* The first column contains the total receipts from the 1st of July to the date of the present returns, and the second the corresponding period of 1847.
† From May 1, 1848, to date of present return.
† A deduction of 2,089, has been made for collection and delivery. Last year the deduction was 2,029.
† Exclusive of tollage payable by Edinburgh and Northern.

I The expenditure includes the cost of the Lincolnshire lines at present but partially opened and the Grimsby books. A further some of 3.17.5-65, remains available to complete the works—being, it is supposed, double what will be required.

### SHARE LISTS-(See also next page.)

[The Returns are furnished by the following Sharebrokers:—the London by Messrs. Hill, FAWCETT & Hill, 29, Threadneedle-street; the Liverpool by Sudlow Brothers; the Manchester by Mr. GRINDROD: the Birmingham by Mr. W. BAKE: and the York by Messrs. Granter & Earle.]

25 All Glasgow, Paisly & Greenock		the Manchester by Mr. GRINDROD; the Birmingham by Mr. W. BANKS; and the York by Messrs. GRAYSTON & EARLE.]

* For account, Oct. 17.

London Stock Exchange, Sept. 29.—The share-market has not shown much variation this week; the absence of speculators, and consequent absence of the dealers may account for this. A feeling of weakness is however perceptible in the few last bargains. The following are the latest transactions in foreign lines :- Boulogne and Amiens, 52; Central of France, 7; Northern of France, 63; Orleans and Bordeaux, 1; Paris and Lyon, 47; Paris and Rouen, 17; Paris and

Strasburg, 1\(\frac{1}{8}\); Rouen and Havre, 7\(\frac{1}{2}\).

Liverpool, Sept. 28.—Our market again exhibited weakness at the close of the account, and prices receded a little, particularly in the new lines; there is not much change in the old lines.

Suplow, Brothers. Manchester, Sept. 28.—There has been rather more business doing in shares during the week, but prices have not improved. SAM. GRINDROD.

York, Sept. 28.—The market has suffered further depression during the past week, and those who have selling orders can only execute them at reduced GRAYSTON & EARLE. rates.

Hull, Sept. 28.—The share-market remains droop ing and neglected, the chief operators being the "bears," either buying to meet former sales, or enter-"bears," either buying to meet former sales, or entering into new speculative operations for the fall, in our opinion a most unsound state of things. The following are the latest prices:—Ambergates, 3§ dis.; Blackburn, Darwen and Bolton, 14 dis.; North British, £; ditto, halves, 8§; ditto, quarters, 4½; ditto, thirds, 5§.

**FLINT & TOOTAL.**

**Tootal: **Cont. 28 **—Our shore, purplet.**

Newcastle upon-Tyne, Sept. 28.—Our share-market during the week has been very dull, there being very few buyers of any stock, notwithstanding the low prices. Newcastle and Carlisles were done to-day at 103, and North British at 18. W. FORDYCE.

Glasgow, Sept. 28.—Since our last notice the market has again fallen considerably for all the speculative shares, which are to-day quoted lower than we have ever known. The stocks usually taken for investment have been comparatively neglected, or investment have been comparatively neglected, but there has been some little inquiry at prices close on those of last week. We add to-day's last sales:—Aberdeen, 16; Caledonian preference, § dis.; Clydesdale Junction, 56; Edinburgh and Perth, 1§ dis.; ditto, halves, 6s. dis.; Ayr, 61, ex div.; ditto, halves, No. 1, 10l. 1s. dis., ex div.; Great Northern 12§ dis.; North British, thirds, 4½; ditto, new quarters, 9s. 3d. dis.; Scottish Grand Junction, 2§ dis.

BUCHANAN ATTERN & CO.

Buchanan, Aitken & Co.

Paris Bourse, Sept. 28 .- There is so little doing in the foreign lines, that we give only the latest Paris prices:—Paris and Orleans, 660f.; Paris and Rouen, 415f.; Avignon and Marseilles, 195f.; Central, 249f.; Bordeaux, 377f. 75c.; Northern, 373f. 75c.; Strasburg and Basle, 86f. 25c.

IRON TRADE. - Glasgow, Sept. 23.-The pig iron market has been exceedingly languid during the week. Prices have not, however, given way much, and may be quoted at 45s. for mixed numbers, and 47s. 6d. to 48s. for No. 1 Gartsherrie.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

MEETINGS.

WEAR VALLEY.—11. on the 251. shares, due Sept. 4.

WILTS, SOMBRSET AND WEMOUTH.—51. due Sept. 7.

### DEPOSITS RETURNED.

Anglo-Belgian.—2l. per share. London, Salisbury and Yeovil.—30s. per share, on and after Sept. 22.

THAMPTON, MANCHESTER AND OXFORD .- Gs. per share

### Joint-Stock & Commercial Gazette.

A half-yearly court of the SOUTH SEA Company was held yesterday, in Threadneedle-street, the Hon. Mr. Bouverie in the chair. The committee for the inspection of the by-laws for the past year was reelected. The secretary then stated that the amount of the bond debt still due by the company was 4,500%. The meeting then adjourned.

Banks.

A general court of the proprietors of the BANK of ENGLAND was held on the 27th inst., for the purpose ENGLAND was held on the Zith mat., for the purpose of proceeding to a ballot for the declaration of a dividend, which resulted in a majority of fifteen in favour of the recommendation of 34 per cent.

We find the following in the Republique:—The

state of the Bank of France continues to present a considerable increase of specie in its coffers, but its portfolio of bills due continues to undergo a constant diminution. It is certain that this decrease is not at an end, and it is to be feared that before long we shall see its portfolio below 50 millions. Can it be otherwise, when the Bank is overcharged with public securities, and seems to hold its millions only at the disposal of the Government? What can commercial houses hope for, when aid seems to be designedly withheld from them-and yet they never were in greater want of assistance to enable them to get over the crisis which now weighs them down. We again the crisis which now weighs them down. We again repeat it, the Bank of France ought to aid men in business, as well as give its co-operation to the Minister of Finance. But it is certain that it does not do so, and from the late returns, the conclusion to be drawn is that the financial position of the country is each day becoming worse

PLANTERS' BANK OF JAMAICA.—The Governor has refused to afford this bank any assistance, on the ground of the Legislature refusing to grant the supplies.

On the 25th inst. the Exeter Court of Bankruptcy was occupied for a considerable time in investigating the circumstances connected with the supposed mysterious disappearance of a considerable sum of money of the HONITON BANK, which had come into the possession of the bankrupts on the day before the stoppage. It appeared from the evidence that money being required at the bank to meet the demands upon it, Mr. Flood, one of the partners, consulted Mr. Mules, of the firm of Mules, Smith &

Mules, and J. Hellier, a clerk, was despatched to Mules, and J. Hellier, a clerk, was despatched to Exeter to Mr. Lott, another partner, who was then seeking money. Mr. Lott had received a cheque on Messrs. Sanders's bank for 390t., the result of the sale of ten shares in the West of England Insurance Company, and J. Hellier was sent to cash it. He received the amount in Bank of England man and took it back to Honiton and gave it to Mr. Mules. The money was required to balance the accounts of the National Provincial Bank, but on Hellier's arrival the manager had posted his letters announcing that he had not received the balance due. announcing that he had not received the balance due.

Mr. Mules therefore did not pay the money into the
National Provincial Bank. Mr. Mules had also
received other monies to meet this exchange, and in
the evening paid over the whole to Mr. H. J. Lott,
to be locked in the strong room for the night, and be
took charge of it for that purpose. Some days after
money was required to pay the collector of rates,
and instead of there being about 500l., there was only
120l. in the bank chest. After giving the evidence at
great length, the Western Luminary adds—The great length, the Western Luminary adds—The inquiry then closed, leaving the case in this singular perplexity, that whereas the 390l. received for the West of England shares was all in Bank of England paper when it went out of the custody of Mr. Mules, and whereas the money found in the parcel taken from the chest is stated to have been in gold, we are left without any evidence as to what became of the difference between the sum handed over and the sum found, or as to when or how any exchange of notes for gold was effected.

Docks. DOCK ASSESSMENTS.—The parish authorities have assessed the Liverpool docks to the relief of the poor at about 166,000l. The claim made upon the dock committee on this assessment is between 19,000l. and 20,000l. This, of course, only includes the docks within the parish. The clerk of the dock solicitor within the parish. The clerk of the dock soluctor has entered a notice of appeal against the assessment at the borough sessions. The question, it seems, is not likely to be argued before the learned Recorder; but Mr. Lowndes, on the part of the parish, and Mr. Worthington, the dock solicitor, with the view to save expense, will agree to a special case, which will at once be subjected to the Judges at Westminster.

A special meeting of the bondholders upon the Extension Docks at Birkenhead has been held at the London Tavern, at which it was decided that the sum of 50,000l. should be raised on preferential mortgages, in accordance with the provisions of an Act passed in the late session of Parliament. It was also determined that a preference of the mortgages should be given to the existing shareholders, until the 16th of October.

The Buffalo Commercial Advertiser says that another effort is to be made for the construction of a canal around the falls of St. Mary, as a connecting link in the navigation of the great chain of lakes.

Mr. Felch, senator from Michigan, has submitted a report from the committee on public lands, to which had been referred a petition of B. Dibble, George C. Bates, and other citizens of Detroit, asking for the right of way and grant of land to aid in the construction of a ship canal around the falls, and the joint resolutions of the Legislature of Michigan in relation to the same. The report recommends the cession of the right of way asked for, and the grant of 500,000 acres of land to aid in the construction of the canal.

A new line of monthly communication is about to be commenced between Liverpool and several of the principal ports in the Mediterranean, including Malta, Constantinople and Trebisond. The first steamer will be the Sir Robert Peel, of 320 tons, to be despatched on the 18th prox. She will be succeeded by the Earl of Auckland, a splendid ship of 450 tons.

Steamboats.

The Lords of the Admiralty have given notice to the Directors of the City of Dublin Steam-packet Company that their contract for conveying the Irish mails will cease six months hence. The cost of this mails will cease six months hence. service to the Government is 9,000%. a year. The contract with the company commenced in 1839. The intention of the Government is to send the whole of the Irish mails vid Holyhead.

Mines.

A special meeting of the Real del Monte Mining Company has been held at the offices of the company in Duke-street, Adelphi. The chairman, Sir T. Price, said that he regretted to inform the meeting that, after much consideration, the directors had come to the conclusion that it was imperatively necessary for the safety of all concerned in the undertaking that the company should be immediately dissolved. They were unanimously of opinion that, under present circumstances, no other course could be adopted, unless, indeed, the shareholders wished to lead the

company into further difficulties. He concluded by moving the dissolution of the company. A long discussion ensued, and ultimately the resolution was carried, and another meeting appointed to be held that day four weeks, to confirm the resolution, and the meeting separated. The company was established 24 years ago, for the purpose of working the silver mines of Real del Monte, in Mexico, and although the shares, which were originally 400l. each, were at one time sold for 1,500l., the undertaking was never a profitable one.

The silver lead mines in the village of Combmartin, Devon (probably the oldest mines in England), which have been worked at intervals from the time of Edward I., and of which mention is made by Camden, who says that the expenses of the war in France, in the reign of Edward III., were partly defrayed by the silver extracted therefrom, have been abandoned within this month, with the exception of the upper levels, where three or four men are still employed.

levels, where three or four men are still employed.

On Friday, the 22nd inst., the coal-miners at the Hopwood Colliery, near Middleton, turned out against an attempted reduction in their wages; and on the following Tuesday, September 26, a numerous meeting was held on the Middleton and Heywood road, when it was stated that in September 1847, the hands at these coal-pits were receiving 4s. 2d. per quarter, and lately 3s. 6d. The masters had proposed last week to reduce their wages to 2s. 8d., but the hands turned out, and it was stated at the meeting that 2s. 10d. was now offered. A motion was agreed upon to remain on the strike until 3s. 6d. could be obtained.

The New Rotterdam Gazette states that very rich iron ore has been discovered recently in the so-called Laut-lands, forming the south-east corner of Borneo. The discovered iron grounds are situated south-east from Fort Tabenio, near the formerly flourishing, now deserted, Kanpong Tambaga, and at 7 or 8 English miles (2 or 2½ hours) distance south from Kanpong Plearic (also called Playhary or Palaihari), inhabited by Chinese and Malays, engaged in the collection of gold-dust. The above-mentioned grounds are chiefly to be found in the western declivity of a hill of gentle rise, covered all over with stupendous hill of gentle rise, covered all over with stupendous blocks of ore, some of them measuring 500 or 600 cubic feet. Their appearance vouches for the supposition that they were projected by natural revolutions, and makes it probable, with regard to the circumstance of ore being found at a depth of 1½ ft. both on the summit and at the bottom of the hill, that the whole of it is to be considered as one mass of ore. Whatever be the truth of this, it remains as a fact, that the quantity of ore found on the surof ore. Whatever be the truth of this, it remains as a fact, that the quantity of ore found on the surface is adequate for an exploitation on a large scale, carried on during a long series of years. The local situation affords imple means for such an exploitation.

At a distance of about 500 ft. from the hill, a level of about 50 or 60 acres is found, which would answer very well for an establishment, and by its elevation is protected against a rise of the waters during the west monsoons. Along the plain runs a rivulet or little stream, which, according to the information given by the natives, is never left dry, not even during the east monsoons, and which might perhaps be very easily converted into a valuable aqueduct, or used as a motive power. Plenty of wood, fit for fuel, charcoal ortimber, is to be found in the neighbourhood. The hill itself, the surface of which consists of red clay, intermixed with humus, deteriorated ore parts and iron oxide, bears all over a kind of wood, which may be burnt into excellent charcoal.

It is reported by the South Alabamian that some very rich lead ore had been discovered in Butler's County in that State, remarkable for its richness, yielding 80 to 90 per cent. of pure lead. The extent of the mine was unknown.

Resides breaking up bad neighbourhoods and letting light and air into our close ill-ventilated suburbs, railways are to have another sanitary mission. The Standard, in alluding to the refuse carried off by the Thames, says:—Let us suppose a canal constructed from some part near Brentford, and supplied from a lake, constantly maintained at high-water mark, and conducted through the valley of the Thames to some place in the Essex marshes, at a sufficient distance from London to secure us from the influence of pestilential vapours; and all the sewers of the north division of the metropolis to disembogue in this canal, in which a constant but moderate stream could be turned from the Brentford lake. A similar canal, similarly supplied, with a head of water taken up at spring tide, and terminating in the Plumstead marshes, might be constructed on the right bank of the river. In this way all the offal of London would be saved for agricultural use, and the river would be preserved as pure at Blackwall as at Twickenham. But the expense would be great; no

doubt the outlay would be enormous in the first instance, but even in the first instance it might be diminished by connecting the subterranean canal with embankments of the river supporting railways. The cost of the ground would in this way be divided between the owners of the railways and the public; and the cost of the ground is the only cost deserving of consideration in such an undertaking. In the end, the accumulated manure would richly repay all expenses. There it would be ready for shipment to all parts of the island, and every day would sustain the demand by new contributions. This is our project; we believe it to be practicable, if the men of our age can only lift up their mind to anything great and truly useful, and we are sure that it would be a blessing to the whole country.

TO CORRESPONDENTS.

H. W. T.—Next week.
E. M., Edgeware.—Not in the power of the directors.
Mr. McAul will hear from us.
An Irish Sharbholder.—Yes; shorter by 70 miles, according to the Ordnance map.

# Railway Chronicle.

LONDON, SATURDAY, SEPTEMBER 30.

The report of the NEWMARKET, received at the half-yearly meeting of the proprietors, declared the terms of the agreement accepted by the Eastern Counties for a lease of the line:—namely, a preferential dividend of 3 per cent. per annum for the first two years, and 3½ per cent. per annum in perpetuity afterwards. The traffic of the line opened from Chesterford to Newmarket has satisfied the directors' expectations.

At the BIRKENHEAD, LANCASHIBE AND CHESHIRE meeting, held yesterday by adjournment from Aug. 26, (see ante, p. 614), the report, with the exception of that part relating to the Board, was adopted, and ultimately a compromise was effected between the directors and the shareholders, and six gentlemen were elected. The negotiations for which the special meeting was called were not concluded and the meeting was again adjourned.

The proposal of the MARYPORT AND CAR-

The proposal of the MARYPORT AND CARLISLE directors to lease the line to Mr. Hudson from the 1st of October, at 4 per cent., with the option of paying off the shareholders at par, when the York, Newcastle and Berwick paid 9 per cent., was, after a stormy debate, affirmed.

In the report adopted by the shareholders of the CALEDONIAN AND DUMBARTONSHIRE JUNCTION the directors specially recommend the completion of the portion between Dunglas, on the Clyde, and Lochlomond. A second call of 2l. 10s. has been made, payable next March. A pier is to be forthwith erected at Helensburgh.

Our readers may have remarked a notice in the money article in the Daily News* of a meeting said to have been held by some directors in the London and North-Western, South-Western and Great Western, with the view of concerting MEASURES TO RESTORE PUBLIC CON-FIDENCE IN RAILWAY PROPERTY. It seems that among their propositions was one to close the capital accounts of all the lines as speedily as possible. To those who have been reading our recent "Heads of Practical Reform," it will not be any matter of surprise that such a step should be seriously proposed; but what can the chairman of the North-Western say to a proposition he has so recently pronounced impossible? We have not been able to learn that there are any immediate prospects of this meeting producing serious effects on the proceedings of directors; but as indicating some sense of the importance of a system of practical reform we are glad to see even these slight symptoms of a salutary movement.

* See Gossip, post.

The Secretaryship of the London and SOUTH-WESTERN has changed hands. Laurentz Campbell, who has so ably fulfilled the duties of that office, has been forced by illhealth to resign the arduous duty of managing that large and valuable property. All who have watched the progress of the great contests in which the South-Western has recently and victoriously been engaged, must know that the talents of Mr. Campbell were severely tasked; and they must also know with how much zeal and energy he forwarded the interests of that company. His health has been sacrificed to his duty; and although for a long time the directors have trusted that he might be able to return to his duties, and once more give them the advantage of his services, yet the prospects of his case are such that he has not been able to give them any hope of being able to resume his official duties with efficiency; and he has finally tendered his resignation. In these circumstances, we must simply tender our expression of the sympathy and esteem which universally follow Mr. Campbell into his retirement, and of the earnest hope which his friends enter-tain, that the relief from further responsibility may tend to soothe his spirits and alleviate his

Mr. Wyndham Harding, who succeeds Mr. Campbell as manager and secretary of the line, will have arduous duties to perform. He comes into office in very difficult times, and on a line which occupies a place in the debateable land of the gauges, which has hitherto been the place of greatest danger. Mr. Harding, however, brings to his task great advantages,—long experience in all the details of railway traffic and railway management, and a thorough training to the duties of secretary; and adds to these advantages administrative talents and the education and position of a gentleman. We congratulate the shareholders on this judicious choice of their directors.

From our official returns it appears that the amount of traffic for the last week, on 4,084 miles of railway, was 229,120l., thus accounted for:—116,916l. for the conveyance of passengers only, 50,310l. for the carriage of goods, and a remainder of 61,894l. for passengers and goods together, not respectively apportioned; being an increase of 25,128l. over the corresponding week of last year, when the mileage was 3,270. The average earnings per mile were 56l., whilst in 1847 they were 62l.

HEADS OF AN INQUIRY INTO THE PROFITS OF THE WIDE-GAUGE SYSTEM.—No. III.

The principle on which depends the economical, and therefore most profitable, use of moving stock is clearly this:—That it shall be so constructed as to be available for the ordinary exigencies of the business, with the least possible waste of power, where the engine is concerned,-of carriage or waggon space, where the use of the latter comes into play. The application of this principle is of course restrained in theory by the conditions essential to railway working;—those, namely, in virtue of which railway conveyance maintains its superiority over every other. But in any practical comparison between the two methods we are discussing it is plain that we need not descend below the actual limits of the national system, or seek the possible force of this restriction; inasmuch as the mode of working on the standard gauge does, beyond any doubt, fulfil this prior condition-of so transacting the business as to supersede any other kind of carriage. Accordingly, for the purposes of any practical result from the present inquiry, - which is, whether the mode of working on the broad or on the narrow gauge is the more profitable, -it

Digitized by GOOGIC

will be sufficient to observe that, as the latter is as the only available means of calculationvisibly superior to all other means of transport, the principle from which we have taken our departure will be unconditionally valid, as applied to any difference that exists between its profits and those of the moving apparatus on the wide-rail system.

Now, first, as to the locomotive. The more costly and powerful the engine, the more necessary it is for its economical use that its whole powers shall be usefully expended:-in other words, that it shall not be generally employed in doing what a less expensive machine could equally well perform. It is plain that whatever fixes the minimum power of the engine on a scale which enables it to work heavier trains than other engines on other lines can draw, also makes it a necessary condition of its profitable use that it shall always have such trains to move; not, of course, loaded with profitless dead weight, but with a burden that pays. Now it is evident that in general on the national lines their less costly engines are sufficient for the traction of the ordinary trains upon them,-in other words, are quite able to drag the full weight of remunerating traffic that presents itself by those trains;—and as the mere circumstance of laying down a wide rail will not alter the essential state of the case in this respect, it follows obviously that in all cases where a narrow-gauge engine can draw the load put on its ordinary trains, (and these, it is well known, are the majority of cases, on the lines now opened,) still more will they be ruling ones in any branches yet to be made or opened; -it follows, we say, that in all such cases the system that renders it impossible to use less than a more powerful engine will impose a waste of power—of power, at least, as employed in profitable work. To put this in a simpler form, it may be thus stated:—If an engine that costs 1,500l. can draw (at a speed sufficient to surpass all other but railway transport) a train containing 150 or 200 passengers on the narrow gauge, and the ordinary pas-senger trains on all railways do not exceed that number, it is evident that by a system that compels the use for such a business of an engine that costs 2,200l., there is just so much loss inflicted as is represented by the difference between the cost of the one and that of the other, -in interest on the capital-and in the maintenance of the more expensive stock, -supposing the wear and tear of engine, the consumption of fuel, &c. to be equal; which, as regards the lastnamed item-other things being equal-may be doubted. This is the way the issue will come out on nine-tenths of the business over nineteentwentieths of the railways in this country. The remaining tenth may be excepted, in such cases as are met with here and there on lines of vast traffic, where there may be a regular demand for power to carry a much heavier weight of paying traffic than the average amount. Such cases are already infrequent, and still less likely to occur in respect to future additions to the system; and it is the profitable application of the broad gauge to such additions that we have undertaken to inquire into.

We have kept in view the profitable load as an essential point in the comparison :observing, that the mode of conducting the traffic within the limits of our discussion has nothing to do with the circumstances that determine its ordinary course. No objection to this obvious fact can be grounded on alleged superior inducements offered by the broad gauge. Even admitting them to be whatever its advocates claim for them, it must be seen that they can have no practical weight in influencing the general run of traffic:-and we shall have occasion at a further stage of this inquiry to show, that on the whole—taking extant instances | of a more expensive system.

they are adverse rather than favourable to its increase. For the present we shall clearly be within the limits of the strictest practical truth, at all events, in assuming that the gauge will have nothing to do with the amount of the profitable weight of the traffic.

The engine on a wide-gauge line has, we know, a greater total load to draw:—and the weight it is tasked to move might, indeed, overstrain the powers of less bulky and expensive narrow-gauge engines. But this excess in weight is not of passengers, but of the carriages made to receive them on the wide gauge, and which are generally heavier, cæteris paribus:—that is to say, weigh more in practice, in proportion to the earning (at similar fares) of the persons carried in them, than on the standard lines. The same system which raises the minimum of the locomotive machine to a degree that exceeds the ratio of remunerating service on all but the few most frequented lines, does, on these lines even, impose the necessity of dragging an enormous extra load of dead weight in carriages, trucks, &c.;while the instant it has to be adapted to the business coming from or going to other lines less frequented, it can only work it (on terms of equal convenience to passengers, as compared with the standard system) at the cost of raising the proportion between dead and profitable load in an enormous ratio. So that the weight to be dragged by a wide-gauge engine may not, indeed, be, and probably is not, less in proportion to its effective power, than that which a narrow-gauge engine has to manage. But that relation is kept up, not by a greater profitable load in the former case, but simply by the excess of mere dead weight, which is thrown upon the moving power by the practical disadvantages of the system. This, indeed, is its vantages of the system. This, indeed, is its essential defect. Being altogether bigger and more powerful than is necessary for a full performance of all that is required to make railway service preferable to any other, it is not only fitted up with useless and expensive provisions for business of a kind, as to amount, which it can never be wanted to perform,-but cannot avoid throwing, in one way or another, upon the actual business that it is required to perform, the charge of an apparatus needlessly excessive. This charge is totally in the nature of a loss, in whatever way it is treated;—whatever is incurred in this system over and above what might have been avoided in one of more practically suitable, because sufficient, dimensions, is so much taken from the gains of those who are concerned in it. It either falls upon them directly, in the shape of less nett earning from the same rate of charge; or if, in order to make the nett earning equal, higher rates are charged, then the loss falls indirectly, in the shape of a check on the travelling which lower rates would have invited. Here it must be seen no question of the general expediency or disadvantages of very low fares comes into play at all. We have merely to consider the operation of whatever extra charge (over and above what might have produced the same nett earning on another system) is imposed with a view to secure an equivalent sum on this particular system :- and in a comparison between the two, therefore, the higher charge laid on to produce the same nett result plainly amounts, -in so far as it may deter any passenger from travelling who might have been induced to travel by the rates being fixed on the lower scale,—to the operation of a total loss of the whole receipt from that passenger;-the question here being, not of rates as more or less profitable per se, but of the working of rates which are raised by the mere exigencies

What has already been said on the matter o dead weight will come to be seen in a more dis tinct light when we proceed, as we shall in the next paper on this subject, to look into the mode of working with the enormous carriage used on broad-gauge railways. It is true that the principle which affects their profit in this department has already been statein what we have said concerning the loco motive; and any one conversant with railway operations must instantly see how it must work in the coaching and luggage business. But to many the operation may not be familiar; and the plain exhibition of its tendencies to burder profits, which are more decisive here than in an other part of the working process, is an essentia point of the summary we have undertaken The bearing on profits of what we shall find to be true respecting the broad-gauge methoof working has been elucidated already by what was said in our articles on economica reform. We have there noted, as one of the objects to be promoted, in order to a relief o the railway system generally, the reduction o dead weight in trains; and have pointed ou how, even with the more handy and less capa cious vehicles of the standard size, the growth of unprofitable load has become serious, owing to the continuance of traffic in the same coaches over branches and extensions. we shall find apt, by the nature of the case, to grow in a far more objectionable degree in a system which uses much roomier coaches, and therefore is less in a condition to avoid waste of room in bringing forward scattered traffic on the same terms as its national rival. What has been described as an evil, requiring to be remedied in the latter, must therefore plainly be held to be a still greater disadvantage in the other; since it will be found that it must, from the essential character of its working, attach to it in a far greater degree. That it is a question of great moment to profit and loss, has been sufficiently insisted upon in the articles already referred to.

