousand pounds per annum in the item of expenditure of that company.

In the course of a few months above 100 tons of gunpowder have been carried on the LONDON AND NORTH-WESTERN to Liverpool, Manchester, Leeds and other places. The waggons in which the gunpowder is conveyed are made expressly for the pur-pose. They are thus described in our contemporary, Herapath's Journal:—There are eight of these waggons, constructed in accordance with the patent of Mr. Henson. The body of the waggon is formed with Mr. Henson. The body of the waggon is formed with sheet iron on the outside; the inside is lined with two-inch plank, between which and the iron outside a thickness of felt is carefully placed. These are screwed together from the outside, so that there is nothing but wood inside; except on the floor, which is covered with sheet lead. The door fits so close with a double rabit that it is almost air-tight, and it is therefore impossible for any fire that the is therefore impossible for any fire to get to the powder inside the waggon. The axles are cased with wood. The comparative absence of the usual noise and vibration in the movement of these powder-

waggons is very remarkable.

The Bury Herald relates the case of an elderly female jumping from a second-class carriage near the Witham station of the Eastern Counties, whilst the train was in motion. She was taken to the Union

Workhouse, being severely wounded and bruised.

The erection of the electric telegraph between Edinburgh and Glasgow is now completed. The wires from Glasgow are not yet connected with the company's offices in Prince's-street, but it is expected that they will shortly be so. The delay on this point arises from the dampness of the tunnel at the west end of the city affecting the wires so much as to render it necessary that they should be covered with a thin coating of India-rubber. This is now in process of being done; and in the mean time the Electric Company have been accommodated with an apartment in the Haymarket station of the Edinburgh and Glasgow.

Detachments of the national guards both of Paris and the departments, of the line, and the garde mobile, escorted the body of General Negrier, killed in the late insurrection, to the terminus of the Northern Railway, whence it was taken to Lille.

A credit of six millions is expected to be voted for the Paris and Lyon, which will immediately give employment to a large portion of the ouvriers of the ateliers nationaux.

At the close of the sitting of the National Assembly of the 30th ult., the Government withdrew the project of law respecting railways, under the plea that the cabinet would require time to consider it. It will probably be withdrawn altogether. On this subject a correspondent of the Morning Herald says:—An end is put to all uncertainty about the railway spolia-tion of the late Government by the withdrawal of the bill from the order list. This measure, which was offered to the eyes of the Communists as a lesser spoil with which to sate the national ateliers, was treated with sufficient contempt even by those whom it was intended to bribe off, as Rome in her later days purchased temporary peace from the inexorable barbarians. There is to be no more partial confiscation-no more whetting of avaricious appetites. Property is to be treated as property, and France will respect her engagements. This is a return to right principles. On the other hand, the National, referring to the bill, does not regard the fact of its erasure as decisive of the fate of the measure. It believes M. Goudchaux, the present Minister of Finance, to be favourable to the principle of the project, although he may think it expedient to modify the details proposed by the late Minister. The National will be satisfied if the right of the State to

will agree to indemnify the shareholders, if that can be done without imposing too great a sacrifice on the country. On this subject the following rumour is the latest:—M. Duclerc, the ci-devant Finance Minister, asked whether the Government intended the absolute abandonment of the railway scheme, and Gen. Cavaignac replied that the Government reserved to itself the new application of the principle, which met with his approval; so that the 472,000,000f. of extra ordinary resources, brought forward in M. Duclerc's plan, have dwindled down to 200,000,000f. in the statement of M. Goudchaux. In the bureaux also statement of M. Goudenaux. In the bureaux and the duestion was again brought forward, and the Minister of Finance was strongly urged to declare explicitly whether or not the proposed expropriation was definitively abandoned, or only postponed. The answer of the Minister implied that the State maintained the right of expropriation, but only intended to exercise it with the acquiescence of the companies: in fact, it is intended to expropriate the railways, or such of them as may be surrendered by the companies to the State on terms mutually acceded to.

Prussia has been affected by the "seizure of proper-'mania, first developed in Paris. M. Hansemann has, it is understood, 160 infallible schemes of this kind before him; but 90 of them are only plagiarisms of the policy of the French minister, and advise a seizure of the railways by the State; 30 propose to deal with landed property; and many of the others suggest a compulsory conversion of all gold and silver plate into coin.

# Reports of Meetings.

LONDON AND GREENWICH.

July 4.—Half-yearly General Meeting, London. Mr. W. SHADBOLT in the chair.

The Report stated it appeared that the directors had elected Mr. F. Maubert a director in the place of Mr. W. H. Hughes, who retired. The statement of accounts showed the half-year's receipts to be as folaccounts showed the half-year's receipts to be as follows:—Half-yearly rent of railway, 19,500*l*.; transfer fees, 11*l*. 15s.; by interest on bonds (8,800*l*.) held by the company, 209*l*. 5s. 9d.; making together, 19,721*l*. 0s. 9d. The balance in hand was 7,743*l*. 18s. 6d. A resolution was passed for paying 3s. 9d. a share on the unprivileged shares, and that 333*l*. be taken from the undivided essets to make up that amount

from the undivided assets to make up that amount. The meeting then adjourned.

# BIRMINGHAM AND OXFORD JUNCTION.

July 3 .- Adjourned Special General Meeting, London.—There were not more than five or six share-holders in attendance. The meeting was further adjourned till 10 30 a.m. on Tuesday week, to be held at the same place, the King's Arms Tavern, Old Palace-yard.

LIVERPOOL, MANCHESTER AND NEWCASTLE-ON-

July 6. - Adjourned Meeting, London. - Mr. FFRANCE in the chair.

The CHAIRMAN stated that the dissolution bill had passed the House of Commons without alteration, and stood for the second reading in the House of Lords, and would, no doubt, be passed.

Mr. Fisher asked if his protest, and those of others, had been laid before the committee of the house.

The CHAIRMAN understood they were all withdrawn.

Mr. FISHER said his was not, and that he had understood that the chairman of the committee had said that as long as one dissentient existed he would not agree to pass the bill. He protested against their breaking up, after spending 100,000*l*., whilst they could put their balance out to interest, and had two more years at their command to wait the event of

The CHAIRMAN said it had been decided by the shareholders that the company ought to be dissolved, and the majority on that occasion was between 40,000 and 50,000 votes, there being on the contrary about 10,000 votes only. He had expressed himself anxious to be guided by the vote of the proprietors, one way or the other, and they had given it by this large majority in favour of dissolution.

Mr. NEWTON complained of the conduct of the directors in hastening the concern to a dissolution. He did not care how many advocated its dissolution, he had bought the shares as an investment in what he considered an excellent undertaking. He had no doubt that a representation made to the Marquis of Londonderry would still induce him to oppose the bills passing the House of Lords.

Mr. Parsons asked what prospect there was, if

2s. 6d., and he had offered them to parties for nothing, for the sake of getting them registered in other names. Besides, they stood in jeopardy to have their balance swallowed up by the monstrous claims of numerous landowners. Now, by the dissolution bill passing, they would put an end to this, and save the remains of their property, which would divide, he dared to say, from 15s. to 20s. per share.

After some discussion, Mr. Parsons moved, and

Mr. TURNER seconded, a motion, in approval of the passing of the bill through the House of Commons, and hoped the same result would attend it in the

other branch of the Legislature.

Mr. Fisher proposed an amendment, seconded by Mr. NEWTON, expressive of regret that the bill had been so far passed, and hoped the Lords would throw it out.

The original motion was carried by 16 to 2 in the egative, those two being Messrs. Fisher and Newton. Mr. Fisher then moved that Mr. C. Swallow be re-appointed auditor, which was seconded by Mr. NEWTON, and passed unanimously.

The CHAIRMAN said the half-yearly accounts were ready for the auditor, and the next half-yearly meeting he advised to be held on the 20th inst. which was agreed upon, and the meeting adjourned.

EDINBURGH AND BATHGATE.

July 4. - Special Meeting, Edinburgh. - Capt. STEWART in the chair.

On the motion of the CHAIRMAN, the following bills were unanimously sanctioned:—1, A bill to extend the Whitburn branch, and to alter or deviate their Uphall and Birnie branches; 2, A bill to amalgamate the Edinburgh and Bathgate with the Edinburgh and Glasgow.

#### BELGIAN EASTERN JUNCTION.

July 5 .- Meeting of Shareholders, London, to consider the propriety of allowing the caution-money to be lent to the Namur and Liege, and other matters Sir F. SMITH in the chair.

The SECRETARY read the Report from the directors, which stated :- The directors have now the satisfaction of meeting, for the first time, share-holders who have acquired a right to vote in their affairs, and who will have power at the approaching general meeting, to be held at Brussels on the 13th inst., to decide upon every question which may then be brought under their consideration. The present meeting has been called, in accordance with the usual practice of the Belgian companies, for the convenience of those shareholders who may be unwilling or unable to attend the Brussels meeting, and to give them an opportunity of communicating their senti-ments on the various subjects which will be presented ments on the various subjects which will be presented for discussion at that meeting. A formal notice of the meeting at Brussels has been duly published. From this notice it will be seen that the meeting appointed for the 13th (which, for the purposes of the statutes, will constitute an ordinary half-yearly general meeting of the company) will also be competent to discuss and resolve upon every question which, under the statutes, requires the sanction of an extraunder the statutes, requires the sanction of an extra-ordinary general meeting, and, among others, the question of dissolution itself. There are many reasons which, in the opinion of the directors, make it expe-dient to dissolve the company, and they think the shareholders must concur in that opinion, when they are reminded that if the company were now dissolved (even with the approbation of the Belgian Government, which is indispensable), the caution-money would be at once sacrificed, and no practical steps could be taken for the distribution of the assets until the funds in the hands of M. Messel had been realized, and a final decision obtained in the suit instituted by M. Vifquain. Since the last meeting the directors have caused the project suggested by Mr. Baly, for the construction of that portion of the line which lies between Manage and Seneffe, to be submitted to the Minister of Public Works in Belgium, but he has declined to entertain any proposition of the kind until a definite answer has been given by the company to the proposal for lending the caution-money to the Namur and Liege. The particulars of that proposal have been already explained to the shareholders. It is therefore unnecessary to repeat them here, and, under existing circumstances, the directors again recommend its adoption, on the grounds stated to that meeting, viz., that it will be the means of postponing the forfeiture of the cautionmoney for a given period, of making it productive during that period, and possibly of giving the com-pany an opportunity, at its expiration, of either pro-secuting the works or disposing of the concession to some other company. If the Namur and Liege should be unable to raise the necessary sum, or from any National will be satisfied if the right of the State to they kept on the company, of getting in the next call. other cause the proposed arrangement with that take possession of the railways be established, and it. He recollected when the shares had been reduced to company should go off, it would, perhaps be well to

urge Mr. Baly's project upon the Minister, who, in that case, might, probably, not be indisposed to entertain it. The shareholders are aware that the usual advertisement has been published, requiring an exchange of the bankers receipts for certificates of shares, and apprising the holders that their deposits would be subject to forfeiture if the exchange was not made within thirty days. That period expired on the 3rd inst. and a considerable number of the receipts are still unexchanged. It rests therefore with the directors either to declare the deposits of defaulters absolutely forfeited, or to enforce the exchange by the expensive and somewhat precarious process of a suit in Chancery, and they are desirous of ascertaining the sentiments of the shareholders upon the subject before they resort to either of those remedies. The more simple, and, in the opinion of remedies. The more simple, and, in the opinion of the directors, the more expedient, course would be to declare the deposits forfeited, if, after a further short notice (say of ten days), the defaulters should not take up their certificates. It seems palpably unjust that any shareholder should remain exempt from the obligations under which he originally engaged to place himself, and yet participate in the benefits, if any, which the concern may eventually yield, rateably with those who have fairly performed their part of the contract, and assumed the responsibilities incident to its conditions.

The Report was adopted.

The CHAIRMAN then moved a resolution, that the directors be empowered to enter into such arrange-ments with the Belgian Government and the Namur and Liege Company, for the loan of the caution-money, as they in their discretion may think fit. There had been an agreement entered into between the two companies for the loan of the money, but to his (the Chairman's) surprise, he had that morning received a communication from the solicitor of the Namur and Liege, stating that the agreement for giving 10 per cent. for the money was at an end, by effluxion of time. But as the Belgian Government had dictated the terms of the loan to the Namur and Liége, he felt that they were bound to offer it to them, when, if they did not choose to accept it, that company must consider what was the next best thing to be done. It would, therefore, if that meeting supported the directors, be their duty to endeavour to enforce the agreement and obtain the best terms they could. If the Namur and Liege would not give the 10 per cent. for the money, he thought the best thing for the company to do would be, if the Belgian Government consented, to devote the caution-money, which, at present prices of Belgian funds, was worth 18,000l., in constructing that portion of the line between Manage and Seneffe, which it was cal-culated would give them a return of 10 per cent. for their money. He did not know but that this would be the best course to pursue, but, in order to keep faith with the Belgian Government, he thought it right, in the first instance, that they should try to enforce the agreement with the Namur and Liege.

A Shareholder asked if the delay would not be injurious.

The Chairman said he thought it would be rather an advantage. It was true they were at the mercy of the Government, but he had no doubt they would be treated fairly by the Government.

A Shareholder asked what was the prospect as to realizing the funds in the hands of M. Messel, the banker, in Brussels.

The CHAIRMAN said M. Messel had been obliged to stop business, but there was every probability of his being able to pay all the demands upon him in the course of a year. The company had obtained a security on his estates for the amount which he held, about 21,000l.

The resolution was then agreed to, so was also one authorizing the directors, in the event of the arrangement with the Namur and Liege not being carried, to apply the caution-money in the construction of the Manage and Seneffe line.

A Shareholder asked how their regular expenditure was to be met, including salaries and so forth, if the contingencies alluded to turned out unfavour-

ably.

The Chairman said the directors had diminished the expenditure as much as possible; they received no allowance themselves, and the outlay was now confined to the secretary's salary of 350%. per annum, and the rent of the offices.

Another resolution was also passed, to the effect that all shares allotted not exchanged for certificates within ten days should be forfeited. It was stated that of 32,000 shares, 18,260 had already been exchanged for certificates, and a further 500 deposited for exchange.

## Law Intelligence.

Costs.—July 1.—In the Vice-Chancellor's Court, in re the East Lincolnshire, at parte the Archbishop of Canterbury, the petition in this case was presented by the present Archbishop, praying that the dividends of certain sums of stock, standing in the Bank, and which had been paid in as the purchase money of lands taken by the company from the see of Canterbury, for the purposes of their Act, might be paid to his grace so long as he should continue Archbishop, and afterwards to the Archbishop for the time being, and that the company might pay the costs of the petition. His Honour made the order in the form asked, including the costs.

ENTRY ON HOUSES.—July 3.—In the same Court, in re Stamps v. the Birmingham, Wolverhampton and Stour Valley, the Vice-Chancellor delivered judgment. The company, in making their line had a ment. The company, in making their line, had to form a tunnel under the houses of the plaintiff in Birmingham, and gave notice accordingly. As the works proceeded, it was found necessary to resort to blasting, which so injured the houses, that the plaintiff filed his bill, and obtained an injunction. Finding it impossible to construct the tunnel without taking the houses, which the company might have taken in the first instance, a second notice was given to the plain-It had been contended that such second notice was bad. He was of opinion that the company might give such notice whenever it became necessary. The plaintiff failing to send in his claim after this second notice, the company proceeded under the 85th section of the Lands Clauses Consolidation Act. to obtain a valuation, the amount was fixed and paid into court, and a bond executed to the plaintiff. The company then took possession of the houses. From the docu-The company ments in evidence, the amount was paid into court on the 10th of June, whereas the award fixing that amount was not dated until the 12th, two days afterwards. The plaintiff contended that this was altogether bad, inasmuch as the amount paid into court could not be that which was referred to in the award. If he determined that under no possible circumstances such a payment could be good, he might be doing very serious injury; and he could not find any thing in the Act itself which required the application of such a stringent rule. Was this, then, a case to give the company an opportunity to explain the circumstances under which the award had been made. and the money paid into court ! He could not refuse to receive the attidavits, which he was now informed had been filed by both parties since the hearing of the motion, but how he might deal with them when produced was another question. The case stood over The case stood over for the production of the affidavits.

July 5.—In the same Court, in re Addison v. the Newcustle and Carlisle, counsel moved for an injunction ex parte to restrain the company from leasing the line to the Newcastle and Berwick. The motion appeared to be founded on a section in the Act which forbade the lease; but his Honour observed it did not clearly appear when the plaintiff had notice of the intention of the directors to make the lease, and he therefore directed notice of the motion to be given for the 8th.

LIABILITY OF PROVISIONAL COMMITTEEMEN. -July 4 .- In the Court of Queen's Bench, in re Hooper v. Smith, this was an action brought by an advertising agent, carrying on business in Thavies Inn, against an attorney, to recover the sum of 80l. for advertisements inserted in several London and country papers, with reference to the Great Western, South-Eastern, Ipswich and Southampton. In the month of October 1845, the defendant applied by letter for shares, and authorized his name to be put on the provisional committee, but he never attended any meetings, nor did he take up his shares. The advertisements in question having been proved to have been inserted in various newspapers, and the letter of the defendant applying for shares having been read, counsel submitted that the plaintiff must be nonsuited, inasmuch as the particulars of demand were from the 17th of September to the 11th of October, and the defendant had not applied for shares until the 13th of the latter month. In support of this objection the learned counsel quoted the well-known case of Wyld v. Hopkins. The counsel for the plaintiff then endeavoured to prove that some advertisements had been inserted in the newspapers after the 13th, but he failed to do so, upon which the learned Judge directed the plaintiff to be nonsuited.

EAST LANCASHIER.—June 26.—At the Bury Petty Sessions, R. Makin, labourer, Pilkington, was charged with having ridden in a third-class carriage from Manchester to Radcliff, without purchasing a ticket.

J. Melling was also charged with having attempted to, rescue the prisoner from the custody of the railway officer. The prisoners were fined 5s. each and expenses.

COMMITTAL OF AN ENGINE-DRIVER.—The inquiry into the cause of the collision on the London and North-Western, at Crewe station, with a train conveying a portion of the uinth regiment to Manchester, has terminated in the committal of the engine-driver, John Bentley, to Chester Castle, for six weeks, for culpable omission of proper caution on the occasion.

REDUCTION OF COST OF WORKING ENGINES.—Several of the officials of our great metropolitan lines have been trying some plan for the reduction of the smallest working expenses in the common business of the company. Among these, Mr. Samuel, of the Eastern Counties, has been especially active. The "Liliputian" engine was brought forward by him, and since its career this little engine has run about 10,000 miles with scarcely any repair. The result of its miles with scarcely any repair. The result of its working induced Mr. Samuel to direct his attention to the employment of light locomotives for branch traffic; and the conclusions at which he arrived will be found in the following extracts from a paper read by him at the Birmingham Society of Mechanical Engineers :- The result of observations which I have for a considerable time been making on the branch passenger traffic of railways, has been to convince me that on the whole it is not remunerative, and in some cases is even worked at a loss. I have been therefore led to consider whether the expenses might not be reduced by the introduction of a system of steamcarriages, made suitable to the amount of traffic to be conveyed. It is evident that the more we can reduce the dead weight of the trains and engines in proportion to the number of the passengers, the less will be the expense of repairs both of the carrying stock and engines, and of the way and works of the line. The average weight of a train on the branch lines is 56 tons, the number of passengers conveyed by each train not exceeding thirty-five to forty on many of the branch railways in England. Supposing each passenger with luggage to weigh 11 cwt., the total weight of the passengers conveyed is about 3 tons, or, in other words, for every ton of paying load we are now carrying by the present system of locomotion, we have 18 to 20 tons of dead weight. It is therefore, in a commercial point of view, of the greatest importance, not only to railway companies, but to the public generally, that some less expensive, and at the same time equally safe, means of transport be adopted. It is therefore proposed to substitute steam-carriages for locomotives on branch railways. The following are a few of the principal dimensions of the steamcarriage now in the course of construction : Diameter of cylinders, 7 in.; length of stroke, 12 in.; diameter of driving-wheels , 5 ft.; distance between centres, 20 ft.; width of framing, 8 ft. 6 in. The boiler is of the ordinary locomotive construction, 5 ft. long by 2 ft. 6 in. diameter. The fire-box is 2 ft. 10½ in. by 2 ft. 6 in. There are to be 115 tubes, of 14 in. diameter and 5 ft. 3 in. in length, giving 210 ft. of heating surface in the tubes. The area of the fire-box is ing surface in the tubes. The area of the fire-box is 25 square feet, giving a total of 235 ft. of heating surface in the boiler. The consumption of coke 1 have estimated at 7 lb. per mile, at a velocity of 40 miles per hour. The total weight of the steamcarriage, with its coke and water, will not exceed 10 tons; and it will be capable of conveying about forty-two passengers at a speed of 40 miles per hour. The water is to be carried below the floor of the carriage, in wrought-iron tubes, of 12 in. diameter and 12 ft. long. One great object attained in this machine is the reduction of the centre of gravity, and the consequent absence of lateral oscillation.

EXECUTIVE APTITUDE OF GOVERNMENT .- What a strong warning against Government management of our railways is presented by the tardy recognition by the Post-office of the advantages of quick communication! For instance, the Caledonian runs two trains daily from Glasgow and Edinburgh to London, which perform the journey in twelve hours and a few minutes; and there are corresponding trains from the metropolis which go over the ground with equal rapidity. Yet, with a perversity, says the Glasgow Herald, for which we cannot well account, the Postoffice, instead of employing the twelve hours' train, makes use of one which takes seventeen hours to perform the journey between Glasgow and London. may be given as a reason, that the latter waits at a greater number of stations than the former, and thus affords facilities for receiving mail bags from the country towns along the line of route; but the Postoffice authorities know full well that the bags can be received and carried by the express trains as well as by the slow one. On many of the English lines, the Post-office van is provided with a net, which on passing a station is extended upon an iron rod; the rod touches a pole to which is attached the mail bag, and even when the train is at full speed the bag is deposited in the net, and drawn into the van with the greatest case and regularity. Would it be asking too

Digitized by Google

much of the Postmaster General to extend these advantages to Scotland? Private enterprize beats the Post-office entirely. We receive the London morning papers by express parcel, about 10 p.m. of the day on which they are published; but the mail does not bring in these papers till 1 30 a.m.; and did we depend on the courtesy, attention and speed of the post, these journals would not be placed in our hands post, these journals would not be placed in our hands before 8 a.m. on the following morning, which is just ten hours later than we supply ourselves by a private opportunity. Of course we have to pay for these parcels; but we cannot regard these payments other than as taxes imposed upon us by Post-office laxiness.

COMMERCIAL SECURITIES.—The Daily News has the following sensible remarks on the continued.

COMMERCIAL SECURITIES.—The Daty News has the following sensible remarks on the continued depreciation:—It is wonderful that in the present depreciation of money, as measured by the rates of interest it yields in public and as in private or commercial securities, comparatively, so little attention is paid to the superior advantages of investment in sound railway stocks, shares and loans, returning so much greater an amount of interest. The cause and the fact why such is the case need not be concealed. Confidence in the directors of those undertakings has been and is very much shaken, from the neverceasing purchases, or undertakings, of new lines and branches, entailing an enormous addition to capital, and, pro tasto, of expenditure, with a decrease of dividends; and, to crown all, with the uncertainty where and when all this prodigality and recklessness of enterprize is to end. In the opinion of all sober of enterprize is to end. In the opinion of all sober calculating men the appropriation of capital in rail-ways should be the most secure and gainful of all investments, because subject to little variation from political influences abroad or at home like the public funds; as it is, the measureless extension of enterprize, with the profuseness of expenditure in the general management deter prudent and moneyed men from carrying their funds into railway channels. It is said that, in the one instance of the Great Western line alone, the engineer in chief, and no doubt the other functionaise in proportion received doubt the other functionaries in proportion, receive yet just as much—thousands per annum, probably—as when the trunk line was being made, and the great work to be done.

IRISH LINES.—Without at present expressing our opinion on the merits of the bill, we give the principal features of the measure to be introduced by Mr. F. French and Mr. H. Brown, for Government assistance to Irish lines:-Commissioners to be appointed by the Government for carrying this Act into execution. Such Commissioners to be empowered to purchase and complete unfinished lines, for which Acts of Parliament have been obtained, and to work or let the same on lease, and also to lay down and carry out a system of railway communication in those parts of Ireland wherein Acts for this purpose have not been obtained. The Commissioners to be enabled to take lands according to the provisions of the 'Lands Clauses Consolidation Act,' and to construct the lines so laid down according to the provisions of the 'Rail-way Clauses Consolidation Act.' That the several baronies in Ireland through which any of the lines of railway so laid down by the Commissioners are intended to pass, shall be empowered to apply to the Commissioners to have the lines respectively constructed, upon giving a guarantee of 2 per cent. upon the interest of the money to be expended on the work. The Commissioners to be empowered to borrow money for the purposes of the Act, and to give deben-tures to the lenders redeemable in five, ten and fifteen years, bearing interest. The interest on such debentures to be secured by the revenue arising from the several railways, which is to form a common fund, and the guarantee of 2 per cent. on the baronies; should any deficiency arise, the same to be secured by Government. The amount of debentures to be issued for the purposes of this Act to be regulated by the Lord Lieutenant, subject to the approval of the Lords of the Treasury. The baronies comprised in any particular or integral line shall have a power periodically of requiring a revision of the tariff—that s, provided the nett revenue of such line is equal to 6 per cent.—the guarantee to remain in force to cover any new risk from such reduction.

GRIMSBY, from its position near the entrance of the Humber, will when the proposed extensive works are carried out and the projected railways completed offer great facilities to the trade with the Baltic and northern Europe, it will be a ready coaling place for steamers, and will probably become the principal resort of the fishing vessels employed on the Dogger Bank as well as on the more distant grounds of the North Sea fishery. This part of the Humber and the neighbouring anchorage of Hawkroad offer the only harbour of refuge in easterly gales from Harwich to the Firth of Forth, and during these winds 300 vessels have taken shelter here at one time.—Second Report of Tidal Harbour Commissioners. PRESENTS FOR WEDDINGS, BIRTH-DAYS, CHRISTMAS, AND ALL PESTIVALS.

# FELIX SUMMERLY'S ART-MANUFACTURES.

Designed by the most eminent English artists, executed by the first English manufacturers, and sold by all respectable dealers in town and country.

The articles priced are now published. Those marked § are just ready.

Camellia Teapot, in Britannia Metal, with Parian

Camellia Teapot, in Silver, 20 guineas; and in Plated Metal, 40s. (R. Redgrave, A.R.A.) Shaving-Pot, in Earthenware. "Heroes bearded and beardless." 4s. and upwards. Shaving-brush Dish, 1s., and Shaving-Brush

handle, 1s.

Bread-knife. Parian handle, 12s. Carved-wood handle, 17s. Carved-ivory handle, 25s., and upwards.

Bread Platter. In Wood and Porcelain. Bride's Inkstand, in Porcelain. (J. Bell.) 11. 13s.

JUNCTION.

At an ADJOURNED EXTRAORDINARY MEETING of the Proprietors of the Liverpool, Manchester and Newcastle-upon-Tyne Junction Railway Company, held at the London Tavern, Bishopsgate-street, within the City of London, on Thursday, the 6th day of July 1848, at 12 o'clock, pursuant to a Resolution to that effect, passed at the Adjourned Extraordinary Meeting of the Proprietors, which was held at the same place on Thursday, the 8th day of June last, at 12 o'clock,—

THOMAS ROBT. WILSON FFRANCE, Esq., Chairman,-The Secretary having read the Resolution adjourning the

lit was moved by Mr. Parson, and seconded by Mr. TURNER,—

TURNER,—
That this Meeting learns with great satisfaction that the Bill for the Dissolution of the Company has passed the House of Commons, and they trust that it will speedily obtain the sanction of the other branches of the Legislature.

obtain the sanction of the other branches of the Legislature.

To which it was, as an amendment, moved by Mr. Pieher, and seconded by Mr. D. Newton,—

That this Meeting learns with regret that the House of Commons have passed the Bill for the Dissolution of the Company, and trust that the House of Lords will throw it out, that the Company may wait the events of the next two years, during which period they are not compelled to proceed with the line.

The amendment having been put to the Meeting by the Chairman, and negatived, the original motion was put and declared carried.

Moved by Mr. Ashlin, seconded by Mr. Passon, and una-

nimously resolved,—
That this Meeting do Adjourn to Thursday, the 20th inst.,
at this house, at 12 o'clock at noon.

Adjourned accordingly.

THOMAS ROBERT WILSON FFRANCE,

#### LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION RAILWAY COMPANY.

TYNE JUNCTION RAILWAY COMPANY.

At an ADJOURNED ORDINARY HALF-YEARLY MEETING of the Proprietors of the Liverpool, Manchester and Newcastle-upon-Tyne Junction Railway Company, held at the London Tavern. Bishopsgate-street, within the City of London, immediately after the adjournment of the Adjourned Extraordinary Meeting, held on Thursday, the 6th day of July 1848, pursuant to a Resolution to that effect, passed on the 8th of June last.—

THOMAS ROBT. WILSON FFRANCE, Esq., Chairman,-The Secretary having read the Resolution adjourning the Meeting,

Moved by Mr. FISHER, seconded by Mr. NEWTON, and unanimously resolved,—
That Mr. Charles Swallow be re-elected Auditor to the

Company.

The CHAIRMAN declared the business of the day at an end, and dissolved the Meeting.

# SOCIETY OF ARTS, ADELPHI, LONDON.

PRESIDENT-H.R.H. PRINCE ALBERT.

# PRIZE LIST FOR 1849.

# SECTION OF FINE ARTS AND MANUFACTURES.

SECTION OF FINE ARTS AND MANUFACTURES.

The Society has revised its classes of premiums in the Fine Arts and Manufactures. It purposes to award prizes for the best designs uniting Art and Manufacture, and also for the best compositions whether painted or modelled, to be employed in architectural decorations, &c.

Another class of prizes is for the encouragement of Carpetus in the same direction. And the object of these prizes being strictly educational, they will be limited to students of a certain age; the Society's aim being to educe a class of Students who shall be prepared to enter into successful competition for the prizes previously mentioned, and to guide their efforts towards those points of general utility where their talents may be renunerated.

A beginning has been made during the two past sessions, and with no little success, to encourage an improved character of design in Manufactures. Prizes having the same object in view will therefore be continued, and their scope enlarged.

With the same object in view the Society commenced in 1847 an Exhibition of Manufactures illustrating the application of decorative design. The Exhibition of 1848 was visited by more than seventy thousand of all ranks, and was universally pronounced to be worthy of the Society Feel that a class of rewards should be established and offered to those manufacturers who produce original and beautiful objects at succeeding Exhibitions.

By first eliciting the design from the Artist, and then honouring the Manufacturer for realizing the design, the Society hopes to extend practically the sphere of its utility, and change of residence of each meritorious competitor, so that on applying at the Society's House, any manufacturer may have the means of communicating with such artist, and may be enabled to obtain the best information respecting all objects of ornamental design. All inquiries and communications connected with the union of Art and Manufactures will therefore be most desirable to connect in one harmonious system all these pr

The following are the arrangements for the year 1849.-

## PRIZE OF FIFTY GUINEAS, offered by T. Twining, Jun. Esq.

  For the best Ornamental Design for an OPEN-WORK PANNEL, in Cast or Wrought Iron, and suitable for an Entrance Gate. The Silver Medal.

# Prizes for Models.

- 21. For the best Working Model of an original Design for a SILVER GOBLET, suitable to be awarded as a Prize value One Hundred Pounds, in conformity with the Bequest of the late Dr. George Swiney. The decorations to be emblematical of Justice. The large Gold Medal or Twenty-the Pounds.
- 22. For a Model of a TABLE LAMP PILLAR. The Silver Medal and Five Pounds.

- led account of the views of the Donor, longther with many useful suggestions, in his Paper entitled 'Pyrolite,' read before
  the Society, and printed for distribution by order of the Council.

  SS.

  121. For the Model of a SALAD BOWL. The Silver Medal and Three Pounds.
  122. For a Model of a TEA-URN or TABLE TEA-KETTLE, with Working Drawings full size.
  123. For the Model of a TABLE CANDLESTICK, to be executed in Metal by dies. The Silver Medal and Ten Jounds.
  124. For a Model of a TABLE CANDLESTICK, to be executed in Metal by dies. The Silver Medal and Province of a Table Candlestick of a CHIMNEY-PIECE CLOCK.
  125. For a Model of an Ornamental Case for a CHIMNEY-PIECE CLOCK. A Gold Medal or Twenty Pounds.

The successful Candidates in this Class will be called upon to attend and give specimens of their competency before the Committee.

All Designs, &c., competing in Classes 1 and 2, must be sent in on or before the first

Monday in January, 1849.

# 3. ARTIZANS' CLASS.

- 3. ARTIZANS' CLASS.

  1. For the best Specimens of WOOD CARVING, the production of an Artizan (male or female) who is not a wood carver by profession. Two shires Medals.

  NOTE—The object of this Prize is to encourage wood-carving (which is a home occupation) as a means of employment subsidiary to other occupations.

  2. For the best-executed GROUP of ROSES, painted on Ghass or China. The Silver Medal.

  3. For the best nude FIGURE of a BOY painted on China. The silver Medal.

  4. For the best nude FIGURE of a BOY painted on China. The silver Medal.

  5. For the best Specimen of CHASING of the HUMAN FIGURE in Brass, produced within the preceding six months. The Gold Medal;—for the second best Specimen of SIEM WEAVING. The Silver. The Gold Medal;—for the second best Specimen, the Silver Medal.

  6. For the best and most claborate Specimen of SIEM WEAVING. The Silver Medal.

  7. For the best Specimen of DIEE-CUTTING of the Human Figure for Stamping Metals for Ornamental purposes. The Diesto be produced. The Gold Medal.

  The successful Candidates in this Class will be called upon to give an actual specimen. 6. For the best and most chlorate Specimen of SLLR WEAVEN.
  7. For the best Specimen of DIE-CUTTING of the Human Figure for Stamping Metals for Ornamental purposes. The Dies to be produced. The Gold Medal.
  The successful Candidates in this Class will be called upon to give an actual specimen of their competency before the Committee.

# 4. MANUFACTURERS' CLASS.

4. MANUFACTURERS' CLASS.

Medals of Gold or Silver, and Honorary Testimonials will be given to Manufacturers and others, who shall exhibit at the Society's House in the year 1849, fine and original specimens of the following British Manufacturers recently executed, to be sent in on or before the first Monday or Tuesday in February.

A Gilt Frame of the best Gold colour.
Shawl Weaving.
Printing for Shawls.
Calico Printing.
Carpet Weaving.
Ribbon and Silk Weaving.
Chutz Printing.
Paper Hangings.
Iron and Brass Casting, applied to ornamental purposes.
Metal Figure Casting.
The most beautiful novelty in Earthenware, Marble, and Slate.
Printing and Colouring on China.
Ornamental Cutlery.
Largest Specimen of Crimson on China.
Best Work of Art applied to Paper Hanging.
The most beautiful Novelties in Paper Maché.
All Specimens, &c., competing in Classes 3 and 4, must be sent in on or before the first Monday and Tuesday in February.

The Society deem it necessary to state that its Rewards are not limited to the subjects specified, but that Rewards will be given to other meritorious works in all branches of Art.

specified, but that Rewards will be given to other meritorious works in all branches of Art.

# ARCHITECTURAL DESIGN, &c.

ARCHITECTURAL DESIGN, &c.

For the best Design for a LABOURER'S COTTAGE in the country. The large Gold Medal or Thirty-one Pounds Ten Shillings,
The Drawings to comprise a general Plan, Elevation, and Section, drawn to a scale of three-cighths of an inch to the foot, together with the requisite Working Drawings to a larger scale and a General Specification of the internal Finishing and Fittings proposed.
The Design must provide a Living Koom, a Scullery, and three Bed-rooms.
Presuming that in Structures of this description, where the outlay must necessarily be very limited, that both with a view to economy of material, and likewise to external effect, it will be considered desirable that the Cottages should be creeted in pairs, the wall between them containing the Flues; in such cases, the Details of one only will be required.

It is necessary that consideration should be given, firstly, to the most convenient arrangement of the parts; secondly, to the best means of ventilation, dramage, supply of water, cleanliness and commenced heating; and lastly to combine therewith the most pleasing and pictures are effect attainable with reference to the limited outhy. The cost of a Double Cottage creeted in Middlesex, when completed with the requisite Landbord's Fixtures, must not exceed 2001.

All Designs in connectition for the above Design must be sent, in on or before the first.

All Designs in competition for the above Design must be sent in on or before the first Monday in January, 1849.

# NOTICE TO CANDIDATES.

The performances competing for the premiums offered in Classes 1 and 2, must be delivered in without any external intimation of their respective authors; but the candidates are required to affix on the front of each of their performances and on the case containing them some motto or device, and the same motto or device is to be inscribed on the outside of a paper scaled up, containing within the name and residence of the candidate, and on the outside the sex and age of each. As only such letters as bear the mottoes of the successful competitors will be opened, Candidates not receiving notification of their performances having been rewarded are requested to apply for their various communications within fourteen days after the 1st of June, to prevent loss of or injury to the same.

Copies of the Designs or Models rewarded in Class 2 must be deposited and left in the Society's Museum; but the Copyright will remain with the Artist, provided that the work is executed for sale, and published, and that a manufactured specimen is exhibited at the Society's Exhibition of Decorative Manufactures in the year following. In case the work had need to sale, and published, the Society reserve to themselves the right of causing the same to be executed on such terms as they may think expedient.

Manufacturers and Designers will have every information and facility afforded them, on application to the Secretary.

SATURDAY, JULY 15.

# CRITICAL TOPICS FOR APPROACHING GENERAL MEETINGS.

For the last two or three years, the importance of the questions discussed and the measures announced at the half-yearly general meetings has been constantly increasing; but the interest of the topics which we apprehend must be handled at those now about to take place, will be felt to rise beyond that of any former period. The several managers of the railway body have to report to their proprietors, and to take counsel with them, upon a state of affairs quite unprecedented; and on the course pursued by both, the future condition of this enormous mass of property will in a great measure depend.

It is not merely the immediate consequences of a time of doubt and distress that give a peculiar character to the deliberations of this period. It is, no doubt, a circumstance that greatly concerns the owners of our railways to know the extent to which they have suffered in the general suffering of the country-to hear what has been done or attempted by their delegates to meet the pressure, and diminish its injurious effect on the proprietors' dividends. But this is not the only serious matter of fact that presents itself for settlement and decision just now. A new feature may now be seen clearly defined by the experience of the last year or two, which affects a question of wider bearing than that of any temporary rise or fall in receipts; and ought to have a material weight in determining the future course of policy in the councils of all the extant railway corporations. The principle on which collateral branches and extensions have hitherto been promoted was the assumption that, if not a direct source of profit themselves, they were at least a sure means of increasing the gross receipts on the main lines. It is now quite evident, however, that, as a general rule, the assumption was erroneous. In a large proportion of cases the branch line, if expensive in its construction, has been found to bring nothing, either directly or indirectly, to its parent, which can be deemed any sufficient compensation for the cost at which it has been made. The public convenience is, no doubt, promoted; but the railway proprietor is out of pocket by affording it.

Experience has now pretty well decided, also, the value of such extra works, and of other extensions and heavy undertakings and obligations of various kinds, as means of defence against the encroachments of rival concerns. It is impossible to view the actual position of every one of those great companies which have been fighting in this way the most strenuously during the last three or four years, without being persuaded of this plain truth, viz., that the only certain effect of their "competing" efforts has been to damage all pretty nearly alike, without bringing any one a single step nearer to that fancied point of security which was the alleged object of the pains taken and the millions squandered in the hope of attaining it by hostile operations. The enfeebled condition which has resulted to all from this ruinous process, can hardly fail to teach the necessity of reviewing the causes of what must now be seen to have ended in mere disappointment, and in a state of finance which has all but fatally damaged the external credit and internal resources of railway property

The object of all concerned in it having been to obtain a profitable return on the sums invested, they can scarcely now avoid the conclusion that the policy hitherto pursued—as it has certainly produced a contrary result, as it

profit on former investments, while rendering new ones in a manner compulsory-has not been consistent with the true principle of railway association. And it may be hoped that, on the part of both directors and shareholders, the instruction to be drawn from this proof will not be thrown away; that a soberer and more practical tone will henceforward characterize the management of our great undertakings; and that at the forthcoming meetings we may hear a determination clearly expressed on all sides to study the main end of these associations, which has been for years in a great degree thrust into the background; and to try in good earnest what can be done to recover the income of a property which has now reached a stage of decline alarming enough to its original promoters, -but utterly disastrous to those who came in by purchase at high premiums, founded on a confidence in the maintenance of the earlier rates of dividend, which, had the property been wisely managed, there is no reason whatever to suppose would have been disappointed so grievously as it has

Here, indeed-as in the larger compass of State affairs-the rule of conduct is written in the clearest characters, for all to read who are not blind to the meaning of what has happened, and is now coming to pass under their very eyes. Moderation must take the place of excess-economy, of heedless expense; real necessities must be manfully dealt with, and idle delusions once for all thrown aside, if the welfare, nay, the existence even, of what it is surely worth making an effort to preserve, is to be maintained through the difficulties which past negligence and past errors have occasioned.

## EAST INDIAN RAILWAY.

We have long hoped for the introduction and establishment of railways in India, and have regretted the want of success which has attended almost every project having this end in view. The East Indian Railway Company, as our readers may be aware, was one of the first competitors for public favour, and was originated under most favourable auspices. In common with all other railway schemes, important or unimportant, it has not been exempted from consequences of the commercial depression, -so much so, that its very existence has at length become precarious.

Many of our readers are no doubt aware that the East Indian Railway proprietors are called to attend an extraordinary general meeting on the 18th inst., for the purpose of deciding on the future policy of the company. A similar meeting was held on the 18th of April last, at which it was announced that, after repeated failures on the part of the company to deposit with the East India Company the sum of 100,000/., as a preliminary step towards securing a guaranteed rate of interest, and after repeated extensions of the time allowed for making the deposit, the East India Company had decided on conceding no further indulgence, and that unless the deposit were made by the 1st of May, all engagements between the companies should be considered at an end. It was finally resolved by the meeting, though not without opposition from some shareholders desirous of effecting the dissolution of the company, that a call of 21. per share should be made, and that if the sum thus collected should not suffice for the payment of the deposit against the prescribed time, it should be returned to the subscribers intact, trustees being appointed to receive it with that view. It was also agreed to unanimously, that the East India Company should be requested to give an improved guaone or other of such concessions being deemed essential to the success of the undertaking.

The call of 21. per share, from which so much was anticipated, proved unsuccessful; only about one-fourth of the shareholders responded to it; whereby, instead of 75,000%, which ought to have been realized, there was collected a sum even less than 20,000%. The company was therefore unable to complete its engagement with the East India Company, and the promise of a guarantee was thereby invalidated. After much importunity, however, the East India Company was induced to consent to another arrangement, which, we presume, will form the subject of discussion at the ensuing meeting. This arrangement is reported to be to the effect that a reduced deposit of 60,000/, will be proposed to be accepted; but it is accompanied with the condition that the guarantee of 5 per cent. shall be confined to one million, instead of three millions, as before. These terms, so far from being any improvement upon the former ones, are decidedly less advantageous; and we cannot doubt that the shareholders who at the former meeting insisted on the absolute necessity of an improved guarantee, will now declare in favour of an immediate dissolution. This consummation, however it is to be regretted, seems to be the only one left to the company; for with an unwilling proprietary, and in the absence of the entente cordiale with the India House, it is much better to wind up at once than to perpetuate expense without any hope of final success. At present, we believe the India House would be willing to make some compensation to the railway company for the expense of surveys and plans; and the sum thus obtained, along with the funds at present in hand, would save the proprietors from any great loss, especially as the forfeiture of the shares upon which 5s. was paid—a measure which seriously diminished the proprietary gave a large sum to the company. Delay, how-ever, will, we fear, only damage the prospects of the shareholders, by disinclining the India Company from negotiating for the plans, and by dissipating the funds at present in hand; and with the East India Company dissatisfied or adverse, and the proprietary unwilling, we conceive that dissolution will be a happy relief to the directors, and indeed to all concerned.

We have it in contemplation to exhibit in detail, on an early occasion, the causes of the want of success which has attended the East Indian Railway Companies, and at the same time to present the most feasible means for their re-construction; but their dissolution appears to be an indispensable preliminary to any further progress.

OPENING OF PART OF THE WEST RIDING UNION.

In connexion with the Lancashire and Yorkshire is that wide network of lines known together by the name of the West Riding Union, of which a portion was formally opened by the directors and their friends on the 12th inst. At 10 a.m. a large party of directors and their friends left Manchester for Cleckheaton; and at the same hour a considerable number left Leeds. Both the parties met at Mirfield, where the junction with the main trunk is effected, and proceeded thence by special train along the new line to Low Moor. About the same hour a large number of persons, including many of the Yorkshire directors and their friends, left Low Moor, and traversed the line to Mirfield and back again. This train was accompanied by several bands of music and banners. After an inspection at Low Moor of the works of After an inspection at Low Moor of the works of Messrs. Hird, Dawson, Hardy & Co., the directors came back to the station with a view of returning to Cleckheaton, where a cold collation was provided for they arrived about 4 p.m. The train, them, and they arrived about 4 p.m. The train, on its return from Low Moor, consisted of thirty-three carriages principally third class, every one of which was densely packed, as were also the roofs and has certainly produced a contrary result, as it rantee, either by increasing the rate of interest, every available spot where a seat or standing-place has undoubtedly so acted as to diminish the or by extending the duration of the guarantee, could be obtained. There could not be fewer than

3,500 persons in the train, which was drawn by four engines. The down train having arrived at Cleckheaton, the directors and invited guests—about 300 in number—sat down to an excellent cold collation in a spacious tent erected for the occasion, and several toasts and sentiments having been given, the principal of which—"Prosperity to the Cleckheaton Railway"—was enthusiastically responded to, the company broke up shortly after 7 p.m., well satisfied with the day's proceedings.

The portion just opened is one which leaves the main line at Mirfield, in Yorkshire, and ascends the beautiful and picturesque valley of Cleckheaton, to Low Moor, a distance of about 71 miles. It is intended that this branch shall be ultimately carried forward, by way of Bradford, to Leeds, (with a fork stretching backwards from Low Moor also to Halifax, to which town there is already a branch from the main line,) and thus become the main line, in fact, from Manchester to Leeds. The Acts of the Lancashire and Yorkshire embrace that object, and the distance from the present terminus of the line at Low Moor to Bradford is only a little over two miles, the works of which are in an advancing state; and when the whole line by this route is completed, con-sidered in connexion with the Liverpool and Bury, very soon to be opened, the Lancashire and York shire will be the shortest route yet projected between Liverpool and Leeds. Like the Liverpool and Bury line the Cleckheaton Valley link, opened on Wednesday, is looked to with some degree of favourable anticipation, not only as likely to yield a large passenger and general goods traffic, but also a very large traffic in minerals. It is a singular fact that so far back as 1809 or 1810, when locomotive engines were unknown, a railway was projected, and seriously con-templated, through the vale of Cleckheaton, as a means, not of passenger, but of mineral traffic alone. In addition to yielding great accommodation to the neighbourhood through which it passes, this line will also be a great boon to the extensive manufacturing town of Bradford. The valley of Cleckheaton is studded with villages and woollen manufactories, the first four or five miles having a population of between 30,000 and 40,000 inhabitants, including upwards of 100 blanket manufactories, and many woollen cloth These villages include Heckmondand yarn mills. wike and Cleckheaton, the first with its suburbs having 10,000, and the latter having about 5,000 inhabitants. Low Moor, at the terminus of the line, is the site of one of the largest iron works in the kingdom, which alone will give a very large traffic over this and the main line, the consumption of lime alone, procured at Goole and used in smelting the ore, being 20,000 tons per annum. The ironstone and coal are procured on the spot, at a depth of 40 yards only, and, so far as the consumption of the works is concerned, will not benefit the company: but a vast surplus of the coal is raised, which will pass over the line, and especially towards Bradford, when the extra two miles of line, which is in progress, shall be opened. In fact, the tonnage over that part of the tine (to Low Moor and back) is estimated at 122,000 tons. The value of Low Moor iron may be gathered from the fact that whilst the bar iron of Stafford is now selling at 6l. 10s. per ton, that of Low Moor is selling at 16l., and its pig iron at 7l. The excursion train, after passing over the whole length of the line, returned to Cleckheaton, drawn by five engines, and carrying between 3,000 and 4,000 persons, mostly villagers, where the proceedings concluded with a dinner, at which Mr. Wickham presided, and where many of the other directors were present, including Mr. Houldsworth, late chairman of the Board, Col. Pollard and Dr. Buchanan. It was stated at the last half-yearly meeting of the company that the capital paid up of the West Riding represented by these works (about half) would bear dividend from the 1st of the present month at the same rate as the Lancashire and Yorkshire.

TIMBER PRESERVING—PAYNE'S PATENT.—Invitations have been lately sent by the proprietors at their works at Westminster, for an inspection of the application of the patent, by submitting two skeleton houses, or models, to the effects produced by ignition—in the one case, the skeleton being composed of deal, or other ordinary timber; and the other, the timber employed having been subjected to the saturating process, as described. It is set forward that wood is, by its application, rendered not only perfectly insensible to the dry-rot, but that it is rendered uninflammable; and, further, that it becomes senoned in a comparatively short space of time. As the matter is highly interesting to those of our readers concerned in the application of timber in bridges, &c., we give the following details from the Mining Journal;—The combinations are, of themselves, in

soluble, and the expense is trifling-about 4d. per foot (or say 16s. per load), under ordinary circumstances. In the early experiments, conducted with the view of a complete change in the nature and properties of wood, it was found that, by the simple act of impregnating the material with solutions of metallic oxides, alkalis and earths in various proportions, using, as a means of facilitating that operation, exhaustion and pressure, satisfactory results had been obtained; but still an objection, and that of an important character, presented itself, viz., that of the liability to which such solutions were subject by disunion. In order, then, to overcome the drawback we find that in the case before us—that of Payne's we find that in the case before us—that of rayle's process—such is effected by the introduction of a second solution—by a repetition, whereby a new indissoluble substance, "absolutely imperishable," is introduced. Wood subjected to this process will be, it is said, proof against wet or dry rot, and the metallic properties acquired will effectually resist the attacks of insects. A still greater improvement may, however, be said to have been made in the process that of rendering timber uninflammable. Having said thus much as to the peculiar objects of the patent, the writer continues:—On visiting the yard and wharf, we found two houses, or skeletons, pre-pared for firing on the strand or beach; the one and other was, so far as the eye would allow, about 4 ft. or 4 ft. 6 in. square, and about 6 ft. to the apex of the roof: two baskets, or in weight 7 lb., of shavings were introduced into each of the skeleton houses, and ignited. In the one case, with the unprepared timber wood (it being, except the rafters, about 1-in. or g-in. plank), a few minutes perfectly satisfied those present that the effect had been fully produced; for floor, indeed in a short time the walls, the roof, the all was consumed, except the more solid timber of which the frame consisted. In the other instance, the shavings were consumed, and the smoke emitted through the apertures by the doors and windows, but no evidence afforded of its action on the wood, if we may except a certain exudation, which we take to be turpentine, but which, it is somewhat curious to find, does not ignite. It being thus rendered clear that the quantum of fuel placed in the two several buildings or models had so determined an opposite effect ings of models had so determined an opposite elect in the one case the building being demolished by the action of fire, while in the other no effect was produced beyond the emission of smokecharge was placed in the prepared establishment, and it burnt out without in any way affecting the mate rial. As an evidence of this, we brought away with us a plank, which will at once illustrate the effect produced. Some other instances were presented of the polish which woods saturated on this principle acquire; and evidence was afforded of the difference presented by wood which had undergone the process. These patents, obtained on the inventions of Mr. Payne, have lately been invested in a company, who appear determined that their value shall not only be more known, but their qualities tried by experiments. Our readers may form some idea of the durability of timber impregnated with metallic oxides, from the fact that the only portion of the Royal George, the Edgar, and the piles of Old London Bridge, found to be sound, were those impregnated with oxide of iron and a calcareous matter, imbibed from the sea water, whilst the remaining portions were either destroyed or rotted. The process under notice consists in introducing, by means of exhaustion and pressure, such metallic and earthy solutions as shall, by single and double decomposition, form new and insoluble salts throughout the interstices of the wood. For ordinary purposes, in the first instance a solution of sulphate of iron, and then one of muriate of lime, are injected these, by double decomposition, form sulphate of lime (insoluble) and muriate of iron. When the timber is required uninflammable, alum, as well as iron, is injected. When timber is required proof against ravages of worms, sulphuret of barytes and sulphate of iron, or of alumina—both or either of the latter are injected. The advantages consist in preserving timber from wet or dry rot, ravages of worms and combustion; it also renders wood as much seasoned in as many months as under ordinary circumstances it would be in as many years. Another valuable property attending this process, is that of rendering the inferior, and consequently cheap, colonial and homegrowth wood equal in strength and durability to the best description; and not only is beech rendered equal to the oak, but made to partake of metallic qualities, even more lasting than the timber which at present exceeds it threefold in price. Wood so prepared, even deal, becomes susceptible of the finest polish; and moreover, by the use of certain solutions, can be stained throughout with every variety of colour. The process has been in operation five years.

# Progress of Works.

CHESTER AND HOLYHEAD. - The Liverpool Albion thus notices the result of an inspection of the stupendous iron tubes which are in course of construction a short distance above the Menai Suspension Bridge, for the purpose of forming a passage. Immense piers of granite are being erected on each side of the strait, and a massive pier of the same material is rising in the middle of the stream. On these solid masses of masonry the vast hollow metallic ways will rest. The most cursory inspection of the tubes will at once convince the spectator of their prodigious strength, and show them to be capable of sustaining a far greater weight than any that is likely to pass across them. They are not either cylindrical or elliptical, as many have supposed, but rectangular, their form being what is not uncommonly called an oblong square, about 30 ft. high and 15 ft. wide. They are constructed of thick plates of iron, firmly riveted together, and strengthened by girders at the top and bottom. The chief element of strength, however, is in the bed or base of the work, which is composed of plates of iron set edgewise, so as to form cells, the under and upper surfaces being firmly riveted to the intermediate and perpendicular plates, the whole, with the walls of the tube, and its covering, firmly girded and bound together with the utmost skill and ingenuity, forming a compact piece of workmanship, the strength of which is beyond conception. These enormous tubes are built on stages erected over the stream. The spectator wonders, when contemplating them, how fabrics of such stupendous weight, amount ing to many thousands of tons, are to be removed and lifted into the position which they are destined to They will be floated to the piers on ponoccupy. toons, and lifted to their final resting place by hydraulic pressure. On the same day, says the same journalist, we passed in the evening train of the Holyhead through the tube at Conway. As the train was proceeding at considerable speed the passage was effected almost in an instant. We were not conscious of any vibration, or indeed of any sensation different from that experienced in passing through an ordinary tunnel. The Holyhead will be a great favourite with tourists and those who travel for pleasure. The prospects from the carriages on both sides are exceedingly interesting. The line runs principally along the sea coast and the banks of the Pee, so that throughout nearly the whole journey from Bangor to Chester we have on one side a fine view of the Irish Sea, and on the other a perpetually changing succession of mountain scenery.

EDINBURGH AND NORTHERN.—The remaining por-

tion of the main line to Perth, says the Scottish Railway Gazette, yet unopened is all but completed; so that it may be safely calculated that in the course of the next fortnight the entire route from Edinburgh to Perth will be opened for public traffic. As soon as that event takes place, one great division of the line may be considered as perfected, and justice will be done to the through, as well as the local, traffic. The conveyance in minerals is confidently expected to form a very large source of revenue, though this is not exactly the season when coal is in much request. However, the passenger traffic, as far as the state of business will allow, promises to be largely augmented by the general migration to the North during the summer and autumn. At the Dundec end of the line, although the communication extends to Ferry-Porton-Craig, we regret to say that the accommodation for goods is at present necessarily very imperiect, carts being employed from that point to Newport, whence the goods are transhipped to Dundee. Arrangements, however, are in progress to obviate these disadvantages, and to facilitate the communication with the lines on the other side of the Tay.

GENERAL TERMINUS AND GLASGOW HARBOUR.—
This is a mineral line, 21 miles in extent, and is to form a general terminus for all the lines from the south conveying minerals to Glasgow harbour. Already, says the Scottish Guardian, rails have been laid from a point under the Glasgow and Paisley joint line at Shiel's Bridge down to the Broomielaw: and the works onwards to the Cavalry Barracks, where the line joins the Caledonian, are pretty far advanced. A branch line in a south-west direction, a little to the west of the Caledonian, is also in course of formation. This branch joins the main line of the Glasgow, Barrhead and Neilston Direct, at the farm of Titwood, and is about a quarter of a mile in length. The General Terminus line passes under the Paisley Canal, by means of a bridge, 50 yards in length, over which the canal is carried by an aqueduct. Emerging from under the canal, the line passes by an arch under the rails of the Glasgow and Paisley joint line. Near the Paisley-road another branch is to be formed to join the Glasgow and Ayr and Glasgow and Greenock lines. When the present longations for

Greenock lines. When the present operations for Digitized by

widening and extending the harbour are completed the facilities for carrying on traffic will be very great. It is stated that the General Terminus Company have acquired a large extent of ground in the immediate neighbourhood of the harbour, upon which they neignbourhood of the narbour, upon which they intend to erect extensive stores for goods. During the mania, shares in this company sold at about 25t. prem.; at present they are quoted at 4t. prem. The entire line could be very speedily finished, but as it will not be available till the harbour is completed at the terminus, it is unnecessary to hurry on the works.

GLASGOW, BARRHEAD AND NEILSTON DIRECT.—This GLASGOW, BARRHEAD AND NELLSTON DIRECT.—This line is completed between Glasgow and Barrhead, and will be opened for traffic in a few days. The length of the main line is 9 miles, branches, 1½. The line is leased to the Caledonian at 8 per cent. on a capital of 150,000L, and 6 per cent. on the new stock of 150,000l. It intersects extensive coal-fields, and communicates with both the Clydesdale Junction and the General Terminus. A temporary station is nearly completed at Gushet-fauld. The Caledonian joins the Barrhead at, and continues the line from, this point, through Gorbals, and across the river to Dunlopstreet

GREAT SOUTHERN AND WESTERN (IRELAND) .- We were compelled from want of space last week to set aside the notice of the works which accompanied our account of the opening of this very important line. The works certainly promise well for the general arrangement of the company. The first sod was turned by the Duke of Leinster, in August 1844, and the line recognition. the line was opened for traffic from Dublin to Carlow a distance of 553 miles) on the 4th of August 1846. The course is well chosen, the cuttings trifling, and the gradients, except for the first few miles out of Dublin, easy and gradual. The first object of attention is the metropolitan station, a commanding structure, in course of erection at the extreme west structure, in course of crection at the extreme west of the city, close to Kingsbridge, occupying the space between the military road near Steevens's Hospital, on the southern bank of the river Liffey. The site is well chosen for the purposes of traffic, and is that originally suggested by Mr. Nimmo for the terminus of the Great Central. The area occupied by the terminus exceeds that of any other in the empire. The great iron roofing of the passengers shed covers an extent of more than 2½ English acres. It combines lightness and beauty in a singular degree, and is supported by seventy-two pillars of cast iron. There are six lines of rails. The platform is 600 ft. in length, 20 ft. broad, and flagged the entire length, with a carriage drive on the arrival side. The principal front, now in course of completion, consists of a central pile, two stories high, the lower rusticated, from which spring Corinthian pillars supporting the cornice which surmounts the upper story; at each side are wings the height of the basement story, from which rise clock towers. The whole is faced with mountain granite, and constitutes one of the finest modern buildings of Dublin. The apartments are numerous, spacious and commodious. The stations numerous, spacious and commodious. throughout the entire distance are elegant and picturesque structures, contrasting strongly with the wild nature of the surrounding scenery; and the observer cannot fail to be struck with the extremely durable character of their construction, being built with the dark quarry stone peculiar to the district and faced with granite. The internal arrangements are complete, whilst the extensive sheds, warehouses, granaries and workshops are adapted for the accommodation of the large amount of traffic expected on the completion of the line to Cork. The same degree of strength, elegance, and durability characterizes the various bridges and viaducts. Of the permanent way, with the 5 ft. 3 in. gauge, and rails weighing 90 lbs. to the yard, the motion at the highest speed (which at times was at the rate of upwards of 40 miles per hour), was extremely smooth and steady plan has been introduced by Sir John Macneill, by which the joints are bolted to the sleepers and intermediate fastenings with spikes, which gives great additional solidity to the work. The average length of bearing is 2 ft. 6 in. One feature in which this line has the advantage over many lines in England is, that there are no public level crossings; the few which exist being merely occupation roads. For many miles together the line runs upon the level, the surface of the country being skimmed over, and we are given to understand the cost of construction is only about 12,000l. per mile. The works on this line towards Cork are proceeding with great rapidity, but they are stated to be of a much heavier description than on the portion of the line which has now been under our notice. The completion of the entire line is, however, confidently anticipated within twelve months from the present time. about, it is said, to establish depots of coal along the

line, for sale at a moderate rate.

undertaking is nearly complete. tractors, engineers and several of their friends had an excursion over the line, preparatory to its open-ing, from its junction with the Lancashire and Yorkshire, at the Dewsbury end, to the terminus at Leeds on the 6th. The train started from the Dewsbury station about 9 30 a.m. and consisted of four of the company's new carriages and a powerful engine, driven by Mr. Mole. After proceeding to Leeds, says the Leeds Intelligencer, where some more of the directhe Lecus Intelligencer, where some more of the arrectors joined the company, the train was again set in motion, and at every viaduct, bridge and other work of importance, the directors and engineers alighted to inspect them. The whole is in such a forward state, and has been erected so substantially, after the chaste designs furnished, that in a fortnight it is expected to be opened for passenger traffic. Early in the morning, Mr. Renton, the resident engineer on the Morley contract, had passed through the tunnel with a pilot engine to ascertain the safety of the permanent way. On their arrival at Dewsbury, the company sat down to a cold collation. After justice had been done to the viands, Mr. Gott proposed the healths of the resident engineers, in conjunction with those of the contractors, and said that it gave him much pleasure in being enabled to state that all the parties had discharged their duties in a manner which reflected the highest credit upon them, and although in a few years the public would look without interest on the numerous magnificent works connected with this railway, yet at present, and during the period of their progress, they exhibited remarkable instances of skill and ingenuity. The line, for its length, is one of the most remarkable of any in the kingdom-passing through a densely populated district, and, from the nature of the country, presenting district, and, from the nature of the country, presenting so many, and such different picturesque views;—the vale of Calder; the hills and ruins of Honley; the grounds around Kirkstall; the towns of Dewsbury, Batley, Morley, Churwell, and a view of Leeds, unequalled on any of the other lines approaching that important town. The nature of the works also— extensive viaducts, lofty and wide spreading bridges, tremendous embankments, deep cuttings through very fine fields of stone, and last, not least, the great tunnel at Morley—all of which reflect, as the chair-

man remarked in his speech, credit upon those who have designed and those who have executed the work.

LONDON AND SOUTH-WESTERN (Waterloo Bridge Extension).—The farce of the Government Inspection was played out last week. Early on the 7th the bridge over the Westminster-road was again tested by the Government officer. To ascertain with positive certainty the effect of a quick passage of bodies across the immense span, a number of strong rods, secured on a firm foundation, were placed upright in the centre of the arch, and midway between the centre and sides, and touching the iron girders. In each of these rods was a groove with a sliding staff, which, on the passing of the trains indi-cated to a hair's breadth the deflexion of each girder; and in no one instance was it more than three-six teenths of an inch. Three of the heaviest engines of the company were selected to make the experiments, and these were closely coupled and otherwise worked in such a manner as under no ordinary circumstances would occur. The four distinct lines of rail were afterwards run over repeatedly with the different engines, and in every instance the points or switches, which are mostly self-acting, proved to be in admirable working order. Capt. Simmons, the Government Inspector, expressed his satisfaction at the result of the experiments, and gave the necessary certificate for opening the new line.—July 13.—Precisely at 4 30 a.m. the first mail and passenger train from Southampton arrived at the Waterloo-road terminus. The engine employed for the purpose was the 'Horton, No. 80, and conveyed seven carriages, with about forty passengers. The workmen on this part were forty passengers. The workmen on this part were employed on Sunday throughout the day, and like-wise the whole of that and the next night; still, liowever, they had not been able to form a clear entrance for passengers into Waterloo-road on leaving the train, and they were obliged to make the best of their way between the masons and labourers to the road. Considerable work remains to be done before the booking offices, &c. will be complete. On inspecting a portion of this line, the appearance of the cast-iron skew bridges over five of the principal thoroughfares is worthy of notice. The one over the Westminsterroad is remarkably so, from the great span (90 ft.) and peculiarly light appearance; this, with four of the others, were cast at the works of Mr. J. Haywood, of Derby, and they are magnificent specimens

this extension are the shareholders of Waterloo Bridge. So great was the increase of the carriage traffic over that bridge, that an extra money-taker was obliged to be put on duty. The carriage-toll is now taken at both ends of the bridge. We recommend a further improvement, by taking toll from foot-passengers on both sides of the bridge.

MANCHESTER AND BIRMINGHAM. The Works are now being vigorously pushed on at Manchester, to connect the line with the Liverpool and Manchester, which will be throughout formed on arches. The men are engaged extra time, working from an early hour till dusk, so the completion of this important connexion may be expected during the present year. The crossings of the principal streets in Manchester will be by cast-iron arches and not, as originally intended, by a flat or horizontal way. That part of the line which passes through what is known as Little Ireland now presents an extraordinary bustle, from the great number of men engaged as excavators, bricklayers, masons, &c. On this part of the line, which joins Oxford-road, there will be a magnificent and very commodious station, worthy in all respects the London and North-Western, with which company the Manchester and Birmingham is amalgamated. This undertaking, when completed, will open a new thoroughfare into the West Riding, via Saddleworth and Huddersfield, thus establishing a competition with the Lancashire and Yorkshire.

NORTH BRITISH.—The temporary bridge over the Tweed is expected to be completed early next month, when the coal and coke trade, which is calculated to be very great, will probably commence. The Ha-wick branch will be ready for the Government Inspector to a point near Galashiels in a short time, and will be open for passenger traffic before the end of this month.

NOTTINGHAM AND MANSFIELD (Shoulder of Mutton Tunnel).-The finishing of this tunnel (which is about 200 yards long, and has occupied somewhere about twelve months in construction) was celebrated on the 1st inst., when a number of workmen employed in Ist inst, when a number of workmen employed in the excavation, with Mr. Cockayne, the sub-contractor, sat down to a substantial supper, at the Blue Bell Inn, Annesley Woodhouse: Mr. Cornish, another of the sub-contractors on the above line, and some of his men, were also included in the party. After doing ample justice to the provisions, says the Notts Herald, which were profuse and excellent, the remainder of the evening was festively spent by the navvies. The summit of the hill through which this tunnel passes, commands. was restrictly spent by the navies. The summt of the hill, through which this tunnel passes, commands, both east and west, a beautiful and almost boundless prospect, and is said to have been a most favourite haunt of Robin Hood. A public house has recently been erected, contiguous to the tunnel, for the convenience of visitors. It is pleasing to add, that, through the attention, unceasing care and supervision of Mr. Cockayne, not only has the sacrifice of life been prevented, but not a limb has been broken, and scarcely an accident occurred during the whole of the twelve months that the works have been in operation.

OXFORD, WORCESTER AND WOLVERHAMPTON. opening of the branch line from Worcester to Abbott's Wood Junction with the Gloucester and Birmingham line is announced by the Worcester Herald. At a meeting of the parties interested the utmost good feeling was exhibited on both sides, and a warm desire evinced to have the branch opened at the earliest moment consistent with safety. The directors have considered the terms of agreement. completed, the branch will be worked by the Midland. The works on the main line are making steady progress, though they have been unavoidably retarded. The cuttings and levellings between Worcester and Stourbridge are completed, with the exception of a short space near Oldswinford; and the Dudley tunnel is approaching completion. It is now partially open from end to end, and the masons are engaged in facing with stone the opening near the gas works. The bridge over the line at the Dudley station, which partially fell down some time ago, has been repaired,

partially fell down some time ago, has been repaired, and is now nearly completed.

South Devox.—The telegraph has been completed during the week to Laira, and is now, we believe, in full operation. The Dainton engine-house and engines, says the Western Luminary, are in a state of great forwardness; the engines, which are being built by Bolton & Watt, are of immense size, and are constructed differently from those at the and are constructed differently from those at the other stations; they will work horizontally, instead of perpendicularly; the exhausting cylinders are 7 ft. 8 in. in diameter. About five miles of pipe are laid between Newton and Totnes. The Totnes engines are not so forward; in fact, it is said the engine at wen under our notice. The completion of the entire is, however, confidently anticipated within twelve on this from the present time. The company are out, it is said, to establish depots of coal along the ie, for sale at a moderate rate.

LEEDS, DEWSBURY AND MANCHESTER.—This great lengths of coal along the diate neighbourhood during the first day was surprising. Amongst the parties likely to be benefited by

to take it down to Totnes, and vice versa. The Torquay branch is not being pushed. It was expected that this capital feeder for the trunk line would have been faithed are this

been finished ere this.

SHREWSBURY AND BIRMINGHAM. — The following is a summary derived from the Worcestershire Chron icle, on the present state of the works :- Considering their heaviness, and the wetness of the spring, the progress is astonishing. Embankments are rapidly advancing in all directions—viaducts and bridges are springing up-huge hills are fast disappearing under the constant action of thousands of mattocks and picks-and even the solid rocks are crumbling before the insidious borer and the more active agency of gunpowder. Starting from Shrewsbury (where a large station is being erected for all the lines terminating in that ancient town), a work of considerable magnitude immediately presents itself in the shape of a fine bridge across the Severn. To this succeeds an embankment about a quarter of a mile in length, ranging from 12 ft. to 20 ft. high. Then comes heavy cutting for more than a mile (probably averaging 18 ft. in depth), extending to the Severn at Preston Boats, where another noble bridge is in course of erection. Next, a heavy embankment, approaching a mile in length, towards the end of which the line crosses the Shrewsbury Canal; and it is crossed a second time, about a mile and a half further, at Upton Magna, a moderate cutting extending from one part of the canal to the other. Irom one part of the canal to the other. Another mile of embankment brings us to the bridge over which the line crosses the river Tern, just beyond which is a short but rather heavy cutting. Hence to Wellington (a distance of about 5 miles) the works, with the exception of a somewhat heavy cutting at Admaston, are tolerably easy. The line runs through Wellington in a cutting 14 ft. or 15 ft. below the main street, close to the walls of the old church; and soon after the town is passed the cutting becomes nearly 40 ft. deep. About a quarter of a mile beyond King-street, near the Windmill, the line of the Shropshire Union branches off in this cutting towards Newport, Gnosall and Stafford. Between Wellington and Shiffnal the works are very heavy, consequent upon the irregular nature of the surface of this mineral district; but at every point where difficulties present themselves, great activity is being displayed. At Oaken Gates (which is studded with immense pit mounds of many years' growth), in addition to heavy cutting there has been incurred the additional labour of diverting the Shropshire Canal, to facilitate the formation of a tunnel. This tunnel (the only one, we believe, upon the main line) runs through a bed of hard rock, and the men are rapidly excavating it from shafts which have been sunk on either side of the Holyhead turnpike-road. At Prior's Lee (about a mile beyond Oaken Gates) is another very heavy cutting; and about a mile fur-ther on, one still heavier, the largest, we should think, on any part of the line. A vast number of men have been at work on this hill for fourteen or fifteen months, and there is yet a good deal of stuff to be removed. Now there is one of the largest embankments, commencing about three-quarters of a mile from Shiffnal, extending about half a mile beyond the town, and occasionally reaching more than 40 ft. in height! The town itself will be crossed upon a noble viaduct about a furlong in extent, the arches of which are from 30 ft. to 40 ft. in height; and the main street will be spanned by a magnificent cast-iron arch, not on the girder principle, but similar to the cast-iron bridges thrown across the Thames. For a mile or two beyond this great embankment the works are of an easy character, but they become very severe as the line approaches Tong and Neachwhere some natural ravines present themselves, calling for a viaduct, heavy embankments, and, as a matter of course, equally heavy cuttings to supply the earth required for the embankments. From this point, passing the pleasant village of Albrighton (which lies about a quarter of a mile from the line), the works are of the ordinary character until we approach the boundary between the counties of Salop and Stafford, when there occurs another heavy cut-This is succeeded by a long low embankment, and nothing peculiar presents itself until within two or three miles of Wolverhampton, when another heavy cutting is seen, followed by an equally heavy embankment. In the middle of this embankment is embankment the Staffordshire and Worcestershire Canal, which is crossed by three towering arches. From the eastern end of this embankment to the Birmingham Canal the works are exceedingly heavy. At the canal commences a large and handsome viaduct, more than 200 yards long, and between 50 ft. and 60 ft. high. The viaduct passed, we come to another short but high embankment; then a small cutting brings us to the road leading from Wolverhampton to Stafford, which has been turned out of its course to allow of

its being lowered, preparatory to the completion of a bridge of the skew kind, upon which the line will run. Between this point and the place where the Wolverhampton station will be erected, but comparatively little has yet been done: but we imagine that the works will not be heavy, and, consequently, their non-commencement will not retard the opening of the line, which, we suppose, from what was said at the meeting, will be in less than twelve months. At most of the points, hosts of labourers are concentrated, and in some cases the works are carried on by day and night. At one point the contractors have a locomotive engine, and we hear that there will be one or two more on other parts as soon as they can be used efficiently, so that everything may be done to open the railway as soon as possible. The viaducts and bridges, we believe, without a single exception, are faced with the Staffordshire blue brick, presenting an appearance of neatness and stability. The materials and workmanship are of the very best kind, and everything (not excluding the permanent way, some miles of which are already laid) gives promise of great durability.

STIBLING AND DUNFERMLINE.—The works, accord-

ing to the Scottish Railway Gazette, have of late made great progress. With the exception of a very small cutting, the line, from Lord Elgin's private railway to Comrie Den, has been completed, and the rails laid, and there is no doubt that this portion of the line will be open for traffic by the beginning of October. At Comrie Den, the piers of the viaduct of eight arches have been completed, and the arches ready to be sprung. Between this point and Alloa great advances have been made, and the line is in many places completed, so that, before many months are over, the whole will be ready. The shareholders may rejoice on the near approach of the opening of the line; and as the Edinburgh and Glasgow are bound to pay 4 per cent. on the expense and half profits, which may be considered worth at the least 1 per cent. more, besides maintaining and working the line, the shareholders are guaranteed in a good interest for their money for thirty-five years to come. The contractors have been regularly paid, and there are ample funds to complete the line, and it only rests with the shareholders themselves to meet the calls promptly when made.

WEYMOUTH.—The Poole Herald reports that the idea of forming a branch line from Moreton, as proposed some time since, is now abandoned, and the original intention will be carried into effect of laying an extra rail on the Dorsetshire and Weymouth line, so as to make that portion available for both the carriages of the broad gauge of the Great Western and the narrow gauge of the Southampton and Dorchester. The works are now proceeding with earnestness between Poole and Dorchester: the number of hands is much increased; and at the expiration of twelve months, or a little more, the opening of this communication between the two towns will probably take place. That heavy undertaking, the Ridgeway tunnel, is fast approaching completion.

# Accidents.

London and North-Western.—July 7.—A passenger train was just coming in at the junction of the Trent Valley with the main line, about a mile from the Rugby station, when it came in contact with a goods train standing on the London and North-Western. Happily the engine-driver saw the impending danger in sufficient time to enable him to shut off the steam and reverse the engine, so that only a slight collision took place, and the passengers escaped without injury.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.—
July 4.—Near the Guide Bridge station, a short
tunnel has for some time been in an imperfect state.
The men had entirely removed the arch, and had
completed a bridge in its stead, which had been open
for traffic for several weeks. About ten or fifteen
men were engaged in removing the fallen materials,
when a portion of the wall or abutment which supported the arch gave way and came in with a tremendous crash, and unfortunately buried three of the
men beheath the ruins, who were killed on the spot.

## Law Entelligence.

July 11.—In the Lord Charcellor's Court, in re Mott v. the Bluckeall, this appeal motion, to vary an order of Vice-Chancellor Wigram, was opened by counsel. The plaintiff had an agreement from Mr. Baker for the lease of two fields near Bow-road, on which he built some houses. He was, under the agreement, to have a way from the fields to the said road. Baker afterwards sold the fields to the defendants, who were constructing works which would pre-

clude the plaintiff from the right of way. Mott therefore filed his bill for an injunction. The Vice-Chancellor, being of opinion that the plaintiff should first establish his alleged right by an action, made an order accordingly.—Counsel argued that the form of action directed would not effect the purposes of the parties.—The Lord Chancellor was of opinion that the Vice-Chancellor was right in directing an action at law, but his Lordship varied the form of action, the company to be at liberty in the meantime to go on with their works, but so as not to stop up the way claimed.

July 8.— In the Vice-Chancellon's Court, in the well-known case of Elliott v. the South Deron, the defendants, by the direction of the Surveyor General, had carried their line over Union-street, Plymouth, by a bridge 18 ft. high, and to do this had been obliged to deviate more than 5 ft. from the level of their datum line. The plaintiff, as owner of land over which the railway passed, obtained an injunction restraining the defendants from continuing their works upon the proposed level. On the motion to dissolve the injunction, the defendants alleged that the lands occupied by the plaintiff were not town lands, and that therefore the deviation was legal under the Companies' Clauses Consolidation Act. The Court directed an issue to try the question, and the jury found that the lands were not "town lands"; but a new trial had been ordered, on the ground of misdirection.—His Honour refused to dissolve the injunction, especially as the company declined undertaking to remove their works if they should prove illegal.—The motion was directed to stand over till another day, when the Court would finally dispose of the question of costs.

the question of costs.

Entry on Land, &c.—In the same Court, in re Stamps v. the Birmingham, Wolverhampton and Stour Valley, his Honour gave judgment upon two motions in this cause, one by the plaintiff for a sequestration against the company for an alleged breach of an injunction by which they were restrained from prosecuting their works, so as to interfere with or damage the plaintiff's premises, the other by the company for a dissolution of the injunction. The defendants, it may be recollected, for the purpose of carrying their line by means of a tunnel under the plaintiff's house, at Birmingham, at first served him with a notice requiring so much only of the subsoil of his land as would be necessary for the bore of the his find as would be necessary for the bore of the tunnel. In proceeding with their works, however, they were under the necessity of removing some rocks by blasting. The plaintiff, apprehending damage to the foundation of his house, then obtained the injunction. The defendants, as they were unable to proceed with their work without the blasting, served the plaintiff with notice that they required the surface of the land, as well as the subsoil, and proceeded, under the Lands' Clauses Consolidation Act, to have the land valued by a surveyor. The valuation having been made, they paid the amount into court, and then made the present application to dissolve the injunction. The plaintiff opposed this application, on the ground that the formalities required by the Lands Clauses Consolidation Act had not been strictly observed, and objected, first, that a second notice was not warranted by the Act, and, secondly, that the valuation was informal, as the written estimate made by the surveyor had not been signed till after the amount had been paid by the defendants into court.—His Honour said he had expressed an opinion in favour of the company's right to give a second notice where more land was requisite to enable them to carry on their works, but reserved his opinion on the other question. In delivering his final judgment upon the motions, he said it had been objected that the proceedings on which the defendants founded their claim to have the injunction dissolved had taken place after their answer in the suit had been filed. This was a technical objection, which was of itself fatal to the defendants' motion. With regard to the motion for a sequestration, it appeared that certain acts which were the subject of the injunction had been resumed by a workman of the defendants, under the impression that they had bought all the plaintiff sinterest in the land. The evidence, however, failed to show that this had been done with the anica to show that this had been done with the sanction of the company; and it did not appear that any of the witnesses had apprehended danger from those acts, or that any application in consequence thereof had been made to the company to desist. Both motions must therefore be dismissed with costs.

LIABILITY OF PROVISIONAL COMMITTEEMEN.—July 8.—In the COURT OF QUEEN'S BENCH, in re Jones and another v. Lawrence, the plaintiffs were stationers and printers, carrying on their business at Eastcheap, and the defendant is an extensive builder at Hoxton. This action was brought against the defendant, as one of the provisional committee of the Reading and Reigate, to recover 1501, the amount of the

plaintiffs' bill, for various articles supplied. The defendant had been appointed one of the managing committee on the 19th of September 1845, and had frequently acted upon the committee. It was proved that he had written the words "Good-William Lawrence" opposite the names of certain persons who had applied for shares, and done other acts in virtue of his office. The defendant had seen the plaintiffs' bill, and inquired what his proportion would be, as he was ready to give a cheque for his share.—Lord Denman said that whether a provisional or managing committeeman, the defendant had evidently taken an active part in the concerns of the company, and had offered to pay his share of the plaintiffs' demands. It was astonishing, under such circumstances, that a jury should be asked whether there was a doubt of his liability. The jury at once found for the plaintiffs for 1081. 17s. 6d., being the amount due from the 19th of September 1845, as agreed on by counsel, Lord Denman intimating that he considered the defendant liable for the whole amount of the plaintiffs' demand.

Purchase of Premises .- July 12 .- In the same Court, in re the Queen v. the South-Western, Lord Denman delivered the judgment in this case, which was a mandamus to issue a precept for a jury to assess compensation for a starch manufactory and premises, and for damage thereby done, which premises the defendants had given notice to take on the 14th of May 1846, and had given notice of their demanding to purchase a part. The return sated that the undertaking was highly beneficial to the public, and that the whole would cost half a million of money or more; that the prosecutors held under a lease, which would expire on the 24th of June 1847, and that the prosecutors at the time of the notice had no greater estate than that of a tenancy from year to year, and that part of the premises were in a dilapidated condition, and not necessary for carrying on the manufactory. The return also stated that on the 14th of May 1846, the defendants gave notice of their purchasing the property under the following description :- "So much of the ground, stable, coach-house, factory and shed as are coloured red in the plan annexed." The prosecutors, however, preferred their claim not for that part, but for the whole within the boundary line, and required 8,000l. for the purchase money, and 35,000l. for the damage, otherwise that a jury should be summoned under the Lands Clauses Consolidation Act to assess what amount of compensation they were entitled to; thereupon the defendants abandoned their intention of purchasing, not saying how or when, or that they gave the prosecutors notice of the abandonment; the prosecutors remained in peaceable possession for the remainder of their term, whereby the defendants contended the Court ought not to issue this warrant. To the averment that the prosecutors had no greater interest than that of a tenancy from year to year, they pleaded a general denial in the same terms, and raised a demurrer, in which the prosecutors joined, and in their turn demurred to the plea as raising an immaterial issue. The writ was also objected to as bad because it claimed an assessment for the value of the entire premises, when the company required a part only; such a claim not being supported by the Lands Clauses Consolidation Act, the compulsory powers of which (sections 18 and 92) were confined to the property described in the claim.—The Court thought the demand of the prosecutors could not be sustained; that the writ could not go for part (as had been contended by the prosecutors' counsel as a last resort), for that no claim had been made for part, and that therefore the judgment must be for the defendants.

A BANKRUPT COMPANY .- July 10 .- In the COURT of Common Pleas, in re Graham v. Cox, this was an action by the assignces in bankruptcy of the Tring, Reading and Basingstoke, to recover from the defendants, stockbrokers, the sum of 300l., alleged to have been lent them by the company. The declaration been lent them by the company. The declaration contained a count for money had and received. The defendants pleaded never indebted, and traversed the allegations of the first count that the company had ever existed, and that the plaintiffs were its assignces. A certificate of the provisional registration of the company, dated the 16th of August 1845, was put in, as also a certified copy of the prospectus of the scheme. From that document it appeared that the line of railway intended to be constructed was to be 41 miles in length, and the capital was to amount to 700,000l., divided into 14,000 shares.—The Hon. H. Fitzhardinge Berkeley was called, and stated that he had been a director, and at one time the chairman; that offices had been taken, and upwards of 6,000 shares had been allotted; and that deposits had been paid upon them. Having a large sum in their hands, the directors passed a resolution in October 1845 for the investment of all surplus above 5,000%. The fol-

lowing cheque, addressed to the Commercial Bank, was proved by this witness:—"October 28, 1845.— Tring, Reading and Basingstoke.—Pay investment or bearer 300l." This was signed by the witness, two other directors, and the secretary of the company. The Commercial Bank was the banking-house where the company kept their accounts, and the defendants were their brokers. Witness conceived the above cheque had been drawn in pursuance of the resolution already mentioned. He was aware that the cheque had been drawn in favour of the defendants, and he did not know that any debt was due from them to the company at the time the cheque was given to them. He conceived they were to pay 5 per cent. for the money. The bill for enabling the company to execute its project passed the second reading in the House of Commons without opposition, but the share-holders, availing themselves of Mr. Duncombe's resolution, stopped its further progress, and compelled the company to avail themselves of the provisions of Lord Dalhousie's Act (9 & 10 Vict. c. 28, 'An Act for the Dissolution of certain Railway Companies).—Cross-examined: The bill before Parliament was merely for the construction of a line about 15 miles in length, and not 41 miles, as contemplated in the prospectus.—Evidence was then given to show that cheque had been paid into Messrs. Williams's bank, and carried by them to the credit of the defendants, and that the company had an account with the Commercial Bank.—The fiat in bankruptcy against the company, dated the 2nd of October 1846, was put in; and to prove that a meeting of share holders had been duly convened, and had duly passed a resolution for dissolving the company, and also that the company had been adjudicated bankrupt, and that the plaintiffs had been appointed assignees, two Gazettes were, after some opposition on the part of the defendants, admitted in evidence. The sub-scribers' agreement was likewise proved.—Counsel for the defence contended that there was no evidence to go to the jury. First, with respect to the issue upon never indebted, two questions arose:—1. Whether there was any evidence of a loan to the defendants. On this point it was observed the mere production of the cheque for 300l. was not evidence that that sum had been lent to the defendants. If it were to be held evidence, every cheque paid to a trades man for goods supplied might afterwards be treated as evidence that the drawer had lent the tradesman the money. Mr. Berkeley's evidence was too vague and uncertain to establish that the sum mentioned in the cheque had been lent. The company had only been provisionally registered, and had no power to sue as a company. The plaintiffs could not sue for this loan in their character of assignees of a provisionally registered company, and referred to and observed upon the 1st and 8th sections of the 7 & 8 Vict. c. 111. He then contended that the company could not be considered even as provisionally regis tered when the fiat issued for the certificate of registration, given in evidence, bore date upwards of a year before the date of the fiat. These observations applied also as to the second issue, and as to the third issue he denied that, inasmuch as notice had been given to dispute the facts, the Gazettes were evidence for the purpose for which they had been admitted.— Mr. Justice Williams, without hearing a reply, held that there was no sufficient evidence of a loan by the company to the defendants, such as the company could have sued for, and directed the jury to find for the defendant on all the issues.—Counsel for the plaintiff elected to be nonsuited.

Wire Fencing.—The following case is especially of such general interest that we insert the entire proceedings:—July 1.—At the Court House, Skipton, in re Dale v. the North-Western, this was an action brought before the Bench to try the sufficiency of the galwanized wire fence which is being erected on the sides of the North-Western, through its entire length. The complainant was Mr. Dale, of Cleatop, near Giggleswick.—D. A. Dale, being sworn, said that the fence was post and wire, the small posts being about 3 yards from each other, and the main ones about 148 yards. The horizontal wires were about 8 in apart, and are very elastic. Has had sheep gone through many times, and cows over. The top wire is sufficiently elastic to touch the second wire. If a sheep got in between two wires they would spring until they were 23 in apart. Gave notice on the 4th of July last of an injury to a cow, which had got entangled in the wires by one hind leg, and was laid up two months in consequence. Estimated the damage at 2l. Got no compensation. Considers that no fence will do but post and wood rails, of 4 ft. 6 in. high.—Mr. R. Ingleby, of Lawkland Green, said that the line went through his land. Has seen four cows leap over, and has had bullocks fast in the wires. It took six or seven men to relieve them, and they

were considerably injured. Had a sheep killed, and two others got fast by the horns. break, they only bend. Considers it a foolish fence. -A. Holmes saw a cow in the wire fence near Clapham, and some men had to cut the wires in order to get her out. She was much cut by the wires .- T. Parker, of Luneside, near Austwick, was the owner of the cow mentioned by the last witness. The farrier who attended her estimated the damages at 31. In March last he had another cow entangled. Many of his cattle have received injury. The fence is not a sufficient one, as cattle will go through and over.—
T. Kendal had a horse fast in the wires a year ago. He got paid for the injury it received. It is no sort of a fence.—M. Hutchinson had had a cow fast by the fore leg. A fat heifer was found one morning, which appeared to have been on the top of the fence all night. Had a Scot fast last week. Cattle ran against the fence, and that showed they could not see it. Mr. J. Procter, of Long Preston, said that one of his cows got fast in the fence last week, and another cow leaped over it .- Mr. R. Waddilove, of Rilston, said that he knew the wire fence. It is not a sufficient fence. This is a grazing county, and when cattle see others across the railway, they go through. It is a danger-ous fence.—Mr. J. N. Coulthurst, of Gargrave, said that one of his sheep had been killed in the wires, and another had died after being injured with them. Has seen some sheep fast, and others go over. Has seen lambs and Scotch sheep go through. His greyhounds ran through, and were cut to pieces. Has a similar fence on his own grounds, and dare not put horses there.—Mr. R. Heelis, agent to the Earl of Thanet, said that his attention had been directed to this fence on the Earl's property. Considers it no fence, and has given notice to the company that it is insufficient .- Mr. J. Watson, the engineer to the company, said that during the construction of railway works it was not possible to make a sufficient fence.—Mr. F. Morton, the patentee of the galvanized wire fence, stated that he was employed to put it up on this railway. He also put it up on the Chester and Holyhead, Liverpool and Ormskirk, Caledonian, Ayrshire, Chester and Shrewsbury lines, &c. On the Southampton and Dorset line a sample fence was set up, and the company of Woods and Forests reported it. Has had complaints of the fence in fox-hunting districts. 400 landholders in Scotland have this fence. -The magistrates eventually decided that it was not a sufficient fence, and the order of the Court was, that a wood fence of 4 ft. 6 in. high, and five bars, 6 in. apart, be erected by the company, and completed within a month. This decision will be seriously felt by the company, as it is understood they have provided materials for fencing the whole of their line. It is estimated that their loss in consequence will not be less than 8,000l. or 10,000l.

RAILWAY ROBBERIES.—In the NEW COURT, T. Barnard, stated to be a solicitor, who was last session indicted for a number of robberies at the GREAT WESTERN, and who pleaded guilty to the charges, was brought up to receive judgment.—The Common Sergeant ordered him to be imprisoned and kept to hard

labour for twelve months.

At the MARYLEBONE POLICE COURT, Mr. Justin, accompanied by the superintendent of the GREAT WESTERN, applied, under the 27th section of the Police Act, that a summons might issue against a pawnbroker, carrying on business in Holborn, calling upon him to show cause why he refused to deliver up a number of silver spoons and other articles of plate, which had been stolen from the terminus of the railway by a solicitor, who had been tried and convicted of other felonies at the last sessions of the Central Criminal Court.—The application was immediately granted.

Last week, at the SOUTHWARK POLICE COURT, J. Newbold, a merchant's clerk, was charged with obstructing the Greenwich line, and breaking a window in one of the carriages.—The Magistrate, after hearing all the circumstances, inflicted a penalty of 20s. on him, and 2s. 6d. costs for witness s attendance.—The prisoner paid the fine, but complained of being locked up all night.

# Parliamentary Proceedings.

LORDS

July 13.—Liverpool, Manchester and Newcastle-upon-Tyne Junction.—On the bringing up of the report of the Standing Orders Committee upon this bill, which was to the effect "That a shareholder had not a locus standi against the bill,"—The Marquis of Londonnermy remarked that it was contrary to law, equity and justice to exclude a shareholder from being heard, and that the sooner the Standing Orders of their lordships were altered the better. The noble marquis gave notice that he would, pursuant to the suggestion of the noble-lord opposite (Lord Beau-

Digitized by GOOGLE

mont), move, on the 17th, for a select committee to inquire into the conduct of the provisional committee and directors of this company; and to inquire into and report whether there has not been an imposition on Parliament in the original subscription contract of the company, with power to send for persons and papers; and that the further progress of the bill to dissolve the company be suspended till the report of the said committee.

#### COMMITTEES ON OPPOSED BILLS. LORDS. GROUP 3.

EXETER, YEOVIL AND DORCHESTER (with a branch to Devizes).—Decision.—July 10.—Preamble proved. London, Brighton and South Coast (Amendment).—Promoters' Case.—July 12.—Counsel stated

objects sought by the bill.

#### GROUP 4.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE (Humber Ferries Improvement) .- Evidence .- July 8, 10, 11.

-Witnesses appeared for the Hull corporation.

Decision.—July 12.—Preamble partly proved, with rejection of the tubular part of the pier.

LEEDS AND THIRSK AND CLARENCE AND HARTLE-POOL (Amalgamation).—Decision.—July 12.—Preamble not proved.

LONDON, BRIGHTON AND SOUTH COAST (Power to Purchase Steamboats, &c.).—Promoters' Case.—July 13.—Counsel declared the objects desired.

Opponents' Case .- Evidence .- July 14 .- Numerous

shareholders were heard.

Decision.—July 14.—The committee expunged the steamboat clause, but passed the bill as to improvements at New Cross and for additional capital.

#### GROUP 5.

CHESTER AND HOLYHEAD (Power to Purchase Steamboats).—Promoters' Case.—July 10.—Counsel declared that the object of the bill was to enable the company to become proprietors of a fleet of steam-boats, to ply between Holyhead and Kingstown.

Opponents Case.—Evidence.—July 10, 11.—Counsel and witnesses for the Steam Shipping Association and various other steamboat companies.

Decision .- July 12 .- Preamble proved.

GLASGOW, PAISLEY AND AVR (Amendment of Acts, &c.).—Decision.—July 12.—Preamble proved.

LONDON AND BLACKWALL (Branches to East and West India Docks).—Decision.—July 12.—Preamble proved.

LONDON AND SOUTH-WESTERN (Amendment of Acts, &c.).—Promoters' Cuse.—July 14.— Counsel stated objects of the bill.

Evidence.-July 14.-Mr. Tite in support.

GROUP 6.

GLASGOW, PAISLEY AND AYR (Revision of Maximum Tolls).—Promoters' Case,—July 11.—Counsel declared objects of the bill.

#### COMMONS. GROUP 1.

EXETER AND EXMOUTH. - Decision. - July 13. -Preamble proved.

Lancashire and Yorkshire (Amendment of Acts, regulation of capital.)—Decision.—July 13.—Preamble proved.

# UNOPPOSED.

LORDS. WHITEHAVEN AND FURNESS JUNCTION (Extension). Decision .- July 13 .- Preamble proved.

# Manen Market.

## PRICES OF BRITISH STOCKS.

Mon. Tues. Wed. Thurs. Fri. 

* For account, July 14.

London Stock Exchange, July 14 .- The satisfac tory state of the public funds naturally gives a cheerful tone to the share-market, and prices have been

well sustained during the week.

Liverpool, July 13.—Although there is no improvement as to the extent of business, prices are better, and close firm at the quotations.

Sublow, Brothers. Manchester, July 13.—Since my last communication shares have experienced some re-action in prices—a consequence generally looked for after a sudden rise our market, on the whole, has a somewhat her appearance. SAM. GRINDROD.

healthier appearance. SAM. GRINDROD.