### Carrespondence.

### INDIAN RAILWAYS.

Your paper of last Saturday (the 23rd) contained an article on the position of the Great Indian Peninsular Railway Company which requires a few remarks from me. The compliment to myself contained in its first paragraph would have been much more grateful to me if it had not been conveyed by means of a comparison depreciatory to my colleague, Mr. Nicholson. Such, however, as you have been pleased to make it, I must claim the benefit of it, and ask you to give the following observations the full weight of any credit for "sincerity" which I may have acquired. First, allow me to say how it happened that the statements you impugn appeared as the production of Mr. Nicholson, and not as mine. Wearied with our fruitless reiteration of the facts of the case to the Government for two or three years together. I was glad that those facts should be dealt with by some other person, and that thus we should at least get rid of whatever prejudice might possibly have been done to their effect by my manner of stating them, or by my obvious interest in the issue. I therefore placed the original papers in the hands of Mr. Nicholson, and interfered no further with any use he might make of them than to give needful explanations of local circumstances, as occasion for them arose. result is the statements on which you have animadverted; which statements, as to the general character of their conclusions, I am prepared to stand by. Very much like this is also the cause of our adopting so short a portion of our original design, with our eves open to the fact that it would not pay a dividend to be compared with that of the extended project. It was not because we preferred that course, but because solicitation for the authorization of the whole line had long been persevered in without effect. The curtailment is an act of expediency;

Digitized by GOGIC

nevertheless we can show that you are wholly mistaken when you say that "it would be impossible for such an undertaking to return anything at all.' You have been misled as to the direction of the line, and its proximity at Callian to the existing roads. One of the "errors" with which you charge Mr. Nicholson is that of "reckoning the traffic existing on the present, diverging roads as being available for the support of a fragment of a railway lying between them, but communicating with neither. The truth is t hat the line in this incipient state makes no pretension s to a share of the southern traffic, viz... that which comes to Panwell. But for the northern traffic, which comes now to Bhewndy and the Kusseylee Paunder, the temporary head of the line stands well; the distance from the interior to Callian is something short of that to the sea side, while the lo cality is easy to be made accessible from the existing road, and is much better adapted to the accommodation of the great droves of bullocks which now bring down the traffic. This portion of the line it 1 fact does not "run nearly due east;" its course is much nearer to north until it reaches the only neighbourhood in which a railway can cross from the island of Salsette to the mainland, and there it is in the vicinity of the track of the northern trade; 'che southern traffic, not now included in the estimates, the line must get after it has ascended the Ghauts. Not less mistaken do you appear to be as to the present cost of conveying goods by water between Callian and Bombay. From investigations made on the spot, under my direction, by competent and t rustworthy agents, I learn that a boat carrying in the monsoon, 25 candies, or 81 tons, commonly receives about 18 rupees for the trip between these places; the equivalent charge on the railway would be 1.35d. per ton per mile. In the fair season the sar ne boat carries a larger load at a smaller charge; still so high, however, that the equivalent rate on the railway would be \$d. per ton per mile. This calculation, however, supposes the boat to be fully loaded; if, as must often happen, it be hired to carry less than its full burden, the rate per ton of course rises accordingly; if it be three-fourths of the full load the cost comes to 1\darkfullet d. per ton per mile in the monsoon, and 1d. in the fair season. There is a smaller kind of boat much in use, the charges by which are one-third higher still; and there is a still further advance in the charges on goods sent in small hots and not by cargoes. Moreover, these rates are, in the main, like those which prevail on all the other re utes by water in and about the harbour of Bombay. I think, then, I may say with some confidence you are not correct in saying that the cost of conveying go ods on this route by water "does not exceed \( \frac{1}{2}d \). per ton per mile." You may have been misled by the cheap coasting conveyance between Bombay and Guzerat, 200 miles to the northward. Mr. Nicholson's method of dealing with the goods traffic is to tak e only a part of that which exists, and to suppose that this reduced quantity will consist of goods on which a charge of 24d. per ton per mile can be mai ntained, and he altogether omits the rest. This course avoids the inconvenience of applying to this early part of the line a rate different from that on which we have always calculated for the whole of it. In any estimate for this part of the undertaking, mad e some months ago, I took credit for the entire present weight of the goods traffic, and fixed the rate at 11d. per ton per mile, which it appeared to me would secure us at least that weight of traffic out of the increased intercourse which the railway would occasion; this I did to avoid cavil as to the rate assumed to be charged. But in truth both methods do injustice to the case, if English experience is to assist our judgment. If you take the low rate I assumed, we ought at least to double the traffic; for it must be remembered that the water navigation is available with certainty only for seven or eight month is in the year, that it is disgraced by notorious and extensive pilfering, and that its charges, like those of carriage elsewhere in India, fluctuate in the market from day to day. But if you throw away the goods traffic altogether the case is still a sound one for the purpose of Mr. Nicholson's argument. That purpose is to show that the East India Company may give the proposed guarantee without danger to their finances. If you will suppose the line to be carrying passengers only, ... i. e., if you will

take the passengers receipts, and on the other hand | unlimited, or unguarded as your argument implies; subtract from the estimated cost of working as much of it as is occasioned by the goods traffic,-you will still find the dividend amount to near 5 per cent. on a capital of 400,000l., so as to bear the Government wholly, or very nearly, harmless. And even this calculation be it remembered is founded on only part of the number of persons at present passing this road (the poorest part being struck off) instead of being taken, according to the English practice, at double or treble. I forbear to trouble you with the particulars of evidence as to the amount and charges of passenger traffic until occasion shall arise for them. Three estimates have now been made of probable dividend on this first part of the line, all of them founded on the existing traffic or a portion only of it. The first was by a committee appointed by the Government of Bombay to examine the prospects of a railway proposed by Mr. Clark, which railway was nearly enough identical with that now under consideration for the purpose of safe comparison. The conclusion of the committee was that that line would yield 4 per cent. per annum; but this result was found to be in error by at least 12 per cent., through a mis-estimation of one item only, as I believe the members of the committee were afterwards convinced. The true result was therefore not 44 but 6 per cent. per annum. The second estimate was mine, and was dated November 1847; it was founded on materials almost entirely independent of those collected by the preceding committee, and led to a result of 5 per cent. on the cost of a double line, or about 61 on that of a single one. In this estimate I assumed we had no firstclass passengers. The last is that of Mr. Nicholson, on which you have animadverted, in which my materials are treated according to his view of the case leading to an estimated dividend of 74 or 94 per cent. per annum, on a double or a single line respectively. Although a party concerned in the formation of these estimates, I think I may venture to oppose them to your assertion that this undertaking "cannot return anything at all." But why should the prospects of an Indian railway be left in doubt? Why are they not investigated publicly, like those of an English railway? More than once have we offered our evidence to the Court. Let it not be forgotten that this piece is undertaken only as the first section of the larger and better design. the rest of that design we complete our title by the construction of this piece, and in due time our claim under that title will be prosecuted. This is the part which in any case we must begin with; and nobody doubts that this section, when it has become part of the whole to which it belongs, will contribute its full quota and more to the total profit. The length to which I have troubled you on matters of fact forbids me to sav much on two or three other subjects involved in your remarks; but I cannot entirely pass them over. You intimate a doubt as to the prudence of the East India Company permitting the existence of railway companies for India, on the ground that such bodies will promote debate on the affairs of India. This suggestion is tacitly founded on the assumption that the proceedings of the East India Company will not bear discussion, an insinuation for which I should think you will get small thanks in Leadenhall-street. Colonial Office hesitate to encourage railways and English railway companies for the Colonies, lest its disputable policy on other points should be brought under discussion? Did the alleged rapacities of Clive, the imputed cruelties of Hastings, the asserted tortuosities of Sattara, or the sad and acknowledged financial blunders of Humeerpoor and Guzerat, escape discussion because there were no railways? Can you cover India with a table-cloth, and say to the world "No peeping here"? The guarantee, as you know, is now sought in a sense which will cover possible loss on working, as well as a profit of 5 per cent. per annum. To this you object that "it weakens the inducements to activity and economy which ought to preside over all commercial undertakings." an objection to any guarantee whatever, and it applies just as much in principle to the guarantee in the sense put on it by the East India Company as in any other which is fairly consistent with the nature of a guaran-

for the East India Company, possessing by the terms of the proposed agreement sufficient control over the working of the line, can always at its pleasure reduce the loss to a minimum; and however objectionable may be the control of Government over the working of railways generally, there can be no doubt of the propriety of the power of exercising it being possessed, so long as Government is called on to pay The remedy against excessive loss is therefore in the hands of the Government itself. Let us see, however, what is the extent of the utmost possible loss. One train per day each way is the amount of accommodation fixed on by the Government, as that which would justify them in continuing to pay the guaranteed "dividend or interest;" the annual cost of working these trains, together with the attendant expenses of management, need not exceed 14 per cent. on the capital. This, then, is the utmost loss which could occur on a line, worked in a manner approved by Government, and on the extraordinary supposition that it carried no goods or passengers whatever. So much for alarming indefiniteness of obligation. Mr. Nicholson has shown in a statement you have not noticed how very small a portion of the existing traffic is required to cover this expense. It should also be remembered that the guarantee is given only on a short line, or a few short lines, intended to be introductory to a general system of railways. If the whole current expenditure of these short lines were mere waste and nothing else, it would be easy to show that the Government and people of India would be immense gainers by the operation and consequences of the indispensable guarantee through which the lines had been constructed. The question practically, however, at worst is this:. Will you have, possibly, at the beginning some little waste under an effectual guarantee, or probably no railway at all through refusing one? They who know the opinions I have always avowed on the subject of a guarantee will not suspect that these remarks are dictated by any fondness for that measure; since, however, it has become necessary (chiefly I believe through continual assertion of its necessity) I am of course desirous of seeing it well understood and sufficient for the purpose. The dilemma in which you deem the India House to be placed by the conduct of the railways is surely imaginary on one side, probably on both. If "the East India Company gives a guarantee," how can it possibly be "accused of a design to entrap the public into a losing speculation"? Does not the very guarantee it gives prevent its becoming a losing speculation? If, indeed, the Court should offer to the railway companies an arrangement wearing all the appearance of a guarantee, without operating as one in the very circumstances where it would be most needed, then indeed it might be subject to such an accusa tion with some show of reason. Finally,-you speak of "the co-operation of a railway company having its price." You evidently assume that the normal You evidently assume that the normal state of things is that in which Government makes the lines, a railway company being only admitted into the affairs as a matter of convenience. I shall venture to avow an opinion that in India, as in all other places, the making of railways is not the proper business of the Government, and cannnot be well accomplished by it; that in India, perhaps more than anywhere else, it is important that it be taken up by Government only when all other modes of action fail, and even then that it be remitted to private enterprize at the earliest safe and favourable opportunity. Indian statistics, I am sorry to say, are not in very general circulation. Allow me therefore to offer you the use of whatever facts and documents we may have accumulated in preparing any remarks you may propose to make on this letter. My apology for occupying so much of your space must be the fact that there is no public and appointed mode of investigating the merits of Indian lines, and the consequent necessity we feel of meeting at once and through the same medium whatever objections are urged against our undertaking. J. CHAPMAN.

### DISTANCE SIGNALS.

"Honour to whom honour is due!" A letter in a recent number of the Railway Chronicle (ante, tee. Neither is the guarantee, if given in the sense contended for by the railway companies, so unconditional, ing trains of any accidental obstruction at a station,

Digitized by GOOS

or of the line being occupied by a train standing at the platform. It is no doubt creditable to the managers of the South-Western to adopt any means of preventing accident; but at the same time it is right to state that the new invention alluded to was brought forward very long ago, and has been most extensively used (under the name of a wire signal) for the last three or four years on every part of the Midland, where it is found a highly useful and efficient safeguard in conducting the traffic. The fact of this apparatus having been only recently introduced on so important a line in the south of England, would seem to indicate an unaccountable and much-to-be-regretted want of intercourse between the managers of the various English railways. Surely it would be worth while for the directors to send their chief officers on an annual tour of inspection throughout the country, to pick up information on these sort of detailed points of practice. J. P. S.

BELFAST AND BALLYMENA.

I have recently been over at Belfast, and I consider that the English proprietors must begin to exert themselves for their property and have the resources energetically developed. Nineteen or twenty-one directors are too many. The average number of shares they hold is only thirty-six each. Four efficient directors at Belfast, three at Ballymena and one at Carrickfergus, men of business, who would really take an interest in the concern and use and adopt means to bring passengers and traffic on the line, would do more good than such a multitude of directors for so small a line. The line under the present direction is not made attractive enough to the public either for passengers or goods. A railway must be so conducted as to attract the public; if the public will not come they must be fetched; the public must be inducted to the rail-The directors intimated to me that they would adopt some fresh measures for this purpose, but it is evident to me that we English shareholders must also bestir ourselves. In looking over the proprietary at a glance, it appears an English line on Irish soil; therefore let us look after our property, and make the directors know that it is a co-partnery, and as such we are looking into our affairs. The fares are low, which is necessary to attract passengers; but it appears they ought to be still lower to attract passengers to the third class, as numbers will pay, like the principle of the penny postage. It appeared to me the first-class carriages ran comparatively empty. Some twenty or thirty cars should be regularly engaged by the company to convey passengers to and from the station into Belfast at 1d. or 13d. each person, or even 2d. to begin with __ for attraction! The car proprietors should be conciliated, and be brought to favour the line. Vans and waggons should be obtained, to fetch and deliver goods and parcels. This has been promised. It is most essential to have three directors at Ballymena, men of business, who can and will put goods and traffic on the line. I suspect the directors have been pretty sharp in requiring the English proprietary to pay calls, and rather lenient towards the Irish proprietary. Some time since I wrote expressing a hope that money would not be squandered to build stations in a fanciful manner, to gratify the taste of any of the directors. Shareholders want solidity and utility. All contracts should be duly competed for by public advertisement. The solicitor's bills ought to be taxed. We ought to insist on a public accountant with two of the largest shareholders. There should be an express train on market days between Ballymena and Belfast. The directors should have no pay till a divi-dend has been declared.

A HOLDER OF SEVENTY SHARES. Liverpool, Sept. 22.

EXTORTIONATE CHARGES AT "RAILWAY" INNS. Notwithstanding the great facilities which have recently been introduced to promote travelling, inns still maintain very generally their old and extortionate system of charges, and instances of this often occur at inns and hotels where there is a sort of profession that an improved system has been adopted. There is no cure at present or remedy against such extortion but exposure, and I proceed to caution your readers and travellers at Southampton against the charges which are assessed at Radley's "Railway" Hotel, opposite the terminus. Waiting for the departure of the steamer, two of us took tea at that inn, in a private room. We were in the inn hardly one hour and the following was the bill :-

Of the charges for tea I would not much complain, observing only that they would give at least 150 per cent., but the charge for apartment and lights seems to me monstrous ;-2s. per hour is at the rate of 4381 per annum for a single room, and 1s. for servants a charge professed to be an amendment on the old system_is at the rate of no less than 2191. per annum. S. F.

#### ACCOMMODATION AT BAILWAY STATIONS-BOULOGNE AND AMIENS.

Some of your correspondents have from time to time suggested improvements in various departments of the management of railways, and you have thought it worth while to comment on the matters treated of the "reasonableness" of their demands not being in all cases apparent. I trust that a suggestion I am about to submit will be thought deserving some consideration, at least by our neighbours. All who have travelled on the French lines will have seen the invidious cattle-pen distinctions to separate the different classes of passengers in the waiting-rooms; - we might expect that the revolution would lead to the destruction of those "barricades." On visiting the station of the Boulogne line last week, I was glad to notice the absence of these aristocratic erections,was pained to see that the "counter" intended for the reception and disposal of baggage was occupied by a long line of—the fair sex, no other convenience for sitting being provided, though the place is sufficiently large to accommodate a numerous assemblage, if seats were only arranged around it. As the trains are less frequent on the French lines, there will necessarily be more persons waiting the de-parture; and the practice being to keep out the passengers from the platform till the up-train is quite disposed of, the luxury of a seat would be no very costly appendage to this waiting-room; and I hope the directors will supply for their customers so reasonable a desideratum.

A SHAREHOLDER IN THE LINE.

### Gassip.

A meeting of the Chairmen of the Great Western, South-Western and London and North-Western Companies has been held, according to previous appointment, to consider railway interests. Accordance to the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the constant of the c ing to report, for nothing in an official shape has transpired, the material questions for discussion were two. The first regarded matters of detail, as to the most convenient inter-arrangements to be adopted, and carried out, for the more economical working of lines more or less directly in communication with each other. The second matter, of more serious debate, is said to have been the propriety of closing the capital accounts of the lines, so as to afford a sure guarantee to the public and the proprietaries of a certain fixed minimum rate of dividend under whatever contingencies. It cannot be denied that such ever contingencies. It cannot be denied that such propositions, carried out with the honour and decision which may be expected from the respectable parties concerned, could not fail, says the Daily News, to restore public confidence, now so failing, in railway securities—a species of public values which should stand so high, but which, from an unhappy as well as fortuitous combination of circumstances, have so extraordinarily degenerated in public estimation.— Another meeting took place on the 27th, at which it is reported that the best feeling prevailed, and that each gentleman expressed his deep anxiety to act hereafter in concert in the adoption of those means by which confidence in railway property may be restored and its market value improved. The differences between them regarding their respective lines are to be forthwith settled; and it was also agreed that fewer trains should be run on each of the lines, that no further responsibilities of any kind should be incurred, and that every measure which the law allows will be adopted to raise the market value of railway stock, so as to insure better dividends for the shareholders. The Morning Herald, in an eminently selfish notice

of these proceedings, and under the head of City intelligence, asks, coolly enough, whether the interests of commercial public are to be sacrificed to satisfy the cupidity of 10 per cent. shareholders.

As we were the first to draw attention to the RAILWAYS by the East India Company, we are pleased to see our convictions have been confirmed. The Chamber of Commerce of Manchester have taken the same view, and have forwarded a memorial to the India House, praying that the guarantee to the Great Indian Peninsula may be declared to be given in the full sense in which it was understood when first promulgated; and they also suggest that an extension of time, if needful, be granted 1 or procuring subscribers. The facility the railway would give for the supply of cotton and the promotic n of general commerce in Western India is the reas on assigned for this recommendation.—While on this subject we may add that notice was given at the quarterly court may and that notice was given at the quarterly court of proprietors, held at the India House on the 27th inst., of a motion to bring the questions of the establishment of railways in India, and of the relation of the existing companies with the Government, under the consideration of the Court. We feel sure that the proprietors cannot fail to see the importance of giving every encouragement to these undertakings. The claims of Ireland for the manifold be nefits of

railway communication have lately lost a warm and sincere advocate. Though his scheme for a State loan of sixteen millions for opening up the great high roads of traffic throughout the country was too expensive at the time, Lord George Benting & pro-posed it in the firm belief of its remedial effects for some of the worst social evils under which Ir cland labours. We record his death with unfeigned re gret, as he well appreciated the value of railways in his own country, and on more than one occasion numi-fested this appreciation in giving them his coun-

tenance and support.

Rs.

Some of the liberal electors of the borough Some of the liberal electors of the borough of Lynn, which is now vacant on the demise of Lord G. Bentinck, have expressed a wish for Mr. G. P. BIDDER, the engineer of the NORFOLK, to stand. Certainly the railway representatives should lose no opportunity of strengthening their forces in Parlia-

Since the abandonment of the old BICHMOND STATION, on the opening of the extension to Datchet, workmen have been busily engaged in erecting new PASSENGER SHEDS. The loop line branching off at Barnes has been for some distance actively taken in

hand. From all we see, the short passenger traffic down the whole line is increasing every day.

Mr. Vardy, the late superintendent on the LONDON AND NORTH-WESTERN of the goods traffic at Liverpool, received a present of a gold watch and chair from the workmen, porters and others engaged in the carrying department. In returning thanks, he adverted to the fact that he was the person who loaded the first train of merchandise at Liverpool, which did not carry more than 15 or 20 tons, but after eight years had elapsed, when he left the Liverpool station in pursuance of his promotion, the trains carried on the average 1,300 tons per diem. This is one of the numerous instances of the gratitude of the mem to those officers who discharge their duties in a con-

to those officers who discharge their duties in a considerate and kindly manner.

Three EXCURSION TRAINS met near the Derby station on their way to Scarborough; they we rejoined together, and were said to convey the enformous number of 4,000 passengers.

It is a pretty general belief that passengers on arriving at the end of their journey cannot be charged for excess luggage. The station-master of the Burton station, on the Midland, lately enforced the rule of the company providing for such a case. "A IMr. Joyce came from Birmingham in a second-class carriage, and had with him 1761b. of luggage, and he not having paid for the overweight at Birmingh am, 6s. 6d. was demanded from him. The porters had put his packages upon the omnibus while his excess ticket was being made out, and when presented to ticket was being made out, and when presented to him he objected to pay the amount charged, sts.ting as his reason that as the demand had not been rande at Birmingham, they had no right to enforce it liere. His goods were detained, and he went away wit hout them." Mr. Joyce wrote to the local journals to complain, and received the above statement, accompanied by an appeal to the public notice as to the weight of

luggage of passengers, in reply.

The Perth Courier notices the advantages likely to arise to the cattle dealers in the Highlands from the swift and easy conveyance by our north-we stern lines. The large lot of Highland cattle, says the writer, despatched by express train to Londor last week arrived in good order at that market within twenty hours of leaving Perth. Mr. M.Nab, of Badenoch, the owner, is quite delighted witin the

result, the cattle having been acknowledged to have arrived in as good condition as if they had merely had

a short day's journey on foot.

As a caution in case of accidents, Mr. J. Black, As a caution in case of accidents, Mr. J. Black, the late superintendent of fire engines in Glasgow, offers the following suggestions to the Glasgow, examiner. We give them in his own words, and without comment:—" Every train should be provided with two small swivels, to be placed upon the top of the carriage near the guard. When special trains are despatched during dark or hazy weather, I propose that alarm guns should be fired by the guard, at hirisf intervals through the whole length of the propose that aiarm guns snould be fred by the guard, at brief intervals, through the whole length of the line the train has to travel; this would give notice and prevent collision. And to distinguish the line the train is running on, two guns to be fired in quick time when despatched from a certain station, but one gun only when the train is running on the reverse line. When accidents do take place, an alarm should immediately be given by fire arms—so that the succeeding trains may be prevented from running into danger—that the guard, or any person connected with the train, should proceed immediately to the nearest house on the line, so that the alarm may be continued along the whole line to the termini—these houses to be also provided with surety for that purpose. In corroboration of the necessity of having fire-arms, I noticed that an accident happened lately on the North-Western, where fog signals were found to be of no use, but where the firing of a swivel would have been heard for miles around, and in all likelihood prevented the collision. These fog signals have been tried on all the railways in the United Kingdom, and yet many accidents happen. Let fire-arms be used instead, and the difference will soon be apparent. As it is with a view to prevent, in future, far as possible, accidents on railways, I hope you will favour me by inserting the above in your paper. You will notice that I have mentioned that the alarm You will notice that I have mentioned that the alarm should be sent along the whole line, from house to house, and I think that they should also be provided with alarm bells. And in cases of accidental fires, it would not, I think, be improper to attach a small portable fire-engine, water-cistern, &c., to each goods train.

The Irish Railway Gazette has the following notice of an inquisition case, on properties required by was held the other day at Dundalk, before a special jury, to determine the amount of compensation payable to Miss M Rone for the value of three houses taken for the purposes of the line. One of the houses was a tavern, situate at the cross roads, known as Rice's Cross, on the Carrickmacross-road. An array of counsel and solicitors appeared for the claimant and company, and after full investigation, the award for commensation was readfor compensation was made for 80%. Now we have no doubt on our minds that the jury gave the full value of the three houses, even though one of them was a public house; but compare this award with what the company paid for the eight houses, or rather three small slated houses and five thatched hovels belonging to Lord Roden, and see how differently fared, in their dealings with the company, the peer and the spinster! According to the award in the spinster's case, the house property of the peer was worth 2931. 6s. 8d., to which perhaps might be added something for difference of situation and title, whereas the peer received 1.750d.!—[We should hope some explanation will be afforded sufficient to clear up the facts as stated here by our contemporary.

Ed. Rail. Chron.]
The New South Wales people are bestirring themselves to obtain a RAILWAY somewhere in their continent. In the Legislative Council, on the 15th of July, Mr. Cowper, chairman of the committee on railways, moved six resolutions, founded on the report of the committee, expressive of the opinion that the time had arrived when the formation of railways ought to be commenced, that the Government should encourage such undertaking, that crown lands ought to be granted, a dividend of at least 6 per cent. guaranteed to the shareholders, and that part of the idle capital locked up in the savings bank should be invested in shares. Mr. Cowper very ably urged the resolutions on the attention of the council. The first public meeting to consider the subject of railways was held January 29, 1846, which resulted in the appointment of a committee of inquiry on railways recognility and subsequentities for considering paraought to be commenced, that the Government should generally, and sub-committees for considering par-ticular lines of railway. It was found that the most advantageous line for a commencement would be from Sylney to Goulburn, a survey of the country being performed by Mr. Woore. Mr. Cowper recommended that some short line should be at once commenced, which should extend only 24 miles, or even further, to the limits of the country of Cumberland. To carry out a railway to this extent would not cost above 100,000.—Mr. Lamb seconded the resolutions.

-The Colonial Secretary supported the resolutions. He was not, however, prepared to say to what extent Government could give support.—The question was put and carried unanimously.—The report of the select committee on railways has been published; the committee are highly favourable to the introduc-tion of railway communication.

### Reports of Meetings.

NEWMARKET.
Sept. 25.—Adjourned Half-yearly Meeting, London.
Lord G. Manners in the chair.

Mr. Brown, the secretary, read the report:—Since the special meeting on the 27th of March last, the committee then appointed, consisting of three directors and three proprietors, have used every exertion to carry out the amalgamation, which the proprietors meeting desired should, if possible, be effected the Eastern Counties. The negotiation with with the Eastern Counties. The negotiation with the directors of the Eastern Counties not having been concluded at the usual period for holding the half-yearly meeting of this company in August, your directors deemed it advisable to adjourn such meeting until the conclusion of the negotiation. The agree ment under the seals of the two companies was exchanged on the 7th inst., and will be submitted to the proprietors for confirmation and adoption at the meeting specially convened this day for that purpose, the main provisions of the agreement are as follows —1. The shareholders of the Newmarket to receive from the Eastern Counties a preferential dividend or guaranteed stock of 3 per cent. per annum for the first two years, commencing from the 1st of October 1848 (when possession of the line will be taken by the latter company), and 31 per cent. per annum in perpetuity afterwards. 2. The same dividend to be paid on the deposit moneys received on the extension scrip. 3. No further call to be made beyond 20%, per share, and the Eastern Counties to provide all other funds which shall be required for completing the branch line to Cambridge, and liquidating the habilities of the New-market, which have been ascertained, and (exclusive of the deposit on the extension scrip) are limited to a sum not exceeding 530,000l. The directors think it unnecessary to lengthen their report by entering into the minor details of this agreement, which they recommend for the adoption of the shareholders. They have hitherto exercised considerable forbearance in not pressing for the amount outstanding on account of calls, but they cannot conclude their report without pointing out to those shareholders who are in arrear the penalties to which they are subjected for non-payment, and impressing upon them the necessity of an immediate liquidation, which otherwise it will be the obvious duty of the directors to enforce, or to declare the shares forfeited.

The statement of accounts showed receipts on capital account at 378,6111.13s. 5d.; expenditure, 371,6141. 0s. 7d.; balance in favour, 6,9671. 12s. 10d. The traffic account for the three months ending the 30th of June, showed the receipts at 3,085l. 7s. 7d.; ex-

penditure, 1,879l. 2s. 8d.; balance, 1,206l. 4s. 11d.

The CHAIRMAN said that since the meeting held in March last there were but two circumstances to which he considered it necessary to call attention—the one the opening of the line from Chesterford to Newmarket for general traffic, and the other the con-clusion of the negotiations between the directors and the directors of the Eastern Counties, which were entered into according to the wish expressed by the shareholders. The result of the traffic for the past three months was before the proprietors, and he trusted that it would be considered as satisfactory by them as it was by the directors. With respect to the negotiations with the Eastern Counties, he could assure them that the directors, assisted by the committee appointed by the shareholders, were desirous to carry out an amalgamation upon what, under present circumstances, were considered fair terms; and, as far as they had proceeded, they had, he considered, been eminently successful. The heads of sidered, been eminently successful. The heads of agreement were before them, but before calling upon the proprietors for their assent to it, the Secretary would read it in full, in order that they might the better understand it, and judge of its value. In conclusion, he begged to move the adoption of the

report.
Mr. FRITH seconded the resolution.

In answer to questions from a Shareholder, it was stated that the revenue account included the receipts for goods traffic on the line for about six weeks pre-vious to its being opened for passenger traffic; prior to which time the expenditure exceeded the receipts. The report was then adopted.

The meeting was then made special, to take into consideration the proposed lease of the Newmarket line to the Eastern Counties.

The SECRETARY read the agreement in estenso,

which provides for the lease taking effect from the 1st of October next, and to continue for 999 years, and that l'arliament be applied to for legislative powers to carry out the agreement. The total expense of the line not to exceed 566,250L, or in the event of it exceeding that sum, the Eastern Counties are only to be liable to pay rent on that sum. The Newmarket are not to carry out their extension, but the Eastern Counties to have the power to do so if they In the event of the lease being confirmed by Parliament, the expenses of the application to be borne by the Eastern Counties; but if the application should be rejected, the expenses to be divided between the two companies.

between the two companies.

After a short conversation in explanation of the agreement, in which it was stated that it was estimated that 530,000*l*. would be amply sufficient to cover the whole of the liabilities, and that the Eastern Counties would pay the interest on the debenture debt of the company, the agreement was maniformally approved. unanimously approved.

Thanks were voted to the chairman and directors for their services, (especially as they had themselves reduced their remuneration from 600l. to 300l. ayear.) and the committee, who had assisted the directors in their negotiations with the Eastern Counties.

#### MARYPORT AND CARLISLE.

Sept. 23.—Special Meeting, Maryport.—Mr. F. L. B. DYKES in the chair.

The CHAIRMAN stated that in pursuance of the resolution of the late half-yearly meeting, the committee for conducting the amalgamation had met Mr. Hudson, who appeared on the part of the York, New-castle and Berwick. The following were the arrange-ments then agreed upon:—That Mr. Hudson was to take possession of the Maryport line on the 1st of October, paying 4 per cent. on the share capital; also taking upon himself all the liabilities, which were not to exceed 450,000%, with the option of paying off the present shareholders of the Maryport line at par when the York, Newcastle and Berwick paid 9 per cent. on their shares, in which event the Maryport

are to receive 1 per cent. additional.

The Earl of LONSDALE proposed that the agreement thus entered into should be accepted on the terms stated. In moving the resolution his lordship said, that considering the condition of the company's finances, and the railway market generally, the terms were on the whole beneficial to the shareholders.

Sir W. Lawson, Bart., said that he had great confidence in the gentlemen who formed the amalgamatheir great stake in the concern, and thought that they had exercised a sound discretion in concluding

Mr. Mitchell, of Newcastle, said that he had been deputed by several shareholders in that town to complain that the specific terms of the arrangement had not been introduced into the notice convening the meeting; and that the most fitting time had not been chosen for disposing of the line. He did not wish, however, to move any resolution, but requested that the form of remonstrance placed in his hands might be read.

The document having been read,

The CHAIRMAN observed that the meeting was strictly regular, and in strict accordance with the resolution of the last half-yearly meeting, which was simply to negotiate with Mr. Hudson, and then report

the result of the arrangement to a special meeting.

Mr. Wilson, of Kendal, said that although he approved of the disposal of the line, and felt that the proprietors were bound to assist the directors, he, nevertheless, thought that some measure of protection should be afforded those shareholders who had bought shares in 1845 at a large premium, upon the representations of the directors that the line was yielding 5 per cent.

This led to considerable discussion, the share-

holders so situated thinking it reasonable that they should be indemnified by having the amount of those premiums converted into stock, and made part and parcel of the amount on which Mr. Hudson will have

to pay 4 per cent.
One Shareholder said that he had paid 7501. in premiums for trust money.

Another Shareholder said that he had paid 1,500%. in the same way.

The CHAIRMAN decided that the question could not be entertained.
Mr. D. Bell, of Liverpool, moved that the meeting

be adjourned for a fortnight, in order that the negotiation might be resumed, as he conceived that the line was worth at least 6 per cent. He entered into a long statistical account of the average receipts and expenditure since the 1st of July.

Mr. MITCHELL seconded the amendment.

Mr. G. SAUL spoke in favour of an adjournment, as he conceived better terms might be obtained, for Mr. Hudson had made a very improvident bargain for the Newcastle and Carlisle if the Maryport line was only worth 4 per cent. Indeed, he had understood that it was likely Mr. Hudson would not confirm the arrangement for the Newcastle unless he was sure of obtaining the Maryport

obtaining the Maryport.

After a stormy debate, of no general interest, the original motion was carried by 30 votes to 10.

### BIRKENHEAD, LANCASHIRE AND CHESHIRE. (BY EXPRESS.)

Sept. 29.—Adjourned Half yearly Meeting, Birken-kead.—Mr. Ald. BANGROFT in the chair. From the report, the consideration of which was

From the report, the consideration of which was postponed to the present meeting, it appeared that during the half-year there had been an increase in the traffic amounting to 8 per cent. on the receipts for passengers, and 20 per cent. for goods, as compared with the corresponding period of the last year. This would be materially increased on the fuller developement of the Holyhead and other lines in connexion with the Chester and Birkenhead. A saving had been effected to the extent of 5 per cent. over previous periods, and to the extent of 400L. a-year in the general expenditure. The capital account showed a receipt of 1,146,000L; leaving, after expenditure, a balance of 119,343L. The revenue account showed a receipt for the half-year of 20,214L; leaving, after payment of expenses, a 20,214l.; leaving, after payment of expenses, balance of 8.626l.

The CHAIRMAN said the only thing that had taken place since the last meeting had reference to an arrangement that had been made, by which the company were to bear an equal share of the expense of erection and maintenance of all the stations. This they could not continue, as it was manifestly unfair that their line of 15 miles only should contribute for this purpose in an equal proportion with the 200 miles of the London and North-Western, who wanted them to pay 60,000l. for the accommodation. Other arrangements were on the tapis, which he hoped would be carried out equitably.

The report, with the exception of that part relating to the constitution of the Board, was then adopted.

A long discussion of no public importance followed

relative to the election of directors. Upon a poll being demanded, the CHAIRMAN, amid much confusion, announced that, to relieve the shareholders from embarrassment, the directors would resign in a body

Ultimately, a compromise was effected between the shareholders and directors. The following gentle-men were put to the vote and declared elected:— Messrs. Balleny, Howard, Cattrel, Brown, Tootal and Rogers.

The meeting then adjourned at past 4 p.m., the CHAIRMAN stating that the negotiations for which the special meeting was convened were still undetermined.

### CALEDONIAN AND DUMBARTONSHIRE JUNCTION.

Sept. 27.—Adjourned Half-yearly Meeting, Glasgow.
—Mr. GIBSON SCOTT in the chair.
The Secretary read the report, which stated that the directors thought that the portion between Dunglas, on the Clyde, and Lochlomond might be worked by itself so as to yield a remunerative revenue; and they recommend the completion of it as speedily as their funds would enable them to do so. The directors had no doubt that this portion would prove very remuncrative, from the number of passengers that generally travelled along this route; and also in consequence of the frequent interruptions to the navigation of the Leven. From this source they expect to receive nearly the whole traffic. To enable expect to receive nearly the whole traffic. To enable them to complete this portion the directors had made a second call, payable on the list of March next, of 2l. 10s. per share. The report then alluded to an agreement entered into with Sir J. Colquhoun and a minority of the Helensburgh Harbour Trustees, as to the erection of a pier at Helensburgh. These parties having called for the fulfilment of the agreement, it was resisted by the directors, whereupon Sir J. Colquhoun complained to the last general meeting, and in consequence the directors. general meeting, and in consequence the directors were instructed to negotiate with him and the trustees, with whom he acted; the result of which negotiation was a proposal that, as a compromise, in full implement of the agreement, a pier should be creeted at Helensburgh, according to a plan submitted to the parties, and estimated to cost about 4,000l., the expense of which should be advanced by the company, pense of which should be advanced by the company, and should, to the extent of 3,000*l*., form a debt on and be repaid with interest out of the revenue of the pier. This proposal was considered reasonable by the driectors, who requested the instructions of the share-

holders as to the proposal and as to the execution of | with the Chancery suit, but he was doubtful of it,

The statement of accounts showed the receipts at 3,917*l*.; expenditure, 63,522*l*.; balance, 11,394*l*. Mr. Baird moved the adoption of the report, and

that the engineer's recommendation that the works be proceeded with at a rate not exceeding 500L of expenditure during each month of the next six months, be adopted; and that the works be confined to that portion of the line between Dumbarton and Lochlomond until the restriction be removed by a general meeting; and further, that the directors be instructed to recover immediately all calls due and not fully paid on or before the 10th of October next.

Mr. Tennent, of St. Rollox, seconded the motion which was unanimously agreed to.

After another short discussion, it was moved that

the recommendation of the directors as to the Helensburgh Harbour be agreed to, which was also unanimously adopted.

MADRID AND VALENCIA. - Sept. 27 .- Meeting of Scripholders, London, to receive a report from the committee.—Mr. D. W. Harvey in the chair.—The Chairman stated that the action which had been brought against Mr. Chadwick, the chairman, stood for trial in July last, but on the morning of the day on which the trial was to take place an arrangement was entered into which was made a rule of court, as

In the Common Pleas, in re Paterson v. Chadwick .- Thurs the Common Pleas, in Fractions V. Caqueck.—Inter-day, July 20.—Upon reading an order made in this cause by the Hon. Mr. Baron Alderson, dated the 18th day of July inst, the tenour of which follows in these words, that is to say, "Upon hearing Mr. Lush of counsel for the plaintiff, and Mr. James of counsel for the defendant, and by consent, I order that the record be withdrawn, that all costs of each say, "Upon hearing Mr. Lush of counsel for the plaintin, and Mr. James of counsel for the defendant, and by consent, I order that the record be withdrawn, that all costs of each party be taxed as between attorney and client, and paid within a month by the defendant, out of the assets of the company; and that if question arises as to the costs of any other shareholders, that question to be submitted to Charles Hill, Esq., and if allowed they are to be taxed and paid in like manner. The defendant, as chairman, undertaking for himself and the other directors, to return to the plaintiffs and the other shareholders of the company, within three months from this date, at least 11. of the deposit of 21. per share. That the accounts be forthwith made up and submitted to the said Charles Hill, Esq., who is to examine the same, and determine what amount in respect of expenditure is to be allowed and deducted from the remaining 11. per share of the deposit, it being understood that, in determining the question of expenditure, a fair and liberal view with reference to the peculiar circumstances of the company is to be taken. That the balance of the assets of the company (which are to be forthwith realized) are to be, after such deductions, divided rateably amongst the shareholders, and paid over to them at a period to be fixed by the said Charles Hill, Esq. That the directors have power to reimburse themselves out of the assets which may remain after payment of 11. per share any costs or expenses they may be put to or incur by any shareholder who may not concur in this arrangement. The directors, on their part, hereby engaging not to incur any further expense than may be necessary to carry out these terms. That any matter of dispute, whether relative to these terms or the carrying out this arrangement, to be left to the determination of the said Charles Hill, Esq. That each shareholder shall, on receiving the first payment of 11. per share, sign his consent to the foregoing arrangement. And, lastly, I order that the Master same is hereby made a rule of this court.

The Chairman said, that the solicitors of the plaintiff The Chairman said, that the solicitors of the plaintiff (or, in other words, of the committee) had prepared their bills of costs, but those of the defendants had not been obtained. The arrangement was perfectly satisfactory, and had it been fairly carried out the shareholders would, in the course of a few days, have been in the receipt of the first 1l. return of the described. However, an injunction had been obtained posits. However, an injunction had been obtained in the Court of Chancery, at the instance of a Mr. Wells, a stationer in the city, preventing the directors carrying out the order of court, and calling for the prosecution of the scheme, which would render the shareholders liable to have 50l. per share called up. Of course that bill must be answered by Mr. Paterson nominally, but, in fact, by the committee of the shareholders. In his (Mr. Harvey's) opinion, the shareholders would get a greater return through the court of equity than through the order of though that order had been founded on a fair ar-rangement; and, though he did not wish to press it upon the shareholders, he considered that a suit ought to be commenced in Chancery against the directors, in order to insure the return of the deposits. He felt assured that, though it was stated to the contrary, the injunction obtained by Mr. Wells was so obtained at the instance of the directors, or one of them, to prevent the arrangement entered into being carried out, the object being to encourage the sale of the shares at a sacrifice, and he here begged shareholders not to sell under 25s. or 30s. per share, for that sum would be ultimately obtained. Mr. Chadwick had assured him (Mr. Harvey) that he had nothing to do

and called upon that gentleman to convene a meeting of the shareholders and take their opinion. That Mr. Chadwick had declined to do, and stated that Mr. Chadwick had declined to do, and stated that the opinion of legal gentlemen was being taken, which was not yet obtained, the only desire of the directors being to do justice to all the parties concerned. Mr. Chadwick, Mr. Waley (two of the directors) and Mr. Wells had been invited to attend at that meeting, but had declined to do so. As regarded the funds they had in hand with which to meet the suit of Mr. Wells, he might state that from the 3s. per share subscribed not more than is. had been expended, and after paring all the aveness hitherto incurred in after paying all the expenses hitherto incurred, including the account of Messrs. Wire & Child, there cluding the account of Messrs. Wire & Child, there remained in hand nearly 1,000l.—Mr. Spackman contended that there was no law by which the company could be dissolved by the directors and the funds returned—for after they had done so any one shareholder could call upon them to pay the whole of the money into the Court of Chancery, to meet engagements entered into for constructing the line. During the last session an excellent bill had been passed for winding up other joint stock nad been passed for winding up other joint stock companies, but it did not touch railway companies. He then proposed a resolution,—which he pledged himself would be acceded to by the directors, and put an end to all difficulties,—to the effect that a committee of three shareholders be appointed to confer with the directors, to go into the accounts, and to enter into any arrangements by which the share-involved are the actual value of their shares in holders might get the actual value of their shares in reference to the balance in the hands of the directors. That, he maintained, was the only legal way by which shareholders could get out of their difficulties; and if they rejected the proposition and went to the Court of Chancery, they would never get anything at all, as all their money would be wasted in litigation.

—Mr. Wire said that, in opposition to the opinion of
Mr. Spackman, he had that of Mr. Bethell, the eminent Chancery barrister, that the shareholders had a remedy by which they could obtain their rights through the Court of Chancery. At a previous meet-ing that opinion was laid before the shareholders, as was also an opinion of the Attorney-General, that they had a remedy at common law; and it was then determined to proceed at common law, the result of which was the order of the Court in favour of the shareholders, which they were prevented carrying into effect merely by the injunction obtained by Mr. Wells in the Court of Chancery. He declared his belief in the connexion of Mr. Wells, Mr. Spackman and the directors, judging by their acts, which was disavowed by Mr. Spackman, and contended that there was no necessity for a new committee being appointed, as, if the directors were prepared to enter into arrangements, the committee already appointed by the shareholders could negotiate.—After some conversation, it was understood that the committee of shareholders already existing should again put themselves into communication with the directors, and endeavour to come to some amicable arrange-ment for the settlement of the claims; and in the event of failing to bring about such an arrangement, it was resolved,—"That the committee be authorized to adopt such measures in law or equity as may be required to protect the interests of the subscribers, and that the money paid and the shares deposited are available to that object, not exceeding the amount already prescribed."

FINAL OPINION OF MIXED GAUGE. - Speaking, then. rrespectively of the interest of any particular railway company, we wish to record our deliberate opinion that the mixed-gauge system, in the form in which it is now proposed to carry it out, namely, by extending it northward from Oxford to the centre of England, already occupied by railways of the ordinary gauge, which are spreading themselves in all directions, far from remedying the evils of diversity of gauge, will augment those evils, and extend them into new and distant parts of the country, and we are satisfied that the arrangement will not only involve an enormous waste of national capital, and as a consequence be the means of imposing upon the public unnecessarily high rates of carriage, but that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that it will permanative that the arrangement will not only involve an enormous waste of national capital and as a consequence of the arrangement will not only involve an enormous waste of national capital, and as a consequence of the arrangement will not only involve an enormous waste of national capital, and as a consequence of the means of imposing upon the public unnecessarily high rates of carriage, but that it will permanative the arrangement will not only involve an enormous waste of national capital, and as a consequence of the means of imposing upon the public unnecessarily high rates of carriage, but that it will permanative that it will permanative the arrangement will not only involve an enormous waste of the means of the arrangement will not only involve an enormous waste of the means of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous waste of the arrangement will not only involve an enormous nently deteriorate the value of railway property, and will prevent this country from ever securing to itself that most important instrument of commerce, a safe and efficient railway system.—From Massrs. Robert Stephenson and Locke's Report.

#### GREAT NORTH OF ENGLAND RAILWAY

THIRD CALL ON THE £40 SHARES.
At a MEETING of the Directors of this Company, held at
Darlington, on Tuesday, the 19th day of September 1848.

NATHANIEL PLEWS, Esq. in the Chair,—

A Resolution of the Joint Committee of the Directors of the York, Newcastle and Berwick Railway Company and the Great North of England Railway Company (pursuant to, and in accordance with, the provisions of the Deed of Contract and Agreement between the said Companies, for the Lease and Sale of the Great North of England Railway) was received and read, requiring the Directors of this Company to make a further Call of 104, per Share upon the Shares of 404, each, created by this Company.

upon the Snares of 40c. each, created by this Company.

It was resolved,—
That a Call of 10d per Share be, and the same is hereby made upon the Holders of the 40c. Shares in this Company, to be paid upon the Holders of the 40c. Shares in this Company, to be paid the fore Friday, the 3th lay of October next, to the fork Union Hanking Company, at York; or to Messra Glyn, Halifax & Co., Bankers, London,
Interest at the rate of 10 per cent, per annum will be charged by the Bankers on all Calls unpaid after that day.

J. M. SPARKES, Clerk to the Company.

Railway Office, Darlington, Sept. 19, 1848.

DURIFIED BLACK LEAD PENCILS, per-

PURIFIED BLACK LEAD PENCILS, perfectly free from grit, may be entirely erased, and will maintain a firm point. Manufactured by E. WOLFF & SON, No. 23, Church-street, Spitalhelds, London.

E. Wolff & Son beg to inform Artists, Architects and Engineers that they are now manufacturing pure plumbago or black lead pencil entirely free from grit, which will casily yield to India rubber, and insure perfect ensure: it possesses great brilliancy and depth of colour, and will maintain a firm point. They have attained to so great a perfection in the manufacture of this lead as to be able at all times to make the same strength and colour when once found to he suitable for any particular purpose, and have produced a pencil fully equal to those used in former years, when they were made of the finest Cumberland lead, which at the present time cannot be obtained sufficiently pure for the best pencils. The following are the degrees: H. Hill, H.H.H. Hill. H. The Chells. The following are the degrees: H. Hill, H.H.H. HIHHH, C. This conclusion and the supplying their purified I and country; and all respectable Stationers, &c.

E. Wolff & Son has the honour of supplying their Purified Lead Pencils to Her Majesty's Stationers, &c.

E. Wolff & Son has the honour of supplying their Purified Lead Pencils to Her Majesty's Stationers, &c.

EMIGRATION AND COLONIZATION—
Immigration being much required in Australia, New
Zenland, &c., and as the supposed expense of an OUTFIT often prevents individuals emigrating, S.W. SILVER & Co., CLOTHIELS,
OUTFITTERS and CONTRACTORS (having a large interest to
maintain in those Colonies), have been advised to make known
that they can supply a comfortable Outfit, including bedding, for
male or female emigrants, from 44 (mett) upwards, or less (24, if
needful), and for children in proportion, at 4, Bishopsgate-street
Within topposite the London Tavern), where Lists will be given
on application. S. W. & Co. being the makers of nearly every
article in all the outfits they supply, and as one of their objects is
to promote emigration, they neither receive from agents, nor pay
the too usual commission to any person introducing passengers
to be fitted out, so that the passage and outfit may be procured at
these proposable expense; but they will, on application, advise
to be fitted out, so that the passage and outfit may be procured at
these proposable expense; but they will, on application, advise
they ship clothing monthly—thus they critical colonies. They have a representative in sevenomente passage to the Colonies
of the proposable of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies of the colonies MIGRATION AND COLONIZATION.

SATURDAY, OCTOBER 7.

#### INDIAN RAILWAYS.

We last week published a letter from Mr. Chapman, in reply to certain remarks of ours, respecting the Indian Peninsula Railway. Mr. Chapman writes with all the plausibility of a man of talent, and if he were only blessed with a good case, it would be hard to resist an acquiescence in his conclusions: as the fact stands, however, we believe it will not be diffi-cult, out of Mr. Chapman's own mouth, to substantiate every one of our material allegations. We know very well that when men concentrate their attention exclusively upon any one object its aspect is liable to change imperceptibly with the instincts of personal interest, until condi-tions, which were at first deemed inadmissible, are finally embraced and defended; and in this circumstance of human frailty we are willing to recognize some extenuation of the apostasies of projectors whose creed varies with the exigencies of their scheme. Few persons, we believe, would embark in any of the existing Indian Railways if those schemes had now for the first time been propounded; but some persons who have embarked in them persevere in the course they have adopted from motives of pride, or some other considerations merely personal, and seek by halting arguments to justify the infirmity. However natural such a course may be on the part of managers or compromised directors, we believe that among shareholders, at least, it will find but little imitation. Their interest simply lies in the prosecution of good schemes, and the relinquishment of bad ones; and that the Indian Peninsula Railway in its present form must be ranked in the latter category, we believe it will not be very difficult to show.

Bombay, the main terminus of the Indian Peninsula Railway, is situated on an island, which communicates with the contiguous island of Salsette by means of two causeways, the Mahim causeway, lying to the north of Bombay, and the Sion causeway, lying more to the northeast, and adjacent to the proposed line of railway. As all the land traffic entering Bombay must come over one or other of these causeways, Mr. Chapman, when he was in India, stationed men upon each of them, to ascertain what the amount of the traffic really was; and at p. 38 of his Report upon the Peninsula Railway, he has given the result of this investigation. It appears that the traffic on the Mahim causeway is 59,955 tons yearly, and on the Sion causeway, 48,376 tons yearly; but as the Mahim road does not run in the direction of the railway at all, and as much of the remaining traffic is derived from Salsette, and would not be available for the support of a railway passing across a corner of that island to the mainland. Mr. Chapman reckoned that only 10,833 tons of the causeway traffic would be acquired by the railway, as will be seen by a reference to p. 31 of his Report. This, it is true, does not constitute the whole of the traffic of the completed line; for Mr. Chapman anticipated that the north and south branches of the railway would intercept much of the traffic which reaches the coast from the interior, at a considerable distance north and south of Bombay, and that in this way much of the existing coasting trade would be acquired by the railway. It is clear, however, this traffic could not be acquired by the railway if the north and south branches did not exist; and the traffic between Callian and the interior could not be secured by a railway which stopped short at that place. The import traffic by water between Bombay and Callian is not considerable; and, as it does not appear likely

proposed railway, it is needless to give it further consideration. The causeway traffic is that apparently on which Mr. Nicholson relies, and the proportion which would be available for the railway is 10,833 tons, according to Mr. Chapman. In the face of this declaration, what says Mr. Nicholson? "The quantity of goods is 80,000 tons per annum, and of passengers 370,000, taken at Sion causeway, which is eight miles north of Bombay;"—and of this imaginary influx of goods, he reckons 60,000 tons per annum as available for the support of the railway-being just six times the quantity estimated by Mr. Chapman. Mr. Nicholson also reckons that 23d. per ton per mile would be obtained by the railway for carrying goods between Bombay and Callian,—whereas Mr. Chapman admits that goods are at present carried be-tween those places for  $\frac{3}{4}d$ . per ton per mile, or about one-fourth of the price Mr. Nicholson has It is true Mr. Chapman adds that if the boats be only partly filled, or are exposed to the severities of the monsoon, the average cost will be greater than this; but there is no need for working boats expensively more than for working railways in that manner. It is very well known, moreover, that the monsoon, even while it lasts, very seldom blows home upon the land, so as to offer an impediment to inland navigation,-and, even if it did so, the remedy would lie in a steamboat rather than in a railway. If, then, Mr. Chapman's numbers are to be adopted, Mr. Nicholson has taken the railway traffic in goods between Bombay and Callian six times too large, and the tariff four times too high; or, in other words, he has taken the revenue derivable from the transport of goods twenty-four times greater than could be realized in practice. Instead, therefore, of 24,000l. being realized yearly by the conveyance of goods, only 1,000l. yearly would be realized by it—a conclusion, be it remarked, resting not on our authority but on that of Mr. Chapman.

So much then for the goods. With respect to the passengers, the result, we apprehend, will not turn out to be much more auspicious. We are here, indeed, left without the numerical checks afforded by Mr. Chapman, to detect Mr. Nicholson's exaggerations; but the presumption certainly is that he has not made the passenger traffic an exception to his common rule. In the estimates of the Madras Railway the passenger tariff is taken at \(\frac{1}{4}d\) per head per mile, and in the estimates of the East Indian Railway the mean charge for passengers is ½d. per head per mile; or the average charge for passengers upon the Indian Railways, other than the Bombay, is § d. per head per mile. The average charge assumed by Mr. Nicholson, though under the disadvantage of a competing water carriage, is 1\frac{1}{2}d. per head per mile, being about three times the charge of the other railways.

But however extraordinary these exaggerations may appear, they are insignificant compared with another which has yet to be displayed. While Mr. Nicholson rests his chief hopes upon the passenger traffic, and talks with complacent dogmatism of the chimeras of those who doubt its existence, Mr. Chapman excludes from his estimate any credit for a passenger traffic at all; and it is simply because he did not reckon upon any passengers being carried by the railway that he neglected to estimate their possible number. At page 7 of his Report Mr. Chapman says, "no credit is taken for profits from passenger traffic; nothing certain, or even probable, is known of their amount;" but such profits, if any, as may arise from passengers, he recommends to be set down to "cover unforeseen expenses, and errors which may be over-looked." At page 21 of his Report Mr. Chapthat the water traffic can be disturbed by the man, in reference to the passenger traffic, says,

"we have no facts adducible in reference to its amount;" and if he had attempted any statement of what the amount would be, he adds, " he should have had to make conjectures more easily objected to than supported." These views, whether just or otherwise, appear to have been adopted by the railway company. In a letter from Mr. R. W. Crawford, chairman of the Indian Peninsula Railway at Bombay, accompanying Mr. Chapman's Report, the passenger traffic, even of the completed railway, is characterized as "speculative or conjectural!" And if this be true of the railway when executed according to the original design, it must be equally true of a fragment which suffers all the evils of a water competition, and which Mr. Chapman admits "would not pay a dividend to be compared with that of the extended project."

If, then, the goods traffic, even on the evidence of Mr. Chapman's own statistics, will yield only 1,000% a-year, and if, at the same time, it be doubtful whether the passenger traffic will yield anything at all, how can it be maintained that the proposed railway is an eligible undertaking?—or how is it possible to resist the conviction that the design of Mr. Nicholson's estimate is not so much to exhibit the facts as to prop a tottering project by the aid of artificial statistics? Mr. Chapman admits, indeed, that in an estimate of the returns of the Callian line, lately made by him, he took the charge for goods at  $1\frac{1}{2}d$ . per ton per mile; yet Mr. Nicholson, it appears, finds facts so tractable upon paper, that he doubles the sum without hesitation. Then, again, Mr. Chapman, who needed in his later estimate some compensation for the moderation of his charges, swelled his goods traffic to make up for the lowness of his tariff. If such loose methods of framing estimates are to be permitted, there is no quality which cannot be shown to attach to any project. But to such feats of legerdemain we cannot extend our admiration. It is quite clear from Mr. Chapman's original investigations, which were undisturbed by the exigencies of a mutilated project, that a line to Callian would prove a failure; and we prefer to accept even an unwelcome conclusion from the facts, rather than to attempt to bolster up a feeble case by pliable statistics.

In his remarks upon the guarantee Mr. Chapman exhibits his usual controversial ingenuity; but, we apprehend, his argument admits of a ready confutation. Mr. Nicholson, in his letter on which we lately commented, anticipates that the East India Company must grant an unconditional guarantee, as it is not to be supposed that the Court "would allure the public into an undertaking which could not meet its ordinary expenses;"—and in reference to this doctrine we remarked, that the Court appeared to have a hard alternative; for that whereas before the concession of the guarantee the Court was accused of some improper motive for withholding this necessary encouragement, it is now accused of alluring the public into a losing scheme because it declines to heighten the temptation. This dilemma, however, Mr. Chapman argues, is altogether imaginary. "If the East India Company gives a guarantee, how," he asks, "can it possibly be accused of a design to entrap the public into a losing speculation? Does not the very guarantee it gives prevent its becoming a losing speculation?"—
to which our reply simply is, that it does not.
The guaranteed interest or dividend was granted on certain prescribed conditions; one of which was, that a certain number of trains were to be run daily; and it is possible that the expense of working and maintaining the railway as this stipulation requires might amount to a larger

sum than would be receivable as income. Now, whether a guarantee, coupled with such conditions, was a beneficial one or not to accept, it was at least intelligible; and those who were dissatisfied with the terms had the option of their rejection. But for men who have deliberately accepted those terms to affect so complete a misapprehension of their import as has lately been professed, and to attempt to hold the India House responsible for their misconceptions and blunders, only manifests the want of some quality which we are not ambitious to define.

We do not think it necessary to follow Mr. Chapman far in his replication to our remarks touching the possible inconveniences to the Government in the existence of factious companies ready to spring at the throat on the slightest provocation - for here our meaning has been merely perverted. Legitimate debate or inquiry we presume the India House need not shun and does not discourage; but there is a difference, we apprehend, between a conscientious opposition and a cabal to harass the Government by all the stratagems of faction into concessions which justice and prudence would equally deny. We do not think that there is any natural or necessary antagonism between Indian railway companies and the Indian Government; but we do think that the existing railway companies have, by their selfsufficiency and indiscretion, done much to justify such an hypothesis.

Are then railways in India to be abandoned? We do not think so; but we think those only should be constructed which are capable of returning such a profit as will justify the further prosecution of such undertakings. The question to be resolved, Mr. Chapman maintains to be practically this-"Will you have, possibly, at the beginning some little waste under an effectual guarantee, or, probably, no railway at all through refusing one?" But we dissent altogether from this view; and in our judgment the practical question rather is, -Will you commence with some losing line, which must necessarily operate as a railway scarecrow, or with a line which will encourage subsequent adventure? We do not see how the proposed fragments of the East Indian, or Indian Peninsula Railways, can prove profitable undertakings; but the Madras Railway seems to present a better prospect; and if so, a commencement should be made with it, for we concur with Mr. Crawford, the Bombay chairman of the Indian Peninsula Company, in thinking, that "if the first considerable attempt should fail to be a profitable one, great discouragement to future enterprize will necessarily ensue; on the contrary, a successful railway will be the precursor of many more."