Birmingham, July 13.—This market has materially improved during the week: to-day a good amount of business has been done, with but little stock of any kind offering at present quotations. North Staffords W. BANKS.

closed at 2s dis. W. Banks.

York, July 13.—We again notice the paucity of railway stock in the market. The prices of stock are very well supported. The agricultural show in York during this week, has entirely engaged public attention. This city and the country are much indebted to Mr. Hudson, M.P., for his interest in procuring the show to be held this year in York, and for the unprecedented railway facilities afforded by him to the public. The results of the great Agricultural Society and of railway transit mark the characteristics of this country, which are well described by the words "national stability." Grayston & Earle.

Hull, July 13 .- The share-market is still languid and depressed, and the operations quite insignificant.

Newcastle-upon-Tyne, July 13 .- Our share-market has been more active this week, and business has not been—as for some time previously—confined exclusively to stock for investing purposes. sively to stock for investing purposes. The demand has continued to-day, and the market closes with a firmer appearance. W. FORDYCE.

Glasgow, July 13.-We have had a steady market for the last eight days, and latterly prices have gradually advanced. The demand, however, is principally for the lighter class of shares, old stocks not having yet participated in the improvement. The following are to-day's latest sales:—Dundee and Perth, 253; Dunblane, Doune and Callander, 37s. dis.; Eastern Counties, 6 per cents, 14s. pm.; Edin. burgh and Perth, 24s. dis.; Dumfries and Carlisle, 63; Ayr, 72; ditto halves, No. 1, 6l. 19s. dis.; ditto, No. 2, 7½ dis.; Great Northern, 8½ dis.; North British thirds, 36s. dis.; Scottish Central, 24½.

BUCHANAN, ÄITKEN & Co.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

## MEETINGS.

Birmingham and Oxford, July 18. London. Caledonian,—July 29. Edinburgh. Liverpool, Manchester and Newcastle-on-Tyre.—July 20.

## CONTRACTS.

GREAT NORTHERN.-Works between Copenhagen Fields and King's Cross, July 24.
LONDON, BRIGHTON AND SOUTH COAST.—Erection of warehouses at Bricklayers' Arms Station, July 21.

IRON TRADE.— Glasgow, July 7.— There is not much doing as to buying pig iron for consumption. Some purchasers have been compelled to buy in at 45s. 6d. and 46s., cash.—July 11.—There has been more excitement and animation in our pig iron market during the week than for some time past. The de-mand has been chiefly speculative, and a good deal of iron has changed hands. Yesterday and to-day the market is quieter, and closes, sellers at 46s, for mixed numbers or all No. 1, and 45s, 6d. for No. 3; buyers of No. 1 at 45s, 6d., and of No. 3 at 45s, nett cash.

Wolverhampton, July 12.—This was the third of

the quarterly meetings of the ironmasters of South Staffordshire and Shropshire, for the current year. The attendance was not so numerous as usual, and comparatively only a small amount of business was

Digitized by GOOGLE

doing; so far, however, as could be ascertained, the trade is already partially recovering from the depression which has hung over it during the last two months. The orders for manufactured iron, says the correspondent of the Daily News, are steady, and, in the absence of the most untoward occurrences, iron will not be lower for some time to come. There are considerable orders in some of the houses for rails for America, which will help to sustain present quotations. That the general state of the trade is far worse than it was at the corresponding period of last year cannot be denied; at the same time it is, perhaps, upon the whole, in a more healthy condition than it was immediately after the panic set in last October. The present prices are—bars, 6l. 10s.; hoops, 7l.; and sheets, 8l.; these being understood as referring only to the best material. As a proof that the iron-masters themselves have confidence enough that prices will not further recede, I may cite a fact, on the authority of one of the largest and most respectable makers, that an order for so large a quantity as 1,000 tons was refused a day or two since at the current price, on the consideration of the delivery being extended over a period of nine months. For pigs the figures may be quoted at 3l. to 3l. 10s.; for these the price will probably be maintained. Stocks are now not large, and I was informed to-day an order was accepted for 300 tons, at 2s. 6d. better than would have been given a fortnight since. The foregoing in all probability presents as accurate a sketch of the actual state of the trade as can be presented. Opinions are generally tolerably diversified amongst those engaged in this trade; but as these facts are gleaned from the heads of the largest houses, they will most likely be found to be correct, and so far to be relied upon in preference to those circulars which fly about, issued for the most part by interested parties, and presenting but an imperfect reflex of the condition of the trade. The men are tolerably quiet, and where reductions in wages have been attempted they have been submitted to.

Birmingham, July 13.—At the usual quarterly meeting of the ironmasters held here to-day, there was a large attendance of those interested in the trade, and some rather considerable orders were given by the manufacturers. The entire state of the trade has been so fully reported above, that little additional information can be offered. Prices are undoubtedly firmer than might be expected, even at existing quotations; and as orders are creeping in gradually, it is probable that they will rather look upward than experience another retrograde movement. For pigs the demand is increasing, especially for the better qualities.

# Joint-Stock Companies' Gazette.

As the half-yearly meetings of the various jointstock companies are now taking place, we have been advised to extend our field of observation to the proceedings of the chief of these corporations, as being intimately connected with our own specialty in their monetary and speculative character, as well as interesting to a large class of our readers. We hope to be able to give, from time to time, not only a succinct account of the facts as they arise, but also their bearing and tendency, and to publish original information as well as remarks on the general management of those concerns.

Joint Stock Banks.

A meeting of proprietors in the COLONIAL BANK was held on Tuesday last, to receive the Directors' Report, which was very unfavourable; showing the losses to be about 100,000l. At the meeting, several proprietors expressed their opinions that it would be better to wind up the affairs of the bank, and dissolve it but, after a little discussion, it was resolved that the matter he left for the decision of the directors. the matter be left for the decision of the directors, in whom they had every confidence. The Report was adopted, and thanks voted to the directors, &c.

No dividend was of course declared.
On Wednesday the shareholders in the UNION BANK OF LONDON also met at the offices of the bank, to receive the Report of the Directors. A dividend to receive the Report of the Directors. A dividend was declared at the rate of 6 per cent. per annum. The business for the half-year had been very satisfactory. The balance-sheet showed the profits to be 39,2831., after defraying expenses and allowing for bad and doubtful debts. The total of the dividend would be 25,3741., leaving a balance of 13,9091.; of that sum, 9,1001. had been carried to the reserved fund, which now amounts to 50,0001., and, after paying parliamentary expenses, 5001., there remained a nett sum of 4,3001. The Report stated the amount paid on current accounts, in the shape of interest,

was 30.000l. Thanks were tendered to the officers of the bank for their able conduct of the affairs of the

The shareholders of the LONDON JOINT STOCK Bank met at their offices on Thursday, to receive the twenty-second half-yearly Report of the Direc-The balance-sheet laid before the meeting showed the nett profit for the half-year to be 33,490l. A dividend was declared at the rate of 6 per cent. per annum, after payment of which there would remain a balance of 15,490t, to be carried to the next half-year's account. The shareholders tendered their thanks to the directors and officers for their good management.

Insurance Companies.

The eighth annual meeting of the proprietors of the UNITED KINGDOM LIFE OFFICE was held on the 6th inst. The Report showed a steady and good increase of business, and the annual income of the company is 10,000%. more than it was in 1846.

Docks and Canals.

The half-yearly meeting of the St. KATHARINE Dock Company was held on Tuesday, to receive the account of the directors, when a dividend was de-

account of the directors, when a dividend was de-clared at the rate of 2 per cent. for the half-year. The proprietors of the LONDON DOCK COMPANY met on the 5th inst. The business of the docks continued to increase, the ships' tonnage being 4,123 tons above that of the corresponding half-year of 1847. The amount of expenditure was 107,5187, and, compared with that of the same period of 1847, showed a dewith that of the same period of 1847, showed a decrease of 596l. The business and revenues of the company, from the statement prepared for the sharecompany, showed a very marked increase. The dividend declared was at the rate of 5 per cent. per annum, after paying which there remained in favour of the company the sum of 133,505l., including charges due on warehoused goods.

Mines.

The half-yearly meeting of the ROYAL SANTIAGO COMPANY took place on Wednesday. The accounts prepared for the shareholders showed the expenses for the half-year to be 300*l*, above the receipts. This state of affairs was accounted for by the low price of copper at the present time. The directors, having a reserve of 40,000*l..*, resolved to pay back to the shareholders the sum of 25s. a share, after paying which there would still remain 30,000l. to carry on the affairs of the company. At the meeting Baron de Goldsmid mentioned that efforts were being made by those interested in the copper trade, to suppress the foreign companies as far as practicable, and over-tures had been made to him in reference to their concern, but he would not entertain the proposal as he had great confidence in its future success.

TO CORRESPONDENTS.

A SUBSCRIBER will be answered next week, E. J., Blackwall, had better go over there, and see the resident engineer.

D. M., Wolverhampton, is thanked for his communication. RECRIVED: A CONSTANT READER, Bath.—E. F. J.—S. P., Fenchurch-street.—A. M.—g.—D.

# Railway Chronicle.

LONDON, SATURDAY, JULY 15.

The vigorous opposition of the shareholders of the London, Brighton and South Coast to the purchase of the steamboats, has succeeded in defeating the directors in their project. The shareholders generally will no doubt he glad of the result,-for were there sufficient traffic to warrant the enterprize it would soon be taken up by parties who would work it to the best advantage, both for themselves and the

The BIRMINGHAM AND OXFORD shareholders again adjourned their special meeting for a week.

At the annual meeting of the CITY OF To-RONTO AND LAKE HURON, the shareholders ratified the proposal of the directors to lie by for better times, and to delay operations until the line through Montreal is settled upon. This precaution is wise, as in the event of the capital being procured, no legal resistance would be made against the completion of the other necessary steps for establishing the line.

The following is the business of the COMMIT-TEES carried on during the past week. In the Lords—preambles proved:

Chester and Holyhead (Power to Purchase Steamboats).

Exeter, Yeovil and Dorchester (with a branch to

Devizes).
Glasgow, Paisley and Ayr (Amendment of Acts, &c.).
London and Blackwall (Branches to East and West India Docks).

London, Brighton and South Coast (Improvements at New Cross, additional capital, and power to purchase steamboats), except as to steamboat purchase.

Manchester, Sheffield and Lincolnshire (Humber

Ferries Improvement), except as to tubular part of the pier.

Whitehaven and Furness Junction (Extension).

Not proved: Leeds and Thirsk and Clarence and Hartlepool (Amalgamation).

In the Commons—preambles proved: Exeter and Exmouth.

Lancashire and Yorkshire (Amendment of Acts, regulation of capital).

One of the hardest-fought battles of the present parliamentary session has been the contest of the Manchester, Sheffield and Lincolnshire with the Hull Corporation and Docks, for the right of erecting a station and pier on the Hull side of the Humber. The Lords' Committee, after several days' sitting, decided this question on Wednesday, by giving the railway the privilege of making a station and a pier at Hull; but at the same time they curtailed the length of the pier, by forbidding its extension beyond a certain usual boundary, beyond which no other piers in Hull extended. The practical effect of this decision is to prevent the landing of the railway passengers at extreme low water, except under circumstances of great inconvenience, which the railway company proposed to remedy; -- for their pier consisted of two parts; one, a fixed pier, reaching low-water mark, the other a floating tube, which extended some two hundred feet into the river, and was supported on an open timber-work. The Hull Corporation and Docks viewed with jealousy and indignation the advent to their shores of a stranger, and especially of that stranger, who seemed, though it may turn out differently, to be brewing a formidable opposition in the new docks at Great Grimsby. They pleaded their vested rights in their own bad piers; they alleged that the new railway pier was needless; and, if needful, badly placed; and, lastly, that the tubular part of the pier would damage most seriously, if not stop altogether, the navigation of the river. The Lords' Committee, by their decision, however, have given the railway company a triumph, though not a complete triumph. It was essential to the railway interests to have a station and a pier of their own: these they have obtained, and we have no doubt that the extended pier will be erected at some future time.

From our official returns it appears that the amount of traffic for the last week, on 3,916 miles of railway, was 205,620%, thus accounted for:—111,824% for the conveyance of passengers only, 45,068/. for the carriage of goods, and a remainder of 48,7281. for passengers and goods together, not respectively apportioned; being an increase of 16,468l. over the corresponding week of last year, when the mileage was 3,070. The average earnings per mile were 53l., whilst in 1847 they were 61l.

## LORD MORPETH AND THE WINDSOR RAILWAYS.

The proceedings of the Woods and Forests in the matter of the railway approaches to Windsor, called forth some unusually strong expressions on the third reading of the Great Western bill in the Commons; and we appre-

Digitized by GOGIC

that measure comes before the upper house. They have, indeed, been of a most extraordinary character. We shall sum up, as briefly as may be, the essential facts of the case:-passing over many details that have nothing to do with the main points on which Lord Morpeth's conduct must be judged.

In 1847, the resistance that had been made in former years on the part of the Crown to the entrance of any railway whatever into Windsor, had been already given up; and various plans lay on the table for discussion. The practical choice, however, which the present chief Commissioner found himself required to make was between the two rival schemes then promoted by the Great Western and the South-Western respectively. The latter, after various discussions, was cordially adopted by the noble lord, on certain conditions-of which the two main points were, the placing of the Windsor terminus on the Buckinghamshire side of the Thames, from whence a carriage-road was to be made through the Park into Windsor; and the payment by the company of 60,000/., to be expended by the Crown in certain improve-ments of the royal property. These terms being agreed to by the promoters, their bill was supported in Parliament by Lord Morpeth; and, of course, owed its success to that support :- the obvious conclusion being, (inasmuch as a rival plan was then in the field,) that the arrangement would be virtually maintained by the Crown, which had received a large price for the grant of its patronage and had dictated the site of the proposed station. But this was not merely a legitimate inference, drawn both by Parliament and by the company who had agreed to pay 60,000l, for the sanction of the Woods and Forests. Lord Morpeth, in his evidence for the bill, expressly stated his approbation in the strongest terms; and spoke of the rival scheme in language that could only bear one construction. With respect to that scheme, he stated that as it had been a subject of negotiation with his predecessors in office, who had laid down certain directions for the bringing of any line into Windsor, he could not refuse his formal support to any bill in which those directions should be observed. This, however, was felt by every one at the time, and will be felt by any one who now reads the words of the evidence then taken, to mean, if it meant anything, that nothing beyond a formal consent, no other support of any kind, would be given to a scheme which could only be carried out to the disadvantage of that other, whose details the Woods and Forests had prescribed, from whose funds the Crown was to receive a large sum, and whose promotion, "with all its incidents, had the full consent of the Crown."

This was further demonstrated by a fact which has since been established on the testimony of Mr. Saunders, of the Great Western. He informed this year's committee that Lord Morpeth in 1847 was unable to consent to the agreement proposed on behalf of the Great Western scheme in that year, expressly on the ground of his arrangement with the London and South-Western.

Thus matters stood at the close of the session

In the present year, the very same plan for a Great Western branch is, however, brought forward, with the cordial support of Lord Morpeth; whose conduct herein may be appreciated by the following substantial facts. The scheme is meant to give the Great Western an access to Windsor that will deprive the South-Western station of its value; the site of the latter having been fixed by Lord Morpeth. The scheme is

hend will not pass without further notice when I out those same improvements towards which 60,000l. had previously been obtained from the rival project, about to be thus fatally injured. In the details of the Improvement Act, (which was most unaccountably suspended by Lord Morpeth last year,) there is no new feature to explain this new money arrangement; nor has anything whatever occurred, since 1847, to alter the character of the agreement with the South-Western Company, which in that year, we are told, prevented Lord Morpeth from supporting the competing scheme he has now espoused. These are the plain facts of the case; and the conclusion to be drawn from them alone would be that the Woods and Forests, having first got all they could from one party for Crown uses, on a certain understanding, in 1847, now sell to a rival project a support which is fatal to that understanding, for a further sum of money; -a transaction that might well deserve the strong language applied to it in the House of Commons.

We acquit Lord Morpeth, however, of any design to wrong the company he last year supported-and obtained for the Crown so large a sum by supporting. We believe the key to his conduct on this occasion has been the unstable desire to please all parties, which has made him surrender to a new and pressing petitioner the consent from which he was precluded by his engagements to another. But its effect on the latter is, unluckily, just the same as if it had been an act of the most studied deception, instead of a proceeding extorted from an amiable weakness. And as in the actual business of life, results. and not motives, can alone be regarded, we do not see how the plea of good intentions can be accepted in excuse of an act which could not have been more injurious in its effects had the object of Lord Morpeth been really to play at fast and loose with both parties, for the advantage of the Crown, leaving honour and justice aside, as things which should have no place in official transactions.

# THE EXPIRING COMMISSION.

When economy and retrenchment are so urgently called for in every branch of the public service, it seems wonderful that a Government professing to hold office on these principles should still cling to the preservation of such a body as the Railway Board, and omit to take advantage of the opportunity which has fairly offered of making a useful practical re-form. Sir Charles Wood, it might be supposed, is not so very full of money just now as to justify him in neglecting to economize an establishment which has been costing the country 12,000%. per annum. Something was said about the abandonment of salaries by the higher authorities of the Board; but why keep them on at all? The whole affair is such a mockery to the common-sense of the country, that it must ultimately be abandoned; and Ministers may perhaps find, when it is too late, that though they cannot save their subordinates, they may be swamped with them. My Lord Lansdowne has declared that they have accumulated a large mass of useful evidence on various statistical points. Granted; but at what cost, not merely to the country, but to every railway in the kingdom! We have seen an elephant employed in picking up sixpences, but the end seems sadly out of proportion to the means; and such have been the results of this Board's labours. Has one single decision been given bearing usefully upon the great questions of the day? Are not the gauges as far from a settlement as ever! On what grounds were the appointments made? We really are puzzled to find a reply. Mr. Labouchere at present seems to give the Crown a sum of 25,000l. for carrying to do the needful in the Commons, while my amine it minutely on his journey—which by

Lord Granville takes up the running in the Lords. Now, if the former can attend to the duties of both the Railway Board and the Board of Trade, he must either be a very clever man, or the amount of work is not sufficient to occupy the number of officials hitherto employed. We have certainly heard no complaints of arrears; and we suspect the public find railway matters go on just as well as when Mr. Strutt used to make long Reports and speeches, which, however strongly he might urge them by pen and tongue, were so surely reversed by the House of Commons. Lord Granville is, no doubt, a very estimable nobleman, but we must be permitted to question whether he is at all qualified by his previous habits to fill the position he now occupies. Lord Dalhousie was a man of talent and business habits, and his removal to India has, no doubt, been a great loss to the railways as well as the public; for notwithstanding what has been said and written to the contrary, we hold both interests to be identical. We might also, if it were worth while, inquire into the fitness of some other appointments; but we will not detain our readers. We had as soon see a man with a prefix to his name employed as any other, if his talents justify the appointment; but we have no notion of submitting to the jobbery of putting a man into a lucrative sinecure because he happens to be a lord or an honourable. The only men whose previous education has in some measure fitted them for their duties at this office, are the members selected from the corps of Royal Engineers-a body who deservedly rank highly for their scientific attainments. We much doubt, however, whether a military education is the most proper for the formation of habits suitable for the superintendence of such industrial undertakings as railways. Like the Centurion of old, our modern soldier says to this man, "Come, and he cometh; to another, go, and he goeth," without looking or caring for the attainment of the most work with the greatest economy of labour in both man and machine. He has never been troubled with the wages wanted for Saturday night, or had to calculate the productive industry of his workpeople. The system of rigid economy, however, is the only one under which railways can flourish; and when we have evidence given "irrespective of expense," we begin to doubt the solidity of the basis on which we are proceeding. Mr. Sidney, in his pamphlet on 'The Commercial Consequences of a Mixed Gauge,' puts these questions very plainly and very forcibly before his readers, and gives some curious statistics, which fully corroborate the doctrines we have always endeavoured to inculcate. Now, if this establishment, enormous and costly as it is, had added to the public safety one jot, or sared either life or limb, we should be the last to object to it; but this it has not done. Railways must, for their own interest, be anxious to avoid accidents. We will put the question merely on that, though we must presume better motives are also at work to prevent danger; but if an accident happens, no matter how, to what an extent is a company mulcted! The cessation of traffic, the damage to engines, carriages and permanent way, the compensation to those who are injured, run up to enormous amounts. Losses on these occasions are not reckoned by hundreds. but thousands of pounds. The late melancholy accident on the Great Western will, it is said cost that company upwards of 50,000l. Will any man of common sense say that such tre mendous responsibility is not a greater safe guard to the public than the inspection by some one of the Railway Board, who goes from one end of a new line to the other, professing to exthe way, he cannot do—and then signing a certificate to open it for traffic? We believe, however, that the knell of the Railway Board has been sounded; and after the demolishing exposibately made by Lord Redesdale, it seems an act of supercrogation to say more on the subject.

#### LONDON AND NORTH-WESTERN.

Mr. Creed has addressed an official reply to Mr. Slaughter, of the Weekly Share List, to certain statements and fallacies set forth respecting the London and North-Western, by a pamphleteer in his remarks, entitled, 'The Bubble of the Age.' The results presented by Mr. Creed, as gathered from the reports of the directors, furnish such a clear and concise statement of the present position of the company, that we present it to our readers in its entire state.

By the Act of Incorporation, of the 16th of July 1846, of the London and Birmingham, the Grand Junction and Manchester and Birmingham Companies, a capital was authorized of 17,242,3101. On the 7th of August following a further capital was created, under the powers of the Acts of that session, of 4,687,5001. And 168,380-251, shares (4,209,5001.) were issued to proprietors at par; making, therefore, the share capital created 21,929,8101. and the actual capital in shares issued, 21,017,6571. The shares were in every case issued at par; and whatever may have been the benefit resulting from their issue, the lond jide proprietors had it to themselves. The 964,7622 assigned to the Grand Junction Company, was an equivalent claimed by them, and admitted by the London and Birmingham Company, who were already annalgamated with the Manchester and Birmingham Company), and it received the sanction of Parliament. The assumed subsequent division of a "fictitions" capital of 1,205,0001, is a fable, founded no doubt on the issue to the proprietors at par of the 251, shares above referred to. The shares passed, as in former allotments, into the possession of the proprietary, who were to hold or sell them, as they thought it. The same observation applies with equal truth to the creation of the London and Birmingham Company.

Having given the share capital created and issued, I proceed to state the result of the capital cash account for the two years referred to.

£21,513,354

The expenditure on the main line for the two years has been, for new stations, workshops, side lines and land

side lines and land

For an increased locomotive and carrying stock.

For addition to the previously existing stock.

For additional houses and cottages, &c., yielding

For additional houses and cottages, &c., yielding rent  $\frac{40,567}{\pounds 2,051,931}$ 

No part of this expenditure can, by any forced construction, be a charge on the company's nett profits, the whole being a new and increased stock, for which powers were granted by Parliament.

powers were granted by Parliament.

The revenue account for the same period is as follows:—

| Dividends ordered :—Angust, 1846 | ... 607,389 | February, 1847 | ... 652,993 | Angust, 1847 | ... 652,993 | February, 1948 | ... 564,029 | ... 2,454,070 |

Balance of profit in hand, December 31, 1847 . £50,392
The author of the Appendix has given a statement of an "annuity, as it were," chargeable on the company's profits, amounting to . £513,618
But on his own principle of calculation it should be 420,855
YIZ. Dehenture debt. 43 per cent. on the average, instead of 5 per cent. . £333,726

Both average, instead of 5 per cent. £333,726
Difference. 57,080
Homes on the London and Birmingham 20t, shares (mt) 55,683

Error .. .. .. £92,763

I have already stated the principle on which interest is charged against revenue, and may be dispensed from further commenting on this head.

The author, by his loose remark on the subject of wages, only manifests his own ignorance of the strict system of check and audit which his exercised in the cash payments of this company. He has obviously included wages of men employed on branch lines in course of construction.

The payment of the North Union rent is connected

The payment of the North Union rent is connected with an account for sets-off, which delayed the appearance of the charge in the last half-year; but it will be charged against the current half-year.

The purchase of the Trent Valley comprises, as I have already explained in my former letter, the premium on the shares.

The payments on the Chester and Holyhead account have been made with the sanction of the proprietors and by the advice of the company's solicitors.

#### THE RAILWAY COMMISSION.

The Daily News, in noticing the debate on Mr. Bankes's motion last week for the aboition of the Railway Commission, thus speaks of the lame reply of Mr. Labouchere to the remarks of Mr. Gladstone on the utter uselessness of the Board:—

It was difficult for the minister to justify, in the presence of so many members acquainted with the business, the greater salaries of the Board on the score of the "superior competency" of its present members, and of the relative "incompetency of the persons by whom Lord Dalhousie was assisted in railway questions." And not less surprising was the confidence with which he added that there was "only one Report of that Commission—on the gauges, namely—that had been overturned by a decision of Parliament." Had this been the fact, which may be denied, one such exception—of the only railway question of any real moment that the Government been called upon to adjust, the only question which it is of paramount importance to the country at large to have wisely and promptly settled—an ex ception like this, we say, must determine the character of the office. Its failure in this important matter—which involves no less than the freedom or impediment of communication and traffic all over the island, and the economy or waste of millions, from the arrest or extension of a grave practical evil-this fatal instance of its usclessness is disposed of in a cool parenthesis! We have, indeed, got nothing settled by the Board on this vital matter; and what the Board has done in respect of it has been, so far, to prolong and increase the confusion already existing with regard to it. But we have in exchange, as Mr. Gladstone pithily observed, a copious volume full of words—a fine blue-book of report and appendix; and if the wisdom and force of the Board have not sufficed to adjust this imperial question, these qualities have been exerted with "tremendous energy" in reducing to 2d. per mile the charge for a quarter of a ton of luggage made to a single private of the sapper corps! Inggage hade to a single private of the sapper corps; In this "great controversy" the Commissioners were successful; and we must, it seems, accept their suc-cess in such petty cases as a full compensation for their default in all cases that really can deserve or demand official interference. The position taken by Lord John Russell, atter Mr. Gladstone had delivered his pungent critique on the Board and its doings, was much less assured than Mr. Labouchere's. The Prime Minister at least admits that the Commission too expensive; but then he entreats that Par liament will do nothing positive to reduce its ex-pense; begs that hon, members will but wait a little, and see what the committee on miscellaneous esti mates may perhaps bring forth; in short, he has too much good sense to attempt an absolute justification of an untenable mistake, but tries, nevertheless, to wheedle Parliament into allowing its continuance. One item of his expostulation—on the chapter of salaries, namely—must be plainly denounced. He argues that for such an office you must have good officers; and that, if these be not liberally paid, they will seek other employment. The answer, as far as the actual appointments are concerned, is this positive one: the Commissioners hitherto appointed, instead of being the fittest that could have been chosen for their particular duties, have for the most part, on the contrary, been about the least fit that could have been anywhere discovered. The only principles apparent in their choice were—first, that they should have had no previous "connexion," in other words, no acquaintance whatever with railway business; and next, that they should be recommended by members of the Government, or by friends of those members; and it must be added that, had the least desire existed to find really capable paragraph for the office, such might have been ble persons for the office, such might have been easily met with, and found willing to do efficient

service, for far less salaries than are now paid to men uninstructed in every essential part of the business they have to manage. The claim for admitting the increase of cost on the score of the personal aptitude of the Commissioners selected is, indeed, a strange one; a main and just cause of complaint against the Board being precisely that the principals chosen were some of them manifestly unfit, and all of them, without exception, wholly inexperienced. This exhibition in a country that boasts of its practical good sense was of itself unfortunate enough. But it is somewhat too hard to find the extra cost of the mistake now defended on the very point on which it was most gravely censurable. It is bad enough to have given John Bull such unsuitable ware; but too have given John Bull such unsuitable ware; but too bad to inform him that he must pay for it more than the fair price of a superior article.

## Gossip.

The expedition with which some of the Parliamentary Committees achieve their duties is creditable to themselves and instructive to other tribunals. That committee of the Lords which decided the fate of the HUMBER FERRIES bill has notably worked hard and well. On one of the days occupied by the evidence of the opposition from Hull, so numerous were the witnesses (testifying to the injury to the navigation of the Humber, which, they alleged, the project sought by the bill would inflict) that the chairman directed they should be sworn in a lump—half a dozen at a time-with a leader, who was to undergo the examination, whilst the others were simply to affirm, or otherwise, by a shake of the head, like Sheridan's four conspirators in the 'Critic,' who pray all at the same time, and to whom Mr. Puff suggests that, to heighten the solemnity of the devotion, they should all the off broading a convenient who sent the all go off kneeling. A correspondent, who saw the arrangement in the Lords committee, said that the vows of half-a-dozen specimens at a time of some of vovs of narra-accer specimens at a time of some of the bluff, hardy, bull-headed scamen from Hull posi-tively frightened him; he thought they were swearing in special constables again, and this, too, in the pre-cincts of the Parliament. Was there another Gny Faux to apprehend! Seriously speaking, the cir-cumstance in question shows the necessity of a reform in the way the Parliamentary agents do their work. A host of witnesses (say 100 in number) are brought up, at an expense frightful to think of; they are lodged, fed and paid during their visit to the metropolis; and at the examination it is found that one in a dozen will perfectly suffice. Their business done, and, indeed, when they return home, there comes the sad old English question-Who is to pay the piper?

The fine weather and the accommodations offered by the London and North-Western have increased the cheap trip trains considerably. On the 3rd, a special train of forty-four carriages, containing a great number of passengers, left the Sheffield station for Birmingham. Such was the interest excited in the town by this trip a few days before the time, that all the tickets were bought up, and an extra number of second-class had to be issued. The train left Sheffield at 5-30 a.m., and arrived at Birmingham at 11 a.m. The travellers then dispersed themselves, and spent the intervening hours which clapsed previous to the hour of return in visiting the numerous interesting sights which Birmingham presents. Amongst the passengers, says the Shefield Independent, were four members of the Rotherham Society of Change Ringers, and they instinctively bent their steps in the direction of St. Peter's church, and having "ascended the tower," together with six members of St. Martin's Society, Birmingham, they rung, "in a masterly style," a complete peal of Kent triple bob royal, comprising 5,200 changes, in three hours and thirty-three minutes. At 7 p.m. the train started home, and reached the Sheffield station in safety at 12-30 at night. The profits are to be devoted to the Widow and Orphans' fund of the Chesterfield district of Odd Fellows, M.U.

The CALEDONIAN has reduced its fares betwixt Edinburgh and Glasgow, (conuncuing on Monday last), to 4x first class, 3x, second class, and 2x, 6d. third class; and have appointed four trains to leave each end per diem, namely, at 8 a.m., 11 a.m., 4 15 p.m., and 8 30 p.m.—the late trains from Edinburgh being slightly different. The entire distance is to be performed in two hours. The EDINBURGH AND GLASGOW joined issue on the 12th by running the same number of trains at the same hours and fares, but performing the distance in half-an-hour less time. This keen competition arises, we hear, says the Scotsman, from the Caledonian believing that the Edinburgh and Glasgow have not faithfully adhered to an understanding come to between the two companies regarding the goods traffic.

The Scotch lines are wisely pursuing the system

Digitized by Google

of affording cheap trains for visitors to the English metropolis. The public, says the North British Railway Journal, are soon to have another opportunity of getting a cheap trip to London and back again for 37s. 6d. We believe the route will be from Glasgow to Edinburgh, and from thence by the North British, Newcastle and Berwick and Midland, through a very interesting country.

A deputation from the Londonderry and Coleraine and the Londonderry and Enniskillen, consisting of and the Londonderry and Emniskillen, consisting of Capt. Bateson, M.P., Sir R. Ferguson, M.P., Capt. Jones, M.P., Dr. J. Boyd, M.P., Mr. J. Clay, M.P., Mr. J. G. Frith, chairman of the companies, Mr. W. H. Thomas, Mr. T. Tyrrell, and Mr. F. H. Hemming, have had an interview with the Chancellor of the Exchequer, with a view of obtaining Government will in convenient out the Iriel lines.

aid in carrying out the Irish lines.

The directors of the Northern Counties Union, in consequence of the unfavourable decision by the parliamentary committee, have withdrawn the bill. In compliance with an express promise held out at the last meeting, the Board have determined to call a special general meeting of the proprietors immediately after the general half-yearly meeting (usually held in August) for the purpose of laying the pros-pects of the company in the fullest and most open manner before the proprietors, and of taking their opinion on the proper course to be pursued with regard to the further prosecution of the undertaking, and they announce their readiness to join in whatever course the shareholders, after mature consideration,

may decide upon.

The bill promoted by the Waterford, Wexford and Dublin has, as our readers may be aware, received the royal assent for a subscription of 224,000%; a guarantee of the Great Western of the payment, and 5 per cent. interest, is stated to exist. The shareholders of this and the South Wales, and landowners' petitions against the bill, and for an investigation into the conduct of the directors were re-heard before the Standing Orders Committee, but, owing to the defective steps of the South Wales dissentient shareholders, they were not allowed to be heard on the facts they brought forward. The committee of the House of Commons, presided

over by Sir Robert Peel, refused to sanction the guarantee of 5 per cent. by the Great Western to the shareholders of the South Wales. The guarantees to the South Wales, as to the Llynvi Valley, Vale of Neath and Waterford, Wexford and Dublin, are not yet perfected.

The directors of the LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE having withdrawn their opposition to the dissolution bill and adopted it, some shareholders and landholders sought to oppose the bill, and the Marquis of Londonderry, as our readers will recollect, came forward to support an inquiry into the affairs of the company, and gave notice in the House of Lords for a select committee, as in the London and York, and other cases. The petitioners were offered a reference to the committee on the bill, if the standing order committee should grant them a locus standi. The subject came under con-sideration on the 7th inst., when the locus standi was conceded to the landholders but refused to the shareholders, because they were considered to be held bound by the acts of their directors. It will be remembered that in the case of the 'Law Society it was held by the Lord Chancellor that a minority could not be bound by a majority in what affected the constitution of the company, but only in the management and what was incidental to the directors powers. The motion in the house will be renewed.

The Bank has renewed the loan for 100,000l, with the London and Brighton, for five years at 5 per cent.; after an inspection (highly favourable to the company) of the books. The SOUTH-WESTERN have also negotiated a loan of 70,000l. on the same terms with the Bank.

The North Devon Journal, states that all men employed on the Taw Vale were taken off on Thursday, the 29th ult., the day on which the intelligence arrived that the bill authorizing the South-Western company to lease the line had been thrown out by the Committee of the House of Commons.

On the authority of one of the clerks connected with the carrying department, says the Sheffield Independent, the number of waggons, &c. (exclusive, of course, of passenger carriages,) on the LONION AND NORTH-WESTERN exceeds, 11,500; which, if estimated at only 50%. cach, represent a capital of nearly 600,000l.! and to this number daily additions are

making.
The Shrewsbury and Hereford has been brought to a close by a return of 5s. a share to the scripholders, the payment of which has commenced.

Bullion brought in the Collingwood was forwarded to London, on the 11th, by special train, on the London, Brighton and South Coast line, of six trucks,

which left the Landport station at 10 30 a.m., and arrived at London Bridge at 2 p.m.; it consisted of 30 tons weight. The ship was not brought alongside the Camber until 5 a.m., and it was all conveyed by Messrs. Prescott & Son to the station and packed by 10 30 a.m. It was delivered at the Bank in the afternoon.

In our traffic returns, the large amount received in the corresponding week last year on the EASTERN COUNTIES is accounted for by the Queen's visit to Cambridge, which increased the receipts upwards of

The directors of the CALEDONIAN, in answer to a memorial presented to them to change the site of the Gretna station, so as to make it more convenient to the inhabitants of Springfield and the neighbourhood, have replied, "That they regret to be under the necessity of declining to accede to the prayer of the

At the Glasgow station of the Ayrshire a number of gentlemen met to test the efficiency of 'Montgomeric's Improved Railway Brake.' The brake was fitted to the axle of a goods truck, and was taken by one of the Ayr Company's engines from Johnstone station to Glasgow. During the journey various trials were made, by disconnecting the trucks from the engine when at various speeds. The average of the trials were, that at a speed of 39 miles an hour, the truck was disconnected from the engine and brought to a state of rest by the brake in 120 yards.

In returning thanks to the guests of the Great Southern and Western (L) for the compliment paid him in drinking his health, Sir J. Macneill said,—I am quite sure, from the feeling I have seen manifested to-day, that my works have been approved of; and that is the greatest gratification which could be conferred upon me. I am well aware that the works on which we are now engaged are calculated to be of great advantage to the people of Ireland—not merely from the employment afforded by their construction, but the ultimate results which they will certainly produce. At present we find that labourers, after being some weeks in our employment, become able to execute their work with greater rapidity and skill than they ever were before. We find in our contracts, all of which are publicly advertised, that men from England, Scotland and Ireland have put in tenders for our works. We have invariably given the contracts for the lowest tender; and I am proud to say that in nine cases out of ten, those tenders have been made by Irishmen. In fact Irish artisans -carpenters, smiths, and common labourers-have done their work in the most satisfactory and permanent manner. It has been my great object, in the construction of these works, to ensure in the first instance perfect safety—and I think I have managed to arrive at that end. The Dublin and Drogleda line has now been worked upwards of five years. It has conveyed a great number of passengers during that time, and I am happy to say not a single accident has occurred. The servants of that company are all Irishmen; in this company they are the same to a great extent, and since the opening of the railway we never had an accident. Our permanent way will not require any repairs for a long period; and owing to a very simple mechanical contrivance which I was fortunate enough to devise before I came to this country from England, we never had an engine, a carriage, or a truck off the line. The whole of the works, as I before remarked, are carried on by Irishmen, and, being an Irishman myself, I cannot help feeling proud of it. I trust that we shall be enabled to proceed to Cork without any accidents, and that the same friends whom we have now the pleasure of seeing will meet us there next year.

Herapath, in speaking minutely of the arrangewith the opening of the GREAT ments connected ments connected with the opening of the Great Southern and Western (Ireland), says, the Irish appear to be exceedingly fond of long carriages. One of the Dublin and Drogheda second class was measured at my request and found 32 ft. in the body. Such long carriages are easy and comfortable to the rider, but I am very doubtful of their running lightly over the road. While speaking of carriages, I may here notice a perfect monster railway carriage which I saw upon the Waterford and Limerick Railway. It carried four persons abreast, with room to walk from one end to the other up the middle for the tallest of Adam's descendants. Unprovided with instruments, I could not take its dimensions; I was told it would carry nearly 100 persons. It was on eight wheels, four at each end, fixed on a frame, turning on an axle or pivot, on the bogie principle. The bogie axle or pivot, on the bogic principle. The frames were restrained within limits by chains. wheels were small, I should judge scarcely 2 ft. It was a comfortable carriage, but more like a moving little town than a railway carriage; and at high speeds, it was the opinion of all who saw it, that it would be very likely to run off the road. It was a

true type of the American carriage, or rather an English built American one.

WATERFORD AND KILKENNY .- The Kilkenny Journal reports favourably of the late change of trains and fares on this line. A fourth train has been added to the list, which will enable parties going to Waterford to avail themselves of the route by water from Ross at a moderate expense, thereby diversifying the monotony of the journey, and taking advantage of the beautiful scenery, for which the entire country from Tomastown, by the banks of the Nore, through Innistogue, and by the Barrow and Suir to Waterford, are so celebrated. The journey to Ross will be accomplished by a well-appointed car, under the control of the company's manager; and preparations are making for another car, equally well appointed, to run between Tomastown and Waterford, thereby securing to the public the double mode of communication. In addition to the above, we are informed that arrangements are in progress for the speedy and certain transmission of heavy goods by this railway, of every description, to and from the seaports of Ross and Waterford, at charges considerably less than those incurred under the old regime, thereby benefiting the exporter, importer, and we trust we may add consumer also, of this locality.

As a commencement of the amicable mode of settling the question of the French railway expropriation with those companies that are not in a condition to proceed with their undertakings, that of the Lyon has, it is said, been arranged thus:—The Government takes the line at the rate of 10f, of the 5 per cent. rentes for every 250f. which the share-holders have actually paid. This is equivalent to giving 200f. in the Fives, taken at par, for every 250f. actually disbursed by the shareholders; that is to say, they will receive 4 per cent. for their money, if they are content to hold the stock given in exchange. The committee appointed to examine the accounts

of the DIEPPE AND FECAMP have given in their Report. In general it is said to be favourable to the directors, of whose integrity it speaks highly, and concludes by expressing approval of the accounts, into which some temporary irregularity had crept. Assurance was given that the working of the line would shortly commence.

The works of the Prussian Great Eastern have begun in the neighbourhood of Schneidemühl, and it is proposed to carry on the line as far as Posen. The works, however, are only slowly progressing.

On the 1st inst. all circulation of carriages through NAPLES was prohibited; the railways were also suspended, to prevent the arrival of disaffected persons from the country.

The heavy rains and floods are reported to have seriously damaged the line of the JAMAICA, near Cumberland Pen, between Kingston and Spanish Town. The trains were wholly unable to run from the 24th of May to the 4th of June. Upon the 5th of that month, however, they resumed running.

# Reports of Meetings.

BIRMINGHAM AND OXFORD JUNCTION.

July 11.—Adjourned Special Meeting, London.—Mr. W. Matthews in the chair.

There were only two shareholders present, one of whom moved and the other seconded that the meeting should adjourn till that day week, at the same hour and place.

The motion was put from the chair, and, of course, carried unanimously.

CITY OF TORONTO AND LAKE HURON

July 13.—Annual Meeting, London.—Mr. C. FRANKS in the chair.

The retiring directors (with the exception of Mr.

Easthope) and auditors having been re-elected,— The CHAIRMAN read the Report, which stated that since the last general meeting no circumstance had arisen to alter the opinion entertained by the directors that a line to connect the city of Toronto and Lake Ontario with Lake Huron would be profitable, but on various grounds it had not appeared to them advisable to take any immediate steps for its prosecution. In the first place the line, however important and advantageous in itself, would be much more so if prosecuted in connexion with a line of railways through British North America; and as the report upon the Government survey from Halifax to Quebec had not yet been made public, and the plan which might be adopted for completing the line through Montreal was still undetermined, the directors were of opinion that it would be advisable to delay any operations until those plans were better understood, moreover, the state of the money-market continued to be so unsatisfactory as by no means to justify the belief

Digitized by GOGIE

that a call upon the proprietors would be well received. For these reasons the directors had thought it inexpedient to incur expense in obtaining a power for the construction of the work in connexion with the com-pany formed for a similar object in Canada, feeling pany formed for a similar object in Canada, teering assured that when the English company were disposed to provide the capital for the work, no difficulty would exist in obtaining any necessary legal authority. The directors, under these circumstances, had restricted their expenses to the smallest possible amount, and by the exercise of the closest economy their outgoings in the last twelve months had only amounted to the sum of 751, 19s. 9d., leaving in their hands the sum of 256l. 15s. 3d., which would be sufficient to keep the undertaking on foot for some years, during which, if a favourable opportunity should present itself for proceeding in the object, they would, according to a pledge made on a former occasion, call the proprietors together and take their opinion upon the inexpediency of proceeding before any engagements were made for the purpose.

The Report was unanimously adopted.

#### RAILWAYS AND AGRICULTURE IN LINCOLNSHIRE. [Continued from p. 462.]

From Aylsby to Brocklesby, the seat of Lord Yar borough, is a pleasant ride of about four miles, part of the way until you reach the Wolds, through green lanes, zigzagging, until they fall into the highway in a manner more calculated to define the boundaries of properties than to afford a direct route. Accustomed now to the straight lines of railways we grow impatient over these picturesque but devious routes, when pressed for time and unable to indulge in the luxury of an ambling reverie. In spring time these lanes form delicious riding ground, all bordered with luxuriant springy turf, the banks beautifully covered with primrose and harebell. I passed from time to time spots where a few small freeholders lay among the great farms. In this part of England, at such a distance from markets, with less than fifty acres, they seldom succeed for more than one generation. The competition for land is keen, the expense of sending to market considerable, and manures expense. Law, the poisonous cancer of our English comforts and liberties, begins to cat up the small freeholder after the first bad harvest or improvident speculation has sent him to borrow money for a temopening for small farmers, by opening up markets easy of access, without the constant expense of a team. Already all our principal towns derive immense supplies of garden produce from distances up to fifty miles. It is worth notice that the land purchased by railway companies is transferred by a short form not permitted or not accustomed to be used by private individuals. A large fund of discontent would be removed-a large class interested in peace would be created if, to the advantages offered to the small cultivator by railways, our legislators would add a cheap mode of legal transfer conveyance, and a cheap mode of mortgage for land-in fact, a comprehensive system of legislation. At present, all landowners, great and small, are lawyer-ridden. The old man of the sea on Sinbad's shoulders was the exact representative of the conveyancer's position with regard to landowners. Some parties imagine that the laws of entail and primogeniture stand very much in the way of agricultural as well as social improvement. It may be so, although I do not believe it; but I am quite sure that any alteration of those laws, unaccompanied by measures for abolishing our present absurd, vexatious and costly system of title deeds, and for making land as easy of sale as stock or shares, would only tend to hand us over more hopelessly enslaved into the hands of the lawyers, and I am equally sure that an inexpensive safe system of registration and conveyance would render the sale of land so frequent, and the acquisition of it so easy, that the cry against our laws of limited entail would die away. This is a farmer's question, because to a tenant the incumbrances of the landlord are matters of importance, and to a freeholder a mortgage on reasonable terms is a proper resource for improve-ments. It is a question which will not be properly settled until it is taken up by the landed gentry, whose estates an improved system of conveyancing would raise in value from 10 to 15 per cent. The dilettanti lawyers who pretend to improve the law, unless pushed behind by the non-professional public, will never do anything. With the exception of the dots of small frecholders the farms all the way from Grimsby to Brocklesby are large, probably averaging above 400 acres. Brocklesby lies almost at the commencement of the Wolds, and contains within the demesne some of the highest land in the country, and slaughter a fat, short-winded stag. The house that the I not very high though. On my first day's journey (I (pleasantly situated on a sheet of water, in view of a have got back to the month of March) two matters I fertile campaign country, and well relieved by the in August.

pleased me much, of a different kind—the fine stock in the feeding yards and the pleasing bustle of numerous threshing machines at work. Among the stock were a good number of black polled Scotch. I did not notice any of the long-horned, deer-headed Highlander, so much in fashion with the London butchers for their fine-grained small-boned meat. For a provincial district there is no place where you get better meat than in Lincolnshire; whether this pre-emi-nence will continue when the butchers have the means of sending away the choicest joints of dead meat by rail is doubtful. The threshing machine at work is at all times a lively sight, especially in this county, where the labourers have a ruddy-brown, well-to-do appearance; and the substitution of the steam-engine for the perpetual round of the horses is not a bad change, if you only follow in your mind's eye the many useful operations the engine which drives the machine can perform. I rode into one farm-yard, where a six-horse power high-pressure engine was driving a threshing machine (the improved Scotch patent) gloriously along, worked by a shaft from the other side of the barn. One gang of men were hurrying in succession from a stack-yard close by, with a continuous succession of the un-threshed sheaves, a party of sunburnt comely dames and damsels were busy unloosening the sheaves and giving a perpetual feed to the maw of the machine, which roared and growled away like the monster of some magical romance or Christmas pantomime. On the other side, pike in hand (I mean the agricultural, not the Irish pike), half-a-dozen women and boys were busy piling up the straw; two sagacious hinds superintended the winnowing corn, while two more measured it off and put it up in sacks, for immediate exportation; a more busy scene it was impossible to imagine. The engine also put in motion the winnowing fan; and going round afterwards to the engine-house I found the boiler which made spare steam was steaming potatoes for the pigs. All this was exciting and bustling, and suggestive of much more pleasant ideas to the man who thinks than the wearisome, mindless and wasteful threshing of the wearisome, mindless and wasteful threshing of the flail. It is surprising to find our southern counties adhering to the flail system, which at greater cost produces an inferior article. If philanthropists, like the author of the 'Agricultural Tour in France,' who object to the employment of machinery lest labourers should be thrown out of employ, were to visit Lin-colnshire and Nottinghamshire, they would see that the money saved by the steam threshing machine is all expended on other labour of a more useful character. Two points require consideration before substituting steam for horse power—the amount of work required to be done and the price of coals. It will not do for a tenant farmer to put himself to the expense of working steam machinery unless he can ind work for its employment every week without making work on purpose. Amateur agriculturists may pump up water from wells where a hand pump would serve every turn, but it must never be forgotten in preparing plans of agricultural improvement, that farming, like cotton spinning, is a matter of profit and loss. The price of coals is another important consideration. Here they cost about 16s. a ton. Two kinds of coal come into competition in the district. The Yorkshire by the Ancholm inland navigation, and the Newcastle, which come seaward into Grimsby. To the Newcastle colliers the Grimsby district is indebted for a very superior kind of limestone for burning, brought from Dorset as a ballast cargo in replacement of coals, and sold in consequence at the very low price of 8s. 6d. a ton. It is expected that the opening throughout of the Sheffield and Lincolnshire line will bring additional coal pits into competition with the present trade, and lower the price from 2s. to 3s. a ton. The increased quantity will more than proportionably lower the price of slack for steam-engines. In ten years every arable farm of 500 acres in the district will have a small steam engine. My next point was Brocklesby. Brocklesby, the seat of the Yarborough family, stands on the north-eastern extremity of the Wolds, on the highest ground in the neighbourhood, surrounded by large plantations arranged in an indented or star-like shape. These plantations are intersected by broad green rides, so ingeniously planned, that it is said that within the circle of the domain 11 miles of riding over turf and through woodland may be obtained. Some of the avenues are almost entirely composed of lofty evergreens, affording in the midst of winter a pleasing shade and verdure. The gallops of hunting parties down these rides bring to mind the more stately and less exciting hunts in the woods of Chantilly and Fontainebleau, when Louis le Grand, in a full periwig and a phaeton drawn by four ponies, used to pursue

plantations) is a dull red-brick, capacious mansion. scarcely equal to the rank and position of the noble owner, built at an epoch when there was no choice between square brick and the bastard Italian style. An architectural genius of the Barry school would. doubtless, be able to transform Brocklesby into a picturesque and imposing something, in keeping with the surrounding pleasing and purely English scene. What has been done at Trentham, with much more unpromising materials, may suggest what might be done here. The house being under repair, I did not see the chief attraction—the picture gallery, but was well pleased to have an opportunity of looking over the celebrated kennels. These kennels are perfect. To describe them here would be out of place. A series of kennels and yards, with boiling and feeding rooms on a most extensive scale, the whole built in a solid substantial manner, accommodate two packs, beside ample room for breeding. The division-walls are of brick, and very lofty, and the yards are all flagged with Yorkshire stone; the drainage and ventilation are perfect. I should have expected that these cold stone floors and lotty walls would have produced a good deal of chronic rheumatism, and other disease from colds. Such, however, is not the case, and the pack are singularly free from kennel lameness. Perhaps the southern aspect, and the site, on a well-drained gravelly soil, with a chalky sub-soil, have counteracted what must have been the result of such a long range of brick and stone buildings anywhere else. The hounds, although not divided into dog and bitch packs, are allowed to be one of the most even packs in the field; they are of medium size, very powerful, handsome, and of the best blood of the country. The present noble proprietor of Brocklesby, like his father and his grandfather, is a keen sportsman, and has proved in his own person, contrary to the theory of chamber philosophers, that it is possible for the same man to achieve eminent success as a legislator, a sportsman, a railway director, an agri-culturist, and, I may add, from the universal suffrage of every man, woman and child I spoke to in North Lincolnshire, as a popular landlord. The John Bright amounts are a popular landord. The John Bright school will scarcely understand such a coalition of qualities. But Brocklesby is most remarkable, not for its picture-gallery or its fox-hounds, but as being one of the centres from which proceeded that course of improvement which turned a vast part of wild heath land into a succession of richly productive farms, peopled by a race of farmers unmatched for intelligence, liberality, energy, industry and hospitality. Starting from Brocklesby, riding for nearly 40 miles towards the South, you pass an unbroken succession of large farms, composed, with exceptions I will hereafter describe, entirely of arable land, farmed by men of large capital under a customary tenancy at will. There are in this great district no small farmers, and, I believe I may add, improvidence apart, no poor farmers.

# Miscellanea.

KINGSTON-UPON-HULL.—This port takes the lead as the first in the kingdom for inland trade, while its position with respect to the North Sea has made it the chief outlet of our manufactures to northern Europe, and raised it to the rank of the third port Europe, and raised it to the rank of the third port in the country in foreign traffic. The approaches by the deep but intricate channel of the Humber are admirably buoyed and lighted by the Hull Trinity Board; floating docks to the extent of 23 acres already exist, and 15 acres in addition will soon (1846) be opened. The tonnage of the vessels that have paid dock dues during the year amounted to 700,000 tons, and the whole income of the port derived from tolls and the whole income of the port derived from tolls on shipping and goods borne by shipping exceeds 75,0000. a year. The old Hull dock was set on foot 1775, the Humber dock in 1807; more than 20 years elapsed before the Junction dock was opened. Trade has more than kept pace with the increase of accommodation. On one occasion a ship made a voyage to the Baltic and back while another was ready but unable to get out of the harbour. Original shares of 250l. are now worth 2,000l.—Second Report of Tidal Harbour Commissioners.

WANSFORD .- There is a probability, says the Boston Herald, of this desirable line from Stamford being constructed. Considerable influence is being used, both in and out of Stamford, to effect it, and both members express their interest in carrying out the wishes of the inhabitants. The distance in the route to London would be much shortened by its construction.

WEST RIDING OF YORKSHIRE .- It is expected that the Leeds and Thirsk will be opened from Thirsk to Weeton, about 10 miles from Leeds, early

Digitized by GOGIC

# SOCIETY OF ARTS-PRIZE LIST FOR 1849-Continued from p. 474.

# NOTICE TO EXHIBITORS OF MANUFACTURES, &c.

- 1. All Works intended for the Annual Exhibition in 1849, at the Society of Arts, must be punctually sent there on or before the first Monday or Tuesday in February.
- 2. They must be addressed to the Secretary, and accompanied with a note, describing them as they are meant to be inserted in the Catalogue, with a statement of the retail price if for sale, which will be kept by the Secretary. The description in the Catalogue is subject to the approbation of the Council. Each article must be marked with the Name of the Exhibitor, and the Number (if there be more than one) to which it refers in his List: particular accuracy is requested in this respect.
  - 3. Works which have been already exhibited at the Society's House cannot be again received.
- 4. To enable the Council to make the necessary arrangements, Exhibitors are requested to send, on or before the first Monday in January, a list of the works intended for Exhibition, and to state, as nearly as possible, the superficial space the works will occupy.
  - 5. All Works sent for Exhibition are submitted to the approval or rejection of the Council, whose decision is final.
  - 6. Every possible care will be taken of Works sent for Exhibition; but the Society do not undertake to pay the carriage of any package which may be presented by carriers.
- 7. With a view of promoting the interests of the Exhibitors, and generally extending the benefits of this Exhibition to the country at large, arrangements have been made by the Council with the Board of Trade and the Committee of Management of the Head Government School of Design to exhibit in the Provincial Schools of Design a selection of the specimens after the close of the Exhibition. All such selected Articles will be returned sufe and free of any expense to the Exhibitors.
  - 8. No works can be removed until after the close of the Exhibitions.
  - 9. Gold and Silver Medals are offered for the best Works exhibited. For information respecting them the Prize List should be referred to
- 10. The Council have the satisfaction of stating that Her Majesty's Chief Commissioner of Woods has promised that a public site of very increased dimensions shall be provided for the use of the National Exhibition of British Manufactures.

The first Exhibition of British Manufactures in 1847 was visited by about twenty thousand persons. The second Exhibition in 1848 was visited by more than seventy thousand sons. Besides the daily Exhibition there were five Evening Meetings: three for the Members and their friends—two for the Officers of State and Government, and the Nobility generally.

# In the SECTION of AGRICULTURE.

- 1. For the best Essay on the MODE of ARRANGING and CONSTRUCTING a FARMSTEAD, Homestead and the complete requirements of an Agricultural Establishment for 300 acres, comprehending the best system of convenient arrangement of the Farm Yard and Offices, as to draining them most simply and economically, and especially with reference to the reception of a Steam-Engine capable of performing the various duties of Threshing, Cleansing, Brutsing, Cutting, Grinding and Steaming with economy, safety, &c. The Essay to be illustrated with Drawings or Models, to show what degree of pictures up effect might be given to such design, subservient to strict conomy, and a Specification, describing the materials such buildings would be constructed with, and the reasons for their propriety. Separate Drawinss of the clevations of the Homestead and Offices, Section of the Ground Plans and Plans of the Liquid Monure Tank.

  2 For the best Paper, founded on experience, for CLEARING MEADOWS and PASTURE
- and Drains are required. The Gold Medal.

  2 For the best Paper, founded on experience, for CLEARING MEADOWS and PASTURE LANDS from the places commonly called Fairy Rings, and also from Buttercups, Eluc-Bells, Dandelions and other noxious Weeds. A Gold Medal.

  For the best Practical Essay on the NATURE and HABITS of INSECTS affecting the Farmer, with the most approved method of preventing the destruction usually committed by them. A Gold Medal.

- Gold Medal.

  4. For the best Paper on MOLES, ROOKS and SPARROWS, setting forth the good or ill they do; whether they should be encouraged or destroyed. A Gold Medal.

  5. For the best Paper on the subject of AGRICULTURAL STATISTICS, showing the nature of the information most desirable to be obtained, and the method by which it may animally, or oftener if required, be collected and published by the Government. A full and detailed account of the Scheme and the Officers and Machinery by which such collection is proposed to be made, with an Estimate of its Cost, either in gross or at per acre, for Parishes or Districts, will be required. A Gold Medal.

  6. For the best Paper on MOLES, ROOKS and SPARROWS.
- 6. For the best Essay on the Application of LIQUID MANURE, illustrated by practical examples, with full details of the plans for constructing the tanks and distributing the liquid. A Gold Medal.
- 7. For the introduction into Field Culture of a PLANT as a SUBSTITUTE for "Carthamus tinctorius," or Dyers' Saffron, with the result of the cultivation in this country of at least a quarter of an acre. Samples of the flowers (not less than 14 lb.) made up into cakes, with a specimen of Silk dyed with the same, to be forwarded to the Society. A Gold Medal.
- 8. For the introduction from Abroad of any improved AGRICULTURAL IMPLEMENTS. A Gold Medal,
- For an Account of any GRAIN or PULSE imported from Foreign Countries since 1840, which
  has been found a profitable Food for Farm Stock. A Gold Medal.

All Claims for the above Premiums must be addressed to the Secretary, and delivered in at the Society's House on or before the second Monday in January 1849.

# In the SECTION of CHEMISTRY.

- For any material improvement in the manufacture of CROWN GLASS, with special reference to the transparency and durability of surface. A Gold Medal.

- the transparency and durability of surface. A Gold Medal.

  For FLIAT GLASS PREE FROM VEINS, as dense and transparent as the best now in use, and quite fit for the purposes of Opticians. A Gold Medal.

  For the best Account of the CAUSES of the DEFECTS in Flint Glass, with the means which have been employed to remedy the same, accompanied by suggestions for the improvement of the manufacture. A Gold Medal.

  For the best set of Experiments on any white METALLIC ALLOY that can be usefully applied to the Arts, or hard chough for use in reflecting Telescopes, and certain it from term increasepit faults. Samples of the Alloy particularly requiring notice are, insidility and is a fact that the produced insidility to tarnish when even of the Alloy particularly requiring notice are, insidility, the condesses force, the cohesive force, the temperature of the facts of hydrolinary distillation of which it is susceptible. A Gold Medal.
- susceptible. A Gold Medal.

  5. For the discovery of a SUBSTANCE capable of receiving the CALOTYPE or TALBOTYPE IMAGE. It should be absorbent and Chemically Neutral to the Action of Nitrate of Silver, Acetic and Gallic Acids and the Iodide of Potassium. It should be at least as transparent as paper (or more so, if possible), even in texture and free from a granulated surface. A Gold Medal.

  6. For the best method of DYEING WOOLLEN YARN in the HANK, so as to stand the process of Milling. A Gold Medal.

- of Milling. A Gold Medal.

  7. For an arrangement by which ELECTRIC TELEGRAPHS would be protected from the influence of Atmospheric Electricity, Sea Water, Ac., and rendered capable of being worked during the most powerful Aurora Borealis. A Gold Medal.

  8. For a method of REFINING VEGETABLIC OILS, by a quick and cheap process, so as to render them fit for burning in lamps, and for Indiricating machinery. A sample of not less than five gallous to be forwarded to the Society. A Gold Medal.

  9. For the DISCOVERY of a GLAZE for EARTHENWARE and CHINA, equal to the glazes ordinarily used by manufacturers, but produced without the use of lead. A Gold Medal.

  10. For the best series of Specimens of OPAQUE ENAMELS, suited to Artistic or Manufacturing purposes. A Gold Medal.

  11. For the best series of Specimens of TRANSPARENT ENAMELS.

- For the best series of Specimens of TRANSPARENT ENAMELS, suited to Artistic or Manufacturing purposes. A Gold Medal.

Claims for Premiums in this Section must be accompanied with full Descriptions, Certificates, and Samples, and should be delivered to the Secretary, at the Society's House, on or before the second Monday in January 1849.

# In the SECTION of MECHANICS.

- 1. For the Plan of a ROOP, composed of Wood and Iron, Circular or Octagonal, to cover the largest Area without Pillars, with details, specification, and estimates, and the cubic quantities of timber, with the weight of wought and east iron employed. The Gold Medulon, the Action Premium.

  2. For the Design of the arrangements for the INTERIOR of a BUILDING to accommodate the largest and there with the most perfect arrangement for hearing. A Gold Medul.

  3. For the best Essay in the means by which the gold and the Arabic of large Buildings may be also printing out the provided in the provided that the word interfered in the coice of a speaker, also pointing out the position in which the speaker should be placed so as to be heard by the largest number of persons. The Silver Medul.

  4. For the best Design for a CONSERY ATORY, to be excented in Carpentry, combining furtures and strength of construction with lightness and elegance of form. The structure to be statable for the Gardens of a Botanical or Horticultural Society, and adapted to the present improved state of the glass manufacture. A Gold Medul.

  5. For the best Design for a WATER-MITTER to measure and resister the quantity of water supplied to Private Houses, Breweries, or Manufactories, so that the consumer may pay for the quantity taken at per 1000 gallons, without using a cistern. The Design must not be too costly to prevent its general application, and it must not be liable to be deranged or tamp, red with. A Gold Medul.

  6. For the best Collection of Diagrams (with explanations) to illustrate the action of theres on a Crank or Cranks turned from a horizontal direct action Steam Cylinders of Cylinders, the effect of various proportions of Connecting-rods, and degrees of expansion of steam being shown. A Solid Medul.

  7. Medulon of the properties and expensions of steam being shown.

  8. For the best Paper on the Causes of OSCILLATION in RALUNAY LOCOMOTIVES at high velocities; and on the principles and expensions by weighties; and on the principles and ex

- Silicer Medal.

  For the bast Paper on the Causes of OSCILLATION in RAILWAY LOCOMOTIVES at high relocities; and on the principles and expedients by which that source of danger may be removed. A Gold Medal. 9. For the most simple and efficient FIELD GATE. The Silver Medal,

Communications sent in for competition in this Section should be delivered at the Society's House not later than the second Monday in January.

# In the SECTION of COLONIES and TRADE.

It is absolutely necessary that in all Claims for the following Premiums, the statements made by Candidates residing in the Colonies should be authenticated by the Certificates of ecretary of the Colony, or by two Justices of the Peace, or other com-

- the Governor or Secretary of the Colony, or by two Justices of the Peace, or other competent local authority.

  1. For the IMPORTATION of any NEW PLANTS likely to be useful as substitutes for the POTATO. A Gold Medal.

  2. For the IMPORTATION of any NEW SUBSTANCES which can be successfully used as substitutes for CAOUTCHOUC. A Gold Medal.

  3. For the best Samples of COTTONS produced along the Western Coast of Africa. Specimens to be produced to the Society both in seed and picked. A Gold Medal.

  4. To the person who shall know and prepare in the EAST INDIES, or in any BRITISH COLONY, the best Specimen of TEA, of good marketable quality. Samples, amounting to at least two pounds, with Certificates that not less than one hundred weight of equal quality has been prepared and imported into Great Britain, to be produced to the Society, together with Iuli information as to the mode of growth and prepared into. A Gold Medal.

  5. To the person who shall raise the greatest quantity of FLAX, of good quality in any of the British possessions in the EAST INDIES or AUSTRALASIA, being the produce of not less than five English acres. Certificates of the number of acres cultivated, the mode of entiture, the nature of the soil, and weight of the produce, together with fourteen pounds of the Flax, to be forwarded to the Society. A Gold Medal.

  7. To the person who shall import at least two tons of any VEGETABLE FIRRE which shall be equally chean, strong, and durable, and applicable to all the purposes for which IIEMP is now used. A Gold Medal.

  8. To the person who shall produce in any BRITISH COLONY, and shall import the greatest quantity of SLK proper for Manufactures, not less than one hundred pounds weight. Specimens of the SIR not less than one producing it, to be forwarded to the Society. A Gold Medal.

  8. To the person who shall import the finest quality of SLK produced in the EAST INDIES, equal to the best Italian or China SiR. One pound of the SiRk to be sent to be Society, as a Sample, with Certificates that at least one

- Sample, with Cartificates that at least one hundred pounds of equal quality have been imported. A Gold Medal.

  To the person who shall manufacture and import the finest Specimen of OLL, not less than 10 gallons, the produce of OLLVES grown in any British Colony in AFRICA or ALSTALASIA. Specimens of the 6il, not less than two quarts, together with satisfactory Certificates, to be produced to the Society. A Gold Medal.

  To the person who shall import the finest WINE, not less than one pipe, of good marketable, quality, made from the produce of Vineyards in AUSTRALASIA. Samples of the Wine, and Certificates that it was made in the Colony, to be produced to the Society, together with an account of the Vineyards, and of the process of Manufacture. A Gold Medal.

  To the person who shall prepare in any BRITISH COLONY or Possession, and import into Great Britain, the createst quantity, not less than one hundred pounds, of DRLED FRUTIS, of great the Printis were grown and prepared from the Mediterranean. Satisfactory Certificates to the Society. A Gold Medal.

  For the importation or introduction into this country of any new Plants or Trees, from China, India, or elsewhere, producing OLLS or FATTY SUBSTANCES, such as can be used as FOOD, or are applicable to manufacturing purposes. A Gold Medal.

  For the best Sample of any new ornamental WOOD suitable for the manufacture of Furniture. A Gold Medal.
- Claims for the Premiums in the Section of Colonies and Trade to be sent in on or before

The Society expressly reserves power, in all cases, of giving such part only of any premium as the communication or performance shall be adjudged to deserve, or of withholding the whole. The candidates, however, are assured that the Society will judge liberally of their claims.

All Communications must be written on foolscap paper on one side only, with an inch margin, and, together with all Drawings and Models offered in competition for the above Prizes, must be delivered to the Secretary at the Society's House, John-street, Adelphi, postage and carriage free, at the respective days appointed.

Printed by James Holmes, of No. 4, New Ormond-street, in the county of Middlesex, printer, at his office, No. 4, Took's-court, Chancery-lane, in the parish of St. Andrew, in the said county; and published by John SFR axers, of No. 14, Wellington-street North, in the said county, Published, at No. 14, in Wellington-street aforesaid; and sold by all Booksellers and Newsycodors.—Agents: for Scotland, Messrs, Uniforming a Ferguson, Dublin.—Saturday, July 1888. PORT OF GREAT GRIMSBY.

# NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonninge.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

# CALEDONIAN RAILWAY.

At a SPECIAL GENERAL MEETING of the Share-holders of the Caledonian Railway Company, held, pursuant to Advertisement, within Gibb's Royal Hotel, Edinburgh, on Thursday, the 20th day of July inst.,

#### It was resolved .-

That the several sums of 50,000L, 16,000L, 450,000L and 150,000L, which the Company are authorized to raise under the powers of the Caledonian Railway (Glasgow, Garnkirk and Coatbridge Branch) Act, 1846,—the Caledonian Railway (Clydesdale Deviation) Act, 1846,—the Caledonian Railway (Clydesdale Deviation) Act, 1846,—the Caledonian Railway (Glasgow, Garnkirk and Coatbridge Railway Purchase) Act, 1846,—and the Caledonian Railway (Garnkirk Station) Act, 1847; and also the sum of 9,180L, being part of the sum of 200,000L, which the Company are authorized to raise under the Caledonian Railway (Edinburgh Station and Branches) Act, 1847, making together the sum of 745,180 be raised by the creation of 74,518 shares of 10L each, to be called "10L Guaranteed Shares," which shall be entitled to a fixed dividend of 7 per cent. per annum, for five years, and 6 per cent. per annum, in perpetuity thereafter, in preference to the dividends payable on the existing ordinary Shares of the Company; but without participating in any surplus Dividends, or any future issues of Shares or Stock, or any other profit or benefit. That the several sums of 50,000l., 16,000l., 450,000l. and Stock, or any other profit or benefit.

That the said 10l. shares shall be paid up by the following 103. shares shall be paid up by the followinstalments, viz.—

24. 105. per share on the 21st day of August 1848.

24. 105. per share on the 21st day of October 1848.

25. 105. per share on the 21st day of December 1848.

27. 10s, per share on the 21st day of February 1849.

And that after payment of the last instalment the scrip notes shall be forwarded to the Secretary of the Company, to be exchanged for certificates of stock registered in the name of the holder.

That every Proprietor of existing Shares who shall be registered as such on the 25th day of July 1848 shall be entitled to one of the said new Shares in respect of every 50th (nominal value) of the shares then standing in his name, provided he pays the first instalment, of 2l. 10s. per share, on or before the 21st day of August 1848, and each of the subsequent instalments within one calendar month after the date of its becoming due.

That subject as is after mentioned the said new shares shall be entitled to dividends at the rate aforesaid, upon the several instalments, from the respective days hereinbefore fixed for payment thereof, such dividends to become due in half-yearly portions, the first dividend falling due on February 21, 1849, and to be paid within one calendar month after becoming due.

That in case any instalment on any of such new shares shall not be paid on the day when due, interest at the rate of 5 per cent. per annum shall be charged upon the instalment so in arrear, until duly paid. And turther, so long as any instalment shall be in arrear on any share no dividend shall accrue in respect of the instalments paid on the same.

That every holder of such new shares who shall pay any of the instalments thereon in advance shall be allowed dis count at the rate of 7 per cent. per annum.

That the Directors be authorized to take such steps and That the Directors be authorized to take such steps and make such regulations as they may deem necessary in reference to such new shares, the obtaining payment of the several instalments, and the forfeiture and disposal of such shares in respect of which the first or any subsequent instalment shall not be duly paid.

That the cordial thanks of the meeting be given to the Chairman for his able conduct in the chair.

J. J. HOPE JOHNSTONE, Chairman.

J. W. CODDINGTON, Secretary.

# EAST INDIAN RAILWAY 1 COMPANY,

8, BROAD-STREET-BUILDINGS, LONDON.

At an EXTRAORDINARY GENERAL MEETING of the Shareholders, held this day, the following resolutions were moved and carried unanimously:—

1. That the call of 21 per share, made on the 20th of April last, for the purpose of enabling the Directors to make the deposit of 100,000 on the lst of May then ensuing, be cancelled, and that the amount paid by the proprietors who have responded to the call be returned to them on

2. That it appears to this Meeting that the letter of the 2. Hat it appears to this meeting that the feeter of the East India Company, bearing date the 4th of July inst., contains a basis of negotiation for a contract which appears to this Meeting advantageous, under existing circum-

3. That with a view to the deposit of 60,000l., on the terms of the letter of the 4th of July inst. from the East India Company, the Directors be requested to make a new call of 2l. per share, in lieu of that cancelled, and that the Sharcholders be requested to respond thereto without delay, it being understood that the whole of the call thus made is to be returned to the proprietary, unless a contract be completed with the East India Company to the satisfaction of a general meeting, to be called for the purpose of considering and approving the terms thereof.

An Act to make a heyation in the authorized line of the Manchester, Buxton, Mathewa and Midlands Junction Railway, together with a Branch to Bakewell.

Dated this 13th day of July 1848.

G. H. CAVENDISH, Chairman. H. TOOTAL, Deputy-Chairman. FRED. WRAGGE, Secretary.

#### LUXEMBOURG COMPANY. BONUS TO HOLDERS OF SHARES 27 PAID.

The Directors having had under their consideration various propositions for granting a Bonus to those Shareholders who have pud up all Calls, have determined upon adopting the following arrangement:

Every holder of Five shares on which 7t, per share has been paid will be at liberty to purchase of the Company one share, 1ct, paid, for the sum of 1t.

These shares will bear interest at the rate of 5 per cent, per annum upon the full amount paid (10t), from the 1st of July 1818, and will be exempt from any further Calls for a period of two years.

As the amount of discount at which they are sold and the interest already paid on the share capital are more than covered by the money which has reverted to the Company from the forfeited shares, a present Bonus is secured to those who have paid their Calls without augmenting the capital of the Company as a

terrecuation.

Shareholders wishing to avail themselves of the option must
make application to the Secretary of the Company on or before the 7th of August next.

By order of the Board,

THOMAS COXHEAD, Secretary.

No. 1, Royal Exchange Buildings, London, July 21, 1848.

SATURDAY, JULY 22.

LIMITS OF RAILWAY BUSINESS FOR RAIL-WAY OWNERS

From what we thought it right to say when the steamboat question was agitated in the Brighton and South Coast Company, it will have been collected that we deem the late decision of the Lords in this matter important to the proprietors. The bearing of some of the arguments on which our view of the case was founded might be pretty clearly seen to lie in the tenor of the proposal itself; -it being admitted that the anxiety to lay the onus of the steam company's liabilities on the railway concern arose from the knowledge on the part of those engaged in the former that a certain loss would result from them. This loss we could not think the railway company bound to sustain, on the alleged ground of obligations incurred by the directors, inasmuch as the approval of the project by the company was only given to it on the ground of the directors' original suggestion,-which was expressly to the effect that the steamboat concern should be kept distinct from the railway. So much for the liability implied in the sanction afforded by the proprietors. This being denied, on such plain grounds, there remained the further question of the expediency, or otherwise, of taking up the scheme, as a feeder to the railway. This also, it appears to us, will admit of but one answer, on a due consideration of the only really sound principles of railway enterprize. As a general position, it is clear to our mind, that it cannot be safely allowed to exceed the limits of a provision, by such appliances as a railway can directly furnish, of conveniences for traffic existing on the line opened, or created by its opening:-that from the moment when this limit is exceeded and the principle is admitted of doing by the railway company of anything whatever which the railway itself and its proper appurtenances cannot do, with a view of attracting business, an opening is made to an indefinite series of risks and obligations,the sum of which will be found in practice to amount to the infliction of a pretty certain loss, in the hope of procuring a doubtful gain,—the necessity of which, if it absolutely exists, can only prove a radical defect in the original basis of the railway scheme, which will be apt to be rather increased than diminished by running into new speculations of a kind foreign to the special purposes for which it was started. We have already pointed out, in more than one case, the vice of that process of circular reasoning by which this erroneous principle has been usually sustained. A railway is first brought forward to connect two given points, on the plea that it will find or create, by its junction of those points, a traffic sufficient to make a profit on its cost. Then, the railway being made, it is proposed to do something beyond those points, and with other means than those of the railway itself, as a condition necessary to procure the traffic on the strength of which the line was founded in the first instance, and which it was affirmed, in the original and only truly valid case for making it at all, would certainly be procured by the fact of its construction. The conclusion is inevitable. Either the first scheme was erroneous, or the second is unnecessary. And we must further add, that if there have been a radical error in the beginning, it cannot be amended by what we must call an unnatural use of railway funds. If, for instance, we have made a line which cannot thrive by the business its own operations will secure, -we shall be apt only to make its profits less by undertaking others, which it is solely and expressly proposed to us to engage in, be- | mitted by another; and so the several railway |

principle, we repeat, is altogether a mistaken one; - and if good for one would be equally applicable to fifty other questionable uses of railway funds. If we once allow the necessity of spending them on any one of those outlying means of "encouragement," it may be seen that the only consistent end of such a course must be to impose the necessity of entering upon every kind of business, speculation and outlay by which a premium can be given to losing enterprizes that will not be spontaneously undertaken - on the plea of increasing the traffic of the railway. The same rule that authorizes the forcing of a steamboat trade, that will not grow of itself, would require with equal cogency the expenditure of railway funds in building theatres and other places of entertainment, lending money to establish gas and water companies,—in doing anything, in short, by which a concourse of people may be invited to any of its termini; -the plain objection to all being one and the same; -the plain effect of all alike being either a superfluous expense or a losing speculation.

At the very moment when some of the Lords were sitting to hear the Brighton case in one committee room, another committee in another room was hearing from the applicants in a similar case some evidence which seems to illustrate very aptly what we have already said on this subject. We find in the newspaper reports of Mr. Tite's statements before the committee on the London and South-Western Purchase Bill, the following admissions:-

That the Packet Company was a losing concern, and unless the provisions of this bill were agreed to, the boats would have to cease running. At present the boats afford the public every accommodation that superior management and expense could assure; but it was absolutely necessary, if this accommoda-tion were to be continued, that the steamboat company should be incorporated with the railway company. It was not so much the pecuniary gain the amalgamation would secure to the railway company as the convenience it would enable them to continue to the public that induced the South-Western directors to promote it, for the return upon the capital would be trilling compared with the great amount of accommodation that would be conferred upon the public.

These may be thought good reasons for inducing Parliament to allow the loss to be incurred by parties willing to submit to it, for the advantage of the public; a good reason why those who have entered into such steamboat undertakings may be anxious enough to get their risk taken up by a railway company. But for the latter, where free to consult its proper duties, to study its natural limits and its obvious interests, they can only confirm the view that the only prudent course is to keep to its own business, and not add to its difficulties by entering upon any other which will not of itself, as it is admitted, repay the undertakers.

The illustration we have cited applies in another way with singular aptness to the case discussed above. Here we had, as one of the main arguments for the Brighton steamboat project, the existence of a rival one at Southampton :- while we now are told that the latter itself is such a losing concern, that it must cease if its losses are not paid out of the profits of the adjunct railway. Thus, by the mere process of a deviation from the true course in both cases, we have two rivals, contending for the maintenance of a palpable loss; -or rather one striving to incur this damage, because it has already been incurred by a neighbour. Meanwhile, on this kind of competition in an unsound business is built up a continually increasing system of loss,-the error of one being made the plea for the like error being com-

cause no one else finds them remunerative. The | bodies go plunging on into new seas of expense. running further and further from their true boundaries-while the public stands by making use of their sacrifices, without even giving thanks in return. One may well think it an office for judicious friends of the railway system to discourage by all lawful means its further progress in this questionable way-at a time when it is evidently necessary to lay a firm hand on all questions of expenditure, and to keep a fixed eye on the true principles of railway enterprize, in order to raise it from its present depressed and perplexed condition.

> THE UNION OF THE ATLANTIC AND THE PACIFIC. —The following observations inserted in the Times on this project, which has lain dormant during the Mexican war, and which now promises to attract public support, shows the striking importance of the scheme to our British capitalists.—The project in the United States for a railway from the Atlantic to the Pacific seems likely, now that the war with Mexico is ended, to become a subject of practical consideration; and in a letter published by Lieut. Maury, of the American navy, we have a clear view of the most prominent bearings of the undertaking. The route hitherto proposed has been a northern one from New York up to Chicago, and thence to Oregon and the Columbia river; but Lieut. Maury contends that the dangerous navigation at the mouth of the Columbia, and the fact of this outlet being effectually commanded by the British possession of Vancouver's Island, constitute insuperable objections to it. He therefore proposes that the line should commence from the port of Charleston, in South Carolina, to Memphis, in Tenessee, and thence to Monterey or San Francisco, in California. From Charleston to Tenessee a railway is already completed, and the distance from Memphis to Monterey is 1,500 miles. By this route, the dis tance from the English Channel to the Pacific would be 5,370 miles; by the Chicago route it would be 5,320. The general advantages of constructing a railway to connect the two oceans through the heart of the United States, consist in the fact, never lost sight of in that country, that the increase in value of the land through which it would pass would far more than cover the outlay to be incurred, and also that such a line would confer exclusive advantages on the United States, which would be lost if the communication were effected by the old scheme of a canal across the isthmus of Panama. The particular recommendations of the California over the Oregon route are the secure nature of its harbours, their convenient position for the 300 American vessels annually employed in the whaling expeditions in the Pacific, and the central point they would present for the esta-blishment of a great naval station and dockyard, San Francisco being midway between the southern and northern boundary of the American possessions on this coast, which now extend about 1,000 miles. By the construction of the contemplated route, Lieut. Maury asserts that the United States would be placed in a position to command the trade of the entire East.
> "Hitherto," he says, "in all parts of the world, except
> Europe and the West Indies, the ships of the two great competitors on the ocean have met on barely equal terms." To reach home from India, China, New Holland, the islands of the Pacific, or the ports of South America, an American and British ship had both to pursue the same route, although the course of one was terminated at Liverpool while the other had to proceed to New York. "But now that Oregon and California are Americanised, all of these ports are nearer; and the chief among them, as Bombay, Calcutta, Singapore, the ports of China, Japan, New Holland, Australia, Polynesia, and the islands of the East, many thousand miles nearer to the United States than they are to England." The following is a table of comparative distances to England and California from various places in the eastern and southern seas:

						10	To ports of	
						England.	California.	
						Miles.	Miles.	
From	Persian Gul	f				11,300	 10,400

	New Zealand					13,500	 5,600	

# Brogress of Works.

EDINBURGH AND GLASGOW (Campsie branch).—The opening of this branch has called into productive use about 50,000?. of capital. The line is made substantially, and the rails firm and smooth. After passing the new Kirkintilloch junction station, says the Scottish Railway Gazette the line has a slight descent, and as it here takes a pretty wide sweep, a good opportu-nity is afforded of seeing the country through which it passes. The Campsie portion of the line runs through the town of Kirkintilloch, and it is a very pleasant one to travel on, the scenery being agreeably diversified with hill and dale, and wood and water At Milton, half-way between Kirkintilloch and Campsie, there is also a station, and the terminus is at Lennoxtown, just beside Campsie. The Campsie hills rise close behind the village, and the far-famed Campsie Glen is not more than a mile and a quarter from it—a healthful resort for the denizens of Glasgow. We believe that it is the company's intention to grant day tickets, at a considerably reduced rate, to persons desirous of going during the day to Campsie and returning in the evening; and as the Glen is very place for a pic nic party, we have no doubt that many will avail themselves, in fine weather, of the privilege. During the fair week, too, cheap excursion trains have been put on with great advantage to all parties. This ought to be a favourite line during the summer months for tourists.

EDINBURGH AND NORTHERN.—July 13.—Capt. Laffan, the Government Inspector, examined that part of this line which still remains to be opened between Abernethy and the junction with the Scottish Central at Hilton, extending to about six miles, and expressed himself satisfied with the finished state of the works.

GLASGOW, BARRHEAD AND NEILSTON DIRECT.—On the completion of the working arrangements this line will be opened. The Government Inspector, Capt. Laffan, R.E., went over the works on the 12th, testing the various bridges and minutely noting the effects. The examination was said to be satisfactory, and the whole of the works appear to have been executed substantially.

MIDLAND GREAT WESTERN (IRELAND). — This undertaking, says the Mercantile Advertiser, is advancing rapidly towards completion, and will, it is expected, be finished to Mullingar early in the ensuing month—thus opening up one of the richest viens through the interior of the country, and will be of immense advantage to the farmer and grazier, by offering a quick transit for their cattle and produce to the Dublin and Liverpool markets. The income of the company hitherto has averaged 1,000l. per week, or 50,000l. per annum; and that amount, it should be remembered, is exclusive of the entire charge for the conveyance of the mails, as yet not taken into account, but which, when finally arranged, will probably produce to the company from 14,000l. to 15,00l. per annum in addition; therefore it may be fairly concluded, when the line produces so much at present—though only partially opened, and to a place of no note—the income, when opened to Mullingar, will be more than doubled, passing as the line will through the very best part of Ireland, and combining also the double advantage of two modes of conveyance, viz., the canal and the rail.

Newcastle and Berwick.—The works connected with the high level bridge over the Tyne, and the junction of the railway terminus, are rapidly proceeding. The principal streets are already spanned with masonry of a most substantial character, and the river work of the bridge is gradually assuming its imposing position. A portion of the timber forming the centering of the arch over the foot of Dean-street was removed on the 13th inst. The extent of setting was only one inch, which, in a stone arch of that description, with a span of 80 ft., is considered to be a good criterion of the stability of the work, and to reflect credit on the skill and judgment of Messrs. Rush & Lawton, the contractors.

FERTH LINES AND THE GENERAL TERMINUS.—The Edinburgh and Northern has now a single line laid from the point near Newburgh, on the main line, to whigh the traffic has hitherto been confined, to its junction with the Central on the south side of Moncrieff tunnel; and the Government officer is daily expected down to examine that portion of the line, and authorize its opening throughout to Perth. The Scottish Midland will still require a week or two to be ready for the Inspector, some delay having been caused at the first bridge from Perth on the Dunkeld road. The Dundee and Perth will probably not be able to effect a junction with the others, by rail direct, for another year at least. There is no talk now of the viaduct through the town, the whole

energies of the directors being concentrated on the bridge erecting over the Tay. The skeleton arches bridge erecting over the Tay. have been completed to the centre of the river, all of which are of wood; but the abutment at the west shore, upon which the draw is to be hung, is to be of stone, and much delay has been caused by the difficulty of laying a foundation, from the gravelly soil, through which the waters of the Tay percolate, independent of the coffer-dam. The whole is expected to e completed, however, ere the close of the autumn, when a temporary station for passengers will be made on the ground lying between Princes-street and the river. 200 ft. of the interior front of the general station have been completed on each side of the rails to the height of the first storey; and in the meantime the buildings are to be carried no higher, but temporarily covered in, with sufficient accommodation for the traffic. The space between the two fronts referred to (130 ft. in breadth) is to be covered over with an iron roof, now manufacturing in Sheffield and daily expected. This is to be supported by a single line of hollow pillars. The length of each front is 200 ft., and, although only one-third of the entire length of the station when completed, will, when covered in, give some idea of the magnificent scale of the buildings. The office accommodation will be ready, it is expected, early in August, when the present temporary station at the south end of St. Leonard's Bank will be removed there.

SALISBURY AND YEOVIL, AND EXETER, YEOVIL AND DOROHESTER, &c. (Extensions of the South-Western).—
Preparations are making to proceed vigorously, first to Yeovil. More hands have already been engaged at the works between Basingstoke and Salisbury. At various parts of the line the rails are being laid down rapidly, and the roads and bridges are fast springing up. Over the road leading to Stratford, near Salisbury, a good and substantial bridge is nearly grounds of Mr. J. Keynes, of Castle-street, in that city, across the water and meadows, to Fisherton Anger, on to Wilton. In those places men are to be set to work in a few days; the same also at Gillingham, Shaftesbury, Sherborne, direct to Yeovil. In most parts the grounds are staked out, bricks and timber carted thereon, barrows, carriages, waggons, planks, and every other necessary tool and article conveyed to each district; so that, when once comenced, not the least delay shall take place afterwards. The inhabitants of Salisbury have, according to a correspondent of the Morning Post, heartily welcomed the successful termination of the struggle.

WINDSOR, STAINES AND RICHMOND. - The Bucks Herald, after alluding to the probable opening of the line in the beginning of August, says,—On a visit made lately we found the permanent way completed to within two or three fields of the village of Datchet, being somewhat nearer to the village than the windmill on Datchet Common. Beyond this we may state that the rails and sleepers were lying ready for being placed on nearly the whole of the line, the ground being for the most part prepared and ready to receive the rails. The station, which will be only temporary at Datchet, has been prepared in London, and was expected to be brought to the spot where it is to be erected by the beginning of this week. A wooden erection being intended, it will take but very little time in putting together. It is stated that the formation of the line has had already the effect of very considerably enhancing the value of property in the village. An arrangement has been made by the com-pany with Mr. Chater, of the Castle Hotel, Windsor, to run omnibuses between Windsor and the station, for which the charge will be only 4d. each person. The fare by the railway (with a day ticket) will be, as we are informed, only 2s. 8d. for the journey to and from London as far as Waterloo Bridge, from which may be anticipated a vast increase in the traffic between Windsor and the metropolis.

# RAILWAYS AND AGRICULTURE IN LINCOLNSHIRE. [Continued from p. 487.]

There seems to be some difficulty in ascertaining who first imported turnip culture and bone manure into Lincolnshire. When Authur Young made his first tour in the county this great improvement had already taken root, although it was then but slowly extending itself. Under its influence the rental of the Brocklesby estates, as I am informed, has risen many thousands a year in rent from farms not under 300% a year. The rental of other proprietors of lands on the Wolds has risen in like proportion, the rise having been from 2s. an acre for the waste pasture, to 25s. an acre, after a series of turnip culture and sheep feeding. In this instance, a customary agreement to pay for improvements and

reliance upon the honour of an old family stand in the place of a lease. No one would venture on mere verbal terms to lay out capital in reclaiming waste land, the property of a stranger capitalist. On the first day that I went to meet the Brocklesby hounds, I had a delightful ride of eight miles to cover. roads, hard and smooth, as in all chalk countries, showed their recent origin in their straight direction and breadth. It is one of the characteristics of the Wolds that there are scarcely any of those little high-banked crooked lanes which cut up an old cultivated country. Instead, there are a profusion of bridle roads leading through farms. My guide, a tenant farmer, mounted on a hack pony that would fetch sixty guineas at a word in town, constantly turned from the highway to make a short cut of a mile or so across fields, passing through well-kept bridle gates, at which our spirited nags always paused and helped the rider in opening them, in a manner which showed them trained from their earliest days in the way they should go. In this way I saw a great deal more of the county than by the turnpike road. As we passed along, there seemed one universal rule of farming; hundreds of sheep feeding off turnips in the fields—scores of young stock feeding off cake and hay, and treading down straw in the yard. Our first halt was to breakfast with the gentleman who was to take me off my guide's hands and up to covert side, my first guide being on other thoughts intent than hunting. Our breakfast host met us at the door; and he, his dwelling, his farm buildings, and his farm, were all fair specimens of what is to be found on the Wolds. He was a tall, portly, powerful man, nearly 6 ft. in height, and about 15 stone in weight, with rosy, well cut, small features, a bald forehead, curly grizzly hair, with a big arm and a small hand, and gay, jovial expression of countenance, welcoming the stranger as if he had known him and liked him before. The house, a brick villa, with a garden of a couple of acres well stocked with fruit trees, overlooking huge, bare, ploughed fields;—just the style of house that near a large town would let for 100l. a year. Divided from the house by an occupation road were the farm buildings, a compact three-sided parallelogram. I counted forty young beasts in one yard; there may have been more. There was first-rate stabling for about half-a-dozen horses. My new friend was one of the crack horsemen, and horse-sellers too, in the district. That was to be seen in the accustomed style of his boots, white cords, scarlet waistcoat and coat, with the button of the Brocklesby hunt. In the breakfast-room the table displayed, with its array of hot and cold meats, a picture not to be beaten by the Cafe de l'Europe before the Revolution. A gold-mounted whip on the chimney-piece, with an inscription showing that it was presented by Lord Yarborough to the owner of the best three-year-old hunting colt, and some sporting prints, gave a hint of the prevailing tastes of the owner—just as the pictures of prize-bulls, sheep and pigs, bred by my friend Torr, and hung round his room, show his preference. In a word, host, hostess, house, furniture, everything, was thoroughly English. and the reception worthy of that English hospitality which in towns has been too often replaced by second-hand gentility. The farm is about 1,100 acres, nine-tenths arable, and almost all reclaimed by the present owner from moorland, having been let or given, as they term it, to him by the late Earl in a wild state some thirty years ago, because he seemed a hard young fellow, and it would give him "some-thing to do." After breakfast, to which my prething to do." After breakfast, to which my pre-paratory gallop afforded an admirable sauce, we adjourned to the stable, where a horse, kindly lent by a gentleman whom I had not then had the pleasure of knowing (where else should I have found such kindness!), awaited me. As the letter in which Mr. N. announced his politeness spoke of "my father's horse," I expected, as a matter of course, some fat old screw. My surprise and pleasure were equal on seeing a fine well-bred mare, nearly 16 hands high, with an eye that looked like going, and she did not disappoint me. Breeding, size and power distinguish the Lincolnshire hunters. They are chiefly bought at three and four years from York-hire and other breeders, and paired by those of the Wold farmers who have sporting tastes; that is to say, almost all. The want of pasture prevents much breeding. If circumstances should lower the price of horse-keep concurrently with the opening of the Lincolnshire railways, the trade in horses must, in the presence of the limitless demand, take a great developement. My host showed me, before starting, three hunters, for size, power, beauty and breeding not to be easily matched. In proceeding to cover, our way lay almost entirely through bridle roads; occasionally we descended gorges where pasture grew luxuriantly. These are a sort of cases much prized; and farmhouses are usually pitched upon them. The general

character of the soil renders summer feeding, except on artificial grasses, impossible. Most of the farmers hold, in conjunction with their Wold farms, some pasture in the belt I have described along the sea. The style of cultivation is simple and uniform. We passed field after field, each perhaps containing 40 to 70 acres, white as snow, with chalk dug out from pits beneath the soil; a strong manuring with bones prepared for turnips, which are now by some stimu-lated with guano. These turnips are eaten off with sheep confined in apportioned spaces by net-folds. I cannot think why these net-folds, which are so light and easy to shift, have not universally superseded wooden hurdles. The only disadvantage of net-folds is to the sportsman, being, as they are, the most awkward leap a horse can take. The ground being prepared by the treading and dunging of the sheep, which have had oilcake for part of the time, is furth enriched by the manure of the oilcake-fed cattle, fed in the straw-yards all winter. This ploughed in comes for barley and wheat and seeds for summer feeding. The Wold farms are too large to summer feed in pens; the labour of cutting and bringing home the grass would be too great. They often suffer in dry weather for want of water for horned stock. It is thought that Wold farming might be improved by feeding more stock than they do at present in winter. New means of conveyance will do much for them in bringing grain and pulse for winter feed, as well as artificial manures, nearer their doors. They have been suffering for some time from the competition of those lying near to railtune from the competition of those lying near to rail-way conveyance. A very careful system of husbandry and liquid manure would enable many to grow more artificial grasses for summer feed than they do at present. This is one of the improvements most re-quired in the Wolds. The scale of operations is to our southern eyes gigantic. Near a farm planted in a heartiful gram of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the scale of the a beautiful green gorge, along a hilly 70-acres field, I counted twenty-two pair-horse ploughs, chiefly iron, at work, all the property of one man, and was told that was nothing extraordinary. I heard of one farmer selling in one year 1,000 quarters of wheat, 1,000 sheep and lambs, and 120 fat bullocks. The hunting field was a sort of thermometer of the wealth of the Brocklesby district; every farm turned out one or more horsemen chiefly in scarlet, well mounted, well appointed, so that when all assembled there was probably represented 30,000l. or 40,000l. a year of farmers rent. They came dropping in upon us from gates and over hedges on all sides; every field in the horizon had a dot of scarlet. According to the doc-trine of some political economists, large farms should result in a miserable labouring class. So far from that being the case, I never saw a better looking, more contented race; the villages are pleasant sights, so clean and comfortable, and the women very pretty. I shall not describe our sport on this or any other day. The country is a pleasant one to ride across presenting no formidable obstacles to a well-mounted horseman—no morasses or rotten banks. The mange among the foxes was a sad spoil sport. The huntsman, Smith, is a capital horseman, with a very fine voice. He complained of the interruption of the railway fences; in a few years he will think as little of it as they do in Durham, Gloucestershire and Cheshire. He does his work very quietly, and the pack being very silent, it requires a sharp eye or they steal away from cover before you are aware, and with a good scent it takes a wonderful horse to catch them, if they get a few fields ahead. I never saw hounds work so well with a bad scent, but I have an oldfashioned prejudice in favour of a little music on breaking cover. At Brocklesby they told me that they draft more for tongue than any other foible. After a day of eight hours on horseback, in which the even uniform cultivation of vast farms, the size of the farm-buildings, the number and excellence of the sheep and horned stock, the neatness of the fences. gates, and general cultivation, excited my constant admiration, my greatest source of surprise lay in the farmers themselves. Like every other traveller in this county I wondered where the race came from. A fishing question on this point brought out from an apple-checked farmer of seventy, in scarlet, on a stout cob, a story which others may have heard before—I have not. When Dr. Buckland was visiting the prehave not. When Dr. Buckland was visiting the present Lord Yarborough (then Lord Worsley), after seeing the specimens of Wold farming, the same query fermented in his head; so at a dinner of farmers, his lordship presiding, in the course of an awful pause, the doctor exclaimed, "My lord, the farming here is splendid; but what I want to know is, where do you get your tenants from?" Before Lord Yarborough could answer this puzzling ques-tion, a patriarch, from the other end of the table, roared out, "I'll tell you, doctor; his lordship breeds

# Law Intelligence.

DEPOSITS WITH BANKERS .- July 15 .- In the VICE-CHANCELLOR'S COURT, in re Williams v. Majoribanks, in this case it appeared that the scheme to be called the Worcester, Tenbury and Ludlow, projected in 1845, failed. An application was made to Messrs. Coutts & Co., bankers, to receive the funds. This they objected to do, but stated that they would have no objection to open an account for any particular gentlemen who paid in money in their own names. Accordingly, an account was opened in the names of four of the directors, Messrs. Williams, Whitmore, Stevens and Richardson, the latter being the chairman; and a note was signed by all four, directing the bankers to honour the drafts of any three of them, Richardson being always one of the three. It was subsequently that a draft which had been drawn by discovered three of the directors for 10l. had been altered to 5,000l.; the money was paid in five 1,000l. notes, and one of them was traced to have come from Richard son, who was thereupon indicted for felony. The grand jury, however, ignored the bill, on the ground that the charge amounted only to a breach of trust. After these proceedings Richardson absconded. An application was now made to the Court for an order upon Messrs. Coutts to pay over the balance standing in their bank, which amounted to 8071. 9s. 11d., to the three remaining depositors.— The Vice-Chancellor said that, under the circumstances, it was quite right to make an order upon the bankers to pay the balance now standing to the account of the Board to the plaintiffs as trustees.