These then constitute the main grounds of our objection to the Callian Railway project; but there is one point of reputed importance in Mr. Nicholson's letter which we have not yet noticed, and which we should hardly have thought worth noticing now, had not our atten-tion been specially called to it by Mr. Chapman. Mr. Nicholson maintains that the East India Company could not be damaged to the extent of more than 11 per cent. upon the capital by making the guarantee absolute, for that the cost of running a train each way daily, as required by the agreement, would not amount to a larger sum than 11 per cent., even if neither goods nor passengers were carried. It may be asked, even if the facts were so, why the Government should be mulcted in an additional 11 per cent. for so futile a service; but the hypothesis itself rests upon no more substantial basis than Mr. Nicholson's allegation. Granting for the moment, however, that a train

could be worked each way daily for 11 per cent. upon the capital, is there no other element of expenditure upon a railway than that assumed by Mr. Nicholson for such a service? Will not rails and sleepers decay, the machinery become old, and all the structures of the railway gradually moulder? In the estimates of the East Indian Railway the yearly depreciation is set down at 10 per cent. upon the capital; and whether this charge be too large or too small, and whether it be charged in the form most consonant with European usage or otherwise, it is quite certain that in all railways, and especially if situated in tropical countries, there must be a large yearly depreciation, which if not paid out of the profits must be paid in some other way. If we add to Mr. Nicholson's 11 per cent. the charge for depreciation adopted by the East Indian Railway, it appears that the Indian Government would have to pay 161 per cent. as a yearly contribution to the proposed fragment of the Indian Peninsula Railway—a work which after all would, we fear, fail to accomplish any object of practical utility. Add to this the risks from slips, inundations, and the conflagration or fall of viaducts-the expense of all of which, if happening, the Government would have ultimately to defray—and it will be seen how inadequate is Mr. Nicholson's representation of the responsibility attaching to an unconditional guarantee, and which he invites the Government to incur.

HEADS OF AN INQUIRY INTO THE PROFITS OF THE WIDE-GAUGE SYSTEM.—No. IV.

It has already been said that the point to be aimed at, with any view to the profitable employment of coaches or waggons in railway business, is, that they shall be so adapted to the usual demands of that business as to be in general fully occupied while in motion. This is the positive side of the rule; its negative one, of course, is, that such carriages shall not run empty, or but partially filled with profitable loads. That mode of working, therefore, is the best which is most apt to carry out, in the majority of cases, this ruling principle, and which least infringes it, in the inevitable cases of exception to its strict observance which also must daily occur-if the convenience of the passenger be not sacrificed to the profit of the railway: that is the least profitable which from its nature must be either peculiarly apt to break the general rule, or, when it is broken, to make the greatest departure from it. It will appear, on examination, that the latter condition applies to the broad-gauge working under all circumstances whatever; and that the former must always belong to it whenever it is used for the traffic, such as we know railway traffic to be, on any but lines greatly frequented by passengers and largely employed for a bulky goods business.

There can be no doubt whatever that the carriage or waggon that should be the most conveniently adapted to a varying traffic ought not to exceed a certain limit;—and this limit, it is clear, is fixed by the mechanical conditions of railway working. These require the use of at least two pairs of wheels, the bearing of a certain length, &c. &c.; -and thereby fix the smallest size which can be allowed on any line. It will be found that every attempt to go beyond this limit, in any system which is intended for general use, is to incur a risk of waste of the stock in one way or another, in a proportion continually increasing with the degree of deviation.

In order to show the working out of this rule, we will first take what is, of course, an extreme case, merely supposed for the sake of

posing the smallest carriage that railway working allows of to contain fifteeen to eighteen passengers, and that the greatest average of passengers by any train were no more than five, it is clear that a waste of the room for ten at least, and of the cost of power for dragging the unemployed accommodation, would be continually incurred. This would be the state of things on a line of smaller traffic than any for which a railway ought to be made. Now the same principle that governs this supposed case applies equally, in the first place, to what may be called the odd loading of every train on the most frequented railways, and on the wide gauge more than on the narrow; and, secondly, when we regard the operation of a connected system. including and working to and from a number of cross communications of but moderate traffic, it will be seen that it comes into effect in every part of such a system-provided the service be kept up with the same efficiency on the wide gauge as the narrow—so as to produce a much greater profitless expense in moving stock on the former than on the latter. In both systems there is a certain waste, a considerable amount of dead weight; -more considerable, indeed, under present arrangements, than is consistent with the profitable working of either. That, however, in which it the most largely occurs is of course the least profitable, and however you take the proposition as applied to working conditions, it results in the same thing; because, supposing an amendment to be found necessary in both, it is plain that where the least degree of excess has been, there the greatest relative effect may be produced by cutting off whatever is unprofitable excess with the least diminution of any accommodation that may have been afforded before such a change; and this again, in one way or another, is resolvable into a matter of loss or gain.

The case with respect to the odd loading on main lines is obvious enough. Suppose you have no coach that when full will take fewer than thirty-two passengers in one class, or forty-eight in another, and thirty-three of one, or forty-nine of another, are booked to proceed by a single train. You must either leave the odd number behind or send two coaches, with one passenger each in them; -coaches of the heavy descriptions above mentioned. Now a process of the same kind, of course, will happen wherever. on a narrow-gauge line, there may come a greater number, by one or two only, of passengers than any single coach can hold. Thus, if you have nineteen first-class and your first-class coaches only hold eighteen, you must send another coach with a single passenger for that other one. But it will be observed, firstly, that in the common rule of travelling-other things being equal—the chance of the second coach, or third, as the case may be, being well filled, will always be in favour of the system which has the smallest coaches: — secondly, that the dead weight imposed by adding a fresh vehicle for but one or two passengers is less in the one case than in the other :- and, further, that as there must always be some allowance for vacancies on the road, the adjustment of this want, which is equally applicable to both, will be both easier and less apt still to leave, after this has been provided for, a number of empty compartments in a train on the moderate, than in one on the excessive, scale. Indeed, it is merely stating a truism to say, that the system most available for close adjustment to varying circumstances, is that which has the most manageable units;—and that every step made to enlarge the unit beyond what is absolutely necessary, is just so much added, in a progressively increasing ratio, to the difficulty or presenting the principle in a clear light. Sup- expense of making every such shifting arrange-

Digitized by GOGIE

Now it is on the degree of cheapness and ease with which this can be done from day to day that the difference in economy or waste in working depends in this class of business-which embraces all nearly from which a revenue is to be derived. Wherever the pinch comes-and it is clear that its occurrence will be just as common on one dimension as on the other-that one which has the most compact implements will feel it the least and work the most frugally. This, in short, is the position which, in theory and in practice, determines the question of profits-in such a variable service as that which railways have to make their earnings by -against the wide gauge plan of working, even on main lines. It will be found to be still more largely apparent when the working of small traffic, or the sending of through coaches on for long distances is concerned. This cannot be done on the wide without much greater waste in the process than on the national system, provided it gives the same accommodation that may be offered on the national scale. This will be the issue of the comparison in whatever point the matter is practically taken up. And, let it be observed that-taking it for granted, as a matter of course, that equal convenience must be given to both—the condition that inflicts a daily burden on the current expenses of moving stock in every train,-to say nothing of the relation of this to other expenses and causes of expense-is quite decisive of the difference in any question of comparison between the profit or loss of the two systems we have before us.

Take the case, for instance, of booking through from branch lines in the same coaches. It is known to all familiar with railway business how this kind of traffic fluctuates; as, also, that it must be daily kept up if once undertaken, whether the passengers+ in any single day or series of days be many or few. Now, in any large national system you cannot count upon having fewer than three or four places at least to and from which this convenience must be given by any metropolitan railway. Suppose the case—and it is one of frequent occurrence of three, four or five seats at the most being taken; - and the difference of working on an unwieldy or on a more compact system, is seen Precisely the same rules apply to at once. goods :- the instant you get off the great track, and give the convenience of sending through without unloading, and as promptly also as on the other system, the dead weight from the bigger waggons begins to grow in an inverse ratio to the returns from the business: and as on every main line the traffic-unless we suppose it to be equally balanced each way (which no merchandise traffic ever is) will have to be adjusted by moving empty waggons to and fro. and the proportion, consequently, of these to a very large and constant traffic can never be exactly measured, it is clear that even here the dead weight to be shifted about will be by many degrees heavier, and therefore worse to manage on the system in which every single waggon is doubly big and unwieldy.

The same rule applies to all local traffic, whether by goods or passenger trains, on lines of small activity; and let it be remarked here that all the great channels have already been occupied: that many of the new branches lately or about to be opened can only fail to be sources of loss by being worked as cheaply as possible: and further, that of any to be made hereafter, whether as independent or as subsidiary works, the same general description must be given. From what has been already said, it will be seen that on the wide gauge such traffic must

either be worked less profitably for the company, or less liberally towards the public. The latter will hardly be permitted; and the difference in cost of an over-expensive system will therefore be likely to fall on the shareholders.

We have confined ourselves to the main cause of this result; without insisting on many other points of detail, in which however the same conditions will render a greater working expense inevitable in every department. We need not point out, to one acquainted with railway working, that the larger dimensions of everything must demand for several operations a greater working staff, in proportion to the effective service, - whether we look to the engine-cleaners or turners, at carriage or goods porters, &c. &c. Where the unit of stock, whether engine, coach, or truck, is the largest, in a system made up of several of each, there the ratio of the cost of handling to profit from the cost will always be the highest. As for instance, suppose that you have to carry one hundred passengers, and want for their conveyance six narrow or four wide gauge coaches. To handle the former, a gang we will say of four may suffice; and this same gang will shift and arrange as many as can be needed for any greater number of passengers; the latter must have one or more extra hands to handle its single coach with equal despatch, &c.; and this is a permanent extra charge, whether the business be such as to require many or few, and is merely due to the greater bulk of the unit of a number of which the aggregate train is to be made up. In

a more compact system the necessary number of such separate items can be added at pleasure, to whatever extent will be required in ordinary practice—by the successive efforts of a smaller number of workmen. Here, again, is an element of daily charge affecting profits throughout every part of a railway system. Nor need we pay any regard to the assertion, should it be made, that in practice no such difference exists; that more porters, &c., are not needed in the one case than in the other. The balance here can only be kept up by a less efficient performance in some respect, it matters not which, of a business in which despatch is an essential feature; so that it cannot be allowed to take place in an argument which must assume a real, not an apparent, equality in the conditions of the service.

MR. WYNDHAM HARDING'S FACTS AND PROGRESS OF THE RAILWAY SYSTEM. [Concluded from p. 693.]

We now give the concluding portion of Mr. Harding's interesting paper, and recommend the various topics herein treated to the consideration of all who feel interested in the welfare of railway property.

The bearing of railways on local rates is a point in connexion with this part of the subject, on which interest will be felt in those parts of the country which anticipate the introduction of railways.

The following table is compiled from a return given in by the London and Birmingham Railway Company, in 1844, to the Select Committee on Railwavs :-

County. Totals $\dots$ £		10	7	2,445	8	7	128,007	2	6	1,085	iż	0	32	i	8	354,637	0	0

In this case we see that the land which, before it was occupied by the railway, was only valued at 2,445L, after the railway was established was rated at 128,0071. Also that the railway pays 32 per cent., or one-third, of the whole rates of the parishes it passes through, although it does not add in any degree to the burdens of the parish, inasmuch as it affords regular occupation to all its servants.

A few facts as to the railway mania may be worth recording. It may be said to have commenced in the year 1844, and to have reached its height in 1845. On the 17th of November 1845, the Times published a list of projects, comprising 1,263 railway companies, proposing to raise capital to the amount of 563 millions. Many of these, of course, were mere bubbles, but there were actually presented to Parliament in the session of 1846, 561 railway bills, and Parliament actually sanctioned in that year 4,600* miles of railway, and authorized the raising of capital on the shares of the companies to the amount of 132 millions. It is scarcely credible that even this did not subdue the fever which ran on through 1846, and did not die out until the latter part of the year 1847. The legislative results were as follows: During the years 1845, 1846 and 1847, the royal assent was given to bills authorizing the construction of 8,900 miles of railway, requiring a capital of more than 200 millions, of which more than 30 millions is destined to compensation to landowners for land taken by the companies. In the year 1847, the calls of the English, Scotch and Welsh companies+ amounted to 34 millions, of

which probably 28 millions were raised and spent in the construction of railways.

The extravagant waste of money in the parlinmentary contests upon the bills is not the least painful feature of the case. The deposits with the Accountant-General for 1845 and 1846 were 18,647,7011. Those for 1847 I have not been able to obtain,—they must have been not less than two millions. Of these, probably not as much as one-half has found its way back into the pockets of the depositors. More than ten millions have thus been thrown away in preparations for parliamentary inquiries and in parliamentary contests during these three years; and the greater part of this has been saddled on the railways sanctioned, for which the public will have permanently to pay interest in the shape of higher charges and fares. This completely colipses the 200,000*l*, parliamentary expenses of the London and Brighton, which used to appear enormous.

The fluctuations in the price of railway share § during this period were as follows:-

		en <b>t</b> tern.		on and nghain,	Midland Stock.					
July 1844 July 1845 July 1846 July 1847 July 1843	Paid. £. 70 80 83 83 85	Price. £. 125 205 150 117 87	Paid. £. 100 100 100 100 100	Price. £. 218 243 243 225 183 1214	Paid. £. 100 100 100 100 100	Pric . £. 95 187 151 120 1013				

These premiums, varying from nothing to 1251. on the Great Western shares, from 201, to 1401, on the London and North-Western, from a discount to a premium of 801, on the Midland, are from half-

§ 'Tuck's Shareholder's Manual.'

We have come and gone between Cheltenham and Paddington, in the summer, one of two or three passengers, in a coach made to carry thirty-two; and this not once only, in the present year.

[•] Return (House of Commons), 708. • The calls on Irish railways were 1,900,000L; on foreign railways, 6,700,000L; in all 43,000,000L in one year, 1847.

yearly averages, be it remembered; the extreme fluctuations must have been even greater than this.

Railway Legislation .- It is not within the province of a statistical inquiry to treat of the want of good faith or of any definite principle of legislation which has characterized our law-making on railways. Our railway system may without exaggeration be said to have arisen in spite of the Legislature. The prodigious expense attending our system of parliamentary inquiry is impressed upon my mind by the following fact, within my own knowledge, that upwards of 900,000*k* has in one district* been spent in parliamentary surveys and contests, the result being 350 miles of railway, by no means laid out in the most judicious way; the parliamentary expenses will therefore, in this case exceed the cost of the iron rails themselves, on the lines finally passed. The capriciousness and uncertainty of parliamentary tribunals are shown by the following facts+:-Of eighteen bills rejected by certain committees of the Commons in 1845, seven were passed by other committees when brought forward again in 1846. Of six bills rejected by certain committees of the Lords in 1845, four were passed by other committees of the Lords when brought forward again in 1846. Six bills were passed by the Commons in 1845, but rejected on precisely the same evidence by the Lords in the same year. The same evidence by the Lords in the same year. treatment of the Board of Trade Reports in 1845 is a proof of the same sort. Parliament in 1845 called in as assessors the Railway Department of the Board of Trade, and required their opinion on the schemes before Parliament: that department accordingly divided the railways into several groups, and reported upon them. Parliament, however, overset the recommendations of its own assessors with regard to the first and principal group that came before it, and proceeded to do the same in the case of the five other principal groups of lines reported upon. It is obvious that no confidence can be placed in the judgment of a tribunal the proceedings of which are so inconsistent as this; and it is difficult to conceive why railway bills are passed before two tribunals, Lords and Commons, composed of inexperienced persons. at an enormous expense, instead of before one experienced and competent tribunal, or why members of the Legislature submit to sit for days and weeks in judgment on technical matters, on which their training does not qualify them to give an opinion.

The saving effected by railways is a point we some-times hear debated, and it may be well to attempt a rough computation of it. Railways save time, and time with an industrious people like ours is another word for labour, which is the source of wealth; to save time is therefore to increase wealth; but this we cannot bring to the test of figures, as we cannot tell what proportion of railway passengers occupy their time profitably to the country. If we were to take the test of fares indeed, as some would contend we should, seeing that the fares by former modes of travelling were double the present railway fares and that 4,998,000l. was spent in railway travelling in 1847, the saving might in this way of regarding the question be estimated as equal to this sum; but let us confine the calculation to the saving in connexion with the transport of goods, coal and cattle, where the data are more certain. There have been conveyed during the last year, as we have seen, 7,000,000 tons of goods; the value of these goods will be not less than 100,000,000L, or the value of the goods in transit daily cannot therefore be less than 300,0001. calling the average time of goods in transit by railway one day, and by the former modes of conveyance three days, it follows that there must be a saving on the value of the goods in transit at any one time of 600,000L, due to the rapidity of railway conveyance. This amount of capital is released by railways. and instead of being unproductively locked up in the shape of goods in transit, it is free to be invested reproductively in the transactions of commerce. The charges for goods were, during the year 1847, 1,900,000%; taking the railway charges as threefourths of the charges by former modes of conveyance, here is a further saving of 666,0001. 8,000,000 tons of coals have been conveyed; taking the saving of railway conveyance at only 2s. per ton, here is a

saving of 800,0001. The same principles of calculation might be applied to cattle, sheep, pigs, &c.

I have endeavoured to avoid anything like exaggeration in this rough estimate; and from these figures I think it appears that in the transport of goods, coal and cattle traffic there is already a saving to the nation of more than 2,000,000% annually, due to the introduction of railways.

The result of a comparison of the branches of the revenue which may be considered as most likely to have been affected by railways, viz., the stage-coach duty, the tax on carriages, the post-horse duty, and the tax on horses, in 1834 (before any of the large towns except Liverpool and Manchester were joined by railway) and in 1845, when railways were laid on almost all the main routes, is, that the stage-coach duties are about the same in amount as before railways were introduced, and that the tax on carriages has increased, but that the taxes on horses Whether these results are to be produced less. entirely attributed to railways or not I do not know, but it will be seen that the total falling off of 146,000L is more than covered by the railway passenger tax, which produced 250,000L last year, so that the revenue is a gainer by the exchange.

The result of the preceding inquiry is, it appears to me, on the whole satisfactory. The railway system has doubled itself in the last three years. Fares have been greatly reduced. Third-class passengers have largely increased. The importance and value of the traffic in goods and cattle relatively to the passenger traffic have become more apparent. The number of trains is greater and the speed of some of the trains has been accelerated; and all this has been effected without any falling off in the average receipts on each mile of railway in working, but with an increase probably sufficient to meet the increase of the working expenses attendant on the increased accommodation now afforded by railways: whatever falling off in dividends there may have been, is therefore to be attributed in a general view of the subject to the capitalization of loans and the creation of fictitious capital by the purchase of railways at premiums, and therefore at sums beyond what they actually cost. These, being profitable speculations when shares were high, were pushed to such an extent as now to press severely on the original share capital of railway companies. The great evil of the last three years is the extravagant outlay of money which has taken place; an outlay which, instead of being checked by the Legislature, has been encouraged to the utmost by the mode of inquiry adopted. This has inflicted on the railway system a burden which it will never be able to throw off, and which the public will always have to bear with them in a higher rate of charge for conveyance than would with common prudence have been necessary. It only remains to stop the extravagance with a strong hand. The very exist-ence of the railway companies depends on the economy they can practise in making and working their railways; and nothing which on the face of it involves increased outlay, be it diversity of gauge and its consequence the mixed gauge, or the more plausible plea of competition, should be countenanced either by railway companies or by the Legislature if we wish to secure for ourselves the full fruits of that admirable invention which England and English engineers who have followed in the steps of George Stephenson have given to the world.

### Official Papers.

ULSTER.

Engineer's Report for the Meeting, Sept. 28 (p. 719). I have the satisfaction of stating that the works on this I have the satisfaction of stating that the works of miles of railway are now completed, with the exception of some trifling matters connected with the station arrangements; and I feel gratified in being able to state that the whole is substantially and well executed. The permanent way and working stock of the company are in excellent order, and I refer with satisfaction to the working expenses order, and I refer with satisfaction to the working expenses of the last half-year, which is very little above that of the preceding one, notwithstanding the addition of 11 miles to the length of the line. It should, however, be remembered, that the cost of maintenance of the extension line to Armagh is as yet borne by the contractor, and when taken out of his hands will necessarily add to the working expenses.

Belfast, Sept. 21.

J. Goodwin.

MIDLAND GREAT WESTERN (L). Engineer's Report for the Meeting, Sept. 29 (p. 719).

Mullingar, the turntables, water-tank, sidings, &c., will all Mullingar, the turntables, water-tank, sidings, &c., will all be ready for use on the 30th inst, so that the public opening may take place on the 2nd proximo. The line between Dublin and the Kinnegad station has now been safely and satisfactorily worked for about a year, and I have no particular remarks to make on that portion, the works having been limited to mere details of finishing, which are now almost completed, and the permanent way is in excellent condition. The coke ovens are nearly constructed, and will shortly be ready for use; I expect the result of working them will prove highly satisfactory. Three of Mr. Fairbairn's new locomotive engines have been delivered on the line; they are made to the drawings of your locomotive superintendent, and are remarkably fine engines, and of line; they are made to the drawings of your locomotive superintendent, and are remarkably fine engines, and of excellent workmanship. Three more of these are completed, and are on their way to Dublin. Additional parcel-vans, horse-boxes and cattle-waggons are making, and will be ready for the Mullingar traffic. On the opening of your line to Mullingar every attention will be given on my part to economize, as far as consistent with safety and efficiency, in the working expenses of the line; and, as I mentioned in my last report, this can be more readily effected on a length of 50 miles than on the short distances over which your traffic has hitherto been conducted.

G. W. Hemans.

#### Brogress of Works.

ABERDEEN.—The Scottish Railway Gasette continues to express its hopes that immediate measures will be adopted to relieve the mass of dormant capital sunk in the valuable works of the line, and at the same time to call into activity the immense traffic which will be brought upon all the existing Scottish lines by the completion of the communication with Aberdeen and the north of Scotland. Every effort should be made to have this work done before the winter season sets in. That this is quite practicable will be admitted from the advanced state of the line generally, and particularly of the heavier and more expensive works upon it. In some parts of the line the works are completed, with the exception of the permanent rails not yet being laid. One of the heaviest contracts, that of Mr. Forbes, extending from the viaduct over the Cowie Water to a distance of five miles, is so far forward that the principal cuttings are nearly finished; more than half of the contract is ballasted, fully a third of it is laid permanently, and the whole rails for the contract have been on the ground for some time. On this contract there are about 300,000 cubic yards of bastard whin rock, besides a great quantity of earth cutting, and by far the heaviest bridges on the line, and we understand that the viaduct of nine arches upon it was finished more than twelve months ago, and which we have the best reason for stating is one of the most substantial and workmanlike buildings to be seen on any line. On this contract we are glad to learn that 400 men have been employed for some time past; but on several of the other contracts the works are suspended, and on the remainder, as we stated before, the force is altogether inadequate to secure the completion of the line for some time to come.

CHESTER AND HOLYHEAD.—Oct. 2.—To-day, says a correspondent of the Morning Post, active preparations, under the superintendence of Mr. Stephenson, tions, under the superintendence of Mr. Stephenson, M.P. and Mr. Clarke, his assistant, commence for floating the second great tube over the Conway into its place, prior to its being finally fixed upon the grand piers and abutments on the 11th inst., for the through transit of the trains. Mr. Stephenson was to be down for the purpose. The six pontoons on which the tube will be cradled during the process of raising are in readiness. They are of gigantic dimensions each being 95 ft. long. 25 ft. broad, and 8 ft. sions, each being 95 ft. long, 25 ft. broad, and 8 ft. deep, capable separately of sustaining 400 tons, though the real demand made upon them will be only 220 tons. The castings at the pier-ends are completed, and the hydraulic machines, for the lifting of the tight time of tide, are ready. The total weight of the tube is 1,300 tons, formed of rivetted iron-plates, with a span over the river of 400 ft., and the inside width 14 ft. The tube in juxta-position with the one now to be lifted has been up for four months, and during that period has been subject to the daily transit of express and heavy trains; and from observations made as to the effect produced, it appears that the deflection does not extend to the sixtcenth part of an inch.

EASTERN COUNTIES .- The Maldon, Witham and Braintree branches have been during the week opened for passenger traffic. They diverge from the trunk line at Witham, the branch to Maldon being on the south side,  $5\frac{1}{4}$  miles in length, and that to Braintree on the north side, length  $6\frac{1}{4}$ . The company intend to run five trains each way per day. In order to commemorate the opening of "the town line," as it is called, a cheap trip to Braintree fair was afforded the working classes.

GREAT NORTHERN.—Mr. Moody, the contractor, has finished the pile-driving at the Don Bridge, and I have great pleasure in reporting the favourable result of the Government inspection of your line from the Hill of Down to Mullingar, a distance of 14 miles. The station at has begun the masonry work for the abutments.

Digitized by GOOGIG

^{*} That between Gloucester, Wolverhampton and London. † See Mr. Shaen on 'Railway Legislation,' for much curious information on the subject.

This bridge will be constructed of wrought-iron, on the principle of Fairbairn's patent hollow bridge, and will consist of two hollow iron girders, which will span the stream, transverse girders for the rails to rest upon, and iron-plate sides. The bridge will be 5 ft. 6 in. high in the middle, 4 ft. 8 in. at the ends, the side-plates being only 5-16ths of an inch thick; the plates at the bottom of the bridge are 9-16ths of an inch thick. All these will be firmly rivetted together, to form a rectangular beam. The principle of construction, says the Doncaster Chronicle, is the same as that adopted at Conway, and which is now being very generally adopted for railway bridges. As we stated last week (p. 694), the span of the bridge will be 70 ft. The cattle bridge over the marsh is completed. The brickwork of the bridge over the Balby-road is commenced. The company have obtained possession of the land between Rossington and Bawtry, and having already collected together the requisite materials, that portion of the line will be commenced immediately.

GLASGOW, BARRHEAD AND NEILSTON .- Sept. 26. The directors, with a party of friends, made a trial-trip along the line, previous to its being opened to the public on the 27th. The temporary station at the head of Main-street, Gorbals, was decorated with evergreens and flowers, which also were placed about the carriages. About 1 15 p.m. the train started on its course. The line, which is but of short distance, after passing the station about a mile, enters on the grounds of Sir J. Maxwell, of Pollockshaws, and, after running through them for about two miles, passes over the White Cart, and a stop takes place at the station of Pollockshaws, which is about 200 yards distant from that village. After proceeding about a mile and a half farther, the train, after passing through Pollockhead Wood, stops at Kennishead station. From this station a branch, worked by horse-power, extends for fully a mile, to the extensive works of the Messrs. Crum. The train then passes through some heavy cuttings, and, after sweeping past Mr. Wilson's famed chemical works at Ni hill, once more comes to a stand at the Nitshill station. On passing Nitshill, the line crosses over the Levern Water, and runs near to the Cross Mill Print Works. After a pleasant trip, the train reached the Grahamstown station, about five minutes' walk from the village of Barrhead, in about eighteen minutes from leaving the Glasgow station. Shortly after 2 p.m., a special engine and tender arrived at Barrhead, having on it Mr. J. Graham and a party of engineers, who had traversed the line on the truck. The works seem to have been completed with the greatest care. The parish of Neilston is famous for its pastoral wealth, and its milk and butter are too popular to require commendation. The other districts over which the line passes are also well known as the seats of manufacturing and mining industry. At Grahamstown a luncheon was prepared, and the company, headed by Mr. J. Graham, of Fereneze, festively celebrated the occasion with the usual complimentary ceremonies.

HAVANT AND COSHAM.—Arrangements have been made, says the Hampshire Guardian, between the London, Brighton and South Coast and the South-Western for opening the line between Cosham and Havant immediately, by which means the traveller will be able to avail himself of the ready means of conveyance now open to him from Brighton vid Shoreham, Little Hampton, Chichester, Havant, Farcham, Southampton, and from thence to Salisbury, Dorchester, &c., thus making the South Coast

line complete.

NORTH-WESTERN.—Sept. 28.—The first sod on the Bentham contract was cut by Mr. Pudsey Dawson, the chairman, in presence of many of the directors and the principal officers of the company. Luncheon, of which 150 partook, was afterwards given on the field, by Messrs. Coulthard and Allen, the contractors. After luncheon, a jingling match, wheelbarrow and sack races, &c. were entered into by labourers, to the great amusement of the company. The entertainment, says the Lancaster Guardian, diffused general satisfaction.

SOUTH WALES.—The works of the Newport and Monmouth branch have been stopped at Caerleon and all the navigators discharged. The Monmouthshire Merlin reports that nothing of consequence will be done there before 1850.