GREAT WESTERN.—July 15.—At the Oxford Circuit, before Mr. Baron Rolfe, James Weybury was indicted for the manslaughter of Edwin Wiltshire, in the parish of Shrivenham, on the 10th of May last. The indictment consisted of five different counts The first charged that the prisoner feloniously and negligently placed a certain truck on the Great Western, and that a certain carriage in which the deceased was riding struck against such truck, where by the deceased received divers mortal wounds, of which he lingered and died. The other counts varied the offence, charging that it was the prisoner's duty to keep the line clear, &c. The evidence showed that on the day in question the express up train from Excter, which was due at Shrivenham, at 3 3 p.m. was 21 m. late; that the prisoner and two men who were under him came late from their dinner, and proceeded to place the trucks and the horse-box on the up line, while the "all right" signal was up; that it was the prisoner's duty while that signal was up not to put anything on the line; that about 3 m. before the collision took place the prisoner and the other man were engaged in placing the trucks on the line; that another up train was due that day at 4 p.m.; that the policeman, whose duty it was to see that the line was clear when he had up the "all signal, could have seen the prisoner placing the trucks on the line, and that, notwithstanding, he kept up that signal, and even held out his hands to the engineer as a sign that all was right. From the cross-examination of the witnesses it was elicited that since this accident occurred there had been two other accidents at the same station, one of them only last week; that the station had been enlarged since this accident; that the instructions recommended by the coroner's jury to be issued by the company had not been issued yet, nor could Mr. Seymour Clarke, the superintendent of the line, say whether they would be; that the policeman had to attend to the signals and to the opening and shutting of a gate on a highway which crossed the line near the station: and that the prisoner had been eight years in the company's service, and had been always remarkable for diligence and attention. - His lordship, in summing up, said there was no question more difficult to deal with than charges of manslaughter arising from want When a person was in a public situation, having certain duties to perform, and especially when on their performance or non-performance de pended the safety or insecurity of other people, then the public had a right to expect a greater degree of caution than ordinary. The facts of this case were simple. The prisoner was a servant in the employ-ment of the Great Western, at Shrivenham, and it was his duty to regulate the trucks and horse-boxes in their proper situations. A great deal had been said as to duties more than the parties were adequate to perform being cast upon them by the managers of this railway. But with that the jury had nothing to do. The question they had to determine was, whether, there being that establishment, and the prisoner being on it, he was guilty of culpable negligence, the result of which was this accident? There was a policeman at the station, whose duty it was to take care when a train was coming that all

the signal to indicate that the line was clear. prisoner had nothing to do with the putting up of that signal, and if they believed the evidence it was his duty before he put anything on the line to inform the policeman, and he was aware that it was his duty while the signal was up not to put anything on the line. It was therefore a gross piece of negligence on his part to put the trucks on the line without communicating with the policeman. It was said that the policeman was guilty of gross misconduct in keeping up the signal when he saw the trucks on the line. But the guilt of the policeman did not affect the guilt of the prisoner. The policeman ought perhaps to have interfered to stop the prisoner from putting on the trucks, or ought to have altered the signal; but whether he was equally guilty with the prisoner, or more or less guilty, was not the question, but whether the prisoner was guilty of the negligence which caused the accident. It was suggested that he thought that the express train had passed up and that that had misled him. But if he thought so, that would have been a good reason for his asking the policeman if he could put the trucks on the line; but, instead of asking that question, he took it upon himself to place them on the line. He (Baron Rolfe) could not see how the prisoner could be guiltless in putting anything on the line while that signal was up. How could he know but that there was a special train coming on? He knew when he was placing those trucks on the line that the signal was up which indicated that there was nothing on the line. He (Baron Rolfe) felt quite unable to suggest any doubt as to the culpable negligence of the prisoner, and consequently of his being guilty of manslaughter.—The jury de-liberated for about five minutes, and then returned a verdict of "Not Guilty."

EXPRESS TRAINS.—On the same day, on the same circuit, in re Smaner v. the Great Western, this was an action under Lord Campbell's Act for compensation for the death of a person killed by an express train on the Great Western on the 10th of August The declaration alleged that at a certain point called Challows Cross there was a public highway crossing the line; that it was the duty of the company to keep two gates across the line enclosing the public highway when a train was not passing; that they neglected to do so, and that the deceased, in crossing over the said highway, was struck and killed by a certain locomotive engine belonging to the defendants, coming along the said line; and also alleged that there was a highway crossing the line, and that defendants negligently and carelessly drove a certain locomotive engine across the said highway at an excessive rate of speed, to wit, at the rate of 60 miles an hour; and that the engine struck the deceased when crossing the line and killed him. The defendants, by their pleadings, besides denying their liability generally, denied that the public had a right of way across the line at Challows Cross, or that they were bound to keep gates across the line enclosing that portion of it on which there was a right of way. The plaintiff was the widow and administratrix of feceased. He was formerly a silversmith and jeweller at Bristol, but had recently given up his shop there, and taken to hawking. He hawked about jewellery to a large amount, and was much respected amongst all who dealt with him; and on the evening of the 10th of August last, about 6 45 p.m., he came to a gate where a highway crossed the line on a level; he opened the gate, and had crossed a line of rails, when he suddenly saw an express train coming towards him. Apparently paralyzed, he ran across the very lines on which the train was coming, and was immediately killed, and his pack, containing watches and jewellery to the value of 500%, was broken to pieces. The engine-driver saw him when about a quarter of a mile off, and immediately let off the steam and gave the alarm whistle, but could not stop the train (which was going at the rate of 60 miles an hour) in time to save the deceased. Several witnesses proved that there was a right of way at Challows Cross, being the continuation of a roadway from Challows turnpike-road to the parish of Denchworth. An inspector of police on the line, however, stated that it was nothing more than a track across the fields for the convenience of the adjoining farms, and had never been considered by the company as a public highway.-Mr. Baron Rolfe said that to entitle the plaintiff to a verdict the jury must be satisfied that he negligence of the company exclusively caused the accident complained of, the plaintiff showing that on the deceased's part the conduct pursued was that of an ordinarily prudent man. Upon the first count the defendants would be entitled to the verdict if the plaintiff had failed to make out either that the accident resulted from there being no gates, as alleged, at the place, or no one to attend to them, or that

trucks were cleared off the line, and then to put up there was no public highway. On the second count

no question was raised as to the roadway; and if the jury thought that negligent driving of the engine had caused the death, the plaintiff ought to have the verdict on that count. He (the learned Judge) thought the accident could not be attributed to the absence of a policeman or the want of a gate, when the man himself, seeing the express train coming at a little distance off, attempted to cross. He could not agree in saying that the company ought to have some one to give warning at a place where, de facto, people passed over when trains were sent along at so rapid a rate. In this age of advance, when the nature of railways was so commonly known, people about to cross a railway must have their eyes and cars open; and it was unreasonable to say that no more caution was necessary than in former times, when coaches and horses were the only means of fast travelling. question of whether the road in question was one de facto or de jure did not appear to him in the present case to alter the duty of the company.—The jury found a verdict for the defendants, and stated especially that there was no public highway at the place.

## Barliamentary Broceedings.

July 21.—Great Northern (Deviation).—On the motion that the report on this bill be received, the Earl of EGLINTON moved that the bill be re-com--The Earl of Kinnoul, as chairman of the committee on this bill, justified their decision, and opposed the re-committal of the bill.-After a few words from the Earl of GRANVILLE, the Earl of EGLINTON withdrew his amendment and the motion was agreed to.

COMMONS. July 21. - Railway Companies and the Railway Commissioners.- In reply to an hon. member, Mr. LABOUCHERE stated that the Commissioners of Railways under Mr. Gladstone's Act, were authorized to inquire into the infringement of any acting railway companies. The principle on which they acted was on receiving a complaint, to send an inspector down on receiving a companit, to send an inspector down to investigate it; and in the event of any valid grounds existing for doing so, to proceed in the ordi-nary course of law against the company.

### COMMITTEES ON OPPOSED BILLS. LORDS. GROUP 4.

LONDON AND SOUTH-WESTERN (Power to Purchase Steamboats, &c.). — Opponents' Case. — July 17. — Counsel on behalf of the existing steam-packet companies, whose boats ply between Southampton and the coast of France. panies, whose boars problement Southampton and the coast of France.

Decision.—July 17.—Preamble proved. For four-

teen years from and after the passing of this Act the South-Western Company should be at liberty to purchase and run steamboats between certain ports on the western coast of England and certain ports on

the opposite coast of France.

The CHAIRMAN said that the reason the bill had been allowed to pass without any of the railway shareholders appearing to oppose it, arose from the circumstance of the nature of the measure not being fully known to the general body of the South-Western proprietary; and the committee had introduced a clause, requiring that, before the capital should be raised to purchase the steamboats, the consent of three-fifths of the shareholders should be obtained to the step.

It was then agreed that the ports to be inserted in the bill should be Southampton, Portsmouth, Gosport, Lymington, Poole and Weymouth, on the English coast; and Havre, St. Malo, and Granville, on the French coast.

GROUP 6.

OXFORD, WORCESTER AND WOLVERHAMPTON (No. 2).

- Promoters' Case. — July 17. — Counsel stated that the object of the bill was to authorize a deviation in the line at Wolverhampton, and the raising of additional capital to build a joint station there.

Decision.—July 18.—Preamble proved.

LONDON AND NORTH-WESTERN (Deviations and Extensions at Leanington).— Promoters' Case.— Evidence.—July 17.—Local and other witnesses in favour. Decision.-July 18.-Preamble proved.

GREAT WESTERN (Birmingham and Oxford Junction purchase).—Promoters' Case.—July 18.—Counsel stated that the object of the bill was to increase the power of the Great Western on the Birmingham and Oxford Junction, so as to enable them to exercise an active control over the expenditure of that line, and to sanction a scheme for laying down the mixed gauge from Fenny Compton to Birmingham.

The CHAIRMAN intimated that the committee were satisfied with the opinion of the Board of Trade that the plan was quite practical, but they wanted the

promoters to show 'what special reasons existed for

applying the mixed gauge to this particular line.

Evidence.—July 18.—Witnesses as to points required by chairman.

Decision .- July 21 .- Preamble proved.

GREAT WESTERN (Birmingham and Oxford Junction loop line) .- Promoters' Case. - July 21. - Counsel stated that the object of the bill was to authorize the construction of a short loop line from the Birmingham and Oxford Junction through the town of Learnington. Evidence.-July 21.-Witnesses in favour.

GROUP 7.

EDINBURGH AND NORTHERN .- Promoters' Case .-July 18.—Counsel said that the object of the bill was to authorize the construction of branches to Boscobie, Keltyhead and Glencraig.

Decision.—July 18.—Preamble proved.

STIRLING AND DUNFERMLINE (Amendments and Deviations),—Decision.—July 18.—Preamble proved.

FLEETWOOD, PRESTON AND WEST RIDING JUNC-TION (Burnley and Colliery branches).—Promoters' Case.—July 18.—Counsel stated that the object of the bill was to authorize an important branch to Burnley and extension to the adjacent coalfields.

Evidence.—July 18, 19.—Local and other witnesses in favour.

Opponents' Case. - July 19, 20. - Counsel appeared on behalf of the East Lancashire and several landowners.

Decision .- July 21 .- Preamble proved.

LONDONDERRY AND COLERAINE (Deviation of line and amendment of Act).—Promoters' Case.—July 21.—Counsel stated objects sought by the bill.

Evidence.—July 21.—Witnesses in favour.

Opponents' Case. - July 21. - Several landholders.

GROUP 8. GREAT WESTERN (Slough to Windsor) .- Promoters' Case .- Evidence .- July 18, 19 .- Local and other wit-

Decision .- July 20 .- Preamble proved.

NORTH AND SOUTH WESTERN. - Promoters' Case. July 21.—Counsel stated that the bill was to authorize the construction of a short line from the Brent-ford station of the Windsor, Staines and South-Western to the Harrow station of the London and North-Western.

Evidence.—July 21.—Witnesses in support.
Opponents' Case.—Evidence.—July 21.—W on part of Great Western and several landholders.

GROUP 9.

WISHAW AND COLTNESS (Amendments and Deviations).—Decision.—July 20.—Preamble proved.

EDINBURGH AND GLASGOW AND GLASGOW, AIR-DRIE AND MONKLANDS JUNCTION (Amendments of Acts). - Decision. - July 21. - Preamble proved.

SCOTTISH MIDLAND JUNCTION (Amendment of Acts and Branch to Laurencekirk) .--Promoters' Case.-July 21.— Counsel stated objects of bill.

Evidence.—July 21.—Witnesses in favour.

UNOPPOSED.

EDINBURGH AND BATHGATE (Extensions).—Decision.-July 17.-Preamble proved.

LONDON AND BLACKWALL (Connecting branch). Decision .- July 18. - Preamble proved.

MONKLAND AND KIRKINTILLOCH, BALLOCHNEY AND SLAMANNAN (Amalgamation or sale and amendment). -Decision.-July 20.-Preamble proved.

ROYSTON AND HITCHIN (Extension) .- Decision. July 21.—Preamble proved.

# Reports of Meetings.

EAST INDIAN.

July 18 .- Special Meeting, London .- Mr. Acli-ONBY, M.P., in the chair.

The CHAIRMAN thought that any lengthened observations from himself were rendered unnecessary by the nature and fulness of the Report. He trusted that the document had been read by many gentlemen embarked in such an undertaking. astonished by the attempts, in newspapers and anonymous publications, to separate the interests and feelings of the proprietors from those of the board of directors-to create an impression that the interest of one was averse to that of the other. Now he had always thought theoretically, and he had not seen anything since he joined the Board to militate against the soundness of the theory, that the directors and sharcholders had one common interest; that they were not two bodies with two separate objects in view and two distinct modes of action, but that they worked for the attainment of one great end; that whatever benefited the one would be an advantage to the other, and that if the directors did not do that which was best for all parties, the cause did not originate in improper motives, inasmuch as their interests were identical with the interests of those whom they represented. He felt in his conscience that in having had the pleasure of working at the board of directors with a number of influential and honourable men, second to none in the City of London, he and they had had but one wish, and had endeavoured to perform but one duty, viz., the promotion of the interests of the shareholders, and of the accommodation of the public. It was now for the proprietors to say what course they were to take; whether they would do that which might be considered as an abandonment of a great measure at a large sacrifice of money, or proceed with it in the way suggested in the Report.

### The SECRETARY then read the Report.

In accordance with the resolution of the last special meeting, on the 18th of April 1ast, the directors made a call of 2t, per share, in order to place the Board in a position to effect the deposit of 100,0000, with the East India Company by the time required—namely, the 1st of May. The period intervening between the date of the call and the time fixed by the East India Company for the payment of the deposit, was so short, as to leave little ground for expectation that a was as short, as to leave the ground for expectation that a sum sufficient to enable the directors to complete the de-posit would have been received by the day specified. Your directors, therefore, in communicating a copy of the resolu-tions passed at the meeting (which they felt it right to lay before the Court of Directors of the East India Company), frankly stated the circumstances to them, and applied for such an extension of time as they conceived to be reasonable. Between the date of issuing the notice of call—namely, the 21st of April—and the 29th of the same month, namely, the 21st of April—and the 29th of the same month, the call was paid on 10,062 shares, many more shareholders expressing their desire to pay if a little extension of time were allowed. At the same time your directors, acting in conformity with the second resolution passed at the meeting, strongly urged upon the Court the sense entertained by the meeting that it would be impossible, under existing circumstances, to increase the list of their proprietary to an extent necessary to the immediate outlay of the group of 300 0000 for resolved by the Court of Divectors. tary to an extent necessary to the immediate outlay of the sum of 3,000,0006, as required by the Court of Directors, without an increase in the rate or term of guaranteed interest. The Court of Directors, in reply to these communications, declined either to extend the period for making the deposit or to increase the rate or term of guarantee; and as pending these negotiations, the Great Indian Peninsular Railway Company had accepted the terms proposed by the East India Company, and had made the deposit of 3,0006, required of them on a capital of 500,0006, it became obvious that further ambiguings based on an extended currents. required of them on a capital of 500,000L, it became obvious that further applications, based on an extended guarantee, would be unavailing. Under these circumstances, two alternatives presented themselves to your directors—the one, of winding up the company, taking the chance of obtaining a return of the whole or a part of the expenses incurred, in the event of the East India Company proceeding with the undertaking; the other, of bringing back the Court to a consideration of the views originally subsided to them by this company of the policy of company projects of the policy of company. mitted to them by this company, of the policy of commencing operations, in the first instance, on one section of the line between Calcutta and the north-west provinces. In weighing these alternatives, it appeared to your directors that there was no adequate reason for abandoning at a sacrifice an undertaking the merits of which remained the same as they had always been, notwithstanding the tempo-rary depression in commercial affairs; and they felt bound, and repression in commercia mains; and they let bound inder any circumstances, to endeavour to secure to their starcholders the option of carrying out a scheme for which the machinery was prepared and the groundwork laid. They had always contemplated—and in their earliest prossitions to the East India Company had proposed—to commence in the first instance by undertaking the construction of a section of the line between Calcutta and the north-west provinces, to be unutually agreed upon, intending to limit their first operations and engagements, and to leave the the nature and fulness of the Report. He trusted that the document had been read by many gentlemen present, who, no doubt, took a warm and deep interest in the success of this great undertaking. The directors there lay before the proprietors a plain and distinct statement of affairs. He would, for the present, cease to address the meeting, and he should, before he sat down, make only one general observation in reference to certain improper attacks made upon the board of directors. He joined this undertaking in March last (not having previously been connected with railway undertakings in this country), considering it to be of national importance, and affecting, in fact, the best interests of both Great Britain and India. He joined it, not with any notion of pecuniary speculation, for his investment in it was very small, but because he felt it his pride to be to be mutually agreed upon, not exceeding in cost 1,000,000L sterling." On the 4th of July the Board of the East India Company replied, through their secretary, as follows:—

"In reply the Court compand me to state that one

Company replied, through their secretary, as follows:—
"In reply, the Court command me to state, that on a review of all the circumstances of the case, they are prepared to accede to the proposition above quoted, upon condition that a sum of 60,000. be forthwith deposited in the company's treasury, and that satisfactory proof be adduced, within four months from the date of this communication, that the railway company will be able, through their registered shareholders, to raise the capital—viz., their registered shareholders, to Faise the enjuria—Viz., 1,000,00004.—proposed to be expended in the undertaking now suggested, so as to carry out that undertaking without delay, and in an efficient manner; but it must be distinctly understood that if this course is followed, the East Indian Railway bill now before Parliament must be withdrawn."

The effect of the arrangement offered to the company by The effect of the arrangement offered to the company by this letter your directors understand to be, that whilst the proprietary would have the opportunity hereafter of completing the whole line, if they thought fit, they would not be bound to undertake a work exceeding in cost 1,000,000, sterling. Your directors feel that in conducting the negotiations with the Court of Directors to this point, they have been enabled, notwithstanding more than ordinary difficulties, to place it in a position of comparative advantage. The proprietary, in August last, accepted the terms of the Court of Directors; but a portion of them became unable or un-willing, through the intervention of overwhelming monetary pressure, to respond to the call necessary to comply with the requisition of the East India Company on its then basis; and hence the Court of Directors, mistrusting the stability and nence the Court of Directors, mistrusing the standing of the company, were disposed to break off further negotiations. Your directors have been enabled to satisfy the Court of Directors of the East India Company of the caused originating the failure, and have induced them to accede to a smaller deposit, a more limited responsibility, and a to a smaller deposit, a more limited responsibility, and a basis of arrangement generally more consistent with the original proposition of the company. The company has only to make the deposit of 60,0000L, on which they will be at once entitled to 5 per cent. interest, and on satisfying the Court of Directors of their ability to expend one million, for which a period of four months is allowed them, they may proceed to complete a contract with the East India Company. If, on the contrary, they are unwilling to proceed they may wind up the company subject to the usual Company. If, on the contrary, they are unwriting to proceed, they may wind up the company, subject to the usual consequences. Should the proprietors resolve to proceed, the directors see no reason to doubt that the undertaking will become (as they regarded it from the first) a work of great national importance, and of considerable pecuniary advantage to those embarked in it; and they are pecumary advantage to those embaraced in it; and they are prepared to give it their best attention, relying on the full and hearty co-operation of the proprietors. The directors think it right to report, that the shares in respect of which the first call of 20s. has been paid amount to 37,441, and the capital thus represented to 1.872,050%, but inasnuch as the capital thus represented to 1.872.0500., but inasmuch as it has been understood that the shares are to be treated as shares of 201. each, the capital actually represented amounts to 748.0801. The directors, however, have reason to believe that if the deposit be made with the East India Company, the list of subscribers will be augmented in Europe and India. The funds now in hand the Indian accounts being made up to March last) consist of 14.0601. 32.94., invested in Exchequer Bills; of 24.7851. 16s. 91., invested in Exchequer Bills; of 24.7851. 16s. 91., invested in Enchequer Bills; of 24.7851. 16s. 91., invested in India Bonds; and 23.5351. 4s. 1-d. in cash—comprising the whole of the first call of 20s. per share on 37.441 shares; of 4.0671. 7s. 2d., monies paid in anticipation of calls; of the second call of 40s. per share on 10.662 shares; and of interest. It will, however, be in the recollection of the proprietary that the last call was paid on an understanding that the amount would be returned to the proprietary paying it on or before the 1st of October, if the deposit of 100.0000, were not completed on or before the 1st of May, or any extended time that might be allowed. The directors conceive that the proposed arrangement with the East India Company is within the meaning of the resolution under which that call was paid; but they would not feel authorized in paying in this money as part of the deposit without giving an option to the proprietors who paid it to receive it back. With their acquiescence the funds in hand are sufficient for the purpose of making the deposit, which will immediately entitle those who have paid the calls to interest at the rate of 5 per cent, per annum from the East India Company. The directors desire once more to repeat, that It has been understood that the shares are to be treated as immediately entitle those who have paid the calls to interest at the rate of 5 per cent, per annum from the East India Company. The directors desire once more to repeat, that it is entirely for the proprietors to determine the question, whether they prefer the prosecution to the abandonment of the scheme. Considering the unfavourable circumstances which have interfered with the progress of the measure since its commencement, it appears to the directors that they can at least congratulate the proprietary on having arrived at a stage of negotiation with the honourable Court of Directors involving the prospect of a practical result. Looking also at the intrinsic merits of the undertaking, and the value of the terms offered by the Court of Directors of the value of the terms offered by the Court of Directors of the East India Company, coupled with the expense and labour incurred, it seems to the directors that it would be a cause of regret to every interest connected with it, if, with such progress made, and so much information gained, the undertaking were now allowed to fall to the ground. directors, however, have only to add that, on whatever course the proprietors resolve they may rely on their unremitting exertions to give effect to their wishes, and to advance and protect their interests to the best of their

The SECRETARY then read the resolutions in sup port of the Report. They were-

1. That it appears to this meeting that the letter of the East India Company, bearing date the 4th of July inst., contains the basis of negotiations for a contract which this meeting is of opinion will be advantageous under existing circumstances. 2. That a call of 2l, per share made on the 20th of April last, for the purpose of enabling the directors to make the deposit of 100,000l, on the 1st of May then ensuing, be cancelled, and that the amount paid by the proprietors who have responded to the call be returned to

them on application. 3. That with a view to the deposit of 60,000L on the terms of the letter of the 4th of July inst. from the East India Company, the directors be requested to make a new call of 2L per share in lieu of that cancelled, and that the shareholders be requested to respond thereto without delay, it being understood that the whole of the call thus made be returned unless the contract be made with the East India Company to the satisfaction of a general meeting of the shareholders to be called for the purpose.

Capt. BARBER said there was not, in the Report any allusion to a subject which has prejudiced the company. It was understood at a former meeting that there was to be an amalgamation with the Great Western of Bengal, and resolutions were passed that three directors from the latter should join the direction of the former. He was told that they did take their seats at the Board. It would be well, he thought, to have explained why it was that they

were not now there.

The CHAIRMAN said it was not strictly an amalga-mation with the Great Western of Bengal, it was rather that of a company not able to carry out its undertaking merging into another under certain plans and proposals for the prosecution of one line instead of two. The arrangement took place before he joined the Board. No doubt this company engaged to meet the Great Western of Bengal on terms of which the proprietors of this company were cognizant, and, indeed, approved. A certain number of shareholders in the former did sign the deed of, and become scripholders in, the latter company, in lieu of being shareholders in such former company. Three of the directors of the Great Western of Bengal did join the Board of the East Indian, and continued members of it some time after he had the honour of a seat at it. The reason of their retirement had not been communicated to the Board. But one or two of those gentlemen were in the room, and perhaps they would state the grounds on which they retired. It was understood at the time the shareholders sanc-tioned the arrangement with the Great Western of Bengal, that the latter should be dissolved, and that on the dissolution they should join this (the East Indian) company, and regard its interests as their own. Such a step as the dissolution was considered by his colleagues as a matter of no great difficulty, but to their great surprise they were told by the legal adviser of the Great Western of Bengal that the body could not be dissolved in a straightforward course, but that an Act of Parliament must be had for the purpose. He believed a bill for that object was brought in without the sanction or knowledge of the directors of this company. That bill contained most objectionable clauses, calling on this company to give compensation to all sorts of people. These clauses were objected to, on the ground that they were not in accordance with the terms of the arrangement; but an offer was made to let the bill proceed such objectionable clauses were struck out. understood that the clauses were struck out, and that What the all of a sudden the bill was withdrawn. intention of the Great Western of Bengal was he did

Gen. M'LEOD said he did not quit the direction in consequence of seeing anything in the slightest degree dishonourable on the part of the Board, but he did not like many of their proceedings. If the informa-tion that he was now about to ask for were given, the shareholders would fully understand what it was that he objected to—it was the enormous staff of the company, and the unnecessary expenses incurred What he wanted to be laid before the meeting were the names and designations of the gentlemen of the staff sent out to India in 1847, including those already there, with the amount of their salaries, individually and collectively, and the terms of the agreement entered into, with the sums that had been paid to them, and what was the amount of liability to be provided for under the terms of such agreement, with a statement of the expenses of the London establish ment, including officers of all kinds.

The CHAIRMAN observed that the gallant general was fully entitled to the information he had asked for, and he and the meeting should have it. He had never been aware till the present moment that the gallant officer had ever before asked for anything of this sort in detail. He had believed that Gen. M'Leod was fully cognizant of all the arrangements and the whole of the expenses. If not, (and he said this with due submission,) he could not understand why it was that the gallant officer, who had full opportunity making inquiries, did not seek the information while at the Board.

Gen. M'LEOD said the whole matter was settled before he was at the Board.

The CHAIRMAN said that the directors, while re gretting such a large expenditure, believed that, under all the circumstances, it was justifiable.

Gen. M'LEOD wished it to be understood that he had asked for precise information on particular points,

because he knew that much discontent existed on the subject of the expenses.

Sir G. LARPENT, having been chairman of the company, perhaps might be allowed to state his impression and belief on this subject. To the third Report, presented on the 19th of February 1848, he found attached the names of Gen. M'Leod and Mr. H. Kennedy, as directors. It was there stated that, in pursuance of the policy determined upon by the Board, it had been resolved to take steps for commencing operations during the cold season, and that a competent staff of officers had been sent out to India. That Report appeared, with the names of the gentlemen he had mentioned attached as directors, and he felt confident that during the time he was at the Board every information required had been freely given. He must deprecate any discussion now that would prevent them proceeding with their present important business; and, having got rid of that point, perhaps he might be allowed to say a few words relative to this highly important undertaking. Having expressed in the last Report which he had the honour to frame—that of August 1847, that it was a work which, while it would "prove a blessing to the empire, would afford the means of a safe and profitable investment to individuals," he would pass over the difficulties which had unfortunately arisen since August 1847, and endeavour to call their attention to their present position; but, in doing so, he might be allowed to state that they had originally met with great difficulties, from the tardy manner in which negotiations were conducted between the East India Company and the Board of Control, and that they had scarcely got over them when they were thrown back from their position by the late unfortunate commercial crisis. He considered that, notwithstanding their present difficulties, the proposition of the East India Company was one which they ought to accept as the basis of future operations. He had seen similar difficulties in the prosecution of great works before, and he recollected the time when London and Birmingham shares would not be touched in the London market, and they now saw the position in which that company stood. He also recollected when a long paper controversy was carried on relative to the possibility of carrying out the overland route to India, in which he had taken so great an interest. He felt a kind of parental interest in the success of the East Indian Railway Company, and that was the reason which induced him to trespass upon them that day. He had always considered that in carrying out the important object they had in view, they should go hand in hand with the East India Company; and it was worthy of remark, that after making inquiry, that company adopted the line originally proposed by that (the East Indian Railway) company. When the East India Company identified themselves with that company by giving them a guarantee, which in the then state of the money-market was considered fair, he deemed it most important for their interests, and but for subsequent events he had no doubt the shares would have been readily taken up. The first proposition of the East India Company was to give them 4 per cent., which was afterwards extended to 5 per cent., but from September last it would have been impossible to raise money at those rates. But now, when the money-market was becoming calmer, the East India Company offered them the same terms, with the reduced deposit of 60,000l. and a capital of 1,000,000l.; and he called upon them not to lose the opportunity of driving in the wedge and obtaining possession of the line, identified as they would be with the East India Company. He considered the 5 per cent. a fair offer, and he believed the time was not far distant when they would be glad to obtain that rate for money, and he thought that they ought now to avail themselves of the offer of the East India Company, and try to carry out the line without letting others slip into their place. He was quite sure, from everything that he knew, and the opinion of successive governors of India, that this was the best line in the empire, and having once commenced it they were to have the option of proceeding with it if they saw fit. It was most important to the country in a military point of view, affording as it would a ready communication with the only part of India from which they could fear aggression—the north-western provinces. He felt that the plan now proposed could be practically carried out, and that while it would be of immense importance to India and this country, it might be made a safe investment. He trusted they would consent to the proposition before them which virtually bound them to nothing, as in the event of subscribing the 60,000l., they would have another opportunity of determining on the line proposed to be carried out, and, if not satisfactory, of withdrawing from the company without further loss. Capt. BARBER, in alluding to the various attacks on

Digitized by

the directors, asked whether a statement made in one of them was true—viz., that at the last meeting the secretary had brought forward a resolution and obtained a vote from the shareholders for a call of 2l. per share, after it had been unanimously decided against by the board of directors.

The CHAIRMAN knew of no such vote; indeed, so far as the opinions of the directors could be obtained, either by their voices or in writing, they were unani-

mously in favour of the call.

Capt. BARBER fully agreed with a writer, who signed himself "A Sharcholder," that it was to be regretted such large expenses had been gone to in India before the deposit with the East India Company was made; but then it should be recollected that those expenses had been sanctioned by the proprietors, and that no person could have foreseen the disastrous times which had come upon the country since August last. The gallant captain at some length argued in favour of adopting the proposal of the East India Company as the basis for their contract.

Mr. Brown thought that before they came to any decision they ought to know what line they were called upon to execute — what would be the expense of constructing it—and what the probable returns. It was obvious, if they agreed to proceed, that they would not require so large a staff for the construction of a line on which only 1,000,000l. was to be expended, as one on which 8,000,000l. or even 3,000,000l. was to be spent; and he wished to know whether there had been any attempt to compromise with the parties forming that staff to relinquish their engagements.

The CHAIRMAN entirely concurred with these opinions; but he wished the meeting to bear in mind that they were not at present called upon to do more than deposit the 60,000l. The East India Company would afterwards inform them what line it was proposed to construct, and if that company did not approve of it they would have the opportunity of rejecting it, and having back their 60,000l. with interest from the time of its deposit. With regard to the reduction of the staff, the committee of management in India had, on learning the position in which

they were placed, called the staff together, and proposed to them to relinquish their appointments and receive a compromise, and the result was that many of them had already returned to England. It was proposed that they should either be paid a certain sum at once, on condition of relinquishing their engagements, or that those that remained in India should be consolidated at one spot, and some arrangement come to for their future services. It was, however, resolved not to come to any direct arrangement until after that meeting, as, if they agreed to dissolve the company, only one kind of arrangement would be necessary. With regard to commencing operations at the time they did, he begged to observe that they did so in obedience to an intimation of its desirability in a letter from the East India Board.

After observations from Messrs. Henderson and Baxendale, Mr. Fisher thought the Report was deficient in one or two particulars. At present they were only promised a guarantee for 25 years, but nothing was said of what would be the probable return after that period; and secondly, nothing was said as to the amount of the liabilities; which he thought it was most important should be limited, especially if they wanted the public to join them.

The CHAIRMAN reiterated his inability to give an idea of the return until they knew what line they were to be called upon to carry out; and of their having the power to decline going on, and receiving back their deposits, if it was not satisfactory. With regard to the limitation of the liabilities of the shareholders, they had a bill before Parliament, one object of which was to reduce their shares from 50k. to 20k.; but it had been suspended before the committee of the House of Lords by the opposition of the East India Company and the Board of Control, in consequence of a petition of some of their own shareholders. If, however, that petition, which General M'Leod admitted that he, with others, had promoted, was withdrawn, the 60,000k. deposit made, and the subscription list, which now only amounted to 750,000k., filled up to the 1,000,000k. before the close of the session of Parliament, he had no doubt the bill would be allowed to pass.

Mr. Anderson suggested that, in order to open the door to those who wished to retire, the second resolution should be put as the first. He proposed that the call of 2l. per share, made on the 20th of April last, to complete the deposit of 100,000l. by the 1st of May, be cancelled; and that the amount paid by proprietors in respect thereof be returned to them on application for it.

Mr. Dent seconded the resolution, and expressed his belief that if they abandoned the concernal together it would be carried out by the East India Company themselves. He therefore suggested that a negotiation should be entered into with the East India Company, to see whether they would take up the line and make any allowance to the company for the expenses already incurred.

Messrs. Bird and Baxendale, as directors, expressed their belief that the East India Company would not take up the line, and that it would be useless to go again to the Board with any further propositions.

The resolution was then put and carried unanimously.

The CHAIRMAN said he next had to move the resolution, "That in the opinion of that meeting the letter of the East India Company contained the basis on which to negotiate a contract that under existing circumstances would be advantageous to the railway company."

The resolution having been seconded, Mr. Godfrey moved, as an amendment, that the meeting be adjourned, in order that the directors might have the opportunity of reporting that a line had been selected, and informing them what would be its cost, and the probable return upon it.

Capt. HENDERSON seconded the amendment, which, upon a show of hands being taken, was negatived by a majority of about three to one, and the original resolution carried.

The resolution was then passed to the effect that a call of 2l. per share should be made, in order to make the deposit of 60,000l. on the understanding that it was to be returned if the proposed contract was not agreed to.

[ For further Reports of Meetings, see p. 501.]

* For account, Aug. 10.

London Stock Exchange, July 21.—The Consol market having manifested, in the early part of the week, so great an im provement, the share-market

sympathized, and in creased business at improved prices was the result. The news from Ireland, however, did not allow us to enjoy this sunshine very long, and a decline has ensued in consequence.

Liverpool, July 20.—The news from Ireland has given a check to the previous improved state of our share-market; prices have declined, but not mate-SUDLOW, Brothers.

Mancheste, July 20.—We experienced a gradual improvement in our share-market during the week till yesterday, when the news from Ireland caused some reduction in prices. There is very little business

doing here to-day.

Sam. Grindred.

Birmingham, July 20.—There has been a good amount of business done in this market during the week, but the unsatisfactory intelligence received from Ireland has caused a re-action, and prices have receded considerably the last two days. North Staffrom Ireland has caused a reaction, receded considerably the last two days. North Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard Standard St

fords were done to day at 51s. 6d. dis. W. Banks.

York, July 20.— Little business transactions in shares have taken place during the past week. When stock is offered at the market price of the day it is generally taken.

Grayston & Earle.

Hull, July 20 .- The fine weather has improved the share-market, which shows more firmness than for some time past.

r some time past.

**FLINT & TOOTAL.

Newcastle-upon-Tyne, July 20.—The amount of business during the early part of the week was considerable; but the recent news from Ireland has had the effect of curtailing transactions, without, however inducing holders to press sales at the lower W. FORDYCE. nominal quotations.

nominal quotations. W. FORDYCE.

Glasgow, July 20.—The demand for shares was good in the early part of the week, and a gradual but steady improvement was the consequence. Yesterday and to-day, however, this has been checked on receipt of the news from Ireland, and the market

closes weak at the quotations. We add to-day's last sales:—Aberdeen, 23; Caledonian, halves,  $7\frac{1}{4}$  dis.; Caledonian and Dumbarton, 99s. 6d. dis.; Dundee and Perth, quarters, 9s. pm.; Edinburgh and Glasgow, 81; Edinburgh and Northern, preference, 15½; Edinburgh and Perth, 23s. dis.; Ayr, halves, No. 1, 7l. 9s. dis.; ditto, No. 2, 7½ dis.; Greenock, preference, (51 paid), 51; North British, thirds, 36s. dis.

BUCHANAN, AITKEN & Co.

Paris, July 20.—After various proposals, the Government, it is said, is now disposed to treat with the shareholders of the PARIS AND LYON on the following terms:—7f. 60c. rente are to be allowed the share-holders in exchange of the 250f. paid in by them for every share. The sum of 1,400,000f., paid in addition to those 250f. per share, are to be reimbursed in specie. "Nevertheless," says the Constitutionnel, "it would be indispensable, previous to the conclusion of the affair. that the Government should take into consideration the decision adopted to-day by the Committee of Public Works. A sum of 25,000,000f, is necessary to complete the works to be executed this year on the Lyon Railway. The Committee accordingly resol to divide the shareholders into two categories:-The Committee accordingly resolved Those who should not pay up their instalments would receive a rente of 7f. 50c. for the 250f. they have already advanced. 2. Those who undertook to pay the 500f., the amount of each share, according as it should be called for, are to receive a rente of 25f. The Committee intended by that measure to encourage the shareholders to afford the State the resources it stood in need of, by securing to them for that loan of 250f, an interest of upwards of 7 per cent. Thus would vanish, at the same time, the reproach addressed to the Government of taking advantage of the difficult situation of the company, since it would ensure an interest of 5 per cent. to the shareholders who should fulfil their engagements.

IRON TRADE. Glasgow, July 14. - Latterly there has not been so much doing, and the late advance has not been maintained. To-day prices quoted are 46s. per ton, cash.

# Joint-Stock Companies' Bazette.

Joint-Stock Banks.

On Tuesday last the directors of the COMMERCIAL BANK OF LONDON convened a meeting of the shareholders, to receive the eighth annual report of the affairs of the bank, which showed that the year's operations had been very satisfactory and encourag-ing. The nett profits for the last year, after allowing for all bad and doubtful debts, amounted to 11,568l.

The dividend declared was at the rate of 6 per cent. per annum, free from income-tax. The report stated that, after paying the above dividend, &c., there remained a balance of 2,1691 to be added to the reserve or guarantee fund, which is now increased to 17.386/. The report was adopted unanimously, and two new directors were elected, Messrs. CHARLES HILL and THOMAS WINKWORTH, and thanks voted to the directors and to the manager (Mr. A. R. Cutbill) for their zeal in promoting the interests of

The half-yearly Meeting of the LONDON AND WEST-MINSTER Bank proprietors took place on Wednesday last. The report stated the nett profits to be 24,838% for the half-year ending June last. The total amount of losses written off since the last accounts rendered to the shareholders was stated to be 14,000l. The profit and loss account of the last two half-years remaining undivided amounted to 125,486l., and after paying a dividend of 3 per cent. for the half-year (6 per cent. per annum) there remained a balance to be carried to next account of 95.486l. The business of the bank, according to the report, continues to increase. A discussion took place respecting the principle, &c., of election of directors. Mr. Ald. Salomons defended the mode of election, and contended that something more than mere wealth and interest as a shareholder was required to conduct a bank successfully, and that the proper qualification was an aptitude for business and to be perfectly conversant with commercial affairs. Mr. Salomons' explanations satisfied the meeting. The Report was adopted, and the dividend as proposed declared. Thanks were voted to the directors and officers for their management of the bank.

For some time past there have been rumours among the banking circles, respecting a joint-stock bank, which, it is stated, is discounting for some of the West-End nobility at rates ranging as high as 50 or 60 per cent. How true this is, it is at present impossible to say—but certainly the quarters in which it is most canvassed give it every appearance of truth. Such transactions will only end in loss to the bank, and cause the accounts and balance sheets of the company to show rather a heavy item under the title of bad and doubtful debts at the next meeting of the shareholders.

# Docks and Canals.

The half-yearly court of the EAST AND WEST INDIA DOCK COMPANY was held on the 10th inst. The report for the shareholders was presented and the usual dividend declared upon the capital stock of the company.

The half-yearly meeting of the SWANSEA DOCK COMPANY was held on Thursday last. The report stated that the reduction of duties on copper ore would considerably increase the receipts of the com-pany, and the prosecution of the Australian mines would likewise give an influx of business. The receipts amounted to 5,988l. 8s. 7d., and the expenditure to 4,850l. 13s. 8d., leaving a balance of 1,147l. 14s. 11d. to the credit of the company. The disputes between the board of management had been amicably settled, and the secretary had voluntarily offered to forego 2001. a-year of his salary, which would now be only 1001. per annum. The report and accounts were approved and adopted, and the usual vote of thanks passed to the directors.

An agreement for the sale of the Andover CANAL NAVIGATION to the Manchester and Southampton Railway Company has been entered into, whereby the shareholders in the canal are entitled to participate in all the advantages that may arise from the sale to the railway company.

## Mines.

The letters that have been received from the NATIONAL BRAZILIAN MINES are to May 6. The advices state ten days working to produce 14 mcs., 5oz., 4 oits., 18 gr. We have not heard whether the unfortunate disputes between the directors have yet been amicably settled. The interests of all parties is at stake in such matters.

Letters from Gongo Soco, dated May 3, state that

the workmen, &c. of the IMPERIAL BRAZILIAN MINING COMPANY had left for Rio, to fetch machinery, &c. to Bananal, and subsequent advices announce its safe arrival there. A parcel of gold, stated by the agents |

to be 16 lb. 9 oz. odd, had been received for shipment to England.

The accounts received from the Asturias, mention the mining operations as satisfactory. The demand for the iron is stated to be on the increase and the blasting furnaces to work well. The captain of the mines writes encouragingly, and it is expected that no further call beyond the one due in August will be required. The calls made by the Directors we know have not been met by the shareholders with that readiness which would have enabled them to display to a greater extent the value of the mines. The amount of shares that have been forfeited will fully bear out this statement. That the prospects of the shareholders will brighten, and that the promises made in 1844 will yet be realized, is the opinion of many interested in the undertaking.

The letters received from the mines of St. John DEL REY state the returns for the month of April to be 16,059 oits., and the profit for the month at 2,203l. Mr. Keogh (the late secretary) was sent to the mines last year by the directors, and has since been appointed manager there. The dividends upon the shares are regularly paid, and the mines are worked and managed well.

### TO CORRESPONDENTS.

In reply to "A Subscriber," who wishes to know whether the Exeter and Yeovil line, just obtained, includes branches also to Chard and to Bridport,—and also whether the gauge question is quite settled upon this line by the decision of the committee, or whether it is yet competent for the Railway Board and Commission to direct that the mixed gauge be adopted,—we have to state that the branches to Chard and Bridport have been cut off in the Commons; and that the narrow gauge is finally settled by the rejection of the mixed-

J. K. is thanked. His communication shall be discussed. We have not room for the whole of the Mechanical Engineers' meeting.

Let our correspondent D. M. inspect the tunnel through

# Railway Chronicle.

LONDON, SATURDAY, JULY 22.

Two meetings of shareholders in London, dissenting from the proposed raising of 745,180l. by 7 per cent. preference shares, by the directors of the CALEDONIAN, have been held. They do not appear to have gained their object, as the proposal of the Board was subsequently carried in Edinburgh, by a large majority.

A meeting of shareholders of CAMERON'S COALBROOK STEAM COAL AND SWANSEA AND LOUGHOR received the report from a committee of inquiry, which, with many details, blamed the directors for imperfect performance of their duties, and which was adopted (Col. Cameron being the only dissentient).

The committee of inquiry appointed on the 21st ult. by the shareholders of the SAMBRE AND MEUSE have presented their report. It attributes a want of caution in the arrangements of the Board with the contractors, and furnishes details of management which exhibit neither prudence nor foresight. Two vacancies at the Board were filled up, and the meeting adjourned for the election of the other two

The shareholders of the ITALIAN AND AUS-TRIAN, after altering the recommendation of the directors to create new shares of 10l. each, in lieu of the present shares of 50%. each, by limiting the value of the shares to 6l. 13s. 4d., adopted the report. That document gives promises of the success of the project, as the line from Florence to Prato has already surpassed previous calculations. The Count de St. George appears to have laboured unceasingly for the benefit of the company, in entering into arrangements with the Tuscan States.

In default of receiving the decision of the local Government the directors of the CEYLON recommend in their report that matters should 5s. will probably be made to meet existing lia-

The following is the business of the COMMIT-TEES carried on during the past week. In the Lords—preambles proved:

Edinburgh and Bathgate (Extensions).

Edinburgh and Glasgow and Glasgow, Airdrie and Monklands Junction (Amendments of Acts).

Edinburgh and Northern (Branches to Boscobie, Keltyhead and Glencraig).

Retylicate and Generally.

Fleetwood, Preston and West Riding Junction (Burnley and Colliery Branch).

Great Western (Birmingham and Oxford Junction

purchase), (Slough to Windsor).
London and Blackwall (Connecting branch).

London and North-Western (Deviations and Extensions at Leamington).

London and South-Western (Power to Purchase Steamboats, &c.).

Monkland and Kirkintillock, Ballochney and Slamannan (Amalgamation or sale and amendment) Oxford, Worcester and Wolverhampton (No. 2).

Royston and Hitchin (Extension).

Stirling and Dunfermline (Amendments and Deviations)

Wishaw and Coltness (Amendments and Deviations).

From our official returns it appears that the amount of traffic for the last week, on 3,910 miles of railway, was 205,998l., thus accounted for:—112,970l. for the conveyance of passengers only, 44,850l. for the carriage of goods, and a remainder of 48,178l. for passengers and goods together, not respectively apportioned; being an increase of 16,067l. over the corresponding week of last year, when the mileage was 3,100. The average earnings per mile were 521., whilst in 1847 they were 611.

# THE BIRMINGHAM AND OXFORD CASE SETTLED.

The mixed gauge is to be carried to Birmingham, so the Committee of the Lords have finally decided. According to the declaration of the counsel for the Great Western the mixed gauge is to be extended at the earliest opportunity to Manchester and Liverpool. In this decision there is nothing extraordinary, as we long ago observed: unless the broad gauge was forced back to Oxford it could not be arrested at a miserable village in Warwickshire, within forty miles of the traffic of Birmingham. The question was virtually decided in 1846, when the gauge report was mutilated and the deceptive Gauge Act passed without a protesting word from the hands of the narrow-gauge party. In 1847 there was a chance in a narrow-gauge combination to amend the Gauge Act when the flaw which re-opened the Gauge Act was discovered. Whenever we think of this turning point of the gauge question we cannot help wondering what all the numerous and expensive legal staff of the narrow-gauge party were about when they permitted this obvious flaw to pass unnoticed. Judging by the experience of the Great Western, the South-Western, and the Great Northern, it would be far better to rest the legal responsibilities of a company upon one efficient firm instead of dividing it to suit the convenience of bills of costs. The Grand Junction never sustained a defeat as long as they put their whole trust in one able and clear-sighted lawyer. From this decision in the Birmingham and Oxford case we learn that it is not sufficient to afford the best accommodation to the public at the lowest rates, and have at the head of your company gentlemen of the first character for integrity and financial ability, unless pains are taken to secure an efficient parliamentary representation, and unless battles are contested on broad principles of public benefit instead of narrow nisi prius principles of private interest. The Birmingham and Oxford case was a cause of national importance, but by mis-management it was narrowed be left in abeyance for the present. A call of down to the dimensions of a petty private

squabble for traffic between two companies .-On the part of the narrow gauge, thanks to the interest of the Bucks lines, the battle was well fought in the Lords. We must now wait until the public and the Great Western shareholders find out the practical meaning of the mixed gauge.

### EAST INDIAN RAILWAY.

We called attention to the position of the East Indian Railway Company last week, and indicated the course which we considered it most judicious to pursue, under existing circumstances. Since we expressed those views, the meeting of proprietors has taken place, and after a very lengthened, and rather stormy, discussion, it was agreed to accede to the terms proposed by the East India Company. These terms, as we stated last week, are that the East India Company shall guarantee 5 per cent. interest for twenty-five years, upon a sum of one million sterling, on condition of the immediate payment of a deposit of 60,000l. into the East India Company's treasury, and the exhibition within four months of a satisfactory list of registered shareholders.

At the previous meeting of the company, on the 18th of April, it was unanimously resolved, that unless the East India Company conceded improved terms of guarantee, the abandonment of the undertaking was inevitable. In the in-terval, the East India Company has not merely refused to increase the rate or duration of guarantee, but has actually reduced, by two-thirds, the amount which the guarantee covered; yet, in opposition to their previous unanimous determination, the shareholders have now consented to accept, not the guarantee which they formerly declined, but the inferior guarantee upon

one million!

In order to complete the agreement with the East India Company, the sum of 60,000l. must be paid into their hands forthwith, and with this view another call of 2/. per share is to be made, the funds accruing from the former call being reclaimable by those who responded to it. is difficult to see what prospect there is of the shareholders now supporting the directors, when they declined to do so with a superior inducement; and it seems most probable that, after the reclamation of the previous call, the shareholders will disregard the present one; the East India Company will be in a position to declare all negotiation at an end, and the last chance which the shareholders had of at least partially retrieving their losses will be for ever lost, unless the East India Company should, in a fit of generosity, present them with some solatium for their mortification. But supposing that it were possible to fulfil the conditions of the agreement with the East India Company, it is desirable to consider what would be the position and prospects of the East Indian Railway Company. The object which it proposed to accomplish was the construction of a railway from Calcutta to Mirzapore; and the cost of this, it was estimated in the Report of the Directors, would amount to ten millions sterling; and the dividend which was anticipated was 12 per cent. By the same means of investigation it appeared that a line from Calcutta, carried only a part of the way towards Mirzapore, would be commercially unsuccessful, inasmuch as it would not secure the traffic of the Ganges, which is at present the great medium of internal communication, and that instead of returning a dividend, it would occasion a loss of more than 3 per cent. per annum. If then the million sterling, to which the railway company proposes to limit its operations, the East India Company; but can they find no better investment for their money than that afforded by a guarantee of 5 per cent. for a limited time, and that too in India, where the value of money is much greater than in this country? If a simple interest of 5 per cent. has such attractions for the proprietors, why did they not, when they had the option, invest three millions at that rate instead of one million only? It is a mistake, moreover, to suppose that a return of 5 per cent. will certainly accure to the company; for even though they receive from the East India Company 5 per cent. upon the capital invested, they will have to deduct from this 3 per cent. for the yearly loss upon the railway, leaving the fortunate proprietors in the receipt of the magnificent dividend of 2 per cent. Such a result it is impossible to obviate; for an attempt to evade the difficulty by ceasing to work the line would provoke the resumption of the railway by the East India Company, who would insist on the proper accommodation of the public.

For the present, we must leave this subject; but we do so with an earnest recommendation to the proprietors to examine it carefully in all its bearing; and if they come to the same conclusion as ourselves—as we feel assured they must do-then let them resolutely decline to pay any further calls, which will virtually be a demand that the company be dissolved, steps being taken at the same time to obtain some compensation from the East India Company, in return for the plans and surveys. By the adoption of this course alone can they secure themselves from further loss, unknown responsibilities and lasting mortification.

FICTIONS AND TRUTHS CONCERNING THE LONDON AND NORTH-WESTERN.

Last week we printed the substance of an official reply from Mr. CREED, of the LONDON AND NORTH-WESTERN, to statements respecting that company which a certain Mr. Arthur Smith put forth not long since, in an ill-written and shallow pamphlet, entitled, 'The Bubble of the Age.' We did not regard this publication as deserving of any notice at the time, an inspection of its contents having shown us at once that the writer's information on the subject consisted merely of such ill-digested scraps as can be gathered from the letters in the Times and Mr. Morrison's partial statistics; and that the collector of these had engrafted on the errors of his originals, as to matter of fact, a mass of blundering comment of his own, of which both the invidious purpose and the extravagant deductions were too palpable to deceive any but the weak and ignorant. That any one who has a real interest in railway affairs could be misled by such an attack as this, appeared wholly out of the question; while the opinions or prejudices of those whom alone the pamphlet was likely to impose upon, cannot be of much consequence to any one, and are, moreover, quite beyond the reach of any kind of rational demonstration whatever. In short, we did not think Mr. Arthur Smith an assailant either formidable or conspicuous enough to make it worth our while to placard the folly of his attack; and it has rather surprised us to find that the directors of the London and North-Western have deemed it necessary to make a formal defence against that part of it which concerns their undertaking.

One can the less understand why any industry should just now be wasted in demolishing chimeras, the character of which no rational bystander can mistake,—as there are realities serious and tangible enough, in the actual posi-

secured from absolute loss by the guarantee of | will certainly task all the diligence and skill of the directors to meet in a way acceptable to the proprietors. It cannot be presumed that Mr. Creed's explanatory letter can have any covert reference to this far more important object; or that it can be meant, by thus destroying what is merely false, to produce the impression that there are no true grounds of anxiety or dissatisfaction on the part of the shareholders. Board, we are sure, have too much good sense, and possess too accurate a view of the extent of those grounds, to entertain any such design. They must be perfectly well aware that, after they have completely silenced whatever absurd rumours ignorance or wilful deceit may circulate, the real condition of the concern must still present itself seriously enough and in plain figures to those who belong to it; and that it is this condition, and not any fictitious statement of it, of which a satisfactory account is most earnestly desired, and may be the most difficult to afford.

> The extent of this difficulty can be readily appreciated, when we look back on the former state of the several companies now merged in the London and North-Western, or even compare the circumstances of the latter itself two vears since with what they are at this moment; taking into this account the while, on the one hand, the premiums that holders by purchase have in past years paid for their shares; and, on the other, the sums that original holders have had to contribute, with the result to them, of late, of a positive decline in their total dividend receipt. The circumstances described not long since in a letter addressed to us by an original shareholder, are not, we know, peculiar to him alone. There are dozens like him, who have been paying, for the past two years, from 300l. to 1,000l. annually in successive calls, whose last dividend was, and whose next dividend will be, less than they received before a penny of these additional sums had been drawn from their pockets into the company's exchequer. This class of facts and results collected and weighed, and then illustrated by a survey of the company's traffic tables for the last twelve months, we apprehend will present matter for consideration far more serious and authentic than any of Mr. Arthur Smith's groundless imputations. It can be easily shown that the latter are grossly erroneous—it will be difficult to prove that the former do not justify an inference, as to the policy adopted by the directors for some time past, which must enforce the necessity of a totally different system prevailing hereafter.

It will doubtless be urged, when the present state of things is discussed, that it has been mainly owing to the general distress, in which all other interests have also been suffering. That this has largely affected the traffic, and tended to depress the value of the stock, no one will deny. But it would be quite erroneous to ascribe a great part of the actual results visible in either the one or the other to this general cause. It is clear that, in spite of the bad times, the traffic on all the vital parts of the service has been sufficient, with good economy of capital, to have produced a good nett income, had not this receipt been loaded with the interest payable on unprofitable branches and expenditure in fruitless contention;—that in the abundance of money which has prevailed during the last quarter, it is not the "drain of specie" that keeps the stock, for which many holders have paid 210l. to 220l., at prices below 130l. The one, in short, is due in a great measure to the works, obligations and expenses created by the be expended in making a portion of the line, tion of the London and North-Western, which policy of past years; the other, to the instant the result can only be failure and discouragement. No doubt the shareholders will be of all concerned in that company, and which it and to the apprehensions of the future con-

501

tinuance and growing burden of that policy. The matter, therefore, which really calls for the directors' care, lies within the range of their own councils: the causes which have inflicted so serious a loss in the money value of the company's stock-so grave a decline in the money receipts from it—are in a great degree within their own reach, and may still, we hope, but only if wisely and resolutely handled, be reduced to a narrower compass. This we believe to be a persuasion rapidly gaining strength amongst the shareholders; and if the directors were inclined to hear us, we should strongly advise them to address themselves as strenuously as may be to this topic, and to its various practical conclusions; being quite certain that here -and not in anything which accusers of the Arthur Smith class may throw out-lies the real onus on the administration of nearly all our great railway concerns.

### Correspondence.

### WATERLOO-BRIDGE EXTENSION SHARES.

In your Chronicle of the 1st inst. you have expressed some commiseration for the holders of the above shares, in the FAILURE OF THE OPENING of the extension line on the 30th ult. As one of the unfortunates, I was curious enough to look at the certificates, to ascertain the exact terms on which they were issued, and I find that your representation that the holders would be deprived for six months of sharing in the regular dividend is not consistent with the terms as printed on the face of the certificates :_the words are__

This share bears interest at 4 per cent, per annum from the lat of December 1846 to the 31st of December 1848, or (if earlier than the 31st of December 1849), to the 30th of June or 31st of December next ensuing after the opening of the Waterloo Extension, and dividend at the same rate as the dividend-bearing shares upon such interest ceasing Now to entitle me to take dividend at the end of this year, for the half-year's earnings of the extension, it ought to have been opened before the 30th

of June; as it is, I shall come in for dividend on the 30th of June next year, the earliest moment I should have been entitled, as it seems to me, whether the opening had really taken place on the 30th, or, as it happened, a week later—unless the directors were to declare the "opening" to be effected by the Government inspection.

[The intention evidently was, that the shareholders should receive dividend for the first bond fide halfyear of working over the extension, and the certificate seems quite to bear out that meaning. Ed. R. C.]

## THE GAUGE CONTEST.

Now that the expensive contest which has been so long carrying on has terminated, you cannot fail to perceive that a precisely similar result would have been arrived at had the broad and narrow-gauge parties agreed to allow each other's bills to pass unopposed. It is true that had this plan been pursued the various officials would not have had so favourable an opportunity of displaying their abilities, but it is equally certain that a good round sum of money, which has been needlessly squandered, might have been unostentatiously divided among the shareholders,-a proceeding which I would have preferred to all the éclat of the contest. However, it is in vain to lament our past errors; nevertheless, we may profit by them, and can make a practical application of the experience which we have purchased at so dear a rate, by insisting at the approaching half-yearly meetings that no more such folly shall be committed.

A SOUTH-WESTERN SHAREHOLDER. Barnstaple, July 15.

## Gassip.

It is wonderful how instantly commerce employs any new channel of communication almost as soon as it is open to it, if it be its interest to do so. Scarcely has Yarmouth become recognized as a port for shipping to Rotterdam, when the exporter of cotton twist sends it thither from the furthermost parts of Lancashire for shipment. Not a month has elapsed since this new means of communication with Germany had been advertised, before a freight of cotton twist passed over the Manchester, Sheffield and

Lincolnshire, the Midland, the Syston and Peter-borough, the East Anglian and Norfolk lines to great Yarmouth, and was shipped thence. We congratulate Mr. Hudson on this evidence of what his management has been able to do for the once despised Eastern Counties—and the fact also proves what the docks at Great Grimsby may fairly expect to obtain of this class of exports when the chain of railways is completed.

The PLEASURE TRAFFIC on the South-WESTERN, since the opening of the line to Waterloo Bridge, has enormously increased-indeed, so great was the rush on Sunday, that, although every available carriage was brought into use, numbers were left behind: we have been informed officially, that upwards of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the con 4,000 persons beseiged the station at one time. increase has been steadily maintained; and there can he no doubt that when the Hampton Court and Windsor branches are completed, which will be in about a fortnight, the pleasure traffic on this line will be the greatest in the country. Those who would enjoy to the utmost the day devoted to these trips, should provide themselves with Felix Summerly's book of 'Pleasure Excursions,' which can be had at Winchester, on this line, are each illustrated with engravings, and ample instructions are given that the visitor may make the most of the time.

The boats of the CHSSTER AND HOLYHEAD for the passage to Dublin will rival the noble fleet possessed by the South-Eastern. On the 13th a trial of the new iron steamer, Cambria, constructed by Mr. J. Laird, of Birkenhead, was made between Liverpool and the Menai Straits. The Cambria is the property and the Menai Straits. The Cambria is the property of the Chester and Holyhead, and is intended, when the works at Holyhead are completed, to ply between that station and Kingstown, in connexion with, or rather in extension of, the railway. The local papers describe her as being of fine model, remarkably neat appearance, and great strength. The utmost care and skill have been exercised in so constructing her that she may combine the best qualities of a sea-boat with the highest amount of speed. The following are the particulars of her dimensions:—length of water-line 193 ft.; beam, 27 ft.; draft of water, about 9 ft. 3 in. tonnage, about 700 tons; diameter of cylinder, 73 in.; length of stroke, 5 ft.; diameter of cylinder, 73 in.; length of stroke, 5 ft.; diameter of paddle-wheels, 28 ft. 6 in.; number of strokes per minute, 24 to 25; power, 370 horse. The result of the trial was in all respects highly satisfactory. The speed of the vessel was, during the trip, ascertained to be full 17 miles an hour, and on this rate there will, no doubt, he a considerable improvement when she comes under the management of her regular officers and crew, and when the engines have been worked into full facility of action. She had on board all the weight which she will have to carry on her station, so that the trial was a perfectly fair one in this as well as all other respects. She steers remarkably well, and as she is altogether free from tremulous motion she will be an exceedingly pleasant boat for passengers.

The Carlisle Patriot, in announcing the death of Mr. J. Stephenson, railway contractor, at Rotherham, on the 8th inst., rightly enough observes:—He was a remarkable instance of what may be accomplished by the force of natural talent, aided by industry and integrity, for by the exercise of these qualities he raised himself from the position of a humble artizan to that of an extensive and influential railway contractor. Some of the most gigantic undertakings in the kingdom were executed by the firm of which he was at the head.

The Act for the lease of the Hartlepool Dock and Railway to the York, Newcastle and Berwick having passed, the receipts are now included in the returns

of the latter company.

The motion for a select committee, which was to have been made by the Marquis of Londonderry, into the affairs of the LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION, WAS WITHDRAWN On the understanding that the petitions of some further landowners, which embodied certain allegations relating to the conduct of the directors should be received and referred to the select committee on the bill, and be entrusted to Mr. Mosse, the opposi-

The BIRMINGHAM AND OXFORD meeting, adjourned to the 18th, was again adjourned from day to day to the 20th-and then adjourned to the 24th inst., at 2 o'clock.

The London and Nobth-Western, encouraged doubtless by the easy state and cheap conditions of money, is about to conclude an agreement with the Aberdeen, by which the former covenants to take shares at par in the latter to the extent of 140,000l., and undertakes to enable it to pay off debentures at short dates and high rates which shortly become due.

cisely transpired. In taking shares at par, or say at the 50t, paid, when they can be bought in the market at about 22t, or say 28t. discount, countervailing advantages in some shape or other of a prospective nature must necessarily be stipulated or contemplated.

A policeman committed suicide at the Ivybridge station of the SOUTH DEVON by sitting on one of the transoms of the line previous to the approach of the 7 30 a.m. up train. The curve is so short that command of the road cannot be had beyond a distance of a few chains.

The terms at length said to be adopted for the purchase by the State of the Paris and Lyon line, and which have been finally settled, are 150f. of 5 per

and which have been finally settled, are 150f. of 5 per cent. rentes at par for each share.

The sum of 2,000,000f. (80,000L.) voted for the matériel of the Versailles and Chartes has been appropriated to the employment of the manufacturers of Paris and its suburbs, in constructing the locomotives, carriages and tenders for that line, which is shortly to be opened. This, it is expected, will relieve the State from some portion of the burthen of providing for the unemployed operatives.

A speedy and effectual method was adopted by the Mayor of Orleans in bringing some refractory enginedrivers to their senses, during the last insurrection.

M. Martin, the Mayor, says the Globe, having heard that the engine-drivers on the Orleans inc refused

that the engine-drivers on the Orlieans line refused to bring up the train containing the National Guards who had volunteered to assist in quelling the insurrection in Paris, went to the station, and formally summoned the men to their duty, but they refused acquiescence. He again summoned them, and they again refused. He then called on the National Guards to obey him, saying that he would assume all the responsibility of what he was about to do; and, same moment, he made them seize one of the ringleaders, and on the man, in answer to another appeal, again refusing to drive the engine, M. Martin ordered that he should be instantly shot, and he warned the other men that he would treat them in the same way if they persisted in their refusal. Execution was just about to be done, when the men, seeing that M. Martin was really in earnest, offered to resume their duty. It was entirely owing to this energetic act that Paris was enabled to have the assistance of the National Guards on the Orleans

## Reports of Meetings.

[Continued from p. 496.]

LIVERPOOL, MANCHESTER AND NEWCASTLE July 20. - Adjourned Meeting, London. - Mr.

FPRANCE in the chair.

The CHAIRMAN stated that the bill now before Parliament for the dissolution had been read the second time in the House of Lords on the 13th inst., and that it was probable a committee would be appointed some day next week to examine it on its merits, after which he had no doubt it would pass.

In answer to a Shareholder, the CHAIRMAN said the only opposition they expected against the bill was from one petition, which was signed by seven was from one petition, which was signed by seven small landowners, representing in the aggregate about 16 acres of land. He believed none of them were shareholders, and that their opposition would be easily disposed of.

On the motion of Mr. Parsons, the meeting adjourned to the 3rd of August.

SAMBRE AND MEUSE

July 19.—Adjourned Half-yearly Meeting, London, to receive the report of the committee appointed on the 21st ult. to inquire into affairs.—Mr. W. P. RICHARDS in the chair.

Mr. SHEWARD, the chairman of the committee,

Mr. SHEWARD, the chairman of the committee, read the report, which stated—
That the original concessionnaires, Messra. Riche de Bou & Co. ceded their right to the company, on condition that they should be employed on the construction of the entire line, which they undertook in a lump contract, according to the estimates of their own surreyors and those of the Government, for 508,000. On the 12th of April 1845, the director determined on certain changes in the construction of the line—for instance, locomotive for horse power, and a double line of ralia instead of a single line. The first was therefore set aside, the lump contract was abandoned for one of a schedule of prices, and a sum, as compensation for the concession, amounting to 24,000%, was placed to the credit of the contractors. In addition to the price to be paid by measure for the work and labour performed, they were to receive 10 per cent. for contingencies, 3 per cent. for surreillance, and an extra 3 per cent on the whole cost of land and works, provided certain portions of the line were completed within a fixed time. The committee regret that when the first contract was deemed insufficient in the letter, the spirit of it was done away also; for this omission they could not securit the director of wast of numbers. Before the direct it was done away also; for this omission they could not acquit the directors of want of prudence. Before the directors of want of prudence. acquit the directors of want of prudence. Before the directors had determined on the acquisition of a rival line, 35 short dates and high rates which shortly become due.
What the exact conditions are per contra in favour of the London and North-Western have not yet pre-

taken. The committee were satisfied that the sums necessary to complete the original line and all the various sary to complete the original line and all the various branches must exceed the subscribed capital by at least 1,000,000.1. They considered that the advances to the contractors, amounting to 81,3421., were injudicious, and not required for the works, and particularly objectionable, on the ground of the money being lent on insufficient security. They also objected to the mode of paying the contractors, in some instances beyond the value of the work executed. In speaking of the state of the works, the report complains that a branch line, which runs through a very thinly populated district and intended principally for mineral traffic. lated district, and intended principally for mineral traffic, should have been so expensively constructed; that the works on other portions might have been less expensively constructed, and, at the same time, sufficiently substantial for all the necessary purposes. The committee regret to observe that the section of the line from Walcourt to the observe that the section of the line from Walcourt to the junction at Marchienne, in fact the whole of the work (excepting the Sanefle branch) included in the first section, cannot be said to be generally light; that it will be found as expensive as the same length in many parts of England. They are of opinion that had a greater foresight been exercised in the application of the funds, and a more complete check been kept over the expenditure, the first section would have been opened without having now to call upon the shareholders for additional capital. A proof of the incautious mode of procedure is stated to be found in the entire inattention to the cost, as compared with the estientire mattention to the cost, as compared with the estimated expenses of the works; and it is shown that the increased expenditure over the estimate on works already completed from Walcourt to Marchienne-au-Pont amounts to 44 per cent. They have no confidence in the estimates for the works set forth in the report presented last June, and are of opinion that unless a strict superintendence be and are of opinion that unless a strict superintendence be adopted with reference to finishing the works at the least possible expense consistent with security and solidity, the total cost of the line will considerably exceed 1,000,000t., and that it is quite clear, unless some other system be adopted, what was estimated to cost 1,000,000t. only will in reality require 1,440,000t. Nearly 10,000t. Will be lost to the company by the depreciation in Belgian bonds. Unless the Belgian Legislature relax in some degree the letter of their bond, the companies for the three works undertaken can bond, the committee fear that the works undertaken can never be carried into completion, from the utter impossi-bility of raising the money. The committee are of opinion bility of raising the money. The committee are of opinion that their future course is beset with difficulties, and that the only chance of success the undertaking now possesses depends entirely upon the energy of the management. Four seats in the direction have been placed by the directors at the option of the shareholders by the retirement of four of their body.

Mr. Lindo proposed a vote of thanks to the committee.

The CHAIRMAN said that he and his brother directors would cordially agree in that resolution, as they had but one wish, that the affairs should be conducted in the best and most beneficial manner. He thought the directors were entitled to some consideration, owing to the change of circumstances. The directors, at a distance from the spot where the works were being carried on, had, doubtless, been often imposed upon, while the contractors were continually on the watch, and, being acquainted with the laws of the kingdom, had taken advantage of them. He believed they had seen enough to make them careful how they in future employed their money in indus-They all regretted what trial enterprizes abroad. had taken place, and they now saw their error. He hoped the gentlemen who might be elected to the direction would bring with them the same acuteness and industry which had distinguished the committee in preparing the report submitted to the shareholders, and he could assure them that they should be most cordially supported.

The vote of thanks to the committee having been carried, some of the shareholders expressed themselves strongly dissatisfied that Mr. Cubitt, the managing director in Belgium, was not present.

Mr. Waddington perfectly agreed with them that Mr. Cubitt ought to have been present that day, knowing, as he did, that a report upon the works was to be made.

Mr. FISHER said the great mistake under which they were now suffering was the advancing of money to the contractor beyond what he was entitled to for the work executed as certified by the engineer.

Mr. Waddington subsequently intimated his intention of retiring from the Board to make room for one of the new directors. This was met by cries of "No no," and the feeling seemed unanimously in favour of requesting him to remain at the Board, which request he promised to consider.

At the suggestion of Mr. T. HANKEY, the meeting proceeded to elect two directors; and after some discussion Messrs. Sheward and Williamson were elected. It was agreed to leave to the Board the election of the two other new directors.

The meeting was then adjourned to the 25th.

CEYLON.

July 19. - Half yearly Meeting, London. - Mr. Tindall in the chair.

The report stated that at the last meeting the directors anticipated that the decision of the local Government would shortly have been communicated to them, respecting the introduction of the railway

system into Ceylon, on the terms upon which they had arranged with the Secretary of State for the Colonies. Up to the present time they had been anxiously awaiting the decision of the Ceylon Government. On the 1st of June the directors addressed a letter to the Secretary of State for the Colonies on the subject, complaining of the delay, and ex-pressing a hope that Her Majesty's Government, might be induced to afford a guarantee similar to that proposed to be given by the local Government, viz., for the payment of a dividend at the rate of 5 per cent. per annum on the paid-up capital. On the 16th of June the directors received a reply, stating that Earl Grey could not recommend the sanction of a guarantee from the Imperial funds in favour of the Ceylon, and that he apprehended the reason why the ordinance had not yet been passed by the Ceylon Legislature was, that the Colonial Government had been led to suppose, owing to the depressed state of the money-market in this country, the company were not able to raise the necessary capital; that there was nothing in the present state of the finances of the colony which need present the slightest obstacle to the enactment of such an ordinance, and that the colonial guarantee for interest on paid up capital would afford a perfectly valid security. The directors recommended that the scheme should remain in abeyance until a favourable opportunity arose for carrying out the project; that the plans and sections and other property of the company be deposited in a place of security until again required; and that a call of 10s. per share be made in order to liquidate the claims upon the company. The accounts to the 18th of July showed that 829l. had been received, and 726l. expended, leaving a balance of 33l.; that the assets amounted to 83/., and the liabilities to 1,648l., leaving an excess of liabilities over assets of 1.5651.

A discussion took place, in the course of which it was stated that the holders of 6,206 shares had signed the deed, out of 13,000 shares registered.

signed the deed, out of 13,000 shares registered.

It was contended by Mr. Anderfor that a call of 5s. per share would be ample, and at all events, that it would produce more money than a call of 10s. per share.

After some conversation with regard to the legality of the meeting, owing to the thin attendance, resolutions were passed receiving the report, requesting the directors to make a call of 5s. per share, in lieu of the proposed call of 10s. per share, and to send a copy of the report to each shareholder, stating that it would be submitted for their approbation or otherwise at a meeting to be held on the 1st of August next.

The retiring directors and auditors were reelected.

# ITALIAN AND AUSTRIAN.

July 17.—Special Meeting, London.—Mr. W. JACK-SON in the chair.

The directors stated in their Report that they had deferred calling the meeting until the arrival of the resident director in Italy, the Count de St. George. The first portion of the Maria Antonia line, about 11 English miles, from Florence to Prato, was opened for passenger traffic on the 3rd of February last. The receipts, in which there has been a steady increase, amounting at present to about 2001. per week at very low fares, and without any goods traffic, have surpassed previous calculations. When however the line is finished to Pistoja, a further distance of about 11 miles, not only will the traffic on the whole line from Florence to Pistoja be fully developed, but from its junction at Pistoja with a line now in progress from that place through Pescia and Lucca to Pisa, a length of 40 miles, all the through traffic of the cities of Lucca and Pescia and a large portion of the traffic of Pisa and Leghorn with Florence will be thrown on the trunk line of the Florence and Pistoja. The directors estimate that the receipts, when the line is completed to Pistoja, will not be less than 35l. per mile per week, and that they will rise to 50l. per week, at least, on the completion of the continuous line from Pistoja to Pisa. Already 21 miles, from Pisa through Lucca to Altopascio, are open; 4 miles, from Altopascio to Pescia, are nearly finished, and will be opened in two months; and the remaining 15 miles, from Pescia to Pistoja, will shortly be com menced. A further increase in the through traffic will take place on a line being made from Pistoja to A company has already been formed for Bologna. part of this Bologna line, which runs through the Tuscan territory, and one-tenth of the requisite capital has been paid. This additional line will ultimately render the Maria Antonia line the great medium of communication between the north and the south of Italy. The realization of these prospects would produce a dividend of from 10 to 15 per cent. per annum on the share capital of the Maria Antonia

Company. Two-thirds of the shares in the Maria Antonia Company belong to the Italian and Austrian. the other one-third having been subscribed for in Tuscan. The principal Tuscan holder became insane and died; and a large majority of the others having been unable to continue the payment of their calls, the Italian and Austrian, as holders of the other two-thirds of the shares, have had to sustain nearly the entire difficulties of the undertaking. This company had made a deposit with the Tuscan Government, as security for the completion of the works, amounting, agreeably to the account appended to the last Report, to 66,809l. 13s. 7d., invested in Austrian and Piedmontese bonds, which deposit, by agreement with the Government, was not to be returned till three-fourths of the capital required for the entire line from Florence to Pistoja should have been ex-pended; and in the event of the line not being completed within a specified time, it would have become forfeited to the Government, with all the outlay incurred, in conformity with the usual conditions of such deposits with Continental lines. The Italian holders of the one-third portion of the shares in the Maria Antonia having failed to make good the instalments upon their shares, it was impossible for the Italian and Austrian to have completed even the first portion of the line, without either using the deposit or making heavy calls. It became, therefore, a point of vital importance to get the deposit released by the Tuscan Government, and the directors are happy to state that the Count de St. George was able to succeed in this object. The Count then endeavoured to procure from the Tuscan Government a guarantee of 4 per cent. per annum on the capital, until the nett returns should pay a larger dividend. This concession, and also the extension of the term of the company's grant from sixty to one hundred years, were obtained. The Tuscan Government have, however, at present attached to this concession the obligation continuing the line from Pistoja to Pescia, accompanied by the deposit of a large sum as security for its completion. Notwithstanding the advantage of the guarantee of 4 per cent. which the Maria Antonia Company would obtain by this arrangement, the directors cannot recommend its adoption, for the costliness of this line, in consequence of some heavy tunnelling and earthworks, would diminish the income on the capital to be employed in constructing the Florence and Pistoja line. The directors stated in their last Report that they estimated that 41. per share would afford sufficient capital to complete and stock the line from Florence to Pistoja. mate was, however, founded on the expectation that the Tuscan shareholders would have punctually paid all the calls on their one-third of the Maria Antonia shares, of which there was at that time no reason to entertain any doubt. The Board also believed that the last call of 1% on the Italian and Austrian shares, which was paid on only 35,671 shares, would have been paid on all the shares. The amount of nett capital, however, received by the directors, after deduction of interest paid back to the shareholders by them out of the capital, has been 159,434l. 6s. Sd. Good management of that capital and economy have enabled them, with 2,767l. 13s. 9d., cash and securities in hand, to expend the whole upon the works and plant, with the exception of 763l. 7s. 3d. debited to expenditure account, which latter is the only sum taken out of capital towards defraying preliminary expenses and advertisements, law charges, salaries, &c. The directors believe that this small expenditure for these purposes is unexampled. The original estimate, including the purchase of working stock, was 8,000,000 Tuscan livres, or about 266,000/, ster-The amount expended on the line to this period is about 210,000l.; but a portion of this expenditure belongs to the Pistoja portion of the line, as the working stock is sufficient for the whole line, and there is on hand a portion of rails, timber and stores, applicable to the Pistoja portion. The expenses of the station at Prato also need not be increased. The estimate for completing the line to Pistoja is 80,000l., which, in addition to the 210,000l., gives a total of 290,0000t., showing an increase upon the original estimate of 24,000t. After examining fairly what the Tuscan shareholders are likely further to pay, and what may be produced from the sale of surplus lands and houses, the directors have found that about 34,000%, will be required to discharge the debts and liabilities. If these be not speedily paid, the creditors in Italy would be enabled to seize and sell the whole property, and destroy the company. The directors have therefore no option but to make another call of It. per share, payable on all shares on which 41. per share shall have been paid. They have made this call payable on the 15th of August next; but if any shareholder should be desirous of paying it by instalments, it will be received by four equal payments of 5s. per share, on the 15th of August and

the 15th of November 1848, and the 15th of February and the 15th of May 1849, with interest on the three last payments at the rate of 5 per cent. per annum; but the directors announce that, in justice to all those who shall duly pay the whole call at once, or the above instalments as they fall due, forfeiture must inevitably take place of all shares upon which there shall be any default in paying any of the four instalments. Each holder will also be entitled out of the call, if paid on the 15th of August, or out of the last instalment, to deduct the interest on his shares at the 3rd of February last, when the line was opened for traffic. From that period, the Florence and Prato portion of the line being productive of income, the nett receipts will be appropriated in the usual manner to paying dividends. The directors also propose that those parties who have paid only 3l. per share shall be enabled to save their shares from forfeiture, in respect of the default in not paying the call of 1/. per share due on the 19th of October 1846, provided that such call, with interest at 5 per cent. from the 1st of November 1846, be paid on or before the 7th of August next. It is the intention of the directors, on the payment of the call now made, to issue new certificates of shares, of the capital amount of 10l. each, in lieu of the present shares of 50l. each, and that the company shall be entitled in future the "Anglo-Italian," instead of the "Italian and Austrian." In order to complete the second portion of the line, from Prato to Pistoja, as soon as possible, without making any further call for some time to come, the directors contemplate issuing debentures, not commencing the works on this portion until a sufficient amount of such debentures be taken. But if the Tuscan Government should guarantee 4 per cent. on the capital of the Maria Antonia Company exclusively, the directors would immediately commence operations on that portion of the line without issuing debentures, not doubting that in such case calls would be readily responded to. as the shares in the company would be then equivalent to a Government 4 per cent. stock, entitled, more-over, to all the profits of the railway above 4 per cent. In conclusion, the directors congratulate the shareholders on the prospects of the company, and on having arrived at the great point that half of the railway is now making a return, which is weekly increasing. The traffic receipts on this portion, from the opening on the 3rd of February to the 2nd of July were 3.672l.

The CHAIRMAN, after recapitulating the various topics of the Report, moved that it be adopted, with the necessary resolutions.

In answer to a question put by Mr. FISHER,

The CHAIRMAN said, that if the proprietors would give the directors the means, the line from Prato to Pistoja would be completed within twelve months.

Mr. REED said he could not understand how it was possible to complete that line of 11 miles for the sum possible to complete that the of 11 miles in the same stated in the Report, viz., 80,000l., when the 11 miles from Florence to Prato had cost 210,000l. The Chairman replied that the extra cost arose from the construction of the station in the city of

Florence, and the high value of the lands.

Mr. REED thought it desirable for the court to fix the extent of the liability to which the proprietors should be subjected. The Report proposed to reduce the 50l. shares to 10l. Now, he thought that instead of 10*l*. shares they ought to be fixed at 6*l*. 13s. 4*d*., which would give funds with sufficient margin to complete the line from Prato to Pistoja. He should therefore move, as an amendment, that the Report be received, approved and adopted, with the exception that the shares be limited to 6l. 13s. 4d.

Mr. Brown having seconded the amendment-The CHAIRMAN said the directors were quite willing to adopt the wishes of the shareholders.

Mr. Samuda thought that time ought to be afforded to the shareholders to consider the question; and moved, as a second amendment, that the Report be received and entered on the minutes.

A long conversation, in which Messrs. H. DE CAS-TRO, REED, BROWN, and several other shareholders, took part, ensued; but eventually the proposition of Mr. Reed was unanimously adopted.

A discussion ensued as to the propriety of appointing auditors; but as Mr. H. DE CASTRO spoke to the accuracy with which the accounts in England were kept, and Mr. A. Morrison bore similar testimony to the manner in which they were kept in Italy, the

proposition fell to the ground.
On the motion of Mr. H. De Castro, seconded by Mr. Samuda, it was resolved that the directors be requested to give their anxious consideration to the necessity of completing as soon as possible the Maria Antonia line, and to keep in view the great importance of securing from the Tuscan Government the guarantee of 4 per cent. on the capital of the Maria Antonia Company.

COUNT DE ST. GEORGE bore testimony to the suprt the Tuscan Government had given to the undertaking, and pledged himself to continue his best exertions to promote and secure the best interests of the company.

Mr. BROWN moved, and Mr. CARVALHO seconded, a vote of thanks (which was also supported by Mr. C. Morrison) to the Count de St. George for his past services.

The Count de St. George acknowledged the compliment.

CALEDONIAN.—July 14.—Meeting of Shareholders, ondon.—Mr. Jacobs in the chair.—The proposal of London.—Mr. Jacobs in the chair.—The proposal of the directors to raise 745,180%. by the issue of 7 per cent. preference shares, according to the statement of Mr. Little, had instigated him to summon the shareholders present. Being interested in the line to the extent of 5,000l. or 6,000l., and having received no notice of the meeting but merely seeing an advertisement in the Times that a general meeting of shareholders would be held in Edinburgh on the 20th inst., to decide on that important question, he thought such a step advisable. The directors had not applied for an extension of time for the complethe branches, and they could not legally raise this 800,000l. without first coming to the share-holders. He had addressed a letter to Mr. Hope Johnstone, the chairman, for the purpose of getting any information he could for this meeting, but he was informed that he was gone to Scotland.—A shareholder said he understood the money was required to pay off the debentures falling due at 44 and 5 per cent. He had given his proxy to the assistant secretary on that understanding.—The chairman was surprised at the interference of any official of the company .- Mr. Taylor thought it was injudicious to issue these shares and prejudice the original shareholders, without a clear statement from the directors as to the money being all spent, and showing the precise objects for which they were to be raised.—After some further discussion, it was unanimously agreed that a subscription be entered into, and that a deputation proceed to Edinburgh to obtain an interview with the directors prior to the meeting to be held on the 20th inst., so as to get the same adjourned and in the interim that the directors furnish the shareholders with a clear statement of the financial position of the company, and the grounds for issuing the proposed new shares

July 17.—Adjourned Meeting, London. — After some conversation, Mr. Little read a protest, prepared for the meeting, against the raising of the money proposed, and also a requisition for calling a meeting to consider the general financial position.—The chairman hoped these documents would not require to be used, but that the directors would agree to the wishes of the proprietors.—Mr. Abbott stated that he had visited the line, and said the money would be required for the completion of the Carlisle line to Glasgow and Edinburgh. A large portion of it would also be required for the Edinburgh station. He thought it was unwise to oppose this guarantee, for they must have the money, and would raise it in some quarter. He saw no remedy for the shareholders but to prevent the directors from extending their operations all over Scotland, as they would like to do, at the expense of the shareholders, and to appoint English directors, having the meetings periodically in London, Manchester and Liverpool. There was no doubt of Manchester and Liverpool. There was no doubt of the goodness of the line if the directors confined themselves to the original plan, which ought to be the main object with the English shareholders.—Mr. Little asked, when they compared the contradictory statements of Mr. Abbott at this meeting and that of the shareholder at the last meeting who stated he had given his proxy to the assistant secretary under the impression that the money was to pay off debentures, whether there was not sufficient ground for inquiry as to the real position of the company. -The chairman considered that it was their duty to get an adjournment to prevent the directors getting anything by a side-wind, such as sending to London for proxies.—The resolution finally come to by the meeting was to the effect of taking measures for the adjournment of the meeting appointed for the 20th inst., by sending a deputation to Edinburgh to confer

with the directors for that purpose.

CAMERON'S COALBROOK STEAM COAL AND SWANSEA & Loughor.-July 17, 21.-Meeting of Shareholders, London, to receive the report of a deputation, appointed at a meeting held on the 20th of last month, to investigate the present position and future prospects. Mr. Burls in the chair .- Col. Cameron objected to the meeting that it was not legal, not having been convened in accordance with the company's deed of settlement.

The report entered minutely into the condition of the company; the property at Swansea and Loughor; the staff employed; the amount of coal raised; the I holders has been announced for the 24th inst.

cost from the pit to the shipment; the cost of freight (which is now carried on in a vessel belonging to the company), and the profits and loss upon the sale of the produce in the Swansea and London markets. The deputation particularly directed attention to the wharf at Swansea, and they state that the same has not been purchased, but leased only; and that many statements in reference thereto, contained in the Report of the directors of the 29th of January last, are not correct; that rent is due in respect thereof to a large amount; that the corporation of Swansea have large claims against the company, and that the forty cottages referred to in a recent report of the directors as built or building are not erected. The facilities for raising coal (200 tons a day by two adits) have not been fully employed, the actual quantity got out not being more than 100 tons a day—the quantity raised in the year ending July 1848 being only 19,400 tons. The Report proceeds to point out discrepancies in some of the official reports, particularly as to the quantity of coal raised. In reference to the cost of raising the coal and the profit on its sale, it states that the deputation were apprised that the servants of the company had been instructed to afford them only "proper" information on this subject, and that the result of their inquiries from other sources enabled them to state that the cost of raising the "hand picked" coal is 8s. 8d. per ton, and the the "name picked coal is 8s. 3a. per ton, and the selling price 10s., leaving a profit of 1s. 4d. per ton; of "all through" coal 1s., selling price 6s. 9d. per ton, being a loss of 1s. 3d. per ton; of "small" coal 7s. 2d., selling price 5s., being a loss of 2s. 2d. per ton. It is also stated as a fact, that under the present mode of shipment in the company's own ship, the coal sold in London is a loss to the company. After entering into minor details, the report contrasts the condition of the operations of the company with the expenses of management, and the heavy engagements under the agreement with Col. Cameron, the royalty of 2,000l. a year, and other incumbrances pressing upon them. The deputation express an opinion that the property is nevertheless capable of being worked at a profit, but that the dividends previously paid to the share-holders have been paid out of the capital; that, in order to furnish a return of 5 per cent., the supply of coal must be raised from 19,000 to 100,000 tons per annum, and that new openings for the sale of coal must be found. In conclusion, the deputation recommend an immediate change in the management; secondly, a reduction in the general expenditure; and, thirdly, the raising more coal and finding fresh openings for the sale of coal. On the subject of the Swansea and Loughor, the deputation protest against any outlay on that scheme, with the prospect before them of the speedy completion of the South Wales. The report concludes by expressing regret that the application of the shareholders some time since for an investigation of their affairs was not cordially met by the direction, and stating that it is not too late to bring the concern into good remunerative action.—The Chairman expressed his conviction that the property might be made to return 5 per cent. if the directors abandoned the Loughor and Swansea and kept down their expenses. - Col. Cameron declined supporting the recommendations of the deputation, on the ground that it was the duty of all parties to hear the statement of the directors themselves before any decision was come to .- A motion for the adoption of the report was carried, Col. Cameron alone dissenting, and the meeting was adjourned to yesterday,when the chairman stated that the committee of shareholders had deemed it necessary to take legal advice with regard to the course to be pursued, and Mr. Fry, of the firm of Fry, Lockaby & Fry had accordingly been engaged on their part. After some conversation, it was agreed that three gentlemen should be selected to fill up the vacancies in the direction. The following were then nominated as eligible: Messrs. Badham, Burton,

W. and J. Danford, Hunter, Land, Mandens, Wood, Bourdon, Greenwood, Montefiore and C. Jones.

DUTCH RHENISH.—July 11.—Meeting of Share-holders, Liverpool.—It was stated that the Dutch directors intended forthwith to make another call, and to proceed with the forfeiture of the shares of those who had not paid the last call; that Mr. Stitt, the commissary named in the Liverpool resolution, was refused admittance by the directors at their meeting, although his appointment had been con-firmed by an immense majority of votes at the annual meeting.—Mr. Beloe said that high legal authorities in Holland had given an opinion in favour of the legality of the resolution emanating from the Lancashire shareholders.—After some discussion a committee was appointed to confer with the commissaries for the purpose of considering the best line of policy to be pursued at the meeting of the company, which is to be held next month in Holland. By order of the London direction a meeting of share-

Digitized by GOGIE

#### TO THE SHAREHOLDERS OF THE RAILWAY CALEDONIAN COMPANY.

GENTLEMEN,—Will the proposal to create Preference Stock in your Company, to the amount of 745,18%, at length open your eyes to the true character of the policy pursued by your Directors?

Will you have the firmness to withstand them, and the courage to appoint a new Board to reverse the proceedings which have brought you to this plight, and to nurse your all but ruined enterprize?

I doubt if you will; for Shareholders are generally so supine, and so much at the mercy of Directors; but, if you do not, then not one farthing of dividend will you ever receive, either upon the present stock or upon this proposed guaranteed? (by whom?) capital.

Look for a moment at the position of your affairs, as shown by your own balance-sheets.

Your Directors' last account shows that, on the 31st of December 1847, they had received and expended—

From Shares ... £2,947,362 0

From	Shares		• •	£2,047,362		
"	Debentures Loans	••		838,961 288,848		
					 _	

Total to Dec. 31, 1847 £3,174,472 4 \$
Suppose that there has been no money borrowed or expended since, or that the amount so raised has been spent entirely upon the branches not yet opened (neither of which suppositions represent the real facts), then there is a debt of 1,187,1104. 45.5d., at least, on your main line from Carlisle to Edinburgh and Glasgow, the interest of which has to be met out of the revenue received from the traffic on

The Wishaw and Coltness rent and interest The Garnkirk	per 	annum,	for £29,250 12,508
Add the interest as above			£41,758 56,355

Which makes a total annual charge of ...£98,113 To this we must add the expense of working the line; what this will amount to must to some extent be conjectural. Your line has the disadvantage of steep gradients, and the expenses of mineral lines, such as the Wishaw and and the expenses or mineral lines, such as the wishaw and Coltness and Garnkirk, are notoriously heavy. On the other hand, your new line has few stations, and not many trains, and that part should be worked with a small establishment and at little expense.

I believe the average expense per mile per week of all the

principal English lines considerably exceeds 304; we will suppose yours not to exceed 204. per mile per week; it is absolutely impossible that it can be less, or even so low. The length being 130 miles :-

 $130 \times 20$ , or 2,600% per week, or for 52 weeks—

£135,200 98,113 Add to this the interest and guarantee as above

We have a total annual charge of £233,313

before any dividend whatever can be paid to you.

Now what revenue have you to meet this charge? The eccepts since your line opened have not averaged 4,000% or week. Take them at that amount for 52 weeks, which per week. Take them at that amount for 52 weeks, which will give 208,000, per annum, leaving an actual deficiency of 25,313, from the sum necessary to meet working expenses, rent and interest to bondholders.

of 25,313. from the sum necessary to meet working expenses, rent and interest to bondholders.

This looks very black, but you might hope for an increase of revenue sufficient at least to cover this, and, perhaps, to pay a small dividend on the 2,047,362. Ashare capital sunk in this concern; you might hope, for instance, that the revenue would rise to 5,000. per week; and if there has been no more capital expended since the 31st of December 1847, this would leave a surplus of 26,687. after meeting the deficiency shown above, which would actually give a dividend of almost 1½ per cent. But here your Directors come forward with a proposal to create a perpetual preference dividend of 52,1604.!!! It is true that this can never the paid unless your revenue rises to 6,000?, per week, but it effectually destroys the very remote chance you have of ever receiving one fraction of dividend on the old stock.

I have not taken into account any of the guarantees your Directors have given in other lines than those over which your traffic is now passing. My statement supposes that the traffic on these lines will meet the guarantees. But every one knows this will not be the case; they have guaranteed the Glasgow and Greenock 4 per cent., and the Perth, Jundee and Arbroath 8 per cent. These lines have been open for some time, and are not earning respectively more than one half the dividend proposed to be secured to them, Where is the balance to come from? Then there are the guarantees of the Scotch Midhard! the Scottish Central!! the Neilston and Barrhead!!! and many other trifles which need not be dwelt upon—and these, too, from a company which, after threatening its Shareholders with the harshest proceedings, and scouring the money-market in vain for help, has actually at this moment a circular issued to its creditors, requesting them, as the only mode of "keeping file ir railway open," not to proceed at law for the recovery help, has actually at this moment a circular issued to its creditors, requesting them, as the only mode of "keeping their railway open," not to proceed at law for the recovery of their overdue bills, and promising to pay them by five instalments, each at three months interval! from a company which has actually stopped payment!! There never was such an infatuated madness, even in the railway world, as that exhibited by your Board.

Your only chance of saving your line from utter run is by acting promptly now. Refuse to create this preference stock: change your whole Board; the directors are, of course, all of them most respectable men, but have shown their utter incompetency for prudent management. Appoint

their utter incompetency for prudent management. Appoint a new directory; select men who will stop all needless and

extravagant expenditure on new works—who will manage their line themselves, and not stoop to receive the dictation of agents and engineers, and who will study to raise the utmost revenue from your legitimate traffic without in-

volving you in ruinous guarantees and needless competition.
If you take this course I would not yet despair of your retrieving your line from utter ruin; your trade from Edinburgh and the north-east of Scotland must be consi-Edinburgh and the north-east of Scotland must be considerable, and this, by proper arrangements with other lines, should be all your own, while you may fairly claim to divide that to London and the South. From Glasgow and the West you should have the entire English traffic. An arrangement could be made with your only competitor for this, by which you would mutually refrain from interfering with each other.

with each other.

In short, you should have a new administration, whose motto should be—economy, retrenchment and peace; and if you appoint such an one you may yet flourish. Maintain your present management, and nothing can be hoped for VATES.

#### TO THE SHAREHOLDERS IN THE ALEDONIAN COMPANY. RAILWAY

GENTLEMEN.-I observe an able letter addressed to you GENTLEMEN.—I observe an able letter addressed to you in the Scottish and English papers of this and last week, under the signature of "Vates." Its earnest and truthful tone and its comprehensive view of the affairs of the Company render it almost needless to add anything to the startling appeal the writer has made to induce you to adopt measures for protecting your property from utter ruin; nor should I have gone again over the ground he has so well occupied but in the hope of adding a further stimulus to the occupied but in the hope of adding a turner similar to the one he has applied, by showing you, that so far frem having exaggerated in his statement of the position of the Company, he has not shown you the full extent of your difficulties. Why, with bad gradients and a heavy mineral traffic, should the Caledonian Railway calculate upon doing its business lower than the cheapest railway in England? The average of superiors of the railway in England? lower than the cheapest railway in England? The average of seventeen of the principal railways in England gives 33%. Per mile per week,—the lowest (under independent management) being 22%. Will any reasonable man tell me what especial advantages the Caledonian has that it should be rated lower than the average, or at least lower than the lowest of English railways? and even this will place an additional charge of 14,000% more upon your revenue. Again, the estimates of "Vates" are based upon accounts published in December last. Now, it is notorious that at that date the main line required at least 500,000% to complete it. Here is 25,000% per annum more to be provided for, and lastly, there is the certain liability accruing in 1831, under the engagement to purchase the Clydesdale Junction shares at 75% per share, and which will add full 12,000% more to the annual liabilities of the Company.

On the other hand I am at a loss to find the least tenable ground to expect the income of the line will attain any

annial habilities of the Company.

On the other hand I am at a loss to find the least tenable ground to expect the income of the line will attain any permanent increase beyond its present amount, unless carried on in a totally different spirit towards its neighbours and competitors. The revenue of the Wishaw and Collness and Glasgow and Garnkirk lines is already included in the returns, and we can only look for increase from the Clydesdale Junction, on which, however, a large portion of the business will consist of direct Glasgow traffic, diverted from the present main line. As for the other countless alliances your Directors have formed, I have no hesitation in agreeing with "Vates" that the balance of revenue will be seriously against them. It is quite possible that, for a short time, there may be an increase on the present revenue, but we must remember that very soon the North British and the Glasgow, Dumfries and Carlisle Railways will be in the field against us. Upon what reasonable ground then, I demand, can any material permanent increase of revenue be expected? However, for the sake of inquiry, let us estimate its increase to 5,000. Per week,—a sum that, if I recollect rightly, it was stated would enable the Directors to pay you 5 per cent. upon your capital. Let us see:—

The amount of annual liabilities, found by "Vates" £233,313

The amount of annual liabilities, found by "Vates"£233,313

The amount of annual liabilities, found by "Vates".

Interest on the amount required to complete the

line in December last, say 500,000.

Liability accruing in 1851, for purchase of Clydesdale stock

"Vates" is under-estimate of working-expenses.— 25.000

say, at least, 21. per mile per week, for 1301 miles

#### Total amount of liabilities .. .. £284.260

To be met before paying dividend upon capital; against which the extreme revenue, 5,000. per week, will give 260,000. leaving an annual deficiency of 21,260. against the Company. These are startling facts; they cannot be answered by merely trumpeting forth the prosperous aspect of the railway. They are hard, dry figures and must be answered by figures. Call upon your Directors then to show the fallacy of these statements; let them show us how a a revenue of 5,0000. per week, after meeting these liabilities, will nay 5 per cent on capital of 2 043 363. let them show will pay 5 per cent, ona capital of 2,047,3624; let them show that such revenue will even cover the liabilities; otherwise let them show that these liabilities do not exist, or that they have a reasonable hope for such increase of revenue as will enable them to realize their flattering promises. But de-mand it from them in plain intelligible figures, and do not be satisfied with vague and baseless promises of a prosperous future.

Undoubtedly something must be done to extricate the I indoubtedly something must be done to extract the Company from its present disastrous position,—whether by creating preference shares or some other financial measure you may hereafter determine; but your first step should, undoubtedly, be to remove from the direction of your affairs men who have wasted your money by extravagant undertakings, who have embarrassed your operations by a host of useless alliances, and by hitigious meddling in and expensive opposition to parliamentary measures, affecting the internal policy of other companies with which they have no earthly concern, have provoked an amount of rivalry and

ill-feeling that will tell fearfully against you in the competition for that increase of revenue that alone can carry you through your difficulties.

Bestir yourselves, then, before it is too late; put your present Directors from the power they have so mis-managed; select men who in word and work will adopt the admirable motto "Vates" has recommended to you, and, bad as things look, I do not despair of seeing them retrieved and carried out to a good and profitchle inventor. out to a good and profitable issue.

Your obedient Servant.

MONITOR.

EIGHTH REPORT of the DIRECTORS of the COMMERCIAL BANK of LONDON, Lothbury, and 6, Henrietta-street, Covent-garden.

Directors.

Directors.

JOHN TAXLOR, Esq., Chairman.

THOMAS BARNEWALL, Esq., Deputy-Chairman.
Charles Dickson Archibald, Esq., Jonathan Hopkinson, Esq., William Beresford, Esq., Edward Oxenford, Esq., John Alfred Chowne, Esq., John Shrander Douglas, Esq., Joseph Thompson, Esq., Joseph Underwood, Esq., Jonesh Hill, Esq.

Childrad Walker, Esq., M.P., Thomas Winkworth, Esq.

Solicitors.

Messra Amory, Nelson, Travers & Wyn, and Messra Norris & Sons.

The Advertisement calling the Meeting having been read, the following Report from the Directors was read by the Manager:— REPORT.

REPORT.

In presenting the eighth annual statement of the affairs of the Bank, the Directors congratulate the Proprietors upon the result of the year's operations—and it is a source of much gratification to find that they are enabled to continue the dividend of oper cent, per annum, and to make a further addition to the Guarantee Fund, not withstanding a mometary crisis more severe in its pressure on the mercantile affairs of the kingdom than any experienced for many years not.

notwithstanding a monetary crisis more severe in its pressyre on the mercantile affairs of the kingdom than any experienced for many years past.

It will be seen by the annexed Balance-Sheet, that after writing off the bad and doubtful debts, and paying the charges and current expenses of the past year, the nett proits amount to 11, 384, 182, 24, out of these profits, a dividend at the rate of 6 per cent. For annual for the half-year ending the 31st of December 1837 has been already paid, and the Directors have now to declare a dividend for the half-year ending the soft of June 1818, at the same rate, and, as usual, free from income-tax.

After paying this dividend and deducting rebate of interest upon current bills, there will remain a balance of 2,1581, 188, 4d, to be added to the reserve fund, increasing that fund, with the addition made during the year, to 17,383, 59.

In compliance with the provisions of the Deed of Settlement, the following Directors retire from office, viz.:—Edward Coxford, Esq., and James Alexander Douglas, Esq., Edward Oxenford, Esq., and James Alexander Douglas, Esq., Edward Oxenford, Esq., and James Alexander Douglas, Esq., Edward Oxenford, Esq., and James Alexander Douglas, Esq., and Edward Oxenford, Esq., being digible, fift themselves as candidates for reclection. And Charles Hill, Esq., and Thomas Winkworth, Esq., who are duly qualified Proprietors, offer themselves as candidates.

Balance brought down

The Report and Balance Sheet having been read, the Chairman, John Taylor, Esq. on the part of the Directors, declared a dividend at the rate of 6 per cent, per annum, free of income-tax, payable on and after the 1st of August next.

Resolved unanimously,—That the Report just read be approved, printed, and circulated amongst the Proprietors.

Resolved unanimously,—That James Alexander Douglas, Esq. be re-elected a Director of this Company.

Resolved unanimously,—That Edward Oxenford, Esq. be re-elected a Director of this Company.

Resolved unanimously,—That Charles Hill, Esq. be elected a Director of this Company.

Resolved unanimously,—That Thomas Winkworth, Esq. be elected a Director of this Company.

Resolved unanimously,—That the thanks of this Meeting be presented to the Chairman, Depaty-Chairman and Directors, for the very able manner in which the affairs of the Bank have been conducted by them.

Resolved unanimously,—That the cordial thanks of this Meeting be given by Mr. A. R. Cutbill, for his able and zealous services in the management of this Bank.

(Signed)

JOHN TAYLOR.

(Signal) JOHN TAYLOR.

The Chairman having left the chair, it was

Resolved unanimously,—That the thanks of this Meeting be given to John Taylor, Esq., for his able and courteous conduct in the chair this day.

(Signed) THOMAS BARNEWALL, Deputy-Chairman,

NOMMERCIAL BANK of LONDON Of the Picctors HEREBY GIVE NOTICE, that a DIVI-DEND on the paid-up Capital, at the rate of 6 per cent, per annum, free of incometax, for the Halfycar ending the 3-th of June 189, will be payable at the Banking-house of the Company, in Lothbury, on and after the 1st of August next.

By order of the Board,

July 18, 1848.

## PORT OF GREAT GRIMSBY.

# NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

## SUMMARY OF THE PROSPECTUS.

The principal features and conditions of this undertaking are as

The principal restures and constrood.

The Company will be incorporated by Royal Charter or Act of Parliament, and the Hon, the East India Company guarantee 5 per cent. as a minimum dividend for twenty five years, besides making a free grant of all lands necessary for the railway and

making a free grant of all lands necessary for one annual works.

The shares will be limited to 21 each, and be applied to the section from Bombay to Kallian. The calls will extend over three years, and not exceed 10s, at any one time, and the 5 per cent, will commence at once, and be payable half-yearly upon the calls as respectively made. If the whole sum be paid at once, full interest will be allowed. Where the shares are fully paid up, interest coupons will be attached, payable to bearer; and in every case the utmost facility will be given in payment of dividends.

In the event of any obstacle to prevent the constitution of the Company, the deposit moneys will be returned to the contributors the interest being estimated as sufficient to cover current expenses.

expenses.

The Caution Money (30,000l.) has already been duly lodged with the East India Company, and interest is meanwhile accruing upon

expenses.
The Caution Money (30,000) has already been duly lodged with the East India Company, and interest is meanwhile accruing upon the same.

The Line commences at the port of Bombay, where there is a population of 300-200 inhabitants, and proceeds 35 miles towards the producine districts of the interior, by Tannah to Kallian, places of considerable population and resort, on the route of one of the greatest channels of traffic in India.

The gradienta being for Smiles level, and the remaining 27 miles averaging only 1 in 1205, the cost of construction and expense of working will be necessarily lach.

The original scrip shares, already issued, upon which 5a per share has been paid, will be consolidated into share of 5d, and rank as wholly paid-up shares entitled to full dividend. Or, such scrip shares may be commuted, and credit given for the 5a dready paid. Provided that these alternative options be declared in writing on or before the 31st of August custum. If not so declared by the time stated, the option will cease, and the shares become absolutely of the property of the stated, the option will cease, and the shares become absolutely assectained from official data to be, at the present time, 182,000 tous per annum, conveyed at a charse of from 3d, to (3d, per ton, and which at 3d, per ton per mile would give a receipt of 4d, per nile per annum, conveyed at a scheme of the highest national importance. The following brief extracts from papers just laid before Parliament may serve to show this judgment authoritatively:—

"The varied desileratum which prevents the infinitely greater development of the resources of India, is the great want of speedy, cheap and convenient transport to and from shipping ports. The construction of Railreads will alone obvaste the pescent incalculable disadvantages under which lindia is paralysed by the obstruction to speedy and cheap transport.—Report of the Boord of Trade to Mr. Boord of Trade to Mr. Processed and early attention to this important and sec.—Report of the observa

Applications for shares to be forwarded to the Company's Offices, 3, New Broad-street, Lendon; to Messrs, Simon & Son, brokers, 7, Wannfordeourt, Lendon; to Messrs, Hoyland & Co., Bank, streek, Manchester; Mr. T. Forsyth, Liverpool; Messrs, William Bank, C. Sarvenson, Perlay, Co. J., Watson, 32, St. or Mr. C. Stevenson, Derby,

LIST OF PRIZES FOR SESSION 1848-9.

# THE ROYAL SCOTTISH SOCIETY OF

ARTS proposes to award Prizes of different values (none to exceed Thirty Sovereigns, in Gold or Silver Medals, Silver Plate, or Money, for approved Communications, relative to Inventions, Discoveries and Improvements in the MECHANICAL and CHEMICAL ARTS in general, and also to means by which the NATURAL PRODUCTIONS of the Country may be made more available; and in particular to—

I. INVENTIONS, DISCOVERIES, or IMPROVEMENTS in the USEFUL ARTS, including the Mechanical and Che-mical; and in the Mechanical Branch of the Fine Arts, such as the following, viz.:

#### I. Mechanical Arts.

1. Methods of Economising Fuel, Gas, &c.-of preparing superior Fuel from Peat-of preventing Sincke and Noxious Vapours from Manufactories-of Warming and Ventilating Public Folifices, Private Dwellings, &c.-of Constructing Economical and Salusirous Dwellings, for the Working Classes, especially in Towns-of Filtering Water in large quantities-of rendering large supplies of Water available for the purpose of extinguishing Fires, and the best application of Manual or other power to the working of Fire-Engines of constructing Buildings on the most correct Acoustic principles-of applying Glass to new and useful purposes.

principles—of applying Glass to new and useful purposes.

2. Inventions or Improvements in the Manufacture of Iron, and other Metals, simple or alloyed in the Manufacture of Writing and Printing Paper—in Tuyeres for Blast Furnaces—in the Manufacture of Writing and Printing Paper—in Tuyeres for Blast Furnaces—in the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the Paper of the

II. Chemical Arts.

Improvements in Fine Glass for Optical purposes, free from Veins, and of a Dense and Transparent quality—also in rendering Glass hard and difficult of fusion for Chemical purposes—in the Annealing of Glass—in the Mandacture of Writing Inks, both Common and Copying, so as to flow freely from Metallic Pens—in the application of Caoutchouc and Gutta Percha to new and useful purposes.

HI Relative to the Wine Lett.

# III. Relative to the Fine Arts.

III. Relative to the Fine Arts.

Improvements in Patterns of Porcelain, Common Clay, or Metal of Domestic Articles of simple and beautiful Forms, without much Omament, and of one Colour—in the Preparation of Lime and Plaster for Fresco Painting, and in appropriate Tools for laying the Plaster with precision—in Engravanto on Stone—in Deamerrotype, Talbetype, or other Photographic processes in applying such processes to stone, for lathographic Printing in Electrotype processes in the production of White or Neutral Artificial Light by means adapted to ordinary use—in Dieschking in Woodcutting, and other methods of illustrating Books to be printed with the Letter-press—in Printing from Woodcuts, &c.—in Ornamental Metallic Casting.

- II. EXPERIMENTS applicable to the USEFUL ARTS
- III. NOTICES of PROCESSES in the USEFUL ARTS prac-tised in this Country, but not generally known.
- IV. INVENTIONS, Processes, or Practices from Foreign Countries, not generally known or adopted in this country.
- V. PRACTICAL DETAILS of Public or other Undertakings of National importance, not previously published.
- VI. DISCOVERY of substitutes for HEMP and FLAX, &c.

## The SOCIETY also proposes to award the KEITH PRIZE, value Thirty Sovereigns,

For some important "Invention, Improvement, or Discovery, in the Useful Arts, which shall be primarily submitted to the Society," betwixt and 1st of April 1849.

# GENERAL OBSERVATIONS.

GENERAL ORSERVATIONS.

The Communications and the Descriptions of the various Inventions, &c., to be full and distinct, and to be written on fool-cap parer, leaving marchs at least one inch bread, on both the outer and inner reless of the writing, so as to allow of their being bound up in volumes; and, when necessary, to be accompanied by Specimens, Drawings, or Models, and Brawings to Too Impuring and the Letters or Figures of Reference, to be in bold lines or strongly coloured, so as to be easily seen at about the distance of 20 ft, when hung up in the Hall of Meeting.

The Society to be at liberty to publish in their Transactions expices or abstracts of all payers submitted to them. All Models, Drawings, &c., for which Prizes shall be given, to be held to be the property of the Society; the value of the Model, &c., being taken into account in fixing the amount of the Prize.

Communications, Models, &c, are to be addressed to James Tod,

Communications, Models, &c. are to be addressed to James Tod, Esh, the Secretary, 55. Great Kingstreet, Edinburgh, postage or carriare paid; and they are expected to be lodged on or before the list of October 1835, in order to insure their before read and reported on during the Session, the ordinary Meetiass of which end in April 189; but those which cannot be lodged earlier, will be received up to the 1st of March 1849.

By order of the Society. JAMES TOD, Secretary.

*x* Copies of this List of Prizes may be had from the Secretary.

# NORTH STAFFORDSHIRE RAILWAY.

At the FIFTH ORDINARY MEETING of the North Staffordshire Railway Company, held at the Company's Station at Stoke-upon-Trent, on Saturday, the 22nd of July 1848,

JOHN LEWIS RICARDO, Esq. M.P., Chairman of the Directors, in the Chair,

The following Resolutions were moved, seconded, and passed:

That the Common Scal be affixed to the Register of Shareholders.

That the Report of the Directors, with the accounts thereto appended, be adopted and circulated amongst the proprietors.

That Messrs. Sharp, Bradley, Moore, Ridgway and Kennersly be re-elected Directors of the Company.

That Thomas Salt, Esq., be, and is hereby, elected an Auditor of the Company.

That a dividend of 4s on each ordinary share be and is hereby declared, and that the same be paid on and after Monday, the 14th day of August next, free of income-tax.

That the declaration of forfeiture of Shares in this undertaking, numbered respectively (as set out in the resolution) be and is hereby confirmed.

Ordered: That the Shares so forfeited, or so many thereof as will be sufficient to pay the arrears due from the respective proprietors thereof on account of calls, together with interest and expenses, be sold or otherwise disposed of, at such times and in such manner as the Directors may deem expedient.

That the best Thanks of the Shareholders are due and are hereby given to the Directors for their care and atten-tion to the interests of the Company; and that the Share-holders have great confidence in entrusting to them the further prosecution of the Company's concerns.

Signed,

J. LEWIS RICARDO, Chairman. J. SAMUDA, Secretary.

28, Parliament-street, London, July 24, 1848.

# DERBY, UTTOXETER AND STAFFORD RAILWAY COMPANY.

At a GENERAL MEETING, held at the George and Vulture Tavern, Lombard-street, on the 19th inst., pursuant to Advertisement,-

# WILLIAM NASH, Esq. in the chair,-

The Report of the Deputation, appointed by the General Meeting of Certificate Holders on the 2nd of June last, to confer with the Committee, having been read, it was moved and seconded,—

That the Report and recommendation of the Deputation be received and adopted; whereupon the following amendment was proposed and carried unanimously:—

ment was proposed and carried unanimously:—
That the Report just read be received and adopted, excepting that 7s. 4d. instead of 7s. 6d. per Share be divided amongst the Shareholders, and the remaining 2d. per Share to be thus disposed of; two-fifths thereof (with two-fifths of the 100 gaineas reserved by the Report for the Committee) be paid to William Nash, Esq., the chairman, and the remainder to be divided among F. Ede, E. Harvey and F. B. Goldney, Esqrs., as a slight testimony of their honourable, disinterested and ceaseless attention to the interests of the Company.

The following Resolutions were then passed unanimater.

The following Resolutions were then passed unanim-

That the Committee be authorized, and they are hereby empowered, to enter into such arrangements as will enable them, with safety to themselves, to return forthwith 7s. 4d. per Share as a final dividend.

That the Secretary, Boyman Boyman, Esq., having rendered important services to the Company, beyond his official duties, be presented with a piece of plate, of the value of

That the best thanks of this Meeting be given to the Deputation for their labours in bringing the affairs of the Deputation for their modern Company to a conclusion.
WILLIAM NASH, Chairman.

62, Moorgate-street, July 20, 1848.

SATURDAY, JULY 29.

NECESSITY AND PRINCIPLES OF RAILWAY REFORM.

We have already pointed out what are the two principal objects that ought to command the attention o all our great railway bodies in the present condition of their property. The first: a review of the causes that have mainly tended to produce that condition, and the adoption consequent thereupon of an altered system of external policy;—the second: a diligent in-quiry into the means of husbanding their internal resources, and of increasing the nett working profits. Both of these important topics, we have reason to hope, are now engaging the care of railway directors. The latter may perhaps be regarded, for the moment, as the most immediately pressing; and there can be no doubt that on this head a great deal may be, and indeed ought to be done, in order to relieve the owners of railway property from the consequences of an employment of their capital, during the last three or four years, in a way which has greatly increased its utility to the public without producing any commensurate advantage to those who have contributed the money.

We propose to devote some care to the suggestion of practical means conducive to this object. In the first place we shall state briefly the grounds on which it claims to be regarded; and the direction in which it may be effectually The detailed consideration of the songht. several points on which working improvements may be introduced to this end, will be a sub-

ject for future papers.

It would be needless to recur to the wellknown principle on which all the railways of this kingdom have been founded, were it not notorious that it is continually overlooked in what is advanced respecting the system by all who stand without it, and were there not some reason to apprehend that it has not been sufficiently borne in mind at all times by those who direct its councils within. It has been determined in this country that its railway communications should be made, not by the State, nor with State assistance of any kind, or in any way, but by the voluntary employment of the means of private individuals, attracted to this class of public works by the legitimate inducement of gain. It is not necessary here to inquire whether this arrangement was well or ill considered: were this the point in question, it might be easily shown, both on theoretical grounds and by a reference to matters of fact, that a better means of speedily enriching this country with a most precious advantage could not have been devised under our actual constitution. For any such inquiry the field has long since been closed. It is a settled point that the British railways have been so constructed; that the principle of their establishment has been the supply of a public convenience on terms sufficiently profitable to those who supply it.

This having been, as we say, practically established as the base of the system, we have here the elements of a perfectly clear arrangement, which has two essential parts—the benefit given to the public on the one hand, the benefit accruing to the association of private persons on the other. And the obviously just conclusion respecting an arrangement like this must be, that the benefit should be distributed in equal proportions: that the gain to one party should not be secured at the expense of the other.

This being fixed, it will be sufficient, for the purposes of our present practical inquiry, to examine if the actual state of the railway system, as it has been spread out to the extent it now occupies, at the cost of its constituents,

reciprocity. It must be affirmed that it does not; that the result of the proceedings of the last three or four years has been, on the whole, to increase the amount of convenience obtained by the public in a degree out of all proportion to the profit gained by those who have afforded this convenience. It is impossible to compare the state of the railway proprietors of 1848 with that of the same class in 1845, without perceiving that their position as owners of a lucrative property has been seriously changed during that interval; and that whatever may have been the motives, or the views, just or erroneous, which have caused the change, its practical result has been to benefit the State enormously at the cost of the owners of railway capital. Such being the case, the conclusion from the matters of fact composing it, we apprehend, is perfectly irresistible. The public are considerably in arrear to the railway body; and the latter is justified in endeavouring to reduce that arrear by all the means it can lawfully employ. It lies in the nature of the arrangement on which our railway system has been founded, that its promoters should receive their due share of its benefits; and when it can be shown, as it now may be, that they are far from enjoying any such equitable share, there cannot be a pretence of objection raised against the measures requisite to recover a part of it.

It is no answer to this proposition to urge that the measures which have reduced the rate of railway profits may have been promoted with a view to gain; that a desire to accommodate the public was not their presiding object; and that the detriment must be accepted, like every other consequence of an unwise speculation. All this may be true; but it cannot bar out the right to attempt to make the business more profitable, unless this should be pursued by measures tending to deprive the other party in the business of something which it is fairly entitled to claim. Such measures, of course, it is not our intention to propose. The present arrangements of the system are such as to leave a wide margin for economy and adjustment, within any limit that can be fairly laid down as marking the bounds of what the public can justly demand, on the largest construction of its rights in this matter. In anything we shall say on the subject of revising the method of working railway traffic, our suggestions will not reach, by many degrees, to any point approaching that debateable region. We say debateable, because it is somewhat hard to define what are the public rights in this respect,-because it would be somewhat hard to prove that they amount to more than is implied in the express terms of the Acts of Parliament, private or general, applicable to railways—especially after so many burdensome obligations have been positively laid by those Acts on all concerned in them. The claim of the public to interpret its own rights in such a case—which means nothing less than the right to demand whatever it may find convenient, and to pay for that convenience no more than it may feel disposed to give—this claim, which is usually the only thing meant by those who use the term, we entirely repudiate; and should feel it proper to dissect, were its determination necessary to our immediate purpose. But, as we have said, we shall not be required to approach this ground in the suggestions about to be made for a recovery of the profits of the railway shareholder.

The means by which this end may be promoted are various; -it is our intention to dwell on a few principal ones only, in which the margin for amendment is the widest, and the results of a judicious change will be the most fruitful. And while pointing out the direction

shall take occasion to offer a word or two of caution against pursuing it in an erroneous way -into which we have reason to apprehend directing bodies may have been tempted of late to think of entering. We trust to have it in our power to touch upon the most material of these topics before the expiration of the season of general meetings, at which the financial cir-cumstances that lend a sovereign importance to the subject cannot fail to occupy the first place. But whether this can be accomplished or not, it is certain that the principle to which we have already referred as the basis of all inquiry upon such matters, must be either directly or virtually discussed at these meetings; and we apprehend that the proprietors will so far make known their anxiety, on the very point to which our notices practically tend, as to render them apposite, after these assemblages shall have passed over.

# Mechanical Improbements.

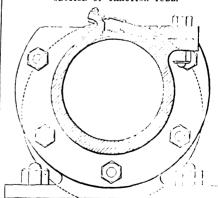

MR. PIATTI'S TRACTION TUBE FOR COMPRESSED AIR.

This system, the invention of Mr. J. B. Piatti, of Milan, has been patented in this country by Messrs. Prosser & Carcano. It is a modification of the atmospheric railway, with the difference only, that the atmospheric air in the pipe is compressed instead of rarified, and that it pushes the train away from the fixed steam-engine instead of towards it. The advantages and disadvantages of this system are pretty obvious; compared with the atmospheric system of Mr. Samuda, it has the advantage of being able to work a given train with a smaller, and therefore less expensive, tube. It can also vary the power according to the inclination, through a considerably wider range, without change of piston or piston-carriage; but it has the disadvantage, which we cannot help think-ing considerable, that the valve acts on the inside of the tube instead of on the outside, so that in case of accident it is much less accessible and more difficult to repair.

So much for the general principle of the compressed system as compared with the exhausting system. As to the particular plan adopted in this case, it appears to be ingeniously contrived, so as to make the liability to derangement less than in other instances we

have seen.

SECTION OF TRACTION TUBE.

The following is the statement of the patentees, from which the practical reader will form his own judgment as to whether the plan is better than the atmospheric railway or not; and he may further gratify his curiosity by inspecting the model railway now at work at the Rosemary Branch Tavern, near Peckham :-

A reservoir is filled with compressed air by means of a 4-horse Cambrian steam-engine—a communication between the reservoir and traction tube is mainit now occupies, at the cost of its constituents, fruitful. And while pointing out the direction tained by a pipe, and the supply of air regulated by does or does not present these fair conditions of in which it may be sought with advantage, we a cock. The line of rails, which are 18 in. apart, is

Digitized by GOGIC

150 yards long—50 thereof being on an incline of 1 in 30; a traction tube is placed between the rails, of 2\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2}\frac{1}{2 coulter attached to the carriage, which, with its load, weighs 1 ton, compressed air of about 30 lb. pressure is admitted, and allowed to exercise its force for only 47 or 48 yards. This gives sufficient momentum for 14 or 40 yards. This gives summent momentum for its travelling over the remaining line, of about 53 yards on a level, and nearly 50 more on the inclined plane. This system is based in the power of compressed air, acting on a piston, travelling in a series of longitudinal iron tubes, fixed between the usual iron rails. The upper side of the tube has, in its whole length, a slot or aperture. The tube is furnished with a longitudinal vulcanized india-rubber valve, which, shutting from within, closes the above slot. The piston has a vertical coulter, which, passing through the slot, is attached to the first carriage of the train. At the commencement of and at convemient distances on the line, are reservoirs, which are filled with compressed air, by means of small steamengines constantly at work, or by water power, when advantageously to be obtained. To set the train in motion the piston is inserted in the traction pipe, and the coulter attached to the first carriage; compressed air is then admitted from the reservoir into the trac-tion pipe, and, acting behind the piston, imparts a velocity according to the power employed, hermeti-cally closing the longitudinal valve the moment the piston has passed. The compressed air can easily be continued of the same force the whole of the course. The cocks of the reservoirs on the line may be worked by the train itself as it passes. The tube at several sections, according to the number of the reservoirs, has within it transverse valves, to stay the passage of the compressed air, suspend its action on the piston when nearing a station, and to maintain and determine the communication from one tube to the other, and in crossing the road. Numerous advantages are possessed by the atmospheric vacuum railway over the locomotive, viz., immense saving in cost of construction of the line and maintenance thereof-impossibility of collisions, of trains taking fire, or of running off the rails—facility of travelling up steeper inclines, and on curves of very small radius—the direct application of the motive power on the load itself, instead of being, in a great measure, absorbed by the locomotive engine and tender-and the consequent ability of drawing 20 tons more goods every journey, from the absence of the locomotive and tender, usually of that weight. Mr. Piatti's system has all the above, as also the following advantages over the vacuum:—1. Perfect closing of the longituding advantages over the vacuum:—1. over the vacuum:—1. Perfect closing of the longitudinal valve, which prevents any escape of air or loss of power. 2. Uniformity of diameter of traction tubes at all acclivities. 3. Facility of increasing or diminishing the propelling power according to the weight of the train. 4. Facility of augmenting the speed of the train. 5. Facility of surmounting steeper inclines. 6. Respective and precision in the service. inclines. 6. Regularity and precision in the service of the trains. 7. Saving by the engine and air-pumps, being considerably less, and constantly at work. 8. Economy of about 20 per cent. in construction of the line. 9. Economy of about 25 per cent. in its maintenance.

The Vacuum system. Mr. Piatti's Compressed Air.

1. The longitudinal valve, shutting on the outside of the tube, and having a pressure of only from 2 lb. to 10 lb. on the square inch, cannot shut close, consequently much air gets in, and a considerable portion of the vacuum is destroyed and propelling power

2, 3, 4 and 5. As the power resulting from the pressure of the atmospheric or external air (about 31b. on the square anr (about 31b. on the square inch) on the surface of the piston cannot be increased, it will be necessary to change the ordinary tubes, and replace them by much larger pipes and pistons, whenever are increase of nower is re-

of the train frequently occurs and sometimes a total stop-

page.
7. Large air-pumps are required to be worked by very powerful steam-engines, because the action of the pumps being intermittent, they are inactive nearly two-thirds of

- 1. The longitudinal valve shuts within the tube, and no air can escape, as the pressure from the compressed air within the tube of at least 30 lb. to the square inch must close the valve hermeti-cally, and prevent any loss of propelling power.
- 2, 3, 4 and 5. To accomplish the same objects no change of tubes or pistons is requisite: it is only necessary to increase the force of the compressed air, which can be done to an almost unlimited extent. It can also be diminished at pleasure, by admitting smaller quantities through the cocks, which the train itself regulates in its
- 6. These inconveniences cannot arise, as the valve shuts perfectly close.
- 7. Much smaller pumps and steam-engines are required, as their action is continuous; and no escape of air can take place, as the longitudinal valve is hermetically closed.

the time. Much loss of mo-tive power also takes place, from the imperfect closing of the longitudinal valve, which admits the external air, and diminishes the vacuum in the

8. This system requires the road to be more levelled than that for compressed air; as also a variety of tubes and pistons from a diameter of 15 in. upwards.

9. Repairs of road from embankments, cuttings, &c., to make it more level; also repairs of large pipes, pistous and complicated apparatus to valve, &c., make the working expenses high.

8. Saving of 20 per cent. in construction of road, much steeper inclines being sur-mountable, owing to the great increase of power which can be employed; and also in cost of the pipes, those used in this system being only about 8 in. in diameter. Although the traction pipes sustain a much greater pressure than those of the vacuum system, they need not be stouter, as their smallness makes them more solid. The cost of the reservoirs is no-thing in comparison to the other advantages over the

vacuum system.

9. Saving of about 25 per cent. in working expenses, from fewer embankments, cuttings, &c., from the simplicity of the internal longitudinal valve, and from the traction tubes being half the

# Literature.

Judge-made Law versus the Law of the Land. Second edition.

The interest excited by the opportune appearance of this pamphlet has been such as, within a month, to call for a second edition. We hope it may lead to a full discussion of the important question on which it treats-viz., the liability of parties who consent to become committeemen in connexion with joint-stock companies that seek parliamentary powers-and to such a consistent maintenance of the law with common sense as to avoid the scandal of conflicting decisions by the different members of the Bench as here Having already noticed this subportraved. ject at some length (ante, p. 427), we shall now only give an extract from the preface of the present edition.

"It is believed that through the medium of the press, the attention of jurymen will be secured to a more serious consideration of the important functions they are called upon to exercise. It has been generally thought the practice of late has been too much to dictate to them from the Bench, thus interfering improperly with that security that every one ought to feel in presenting his case for decision. That it is requisite that juries should be allowed to reason for themselves, will be at once seen by a perusal of the cross inconsistencies that have emanated from the Bench. Nearly all the cases are given in which they rule the liability of committeemen; and it is an insult to common sense to presume that the said decisions to common sense to presume that the said decisions were not founded in right. But, somehow or other, the Judges have belied their previous decisions, so as to let committeemen off by raising the standard of 'non liability.' It is difficult to discover why so sudden a change should have taken place; perhaps, however, the enigma may be solved by the appearance in the lists of 'provisional committeemen' of noble lords, peers of the realm, members of Parliament, judge's relations, barristers. &c. The oninion ment, judge's relations, barristers, &c. The opinion of the Times on the subject will doubtless be reperused with considerable interest. The matter has been allowed to sleep too long. It does not follow that because men hold high and honourable positions their opinions and actions are always to be found consonant with the principle of natural justice.'

## Progress of Works.

EAST AND WEST YORKSHIRE JUNCTION.-July 13. The directors made a trip from Knaresborough to York about 8 a.m., and returned about 7 p.m. weather was beautifully fine, and being the great day of the agricultural show, all the roads leading to York presented an unusually animated appearance. On the same day Mr. Oldham, contractor on the line, made arrangements to give his workmen a pleasure trip and a dinner. In the morning a train left Poppleton station with workmen, banners and music, and pro-ceeded to Hay Park, thence most of the party went in procession to Knaresborough, and after partaking of refreshments at the King's Arms Inn, "Success to the East and West Yorkshire" was drunk with great cheering. The party returned to reppieron and mid-day, where upwards of 400 were provided with a mid-day, where upwards of a place temporarily very substantial dinner, in a place temporarily fitted up for the purpose, after which an ample allowance of ale went round. The conduct of the workmen was most orderly throughout the day.

EDINBURGH AND NORTHERN (Opening to Perth).— July 13.—The Government Inspector went over the unopened portion, from Abernethy-road, near New-burgh, to the junction with the Scottish Central, near Perth, and expressed himself highly satisfied with the substantial nature of the works. The line was in consequence opened throughout on the 18th, when the mail reached Perth an hour sooner than formerly.

GLASGOW AND AYRSHIRE (Galston Branch) .-GLASGOW AND AYRSHIRE (Galston Branch).—This branch was opened on the 24th. The line had been previously inspected on the 14th by Capt. Laffan, Government engineer. At all the villages and bridges along the line the inhabitants turned out and cheered the train loudly as it passed. The branch terminates at present at the village of Galston, in the neighbourhood of which is Loudon Castle, the beautiful seat of the Hastings family.

neighbourhood or which is Loudon Castle, the Beau-tiful seat of the Hastings family.

GREAT NORTHEEN.—The works in progress be-tween Boston and Bardney have been closely in-spected by Messrs. Betts, Cubitt and other gentlemen connected with the contractors and the company. connected with the contractors and the company.
They were found to be in all respects satisfactory.
The greater portion of the Witham district is already
in working order; the stations at Tattershall and
Langrick are much above the ground; and Bardney
bridge and viaduct are nearly finished. A temporary
line is constructing, to form a junction between the
East Lincolnshire and Great Northern, across a field a little above the old brewery, on the Witham bank. Beyond the London road the ballasting is completed for three or four miles towards Spalding; this portion of the line runs through a most lovely country, and is of such facile construction that a junction with Spalding will be effected in a very short time. There is little doubt the entire line from Peterborough to Is little doubt the entire line from reteriorough to Lincoln will be opened to the public by the specified time (in September). The Boston station is not yet commenced; it will be at first a temporary erection, but will occupy the site of its ultimate locality, between the Grand Sluice and West-street.

LEEDS, DEWSBURY AND MANCHESTER. — Public traffic will probably commence on the 1st of August. It was inspected on the 20th by Capt. Simmonds, one of the Government Inspectors. The Harrogate and Church Fenton has been further opened from Spofforth to Harrogate, so that there is now direct rail-way communication from Harrogate to the South.

LIVERPOOL AND BURY.—The works are rapidly drawing towards completion, and it is expected that it will be opened in about a month or six weeks. It is one of the most important portions of the Lancashire and Yorkshire scheme, being upwards of 30 miles in length with the link through Heywood, to unite it with the Manchester and Leeds section; and besides competing with the Manchester and Liver-pool section of the London and North-Western for the Yorkshire traffic (which over this route will be effected with a saving of time and without change of carriages) will also offer very nearly as short a route from Liverpool to Manchester, by its junction with the Bolton and Manchester, now a portion of the same company's lines, near Bolton. A large coal and mineral traffic may be looked for.

LIVERPOOL, CROSBY AND SOUTHPORT .- July 24 .-The line between Waterloo and Southport was opened to the public after the Government inspection. On the 20th it was passed over by the directors. The line is 13 miles in length. Southport is a favourite watering place, about 17 miles from Liverpool, and much passenger traffic, during the summer season especially, may be expected. The line, a single one, has been so far constructed in the short space of three months, and without any further demand upon

the shareholders than the first call of 2l. per share.

LONDON AND SOUTH-WESTERN (Windsor, Staines and Richmond).— July 22.— The directors have made their experimental trip to Datchet. The works were commenced by Mr. Brassey in August last, by the removal of ballast from the bed of the Thames at Richmond, to lay the foundation of the most important work on the entire line-the viaduct across the river. Little more was done until after Christmas, when the works commenced simultaneously at various points of the intended line, and have been since carried on, so as to enable the directors to open the line for public traffic at least as early as the beginning of August. The line is 15 miles in length, commences at about a quarter of a mile on the London side of the Richmond terminus, and terminates for the present immediately opposite Datchet Bridge, within a mile and a half of Windsor. There are no heavy and deep cuttings, or very lofty embankments; it is in its main features a dead level. Where the junction is effected with the Richmond line it has been found necessary to make a considerable inclination, in order to pass under the Kew-road, to maintain which an iron girder bridge has been thrown across the line. At the point where Kew-

Digitized by GOOGLE

lane intersects is another iron girder bridge, and the cutting is followed by an embankment within re-taining walls, which crosses the end of the old deer park, and the line is continued by a series of beautiful arches of white brick with red quoins to the viaduct across the Thames, which consists of three iron arches, each of 100 ft. span, and supported on brick foundations and abutments faced with stone, two of the abutments springing out of the river.

An embankment carried across the Marquis of An embankment carried across the Marquis of Ailsa's estate, diminishing in altitude as it proceeds, brings the line to Twickenham, where it passes under the high road. This is the first station out of Richmond. A cutting of no great depth intervenes between Twickenham and Feltham, and at this place there is erected another station. The third appointed stopping-place is Ashford, and thence Staines is reached. The line crosses the main road at an altitude of 18 ft., which is attained by a gradual artificial rise of the line, and as gradual a declination. The bridge erected here is a handsome structure; the station and engine-houses are, as is the case on the entire line, temporary. At this station the junction with the Chertsey line will be effected. Another station at Roseberry is reached, and two miles further brings the line to its present terminus at Datchet. The special trains, says the Observer, left Richmond about 3 30 p.m., and re-turned exactly at 7 p.m., when the directors unani-mously expressed their satisfaction at the manner in which the works had been carried out, and the great smoothness of the line. The Government Inspector will shortly make his survey, and grant the certifi-cate, in the event of which the line will be thrown open early in August, and, connected as it is with the very heart of London, will doubtless prove a most powerful rival to the Great Western, which has hitherto enjoyed the monopoly of the traffic to Windsor and its environs.

Scottish Midland Junction .- The directors confidently expect that the whole of the line from Perth to Forfar will be opened for public traffic on the 1st

of next month.

# Law Entelligence.

ALTERATION OF LINE.—July 26.—In the LORD CHANCELLOR'S COURT, in re Holyoake v. the Shrewsbury and Birmingham, counsel supported a motion to discharge an order for an injunction granted by Vice-Chancellor Wigram to restrain the defendants from going on with their works until after the trial from going on with their works until atter the trial of an action brought by the plaintiff against them at the next Gloucestershire assizes. (The facts are given in the report of the motion in the Vicc-Chancellor's Court, below.) Counsel now stated that it would be most injurious to the company to have their works suspended until a trial could be had at the Gloucester essizes the result of which even if in the Gloucester assizes, the result of which, even if in their favour, could not be made available for them in this cause until the courts again sat, in November. They contended therefore that the injunction ought to be dissolved. It was proved that the company deviated from the parliamentary line and levels, and also from their agreement with the plaintiff.—The Lord Chancellor said the true question was, whether the plaintiff had suffered damage by the deviations of the line. The Court was always anxious to protect suitors against these great companies, and they also were entitled to protection against injunctions extending over several months, at a season when they could not have them removed. The action was fixed for trial at Gloucester. The parties were quite ready to go to trial, the pleadings being complete, and his lordship saw no reason why the plaintiff could not collect his witteress and twith a citien next work of collect his witnesses, and try the action next week at Shrewsbury, the commission for which would then be opened. By taking the trial there the Court would be in possession of the result before the long vacation, and be able to pronounce whether the injunction ought to be dissolved or continued. His lordship varied the order appealed from accordingly, and the counsel for the defendant agreed to accept whether the right. short notice of trial.

July 20. - In the Vice-Chancellor's Court. in re Holyoake v. the Streesbury and Birming-ham, a motion was made to restrain the company from carrying their line over the plaintiff's land at a deviation exceeding 5 ft. from their datum line. The plaintiff owned a mansion house and estate, called the Neachley estate, at Doddington, Shropshire, and the Netchicy estate, at Poddington, Enropshire, and had at first opposed the bill in Parliament, but had afterwards withdrawn his opposition, upon an understanding with the defendants, as to the communications with the part of his property to be severed. By this agreement the defendants undertook to carry their line green the public result from Page 1. their line over the public road from Tong, by means of a viaduct in front of the mansion. Instead of doing this the company had constructed the railway between embankments, at a level of 12 ft. lower than they had agreed; and had carried the public road over the line by means of a bridge which was brought into view of the mansion. The plaintiff complained that by this means the privacy of his residence had been destroyed. The defendants contended that the manner in which the line had been constructed was more beneficial for the plaintiff than the plan origin-

ally proposed; and secondly, that the plaintiff had acquiesced in their proceedings for upwards of a year, and could not now be heard to complain of what had been done.-His Honour was of opinion that the been done.—His Honour was or opinion that the evidence did not establish acquiesence on the part of the plaintiff; and directed that the question of damage should be tried by a jury. The action would be tried upon admissions by the parties showing the difference between the actual level of the railway and that which was considerable proposed.

and that which was originally proposed.

July 25.—In the same Court, in re Rudge v. the Oxford, Worcester and Wolverhampton, the injunction had been granted ex parte to restrain the company from working upon the plaintiff's land, on the ground that the purchase money was not paid. The bill and affidavits had stated that the first knowledge that the plaintiff had of such steps having been taken by the company was on the 21st of June last. On the affidavits for the company, the possession had been in fact taken in October last, but the plaintiff having then remonstrated the company had discontinued their operations, and had not resumed them until the month of June last. Upon this ground it was argued for the company that there had been a material suppression of facts, and that the injunction ought to be dissolved with costs.—His Honour, after observing that the rule imposing upon the plaintiff, who applied ex parte, the duty of disclosing his case fully could not be applied too strictly, held that the omission to advert to the possession taken in October, and afterwards given up, was not such a suppression of the circumstances as should deprive the plaintiff of his injunction. If the fact had been stated it would not have excluded his right to that relief. He ordered that, upon payment of the purchase money by the company, the injunction should be dissolved.

GREAT WESTERN.-The magistrates at Taunton have lately committed four men (navvies) for trial at the ensuing session, for placing an obstruction on the main line and perilling the lives of the passengers travelling by a mail train.

# Reports of Meetings.

CAMERON'S COALBROOK STEAM COAL SWANSEA AND LOUGHOR.

July 28 .- Annual Meeting, London .- Mr. R. P. CAMERON in the chair.

The Chairman gave a protest to the secretary to read, which was signed by S. Wood and C. Jones, against the meeting, as being illegal, the directors having failed to comply with the provisions of the Joint Stock Companies Act. It pronounced that all resolutions which might be carried would be of no

The Report stated that the directors had come to an amicable settlement with Col. Cameron, the vendor, so that the proprietors might have full command of the property. They had thought it advisable to take measures for the construction of a short line of 21 miles to Llanglly, until the two pain lines. line of 2½ miles to Llanelly, until the two main lines to Swansea shall be constructed and ready for traffic. This line might be completed in three months from the present time. When the colliery openings are completed, the directors expect the command of upwards of 60,000 tons annually for several years. A further outlay of 30,000l. would carry out the recommendations of the Report, and would give the command to the company of the ports of Swansea and Llanelly. The quantity of coal raised during the year was 19,496 tons; the mineral still retained its high character for steam purposes. The Swansea and Loughor project remains in suspense, the directors preferring to construct the in suspense, the directors preferring to construct the short line to Llanelly. In conclusion, the directors recommended that a dividend at the rate of 5 per cent. for the half-year be declared. From the balance-sheet it appeared that the profit on the sale of coal was 3,961. 1s. 34d. The total amount received was 197,140l. 12s. 24d. The cash and bills at the bankers amounted to 2,216l. 13s. 14d.

Mr. Burks pointed out a course which would save him going into anything unpleasant as to their past transactions, which was, that the directors allow the four vacancies in the direction which then existed to be filled up by the shareholders; the names he had to propose were those of Messrs. Hart, Lunn, Hunt and Danford.

The CHAIRMAN gave in the names of two candi-

Some informalities having been proved to exist in the notices, Col. CAMERON thought the names suggested by Mr. Burls very good ones, but suggested that a special meeting should be called for the pur-

Mr. Elderton, the solicitor, thought it unsafe to elect the directors under such circumstances.

Mr. Burls contended that he did not anticipate

any difficulties from the notices as they stood; but

Digitized by GOOSIC

he thought the shareholders would not object to have another meeting, for the purpose of the election.

The CHAIRMAN courted a full inquiry into all the

acts of the directors, and for that purpose would not object to a committee of inquiry being at once appointed.

Col. CAMERON also explained, and said that he should be happy to retire from the company, and request his two sons also to do so, if it would lead to unanimity. He knew the company had up-hill work at present; but when they raised beyond 40,000 tons, they would only be liable to him for 1s. per ton, besides the dead rent of 2,000l. a year. They were now going the way to raise nearly 60,000 tons a year. On concluding his explanation he was much applauded.

After some consideration, a committee of six shareholders was appointed to consider the report and general affairs of the company, and to report to

a special meeting, and the meeting adjourned.

Special Meeting.—This meeting took place afterwards, for calling up the remaining 4l. per share, which was agreed to be paid by 1l. instalments.

## SAMBRE AND MEUSE.

July 25 .- Adjourned Meeting, London .- Mr. W. P. RICHARDS in the chair.

The CHAIRMAN said the meeting was adjourned in order that the directors, with the assistance of those added to the Board, might consider the best means of raising money for carrying on the works. He should make but few remarks, because the reports of the directors and the committee of shareholders recently presented to them had put the proprietors in full possession of affairs. Both reports agreed in this particular, that it was necessary to raise a comparatively small sum for the completion of the first section of the line from Morialme to Marchenne. Though a comparatively small sum was required for the purpose, yet the benefit of having that portion open for traffic would be very considerable. With regard to the two reports there was no difference on that point, but the directors felt that there were many observations in the report of the committee which arose from a misconception of the position of the company. The directors had not made any public answer or provoked private discussion, however, on those observations, because they felt that it was a matter of importance in the prosecution of the works that a cordial understanding should exist between the directors and the proprietors and the Board, and those who might be added to it. The general meeting had been held as early as possible, in consequence of the pressure on the company for money. they were shortly placed in possession of funds the works must come to a stoppage. The mode of raising those funds had been a matter of considerable discussion at the Board, and the first idea had been to ask the proprietors to agree to the issue of preferential shares. Supposing that each proprietor took his proportion of those shares no wrong would be done to any party, but that could not be calculated upon, and the directors therefore adopted another The sum required was so comparatively inconsiderable that the directors thought it would be hardly fair to burden the capital of the company with a perpetual charge for preferential shares. They therefore proposed to raise the amount required on debentures, bearing a high rate of interest, giving the shareholders the option, in the first instance, of taking up those debentures, which would be redeemable at the end of a certain time, when the capital of the company would be freed from the extra burden. The line was nearly complete, so far as regarded its first section, and he believed that if it could be completed, it would prove of benefit to the company; and all the reports which had been laid before the proprietors would enable them to judge of the traffic to be expected. At present Belgian railways were certainly labouring under depression, but he believed that they were all aware of the causes. He believed that depression to be temporary, and even now he saw every prospect of the trade and confidence in that country reviving. If they were enabled to open the first section of their line, he believed it would prove the solidity of their undertaking and lead to the extension of the line. At the last meeting of the proprietors a wish had been expressed that four gentlemen should be added to the direction in lieu of four who were to retire. In conformity with that wish the directors had already elected Messrs. Sheward and Williamson into the Board, and made a proposition to a third gentleman (Mr. Crake) to join them, but he had declined. The directors, however, would take the earliest opportunity of fully carrying out the wishes of the proprietors with regard to the He would now move that a loan not exceeding 40,000% be raised for the purpose of opening the first section of the line from Marchenne to Walcourt,

with the Laneffe and Morialme branches, on debentures to be issued for five years, bearing interest at the rate of 10 per cent. per annum, payable half-yearly in London. Such debentures to be offered to the shareholders in the proportion of one debenture of 2l. for every three shares held in the company, provided they were applied for within fourteen day from the date of the resolution, and a deposit of 10s. per share paid upon them prior to the 1st of August. If such shares be not all subscribed for the directors to be at liberty to apportion them among shareholders wishing to augment their proportion, and, in the event of any being then left, as they might deem advisable for the interests of the company. The further instalments of the debentures to be payable as follows:—10s. on the 1st of September, 10s. on the 2nd of October, and 10s. on the 1st of November; it being understood that the last instalment should not be called up if the other calls were found adequate for the purpose required, the shareholders having the option, at the end of the five years, of converting the loan into shares of the company at par. If 10,000 shares were not applied for and paid upon, the amount received on account of such shares to be returned to the parties subscribing to the proposed

Mr. Brooke wished to know how the principal was to be guaranteed, and what, in the event of the line ever being forfeited to the Government, would be the position of those advancing money on deben-

The CHAIRMAN said that the whole property of the company would be liable for the repayment of the principal of the loan. Should such an event as that referred to by Mr. Brooke occur, and the line fall into the hands of the Government, it would be sold, and the creditors of the company, including the debenture holders, be paid out of the proceeds. the company did not carry out the line to completion it would become forfeited to the Government, who would sell it for the benefit of the shareholders

Mr. FLOOD said that as far as he understood the plan proposed it appeared to be well selected. He had a great objection to preference shares, because many parties in entering a company calculated how much money they could invest in it, and if preference shares were created they must either sell a portion of their original stock at a loss, or embark more capital in it; but by the present plan, the preference only being for a limited period, every person could cal-culate what would be the extent of his loss without the necessity of sacrificing the property he possessed. It was useless to look at bygones; and he thought it now became their interest and their duty to cordially unite and see what could be done to sustain and improve the value of their property. He looked to the opening of the first section with great hopes, and he believed that no sooner would they have a portion of the line open and at work than the Government would see the necessity of giving their encourage-ment and assistance to complete it. From what he knew of the manner in which the Belgian Government conducted their business, he had no fear of the forfeiture of the line, and he was not only prepared to take his proportion of the debentures, but should be glad to have two or three times the number he was entitled to if other gentlemen should fail in taking them up. He urged upon the directors to give their attention to the most economical method of working the line, as he believed, from the nature of the traffic to be expected upon it, the locomotive would not be so, though it was universally admitted to be so where there was a large traffic which could be got together in masses, but which, he believed, would not be the case on their line.

Mr. FISHER expressed his intention of at once taking his proportion of the debentures, and more if he could get them.

Mr. Kingston, who represented 1,000 shares held in Bath, would answer for it that the proportion of debentures belonging to the parties in that place would be readily taken up.

After a short conversation, in the course of which it was stated that it was believed that the two retiring directors would be Messrs. Betts and Cubitt, and that the working stock on the line, which could not be forfeited to the Belgian Government, would be suffi-cient to guarantee the repayment of the amount to be borrowed under the debentures, the resolution was carried unanimously.

NAMUR AND LIEGE.

July 22.—Annual Meeting, London.—Mr. A. Spot-TISWOODE in the chair.

The report stated that-

On the 5th of January last the directors presented a report recording the formal opening of the first section of the Mons and Manage (about 12 English miles), and the then state of the works. This section of the Mons and Manage

commenced working for merchandise on the 20th of January, and for passengers on the 1st of March last. The number of passengers, without accident, up to the 30th of June last, amounts to 20,636; and the quantity of merchandise conveyed up to the same period is 26,128 tons. The returns amount to 43,328f, 97c. (1,7331), and the working expenses to 41,843f. 66c. (1,673f).; but it is only when the entire line from Mons to Manage shall be opened for traffic throughout that its capabilities will be fully tested. Arrangements are already in progress for the conveyance of large quantities of coult to Paris and the interior of France as soon as the whole of the line is opened. The contractor has given his assurance that he could complete the works throughout this indexenand for passengers on the 1st of March last. already in progress for the conveyance of large quantities of coal to Paris and the interior of France as soon as the whole of the line is opened. The contractor has given his assurance that he could complete the works throughout this independent line from Mons to Manage by November next, whereby the most important and active period of the year for the traffic in coals will be secured. To show the present state of the works up to the 30th of June last, both on the Namur and Liége and Mons and Manage lines, the directors refer the shareholders to the report of the engineer. Operations have unavoidably been limited by the pressure upon the money-market during the past year, but the directors cannot omit this opportunity of recording their thanks and obligations for the liberal conduct shown by the contractors. Since the special general meeting of the 26th of April last the directors have been diligently engaged in endeavouring to effect loans. They have found the greatest difficulty, not arising from any doubt of the value of the undertaking, or any fear as to the position of Belgium, but from the disinclination entertained by capitalists to invest in any industrial pursuit, and from the unsettled state of the Continent generally. The directors are deeply impressed with the importance of procuring as early as possible the necessary capital. As long as the works are incomplete, not only is the company unable to obtain a revenue, but it is saddled with the payment of interest at the rate of 4 per cent. per annum upon all the paid-up capital. The Belgian Legislature has granted an extension of the time allowed for the full execution of the works on both the company's lines until the 28th of July 1850, or two years beyond the time previously fixed—on condition that the company lines until the proprietors that this number is very far below that requisite for the proper and vigorous prosecution of the works. A convention, signed by the Minister of Public Works and by the directors, dated the 28th of April last, to the of the undertaking. To open the Mons and Manage line with as little delay as possible, and to maintain in progress the works on the Namur and Liége line, are the primary objects to which the directors are turning their attention, and they need scarcely remind their brother proprietors that the more speedily the required funds are placed at the disposal of the Board, the more advantageously they can be administrated. be administered. The half-yearly interest on paid-up capital, due the 12th of August next, will be payable, as usual, on and after the 21st of that month.

The statement of accounts showed the receipts at 723,296l. 16s. 4d.; expenditure—for works, 587,740l. 18s. 7d.; for working stock, 58,256l. 6s. 1d.; interest to shareholders, 29,108l. 2s. 9d.

The CHAIRMAN would read them an extract from a letter addressed to them by Sir F. Smith, who had examined the works completed and those which were in progress. Sir Frederick would have been present that day, only he had met with an accident in one of the tunnels, which prevented him leaving Belgium: "I am desirous of acquainting you that I have carefully examined the works, both completed and in execution, on the Mons and Manage and the Namur and Liege, accompanied over the former by Mr. Stocks, and over the latter by Mr. Mitchell, the resident and assistant engineers. I am sure it will be satisfactory to you and our colleagues in the direction of the Namur and Liege to learn that in every part of both lines I found that the works which have been finished are of a substantial character and in admirable order, while those in execution are carrying on upon sound principles, and in a manner which reflects the highest credit upon the engineers of the company, and affords reason to be satisfied with the contractors, for in no one instance did I find evidence of carelessness or bad workmanship, and the materials seem to be of a suitable description throughout."—Those opinions were peculiarly valuable, inasmuch as Sir F. Smith could not be influenced by any premeditated views of his own. He had very little to add to the report. They must all see the difficulty the company, and indeed almost everybody, was labouring under at the present time, namely, the difficulty of getting money. They were suffering from bad laws, which deprived them of the means of using and disposing of property, except under depreciated circumstances. Still the directors struggled against them, and made much and good progress. A very moderate sum would enable them to complete the Mons and Manage line, which would be a valuable

Digitized by GOGIE

working line, and promised better than was originally expected. There were some who thought it would exceed in value the Namur and Liege line, but the directors did not carry their hopes so far. However, every indication showed that it was likely to turn out every indication showed that it was likely to turn out a very valuable line, and a great deal depended on the economical use of funds, and that those funds should be provided as soon as possible. Time was valuable, and the more difficulty there was in obtaining money, the more valuable time was. In the actual state of the money-market, it was not advisable to raise money by the issue of shares. Prospects, however, were brightening, and it was the interest of the proprietors to help the directors out in their attempts to

raise the necessary funds, for by so doing all would be equally benefited. That ought to be their main object. He moved the adoption of the report.

Capt. Greig seconded the resolution. Having just returned from Brussels, he could vouch that there could be nothing more satisfactory than Sir F. Smith's report of the Mons and Manage line. He had seen M. Noel, chief of engineers at Brussels, who had examined the line, and pronounced it the best on the Continent, or at least in Belgium. If the portion opened for goods in January last had been opened earlier, the traffic receipts would have been vastly greater, for then they would have had the conveyance of coals to several Continental cities, the inhabitants of which laid in their stock of coals in autumn. In the coming season the whole of that traffic would be transferred from the canals to their line, and the receipts next year would be augmented in proportion. He should be sorry if any of the shareholders were not satisfied with the system pursued by the directors, but if they sent over a deputation to Belgium to make examinations on the spot, they would find that their investments would ultimately prove profitable. The more he saw of the line, the more he was satisfied that ultimately it would make a very good one.

A Proprietor asked an explanation touching 81,876l.

18s. 2d., he saw in the construction account.

The CHAIRMAN: It is what has been received, and not what is due. All the caution money had been received back from the Belgian Government, and is accounted for in the item just named.

Another Proprieter pointed out what he considered loss of 13,000l. and upwards, by investments in Belgian stock.

The CHAIRMAN: That refers to the caution money rendered necessary by law, and the loss was by being forced to sell out at low prices. By another sale 19,000l. had been gained, so that in the aggregate there was no loss.

Mr. Carvalho was dissatisfied with the report. He moved as an amendment, that "a committee of five be appointed to investigate the affairs of the com-

pany and report thereon."

Mr. Burns seconded the motion, and a long desultory conversation ensued, in which the number of clerks, the amount of their salaries, the rent of the offices, and other minutize of management were discussed.

The CHAIRMAN said, as the directors and the contractors held one-fifth of the capital in their own hands, they were not very likely to squander it away, though they were at all times happy to receive suggestions. He might mention that the excess of capital required would be very little beyond what was originally estimated, and that had been caused by circumstances over which they had no control, such as the Belgian Government compelling them to construct their line on the left bank of the Meuse instead of on the right, by which they would have a more valuable line, which they had only been prevented from adopting in the first instance from considerations of expense, though he did not think that the extra expense would be ultimately any loss to the company.

Mr. HARRISON objected to discussing points of detail in the management when they ought to be considering how to make their property available to return a profit. The accounts showed that 290,000l. had already been expended on the Mons and Manage line, and that it only required 30,000l. more to bring it into profitable action with a single line. What they ought to do now was to consider the best means of raising that money, and he wished to know if the directors had any suggestions for doing so, and whe-ther they would consider it desirable to issue the forfeited shares to the shareholders at about the pre-

The CHAIRMAN said that the directors did not consider it expedient to issue shares at the present price, as they believed that in a very short time they could be more advantageously issued; and that at present it was much better to give an excess of interest for loans. All the loans they had hitherto made had been at 5 per cent., but they were now prepared to

were going on which he believed would result in their being placed in possession of the necessary funds. They were not suffering alone for want of funds: but all commercial enterprizes were depreciated from the same cause—the want of money. He was surprised that the railway proprietors had not united and compelled the Legislature by their remonstrances to alter the currency laws, which were paralysing all commercial pursuits. He could assure the proprietors that the question of economy was constantly before the eyes of the directors, and that the real economy would be found in providing the funds quickly, and so getting the line promptly completed. He must urge upon the proprietors the necessity of completing the Mons and Manage line before the winter began. It would require great exertion to do it, but yet he hoped they would find money to accomplish that object.

Mr. HARRISON saw from the report that the interest on the paid-up capital became due on the 1st of August, and he would suggest the propriety of the shareholders foregoing its receipt. It took 10,000l. to pay that interest, so that the half-year's interest would be sufficient to complete the Mons and Manage line for opening. He was aware that a resolution could not be brought forward at the present meeting to suspend the interest, no notice having been given on the subject. He would therefore suggest that, if each proprietor was to make a loan of 30s. per share specially for the completion of the Mons and Manage line, they would be much benefiting their property, from which at present all was going out, and nothing coming in.

Mr. WILLIS supported the views of the last speaker, and deprecated the appointment of a committee, which he invariably found only created distrust, by pointing out difficulties without suggesting remedies.

The CHAIRMAN said they were bound by statute to pay the interest upon the calls, and had they been enabled to raise the money quickly and complete the works, no great inconvenience would have been felt; but the events which had occurred causing the works to be protracted made those dividends a heavy incubus on the company. As to refraining from receiving the dividends, the direction could take no initiatory steps, but they would be very happy if the shareholders voluntarily and unanimously agreed not to receive them, as the next best thing to giving the company money was to abstain from taking it from them. Any proprietor was at liberty to lend money to the company, and a most liberal interest would be given them for it, as it was desirable that every one who could do so should lend a helping hand to bring

the property into profitable operation.

The amendment was then put and lost, only five hands having been held up in its favour. The original motion (the reception of the report, &c.) was then carried with only one dissentient.

The election, as directors, of Sir F. Smith and Mr. J. F. S. Parry was confirmed.

# DUTCH-RHENISH.

July 24 .- Special Meeting, London .- Mr. W. REED in the chair.

The CHAIRMAN gave an account of his endeavours to get an alteration in the statutes, so as to make them more similar to those of the French companies. He only wished to procure for the English shareholders a greater control over their property than they had under the present statutes. He read a report, from which he argued that the feelings of the Dutch Board were not friendly to this alteration, which, in his opinion, would enable the concern to go on to prosperity. The head direction in Holland consisted of six persons, one of whom happened to be an Englishman, and four directors were in London; but still if they had all wished to go to Holland, they would not be considered as forming the Dutch Board. He considered that the number ought to be twelve, and that the London Board ought to have a representative at the head direction in Amsterdam. At the last meeting, in June 1848, he attended, and the day before the meeting he heard that a hostile deputation was come from Liverpool with fresh demands. On this occasion he entered his protest against them, as neither having the sanction of himself nor of any of the other directors in England. Still the resolutions were carried by the force of the proxies brought by the gentlemen from Liverpool, several of whom were parties to the former arrangement between himself and the other directors. He was perfectly certain that there was scarcely the owner of a single proxy out of the 50,000 shares who knew how greatly it was to be used to the detriment of their property. They now found out that another call was made, and that was not owing to the Dutch gentlemen or the London Board, but to the zeal of the list of gentlemen from Liverpool. The directors were urged by himself to give a larger rate of interest; and in fact negotiations purchase the land, and they made arrangements for

that purpose for the land between Utrecht and Rotterdam, for which purpose they agreed to a call of 10s. per share. Another call of 10s. had now been made, and he was sure that a great pressure would be put on to get in the arrears due from the share-holders. All this would not have happened but for the inopportune conduct of the gentlemen from Liverpool. He would conclude by inviting them to signify by their proxies at the next meeting which course had been most agreeable to them-that pursucd by the London Board or the parties from Liver-pool. In the meantime the London directors would do all in their power to undo, if possible, what had been done, so as to carry on the work to a happy completion.

Mr. HOLLAND, one of the Liverpool shareholders, gave an account of the reasons for their demands, in doing which he dissected the prospectus of the company, and stated that the undestanding was that the management was to rest with the joint direction in England and Holland. He found that 90,000 out of the 100,000 shares had got into the hands of Englishmen. Salaries might be an object to the directors, but whether they were entitled thereto from any exertions on their behalf was another question. In one short twelvemonth 300,000l. had been invested in bonds without their sanction. These and other circumstances led them to have no confidence in the head direction; but when it was mentioned to them. they stated that these bonds were bought at the instigation of the London Board. He admitted that Mr. Reed's objects were a step in advance, but were not such as would satisfy the shareholders. He and not such as would satisfy the shareholders. He and his Liverpool friends insisted that the proprietors should have a control in the representation, without which they would never progress to their satisfaction, nor could they obtain their general meetings for explanation. He would now ask, how could these things be offensive when they were merely proposals for carrying out the agreement, and giving the shareholders in this country a majority in the management? They did, however, consider these proceedings as hostile, and calls had been made in consequence; the property was now further depreciated, and their shares in arrear were threatened with forfeiture within fourteen days. Was this for the purpose of issuing a new prospectus? They had the materials at hand; there was their 300,000l., and there was their concession of the line. He concluded by denouncing the original prospectus, and the concocters of the scheme, for the manner in which they had deprived the shareholders of the control over their property.

Mr. MASTERMAN, jun, a director, defended the conduct of the Board, and said that the party from Liverpool had completely upset the arrangements that were making by the two Boards. He declared from his heart, that everything he and his friends had not footby accomplished by the two boards. had put forth was genuine and true, and that if the concern had been thrown into any difficulties, it must be traced to the busy interference of a number of shareholders.

Mr. Devaux justified the purchase of the bonds on the part of the directors.

Mr. CHAPLIN, a director, also explained, and stated

he still held his 4,000 shares in the company.

After some discussion, and advice from Mr. Ben-NETT as to a conciliatory course, a resolution was passed for a conference taking place between three of the directors (the chairman, Messrs. Chaplin and Maynard) and three of the Liverpool proprietors (Messrs. Moss, Gladstone and Swift), with a view to an amicable settlement of the differences now ex-

isting.
A vote of thanks was passed to the chairman, approving of his policy.

DERBY, UTTOXETER AND STAFFORD.—July 18.—
Meeting of Certificate Holders, London.—Mr. W.
Nash in the chair.—The Chairman said, that at
a meeting on the 2nd of June last, the shareholders
appointed a deputation of four of their own body to look into the accounts, to see if some arrangement could not be come to for the settlement of the outstanding claims, with a view to their being arranged with satisfaction both to the claimants and them-selves, and that they might be enabled to effect the final winding up at as carly a period as possible. The the shareholders were convened for the purpose of receiving the report.—Mr. Phillips, one of the gentlemen appointed, accordingly read the report:—

In pursuance of the resolutions passed at the said meeting, your deputation have had many interviews with the Board; and after maturely considering the delay and uncertainty of law proceedings, thought it best for the interests of the shareholders to make (subject to your approval) such arrangements as will apply the committee to divide incomparing snareholders to make (sinject to your approvan) such arrangements as will enable the committee to divide immediately 7s. 6d. per share. Your deputation accordingly recommend the shareholders to authorize the committee to enter into such arrangements as will enable them safely to Digitized by

divide that amount forthwith. It is recommended also that 100 guineas should be reserved for Messrs. W. Nash (chairman), F. Ede, E. Harvey and F. B. Goldney, the four gentlemen of the London committee, as a slight testimony of the honourable and efficient manner in which they have attended to the interests of the shareholders—the deputation regretting that the company's funds do not enable them to make a more valuable acknowledgment of their merits. Also that the further sum of 100 guineas should be reserved for the secretary, Boynan Boynan, Esq., for his important services beyond his official duties, during the complicated and protracted lawsuits in which this company have been energed.

engaged.

—In answer to questions, Mr. Phillips explained that the dividend of 7s. 6d. was clear of the sum of 200 guineas which the committee had recommended to be appropriated in the manner which he believed would be gratifying to the shareholders. This sum would be gratifying to the shareholders. This sum was also independent of a balance from which they might possibly be enabled to declare a further trifling dividend on the final settlement of their affairs.

Mr. Halse (another member of the deputation) added that it had been thought better, in order to obtain an immediate return of the dividend mentioned, to sacrifice about 6d. or 8d. per share to meet outstanding claims, than to await the event of lawsuits, which might delay the distribution two or three years longer; that certain parties, whose names it was not neces-sary or desirable to introduce on that occasion, had for that sum undertaken the responsibility of meeting those claims, and the committee were thus enabled to return the money to the shareholders without delay.—In the course of a conversation which ensued, the shareholders present expressed a unanimous opinion that the sum of 100 guineas, which had been recommended by the deputation to be set apart as a testimonial of the respect of the shareholders for the labours of the acting committee of the direction, was inadequate to enable them to mark, in a more distinct form, their sense of the obligations which they owed to their chairman for his zeal in the winding up of the affairs of the company; and it was ing up of the affairs of the company; and it was eventually agreed that 2d. per share should be appro-priated in addition to the 100 guineas, and presented to the directors as a token of respect and acknow-ledgement of their services for a period of three years.

With this fund they would be enabled to request their worthy chairman to accept the sum of 100 guineas as a personal acknowledgment to himself.-A formal resolution was then passed adopting the report, and recommending that a dividend of 7s. 4d. per share be returned to the shareholders, instead of 7s. 6d., as proposed in the report, to enable them to express their approbation of the conduct of the directors by presenting them with 250t.; viz., to Mr. Nash, the chairman, 100%, and to the other directors, Messrs. Ede, Goldney and Harvey, 50% each.—The Chairman expressed the sense he entertained of this kind recogrition of his services. The event was exceedingly gratifying to him, and would be more gratifying but that he was then to separate from them. He should always retain a deep sense of this token of respect. aways retain a deep sense of this token of respect.—
A separate resolution was then passed, voting the sum of 100 guineas to be laid out in the purchase of a piece of plate to be presented to the secretary, Mr. Boyman Boyman.—The Chairman, in putting this resolution, observed that he could not refrain, on such an occasion, from speaking in the highest terms of the honourable manner in which the Secretary had conducted himself throughout the company affairs, and in bearing testimony to the general ability with which he had acted for the interests of the shareholders.—Mr. Phillips had no hesitation in saying that to Mr. Boyman's exertions they (the shareholders) were indebted for the settlement of the unhappy lawsuits which had so grievously interfered with the settlement of their affairs.—Mr. Boyman thanked the shareholders for the handsome manner in which they had recognized his services, and assured them that until their affairs were entirely closed, they might depend on every assistance which he possibly could render them.—It was understood that on Wednesday next the division of the sum of 7s. 4d.

per share would take place.

DUTCH-RHENISH.—July 21.—Meeting of Share-holders, Liverpool.—Mr. C. Holland in the chair.—
The Chairman stated that the occasion of the present meeting was an advertisement in the London papers, convening a meeting of shareholders in London. It did seem highly desirable that the shareholders in

Liverpool and vicinity, being in number double or treble those in London, should have an opportunity of expressing an opinion of the present state of affairs prior to the meeting in London. The Chairman gave a detailed account of the different measures adopted by the sharcholders in Liverpool, from the period of holding a meeting in February 1857, with the view of acquiring the representative principle of having a voice in the management of their string. The following resolution was need:

ciple of having a voice in the management of their own affairs. The following resolution was passed:—
That this meeting do confirm the appointment made at a select meeting of sharcholders, held on the lith inst. of Messrs. 11. Harrison, T. B. Forward, C. Holland, J. Wastaff and A. Maegregor, as a committee, to confer with the Liverpool commissaries, and also for such other purpose a were mentioned in the resolution passed on that occasion, which was as follows:—"That a committee of shareholders be appointed to confer with the Liverpool commissaries, at onflairs, particularly as to the course to be taken at the adjourned general meeting in Amsterdam, on the 255-de August, with full powers to appoint a sub-committee for any special purpose, to employ a legal adviser, and to take any steps that they may deem necessary for the protection of the English shareholders, and to call a general meeting at such time as they may think proper."

A resolution was also adopted, giving thanks to the gentlemen who had formed the deputation to Am-

A resolution was also adopted, giving thanks to the gentlemen who had formed the deputation to Amsterdam, for the able manner in which they had carried out the instructions given at the meeting of the 9th of June. Resolutions adopting measures to carry out the views of the shareholders were then passed.

[For further Reports of Meetings, see p. 518.]

The affairs of the ABERDEEN, BANFF AND Elsit, says the Scottish Railway Gazette, are all but closed. It will be recollected that various lawsuits depended between Oswald, George & Co., of Aberdeen, and the law agents and committee; and two of the scrip or shareholders, who refused to accept the balance of the deposits, brought actions, not only for the deposits, but also claiming damages, or the premiums paid for the scrip. All these actions are now out of cont, highly to the honour of the railway committee, whose conduct after a searching inquiry has been found beyond all exception. The remaining deposits will now be taken up.

# Manen Market.

# PRICES OF BRITISH STOCKS.

* For account, Aug. 10. + Ex Div.

London Stock Exchange, July 28.— The share market continues to feel the fluctuations in the public funds, and the progressive improvement in prices has been checked; there is, however, some demand for debentures and guaranteed stocks, which, with the return of quiet, will easily be extended to the original shares.

Liverpool, July 27.—The market has been very inactive throughout the week, and prices weaker. Owing to the news from Ireland this morning the market opened very heavily, but towards the close there was a better feeling, as a greater part of the reports were contradicted.

Sublow, Brothers.

reports were contradicted. Sublow, Brothers.

Manchester, July 27.—Our share-market this week has been unsettled and uncertain, and prices generally are lower. The gloomy accounts from Ireland this morning have also had a depressing effect.

SAM. GRINDROD.

Birmingham, July 27.—The market has been flat throughout the week, and prices have gradually declined. To-day North Staffords have been done at W. BANKS 27 dis.

York, July 27 .- A combination of untoward circumstances have prevented the usual amount of business transactions in this market, and until the Irish matters are settled we may expect the sharemarket to be to some extent neglected.
GRAYSTON & EARLE.

Hull, July 27.—The Irish news and the unfavourable weather have depressed the share-market, and quotations are more in favour of buyers. An attempt has also been made to revive the idea of the potato disease, which has had some slight effect, combined with the above more proximate causes.

FLINT & TOOTAL. Glasgow, July 27.—Our market has been very sensitive during the last week, and parties do not seem disposed to enter into any operations of consequence until matters are more decided. Prices are generally lower, and have an appearance of a further

fall. The following are to-day's latest sales :- Caledonian, new preference, § prem.; Edinburgh and Perth, 1¼ dis.; Ayr, halves, No. 1, 7½ dis.; Great Northern, 9 dis.; North British, thirds, 1½ dis.

BUCHANAN, AITKEN & Co.

IRON TRADE.—Glasgow, July 21.—There have been few transactions in pig iron for the last two days.

The unsettled state of Ireland tends to depress prices. Sales have been made at 45s. 6d. for mixed numbers. and 46s. for No. 1.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

# MEETINGS.

Dendre Valley.—July 31. Brussels, at 1.

# Joint-Stock Companies' Gazette.

A company has been started to fill up the great gap in communication with the Cape of Good Hope, &c. by screw steam ships. There is plenty of room for such a company, and it would greatly add to the value and prosperity of the Cape of Good Hope, as a present the only communication with England for this important colony is by casual sailing vessels.

The undertaking projected under the title of the NORTH WALES SLATE COMPANY holds out many inducements to persons to become shareholders, and with a limited liability of 1l. per share. The objects are to work the extensive slate quarries near Minfordd, in Merionethshire.

Banks.

The twelfth annual meeting of the proprietors of the Liverpool Borough Bank was held at the Clarendon Rooms, Liverpool, on Tuesday last, Mr. J. Pennington in the chair. The report read by the manager stated that the total profits for the past year, after paying all expenses, were 48,744. The losses and bad debts, arising from the commercial disasters that have taken place, were 38,099l., leaving a balance of 10,664l. for dividend. Out of this sum a dividend of 2 per cent. on the paid-up capital (498,120l.) was proposed, after paying which there would be 688l. to be carried to the next account. Mr. Watson, a director, had resigned during the year, and Mr. W. C. Mylne had been elected in his stead. The report was adopted, the retiring directors reelected, and a vote of thanks passed to the directors and the manager (Mr. W. Cross).

Within the last few weeks a new company has made its appearance, and now courts public patronage under very satisfactory auspices. The name or title of the company is The Mentor, and amongst the directors will be found several partners in one of the leading banks not far from Temple Bar. The trustees and presidents are all men of standing and well known in the higher circles of life, and of reputed wealth. The advantages offered by the company are sterling, and will no doubt meet with due appreciation.

Many of the companies have lately issued new prospectuses, offering greater inducements to parties to assure their lives. The declaration of bonuses which have been made greatly reduces the annual amount of premium. The CROWN, ALLIANCE, WESTERN, NORTH BRITISH and several others of good standing offer the advantages stated above.

Mines.
The Anglo-Mexican Mint Company have declared

their dividend as payable on the 7th prox.

At a meeting of the IRISH MINING Company held

At a meeting of the IRISH MINING Company held last week, it was stated, the result of business for the half-year would not allow of any dividend being declared.

Several of the Cornish mines are looking very well, and the speculators or "adventurers" have held very satisfactory meetings to audit accounts and declare dividends.—A parcel of lead ore sold by the Trelawny Company fetched 13t. 13s. per ton.—The managers of the Devon Great Consols have declared a dividend of 5t. per 1,024-th share for the two months just passed, leaving a balance to be carried to next account of 12,000t., and good bills for ore coming due.

The third annual meeting of the AUSTRALIAN MINING Company is to take place on Monday next, to receive the report of the directors. The mines in Australia, if properly worked, under good management and sufficient capital, cannot fail to renunerate the shareholders handsomely, and we have no doubt that the day will come when this company will hold a very good position in the estimation of capitalists. The great difficulties to contend with are the expense of transit of the ore, and the dear rates of labour.

A dividend has been declared by the CONSOLIDATED COPPER MINES OF COBRE Association, of 1l. per share.

COPPER MINES OF COBRE ASSOCIATION, of 11. per share. The shareholders in the UNITED MEXICAN ASSOCIATION met on Wednesday last, to receive the report of the directors, Sir J. Easthope in the chair. It appeared from the report that the advices from the mines were most gratifying. The dividend proposed was 5s. per share, and there was every reason to expect that at the next meeting a much larger dividend would be proposed. The stock of quicksilver on hand was valued at 7,552t. The total sum at the disposal of the company for dividend, &c. was 15,754t; the amount required to pay the dividend was 10,793t, leaving a good balance to carry on the works. The company claim from the Mexican Government, as compensation for losses on account of the war, &c. the sum of 289,000 dollars, and the previous debt is stated to be 669,438 dollars; the whole of these debts were now considered good, and in English coin would amount to about 240,000t. there was every probability of this sum being realized. Mr. Shoolbred had

been sent to Mexico to purchase more mines, but was limited to the amount to be expended. If the remittances expected were ample, the directors promised to call the shareholders together again. Two directors, Messrs. Mackillop and Hibbert, were re-elected, the report adopted, and thanks voted to the directors and managers.

The affairs of the Galvanized Iron Company

The affairs of the GALVANIZED IRON Company appear to be in rather an unfortunate state. The directors have called upon the shareholders under their Dissolution Act, just obtained, to pay a call of 2L per share, to be applied to the settlement of the debts and liabilities.

TO CORRESPONDENTS.

E. J., Edinburgh.—By the Clydesdale Junction. C. N. is thanked, but we have no room for the papers offered.

E. F.—The Aire and Calder Navigation is the company. Received: An Eastern Counties Shareholder.—A North British Shareholder.—T. F. W., Wood-street.

THE

# Railway Chronicle.

LONDON, SATURDAY, JULY 29.

The shareholders of the CALEDONIAN, after a special and lengthened explanation by the chairman of the causes which had necessitated the measure, agreed to the raising of the 745,180l. by new 10l. shares. The vast works completed and those in hand, according to the chairman's statement, forced the Board to take the decisive steps they have done.

The report presented to the half-yearly meeting of the North Staffordshire proprietors declared a dividend of 4s. per share, from the interest received on capital and the surplus proceeds on the canal. The works appear to have been actively carried on, and the passenger traffic on the portion of the line opened from Stoke to Norton Bridge is satisfactory and promising. The report and accounts were adopted unanimously.

The SAMBRE AND MEUSE have determined on raising a loan not exceeding 40,000*l*. for their unfinished works. Debentures are to be offered to the shareholders in the proportion of one debenture of 2*l*. for every three shares; and instalments of 10*s*. are to be paid on the 1st of August, 1st of September, 2nd of October and the 1st of November.

The proprietors of the Namur and Liege adopted the report and accounts at their annual meeting. The line is stated to be soundly and substantially constructed, and the traffic on the twelve miles of the Mons and Manage has realized all that was anticipated. The directors pithily record the difficulty in obtaining money for the completion of the works.

At the special meeting of the DUTCH-RHENISH the shareholders agreed to refer all their differences between the Board and the Liverpool party to a conference between three of the London directors and three of the Liverpool deputation.

The following is the business of the Commit-TEES carried on during the past week. In the Lords—preambles proved: Caledonian (Glasgow station, &c.) Glasgow, Barrhead and Hurlet.

Newport and Pontypool.

Not proved:

Liverpool, Manchester and Newcastle-upon-Tyne (Dissolution).

North and South Western (Harrow to Brentford). Scottish Midland Junction (Amendment of Acts and branch to Laurencekirk).

From our official returns it appears that the amount of traffic for the last week, on 4,040 miles of railway, was 223,107%, thus accounted for:—120,983% for the conveyance of passengers only, 45,560% for the carriage of goods, and a remainder of 56,564% for passen-

gers and goods together, not respectively apportioned; being an increase of 28,591*l*. over the corresponding week of last year, when the mileage was 3,158. The average earnings per mile were 55*l*., whilst in 1847 they were 61*l*.

PROPOSAL TO DISSOLVE THE BRIGHTON STEAMBOAT COMPANY.

The usual general meeting of the BRIGHTON AND CONTINENTAL STEAM-PACKET COMPANY happened to follow pretty closely on the heels of the late decision in the House of Lords. disclosures afforded on this occasion of the history of the undertaking and of its present state will be found to place in a very clear light what we have already said, both as to the obligation sought to be laid on the railway company, and as to the abstract expediency of taking up the steamboat trade as an appendage to its proper business. As to the former point, the facts are decisive enough. It appears that whereas the capital set down in the prospectus was to consist of 15,000 shares, the number actually taken by being paid upon has not exceeded 5,000. In order to estimate the bearing of this fact, it is only necessary to remember that according to the plan brought forward by the directors, shares in the steam-packet company, as a separate concern, were to be offered to the railway shareholders. Their reluctance to engage in this business was immediately proved by the small amount of their subscriptions :- a large proportion, even of the 5,000 taken, having been contributed by the directors. Under such circumstances it is clear that the only proper course, as far as the company was involved in the transaction, would have been to suspend proceedings until the matter should have again been formally laid before the railway shareholders; - they should have been duly informed of the limited extent to which the plan had been supported by individuals of the company, and an opportunity given them of weighing the arguments in favour of a more active prosecution of the scheme. If these arguments had still failed to produce the requisite assistance, the idea of proceeding further should then have been at once abandoned.

The course pursued by the directors of the steam-packet company, on the contrary, clearly makes them responsible for any inconvenience that may now arise from the refusal of the railway body to step in and assume the consequences of their acts. With the knowledge that the support given to the plan as originally brought forward was inadequate, they did not hesitate to go on with the undertaking, in the apparent expectation of getting themselves indemnified at a future period by the settlement of the concern on a basis different from that on which it was started; and proceed to incur obligations that the railway company was pretty certainly counted upon to redeem, without having at the time taken the opinion of the collective body on such a change, which it was material to it to have known before the risk was incurred. This is a method of transacting business which is greatly for the interest of all concerned in such affairs to discourage:-and it seems to us to exonerate the railway company altogether from the consequences with which an attempt has been made to saddle them. Had the concern been fully started on its original footing, and had still shown a deficit in the working, there might have been some show for an appeal to the consideration of the railway company. But having been from the beginning a failure in the very terms of its constitution, it is clear that its managers had no just reason to enter into liabilities in spite of that failure, and look to be supported in them by a body which had not the option of approving or disapproving of the obligation when it was incurred.

The accounts of the working result of the concern thus founded may be safely left to the judgment of proprietors in the railway company as far as they bear on the advantage of entering into the steam traffic. The boats, laid up throughout the winter, have not been again started this year; and the immediate effect of the Lords' decision has been to induce the managers to recommend that they should be sold, and the concern wound up-seeing that it has not been possible, as the chairman phrases it, to get the "interests of the two companies identified;"—the "interest," as many will be apt to think, being pretty nearly all on one side. A proposal was suggested for running the boats until they can be sold,—and something thrown out respecting the possibility of an arrangement with the Dieppe Company for keeping them on the station. With the concerns of that body we shall not interfere. Its proprietors, we presume, will decide as they may find best for their advantage, and will have an opportunity of knowing what they undertake before it is undertaken. The Brighton Railway Company, we think, will see no good reason to wish to compete with them for the possession of a steampacket establishment. And it may be added that the entire stoppage of the boats for some months will have enabled them to judge how far their receipts depend upon such aid; while the actual state of their finances may well induce them to pause before they add to their capital any new stock which cannot be shown to promise a direct return of interest on the amount added. It is, further, quite clear that when the directors cannot find the means of meeting the company's present obligations without adopting the questionable expedient of issuing guaranteed 6 per cent. stock-nearly a quarter of which, even, it seems, has not been taken up by those to whom it was offered,—it is no time to incur fresh burdens, in hopes of obtaining from them that general improvement in nett traffic, which the extra outlay already incurred has by no means realized.

# EAST INDIAN RAILWAY.

Our former remarks upon this undertaking will enable its present position to be clearly apprehended; nevertheless we think it expedient to give such a recapitulation of the facts which have been already established as will constitute an outline map by which shareholders may direct their course in safety.

1. No piece of the East Indian line which a million sterling can execute will return its expenses. If the section on the line on which the million is to be expended proceeds from Calcutta towards Mirzapore, without reaching that place, it will fail to obtain the traffic of the Ganges, and the result will be, as shown by one of the company's own engineers, that even on the favourable supposition that the whole of the existing road traffic, including foot passengers and all, were to be acquired by the railway, the yearly loss would nevertheless be 3½ per cent. If the section between Allahabad and Cawnpore were to be taken as the portion on which the million of capital were to be expended, even overlooking the fact that the capital would be insufficient to complete that section, a still worse result would be encountered. The traffic upon this road has been officially ascertained, and a statement of it is given in Mr. M. Stephenson's first report, and by this return it appears that the goods traffic upon the section between Cawnpore and Allahabad is five times less than upon the section leading out of Calcutta, while there are also fewer passengers. If then the best section could only be worked at a yearly loss of  $3\frac{1}{2}$  per cent., is it not clear that no section of the line can be profitable?

2. The minimum dividend, instead of being 5

per cent., may be only 11 per cent., or even less. The whole of the negotiations with the East India Company were based on the supposition that a line would be selected which would yield some profit; but if the dividend did not reach 5 per cent. per annum, the East India Company was to make it up to that amount. The East India Company, however, never undertook to make up the losses consequent upon such a reduction of the capital as rendered the execution of any profitable line impossible; and the losses therefore must be deducted from the guarantee before any dividend at all becomes payable to the shareholders. Under the most favourable circumstances with respect to traffic, the loss with a double line would be 3½ per cent., and it is impossible that any short line should be other than a double line, else the traffic will be reduced most injuriously by the infrequency of the trains. If, then, the guarantee be 5 per cent., and the losses be 31 per cent., upon the most favourable showing there remains but 11 per cent. divisible among the shareholders, or possibly less, instead of the minimum dividend of 5 per cent., as heretofore supposed.

3. The whole of the money hitherto subscribed has been swallowed up in expenses, with the exception, perhaps, of a few shillings per share, which might yet be saved by an immediate dissolution. It appears from the directors' last report that the money in hand is 63,180l., of which sum 24,991/. has been received from calls paid in anticipation, and from the last additional call of 2l. per share, which has now to be returned. The available balance therefore, assuming the statement of the last report to be correct, is 38,189/., but of this sum 10,000/. or 12,000l. is in India, so that only 26,000l. or 28,000l. is available for paying into the India House the 60,000l., which is to be deposited forthwith, except by such an improbable realization upon the new call as will provide the sum required. Upon the 38,189%. of available balance there are the following claims:-two engineers who have refused any compromise, 4,800l.; six engineers, who have accepted a compromise of 8,748l.; compensation to management in India, allowing six months salary (though it is thought the engagements are for three years), 4,000%; arrear of Indian salaries since March, the date of the last accounts, 1,500%; salaries accruing during time required to send out notice, 1,000%; office expenses in India, 1,000l.; making in all 21,048/., to which sum about 5,000l. has to be added for law, parliamentary and office expenses in England, so that the total liabilities amount to 26,048l., leaving 12,138/. as the resulting balance, supposing the dissolution had been carried at the last meeting. But the determination to postpone the dissolution for four months carries the engagements into another year, and adds the cost of another year's management to the expenses, whereby the available balance for distribution among the proprietary will be reduced to about 2,000l., or 1s. 6d. per share. It appears probable that if the postponement were to be immediately revoked and a dissolution carried, about 3s. or 4s. per share would be recoverable by the shareholders, whereas the contrary course not only makes the expenditure of every farthing that has been subscribed inevitable before any progress whatever can be made in the undertaking, but involves the prospect of new responsibilities. At the end of four months the season will be too far advanced to make any progress with the works this year, even if the requisite capital for that purpose could be collected; and against next year the funds now in hand will be expended, and the engagements of the staff will be so near their railway,—though, perhaps, if we had fewer of the expiration as to make it unadvisable to be at latter we should be no worse. It can hardly be

the expense of sending them again to India with so inadequate a claim upon their services. The time of the staff must be lost to the company in any case; and since this is so, it is better it should be lost under such circumstances of compromise as will abate the expense and enable the shareholders to recover all that is possible under the circumstances, instead of adding other salaries and expenses which may be avoided, and which only remunerate those who, even in the shareholders' losses, find their individual profit and advantage.

# Correspondence.

THE ANTI-CRUELTY-TO-ANIMALS-BY-RAILWAYS COR-RESPONDENT OF THE 'TIMES.'