## Accidents.

Great Western.—Oct. 3.—The 8 30 p.m. train left Maidenhead at its proper time. It is due at Bull's Bridge at 9 p.m. Bull's Bridge is a place where the company keep a large quantity of timber stores, abutting upon the Grand Junction Canal. At the western extremity of the place the Hayes-road is carried over the line by a brick bridge, upon which

the night or lamp up-signals for the engine-drivers are placed. The line approaches this bridge on a curve, which continues for a considerable distance beyond the spot where the accident took place. About 300 yards on the London side of the signal upon the bridge, is the night signal for the down trains, and about 30 yards nearer Paddington is a crossing for the purpose of moving the stores at Bull's Bridge across the main lines on to the down siding. As the train approached, at about 9 2 p.m., the driver saw that the white, or "all right" light, was turned on at the bridge. Immediately he saw the line was signalled as clear, he crossed from the reversing side of his engine to the other side, in order to set on one of his pump cocks; his firemen at the same moment crossing over from the opposite side of the foot-plate, and taking his (the driver's) place at the reversing lever. By this time the engine had got to the signal at the bridge, and the driver saw the policeman give the "all right" (white) signal with his hand lamp. The driver at the same instant felt that his fireman the "all right" had reversed his engine; but before he could step across the foot-plate to ascertain the cause, the engine, which was running at about 45 miles an hour, struck obliquely a loaded coal-waggon, weighing at least 10 tons, which, it is said, was being drawn across the main line by horses. The engine (the Gorgon,' a six-wheeler, weighing about 24 tons,) cut the coal-truck (a wooden one) in half, struck off one of the axles from the "boss" as cleanly as an apple is divided with a sharp knife, and at the same moment snapped the coupling-pin of the tender. The engine would still have kept the rails had not some of the ironwork of the coal-truck got under her leading wheels. This caused her to mount the rails, and to take a course across a siding on the up-side of the line, and in the direction of the canal, pulling the carriages, four in number, with her—the carriage next the tender holding on by the drag chains. The engine tender holding on by the drag chains. The engine proceeded in its course for about 40 yards, striking and bending the rails in several parts, but without in the slightest degree displacing any of them, or seriously injuring the longitudinal bearings. Within some 30 yards of the bridge over the canal, and where the line is carried upon an embankment, 7 ft. or 8 ft. in height, the engine was thrown off, and fell bodily down upon its side, the tender remaining partly upon The two first carriages were the embankment. thrown across the line, but the other two did not leave the rails. The chain to which the horses were attached is said to have broken when the engine struck the coal-truck. The driver Roscoe (who singularly enough drove the engine at the Shrivenham accident), and his fireman, J. Greening, stuck to their engine to the last. As she turned over they seized hold of the hand-railing on the upper side of the engine, and escaped unhurt. The only persons who sustained any injury were a passenger, who received a slight cut in the head, and one of the guards, who was severely bruised about the shoulders and ribs .-Oct. 5.—At the inquiry before the Uxbridge magistrates, the men with the coal-truck and the porter declared they were justified in moving the truck across the line as the "all right" signal was exhibited. The policeman denied this, and stated that he showed the red, or danger signal. The case was remanded for further evidence.

London, Brighton and South Coast.—Oct. 1.—In the Merstham tunnel, about 1 p.m., as the Brighton goods train for town was passing through the tunnel, the driver observed what he thought was a sleeper lying across the rails on the down line. On meeting what is called the "pick up" train, he cautioned the engineer as to what he had seen on the rails in the tunnel. The driver and stoker of the "pick up" train accordingly proceeded at a steadypace and kept a good look out. They had not progressed far before they discovered the body of a man lying on the permanent way, and literally cut to pieces. He must have wandered into the tunnel unperceived by the policemen who guard the entrance, and been cut down by the first train that passed.

cut down by the first train that passed.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.—
Sept. 30.—About 10 a.m. the whole of the twenty

arches of the Rother viaduct fell down, burying beneath the material four of the unfortunate workmen, only one of whom has escaped with his life. In consequence of the heavy rains which have recently fallen in this neighbourhood, and by which the valley is inundated, Mr. Carlisle had deemed it prudent to give orders to his workmen to shore up the nineteenth arch with a view to its better protection. Seven or eight men were employed upon this work, and had resumed their operations that morning at an early hour. A few minutes before 10 o'clock, while they were thus engaged, the nineteenth arch fell in, without a noment's notice, and was immediately followed by the thirteen or fourteen adjoining arches. After a few minutes the remainder of the viaduct also fell

in, thus completing the destruction of this extensive work, which has been in the course of erection about a year. Four of the workmen were completely buried beneath the fallen materials. Two bodies were found lifeless. Another of the sufferers died within a very short period. The fourth man had his arm broken, and sustained other severe injuries; but fatal results in his case are not anticipated.—Oct. 2.—At the inquest at Beighton, before the county coroner, after the examination of the bricklayer and Mr. Gibson, the engineer, Mr. Wilson, the resident engineer on the Sheffield and Lincolnshire line, said he was on the works on Wednesday afternoon, and then observed the settling of the piers where the first arch fell. The arch had settled about 14 in., but very regularly. He was scarcely able at present to state the cause of the accident. Of course it was owing to the giving way of the foundations, but at what depth the yielding had taken place he had not ascertained. Originally he believed the foundation good.—Mr. Fowler, the principal engineer, also entertained the opinion that principal engineer, also entertained the opinion that originally the foundation was good.—The jury did not think any further evidence necessary, and returned the following verdict:—"That the decessed were killed by the falling of the Rother viaduct while in the course of construction, in consequence, it is believed by this jury, of the insufficiency of the foundation.

NORTH STAFFORDSHIRE.—Four of the arches of the Dane viaduct have fallen in in consequence of a settlement in the foundation of one of the piers. Steps are being taken for its immediate reconstruction; and the opening of this portion of the line will not be retarded in consequence.

## Law Intelligence.

Sept. 27, 28.—In the VICE-CHANCELLOR'S COURT, in re Edwards v. the Shrewsbury and Birmingham, the plaintiff sought for a special injunction to restrain the company and the directors from creating and issuing new or preference shares, or any other shares bearing a fixed rate of dividend or interest of 8 per cent. per annum for ten years, and 6 per cent. per annum in perpetuity thereafter; and from paying out of the revenue funds or monies of the company any dividend or interest upon such new shares calculated from the time proposed by the pretended resolutions of the 12th of September; and from raising the sum of 155,000L, or any part thereof, until the same should be actually required for the purposes authorized. rized by the Shrewsbury and Birmingham (Amendment and Branches) Act, 1847, and from applying the same when raised in any other manner than that prescribed by the said Act, or for any other purpose than for the constructing and working the branch lines thereby authorized to be constructed, and from otherwise carrying the said pretended resolutions into effect. The bill was filed by Mr. Edwards, a shareholder. The affidavit at great length set forth the history of the company and the proceedings of the directors in the creation of the shares objected to .- His Honour said the course of proceeding to which the plaintiff objects may possibly be incorrect, but fraud and bad intention are quite out of the question. The directors, a body of persons whose respectability and good faith are not questioned, have considered and do still consider this course of proceeding advisable and beneficial for the shareholders. and it is not clear to me that, whether strictly warranted or not, it is not on the whole substantially advisable. There is only one plaintiff, a holder of twenty-five shares, and no more, the utmost amount paid on which is 1250, and it is admitted that the shares are not saleable for more than half that amount. That observation is not decisive, but also is not immaterial. I do not forget that the plaintiff states that a large body of the shareholders enter into his views, but the fact is that there is only a single plaintiff on the record. Considering that circumstance, and considering that there is doubt on the other parts of the case, I must decline to interfere. It is not to be inferred, however, that because I refuse to interfere I consider the resolution legal, or regularly voted, or legally passed; on the con-trary, my impression is the other way. The motion must be refused, without prejudice to any question in the cause and reserving the costs.

EAST LANCASHIEE.—Sept. 27.—Mr. Fraser, tra-

EAST LANCASHIRE.—Sept. 27.—Mr. Fraser, traveller for Mr. C. Johnson, tobacconist, Bolton, summoned the company to appear before the Bury County Court, for the sum of 14s. On the 18th of August last, Mr. Fraser, at Bury, purchased a ticket to go to Bolton. On arriving at the Clifton station he had to get out of the carriage on the East Lancashire line, and was to have got into one on the Bolton line, but the Bolton train had gone, owing to some delay in the East Lancashire train. Mr. Fraser was directed to go to Manchester by the last train,

Digitized by GOGIE

and make his case known, which he did. A return of his fare was offered, but he refused, and hired a cab as a conveyance to Bolton, for which he paid 14s. Mr. Fraser afterwards communicated the circumstances to the superintendent of the East Lancashire, but was still unable to obtain the sum in question. Previously to going into court, the authorities of the company agreed to pay Mr. Fraser the demand and all expenses.

demand and all expenses.

LANCASHIRE AND YORESHIRE.—Scpt. 26.—Two young gentlemen, of the names of T. and J. Holdsworth, were charged, at the instance of Capt. Binstead, the superintendent, with having placed a stone upon one of the rails of the Halifax branch, at the Shaw-hill crossing, on the 16th. They are sons of Mr. J. Holdsworth, of Shaw-lodge, a well-known manufacturer. The younger brother (John) was discharged, and the other prisoner stood committed for trial at the next Leeds sessions. Bail was then tendered, and the magistrates agreed to accept the prisoner's own recognizance in the sum of 2004., and one surety in the like amount, for his appearance to answer the charge.

YORK AND NORTH MIDLAND.—R. Lupton and T. Saunders were charged with having rode in a van from Darlington to York without tickets. The defendants said that they were engine-fitters, but out of employ, and without money.—Mr. Gutch said the the company had reason to believe that this practice was carried on to some extent, and therefore wished to press the charge. They were fined 40s. each, but in default of payment committed to the house of correction for seven days.

THE PUBLIC FARES.—The Daily News, in a clear and dispassionate review of the present aspect of railway affairs, sensibly enough says,—Some of our contemporaries, we see, are expressing fears of what directors may be tempted to do in this emergency, and we have heard some idle wailing on the chapter of fares, which it is apprehended may be raised to an inconvenient height. On this head, however, there is no just cause for alarm. The maximum rates in the

Railway Companies Acts are in no case excessive; and in some of the chief companies they are so fixed already that no rise can be made, while the so-called "parliamentary trains" secure on every line, every day, a conveyance for the really poor, far cheaper and better than they ever enjoyed before. There are not many companies, we say, that can greatly raise their charges, nor would any that can be foolish enough so to raise them as to check travelling. This being premised, as matter of fact, we may add that, on the principle above mentioned, it is, on the other hand, quite clear that no one can fairly complain of any trading company fixing, within the stringent limits drawn by law, such charges for the work it does as shall asonably pay for doing that work. Nor can we at all recognise any claims on behalf of the public to enjoy the whole of the advantage from this wonderful system to be carried backwards and forwards at the speed of light, and as cheaply as it may desire-without regarding for a moment whether the service is or is not remunerative to those who conduct it, and who have risked their property in order to make the service possible. This is neither just per se, nor would its effect be advantageous to the country, even were all considerations of justice set aside. As the matter stands, however, there is no probability of any such increase of rates as can in any case amount to a grievance. What the combined directors—if they do combine—can effect to improve the value of their property, will be much more in the other ways we have already pointed out than in this—which will always be restrained, not merely by a parliamentary maximum, but also by the fact that reasonable charges promote traffic. This, however, of course does not forbid a revision, where it may be possible or necessary, of charges that are at present unreasonably low; and such only can be made a subject of alteration in times like these. On the whole, we have seen that it is desirable on every account to improve the condition of this enormous mass of property, in the success of which all classes of this nation are now, in one way or another, concerned; and we shall be glad to find the directors' conferences

TRAPPIC TABLE.

lead to such a result; which we believe to be in a great degree attainable, if set about in the right way, and in good earnest.

RAILWAY SPEED.—The limitation of railway speed is not to be found in the width of gauge, but in other and different considerations, such as the strains to which it is prudent to submit materials—the same on every gauge—the local features of the railway (as its gradients, curves, &c.), the comparative freedom or otherwise of the line from trains (such as goods and mineral trains) necessarily travelling at low speeds. Thus, on the London and South-Western, a narrow-gauge railway, the express trains have, during the last twelve months, been travelling at a higher rate of speed (by 1½ mile per hour) than those of the Great Western from London to Exeter on the broad gauge.—From Messrs. Robert Suphenson and Locke's Report.

A table just published, says the *Times* City correspondent, of the rates of passenger fare on sixty-four of the railways of the United States, shows the average to be 3.27 cents, or little more than 1\(\frac{1}{2}d\). per mile. The lowest fare is on the New York and Harlem, a line of 53 miles, where it is only 1.88 cents per mile; while the highest is on the Winchester and Potomac, a line of 32 miles, where it is 6.25 cents. From Albany to Buffalo trains are run for the use of emigrants proceeding from New York to the West, at the rate of 1\(\frac{1}{2}\) cents, or 3\(\frac{1}{2}d\). per mile.

West, at the rate of 1½ cents, or ¾d. per mile.

The guardians of the Dublin Union have received a remonstrance from the Dublin And Drocheda (for rating the company) in the following terms:—
Inasmuch as recourse has not been had to the account kept of the tolls and profits of the said company, under the 1 & 2 Vict., c. 56, s. 67, the nett amount of which after all proper deductions ought to form the basis of the valuation under the said Act of Parliament, which has not been done or followed in the rate, as it would appear by inspection that the company are not at present liable to be rated. They have made no dividend these last two half-years. They have forwarded a statement to Mr. Griffith, the commissioner of valuation.

^{*} To present date: corresponding period in second column. From May 1, 148. (3,198), deducted for collection and delivery—last year it was 2,432. (4 Exclusive of tell from Edinburgh and Northern, Expenditure includes cost of Lincolnshire lines (partially opened) and Grimsby Docks. (3,117,598), remains available to complete the works—double, it is supposed, the amount required.

## SHARE LISTS-(See also next page.)

London Stock Exchange, Oct. 6 .- There is a continued depression in the share-market, arising in part from the absence of business. The York lines have been most severely depressed during the week, too much having been undertaken in that neighbourhood; and there is a growing want of confidence, from the meagre accounts presented to the shareholders. The following are the latest transactions in foreign lines: following are the latest transactions in foreign lines:

—Boulogne and Amiens, 6½; Central of France, 6; Dutch-Rhenish, ½; Namur and Liége, 4; Northern of France, 6½; Orleans and Bordeaux, ½; Paris and Orleans, 25½; Paris and Rouen, 16½; Paris and Strasburg, 1½; Rouen and Havre, 7½; Sambre and Meuse, 2½; Tours and Nantes, 1½.

Liverpool, Oct. 5.—There is no change of moment in the state of our market. Prices were somewhat more firm at the compangement of the weak but

more firm at the commencement of the week, but have since become extremely heavy. We have no increase in the demand. Suppose, Brothers.

increase in the demand. Suplow, Brothers.

Manchester, Oct. 5.— Though we have had some little fluctuation in our share-market this week, we cannot report any improvement. Some stocks, par-ticularly the Manchester, Sheffield and Lincolnshire,

have still a downward tendency. SAM. GRINDROD.

Birmingham, Oct. 5.—This market has been very much depressed throughout the week; scarcely anything has been done, but to-day prices are rather W. Banks. firmer.

Oct. 5. - The market has been much neglected by the buyers, and a fall in stock has been the result. It is not known whether Mr. Hudson and the North British will come to an agreement to lease or purchase the North British line, but it seems desirable that the question should be set at rest.

GRAYSTON & EARLE. Hull, Oct. 5 .- The share-market, after a rather severe fall, has slightly rallied, and a few shillings per share might have been made by buying the light stock of the North British at the lowest point, say thirds, 90s., now 97s. Nothing more has transpired with regard to the lease of this line to the Newcastle. A memorial to the directors to increase the return to the holders of Carlisle scrip, and to define the time of its payment, is in course of signature. There is little doing in local stocks. The following are the latest prices:—Ambergates, 3\(\frac{3}{4}\) dis.; North British, halves, 7\(\frac{1}{4}\): ditto, quarters, 4; ditto, Carlisles, 5s.; York, Newcastle and Berwick preference, 1\(\frac{1}{4}\) dis.; Leeds and Thirsk, 22; ditto, new, 27 dis.; preference, 2\(\frac{1}{4}\) dis. FLINT & TOOTAL.

Glasgow, Oct. 5.-We have no material alteration to report in our market. A considerable amount of has been taken up at the low prices which have ruled during the week, but there is not much animation yet manifested. To-day's latest sales are:

—Caledonian preference, \( \frac{1}{2} \) dis.; Clydesdale Junction, 55; Edinburgh and Northern, 124; Ayr, 58; ditto, halves, No. 1, 101 dis; ditto, preference, 1s. 6d. prem.; Great Northern, § dis.; North British, thirds, 4§; ditto, new quarters, 9s. dis.; Scottish Central, 22§.

BUCHANAN, AITKEN & Co.

IRON TRADE. — Glasgow, Sept. 29.—The pig iron market has been dull for the past eight days. No transaction to note of any importance, and prices are easier at 44s. 6d. for mixed numbers, cash.

[Secretaries of companies are requested to forward notices of Meet-ings, and closing of Contracts, as early as possible.]

#### MEETINGS.

MEETINGS.

AMIENS AND BOULOGER.—Oct. 28. Paris, at 2.

COLCHESTER, STOUR VALLEY, SUDBURY AND HALSTEAD.—
Oct. 17. Colchester.
DEMERBAR.—Oct. 10. London Tavern, at 1.
EASTERN UNION.—Oct. 9. Radley's Hotel, at 2.
LEINE AND THIBSK.—Oct. 7. Leeds, at 12.
NORTH BRITISH.—Oct. 18. Edinburgh.
TAW VALE.—Oct. 17. London.

#### DIVIDENDS.

DUNDER, PERTH AND ABERDEEN .- At the rate of 8 per cent. per annum, now payable.

MIDLIESBOROUGH AND RESCAR.—At the rate of 6 per cent. per annum, payable Oct. 18.

NORTH BRITISH.—12s. 6d. on the 25l. original shares, and

-12s. Gd. on the 25l. original shares, and 2s. 6d. on the 5l. shares.

#### CONTRACTS.

LONDON AND NORTH-WESTERN. - Stationery and account-books, and printing time-bills, Oct. 10. - Stores. No tender will be received after the 1st of November.

#### CALLS.

OXFORD, WORCESTER AND WOLVERHAMITON.—51. due Sept. 20.

SOUTH YORNSHIRE, DONCASTER AND GOOLE.—11. due Sept. 30.

TAW VALE.—21. due Oct. 10.

## Joint-Stock & Commercial Gazette.

The GLASGOW UNION EXCHANGE Company called a meeting on Thursday week; but there not being a sufficient number of proprietors present to constitute a meeting, no business was transacted. It appears that the second call made has only been responded to to the extent of 370l. The sum of 7,045l. 13s. 1d. was due to the bank, and 17l. 15s. 1d. to Messrs. Wilkie. The concern is now under the management of a factor, and the monies received from it deposited in

#### Banks.

A change has lately taken place in one of the Joint Stock Banks; a leading director and authority has retired, rumour states, owing to pecuniary difficulties

caused by over-trading or speculation, and that the party will shortly be compelled to have recourse to the Bankruptcy Court. The Daily News says—It is supposed that some curious disclosures may arise out of the proceedings, sooner or later, with reference to a liberal but novel system of bank management, which has latterly grown up under certain auspices to the signal accommodation of some West-end customers, more honourable of title than their bills are honoured by payment. 40 or 50 per cent. discount was perhaps too alluring a temptation for extra risk, and may

help to mitigate a final loss.

The advices received from Jamaica announce the half-yearly meeting of the JAMAICA Bank, at which a dividend at the rate of 6 per cent. per annum was declared. The report was considered very satisfactory. The cash in hand was stated to be more than the notes in circulation. It was said great inconvenience and distress were experienced in the island

owing to the paper currency being very contracted.

The Planters' Bank, it appears, have assets to
the extent of 190,000*l.*, of which 120,000*l.* was held by parties engaged in the agricultural districts. The liabilities were 78,425l., of which 43,777l. represented

the amount of notes in circulation.

The half-yearly meeting of the North-West Bank of India was held at Meerut on the 7th of August last. The dividend declared was at the rate of 5 per cent. per annum. The losses the bank sustained owing to the commercial disasters that have taken place amount to 10,000l., to meet which there was a sum of 14,443l. The capital paid up was 400,000l., the deposits are 91,355l., and the cash, Government paper and discounted bills amount to 37,815l.; the remainder of the assets consisted chiefly of loans and credits.

The CAWNPORE and the SIMLA AND UMBULLA Banking Companies held their meeting on the 10th of August last. The former had suffered still further England, on whom the bank held bills. The Simla and Umbulla bank's affairs were in a very favourable state, a clear profit of 68,731 rupees having been made

The AGRA AND UNITED SERVICE Bank held its meeting on the 14th of the same month, when a dividend of 5 per cent. for the half-year was de-Government paper, 63,922l.; Exchequer bills in London, 16,698l.; London balances, 45,774l.; bills discounted, 51,748l.; loans on Government and joint-stock securities, 385,342l., and other sums. The bases had been rather more than surgineted from losses had been rather more than anticipated, from the failures that had occurred.

#### Mines.

A diamond, weighing 104 carats, and said to be of the purest water, has been found in Borneo, the new settlement in the Eastern Archipelago

The market this week has remained in nearly the

same position as last.

Shares in the Australian companies have been much inquired for of late, but prices have been fluctuating about 2l. to 3l. per share.

The annual meeting of the TRELEIGH Consolidated

Mining Company was held on Wednesday, Mr. G. B. Carr in the chair. From the report we learn that— Since the last quarterly meeting, little if any improve-

ment has taken place in the position of the company, the disturbed state of the Continent having caused a stagnation in the copper trade. Recently, however, some purchases of fine copper have been made for exportation, which it is hoped will lead to an increased demand, as it is evident that hoped will lead to an increased demand, as it is evident that unless the large stock in hand was diminished, no improve-ment in the price of ore can be expected. Christoe shaft had been sunk 120 fathoms, and a left driven east to cut the lode; but not having been found so productive as was ex-pected, it was determined not to prosecute the works for

しょし

the present. The manager of the mine says, "In the 90 East we have driven north, and discovered a lode 4 ft. wide, 2 ft. of which is very good ore, and worth 400 per fathom. This I am in hopes will open some good tribute ground; it seems to be the same shoot of ore we had in the 80 dipping East." The accounts showed the receipts to be—balance at least meeting 3 1991 10: 1041 course and at 2001 East." The accounts showed the receipts to be—balance at last meeting, 3.8321. 19s. 10d.; copper ore sold, 8,2221. 17s. 2d.; fourth call on seventy shares, 17l. 10s.; spare materials sold, 46l. 0s. 3d.: total, 12,1194. 7s. 3d. Expended; cost of working, 7,348l. 1s. 2d.; dues, 650l. 6s. 6d.; dividends, 2,789l. 15s.; reserved fund, 275l.; rent, salaries, &c., 680l. 10s.: total, 11,439l. 17s. 3d.—leaving a balance in hand of 6600l. 10s. The assets of the company were 1,560l. 5s. 6d.; the liabilities, 1,065l. 7s. 2d.; and the reserve fund, 575l.; representing 673l. 16s. 1d. three per cent. consols.

The sales of copper ore in Cornwall during the last

The sales of copper ore in Cornwall during the last quarter have been 39,206 tons, realizing 175,609t. 16s. 6d., against 40,018 tons, which realized 187,770t.

14s. 6d. during the quarter ending June last.

At Swansea the sales of copper ore during the same period have been much greater than during the preceding three months. The quantity sold has been 15,143 tons, realizing 161,583l. 16s., averaging 10l. 13s. 4d. per ton, against 9,895 tons and 84,454l. 7s., averaging 8l. 10s. 8d. The great increase in the sales is attributed to the extended imports of foreign ores, principally from Australia and Cuba. The subjoined table of the respective quantities sold of each description, with the amount of purchase money, during the two last quarters, will doubtless be found interesting:

Quarter ende						ted Scpt		
	Amou							
Australian 565	£7,723	90		2,719	3	£41,387	19	6
Cobre3,206

Against 3,540 tons and 19,304l. 1s. 6d. during the quarter ending June last.

Adelaide papers to the 10th of May state that during the first quarter of this year the value of copper ore shipped amounted to 76,380%. The prospects of the nines and the colony were improving, and great spirit was exhibiting itself in mining adventure, owing to the success which had hitherto followed

The advices received from Labuan mention that there was every appearance of iron being obtained, the water on one part of the island being very much impregnated with it. In dry weather coal-tar shows

itself on the surfaces of the pools.

The Morning Chronicle of Friday states that accounts from California, contained in the New York papers, give incredible statements of the returns of gold-washing on the American Fork and Feather rivers, the branches of the Sacramento, and which, it may reasonably be conjectured, are written and circulated by a very keen but dishonest class of the community—land and other speculators. If these persons' versions of the state of things were to be believed, it would appear that the beds of the rivers above mentioned are for several miles full of pure gold; indeed, so abundant as to bear on the spot a most disproportionate value to the price of the dust when exported. A perfect mania for gold-collecting when exported. A perfect manta to gott-checking is said to pervade society, from the lowest to the highest class. The size of the gold grain is said to be various, but in some cases so large as to be worth from 6 dollars to 16 dollars. The public should be on their guard against these too flourishing accounts of the newly discovered "El Dorado," which are doubt-less concocted by a parcel of interested jobbers.

The lead mines in the neighbourhood of Matlock have been for years doing little, owing to the progress of the mines being stopped by water, and many of the veins which have been very productive obliged to be abandoned for want of power to drain them. There appears now some chance that this object will be obtained, as we understand a powerful company is contemplated to relieve several mining districts, and also make some valuable trials, which the miners have not been able to do themselves. It is expected that this company will be speedily formed in a considerable number of shares of small amount. The Derbyshire mining districts have been, comparatively speaking, doing nothing; and should this plan be carried out, a complete renewal of the veius, at a

now be done by the great improvement in the steamengine, and the facility of getting the engines supplied coal by means of railways.

Advices from Belgium mention the discovery of a rich coal-mine near Douary, close to the Port de la Scarpe.

TO CORRESPONDENTS.

E. M .- Refer to Bradshaw's monthly Guide. J. D., Malton.—Twenty-one days' notice was to be given by the Company.

M. J.—By the Great Northern of Scotland.

# Railway Chronicle.

LONDON, SATURDAY, OCTOBER 7.

At a special meeting of the BRIGHTON shareholders, the sale to the South-Western of part of the Portsmouth extension of the Brighton and Chichester was confirmed. The number of directors is reduced from fifteen to nine. The chairman incidentally announced that the traffic was slightly improved.

The dissolution of the LIVERPOOL, MAN-CHESTER AND NEWCASTLE JUNCTION is settled. A return of 14s. per share was determined upon, and the proceedings of the half-yearly meeting were adjourned to the 24th inst.

At the half-yearly meeting of the MAN-CHESTER AND SOUTHPORT the report was adopted. The portion of the line (three miles) connecting the Liverpool and Bury was expected to be finished next month, and to be opened simultaneously with that line. It was not yet determined whether the extended time for finishing the line would be required.

At the half-yearly meeting of the GLASGOW, AIRDRIE AND MONKLANDS JUNCTION the directors' report regretted the parliamentary re-fusal of their line across the Clyde. A loan of 25,000l. had been negotiated. The call of 21. 10s, was reduced to 5s. per share.

The directors of the East of Fife were specially authorized at the half-yearly meeting of their proprietary to adopt legal proceedings against shareholders in arrear.

The proprietors of the ULSTER received the report declaring a dividend of 13s. per share. There is a falling off in the gross receipts for the past half-year. The chairman stated that a call of 21, or 21, 10s. would close the capital account

The half-yearly report adopted by the shareholders of the IRISH SOUTH-EASTERN announced the efforts of the directors to complete the line to Kilkenny. The Great Southern and Western are to supply the locomotive power. The call of 11. is only part of a 61. call, of which 51. has been paid up.

The directors' report of the MIDLAND GREAT WESTERN (I.) declared a steady increase in the receipts. The line to Mullingar was opened on the 2nd. Strict economy has been enforced by the Board; and the report respecting a Government loan of 500,000l. was denied.

In noticing last week the retirement of Mr. P. LAURENTZ CAMPBELL from the SECRETARYSHIP of the South-Western, in consequence of his continued severe illness, we little expected so soon to have the melancholy duty of announcing the decease of that gentleman, which took place on Wednesday last at his residence in Chestersquare. We have recently borne testimony to the high character and arduous services of Mr. Campbell. Our observations printed last week have been quoted by the Times at length in announcing the sad event. His hard work has had a sad and speedy end.

We see it announced that the SCALE OF great depth, is confidently expected; and which can | CHARGES has been RAISED, from the beginning | goods, and a remainder of 58,480/, for passen-

of this week, on the London and South-West-ERN, and also on part of the traffic of the BRIGHTON RAILWAY. The experiment we cannot say is prematurely tried, because it is but too well known that all companies which have formerly made great reductions have sufficiently proved, by this time, the error they committed in sinking beneath a scale which, at the time of the change, was no more than reasonable, and had moreover already been practically reduced, in one important branch, by the law of parliamentary trains. But it is one which, as we have already said, will not be carried out now without some opposition on the part of the public; and we may commend the study, both of the past course of this business and of the further progress of the effects of thus returning to its earlier state, to the attentive consideration of all companies that are still in a condition to make any adjustment of their tariffs. This, we know, is not the case of all concerns, nor of some of those which have suffered most from forced or voluntary reductions of their charges. In the meanwhile, it may be observed that there is, even for these, a source of some improvement open, which has been too little attended to in more prosperous times. We allude to a stricter looking after extra luggage. On those Continental railways, whose low rates we have been so often urged to imitate, every traveller knows how much has to be paid by all who carry more than a very limited maximum-limited, indeed, to a weight scarcely onehalf of what is allowed on our railways. Now we do not advise that this attempt should be made-if it could be made-to diminish the weight allowed free in this country; but we do think it very needful to take care that every excess beyond so very liberal an allowance should be duly charged; and we apprehend that this is far indeed from having been the case. The point is one, at all events, well worthy of practical attention, and we trust it will be looked into. It will not indeed be easy to effect a proper control over extra weight, -so, at least, as to avoid endless contention,—without some change in the present system of passing luggage; and it appears that nothing short of a regular movement through the baggage office in all cases -- something like what is practised abroad—can insure the due amount being ascertained and charged upon, without an appearance of caprice or irregularity in the business, and without provoking, in both ways, constant irritation. The method would have some other advantages to recommend it,-such, for instance, as the means it would simply afford of properly checking the practice of carrying as luggage great loads of merchandise, furniture, &c. which passengers now will often attempt to bring with them as personal effects; by which process the railway may be seriously defrauded of its proper revenue. It is clear that when the low fares now charged free a certain weight of baggage, they were not meant (and it cannot be just that they should be abused) to cover things of a totally different class, merely because the passenger may choose to bring them himself. In this direction, we say, something practical may be done; and we believe that the coaching returns might be considerably improved thereby; -without any rise of fares, or attempting anything beyond the mere carrying out of the liberal terms already settled by the companies, in a point which we apprehend has been kept so loosely in practice as to be scarcely regarded at all.

From our official returns it appears that the amount of traffic for the last week, on 4,119 miles of railway, was 224,988l., thus accounted for:—115,384l. for the conveyance of passengers only, 51,124l. for the carriage of

 $\mathbf{U}$ Digitized by

gers and goods together, not respectively apportioned; being an increase of 25,196l. over the corresponding week of last year, when the mileage was 3,278. The average earnings per mile were 55l., whilst in 1847 they were 61l.

bination as is mentioned above can have been actually entertained by any of the parties named, we shall take leave to disbelieve altogether, until convinced by actual proof of the contrary. The idea of effecting any complete financial

#### COMMENTS ON THE DIRECTORS' CONGRESS.

The newspapers are very busy with conjectures or rumours of what has been done at the CONFERENCE OF RAILWAY DIRECTORS, to which we briefly alluded last week; and they have freer scope for the exercise of their faculty of guessing from the fact that nothing official has yet transpired on the subject. In a City article of the Morning Herald there were, last week. some silly and spiteful comments, nearly in the worst tone of the Times, on the subject of a presumed resolution of the "Congress" to raise fares—a resolution, we may observe, which, however expedient, cannot, as it happens, be jointly adopted by all the parties to the conference, for very good reasons; to which it may be added, that we have long been aware of the determination of the London and South-Western to revise its tariff of rates; which the journals erroneously deem one of the results of the recent "Congress." In Fraser's Magazine for this month there are also some comments thereupon, in a more moderate strain, indeed, than the Morning Herald's City diatribe, but still harping on the apprehended consequences of economy and on the fare question, in a spirit little more just or liberal in reality. These superficial observers, one and all, seem to overlook the fact altogether that in a bargain, such as this, between the public and those who serve it in the hope of gain from the service, there are two parties to be considered. We are glad to see this cardinal point indicated in a recent article in the Daily News, which takes a more moderate, and a wider view, also, of questions that have been discussed on this occasion; and, while laying due weight on some just considerations that are too little regarded in general by the public press, and showing how little it is to be desired, on national grounds, that railways should be ruined to please "the public," by working at a loss, takes occasion to impress upon the railway body itself some wholesome truths. The Atlas professes to have particular information of what this Directors' Congress is to produce; and mentions, as resulting from it, the determination to diminish the frequency of trains on the lines to and from Brighton, Portsmouth and Southampton; and also imparts the more large and surprising information, that "a proposal for the amalgamation of the London and South-Western, London and North-Western, and Great Western Railway Companies is now under consideration by the chairmen of these com-

The first-named of these resolutions, we need not say, we cordially approve of, however it may have been brought about. It is clear that much may be done, in the right way, to cut down working expenses, by cutting off trains that run without a sufficient number of passengers to pay for keeping them on; and of such trains there are not a few on all of our chief lines. The commencement of the winter service affords a good opportunity for this process; to which, indeed, we have called the attention of railway Boards before now, on the previous occurrence at this same season of the usual changes in the half-yearly arrangements.

The other (alleged) intention we cannot scriously suppose to exist, except in the imagination of the reporter; who may possibly have misinterpreted in this way some negotiations with respect to mutual passenger and traffic arrangements. That the plan of such a com-

actually entertained by any of the parties named, we shall take leave to disbelieve altogether, until convinced by actual proof of the contrary. The idea of effecting any complete financial union between such incompatible elements as these are under present circumstances, is not less inconceivable than the adoption of a rational and friendly understanding between the three as separate concerns would be satisfactory, and, we trust, practicable. Against the amalgamation plan there are fifty decisive reasons; and so far, the results of past attempts of the kind have not been such as to invite any new experiments of the same class: to say nothing of one on a still larger scale, and under far less favourable conditions. But were there no other than this one objection—namely, that it cannot be accomplished without a bill in Parliamentit would be reduced by this alone to a proposal, nearly destructive of the last hopes of the several parties concerned of ever seeing their property improve; if not, indeed, to a certainty that the step would take their property, such as it is, out of their hands altogether. We have seen how Parliament pounced upon the promoters of the London and North-Western amalgamation; and on what hard terms-from which its revenues are now deeply suffering—that arrangement was granted. One may imagine what would be the treatment of a far more daring proposal to mass together a full two-thirds of the railway interests south of the Trent, with so much of the Northern system; and what a dangerous use would be made of the opportunity, should the representatives of the companies in question be insane enough to afford it, by applying, for the ratification of any such ambitious-looking scheme, to the Legislature. One may fancy how, on its appearance, the cry of "monopoly would be reinforced, and how its promoters would be punished. This, indeed, would be improving the prospects of the parties with a vengeance!-in short, the mere effect of such a design being announced on authority, as meditated even, would probably give the coup de grace to whatever lingering confidence still exists of a change for the better. However, we shall not go further into this question, nor produce any of the other strong reasons that would start up to condemn a union, not less unnatural than monstrous in every way; because, as we have said, we cannot persuade ourselves to attach any credit to the rumour; nor shall we believe, until it is forced upon us, that the directors in question have so little practical good sense as to look for the improvement. which is said to have been the object of their conference, in a quarter from whence nothing but new evil would be apt to proceed. If, indeed, they could seriously nourish such a plan, it might be said that the concerns ruled by men of so little wisdom would be in an equally hopeless state as to real reforms, whether it were to be carried out or prevented.

# THE IMPROVISED TRIP OF THE QUEEN FROM ABERDEEN TO LONDON.

The capabilities of our railway system, its admirable management, and the great unity and power of co-operation which it possesses for meeting sudden emergencies, have been very notably demonstrated in the recent trip of our beloved Queen from Aberdeen to London. Very absurd statements on the subject have appeared in some of the country papers, but the following are the facts of the case.

Between London and Aberdeen there are no fewer than six railways, allied with the London and North-Western in policy, and associated with it in management. These lines have the advantage of being under the direction of

Messrs. Locke and Errington as engineers throughout for 400 miles north of Birmingham, and of Mr. Robert Stephenson for the remainder of the distance to London.

These lines are as follows:-

Aberdeen	18:	miles.
Scottish Midland	33	••
Scottish Central .	45	**
Caledonian	105	,,
Lancaster and Carlisle .	90	**

Total of the Queen's journey . 500 miles. When it is known that over this distance Her Majesty was conveyed, without any previous notice, at the rate of 35 miles an hour including stoppages—at a rate amounting to, but not exceeding at any time, 50 miles an hour, over a country rising twice to an elevation of 1,000 ft. above the level of the sea, and descending, at intermediate stations, nearly to the level of the sea, and so conveyed without the slightest alarm or cause for danger, we may be permitted to say that the railways of England, under their present system of management, have reached an amount of perfection, regularity and security unsurpassable, and almost unhoped for.

The incidents of the journey, divested of the exaggerations and errors of local statements, are as follows:—On the morning of Friday, the day of the intended embarkation, a dense fog shrouded the mouth of the harbour of Aberdeen, and extended far along the coast, presenting an evident source of danger to Her Majesty in the voyage by sea. About 12 30 p.m. intimation was sent to the engineer, Mr. Errington, who happened to be at Aberdeen, of Her Majesty's intention to change her route. Mr. Ker, the assistant engineer, was instantly despatched by coach to Montrose, being the extreme northern point from which at present the railway communication is unbroken. From this point to Carstairs Junction, on the Caledonian, the trains were arranged by Mr. Errington; from thence to Crewe by Mr. Locke; and from Crewe to London by Mr. Trevithick.

From Montrose to Perth the arrangements had to be made only half an hour before the Queen's arrival, and it was a wet, foggy night; but she was taken without hindrance the 50 miles under two hours. Notice was sent forward from Perth to Carlisle in the night. The train was clear away from Perth about half-past ten on Saturday morning; and the run to Carlisle, 150 miles, with four stoppages, was accomplished in 44 hours. At Carlisle the Queen rested a short time, and the train was clear away at 3 p.m., arriving at Crewe at 7 p.m., making four stoppages-that at Lancaster being of some duration, to receive an address from the corporation. The highest running speed was about 50 miles an hour. Next morning, Her Majesty started from Crewe at 7 a.m., arriving in town at 10 a.m. The Queen was conveyed in the same carriage throughout, being an ordinary first-class carriage belonging to the Aberdeen Company. The train consisted of six carriages and trucks; and of necessity (as there was no time for any especial provision) the locomotive and every other service was of the ordinary description furnished to the public and in daily use.

We congratulate these six companies and their engineers on having shown the public that whenever difficulties or unforescen contingencies arise which tax the exertions of railway men to the utmost, they are always found equal to the emergency; and that whether they obtain the reward of public favour or not, they on all occasions establish a just claim to the character of public benefactors.

#### Carrespandence.

#### KILLARNEY AND VALENTIA.

At a time when the disturbed state of a country offers peculiar advantages to those agitators who wish to live upon the credulity of the lower classes of society, who unfortunately when employment becomes scarce, and causes of discontent are thereby multiplied, are too prone to follow bad advice, I consider it to be of no small importance to bring employment to their very doors, at fair wages, especially if such can be done with a fair return for the capital invested in it. By so doing, I believe that you are carrying the enemy's camp by storm, neither more nor less. These remarks are drawn from me by a letter signed "Hibernicus" in your paper, which I doubt not has met the eyes of those persons for whom it was intended. Whilst Galway and Limerick have taken advantage of the disposition of all parties to benefit that seat of so much misery and want, Ireland, and have urged before the ministry and public their individual claims as packet stations for the Western world, the directors of the Killarney and Valentia seem in much the same sort of lethargy as Punch a short time ago represented the Premier to be. To you and many of your readers who are no doubt well acquainted with the position and capabilities of the harbour, it would be tedious for me to mention the many reports that have decisively named Valentia as incomparably the finest harbour on that coast and the fittest for a packet station, and the extensive slate quarries and other great resources of that part are well known to all geologists. The line when completed and opened through to Dublin will indeed be an important one, and must undoubtedly return a good per-centage. Believing that this is a bond fide undertaking, and that it will be in many respects a boon to the county of Kerry in particular, and a saving of some days in the passage to New York and other parts of America, I trust that the directors (especially after their report of the 11th of May) will see the necessity of immediately ordering the necessary opera-II. W. T. tions. Sept. 27.

#### THE WESTERN RAILWAYS.

[As many a true word is spoken in jest, we insert the following epistle, since a hint may be taken worth the notice of those concerned.]

## To all Railway Proprietors.

Ladies and Gentlemen,-If those three railway magnates, Messrs. Glvn, Russell and Chaplin, had never existed, would railway property be in its present mess? Instead of making such a mighty fuss anent their conferences, the public press ought to do its duty, and plainly tell the worthy trio that you must no longer be bamboozled by mere moonshine, for the Western Railways question lies in a nutshell. Glyn's company should relinquish to Russell's any unopened lines lying south-west of Birmingham; and Russell should abandon to them the Birmingham and Oxford Junction bargain. Russell's company should (as suggested to the chairman by a broad-gauge advocate in March 1847) relinquish to the Midland's monarch the line from Oxford to Rugby, receiving in exchange the Birmingham, Gloucester and Bristol line, Russell's company should transfer to Chaplin's the line from Basingstoke to Reading; and Chaplin's company should abandon the sheep-shearing line from Basingstoke to Salisbury, Yeovil and Exeter, but extend their Southampton and Dorchester line towards Bridport, Honiton, Exeter, Tavistock, Liskeard and Truro to Falmouth. All minor matters in difference should be referred to three schoolboys, or three members of the Government Railway Board. The South Devon Company might then continue their single line of rails and bad gradients from Devonport to Tavistock, in preference to waiting until an earthquake shall have choked up the Tamar at Saltash Ferry.

DIOGENES. Tub Cottage, Oct. 4.

#### CHARGE FOR OVERWEIGHT LUGGAGE.

In your "Gossip" of last Saturday's Railway Chronicle you adverted to a dispute in which I have been concerned with the master of the railway station at Burton-upon-Trent, respecting a charge for excess of luggage; but the facts are not precisely as you have put them. I never denied the power of the

company to charge for excess of luggage at the end | of a journey; but I disputed the authority of the station-master to remove my luggage after it had been placed on the omnibus, by the company's own servants, without any demand whatever having been made for overweight; and Mr. Hackett subsequently admitted that he was in error in this particular. The charge for overweight (7211b.) was 1s. 6d., not 6s. 6d. The following day I left Burton, and no charge The following day 1 ich Duron, whatever was made for the same luggage.
P. Joyce.

Union Inn, Birmingham, Oct. 5.

#### Gassip.

Lord and Lady Yarborough and party of friends visited the GREAT GRIMSBY DOCKS last week. They expressed much admiration of the magnitude of the undertaking and the rapidity with which the works had been performed. At the time of the visit it was high water, and the coffer dam and outer banks being entirely completed, so as to exclude the water from the interior of the works, there was seen on the one hand the river Humber, with its swelling waters, and on the other, an immense area reclaimed from the bed of the river for the site of the intended docks. Mr. A. Smith, the engineer, received a donation from the Countess for the benefit of the work-men. The coffer-dam has been closed, and we understand says the Sheffield Independent, the whole of the works stand well, a satisfactory answer to many evil rumours which have been circulated. The entire area is now dry, and will soon be ready for excavating operations. The all-engrossing topic now is the coming of H. R. H. Prince Albert, to lay the foundation stone, and the event appears to be hailed through the length and breadth of this and the adjoining counties with unusual interest.

The London, Brighton and South Coast and South-Western will now work their lines conjointly for the long-disputed Portsmouth traffic. train for London will start from the terminus of the Brighton at Portsmouth, branching off west or south, as the case may be, at Cosham or Hilsea. Mr. R. C. Sutton, with an increased staff, will be sole superintending manager of the Portsmouth traffic. fares by express trains will be raised from 16s. 6d. to 21s.: the ordinary trains, first class, from 14s. to 18s.: 21s.; the ordinary trains, miscais, from 12s. of 2s. second class, from 10s. to 13s. 6d.; and third and parliamentary trains, from 6s. 6d. to 7s. 6d. Various alterations will be made in the starting of the trains, several of which will be discontinued.

We are glad to see that Mr. Macgregor, the chairman of the South-Eastern, is restored to health and again able to attend to business; he was present at Dover to receive the Queen of the Belgians on her arrival on Tuesday, and attended her majesty in a

special train to town.

The directors of the CHESTER AND HOLYHEAD have elected Mr. Gifford as secretary, in the place of Mr.

King, whose resignation we previously noticed.

Mr. Bury, the late locomotive engineer of the
London and North-Western, and who has been appointed locomotive engineer and general storekeeper of the GREAT NORTHERN, has secured the services of Mr. W. Pulford, the late secretary and superintendent of the locomotive department of the Brighton, Croydon and Dover Railways, at London Bridge, as his acting manager and deputy. The company may be congratulated on the judiciousness of the selection. The SHREWSBURY AND CHESTER is to be opened on

the 12th inst.

The workmen at Swindon have been receiving a The workmen at SWINDON have been receiving a deputation from the Colonization Society, explaining the means of employment likely to be afforded by the Australian colonies. Mr. Sturrock, the manager, took a leading part in the proceedings, and adverted to the benefits the society might afford those workmen whom the Great Western could not afford to keep in their service.

The Edinburgh and Northern and North BRITISH are said to have agreed to advance to the ABERDEEN whatever amount may be required to finish that line. The terms to be 6 per cent. for the first five years, and 5 per cent. in perpetuity afterwards. The two companies are to take the plant of the Aberdeen line at a valuation, and work it on terms most satisfactory to the Aberdeen. The sum required to complete the line will, as said, be about 200,000l. and the entire line will be finished in the Spring. The portion in operation, though it has only been opened six months, is understood to have already nearly trebled its passenger traffic. The Caledonian Mercury reports that Mr. Hudson will join the Edinburgh and Northern in this arrangement.

On the 4th inst., on the completion of the Scottish CENTRAL, the express trains commenced running between London and Perth in 14 hours.

Duncan, thus reports the route of her Maiesty from Scotland, on the 29th ult. From Aberdeen to Mon-trose by posting; from Montrose to Forfar, by the Aberdeen; from Forfar to Perth, by the Scottish Midland; from Perth to London direct, per Scottish Central, Caledonian, Lancaster and Carlisle and London and North-Western.

There being an insufficient number of shareholders of the Glasgow, Kilmarnock and Ardrossan Di-RECT, the half-yearly meeting did not take place. At the request of Lord Eglinton, the chairman, the report by the directors was read, but of course no business was transacted. It states that—

The directors have to report that, in consequence of the continued pressure of the money-market, they have, in accordance with the resolutions of the last half-yearly accordance meeting, limited their operations to the relaying and reconstructing for locomotives about 34 miles of the Ardrossan line between the Perceton branch and the line from Kilwinning to Ardrossan, which were formerly adapted for horse haulage only. By these works, which were completed in the beginning of July last, the locomotives are now enabled to work the whole line from Perceton coalfields to the harbour of Ardrossan, a distance of nearly 11 miles. The traffic which has thereby been already developed miles. The traffic which has thereby been already developed promises to exceed the most sanguine anticipations of the directors, and leads them to hope for an equally gratifying result from the formation of the other branches in the Irvine coal-field, and from connecting the works now in operation with the Ayrshire, Kilmarnock and Irvine branches. The directors have to inform the shareholders that the Commissioners of Railways have acceded to the application made for an extension of time for the construction of the remainder of the works authorized by your Acts, being about 28 miles of main line and branches. In consequence of the extension of time thus granted, the execution of the works may be spread over a period of five years from quence of the extension of time thus granted, the execution of the works may be spread over a period of five years from this date. Now that the Burrhard is opened and in operation, it would be of great importance were you to proceed with the construction of the works between Barrhead and Lugton, being the 5 miles of your line nearest Glasgow, Lugton being the 5 miles of your line nearest Glasgow, Lugton being the joint at which the lines to Kilmarnock and Ardrossan diverge. There cannot be a doubt that so soon as the line is opened thus far, the whole passenger and goods traffic between the town of Kilmarnock and the surrounding district, and the city of Glasgow, will, by means of conveyances from Kilmarnock to Lugton, be carried on more cheaply and more expeditionsly by this railway than by the Ayrshire, more especially so as the traffic will be worked by the Caledonian, and thus obtain all the facilities and advantages of their extensive establishment in Glasgow. An adjourned meeting of the GLASGOW, BARRILEAD AND NELLSTON DIRECT was to have been held in the

AND NEILSTON DIRECT was to have been held in the company's office, Glasgow, on the 29th ult.; but a quorum not being present, no business was done, and the meeting adjourned till the 10th inst.

The Chairman of the Paris and Strasburg has published a contradiction to a report circulated on the Bourse, that the Government is in treaty with the company for the purchase of the line.

The Times states that a joint-stock company of 60 masters and 6,000 operatives, is being constituted in Paris, to undertake the construction of the works on the Paris and Lyon.

The Belgian trains have been carrying considerable remittances of specie, en route for Paris. Some of the trains have carried as much as 200,000f. each. It is believed that these remittances have been drawn by the Paris bankers from abroad, in order to make up the 87,000,000f. required for the payment of the dividends which became due on the 22nd ult.

According to the Times, the prospect of the GREAT INDIAN PENINSULA (Bombay to Callian) being at length carried out would seem now no longer doubtlength carried out would seem now no longer doubt-ful. Up to the departure of the mail the total number of shares subscribed for in Bombay, was upwards of 18,000, and the subscription was still going on, and was expected to be largely increased. Col. Jervis, chief-engineer of Bombay, has accepted the office of chairman of the provisional committee, and Mr. Malet, the chief-secretary to the Government, has also become one of its members.

### Reports of Bleetings.

LONDON, BRIGHTON AND SOUTH COAST. Oct. 5 .- Special Meeting, London .- Mr. S. LAING

in the chair.

The Solicitor read the heads of the agreement which had been entered into with the South-Western, for the sale to the latter of a portion of the Portsmouth extension of the Brighton and Chichester line, for the approval of which, and also for the purpose of considering the expediency of reducing the number of directors, in pursuance of the powers given by a recent Act of Parliament, the meeting was held. The line into Portsmouth for four miles was to be a joint line, and there was to be a joint station at Portsmouth. For this accommodation the South-Western was to pay 60,000l, and for the portion of the line transferred, there was to be a joint ENTRAL, the express trains commenced running proprietary and a joint management. The agree-etween London and Perth in 14 hours.

The chairman of the Scottish Central, Viscount to the chairman of the London and North-Western The agree-

and in the event of any future extension of the line, it was to be done at the joint expense of both com-Either company to have the power of laying

down the electric telegraph.

The CHAIRMAN, in proposing the adoption of the agreement, recommended it as best calculated to put an end to those wasteful contests which up to the present time had had such an injurious effect on railway property. A state of things had existed between that company and the South-Western which it was most desirable should be removed. The London and Brighton had constructed a line into Portsmouth, when they found that the South-Western had got an Act for an independent line, which would run side by side with theirs into Portsmouth, in-volving also the necessity of separate stations. To obviate this inconvenience, an amicable arrangement had been come to with the South-Western, in the terms read by the Solicitor. Instead of two separate lines there would be a joint line, and for this privilege the South-Western were to pay 60,000*l*. and also half the expense of the station at Portsmouth. This arrangement he considered would be a saving to both companies. The South-Western would be saved the expense of carrying their line through the fortifications of Portsmouth, and the Brighton, be-sides the 60,000l., would be saved the expense of a separate establishment, the maintenance of four miles of railway, and other expenses. He did not set the advantage down at less than 70,000*l*. to each company. When this arrangement was carried out and pany. When this arrangement was carried out and other reforms and savings were effected, such a steady return of profits would doubtless be obtained as would restore the confidence of the public in railway property. His object was, and should be, to bring the capital account to a close as soon and at as low a figure as possible, and under no circumstances did he expect that 7,250,000l. would be exceeded. He congratulated the shareholders on their traffic returns, which, notwithstanding the depression of the times, had slightly advanced, while nearly all other lines had receded.

One or two Shareholders complained that the meeting had not been sufficiently advertised.

Mr. Cohen thought that the South-Western was

getting the only portion of the Brighton and Chi-chester line which was valuable.

The CHAIRMAN said that the arrangement was perfectly equitable. The South-Western would have a slight advantage as regarded distance, and the Brighton as regarded time.

After one or two further observations, the resolution adopting the agreement was carried unanimously.

The CHAIRMAN then proceeded to introduce the second object for which the meeting had been convened,—namely, the reduction of the number of directors. An Act of Parliament having been obtained for the purpose, the directors had come to the determination of reducing the number of their Board from fifteen to nine, considering the smaller number by much the more likely to carry on the business of the company efficiently. The mode which the directors had adopted for the purpose was that of balloting among themselves. Each member of the Board to give in a list of names, and those who had the least number of suffrages pledging themselves to resign, should the shareholders confirm the arrangement of the Board. The selection had fallen on the following gentlemen: Messrs. Laing, Cash, Crowley (2), Hotham, Lloyd, Schuster, Lawrie and Whishaw.

A resolution reducing the number of directors to nine was then put from the chair.

Mr. Biggs wished to know whether the amount of remuneration was to be the same.

The CHAIRMAN said that no alteration was intended

on that point.

Mr. Brogs did not object to the amount of remuneration, but thought that a better mode of selection might have been adopted. In his opinion the better way would have been to have left the selection to shareholders.

Mr. Wilson was quite of opinion with the last speaker. He thought that the directors should have been selected according to their attendances. Besides, he believed that the arrangements had not been unanimous among the directors themselves. It was also a remarkable circumstance that all the gentlemen excluded were members of the audit committee. He moved that Capt. Kelly and Mr. Whisken (members of the audit committee) be restored to the Board.

The motion, not being seconded, fell to the ground. Capt. Kelly felt much obliged to Mr. Wilson, who was a perfect stranger to him, but nothing "under the canopy of heaven" would induce him to resume his seat at the Board. He had risen merely for the purpose of giving an account of his stewardship. He entered into a long detail of the transactions of the company, and censured many acts of the directory, of which body he had remained a member

merely to minimize the amount of mischief done. He censured principally the purchase on ruinous terms of the Croydon and Brighton and Chichester lines, and the works at Newhaven, comprising a hotel as large as the Wellington Barracks in St. James's

Mr. Love objected to the mode of selection, more especially as there appeared to be a split in the direc-He moved as an amendment to the resolution that the selection of the nine directors for the future Board be left to the great body of the shareholders. Mr. Wilson seconded the motion.

The amendment was put and negatived; after which the original resolution was put and carried unanimously.

LIVERPOOL, MANCHESTER AND NEWCASTLE

JUNCTION.
Oct. 3.—Adjourned Half-yearly Meeting, London. Mr. T. R. WILSON FFRANCE in the chair.

The SECRETARY read the schedule of disbursements for the half-year ending the 30th of June last, from which it appears that 7,282*l*. had been expended, including 3,528*l*. half-yearly interest to shareholders and sums unpaid from preceding half-years; that 2,850l. had been advanced to solicitors on account of general business—application for extension of time, opposition to Northern Counties Union bill, opposition to Dissolution bill to the 3rd of June, parliamentary agents' bills, and on account of promoting the Dissolution bill since the 3rd of June. The details of some of the items in the accounts were also read by request of Mr. PARSONS.

Mr. Fisher had not given his assent to the Dissolution bill, and he would protest against allowing

any of the expenses for its promotion.

The CHAIRMAN stated that the proxy of Mr. Fisher was presented at the meeting in Manchester in favour of the Dissolution bill.

Mr. FISHER said he had not given it for that pur-

Mr. PARSONS expressed himself dissatisfied with the amount of the expenditure; 9711. for travelling and tavern expenses he thought was excessive. He was surprised at such an enormous expenditure—4,000l. -for the Dissolution bill. This was the period when the directors ought to have decided among themselves who was to go out of the direction by rotation.

The CHAIRMAN said it was not the time, and they would act according to law. They were not there to

discuss Mr. Leeman's motion.

It was then agreed to adjourn the half-yearly meeting until after the special meeting, in order to consider the proposition for returning to each shareholder

a proportionate amount per share of paid-up capital until required for the railway.

Mr. Leeman estimated the available assets at 60,000., and he was informed that the liabilities amounted to about 8,600. He stated that, about three years ago, they subscribed 175,000% for the prosecution of the scheme, of which sum they had now only 71,000l. left; a considerable portion having been invested in consols, it would be reduced to 63,000l. by the present market price. The company 63,000l. by the present market price. The company had spent 6,000l. or 7,000l. in a fruitless endeavour to obtain a bill for dissolution, and they were after all in a worse condition than before. Considering that directors all over the country were contracting their outlay, it was not the time for them to commence operations, but the period might come when the undertaking could be usefully carried out. The time for the purchase of the land had been extended to three years from the present time, and for the completion of works to five years. It being injudicious at present to proceed, he thought the proprietors might become their own bankers, and thus hold a rateable proportion of their money in hand. He held proxies of 24,000 shares in support of the motion he had to propose, which was in accordance with the views of a large and respectable portion of the proprictors. Leaving 10,000l. to meet the liabilities of the company, and returning 13s. 4d. per share to the shareholders, there would remain in the hands of the directors 7,000l. to meet contingencies. He then proposed that 13s. 4d. per share be returned to the shareholders until it should be required; that no engagements be entered into, nor any call be made, without the consent of the proprietors; the object being to defer the construction of the works until a more favourable period.

Mr. COURTNEY seconded the motion.

Mr. BURCHELL did not intend to oppose the motion, but he would not be one to carry it out. It would not relieve the shareholders from any risks or calls. He would not concur in the responsibility of the directors to carry it out, but he would not object to any gentleman taking his place at the Board. Mr. Leeman would take it and undertake his (Mr. Burchell's) liabilities in respect to his shares, he would let that gentleman have them at 10s, each,

Mr. LEEMAN would accept a transfer of the shares at that price, and on receiving the 14s. per share would undertake to pay the 10s. per share, and the responsibilities attaching to holding the shares.

After some observations, a resolution was passed

authorizing the re-payment of 14s. per share on the 1st of November, including the interest now due on paid-up capital to the shareholders.

The adjourned half-yearly meeting was then resumed. It was stated that the directors would not pledge themselves to carry out the resolution for the return of the 14s. unless they could do so legally; if not, they would retire, and appoint other directors in their places.

The meeting was then adjourned to the 24th inst., to enable the directors to consider what course they would pursue; convening for that day a special meeting, to be held immediately afterwards, for re-ducing the number of the directors to six, with full power to elect others in the places of those who

MANCHESTER AND SOUTHPORT.