None of your readers who have ever travelled by coach in bygone days, can have forgotten the poor wrecks of horses which were brought out to run their stage of torture, and more especially those that did the night work. Some few might have got into this situation by their vices, but the majority had been reduced by their misfortunes, and were bought on a deliberate calculation of how much they would pay to be flogged to death. Nor can the same travellers have forgotten the interminable droves of cattle and sheep, which used to be seen plodding their weary way up to London, choked with dust, foot-sore and jaded, the whole of them fevered and restless, and the fat and condition which had taken so much time to lay on rapidly wasting away under the unwonted influences to which they were exposed. Railways, however, have changed all this; and, without stopping to consider the national economy which has been effected in the transmission of cattle and sheep, I should have thought that the mere fact of the enormous diminution in animal suffering would be a matter of congratulation to all right-thinking minds: but I find I am quite in error; for a few days since a letter was published in the Times, on the great annoyance occasioned to the public by the quantity of cattle arriving at the railway termini being driven through the streets. This, however, is not altogether owing to steam. The channel has been changed, but the influx of living animals destined to supply two millions of human beings was always enormous. Whether better arrangements might not be made for slaughter-houses outside the town, is another consideration; but railways and steamers have both contributed largely towards remedying this nuisance, by the transmission of heavy supplies of dead meat, with every probability of a large increase as the facilities for conveyance are developed. All these considerations, however, vanish, when the tremendous incident narrated by "Our Camden Town Correspondent" is read. It appears that a bullock, fresh from the country, passed our author's villa, and being, it is suggested, very thirsty, from a three hours' drive in a hot sun, laid himself down, but was brutally jagged on by the drovers, and after proceeding a short distance ran head foremost into a small shop, where he could not turn, and, looking through a glass door, so alarmed the owner, a respectable middle-aged female, as we are informed, that, naturally enough, not expecting such a customer, she fell down on the floor of her own inner room. The drovers, however, came to the rescue, and succeeded in backing the intruder out, and he was again urged on his journey, till, utterly exhausted, he fell down dead, and, his historian feelingly adds, perished of a broken heart—"procumbit hami bos." But, says our author, and this really ought to be well considered, "if the rush of blood to the heart had been to the head, this ox might have taken a fearful revenge on his tormentors. I am no advocate for cruelty to animals, but more maudlin twaddle than this I think I never read. No doubt accidents must occasionally happen; I recollect seeing an account of an Irishman who chartered a waggon which he loaded with his pigs, but being of a frolicksome temperament, as soon as the train had got to its full speed, they all jumped out one after another, and of course were smashed. But this, I presume, would be no argument for for-

Digitized by GOOGIC

expected that bullocks, either fat or lean, just brought up from their pastures or their stalls can be very handy as railway travellers, but, notwithstanding the episode of the "broken-hearted one," I fancy it will be found that there is a much less amount of suffering inflicted upon them now than formerly, particularly in those good old times when every Smithfield market-day used to produce a mad bull or two, to the great delight of the butchers' boys and blackguards, and the great detriment of the old women who kept apple-stalls in the neighbourhood, who were generally pitched clean over their merchandise. July 25.

### IMPORTANT

To the Shareholders of the Edinburgh and Glasgow. Gentlemen.-Are you aware that passengers are booked from Glasgow to London at fares unparalleled in the annals of railway economy? Are you aware that you are just now carrying, not only passengers from Glasgow to Edinburgh free, but paying Hudson the difference between your present rates and those charged by him from Edinburgh to London? It is, however, so. Let your secretary deny this, if he dares: I can prove it.

ONE WHO KNOWS WHAT HE WRITES ABOUT. Edinburgh, July 26.

### NORTH BRITISH.

Can you inform your readers whether there be any truth in the report of a negotiation between Mr. Hudson and the North British directors for the lease of the North British? I observe the report is asserted by one railway authority and contradicted hy another. Looking to the position of the North British, I cannot find out the inducement Mr. Hudson can have to lease it, since he must get all the traffic whether leased or not, the North British having no other exit. I should also think it very unlikely for another reason. The North British, so far as opened, pays but 5 per cent. on a capital apparently fixed at random to represent the mileage in operation, and indeed obviously and confessedly inadequate. Now, as this is the best part of the line, is it probable that the system will pay anything like 5 per cent.? When the prospects of the line were not so well understood, Mr. Hudson made an offer of 8 per cent., and now could he ever expect them to accept 4 per cent.? Unless he wished to secure a certain loss every year, I think he could not safely undertake to lease it at a higher sum.

INVESTOR.

[Mr. Hudson is not bidding for the line, as we hear.—Ed. R. C.]

### LANCASHIRE AND YORKSHIRE GUARANTEED NEW SHARES.

As a West Riding Union shareholder, I had allotted to me my proportion of the new 6 per cent. stock in the Lancashire and Yorkshire. Being in town on the 5th inst., I called at the bankers to pay the deposit, but was informed that the time for payment having expired on the 30th ult., the money could not be received. I immediately wrote to the secretary, requesting to be allowed to take up the shares, but received in answer a printed notice [enclosed], stating that the directors are compelled to decline acceding to my request. I must say I think this treatment rather too bad to shareholders, who having bought their shares at a heavy premium on the faith of dividends which now turn out to be fictitious, have punctually paid up all calls, without having as yet received a farthing return. It is almost impossible for shareholders living in the country to go up to London purposely to pay so small a sum as the deposit on a few shares, and some few days' grace should surely have been allowed to parties in this predicament.* By inserting this in the next number of your valuable journal you would confer a great obligation on

ONE OF YOUR SUBSCRIBERS.

Chelmsford, July 22.

[Our correspondent seems to have forgotten that the Post-office would, for a trifling fee, have saved him the trouble of coming to London, if he had no bankers to draw a cheque on. It is important that

. Qy. What is done with the forfeited shares?

when dates are fixed for payment they should be strictly observed. It is at the peril of the shareholder to neglect this rule.—Ed. R. C.]

## Gossip.

We have received lately several rebukes from correspondents for the commendation we have bestowed on the boldness and vigour with which the London and South-Western fought their late gauge battles. We have been accused of being partizans and advo-cates of the expensive and ruinous system of parliamentary contests in which this company have been engaged. To such short-sighted imputations we can but give a flat denial;—with a reference to the recommendations we have constantly impressed upon all sides. We, who have ever been the advocates of a judicious, temperate, yet stringent economy, who, in fact, urged both in foul and fair weather, the incessant neces-sity of the companies constantly keeping their expenditure below their means-weare the last of the railway journalists to whom such a charge should have been addressed. We praised the conduct of the leaders and officials of the London and South-Western, in their late warfare with the Great Western, because such conduct (extravagant and reckless as some "poor sharcholders may have considered it) was absolutely necessary. The London and South-Western people knew by experience what weapons they mu against an enemy who brought money, friends, the high and mighty in both Houses of Parliament, clever, indefatigable agents and solicitors, crowds of witnesses from all ranks of life, and officials ready to meet every emergency, and to overcome every diffi-culty asserted against them. The narrow-gauge party in the West, with all the excellence of their cause, had not a chance but by fighting the foe with their own weapons, and they fought the fight to their heart's content, and hence our commendation at the triumph of what we think to be the right cause, though achieved at a tremendous sacrifice and at a cost which will temporarily affect the pockets of the proprietors. On the last occasion the victors, moreover, are especially deserving of credit and a good word because they sustained their cause so manfully and successfully after the defeat of the London and North-Western, who, though possessed of far better means, have been certainly beaten again and again in the gauge strife from the supincness and inertness of their friends and representatives.

On the 25th the Railway Commissioners granted to the London and South-Western Board, under their Act of 1846, an extension of two years to complete the line from the Waterloo Bridge station to

London Bridge.

The Lincolnshire lines, from all appearances, will prove a godsend to the MANCHESTER AND SHEFFIELD, with which they are now amalgamated. We have recently been over the whole of this series of lines, and have observed great progress made in their construction. In about nine months the whole will be in working, but before the end of the year, the portion between Great Grimsby and Lincoln will be in use, and so will the junction with the Midland, which gives the shortest route between London and places south of Sheffield, with Sheffield. Already the traffic on the 15 miles between New Holland and Grimsby is double what was expected, and though open as yet only to the local traffic of the surrounding villages, with the very minimum of conveniences, this little portion is paying 5 per cent. on its construction. If this may be a token of the prospects of the Lincolnshire traffic, the Manchester and Sheffield shareholders, we repeat, will have good reason to rejoice in the amalgamation.

A deputation, representing the interests of the Buckinghamshire, and those of the towns interested in the Buckinghamshire narrow-gauge routes between Birmingham and London, waited on the Commissioners on the 27th inst., headed by Viscount Brackley, M.P., and accompanied by Mr. Wyndham Harding, the secretary.

On the 24th, at the adjourned meeting of the Bir-mingham and Oxford Junction, the only business done was the adjournment of the meeting to the next It appears that the Great Western directors are very much dissatisfied with the clauses in the purchase bill referring to the mixed gauge and em-powering the London and North-Western to run trains over a certain portion of the line. Every exertion, it is said, will be made before the bill is read a third time in the Lords to get these objectionable clauses expunged, so as to prevent, if possible, the narrow-gauge parties working on the line. On the 25th, the meeting was again adjourned.

The agreement between the CALEDONIAN and the

GREENOCK has been so far altered that the power the Caledonian had of amalgamating at par within five years is given up, and the Greenock is now guaranteed

an absolute minimum dividend in all time to come of 4 per cent. per annum, with one-half the sur-plus profits of their own line, which also the proprietors hold as security for the dividends. It will be seen from this, says the Greenock Advertiser, that at present prices Greenock stock is worth to investors about 61 per cent., guaranteed on one of the best finished lines in the kingdom, and one, besides, of which the full resources may be said to be only now about to be developed, by its junction with the Cale-donian and other railways. Hitherto it has had to depend solely on its own traffic, which will, we have no doubt, be greatly increased by the connexions now rapidly approaching completion.

Among the projected lines for Canada, reported by the last mail, is one for a line between Prescott and Bytown. A meeting was held on the 19th of June. One of the speakers stated that the people of Ogdens-burgh were willing to subscribe all the money; all they wanted was the charter. The distance stated at 54 miles, and the route said to be very level.

The following resolutions were passed.

1. That the construction of a railway from Prescott to Bytown would greatly contribute to promote the trade and Bytown would greatly contribute to promote the trade and facilitate the communication between those places and the adjacent country, and would open up a large tract of fertile land for improvement, and would tend much to advance the prosperity of this portion of the province. 2. That the present railway constructing from Ogdensburgh to Boston fully exemplifies the necessity of having a corresponding communication between the waters of the St. Lawrence and Ottawa. 3. That a committee be formed to correspond with the people of Bytown and other places on the subject, and to solicit their co-operation therein, and to draft a petition to the Legislature, to be presented at its next session, for an Act of incorporation, and to procure signatures to the same.

It was intended to commence laving some of the rails on that portion of the Portland line nearest Montreal

in the course of last month. Two or three of the carriages for the line were in a forward state.

The commissioners for the survey of a line for the HALIFAX AND QUEBEC, Major Robinson and Capt. Henderson, of the Royal Engineers, still remain at Halifax, where they are as yet occupied in preparing plans and sections of the several routes. Before making their first report, the commissioners will pro-ceed to the United States; for the purpose of examining various lines there, ascertaining the cost of construction, expense of working, and such other particulars as to wooden railways, and railways on piles, as will enable them to offer to her Majesty's Government a well digested estimate of the probable expense of a railway through these colonies, constructed on the most economical principle with reference to durability and the requirements of the contemplated traffic.

Meetings have lately been held for the furtherance of a systematic emigration amongst the working classes. Connected with this object we have received a prospectus of the GREAT CANADIAN Land and Railway Association, the aim of which we shall probably

notice next week.

The scripholders and directors of the MADRID AND VALENCIA are reported to have at length come to terms. It will be remembered that in the early terms. It will be remembered that in the early part of last year a committee was formed (of which Mr. D. W. Harvey was the chairman) of the dissentient scripholders, and a fund was raised by subscription amongst the shareholders to defray expenses. An action was commenced in the Court of Common An action was commenced in the Court of Common Pleas against Mr. Chadwick, the chairman of the company; one trial having been fixed to take place on the 11th inst. The action, "Paterson v. Chadwick," was settled, however, on the morning it stood for trial, as will appear from the following extract from the circular, forwarded to the subscribers to the fund by Mr. Flaxman, the secretary to the committee:—"I am directed by the committee to inform you of the terms upon which this action (Paterson v. you of the terms upon which this action (Paterson v. Chadwick) was settled upon the morning it stood for trial. The sum of 20s. per share to be returned to the scripholders within three months—our costs to be taxed, and paid out of the funds of the company within one month; and the accounts of the company to be referred to Mr. Sheriff Hill, by whom all just and equitable allowances are to be made, and the surplus divided.'

In the French Chamber, a member having asked that a proposition he had brought forward a month before, relative to the redemption of the Paris and Lyon, be reported upon, General Cavaignac replied that the Government and company had come to an agreement on the terms of the cession of the line, and that a project of decree to that effect should be shortly

submitted to the Assembly.

The last plan proposed in the French Chamber for the employment of the thousand outcasts now patrolling France seems to us a mistake. The Minister of the Interior, it is said, proposed to take six millions for the credit voted for the railroads, for the repairs

(JOO)

on the high roads and thoroughfares, as this would relieve the towns of the surplus population and distribute workmen more about the country. Is the work to be performed half so valuable in its results?

The inauguration of the DIEPPE has been delayed a few days. The directors have inspected the line, and have expressed their satisfaction at the various

The tunnel of Chezy, near Chateau Thierry, on the STRASBURG line is finished. The key-stone was

the STRASBURG line is missied. The key-stone was placed on the 12th. The tunnel is 400 metres long. It is stated that the sequestration under which the ORLEANS is placed is about to be taken off. The Board of directors has appointed M. Mourlhou director of the company, and M. Polonceau, jun., chef d'exploitation.

The three bridges over the Elbe at Magdeburg will be finished towards the end of this month. During the year 1847 the total receipts on the Berlin and Magdeburg line (707,367 passengers) amounted to 600,707 thalers, and the expenditure to 268,295 thalers. No direct dividend has been declared for the past year, but the shareholders will be paid 4 per cent. on their paid-up shares.

# Reports of Meetings.

[Continued from p. 512.]

CALEDONIAN.

July 20 .- Special Meeting, Edinburgh .- Mr. J. J. HOPE JOHNSTONE in the chair.

The Chairman said—I have to express my regret that there should be a necessity for the performance of an act of an unpalatable nature, and one much to be regretted; but I trust to be able to show you that this necessity has arisen from circumstances entirely beyond our control. I may perhaps enumerate the different Acts authorizing us to issue additional stock. There is, first, an Act authorizing the purchase of the Garnkirk and Coatbridge, by which we have power to raise 450,000l. in share capital, and on leans one-third of that amount. Secondly, there is an Act called the Garnkirk and Coatbridge Branch Act, obtained in 1846, by which we have power to raise 50,000l. by the issue of shares, and by loans 16,000l. Thirdly, by the deviation Act of the Clydesdale Junction we are authorized to raise 16,000l. by the issue of shares, and 5,300%. on loan. Fourthly, by the Garnkirk Station Act we are authorized to raise 150,000l. by the issue of shares, and 50,000l. on loan. These sums, in all, amount to 660,000*l*., inclusive of loans. No part of this has yet been raised, either on loan or by the issue of shares. Then, lastly, there was an Act passed last session to enable the company to provide station accommodation at Edinburgh, and to make a branch to Granton. The amount authorized to be raised by that bill was 200,000l. As it was not the intention of the directors to proceed with the branch to Granton, they proposed to limit the amount to 79,180l., being what was required to provide station accommodation, and to make room for the earth excavated. The sum remaining under this Act, together with the sums previously men-tioned, will make up the 745,180*l.*, which we propose to raise by the creation of new shares. Since the passing of these Acts, the money-market has been extremely depressed. It would have been impossible to have issued stock to that extent, or to any extent, with any prospect of its being taken up. were therefore so placed that we must either have abstained from executing those works or have gone on with them in the hope that times would get better, and that we should be enabled in the ordinary course to issue that stock in shares, as we now propose to do. If we had not carried on these works, but permitted them to stand over till better times should arise, we should not have been acting for the interest of the shareholders. The first work of material importance is the Garnkirk extension, which passes below the Forth and Clyde Canal, and connects the line by the easy inclination to a station in Buchanan-street, Glasgow. To gentlemen acquainted with the locality, it must be evident that this is a work of indispensable necessity. The present terminus lands you a mile from the centre of Glasgow, on the top of a hill of difficult access, necessarily imposing additional ex-pense and labour in the transit of goods, and deterring many passengers. In addition to that, it is the great coal depot for Glasgow, and when we think of the immense consumption of that town, gentlemen may form some conception of the scene of confusion which prevails on the line. Trains are coming in every quarter of an hour loaded to the utmost extent, and I do not think I exceed the fact when I say that there are frequently 100,000 tons of coal collected at one time at that station. Better and more extensive accommodation is on the face of it absolutely necessary. When we required leave of the Corners is the contribution of the Corners and the contribution of the Corners are the contributions of the Corners and the contribution of the Corners are the contributions of the Corners and the contribution of the Corners are the contributions of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contribution of the contr When we required a lease of the Garnkirk, the rails were on a gauge different from the ordinary

They consequently required to be relaid, which at once involved us in an expenditure of nearly 200,000l. for adapting this line to be used by passenger-trains. A considerable sum of money Was also expended in adapting the line for the Wishaw traffic. For these purposes no funds were raised; but the work was carried on on credit, or with funds then in our possession. Then there was also a com-munication to be made between the Clydesdale Junction and the Greenock and Ayr lines and the general terminus lines to Glasgow, which was the great port for the shipping of minerals, which came down that side of the Clyde. Even suppose the Clydesdale Junction were made, we should be cut off from all communication either with the Ayrshire line or the Greenock line, and should thus lose all that benefit which would accrue from having a direct and immediate connexion with those populous districts, so that there was a necessity for all the works contemplated in connexion with these lines. In addition to these outgoings, we were obliged to incur a considerable extra expenditure in the construction of the main line, arising from the claims of individuals for land. We have in this way had to pay upwards of 200,000l. more than was calculated upon in the shape of damages. Moreover, an Act was passed subsequently, by which we required to provide a larger number of bridges, as well as to widen others. On this account a great deal of extra labour was required, and the result has been to impose about 150,000l. of additional expense. A larger portion of land for station purposes than was contemplated has been necessarily purchased. Thus a great deal of additional expenditure has been thrown on the company. Now, all these things combined have left us in a very painful position. We have incurred, in pushing forward these works, large liabilities, for which no funds are available; and the result of this meeting, should it unfortunately determine not to consent to the creation of the proposed preference stock—a result which I cannot contemplate—will leave us no alternative but to stop those works which are now nearly completed, and which are so essentially necessary for our traffic. Should such be the case, the money already expended on them, and which is very considerable, will be dead. We shall also be prevented from bring ing a great increase of trade on our line, and which will in future be diverted to other channels. There are some parts of these works in regard to which there is a great necessity for pushing them forward. Such, for instance, as the Clydesdale Junction and those branches on that side of the river Clyde in connexion with it. The engineers had reported that unless the works were advanced energetically they would advise their being discontinued altogether for this year; therefore, if not completed and finished off-hand, not only would they lose the advantage of the traffic that would be drawn from it, but a great deal that was done would be injured, and a great deal of additional expense incurred if the labour was to be commenced next spring. I may also mention, with reference to that line, that it is a line which we have acquired by Act of Parliament, on a guaranteed dividend of 6 per cent. That dividend will amount to 24,000% a year; and when you consider that it will only take 36,000% to complete it, I think you will agree with me that it would be much better to proceed with it. The general result of the observations which I have made brings me to this, that in the event of your not agreeing to furnish us with the means to complete all these works, to clear off our engagements, to connect our communication with the orth of Scotland, with the Ayrshire and Greenock lines, and the branches on that side of the Clyde, we shall lose the advantage of a proper communication with the town of Glasgow, and not have the means of giving those facilities indispensably necessary for the development of our traffic. We shall also be prevented from doing what is necessary for the local traffic, by the putting in of sidings, &c. In short, you will prevent an increase of your revenue to one-half its present amount. The Chairman concluded by saying that while the local traffic had exceeded all their expectations, the through traffic had not done so, which he and his co-directors ascribed to the stagnation of trade. He would assume, then, that with regard to undertaking other works, the directors would not do so until they had obtained the sanction of the shareholders. The Chairman then moved a resolution to the effect that the various sums authorized to be raised under the Acts, amounting in all to 745,180%, should be raised by the creation of 74,518 shares of 10l. each, and that there should be a guarantee on those of 7 per cent. for five years, and 6 per cent. in perpetuity, without participation in any surplus dividend or any issue of new stock; that the shares should be paid at the following terms:

-2l. 10s. on the 21st of August next; 2l. 10s. on the 21st of October; 2l. 10s. on the 21st of December;

and 2l. 10s. on the 21st of February 1849; and that these new shares should be divided rateably among the shareholders.

Mr. KYNASTER, a Lancashire shareholder, asked if. after acquiring the Glasgow and Garnkirk, 200,000%.

had been laid out in adapting it to passenger traffic.

The CHAIRMAN explained that besides adapting the line to passenger traffic they had been obliged to take up the debts.

Mr. KYNASTER observed it had been better then to have made a new line, and instanced the Lancaster and Carlisle, through a difficult country, as only having cost 20,000l. a mile. Immense sums, he believed, had been lavished on law and parliamentary expenses, which were not the legitimate objects of the Caledonian. The law expenses were near 100,000l. or 200,000l. He viewed the measure of creating preference shares thus :- There was a number of capitalists, he said, who, having felt the sweets of extracting from 7 to 10 or 12 per cent., and seeing them fast vanishing to 3 or 4 per cent., were pushing the railway company for illegal bargains above 5 per cent. Their present guarantees swelled the amount to 191,278l. per annum. If they added the Scottish Midland, it came up to 220,000l. The directors had likewise made an offer for the Newcastle and Carlisle line. They had gone to other companies, sure of carrying matters with their own shareholders. After these guarantees, the shareholders should ask themselves what was left for the owners of the 50l. shares. Not what would find an individual in salt. this is a little extraneous, but it is admitted there had been expenses which never were legitimate ex-He was a holder of fifty old shares, and

penses. He was a notice of the order, and should like something for an outlay of 2,500%.

Mr. Campbell, Edinburgh, moved as an amendment that the statement of the chairman, and the resolutions proposed by him, should be circulated among the proprietors, and that the meeting should be adjourned for a fortnight to consider them.

Col. GRAHAM seconded the adjournment. He found that the funds available amounted to 383,000l. on the sum to be called up and the arrears due. He thought the directors should take every step in their power to have that money paid before granting the guarantee, which would go far to swamp altogether the original stock of the Caledonian.

Mr. H. HINDE said if the directors could, in justice to the company, afford the delay of a fortnight, nothing would induce them to refuse. Nothing but conviction of the necessity for the progress of the work could make them withstand such an appeal. To raise the sum of money necessary for the works, required a large operation to be effected. Certainly, unless the money were raised, the works of the company would be inevitably stopped. He would ask what effect that would have on the credit of the company. As regarded all the works, let them consider what would be the result. As to what had been said about stopping the Garnkirk if the Clydesdale were finished—the latter did not give them access to Glasgow; it only completed the communication with the Clyde—but it did not serve to introduce their passenger traffic to Glasgow, without the greater expense of completing the bridge and station at Dunlopstreet, for which an Act had passed the House of Commons but had not yet passed the Lords. They would secure a good station for the inhabitants of Glasgow only by prosecuting the Garnkirk Extension, besides forming their junction shortly with the Scottish Central at Castlecary. Supposed they stopped short with the present Garnkirk works, how could they compete for the Northern traffic? The 50% shares, to a great extent, had been paid up; but the arrears were very heavy on the half-shares. The course taken by the directors had been, where the parties were substantial, to take stringent measures; but where time was absolutely wanted, it had been given. It was said it would have been less expensive to have run a line parallel to the Garn-No doubt they had acquired it at a dear rate, but it was already paying itself; and as to another line, was it reasonable to suppose that Parliament would have sanctioned any such proposal, to the ruin of the one existing! The Caledonian were now running their traffic for nothing on that line. The hon. gentleman, too, had alluded to parliamentary contests, but what sort of a parliamentary contest would they have had had they entered into competition with an existing line? It was a dear bargain then—but forced upon them. Their parliamentary expenses, it was quite notorious, had been large, but they had been engaged in most extraordinary contests. these had been forced upon them, not as contests for victory, but contests for existence. Had the opposition succeeded, the Caledonian line would have been a mere trunk, with one or two competitors betwixt Glasgow and Edinburgh and Carlisle.

Mr. HILDITCH, of Manchester, entertained no doubt

しょしし

the directors had done that which was necessary for the credit of the company and the completion of the works. He had no doubt that when the works were almost completed this should be done. The question was, was it essential the money should be The necessity of this step was to some extent conceded by all. There was considerable debt on the main line. More than 400,000l. had been expended, was owing, and must be paid.

The CHAIRMAN was not asking for more than would pay off the liabilities on the main line and push forward the necessary works. Part had been already paid on the main line and part expended on

Mr. HILDITCH said the company owed 745,000l.

The question was whether a sufficient amount or any part could be raised by forcing arrears and new calls. Were there any additional works not yet contracted which it was essential to complete? He thought there were, in order to make a complete railway system. The connexion must be completed with the Greenock line. After a lengthened argument against the lease of the Scottish Central, Scottish Midland, Dundee and Perth, to which he emphatically declared Parliament would and ought never to agree, he resumed his position in support of completing the works that were necessary to form the system of the Caledonian, which he described as beginning at Carlisle and terminating in Edinburgh and Glasgow. He concluded with the proposition, that 500,000l. or 600,000l., as the shareholders should think fit, should be raised on a perpetual guarantee of 7 per cent.

Mr. CRAM, of Newcastle, wished to hear the opinion of the company's legal adviser as to the legal effect of the difference of the resolutions from the notice.

The CHAIRMAN replied that the directors having heard that doubts were entertained of the competency of the meeting to entertain the resolutions they had taken the opinion of the highest legal authority in Edinburgh, who had no doubt whatever of their competency to do so.

Mr. CRAM said he was an English shareholder, and had been alarmed at reports which had reached him of the state of affairs. This, however, had been greatly allayed by the statements of the chairman, of Mr. H. Hinde, and of the gentleman who had last

spoken.

Mr. Jacobs, who was appointed to represent the London meeting, said the chairman's statement had given him great satisfaction, and he was persuaded now that affairs were not in that gloomy state which they had been represented to be. He did not like to do anything that would at all inconvenience the directors in the prosecution of the works, or embarrass them as to the liabilities they had incurred: and therefore he thought that he would satisfy those whom he represented by proposing as a middle course that the directors should be allowed to raise one-half of the amount for which they sought, and that at the times at which the two first calls were asked to be made in the chairman's resolutions. This would enable them to meet their present pressing difficulties, while it would enable the shareholders fully to consider what was proposed by the directors, and they might, at a future period, be enabled to raise the other half of the proposed amount by mortgage

The meeting then came to a vote, when 13 of those present voted for the amendment for adjournment, and 30 against it, together with proxies representing 2.295 50l. shares and 641 half-shares, or 1,170 votes. The motion of the chairman was therefore carried,

as we stated last week, by a large majority.

NORTH STAFFORDSHIRE.

July 22.—Half-yearly Meeting, Stoke-upon-Trent. Mr. J. L. RICARDO, M.P., in the chair.

Mr. SAMUDA read the reports. The directors' report stated-

It will be seen that your directors have strictly followed the course proposed in their last report of completing suc-cessively different lengths of the line, which plan will come eration as follows:-From Stoke to Norton Bridge, 102 miles, April, 1348; the Potteries to Uttoxeter, 17 miles, August, 1848; Crew to Burton, 27 miles, September, 1848; Congleton to Colwich (in addition to length from Stoke to Stone), 245 miles, September, 1848; Congleton to Macclesfield, 7 miles, March, 1849; Uttoxeter to North Rode, 274 miles, July, 1849. The first of these, a length of 103 miles, has been opened for traffic a little more than two months. has been opened for traffic a little more than two months. The nett profit obtained upon it during that period has amounted, as will be seen by the revenue account, to 1,66iii.

—a result exceeding the anticipations of your directors. After a careful investigation, it has been ascertained that the amount required to complete the whole works and plant of the railway will be met by the subscribed capital of the company—a circumstance, as your directors believe, almost without precedent in railway history. One more call of 21.10s. will be required in the course of the present year. It is prowill be required in the course of the present year. It is proposed to make this in the month of September. A further amount of 21, 10s, will insure the completion of the line, but this call will not be made till the year 1819, even if it should be necessary at all—a contingency dependent upon the issue

of debentures. On this point your directors have some hesitation in giving an opinion. They are determined not to sacrifice the true and permanent interest of their shareholders for the sake of a present advantage in the market price of the shares; and they have uniformly refused, in times and under circumstances far more adverse than the present, to issue debentures bearing interest above 5 per cent. At this rate they have hitherto been enabled to negotiate but a small sum; but when it is recollected that your debentures are secured, not only by the revenue of the railway now partially, and within twelve months to be enrailway now partially, and within twelve months to be entirely opened, and upon which 15.4 a share, amounting to 2,522,605.4 sterling, will have been paid up, but also upon the canal, yielding a nett revenue of from 80,000.4 to 90,000.4 a year; and further, that the debentures are for money raised, not in addition, but in aid of your paid-up capital, and are guaranteed by calls which may be legally enforced upon the whole body of shareholders—your directors do not doubt but that, if this description of security should again obtain favor in the property and at the North Stoffichiers. doubt but that, it this description of security should again obtain favour in the money-market, the North Staffordshire debentures will be those which will in a great degree command a preference. In the last report it was intimated that the interest received on capital and surplus proceeds on the canal would enable the directors to recommend a small ship of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as small still the canal would enable the directors to recommend as small still the staff of the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend as the canal would enable the directors to recommend dividend on the shares, and the amount of this was estimated at 5s. per share. The great depression of trade during the last six months has, however, so far diminished the receipts of the canal, that it is not thought prudent, consistently with the expressed determination of the directors to under any circumstances from trenching on their capital for the payment of interest, to recommend a distri-bution of more than 4s. per share, for the payment of which dividend a resolution will be submitted to you. It is not at present proposed to incur any expense upon the Ashbourne branch until the completion of the main line in July 1849. The question and expense of insuring the property of the company against fire have been fully inquired into. The proprietors are recommended to become their own assurers, to set aside a certain per-centage in order to form a fund which may cover any losses incurred.

The capital account showed that there had been disbursed under the following principal heads—general expenditure, 134,8481. 6s. 1d.; works, 970,4811.; rails, chairs, &c., 234,9491. 8s.; stations, locomotive stock, carriages, 115,0681. 6s.; land and compensation, 351,3381.; engineering, 35,4071. 14s. 9d.; the total expended being 1,881,3551. 8s.; leaving a balance under this head in favour of the company of 154,5651. 10s., and upon the general balance (which includes revenue traffic account and interest account) of 178,7271. 16s. 10d. The passenger traffic report showed, since the line from Norton Bridge was opened in April to June 30, the number of first-class passengers at 3,210; second-class, 12,366; and third-class, 28,526. Of the 161,507 registered shares, there are 43,548 upon which the fourth call has not been paid; upon the other calls the arrears are comparatively trifling. The navigation revenue account, which extends over a period of eighteen months, showed the receipts at 124,253*l.*, and, after paying the interest on The navigation revenue account, which the preference shares, the profit accruing to the company, 10,503l. 16s. 7d.

The CHAIRMAN said the directors had endeavoured to give the shareholders all the information at their command. They had not indulged in any kind of mystification—they had not represented the company's affairs better or worse than they really were; but if they had leaned either way, it was to the worse side. He explained the manner in which their accounts were made, showing that what had been included in revenue accounts might fairly have been placed in the capital account. There had, in conplaced in the capital account. sequence of the depressed circumstances of the iron trade, been a considerable falling off in the demand for iron-stone. The company, however, had continued to accumulate stock, and the quantity now in hand, which was very considerable, would be brought into next half-year's account. The directors had taken the limestone trade into their particular consideration, with the view of making it profitable to the company, but this had caused considerable expense, more particularly at Froghall. This expenditure, incurred to promote a particular branch of their trade, might have been put down to capital, but they had not done so—it came in the revenue account; and he believed that in time they would find the benefit of such a mode of making up their accounts. He (the chairman) thought that the report must be considered highly satisfactory. He did not mean to say that the directors had thought it necessary to make any great flourish. They had entered upon a great undertaking, founded upon certain data they had promised to do they had done. He (the chairman), in making this statement, must say that the directors had been most ably and efficiently supported by the great body of proprietors. They (the directors) came before them with clean hands, and in times of difficulty, such as they had recently passed through, no company stood higher than that of the North Staffordshire. They had no borrowed money North Staffordshire. They had no borrowed money (to be repaid eventually at a great cost)—they practised no fictitious mode of raising capital and enhancing prices-they stood before the shareholders and the world plainly, and were thus content by their cha-

racter and conduct in the management of the great undertaking in which they were engaged to abide the result. During the last twelve months the country had been subjected to a complication of difficulties, in his opinion, unparalleled in history. There was first the great crisis in the money-market, and they had hardly recovered from that, when those stirring events took place on the Continent of Europe which deranged money and commercial arrangements scarcely less than the money panic by which they were preceded. Now he believed that railway proprietors were frequently in the habit of placing the sins of the times upon the shoulders of their respective directors, but he (Mr. Ricardo) was prepared to contend that during the late commercial crisis, rail-way property had suffered less than any other description of property. In France, for instance, when other descriptions of property were annihilated, railways were looked upon as tangible property, and to them, in the first instance, Government looked for a revenue. It was not fair therefore that these great national undertakings should be depreciated as they had been. He (Mr. Ricardo) believed that there was no safer investment of money, if they were well conducted and prudently managed, than in railways. At any rate, he might say that they had no reason to be dissatisfied with their undertaking, for he believed that the North Staffordshire was established upon a sure foundation. After alluding to the great advantage which the line derived from its peculiar position—its various lines being central in one terminus at Stoke, and not, as other lines, being managed by two termini at each end-stated that in consequence of the great trouble in putting the accounts in proper form, the canal accounts for the last half-year had not been audited. He concluded by moving the adoption of the report.

Mr. SHARP, of Manchester, seconded the motion, which was carried unanimously.

The retiring directors were then re-elected.

Mr. S. Barker, of Stafford, was elected auditor, in the room of Mr. Moore, retired. A dividend of 4s. per share was declared payable

on the 14th of August, and it was also announced that a call of 21. 10s. would be required in the month of September.

On the motion for declaring certain shares forfeited in consequence of non-payment of calls,

Mr. OGLEVIE suggested that, in consequence of the recent depressed state of trade, forbearance should be exercised towards the defaulters.

The CHAIRMAN said it would be recollected that at the last meeting certain shares were declared forfeited, but he was happy to say that in consequence of the conduct of the holders, the resolution was never carried into effect. The directors, however, hoped this liberality on their part would not be misunderstood. It was not just that willing shareholders should pay and run all risks, while defaulters, up to the twelfth hour, might come in and obtain equal benefit.

The CHAIRMAN, in answer to a question, declined to state positively whether or not the directors were in negotiation with any other company for the sale or purchase of the line.

The Rev. W. Robinson, at some length, protested against cheap trains upon Sundays, but met with but little support from those present.

BRIGHTON AND CONTINENTAL STEAM PACKET COMPANY.

July 24.—Special Meeting, London.—The Hon. Capt. Hotham in the chair.

The SECRETARY read the Report, which stated that this company was formed under the expectation that it would be supported by, and its interests identified with those of, the London, Brighton and South Coast; but as an injunction was obtained to prevent that company from affording such support, and as Parliament had refused its sanction to the bill to effect such latter object, the directors have only one course to recommend, namely, an abandonment of the undertaking and the winding up of affairs. The statement of accounts showed the liabilities at 56,452l. 19s. 2d.; assets, by balance at bankers', 1,510l. 13s. 5d.; due on the four calls, 3,090l.; packet accounts, 50,222l. 5s. 9d.

The CHAIRMAN said that their boats on the station ran last year from July until October. During the early part of that time they as perfectly succeeded as the directors could anticipate under the circumstances of a new company taking up the ground against an old established one. They were laid up during the winter, and the directors were in hopes that the Brighton would be enabled by their bill to have identified the interests of the two companies, because in all the substantial points they were identical. The establishment of the steam communication would be to the interest of the railway company; there was no question whatever that the railway company lost

several hundreds per week for want of a proper steam communication between their line and the French coast. The Dieppe and Rouen was nearly finished, and would be opened in the present week. Mr. Blount, the manager, came here for the purpose of endeavouring to make arrangements with them for the running of boats to communicate between Brighton and Dieppe. Even in the present state of Paris there was greater traffic between the two countries than most people were aware of. The directors would not impugn the decision of the House of Lords, but lamented that their lordships had come to an unfavourable conclusion, and the only thing they had now to recommend was the winding up of the con-cern and the disposal of the boats. The chairman then put to the meeting the adoption of the report and accounts.

A discussion took place as to the propriety of leaving it to the discretion of the proprietors to work the boats to the advantage of the company before they had an opportunity of selling them well. This suggestion, however, did not meet with the support of the meeting.

The report and accounts were then unanimously

adopted.

Mr. Pagliano then moved "That the directors be and are hereby authorized to dispose of the stock of the company, either by public auction or private contract, and wind up the affairs in such a manner as they may deem advisable."

The motion was seconded and unanimously adopted. Six retiring directors were re-elected, and the thanks of the meeting were voted to the chairman, who, in responding, recommended the gentlemen present to explain to the proprietors of the railway company, who were friends of theirs, how mistaken were as regarded their own interests in not supporting the bill which had been thrown out by the House of Lords.

# To the Editor of the Railway Chronicle. Edinburgh, July 27, 1848.

SIR, -We observe in the Railway Chronicle of Saturday the 15th inst., an account of the case of "Dale versus the North-Western," tried at the Court House, Skipton, on the 1st. lust., in reference to Wire Fencing for Skipton, on the 1st. lust., in reference to Wire Fencing for Railways. As the decision in this case, proving the insufficiency of Mr. Morton's system for such purposes, is calculated to affect all other systems of Wire Fencing, we consider we are called upon to direct your attention to the fact that in Scotland and in several parts of England, the Wire Fencing put up by us is in every respect totally different from that referred to above, and that in every instance it has been successful, and met with the unqualified approval of all the engineers and contractors connected with the lines. Independent of the favourable opinion of these parties, it has been highly approved of by the landed proprietors and tenants through whose grounds the lines have been formed, which to the railway companies is of the first importance, as it thereby prevents the loss and annoyance experienced in this case. in this case.

We have innumerable testimonials from several of the first engineers, some of the most eminent contractors and the principal landed proprietors and tenants in Scotland in favour of our system, and what renders this of more weight is the fact that many of the contracts were got in competi-tion with Mr. Morton, not only on account of the superiority and sound principles of our system, but also because it was very considerably cheaper.

We shall be glad of an opportunity to satisfy any of your readers of the perfect efficiency, durability and great economy of our system.

As some of the remarks in the evidence of Mr. Morton, if not explained, are calculated to mislead the public, and, further, may tend to condenn all Wire Fences, we consider ourselves justified in drawing attention to them. We allude especially to his statement that 400 landed proprietors in especially to his statement that 400 landed proprietors in Scotland have the same fence that was condemned on the North-Western. This is not the case. And we apprehend Mr. Morton must have procured this number from our published list of references, we being the contractors so employed. It is our system, not his, that has been so universally adopted in Scotland, and which is now extending so rapidly in England and Inches. and Ireland.

Mr. Morton further states that his Fencing was put up on the Caledonian Railway. To a certain extent it was; but, after completing a very small portion, we were employed by Messra, John Stephenson & Co, to do the remainder of the work upon our system,—which fact requires no comment.

In conclusion, we disclaim all idea of personal bad feeling towards Mr. Morton, although we certainly consider it most unfair his attempting to attach to his system the credit which solely belongs to ours; and we should not have troubled you with this communication had it not been that the decision of this case, coupled with his remarks, is calculated most unjustly to destroy all confidence in Wire Fencing for railway purposes in the minds of those who have had no opportunity of seeing any other Wire Fence but his.

Although this decision will affect our system to a certain extent, yet we are confident, and have the weight of the opinion of eminent engineers in corroboration, that eventually ours must supersede the old expensive methods. The greatest obstacles we have met with in extending it have been the insufficiency of Mr. Morton's Wire Strands and the attempted performances, with bad materials, of other

parties without experience, having no knowledge of the principles, upon which so much of the efficiency of the work We are, sir,

Your most obedient servants.

CHARLES D. YOUNG & CO.

# SOUTH-EASTERN RAILWAY COMPANY

SOUTH-FASTERN RAILWAY COMPANY.

FINAL CALL ON No. 4 SHARES.

NOTICE IS HEREBY GIVEN, that the Directors have this day made a CALL of the SEVENTII INSTALMENT of 12.5s.

per Share on the Shares created under the Resolutions of the General and Special General Meeting of the Proprietors in this undertaking, held on what the control of the Proprietors in this undertaking, held on what the control of the day of Amenst nock, and may be paid at either of the undermentioned Bankers, viz.:—

Messrs, Williams, Deacen's Co. 90. Birchin-lane, London.

The Manchester and Liverpool District Bank, Manchester.

The Commercial Bank of Scotland, Edinburgh.

The Commercial Bank of Sectland, Glasgow.

Messrs, Mercer, Randall & Co., Maidstone.

Interest at the rate of 5 ner cent, per annum will be charged on

Mesers, Mercer, Randall & Co., Maddstole.

Interest at the rate of 5 per cent, per annum will be charged on the said Instalment if not paid on or before the said lith day of August next; and if default shall be made in the payment of such lustalment on any Share for thirty days after the last-manuel date, the previous Instalments in respect of the same Share will be foreited to the Company, and no party in respect to such previous Instalments will be entitled to any share or have any claim on the Company.

Instalments will be entitled to any smale or make all, Scholler Company.

Interest will be allowed and paid half-yearly on all sums paid in anticipation of future Calls on any of the Shares in this undertaking on which Instalments remain to be called up; and Proprietors desirous of making such payments may apply to the Secretary.

TABLIAN AND ACSIMAN RAILWAY
COMPANY.

The Shareholders are informed that, as announced in the
Report addressed to the General Meeting on the 17th inst, the
Directors have made a CALL of It, per share, payable on the 18th
of Angust next, at the lanker of the Company, Messes, Denison,
Heywood, Kennards & Co., No. 4, hombard street, and that if the
said Call be not paid on that day, the Shares will be absolutely
forfeited. forfeited.

The Shares on which the Call of 11 per Share due the 19th of October 1846 shall not be paid at the Office of the Company on or before the 7th of August next will also be absolutely forfeited.

WILLIAM JACKSON, Chairman.

Italian and Austrian Railway Company's Office, 2, New Broad-street, July 20, 1848.

# DUTCH-RHENISH

The Head Direction hereby interiors the Shareholders that, in virtue of a Resolution of the Meeting of the General Direction, held on the 8th of July, agreeably to Articles 12 and 13 of the Statutes, the other moiety of the Call which was made payable on the 12th of April 1847, but provisionally suspended by a Resolution of the 29th of March 1847, is now to be paid on the 15th of August 1888, to the amount of of forins per share.

All Calls, without exception, must be paid in Amsterdam, exclusively to the Associate Cassa, on the Herencracht, near the Direkoningen-straat, between the hours of 10 in the Morning and 2 o'clock in the Afternoon, where the Shares, which must be presented at the same time, will be stamped. In order to save the English Shareholders from the necessity of sending over their Shares, the Calls may also be paid on that day against a receipt to be delivered to the consequence Cassal in upon which the payment is made. On the presentation of the Associate Cassal receipt at the Office of the Company, 4. New Broad-street, London, the Shares for this Call will there be stamped.

The Head Direction of the Dutch-Rhenish Railway Company,

Company,

L. J. ENTHOVEN, President.

By order of the same,

J. C.s.' JACOB, Secretary.

Amsterdam, July 10, 1848.

# GREAT REAT LUXEMBOURG COMPANY. BONUS TO HOLDERS OF SHARES &7 PAID.

The Directors having had under their consideration various ropositions for granting a Bonus to those Shareholders who ave paid up all the Calls, have determined upon adopting the fol-wing arrangement:—

Every holder of Five shares on which 7t, per share has been paid will be at liberty to purchase of the Company one share, 1ct, paid, for the sum of it.

These shares will bear interest at the rate of 5 per cent, per annum upon the full amount paid (1ct), from the 1st of July 1848, and will be exempt from any further Calls for a period of

1849, and will be exempt from any rurner cause at two years.

As the amount of discount at which they are sold and the interest already paid on the share capital are more than covered by the money which has reverted to the Company from the forfeited shares, a present Bonus is secured to those who have paid their Calls without augmenting the capital of the Company as a

Shareholders wishing to avail themselves of the option must make application to the Secretary of the Company on or before the 7th of August next.

By order of the Board.

HOW TO PAY NO DIVIDEND.

To the Shareholders of the Edinburgh and Glasgow Railway. CARRY Passengers between Edinburgh and Glasgow at half fares, thus losing 50 per cent. while your rival cannot lose what he never had.

Advertise to carry passengers between Glasgow and London for 33. 6s. by the East Coast Line—the fare of rival line being 41.7s. and that from Edinburgh to London by the East Coast route being also 41.7s.—thus carrying Passengers between Glasgow and Edinburgh for nothing, and paying in addition one guinea to Mr. Hudson and the North British Company!

Gentlemen, I can conceive no better mode to insure the payment of no dividend. Pray, what is your opinion? "PUNCH."

To the Shareholders of the Edinburgh and Glasgow Railway.

CENTLEMEN,—Perhaps you may have noticed a letter signed 'An Unfortunate Shareholder in the Edinburgh and Glasgow Railway,' which appeared in the Edinburgh and Glasgow Railway,' which appeared in the Railway Times of the 15th inst., taking for its text the then fresh reduction of fares between Edinburgh and Glasgow to 4s., 3s. and 2s. 6d. by eight special express trains daily. Certainly this was bad enough (though done in self defence) and the writer was fully justified in drawing his despairing conclusions: but my attention has been called to an advertisement since issued by order of your Directors, almost amounting to a confession of intended suicide on the part of the Company. According to it, passengers from Glasgow of the Company. According to it, passengers from Glasgow to London are now carried by express for 3l. 6s. in place of 4l. 7s., and by other trains at correspondingly reduced rates, —while the fares from Edinburgh to London by the same route (via Berwick) remain as they were, the express being

44.7s.

A little competition is a wholesome thing now and then for the public benefit, so that at the same time it be consistent with the rules of common sense; but will it be believed (yet it is the fact) that your Directors are actually for every first-class passenger booked by express from Glasgow to London not only drawing not one farthing for the forty-eight miles over which they carry him on their own line, but over and above are becoming debtor to the North British and the other lines to the south in 14 bs. to

own line, but over and above are becoming debtor to the North British and the other lines to the south in 11. 1s., to make up the legitimate fare of 41.7s., and so on with the other classes in proportion?

I do not know what the through traffic from Glasgow to London is worth; but, from the anxiety shown by the rival routes to secure it, we may take it at something considerable: and it must be a strange species of satisfaction to your managers, as they see each passenger pay for his ticket, to know that at the same moment a debt of one guinea more than they receive is scored against them by their Southern friends—and that they have besides to carry him to Edinburgh free. to Edinburgh free.

to Edinburgh free.

We have all heard the story of the journey from Oxford to London for nothing, and a bottle of wine to each passenger into the bargain; but this extravagance of the good old coaching days is thrown far into the shade by this modern liberality, which gives to a man of moderate wants sufficient in his pocket for at least two days' comfortable living in

I ask you what is to become of your dividend? If none was afforded last half-year, what are your prospects for this? I, for one, feel my purse none the heavier.

ANOTHER UNFORTUNATE SHAREHOLDER.

DUTCH-RHENISH RAILWAY

The Head Direction hereby informs the Shareholders that, in virtue of a Resolution of the Meeting of the General Direction, held on the Short of Meeting of the General Direction, held on the Short of Meeting of the General Direction, held on the Short of Meeting of the General Direction, held on the Short of Meeting of the Statutes, the other motely of the Call which was made payable on the 29th of March 1817, is nowed by suspended by a Resolution of the 29th of March 1817, is nowed must be paid in Amsterdam, exclusively to the Associate Cassa, on the Heerengracht, near the Direkoningen-straat, between the hours of 10 in the Morning and 2 o'clock in the Afternoon, where the Shares, which must be presented at the same time, will be stamped.

In order to save the English Shareholders from the necessity of sending over their Shares, the Calls may also be paid on that day against a receipt to be delivered by the Associatic Cassa. In that case a list must be presented of the numbers of the Shares upon which the payment is made. On the presentation of the Associatic Cassa Call will there be stamped.

The Head Direction of the Dutch-Rhenish Rallway

SATURDAY, AUGUST 5.

# HEADS OF A SYSTEM OF PRACTICAL REFORM.—No. II.

To say that the railway companies have for some time past been "burning the candle at both ends," would but imperfectly describe the would but imperfectly describe the unfavourable conditions under which they have been working. In every direction a process has been going on immediately tending to lower their profits. . Large additions have been made to capital; either of mere dead weight, laid on by the enormous expense of contentious proceedings in Parliament and elsewhere, or for the construction of branches and other supplementary works, the returns from which are far below the per-centage of gain on the trunk lines. These must have brought down the nett receipts to a lower average, had the general terms of working undergone no change affecting the profits of the service. But while this load on the capital was yearly increasing, there has also been a constantly increasing strain brought to bear on the springs that had to sustain this growing weight. The fares have been materially cut down; the speed of trains has been greatly accelerated—their dead weight being at the same time much increased by the arrangements of through traffic extending from one end of the kingdom to the other. In this way the sum on which a profit was to be made, and the means of raising that profit, have been constantly receding further apart from each other; -the business has been conducted at a diminished advantage, during a process which would have required every advantage to counteract its bearing on the nett receipts.

It is, indeed, surprising that the effect of these doubly exhausting tendencies should have been no greater than has hitherto been felt. That the scale of profits should have kept up to its present average level, under such circumstances, proves the wonderful resources of the system; while it also shows what the prosperity of its main branches must have been, had those who were fortunate enough to have first occupied the ground taken a clearer view of those very interests for the sake of which they were promoted. The actual condition of their property now demands that these interests should be more wisely provided for than they have been in the policy of late years—the effect of which, as we observed in our last remarks on this subject, has been altogether to benefit the public at the expense of the railway proprietor.

Taking the system as it stands,-without wasting time in vainly pointing to what its chief undertakings might have been, had they been confined within their appropriate limits,—it is evident that the immediate business, for all concerned, is to try what can now be done to prevent a further decline in the profit of working it. The obvious rule in this, as in all kinds of business, is of course to simplify as much as possible every movement of the machine, and to introduce, in all its departments, a judicious economy. Such is the general instruction which it will be proper to follow through every particular of the system. Our present purpose, how-ever, is not so much to enforce obvious principles, or to descend to minute details, as to particularize some of the more important instances in which reform may be usefully applied. Of these, the most considerable, we apprehend, have been named in our first paragraph. We shall now proceed to deal with them a little more closely.

On the chapter of fares and rates, however, we shall say but little. For the most part they are so far practically fixed, either by express obligations in recent Acts, or by the force of circumstances which it would be unsafe to dis-

regard, that it would be out of the question to | look for improvement in profits from a return to much higher tariffs. To raise charges after they have been once reduced is, indeed, always a measure of very questionable pru-dence, and one that ought not, in most cases, to be resorted to until all other financial remedies have been applied without effect. For the present, we shall not include this among the indicated means of practical improvement. Those companies which have, either voluntarily or on compulsion, adopted a low tariff, must, we apprehend, be content to view it as a settled condition of their working. But the experience of its effects where it has been tried -on whatsoever grounds-may well serve as a warning to those who have not yet sunk down to the very lowest scale. It will teach them to hesitate before venturing on the hazardous experiment of applying little more than nominal charges to a service which the cost of its establishment has rendered expensive, and which the public in this country demand to have not only liberal in conveniences, but luxurious in accommodation.

The scale of rates being thus left untouched, we shall proceed to notice those reductions of expense which their generally low standard now renders especially needful. And, first, the number of daily departures must be named. Writers and declaimers of the Morrison school in favour of Continental fares-to the level of which many of our chief railways have pretty nearly descended-have never chosen to take this notable item into their estimate. On the Belgian lines, for instance, which figure so prominently in parliamentary comparisons, the proportion of trains despatched per diem to those on our chief railways, is something like one to four or five; and the French—whose charges, including the rates on luggage, do not greatly differ from ours-are at least half-way behind us in the frequency of departures on their long lines. It cannot, however, be pretended that we should closely follow Continental examples in this respect: the circumstances of our traffic render a more frequent circulation of trains than theirs necessary to its proper developement. But there can be no doubt whatever that this necessity should now be the sole guide of those who make out railway train-tables; and it is not less certain that by keeping to this scale several departures would be curtailed on all our chief lines, greatly to the saving of expense, and without any real loss to the public. In scheming the departures hitherto, a large place has been allowed for considerations of merely secondary importance; much needless waste and trouble are daily incurred, with no other object but that of pleasing certain limited classes of passengers, or of suiting the convenience of certain insignificant places, which return no equivalent for the service performed—not even in the barren form of an acknowledgement of the liberality of the efforts made to accommodate them. It is clear that if the principle from which we set out be kept in view—that, namely, of making a fair payment the absolute condition of all railway service-it will lead directly to a revisal of train departures; which may be so arranged as to take a considerable weight off the current expenses, without in any respect unduly stinting the public convenience. This kind of arrangement tells in a double way. Not only is the waste working of unnecessary trains saved, but their suppression throws a fuller stream of custom into those which are retained; so that while an unproductive service is got rid of, what remains is made more profitable, by being employed to the whole available extent of the means provided.

ecuted with judgment, on a full view of the wants and receipts of the service; and to be carried out with consistency and firmness. It is no answer, we must assert, to any recommendation of this kind, to say that it may not be quite easy or quite pleasant to carry it into effect. Those who advance objections on this score alone, may well be required, before they are admitted, to point out what reform of any kind, what duty, indeed, in any part of life, can be accomplished without taking pains and incurring opposition. We do not say that this will be as amusing a task for Directors as meeting deputations or presiding at railway festivals-nor that it may not provoke an outcry in various quarters; but we do say, that in the actual state of the railway interest, those who have the care of this vast property—those, too, by whose advice its present engagements have been incurred, to the great decay of its profits-are bound to shun no labour and to shrink from no opposition in the just fulfilment of what is now their paramount duty. This remark—on which we desire to insist as emphatically as possiblewill apply not only to the regulation we have just mentioned, but to all the others which will be hereafter successively brought forward. If we are right in our view of the present condition of railways, and of the state of their current account with the public, there can be no room left for leaders, responsible for the steps which have made both what they are, to trifle in. The duties now pressing on their hands, they will do well to understand once for all, may be anything but pleasant-as little pleasant, perhaps, as are the circumstances of fully two-thirds, if not more, of the proprietors by whose pecuniary means the system has been stretched out to its present dimensions. The case now requires to be treated with a regard to something more serious than the mere amenities or distinctions of office; -with a strict attention to what is right and necessary on both sides-on one of which, be it remembered, stand the constituents, who have a just claim to have their wants and interests consulted as well as the public. It may be far more popular and agreeable to court the latter at the proprietors' expense; but this has been already carried somewhat further than is either fair or consistent with positive duties; and it is high time that what immediate obligations plainly enjoin should be steadily and thoroughly performed.

Our next article will discuss the considerable item of speed,-which resolves itself in various ways into the still more considerable item of current expenses.

# IRISH REVOLT AND RAILWAYS.

It is natural enough that the present disturbances in Ireland should strongly recall public attention to the plans, often and unsuccessfully brought forward, for giving the people of that unhappy country some better employment than that of listening to seditious demagogues. It is, we hope, beginning to be understood that one main secret of the power that such miscreants have to delude and inflame the populace lies in the real distress to which they make their turbulent appeals. The Irish peasant knows that he is wretched; and since when he is told this he feels it to be true, it is not surprising that he should be easily led to believe in the truth of what the "patriots" tell him will cure his wretchedness. We hear in various quarters of regrets more and more loudly expressed that the millions spent by England in attempting to relieve it,-and spent, alas! with little effect. but that of increasing the confusion, and substituting alms for wages-had not been em-This alteration, we know, cannot be made ployed in useful work, that might now be without some difficulty. It will require to be ex-

Digitized by GOGIC

progress it would have been training the men engaged in it into independent labourers, from their normal condition of vagrants and paupers. The recently published pamphlet by Mr. Brown, on 'Irish wants and practical remedies,' has been read by many with the attention its statements deserve; and the arguments we long since endeavoured to enforce on the subject of Irish relief may be seen to be gaining ground on both sides of the Channel. The Government, it is now said, see the necessity of encouraging railway works in Ireland:-indeed, the recent speech of the Lord Lieutenant admitted as much; but the difficulty in the way is declared to be a present want of funds. It may be questioned whether any sum required to set Irish industry in motion would not be better spent even now, than in charges which must continue to be incurred in subduing turbulence, if Ireland is left to fester in idleness. As far as we are concerned, it will be remembered that the railway proposal was strongly advocated by us at a time when there were still large sums about to be expended in Irish relief; and when the appropriation of part of them in this way could not therefore have been refused on the ground of deficiency of funds at least. The plan we still think deserves a trial, even in our present less advantageous circumstances; since it must be seen that revolt is a disease inflamed by want; and that subduing the one will be but a temporary good, if something be not afterwards done to diminish the other in an effectual way.

## Literature.

A Letter to the Right Hon. Lord John Russell, M.P., on the best mode of avoiding the evils of Mixed Gauge Railways and the Break of Gauge. By Joseph Locke, Esq., M.P., F.R.S.

The evils of the mixed gauge are so many and so grievous that it is wonderful they have not received more attention from the Legislature and the public. From the Legislature, because it is their business not to sanction by Acts of Parliament a wasteful application of capital, and one which diminishes the utility of the great lines of national communication. From the public, because it will diminish the security of travelling and increase its expense. The evil has been that the subject has not heretofore been argued, in Parliament or out of it, on the broad ground which it deserves. It has been fought in petty detail of clauses, in a private Act of Parliament, by some company against some other, generally by the Great Western against the London and North-Western; in such circumstances the well-known talent and tact of the Great Western executive has always beaten the narrow policy and petty views of the parliamentary manœuvrers of Euston-square.

In these circumstances it is fortunate that abler men, with more practical views and a better talent to turn them to account, have now taken the field. Mr. R. Stephenson and Mr. Locke have prepared an admirable joint report on the professional details of the subject, and Mr. Locke has brought his talent of close argument and forcible expression to bear on a quarter where, we should think, a deaf ear will not be turned to so influential an exposition of matured and practical opinion.

The letter has the great merits of being very short and very pithy. It demonstrates the evils of the mixed-gauge system as proposed to be carried by the Great Western into every district but their own, and concludes by showing a practical remedy of the simplest nature and most easy and inexpensive in its application.

The evils of the mechanical expedient of mixed gauge are stated clearly, as follows:-

"It is admitted that the safety of a train in rapid motion on two narrow bars of iron, called rails, is not likely to be augmented by increasing the number of breaks or openings in the rails by what are called switches, points and crossings; on the contrary, all persons agree that such breaks in the rails for local convenience in making sidings or branch lines diminish, in some degree, safety at high speeds, and that but for such purposes they ought to be avoided. See, then, how such breaks will be increased by the mixed Look at the accompanying diagram, and consider that whilst in what is technically called a through crossing (a connexion between one line and another) there are in a simple gauge but two crossings and two sets of switches, there are twelve crossings and four sets of switches necessary for the double gauge, and five switches and eight crossings for what is termed the three-rail system. These crossings, for local convenience, are necessarily numerous, and thus this enormous augmentation of risk must be incurred wherever these communications are required. There are now on the main line of the London and South-Western, between London and Southampton, 130 switches and 130 crossings, or breaks of rails. If the double gauge were adopted, there would be no less than 260 switches and 780 crossings, in order to give the same facility of access to both gauges. I will not dwell on this part of the subject, nor will I attempt to show the great evil that would be inflicted on the many thousand miles of simple railway communication in this country by the introduction upon them of a mixed gauge; for it will not for a moment be disputed that any mixed-gauge system must necessarily augment expense, delay and danger, if introduced upon the present railways constructed on a single gauge. What then, my Lord, will be the effect of extending the mixed guage to the North of England? Shall we secure greater economy in transit-greater local convenience—greater speed or safety !-- or shall we not rather destroy, by a system of complication, the great work which has cost so much thought, time and money to establish? Whatever effect competing lines on the same gauge may have on prices, local accommodation and on general travelling, they do not lessen the safety of the railway system. A reference to the map of England will show how much more competition has already been promoted in the North by duplicate lines on the simple gauge than in any other district of England; and notwithstanding this multiplication of lines, no one contends that the safety of the system is impaired, even where compemixed gauge established by rival interests, competition would be either impossible, or it would be accompanied by absolute danger to the public. there is an evil in a break of gauge is now admitted, and the mixed gauge is put forward to lessen it; but is it not evident that the farther you push the one gauge into the district of the other, the greater will be the number of breaks, and the greater will be the evil? For instance, if all the three lines from Oxford to Rugby, Birmingham and Wolverhampton were to be laid on the narrow gauge only, there would be but one break at Oxford, instead of one at each of the three other places; and the number will increase in proportion as the broad gauge is allowed to penetrate to other northern places.

Having shown that the remedy of mixed auge is a greater evil than the break of gauge, Mr. Locke next shows the cure for both.

"With the view, then, of avoiding the evils which must necessarily arise to the railway system by such extension of the mixed gauge, it is my intention to show your Lordship that, for a far less sum than is now about to be laid out on the mixed gauge upon the three lines I have named, a railway of continuous and unbroken gauge may be completed between the South Coast and the North of England on the one hand, and the metropolis and the whole of the North of England, by the Great Western line, on the other. The mode of doing this is simply by laying the narrow gauge concurrently with the broad gauge from Oxford through Reading to London, and from Reading to Basingstoke, in all 77 miles. This might be done either by independent lines or by a mixed gauge; and although the latter would, I admit, be an evil, it would be much less in extent than it could be by any other arrangement, short of altering the broad gauge to the narrow. The narrow gauge must be laid from Oxford northward; but why lay the broad gauge at all, as proposed by the Great Western Company, at an expense at the outset (from the mixed gauge) of more than 800,000*l*. sterling? Why not, instead, lay the narrow gauge from Oxford to London, at one-third of the cost? If this were done, the Great Western could more effectually compete in the North, if that be their object, with the North-Western, than

either Rugby, Wolverhampton, Birmingham or Oxford; and, for the South Coast, let the Great Western out the pledge often made by its chairman, to lay the narrow gauge from Basingstoke to Reading; and thus the North and South Coast districts, at a cost of less than 100,000l., would be saved the annoyance and expense of any break of gauge whatever. Why then, my Lord, is this suggestion—so obviously why then, my Lord, is this suggestion—so obviously the cheapest, simplest and best for the public interest—not adopted? Must it be confessed that the Great Western, relying on the conflicting decisions of committees of Parliament, hopes, year after year, to extend the mixed gauge further to the North on the one hand, and to Southampton and Portsmouth on the other? Must it be owned, that whilst that company is thus urging extensions, for its own (supposed) advantage, it carefully avoids the introduction of the mixed gauge between London and Oxford, which would almost entirely get rid of the difficulty which affords a pretext for the extension of the broad gauge? It was the Great Western that introduced the exceptional gauge, declaring that it never could interfere with the lines in the North. It is the same company that is now seeking to introduce a mixed gauge, in order to avoid, as is alleged, the evils of a break, but really in order to multiply breaks of gauge at points more remote from their own line; and yet this company, who alone contend that a mixed gauge is simple and easy both to construct and to work, hesitates to apply the mixture to their own line, where no one but themselves would have control

Such is the simple remedy and such the only apparent cause why it is not hitherto applied. The importance of the question and the necessity of its being taken up immediately, on public grounds, are obvious. If anything in the shape of argument can move Lord John Russell or his Government to bestir themselves, the following peroration is well suited to effect an object so desirable:-

"Lord Redesdale, in his evidence this year before the committee of the Lords on the Oxford and Birmingham bill, said most truly, that the extension of the mixed gauge was a public question, and should be dealt with by a public and not a private bill. It is admittedly costly and complicated; it is feared that it will introduce inconvenience and danger into the railway system; and its general effect on that system ought to be considered in a more comprehensive spirit than is admissible in judging of a private bill. If the mixed gauge be safe to Rugby, Birmingham and Wolverhampton, it will be so to Liverpool, Manches-ter, Glasgow and Edinburgh; and, indeed, how can it be resisted on any railway now existing, or to be hereafter made? The arguments which, on local grounds, carry the mixed gauge at present will apply to all future extensions, and, adopting these arguments, the railway system of this country will become a universal mixed gauge, although every mile of such construction will be less simple and less safe than if it were of the usual construction. What a result! England, which has given railways to the world, would see France, Belgium, Germany, Italy and the United States advancing in railway enterprize on a uniform plan-the gauge which England furnished to them; and she would stand alone in the anomalous position of having (because one man of great genius disdained to pursue the path pursued by others, and because Parliament, being careless and indifferent to the subject, allowed one powerful company to deviate from the general plan) engrafted on her railway system a duplication, a complexity and a ruinous expense, of which I am satisfied it would be said that could they have been foreseen they would never have been tolerated. Why then, my Lord, should we pursue a policy which is gradually destroying the capital now invested in railways, and why should we lessen the safety of railway travelling? Why was the Gauge Commission appointed, and why are its warnings disregarded? The Gauge Act does not carry out the recommendations of that commission as it was intended to do, and private committees, on local considerations alone, are extending the evils which the Commissioners predicted, and from which it will become every day more difficult hereafter to recede. Uniformity of gauge we must have, and it will either be simple or duplex; I believe the former to be better for the public in all respects; and I equally believe that it is the interest of the Great Western Company themselves to adopt it. That company has not yet laid any of their lines beyond Oxford; if it were to lay them on the national gauge only, it would save in the course of the next three years an outlay of one million sterling. The same company could, by a line on the same gauge from Oxford to London and Basingthey can ever hope to do with breaks of gauge at stoke, as I have before shown, establish out of this

saving an uninterrupted communication from London to the North, and from the South Coast to the North, with a large surplus to themselves. But whether that company may take this view of the matter or not, I submit to your Lordship that it is clearly the duty of the Government to see that the evils of the complexities of gauge are not inflicted upon the railway system; and to put an effectual stop to the accumulating evils which private legislation is every day causing in further extending the untried system of mixed gauge."

# RAILWAYS AND COLONIZATION.

The cry for colonization is renewed even at the present time of public turmoil and disquietude. The unemployed classes of this country, instead of forming a league, under colour of public objects, to rob and spoil, and then to fill empty pockets on their own private account, turn their thoughts and energies to the formation of a new society in a less populated and less competitive land. Public men and philanthropists who profess to utter or attend to the voice of the people have again joined in this movement, and within the last month we have had three large meetings including politicians of all shades of opinion assembled for the express purpose of benefitting the agricultural or manufacturing labourers who may be destitute of work. One of these three meetings had for its object the creation and support of the Canadian Land and Railway Investment As-We will quote from the plan set forth sociation. the principles of the Association:

The immediate objects which the promoters have in view are, the purchase of large tracts of govern-ment land, and the formation of a railway from Halifax to Quebec, which will intersect those lands to the extent of 600 miles, passing through a fertile country abounding in magnificent timber, with extensive coal field and other mineral properties, lying uncultivated and uscless, though now within the same distance from London, as to time, as Edinburgh and Dublin were in former days. The present price of forest land is 2s. per acre, but it is hoped that as the Government are extremely desirous that this railway should be constructed, and are ready to give every encouragement towards the settlement of these colonies, the land may be secured even at a cheaper rate; and it is already ascertained that sufficient ground for the formation of the railway will be granted free of cost. Although the location of the land is the principal feature in the scheme, to render such land available it is necessary that there should be some medium of communication; and it has been ascertained after mature calculation, that no mode can be adopted so readily, or at so little expense as a railroad, which will at once lay open the whole of the province of New Brunswick, thereby bringing Halifax, in Nova Scotia, within twenty-four hours journey of Quebec, in Lower Canada. The advanformey of such a railway are incalculable. It will at once raise the value of the land in its vicinity to at least 20s. per acre; it will enable the settlers to form local roads to and from the different stations; it will command the larger portion of the passenger traffic from the Canadas, and even part of that of the United States to Europe; it will render more profitable the fine timber, by facilitating the transport of saw-mills and other machinery to the heart of the forests, and thereby saving the heavy expense of conveying the rough trees to the shipping ports; it will also command the conveyance of a large portion of goods and agricultural produce both to and from the Canadas, especially for the five winter months, during which period they are at present excluded from all com-munication, owing to the stoppage of navigation by the frost; further, the transit of the troops and of the mails will be insured to it; and lastly, as it will commence at Halifax, the port nearest to Great Britain, it will form the great trunk line towards which the numerous local rails now made and in progress throughout the Canadas will converge. has been recommended, by high authority, that the rails throughout the line should be formed of wood. after the manner of those now in use in the United States, where they are found to be admirably adapted for the purpose, at a cost of less than one-third of those in England, while it will thus afford employment to a greater number of hands, labour being the principal expense attached to its construction. Detroit and Kalamazoo railroad, Lower Canada, 140 miles in extent, cost 1,500l. currency per mile, paying 12 per cent.; it has lasted 12 or 13 years. And a line now in progress, of about 40 miles extent, is estimated to cost 2,577l. per mile, including six locomotives, 180 waggons, six passenger cars, iron and every other requisite.

The one great feature of making the railway the centre and heart of all the local roads is a novel and we think, a very interesting experiment. The railway system furnishes undoubtedly the very life-blood of modern civilization. The power of inducing a rapid and certain interchange of produce settles and confirms the peculiar trade of each district; one county has its minerals, another its farms, and a third its manufactories. Speculation does not go on roaming about for a dry spot for the sole of its foot. Commerce, under the advantages of our accelerated and ceaseless communication, soon acquires a local We make these few hasty habitation and a name. remarks in furtherance of an association which we sincerely hope may at least have a fair trial and a due share of public assistance, an association which, we repeat, is to be formed under the immediate auspices of that iron-handed power whose description our readers will let us perhaps borrow from Leigh Hunt's account of the fight between the two great rivals, Capt. Sword and Capt. Pen,-

Water he call'd, and Fire and Haste, Which hath left old Time displac'd— And Iron mightiest, now for Pen, Each of his steps like an army of men— And out of the witcheraft of their skill And creature he call'd, to wait on his will— Half irou, half vapour, a dread to behold, Which evermore panted and evermore roll'd, And utter'd his words a million fold.

#### BAILWAYS AND AGRICULTURE IN LINCOLNSHIRE. [Continued from p. 493.]

It must not be inferred, from the account I have riven of the Brocklesby tenants, that they are excep tions in position to the tenantry in North Lincoln-shire. In numbers, wealth and intelligence they are only to be equalled (if equalled) on the estates of the Duke of Sutherland, the Earl of Leinster and the Duke of Buccleuch; but throughout North Lincolnshire you find the same stamp of men flourishing on the land of wise and liberal landlords. The customs and traditions of the county are in the right direction. and custom is stronger than law. Good landlords make good tenants, and it is not any peculiarity in the soil that renders this district flourishing, but the due relationship which exists between the landowner, the tenant and the labourer. Certain broad and equitable principles have been accepted by universal consent all over the district. The tenants are expected to have a due amount of capital—the landlords are prepared to provide proper farm buildings, to contribute in due proportion towards draining and other permanent improvements. The result has been a constant flow of capital and direction of intellect towards Lincolnshire farming. There has been much discussion lately upon the subject of tenant farmers' tenure-a subject on which discussion cannot fail to do good. What I saw in Lincolnshire, compared with what I have seen in other counties, convinces me that for agricultural tenures there can be no universal Custom and confidence in families-in the Rutlands, the Yarboroughs, the Chaplins, the Drakes effect in Lincolnshire what leases do in the Lothians. A lease may ruin a tenant; it may also make his fortune. Tenants must learn to depend on their own foresight and calculations. Legislative dry nursing can never rear a healthy race of agriculturists. But this is no argument against granting a lease to a sub-stantial tenant willing to accept one. It is not a tenant's place to build or effect permanent improvements; he can in all ordinary circumstances employ his capital on the land and in the fold-yard more profitably. With respect to the unexnausted impressions, by manures, &c., some experienced farmers are of opinion that an agreement for an invariable are of opinion that are agreement for an invariable to guit, instead of six months -a fixed allowance for purchased manures (taking, for instance, bones as good for three years, and so on)
-a per-centage paid the landlord on draining—farm buildings be made perfect and put in repair on commencement of tenancy by landlord, and kept in repair by tenant, with a few other arrangements of the same kind—would be better than any lease. There are three points which interfere with improved cultivawant of capital, which leads a landowner to wish a tenant to do what he ought to do himself-a desire for political influence, in addition to rent—and game reservations. On the other hand, landlords suffer from tenants without sufficient capital and without character. A tenant may always learn the character of a great landlord and his agent, which is of more importance; but it is not so easy to learn the character of a tenant. To expect political influence beyond what personal popularity will obtain, is simply to sacrifice so much rent. As to game, there is a great deal of low cant abroad, mixed, however, with some ways ranged from 81., for youths of sixteen, to 142. deal of low cant abroad, mixed, however, with some bigitized by

little truth about it. Game is very plentiful in North I never saw it more plentiful anywhere; and I did not meet with one among scores of tenant farmers who objected to a reasonable head of Give them leave to keep down the hares and game. Give them leave to keep down in lates and rabbits—and the tenant who does not insist on this is very foolish—and they do not object to partridges and pheasants, except in thousands for the sake of the battue. In a few years the daily increasing intercourse among farmers will lead to a general knowledge of the principles necessary to be observed for a mutually advantageous bargain for cultivating Good tenants will be only to be had on fair rerms, and, if I mistake not, good tenants are more valuable every day. Acts of Parliament will only make work for the lawyers, who have too much out of the land already. Railways will render communication between the different counties easy—public opinion will act on all parties with advantage. The absurd restrictions of old leases will be put in the fire, and no man of sense and capital will constitute himself a bare tenant-at-will without custom or confidence to lean on. But in agriculture, as in everything else, any legal meddling that impairs foresight and self-reliance is injurious. Every farmer can reduce tenant right to a personal agreement suited to the farm, before taking a farm, much better than a general statute. It seems to me that the Royal Agricultural Association might with great propriety and utility collect and publish a report of the various tenures under which land is farmed in this country. It would be well, too, if they engaged some thoroughly competent party or practical farmer, of sufficient scientific and literary ability, to collect and edit, with notes, the sketches of agricultural progress in different counties which have from time to time appeared in the 'Journal of Transactions,' so that we might learn the advantages and deficiencies of culture throughout the kingdom. Such a work would be a matter of time and expense, but of the greatest possible practical value, especially if sold at a reasonable price. custom of hiring servants at annual statute fairs still prevails in Lincolnshire. Many respectable people wish to put an end to these fairs, but the peasantry wish to put an end to these fairs, but the peasantry insist upon them, well knowing that there are not too many holidays in England. The 1st of May is the grand statute day, and being on that day at a farmer's who had some hiring to do, I rode up with him to a village on the Wolds where the fete was to take place. It was a beautiful warm day; as favourable season had brought out the green and bloom of hedgerows and banks along the road from every lane and path; the lads and lasses came tripping along in their best attire, lively, healthy and comely,—fit studies for a Wilkie or Mulready. In these remote parts we get a little gay variety of costume, which in such scenery pleases the eye better than the universally dingy garments of a town population. The smock-frock is being replaced in the northern districts be velveteen and fustian,—an improvement both for appearance and for activity. As you get down toward Lincoln, the smock-frock, generally blue, re-appears, and with it a more clownish, slow-moving peasantry than the inhabitants of the northern Wolds. The prevailing costume of the lads able to earn wages as ploughmen, was a round-crowned black felt hat, a coloured shirt, with a gay handkerchief tied loosely round the throat, a ruby or violet coloured shooting-jacket, a double-breasted party-coloured waistcoat with glass buttons, fustian trousers invariably turned up at the bottom to display a pair of stout laced boots, all the attire seeming stiff and new, and the owners rather uncomfortable in them. under the felt hats were plump, sun-burned and freckled, with fair hay-like hair, blue eyes, and a simple, not unintelligent expression. The height of the men seemed rather above the average, and their walk less lounging than in strong clay countries. The girls were fresh, rosy and fair, but female fashions travel so fast now that their costume had no pleasing peculiarity; - there were smart shawls and black visites: I should have preferred one of the old scarlet cloaks. The village, which stands under the shadow of Brocklesby woods, was enlivened by half-a-dozen orange and gingerbread stalls, a stray organ and a fiddle. The sun shone hot on the white chalky road; the green woods on the one side, the neat whitewashed cottages and country inn on the other; the farmers and their wives riding on well-bred nags, the lads and lasses crowding round the stalls, the groups of bargainers, the pleased faces of those who having been hired were about to spend the "binding half-a-crown, made up a famous rural picture, for scenery and good looks not easily to be equalled; but I must own that, under the same circumstances in France or Germany, the beautiful turf under the shade of the trees would have been enlivened by a dancing party. The

a youth of twenty, as ploughman, at 14l. a year. Two, a ploughman and a waggoner, were engaged to go into a part of Cheshire, where wages are lower and the labour dearer. All the best farmers agree that cheap labour is not worth having. I was sorry to find the state of education not satisfactory. The children earn wages so early that they are independent of their parents. It is difficult to find amongst the best farm labourers a man who can read and write fluently This information I had from a gentleman who had been trying to obtain an overseer for a farm in a benighted part of the kingdom. He found plenty of men with practical skill, but no more writing than would make a mark. A clergyman who has taken great pains in establishing a school near Louth, told me that he had the greatest possible difficulty in collecting a reasonable per-centage of the village boys to receive education gratis. The children were moral, all under the control of their parents. If asked why some aged seven were not at school, the reply would often be, "He wunna go"; and that, as with the cottagers of Glenburnie, is considered a sufficient answer. Most boys, gentle as well as simple, prefer roaming the fields, halloing and birds'-nesting to the drudgery of A, B, C; but when to the pleasure of air and liberty wages are added, the preference of the Lincolnshire urchins for field work over school work is not at all surprising. The parents, too, see no advantage in education, but consider it a sort of compliment paid to the clergyman. The fact is, that reading and writing have very little money value at a distance from large towns. In towns, curiosity to decipher the placards, the play-bills, not to mention the penny periodicals with cuts of dreadful murders, the demand for errand-boys that can read, the pleasure of a warm room, the attraction of kindness from a superior, fill "the ragged schools" with half-starved intelligences. In rural districts, even if a boy learns to read well, there are scarcely any books for him to read, and rarely occasions for him to write. Our chamber philosophers are always making the mistake of judging mankind by the very exceptional speci-mens to be found within an easy walk of the Temple. The educationary system which would be admirable in a town, would utterly fail in the rural counties. Hence the urgent necessity of securing the zealous services of the rural clergy. A great deal of the harvest work is done by contract with the labourers, the married ones bringing in their wives and children to help in the bargain; which is generally settled as to details by the labourers themselves. The practice, introduced of late years, of employing women and children to gather the stones brought on the land with chalk, and convey them to the roads, has very much increased the demand for weak, unskilled labour. Roads which were formerly mended with chalk and stones from the pit, are now mended with weeded stones alone. The fashion of dabbling in agricultural science, which fortunately so much prevails, occasionally produces scenes like those which occurred to the bourgeois gentilhomme after he found that he had been talking prose all his life. A great landlord, as learned in agriculture as M. Jourdain, hot from a paper on the virtues of chalk, was riding along one of the Wold roads the other day, when he came upon an aged labourer mending the road in the way he had been in the habit of mending them all his life, that is to say, by filling up the ruts with the contents of a neighbouring and very stony chalk-pit. He had filled up a hollow place with a barrowful of material-value, considering quantity and quality close at hand, under a farthing-when our landowner and magistrate, struck with horror at the waste, pulled up and said, "Stop, my man, stop; the waste, puned up and said, "Stop, my man, stop; do not do that! Do you know what you are doing!"

"I be mending the roads, sir," touching his hat and rather frightened.—"Yes, yes; but do you know what that is!"—"It be chalk, sir."—"Let me tell you, my man, that is manure; you must not waste that. Do not lay down any more." So, having said this with an air that carried authority, he trotted off, and left the old man staring and wondering, until his master informed him, on his journeying to the farm, that manure or not manure, it was to mend the road until some cheaper material turned up. On the Brocklesby estate it is desired that, where possible, the labourer should have a cow as well as a pig, and arrangements are made to facilitate so desirable an object. Gardens are almost universal, but many farmers assign a piece of land annually, besides the garden where that is less than a quarter of an acre, all ready manured and prepared, in a turnip field, for the use This gives them a good crop at the of their men. least possible expense and labour, and it obviates all fear of the land becoming sick for want of change of crop; but there are moral advantages in a permanent tenure of a garden close to a cottage. Allotments seem to fail where they are more than a few yards from the residence of the occupier, and when they

are overlaid with rules and regulations, which, putting the impertinence of them on one side, are founded on the erroneous principle that it is only sober, decorous and religious people who deserve to eat potatoes, cabbages and onions. Paying rent punctually seems to me the only indispensable qualification for an allottee. Virtue must be cultivated in other ways; we have no right to make decent necessities the reward of decorous behaviour. Next to our system of transferring land, our law of settlement is the greatest obstacle to the decent housing of our peasantry, as well as to the due cultivation of the land. Our labouring classes can never enjoy the full advantages which the railway system offers for equalizing the demand for labour until the laws are modified which made parish officers see in every strong-backed hind the father of a race of claimants for board and lodging at the expense of the union. There never was a county more dependent on a good system of conveyance than North Lincolnshire. All the improvements are founded on a transfer of earths, an importation of manures and an exportation of produce.

#### Official Bapers.

READING, GUILDFORD AND REIGATE. Engineer's Report for the Meeting, Aug. 2 (p. 535).

I have the pleasure to report that the works on your rail-I have the pleasure to report that the works on your railway are proceeding rapidly and satisfactorily; and that nearly the whole of the land required is in the possession of the contractors. The entire length is let in four contracts, the state of each of which is as follows:—Commencing at Reading contract, No. 1 extends to the South-Western, near Farnborough, 15 miles. The works are approaching completion, there being finished 460,000 yards of earthwork out of 700,000, and 12,000 yards of brickwork out of 17,000. The next contract in order (No. 4), which extends from Farnborough to the junction with the Farnham and Alton line next contract in order (No. 4), which extends from Farm-borough to the junction with the Farnham and Alton line near Ash, 4½ miles, is in hand. The work is light, not ex-ceeding 120,000 yards in earthwork, and will be completed early in the next spring. From Ash to the Guildford junc-tion the line is under construction by the South-Western. The contract from Guildford junction to Dorking (No. 3) The contract from Guildford junction to Dorking (No. 3) was let in June, and nearly the whole of the land is in the hands of the contractor (Mr. Henfrey), who has made considerable progress with the work. The remaining portion of the line from Dorking to Reigate, which forms contract No. 2, is far advanced, and will be complete, or nearly so, this autumn, 500,000 cubic yards of earthwork being executed out of 700,000, and 10,800 cubic yards of brickwork out of 14,000, and 4½ miles of permanent way laid.

P. W. Barlow.

#### NORTH STAFFORDSHIRE

Engineer's Report for the Meeting, July 22 (p. 519). In submitting to you my fourth report upon the progress of the works of the North Staffordshire, I beg to revert to that part of my last report which refers to the prospective openings of the different parts of the railway. The line hetween Stoke and Norton Bridge was opened on the 3rd of April, instead of the 1st of March, for goods, and on the 17th for passengers. The delay was entirely owing to the continuous wet weather prevailing in the last spring. Since it has been opened the working has been conducted in every respect most satisfactorily, and, irrespective of the loca traffic developed by its opening, it has produced the most beneficial results in forwarding the negotiations with other railway companies with whom it is desirable to establish amicable relations. The works on the line between Stone and the junction with the London and North-Western at Colwich have been retarded, according to the instructions of the directors. The continuation of the wet weather of last spring has necessarily retarded the works upon the re-mainder of the line. I, however, look forward to effecting a communication between Crewe and Burton, with the junction at Colwich, and that part of the line between Harccastle and Congleton, by the 1st of September. With the exception of 80 yards of the tunnel at Harccastle, and a portion of the of 80 yards of the tunnel at Harecastle, and a portion of the earthwork between the same place and Etruria, no works of any magnitude remain to be done. Between Congleton and Macclesfield, where are situated the largest works on the line, the viaduct at Congleton is complete, with the exception of one pier and two arches which have to be re-constructed. At the Dane viaduct all the piers are complete, and the centres set for seven arches. The walling and arching at Macclesfield are nearly completed, and arrangements are made with the London and North-Western for a joint station at that place. The whole of the earthwork will joint station at that place. The whole of the earthwork will be completed by the setting in of the winter, if the weather be completed by the setting in of the winter, if the weather continue favourable; so that, as far as the works are concerned, the line may be opened throughout to Macclesfield next spring. The works upon the Churnet Valley line, from North Rode to Uttoxeter, have been retarded, according to your instructions; they may, however, be completed, if thought desirable, by Midsummer next. The central station at Stoke will be completed so as to work the traffic in September next. This station is intended to accommodate the whole of the establishment of the company, including the canal department. The engine-stable at Whieldon's Grove is complete and the workshops commenced. Every care has been taken to ensure an adequate supply of working stock for the completion of the respective portions of the lines. for the completion of the respective portions of the lines. To do this, however, and to test properly the quality of the work, it has been necessary to receive from time to time such portions as were completed. According to your instructions, I have directed my attention to the determining the

stock, locomotive engines and workshops, and three years maintenance of the railway. The company's capital wil stock, locomotive engines and workshops, and once years maintenance of the railway. The company's capital will stand at 3,400,000. This, as compared with the parliamentary estimates, after deducting 490,000. for stations, carriages, engines, workshops and three years' maintenance, and also 150,000. excess on the land, owing to the purchase and also 150,000M, excess on the land, owing to the purchase of coal-mines and other matters not contemplated by the land valuers, and also 74,371l. 1s. 8d. extra expenditure in Parliament, as detailed in the first report of the directors, will show that the actual cost will be within the original estimates. I trust that I may be excused in stating that I feel assured that no railway of the same length (viz., 128 miles), with works of the same magnitude, with so efficient a carrying stock, stations and equipments, has ever been completed at a less cost; and I am satisfied that it admits of being as economically worked as it has been economically constructed.

G. P. Bidder. 24, Great George-street, Westminster, July 15.

## Brogress of Warks.

CALEDONIAN (Castlecary Junction). - The connexion of the Caledonian with the Scottish Central is now completed, and will be opened on Monday, the 7th of August. The railway communication to the North of Scotland will thus be opened in time to convey parties from England to their shooting quarters for the season. The Scottish Midland will also be opened immediately, in continuation of the through line to the North.

CHESTER AND HOLYHEAD .- Aug. 1 .- The line, with the exception of 32 miles adjoining the Menai Straits, was opened throughout for goods and passenger traffic. This event will materially accelerate the communication between London and Dublin. The mails from either capital will now arrive in both cities at 5 a.m. On the first day, 110 passengers arrived at Holyhead from Ireland by the Government steamer, the Banshee. There are two bonts plying across the Channel, and shortly two more will be placed upon the route, of 670 tons and 370 horse power, and will run from Holyhead to Kingstown in conjunction with the

LEEDS AND THIRSK .- July 24 .- The key-stone of the last arch of the lofty viaduct over the river Wharfe was inserted by Mr. Russell, the resident engineer of the works on that portion of the line, in the presence of Mr. Bourne, the principal resident engineer of the company, Mr. Bray, the contractor, and a numerous assemblage of ladies and gentlemen, thus completing another link in the chain which is to give Leeds a more direct route to the North.

LONDON AND NORTH-WESTERN (Dewsbury section) July 31.—The opening of the Leeds, Dewsbury and Manchester, now called (by virtue of the lease to the London and North-Western) the Dewsbury section of the London and North-Western, took place. 1 30 p.m. a train of forty-five carriages, propelled by two engines, left the Leeds station, in Wellingtonstreet, with the usual accompaniments of music and banners, and proceeded towards Dewsbury at a very slow rate of speed, arriving at that place about 3 p.m. After remaining there upwards of an hour, the train returned to Leeds, its passage to and fro having been greeted by numerous assemblages of persons along the The length of line thus opened is 101 miles, from the station in Wellington-street, Leeds, to the junction of the Manchester and Leeds, a little to the west of the town of Dewsbury. Though of such comparatively short length, there are many very heavy works on the line. It leaves the Leeds station on an embankment, which is continued until it meets the viaduct that crosses the river Aire, the Leeds and Liverpool Canal, and the Leeds and Bradford. That viaduct comprises fifty four lofty arches, the arch that crosses the river Aire having a span of 105 ft., and the one over the canal being 70 ft. span. From Leeds the line continues with alternate cuttings and embankments till it enters the Morley tunnel, which is about two miles in length, and seems to be a very excellent specimen of engineering ingenuity and skill. Emerging from the southern end of the tunnel, in the vicinity of Batley, Batley Carr, and Birstall, three important manufacturing places, a beautiful landscape is presented to the view of the traveller, which is con-tinually varied as the train approaches Dewsbury, on an embankment of considerable elevation, the town itself being crossed by a noble viaduct, the principal arch of which measures 80 ft. span. Beyond Dewsbury there is a fine bridge over the river Calder, and also over the Calder and Hebble Navigation, which run between the town of Dewsbury and the junction with the Manchester and Leeds line. The adjacent viaduct is formed of openings of 100 ft. wide, spanned over with massive cast-iron girders. Shortly after the train had returned to Leeds the directors and their friends, to the number of about 300, dired together in the saloon of the music hall; Mr. J. Gott, the chairman, presided.

MUIRKIRK AND CUMNOCK .- July 22 .- A locomotive engine, with tender and three first-class carriages and

Digitized by GOOGLE

a train of waggons, passed along the line from Cumnock to Muirkirk. The train conveyed a number of the directors, together with a large party of ladies and gentlemen, who expressed themselves satisfied with the manner in which the works have been executed. The hitherto almost stagnant trade of a district which contains immense fields of minerals and also iron works, will be much affected by the opening of this line. The Lugar Iron Company put in blast two of their furnaces, says the Ayr Observer, when the railway was opened for traffic. This work resuming active operations will give an increase of employment to the operatives in that quarter, many of whom, but for the operations on the railway and at New Cumnock, would have been in very straitened circumstances.

NORTH BRITISH.—A further portion of the line to Hawick is ready for opening. The goods traffic commenced on the 2nd. The line is already opened to Gorebridge, about 11 miles, and the additional distance extends to Bowshank, about 15 miles beyond that station. Further progress is delayed in consequence of the heavy works at the Bowshank tunnel, which will take some time to complete. The Bowshank station is about six miles from Galashiels; but the intermediate distance will be accomplished by proper conveyances.

proper conveyances.

Scottish Midland Junction.—July 27.—The Government Inspector visited the line. The works appear admirably finished. The portion completed comprises the main line from Perth to Forfar, about 33 miles in length. At the former town, it joins the Scottish Central, to which it will be an important feeder, as well as to the Edinburgh and Northern; and at the latter point it connects with the Aberdeen—thus completing the unbroken chain from Edinburgh and Glasgow to Montrose.

WINDSOR, STAINES AND SOUTH-WESTERN.—This line was to have been opened this week; but owing, it is said, to one of the arches approaching the iron bridge over the Thames having shown symptoms of weakness on being tested with heavy weights, the opening was postponed for a short time.

#### Accidents.

Newcastle and Carlisle.— July 27.—The mail train from Newcastle was detained upwards of four hours in consequence of the total destruction by fire of a bridge, said to be the Warden Bridge, across the Tyne, on the Newcastle line, about three miles from Hexham. The cause of the fire has not yet been ascertained, but some portion of the woodwork is supposed to have been ignited by a cinder from the fire of an engine passing over the bridge. It was most providential that it happened in the day time. As soon as the fire was discovered, engines were sent from Hexham, but all attempts to extinguish the flames, in consequence of the high wind that prevailed at the time, were fruitless.

### Parliamentary Proceedings.

LORDS.

July 28.—Leeds and Thirsk.—Lord REDESDALE moved that the petition of the Leeds and Thirsk, praying to be heard by counsel against the Clarence and Leeds and Thirsk Amalgamation Bill (presented ou the 23rd of June last, and referred to the select committee on the said bill) be referred to the standing order committee to decide whether it was a petition which ought to have been heard.—The Earl of Morley defended the decision of the committee.—After a conversation, the LORD CHANCELLOR put the motion, which was negatived without a division.

Aug. 1. — London and South-Western. — Lord Granville, in moving the order of the day for the adjourned debate upon the amendment moved on the third reading of the London and South-Western Acts Amendment (Extension, Deviation and New Works), stated briefly the history of the facts. There was a committee appointed at the beginning of the session y the House of Commons to consider certain railway bills that were laid before them. The Railway Commissioners thought it their duty to suggest to that committee that there were four railway bills before Parliament, in each of which unusual powers were asked, and which consequently demanded their special consideration. The Railway Board had made a report which, after stating certain general principles, went into the question of those four bills, and stated that in regard to the South-Western, although it was not so strong a case as the Chester and Holyhead, yet they thought that there was sufficient evidence in relation to it to make it exceptional from the general rules, and that the powers asked for should be granted. The company should besides be limited to a certain maximum amount of fares. whole matter was then submitted to a committee

of the other house. After a careful examination, the committee made their report, arriving exactly at the same result as the Board of Trade. The question then came up in the usual form to their lordships' house, when a committee was appointed, who, after an equally fair examination, made a similar report. He believed that the objections to this bill were, in the first place, that the company should not be incorporated with limited liability to do that which an unincorporated company of private individuals was not competent to perform. In the second place it was said that this bill was likely to give a monopoly to a company injurious to the public. Now it was a common case to see two competing companies running for a short time against each other, when an arrangement was effected, by which the competition was destroyed, and the public exposed to all the inconveniences and exactions of a monopoly. He did not mean to deny that this bill would have the effect of giving a monopoly to one com-pany, but he contended that it would be a monopoly that was likely to prove of the greatest advantage to the public. In the first place it was to be limited to fourteen years, and in the second place the maximum rate of fares was insured. It was also the interest of the company to establish the greatest amount of com-fort and accommodation for the public. He asked their lordships' support to this bill because its merits were already decided by a committee of their lord-ships' house and by two distinct committees in the other house. If there were any objections to be urged against this bill, they should have been stated upon the second reading. He thought that it would be a the second reading. He thought that it would be a great hardship to the company, and it would lower the character of their lordships house in respect to the mode in which they conducted the legislation of the country, if at this stage of their proceedings they threw out this measure.—Lord WHARNCLIFFE took the liberty of stating on a former occasion that whatever was done with the measure itself they ought to be furnished with more information in respect to the decision to which the committee of their lordships' house had come. With that view he had moved for the production of papers containing such information. He did not now intend to offer any opposition upon the merits; but what he felt was this, that, unquestionably, the course taken in respect to the two bills in question, empowering them to have steamers in connexion with their other works, was very unusual. If Parliament felt that it was desirable to give them these powers, proper precaution should be taken to protect the interests of the public, and to provide against those cases being made precedents. objections ought to have been urged earlier; and he regretted that his attention had not been sooner called to these facts, when he should have certainly moved that the committee should report specially upon this case, and should state that these were powers that should not be conferred in all cases. He did not wish to quarrel with the decision that had been come to in respect to the Chester and Holyhead line. He believed, indeed, that that decision was beyond their reach, as the bill had been passed. He should much like to ask their lordships to re-commit this bill for a day or two, with the view of obtaining from the committee a statement of the specific grounds of their decision. He felt, however, that it was impossible for him to take this course now, and he therefore did not mean to offer anything like opposition to the motion. -The Earl of HARROWBY felt that the result of the passing of the bill would be to interfere with all private capital and enterprize, by giving a monopoly to one particular company. This, too, would furnish a precedent which would induce railway companies to make similar applications, so that by and by these companies would, step by step, obtain a monopoly of all their steam navigation. There was a great principle here which was well worthy their deepest attention. They had had communications by sea for a great number of years, which, though perhaps not as good as were likely to be conferred by this bill, yet were well adapted to suit the convenience of the public. He had such faith in the private capital and enterprize of the country in effecting every object that was desirable, that he should object very strongly to give his consent to any measure that would confer such a monopoly as this bill proposed. However strong he might be impressed with the importance of the proposition, he would not give their lordships the trouble of dividing.—The Marquis of CLANBICARDE said his vote would be governed by the report of the committee, because he thought it absurd of their lordships to appoint committees to investigate these cases if they did not adopt their suggestions. He would remind their lordships that the same committee had already given the Holyhead Company power to establish a service of steamboats between that port and Dublin. At the present moment the service be-tween Brighton and Dieppe was very inadequately

performed, in consequence of the company having tug-boats instead of the usual packet-boats.—The amendment was then negatived without a division, and the bill was read a third time and passed.