Oct. 4 .- Half-yearly Meeting, Manchester .- Mr. G. WILSON in the chair.

The report stated that the directors had deemed it advisable in the first instance to proceed with that section of the line which will form the connecting link through Wigan between the east and west portion of the Liverpool and Bury line, and the opening of which for traffic prior to the 31st of December next will, under the terms of the arrangement with the Lancashire and Yorkshire, co-entitle the shareholders to dividends from that date on the capital expended upon the works.

The following statement of accounts, duly audited, for the half-year ending on the 30th of June last, was

submitted :-

Amount contributed by the Manchester and Leeds, deposit and call on their proportion of 28,250 shares RECEIPTS.

£189,912 5 0 EXPENDITURE. £64.234 0 the con-.. 26,430 19 14,532 16 Works Engineering Miscellaneous Balance at credit of the company ... 193 10 78,902 4

£189,912 5 0

The engineer's report states that the portion at Wigan, for the construction of which a contract was entered into on the 6th of August 1847, will be completed next month, and will be opened for the conveyance of passengers simultaneously with the Liverpool and Bury. The portion referred to is three miles in length, and includes the most expensive part of the undertaking, and will form part of the railway com-munication between Manchester and the principal towns in Yorkshire and Liverpool.

In answer to a question,
The CHAIRMAN said he did not know how far the directors intended to avail themselves of the extended time (two years) given them to make the remainder

of the line; it was a matter not yet determined.

The report and accounts were adopted, the retiring directors re-elected, and Messrs. Frith and Agnew were appointed auditors.

GLASGOW, AIRDRIE AND MONKLANDS JUNCTION Sept. 28.—Half-yearly Meeting, Glasgow.—Mr. J. Streo in the chair.

The report stated the regret of the directors at their unsuccessful efforts during the past session to obtain power to make a line across the Clyde, so as to form a junction with the lines on the north and south sides of that river. They were of opinion that the authorities of Glasgow College having failed to implement their engagement, this company was released from all responsibility under the college agreement and relative Act of Parliament. In consequence of the non-payment of the second call, except to a limited extent, the directors were compelled to negotiate for a loan of 25,000%. loan had been obtained on the security of the company's property, and would enable the directors in a great measure to discharge their pressing obligations. The directors trusted that the shareholders would approve of what they had done, and sanction the granting of the deeds of security in favour of the lenders.

The CHAIRMAN then submitted a series of resolutions approving of the report, &c.
Mr. H. Dunlop seconded the resolutions, which

were unanimously agreed to.

Mr. J. M. HILL moved that, from the state of the money-market, the directors be recommended to rescind the call of 21. 10s. per share, or at all events to limit it to 5s. each share.

Mr. REID seconded the resolution, which was carried.

GENERAL TERMINUS AND GLASGOW HARBOUR. Sept. 29 .- Half-yearly Meeting, Glasgow .- Mr. A. S. DALGLEISH in the chair.

The statutory number of shareholders not being

Present, the meeting was adjourned.

The CHAIRMAN stated that another meeting would

The CHAIRMAN stated that another meeting would be advertised in a few weeks, by which time the line would be completed and in operation.

The engineer's report, intended to have been submitted to the proprietors, gave a satisfactory account of the works, which would be found to afford, in proportion to their extent, such facilities for the shipment of mineral and other traffic as could not be surpassed at any port in the kingdom.

#### RAST OF FIFE.

Sept. 27 .- Half-yearly Meeting, Edinburgh .- Mr. HALKETT in the chair.

Mr. Hill, the secretary, read the report, which stated the resolution of the directors not to make any further calls nor to commence the construction of the line at all events for the next six months. At the same time, they earnestly pressed upon the shareholders the propriety of paying up the arrears on calls. The directors would assuredly curtail the expenses of management as much as possible. The balance-sheet showed a balance in the banks of 10,357l. 5s. 6d., while the arrears of calls amounted to 17,000l.

The CHAIRMAN moved the adoption of the report,

which was agreed to.

Mr. Thomson asked why no steps had been taken by the directors during the last six months to enforce payment of the arrears. He could not understand why the sum of 17,000l. in arrears had not been recovered.

The CHAIRMAN said that the shareholders in arrear were all paying interest at the rate of 5 per cent. The directors did not wish to press hard upon the shareholders until they were about to commence the

Mr. Thomson thought that no part of the shareholders should be favoured at the expense of another; and it would only be justice to those shareholders who had paid up their calls that some steps should be taken to recover the arrears. The total receipts for the last half-year amounted 465*l.*, while the expense of management was 323l. 6s.

Mr. Brown said that the charge of 150l. for the directors did not apply to the last half-year, but to the one preceding. In regard to the book-keeper's salary, the directors had reduced it to the very lowest figure; and Mr. Thomson might rest assured that, as the expenses as much as possible.

Mr. Thomson wished to know if the directors in-

tended to circulate the statement of accounts among the shareholders.

Mr. Brown said that would involve an expense which might very well be saved. They had never printed the statement of accounts before, and he did not think there was any necessity for it now.

Mr. Thomson asked if the directors intended to take any steps for the recovery of the arrears.

The CHAIRMAN thought it would be a rather severe proceeding, in present circumstances, to do so. directors were exceedingly unwilling to do anything harsh.
Mr. Thomson said he understood that one party

owed the large sum of 10,400l. It was really unfair that that company should be allowed to retain so much unpaid stock. He wished to know if the parties had refused to pay up their arrears.

Mr. Brown said the party referred to had not ex-

actly refused, but they had delayed paying their arrears. That the money was still due, was merely a matter of courtesy on the part of the directors.

Mr. Thomson then begged leave to move-"That the directors be instructed forthwith to adopt such legal measures as they may think fit for enforcing payment of all arrears of calls, and failing payment, to take the necessary steps for having the shares upon which the calls are not paid forfeited.

Mr. RAEBURN, a director, wished Mr. Thomson to withdraw his motion, which he would assure him would have no good effect.

Mr. Thomson wished to know if the directors had

any objection to take measures to dissolve.

Mr. RAEBURN said that such a measure had never

been contemplated.

Mr. Brown had no objection to the first part of the motion, although he should liked to have seen it in the form of a recommendation; but he most

decidedly disapproved of the latter part, which, in

effect, would dissolve the company.

Mr. Thomson remarked that that was his object. The motion was then put to the meeting, but failing of finding a seconder, it fell to the ground.

Mr. Hurchison, of Glasgow, moved—"That no contracts be entered into, or calls made on shares, without the sanction of a special meeting of the company called for the purpose.

Mr. Orr, of Glasgow, seconded the motion.
Mr. Brown, seconded by Mr. RAEBURN, moved the

previous question, which, on a vote, was carried. Mr. HUTCHISON renewed his motion for next

meeting.

Mr. Brown then said that he thought they could not discharge their duty to the absent registered proprietors in the company without coming to some definite resolution in regard to the calls past due, and the more especially, seeing that the parties in arrear had, at this and former meetings, done everything they could possibly do to retard the progress of this enterprize, for the purpose of relieving themselves from the discharge of certain obligations they had come under. He therefore moved—"That it be a recommendation to the directors to use such legal measures as may be necessary for enforcing payment of the arrears made and due on the 25th of August

1847, with interest thereon, according to the statute."
Mr. RAEBURN seconded the motion, which was agreed to—Messrs. HUTCHISON and ORR dissenting.

Sept. 28.—Half-yearly Meeting, Belfast.—Mr. J.

GODDARD in the chair.

From the directors' report it appeared that the nett balance of the profits for the half-year ending the 31st of August last was 7,7612. 18s. 9d. Out of this sum the directors recommended that a dividend of 13s. per share should be declared, which would leave a balance of 1,012l. 19s. 9d. to be added to the reserve fund. The amount to the credit of the reserve fund in the balance-sheet now presented is considerably smaller than on the last occasion. This is owing to the re-laying of the second line to Lisburn, when it was deemed advisable to employ a better description of timber than what had been formerly used, which was found considerably decayed, and also to substitute a heavier rail. On a review of the business of the last half-year it is a source of deep regret to the directors to find that the gross receipts do not equal those of the corresponding period of last year. They had anticipated that the opening of the extended line to Armagh would, to a considerable extent, have counterbalanced the falling off last winter; at the same time they conceive that the unusual depression which has existed during the last summer, and which has produced similar results summer, and which has produced similar results upon almost every railway in the empire, fully accounts for the deficiency upon this line. Eleven miles (or very nearly one-half) have been added to the length of the line, and yet, excluding the item for rents and taxes—an item beyond the control of the directors—it will be found that the increase on the cost of working amounts only to 563l. 2s. 9d. Over this portion of their business the directors have always exercised a vigilant control, and in their exertions to keep the working expenses as low as possible they have received able assistance from the officers more immediately in charge of the several departments; but with respect to the amount of traffic on the line, the habits of the people and the requirements of the country must determine that, the directors having nothing in their power, except to take care that sufficient accommodation is afforded to the public at reasonable rates, so as to render the undertaking profitable to their constituents, by giving every facility for traffic consistent with the company's interest. The expenditure on capital account is drawing to a conclusion; the account cannot, however, be closed for some time longer, as a few matters of not very considerable extent remain to be completed. Seven directors are now to be elected in place of Messrs. J. Goddard, W. J. C. Allen, R. Grimshaw, A. Mulholland, W. Thompson, M.D., J. Richardson and W. Gregg, and one auditor, in the room of Mr. J. Bristow, all of whom retire by

(For Engineer's Report see Official Papers.)

On the CHAIRMAN moving the adoption of the report,

Mr. KIRK observed that it would be very desirable they should know what amount of calls would be likely to be made upon them before the capital account was closed.

The CHAIRMAN: About 21. or 21. 10s. a share would close the capital account.

Mr. Kirk: It was now eleven years since they began this line, and the closing of the capital account seemed as far off as ever.

The CHAIRMAN explained that they were obliged to obtain a second Act of Parliament, which, with other matters connected therewith, rendered it necessary that the account should remain as it was.

In reply to Mr. J. SMYTH,

Mr. Allen stated that 40,000*l*, would clear off all the debts of the company,
Mr. Smyth thought the salaries of the officers too high. He moved that the directors were not to travel free on the line, save when on the business of the company.

The CHAIRMAN and Mr. ALLEN defended the

amount of salaries. Mr. Godwin had voluntarily relinquished 300l. a-year of his salary.

Mr. Smyth's resolution was carried.

A dividend of 13s. per share was declared, payable on the 4th inst.

Mr. SMYTH complained of the non-payment of calla.

The CHAIRMAN said parties in arrear were paying 6 per cent. interest. The shareholders should instruct the directors as to the recovery of the arrears.

Dr. Bryson then submitted a motion for the reduction of the fares, to meet the wishes of the public.

Mr. Simms moved as an amendment—"That the directors should be instructed to consider the propriety of dropping the third-class carriages and giving slow trains, covered, in connexion with the goods trains, at stated hours in the day."

After some discussion the amendment was carried. After some conversation respecting the salaries of officers, the report was adopted.

The motion for the payment of the directors and

auditor was then passed.

The Rev. Mr. Fitzgerald proposed a motion for the discontinuance of Sabbath trains.

Mr. BAIN seconded the motion.

Mr. Simms could not allow that motion to be put to the meeting without stating distinctly that he was prepared to support the present plan on moral grounds. He thought it was not right that motions of that kind should come before them from time to time, and he considered that the company, in running trains on the Sabbath, were doing no immoral act for the purpose of making money.

The motion was lost.

Mr. J. Bristow was elected auditor for the ensuing

The scruting of the ballot for seven directors, in room of the gentlemen retiring, was then proceeded with. Messrs. W. J. C. Allen, J. Goddard, A. Mulholland, Dr. Thompson, (Lisburn), W. Gregg, J. M'Caw and R. Grimshaw were declared elected.

## MIDLAND GREAT WESTERN (I.).

Sept. 29 .- Half-yearly Meeting, Dublin .- Mr. J. Ennis in the chair.

The Secretary read the report, which stated that the directors, in submitting the report of the past half-year, feel pleasure in being able to state that the traffic has been carried on with great regularity and safety. The accounts exhibit a steady increase on the receipts, the amount for railway and canal being 24,797l. 0s. 4d., an average of 950l. per week, exclusive of the large amount of mail service performed—the remuneration for which is now in course of arrangement with the Post-office authorities. Notwithstanding the trying monetary difficulties during the past half-year, by the united exertions of the board of directors and the cordial support of a large portion of the proprietors, the continuation of the line to Mullingar has been steadily carried forward, and will be opened for public traffic on Monday next, the 2nd of October. Your Board feel great satisfac-tion at this event, which completes the first section of the main trunk line, and carries it to a point which will afford a much better opportunity for developing the traffic than the former temporary termini, where the distances were so limited, and to places compara-tively unimportant. The bill for the deviation of the line from Mullingar to Athlone has received the royal assent—thus granting to this company the whole of the undertaking as originally projected. The Board regret that they are not now in a position to proceed at once with the construction of this portion of your line, which is so important as the second section of the main trunk to the west of Ireland, and also as passing through a part of the kingdom where such vast benefits would be derived from the construction of the railway. Deeply impressed with the necessity of economy in all railway proceedings, your directors have carefully reviewed the expenditure of the company in all its branches. As an example, they have relinquished one half the amount voted by the proprietors for the attendance of the Board in the past year, and made arrangements for effecting all

the reductions at present practicable, consistent with the efficient management of the company's business. The engineering expenses will be considerably diminished, the solicitor's and legal expenses will be very much reduced, and no further parliamentary proceedings are contemplated. Interest warrants, made up to the 25th inst., will be ready for delivery on the 28th of October, when they will be forwarded to all parties not then in arrear for calls; and it must be satisfactory to the proprietors to be informed that the profits of the laft-year will cover those payments of interest. The directors have used every exertion which appeared to them judicious and likely to be effective for obtaining payment of the arrears on calls, and will give the subject their continued and anxious attention, as well as use every legitimate means in their power to defer as long as possible the necessity of further calls. The following five directors go out of office by rotation, and are eligible for re-election:—Messrs. Ald. O'Brien, M.P., J. Perry, T. Richardson, J. Stirling and J. Watson. The statement of accounts showed the total expenditure at 836,799. 2s. 11d.; balance due to bankers and others, 101,018. 12s. 11d.

(For engineer's report see Official Papers.)

The CHAIRMAN expressed his satisfaction at the opening of the line to Mullingar. On the 2nd of October next those whose avocations or curiosity might lead them to visit the great Irish fair of Ballinasloe would be enabled, through the accommo-dation which the company had furnished, to proceed very far on their journey thither. Thus what was once a question of time and labour might now be accomplished with ease and safety between breakfast and dinner. And thus was formed the first link in that great chain of communication which was destined, he trusted, at no distant day, to connect the castern counties of Ireland with the more western ones, and the Irish Sea with the Atlantic Ocean. He should not dwell on all the advantages which the present position of that work presented. Undoubt-edly they were many, but still it was their duty to view them through the medium of caution and expe rience; and it was equally their duty to test their operations, so far as they had proceeded, before they suffered themselves to be tempted by any prospect, suffered themselves to be tempted by any prospect, no matter how flattering it might be, to proceed further. He thought that the time was not far distant when it would be their interest as well as their duty to proceed further; but amidst the present gloom which overhung the country, and considering the pressure that must necessarily attend the making of calls to enable them to carry on their operations, he was pretty sure that any advantage that could be derived from the extension of their line would hardly be compensated by the accommodation which could thus be afforded to the districts alluded to. A report had been circulated that this company had agreed to accept a loan of 500,000l. from Government at 5 per cent.; but there was no foundation for the rumour. Their line had hitherto proceeded through a peaceful, industrious and well-tenantried country; and it was to those facts that he for one looked for a large amount of remu-neration for their operations. If anything could reconcile him to the unpleasant feeling which oppressed him at that moment—when they were about to give up their labours to the district of Mullingar —it was to be found in the expressions which were used by the head of the Irish Government on a recent occasion, when he declared himself an advocate for the resources of the State being applied in aid of Irish enterprize. That was an expression of sentiment that he thought called for the gratitude of railway industry in Ireland. But he thought that they would not stand in need, even at that moment, of the aid of the Treasury, were it not for the serious amount of defalcations which had existed in their shares. It would be mainly dependent on the success which should attend the directors in calling in those arrears how far they should be obliged to press further on the shareholders.

Mr. Workman, of Belfast, said it was the general feeling that the unfortunate depression now so much complained of had arisen from calls continuing to be made to the extent of three or four a month. The only mode of procedure by which they could expect to relieve shareholders was this—for railway directors to rest on all occasions where they had the power of resting. He had been connected with other railways, in aid of which loans had been obtained from Government; and it was his opinion that one of the most unfortunate things that could befall the Midland Great Western Company would be to get Government money. It would be better to depend on themselves, and not expect to get money from Government. To get a loan from Government at 5 per cent, would be a very bud thing.

The CHAIRMAN thought he had stated that nothing would induce the directors to take money at 5 per

Mr. Murray considered it would be right of the directors to tell that meeting whether it was their intention to acquaint the shareholders generally before accepting of any public money, and make known to them on what terms it was proposed to accept it. He then proceeded to comment on two extracts which he wished to read, as they enforced economy on the directors; but after some confusion he was called to order, and the amendment of Mr. Workman, as to the propriety of not pressing for calls, was withdrawn.

The report was adopted, and the retiring directors re-elected.

#### IRISH SOUTH-EASTERN.

Sept. 28.—Half-yearly Meeting, Dublin.—Mr. J. E. Redmond, deputy chairman, in the chair.
Mr. Wilson, the secretary, read the report. The

directors, in again meeting their shareholders, are happy to be able to inform them that they have so far succeeded in realizing the expectations held out at the last half-yearly meeting, that the line from Carlow to Baganalstown (a distance of 103 miles) has been completed, and was opened for public traffic on the 24th of July last; and this they have been enabled to effect without calling upon the proprietary for a larger amount than 5l. per share. Notwithstanding that the directors are deeply sensible of the importance of completing the line to Kilkenny without delay, yet, considering the severe pressure of the times upon all classes, they felt it to be their duty to lean as lightly as possible upon the resources of their shareholders; they have therefore limited the present call to 1l. per share, and have determined on proceeding with the works towards Kilkenny with as much dispatch as the means at their disposal will admit. The contractor will have finished the works on that part of the line between Baganalstown and the bounds of the county of Kilkenny, including the Barrow viaduct, within two months, and there will then remain but 9 miles to be completed, in order to open the whole of the line to Kilkenny. Agreements for the remainder of the land are concluded, the sleepers are in course of delivery, and there is nothing to prevent the opening of the line to Kilkenny within six months from the present time, if the directors shall be enabled to press forward the works with vigour. And they feel bound to add, that until the whole line is opened, they cannot expect the traffic to be remunerative, or the real value of the under-taking to be at all fairly developed. Arrangements have been entered into with the Great Southern and Western for supplying the locomotive power and working the line, which will obviate the necessity of expending any part of the capital of the company, for the present, in the outlay necessary for those pur-poses. The half-yearly accounts are annexed. In consequence of the report of a committee of the House of Commons, on their first application to Parliament, the Wexford and Carlow were placed under the necessity of subscribing towards the improvement of Wexford Harbour; your Board, however, at the suggestion of a large body of their most influential proprietors, have deemed it advisable to surrender the shares in that undertaking in preference to de-voting the funds of this company to the payment of future calls, and in order to avoid the responsibility to which the company would otherwise be liable. The Board, feeling the necessity of conducting the affairs of the company with strict economy, have resolved so to modify the expenses of the office and managing departments as to effect a considerable annual saving to the company. It is recommended that interest at the rate of 4 per cent. per annum for the half-year ended September 1, be paid on all shares not in arrear, and the interest warrants issued ac-The statement of accounts showed a balance in favour of the company of 5,099l. 17s. 11d.

The CHAIRMAN proposed the adoption of the report, and expressed his regret at the absence of Sir J. Macneill on particular business.

In reply to Mr. G. Roe,-

The Secretary stated that the call of 1l., which the report mentioned as intended to be made, was not a new call, but part of a call of 6l. formerly made, of which 5l. had been paid up.

A Proprietor asked what were the weekly receipts. The CHAIRMAN said their receipts up to the present time were not a fair criterion, as they had only carried goods within the last fortnight; but he believed that the entire receipts, from the opening of the line on the 24th of July, up to the present time, would be about equal to the expenses of working. The mail coaches still continued to run between Carlow and Bagaualstown. The works of the line

were going on up to the commencement of the boundary of the county of Kilkenny. The line would be completed to Kilkenny but for want of money. The line would doubtless be remunerative when opened as far as Kilkenny. Upon about 5,600 of the shares the calls had been answered; and all the shares upon which not more than 40s. had been paid up had been either forfeited or surrendered, with the consent of the holders of those who were unable to pay. There were a number of shares on which, upon an average, 60s. had been paid up, and those had not been disposed of as yet. Under 1,500 shares were comprised in that class; and it would be for the Board to determine whether they should be forfeited or not.

A Proprietor observed that the course followed in London of effecting a compromise with those shareholders who were unable or unwilling to pay up on their calls was one which he would recommend.

Mr. Roe had never seen a more respectable list of proprietors than that presented by the registry. He (Mr. Roe) wished to be informed whether the intention expressed in the report of having the line open to Kilkenny in six months would be carried out. He would urge them to do what they could to effect that object. What precise sum would enable them to do it?

The CHAIRMAN stated that from a very careful estimate it had been found that the total cost of making the entire line would be 180,000!. Deducting from that amount the sum already expended on works, there would remain about 80,000!. Yet to be collected, which would fully complete the line and clear off the expenses of construction; and if they were to finish the line, and at the same time remain somewhat indebted to their contractors, about 50,000!. would do. Their borrowing powers were not advantageous. They had got a very extensive proprietary, but it was not available. Considerably under half their entire capital would complete the line. If it was the wish of the proprietors to push on the works during the autumn and spring, the line could be completed within the six months; but it would be necessary for that purpose to put the directors in funds to the extent of 40,000!. or 50,000!. He thought that the cost per mile of making the railway to Kilkenny would be very little over 8,000!.

Mr. RoE inquired if it was intended to provide the locomotive engines.

The CHARMAN replied in the negative. They intended, if possible, to make an equitable agreement with the Great Southern and Western, that the latter should supply the engines.

Mr. Ros said he had no doubt that if the railway were finished at a cost of not more than 8,000% or 9,000% a mile, it would be a very successful undertaking.

Mr. Ros seconded the adoption of the report, which was carried.

South Wales.—Sept. 26.—Meeting of Llanelly Shareholders.—Dr. Bird in the chair.—Mr. S. Padley, junr., read the report of the committee appointed at a meeting of the 18th, to inquire into the expected traffic between Swansea and Llanelly. It stated that the expected revenue from the mineral traffic was— Cameron's Coal Company, 5,650l.; Spitty Copper Works, (Schneider & Co.), 600l.; coal-works of Mr. S. Padley, 650l.; Weig Fach Coal Company, 500l.; making a total of 7,400l. per annum. The committee had sent a memorial to the directors of the South Wales, drawing their attention to the subject, and requesting they would complete the line, at least as far as the river Loughor. The contractors have furfar as the river Loughor. The contractors have furnished a rough estimate of the cost, which is—tunnel, three-fourths completed, 25,000L; railway, 50,000L. The directors suggested, that if the public really wished to have the road completed without delay, they should purchase shares quoted at 91, and pay up the calls; this would improve the market value and induce the other shareholders to pay. Want of money was the only cause of the present suspension of the works west of Swansca, and the concentration of the money force between Swansea and Newport. upon which 28t. have been paid are entitled to a halfyearly payment of interest at 4 per cent. per annum, which has hitherto been regularly paid. The commercial statistics in the report were confirmed by Mr. J. M. Buckland; and it was resolved that the report be adopted, and that a copy be forwarded to the chairman of the company.

LONDON AND NORTH-WESTERN
BAILWAY.

LEEDS, DEWSBURY AND MANCHESTER SECTION.
The public is respectfully informed, that on and after the 5th day of October inst, the Train leaving Leeds at 700 am, and the one leaving Huddersdeld at 1 p.m., are discontinued. Trains continue to run to meet all the Trains on the Lancashire and Yorkshire Railway (except the Train leaving Manchester at 6 p.m.), and Passengers going from Leeds to Liverpood, Manchester, Rochdale, Halifax, or other Stations on the Lancashire and Yorkshire Railway WILL BE BUOKED TO HEATON LODGE JUNCTION, where they can re-book; and Passengers coming from Liverpool, Manchester, Rochdale, Halifax, &c., SHOULD BOOK TO HEATON LODGE JUNCTION, where the London and North-Western Trains await the arrival of the Lancashire and Yorkshire Trains.

N.B. The Up Trains from Leeds are arranged to arrive at Heaton.

N.B. The Up Trains from Leeds are arranged to arrive at Heaton Lodge Junction five minutes before the Laucashire and Yorkshire Company's Trains, in order that there may be sufficient Time for Passengers to re-book.

The WORTLEY STATION will be OPENED for purposes of TRAFFIC on the said 8th day of October inst.

By order
MARK HUISH, General Manager.

*** Time Bills may be obtained at the Company's Station, Hunt's Bank, Manchester, and Lime-street, Liverpool, or at the Stations on this Branch.

# SHROPSHIRE UNION RAILWAYS AND CANAL COMPANY.

COMPANY.

The Head Direction HEREBY GIVES NOTICE to all the Shareholders, that the proposal for alterations in the Statutes of the Company, made to the Meeting of the General Direction in its Sitting on the 8th of October, conformably to Article 27, No. 10, of the Statutes, and unanimously adopted by that body, will be deposited, agreeably to Article 48 of the Statutes, during three weeks, for the inspection of the Shareholders, both at the Office of the Secretary of the Head Direction in Amsterdam, as well as at each of the Directions at Arnheim, Rotterdam and London; which proposal will be submitted for the approbation in the General Meeting of Shareholders on the 7th of November next.

The Head Direction of the Dutch-Rhenish Railway Company, (Signed)

By order of the same, (Signed)

J. L. ENTHOVEN, President.

Amsterdam, Oct. 7, 1848.

# A MIENS AND BOULOGNE RAILWAY

The FOURTH GENERAL MEETING of this Company, called or by Art. 33 of the Statutes, will take place on Saturday, the 38th f October next, at 2 o'clock precisely, Rue de la Chaussée d'Antin,

of October next, as a colora presser, see we sa Chassac a Assac, 49 bis.

Shareholders having at least Twenty Shares, and who have held them for a fortnight previously, should attend at the Offices of the Company, between the 28th of September and the 18th of October, from 10 till 3, in order to obtain their Cards of Admission, upon the deposit of their Shares.

Lorns of Admission, upon the deposit of the Company, at the Colora Boulogne; and with Mr. Whitehead, Agent of the Company, at Colo. Boulogne; and with Mr. Whitehead, Agent of the Company, at Gold and Colora Boulogne; and with Mr. Whitehead, Agent of the Company, at Boulogne or London.

This Meeting will have to deliberate on the proposed modification of the Art. 24 and 25 of the Statutes, as to the number of Members that should compose the Board of Directors.

By order of the Board,

AUG. SEGUIER, Secretary.

Paris, Sept. 23, 1848.

SHROPSHIRE UNION RAILWAYS AND CANAL COMPANY.

SECOND CALL of £1 per SHARE, making £5 PAID.

The Directors having this day passed a Resolution making at CALL of it, each on the Shares of the Company, the Proprietors of such Shares are hereby required to Pay the said Call on or before the 12th of January next, to one of the undermentioned Bankers:

of such shares are merce, before the 1st of January next, to one of the 1st of January next, to one of the 1st of January next, to one of the 1st of January next, to one of the 1st of January next, and the 1st of January will list next of 5. Chester.

Hocke, Eyton & Co., Shrewsbury.
Becketts & Co., Leeds.

The Manchester and Salford Bank, Manchester.

The Bank of Liverpool, Liverpool.

Parties paying on or before the 1st of January will be allowed interest by way of discount, at the rate of 5 per cent, per annum upon all sums remaining unpaid after the 12th of January next, and no interest will accrue upon any share in respect of which the Call shall be in arrear.

By order of the Board.

WILLIAM COWAN, Secretary.

9, Great George-street, Westminster, Oct. 13, 1848.

N.B. The above call has been made to meet the payment of mortgages at 5 per cent.

THE GREAT NORTHERN RAILWAY. THE GREAT NORTHERN RAILWAY.

SATURDAY, OCTOBER 14.

HEADS OF AN INQUIRY INTO THE PROFITS OF THE WIDE-GAUGE SYSTEM.—No. V.

It having appeared, from the considerations adduced in former papers, that the system of working on the broad gauge must necessarily be in general more expensive than on the national lines, while the construction and stocking of railways on the wider dimension are also more costly; -that such is the result of the comparison between the two classes of lines, as far as the exceptional system has been already established; and that the circumstances now specially unfavourable to profits from that system will certainly be found still more strongly decisive against it, as a lucrative means to the employment of capital, in its application to minor communications, and in carrying out the various conditions of a connected series of lines. so as to afford the same conveniences as may be afforded on the less expensive national system; -this being, as we apprehend, the visible result of our practical inquiry into the matter, it remains to be further ascertained whether the broad gauge offers any real compensation for this disadvantage, in a manner tending to repay those who may embark their funds in it for the greater cost of its establishment and working.