Aug. 3.—Misapplication of Railway Funds.—Lord Monteagle moved for accounts, showing the manner in which the funds raised for the North Wales had been invested.

#### Law Intelligence.

COMPENSATION FOR DEATH. July 27.—At the York Assizes, in re Reedie v. the London and North-Western, the plaintiff was the widow of P. Reedie. The deceased was a book-keeper in the neighbourhood of Dewsbury, and on the 5th of June last he was proceeding upon business to Dewsbury. At that time the London and North-Western were erecting over the turnpike-road a bridge, under which the deceased was passing. There were four men passing under the bridge at the time, and one of them, who was in advance of the others, felt something touch the back of his leg. He turned round, unconscious of what had occurred, when he missed the deceased and another man named Hobbitt, upon whom a stone about two tons weight had fallen and killed them. This action was brought to recover compensation for the loss by the plaintiff and her family. There was a very important point of law involved in this case as to how far the company were liable. It was said on their behalf that this viaduct was being constructed under a contract, which indemnified them; and on the other hand several cases were cited to show that whether the work was done by themselves, or by their agents or servants, or even contractors, they were liable to damages for any injuries that might be sustained by reason of the negligence of such servants, agents or contractors. The question was not decided.—His lordship held the defendants was not declad.—Its locasing held the defendant liable, and the jury found for the plaintiff, under his direction—damages 500l., to be proportionately applied to the use of the widow and her children.—

Leave to defendants to move to enter a nonsuit.

At the same Assizes, in re Hobbittv. the London and North-Western, another widow sought to recover damages for the loss of her husband, killed at the same time as Reedie.—The jury found for the plaintiff—damages 4504, to be proportionately applied to the use of the widow and certain members of the family not otherwise provided for. As in the other case, leave was given to the defendants to move to enter a nonsuit upon the question of law raised in that

case, as to their liability.

RECOMPENSE FOR BODILY INJURIES .- July 28. At the same Assizes, in re Robinson v. the York and North Midland, the plaintiff sought damages for an injury in consequence of the negligence of the defendants' servants. He is a cattle dealer at Little Driffield, and is in the labit of buying sheep and convey-ing them to the Leeds and Wakefield markets to re-sell them. On the 13th of December last he and a person named Lamplugh brought a number of sheep to the railway at Driffield. It is the practice to allow one man to accompany every fifty sheep, and the plaintiff therefore, when the sheep were put into the truck, accompanied them to attend to them. The train left Driffield at 4 p.m., and being a very heavy train, it was a long time on the road, and reached Beverley some time later than it ought to have done. The train remained at Beverley for a time and then started off for Selby, where it arrived at 1 a.m., having had the assistance of an additional engine at Beverley. At Selby the train was increased by two or three more carriages, and at 2 a.m. it moved for There were several other cattle dealers accompanying the train with the same object as the plaintiff. Having reached the junction at Milford, the train was allowed to pass, and it went on towards the Burton Salmon station. The mail train from York left there at 3 a.m., and its time of arrival at the junction is 3 30 a.m., but on this particular morning it was said to be a little before its time, and the luggage train was considerably behind its time; but, of course, the conductors of the mail train had no notion of that. At this point it is the duty of the officers to exhibit a light when necessary, and they affirmed that they displayed a green light, which would signify that the mail train should go very cautiously, there being something on the line not far on before. The guard of the mail train denied this, being of opinion that a white and not a green light was displayed, which signified that all was right. mail train went on, and on getting about 600 yards to the west of Burton Salmon, it overtook the luggage train, ran into it, and the plaintiff sustained injuries. After the accident the plaintiff was conveyed to an inn close by and properly attended to by two surgeons at the cost of the company. He remained there for about a month, and was then removed to his own

home; but it was still necessary for him to have surgical assistance, and he was unable to follow his usual avocation.—His lordship summed up, telling the jury that their verdict clearly must be for the plaintiff, but that as to damages, they must only give him so much as they thought him fairly entitled to. The jury returned into court with a verdict for the plaintiff—damages 200l.

THREATENED STRIKE ON THE LONDON AND NORTH WESTERN.—We have no intention here of analysing the causes that have led to this occurrence, believing that at present a plain statement of the facts attending the disaffection during the last week among the ing the disardection during the last week among the engine-drivers of the London and North-Western will be sufficient. The predisposing causes appear to be a dissatisfaction on the part of the engine-men with the recent reduction in their wages, and a disinclination on the part of the authorities to return to ori-ginal prices, coupled with a generally engendered dislike among the men to the system of management adopted by the locomotive manager of the line who succeeded the late Mr. Bury. So obnoxious, it appears, has this officer rendered himself, that the men have expressed a disinclination to work under him, and during the week the manifestations of feeling have been ludicrously remarkable. Some of the engine-men mounted "brooms" on their engines, the well-known vulgar indication of things being "to let," and another man, who had a long rope trailing over the side of his locomotive, on being asked what it was for, replied playfully, "Oh, it's to catch that ____," meaning the locomotive manager. The men, it seems, are disatisfied with the system that has been pursued of putting, as it were, "new wine into old bottles," and vice versa,—i. e. allying new stokers with tles," and vice versa,—t. e. allying new stokers with old engine-drivers, and new engine-drivers with old stokers, and which they contend works anything but well. They complain, moreover, of the harsh treatment they experience in inclement weather. It is said that the only alternative in this state of things is a return to the old scale of wages and cashiering the obnoxious officer. The men on the whole of the southern section of the line.

i.e., from London to Birmingham, consisting of nearly 150 engine-drivers, have declared their inten-tion of "striking," unless their demands are met. If not, the disaffection is likely to spread over the whole of the northern system. The engine-drivers, by means of their clubs and unions, have, we understand, a fund to fall back upon of 10,000l., and they intimate, in the event of things coming to a crisis, that they intend to appropriate it as a weekly provision for those who resign, and who will receive 30s. per week. The plain fact appears to be that this particular class of employés on the London and North-Western are in a state bordering on revolt, and which, if permitted to proceed, or if not opportunely suppressed, may possibly impede, if it does not imperil, the public service of the country. The *Times* makes the following

With respect to the quarrel between the drivers and their employers, the blame, in so far as we are able to judge, does not rest with the latter. About a month ago the drivers demanded an increase of wages, which was granted them. They are now better paid than the drivers of most—we believe, of all other lines. Everything has been done to promote their comfort, and to encourage good behaviour. Indeed, it is well known that the persons employed on the London and North-Western, in every department, are as well, perhaps better, treated than any other comployée in the kingdom. A proof of this may be found in the eagerness with which appointments are sought under this company. The real cause of this threatened strike is, no doubt, the mischievous system of clubs and unions which obtains among the various trades. The first request made by these engine-drivers was, as we have stated, complied with by the company. The deputation which preferred the request declared itself perfectly satisfied. The matter would thus have been set at rest. But it was the interest of the knaves who foster agitation among the lower classes and trade upon their discontent to keep up a grievance. It is these fellows who have got up the strike. We have no doubt that the majority are willing enough to continue work. They usually are so in these cases, but they are not permitted. In this instance the leaders have resorted to threats, even against the life of persons refusing to join the strike. Where such menaces can be brought home, the law is strong enough to deal with the offending parties. It is, however, doubtful whether the company are in quite so strong a position, with reference to such combinations, as the public convenience requires them to be. In this case, no doubt the Legislature With respect to the quarrel between the drivers and their

----

will strengthen their hands, for it is a matter of the last importance that the communications of the country should not be interrupted by the impertment folly of a few engine-

NECESSITY OF A UNIFORM GAUGE.—It can no longer be denied that without a uniform and unbroken gauge. admitting of the uninterrupted passage of carriages, the national uses of a railway, whether for commerce or defence, can never be realized. France, Belgium, Germany and Italy have had the prudence to adopt one uniform gauge; and nothing will be more dis-graceful to this country, which has given railways to Europe, than that it should allow its railway system to grow up in the crippled condition in which it will, if diversity of gauge is to be extended in the manner suggested.—From Mesers. Robert Stephenson and Locke's Report.

At the last meeting of the Institution of Mechanical Engineers, in Birmingham, on the 26th ult., Mr. G. Stephenson took the chair. Several interesting papers were read; amongst them was one on a simple and cheaply constructed machine to crush bones for manure. A discussion took place relative to a rotatory engine, invented by Mr. Onion, who exhibited a model of his invention, for which he claimed the advantages of economy of fuel as well as economy of power, contending that the crank involves a loss of power to the extent of one-fifth. Mr. Stephenson, arguing contra, read a paper with a view to show the fallacies of the rotatory engine, and exhibited a diagram illustrative of his remarks. He contended that the rotatory engine could not be rendered efficient, and that the crank involved no loss of power. The inventor of this machine insisted, on the other hand, that it had been worked at Derby with complete success. After some discussion relative to this subject, Mr. W. Smith read a paper on the sub-ject of high-pressure boilers, and on boiler accidents, which led to an interesting conversation as to the best method of preventing boiler explosions. A paper on a new buffing apparatus, by M. de Bergue, was read, and a model exhibited. The discussion upon its merits was postponed until the next

#### Money Market.

#### PRICES OF BRITISH STOCKS.

Sat. Mon. Tues. Wed. Thurs. Fri. 

* For account, Aug. 10. † Ex Div.

London Stock Exchange, Aug. 4. — The share-market has been in a satisfactory state during the week, and with returning confidence the low-priced shares are in demand.

Liverpool, Aug. 3.—There is no new feature in the state of our market. The amount of business transacted continues very limited, and prices generally are without improvement.

Sudlow, Brothers.

Manchester, Aug. 3 .- We have had a very quiet market during the week, and prices of shares have not experienced much fluctuation. Guaranteed and preference stocks are more in demand.

SAM. GRINDROD.

Birmingham, Aug. 3.— Very little business has been transacted here throughout the week, and to-day prices have slightly receded. North Staffords have been dependent of 58. 64. die. have been done at 58s. 9d. dis. W. BANKS.

York, Aug. 3.—A very limited business has been done during the week. The forthcoming railway meetings are exciting some interest, from a rumour that the dividends will be somewhat reduced.

GRAYSTON & EARLE.

Hull, Aug. 3.—The amount of business in shares since our last has been very trifling, and in local stocks less has been done than for some time past. The forthcoming meetings of the various companies are looked forward to with interest. Upon the result of these, and upon the weather, depend the result of these, and upon the weather, depend the prospects of the share trade for the next few months. The following are the latest prices:—Ambergate, 2k dis.; Darwens, 13 dis.; East Lincolnshire,  $1\frac{1}{2}$  prem.; Great Northern,  $6\frac{1}{2}$ ; Hull and Selby, 100; ditto, halves, 50; Lancashire and Yorkshire preference,  $\frac{1}{2}$  prem.; Leeds and Thirsk, new, 21 dis.; North British,  $22\frac{1}{2}$ ; ditto, halves,  $9\frac{1}{2}$ ; ditto, quarters, 5; ditto, thirds,  $2\frac{1}{2}$ ; Newcastle and Berwick, No. 2, 2, 2 prem. 7 prem. FLINT & TOOTAL. Newcastle-upon-Tyne, Aug. 3.—Our share-market

has been inactive during the week, but to-day there

has been a little more business doing at the previous quotations. W. FORDYCE.

Glasgow, Aug. 3 .- We have no material alterations to report in our market; the demand for shares has been limited, and prices rather lower. A considerable been indiced, and proceed the caledonian 7 per cent. preference have been taken up at from 6s. to 10s. prem., and they close in demand this afternoon at 7s. 6d. prem. We add to-day's latest sales:—Caledonian preference, 8s. 9d. prem.; Edinburgh and Glasgow, Stirling and Midland Junction, 11½; Dumfries and Carlisle, 6; Ayr, halves, No. 1, 7¾ dis.; ditto, No. 2, 7¾ dis.; Great Northern, 8¾ dis.; North British, thirds, 1¼. BUCHANAN, AITKEN & Co.

IRON TRADE. - Glasgow, July 28 .- The local papers report but slight business in pig iron. Prices are—for No. 1, 45s. 6d., for mixed numbers, 45s., and for No. 3, 44s. 6d., cash. The general opinion seems to be that prices will go down.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

MEETINGS.

## Joint-Stock Companies' Gazette.

A meeting of the shareholders in the CAMERON'S STEAM COAL Company was held on Saturday last, when a committee, consisting of six, were elected, with the acquiescence of the directors, to investigate the position of the company, and the meeting like-

wise sanctioned a call of 4l. per share.

The BLANAEVON IRON Company's works commenced operations again last week, after a stoppage

for a short period.

A contract has been entered into by Government for the conveyance of mails once a month between Singapore and Sydney, by the India and Australia Steam-packet Company. The mails, &c. are to go as Steam-packet Company. The mails, &c. are to go as far as Singapore by the Peninsular and Oriental Steam Navigation Company, and then on to their destination by the new contractors. The time which will be occupied in the passage is expected to be

with the occupied in the passage is expected to be seventy-two days. It is generally stated that the colonists will greatly benefit by this arrangement.

A meeting of the proprietors in the Liverpool ANDERTON CARRYING Company is to be held on Monday next, at Liverpool, to discuss the expediency of disclaim the expectation. of dissolving the company.

Banks.

A special meeting of proprietors of the bank of British North America was held on Tuesday last, to elect a director in the room of Mr. G. Pemberton, who has resigned. The vacancy was filled by Mr. J. Seward being unanimously elected, and the meeting then terminated

Mines. The third annual meeting of the shareholders in the Australian Mining Company took place on Monday last. From the report we find that the workings of the mines had been slow and tedious, but every confidence in the subsequent success of the company was entertained. The ore is stated to be very rich indeed. The ship *Derwent* is on her way home with 70 tons of emery. The prospects held out in the last report would have proved remunerative, had not the price of copper fallen 6l. to 8l. per ton, in con-sequence, it was stated, of the distracted state of Continental trade. The directors in their report state that the Secretary of the Colonies had abandoned the idea of claiming "Royalties" on Australian mines, and that there was little doubt of the ultimate remission to 1s. per ton duty on Australian ores. Major N. Campbell had been appointed the company's general superintendent in Australia, and his services are looked forward to with great confidence; his experience is such as to fit him for the appointment. The assets of the company were stated to be lands, stores, buildings, &c., 31,201*l*.; purchase of copper, 17,100*l*.; expended on mines, 12,780*l*.; preliminary expenses, &c., 3,723*l*. There remain sufficient funds to carry on the company's operations for the present. The fall in the value of copper and a change in the Australian banking system has militated greatly to the company's interest. The directors trust that next year they will be in possession of more substantial proof of the capabilities of the mines. The chairman said that the opinion in the colony was more sanguine than ever. After several satisfactory explanations the report was adopted and thanks being voted to the directors the meeting terminated.

An experiment of a striking character, testing the capability of PAYNIZED TIMBER to resist the action of fire, took place on Wednesday at the company's wharf. A large party, amongst whom were the Lord Mayor, the Speaker of the House of Commons, Lord Dudley Stuart, M.P., Sir E. Codrington, Lord Ebrington, M.P., Capt. Mansell, R.N., John Abel Smith, Esq. M.P., and a number of other eminent and scientific men, attended to witness the experiment, which consisted in exposing to the action of fire and flame two structures—the one of Paynized wood, the other of wood in its natural condition. About 8lb. of dry shavings were ignited in each; the Paynized cottage effectually resisted this severe test three several times, being merely charred; the unprepared structure was consumed to the ground by the first charge. We need not enlarge on the importance of the discovery should further investigation demonstrate its perfect efficacy on a large scale, of which there seems little doubt. To say nothing of accidents by fire consuming railway bridges (two of which have recently happened), it is of the highest value to prevent such destruction by incendiaries, as happened to the Rouen Company's bridges at Asnières, &c. We should like to see an experiment with a bridge, applying the fire externally, on the top, and around the basis of the structure, which would be convincing for this purpose. There is no necessity for making an unprepared framing, as that would no doubt be

destroyed. The extensive use of timber for viaducts in the construction of railways renders this discovery of the first importance.

TO CORRESPONDENTS.

TO CORRESPONDENTS.

A Subscriber inquiring about the Rouen and Havre had better wait for the report at the half-yearly meeting.

E. F. (Oxford, Worcester and Wolverhampton) is referred to Mr. N. Smith, the secretary.

RECRIVED: E. M. J., Sheffield.—P. E.,—D. M., Durham.—A Liebs AND DEWSERT SHARHOLDER.—A NAMUE AND LIEBS SHAREHOLDER.—E. T., Aberdeen.

We shall next week resume giving an EXTRA SHEET. to make room for copious reports of the numerous forth-

# Railway Chronicle.

The recommendations of the directors of the MANCHESTER, BUXTON, MATLOCK, &c. in support of their bill were agreed to by the shareholders at the special meeting, after considerable opposition from a shareholder representing the objections of the people of Bakewell to the clause sanctioning the intended branch from Baslow to that town. The bill also authorizes the reduction of capital from 1,650,000l. to 1,320,000l., and the shares from 20l. to 16l.

The shareholders of the BIRMINGHAM AND Oxford again quietly agreed to an adjournment of their meeting in the absence of any information respecting the progress of their

bill of sale to the GREAT WESTERN.

The report adopted by the shareholders of the EAST LANCASHIRE declared that the line between Accrington and the Rossendale line would shortly be opened for passenger traffic. A dividend of 5 per cent. per annum was announced on the quarter shares of the East Lancaster and Preston extension. The forfeiture of 1,080 whole shares and 1,015 quarter shares was also sanctioned.

The rejection in the Lords of the Dissolution Bill of the Liverpool, Manchester and New-CASTLE-UPON-TYNE was announced at the adjourned meeting. The half-yearly meeting will probably determine the fate of the project.

The shareholders of the WILSONTOWN, MORN-INGSIDE AND COLTNESS received the notice of a dividend of 10s. per share on the old shares, and 5 per cent. on calls paid up on new stock.

In spite of the disasters which have occurred and the spoliation which threatened the traffic of the Paris and Rouen, the directors announced a dividend of 8f. 80c. per share. The report, which was sanctioned without a word of opposition, is full of the history of the company through its dangers and difficulties.

The reports and accounts were adopted without any interruption worthy of notice from the shareholders at the half-yearly meetings of the following companies:-

Cockermouth and Workington, who intend a further creation of capital.

Malton and Driffield. Oldham Alliance, the directors of which called the shareholders together several weeks earlier than usual to defeat some dissentient shareholders who sought a dissolution.

Reading, Guildford and Reigate.

St. Helen's and Runcorn Gap, with a resolution for forfeiting 2.000 shares.

From what we said not long since of the conduct of the Woods and Forests in the matter of the WINDSOR RAILWAY BRANCHES, it may have been thought strange that the Great Western bill should nevertheless have gone through the House of Lords without a word being said there on proceedings which had been the subject of strong remarks in the Commons. The explanation of this circumstance it may be worth while to give, for the benefit of those not behind the scenes; espe-

cially as the close of this curious transaction, as far as the public office is concerned, is in perfect keeping with the changeable course it had pursued up to the date of our last notice of its movements. The reason why the Great Western branch passed without attack is a very simple one,-Lord Morpeth having shifted his ground once, has shifted it again. The charge preferred on behalf of the London and South-Western we have already stated. It was to the effect that the office of Woods and Forests, after fully approving of their line, fixing its terminus at some distance from the town, and obtaining a sum of 60,000l. to be laid out in Crown improvements, as the price of its arrangement with that company, in one year, had, in the year following, consented to the line of another company, with a terminus in the town itself, for which inconsistent act a further sum of 25,000l. was to be contributed for the same royal uses; — thereby virtually annulling the chief value of the concession for what the larger sum had been obtained in 1847 from the London and South-Western. The censure which this questionable line of conduct was calculated to provoke it was not thought expedient to meet in the House of Lords: and the Woods and Forests accordingly found it necessary, in the interval between the third reading of the Great Western bill in the Commons and its progress in the Upper House, to face about for a third time. The complaint of the injury meditated to the London and South-Western has been silenced by Lord Morpeth's offer to let their line, also, have a station in Windsor itself; thus placing the rivals on an equal footing as to the accommodation of their passengers: and on this arrangement, we understand, the complainants withdrew their opposition:-the Chief Commissioner having signified the royal assent to a measure formerly resisted on behalf of the Crown, which assent had become necessary to remove the effect of an injustice to which he had-we believe quite unintentionally-suffered himself to become a party! The moral of this exhibition will be obvious to all who have followed the course of the transaction, which, we presume, has now reached its closing term. It may be curious to observe how the result of Lord Morpeth's goodnatured infirmity of purpose has been to establish two railway termini in the neighbourhood of the Castle; it being well known that the Court was averse to the presence of even one so near its precincts. We shall hope that this objection may have been softened by the manner in which Lord Morpeth, amidst other variations of purpose, has at least kept firmly to the resolution of making both sides pay handsomely for his consent. We see by the debates on the Windsor Improvement bill, in the last and present week, that his Lordship takes credit for having thrown the whole expense of the alterations to be made in the royal demesne upon the railway companies he has for the last two years been coquetting with. On any future occasion, we apprehend, no party will like to be the first to lay down any large sum of money as the price of his Lordship's support:—as it would seem to be less expensive to take advantage of his "second thoughts," and purchase his pentimenti.

The LONDON AND SOUTH-WESTERN billincluding the power to own steam-vessels-has at length been passed by the Lords; not without some debate. The third reading was adjourned from the 25th of July, on the motion of Lord Harrowby, who opposed the measure on the ground of its giving an unfair monopoly to the railway company. On its being resumed on Tuesday last, this objection was repeated, and answered on two very sufficient grounds; the first, that it would not be expedient to throw

over a decision of the committee which had fully considered the matter in dispute; the second, that the terms imposed were calculated to protect the public from any misuse of the powers given:-low maximum fares being specified in the bill. These arguments were, and were entitled to be, effectual as against the point raised by Lord Harrowby; -which, probably, was chiefly advanced at the instance of rival steamboat companies. What we have to remark concerning them is, simply that the reasons which might well prevail on the Legislature to pass the bill, are by no means equally conclusive as proofs of the advantage to the railway company from having it passed;—that, in fact, the argument most likely to weigh with the former is of a tendency rather opposite than conducive to the interests of the latter. we take occasion to observe, in order to keep the bearings of a question which appears to us of some practical importance, distinctly before the eyes of all who may be concerned in similar decisions hereafter; -especially since we have seen recent instances of attempts to confuse its terms, by putting forward the assent of Parliament to arrangements of this class, as something conclusive in favour of them, as viewed from the proprietors' side. Now it must be seen that the very reverse would be the true notion of the case;—namely, that the terms most certain to please the Legislature would be precisely those from which the company could least expect to profit :- and it may be added. even, that in the present state of feeling towards railway management no opposed measure of this class is likely to be carried at all, except by a sacrifice on the part of its promoters, as to the conditions of the service undertaken, which must render their success a very questionable advantage. Even were this not the case, we apprehend that it would still be the wisest course to adhere to the general principles we have already attempted to establish on this subject : - but the practical force of those principles is evidently much strengthened by the special circumstances, under which, alone, it may be seen, any departure from them will now be allowed by the Legislature in the matter of steamboat ownership by a railway company.

Preparatory to the half yearly meeting next week, the Manchester, Sheffield and Lin-COLNSHIRE have issued a statement of their accounts. This practice of enabling the shareholder to examine into the progress and working of the company before he attends the meeting is one which cannot be too highly commended or the example too generally followed. It is an unmistakeable evidence of the desire of the directors to be frank and candid with the proprietary, and is calculated to beget a reciprocal confidence on the part of the shareholders towards their board of management. In this company, as the amalgamations and variety of interests have been more numerous than with any other railway corporation, the accounts of each amalgamated interest are presented separately - so that the state and prospects of each property must be examined and judged of by itself. A general summary would seem to be wanted; but, whilst the different properties are in a transition state-some at work, as at Manchester, others partly at work, as at New Holland, others nearly at work, as at Market Rasen, others in progress, as at Sheffield and Great Grimsby—such a summary would only be fallacious. The most satisfactory item is the result of the opening of the New Holland branch. Here, on a short fifteen miles, we find clear earnings in the first three months of more than 500/., when it might fairly have been expected that, at the most, only the current expenses would have been met by the receipts.

From our official returns it appears that the amount of traffic for the last week, on 4,045 miles of railway, was 220,265l., thus accounted for:—120,102l. for the conveyance of passengers only, 49,178l. for the carriage of goods, and a remainder of 50,985l. for passengers and goods together, not respectively apportioned; being an increase of 19,080l. over the corresponding week of last year, when the mileage was 3,205. The average earnings per mile were 55l., whilst in 1847 they were 66l.

#### LORD MONTEAGLE AND HIS MEDDLING.

That facetious character the late Mr. Joseph Miller relates an anecdote of a Quaker, who, having an ill-will to a certain dog of his acquaintance, intimated a doubt as to his sanity; the hint was taken, and without a writ de lunatico inquirendo, poor Tray received his quietus. The same morbid feeling which inspired the Quaker against the dog appears to animate Lord Monteagle, and, determined to be avenged for his defeat upon the Audit bill, he is still bent upon some similar measure, if we may judge of his intentions by what he said in the recent debate on the North Wales Railway, and his subsequent motion on that company's affairs, -and we doubt not, whenever an opportunity offers, will be trying to demonstrate the necessity of having a Board, a large office and a large staff of officers to look into everybody's affairs, whether they are wanted or not, as though it was nobody's business to look after their own interest. Our witty cotemporary Punch has lately published a sketch of our "ateliers nationaux," which speaks volumes,—and we take leave to call Lord Monteagle's attention to it; we cannot think that the further complication of offices and officials is the true way to assist the interest he has so much at heart. The check and counter-check system did not answer very brilliantly under his lordship's own immediate management in the Exchequer Bill Office, although Sir John Newport was induced to retire on a pension, to make room for a real Irish man of business;however, we dare say we are wrong as regards railways, for the Master of the Buckhounds,we beg pardon, the head of the Railway Board, my Lord Granville, -stated very succinctly, as he always does, that something was wanted, and regretted the bill, which was to have set all errors in order, had been lost, in which melancholy feeling my Lord Lansdowne also participated. Now we do not mean to say that cases of hardship may not arise, but de minimis non curat lex; and we do insist on the necessity of opposing this perpetual interference of Government at every turn. Commissioners have been multiplied to such an extent that the bile of Lord Ellenborough, the greatest sinecurist, we believe, in Great Britain, has been moved. and he has declared it was "too bad." there have been other companies and undertakings in this country besides railways which have been permitted to manage their own concerns without such an especial care from the hands of Government; -we have heard, before this sudden vigilance of Lord Monteagle's, of companies owning canals, and docks, and jointstock banks, some of which we have known go wrong too, but the ordinary course of the law has been thought sufficient in these cases. We look upon it to be utterly impossible to bolster up insolvent concerns by State interference, and if they are solvent they do not want it. Adam Smith long since recorded the fact that States, like individuals, must be involved and ruined if they managed their property wastefully and exceeded their incomes; and so it must be with joint-stock companies,

an army of accountants,-who will eat up the substance of those they are employed upon, like a flight of locusts. We must suppose, too, that they will be men of the first talent in that particular line, and we have it from Mr. Labouchere himself, that to insure great talents great salaries must be paid;—he cited the case of Sir Edward Ryan, whose acute mind had been employed in unraveling various Acts of Parliament, upon which doubts had arisen; and Lord John Russell further confirms the necessity of high pay, in grievously lamenting the loss of Capt. Coddington, who left the Railway Commission for the Caledonian. Now we do not blame the gallant officer for this—he is quite right to make the most of his talents—but we suspect the difficulty is not quite so great as it would appear to be, and we cannot help fancying, as supply and demand are very apt to equalize one another, it would not be impossible to find a successor for either situation. who might at any rate do the business respectably for less money. We make these remarks without the slightest disrespect to Capt. Coddington personally, and readily admit that for the first organization of such a gigantic undertaking as the Caledonian, a clever man at a high salary may be much cheaper than two or three inefficient ones at half the money. Now we cannot help thinking that Mr. Labouchere inadvertently touched upon the real evil, which weighs not merely upon railways but upon the whole country; -instead of the acute mind of Sir Edward Ryan being employed in unravel-ing Acts of Parliament, why was it not emploved in making them clear and distinct, that those who run may read? The true remedy is not the multiplication of Boards and officials, but a reform and simplification of the law, -let the process be more easy for putting insolvent or mismanaged companies into the Bankruptcy Court, and we should hear no more of such excrescences as these audit Boards, which, at an enormous cost, would add to the mischief and confusion, in place of clearing away difficulties. It would be entering upon too wide a field to say more on legal reform; those invisible clogs upon progress the Masters in Chancery and their subordinates have it all their own way, notwithstanding the millions held in abeyance, and the sickening pang of hope deferred in the breasts of their suitors. It is astonishing to what misery we may be accustomed, like the feet of the Chinese ladies to their little uncomfortable shoes; and instead of attempting a remedy we put up with the evil and hobble on. as we have done from the days of Oliver Cromwell, who had an off-hand way of settling matters when he took them up, but was fain to give in when he came to the lawyers, and exclaimed, "These men, the sons of Zeruiah, be too hard for me.'

#### Correspondence.

#### EAST INDIAN RAILWAY.

As the Railway Chronicle has in the leading articles of several successive numbers cast doubt upon the eligibility of the East Indian Railway, I beg the favour of your permitting me to state a few plain facts which I trust will modify the feeling your remarks are calculated to inspire. In the first place I may mention that there are certain interested parties who are desirous to damage by every means in their power the prospects of this undertaking, and it cannot be for the advantage of the shareholders that they should further the designs of this faction by adopting the recommendations they may think The undertaking is surely the same fit to offer. now that it was twelve months ago; and if it then was worthy of support, is it now to be abandoned at the bidding of interested parties? The company has still the power of proceeding when it thinks fit in spite of all the assistance to be derived from with the whole line, but in the meantime their po-

sition is so far improved that instead of being called upon for a capital of three millions they may begin with a capital of one million, which surely looks like a favourable abatement in the terms. The direction is a most respectable one, so that no objection can be urged upon that ground, and if the company were to be broken up who can say when another would be formed, or how long the execution of this great national work may be delayed? A dissolution would bring an inevitable loss of money; for the whole time of the staff of engineers would then be rendered unproductive, whereas by proceeding with the undertaking the whole of this time would be rendered available and would indeed go as part of the capital. I trust you will consider these few remarks to afford some refutation of the erroneous statements which have been so industriously promulgated, and which, coming as they do from interested parties, are entitled neither to confidence nor atten-

London, July 31.

[Our correspondent, while denouncing the machinations of interested parties, writes very much as if he had himself some interest in the matter. It is altogether inconceivable that three-fourths of the proprietary of the East Indian Railway should manifest a reluctance to proceed with that undertaking unless the conviction had come upon them that its further prosecution was inexpedient; but it is conceivable enough that such interested parties as salaried officials may be supposed to be should desire to perpetuate the company, however unpromising its prospects. Our business, however, is with facts, not with imputations, and let us just see how far the facts bear out our correspondent's hypothesis. We have shown in previous numbers that no portion of the East Indian line which a million sterling can execute, will return its expenses—that the guarantee is therefore virtually inoperative—and that the capital heretofore subscribed has been swallowed up in expenses. To these facts what does our correspondent answer? That the directors are respectable,-that, although one million is all that is required, the company retains the power of completing the undertaking,—and that a dissolution would make the time of the staff profitless, which would not otherwise be the case. But even granting all this, does it therefore follow that it is expedient to pursue a confessedly losing scheme? And if such difficulty is experienced in raising one million, of what avail to the company would any option be to complete the line—a work which would require fourteen millions more? Besides, it is not reasonable to expect that the execution of a railway so important for political objects should be made to await the convenience of a tottering company of slender financial resources; and it is both idle to hope and impolitic to wish for such a reservation. The engineering staff was, we believe, engaged for three years; one year of the time has already expired; the next cold season will be too far advanced against November-the time prescribed for the completion of the share list-to render any progress with the works possible during the second year, even if the money were forthcoming; and against the third cold season the engagements of the staff will have nearly expired. In any case, therefore, the time of the staff must be lost to the company, and to set it down as a part of the capital would only be to practise a deception upon the proprietary. So much for our correspondent's loose representations, which it will be remarked do not even affect to touch one of our positions. With a capital of three millions the execution of a profitable railway was possible, but with one million it is not possible; so that the undertaking has not the same capabilities which it had before. Even were the fact otherwise, however, it would not affect the question, for no one is bound to stick to a bad speculation merely because in ignorance of its real merits he had once given it his countenance. That the mutilated scheme would be unprofitable no one has attempted to disprove, and the effect of executing a losing line as a specimen of Indian railways would be both to clog the operations of the Government and to interpose an effectual bar to subsequent private adventure. Fortunately, there is not much danger of such a calamity arising; for with a "faction" opposed to the measure, consisting of three-fourths AND NORTH-WESTERN and the ABERDEEN, by which be Welshmen.

of the shareholders, it is hardly to be expected that | all the zeal and ingenuity of interested parties will suffice much longer to keep up the ball, or to perpetuate the delusion they have hitherto managed to maintain.—Ed. R. C.]

#### INCREASE AND ARREARS OF CAPITAL.

Can you inform your readers the nature of the North British bill, No. 1, entitled 'A bill for increase and division of capital,' and which appears to have passed the third reading? If to increase capital, by what process, in the present state of the market, can that be effected, unless it be by the creation of a preferential stock, the effect of which upon other lines has been so disastrous? And then, if the capital of the North British is to be increased, how is the dividend to be paid? I am induced, however, to hope that the necessity for this increase does not arise from the original capital being inadequate fully to complete the system, but from heavy arrears of calls; and if so, I would suggest to the directors the propriety of first enforcing payment of these arrears before any addition be made to the capital or any preferential burden entailed on the revenue; and I hope the shareholders who have paid their calls will make a point of this being fully done-not simply by threatening letters, but by regular legal discussion - before listening to any proposition to raise new capital. There exists another reason for this course being adopted : - owing to the recent state of the money-market, it must happen that many of the nominal holders of shares are totally unable to pay their calls, so that the available capital is less than the nominal. Now the amount of these defalcations ought at once to be ascertained, so as to fix the precise position of the undertaking, or else any calculations of the value of the railway must be uncertain. For the same reason no new stock should be created till that already legalized has been fully called up. The only parties on behalf of whom such a step might be deprecated are those in arrear; but I believe that every interested person will agree that it is better for them that these claims should now be made good at once or abandoned, instead of hanging over their necks during the rest of their lives.

#### Gussip.

We omitted to remark on the large increase of the return of traffic of the YOBE RAILWAYS, consequent on the Agricultural Society's meeting in that city. We learn from the Agricultural Gazette that in one day no less than 27,500 strangers were present! We may well conceive that so vast a number of visitors must have contributed largely to the receipts of the railways; and we find, on referring to our traffic table, that the York and Newcastle received 2,651*l.* more than on the previous week, and the York and North Midland 3,828*l.* more, together 6,479*l.*; besides, the returns last week following 6.479L.; besides, the returns last week following the meeting were greater by at least 2,000L; thus giving to these companies (which being under Mr. Hudson's management, may be assumed as almost one in interest) the sum of 8,500L for the occasion. It should be observed that a reciprocal advantage was bestowed on the agricultural interest, in the facility of bringing from all parts of the country not only visitors, but the produce of the industry and ingenuity of our countrymen. assembling together for ingenuity of our countrymen, assembling together for mutual instruction the prince and the peasant, ambassadors from foreign countries, as well as the system is indisputably the GREAT ACCELERATOR in every sense of the term. We have from time to time given interesting details relating to agriculture in connexion with railways, and we hope to have frequent opportunities of enlarging on those manifestations so hopeful for our country, that in the end the Government may see the advantages of promoting in every way so powerful an agent both in this kingdom, as well as in Ireland and the colonies.

On the occasion of his visit to the York Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts Left the Forty Agricultural Machine, Prince Alberts

tural Meeting, Prince Albert left the Euston station at 9 a.m., and performed the whole distance, 228 miles, at the rate of 40 miles an hour. In ten minutes after His Royal Highness had reached the archiepis-copal city of the North, and at 2 50 p.m., Her Majesty received information in London, by means of the electric telegraph, that the journey had been safely accomplished.

The Scottish Railway Gazette notices with much satisfaction the arrangement between the London

the former undertake to advance the funds necessary for the completion of the Aberdeen line, the works on which have recently been suspended, in consequence of the unfavourable state of the money-market. The London and North-Western are to work the line; the terms to be subsequently arranged by arbitration. This agreement will, of course, effectually secure the completion of the entire through line to Aberdeen at a very early period. Had it not been for the unfortunate interruption of the operations, under the adverse influence of the past year, the progress of the works was such as to have enabled the company to open the line during the present summer, and thus have rendered productive an enormous capital, now dormant, and so far lost to the proprietors. Under the peculiar circumstances of the case, it was hoped that Government would have extended some aid to the company, at least in consideration of the great number of unemployed labourers in the district. The works are now about to be resumed along the whole line, and we are assured that they will be prosecuted with energy to a conclusion. It is confidently expected that the line will be finished throughout in the course of the resent year. Each section will probably be opened immediately on its completion, or as soon as it is in working condition.

An adjourned meeting of the CEYLON was to have taken place on the 1st, to further consider the recommendation given to the directors at the last meeting, that the proposed call of 10s. per share to meet the liabilities of the company should be reduced to 5s.; but a sufficient number of shareholders not attending to make a quorum, the meeting was again

adjourned.

A step in the direction pointed out by our valued correspondent "H. C." in his suggestion on parcels traffic has been taken by the Board of the EASTERN COUNTIES. The directors have, through their secretary, made application to become licensed carmen, for all the purposes which attach to the privilege so conferred. They have been induced to make this request in consequence of a very considerable quantity of bonded goods being carried on their line, to effect which they have hitherto, and are still, for want of being themselves empowered, compelled to employ other persons who are in possession of the privilege. The grant of this request by the revenue authorities will doubtless be of considerable import-

ance to the railway company.

The Northern lines appear to have been successfully cultivating the CHEAP TRAIN TRAFFIC. have been three cheap trains between Perth and Arbroath, and on the 26th there was a large excursion train between Arbroath, Dundee and Stirling. Although the traffic is improving, says the North British Railway Journal, the railway has never yet been in a position to develope that traffic of the por-tion betwixt Dundee and Perth, on account of the break at Perth. The viaduct over the river is, howable to take the passenger trains over in about six weeks, when the traffic will be increased to a very

large extent.
At the late meeting of the Vauxhall Bridge proprietors, the secretary declared that, in consequence of the opening of the extension of the South-Western to the Waterloo-road, the receipts of the bridge had fallen off 61. in the tolls on cabs alone in the week's

receipts.

The opposition party in the London, BRIGHTON AND SOUTH COAST are preparing their energies for the approaching meeting, and, under the leadership of Mr. Hewitt Davis, are taking measures to con-solidate, if possible, the scattered power of the dissentient shareholders, to enable them to arrange their complaints in a concise and systematic form.

The directors of the EDINBURGH AND GLASGOW, with a praiseworthy imitation of some of our English companies, have resolved upon erecting, in con-nexion with a new station house at Cowlairs, a hall to be used as a reading and library room by the work-men employed upon their line. A few of the directors have, in addition, subscribed 5t. each, to aid in pur-

nave, in addition, subscribed 5t. each, to aid in purchasing books, and one has given fifty volumes.

Next to the mullet and pilchard, which haunt the coasts of Cornwall, the SMELT is one of the daintiest of English fish. This is caught abundantly off Grimsby and the Lincolnshire coast, and the London doner will obtain an ample supply, at a much cheaper price than at present, as soon as there is a communication completed from GREAT GRIMSBY, which will be the case early in the present autumn, by means of the East Lincolnshire and Boston and Eastern Counties.

A watchman in the employ of the contractors for the Britannia bridge of the CHESTER AND HOLYHEAD has been found murdered, by four men, supposed to

Digitized by GOOGIC

The opening of the ROUEN AND DIEPPE took place on the 29th ult. Two trains left Paris, one at 7 a.m. and the other at 9 a.m., with the invited and the other at 9 a.m., with the invited guests, among whom were the two Ministers, MM. Bastide and Recurt. On arriving at Rouen, the guests partook of a splendid breakfast, after which they proceeded in aspecial train to Dieppe. On reaching the station at Dieppe they were received by the National Guards of Dieppe and all the surrounding communes, and an immense concourse of persons of all classes. The benediction of the railway, was pronounced by the clergy, and at 3 p.m. there was a grand dinner of 300 covers, laid out in the Hotel de Ville. A Ball and operatic performances ensued.

The Grand Duke and States of BADEN have, by a law dated the 26th ult., authorized the sinking fund for the railways to raise a loan of 2.500,000 florins for for the railways to raise a loan or 2,500,000 norms for continuing the works of the railways, and reimbursing the advances made by the fund. The loan is to be guaranteed by the domains of the State. The terms are to be settled by the Government, in concert with

a commission of the two Chambers.

#### Reports of Meetings.

MANCHESTER, BUXTON, MATLOCK AND MIDLAND JUNCTION.

July 29.—Special Meeting, Derby.—The Hon. G. H. CAVENDISH, M.P., in the chair.
The CHAIRMAN said the shareholders would recol-

lect that at the last half-yearly meeting they approved of a bill for certain deviations in their line. They were now asked to sanction the substitution of a tract from Baslow to Bakewell, instead of one as previously proposed from Roseley to Bakewell. The meeting was not exactly considered necessary under the Standing Orders, as the bill would have been passed but for the opposition of the Manchester, Sheffield and Lin-colnshire, in consequence of which it was deemed desirable to have the consent of the proprietors to the proposed alteration in the bill. He then read the marginal notes and most important clauses in the bill, which provided for the reduction of the capital from 1,650,000l. to 1,320,000l., and the shares from 20l. to 16l. The only new clause was that authorizing the construction of a branch from Baslow to Bake-He accordingly moved a resolution in support.

Mr. Tootal, deputy-chairman, seconded the motion.
Mr. Taylor said that it might appear somewhat
extraordinary that a person from Bakewell should
oppose the making of a line to that town, but he was sure that any one who considered the position of the county would see the advantages that would result to the company from stopping short at Roseley or Darley, instead of going to the expense of getting a deviation bill, which would take them through a country that never could be productive. Those who country that never could be productive. Those who knew anything of the original line would see that it would give them a good line from Eastmoor on the

one side to the Cheshire hills on the other.

After a reminder from the CHAIRMAN that he (Mr. Taylor) was wandering from the question before the

meeting—
Mr. TAYLOR proceeded to say that they had power to make a line to Roseley, and that they might then stop their works. He was going to show that it was through the influence of the town of Bakewell that the bill of the company was allowed to pass without opposition.

Mr. NEWBERRY must interpose; that really was not

the business before the meeting.

Mr. Ellis said that if Mr. Taylor was allowed to go through every circumstance connected with the passing of the bills they would not be done that night. He ought to confine himself to the question before the meeting relative to the Bakewell branch.

Mr. Meadows thought that they ought not to be

confined too close to the question of the Bakewell branch, as other persons might object to other parts

of the bill.

Mr. TAYLOR wished to show the connexion of Bakewell with obtaining the bill, and the undesire-ableness of the proposed deviation. The people of Bakewell objected to this bill because only 6 miles out of 41 miles of the original line towards Bakewell was to be constructed, while the traffic was to be taken a most round-about way, through Chatsworth, Edaile, &c., by which they would have to go round 27 miles instead of 12 miles by road, to get from Boston to Bakewell. However desirable it might be to save 41. a share, he thought it would prove, if the line was to be made at all, much more economical to spend the whole original capital as proposed of 20l. per share. There was no traffic on the proposed line as compared with that as originally proposed, by which Bakewell would be on the main line. Twelve coaches passed through Bakewell every day, whilst not one passed in the direction of the proposed branch. The result | Sheffield, and he should be much better pleased to

would be that a competing line would be formed, which would be destructive of the company. truth was, that the proposed deviation was diverting the money of the original shareholders from the pur-pose for which they subscribed it. The case of the inhabitants of Bakewell was hard. It was principally through their means that the bill was originally obtained, for they succeeded in prevailing on the Duke of Rutland to withdraw his opposition to the bill. For that they obtained the thanks of the company; and yet the directors now turned round and deprived them of that accommodation on the faith of which they made such strenuous exertions to obtain the The line, as a whole, was no more like the original line than the Irishman's knife was like itself after it had lost its handle. He would therefore pro-pose, as an amendment to the motion, "That the line should for the present proceed no further than Roselev.

Mr. NEWBERRY said it would be a waste of the time of the meeting to draw up any such amendment, for

the chairman could not put it.

Mr. TAYLOR then said that he would move, as an amendment, "That the deviation bill should not be

adopted.

Mr. Holland was delighted to see that the share holders were at last arousing themselves to some concern for their own interests. He was a director of the Sheffield and Mauchester, which had a stake in this company to the extent of 50,000. Hitherto, the director had been allowed to have accountling the directors had been allowed to have everything their own way, just as if there had been no shareholders. The chairman had, to his great surprise, not given a single reason why this deviation had been adopt-ed. The proposed deviation would be 4 miles longer, with 2 miles of tunnel, in which, as was shown to the committee by the engineers of the Sheffield and Lincolnshire, no shaft could be made of a less depth than 800 ft.; and this without any local traffic to compensate for the additional length and expense. The line was the product of the mania of 1845, when they were all ready to rush into any scheme without any inquiry as to its merits; and his own opinion was that the line would never pay a single farthing of dividend. Still the line as at first proposed was far superior to the contemplated deviation, and therefore he opposed that deviation. The line had been sacrificed to please the directors of the London and North-Western, though the minutes of an agreement had been prethough the minutes of an agreement had been pre-pared, by which this company would have run over 18 miles of the Manchester and Sheffield line into Manchester, at a saving of 300,000%, instead of a parallel line being made. The directors of the London and North-Western, who had an undue influence at the Board, had, however, prevented the agreement being carried out, and, in his opinion, the deviation bill ought not to be allowed to pass. In fact, he believed that it would be better to abandon the line altogether, if they could do so; but if they could not, then they ought to abide by their original bill. In

conclusion, he begged to second the amendment.

Mr. Kahl, in support of the amendment, argued that the Bakewell line as originally proposed was much better than the deviation, and contended, that as Mr. Ricardo, who might be considered a railway authority, had shown the Ashbourne branch would be profitable to the North Staffordshire line, as Bakewell had double the population, it could not fail to be so, notwithstanding what had been said by Mr. Ellis at a previous meeting. He also complained of the abandonment of the line to Buxton.

Mr. Ellis, deputy chairman of the Midland, said that they were probably aware that three companies had a large interest in the line. The London and North-Western held 190,000t. stock, the Sheffield and Lincolnshire 50,000l., and the Midland 285,000l. Each of the companies was represented at the Board of that company, himself and Mr. Hudson representing the Midland; and they had both come to the conclusion, as the guardians of the interest of the Mid-land, that it would be desirable to make the deviation.

The CHAIRMAN said that the whole of the questions discussed that day had been fully argued at the last half-yearly meeting, when the shareholders approved of the deviation bill. In considering the question, he thought it important that the proprietors should know the interest those opposing the bill had in the undertaking. The gentleman who spoke last supporting the amendment held tenshares—the mover shares, which he became possessed of on the 20th of July—and the seconder five shares, which were only registered the previous day. The hon director of the Sheffield and Manchester had vilified the line, be-cause the directors of that (the Manchester and Manlock) had stood by their original ally, the North-Western, and refused to run into the Manchester line, which the directors would give their ears for them to do. He (the chairman) was a large proprietor in the

find the directors directing their attention to the development of that line than attempting to interdevelopement of that line than attempting to inter-fere to foil the proceedings of their neighbours. That company had no intention of abandoning the Buxton line, and though, from the opposition of the Sheffield, they had been compelled to abandon that portion of their bill relating to it for the present, he trusted to be enabled to get a bill authorizing that branch in a future session, either in accord with the Manchester and Sheffield, or independently. He had spoken to them of the interest held in the had spoken to them of the interest held in the company by those who opposed the bill, and he would also direct their attention to the holdings of those who supported it. In addition to the interest of the who supported it. In addition to the interest of the Midland, for which they were trustees, Mr. Hudson, who was no mean authority, held 500 shares, and Mr. Ellis was also a large holder—as was in fact every director at the Board. He thought therefore that he was entitled to call for the support of the shareholders to the bill, though, after what he had stated he would have them the farm thingen; it do not be supported by the control of the shareholders to the bill, though, after what he had stated, he would leave them to form their own judgment on the matter.

Mr. HOLLAND wished to explain one point alluded to by the chairman. He had, in the first instance, fairly told the meeting that he appeared as the re presentative of the Sheffield and Manchester, and the fact of his having been registered yesterday was to enable him to be present to speak on behalf of that

company.

Mr. Stebbing said that they had heard a great deal that day about the interests of the Sheffield and Manchester, and the interests of the town of Bakewell, but they had heard nothing of the interests of the shareholders. He was the representative of pro-prietors holding several hundred shares, and he had came from persons who had been foiled in their at-tempts to benefit their own interests. All he wished of the directors was that they would proceed moderately in the construction of the line, so as not to press unduly for calls in times of great depression.

The CHAIRMAN said the directors only wanted to consult the wishes of the proprietors in the making of calls. He thought it would be exceedingly wrong on the part of the directors not to meet the views of

the shareholders as to calls.

Mr. NEWBERRY said that so long as he had a seat at the Board he would never consent to a call being made without the shareholders being consulted on the subject.

Mr. G. Stephenson said that before the question vas put he wished to say a few words relative to the was put he wished to say a rew words relative to the tunnel which had been spoken of. Mr. Holland had said the shafts must be 800 ft. deep. Now, he in-tended to have shafts, but they would not be one half that depth; for, if he was asked to go to the top of a house, he should not think of going to the top of the chimney, which it would be equivalent to if he thought of making shafts 800 ft. deep. There was no necessity for them to be half that depth, and the tunnel complained of would be the cheapest ever made, notwithstanding the evidence of the Sheffield and Manchester engineers, which he much condemned.

Mr. TAYLOR appeared to be about to break new round in opposition to the bill, but several share-

holders rose to order, and-

The CHAIRMAN took the opinion of the meeting as to whether he should be heard, which was decided in the negative by about 12 to 1.

The amendment was then put to the meeting and negatived by a majority of 42 to 5. The original motion was then put and carried.

BIRMINGHAM AND OXFORD JUNCTION.

July 31.—Adjourned Half-yearly Meeting, Birming-ham.—Mr. P. H. Muntz in the chair.

Mr. A. PEYTON asked the chairman if he could give the shareholders any information respecting the progress of the bill now before Parliament for the sale of the line to the Great Western.

The CHAIRMAN replied, nothing positive. There were at present difficulties in the way of affording any satisfactory information.

Mr. Colmore said the report of the Lords' commit-

In answer to a question, Mr. Whateley, the solicitor, observed that he could not say that the third reading of the bill would be moved that night.

The meeting, as well as the special meeting, which immediately succeeded, was then adjourned until the 7th, to be held at the company's offices, in Waterloostreet, Birmingham.

EAST LANCASHIRE.

July 31. - Half-yearly Meeting, Bury. - Mr. J. GRUNDY in the chair.

Mr. SMITHELLS, the secretary, read the report, which stated that the great obstacle to economy in working the line, viz., the incomplete and disunited

state of the undertaking, would now very shortly be removed; that the connexion between Accrington and the Rossendale line would, it was anticipated, be opened for passenger traffic in the course of a few After deducting the amount required for the dividend on the quarter-shares, the directors proposed to carry the nett balance of the revenue account, as heretofore, to the reserve fund, there to remain applicable to the general purposes of the undertaking. The state of the works between Accrington and Burnley, between Burnley and Colne, and on the Liverpool, Ormskirk and Preston line, justified the expectation that in the course of four or five months the main line will be completed. The statement of accounts showed a profit on the portions now opened for the half-year of 12,786l. 6s. 2d.

The report was adopted unanimously.
The CHAIRMAN then moved, "That a dividend of 5 per cent. per annum for the half-year ending the 30th of June last be now declared on the quartershares of the company created under the provisions of the East Lancashire Act, 1847, and the Preston extension, by a resolution of the company passed on the 30th of July 1847; and that such dividend be paid on the conditions named in such resolution when and as the directors may appoint."

The motion was seconded and carried.

The meeting was then made special.

A resolution was afterwards moved by the CHAIR-MAN, and seconded by Mr. RILEY, declaring 1,080 whole shares and 1,015 quarter-shares forfeited.

It was adopted unanimously.

READING, GUILDFORD AND REIGATE. Aug. 2 .- Half-yearly Meeting, London .- Mr. Ald.

LAINSON in the chair.

The Secretary read the Report, which congratulated the shareholders on the satisfactory progress of the works, the whole of which were under contract, whilst two sections of great importance were fast advancing towards completion. The directors assured the shareholders that they had, in conjunction with their officers, endeavoured to introduce such improvements in the line as were calculated to promote the strictest economy, consistent with the substantial construction of the works. The directors had the satisfaction of stating that they had been enabled to carry on the affairs of the company in an efficient manner with the capital placed at their disposal from the call made in August of last year. A supply of funds would shortly become necessary. A 21. 10s. per share had been made, and would forthwith be advertised, payable on the 5th of September next at the London and Westminster Bank and Messrs. Wrangle's, Guildford. The accounts showed that there had been expended on land and compensation since the last half-yearly meeting 31,4974. 11s. 1d.; on rails, 10,4744. 11s. 2d.; on chairs, 3,6034. 14s. 2d. The amount of the loan obtained reached 52,3904. The balance at the bankers' amounted to 8,136l. 3s. 8d.

(For Engineer's Report see Official Papers.) The CHAIRMAN moved the adoption of the report. Mr. SMALE seconded the motion, which, after

some discussion, was adopted unanimously.

ST. HELEN'S AND RUNCORN GAP.

July 31.—Half-yearly Meeting, Liverpool.—Mr. T. Ross, in the absence of Mr. G. Greenall, M.P., in the chair.

The SECRETARY read the Report, which commenced by expressing the hope that the share-holders would not be surprised that the extensive depression of trade during the past twelve months has much affected the revenue of this in common with nearly every other company in the kingdom. The falling off in the income of the last twelve months is upwards of 2,700*l.*, while the diminution in the expenditure is only 900*l.*, thus showing a diminished surplus of 1,800*l.* The whole of this falling off is in the coal trade, the difference in the two periods being 60,000 tons, whilst there has been a slight increase on the income from passengers and merchan-The directors do not doubt that on the revival of the general trade of the country the deficiency quickly removed. From the accounts it appeared that on revenue account the canal income for the half-year was 6,372l. 9s., and the expenses 2,658l. 5s. 3d., leaving a surplus of 3,614l. 3s. 9d. income from the railway was 6,419l. 11s. 8d., and the expenses 3,852l. 13s., leaving a surplus of 2,560l. 18s. 8d., and a total surplus of 6,181l. 2s. 5d. Deducting the interest on the canal and railway bonds, and the guaranteed dividend on the preference shares, left a nett profit of 555l. 4s. 2d., and adding this to the balance of the last account, left a clear balance in favour of the company of 5,830l. 11s. 3d. The capital account showed the entire receipts of the company, including payments on shares, mortgages, debts owing

to the company, balance of purchase-money due to the canal company, and surplus on traffic account, to be 415,154%. 13s. 6d.; and the disbursements showed that there had been expended on the railway 209,1731. 12s. 8d., on the canal 175,000l., and on the new branches 30,981l. 0s. 10d.

The report was adopted.

A resolution of the directors for the forfeiture of upwards of 2,000 shares, held by Mr. J. Higginson, a bankrupt, was confirmed.

WILSONTOWN, MORNINGSIDE AND COLTNESS. July 28 .- Adjourned Meeting, Glasgow .- Mr. W. Houldsworth in the chair.

The minutes of the former meeting were read and

agreed to.

Mr. LITTLETON then stated that the balance in hand amounted to 1,354l. 15s. 1d., which would admit of a dividend of 10s. per share on the old shares, and 5 per cent. on calls paid up on new stock till this date. The CHAIRMAN moved the adoption of the report,

and that the dividend be paid on the 31st of July, which was agreed to nem. con.

COCKERMOLTH AND WORKINGTON.

July 28 .- Half-yearly Meeting, Cockermouth .-

J. W. FLETCHER in the chair.

The shareholders had a few days previously received a printed statement of the financial concerns, which showed on the capital account to the 30th of June last that temporary loans had been created to June last that temporary loans had been created to the amount of 9,430*l*.; that 73,550*l*. had been received on five calls; that the mortgage debentures reached 26,666*l*., with transfer fees and rents, making a total of 119,124*l*. 18s. 11*d*., and leaving a balance of 9,1561. 16s. 1d. against the company. The creditor side showed an expenditure during the half-year of 9,267*l*. 16s. On the capital account the expenditure had nearly reached the sum of 120,000*l*. During the current half-year that sum would be further increased by the payment to contractors of outstanding balances which had been adjusted, and the mode of settlement arranged. To meet this excess upon the estimates the directors had had recourse to temporary loans. It would therefore be necessary to make an application in the ensuing session for powers to create further capital. The revenue account showed an increase of 2,959*l.* 2s. 6d., and an expenditure of 2,717*l.* 19s. 10½*d.*; balance, 241*l.* 2s. 7½*d.* This amount, added to the last balance, the directors recommend should be carried to the credit of dividend account for the present half-year. The report concluded by stating that although the general account is not flattering, yet the directors considered there was ground for anticipating an improved state of things. The report was adopted.

Directors and other others were re-elected, and it was resolved that the Earl of Lonsdale should be solicited to become a director, in the room of some

member of the present Board.

In answer to a question from Mr. CASTLE, the SECRETARY said that 120,000l. had been spent, and, speaking in round numbers, 10,000% would cover the outstanding liabilities, exclusive of any extra

Mr. Castle inquired what the works were.

The SECRETARY said that the works were quite, or nearly, completed, with the exception of some small details at Workington Harbour, which would not exceed 500l. The company were under engagements; a balance had been ascertained, and the mode of settlement adjusted, and the total expenses would amount to from 120,000l. to 130,000l.

The CHAIRMAN said that there was one subject on which it would be satisfactory to the directors to have the opinion of the meeting. The directors had, indeed, raised capital on their own personal security to a considerable amount, and the report read at the commencement of that day's proceedings stated that they were about to apply to Parliament to create further capital. It might, perhaps, hardly be a proper course of proceeding to adopt a resolution at the present meeting, but the matter would engage the anxious attention of the directors, and would be brought before the shareholders in some more definite shape at the proper time.

Mr. CLEMENTSON said that the necessary steps must be taken before the 29th of November, and the business previously discussed at a special meeting.

Mr. J. HARRIS remarked upon the necessity of taking all requisite proceedings during the next session of Parliament to relieve the directors from their present liabilities.

MALTON AND DRIFFIELD.

July 31.—Half-yearly Mecting, Malton.—Mr. W. C. Copperthwaite, in the absence of Lord Morpeth, in the chair.

The cash account appended to the report showed

that the receipts since the commencement of the undertaking had been 87,304l. 8s., and that the sum in hand amounted to 1,008l. 7s. 10d. The two objects to which the directors had paid special attention were the getting in of arrears of calls, and limiting expenditure upon the works rendered necessary in consequence of the pressure of the times. Considering the limited resources of the directors, the state of the works was very satisfactory. Two calls were to be made during the ensuing half-year, one payable in the present month and the other in November, which together would realize 30,000l. The engineer reported that nearly the whole of the line from Burdale to Driffield was formed. One line of the permanent way was laid and ballasted, and the second partially ballasted. The whole of the line laid could be used for the purposes of public traffic in the course of a fortnight. Under ordinary circumstances it would not be worth while to open this section until the completion of the whole, but as the contractor proposed to use an engine for the conveyance of his materials to the tunnel, the engineer thought the arrangement might be made with advantage both to the company and to the public, for the conveyance of coals, corn and other local traffic.

On the motion that the report be adopted, a discussion ensued, in the course of which several shareholders expressed their wishes that the strictest economy would be enforced.

The report was adopted.

OLDHAM ALLIANCE.

Aug. 3 .- Half-yearly Meeting, Oldham .- Mr. E. A.

WRIGHT in the chair.

The report stated that the directors had obtained powers to extend the time for purchasing land and completing the works for two years. The money in hand was at interest, and the directors being anxious to distribute the amount so realized had ascertained their power to do so, and would have a proposition to that effect for the next half-yearly meeting. The retiring directors were Messrs. Ralph, Wright and J. Smith. The statement of accounts showed the 3. Sinth. The statement of accounts showed the receipts at 46,489l. 4s. 3d.; expenditure, 13,681l.; 30,000l. out as loan. Other expenses were 997l. 19s. 4½d.; and there was due for interest, or already in hand, 1,809l. 18s. 7½d.

The CHAIRMAN moved the adoption of the report. In answer to questions, the CHAIRMAN declared that the payments for the last half-year were on account of engagements previously incurred, except for 2091. for land and compensation, which they had been obliged to expend in consequence of a previous arrangement with the London and North-Western, for a joint bridge at Guidebridge. The 30,000l. was a loan to the Lancashire and Yorkshire at 5 per cent. The term for which the line was suspended would expire in December next, and the next half-yearly

meeting would be in February.

In answer to Mr. Summerscales, the Chairman declined to pledge himself that the line would not be proceeded with between December and the next meeting in February, but thought it was not pro-

bable.
The motion was then carried.

Mr. A. TAYLOR moved that the retiring directors, Messrs. Smith, Ralph and Wright, be re-elected. It was stated, however, that Mr. Ralph declined to act, and Mr. J. Radcliffe's name was substituted.

The CHAIRMAN declining to pledge himself not to go on with the works without the consent of a meeting of the shareholders, Mr. Summerscales moved, and Mr. Bradford seconded, an amendment, adjourning the meeting for a fortnight, in order that an explicit statement of the views of the new proposed directors, some of whom were not present,

might be elicited.
Ultimately, however, the CHAIRMAN, having qualified his expression respecting the future intention of the directors, to a belief that they would not proceed except under extraordinary circumstances which they did not expect to arise, the amendment was

withdrawn.

The CHAIRMAN admitted that the half-yearly meeting had been called earlier by several weeks than was intended, in order to defeat the proceedings of a party among the shareholders who were seeking to dissolve the company.

The motion was then carried, as also was a motion for the re-election of Mr. Wright, one of the auditors.

LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE

Aug. 3. - Adjourned Meeting, London. - Mr. FFRANCE in the chair.

The CHAIRMAN announced the fact of the bill for the dissolution having been thrown out by the House of Lords' committee. He advised that the subject of continuing or abandoning the project should be well considered by the proprietors by the next half-yearly meeting.

A resolution for printing the report of the committee and the evidence was moved and seconded, but an amendment was carried that the printing of the evidence by abstract or in extenso be left to the discretion of the directors.

Mr. Moss spoke highly of the project, and said that it was essential to the North of England, and that it was essential to the North of England, and the great towns which were comprised in it, that it should be carried out. Mr. Hudson had so high an opinion of it that he had guaranteed 6 per cent. for only a portion of it. He did not deny that Mr. Hudson had withdrawn his promise, but then it was on ac-

count of the dissentions amongst the shareholders.

Mr. Parsons thought very favourably of the line,
but saw no prospect of its being carried out in the present state of the money-market.

Mr. ATKINSON asked on whom the expenses of this abortive bill were to fall.

The CHAIRMAN hesitated to answer this question. After some other observations, it was moved, seconded and passed unanimously, that this meeting adjourn sine die.

#### PARIS AND ROUEN.

July 31. - Half-yearly Meeting, Paris. - M. DE

L'ESPEE in the chair.

M. THIBAUDEAU, the secretary, read the report, which, after alluding to the special meeting on the question of the purchase of the line by the State, pro ceeded to discuss the present condition of their affairs

affairs.

The Committee of Finance, after having examined the situation of the companies and heard their delegates, declared against the bill, from motives based at the same time on respect of existing contracts and the well-understood interests of the State; it rejected the measure as the first act of a system which threatened every kind of property, which for ever destroyed association applied to great works of public utility, and which substituted the action of the State for that of companies, complicated its charges and its obligations by engaging itself in the execution and management, so difficult for it, of industrial enterprises.

The question has been happily reprounced by the

The question has been happily renounced by present Executive Government. The report then argues upon the merits of the plan. It also describes the devastation and its effects on the line in Feb-

ruary. It observes :

The revolution of February surprised us at the moment when all the excess of our receipts was absorbed by the payment of the last dividend and the advances which the working made to the establishment. The consolidation of your engagements to order, which was to be effected by means of your last loan, was not completed. There remained to you 590,000f, of those engagements, which in other times, and when they amounted to nearly 4,000,000f, were of casy investment; but under these new circumstances the renewal of them was rendered impossible. At the same time we had more than 2,000,000f, to settle for materiel ordered, works executed or to be executed; we had, moreover, to provide for the support of the line and of your rolling stock, in a word, for all the working expenses which could not be reduced in proportion to the receipts. In fine, more than 400,000f, remained to be paid on the last dividend, and the services of the loans were coming towards maturity. Besides these charges and claimable debts, we had to immediately provide for the re-establishment of your bridges which had been burnt down, and for the temporary constructions necessary to enable a resumption of the service. No assistance could be expected from the State, and yet (says the report), in spite of the considerable diminution in our receipts, we have been able, during these four months of distress, to pay off the greater part of these engagements to order, to liquidate a considerable part of your debts, either by the investment of your colligations, or by the surplus receipts, to maintain in active operation all the services of the undertaking, and, in fine, to resume the payment of the interest of your two loans. The obligations of your last loan which have been applied to the payment of the supplies furnished by the contractors, and the extinction of a part of your engagements to order, have been reckoned in this settlement at the rate of 800f. This sacrition of a part of your legs question that he remember its interest of your legs question th your last loan which have been applied to the payment of the supplies furnished by the contractors, and the extinction of a part of your engagements to order, have been reckoned in this settlement at the rate of 800f. This sacrifice will appear to you less considerable, by comparing it with what another company has been compelled to do, whose revenue has not suffered so much as yours has done. There still remain to us 4,106 obligations of the first loan at 4 per cent, and 200 of the second loan at 5 per cent. If general credit were re-established, we might negotiate these obligations, and propose to you to issue new ones, in order to raise the sum necessary for the payment of your debts. But we do not think that it will be possible to make an appeal to credit in the special state in which events have placed your enterprise, and when, in the space of four months only, your revenue has been subject to a diminution of more than 1,800,800f. To maintain the expenses of the establishment without going to the money-market (says the report) we must still delay the payment of the coupons of dividend overdue, and of that of the half-year just expired, and, in fine, obtain from the State a delay in the payment of the loan of 14,000,000f, which has just become due. We propose to you at present to settle the dividends in arrear, and that of the last year, in acknowledgments bearing interest at 5 per cent., the maturity of which will be fixed hereafter. As to the credit of the State, we shall ask it to grant us a delay, and to divide it into two annual payments, to be carried to the end of the state, we shall ask it to grant us a delay, and to divide it into two annual payments, to be carried to the end of the sams falling due, as fixed by your grant, in such a manner that no change

will take place in the service of the interests and other nities. Application will, however, be made to the ernment for its aid.

The accounts showed the maintenance of way at 1,611,510f. (64,460*l.*); working receipts, 2,846,884f. (113,875*l.*); total expenses, 2,282,039f. (91,281*l.*). In order to rightly estimate the real comparison between the expenses, properly so called, of the working and the receipts, it is necessary to deduct from the sum of 1,648,671f. 47c. that of 387,173f. 52c., representing the reserve of 15 per cent. of the expense of the locomotion and repairs, laid aside as guarantee of the depreciation of the rolling stock. Keeping in mind that circumstance, the proportion of the expenses, properly so called, of the working to the receipts is, for the last half-year, 54f, 85c. per cent. In recapitulation, in the half-year the receipts have been 2,846,884 f. 80c.; the charges and expenses of working, 2,282,039f. 60c.; leaving a profit of 564,845f. 20c.; which, with balance from last half-year, make a total of 634,505f. 30c.; or, 8f. 80c. per share; leaving a balance for the ensuing half-year of 905f. 30c. After presenting a table of comparison of receipts of 1847 and 1848, the report declares that the receipts have declined during the last six months 1,822,572f. 97c. (72,802l.).

declined during the last six months 1,822,5,21. 97c. (72,802l.).

The increase of 104,914f. 42c. in special trains comes principally from transports of National Guards and troops during the month of June. The increase of 26,228f. 75c. in the supplementary receipts is a proof of the exactitude with which the control of the tickets has been effected, and of the necessity of that control. As to the considerable diminution which is apparent in the principal articles of your receipts, it must be attributed to the exceptional situation in which your undertaking is placed, in consequence of the devastations committed on your line in February. The destruction of an arch of the bridge at Rouen interrupted the connexion of your line with that of Havre. Four arches of the bridge of Hezons set fire to, and two of them entirely consumed, produced another break in the line; and finally, the entire destruction of the bridge at Asnicres completed the isolation of your line from Paris, and only on March the the 1st could we carry the starting point to Maisons, 17 kilometres (10) English miles) from Paris. The transport from Paris to that place and the passage through Rouen were effected in omnibuses. That first partial working lasted from March 1 to April 15, the period at which, the passage having been re-established over the bridge of Bezons, and having been re-established over the bridge of Bezons, and the passage through Rouen, we were enabled to approach our starting point to Colombes, at the entrance on the St. Germain line. The construction of the bridge at Assicres Germain line. The construction of the bridge at Asnicres was not completed before the 15th of June.

A comparative statement of the transport of goods during the two corresponding half-years is then presented. In 1847, 163,160,234 kilog., producing 1,944,679f. 65c., were transported; in 1848,81,067,667

1,944,6191. 65c., were transported; in 1848, 81,067,667 kilog., producing 878,946f. 90c.; being a decrease of 92,092,567 kilog., and 1,065,732f. 75c. (42,629t.). Of the present year, from Jan. 1 to Feb. 23, your average receipts per day, which in 1847 were 20,839f. 51c., and which had risen in 1848 to 22,900f. 49c., fell from March 1 to April 15, the period of the service by Maisons, during the interruption of the bridges of Asnicres, Bezons, and Rouen, to 9,152f. 15, the period of the service by Maisons, during the interruption of the bridges of Asnieres, Bezons, and Rouen, to 9,152f.
49c. from 25,333f. 93c. which they were in 1847, being a falling off of 63-88 per cent. In the second period of your partial working, from April 16 to June 15, the period of your service of Colombes, during the interruption of the bridge at Asnieres, your receipts again rose a little, and attained an average of 13,034f, 74c. They had risen during the corresponding period of 1847 to 29,191f. 66c. — a diminution of 51-90 per cent. The ascensional movement in your receipts has gone on progressing since your line was restored to its regular working. As to the expenses of your working, properly so called, they have diminished during the last half-year 405,561f. 1c., not-withstanding the obligation which we were under to keep up almost all your services in the position in which they were before the revolution. The diminution of 112,954f. 12c., effected in the accounts of the persons employed, and of the general expenses, ought to be considered almost in totality as a veritable saving. Since the days of June, a new progress has manifested itself in your receipts, which, however, are far below the amount of last year. Business is becoming somewhat more active at Havre, and work has again been are in below the amount of hist year. Business is becoming somewhat more active at Havre, and work has again been resumed in some establishments at Rouen. That amelioration, feeble as it is, ought to be considered as the pledge of a better state of things for the future. We have just been present at the opening of the Dieppe line, which from this day is open to public circulation. In other times, the opening of this line and particularly during the present season would have open to public circulation. In other times, the opening of this line, and particularly during the present season, would have augmented considerably your receipts; if this result is not immediately attained, you ought not the less to congratuate yourselves on the completion of this line, which gives you another point of contact with sea navigation. In consequence of arrangements arcred to between the company of Havre and that of Dieppe, this latter line enters into the system of mixed exploitation already applied to the lines of Rouen and Havre. In conformity with art. 27 of the statutes, two directors have been fixed by lot to go out. Every out-going member may be re-elected. The members on whom the lot has fallen are MM. De PEspée and Blount. We propose to you to fix the dividend at 86.80c., which shall be regulated by an acknowledgment bearing 5 per cent. interest.

This report was received with every mark of satisfaction, as the injury done to the line had been so considerable as to have left little hope of a dividend. A conversation then ensued on the general affairs; and in the end, one of the shareholders proposed that

within two months after the expiration of the halfrear, instead of within one month as now required by the statutes; that is, that the general meeting should take place in February and August, instead of February and July as now fixed. The object of this change was to admit the accounts to be made known to the shareholders a fortnight before the general meeting.

It was agreed that a notice to that effect should

for the future the general meeting should be held

be placed on the order of the day of the next meeting,

in order to have the matter discussed.

The accounts were then passed and the out-going directors re-elected.

LEEDS AND BRADFORD .- Aug. 2 .- Meeting of Shareholders, London .- Mr. Harford in the chair .- The shareholders present sought to urge on the directors the completion of the works in order that the shareholders might obtain their dividend of 10 per cent., guaranteed to them under their agreement with the Midland from and after the opening. Until the line was opened the shares bore interest at 5 per cent. There was no reason why the line should not have been opened last year, and although several ap-plications had been made to the directors, through the secretary, to account for the delay, hitherto no satisfactory explanation had been given. One gentlesatisfactory explanation had been given. One gentleman stated, and the opinion appeared to meet with general concurrence, that the works were purposely kept back to save the Midland the extra 5 per cent., amounting to 45,000l. a year. Resolutions were passed expressing the opinion of the meeting that the works had been unnecessarily delayed, and declaring that an explanation should be demanded at the next halfyearly meeting, and if not satisfactory a special meeting should afterwards be called to take further steps. Mr. Harford was deputed to receive proxies to be used at the half-yearly meeting in accordance with the resolutions.

## CALEDONIAN RAILWAY

COMPANY.

GOODS TRAPFIC.

J. & P. CAMERON respectfully inform their Friends and the Public throughout Scotland that GOODS TRAINS are now runing daily to and from EDINGURGH and GLASSOW, also LONDON, LIVERPOOL, MANCHESTER, BIRMINGHAM and CARLISLE.

## CHESTER AND HOLYHEAD

## OPENED THROUGHOUT TO HOLYHEAD.

LONDON TO DUBLIN IN 13 HOURS.

LONDON TO DUBLIN IN 13 HOURS.

The Chester and Holyhead Railway is NOW OPEN throughout, with the exception of about 35 miles adjoining the Menai Straits, for which the Company have provided properly appointed conveyances, the charac for which is included in the Railway Fare.

The Admiralty and Company's splendid Steam-packets, 670 tons, 370-horse power, run between Holyhead and Kingstown, in conjunction with the following Trains, performing the passage in about four hours:

LONDON TO DUBLIN.

1. From Euston-square, London, at a quarter to 9 in the evening, with the Irish Mails, and from Chester at a quarter to 4 in the morning, leaving Holyhead for Kingstown (and Dublin) at a quarter to 7 in the morning.

2. From Euston-square, London, by Express Train, at 9 o'clock in the morning, and from Chester at a quarter to 3 in the afternoon, leaving Holyhead for Kingstown at a quarter to 6 in the afternoon, leaving Holyhead for Kingstown at a quarter to 6 in the afternoon, purchased to the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the

noon, leaving Holyhead for Kingstown at a quarter to 6 in the afterneon.

DUBLIN TO LONDON.

1. From Kingstown at a quarter to 9 in the morning, Publin time, 10 minutes past 9, London time, arriving at Chester at 10 minutes past 5, and in London at balf-past 10 in the evening.

2. The Admiralty Packet, with the Mails, from Kingstown at 10 in the morning, reaching Holyhead about 2; the Train in conjunction therewith leaving Holyhead at 20 minutes past 6, arriving at Chester at 25 minutes past 6 in the evening, and in London at a quarter to 5 the next morning.

Aug. 4, 1848.

GEORGE KING, Secretary.

Only the Admiralty Packet; and Mail Trains (as above) run on the avenday.

PORT OF GREAT GRIMSBY.

#### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d, per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

#### SUMMARY OF THE PROSPECTUS.

SUMMARY OF THE PROSPECTUS.

The principal features and conditions of this undertaking are as follows:—

The Company will be incorporated by Royal Charter or Act of Parliament, and the Hon. the East India Company guarantee by per cent. as a minimum dividend for twenty tive years, besidee making a free grant of all lands necessary for the railway and works.

making a free grant of all lands necessary for the railway and works.

The shares will be limited to 3l each, and be applied to the section from Bombay to Kalliam. The cails will extend over three years, and not exceed 10s at any one time, and the 5 per ent. will commence at once, and be payable half-yearly upon the calls as respectively made. If the whole sum be paid at once, full interest will be allowed. Where the shares are fully paid up, interest compons will be attached, payable to bearer; and in every case the utmost facility will be given in payment of dividends.

In the event of any obstacle to prevent the constitution of the company, the deposit moneys will be returned to the compilators, the deposit moneys will be returned to the compilators their expenses.

expenses.

The Caution Money (30,0002) has already been duly lodged with the East India Company, and interest is meanwhile secruing upon the same.

#### HEADS OF A SYSTEM OF PRACTICAL REFORM .- No. III.

If we consider the speed of railway trains in its relation to the profits of working, it will be found that in every respect in which profits depend on the proportion of expense to receipt excepting, only, what must be laid out on the porterage and coaching establishments, and on the general superintendence of the business, however otherwise conducted - that in every other respect, we say, the rate of the locomotive must tell upon the rate of profitable earning. This general proposition must, of course, be defined, for practical uses, by assuming a term of average despatch as an established and indispensable element of the railway system; -in other words, as that condition which makes it superior to any other means of conveyance. It may be seen that to descend below this limit would be to deprive the system of the advantage to which it owes not merely the preference over any other method of travelling, but also the power of offering an inducement to travel, which infinitely multiplies the number of those who take advantage of it. Above this limit we may place the general standard of railway speed; which need not be so closely defined as to press unduly on the progress of mechanical improvement, the effect of which we know has already been to render performances possible, and even easy, which some years since could not have been accomplished without extreme sacrifices. This standard, supposing the solidity and preservation of the way in no wise affected by the different conditions of working trains over it, would of course be fixed by the effectual average power of the locomotive; and the scale would be susceptible of unlimited extension. provided the effective capabilities of the engine could be extended ad infinitum. But even were this abstract view of the case allowable, it is evident that there is a limit to the effective power of the locomotive; -that for the purposes of a railway, the business of which is transacted with a view to the profit of its owners, the rate of speed for profitable working is much below what engines can now actually perform; and that this would have to be regarded as a practical limit, were there no consideration whatever to be urged on the score of the road they have to travel upon. The working expense of locomotion increases rapidly with every additional mile per hour after a certain point is attained; and it may be seen, even on this survey of a part only of the total charges of the business, that from this point a constantly increasing disproportion must take place between the cost of the higher speed and the degree to which the increase of speed can increase the concourse of passengers, or is compensated by the extra payment that will be made by certain classes of passengers, in consideration of the swifter despatch. But this, as we have said, is not the element that should practically decide the question of working expense, in any part of the existing railway system. The rails begin to complain long before the engine has reached its maximum effort; and it is here that speed tells most seriously on working expenses, in more ways than one.

Now, were there no limit to the strength of rails-were nothing but an increase of their weight needed to adapt the permanent way to unlimited increases of speed,—we should still fall in this way upon a serious addition to the annual charge; it being obvious that as the rate of despatch rises, so must the dimensions, and required from it is at the same time made more consequently the first cost, of the rails. If a onerous than formerly; and thus a constant 70 lb. rail, with certain bearings, will suffice for | tension is kept up from opposite points on the

one of 100 lb. will be required, and is laid down, there is an extra annual charge entailed on the road of the interest on the cost of so much additional iron, expended merely to gain the four or five additional miles per hour for certain trains;-to say nothing of the higher cost of replacing, from time to time, the more weighty and expensive material, and of handling it in repairs. But in practice the effect, for the present, is apt to tell in another way on the rail ways already open. They have been provided, we will say, with rails of from 75 lb. to 85 lb. per yard; which were sufficient for engines of a certain weight, running at a certain speed. But now that the speed is carried far beyond the original intention, and, further, that the engine's total weight is increased, to render an extra mile or two per hour practicable with all kinds of trains, as trains are now made up, the consequence here is to keep the road in a state of constant disorder, whereby the expense of annual maintenance is swelled to a serious degree; and this can only be got rid of, under such conditions, by shifting the charge into another form—by taking up the road, namely, and re-laying it with stronger bars; the interest on the price of which, as we have stated, must come off the receipts in one shape or the other.

It has been thought by many engineers that there will be found to exist a practical limit to the dimensions of a wrought-iron rail; and that it is already nearly reached - it being now difficult to forge a much heavier class than the maximum in common use. This difficulty may be only temporary; and improved machinery may perhaps enable the iron-master to keep pace to any extent with the demand for larger bars. A question has, indeed, been further suggested, whether, even admitting this possibility, the process will not necessarily be attended with conditions unfavourable to the quality of the iron; and we have heard it remarked that even the 80 lb. and 90 lb. rails in general seem to be inferior in texture to those which, from their more manageable size, can be forged throughout at a uniform heat. However this may be and the subject is worth looking into-the extra cost of a heavier rail is, at all events, a matter of no doubt whatever; and must be a serious charge upon any line where it may be found expedient to lay it down, because of the difficulty of keeping the road in order under present conditions. The whole of this expense, or of the keeping up the level without re-laying the lines-which will be the course of most general practice-must be set down to the charge of accelerated trains; and it so far appears that the desire to quicken them has for some time back constantly kept in advance of the power of the permanent way to bear the strain hereby thrown upon it. On this chapter it is clear that a positive check, therefore, is needed; whether we regard the locomotive wear and tear, the extra fretting of the coaches, or the effects on the road-every item of which comes in the shape of serious additions to those annual charges which must be subtracted from the annual earnings.

With this subject is closely connected that of a system of arrangement, prevailing most injuriously on the longest lines, whereby a continual increase of the unproductive weight of trains is now going on. This must be met, in the constant straining for fresh accelerations, by adding to the bulk as well as to the power of the locomotive; so that the action is at work in a double way ;-while the demand on the engine grows daily more pressing, the service

of which is to render the various improvements made in every part of it only available, and barely available, to meet the instant calls on its powers. The waste of power and material consumed in train arrangements will be the subject of a future notice. In the meanwhile, the bearing of what is important in the matter of speed for shareholders of all lines without exception, of the wide as well as of the standard class-may be comprised in the following plain, undeniable statement of fact; which we commend to the serious consideration of all concerned.

The railway shareholder has not derived one farthing of benefit from the manifold improvements made in the locomotive since it has finally taken its place on the long lines as a really efficient machine. Within the last four or five years the stability and power of this machine have been marvellously increased, while the consumption of coke, also, has been greatly reduced; and yet, in spite of these fruitful improvements, the rate of working expense still keeps as high as ever; in some cases it grows higher every year, in proportion to the profit-able receipt. The plain cause of this, as regards moving stock and permanent way, is simply that which we have stated above. No sooner has a material improvement been realized, than it is made use of to facilitate new efforts, instead of making more profitable the scale of working already established. Thus the railway owner gains nothing from the vastly increased efficiency of the system-it is all absorbed by the public; and this too during a time when, on all hands, the representatives of the public have been cutting down the rates of payment for the service so materially improved. This is surely a matter deserving immediate care. We know one main cause of the error we have been noting to lie in the competition between different railway interests; and of that noxious process this is perhaps not the least mischievous effect. We shall say something on this chapter, also, before long. In the meanwhile, it seems quite clear to us that the process we have been describing is not to be vindicated, whatever its causes may have been; and that nothing it can be intended to avert or accomplish (and so far it has done little that is decisive in either way,) can be of so much consequence as its direct operation upon the expenses and profits of all our working lines; -which is decisive enough.

BEARING OF THE MIXED-GAUGE SYSTEM ON THE NATIONAL RAILWAY INTEREST.

In our last, we gave an account of Mr. Locke's well-timed LETTER TO LORD JOHN RUSSELL, on the new aspect given to the gauge question by the Railway Commissioners' advising the House of Lords that the experiment of a mixed gauge shall be tried to Birmingham. One position is clearly established in that letter:-that, whereas the experiment can only be justified, and is indeed professedly ordered with a view to prevent the inconveniences of a break, this object can only be attained, through such means, by carrying a mixed gauge over all the railways in the kingdom; inasmuch as, if you stop short of doing this, every additional branch which is encumbered with the double system must multiply the instances in which the break will take place, where that system ends. The conclusion is obvious: that there can be no use in trying an experiment the only purpose of which, if successful, would be such as no one can venture to justify; which could only add to the confusion already complained of, and introduce diversity in places where the benefits of a uniform system are now enjoyed:—the only consistent end of which, in short, would be to destroy the system it professes to relieve. This result of a process, for which a certain rate of speed, and for a higher rate resources of the whole machine, the first effect no plea can be justly advanced but that of

diminishing the inconveniences of a break, is | north-western provinces of India; and he | millions upon which the East India Company something, we say, too extravagant to be permitted:-and it must be seen that the case is one directly calling for effectual interference before any further progress is made in this false

The position in which the matter is thus visibly placed will surely at last command the unanimous attention of all railway bodies, whose entire system is threatened by a general mischief. Hitherto the progress of a single exceptional interest has been favoured by the indisposition of the majority to make common cause against an evil of which they were not sufficiently clear-sighted to perceive the ultimate tendencies. Those who took a selfish view of the gauge question while it seemed to be confined to the struggle between adjacent rivals for this or that description of railway, must now, at least, discover that by the introduction of the mixed-gauge theory, the danger is brought home to every line in the kingdom; and that, if something effectual be not promptly done to arrest its progress, the whole railway system must be thrown into irrecoverable confusion. We trust, therefore, that no time will be lost in bringing about a real combination of the national railway bodies, in order to resist the evil to which all will be exposed if the scheme of the Railway Commissioners is allowed to take root. There can be no doubt whatever that it will. unless proper measures are timely adopted to prevent it; there can be no doubt, either, that by the necessary union, such measures can be enforced with a power before which the single party interested in making confusion cannot stand for a moment. To inquire seriously whether the representatives of 370 miles of railway can make good their detrimental plans against the clear interests of the nation at large and the united resistance of the owners of 3,400 miles of its railways also, would be trifling with common sense. The former have only carried their point so far, because of the disunion of the national party. If that party be not utterly and fatally blind to its own interests, and destitute even of the mere instinct of self-preservation, it must now see that the time is come at last for putting an effectual end to proceedings that can only succeed by reducing the whole railway system of this country to a state which must render it at once a laughing-stock to all Europe and a ruin to all concerned in it. We trust that the interval between this and the next session will be employed in this essential duty.

### Literature.

Railways in India: illustrative of the Practicability of Rendering Available Existing Works, in Diminution of the Cost of such Undertakings. By John Bourne, C.E. 2nd edition.

A certain air of mysterious perplexity has always hung over the subject of Indian railways, and has prevented it from receiving that attention to which it is so well entitled. Much of this has been attributable to the imperfect acquaintance of writers with the subject, and the crude conceptions of the public; but the fault has chiefly, we think, arisen from the difficulty of eliciting the truth from the chaotical mass of statistical rubbish which formed the basis of all investigations of the probable traffic of Indian railways. The pamphlet now before us is, we believe, the first successful attempt to define with clearness the prospects of the Indian railway projects, and more especially of the East Indian Railway Company.

About a year ago, Mr. Bourne published the first edition of this pamphlet, and entered very

came to the conclusion that any railway from Calcutta, which sought to secure that traffic, could only do so by presenting superior advantages of carriage over the river conveyance, whereby alone the great stream of traffic could be diverted from the Ganges, which is its old established channel, to the East Indian Railway. With this view he proposed the adoption of such rates of carriage as would be certain to induce a preference for the railway, especially when account is taken of the risks of damage and loss by accident, and peculation in the river conveyance, which are so great as to make the insurance between Mirzapore and Calcutta as high as between Calcutta and England. The dividend which Mr. Bourne computed would accrue to the East Indian Railway at these rates of charge was 12 per cent., the cost of the line as estimated by the directors in their Report being nearly ten millions sterling. Mr. Bourne, however, suggested that as the exigencies of Indian traffic were so much inferior to those of England, and as the formation of a railway in India was to some extent an experiment, the miscarriage of which would impede the further introduction of the railway system, it would be the most prudent course to discard the expensive methods of construction which obtained in England and adopt an economical system, more suitable to the undeveloped condition of India. To this end he proposed the adoption of a single line of railway from Calcutta to Mirzapore, at a cost of about five millions instead of ten millions, whereby the dividend that might fairly be expected would be 24 per cent., or twice that which the double line was anticipated to return. This suggestion, however, was received with little favour, the attraction of an additional 12 per cent. being apparently too slight to induce the abandonment of a display of engineering magnificence. The same official data from which Mr. Bourne deduced the prospect of a dividend of 12 per cent. upon a double line from Calcutta to Mirzapore, enabled him to ascertain the probable fate of a line which should stop short between those places. Supposing that a railway was made from Calcutta, extending 150 miles in the direction of Mirzapore, he found that instead of returning any profit, it would occasion a loss of 32 per cent. The obvious inference from these investigations was that the whole line from Calcutta to Mirzapore should be constructed, or none at all, any fragment of it being destitute of attraction to the shareholders, from the fact of the guaranteed rate of interest being thus rendered a maximum instead of a minimum; while the East India Company could feel but little interest in a scheme which converted their guarantee into an annuity, and failed to bestow those political and commercial advantages which had primarily induced them to give so decided a preference to the East Indian Railway.

In the autumn of last year Mr. Bourne proceeded to India, in connexion with the East Indian Railway; and shortly after his arrival went up the intended line as far as Mirzapore. On his way thither he observed that the trunk road between Calcutta and Mirzapore was so well constructed as to be suitable for the permanent way of a railway; and the intelligence of commercial disasters in England having reached him, and apprehending that without some new inducement the scheme might be relinquished, he wrote to Mr. M. Stephenson, the managing director at Calcutta, proposing that application should be made to the Government for permission to lay down a single line of rails along one side of the existing road, whereby the whole line from Calcutta to Mirzapore might be

was willing to grant a guarantee. Mr. Stephenson, it appears, thought favourably of the suggestion, but was overruled by his coadjutors, and Mr. Bourne ceased to obtrude his views upon the committee. Shortly after, several of the engineers returned to England, in consequence of the unfavourable aspect of commercia affairs; and Mr. Bourne, finding that the company was in a critical condition, and believing that his plan afforded the means of retrieving its affairs, was induced to bring it before the chairman of the company in a letter dated the 24th of April, which we cannot do better than

present to our readers :-

"The critical position of the East Indian Railway Company, and the conviction I entertain that a suggestion which I am enabled to lay before you is calculated materially to amend its prospects, will, I trust, constitute a sufficient apology in your estimation for any breach of etiquette in thus presenting myself unbidden to your attention. About a year ago I investigated, at Mr. Stephenson's desire, and in considerable detail, the traffic and probable profits of the East Indian line; and I was subsequently selected by Mr. Rendel as one of the engineers who were to proceed to India, and from whence I have recently returned. I had found, in the course of my investigations before leaving this country, that although a line connecting Calcutta with Mirzapore would in all probability be a most successful undertaking, that a piece of that line, if such a work were undertaken, would, on the contrary, most probably be a failure; and inasmuch as a double line of railway would be a more expensive undertaking, perhaps, than could be accomplished, I advocated the construction of a single line, which I maintained would afford adequate accommodation for the existing wants of the country. It appeared to me, moreover, that it would be more expedient to carry a line all the way to Mirzapore, than to carry a line to Rajmahal, inasmuch as I did not anticipate that merchandise brought from the upper provinces by the Ganges would be disembarked at Rajmahal, even if a railway thither were made, but would be carried on to Calcutta, as at presentthe risks of damage and peculation by transhipment being more than equivalent to any benefit that a railway in this situation could confer. These views I find to be entirely confirmed by the information I have since been enabled to obtain upon the spot; and I believe all the engineers now concur in the opinion that a piece of railway would be an unprofitable work, and that a single line is the most appropriate for the circumstances of the country. These past for the circumstances of the country. These past confirmations of my views you may possibly consider lend some weight to the present suggestion; but how-ever this may be, I feel that I should fail in the performance of my duty to the company if I neglected to bring under your notice a conception which I deem of such material consequence to the company's interests as the one I have to mention. The suggestion to which I refer is this:—The grand trunk road, connecting Calcutta with the north-west provinces, is throughout so smooth and level, and is so elaborately constructed, that it is already a railway all but the rails; while its width, which is 30 ft., is such as to enable a single line of railway, properly fenced off, to be carried along one edge of the road all the way from Calcutta to Mirzapore, without incommoding the road traffic. As the bridges, embankments and other works of the road would thus be rendered available for the reduction of the railway expenses, a very efficient line could be opened between Calcutta and Mirzapore complete, with locomotives, carrying-stock, &c., for less than 3,000,000l. sterling; while there would be sufficient room for a second line of rails, if the traffic should afterwards require it, the ordinary bullock traffic-if any then remained-being accommodated by a small addition to the present width of the road. The East India Company have many inducements to lead them to the concession of a strip of the road for the use of the railway: it would save them the cost of the land which they have to present to the railway company, and would reduce the risks of the guarantee, in consequence of the amended prospects of the undertaking due to the diminished cost of construction. It would further turn to beneficial use the works of a road which the railway must render nearly superfluous, and give to India in the shortest possible time the benefits of railway communication. As regards the shareholders, they would be placed in much the same position, by the acquisition of the road, as if the permanent way of the line had been already completed, and it would be impos-It into the investigation of the traffic of the speedily opened up, at a cost within the three the rails to perfect it should nevertheless be abansible that a railway, requiring merely the addition of

doned. I would therefore beg leave respectfully to suggest, that the question of the eligibility of the road works for the use of the railway, and the expediency, under existing circumstances, of adopting a single line of rails, be referred to Mr. Rendel, to report to you his opinion upon the subject, after the examination of such persons who have returned from India as are capable of giving useful information upon these points. I do not apprehend that the East India Company would refuse to grant the necessary time for this investigation, as the whole question is put upon a new basis by the present proposal, and the East India Company is as much interested in the supercession of the existing difficulty as any other

Of this very temperate letter it appears that no notice was taken, even by way of acknowledgment; and the result of a persistence in the course first adopted by the company has hitherto been most injurious to its interests, and must, we apprehend, prove fatal to its success. It is incumbent upon the railway company to prove the fallacy of Mr. Bourne's views, since they have declined to adopt them, and nothing, we conceive, can justify the very unceremonious manner in which his proposal has been treated: if it had been of much less value than we believe it to be, the company was bound to receive with courtesy suggestions which were dictated by a regard for its interests. Now that Mr. Bourne's proposal has been brought before the public, it appears certain to us that it must form the basis of any successful Indian railway project; and we apprehend the East India Company or the Government will not feel themselves justified in sanctioning the formation of any railways in India which proceed upon a more expensive system, as it is obviously to the advantage of India that it should possess an extended and remunerative railway communication rather than a few expensive lines, which would benefit neither the public nor the shareholders, and which would only afford the barren gratification arising from the possession of a model railway in India.

We noticed Mr. Bourne's pamphlet on its first appearance, and have since quoted largely from it; it is written in a simple and perspicuous style, and in a calm and temperate spirit; and all who feel an interest in Indian railways will find in it a fund of information, which, so far as we know, is attainable in no other work; and his opinions derive additional weight from the circumstance of his having had the opportunity of testing their soundness by his personal experience of India.

## Official Bapers.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE. Engineers' Reports for the Meeting, Aug. 9 (p. 544).

Since my last report the railway from New Holland to Great Grimsby has been opened for public traffic, and worked safely and satisfactorily. By an arrangement with the worked salely and satisfactorily. By an arrangement with the East Lincolnshire, this company have run their engines and carriages from Great Grimsby to Louth, and the East Lincolnshire theirs from Great Grimsby to New Holland, by which considerable expense has been saved to both companies, and the public more conveniently accommodated. The opening of this portion has, as was to be expected, greatly increased the traffic across the ferry between New Holland and Hull; and although, from the miserable accommodation at present on the Hull side of the Humber for the familiar of passengers, this important passage is still in an modation at present on the limit side of the limiter for the landing of passengers, this important passage is still in an unsatisfactory state, we have been able, by means of improved steamboats, better porter arrangements and rigid punctuality, to give far better accommodation than has hitherto been afforded at this ferry. To convey the enormous traffic across the ferry, which, from the experience already traffic across the ferry, which, from the experience already obtained, the further openings of this company are certain to create, permanent steamboats of an improved construction have been ordered and are in progress. The landingstages and other works at New Holland necessary to the accommodation of goods and passengers are in rapid progress, and will be completed in a few months. The only inconvenience which has been felt since the opening of the line between New Holland and Great Grimsby has been the rapid increase of traffic openingally overrunning our caparapid increase of traffic, occasionally overrunning our capability of meeting its requirements, but our stock is now sufficient and in good working condition, and the line and stations are satisfactory and complete. The lines in progress in Lincolnshire, from Gainsborough station to Ulceby

(between New Holland and Great Grimsby) and to Market ibetween New Holland and Great Grimsbyl and to Market Rasen and Lincoln, with the short branch from New Holland to Barton, are so nearly completed that a detailed report of the works is not necessary; but it may be stated that during the present year they will be opened to the public, with stations and stock complete, and being nearly 64 miles in length, they will, with the portion already open, give an aggregate length of not less than 80 miles in North Lincolnshire, from which the company will begin to receive revenue from traffic. In regard to the works at the Sheffield end of the line, and commencing with the valute and the works to the Midland at Beighton, it has been arranged that this part shall be opened simultaneously with the Lincolnshire lines previously referred to, so as to secure, by means of the Midland, a continuous communication for the temporary conveyance of Lincolnshire produce to Manchester and Lancashire. The viaduct has, on the whole, progressed well; and from the assurances of the energetic contractors who are engaged upon it, and its advanced state, it is not probable that any delay will be experienced with this work. Between Sheffield and Beighton the works are so nearly completed that this part might be opened during next Rasen and Lincoln, with the short branch from nearly completed that this part might be opened during next month. At the junction with the Midland at Beighton, arrangements have been made for joint station accommodation rangements have been made for joint station accommodation for the convenient interchange of traffic between the two lines, which will be completed before the opening. The only link remaining after the present year to complete the main line between Sheffield and Great Grinsby, will be from the Midland to Gainsborough. This will be opened to the public before Midsummer 1849, and consists of con-

the public before Midsummer 1849, and consists of contracts No. 3 and No. 4.

Contract No. 3.—The Rother viaduct is well advanced, and will be finished before winter, as indeed will the whole of the masonry in this contract. From the Rother viaduct to the summit cutting, at Wales, the earthwork is nearly completed; and of the summit cutting, which is one of the largest works on the line, only one-fifth remains to be done. At the present rate of progress this will be completed before the end of the year. From this point to Tranker Wood, near Worksop, for about one-half the distance the earthwork is finished and formed, and on the remainder there is little left to be done. The cutting in Tranker Wood is of favourable material, and is now being vigorously worked at a rate to insure its completion early in next year. Between Worksop and Retford the works, which are very light, are proceeding rapidly, and will be finished in good time.

Contract No. 4.—From near Retford to Gainsborough.—
The small amount of masonry required is principally done, and the whole will be finished before the end of the present year. The carthwork is also very well forward, especially at the only heavy parts near Retford. The Clarborough tunnel has yet about 300 yards remaining, instead of being finished, as it might have been, at the present time; but the contractors have undertaken to make better progress, and to complete it during the present year. Trent Bridge at Gainsborough.—This work is progressing at the requisite speed to insure its being ready when the remainder of the line to Sheffield is completed. Retiord to Lincoln.—By an arrangement with the Great Northern, who have undertaken to carry their loop traffic over this line, it has become necessary to execute the works immediately; and contracts have already been entered into for rails, chairs and sleepers, on terms favourable to the company; and the contract for on terms lavourable to the company; and the contract for the works will be made during the present month. All the stations are let between Sheffield and Gainsborough, and several are commenced. On the Chesterfield Canal it has been found necessary during the last half-year to perform somewhat extensive repairs, in consequence of the ordinary repairs having been for many years greatly neglected, and the canal becoming almost impassable in many places, from the accumulation of mud and other causes; but it is satis-factory to find that the outlay is already being returned by means of the increasing trade which can now be accommo-

2. Queen-square-place, Westminster, Aug. 8.

During the past six months the new Dock works at Grimsby have been prosecuted as fast as appeared consistent with a limited expenditure, and the desire to avail ourselves of the completion of the railway to the works for a supply of chalk stone, instead of the more costly mode of procuring the same by the river craft. The delay which unavoidably took place in the acquirement of the land at Grimsby, so as to open the railway to the docks, and by that means supply chalk rock to the works, has been a cause of preventing our having the tide excluded from the site of our works as early as I expected. In our efforts to accomplish this object in the course of the present summer, we endeavoured to make the excavations from the site of accomplish this object in the course of the present summer, we endeavoured to make the executations from the site of the docks answer as a substitute for the chalk rock which the non-completion of the railway disappointed us of, but the use of the mud in such quantities, and with such haste, has caused some slipping of the east and west wharting, which, together with the appearance of springs, locally known as "blow wells," has made it necessary to fall back on the original plan of using chalk stone for these embankments. The railway having been completed to the docks for some days past, we are now obtaining an ample supply of excellent chalk rock, and the arrangements made with Mr. Fowler will insure the necessary quantity for the completion of the east and west side embankments above the level of the highest tides, in much less time, and at greatly level of the highest thees, in much less time, and at greatly less cost, than if we had to depend on the supply by water, as was the case up to the opening of the railway. The coffer dam is completed. The gates and shices for emptying and filling the site of the works with tide water are completed, and the water will be shut out immediately a sufficient quantity of chalk can be delivered by the railway to insure the permanent solidity of the east and west embankments. The supply of stone for the works has been continued during the last six months, and is now ample for their most active prosecution. The advantages to be derived from our position in this respect are too obvious to require comment. The careful inspection of the works by your Lordship, on

the 15th inst., and the full explanations of every part of the same, then communicated by Mr. A. Smith and myself, will any more lengthy report at this time unnec-J. M. RENDEL July 21.

I have the honour to report to you on the progress of the various works connected with the Manchester or Western District during the last six months. The Manchester various works connected with the Manchester or Western District during the last six months. The Manchester warehouse has been completed, and as the Act of Parliament for the approach to it has now passed, we shall be able to proceed with it, for as I stated in my last report the warehouse itself cannot be brought into full use until this approach be made. The coal depot, at Ardwick, is not quite finished, having been retarded in its progress, but it will be got ready for the service of the winter months, when will be got ready for the service of the winter months, when a large coal traffic is expected on the line. The Gorton locomotive depot has been carried on slowly on account of the pressure of the times, and its completion will, therefore, be delayed beyond the period I had anticipated. The accommodation which these works will afford is much needed, and every exertion ought to be made to get them ready as soon as possible. The line generally continues in good working order. At the Manchester end, where it was first opened, several of the rails had become so much worm that it has been found precessive to put down new overs. first opened, several of the rails had become so much worn that it has been found necessary to put down new ones. The second tunnel at Woodhead has been carried on at the usual speed, and 800 lineal yards have been completed during the last six months. The Whaley Bridge Branch has been almost at a stand, in accordance with the wishes of your Board. The permanent road is laid nearly as far as Hyde, but nothing has been arranged as to the station there, and possession of the necessary land has not yet been observed. obtained.

London, July 18.

#### NAMUR AND LIÉGE.

Engineer's Report for the Meeting, July 25 (p. 510).

On the Namur and Liege, since the beginning of the year,

On the Namur and Liége, since the beginning of the year, the works have been prosecuted as vigorously as the state of the company's finances would permit.

**Remur to Huy.**—The line between Namur and Huy, 134 miles in length, is in the following state of advancement—14 miles are up to the formation level, 24 are in course of execution, and 14 not yet commenced. The river walls on this section of the line, in length 24 miles, are entirely finished, with the exception of a short wall at Seilles. The tunnels of Seilles and Statte are both in hand, and the arch of the latter has been turned throughout.

**Huy to Liège.**—The line between Huy and Liège has been

Huy to Liege.—The line between Huy and Liege has been lately carried on only where the greatest engineering diffi-culties presented themselves, in order that these should be brought to a state of completion equivalent to the remainder of the works. At Corphalie more than a third of the river wall, which is the longest on the line, has been completed; and at Flone the works in the Meuse are far advanced. The tunnel at Loyable is progressing, and that at Ougree is entirely finished. Centres are up for three arches of the bridge over the Meuse, at the Val St. Lambert, and the two others are also constructing. The bridge over the Ourthe, at Fetime, is up to the springing of the arches, as also that over the same river at Froidmont, with the exception of one abutunent. In fact, though much remains to be done, all the difficulties on this portion of the line have been overcome. The works throughout have been constructed in the most solid, though at the same time most economical manner, and have met with the approbation of the Government authorities. and at Flone the works in the Meuse are far advanced.

ment authorities.

Branch Line—The construction of the branch line, near

menced.

Mons and Manage.—Part of line opened.—The works on that portion of the Mons and Manage which is opened are in a perfectly satisfactory condition, and the line in a good working state. The same may be said for the stock, which is maintained in a state of perfect repair. No accidents of any kind have occurred to the public or to the company's servants since the opening of the line. The general goods traffic continues to inverse, most interface notwithstanding the derrossed. traffic continues to increase, notwithstanding the depressed condition of trade which recent events have produced; and a greater number of passengers have been carried than was a greater intimoter of plassengers into been carried than was expected by the most sanguine. It must be recollected, also, that the great outlet for the trade of the district is by Mons into France, and that, notwithstanding the satisfactory results hitherto obtained, the great object of the line is not yet secured. Arrangements are now being made with the Northern of France for working the company's waggons through to Paris immediately the line is finished to Mons. Part of line tmopened.—The works between Bracquegnies and Mons, 8½ miles in length, have been so much delayed during the last three months, in consequence of the want of funds, that, unless immediate measures are taken to insure their vigorous prosecution, the senson will be lost. They are, however, so far advanced, that, with a sum of 30,000L at our immediate command, a single line might be opened to Mons by the end of November next. The works then remaining to complete this line throughout would be the basin at Mons, which has not yet been commenced, the laying of the second line, the construction of the principal expected by the most sanguine. It must be recollected, also, laying of the second line, the construction of the principal stations, which are at present temporary, and one or two other works of minor importance.

C. F. STOOKS. Liége, July 8.

RAILWAYS IN NEW SOUTH WALES.-The value of the introduction of the railway system into New South Wales appears by the latest accounts received to have been recognized. A second report has been furnished, containing the results of the inquiries into the means to support and sustain this means of communication. A subscription has been raised; a liberal aid has been received from the Government, and a survey has been effected, which the committee and their constituents have pronounced satisfactory. The

volunteered the service), and described in his report and drawings, comprise the main trunk between Sydney and Goulburn, and five branches, connecting it with Penrith, Camden, Windsor, Paramatta and The main trunk he divides into three Liverpool. sections, called respectively the northern, the middle and the southern. The northern section extends from Sydney to the Nepean river; the middle, from the Nepean to Bong Bong; and the southern, from Bong Bong to Goulburn. The lengths and cost of Bong Bong to Goulburn. The lengths and cost of the several sections and branches are stated in his report to be as under:-

Main Trunk.	Miles.	Cost.	Per mile.
Northern section	40	£74,942	£1,873
Middle section		97,784	2,222
Southern section		73,000	1,587
Total between Sydney and Goulburn direct		£245,735	£1,890
Branches.			
Penrith Branch	91	£17,846	£1.877
Camden Branch	101	19,029	1.812
Windsor Branch	15	20,002	., 1,290
Paramatta Branch	3	8,704	2,321
Liverpool Branch	71	15,139	1,953
•			
Total of branches	47	£80,720	£1,717
Grand total		£326,455	£1,844
		-	
		£364,000	£2,100

Mr. Woore is willing, however, to make a further provision for contingencies to the extent of 400l. per mile, raising the estimated cost to 442,500l., or 2,500l. per mile, "which," he observes, "would provide the large sum of 108,34ll. for unforeseen expenses, or nearly one-third of the estimated cost." He proposes that in the first instance the completion of the northern section only should be undertaken, " or that portion of the line extending from Sydney to the Nepean river, with the branch line to Penrith, comprising 49½ miles; although," he adds, "it will be desirable to form a company for the purpose of eventually carrying out the whole. This portion will open the communication on the two main thoroughfares 40 miles towards Goulburn and 33 miles towards Bathurst, and will facilitate the communication with Paramatta, Liverpool and Windsor, as it will pass within 35 miles of the former, 155 of Windsor, and 73 of Liverpool. It will also be the easiest of construction, as there are no extensive works upon it, with the exception of the bridge over Paramattastreet and the adjoining viaduct, which may be omitted in the first instance, if desirable; and it will always yield the greatest return, for the main part of the export of wool, tallow, hides, &c., the wheat, butchers' meat, and other country produce consumed in Sydney, and the transfer of all the mails and passengers to and from the interior, must pass along it; and if the iron-bark rail be found sufficient to support the necessary weight, without crushing, the easy nature of the gradients relieves us of any apprehension as to the want of power in the locomotive engine, even on wooden rails. The amount required to carry this out (if wooden rails are used) will be 120,000t. which allows 27,212l, over and above what I have estimated for unforeseen expenses, averaging 2,4241. per mile." The present traffic on these portions, calculated from the police and custom-house returns for the year 1847, Mr. Woore sets out in ample detail, giving a total revenue of 30,000l. per annum, without taking any credit for the large increase which railway facilities would be sure to create; allowing 60 per cent. of this revenue, or 18,000L, for the expenses of working, there remains 12,000l., or 10 per cent., as a dividend on the whole estimated outlay.

#### THE STRIKE OF THE ENGINE-DRIVERS.

At the Railway Tavern, Hampstead road, about 150 engine drivers and firemen employed on the London and North-Western held several meetings for the discussion of their grievances, from the 4th to 11th inst. As we have elsewhere commented on the disputed points between the men and the company, which we hope to hear shortly will be settled, we are bound in fairness to give the statements as proceeding from the mouths of the aggrieved parties.—Mr. J. Brown, an engine driver, having been called to the chair, observed, that at the last meeting it had been resolved to apply to the Commissioners of Railways to receive a deputation from the engine-drivers on the subject of their differences with the directors of the London and North-Western. A reply from the Secretary of the Commissioners was read, declining to interfere, but stating that they would communicate with the company on the subject, as it is stated "that the public safety is endangered by the present state of things."

—The Chairman said this communication refuted the declaration of Mr. M'Connell, the chief of the

lines surveyed by Mr. Woore (a gentleman who had | locomotive department, when the deputation waited on him on the 3rd.,—that if the men were determined to stick to their notices, he should have the assistance of Government. The Times had endeavoured to make it appear that there was a strike and a combi-The Times had endeavoured to nation amongst the engine-drivers for an advance of wages. They all knew, and the directors knew, that was not the truth. It was proper that the truth should go forth to the world, and the whole difference between the engine-men and their employers was simply this:—Mr. M'Connell, the chief of the locomotive department, had resolved upon a classification of the men, varying in price from 5s. 6d. per day to 8s. per day. By this classification he reserves the power to himself to reduce any man to the lowest scale, and leaving it to his (Mr. M'Connell's) discretion whether such men shall be ever allowed to rise again. The enginemen want no advance of wages being satisfied with the present scale: but what they did want was, that the same system of promotion should be continued as it was under the management of Mr. Bury, the former chief of the locomotive department. That system had worked well for many years, and the men could not see any reason why it should be infringed upon. Mr. M Connell, however, was determined to stick to his classification, and the directors supported him in it, and the men were equally determined not to accept it. A charge had been promulgated that threatening letters had been sent to some of the directors. Now, inquiries had been made, and not one single instance of a threatening letter could be traced out. The fact was that the company had acted towards the men in a most arbitrary manner. On the 31st finding that Mr. M'Connell was determined to stick to his plan of classification, every man had tendered his resignation, giving a fortnight's notice, in accordance with the terms of their agreement with the company. There was no combination on the subject, but each man acted on his own opinion, and the resignations were delivered at the Euston station on the 31st ult., by the 4 p.m. train. Since that had taken place arbitrary measures had been adopted. Many engine-drivers had been removed forthwith, and others had to do their duty under the influence of the police. Policemen were all down the line in plain clothes. -Mr. Marshall begged it to be distinctly understood that this was no strike for increased wages. Instead of fining the men 1l. or 10s., or any other sum for misconduct, as was done by Mr. Bury, the late chief of the locomotive department, Mr. M'Connell assumed the power to reduce them to 5s. 6d. per day, the effect of which would be that in the course of about two years every engine-driver on the line would be reduced to that amount. That was in reality the object.—Mr. Wingrove had to report that a new man (whose name he gave) had just been stopped with his engine at the Camden station, being drunk. This same man, on the 2nd, had to bring up the 8 a.m. train from Birmingham, and when required to go to work, he was in such a beastly state of intoxication that another man had to bring up the train. This man had now been employed on the line three days. although it was known that he had been discharged six times before for drunkenness, and once fined 21. and imprisoned for a fortnight by the magistrates at Manchester, when he was employed on the Bolton and Preston line .- Mr. C. Langham had to report that that evening a new man, with the engine No. 18 had been brought in with his train 8 minutes before time. On the express train arriving at Rugby at 7 50 that evening, the man who had charge of the engine was staggering about, and in such a state that he was incapable of performing his duty, and he (Langham) had to bring the express train up to London.-The Chairman said the man referred to had formerly been in the employ of the company, but was discharged for stealing oil. - Mr. T. Chapman stated that another of the effects of their proceedings in dismissing some of the engine-drivers was to over work those who remained. On the 2nd inst. he was started from the Camden station at 6 p.m. with a special train to Rugby, and returned with the 2 5 a.m. goods train from Rugby to Camden Town at 7 30 a.m.; started again to Birmingham with the 9 a.m. train, and returned to Camden Town with the 2 30 p.m. train at 7 45 p.m., the number of miles travelled being 391 in 25 hours and 45 minutes; and Henry Clement, his fireman, had been on duty for 12 hours previously.—Mr. F. Allen had been an engine-driver in the company's service for 11 years, and never met with an accident or had any charge made against him. On the 3rd inst. he went down to Euston station to take the 11 a.m. train out with No. 18 engme. On arriving at the platform he saw Mr. M'Connell, who said, pointing to six men, "I want to send these men down with you." He told Mr. M'Connell that the foot-plate was very small, and that if there were five or six men on the engine

with him he (Allen) could not perform his duty. Mr. M'Connell then said, "Oh, you will not take them." He (Allen) said he would take the train, but he could not do his duty with six men on the engine. On this Mr. M'Connell said, "Then come down, and one of these men must take charge of the engine." He did as he was ordered, and the engine was then put in the charge of a man who had never been down the line before, and, although there was a pilot engine sent before the train, it was run into an embankment. He (Allen) offered to be taken into custody, if the authorities thought proper to make a charge; but he was told his services were required no longer.-J Rolls, the fireman to Allen, said Mr. M'Connell asked him to take charge of the engine, and he replied-" No, I will not."-T. Pickton said he was at Wolverton when this engine and train arrived, and when it arrived at Wolverton the foreman examined the water-gauge and found the engine so short of water that he was quite alarmed lest the engine should blow up. He ordered the engine to be immediately hooked off the train, and water to be numbed into its boiler, but the man ran about with the engine several miles before water was pumped in, and another engine and man had to take on the train. He heard the foreman at Wolverton say that he was afraid to go on the engine which the man had brought down. for fear of an explosion. He was the same party who had been staggering about at Rugby, and whose train Langham had been compelled to bring up .- H. Clements, a youth apparently about 17 years of age, said that Mr. Walker, the foreman at the Camden station, came to him and said—"Clements, I want you to take charge of an engine." He (Clements) replied—" That he could not take charge of an engine, s he was incompetent. Mr. Walker then said— What! not at 7s. a day! You are a foolish fellow to be led away by that set of fellows."—Yesterday morning Mr. Walker ordered him to mind No. 109 engine. He (Clements) said—"He would mind her, but not go out with her." Shortly after he said—"Take the damper off, and I will go down to the square with you." He then did as ordered; but they went down the incline so fast that both himself and Mr. Walker were forced to rush to the brakes, shut off the steam and reverse the engine; and if they had not done so they would have ran into two engines which were standing on the line, and they w most probably have been killed.-Mr. Wood said he most propagi nave been killed.—Mr. Wood said he was an assistant turner in the engine-shed. On Wednesday morning Mr. Walker came to him and said he was short of hands, and then said to him—"I want to make you an engine-man." He said—"He could not, as he did not understand it." Mr. Walker then said—"Then John Jones, your mate, must." Jones said—"I have no objection, but you must, he Jones said—"I have no objection, but you must be responsible for all the passengers I kill."—The proceedings terminated at a late hour.

On the publication of these proceedings, which first appeared in the Observer, Mr. Creed dispatched

the following communication:—

The attention of the directors of this company has been called to a report from the this tree of the proceedings of a meeting attended by a number of engine-drivers, servants of this company. The statements said to have been made or this company. The statements said to have been made at that meeting are either unfounded or grossly exaggerated, and prove that the men have allowed themselves to be imposed upon by certain evil-disposed persons connected with their clubs, whose interest it is, by misrepresenting the intentions of the directors, to produce discontent amongst a class of men whose limited number leads them to amongst a class of men whose limited number leads them to imagine that they can dictate the conditions upon which they will continue in the service of railway companies—a state of things incompatible alike with the safety of the public and the well-being of the men themselves. Now, the regulations which the directors of this company have thought fit to impose are not only just and reasonable in themselves, but precisely those which are best adapted to promote these very objects. With reference to the state-ment put forth, that it is the object of the directors to use the classification of the drivers as a means by which to reduce their wages, I am instructed to state that the directreather their wags, I am instructed to state that the directors never have had any intention, either directly or indirectly, to reduce the wages of their engine-drivers. The directors have adopted the measures necessary for supplying the place of those men who have combined to quit their employment. They have already engaged a number of experionced engine-drivers, and have every reason to believe that the service will continue to be conducted with the same regularity and safety to the public as heretofore.

On the 7th the adjourned meeting was again held at the same place.—The Chairman read a speech, which recapitulated the grievance above detailed: "We are perfectly satisfied," he said, "with our wages, but our move is made because we see in the background the real object of the new system-that of being subjected to the caprice of the superintendent. -A variety of statements were made to show that great danger resulted to the public from the course being pursued by the company. 240 resignations had been sent in, and the men intended to adhere to them.

On the other hand, the directors, in consequence

of the number of new enginemen employed, or about to be employed, on the line, have sanctioned the issue of the following general orders to the guards, in order to insure, as far as possible, efficiency in working the traffic:

Instructions to the Guards .- Owing to the appointment Instructions to the Guards.—Owing to the appointment of several new enginemen, perfectly competent to the charge of engines, but unacquainted with this line of railway, the upper guard of the passenger trains on the southern division will, until further orders, ride on the foot-plate of the engine to assist the engine-driver and freman in keeping a look-out for the signals, to inform the driver as he approaches the new-laid portions of the limit of the contractions. the line and where the regulations of the company require the opening of the whistle, as also to make him acquainted with the different gradients as the engine enters upon them. The guards are enjoined to be watchful and attentive in the performance of this duty, and to apprise the driver the instant the signals come into sight, as also to acquaint him mistant the signals come into signt, as also to acquain from when within a mile of the stations, and remind him whether the train is timed to stop thereat or not. The under guard is to ride in the rear van and take charge of the parcels, &c., a porter being appointed to ride in the leading van of each train, to assist at the stations, in giving down and taking up luggage; as also to keep a constant look-out forward, towards the engine, and the instant the guard upon the engine signals with his hand to have the brake applied, he is to do so immediately, still keeping his eye upon the guard when to slacken it or release it altogether. The guard upon the engine is, on the instant he perceives the guard upon the engine is, on the instant he perceives the red signal, to signal the porter in the leading van with his hand to apply the break, and by the motion of his hand let this man know when to slacken or release the brake altogether. The names of the guards employed on this duty will be especially laid before the directors.

By order,

MARK HUSH.

General Manager's Office, Euston-station, Aug. 7

At another meeting of the men on the 10th the Chairman announced that a deputation had attended the directors, who wished to forget the whole affair. The general feeling of those present was not to submit to the proposed classification.

At the meeting held last night, it was decided that

they should quit their work on Monday next, as they could not agree to the arrangement proposed. We cannot but regret this result.

#### Brogress of Works.

CALEDONIAN .- Aug. 7 .- The Castlecary branch was opened, as promised, for public traffic—thus com-pleting the direct line between London, Perth, Dundee, Arbroath and Montrose. The express trains from Dundee arrived at the Euston-square terminus in 15 hours, and from Arbroath in 15 h. 45 m. The line of railway is continued from Arbroath to Mont-

rose, coaches conveying passengers on to Aberdeen.
Edinburgh and Northern.—The entire length of this line, as we stated last week, is now open for passenger traffic, and seven trains have been running regularly both ways every day, yielding a large accession to the business of the line. The whole distance, going and returning—upwards of 90 miles, including the ferry from Granton to Burntisland, about five miles, is accomplished in little more than six hours, allowing fully an hour and a half in Perth for transacting business or looking about the town. The Scottish Railway Gazette gives the following interesting details respecting the line and its attractions:-We have already described the line as far north as Newburgh, and, as all who have passed along it must admit, it would be difficult to exaggerate the natural beauties which it opens up to the eye of the traveller. The passage by Lindores Loch is singularly picturesque, and few scenes are to be compared with the beautiful expanse of the Tay, which suddenly unfolds itself from the elevated path of the railway on entering and leaving the port of Newburgh. A neat and commodious station is erected here. From this point the line proceeds through a cutting of some length, and deep in some portions, but generally through a light sandy soil. Many work-men were employed in finishing the works, and we have no doubt that in a few weeks the new portion will display the same neatness, care and finish which mark all the other parts. The ancient town of Abernethy, with its remarkable round tower, in a state of admirable preservation, will arrest the notice of the The route abounds in striking views of traveller. mountain and glen. The curious serpentine windings of the Earn also form a feature in the landscape. The garden-like aspect of the country, on the approach to Perth, at the same time, affords a refreshing relief to the alpine characteristics of the more distant prospect. At the Bridge of Earn there is a station of some importance, which promises to become one of the busiest on the whole line. As we stopped on our way to and from Perth, there was a dense throng of people of all classes pouring into the folks of various sorts, and servants loaded with baskets, &c., from the fair city. The Bridge of Earn kets, &c., from the fair city. The Bridge of Earn | The rails are heavy, laid upon blocks of wood, and has been long a noted watering-place, and some years | the motion is remarkably smooth. Woodside Bridge,

eekers and quasi invalids from all parts of S It has of late, however, somewhat declined, mainly owing to the comparative difficulty of access, and the advantages in this respect offered by other places of the same character. Passing along the Vale of Earn, the line proceeds upon a level for some miles, with the lofty barrier of Moncrieffe Hill frowning down upon it and presenting apparently an impassable obstruction. The line of the Scottish Central, however, is seen trending along the valley to the same point, and suddenly the train is snatched from the daylight, and we find ourselves rattling through the stupendous tunnel which issues into Perth. The 'fair city' bursts upon the traveller, and, after a stimulating glimpse of the locality, he is comfortably landed at the temporary station in the outskirts of the town. The permanent station is making rapid progress, and will be brought into partial use in a few weeks. The whole arrangements connected with this station are entrusted to Mr. Milner, the superintendent. Everything is here done to meet the wishes and requirements of the public, compatible with the comparatively confined and inadequate limits of the temporary erection. The necessity of an early removal to more suitable and extensive offices already apparent. The goods traffic of all the lines which are to be accommodated in the Central terminus is rapidly developing itself; and more particularly with respect to the Edinburgh and Northern, the immense coal trade from the mineral fields at Lochgelly, which will be immediately active, will require arrangements of corresponding magnitude. Preparations for these objects are in progress at Perth, with the prospect of their immediate comple-tion. While the through route to Perth by the Edinburgh and Northern is thus at length completed, we may mention that the arrangements for perfecting the connexion with the Tay at Ferry Port are proceeding with great energy. Having traversed the new portion of the line from Cupar—which is one of the easiest parts of the undertaking, running mostly upon a level, and through land of little value,—we were struck with the number of workmen engaged upon the new landing-place. The breakwater is already formed a considerable way out; and the quay, which is a most substantial piece of work, is very extensive, and will afford ample accommodation to a large goods trade. The situation is finely adapted, from the great depth of water and the comparative short-ness of the ferry, for the purposes of the line in connexion with Dundee, both by means of the river and the Arbroath line, as well as with the north of Scot-The construction of these important works at Ferry-Port-on-Craig will enable the company to dispense with about three miles of railway to Newbortperhaps the most expensive part of the line; and there can be no doubt that they will thereby obtain a much more commodious and useful terminus and port for the transmission of their northern traffic, besides having complete control of the ferry, which is their own property. The landing place will probably be practicable in the course of about six weeks hence, when goods will be carried to and from Dundee and the North with every possible facility and advantage. Till then, the returns of the line, as a whole, cannot be fairly estimated.

GLASGOW, PAISLEY, KILMARNOCK AND AYR.—The Scottish Railway Gazette gives the following particulars on the opening of the Cunnock Extension to Muirkirk:—Two of the most valuable and important extensions of the Ayrshire line are the branches to Cumnock, 18½ miles, and to Muirkirk, about 11½ miles. Efforts have been made to finish the works and open these portions during the present summer, and this object has been realized to an extent which, amidst so many difficulties as have lately beset railway enterprize, we should have scarcely been war-ranted in anticipating from a company less ably and energetically conducted. Lately, the whole of the new works were carefully gone over by Capt. Laffan, the Government Inspector, who expressed a high opinion of their character and execution. The authority of the Railway Board having been obtained, the branches were opened, July 22nd, by a large party of the directors, the secretary and the engineer and manager, &c. The train proceeded from Kilmarnock, where a new station-house, with a substantial carriage and engine shed, is in course of erection. The town is crossed by an extensive viaduct. country next entered upon is replete with interest and beauty, being pre-eminently the "Land of Burns." The view on all sides is magnificent, including Kilmarnock and Riccarton, with its church; and in the extreme distance are visible the jagged outline of the Arran mountains. The works are admirably finished, and the engineering exceedingly creditable.

which is next crossed, is a very handsome one, the old highway being considerably lowered for the convenience of those passing under it. At Riccarton Mill Dam there is a splendid viaduct over Irvine Water, and the view increases in grandeur and beauty; Loudon Hill and Galston in the distance, up the valley of the Irvine, and the country rich and beau-tiful in the extreme. The Portland Iron Works, now in course of erection, are finely situated and deserve a visit. There are two blast furnaces built upon the latest principle, under the superintendence of Mr. A. Craig, the manager. The bricks used for these buildings are of a very superior quality, and are all manufactured upon the ground. There is also a large commodious foundry erected, which enables the proprietors to do almost the whole of the castings required for the erection themselves. The whole works are now in a state of forwardness, and they are expected to be in blast at the latter end of the year. When finished they will be a capital feeder to the Ayrshire. Branch railways are also being formed from the furnaces and coal-pits to the main line, the former joining at Hurlford station, the latter at the crossing at the Kilmarnock and Galston turn-The mineral fields attached to the Portpike-road. land Iron Works are very extensive, and the black band is of the most valuable description. At the Hurlford station the Galston branch runs off. As the line proceeds a beautiful view of Loudoun Castle is obtained. At Dallars, the seat of Lady Adelaide Hastings, with Ayr Bay and the Arran hills still in the distance, the view is extensive. Farther on is Mossgeil tunnel, 700 yards in length, and remarkably straight and beautiful, and here also is the farm of the same name, the early residence of Robert Burns, the Ayrshire bard. Next comes the Ballochmyle viaduct, a structure of surpassing magnificence and beauty, consisting of seven arches of large dinensions, the centre one of which, 180 ft. span and semicircular, stretches across the Water of Ayr, from rock to rock. The smaller arches are 50 ft. span each, there being three on each side of the great arch; these are also semicircular. The height from the bed of the river to the top of the viaduct is about 185 ft. The viaduct contains upwards of 500,000 cubic feet of stone, and the outer archstones of the great arch were brought from Dundee. The rest of the stone was obtained from quarries opened up on Sir J. Boswell's and Mr. Alexander's (of Balloch-Sir J. Boswell's and Mr. Alexander's (of Ballochmyle) property. The contractors for this great viaduct were Messrs. Ross & Mitchell. The spot is also celebrated as the scene of Burns's "bonnie lass o Ballochmyle:" and a little below is the place where he parted with his "Highland Mary," and gifted her over the running stream with a pair of Bibles. Leaving Ballochmyle woods, Auchinlack House, the seat of Sir J. Boswell, Dumfries House, the seat of the youthful Marquis of Bute, and the flowing water of Lugar, are passed, and the Muirkirk branch entered upon; and that place is reached through the rugged scenery once the haunt and the asylum of the persecuted Covenanters. The New Cunnock Iron Works are seen in the distance. There is an immense embankment on the main line to the left. namely the extension to Cumnock. Coal-pits abound upon every side, and the Lugar Iron Works of Mr. J. Wilson, with a pretty little village which has just risen up, have a branch line down to them. Along the entire line the most useful minerals abound in rich profusion, and already extensive iron works are erected at various points along its course, besides the long-established and extensive works at Muirkirk, all of which will yield an immense mineral traffic to this branch, which will soon prove a most profitable feeder to the Ayrshire line. Upwards of 4,000 men have been employed for a considerable time on the different works, and we believe the execution of the respective contracts, including the viaducts, has given the most entire satisfaction to all concerned. The line itself is most substantial throughout, and will be safe and comfortable for passenger traffic.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.—Of the works near Retford, the tunnel of 550 yards in length through the Clarborough Hills is fast approaching completion, and as double sets of hands are engaged night and day, it is presumed that this great undertaking will be completed early in the month of October. What has tended materially to further the making of this, the lengthiest tunnel on the line, says the Nottinghum Journal, is the capital beds of clay formed both east and west of the undertaking, which has enabled the contractors (Messrs. Waring & Sons) to make their own bricks, and by a temporary side line to convey them to the spot with the least possible delay and at the least possible expense. The approach to this tunnel has furnished an abundance of material for the embankment near Welham, which crosses the Retford and Gainsborough turnpike-road twice, and which at its

Digitized by 400810

principal is 33 ft. high. Coming to the south-east of Retford, it enters a cutting 26 ft. 6 in. at its greatest depth, passing under the Great North Road, and over the Chesterfield Canal feeder and then, on an embankment 21 ft. high, it crosses the river Idle and Ordsal Lows, whence it again encounters high ground and enters a cutting. Here for a considerable distance the line is ballasted and one line of rails permanently laid; and it is from hence that all the ballast for the line to Bolefield, near the river Trent, will have to be taken. Crossing through Whisker Hill, it passes over the Hon. J. B. Simpson's property by a bridge and culvert, both of which are already completed. In a short distance further the permanent lines are again laid, and so continue part of the way to Worksop.

#### Accidents.

EDINBURGH AND GLASGOW.—Aug. 4.—When the 2 p.m. luggage train from Glasgow was distant about one mile from Croy station, five men employed on the line stepped aside to allow it to pass. Unmindful, however, that the 1 p.m. mail train from Edinburgh was also due, they went to the wrong side, and had to cross over the rails upon which the mail train was rapidly approaching. They were perceived by the driver of this train, who sounded the alarm whistle, and three of them effected their escape, but the other two were overtaken, and one of them, named Gray, tavern-keeper, Croy, was killed. The other, named Anderson, had his right foot taken off. There is no blame attachable to the engine-drivers.

#### Law Entelligence.

RENT OF PREMISES.—July 19.—In the Vice-Chancellor's Court, in re the South-Western v. Covard, the defendants, before May 1846, were lesses of premises in Princes-street, Lambeth, which were used as a starch manufactory. In May 1846, the railway company served notice on them, requiring part of the premises for the branch line to Water-loo-bridge. At that time there was about a year to run of the defendants lease; and they served a counter notice on the company, requiring the company to purchase the whole of their interest in the premises. The company refused to do so, and withdrew their notice as to the part which they had required; and the defendants then applied to the Court of Queen's Bench for a mandamus, insisting that the company were not at liberty to withdraw their notice, and that in consequence of their notice to take a part they were bound to take the whole. The question was argued upon the return to the mandamus, and judgment was given, (see ante, p. 479,) when it was decided that in such a case where the tenant refused to sell part, the company were at liberty to withdraw their notice, and were not bound to take the whole. In the meantime the lease had expired, but Messrs. Coward continued to hold over, and were charged double rent. After the expiration of the lease, the company gave notice to the lessor or owner of the fee for the purchase of the same part for which they had before given notice to the Messrs. Coward, and eventually an agreement for the purchase was made between the owners of the fee and the company, dated the 3rd of August 1847. Meanwhile a negotiation for a new lease to Messrs. Coward was going on, and ended at last in another agreement for new lease, dated the 3rd of January 1848; and Messrs. Coward then commenced proceedings to obtain compensation to themselves, as tenants, for the injury done by the purchase of a portion of the premises which the company had purchased from the lessors, pending the occupation of Messrs. Coward na lessees. His Honour had granted an injunction restraining these proceedings, and the motion which was now made was for the dissolution of the injunction.—His Honour considered it was doubtful what interest had passed to the company and what interest had been acquired by the lessees under their respective agreements. If the claim for compensation vent before a jury in the present state, the whole thing would be thrown before them in a huddling way. Before proceeding to assess the amount of compensation, it was necessary to ascertain what interest the lessees really possessed. The injunction must be continued.

SALE OF LINE. - July 26. - In the same Court, in re the Stockton and Hartlepool v. the Leeds and Thirsk, counsel moved to dissolve an injunction granted by the Vice-Chancellor to restrain the defendants from offering any opposition to the passing of a bill in Parliament. The plaintiffs had obtained a lease of the Universal behavioral. obtained a lease of the Clarence, and had entered into a contract with the defendants, the Leeds and Thirsk, on the 13th of January 1847, by which it was agreed that defendants should purchase the plaintiffs' line, upon certain terms therein specified, and by the l

fifth clause in the contract it was stipulated that the purchase should be completed within three calendar months from the passing of the Act for the purchase of the Clarence by the Leeds and Thirsk, and in the meantime the Stockton and Hartlepool were to insure their buildings, to retain possession and management of the line for their own benefit, and keep them in good working condition; and by the 9th clause it was agreed that the Stockton and Hartlepool, and especially the directors, should use their best endeavours to promote the completion by the Clarence of the contract for sale thereof, entered into by their committee of management with the directors of the Leeds and Thirsk. Previously to this contract the defendants had alleged that it would be necessary for their interests that the Clarence should be purchased by them, and negotiations were consequently entered into for that purpose; no agreement, however, had been come to between the defendants and the Clarence, and the latter company had consequently introduced a bill into Parliament for the purpose of effecting a sale and amalgamation of their line with that of the defendants. The bill had passed the the common seal of the Leeds and Thirsk against the bill, which, in consequence, was not proceeded with. The injunction was therefore applied for on the ground that the opposition to the bill by the Lecds and Thirsk was not bond pide, but was commenced in consequence of the provisions of the agreement between the plaintiffs and the Leeds and Thirsk, and for the purpose of defeating or delaying the rights of the plaintiffs, and for the purpose of deferring the payment of the purchase-money and obliging the plaintiffs to pay 5 per cent. interest upon it until paid, according to the provisions of the contract.—In support of the motion to dissolve it was contended that the defendants were justified in opposing the bill, which contained clauses that would be injurious to them; that negotiations had been going on for the purchase of the Clarence, and that if this bill were allowed to proceed the defendants would be compelled to do what they had already refused to sanction.—The Vice-Chancellor said it would be absurd for any Court to say that application should not be made to the Legislature generally for any purpose. Every subject of this country had a right to be protected in such applications. The point here was, whether a particular party had come under a contract not to oppose the bill, and whether the ourt could prevent the opposition being made. He thought, after the case of Lord Petre, and other cases in which the principle there laid down had been followed there was no doubt this Court would give effect to contracts. With regard to certain conduct to be pursued about bills pending in Parliament, the question for decision was, whether it was not manifest that a contract had been entered into by the Leeds and Thirsk that they would not oppose the bill. His Honour then read the fith clause already referred to from the contract between the plaintiffs and defendants, and said it was clear that this very clause imposed upon the plaintiffs an obligation to do what they otherwise need not have done, which was to insure their buildings, &c. The parties had thought proper to stipulate three calendar months for the completion of the contract, and neither party were at liberty to break that portion of it. He considered that the contract also implied an obligation upon the Leeds and Thirsk not to oppose the passing of the Act. The agreement being in this form, he thought he should be departing from the rules of the Court of Equity if he did not uphold the injunction to restrain the defendants from opposing the bill. The house of Parliament would have ample means of ascertaining what was proper to be done by all the parties. should, under these circumstances, refuse the motion

Aug. 7.—The decision of the Vice-Chancellor in the above case has been since appealed against in the Lord Chancellor's Court, and this day the Lord Chancellor pronounced the following judgment:—The application was to restrain the Leeds and Thirsk from opposing a bill for a sale to them of the Clarence. There could be no doubt of the jurisdiction of the Court, for a party who opposed a bill in Parliament did so in his private capacity. By public interest he meant the general interest any person might have in any Act, and the private interest was that which a person had in regard to property. The Legislature did not allow any person to appear and oppose an Act of this kind until he had made out a locus standi, that is, until he had shown that his interest neight be affected by the passing of the Act. If, therefore, this Court saw that a person was likely to be affected with respect to his property by the opposing of a bill in Parliament, it would restrain such opposition in the same way that it would retrain an action at law. The doubting of such a power would only renew the dis-

cussions which for a long time had been carried on as to the power of courts of equity to interfere with the courts of law, and the right to which had been for such a length of time conceded. Here the bill puts its equity upon the hypothesis that the defendants were fraudulently opposing the Act for the sale of the Clarence, in order to escape from their contract in 1847 to purchase the plaintiffs' railway. Now, the Clarence were no parties to that agreement, nor did it appear that the Leeds and Thirsk had at any time bound themselves not to oppose the Act in question; and as there was no equity on behalf of the Clarence to restrain such opposition, how could the plaintiffs have any equity for such a purpose, when they were only acting in collusion with the Clarence to compel the defendants to purchase their railway, and not to enforce the contract of January 1847? Under these circumstances, and as the agreement was manifestly only intended to be conditional, the order of the Vice-Chancellor granting the injunction must be discharged.

We defer till next week our report of the proceedings in the Vice-Chancellor's Court in the case of Tielder v. the Lancashire and Yorkshire to restrain the issue of preference shares.

#### Parliamentary Proceedings.

LORDS.

Aug. 10 .- Paisley, Barrhead and Hurlet .- On the motion that this bill be read a third time, Lord BEAUMONT called the attention of the house to a petition of the Glasgow, Paisley, Kilmarnock and Ayr, which he had presented against the bill, and moved that it be read a third time that day six months.-The Earl of DEVON supported the bill .-After a few words from Lord REDESDALE, the amendment was withdrawn, and the bill read a third time and passed.

#### Reports of Meetings.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE. Aug. 9.—Half-yearly Meeting, Sheffield.—The EARL YARBOROUGH in the chair.

Col. HUMFREY read the Report, which stated, that notwithstanding the depression of commerce, the directors can point with some satisfaction to a gradual, though not very considerable, increase of the The accounts of the western, or Manchester and Sheffield portion, present during the half-year a considerable improvement in merchandise, from the increase in coal and stone, but a falling off in passengers, owing chiefly to the depression referred to. They nevertheless show a gain of 10 per cent. in the gross receipts over the corresponding half-year of 1847. The following is a comparison of results between the last and two preceding half-years:

mor and the preceding	g nan jean	J.	
	To June 30, 1847.	To Dec. 31,	To June 31,

RECEIPTS	. £50,538	£61,052	£56,394

The accounts of the eastern, or Lincolnshire portion of the undertaking, now for the first time include receipts from traffic. On the 1st of March last 16 miles, between New Holland and Grimsby, were opened for passengers, meeting at New Holland the company's ferry-boats to Hull, and uniting at Grimsby with the East Lincolnshire line, open to Louth—the entire length opened being worked by the two companies in friendly alliance. This short experiment has been encouraging as regards the future prospects for passenger traffic in Lincolnshire, the number of passengers conveyed on the railway in the four months being 43,819, and its gross earnings 2,703/. 13s. 3d., besides 47,505 pa-sengers (producing 1,501l. 5s. 9d.) who have crossed the ferry. During the period of the half-year's account the arrangements for conveyance of merchandise had come into operation only

Digitized by GOO

to a small extent. The Grimsby Docks continue to be a promising part of the undertaking, notwith-standing the state of affairs in the Baltic. The gradual increase in the custom dues received at the port, from 3,929%. in 1843 to 70,075% in 1847, plainly indicates that good access landward, operating with the fine existing access to the sea, will, on the completion of the new docks, render the port of Grimsby of the highest importance. To establish pilots at this port is one of the objects gained by the company in the present session of Parliament. The Chesterfield Canal has been a source of profit. The canals in the western division, owing to the partial working of the mills and to interruption of building, have suffered a diminution in their mineral traffic and present a loss. It is proposed to pay for the half-year a dividend at the rate of 5 per cent. per annum on the Sheffield and Manchester 100l. shares, and at the rate of 7½ per cent. per annum on the No. 1 quarters; and on the other portions of the stock of the company interest at 5 per cent. per annum has been paid, as directed by the Act of Incorporation. A capital exceeding two millions sterling lies at present locked up in unfinished works, of course not productive now, and incapable of becoming so until the works shall be finished. To convert this dead weight into a source of profit—to limit, at the same time, the ultimate cost of the line, by curtailing the expenditure of capital in paying interest—and to provide a revenue to meet the guaranteed dividends as they price on the profit of the state of the contract of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit of the profit revenue to meet the guaranteed dividends as they arise on the preference stocks,—are objects solely attainable by completing the works; and they demonstrate the prudence, and indeed insuperable necessity, of doing so. If from frequent calls, therefore, individual shareholders have unfortunately been inconvenienced, still the calls have been inevitable, and for the common good. As regards the future progress of the works, the directors propose to progress of the works, the directors propose to accept loans, as far as they can be obtained, in diminution of calls; but failing that resource, they still rely, and with confidence, upon the shareholders' willing contribution. The directors have every reason to expect the opening of the remainder of the main line, including the south junction through Manchester, by the summer of next year, thus accomplishing a thoroughfare from sea to sea. As previously announced, however, it is expected to complete and open for traffic within the present year the portions from Grimshy to Gainsborough and to the portions from Grimsby to Gainsborough and to Lincoln, and also from Sheffield to the Midlands. While advocating expedition (for the reasons already stated) in regard to the main line, the directors have been studious to relieve the shareholders from claims of less urgency. They have prosecuted only such works as were essential, including the second summit tunnel, and the engine establishment at Gorton: their application to the Commissioners for two years' additional time to complete the branches has been conceded. The whole of the bills presented to Parliament were either suspended measures from the preceding session, or were promoted for new objects which could not safely be postponed. The Barnsley branch, the enlargement of the Manchester, Stalybridge and Sheffield stations, the improvement of the Humber Ferries, and the Manchester South Junction works, and the purchases of the Ashton and Sheffield Canals, were the subjects of those several bills; and the directors have to announce that they have in each case been successful. The directors congratu-late the shareholders on having at length gained access to the Barnsley coal-field and to the railways east of Barnsley, and on having acquired a station and separate landing-place in Hull, so as to perfect the connexion, by ferry, between Hull and the railways which centre there, and the company's line south of the Humber. To give the utmost facilities at this ferry the directors have provided fast-sailing steamers, which already ply across the river in combination with the trains, and the landing-places are so arranged that the boats may meet the railway carriages, under cover, at the pier. Expectant upon the opening of the line the directors have succeeded in making various arrangements with neighbouring companies for facilitating traffic and for their mutual advantage in working. They have also made arrangements by which the Sheffield Canal shall be transferred to the owners of the River Dun Navigation, which adjoins it, this company retaining, on satisfac tory terms, the land required for station purposes, and having fortified their position in Sheffield, which were the objects looked for in the purchase of that

#### (For Engineers' Reports see Official Papers.)

MACCLESTIELD CANAL—The Capital Account shows receipts from calls, loans, &c. at 332,918l.; expenditure in land and works at same sum. The Recente Account shows receipts at 4,332l. 10s. 44d.; expenditure, including interest for loans and annuity, at 6,094l. 12s. 8d.; balance in excess of 1,714l. 2s. 34d.

GREAT GENERAL AND SURFIELD—The Relative Short to

30th of June exhibits expenditure at 423,627L, being an excess over receipts of 71,617L.

MANCHESTER AND LINCOLY UNION.—The Balance Sheet to the 30th of June exhibits receipts at 208,122L 18s. 5d.; showing a balance, less expenditure, of 21,906L 5s. 2d.

CHISTERFIELD CANAL exhibits receipts at 7,058L; expenditure at same sum. The Revenue Account shows receipts at 6,171L 18s. 8d.; expenditure at 2,607L 15s. 8d.; balance,

GRIMSBY DOCKS.-The Balance Sheet to the 30th of June exhibits receipts at 431,2671.7s.7d.; showing a balance, less expenditure, of 63,3401. 18s. 9d. The Revenue Account shows receipts at 1,6011. 4s. 11d., and expenditure, 8041. 17s. 4d.; balance, 796l. 7s. 7d.

The CHAIRMAN: I expect, gentlemen, that you will agree with me that our report and the report of the engineers are so full that I need not occupy your time at any length in moving their adoption. You will remember, those of you who were present here about twelve months since, that I then stated that the portion of the line which has now for some time been completed between this town and Mantime been completed between this southern pecu-chester, passed through a part of the country pecu-lically capacitive to manufacturing distress. Unforliarly sensitive to manufacturing distress. tunately in that country there are towns which must the afflicted more than any perhaps in any other part of England, by the want of employment for those who work in mills. If you look at the table which we have prepared, as to the traffic, you will no doubt perceive, as I have frequently done, from the weekly returns, that our line may be considered very much as a barometer of the trade of the district. It is extraordinary to observe how the want of employment in the mills in that district is shown by an immediate falling off in the traffic of our line; more particularly, I may remark, as to the working people, who travel in the third and fourth class carriages. Therefore if you find that you have not so large a traffic as might have been expected, we are not wrong in stating that it is attributable to the unfortunate distress which has visited England, and more particularly this part of the country, during the last twelve or eighteen months. When we consider that, I do not think that we have any reason to say that we have been disappointed in the result of the work-ing of our line. On the contrary, we find that we have an increase on the whole, by reason of the great increase in stone and coal, and comparatively in goods. Considering these things we have no reason to doubt that when, fortunately for this country, we have a return to a prosperous state of trade, our line will reap the benefit of it. And we may expect that when parties have the means of travelling, they will use your line: they have no reason, that the directors are aware of, to prefer any other. It is with satisfaction that I can refer you to the very excellent traffic on that small portion of your line which is open in Lincolnshire. It is a very curious circumstance, when you remember that that line was opened only on the 1st of March, that the passenger traffic over its 16 miles already equals the traffic per mile between this town and Manchester. When you consider the time it must necessarily take in a country which has not yet had the advantage of railway communications, for persons to change to a certain extent their habits, and that those who have been accustomed to go by the carriers' carts to the New Holland Ferry are not likely immediately to fall into a new system-it must, I say, be a matter of sincere congratulation to the shareholders that this passenger traffic has so far hitherto exceeded their expectations. And, inasmuch as it is only very recently that arrangements have been made for the goods traffic, we may expect that the lines in Lin-colnshire will prove more profitable than had been ever anticipated. Thave always expected that the addition of the lines east of Sheffield would be, if I may use the term, the saving of the present line. I am sure many of the shareholders who have heard me at meetings similar to this, will bear me out in saying that I have always expressed a very strong conviction of that. I have felt that I was rather under than over stating the advantages that would result. Mr. Fowler, in his report, has stated that by the end of this year we shall have 80 miles open in Lincolnshire. That will give us a continuous communication from the north and east of Lincolnshire. By that time, we expect that the loop of the Great Northern will be finished to Lincoln, and the county of Lincoln will then be able to get a railway communication with this town, and thence to Manchester, since the portion of the line between this town and the Midland will be finished. It will be a circuitous communication, but it will be more convenient than any at present existing. I have no doubt that, though circuitous, it will be much used by the public, and the shareholders of 1.714. 2s. 3sd.

GREAT GRIMSBY AND SHEFFIELD.—The Balance Sheet to the 30th of June shows an expenditure of 997,212L, heing an excess over receipts of 46,379L. The Revenue Account shows receipts at 3.904. 2s. 1d.; expenditure at 3,396.

SHEFFIELD AND LINCOLNSHIBE.—The Balance Sheet to the

Digitized by GOOGIC

We have never forgotten the difficulty experienced to obtain money enough to prosecute the works, and we have felt the necessity of relieving you as much as possible. We have never, I can assure you, lost sight of that; and with much pleasure we have seen the of that; and with much pleasure we have seen the general acquiescence on the part of the shareholders in meeting our calls. We have only made calls when absolutely necessary. We have felt, and we feel now, very strongly, that the best interest of the shareholders is to be consulted by the speedy completion of the works. Unless we can get the main line open, we cannot expect the parent line to be really productive in proportion to what is required. I have stated before, but I will venture to repeat it, as there may be gentlemen here who may not have heard those observations, that the expense of working the line from Manchester to Sheffield, in consequence of its being only a length of 46 miles, is much more in proportion than it will be when the whole line is opened. The same power that enables us to move 46 miles, will extend itself very far to the east, and we shall obtain a greater amount of traffic over that portion now open, while we shall find a proportionate diminution of cost in the locomotive department. The directors believe that it is of the first importance to open the line as speedily as possible. The works, you may be assured, are executed in the most substantial manner. We have no reason to find fault, generally speaking, with the manner in which the contractors have done their work, though the engineers have had considerable difficulty in arranging with them the different periods at which the works should be finished, in consequence of our being obliged to give rather contradictory orders, wishing not to press too heavily upon you. With one exception, and that a slight one, there has not been any occasion to meet the contractors in the way of demands for compensation for works undertaken by When the main line is opened, and even the parts which will be opened this year in Lincolnshire, re shall find the necessity for the second tunnel at Woodhead: but it cannot be completed so soon as that; your interest requires that, as soon as possible, it shall be completed. It will be impossible to work it shall be completed. It will be impossible to work satisfactorily unless we have a second tunnel opened, to enable us to take to and from Manchester the goods to enable us to take to and from Manchester the goods which we may reasonably expect to pass between that town and Hull and Grimsby. Mr. Rendel, in his report, has stated very clearly what is done at Grimsby. He alludes to what, in the opinion of men jealous of our success, should have blown us up. I mean those blow-bells. It was thought we should not be able in consequence of them to convolve the be able, in consequence of them, to complete the works. I have inspected those works with Messrs. Rendel and A. Smith. Nothing can be more satisfactory than the works there. I have frequently adverted to those docks as being of essentially national importance. I cannot give you a better proof that they are so estimated by the Admiralty and the Government than by communicating to you the contents of a letter which I have received from Col.

Phipps.
Osborne, Aug. 3.—My dear Lord Yarborough,—His Royal Hishness Prince Albert having become convinced by inquiries that the projected docks at Great Grimsby are likely not only to become of considerable national importance, but also to afford a very desirable refuge to the shipping upon the eastern coast of England, has authorized me to communicate to you his Royal Hishness's consent to lay the first stone of the contemplated buildings. His Royal Hishness understands that the works will be in a proper state of forwardness for this ceremony to take place in the month of October, and I shall be happy, when the time approaches, to communicate with you as to the particular day that may be most convenient. day that may be most convenient.
Sincerely yours

That at once confirms the view I have always taken of the importance of these docks. I have told you, gentlemen, the opinion of the directors, that it is for your interests that the unfinished portion of this line should be finished as speedily as possible. To do that, you are aware that we must call on you for the means of finishing it. We have, as I have stated, wished to relieve you as far as possible. We have postponed works as far as it could be done safely, but I think the time has now come when we must use our best exertions to finish these works, and I think it far better that I should inform you frankly and fairly that we consider your interests require their comple-As such we have only one alternative, which is to tell you with equal fairness and frankness, that in order to do this, we must have money. We will use our utmost endeavour to press as lightly upon you as possible, but at the same time we must keep in view the object of finishing the lines. If it should press hard on some among you to have to meet calls frequently, I ask you to recollect that amongst the largest holders are the directors who have to regulate the time and frequency of these calls. I need not detain you longer than to state that at my request the three engineers are here. I have had

from them, besides their reports, very detailed reports for my own information respecting the different contracts, the money expended upon them, and what is required to finish them. I have requested the engineers to be here to bear me out in any observations may think it necessary to make on these subjects. But I think I need not trouble you now with the particulars. I have mentioned it merely to show you that I am prepared, with the engineers, to afford such information as may be required. As every shareholder has been furnished with a copy of the accounts, we need not detain you to read them. I may add that connected with the 80 miles to be opened by the end of this year, in Lincolnshire, a very serious subject has engaged the attention of the Board, and when that time shall come, it will be necessary to make some alterations as to the management of the line generally. At present, except for the pro-secution of the works, the management principally relates to the district between this town and Manchester; but we have felt that it will be necessary to enter upon a different system, in order to have pro-per control over the lines that will be open in Lincolnshire, and which will not at first have a direct communication with the present line. We therefore contemplate some alteration, but these are matters to be arranged by the directors. If, as I hope is the case, you still have confidence in the Board, you will give us the power to work out the arrangements that we deem necessary for the interests of the company. His Lordship concluded by moving the adoption of the report.

Mr. J. Chapman, seconded the motion.
Mr. Simpson, of Manchester, asked if it was correct
that when the interest on the loans and the dividend on the No. 1 quarters were paid, there remained 1,406l., or about 7s. per cent., to pay the dividend on the original 100% shares.

Mr. Turner referred the hon, proprietor to the

second page of the accounts; if any further information was required, they would be happy to give it.

Mr. SIMPSON wished to contrast the present statement with those made to them after the opening of the Manchester and Sheffield. The working expenses were then 50 per cent.; they were now 66 per cent. Though the traffic was then 33 per cent. less than now, they were congratulated that it had paid very nearly 4 per cent. Yet now, with a traffic increased 33 per cent., they found their working expenses were per cent., and their profit only 7s. a share. He had purchased largely on the faith of the statements of the directors, and he thought a good deal of ex-planation was required. They had now reduced the reserved fund to a mere nominal sum, and yet they were assured on the occasion he referred to that long before that fund was exhausted, the line would pay 5 per cent. He wished to know also what were the arrears on the calls upon the eastern section. made it out to be from 200,000l. to 300,000l., exclusive of the last call. He wished to know whether the capital of the eastern section would be enough to make the lines, and provide plant, stations, &c. without the necessity of creating another batch of preference shares, for he apprehended there would be difficulty in borrowing money for some time to come. He asked these questions with a view to dis-pel doubt. It appeared that 23,000*l*, was charged in the last half-year for law expenses. He had also to refer to what he must consider as a breach of faith on the part of the directors. Last August they issued a circular announcing the preference shares, and stating that if they were taken up no further calls would be needed for twelve or eighteen months. It was true that they had a saving clause, referring to the borrowing powers, but there was no probability that those powers could be exercised on account of the dearness of money. He had from 200 to 300 preference shares allotted to him, and he waited on the secretary and one of the legal advisers of the company, to say that he could not take up those shares, and also pay the calls on his other stock, and to ask whether he might rely on the statement of the circular. They told him there was no reason to doubt it, and he took the stock. But in January, there was a rumour that a call was to be made. the meeting in February, the question of calls was glanced at, but not strongly pressed. Now, the directors must have known at that time, that a call was absolutely necessary, and in less than fourteen days a call was made, and he was obliged to sacrifice his property to meet it. He suggested that the his property to meet it. He suggested that the directors should make a statement as to the frequency with which their calls would be required, in order that the shareholders might prepare for them. He asked if the directors had any objection to tell them what had been the cost of the parliamentary business this session. He wished to know, also, what amount of the capital raised by the No. 2 quarters had been spent upon the Ashton and Glossop

branches, because those branches were now contributing to the traffic.

The CHAIRMAN, in reply, said, that as to his remark that the calls had been paid up satisfactorily, he thought still, considering the state of trade and the want of money, that the directors had reason to be satisfied with the way in which the calls had been paid up. They had large borrowing powers, and they had had every expectation that they should be able to use them. But when they found that the borrowing powers in the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same than the same ing powers—in their case, and in that of most other lines—at that time and now were unavailing, the question arose whether the works should stand still, or the shareholders be asked to contribute. If they had been able to use their borrowing powers, as they had the reasonable expectation of being able to do. there would have been no necessity for calls. thing was left for them but to appeal to the share-holders for the means of going on. The directors had no choice. As they could not borrow, they were obliged to call. It might be unfortunate for gentlemen who had been engaged in speculations larger than they intended, but the directors really could not consider that. He begged the shareholders to remember that the directors were in the same boat with themselves; they had prosecuted the works as slowly as they considered it safe to do.

C. TURNER said it would be wrong in the directors if they did not admit that they had been deceived in their expectations. In common with the rest of the proprietors, they had expected a very different result from what had at this time been realised. Unfortunately, the last two or three years had shown that what appeared to be the best founded calcula-tions were deceptive. If they turned to other lines as well as this, they would find results very different from what had been anticipated. He fully expected that the capital would suffice to finish the line, but he might be deceived about it. As to the question about the time when future calls would have to be made, it was not usual to put such questions, nor could the directors always tell. They had hoped to have been able to borrow some money, and if so, the calls would not have been made. But they had not been able to borrow any considerable amount. It was probable that they might call for 10 per cent. three months till the whole was paid up. That was the probable result, as it appeared to him. He did not include in this the No. 1 quarters. The directors had but one object, and that was to promote the prosperity of the undertaking. As to the call in the spring, it unfortunately happened that when it was made the directors found they could not publish it immediately, because the legal time had not clapsed, and they were obliged to defer it for a fortnight. He added, in answer to Mr. Simpson, that a considerable amount of the preference stock had been allotted, and the directors expected that it would be taken up. The portion which had not been taken up had since been disposed of without loss, and he believed he might say with a small profit. The stock was all out

The Chairman, replying to Mr. Simpson, said it was only an act of justice to Mr. Meadows to say, on the part of the directors, that they had quite as much confidence in him as the shareholders could have. As to the future management, he could assure them that they should not lose sight of the important question of economy. Whether the arrangements which might be necessary would involve any increase of expense, he could not tell, because they had not completed their arrangements. But he might say that the directors had come to the conclusion that the affairs could be as well managed by twelve directors as by eighteen, and that considerable economy would result from that reduction. He mentioned this to show that they were anxious to economise; but he show that they were anxious to economise, should deceive them if he did not add, that they must have had management. That not so economise as to have bad management. would be a very false economy. They must see that it would require a very different system of management when they had 46 miles open in the west, and 80 miles in the east, with an unfinished portion between them. It was he who had brought this matter before the Board, feeling that it was not right to the proprietors that they should have 80 miles insuffi-ciently looked after in a new part of the country. Mr. Simpson said his question as to the capital of

the No. 2 quarters had not been answered.

Mr. TURNER replied. The money had been spent, and they had an account of it. But he must put it to the meeting whether they wished that a question of this nature should be answered. Supposing 1,000l. of that money had been spent on another part of the line, what did it amount to!

Mr. HEALEY conceived that Mr. Turner had made a great mistake in refusing to answer the question as to the amount of arrears. He was not quite satisfied by the way in which the inquiry relative to the calls

Digitized by **GOO** 

had been met. Two years ago they had been led to expect that as the traffic increased the working expenses would decline; but the reverse had been the fact. With the largest return of any spring six months, they had the heaviest item of expense. wished to ask how this very serious charge of 60 per cent, had arisen during the last six months. The line had not a bad traffic. It had returned more than 50l. per mile weekly. Nor was it a line of an undesirable length for economical working. It was not 15 miles, but 46; and the Liverpool and Manchester had paid 10 per cent. with a length of only 30 miles. He wished to ask, also, how the Board accounted for the serious loss, within the last six months, on two canals, at the rate of 15,000l. per annum. Were they to contribute out of their hard earnings, taxed by 66 per cent. of working expenses, 15,000l. to maintain two canals, besides sinking the interest of all the

capital expended upon those canals? Mr. C. HOLLAND, of Liverpool: I can only assure the meeting we have no objection to go point by point through all the details of the long statement which has been made. You may safely trust to the statement of the accounts, for we have made it out in the clearest way we can; and I will take upon myself the responsibility to answer at once the question as to the arrears on the eastern section. They do not amount to 150,0001, and considering the large amount which has been called up during times of the most depressing character, I consider that the proprietors of the eastern section have no reason to be taxed with any more remissness than the proprietors of many more lines which I might mention. The hon, proprietor has charged us with great want of foresight as to the future calls. Now, to a very considerable extent, I admit that he is justified in doing so. We cannot claim any more infallibility than the rest of the community, or than the members of other Boards who have fallen into the same error. Nobody expected that the times would continue in the depressed condition in which they are. We had decided among ourselves, that it would be to the interest of the proprietary rather to submit to a very considerable temporary sacrifice, in the shape of interest, for twelve or eighteen months, than to make more calls. I assure you that on the Board make more calls. I assure you that on there were more strenuous advocates of the policy of there were more strenuous advocates of the policy of the baye seen here to-day. We not making calls than I have seen here to-day. fought against that necessity to the last, but I confess that we did not, and could not, predict or foresee that things would continue so bad as they are. It is the head and front of our offending that we had stronger hopes. We did try to negotiate a loan, and we were led to expect that we should be able to obtain it. We were prepared to pay 13 or 2 per cent. over 5 per cent. to carry us on for twelve or eighteen months, and to open the line without the necessity for much further calls. We had decided, as a resolution now standing on our books will show, that it would be to your interest to make that sacrifice, rather than to furnish the money by calls. But that negotiation failed. During its progress the French revolution occurred, and then we were driven into a corner, and obliged to appeal to you. Events have been against us, and the only charge that can be made against us is, that we were too hopeful. And now, as to the traffic; two years ago you will find that the tolls were then something like 15 or 20 per cent. higher than The character of the traffic, too, differed much that of the last half-year. You are all aware from that of the last half-year. that the greatest profit is derived from passenger traffic, and that the least profitable is that which has increased upon us,-the traffic in minerals and coals. Much of the mineral and coal traffic too, is for a very short distance, and that makes it still more unprofit-We have lost temporarily a portion of that traffic which is most profitable—the passenger traffic, which enabled the Liverpool and Manchester to pay 10 per cent. I trust we shall recover that traffic when the times mend, and that with the extension of our line we shall obtain a long traffic in merchandise, which will yield a larger profit than at present. We are obliged now to receive the traffic from the Midland at a very low rate, and by a circuitous route; for the Midland are taking it at a very low rate in order to attract it. We are obliged to accept it at the same rate, and to warehouse it at Manchester. Till we have a good communication with the east, we shall have immense difficulties in the traffic, and I cannot hold out any sanguine hope that we shall have much profit from the simple working of the Sheffield and Manchester line per se. With regard to the canals, I fully sympathise with Mr. Healey. When I first joined the direction, the thing I most lamented was that we were wedded to those unfortunate canals. It was done during the time of the mania, when it was thought desirable for railways to possess canals, as a mode of giving them an occupation of the territory; that is the excuse to be made for the gentlemen who promoted it. But it was, in my opinion,

a lamentable error to enter into partnership with the canals. Yet we are now wedded to them, and must make the best of them. But Mr. Healey has not correctly stated the amount of the loss. Referring to the account, he will see that it was about 3,600*l*. for the half-year. That is the actual loss, and we do for the half-year. That is the actual loss, and we do not disguise it. We must deal with it in the best way The general stoppage of the mills has di minished the traffic and increased the loss. It should also be stated that by the purchase of the Ashton Canal we have acquired a very valuable property in Manchester. It has given us the possession of land near the station at Manchester and has afforded us great command in that part of the town for land for warehouses. The advantages gained have not been brought to the credit of these canals; but we ought to credit them with the value of that land which has been taken for other purposes. Besides that. we receive a rent for the supply of water under a contract we have made with the corporation of Manchester. The canals have hardly been fairly dealt with. We have taken the worst view of the loss which they involve, but the Chesterfield canal has produced a profit. There is another point which has been very fairly referred to,-I mean the apparently enormous amount of the parliamentary expenses. Although, therefore, we cannot tell what the expenses of the present session will amount to, yet we are certain they will be very much less than we have hitherto paid for the same amount of works. I congratulate you also on the anticipation that we shall have few or no more parliamentary bills for many years to come. It is gratifying to remark that we have carried every measure we have applied for. I trust you will be of opinion that we have shown every desire to give the information required, and I am sure you will always find a similar disposition prevailing at this Board.

Mr. RILEY inquired when the South Junction line would be ready for work, and expressed an opinion that the allowance of 300l. a year to the directors for that line was too much.

Mr. WHITAKER said he believed it would be possible to run from Altrincham to Manchester in November; but the junction through Manchester would not be completed till March or April. As to the allowance to the directors, the directors were willing, in fact, to receive only 150%, and they had applied to the London and North-Western to join in that reduction.

The CHAIRMAN added that Mr. Meadows had writ-ten officially to the London and North Western, stating the opinion of this Board, but had had no reply.

A Shareholder inquired where the dividend for the 1001. shares was to come from in future, supposing that the line should produce no more than it had done. Mr. TURNER replied, that if the line did not earn

5 per cent., the shareholders would not receive it, and The CHAIRMAN added, that when the whole line should be opened the proprietary throughout would receive dividends according to the profits. He should be much mistaken if it did not go much beyond a 5 per cent. line.

Another Shareholder inquired if the Manchester and Lincoln Union line would now be made.

The CHAIRMAN said it was the intention of the directors to confine their operations to the main line. The Shareholder: But will that line be made?

The CHAIRMAN: Perhaps the hon. proprietor will ask the shareholders if they wish it to be made immediately.

Another question was asked as to the interest on No. 2 quarters and the one-eighth shares.

Mr. TURNER replied that they were obliged to pay 5 per cent, on them until the lines were completed.

The resolution was put and carried unanimously. The CHAIRMAN then moved the confirmation of the forfeiture of a number of shares, on which he stated from 40,000l. to 50,000l. had been paid; and also a resolution, declaring a dividend on the 100l. shares, and 74 per cent. on the No. 1 quarters, both of which were unanimously carried.

The CHAIRMAN: Before I leave the chair I wish to state that some unfounded impression appears to have been produced by Mr. Turner's wishing, certainly not in an offensive manner, to decline answering certain questions. It is not easy, without some previous notice, to answer such questions off hand, and it is certainly better that they should not be answered than that a wrong answer should be given. There is not, to the best of my belief, any wish to do other than full justice to the proprietary. The directors have no private object to gain, and I think you will bear me out in saying, that in these times it is not quite a bed of roses to be in the management of a large concern like this. We wish to finish the line, and then we believe that our views will be borne out, and that your property will be a very valuable one. You see it now under very disadvantageous circumstances. You have a great amount of capital locked up in uncompleted works. But the money has been,

I believe, judiciously spent, and the line goes through a country which will show, when it comes into operation. that it is well deserving of railway accommodation. My own impression has all along been, that the part which will be last finished, will be found merely from local traffic, very productive. I have no doubt that there will be a considerable through-traffic. I would not consent to sit upon the Board, or have anything to do with the direction, if I were not thoroughly convinced that the Board meant to act honestly, and to use their best endeavours to carry out the plan in the mode they think most conducive to your advantage. It must be obvious to you, that it can be no advantage to me to have a deal of additional business thrown upon my hands, which I need not necessarily undertake. I feel that while I am upon the Board, I am responsible along with the rest of the directors, for the proper administration of the affairs of the company. I believe that your Directors are men of honesty and integrity, and that you are as well served by the different officers of the company as any company going. If you will only have patience, my belief is, that you will find your line more envied in a few years than you at pre-

Mr. Turner said the shareholders would be satisfied to learn that the arrears were not so large as they had thought. But if they were ever so large, it was not for the good of the company that it should be stated to the world; for it gave poor encouragement for other proprietors to pay up, or for persons to lend their money.

Mr. HEALEY moved a vote of thanks to the Board of directors, which was seconded, and carried unani-

Mr. T. Webster, barrister, of London, moved a vote of thanks to the Earl of Yarborough. In what had been said as to the importance of the connexion between Lincolnshire and Manchester, they had heard little of the importance of joining the Humber and the Mersey, which to every one acquainted with the vast trade between the new world on the west, and the north of Europe on the east, must prove that this was one of the most important lines in the country. He had not a doubt on that subject, and in looking to the future developement and prospects of the line, that feature should never be lost sight of. As to the state of the stock of this company, at present he thought it injurious that there should be such a variety of stock on which calls were being paid. He would suggest that, instead of having stock of 50l. with 35l called up; 25l with 12l 10s called up,—the 50l shares should be divided into two 25l shares, one paid up, and the other with 10t. paid. The effect of this would be that the shareholders would be relieved by a portion of their stock ceasing to be liable to calls. The 100*l*, shares now paid up were at 40*l*, discount; and the 25*l*, shares paid up would occupy a corresponding position in the market. He thought this was a matter of great importance.

Mr. PHILLIPS, of Liverpool, seconded the motion. which was carried unanimously.

The CHAIRMAN, after returning thanks for the confidence displayed in himself and the board of directors, said he might perhaps be allowed to remark, as to the observation on the difficulty of borrowing money, that it perhaps might not be in the knowledge of all shareholders that they had upwards of 4,000,000l. paid up, and yet had only 800,000l., which was only a small proportion, on loan. This was much less in proportion than the loans on many other lines and when this was considered, he thought there should be nothing to deter parties from lending to this railway as soon as they would to any other. In the difficulties it experienced, it was only in the position of almost every other line. As to the suggestion of the hon. proprietor who last spoke, if he would put it in writing, it should have the best consideration of the Board. What occurred to him was, that it would incur the expense of the issuing of new certificates.

SOUTH YORKSHIRE, DONCASTER AND GOOLE. Aug. 11.—Half-yearly Meeting, London.—Mr. Den-ISON, M.P. in the chair.

The Secretary read the report as follows:

The Segretary read the report as follows:—
On the last occasion on which your directors had the pleasure of meeting you, it was intimated that, in compliance with the wishes of a large majority of proprietors, as expressed at an extraordinary general meeting, the works had been commenced between Doncaster and Swinton. These works have steadily progressed under the direction of your engineer, who reports as follows:—"The proceedings adopted with respect to the execution of the line have been highly satisfactory. The greater portion of the land between Swinton and Doncaster has been agreed for. 5,000 tons of rails, and a considerable quantity of chairs and sleepers have been contracted for, at the present low and sleepers have been contracted for, at the present low prices. The plant of waggons and rails necessary for exe-cuting the whole line has been obtained at a very reasonable cost, and the several works between Swinton and Doncaster are in active progress, where possession of the land has been obtained. About 210,000 cubic yards of earthwork have been removed. The cutting through the limestone hill at

Digitized by **GOO** 

Warmsworth is the heaviest work on the line—about one-third of the same has been executed. Operations are now proceeding at six faces in that cutting, so that the time for completing it will not exceed what is requisite for other parts of the line; and it is hoped that the anticipation already expressed by the directors, as to the time of completing the railway between Swinton and Doncaster, will be realized, without departing from a steady economical mode of executing the works. The attention of your directors has been confined, for the last six months, almost exclusively to the formation of this portion, so as to procure the earliest return upon the capital proposed to be expended, and to limit its application to an amount which the finances of the company would be able to bear without undue pressure upon the proprietary. The shareholders are aware that a bill for an extension to Penistone was rejected by a Committee of the House of Lords; but your directors have the satisfaction to state that the interests of the company have not suffered by such rejection, arrangements having been entered into with the Manchester, Sheffield and Lineolnshire, whose bill for a similar scheme has been obtained, empowering the company to use their line when constructed; thereby insuring all the advantages that the passing of your own bill would have secured to you. The total amount of profits accruing to the 30th of June amounts to 19,4612. 185 5d., out of which the deferred dividend, declared at the last meeting, amounting to 2,8121. 10s. being deducted, leaves a balance of Warmsworth is the heaviest work on the line-about onethe deferred dividend, declared at the last meeting, amounting to 2,812l. 10s. being deducted, leaves a balance of

16,649l. 8s. 5d. as profit in the hands of the company. The directors recommend that a deferred dividend at the rate of of per cent. per annum be now declared, for the half-year ending 22nd of July last, amounting on the capital now called up to 4,500d. The directors are still open to receive monies in advance of calls, upon the terms of the circular of the 1-th of January last, viz. 5 per cent. present payment, and an additional 2 per cent. per annum dividend deferred until one month after the amalgamation.

The statement of accounts showed the receipts at 138,953. 0s. 9d.; expenditure, 92,705l. 2s. 10d.; leaving a balance of 46,247l. 17s. 11d.

In moving the adoption of the Report, the CHAIR-MAN bore testimony to the accuracy of the statements of the company's engineer, a gentleman in whom he had the highest confidence. He had no doubt of the works being completed in the course of the ensuing spring or summer. With regard to the ultimate prospects of the line he entertained as favourable an opinion as ever, and he could confidently state that he knew of no railway not yet at work in which he would sooner make an investment than the South Yorkshire; for he was convinced that in a few years it would a very remunerative undertaking. He wished to call their attention to the fact, that the balance of

16,000l. stated in the accounts, was derived from the profits arising from the canal with which the railroad

was amalgamated.

Mr. J. Thompson seconded the adoption of the Report, in a few brief observations, in which he stated that the receipts on the canal paid 3 per cent. on the paid-up capital of the company.

In answer to a Proprietor he stated that the time

which would elapse before the whole line was completed would depend on the amount of calls made. It would require 15t. per share to complete the line.

In answer to another Proprietor, the CHAIRMAN

stated that the length of the line from Swinton to Doncaster was about 9 miles, and the remainder of the line about 9 more. The entire length, including branches, was not more than 20 miles. About 81. per share, inclusive of what had been already paid, would carry them between Doncaster and Swinton, and about 71. per share more would complete the remainder.

The Report was then adopted, and the dividend agreed to.

[ For further Reports of Meetings, see p. 554.]

#### Monen Market.

#### PRICES OF BRITISH STOCKS.

Sat. | Mon. | Tues. | Wed. Thurs. | Fri. 

* For account, Aug. 10, Sept. 7. + Ex Div.

London Stock Exchange, Aug. 11 .- The railway market has been tolerably steady during the week until to-day, when, owing to the London and North-Western announcing at the meeting a dividend of only 7 per cent .- to make up which something is taken from the reserve fund-quotations became much lower, and a general depression ensued. The prevailing gloom was in some measure increased by a fall in the English funds, owing, it is believed, to some large

sales on account of the Irish banks.

Liverpool, Aug. 10.—There is no change of moment in the state of our market. The amount of business transacted continues very limited. Prices are quoted a shade better to-day, but the demand is without improvement.

Sublow, Brothers.

Manchester, Aug. 10.—Our share-market is very languid; but little business has been done during the week, and prices are still drooping.

SAM. GRINDROD.

Birmingham, Aug. 10. - This market has been heavy throughout the week, and more disposition has been manifested to press sales. To-day Shrewsbury and Birmingham B's were done at 3% dis.

W. Banks.

York, Aug. 10 .- Sellers preponderate in the market, but there is little disposition to purchase until the general meetings are held. Grayston & Earle. Hull, Aug. 10.—The share-market remains almost

without alteration. North British thirds have given way in consequence of another call. Kingston Cottons have changed hands at 48 dis.; the demand for this stock is rather active at the low price it commands. The following are the latest prices :-North Midland preference, & prem

FLINT & TOOTAL.

Glasgow, Aug. 10.-The market continues in an inactive state, and few purchases have been made, except in some of the light speculative shares. Prices generally are a trifle lower than last week. The following are to-day's latest sales:—Caledonian preference, § prem.: Ayr, 67; ditto, halves, No. 1, 7¼ dis.; Great Northern, 9½ dis.; North British, thirds, 2½ dis.

BUCHANAN, AITKEN & Co.

IRON TRADE .- Glasgow, Aug. 4 .- The market for pig iron is better-a good deal of inquiry; and sales would be made to some extent at 45s. for mixed numbers, but holders ask 45s. 6d., even at which there is little to be had.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible. j MEETINGS.

BIRMINGHAM, WOLVERHAMPTON AND STOUR VALLEY. - Aug. 14. Birmingham, at 1 BRISTOL AND SOUTH WALES JUNCTION .- Aug. 14. Bristol,

at 12. CORE AND WATERFORD,—Aug. 18. London Tavern, EASTERN COUNTIES.—Aug. 17. London Tavern.

Glasgow, Dumfries and Carlisle .- Aug. 17. Glasgow,

at 1.
GREAT NORTHERN.—Aug. 12. London Tavern, at 12.
GREAT WESTERN.—Aug. 17. Bristol.
LONDON AND BLACKWALL.—Aug. 22. London Tavern, at 12.
LONDON, BRIGHTON AND SOUTH COAST.—Aug. 18. Bridge-

house Hotel, at 1.
Midland.—Aug. 19. Derby, at 1.
Newry, Warrenpoint and Rosstrevor.—Aug. 15. 19, Moor-

NORTHERN AND EASTERN .- Aug. 19. Bishopsgate station,

TH-EASTERN.-Aug. 17. Bridge House Hotel, at 1.

WEST CORNWALL.—Aug. 17. King's Arms, Westminster, at 1.

## DIVIDENDS.

NORTH STAFFORDSHIRE .- 4s. per share, Aug. 14.

## Joint-Stock Companies' Gazette.

Steam navigation to the Cape of Good Hope is, we hear, to remain no longer a mere matter of talk, but to be a reality. An experimental screw-steamer is to be shortly despatched to the Cape, thus commencing this important desideratum needed so much by the colony. As regards freight and passengers, the enterprizing projectors will, we are sure, meet with every

support both at home and at the Cape.

On Friday last week, Mr. Bouverie asked the President of the Board of Control, whether the EASTERN ARCHIPELAGO Company had paid up the proportion of the proposed capital required by the charter. Mr. Labouchere stated that the delay on the part of the company had been caused by several matters, and that the charter would not be made void as the company would be thus punished for the faults of others. As regards this important company, we will say with all confidence, that it is one of the soundest projects ever brought forward, and that too under the ausnices of men of high standing and well versed in the trade of the East. The great pressure in the money market has perhaps given a temporary check to the carrying on of the company.

A society or company has been started, under the title of the Suburban Village Association, having for its objects the erection of villages near railway stations and within an easy distance of London, to form residences for clerks, artizans, &c. of limited means. The committee is composed of persons of good standing in society. The capital is to be in 51. shares, to make 250,000t. Such a society will prove of great benefit to the classes mentioned, as well as generally to the inhabitants of London, and give a slight impulse to the railways in the shape of passen-

ger traffic.

The proprietors in the CANAL DES ALPINES Com pany, originated in 1845, are to meet at Liverpool shortly, to determine on certain modifications in the constitution of the company.

The British and Irish Steam Packet Company's dividend to the 30th June is at the rate of 6 per

cent, per annum.

At the meeting held at Liverpool last Monday of the proprietors in the ANDERTON CARRYING Company, it was resolved that the company be forthwith dissolved; and that a second meeting should be held to sanction the selling off all the effects of the company.

Banks.

A special meeting of the London and Westminster proprietors is to be held next Wednesday, in reference to alterations in the deed of settlement

Docks.

The new North Docks at Liverpool were opened on the 4th inst., and consist of the Salisbury, Nelson and Stanley Docks. The works are very well executed. The time taken in forming them has been three years. Since the commencement of these docks, thirty-four acres of docks have already been added, and twenty-five more nearly completed, to meet the increasing trade of that port.

Mines.

The mining districts of Lanarkshire are in a very disturbed state, and the mining population have held meetings lately, to demand an increase of 1s. 6d. a day above the present rate of wages, but the employers show very little inclination to yield to their wishes.

The returns of the HERODSFOOT for the next two or three months it is expected will show a sur-

plus in favour of the company.

Letters from the St. John Del Rey state that the gold obtained to that date. May 18, is about 5,023 oitavas per cubic foot. Gold of about the value of 12,000t. has arrived.

Remittances and letters have come to hand from the IMPERIAL BRAZILIAN. The operations of the company are very satisfactory.

Letters from the ALTEN announce no additional improvements, yet they are of importance to the shareholders.

The advices from the mines of the NATIONAL BRA-ZILIAN Company are to the 12th of May, and very encouraging to the shareholders.

TO CORRESPONDENTS.

W. P. A. (Indian Railways) is thanked. His obliging offer ill perhaps be accepted at some future time.

P. J., Halifax.—Look to the revenue account of the pre-

eeding year.
M. (Edinburgh and Glasgow) may rest assured of the

correctness of the statement.

correctness of the statement. P. J. M. (Rouen and Dieppe).—No one can say. E.T. (Eastern Counties shareholder).—The statements are made entirely without authority.

# Railway Chronicle.

Some important facts were to be learned at the half-yearly meeting of the LONDON AND NORTH-WESTERN. The reduction of dividend to 7 per cent. was received with silent resignation, if not with content. Mr. Glyn reminded his hearers that he had gone out of his way in 1846, and offended some friends by stating that the price of their stock was then too high. He now considers that it has been unfairly depreciated by the circulation of calumnious reports. He showed that the works of the company were in a perfectly sound and efficient condition, and that the finances were in a state, both as to form and substance, which would bear the closest investigation. In answer to questions from shareholders, he stated that the whole traffic to Birmingham amounted to 7 per cent. on the gross traffic. That was the whole traffic that could be affected by the competition of the Great Western over the Birmingham and Oxford. But not one ounce of that traffic could be diverted until the Great Western made a very considerable reduction in their rates and fares. That the whole amount of the northern and eastern traffic which could be affected by the Great Northern competition, amounted to 3 per cent. only. With respect to the Trent Valley, Mr. Glyn explained, that although between the termini of that line he was of opinion that 10 per cent. would be earned, that 10 per cent. would have been, to a great extent, abstracted from the London and North-Western main line, by a hostile company; and that in purchasing it he never expected to make 10 per cent. of it. but to avoid losing a considerable share of 10 per cent. As a set-off to these losses, or prospective losses, reference was made, both by the chairman and shareholders, to extensions which The arwould, undoubtedly, be profitable. rangements with the Leeds and Dewsbury were unanimously considered advantageous; and Mr. Glyn and Mr. Boothby both anticipated a considerable increase in traffic from the opening of the Chester and Holyhead, which will reduce the journey to Dublin to fourteen hours. It seems that the Caledonian is increasing its traffic every week; and the gross traffic on the London and North-Western was greater last week than in any week since the line has been open. The extension to the Blackwall Docks, which is proceeding rapidly under very favourable contracts, Mr. Glyn considers one of the most important and profitable extensions ever undertaken in connexion with the original line. Although under the control of an independent company, this great merchandise-line is, virtually, part of the London and North-Western. Among the more satisfactory negative assurances were, that no parliamentary applications were contemplated-no new purchases or leases; that no intention was entertained of leasing or finding capital for the Aberdeen line; and that a committee was continuing its labours for economising in every department, having already effected considerable reductions. A considerable part of Mr. Glyn's speech was devoted to exposing the fallacious absurdities of Mr. Arthur Smith,

imagined that this extremely silly and ignorant person could have produced any effect, even upon the most timid shareholders, we should long since have presented our readers with a string of arithmetical blunders as curious as his offences against grammar and English. But in times of depression the grossest misstatements carry, it appears, some weight. That Mr. Smith does not stick at trifles may be learned from the fact that he has tried to give his lucubrations importance by representing himself as employed by the Chancellor of the Exchequer to investigate the financial position of British railways. The fact being that his publishing speculation has been a complete and very inconvenient failure, in spite of the ruse he adopted of reviewing and praising his first pamphlets in his last. - In future, endeavours are to be made to place the accounts in the hands of the shareholders a few days before each half-yearly meeting. On the present occasion it was found impossible to effect that most desirable object without deferring the payment of the dividend nearly a fortnight. Mr. Glyn said that until the buildings were completed at the Euston station-which would enable the whole establishment, now divided between London and Liverpool, to be centralised-he would not pledge himself that this preliminary circulation of accounts could be

In reference to the dispute with the enginedrivers Mr. Glyn, on the part of the directors, distinctly denied any intention to reduce the wages of those servants; and after stating that the dispute was a personal one between the men and the locomotive superintendent, declared the directors were determined to support their officer.

Mr. Creed's resignation was announced as having been tendered by that gentleman in consequence of his advanced age; and amid the unanimous cheers of the assembly, Mr. Glyn stated that the secretary, who had so long ably and zealously served them, would be elected to the first vacancy in the directorate. He took the opportunity of denying that there ever had been any, even the slightest difference, between the directors and their secretary on the subject of the accounts of the company. A suggestion from a shareholder, that at the earliest possible date the capital account should be closed, was warmly received. Altogether the meeting passed over more calmly than might have been anticipated.

At the half-yearly meeting of the MANCHES-TER, SHEFFIELD AND LINCOLNSHIRE, which passed off well, notwithstanding the present circumstances of the line, the last time we imagine they can wear their existing aspect, two remarks were made deserving of notice. In explanation of the amount of traffic, Mr. Holland observed that the present earnings are upon a rate from 15 to 20 per cent. lower than they were two years ago. This is a pregnant cause of the unsatisfactory state of the traffic of almost every line just now, and it should not be forgotten by shareholders in all future parliamentary proceedings. We have said again and again, that Parliament was too eager to impose, and shareholders too eager to assent to, a reduction of fares a great deal too low to give fair profits. We are glad to see such a conviction fairly announced, and our advice to this as to all other lines, is to bring up their rates as high as their Acts permit them to do. The other observation was a more cheerful one, made by the Earl of Yarborough, who pointed out that the traffic on the 15 miles at New Holland, in Lincolnshire, though only opened in March last, was already equal to the traffic per mile between Sheffield author of 'The Bubble of the Age.' Had we and Manchester! New Holland and Grimsby

seem 'nowhere' as compared with those towns. The traffic is purely local and agricultural, and even thus early more promising than that between the two enormous manufacturing towns. It is obviously of a sort less subject to the influences of commercial depression. Once attract the market people to carry their eggs and butter to Hull, and it is difficult to say that their doing so will not year by year increase, under any circumstances, so long as Hull wants eggs and butter. But the manufacturer and the weaver are either rushing in crowds or scarcely moving at all, just as the commercial vane happens to point, between the manufacturing towns. The unanimous feeling of this meeting appeared to be, that the agricultural Lincolnshire lines would be the salvation of the manufacturing portion. And there should be as little delay as possible in uniting them.

The shareholders of the LANCASTER AND CAR-LISLE adopted their report without much discussion of the contents. The passenger traffic appears to have increased; and, indeed, the only unsatisfactory matter is the relation of the line with the Lancaster and Preston. A dividend of 1l. per whole, and 4s. 6d. per third share was declared, and plenary authority was given to the directors for the settlement of the Lancaster and Preston question.

We have only to record from the report of the Kendal and Windermere that the Board propose to raise 50,000%, by issue of 7½ per cent.

preference shares.

The following companies have also held their half-yearly meetings, and received their reports and accounts:—

Boston, Stamford and Birmingham, who suspend active operations till the advance of the works of the Great Northern towards the point of junction.

Coventry, Nuneaton, Birmingham and Leicester, who have obtained an extension of time for their works. East Lincolnshire.

Royston and Hitchin, who will probably commence their works early in the ensuing year. South Yorkshire, Doncaster and Goole.

The BIRMINGHAM AND OXFORD proceedings of late would seem to imply a wavering in the Great Western party; whose designs are evidently not a little perplexed by the new frame of the bill as it has been adjusted in the House of Lords. We shall look for the further issue of this affair with some curiosity; and it will not greatly surprise us to find the reluctance of Mr. Russell to complete the bargain as marked as was his eagerness to enforce it formerly. Whether the approaching term of cash payment may or may not have any influence in producing such a result, we do not think it needful to inquire. The matter has been brought to its present pass with the consent of the shareholders, and its further solution must now be taken on such terms only as they may be able to command.

We shall but briefly advert to the new movement of dissent that has broken out amongst the proprietors of the London, Brighton and South Coast; several of whom have met this week to organize a general attack on the present system of management in that concern. On the merits of the case we shall not now express any opinion; but may simply remark, that the topics most insisted upon by the promoters of the new opposition in this instance will give matter for all managing bodies in all quarters to reflect upon seriously. It may be seen that those tendencies to which we have repeatedly and long since called their attention, are at last beginning to shape themselves into adverse acts; and that in the present state of railway property and profits, the acquiescence that has hitherto responded to all measures proposed by directing bodies, can no longer be

counted upon as a matter of course. say, is the most important comment to be made upon the particular case in question. It is evident that a spirit of dissatisfaction is gaining ground; and that it will only be appeared by something like substantial proof of measures being in progress to remedy the causes which have mainly produced the effects complained of. We are sincerely anxious that this visible piece of instruction may not be thrown away; because we are certain that nothing can be more injurious to the welfare of all concerned than the growth of discord in any partnership undertaking whatever; as, also, that union cannot long be maintained in a period of difficulty except by a prudent and open determination to ascertain and rectify the causes of embarrassment.

The dispute between the LONDON AND North-Western and their engine-drivers, from the statements made at a meeting of the latter, appears to be as follows:-The company some time back granted an increase of wages. and a tariff was agreed to,-the daily pay being in proportion to the men's length of service, with some further advantage contingent on the time the engines ran without needing repairs. The wages rose as high as 8s. per diem, the inspector having a power of imposing fines for irregularity, misconduct or drunkenness. Classes were formed, and a certain number received the highest rate, and so on for the others, promotion taking place according to seniority. This system appears fair enough, and was satisfactory to the men. The alteration which is distasteful to them is the power assumed by the company of striking off from the higher list any one who may be guilty of faults, and not filling up the vacancies except at their own discretion; this the men assert would be tantamount to giving their employers the power of reducing the higher-paid grades altogether. On the other hand, the company's inspector declares he has no such intention. As far as we can judge, this is a correct statement of the position of the quarrel. Now we do not for one moment deny that engine-drivers ought to be remunerated on a liberal scale: they are a most important class of public servants,-they run some risk in their daily employment, and are constantly exposed to the weather; good or bad it matters not, the train must keep time ;-property of great value is in their charge, as well as the lives and limbs of the passengers they are conducting, and they ought, as a matter of course, to be trustworthy, sober men. That there has been great improvement in their general character we readily bear our testimony; but we much question the wisdom of their present policy. The London and North-Western has hitherto been considered the model company for liberality and fair dealing to all, but to their servants in particular; and unless, as we strongly suspect, the men are led away by designing knaves, the dispute may be easily settled. For the sake of the drivers, we trust must be the sufferers. Of course, if according to their contracts they choose to give the requisite notices, they are at liberty to leave their situations, and fall back upon the 10,000% fund so vauntingly talked of, from which they are to receive 30s. per week so long as the strike continues—with a probability, we are told, of the men belonging to other companies following their example. We will, however, only sup-pose 250 North-Western drivers are to be per week on a fund which, we imagine, was intended for sick or wounded members. The company may be put to some inconvenience, and considerable expense, but in the

the engines; steady young men, on promotion, will gladly better themselves; and those who have struck may turn their hands to some other employment, or probably, after a time, be glad to commence their career again as stokers, at 2s. 6d. per day, instead of 8s. In nineteen cases out of twenty, strikes have ended in the serious injury of the workmen and their families; and clubs and unions, which their founders fancied were to protect their interests, have more frequently tended to drive trade away. Such was the case in the capital of unlucky Ireland, though O'Connell vainly tried to set the matter in its true light before the shipwrights and carpenters, who were then combining and using violence to carry out their measures; but they would not follow his advice, which for once happened to be their true interest, and shipbuilding and its attendant employments went elsewhere. Intimidation will not be submitted to in this country, and the engine-drivers will find the law too strong for them if that is attempted. Railway property is not just now so flourishing as to justify any management but that of rigid economy in all its departments. Many poor fellows have recently returned from France who would only be too happy to find employment, and know what it is to bite on the bridle. A large field has been closed for this special employment, not only in France but on the Continent generally, and it is likely enough affairs may be worse rather than better. It would be well, therefore, for the North-Western drivers to reflect a little on the steps they are taking; they do not stand on such a 'vantage ground as they imagine, and if they fancy they are to guide the destinies of the railway interest, they will find themselves grievously in error. similar affair occurred some years since on the Midland line, which, by the firmness and good management of the officers, was quietly settled; but the men did themselves no good, the turbulent were dismissed, and the rest given to understand that the directors would not submit to any dictation. We are glad to be able to add, that after interviews with Mr. M'Connell and one or two of the directors the matters in dispute are said to be in a train for amicable arrangement.

From our official returns it appears that the amount of traffic for the last week, on 4,015 miles of railway, was 231,828/., thus accounted for:—132,796/. for the conveyance of passengers only, 46,677/. for the carriage of goods, and a remainder of 52,355/. for passengers and goods together, not respectively apportioned; being an increase of 19,913/. over the corresponding week of last year, when the mileage was 3,230. The average earnings per mile were 58/., whilst in 1847 they were 65/.

#### EAST INDIAN RAILWAY.

The views which we have expressed on the subject of the East Indian Railway, this will be the case, for in the long run they and in which we have anticipated all our contemporaries, we have the satisfaction of finding have attracted the support of powerful auxiliaries. Many of our readers will have already seen the City article of the Times of the 9th inst., in which our exposition of the probable prospects of the East Indian line is referred to, though without a sufficiently specific designation of the source from which it is derived. The chief points upon which we have insisted are, first, that no fracsupported; this will create a charge of 375l. tional portion of the line can be profitable; and second, that the losses in working must be met by trenching on the guaranteed interest of 5 per cent. The first position no one has ever ventured seriously to impugn, and its soundness meantime other men will come forward to drive rests upon the evidence of all writers who are

Digitized by GOGIC

acquainted with the subject. If further confirmation were required upon this head, we might refer to a letter, in one of our weekly contemporaries of Saturday last, from Mr. Bourne,* one of the engineers of the East Indian Railway, who, it appears, propounded the same views more than a year ago, and whose subsequent personal inspection of the line has only strengthened his first convictions. The second position which we have maintained, to the effect that the guarantee would be swallowed up by the losses upon the line, depends entirely upon the terms of the agreement entered into between the Hon. East India Company and the railway company; and as we have been the first to call attention to the fact, so we shall now be the first to furnish the requisite evidence. The following extract is from an official document containing the conditions on which the Hon, East India Company accords its support to the railway company:-

The East India Company will guarantee as follows, upon the conditions specified:—That interest at the rate of 5 per cent. per annum be allowed on sums which, in the course of three years from the date of the railway company's signing the first contract with the East India Company, shall be paid into the East India Company's treasury by the railway company, to an extent not exceeding one million sterling.

That the payment of such interest shall commence from the date when the payments into the East India Company's treasury shall amount to 60,600l.

That, subject to conditions, to be explained, the East India Company's guarantee to pay such interest shall continue in force for a period of twenty-five years, unless previously determined, under conditions hereinafter provided for.

That, as one of the conditions above referred to, all profits arising from working the several portions of the section, as completed, are to be applied towards the payment of the guaranteed interest, and when the profit shall exceed 5 per cent. half such excess is to be paid to the East India Company, and shall con-tinue so to be paid, until the sums they may have advanced, under such guarantee, shall be re-imbursed; the remaining half of such excess of profits to be added to the dividend to the proprietary, or disposed of as the railway company shall see fit.

That it be a further condition that, if in the last five years of the period, for which the continuance of interest is guaranteed, the railway shall realize a profit, during two successive years, equal to the amount guaranteed in respect of those years, the said guarantee shall thenceforth cease and determine.

That such guarantee shall sooner cease and determine, in the event of failure by the railway company to complete the construction of the section once commenced, or to maintain it when completed, in both of which cases the works will be forfeited to the Government of India, the railway company alone remaining responsible for the debts incurred.

That in order that the public may have security that the guarantee and interest shall not continue to be paid unless the railway is duly proceeded with and kept in use, it be a condition, that unless the line selected shall be opened within a period to be agreed upon between the Government of India, under the advice of the engineers, and the company contracting; and unless such lines, when so opened, continue to be used by the passage each way of at least one train daily, the guarantee must also cease and determine.

Such, then, we have reason to believe are the terms of the guarantee upon which the East Indian Railway bases its claims to public support, and under a misconception of which the shareholders have given their sanction to a mutilated scheme which cannot be commercially successful. We need scarcely say that if we are in error in any particular we shall be happy to rectify it; but we will not suffer ourselves to be diverted by vague complaints from the course which we have deemed it our duty to adopt.

· We have received from the Secretary of the GREAT INDIAN PENINSULA a note accompanying some correspondence he has had with Mr. Bourne consequent on the letter alluded to, stating that the remarks contained therein had been applied by some persons to the Great Indian Peninsula: as this was not intended by the writer it is of course contradicted. Perhaps this will be sufficient notice of the fact.

PROGRESS TOWARDS COMPLETION OF THE FIRST SPANISH RAILWAY.

We have continued from time to time to notice the advance in the works of the BAR-CELONA AND MATARÓ Railway, to which belongs the special interest of being the first work of its kind in a country that many circumstances render slow to follow the general march of European progress in such inventions. This little enterprize we have already described as possessing in its essential features some advantages of position which in Spain are rather an exception than a general rule: and, in the present state of the Peninsula, it seems destined for some time to come to maintain this character; while, in any event, the mere natural features of the soil of that country must always limit the number of railways of its particular class to a very few districts. It runs for some 20 miles along a natural level, formed by the sea at the base of a range of hills that enclose the most busy and fertile district of the only Spanish province remarkable for its commercial and manufacturing energy. The population is crowded along its entire route; and it passes through several towns, the peculiar habits and business connexions of which have already created a frequent intercourse with Barcelona, hitherto conducted along a road always bad, and in winter, when the rains swell the waters that cross the plain from the hills to the sca, is often impassable for days together. Every condition likely to favour the experiment seems to be united in this first specimen of a railway project in Spain,—a line easily formed, a busy population already circulating along its whole extent, with an incessant movement of produce and merchandise, only waiting the opening of a railway to take possession of its benefits. The works, we are glad to hear, are now on the eve of being finished, carriages and engines have already been sent from this country; and the opening, it is said, is likely to take place, in spite of Carlists and Moderados, before the summer is over. The interest of the population, we are told, is becoming very lively in a work that will unfold to them, when once fairly in operation, marvels of which even to this day the travelled Spaniard only appears to have the most remote idea. One must have lived in the Peninsula to conceive the startling effect which a display of the mechanical wonders of the locomotive is likely to produce on the minds of its inhabitants; the greater part of whom have grown up in ignorance of many impressions that have long been matters of course to the nations beyond the Pyrenecs. The Catalans, indeed, are a peculiar and very spirited race; imbued with practical tendencies and apt for enterprize and association in a far higher degree than any other of the various distinct peoples united in the common name of Spaniards—as the very scheme and prosecution of the railway, first started by a native of Barcelona, would of itself demonstrate. But even amongst them the opening of the most important chapter in the book of modern magic will act like a new revelation; and it is difficult to foresee the effects of the change it may create in the ways and condition of the people. This circumstance alone would suffice to lend a peculiar interest to the completion-of which we hope soon to hear-of the Barcelona and Mataró.

#### Carrespandence.

PROTECTION OF RAILWAY PROPERTY --- REVISION OF THE ACTS OF DIRECTORS.

ing interest, whether these vast concerns shall be entrusted exclusively to all the accidents of the present system of directorship. You stated recently, with great truth, that railway management devolved, practically, on the principal paid agents of the company, and that its affairs are, for the most part, conducted by an astute secretary, a clever solicitor and an enterprizing engineer. Neither of these functionaries, nor the comparatively inert mass of railway directors appears to me to supply the protection which shareholders have a right to require. It was stated by Lord Monteagle, on presenting a petition to the House of Lords complaining of the conduct of the directors of the North Wales, that those directors admitted the following mode of keeping accounts, viz., that of putting forward an unintelligible account to be inspected by the shareholders and keeping a private ledger for their own use, and that this was the common course taken by other railway companies! Apart from any imputations of fraud, there can be no doubt that egregious mistakes have been committed, vast sums of money squandered, unwarrantable jobs permitted, and the prospects of shareholders most seriously damaged. Without going into this further, I believe I may safely assume that a great want of confidence prevails, and that distrust will not be removed unless some intelligible remedy is adopted. What is that re-medy to be? The proposition put forward by Lord Monteagle is that of a revision by some Government Board, commission or inspectorship. From any such proposition I must take leave to express my entire dissent. Any system of revision which is to give confidence to shareholders must represent their wishes and opinions. The accidents of Government patronage are well known; some master of the buckhounds, some aristocratic personage, some confident and voluble debater in the House of Commons, may_probably would_be appointed ;_you may have all, or either, and, with them, utter incapacity. The system which I wish to see adopted is that of the appointment of a body of inspectors responsible to and elected by the shareholders; such inspectors to have access to all the books, accounts and correspondence of the companies, to be acquainted with all their transactions and projects, to publish periodical reports for the information of the shareholders, and to have the right of preventing any improper or doubtful schemes, contracts and expenditure of the funds of the companies. The inspectors to receive salaries of such an amount as will ensure the appointment of efficient men. There are matters of detail which I need not go into now. I seek only to show how easy and simple a remedy exists for the evils of the present system, which leaves shareholders at the mercy of men who, however respectable they may be, were never in reality appointed by them, of whom they know nothing, and who, consequently, in no sense of the word, possess their confidence. If your readers, shareholders like myself, concur in these views, I should be glad to see petitions presented to Parliament for the establishment of a Board of railway inspectors appointed by and responsible to the shareholders of railways.

A RAILWAY SHAREHOLDER. [Without at all answering for the soundness of the

suggestions in the above letter, we offer it as an instance of the growing spirit of economy which prompts shareholders to look after and ascertain the correctness of every item in the accounts now submitted to them .__ Ed. R. C.]

#### Gossin.

A correspondent of the Times animadverts on the singular fact that the GREAT NORTHERN have started a newspaper to publish their own reports! We should think, to say nothing of the appropriation of the company's funds for such a purpose, that there were sufficient Railway papers already existing (independent) dently of the notice now taken of the companies' ceedings by the daily press) to give the utmost publicity to their sayings and doings,—any one of which papers would, for less expense, furnish copies for circulation by post among the proprietors,—"with all the railway news of the week." The labour and expense bestowed by the Railway press on the railway interest would call for some such legitimate support from companies The share list of 1848 is, in effect, a vote of want of confidence in railway management and the prospects of railway companies. Millions are at stake; the sum embarked is constantly on the increase; and the question, at last, has become one of absorbing the share of the support and publicity rendered by these journals throughout the year.

Another correspondent of the Times writes thus, on an evil which is easily remedied :—Great numbers of cattle being now conveyed by railway to the London and other markets, and having frequently to be kept waiting at the different stations without protection from the heat, and without water, the animals suffer dreadfully from thirst. Water could be provided for the animals at the stations at a How much it is required, and how trifling expense. cruelly the animals suffer from the want of it, a visit to any of the stations where they are kept waiting will soon show.

The party immediately instrumental in the arrest of Smith O'Brien was, as our readers are aware, a railway guard employed on the TIPPERARY LINE The following is an authentic version of the incidents attending the arrest:—About half an hour previous to the starting of the train on the 5th inst., Mr. O'Brien asked one of the guards the way to the place where the tickets are procured. The guard, whose name is Hulme, an Englishman, who served some time in the Manchester police force, satisfied Mr. O'Brien's inquiries, and at the same moment recognised him. Hulme could not leave his post, but he dispatched a soldier to the barracks with a verbal message that Smith O'Brien was within reach. soldier on his way to the barracks met head constable Ilanover, who is one of a body of country detectives, and apprised him that Smith O'Brien was at the railway terminus. Hanover said, "You don't say so -nonsense! however, I have a warrant for him. Hulme pointed out the person of O'Brien, who was immediately arrested.

We are glad to see the EARTHENWARE MILE-POST HEADS, for marking distances on railways, which we suggested some years ago, coming generally into use. On the Trent Valley the principle of them has been spoilt, but on the Lincolnshire lines, from New Holland to Louth, our original suggestion has been carried out.

The following calculations, prepared by the City correspondent of the Daily News, show, for the infor mation of those who may not be able to follow the course and the fluctuations of public and share securities, with reference to their bearing on the returns upon the prices of purchase, the rates of interest respectively yielded at the average prices on some of the more leading stock and share values :-

Consols, 5 per cents, at 87 ditto ditto 31 per cents, 478 ditto ditto Bank stock (div. 9 per cent.), 198 ditto ditto Rank stock (tity, 2 per Service State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State State Stat 3 14 6 cent. div., price 73 ditto Great Western, price 87 (7 div.) ditto 8 4 11 7 4 9<del>1</del> 8 13 10<del>1</del> ditto South-Western, price 46 (8 div.) ditto Brighton, price 29} (4 div.) ditto Eastern Counties, price 142 (49 d.) ditto ditto 6 16 2 6 9 107 6 6 111 ditto North-Western, price 126 (8 div.) ditto ditto

It is to be observed, in respect of the reduced 3 per cents., the rate of interest on which is the same as for consols, and the ruling price the same also, that their real value ought to be plus the quarter's dividend, say 15s., which they carry more than consols. There ought, however, to be a difference of price corresponding in favour of the reduced 3 per cents., because at present equalized rates with consols there is a difference, not noted in the calculation, in the rates of interest fractionally in favour of the former. discrepancy between the two is only to be accounted for by the superior facility with which, beyond all other stocks, consols can be either bought or sold at the smallest differences of price.

The opening of the ROUEN AND DIEPPE line, which we recorded last week, is said to complete the quickest communication between London and Paris, the total distance (vid Brighton) being 245 miles,—offering an advantage of 100 miles less, "parcours," than the route by Southampton and Havre, and 40 miles less than that by Dover and Boulogne. The Dieppe line branches out of the Rouen and Havre at Malaunay, about 7 miles from Rouen, and traverses the whole way to Dieppe a country of unequalled land-cape beauty. The total length of the line is 30 miles. After leaving the junction, it follows, "à demi côte," the Vallée de Clèves, commanding an extensive view of this rich and beautiful valley. The line continues to rise up to Lenilly, where it crosses the summit by an enormous cutting of 650,000 cubic yards. It then enters the Vallée de la Scie, which it traverses till within two miles of Dieppe, passing by St. Victor, Auffav and Longueville, at each of which places a station has been built. The line quits this valley and enters the Vallee d'Aignes by means of a tunnel a mile in length, and almost immediately arrives at the Dieppe station. The whole of the line was executed by the English contractors, Messrs.

Mr. G. Newman as engineer in chief, and Messrs. F. Murton and Deplanot as resident engineers

The receipts on the DIEPPE portion of the PARIS AND ROUEN, from the 1st to the 5th of August, were

Mr. Punch, who is a large railway shareholder, is beginning to feel sensibly alive to the efforts made in all quarters to sustain the dividends. His last remarks are on RAILWAY PICNICS. The grand object of railway directors is to get a dividend; and the maxim applicable to this process is, "Get a dividend—honestly if you can—but—get a dividend!" Among the various artifices lately resorted to for the purpose of swelling the coffers of the various companies is the happy idea of railway pic-nics, which are becoming exceedingly popular. A few days ago the station of the Eastern Counties, at Shoreditch, was alive with all the resources that beauty can derive from millinery; for a party of light-hearted houris, in stiff muslins of every degree—from the broad-skirted book to the jaunty jaconot—had thronged the platform for the purposes of pleasure. The ample visite hung upon the sloping shoulders of youthful grade, and the newly-imported palalla-manufactured of every material from the rich brocade to the paltry persian or the seedy sarsnet—gave life and vigour to the station. We were at first puzzled to make out the meaning of this group, assembled among porters and packages, luggage and luggage-vans, passengers and paper-venders, until upon inquiry we ascertained that a pic-nic party was going off by the railway, with sandwiches stowed away in the stuffing box of the engine, hot water for tea in the boiler, hard eggs deposited in the cylinder, and some champagne, placed for security, in the safety-valve. Nothing could be more complete than all the arrangements, and when the tender started, with pleasure in its train, the sight was a truly refreshing one. The pic-nic came off, we believe, at one of the lowest goods stations of the Eastern Counties, and the eatables were set out upon one of those revolving pieces of machinery upon which the carriages are turned round, and which, acting as a sort of dumb-waiter, caused the wine to circulate with the utmost facility. There was a constant succession of hot tea from the boilers of the trains passing up and down the line, and the festivities were kept up with great spirit till a late One of the locomotives was kept constantly supplied with the pure element, to act as a great moral engine for the advancement of temperance principles among such as were inclined to follow

#### Reports of Meetings.

[Continued from p. 548.]

LONDON AND NORTH-WESTERN.

Aug. 11 .- Half-yearly Meeting, London .- Mr. GLYN, M.P., in the chair

The CHAIRMAN thought the directors should render some apology for not having carried out what they intimated it was their wish at the last meeting, viz., that of putting the proprietors in possession of the accounts prior to their assembling. In spite of their best exertions, they found it practically impossible (owing to the numerous details to be collected from a variety of sources) to consolidate the accounts; and the question therefore naturally presented itself, whether it would be the more expedient and preferable to postpone the meeting for a week, and thereby delay the payment of the dividend, or whether, in point of fact, they should continue in the course they followed for many years—that of putting the accounts in the hands of the proprietors as they entered. The experience of the last six months in the preparation these accounts went to tell them that it was impossible, from their multiplicity and the multifariousness of the details, to give them earlier with anything like facility of action. It was entirely the wish of the directors to leave the matter in the hands of their constituents, merely intimating that it was one of those variations in an old practice, that would involve the delay of a fortnight in the payment of the dividend, and with a regret that it was not in their power to carry out the good faith that had all along attended their promises at preceding meetings. Had it even been the express wish of the proprietors that they should have delayed the meeting, he feared directors would not have been disposed to acquiesce, seeing that one of their chief reasons was a wish to meet them as soon as possible, to put an end, by a plain, unvarnished statement, to the depreciation that paralyzed their stock. They could not, unless the public supposed that the directors were guilty of accumulated frauds in the management of affairs, conceive how their stock should be at its preent price; for taking it even at a 7 per cent. figure, Mackenzie & Brassey, under the superintendence of the present price was decidedly below the real value.

But in the interval, as had always happened lately, and with regard to the stock of the London and North-Westernin particular, a depreciation respecting it had been spread abroad in public estimation, by a variety of attacks and reports, which apparently had been levelled systematically against them. There had been a renewal of a very absurd report, which he was almost ashamed to allude to,—namely, that they were going to shut up their line. A new report had also appeared on the horizon, and one which, had it been true, he confessed would have affected his feelings, as regarded the interests of the undertaking most materially; he alluded to the report that his hon, friend Mr. Creed was about to relinquish his situation as secretary because he had a difference with the directors respecting the accounts. Were it true that his friend Mr. Creed had any difference with the directors as to the accounts, he should indeed be suspicious that there was something wrong at bottom. To him they had looked from the first for the management of their accounts, subject to the superintendence and control of the directors. To his honesty and integrity, as regarded these accounts, he, the chairman, implicitly pinned his faith; and he need not add that to that honesty and integrity the proprietors might implicitly pin theirs. His hon-friend Mr. Creed did intimate to the Board that he had reached that period of life when it would be pleasanter to him to be relieved in some degree from the cares and responsibilities of office; and no one responded to the request more readily than did the directors. When they did, however, respond to it, that they would prefer themselves being the judges of the time when it seemed best for the company and the interests of the proprietors that such retirement, if any, should take place, there was annexed to that reply the condition that, as long as life and health were spared to him, he at least would not decline his aid in the conduct of their affairs; and the directors, by their unanimous voice, in order to secure his co-operation, placed at his disposal the first vacancy that might occur in the direction. He trusted that this plain statement, which had created a considerable impression, unfavourable to their affairs, would entirely set the matter at rest. But this was not all. They had, through the medium of the press, been systematically attacked, and in a manner more calculated to make an impression on the public mind, during the last few months, than anything he ever recol-lected. It was certainly true that the attacks that had been levelled against them had at the same time been levelled against railway companies indiscriminately. In a pamphlet he had before him all the narrow-gauge lines were included in one general stigma; but there was a special publication also out against the broadgauge lines on the same ground. The impartial venom of the writer was therefore general; but, called upon as he had been by many proprietors, whose eyes and ears seemed to have been open to this pamphlet, it was right he should allude to the subject,-though he candidly confessed that from the tenor of the statements, the inaccuracy of the facts and the misquotation of figures, he should otherwise have passed over it in silence. He felt it his duty to do this, so long as they represented the interests of the London and North-Western, and with the sole desire of susand North-Western, and with the sole desire of sustaining the confidence of the proprietors and the public in the property of which they had the management. This pamphlet was entitled 'The Bubble of the Age.' He should have thought that if any new created property in this country little deserved the name of "bubble," it was that of A bubble was generally something light, something ephemeral, something which passed away. They hoped that their property in the London and North-Western was not of that character, and he thought past experience, at least, went to show that it was deserving of anything but that name. If he was content to pass over the name, he felt otherwise as to the facts, which were rather of a serious character. The writer, who did him the honour to send him a copy of the second edition, began by assimilating railway companies generally to the Union Bank of Calcutta, a large banking establishment in Bengal, now endeavouring to wind up its affairs as well as it possibly could, having, in point of fact, lost all its capital, and calling on the proprietors for a large contribution; but, in the case of the Union Bank of Calcutta the predisposing cause was one of mismanagement, and the imputation the writer meant to convey was, that which was felt uniformly in Calcutta with regard to the Union Bank, namely, that there had been gross misappropriation on the part of the directors. That was the accusation he meant to convey against the London and North-Western. The pamphleteer then called attention to another company, well known in the city of London-that of the Copper Miners of England,

which though not in the same predicament as the

Union Bank of Calcutta had lately obtained an unenviable notoriety. These were the two similes or parallels the writer was pleased to institute. The writer then proceeded to state that the chairman of the copper company was governor of the Bank of England and chairman of the Brighton Company. He mentioned no name, but it was too evident to whom allusion was made—the hon, member for Preston, Mr. Grenfell, who held the two latter appointments-but not only did Mr. Grenfell never hold any connexion with the Copper Miners Company, but if in the city of London there was any one opposed to the Copper Miners' Company, Mr. Grenfell was the one in question. Mr. Grenfell occupied a position that would cause him to care little for such an attack; but he mentioned it to give them an idea of the accuracy of the information contained in the pamphlet. After alluding to the Union Bank the pamphlet. After alluding to the Union Bank of Calcutta, which (said the writer) had been expending its capital for the purpose of keeping up the market price, he added a note to the effect that in this way the capital of railway companies is squandered to keep up shares in the market. This is what among railway companies was called 'rigging the market.' It was very convenient before a meeting. and put the company in good humour. Many held who were inclined to sell out, and it operated as a temptation to the purchaser." Such was the tenor of this pamphleteer's tirade. There were some people, indeed, who might not be very sorry if they had been in the habit of rigging the market, but he would appeal to the proprietors if they had ever been in the habit of doing so! Did he not the first time they met in that room almost go beyond his province to warn the proprietors that their stock at the time was too high !- that, at least, did not look like rigging the market." It was impossible to follow the pamphleteer through the whole of his effusion, but in alluding to the Copper Company and the Bank of Calcutta he said:—"But all these sink into insignational company and the Bank of Calcutta he said:—"But all these sink into insignation do." nificance compared with what railway companies do. With respect to their own position, the gist of the passage against them was that the directors had from time to time appropriated monies out of the capital fund. which had gone to pillow up the payment of dividend. That was the gravamen of the charge; and the writer, professing to take the figures from the company's own account, placed in juxta-position on one side the amount which, from half-year to half-year, was applied to the capital account, and on the other the amount which was paid to dividend, and—taking advantage of a sort of coincidence between the figures, (and he would not say they were accurate, but they might be sufficiently so, for the purposes of a pamphleteer)-taking advantage of this he said, "Here is a proof that the directors have been paying dividend out of capital." When he addressed the proprietors out of capital." on the last occasion he endeavoured to make clear to them the principle upon which the company proceeded with regard to the application of sums in every half-year from capital, and the application from those they received as revenue; and the principle received their entire acquiescence. Had the writer of the pamphlet done him the favour to read what he had said on the subject, and then framed his pamphlet, the result would have been as different, not as they could desire, but at any rate it would have been a plain statement of matter of fact. The writer also charged them, in another portion of the pamphlet, with not having fairly charged to revenue the actual outlay for the service of the line, arising from police, porters and artificers, and that they were much smaller than they ought to be. The egregiousness of this assertion carried with it its own refutation. He was not aware what the feelings of the writer on the subject were now, seeing that Mr. Creed, with that openness which always characterized him on all matters connected with the accounts, had invited the writer of the pamphlet to inspect the books and satisfy himself on the subject. What the convictions of the writer now were upon the question he was at a loss to tell, but for himself he should say that from the system of audit and accounts established by the company, it was impossible, unless the directors set about suborning the people under them to a most extraordinary extent, it was impossible such things could occur. Their payments came in just as they did in other large establishments. They went through the regular routine of accountants, auditors and clerks; and if there was the slightest appearance of altering or checking or changing, every clerk in the office would be aware of it at once; and not only so, if there existed anything of the sort, his hon friend Mr. Creed would not so freely have offered an inspection of the accounts. (A voice: Is not the pamphlet anonymous!) Had it been anonymous he (the Chairman) would not have condescended to notice it as he had. It professed to be written by a Mr. Arthur Smith.

At page 32 of the pamphlet, the writer said, in the year 1845 the London and Birmingham proprietors made a nominal increase in their capital of 1,237,000l. They had made What this meant he knew not. none; and he went on further to state, that in 1845 the amount of fictitious capital created was 2,000,000. This assertion was so absurd as to be scarcely worth answering. They had no fictitious capital created, neither was it their policy to do so in any shape whatever. They had raised capital under their Acts of Parliament, and had distributed in the usual course 1,237,000*l*. What was meant he could not divine. The writer also attacked them on the subject of Lord Monteagle's Railway Audit Bill; and said, that Mr. Glyn meant to resign if it was carried. The railway interest or rather, he should say, not the railway interest, as there were many members of Parliament totally unconnected with that interest who were also hostile to the bill in the Commons,-opposed it because it was founded on false and erroneous principles. It proposed to take out of the hands of the majority the power they were entitled to have, and introducing, by a small minority, the surveillance of Government; not that the directors did not wish for a proper investigation of the accounts, through the medium the proprietors already possessed. It was their duty to resist the bill; and he said, on the part of himself and colleagues, that when it was made apparent that Government by this measure would be doing that which was tantamount to taking from them the control and leaving them only the responsibility, they thought that it then was time for them to resign their situations, and in the expression of this sentiment his colleagues fully concurred. [A Proprietor here observed: I have a letter from Mr. Smith in my counting-house, in which he says that he was employed by Government and the Chancellor of the Exchequer, that the public might be acquainted with transaction .- An announcement which was received with ironical cheers.] The Chairman was delighted to hear the declaration, though he was altogether incredulous concerning it. That the Government of this country, that the Chancellor of the Exchequer, one of the most high minded men that the country had produced, should encourage such a Quixotic crusade against the railways, was second only in preposterousness to the assertions contained in the pamphlet of its author.-He would now advert more particularly to the subject matter that more immediately concerned them. At the last meeting he suggested that there could not be any very easy or sudden return of commercial prosperity in the general affairs of the company, that the crisis they had passed through in 1847 was too severe, and the pressure in the money-market much too great to allow of any rapid transition from a state of comparative torpor to one of prosperity and It could not, however, have escaped their observation, that the events that had taken place upon the Continent since February had entirely checked all tendency towards improvement, more particularly in the commercial districts of the country with which they had more especially to do. Nevertheless, their receipts did not show a falling off as compared with the previous half-year. They had not, however, increased, and one of the causes that materially acted on their dividend was the increase that took place in their stock. Under these circumstances, they were again, with great reluctance, obliged to reduce their dividend to 3l. 10s.—a course which they took consistently with what they considered the best interests of the company. Although their working charges had borne the proper amount of cost of the new stock infused into the working stock, they had been enabled to show a saving in the working charges of 12,000L, a sum that might be looked upon as in their favour, considering that they had added 50 miles to their working mileage; and this saving having been effected into the bargain, without, in any degree interfering with the efficiency or improving the proper order of the service. During the last six months the public service had been conducted with more than usual regularity. They had been chabled to increase their speed, and the accounts showed a saving of 14,000*l*., after deducting the working charges for infusion of new stock. In the matter of maintenance way, locomotive power, works, engines and coke, there had been a considerable saving. was a small increase in the police charges, owing to their having 50 more miles of line to work. ĺ'n the merchandise and passenger traffic there was a small decrease. There was, however, a consider-

chargeable. It was with great satisfaction he made the declaration that they had nothing to report to them in the shape of parliamentary proceedings, and he could give the full assurance of the executive that there was not one of the bills suspended in any previous sessions that would be entered on without a full and searching inquiry. They had, no doubt, seen in the public newspapers a much to be lamented difference between the engine-drivers and the company, and he thought it only right to allude to it, as it had occupied public attention considerably. The subject, of course, was one that had pressed most seriously on the minds of the directors, and they thought it right to state, in justice to the able officer who superintended that department, that they had seen no cause whatever to find fault, or to make any alteration in the arrangements which he, under the sanction of the locomotive committee, had deemed it right to carry out. He was disposed to say that the case of the engine-drivers very much confined itself to individual and personal charges against their superintendent; and inclined as they were to deal with every class of their servants in the most liberal way possible, they had not thought it right to allow those who held subordinate situations to dictate whether or not the superintendent they put over them, and whom they had found to be a faithful, zealous and active servant, was the person who ought to be at the head of the establishment or not. He was happy to state that their other artificers had come forward in a most excellent spirit, and that they had received such assistance from the north and from other public establishments, that they would be able. without the slightest difficulty, if these misguided men pursued their present course, to carry on the public service without detriment or danger: and he was convinced, while they were ready to receive again those who were ready to rejoin them, and who had not misconducted themselves in the course of the proceedings, that the proprietors would approve of the policy of the executive, in not allowing, in times like these, a subordinate body to dictate terms to their employers.

The CHAIRMAN resumed his seat amid loud applause, with which he was frequently greeted during the intervals of his address.

Mr. CREED then read the Report, as follows :-

The directors in their two last reports adverted to circumstances connected with the monetary and commercial state of the country, which were operating unfavourably on the traffic of railways generally, and they regret to say that the depression to which they referred has been aggravated by the revolutionary state of the Continent throughout the last half-year. In the face, however, of these adverse circumstances, the proprietors will observe by the statements of accounts which have been laid before them, that the receipts from traffic differ only by the small increase of 1,109J. from the corresponding half-year of 1847; whereas the working charges are 12,065J. less, after including a large addition of new stock to the debit. That the Government duty and parish rates are more by 1,877L, and the interest chargeable on revenue for borrowed capital by 28,336L, reducing the nett profit on the half-year's operations, after allowing for interest on credit, balances and rents, to The directors in their two last reports adverted to cirallowing for interest on credit, balances and rents, to 491,2,21, or 23,4251, less than in the corresponding half-year (irrespective of the surplus in hand on December 31, 1847). In explanation of the increased charge on revenue for interest, the directors have to remark that the Trent Valley having been opened throughout in December last, the interest of the borrowed capital, expended on the pur-chase and completion of the works, which was before charged to the capital account, became a liability of revenue. the increase in parish rates may be the result of greater distress among the poorer classes, but the principle on which the company's profits are thus severely taxed, when it is notorious that railways confer the most important benefits it is notorious that railways confer the most important benefits on every parish through which they pass, is too unequal, not to show clearly the necessity of a combined effort amongst railway companies, to obtain some modification and improvement of the law as now interpreted. The reduction of 12,068L in the working expenses, without detriment to the efficiency of the service, notwithstanding an addition of 53 miles to the lines in work, will no doubt be considered satisfactors by the recognitions. They will be pleased also or 33 miles to the lines in work, will no doubt be considered satisfactory by the proprietors. They will be pleased also to learn that, with a view of enforcing the most strict economy in every branch of current expenditure, a com-mittee of the directors have been for several months employed in the thorough investigation of this important employed in the thorough investigation of this important subject and are still occupied in the prosecution of this duty. The expenditure on capital account in the last six months has been 1.321,766%, of which 524,990% belongs properly to that portion of the railway and branches which yields revenue; and the remainder attaches to subsidiary lines, in which the company have a direct interest. Of this 524,990%, the proportion expended in land and works, is 312,428%, in carrying stock, 181,297%, and in additional cottages for the company's servants, 1,264%. Under the first of these three heads is comprised the cost of land and station buildings, warehouses, sheds, workshops, and the merchandise and passenger traffic there was a small decrease. There was, however, a considerable increase upon those items over which they had no control, namely, Government duty, which they could not lament much, and in parochial rates and charges. There was also a considerable increase in the amount of interest upon loans, from the fact of the Trent Valley having come into operation and from the capital employed on the line being no longer in the directors have been enabled in a great measure thereby

to dispense with the proposed addition of a double line of rails from Primrose Hill Tunnel to Watford Station, by which an expenditure little short of 500,000. Ins. been avoided. They have also secured the means of reducing the expense of repairing their stock, and of concentrating the general business of the railway at the Euston Station, by which a further saving will be effected. The proprietors may now look forward to the close of capital expenditure under this head, within a comparatively short period, with assurance of the firm intention of the directors to persevere in their efforts for the attainment of this important object. In furtherance of these views, no new responsibilities were incurred in the last twelve months which might involve a further outlay of capital, but as there are still sources of expenditure on lines with which the company is connected, a careful revision of every existing engagement of that nature, and a constant superintendence of the proceedings in each particular case is considered indispensable. The directors, impressed with this conviction, have appointed Mr. H. Booth, a director of the company, in conformity with the Act of Parliament for the supervision and control of the expenditure on the Leeds and Dewsbury and Huddersfield and Manchester sections, in the place of Mr. John Cropper resigned, and generally under the authorities of the Newed for the objects estated and durch a durf for which Mr. John Cropper resigned, and generally under the authority of the Board, for the objects stated, a duty for which his abilities and experience peculiarly quality him, and they are persuaded that they cannot fail to benefit by the

Under the second head of expenditure is comprised a further charge for working stock, required for an extension of traffic on the Lancaster and Carlisle Railway, and for working the Chester and Holyhead Railway, which the directors have undertaken for a period of years. As this item may be liable to misconstruction, the following table of the charge for stock since the opening of the various lines now consolidated in the London and North-Western Railway, with the progressive increase of mileage, is submitted:—

Year.	Total Charge.	Total Mileage Worked.	Per Mile.
1840	602,999	2333	2,579
1841	628,700	260	2,411
1842	685,916	260	2,630
1843	687,546	285	2,406
1844	708,959	285	2.481
1845	805,691	3031	2.656
1846	1,135,937	5024	2.259
1847	1,462,900	555	2.635
1848	1,674,668	6331	2,646

It will thus be seen, that while the demands on the service, in consequence of increased accommodation, and reduced charges, are much greater than heretofore, the ratio of the moving stock to the mileage worked remains about the same, and continues to be very much less than that of other railway companies. The proprietors will recollect that in the last half-yearly account a sum of 30,400. was deducted from the company's profits, under the head of depreciation of stock. Further investigation into the condition and value of the stock having convinced the directors that this additional charge on the revenue to the 31st of December last was not at that date required, and would certainly not have been made had they then been as fully aware of its actual state as they now are, have re-transferred the amount to the reserved fund. The partial opening of the Chester and Holyhead has fully equalled the expectations of the promoters; and now that the journey between London and Dublin is reduced to about thirteen hours, the directors look for that increase of traffic on the Lancaster and Carlisle testedily ingressing and there appears avery recape for ties of travelling. The traffic on the Lancaster and Carliale is steadily increasing, and there appears every reason for anticipating an improved dividend on the shares held by this company in that undertaking.

From the statement of the half-year's ac-		
counts, it will be seen that the nett pro-		
ceeds, after deducting 11,715l. 4s. 11d., for		
replacement of locomotive engines and car-		
riages, is £491,272	3	4
To which must be added the balance carried

19s. 8d. and leaving a balance of 44,33dl. 11s. 2d. to be carried to the next half-year's account. The directors do not contemplate making any other call in the next half-year than on the Manchester and Birmingham 10l. shares C. unless the state of the money-market should require it. The lamented death of Mr. R. Earle, one of the company's auditors, makes it necessary that the proprietors should at auditors, makes it necessary that the proprietors shound at the present meeting, appoint another in his place. The directors cannot conclude the present report without declar-ing their conviction, after mature consideration of the manifold difficulties with which the company, during the last eighteen months, have had to struggle, and the practical effect which must result from their avowed determination, effect which must result from their avowed determination, sanctioned by the proprietors, not to contract any new engagements, which may become chargeable on their existing revenue, that there is nothing in the position of the company, at the present time, to shake the confidence of proprietors in the stability of the concern or to create anxiety as to their future prospects.

The statement of the capital account showed a total of expenditure to the 30th ult. (less 22,967).
11s. 10d., repaid for Lancaster and Carlisle line) to be 22,835,1191. 19s. 3d.; the total receipts of stock,

calls in advance and loans, were 23,231,245l. 10s. 10d.; leaving a balance in hand of 396,125l. 11s. 7d.

£962.182 2 11 Mr. Duncuff inquired the amount of capital on

lines yet undeveloped. The CHAIRMAN replied that the amount of capital invested in lines upon which no dividend was yet received was 4,100,000/.

Mr. DUNCUFT: And the amount of capital expended on the stations of the main line since 1844

Mr. CREED replied that as they had not the accounts of both companies since the amalgamation, it would be difficult by any other operation to arrive at a correct result.

Mr. Hoves observed that they had spent 2,000,000l. on the Trent Valley, and when the proposition of leasing was brought forward it was asserted that there would be a traffic that would warrant them in giving the per centage. Since then it appeared that the line had not come up to their expectation, that the line had not come up to their expectation, and the report stated that since its opening it had been anything but satisfactory. He believed that the depreciation in their stock was to be attributed more to these extensions, leasings and new lines than to Mr. Smith's absurd pamphlets. Were the directors, he would ask, negotiating for the lease of the Aberdeen whose duty it was to make their own line. Aberdeen, whose duty it was to make their own line from their own resources? Their engagements, without adding to them, were sufficiently onerous.

The CHAIRMAN replied that the directors had always adhered to one doctrine with regard to the Trent Valley, namely, that though, per se, it would be a line that would realize the price put on it,—10 per cent., yet, that it would almost entirely be derived by a subtraction of revenue from the main line. The object of the Trent Valley was to shorten the distance between Manchester, Scotland, Liverpool, and London; and the calculation on which the revenue

was based was simply on the traffic from the terminal points so connected with the Trent Valley; but it always was admitted that the Trent Valley was not a line, quoad the London and Birmingham, that could be a paying line, because it was a deduction from their own revenue, excepting so far as it was locally concerned; but it was a matter of political necessity that it should not fall into such hands as would use it to their detriment. They never pretended to say that the Trent Valley, quand the Trent Valley, did ever furnish traffic to pay for the cost, but that used as an intermediate link between the points it would pay 10 per cent. no doubt. He was not able to give any answer with respect to the Caledonian, not having yet received any accounts; but it would be observed, with satisfaction, that the receipts of the Caledonian were now undergoing a satisfactory increase. They were not going to subscribe any capital for the carrying out or making the Aberdeen, neither were they going to undertake any guarantee or hold any stock in it. If anything was done with the Aberdeen it would be a mere working agreement to furnish them with plant, but it was extremely doubtful whether the proposition would come to anything at all.

Mr. Upcroft congratulated the meeting on the retrenchments in the working economy, by the zeal of the directors. He hoped that before long it would result in a permanent improvement of their dividend.

The CHAIRMAN, in reply to an inquiry as to the com-pletion of the East and West India Docks Extension, and the probability of what it would pay, said it was an independent company and the line was progressing. No line either made or making had probably succeeded in getting its contracts at such an amount under the parliamentary estimate. The question of what it would pay was a vitally important question, but without saying that it would contribute either 5 or 10 per cent., he might assert on the authority of their most practical officers that it was a communication, the value of which could not be overrated, since it gave them access to the docks of London and the Thames: and that, in short, it was one of the most important lines that could be devised in connexion with the company. Its total estimated cost was 700,000l. They were pretty close up in the delivery and settle-ment of their solicitors' bills.

Mr. Moore asked the estimated traffic per annum between the London and Birmingham, that the Birmingham and Oxford would subtract.

The CHAIRMAN was understood to say that it was per cent. only upon the gross receipts, and unless there was a great reduction in the present charges of the Great Western, they must not expect to get an ounce of the traffic.

Mr. Moore then wished to know what would be the loss to the general traffic when the Great Northern and lines to the north and north-east were completed and opened, and whether the development of the Irish traffic vid the Chester and Holyhead, the opening of the Scottish lines, and of the Leeds, Dewsbury and Manchester, would compensate for the probable abstraction occasioned thereby and the rivalry of the Birmingham and Oxford.

The CHAIRMAN replied that the inquiry was of so problematical a character that it was difficult to

give a reply.

Capt. Huish said that as regarded the Great Northern line, it might be taken at about 3 per cent. on the gross annual income.

Mr. Alston, of Liverpool, objected to hypothetical questions and replies. At the next meeting they might be brought forward as facts. He did however, having agitated the question for years, again urge on the directors the expediency of issuing the accounts

before the meeting.

Mr. Moore gave the directors credit for their arrangement with the Leeds, Dewsbury and Manchester, in which they had evidently got to the windward of the Yorkshire directors. The Leeds Company's portion of the 7 per cent. would be about 41. 18s., and it produced to the London and North-Western 10 per cent. The line itself, moreover, went through a complete bechive of industry.

The CHAIRMAN thought the only thing remarkable about the matter was the fact of the London directors getting the better of gentlemen in Yorkshire.

other respects the bargain was an eligible one.

After some further remarks as to an earlier distribution of the accounts, the report was put and carried unanimously, with the resolution declarative of dividend.

Mr. EARLE was glad to find that there had been a diminution of 12,000l. in the working of the way; but this would be anything but satisfactory if they struck off those skilful and valuable men who had worked the line from its commencement.

The CHAIRMAN did not wish to make the case

stronger against these men than he had, but so far from their wages having been reduced, he might state that they had been increased quite recently. It was not a question of payment, but it was a question between them and the superintendent, and when they had an able intelligent officer it was the duty of the directors to stand by him when there was no substantial ground of grievance.

In reply to questions upon other topics,
The CHAIRMAN said the balance in hand bore
interest from the 30th of June, and the Chester and Holyhead was not at present paying dividend.

Mr. BOOTHBY, a director, in reply to the inquiry as to whether the Irish traffic would compensate for the loss of revenue that might be abstracted by the Great Western and Great Northern, said that as a director of the greatest line of Irish communication he had directed his attention carefully to the subject, and was convinced that on the completion of the Holyhead line the London and North-Western would, to compensate for collateral losses, receive an

augmentation of traffic at the rate of 4,000%. a-week. It was then proposed by Mr. H. CROSSFIELD, and seconded by Mr. M'CALLUM, that Mr. E. J. Moseley be elected an auditor, for his unremitting attention to the company's affairs, in the place of Mr. Earle deceased.

Mr. Casson reiterated the request for a circulation of the accounts some days prior to the meeting. It was a farce, when grave questions were discussed, that they should sit there without their text-book of

figures.
The Chairman almost despaired of their being able to do so at present, but intimated that when they concentrated their establishment at Liverpool in the new offices at Euston-square they would possibly be able to accomplish it. At any rate let the proprietors bear with them another half-year.

Mr. Casson was about to propose a substantive motion, but, at the suggestion of Mr. Puncher and

others, was prevailed on to withdraw it.

The CHAIRMAN, reverting to the question of the engine drivers, said, the arrangement with them was one of classification, to which the attention of the locomotive committee was called by the engine-men themselves. There were now several classes,—at 8s., 7s. 6d., 7s., 6s. 6d., 6s., and 5s. 6d., a day; and the intention of the classification was one of rotation which would be uniformly followed; and in availing themselves of the principle, they had not the slightest intention of reducing the men's wages, which were higher than on other lines. They were under, he would not say, considerable obligations to these men,

but they owed a great deal to their good conduct.

On the motion of Mr. Ramsden a vote of thanks was passed, by acclamation, to the CHAIRMAN, who in acknowledging it, said this was a peculiar epoch in their affairs. It was a disagreeable duty at all times to propose a reduction of dividend, but the proprietors he hoped would give them the credit of so doing from an earnest desire for the well-being and economical management of the line. They could not control the causes that were now operating on their position-causes that were involved in the large creation of capital on the one side, and the absence of an increase of anticipated revenue on the other.

#### BIRMINGHAM AND OXFORD JUNCTION.

Aug. 7.—Adjourned Meeting, Birmingham.—Mr. P. H. Muntz in the chair.

Mr. A. PEYTON wished to inquire of the Chairman whether he could afford them any more information with respect to the bill now before Parliament for confirming the sale of the line to the Great Western. There could, he (Mr. Peyton) thought, be no mistake about the matter. Did the Great Western intend to proceed with the bill or did they not? The directors of the Great Western knew perfectly well that, although they (the shareholders of the Bir-mingham and Oxford Junction) supported the bill, it would be opposed by other parties. Mr. Saunders, the secretary, had admitted this; but that opposition, however successful, was no reason why they should not have all the information which could be afforded with regard to the intentions of the Great Western directors; nor did it at all affect the agreement between the two companies.

The CHARMAN said there could be no doubt that

the Birmingham and Oxford had not only agreed to, but supported the bill, and that the solicitors to the respective companies had drawn an agreement setting the terms upon which such support was to be given. It was also agreed that if the Birmingham and Oxford did all they could to insure the adoption of the broad gauge on their line, and although sanctioned by Parliament, the opposition of other parties should be no impediment to the fulfilment of the other conditions of the agreement. The Birmingham and Oxford had carried out their portion of the

rted in the bill, while in committee of the House of Lords, not previously contemplated. It was the insertion of these clauses which caused the present When the decision of the Lords' Committee was made known, he (the Chairman) went up to London, for the purpose of ascertaining the intention of the directors of the Great Western, but, at that time, unfortunately, Mr. Saunders, the secretary, was out of town and Mr. Russell, the chairman, was ill. Since then he had had a correspondence with Mr. Russell, for the information of shareholders, to know the determination of the Great Western. He regretted to say, however, that the answer of the chairman of the Great Western was not decisive, either one way or the other. Mr. Russell referred to a deputation from the Buckinghamshire, which had recently waited on the Railway Board, and pro mised that in a few days he (the Chairman) should have a positive answer.

Mr. PEYTON observed that the shareholders were most anxious, and would be thankful for any infor-mation with which he might favour them. For himself, he did not care one rush whether the Great Western proceeded with or abandoned the bill.

Mr. Colmore said it was hard that the shareholders, who had performed all their conditions of the agreement, should be treated with indifference because some company, with which they had no connexion,

had had a communication with the Railway Board.

Mr. Beale contended that the interests of the shareholders ought not to be compromised by the acts of any other company.

The CHAIRMAN considered that the shareholders had, according to the terms of their agreement, done all they could to carry the bill introduced into Parliament by the directors of the Great Western. his opinion, whether the Great Western accepted the bill as altered by the House of Lords or rejected it, they were bound to fulfil the obligations into which they had entered with that company.

Mr. Colmoke: At any rate they ought to let them know whether they intend to proceed with or abandon the bill. He suggested that the Chairman should proceed to London, and obtain an explicit answer from the chairman of the Great Western.

A desultory conversation ensued, when it was ultimately agreed that the Chairman should immediately solicit the determination of the Great Western directors, and the meeting adjourned until the 11th, to receive any report the Chairman might then have to make.

The half-yearly meeting was adjourned till the 30th of August, to be held in Birmingham.

Aug. 11.—Adjourned Meeting, London,—Mr. Muntz

in the chair.

The CHAIRMAN announced that the notices had been given for the third reading of the bill that day in the House of Lords; he should therefore move that the meeting adjourn till to-morrow at 10 A.M., at the same place, No. 449, Strand. The adjournment was necessary in case the bill should not get a third reading that night.—Adjourned accordingly.

BOSTON, STAMFORD AND BIRMINGHAM. Aug. 8 .- Half-yearly Meeting, London .- Mr. W. MACAULAY in the chair.

Mr. SAWARD, the secretary, read the Report. The directors have little beyond the cash account to lay before the proprietors, all operations being suspended until next December, in compliance with the Act of Parliament previously referred to. After that period, and as soon as the line can be commenced consistently with the progress of the works of the Great Northern at the point of junction, the directors will proceed to call up the capital and complete the arrangements for securing to the proprietors the guarantee of that company. Two items in the present account appear to call for some remarks. The first is the charge for printing, &c., 8541. 14s. 6d.; four-fifths of this consist of a bill for the scaled certificates, the registration and account books, printing, stationery and postage stamps from June 1846 to the middle of 1847, the charges in which appearing to the directors to be on a high scale, it has been in abeyance for some time, and was subjected to considerable reduction before payment. The other item the directors wish to refer to is that under the head of law and parliamentary expenses, &c., which, besides the general charges of the solicitor to the present time, includes those incurred in applying to Parliament for three separate Acts, viz., the Wisbeach and Sutton, Wisbeach Harbour and Peterborough and Thorney line during 1846, and amounts to 11,052l. 0s. 6d. The latter will doubtless appear a heavy payment, and has been the subject of much consideration to the Board, who spared no pains to investigate the merits of the account in the best manner they were able; the result of which was that before they would venture

bargain. On the other hand certain clauses had been | to discharge the claim they had succeeded in reducing it by a considerable amount. The statement of accounts showed the receipts at 61,643l. 4s.; expenditure, including 35,672l. 18s. preliminary expenses and the items above mentioned, 54,348l. 10s.; balance in hand, 7,294l. 14s. 6d.

The CHAIRMAN said that the report was necessarily brief, and did not require many observations. related principally to the guarantee from the Great Northern, which they were informed at the last half-yearly meeting could not be at once brought into operation, in consequence of an Act of Parliament having passed which rendered it imperative that a certain portion of the capital of each company should be paid up before one could guarantee interest to another. That Act overrid all agreements, and it being useless to call up their capital until the Great Northern had somewhat advanced, they had no alternative but to wait till that time arrived before they could claim their interest of 6 per cent. The parliamentary expenditure had certainly surprised the directors. The year 1846, they were aware, was a peculiar one with regard to parliamentary expenses; they much exceeded those of any year before or since, and they would see by the report the amount paid; but however large that was, it had been considerably reduced from the original claim. The directors at first hesitated whether it would be the wisest course to settle amicably with the solicitors or have the bill taxed; but having adopted the former, they had succeeded in obtaining a reduction of about 25 per cent. on the professional charges; and he believed that he might state that, with the exception of one demand of 1,000l., they did not now owe anything to the parliamentary agents. By and by, when the Great Northern was far enough advanced, the capital of this company would be called up, when the guarantee of 5 per cent. from the company he had mentioned would at once take effect, with the prospect of an early receipt of 6 per cent. He moved the adoption of the report.

Mr. PHILLIPSON seconded the motion, which was unanimously carried.

#### EAST LINCOLNSHIRE.

Aug. 11.—Half-yearly Meeting, London.—Mr. G. H. PACKE in the chair.

The Report stated that the line between Great Grimsby and Louth, 14 miles in leugth, had been opened since the 1st of March. The Act for the junction at Grimsby with the Manchester, Sheffield and Lincolnshire has received the Royal Assent. The works on the line between Louth and Boston were nearly completed. The whole line would be handed over to the Great Northern about the end of Septemover to the Great Northern about the end of September, and the guarantee of that company of 6 per cent. would come into operation on the 1st of October next. A call of 2l. per share would be made on the 1st of November next. The cash account showed the total receipts to be 523,955l., and the cash in hand 20,933l. 19s.

The Report was agreed to.

#### ROYSTON AND HITCHIN.

Aug. 7 .- Half-yearly Meeting, London .- Mr. WIL-SHERE in the chair.

The Report stated that the directors, in accordance with certain arrangements, had made no progress with the works since the last meeting; but the advanced state of the works of the Great Northern between London and Hitchin would render it necessary for the contractor to commence operations very early in the ensuing year. After a very severe par-liamentary contest for an extension of the line from Royston to Cambridge, the select committee of the House of Commons affirmed the proposition contended for by the directors, that the introduction of the Great Northern system into Cambridge by means of this extension was called for by the public requirements. They decided that the communication should be made by a junction with the Cambridge and Bedford, instead of by the formation of a second line into Cambridge, and accordingly recommended the adoption of so much of the proposed plan as related to a line between Royston and Shepreth, and that the Royston and Hitchin be authorized to make the portion of the line between Shepreth and Shelford on the Eastern Counties line, in case the latter company shall not make it at the time specified in the Cambridge and Bedford Act; that the proposed branch from Baldock to Arsley was rejected in consequence of the Eastern Counties refusing to enter into an arrangement with respect to substituting it as a means of communication between Cambridge and Bedford. The statement of accounts showed the receipts at 44,048L; expenditure, 59,743L; balance, 4,305L in

cash.
The CHAIRMAN moved the adoption of the report. Mr. Drake, in reply to a question, stated that the

proportion of the capital was raised on preference

committee on the bill assumed that the portion of line between Shepreth and Shelford would be constructed by the other company; the power to do so was only recommended, but not inserted in the Royston and Hitchin Extension Act. He said it would be no use to open the Royston and Hitchin line until

the Great Northern was opened to London.

The distance from Shepreth to Cambridge by the intended line would be about 64 miles, and the guarantee of 6 per cent. on the companys paid-up capital would come into operation in July 1849, whether the line was opened or not.

Resolutions were passed adopting the report, authorizing the directors to enter into arrangements with the Great Northern respecting the extension line, and re-electing the retiring directors. It was agreed not to fill up the vacancies in the direction at sent, caused by the retirement of Messrs. Jackson, M.P., and S. P. Boyd.

## COVENTRY, NUNEATON, BIRMINGHAM AND LEICESTER.

Aug. 8.—Half yearly Meeting, Birmingham.—Mr. Briggs, of Leicester, in the chair.

The SECRETARY read the Report, which stated that The SECRETARY read the Report, which stated that the arrangements with regard to the expenditure of the capital agreed upon at the last meeting were being carried out; that the arrears of the call of 1l. 12s. per share, due on the 8th of February last, amounted to only 462l., and that measures would be taken to obtain the immediate payment of that sum due from defaulters. The Railway Commissioners have signified their intention of extending the time have signified their intention of extending the time for the completion of the works and the purchase of land. The directors expressed a confident hope that, in the course of a few months, they should be in a position to proceed with negotiations for the sale of the line. The statement of accounts showed a balance in hand of 52,0771., but this sum will be absorbed in the purchase of rails, sleepers, &c., for which the directors had made contracts upon fair and advantageous terms.
The report was adopted.

#### LANCASTER AND CARLISLE.

Aug. 4.—Half-yearly Meeting, Lancaster.—Mr. E. N. HASELL in the chair.

The Report commenced by alluding to the increasing prosperity of the line. Since the opening of the entire Caledonian line in February last, the weekly returns show a progressive increase of traffic, amounting, in the month of July 1848, as compared with July 1847, to 44 per cent., the month's gross receipts in 1848 having been 9,616L, and in 1847 only 6,679t. This increase had been greater in the passenger department than in that of goods and cattle, from which the directors inferred that a large and increasing revenue from passengers, under all conditions of trade, might be calculated upon. The working stock of engines, carriages, &c., had been kept up in a state of great efficiency by the London and North-Western, under their contract, which continued to answer the expectations that led the directors to enter into it originally. The current expenses of the half-year showed a greater proportion to the gross receipts than those of former periods, because they now for the first time include the maintenance of national works, increased poor rates, and other local charges. The total amount expended, according to the capital account, considerably exceeded the sum of 1,200,000%, which was the original estimated cost of the line, exclusive of the station at Carlisle. The principal cause of this excess was an account of 50,000l. by the engineers to the contractors for extra works over the payment and of a larger sum than was calculated on for land purchased for the line. To these items must be added charges not included in the original estimate, viz., those of supplying a sufficient number of waggons and other requisites for carrying on the goods traffic and of building warehouses at the stations, and making sidings and accommodations necessary for the same purpose. The only unsatisfactory matter in connexion with the company's affairs was one which the directors had frequently found it to be their duty to bring before the shareholders, namely, the state of their relations with the proprietors and lessees of the Lancaster and Preston, which was still a disconnected link in the otherwise uninterrupted chain of railway communication, in friendly bonds, from London to Perth. The Lancaster and Preston line was still in the possession of the Lancaster Canal Company, but unlawfully, as its owners, the Lancaster and Preston, ailege: and the rights of those parties were, and long might be, in course of lingation in the Court of Chancery or elsewhere. Although the directors had been unable hitherto to come to any arrangement

greatest disinclination to act upon the large powers given them at former meetings, in the hope that so desirable a result would, ere this, have been arrived at. Disappointed, however, in this hope, the directors had now to ask from the shareholders a continuance of ample powers for dealing with this most important question, it being obvious that it was no less necessary for the interest of the public than for theirs that the question of the safe and free passage, on fair terms, of the north and south traffic from Lancaster to Preston, and vice versa, should be placed without delay upon some permanent footing. The statement delay upon some permanent footing. The statement of accounts showed the traffic receipts at 46,376l. 2s. 2d.; disbursement, 26,654l. 0s. 9d.; balance for dividend, 21,600l.; leaving 147l. 13s. 2d.

The Chairman moved that the report and state-

ment of accounts annexed thereto be adopted; that a dividend of 1l. per whole, and 4l. per third, share be now made and declared out of the nett profits of the undertaking, up to the 30th of June last, and that the directors be empowered to adopt such parliamentary or other measures as they shall think expedient for protecting the interests of this company in the matter of the Lancaster and Preston, and if, in their opinion, needful, for obtaining for this company an independent means of communication between Lancaster and Preston.

These motions were unanimously carried.

#### KENDAL AND WINDERMERE.

July 31.—Half-yearly Meeting, Kendal.— Re-orters were excluded. The report showed the porters were excluded. receipts for the half-year (including 1291, from rents) at 3,656l., while the working expenses were 2,490l. at 5,050c., while the working expenses were 2,450c., to which is to be added 948t. interest on the debt, leaving a nett balance of 218t. only. The directors propose to raise 50,000t. by issue of 7½ per cent. preference shares. This proposition, involving a preferential payment of 3,750t. per annum, was withdrawn till the adjourned meeting. Complaints, it is stated, were made as to the amount of working expenses-about 67 per cent. on the receipts-and a stormy discussion ensued; a joint committee of investigation of directors and shareholders was ap-pointed, and the meeting adjourned for a month. The balance at credit of revenue account is 2,166l.

Caledonian.—Aug. 9.—Meeting of the 50l. Share-holders, Liverpool.—Mr. Cochrane in the chair.— Dr. Chalmers said that the meeting had been called in consequence of what had been stated by the chairman at the last meeting held in Edinburgh. Dr. Chalmers then read from the report a statement made by the chairman, to the effect that it was the intention of the directors to propose, at the next half-yearly meeting, to reduce the 25l. shares, on which 8l. 15s. had been paid, to 12l. 10s., and, when times became better, to create new stock among the whole body of proprietors, bearing interest at 5 per cent. for the first seven years, and 6 per cent. afterwards in perpetuity, and that all the holders of 25t. shares, who had paid up the reduced share of 12t. 10s., would be entitled to one of the new issue for every share they held. He (Dr. Chalmers) contended that this was unfair to the old 50t, shareholders, who had paid up the full amount of their shares, and whose property had been reduced 7l. since the issue of the 25l. shares. The Chairman said it seemed to him perfectly clear that the 25t, shareholders would be placed in an advantageous position over the old shareholders, if the arrangement were carried out. It was ultimately agreed that a further meeting should be called previous to the half-yearly meeting to be held next month.

Aug. 8 .- Manchester .- This was also a meeting of shareholders opposed to the present proceedings of the directors, but reporters were not admitted.

LONDON, BRIGHTON AND SOUTH COAST .-Meeting of Shareholders, London.—Mr. J. Wilson in the chair.—Mr. H. Davis stated that he proposed to go into a few details, in order to show that the past management had not been beneficial to the proprie-Their shares had sunk rapidly enough in the market, from 80. to about 30., and their interest had fallen from 8 to 4 per cent., and perhaps less. They were told that the depreciation arose from the circumstances of the times through which they had passed The truth was that the public saw that a vast proportion of their capital had been spent injudiciously, that there was little prospect of getting a fair interest. and had therefore lost confidence in the company, as it was not to be supposed anybody would give 80% for a return of 3% or 4%, per annum. By the reports, the capital expended was about 7,000,000%, and the gross returns about 450,000%, from which they had totake the working expenses, which absorbed one-half, with these parties for the passage of Lancaster and so that under present circumstances their dividend to be called upon to create preference shares to 1 ay Carlisle traffic over the line, they had felt the could not exceed 4 per cent. But then, again, a large off their own bonds. Had the shareholders been

shares, with guaranteed interest of 6 per cent., se that if the traffic paid 4 per cent. upon the capital. in order to pay the interest on the preference shares the original shareholders must go short of that amount; and he was afraid, that if some method was not taken to limit the expenditure, further preference shares would have to be created. From the accounts furnished for the year 1847, a period which it was well known was very trying to mercantile speculations, and when all prudent men were seeking to contract their expenditure, the directors had actually spent 978,000l. in increase of capital. -and he would just go through a few items to show them what was the nature of that expenditure. The first item to which he would allude was stations, 31,000l. He could not see for what it was required, though he had observed that a new station had been built at Croydon, while the old one stood perfectly uscless. Then, again, there had been 10,513%, expended on six branch lines, the construction of which had not yet been touched. The next item to which he would call attention was opposition to other schemes, viz., to the Great Kent, 42,643l., and to the Tunbridge and Hastings, 6,473L; making together about 49,000L expended, which must ever be wholly unproductive to the company; and, again, he found for law charges, parliamentary expenses, and miscellaneous charges, 12,200*l*. and odd. If such expenditure was allowed, the time would come when would not receive any dividend at all; and, in fact, there could be no security for the shareholders till the capital account was closed, as they could not tell from the accounts, as at present furnished to them, whether things charged to that account ought not in reality to go to the revenue account. By the revenue account of the past year, he found that the takings had been 410,000l. (exclusive of the toll from the South-Eastern), and the expenditure for working the line, excluding interest on borrowed capital, 194,000/. That item appeared so large that he would give them a few of the details: for locomotive power they were charged 78,000*l*.; coaching, 42,000*l*.; office expenditure, 2,900*l*.; direction and management, 1,600*l*.; stationery, &c., 3,000*l*.; and miscellaneous, 1,000*l*.; the last four items making together about 9,000%. was impossible to go thoroughly into detail, but the sum total must strike every one as too large. He found that the working expenses of the London and North-Western were 38 per cent. on their receipts; of the Great Western, 38 per cent.; of the South-Eastern, 37 per cent.; of the Lancashire and Yorkshire, 39 per cent.; and of the Brighton no less than 48 per cent. That appeared to him to be much too large, especially when he considered that the tonnage for goods was less in proportion than the charges for passengers, though the cost of carrying the latter was less than that of goods, very little of which came on the Brighton, as compared with other lines. comparative passenger traffic on the London and North-Western he found was 65 per cent. of the whole; of the Great Western, 75 per cent.; of the South-Eastern, 79 per cent.; and of the Brighton, 89 per cent.; and he was informed by persons of experience that the working expenses of the Brighton line ought not to exceed 35 per cent. of their receipts, so that if they were to reduce their expenditure to what it ought to be, it would make a difference of at least 1 per cent. in their dividends. There was one item the capital account to which he had omitted to allude, which he considered extremely large, namely, 55,000% under the head of manufactories and works. He considered the accounts as presented by the directors as altogether unsatisfactory, and they would continue so until they were accompanied by a balancesheet, in which the expenditure and receipts were shown to balance to a fraction. At the past halfyearly meetings it appeared to have been the practice of the directors to tell the shareholders that there was some 80,000*l*, or 90,000*l*, to divide amongst them, and some 300,000% to be called for from them. And why was it so? Because the revenue was continually being used for the capital account, and the accounts were so made up that nobody could tell what ought to belong to capital and what to revenue. And the dividends of the one half-year were paid out of the receipts of the following. At their last meeting in February they were called together to receive certain accounts and certain information; but it was afterwards discovered that the directors had made application to Parliament, without the sanction of the shareholders, to subscribe 300,000l. to the Direct Portsmouth, and 75,000l. to the establishment of steamboats, and that they had also advanced, out of the funds of the Brighton, 20,000*l*, to the Steamboat Company, and 23,000*l*, to the Portsmouth, and that, too, at a time when the shareholders were compelled supplied with a balance-sheet, those sums must have appeared upon the face of it as assets, and they would have seen how their money was disposed of. In despite of the strong feeling expressed by the shareholders at the last meeting, the directors had proceeded to Parliament for the two measures they had lost; but the shareholders would have to bear the expense of the contest. He had prepared a series of resolutions, which he would move as a whole for consideration. They were to the effect-

sideration. They were to the effect—
That the large expenditure in law and heavy works appeared to the sharcholders to have been very improvident, ill-judged and destructive of the future good prospects of the company; that the advances made to the Direct Portsmouth and the Brighton and Continental Steam Packet Company, without the assent or knowledge of the shareholders, were misappropriations of the Brighton funds; that the concealment of these advances in the accounts furnished to the shareholders, and the refusal of the chairman to answer questions put to him at the general meeting on the shareholders; that the statement of Mr. Grenfell in the House of Commons, that on three or four occasions the the House of Commons, that on three or four occasions the proposal of the directors to establish steamboats had been unanimously concurred in by the proprietors, and that the undertaking had been promoted at the instigation of the shareholders was made by him for the purpose of leading the members to suppose that the bill to enable the directors the memor's cosmpose may the bit of chaole the directives to subscribe 75,000%, out of the railway funds to steamboats had been sanctioned by the shareholders, and was without foundation; that the like declaration of Mr. Parsons to the committee of the House of Lords admitted of the like con-tradiction; and that the growing revenue of the company, combined with economy in the management, would justify combined with economy in the management, would justify the expectation of increasing dividends, and the proprietors present pledged themselves to use all their efforts and influence to effect the necessary changes in the management, and invited the assistance of distant proprietors.

Mr. Ald. Wilson, at great length, seconded the resolution. He reiterated all the charges brought against

the directors at the last half-yearly meeting in February; denied that the committee appointed to examine into the state of the company had been fairly selected, or had been furnished with full information; and accused some of the directors, either by themselves or relations, of jobbing in the share-market and in other respects with the property of the company.—Mr. W. Y. Freebody, C.E., recommended the appointment of a committee to organize the opposition and the publication of an appeal. They had spent 212,000t. in former years in law proceedings, when one clever and honest lawyer could be got to do the work for 1,000*l*. per annum. The greater part of this sum had been spent in warfare with their neighbours. He believed that the line, under proper management, would give them a return of 6 per cent.—A Proprietor thought the shareholders were as much to blame as the directors, because they had allowed the Board to take those measures without opposition.—Mr. Wood proposed that a subscription should be entered into to give publicity to their propositions and that the absent proprietors to their proceedings, and that the absent proprietors be solicited to aid in forming a new direction.-Mr. Freebody seconded the motion, which was also carried.—The following gentlemen were appointed the committee: Mr. Ald. Wilson, Messrs. Davis, Freebody, J. Wilson and Wood.

THE REVOLUTIONS AND RAILWAYS .- The follow ing results are taken from a Beigian paper (L'Independance), and are truly lessons to those who wish reform as our French neighbours have obtained it through the destructive agencies of a revolution :-The greatest deficit in the ways and means is upon railway receipts, there having been in the first five months of the present year a diminution of 657,919f. 36c.: for while in that period of 1847 they were 5,423,444f. 20c., they have this year been only 4,775,524f. 84c. The increase of the receipts which seemed certain in January would have continued this year on the preceding, as much or even more, as several excellent measures were adopted, in order to develope the working. All these hopes have been crushed by the contrecoup Belgium has received from the French revolution; and the conveyance of merchandise has essentially suffered from the disturbances in Germany. A certain improvement has however begun to manifest itself. It is a remarkable circumstance, that there has been but a very slight diminution in the number of passengers. We do not take into account here the number of military and extraordinary passengers. In May 1847 there were conveyed 322,390 civil passengers; and in May this year 321,241. But a very sensible difference is observed in the distribution of passengers between the different classes of carriages. Last year the number of passengers who took seats in the diligences (the first class) was 35,543, or 11 per cent.; this year the number has been only 26,427, or 84 per cent. The proportion of the number of passengers in chara-bancs (the second class) has decreased from 22, to 19; per cent; while that in the passengers by the waggons (the third class) has risen from 671 per cent. to 721. I run is made with perfect safety.

Several causes have contributed to produce this result. In the first place, the considerable reduction in the number of foreign passengers, who usually take the first class; next, the desire or necessity of economy, which has caused a certain number of passengers who in other times would have taken the first to go by the second class; and lastly, the improvement in the third class, in which passengers are now better protected against the rain than they were previously, the latter cause being certainly not the least influential. However, without having occasion to learn the degree of influence exercised by each of the different causes signalized, there has this year been a diminution of 72,000f. in the product of civil passengers (there having been an increase under the head of extraordinary products, comprising the army, &c.). The number less conveyed has been only about 1,000, but the average sum per passenger has fallen from 1f. 77c. to 1f. 55c. The deficiency as regards the conveyance of goods, 22,000 tons in quantity, and 146,000f. less in the receipts, proceeds almost exclusively from the disturbed state of our international relations, produced by the events in France and Germany. As with the passengers, the interior traffic of goods has diminished very little. Thus the receipts at the Ghent station (for goods) were 16,743f. in May 1847, and in May this year, 14,337f.; while the Antwerp station, the great outlet and inlet of merchandise, has in the same month this year, received only 52,201f., the amount in the former year having been 143,843f. This state of things, however, begins to improve. Order and calm are resuming around us; there is, then reason to believe that the half-year we have just entered will present results more satis-

Suspension Bridge at Niagara Falls.—The Albany Journal thus speaks of this work:—It is contemplated to have the foot bridge at the Falls ready for crossing on the 4th of July. The following is to be the composition of the railway bridge:— Number of cables for bridge, 16; number of strands in each cable, 600; ultimate tension, 6,500 tons; in each cable, 600; ultimate tension, 6,300 tons; capacity of the bridge, 500 tons; number of strands in the ferry cable, 37; diameter of the cable, § in.; height of stone tower, 68 ft. 1 in.; height of wood tower for ferry, 50 ft.; base of the tower, 20 sq. ft.; size at the top, 11 sq. ft.; span of the bridge, 800 ft.; whole weight of the bridge, 650 tons; height from the water, 230 ft; depth of water under the bridge, 950 ft. 250 ft. This suspension bridge is the most sublime work of art on the continent. It makes the head dizzy to look at it, and yet it is traversed with as much security as any other bridge of the same width. We were present while the workmen were engaged in hanging the planks over the fearful chasm. It looked like a work of peril, but it was prosecuted with entire safety. Not an accident has happened since the first cord was carried across the river at the tail of a kite. It is impossible to give the reader a clear idea of the grandeur of the work. Imagine a foot-bridge, 800 ft. in length, hung in the air, at a height of 200 ft., over a vast body of water rushing through a narrow gorge at the rate of 30 miles an hour. If you are below it it looks like a strip of paper suspended by a cobweb. When the wind is strong, the frail gossamer-looking structure sways to and fro as if ready to start from its fastenings, and it slakes from extremity to centre under the firm tread of the pedestrian. But there is no danger. Men pass over it with perfect safety, while the head of the timid looker on swims with apprehension. We saw the first person pass over it—Mr. Ellet, the builder. His courageous wife soon followed him, and for two days hundreds, attracted by the novelty of the thing, took the fearful journey. It is worth a trip to the Falls to see this great work, although it is not probable that one in twenty will have the nerve to cross upon it. For, strange as it may seem, there were those who had no hesitation to slide over the awful chasm in a basket, upon a single wire cable, who could not be induced to walk over the bridge. And this aerial excursion is thrillingly exciting. seat on a locomotive, travelling at the rate of 60 miles an hour, is nothing to it. When you find yourself suspended in the air, with the roaring, rushing, boiling Niagara 250 ft. below you, if your heart don't flutter you will have nerve enough to swing over Vesuvius And yet the sensation is not altogether unpleasant. The ride itself, as the old lady said about skinning cels, "is nothing when you get used to it." Another new attraction at the Falls is the excursion from the site of the suspension-bridge to within a few rods of the Horse-shoe Falls in the little steamer Maid of the Mist. In no other mode can the visitor obtain so grand a view of the great cataract. Every one makes the trip, and all express the same sentiment, that the Falls are not seen in all their sublimity and grandeur except from the deck of the Maid of the Mist. The

## ANCASHIRE AND YORKSHIRE

ANCASHIRE, AND I ORRESHIRE RALLWAY.

NOTICE IS HEREBY GIVEN, that the BOOKS in which are registered the TRANSFERS of SHARES in this Company will be CLOSED from and after Wednesday the 16th of August 1818, to and inclusive of Wednesday the 6th of September 1848.

By order, JOHN S. HERON, Sceretary.

Manchester, July 28, 1848.

SIXTH CALL, £5 per Share, making £28 paid.

NOTICE IS HEREBY GIVEN, that pursuant to a Resolution of the Board of Director, the Proprietors of Shares in this Company are required to PAY the SEVENTH INSTALMENT of 22, per Share, on or before the 16th day of August next, to any of the under-mentioned Bankers:—

der-mentioned Bankers:—
Londen-Messes, Glyn, Hallifax, Mills & Co.
Liverpool—The Bank of Liverpool.
Manchester-Messes, Jones Loyd & Co.
Gloue-ster-The Glouce-stershire Banking Company.
Brist-) and Exeter-The West of England and South Wales
Bank.
Cardiff: The National Provincial Bank of England.
Carmarthen-Messes, David Morris & Sons.
Swansea—The Glamorganshire Banking Company.

Swansca—The Glamorkanshire Banking Company.

All Calls not paid on or before the 16th of August next will be charged with interest at the rate of 5 per cent, per annum; and no interest shall be payable to any Proprietor upon any amounts which he may have paid up, or which may have been paid upon any Shares, so long as any Call shall remain unpaid upon any Shares, so long as any Call shall remain unpaid upon any Shares, beld by him.

N. ARMSTRONG, Secretary.

South Wales Railway Office, 449, West Strand,
London, July 12, 1848.

#### DUTCH-RHENISH RAILWAY

The Head Direction hereby informs the Sharcholders that, in virtue of a Resolution of the Meeting of the General Direction, held on the 8th of July, agreeably to Articles 12 and 13 of the Statutes, the other moiety of the Call which was made payable on the 18th of July and provisionally suspended by a Resolution of the 18th of August 18th, to the amount of 6 florins per share.

All Calls, without exception, must be paid in Amsterdam, exclusively to the Associatic Cassa, on the Heeringracht, near the Driekoningnenestrata, between the hours of 10 in the Morniag and 2 oclock in the Afternoon, where the Shares, which must be presented at the same time, will be stamped.

In order to save the English Shareholders from the necessity of sending over their Shares, the Calls may also be paid on that day against a receipt to be delivered by the Associatic Cassa. In that case a list must be presented of the numbers of the Shares upon which the payment is made. On the presentation of the Associatic Cassa's receipt at the Office of the Company, 4, New Broadstreet, London, the Shares for this Call will there be stamped.

The Head Direction of the Dutch-Khenish Railway
Company,
L. J. ENTHOVEN, President.
By order of the same,
J. C.s. JACOB, Secretary.

PORT OF GREAT GRIMSBY.

# NOTICE, TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

# GREAT NORTH OF ENGLAND RAILWAY.

At the HALF-YEARLY GENERAL MEETING of the Proprietors of the Great North of England Railway Company, held at Darlington, on Thursday, the 10th day of August 1848,-

NATHANIEL PLEWS, Esq. in the Chair,-

The following Resolutions were passed:—
1st. That the Common Seal of the Company be affixed to
the Register of Proprietors now produced.

2nd. That a Dividend be declared, at the rate of 10 per cent. per annum upon the 100l. Shares, 40l. Shares and 30l. Shares; which, for the half-year, will be 5l. per Share on the 100l. Shares, 1l. 6s. 5d. per Share on the 40l. Shares, and 1l. 10s. per Share on the 30l. Shares; and further, that 4s. 3d. per Share be paid on the 15l. Shares, being half-year's interest on instalments at 5 per cent. per annum. The whole of the above Dividends to be paid on and after the 17th inst., subject to the deduction of the Income-tax.

N. PLEWS, Chairman.

# EASTERN COUNTIES RAILWAY.

At a GENERAL MEETING of the Shareholders of this Company, held in pursuance of the Act of Incorporation and after due notice given at the London Tavern, Bishopsgate-street, London, on Thursday, the 17th day of August 1848.

GEORGE HUDSON, Esq. M.P., in the Chair,

It was resolved,—
That the common seal of the Company be affixed to the registered list of shareholders here produced.
That the Report of the Directors now read and the accounts annexed thereto be adopted, and that the divisional of the third that the divisional of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of dend of 8s. per share be paid on and after the 4th of Sep-

That James Peek, Esq., of Finsbury-square, and James Reeves, Esq., of Leyton, Essex, be appointed auditors, and that the Directors be authorized to allow to them the sum

### INIQUITY OF THE LAWS AFFECTING RAILWAYS.

An enormous mass of legislation has been thrust upon railways, complex in its details and useless in its results,—but when any subject of a practical nature comes on for discussion, either no decision is given, or the time of Parliament is frittered away in fruitless debate. The authorities have been exact enough in their tithe of mint, anise and cummin, but the weightier matters have escaped notice;-real injuries are often inflicted if anything is done, and more frequently real abuses are allowed to escape unredressed. Such is the anomalous state of matters at this moment as regards the rating of railways to parochial assessments; at every village they pass through they are attacked and excised upon to the uttermost farthing; when such a wealthy body as a railway company is to be plundered, every village Hampden thinks this too convenient an opportunity for freebooting, and the proprietors who have probably brought an increase of revenue and wealth to the little miserable clod-hopping community, are set upon and robbed with as little compunction as if they had been attempting to force their way through the inhospitable passes of Afghanistaun.

Most unfortunately, and most unexpectedly, Lord Denman took the same view as the parishes, and thus fixed the railway interest with these liabilities, which, nevertheless, we cannot help thinking to be an exceedingly hard decision. Such, however, is the fact, and nothing short of legislative enactment can, it seems, remove the difficulty,-though why a different rule has been applied to railways than to Messrs. Pickford & Co., or any other carriers or manufacturers, whose stock in trade and profits are expressly exempted, we cannot by anv means comprehend.

That Parliament will ultimately take up the business there can, we think, be no doubt; the injustice is too glaring to be allowed to exist after a fair discussion, of which, by the way, railways have hitherto seen very little. There are now in the house several talented men so closely connected with this interest, and so well able to make their part good, that we do not doubt the grievance will be redressed; but their exertions must be seconded by a strong, vigorous and united effort on the side of the companies, who here at least have all a common bond of union.

The session is too far advanced, and the arrears of business are too heavy, to allow of anything being done at present, but the matter must not be suffered to drop. Sir George Grey has a bill now before the house for ameliorating the position of turnpike roads, which, though very important, seems to be attracting very little attention. The object is to relieve trusts from their present enormous charge of management; in fact, putting sundry short pieces of road under one Board, and amalgamating them somewhat on the railway principle. This is sound and rational legislation, and will afford a remedy to an evil of considerable magnitude; and we see no good reason why those gigantic turnpikes the railways should not have a similar judicious and honest meed of law awarded to them; we have surely by this time so far recovered our senses as to see that the outery which was raised as to the oppressive monopoly of railways is altogether without foundation. The wise precautions of our rulers, which precluded them from dividing more than 10 per cent., we hope will take a more wholesome direction, and, leaving them a fair field, see that

severe race they are running. Our space prevents us doing more than calling attention to the parochial rates and audit bill, which we are glad to see the associated railways are also taking in hand. The detects and blunders in Acts of Parliament are really disgraceful to us nationally,-the Acts now appended to explain the parent Act, make such a tissue of confusion that we throw up in despair at the perusal of the document with its explanatory riders; in short the law is the great curse of this country, and if anything could justify a revolution we can conceive nothing so likely to do it as the torture inflicted by law and lawyers, from the Court of Chancery down to a parliamentary committee, with its half-a-dozen or more learned gentlemen talking against time, the leaders being retained inlas many cases, and, after having taken their fees, leaving their clients in the lurch when most wanted. This, however, is somewhat foreign to the more immediate object under discussion, and we will therefore briefly allude to a few points which have struck us in perusing the The very commencement is startling; for the first three clauses would contain a power to reverse all previous decisions as to the application of parochial rates, which might thus be managed by a self-elected clique, who often conduct affairs in a vestry with as little attention to the right of the case as may suit their own immediate interest. The bill contains, further, a retrospective power of thirteen years' duration. This seems too monstrous to be passed, but so it stands at present; it would open the door to such an amount of vexatious proceedings that we can hardly suppose it will be allowed to form part of the law of the land. Some of our readers may not be aware that although railways contribute frequently the largest amount in a parish, on the least amount of property, they are only entitled to twelve votes, and it may easily happen that these meetings whose fiat is thus launched forth may be called in such a way that the officers of the railway about to be mulcted may know nothing about it; and even if they did, their opposition would probably be neutralized by the efforts of these parish functionaries, who in some hole-and-corner meeting, with Mr. Bung, the beadle, to tile the lodge, would decide that the rates are to be so and so, and pass them accordingly, nemine contradicente.

We have frequently heard it said there never was an Act of Parliament without a hole in it big enough to drive a coach and four through. As their day is somewhat past, we trust the locomotives will bestir themselves, and not only drive in, but over this precious attempt at legislation, nor rest quiet until full and ample justice is rendered to them.

# HEADS OF A SYSTEM OF PRACTICAL REFORM.—No. IV.

It has already been remarked that the extension of railways by continuous lines to remote points, and the junction with these at intermediate points of divergent lines, has given rise to arrangements tending to increase, in a serious degree, the unproductive weight of trains. The object of these being the convenience to passengers of completing the entire journey without change of carriage, the growing practice is to send "through" coaches to and from every chief point in communication with the terminus. The effect of this process on all long lines is to burden the train in a degree out of all proportion to the number of passengers it contains. For instance, if we adopt the rule of conveying every traveller from London to York, Edinburgh or Glasgow, or vice versa, without change of coach, the followthey are not allowed to be overweighted in the ing case will be constantly happening. There coach is a real inconvenience, which we would

are, we will say, twenty passengers for Edinburgh, and five for York. For the former, two coaches must be sent, which contain thirty-six places; for the other, one, containing eighteen; while it will usually be found that there is also room to spare in other parts of the train, appropriated to shorter fares; and the vacancies become more as the train goes on to Rugby, Birmingham, Derby, or Carlisle. At each of the points where main lines join, the same arrangement will bring a further number of "through" coaches but partly full; and these are to be dragged along with the train, that is dropping its shorter fares, as we have said, so as to be constantly adding to the vacant room in its other parts at the same time that its useless load is growing heavier by taking up half-filled carriages. The practical result up half-filled carriages. The practical result of this is, that the engine has to draw—we will say-the weight of nearly twice as many coaches as would suffice, were all duly filled, to contain the passengers booked. Supposing the average number of ten passengers per coach all through the train-which, from some observation of the business as thus conducted on long lines, we should think not far from the truth, except at particular seasons only—you will employ for 200 passengers twenty coaches; whereas could they be disposed of according to the real capacity of the vehicles provided, twelve would easily convey them all. Now, it will be seen that such a consequence of the "booking through" system, going on each way daily in three or four trains at the least, is a very heavy item in the chapter of working expenses. The needless wear and tear of the coaches is a considerable objection; but it is, perhaps, the least serious in a financial point of view. The strain upon the locomotive is a far more important business, both in its direct increase of the cost of moving the train, and in the effect upon the road of the increased weight of the engine required to move trains so encumbered at the rate of speed which, as we have observed in a former article, constant efforts are being made to accelerate. Here, then, is room for a practical amendment of great consequence to the profitable working of all our chief railways; and unless measures are taken to reduce, in some way, the mere dead weight of the trains, which in the present course of practice goes on increasing in proportion as new lines are opened into the main trunk, there can be little prospect of improving the nett receipt, at the low fares which are now become general. That, under such circumstances, something may, with perfect fairness to the public, be attempted, to get rid of a part of this unprofitable burden, cannot be reasonably denied: it is evident, also, that much may be done to this end without imposing on the passenger any conditions whatever of which he can justly complain.

The details of what would be required, must of course be adapted by the managers to each particular case: - the principle of trying to render the trains more compact being once laid down as necessary, its application within certain limits will be found no difficult matter, if the resolution be taken of pursuing it with the care it deserves. It will suffice to remark, that the existing practice of stopping all through trains for periods of ten to fifteen minutes at several chief stations where other lines join or branch off,-on which occasion the passengers always quit the coaches for refreshment, &c., -affords sufficient facilities for the adjustment of their loads-especially since the old method of stowing luggage on the coaches has already been in a great degree superseded by the use of luggage-vans. shifting of passengers' effects from coach to

on no account expose them to; but this might | a competition conducted in any way directly be rendered unnecessary by arranging the whole baggage in different compartments of one or more roomy vans-as we see it done on most of the foreign railways. From these the packages can be easily transferred where a change of line is made; and the luggage being thus disposed of, useless coaches can be readily turned off at certain points, wherever a principal stoppage takes place. The passenger, who always leaves his place at such points, would simply have to be shown to another, when about to start again; and the only extra trouble required would be that of the people in charge at stations where the re-arrangement must take place. Any one who has observed what is done in the time now allowed at such points as Swindon, Crewe, or Normanton, will see that for this process there is enough, and more than enough, provided by other conditions of the business. The object, other conditions of the business. indeed, is of itself so very material, that it might be worth while, did not this time suffice, to incur some extra delay in order to accomplish it. Were this necessary, the increased capacity of speed gained by relieving the engine would far more than compensate the detention. But with a moderate amount of system, and a few additional hands, all might be done within the limits of stoppage now existing. The effect in saving expense would be far more considerable, both directly and indirectly, than casual observers may believe. Besides this, it would produce other advantages, by increasing both the case and the safety of working, which unwieldy trains are always apt more or less to interfere with.

In a late journey of some 300 miles by one of the chief lines to the North, the extent of the evil we have been noticing was forcibly brought to our notice by the state of the trains we travelled in both going and returning. In one part of the down trip we started from a main station, after a stoppage there of more than twenty minutes, with some twenty coaches, four or five of which, appropriated for through traffic, had not altogether more than a dozen passengers, while in the other carriages there was vacant room for a score at least. The same thing occurred on the return. In one through coach that had come 100 miles thus, there was a single passenger when we got into the train, in another there were three. At every new point of junction the dead weight of half-filled coaches became greater-the train arrived at Wolverton with about twice the number that were needed for those booked in it; and a profitless load of at least 20 tons was dragged from thence to London, at a running speed of nearly 40 miles per hour. What the practical outcome of such a method of working must be, on every chief item of current expense, we surely need not insist upon. No one conversant with the business can be at a loss to trace its financial effects -they are merely submitted to, we apprehend, on grounds which themselves require thorough re-consideration.

These have already been touched upon in our remarks on the chapter of speed. They amount to the adoption of a principle of competition, on which it becomes necessary for every line to keep pace in this and other ways, at whatever cost, with every other that can take passengers in the same direction; and the only consistent result of carrying out the process, would clearly be, that all shall arrive at length at a point where the profits of the working will be reduced to zero. An expensive concession on one line must be met by one equally expensive on the rival railway; this, again, the former

tending to lower the profits of the whole business, a part of which only it professes to secure, is wholly unsound in principle; and could only act by producing a result more detrimental than any partial abstraction of the business in question, even could the object be in the meanwhile attained. But if to this we add that it cannot, after all, secure that object, while similar counter-efforts are still in the power of the competing party, the bearing of the double error may be perceived. It is one of a class to the influence of which the present embarrassments of the railway interest may nearly all be traced; and there can be no real prospect of a change for the better until more rational views on the subject prevail, whether by the force of reason or the force of mere necessity. If the former be ineffectual, the latter will be sure to come in time, with severer methods of instruction.

### SOUTH-EASTERN.

Engineer's Report for the Meeting, Aug. 17 (p. 579). It is highly gratifying to me to announce to you that the progress of the works during the last half-year has fully confirmed my anticipations as to the reduction in the quantities of work as compared with the estimated contract amounts; the various reductions will make a sum at the contract prices of about 250,000l, on the whole of the lines, atthough beinglying the scene-place here a putitive dentities.

amounts; the various reductions will make a sum at the contract prices of about 250,000l. on the whole of the lines, although brickwork has generally been substituted for the timber constructions. This important reduction has been obtained partly by deviations of the lines within the parliamentary limits, but principally from the material of the country proving more favourable than was assumed when the working drawings were first made, which is particularly felt in the tunnels, where nearly one half the saving occurs. North Kent Line.—The construction of this portion of the company's lines has not progressed so much as it otherwise would have done, arising from the unavoidable delay in obtaining the land for the deviations already mentioned. The whole of the land between Plumstead and Gravesend is, with little exception, in the hands of the contractors, and also the principal portion between London and Charlton. In the district of 15 miles, between Woolwiel and Gravesend, the works are far advanced, the tunnel and the principal cuttings being so near completion that this portion of the line may be opened for traffic by Christmas with ordinary exertion, at a further expenditure not exceeding 50,000l, in works. In the upper portion, between London and Charlton, the two principal works are the Greenwich viaduct, or widening, and the Blackheath tunnel of 1,700 yards; the former of which is fast approaching to completion, seven-eighths of the brickwork being finished, and the latter having the arching turned on above one-half of its entire length, and is proceeding yers satisfactority. The tion, seven-eights of the brickwork being missed, and the latter having the arching turned on above one-half of its entire length, and is proceeding very satisfactorily. The other intermediate works, which are comparatively light, are at the same time progressing rapidly, and the whole will be finished in six months with fair exertion on the part of the contractor. The line may then be opened, with the exception of 2 miles through Woolwich, the traffic on which may be temporarily carried on by omnibuses, with so little loss of time that the greater portion of this traffic will be

secured. Bricklayers' Arms Junction Line.—This branch forms a connecting link between the North Kent and Greenwich line and the Bricklayers' Arms station, not merely for the purpose of the goods truffic, but will yield also a considerable revenue from passengers. It commences at the crossing of the Surrey Canal under the Greenwich line, and descends by a gradient of 1 in 125 to pass under the Croydon line and grain grounds by a gradient of 1 in 125 to pass under the Croydon line and grain grounds by a gradient of 1 in 125 to pass under the Croydon. line, and again ascends by a gradient of 1 in 140, forming a junction with the existing Bricklayers' Arms branch at Corbett's lane. The principal work on this branch is the brick viaduct from the Surrey Canal to the Croydon line, which is complete; there only remains to be executed the bridge under the Croydon line, which is in hand, and the small embankment on the west side, the earthwork of which is obtained from the excavations of the North Kent

Ashford and Hastings Line. - This line, which completes Ashford and Hastings Line.—This line, which completes the South Coast railway communication, commences at Ashford on the main line, and terminates by a junction with the Tunbridge Wells and Hastings at Whatlington; the last 7 miles of which latter railway is common to the direct and coast communication. By this advantageous arrangement, the expensive portion of the original Ashford and Hastings line through the Forest ridge is avoided, and the coast line will be rendered complete without a tunnel. and that he will be rendered complete without a tunnel, and practically with a diminution of distance from the superiority of gradients. The Astiford and Hastings line, as now under execution, is a very favourable line as to works, and the 25 miles between Astiford and Whatlington will be completed for 10,000, per mile for a double line, or 8,000. for a single line and double works. On the first 16 miles of the line, between Ashford and Rye (where the only works deserving of notice occur), so much progress has been made that the line may be opened in six weeks or two months to Rye, on the eastern side of the river Rother, where a swivel bridge is required to be constructed, which has caused some

heavy work of this branch, to which the efforts of the con-tractors have been principally directed, and in which the most satisfactory progress has been made. The Grove tunnel is entirely complete; and a waggon road heading has been formed through the summit tunnel at Wadhurst,

has been formed through the summit tunnel at Wadhurst, which proves of the most favourable material; and the brickwork is proceeding rapidly, and at a cost not exceeding 332, per lineal yard. There are also executed 330,,000 yards of earthwork and 7,000 yards of brickwork, with a proportionate amount of other work.

Reading, Guidford and Reigatz.—The works of this railway, which forms a part of the South-Eastern Company's lines under lease, are proceeding very rapidly; and I refer with satisfaction to my report on the details, as well as to the statement made by the chairman, Mr. Ald. Salomona, at the general meeting, as to his experience enabling him testate that the ultimate cost of this work proves less than had been previously estimated; and that 154, per share, or three-fourths of the share capital, will be sufficient for the completion of the work.

P. W. Ballow. completion of the work. P. W. RARLOW.