Here the question is not, which system may be preferred by the travelling public? but whether the wide gauge can be shown to possess the means of commanding, by any special features of its service entitled to preference, an excess of custom over and above what a railway of the standard class, under the same local circumstances, would have secured? This must be proved, in order to establish any case in favour of making the more expensive description; and if it appear that no such proof can be maintained, it will then follow, as an obvious conclusion, that whatever is the excess of expense in the one over the other, is exactly so much dead loss to those concerned in the more

expensive system.

We will, for the moment, take for granted all that has been urged by the advocates of Mr. Brunel's experiment, as constituting the peculiar attractiveness of this class of railways. We will suppose them to work more smoothly, to run much faster, to admit of more roomy and luxurious carriages-all this we will suppose proved, for the sake of the argument-only leaving out, what would be too visibly repugnant to matter of fact to be even hypothetically used,-the article, namely, of superior cheapness to the passenger; which, indeed, no advocate of the system will be confident enough to make a point of. Allowing the charges to be equal, (which is a very liberal concession,) and the other merits such as we have enumerated, it may be asked, —Is there one of these that amounts to so much advantage as would secure to a wide-gauge railway between two given points a greater business than would have been obtained by one on the narrow gauge between the same termini? This is the practical question; and it can have but one answer from those who have studied the railway system. When we remember what the difference of so great a superiority of speed even as 10 miles per hour amounts to, in a journey of 200 miles, where the comparison is between a running rate of 35 and 45 miles per hour-how merely insignificant it is in practical effect on half that distance-how nearly insensible when we come to still shorter trips,it will be seen that no rational induction from the causes that affect railway travelling can lead any one to believe that the difference will have created any perceptible excess of business; or, in other words, that the broad-gauge line will

a single passenger that would not have been equally attracted by one of the ordinary kind at the usually slower rate. The same applies to any difference, supposing there were any, in the comfort of the coaches. Those in use on the standard lines are known to be at least sufficient in their comfort to make it certain that no one, however fastidious, would be deterred from a journey by the want in them of anything which a wide-gauge carriage can offer: and unless such were the case, not a fraction of weight can be laid upon this point, were the superiority of the latter as great as any partisan may choose to describe it. It would amount to the ground of a mere preference of taste, which may turn an opinion or affect the tone of praise or dispraise, but can have no practical influence in determining the amount of business. The passenger, even supposing him to like the widegauge carriages of all classes better, would none the less have travelled as far and as often had one of the usual dimensions been there instead of the other. And exactly the same may be said of the more or less of smoothness in the motion over the rails. Without caring to dispute the advantage claimed by the wide gauge, we may sufficiently dispose of this point by remarking that on the standard lines the motion is easy enough to effect all that comfort in this respect can do to invite passenger traffic ;-and anything beyond this-admitting that it exists can have no influence in the way which alone must be considered when we are dealing with questions of profit and loss. If railway proprietors were sufficiently repaid by the praises of the public, it might be a point of importance to ascertain what will most surely obtain this praise, and a compensation to have this credit—always presuming it deserved. But it is not on this score, we apprehend, that the broad-gauge system has ever been professedly advocated or recommended to its proprietors, at all events; and just now, we fancy, no shareholder will be apt to think that it would be any set off for a scanty dividend, however richly the public praise might be administered.

Thus far we have proceeded on the showing of what is urged by partisans of the system:—and we have seen that, were all they can urge true to the letter, it still would not amount to any recompense for the extra cost it entails; that, did it exist, it would be an utterly barren advantage, which might, indeed, redound to the praise of the engineer who started a more luxurious method of travelling, but would not bring one additional penny into the purses of those by whose funds it was established. We have now to assert that on a review of the whole accommodation given by the system, as shown in its best existing specimens, compared with what is generally afforded on the standard lines of the same class, it will be found that the advantage which we have hitherto taken for granted, has not in practice any effectual exist-ence whatever. The common run of travelling is neither quicker, more pleasant, nor in any way better than on narrow-gauge railways. In the matter of express trains, even, it is now known that the speed on the national lines is quite as high in some instances, and is generally so nearly equal to that of the quickest on widegauge railways, over similar gradients, that the difference here amounts to a mere nothing. As to the comfort of the eight compared with that of six inside first-class coaches, many passengers we know prefer the latter, and with good reason: while the plan of dividing the interior of the former by a door that makes two compartments of four seats in the same section of the carriage, is attended with anything but superior convenience in several ways. When we rior convenience in several ways.

wide-gauge railways, the advantage in every point of comfort is altogether in favour of those used on the older class of lines. Indeed, on the Great Western some pains appear to have been taken to render them as inconvenient as possible; and even putting this aside, as not necessarily belonging to the gauge, it may be seen that the greater the number of persons contained in a single division on the secondclass plan, the greater must be the amount of whatever discomfort attaches to this kind of conveyance. The Great Western, we say, need not be taken as a pattern in all respects for all wide-gauge railways. Were this the case, it might be urged in the most unconditional manner, that they are only inviting to the first class of travellers; that all beneath that class are much worse off upon such railways than upon the national lines. But omitting all that is a matter of merely arbitrary arrangement on the Great Western in this respect, it will still be apparent, from the single condition, essential to the wide gauge, of increasing the number in each separate division of every coach, that the passenger comfort must be less on any wide-gauge line, that takes advantage of its width in the arrangement of its business, than on a more compact system.

Hitherto we have not said a word on the material chapter of charges, which, after all, are the most decisive element in inviting passengers. And here we shall first observe, what indeed is notorious enough, that the Great Western management has deemed it necessary to fix rates above those of similar railways, without the company having ever derived a relatively superior dividend from the extra scale; as also that the chairman has lately declared the impossibility of keeping up the accommodation now given on that line, if the tariff is to be re-duced to the scale intended by Parliament, and assented to by the company two years since. Avoiding, however, deductions from what may have a special origin in this case, independent of the essence of the system, as such, we shall proceed to remark that it will be seen from what has already come out in the course of this inquiry, that railways which cost more to make and more to work than others, must either charge more, or profit less than those which can be established and served for less money. Indeed, charging more, in so far as the excess may be occasioned by the mere expensiveness of one system compared with another that can do the same business at less expense, is of itself equivalent to a deduction from profits to the extent of that excess, because it is well known how raising charges beyond the general standard acts on profits. It may not, indeed, be wise to reduce rates below the minimum at which they will pay well on any line; but it is evident also that the particular system on which this minimum occurs before it is reached on the other, has a special disadvantage to contend with in this respect, and will be lowering its scale of profits while charging no more than will suffice to make a liberal nett return on the less costly cystem.

Such, then, is the practical outcome of our inquiry: from which it results that the introduction of the wide gauge, however pleasing as a mark of distinction to its inventor, is not recommended by a single circumstance that can be felt in the shape of profit, but is, indeed, disparaged by many circumstances that act to make its profits in all cases relationally less. And for this uninviting result the promoters have subjected themselves to the serious additional disadvantage of being excluded from interchanging business with the prevailing class of lines: to the inconvenience of remaining have procured, in virtue of this quality of speed, | come to the second-class coaches on the extant | insulated in the midst of the general traffic of

Digitized by GOOG

the country, which must certainly go on increasing the more widely the exceptional system is overlaid, as it is sure to be progressively more and more, by the national series; -to the ruinous struggles by which even this undesirable position has had to be, and must hereafter be, maintained, if at all, and to the enormous dead weight which the cost of incessant contention throws upon the capital from which investors look to obtain dividends. A more profitless business, in all respects, indeed, can hardly be imagined; and nothing but the entire want of reflection, and the want, too, for a long time, of those practical tests that compel men to reflect, can have allowed any number of persons to risk their means in continuing what they will find to have been a grievous mistake, as far as its pecuniary results are concerned. There has, perhaps, never been an instance more strongly proving to what lengths a body of men will go, for a while, against their real interests, at first on the spur of specious inducements, and afterwards by the mere unwillingness to yield in a matter of contention, than has been afforded by the history of the broad gauge, by its progress, and by its present results. We apprehend that the time is now come when the practical test furnished by these will begin to be pretty closely applied, and that both the colour of mere allusions, and the obstinacy engendered by strife, will be apt to take a much less prevailing share than heretofore in the determination of this matter. In the state of mind which is usually produced by the contact of real and pressing agencies, there must be some attempt made on the part of all concerned to count the cost of their adherence to Mr. Brunel's method of distinguishing himself: and whenever this takes place, what we have now set down will be found in the end to supply the grounds on which any practical examination of the business must be undertaken.

RAILWAYS ABROAD-THE HAVRE AND ROUEN. [We extract the following from a pleasant paper in the Atheneum, describing a pleasure trip to Rouen, by one who went abroad for the first time.]

The system of English railways is to let every traveller manage for himself. You go to Euston Grove when you please_stay in the waiting-room, or wander on the platform-superintend the packing of your luggage choose your own seat, &c. In France the system is that you shall be managed. After paying for your ticket-people for all places crowding and served at the same counter—you deliver up your luggage, pay a sous or two, and obtain a receipt—and are then marched into a waiting-room, according to the class of your fare. You are locked up here until the train is ready. The doors of the first-class room are opened, and every one scrambles for his seat_then the doors of the second classthen of the third. Thus, it is not the first comers who choose their places, but the strongest and most vigorous in the crowd. The first-class carriages are furnished just like the South-Western carriages with us; but are more crowded, as four persons ride on each seat. The second-class carriages are decidedly more comfortable than our own. They are lined more comfortable than our own. They are lined with ticking, and are better than the insides of the old stage-coaches. The pace of the trains is slower than is usual in England—not averaging 20 miles an hour. The police at the stations have a strangely compounded costume. Like the country people, they wear a blue cotton blouse,—and to this is added a red belt:—the hat is like the priest's—long, slouching, and broad-brimmed. The policeman carries a sword at his side_of course as an official he could not act without one-has in one hand a red signal-flag and in the other a horn. His appearance is a compound of the soldier, the rustic, and the huntsman. Rouen and Havre line was laid out by our Mr. Locke_or" Loke," as the French guide-book names him-and the stations were designed by Mr. Tite; so that it is altogether very like an English railway. The scenery through which it passes is also
very English in character—resembling much the with the bold and rugged coast on one side, the rocks

bolder scenery of the south-east of England. The farming seems excellent; and the ploughing is done by horses three abreast, a sure sign of intelligent farming. Many parts of the line might be mistaken for portions of the Brighton and South-Western.

#### Brogress of Works.

BLACKWALL.—Oct. 10.—The workmen commenced taking up the north line, preparatory to the alteration of the gauge. The trains now leave either end every half hour, instead of every quarter, as heretofore.

NORTH STAFFORDSHIER (Crewe line).—Oct. 9.—
This branch was opened for passengers. It is 30 miles in length, and commences at Stoke-upon-Trent, curping theory. Stoplay near to Newsestle to miles in length, and commences at Stoke-upon-Trent, running through Stanley, near to Newcastle, to Burslem and Congleton. Mr. Ricardo, M.P., the chairman of the company, together with the directors and their friends, passed over the line in a special train, and were met by the authorities of Congleton at the station, and conducted to the Town Hall, where a banquet had been prepared. After the usual loyal toasts, the Mayor (Mr. Waddington) proposed the toast of "Success to the North Staffordshire, and the health of Mr. Ricardo M.P. its chairman". the health of Mr. Ricardo, M.P., its chairman. Mr. Ricardo, M.P., in rising to respond to the toast, was received with loud cheering. After some few prefatory observations, he said that the North Stafprestory observations, he said that the North Stat-fordshire had had many difficulties to encounter. He had heard a great deal said about this country being dependent on the home trade; but he would say that the home trade was dependent upon the foreign trade —that this country, at this moment, was suffering from the adversity of our neighbours, and would con-tinue to suffer until our neighbours were more prosperous. The cost of production was not to be calculated on the price of the commodity when it was in the factory, but it was to be calculated at the price in the market to which it was to be sent; and if they could bring those commodities which they manufac-tured to market cheaply, then they had an advantage over their competitors; and that advantage the North Staffordshire had in a great measure endeavoured to secure for them. The worthy mayor had coupled his name with that of the company, and he (Mr. Ricardo) could only say that he had undertaken this great enterprize, not with any view to personal profit or advancement, but simply with a view to benefit his constituents and the country at large. If he had succeeded, the only reward he would ever require was to see the North Staffordshire prosperous. At 5 p.m. the corporation of Congleton accompanied the directors in a special train to Stoke, and returned to Congleton later in the evening.
SHREWSBURY AND CHESTER.—Oct. 12.—The line

SHREWSBURY AND CHESTER.—Oct. 12.—The line was opened throughout. At 7 a.m. the first excursion train left Chester, drawn by three engines, with bands from Liverpool, Shrewsbury and Chester, with seventeen carriages, containing the chairman and several of the officers and members of the corporation. It reached Shrewsbury about 10 a.m. At 10 10 it returned, bringing the mayor and corporation and several hundreds of the gentry of Shrewsbury, who, having completed, as it were, this interchange of city with city, returned again at about 2 p.m. in a monster train of fifty-eight carriages, drawn by three engines, and accompanied by a band. At the various intermediate stations beyond Rusbon the trainstopped to take up fresh people. The line connects the mineral districts of North Wales with the manufacturing districts, and forms an improved communication bedistricts, and forms an improved communication be-tween the estuaries of the Dee and the Bristol Channel. It was expected to be opened in August, but the wet weather retarded it. The line for upwards of 60 miles traverses the rich vales of the divisionary or to miles traverses the rich value of the divisionary boundary of the principality and of the western counties. Birkenhead may be looked upon as its main goods terminus. The works in general are substantially constructed, and in consequence of the favourable nature of the soil the line will be cheaply

maintained. A public dinner in commemoration of the event took place in the evening.

WATERFORD, WEXFORD AND WICKLOW.—Saunders's News Letter thus reports of the progress of the works:—In order that a proper idea may be formed of the Herculean nature of the task undertaken, as well as the manner in which this apparently insurmountable task is being gradually overcome, it is only necessary to visit the works at Dalkey and Bray Head, particularly the latter locality, to be struck with surprise at what man's ingenuity and labour combined can accomplish, and in a comparatively short space of time. The visitor, on arriving at Bray, will proceed to the back of Queen's Hotel, to the foot of Bray Head. A new road has been recently formed,

below, sea-beaten and covered with sea-weed known below, sea-beaten and covered with sea-weed known hitherto only to the sea-gull and the samphire-gatherer; on the other side, the heath-clad cliff towering 150 ft. and upwards above. Beneath this new road, at a general height of 70 ft. above the sea level, is to be seen the centre line, marked out with white stones, at present rising and falling with the nature of the rocky ground over which it is to pass. The indented revines formed by the sea, hitherto inaccessible without considerable toil, may now be seen in an agreeable walk by means of this road. It was originally intended that some of these ravines should be bridged over; but the resident engineer, finding that the material suitable for such building work could not be had on the spot, as well as that skilled could not be had on the spot, as well as that akilled labour was scarce and necessarily dear, resolved to "bite" the hill side more closely, and thus render the bridging unnecessary. Besides, the adoption of this plan will have the effect of giving a greater amount of employment to the class of unskilled labourers most generally to be found in the district. The present road crosses to the hill side of these ravines with the aid of retaining-walls and filling-stuff readily had from the vicinity. It is a most cheering sight to behold the most inaccessible spots occupied by groups of labourers engaged in all the heavy operagroups of labourers engaged in all the heavy opera-tions of quarrying, levying, &c. Several hundred pounds of gunpowder are daily expended in blasting, and as many as 50 to 100 explosions of blasts take place, from which the visitor need be under no place, from which the visitor need be under no apprehension, as the workmen's movements, if followed, will be a certain guide to avoid danger. A number of ravens usually build in these cliffs, but their solitude being broken in upon they have totally disappeared. Two jackdaws were not, however, to be disturbed; they built their nests, and succeeded in regring their young this season. During the in rearing their young this season. During the process of incubation, at the word "fire," uttered as a warning previous to exploding a charge, the jack-daws took wing, and hovered around the place until all danger was over, then returning to their nests. After rounding the summit hill, the site called Brandy Hole is reached, famed in olden time as the Brandy Hole is reached, famed in olden time as the resort of the smuggler, now as the place where the first sod was cut by the chairman of the company, the Earl of Courtown, who, from the commencement, has, with Sir T. Esmonde, zealously supported the undertaking. Just at this place the mouth of the second tunnel appears. It is intended to be 154 yards in length, and runs through clay, slate and quartz—very impracticable materials. This tunnel is nearly one half completed; and skirting the sea at a moderate level, the second tunnel, 220 yards in length, is in progress. in length, is in progress. This part of the work has progressed with great vigour; it is more than two-thirds finished, and the energetic contractor, Mr. J. Grogan, is confident it will be finished before December. The entrance is finished, and some of the rails laid, on the Wicklow side, as they are intended to be when the line is perfected. The line intended to be when the line is perfected. The line will from this point pass along the coast with a sloping embankment landwards, until it reaches the neat little sea-bathing village, the Greystones, at the back of which it will be formed on to Wicklow, &c. The chairman of the Board (the Earl of Courtown), and Sir T. Esmonde, Bart., accompanied by Capt. Owen, Mr. Purdon the resident engineer, and Mr. Muggeridge the secretary, inspected the works on the 7th inst., and expressed their satisfaction at the forward manner in which they were found. The description of labour required here will not be much description of labour required here will not be much impeded by the weather, and the coming spring will see the face of this almost impregnable coast levelled nearly to its proper bearings for the purposes of the line. The works of Dalkey are more generally known, and do not require much further reference than to say that the tunnel excavation is proceeding as rapidly as the nature of the work will admit of. There are in all at present above 500 men employed daily, as many as can at present be made available.

#### Accidents.

Edinburgh and Northern .- Oct. 7 .- As the down train from Edinburgh was nearing Ferry-Port-on-Craig it was observed that the impetus was not Craig it was observed that the impetus was not lessened on approaching the station, which omission or accident (as will no doubt be explained) unfortunately led to a violent collision with the outworks of the building, by which many passengers were severely injured. Several ladies and one of the leading merchants of Dundee (Mr. Edward) are the principal sufferers. principal sufferers.

LONDON AND SOUTH-WESTERN. - Oct. 11. - The 8 10 a.m. train from Portsmouth to Southampton run over a cow which had strayed on the line. The last carriage was thrown off, but by the prompt attention of the engineer no further accident occurred. The other trains were delayed two hours.

#### Law and Bolice.

GREAT WESTERN.— Oct. 9.—On the resumption of the inquiry into the accident at Bull's Bridge, at Uxbridge, G. Wheeler, the lad whose duty it is to hook and unhook the horses employed in taking the trucks across the main line at Bull's Bridge, deposed that he saw the green light glisten a minute or so after the bell was rung by Berwick. The light was given by a man on the line, and was not the green light placed in front of the engine.—T. Heather, the carter who drives the purses attached to the wargary that have to be taken. horses attached to the waggons that have to be taken across the main line at Bull's Bridge, stated that he did not know the train was due at Bull's Bridge, and repeated his evidence as to having received the green light signal from Berwick to cross the lines.—
Berwick declared that he saw the full green signal light given to him by Herbert after he (Berwick) had rung the bell. He said that at the time the green hight signal was given by Herbert for the coal-waggon aginal was given by Herbert for the coal-waggon to cross the main lines, he (Herbert) was taking the numbers of the waggons on the down siding, close by the bridge where the down lamp signals are placed.—Mr. Webber detailed the respective duties of Herbert and Wheeler, and stated that the green signal hand-lamp can be seen 300 yards from the spot on which Herbert stood at the time of the accident; that Berwick was 238 yards from Herbert, and 63 yards from the boy Wheeler.—R. Roscoe, the and 63 yards from the boy Wheeler.—R. Roscoe, the driver of the engine attached to the train, proved that he left Slough and West Drayton at the proper time, and that he arrived at Bull's Bridge at 9 p.m.; that the white light, or "all right" signal, was on at the bridge where Herbert was stationed, and that he saw Herbert exhibit his white light hand-lamp signal was shown by Herbert on the up side of the up line. The engine ran into the coal-truck immediately after. When he saw the "all right" signal on at the bridge he crossed over from the reversing legar to try one of he crossed over from the reversing lever to try one of his pumps, his fireman at the same moment taking charge of the reversing lever and the regulator. While attending to the pump, the guard's whistle (the signal for the guards to put on their brakes) was sounded by his fireman, who at the same time the collision took place.—J. Greening, the fireman, deposed that he saw the "all right" signal turned on as the train approached the bridge. After this signal was seen, Roscoe (the driver) went to the other side of the engine, and he (Greening) took charge of the reversing lever and the regulator. In a second or two afterwards he saw a red light shown by a hand-lamp he immediately sounded the guard's whistle and reversed the engine. Almost at the same instant the engine ran into the coal-truck.—Berwick has been employed on the line for about seven years; he had been stationed at Bull's Bridge for about six months, and had a thorough knowledge of his duties.— Herbert, who has been in the service of the company seven years, and stationed at Bull's Bridge about two ears, said he had been attending to the crossing of the trucks as usual; that he heard the bell rung by Berwick; that he heard the bell rung by Berwick; that he heard the train coming and turned on his white light to the train and his red light to Berwick.—Mr. S. Clarke, the superintendent, said that the momentary signal of the red light by Herbert (supposing Herbert to have shown it) was not sufficient, and that he should have turned the red or danger signal against the train. The porter, Berwick ought to have been aware that the train Berwick, ought to have been aware that the train was due.—The magistrates sentenced Herbert to two months' imprisonment, and trusted the conduct of Berwick would be rigidly investigated.—Mr. Clarke said he should bring the case before the Board at the sitting which would shortly take place.

Oct. 9.—At the Worship-STREET POLICE COURT, a man named Hanway was charged with robbery from a train at the Eastern Counties terminus. A box, which was understood to contain a large amount of valuable property, and which had been brought up by the train, was deposited upon the platform, which the prisoner no sooner saw than he called to a porter, and pointing to the trunk said—"Take that immediately to a cab." The porter was hastening away with the property, followed by the prisoner, whose progress, however, was arrested by a gentleman witnessing the transaction, and he was taken into custody by witness.—The prisoner was remanded.

## RAILWAY DEPRECIATION.

Mr. Spackman has written to the Times his preventive for the continued decline in the prices of railway stock. We present it to our renders, merely observing that the authorship of the table is claimed by another:-

The writer of the City article in your paper of this morning, after noticing the continuous decline in the

value of railway property, very naturally inquires—
"Where is this to end? It is evident the evil is peculiar to railways, it affects them alone, and hence no revival in business, no abundance of money, nor even revival in business, no abundance of money, nor even the assurance of universal peace, could bring a cure. This very question, however,—'Where is it to end?'—tells the whole history of the mischief. Each man asks of his neighbour, and neither can give the slightest clue to its solution. No one has a single figure on which he can rely." To all which, Sir, I submit the following is a good and griftiant anywer. submit the following is a good and sufficient answer, and the figures may be relied upon as embodying not only the whole truth, but as clearly demonstrating the nature and extent of the evil under which the railway interest is now suffering so severely. Independent of about 30,000,000l. of debentures afloat in pendent of about 30,000,000l. of debentures afloat in the market, a liability of 130,000,000l., in respect of lines projected but not executed, still rests on the shareholders in railway companies, and so long as this liability continues to exist, how is it possible that confidence can be restored? No assurance on the part of directors that they will limit the expenditure for the future, or exercise greater economy in their management, will have the desired effect. The under-

takings must be abandoned and given up, the obligation must be cancelled; and without this is done, and done immediately too, it is impossible to see how far the depreciation in the best companies will be carried. I contend, Sir, in this terrible crisis of railway property, one only course is open to the directors, and that is to ascertain how far their liabilities can be reduced by suspending all works for the present. Let them then call their shareholders together, and do what they have never yet done—make a full and fair exposition of these liabilities, and at the same time pass a resolution binding themselves to make no calls for the future without the consent of their shareholders, nor enter into contracts for more than shareholders, nor enter into contracts for more than the amount actually paid up from time to time. The real evil is that they can do both without the slightest reference to their shareholders. If this course were generally pursued, nine-tenths of the absurd schemes for which Acts have been obtained would never be heard of again, and confidence in its value would soon be restored, because the investment of our spare capital would be limited to the legitimate wants of the public. W. F. SPACEMAN. Guildhall Chambers, Basinghall-street, Oct. 10.

Liabilities still resting on the public in respect of railway projects not completed ..

We are saved part of our intended labour in dissecting the selfish fallacies and interested misstatements of the Times of the past week respecting the prospects and position of the railway interest, by the following comments in the Daily News. We may dismiss Mr. Spackman's statement with the words of

the old song—
Remember, when the judgment's weak the prejudice is

The declarations of the Times will probably meet with our further notice. Meanwhile let our readers see what the plain-speaking City correspondent of the Daily News has said of its contemporary's mischievous efforts.

"The Times has come forward, as railway values became depressed, to slay the slain, and to claim the honours of the hangman. Certain elaborately constructed tables from a Stock Exchange Committee paper, and another source, have been produced on consecutive days, to prove that railways and ruin are convertible terms, and that shareholders might as well look to the North Pole for dividends as to the North-Western—for against the London and North-Western the venom of the articles, City and Leader, is mainly directed. A Mr. Spackman, with a large array of figures, is lugged in in aid, but the labours of this gentleman, so unfortunately notorious for former inaccuracies or blunders in his multifarious statistics, may be safely dismissed from the account altogether. Neither with the statistics furnished by the Stock Exchange Committee's paper is it proposed to deal, for he would be a bold man, and the most finished of accountants, who could pretend to dissect or under-stand, much less explain them. But there are some salient points that more palpably challenge observa-tion. For example, the bond debt of the London and North-Western is placed to capital account appa-

rently as entitled to a 7 per cent. dividend like shares, supposing shares to be so retributed. debt of the company is about eight millions sterling, bearing 5 per cent. interest. The Stock Exchange bearing 5 per cent. interest. The Stock Exchange Committee paper, called the London Weekly Railway Share List, has therefore made the small mistake of bringing 160,000l. only—a small sum with a writer who slaughters millions so unmercifully—to charge as really so much additional burden upon income. The Stock Exchange Committee paper, moreover, plants the capital stock of the same company at forty millions sterling, upon which dividends have, or will have, to be paid. Yet we know, and the Stock Exchange Committee must also know, that the capital stock does not really amount to thirty millions; that it is now some three millions short of thirty millions: it is now some three millions short of thirty millions and supposing all the branches and lines additional made, which it is in contemplation now to make, it is not likely that the capital sunk, or chargeable with dividend, will really exceed thirty millions. More might be said about the blunders of bringing bonds to charge as capital, and bringing new shares not yet paid up to charge as capital also, a double operation, as the Stock Exchange Committee should know that the new shares were created for the pur-pose of paying off the debentures, or bond debt, as they became due, and that the instalments on such new shares have been called up accordingly, so far about one-third only, and have been so applied. Leaving the figures, which the directors of the London and North-Western, and other lines implicated, should feel it their duty to deal with authoritatively, for the satisfaction of their proprietaries, we come now to the consideration of their proprietaries, we come now to the consideration of a graver matter still than the statistics of a weekly publication. The committee of the Stock Exchange, for the first time since the institution of that close corporation, which by the public at large is viewed with no good will, have

£131.326.111

Digitized by GOGIC

undertaken to become newspaper proprietors, or, at all events, to figure in the equivalent of that character, since the London Weekly Railway Share List racter, since the London Weekly Raiway Share Last is 'published under the authority of the committee of the Stock Exchange.' It is, to be sure, added, in small type supplementarily, that 'the committee are in no way responsible for editor's remarks.' Was there ever such a curious contradiction in terms? there ever such a curious contradiction in terms?

The purity of the English may be pardoned for the Stock Exchange—as authorizing a publication whilst declining the responsibility! It is just the same as if a man should set up a shop, put some people in it to buy and sell, and advertise that he was in no way responsible for their engagements. Worse still than this: suspicions are abroad, they are common talk, that this Weekly Share List paper is made use of to subserve the interest of the Stock made use of to subserve the interest of the Stock Exchange Committee. The members of that com-mittee have only, as said, to notify what facts, or simulation of facts, may be most agreeable to them, and there are the paper and the conductors, both dependent upon them, ready to register their decrees. Before the last number of the Stock Exchange Committee's paper, London and North-Western shares stood at about 109. Knowing the laborious, unintelligible, but startling tables about to appear, how easy for the members of the committee to sell each a thousand or two shares of that or any other line, and pocket the difference of six or seven pounds a share! So anxious, indeed, as maliciously observed, were the committee, or members of it, to keep the market down, that a succession of other unfavourable railway accounts were furnished to the Times, in anticipation, and so far in robbery of, the weekly Stock Exchange paper published on the Saturday. For the Times states distinctly that 'corresponding accounts * * have been handed to us from the same quarter, regarding the Great Western and the London and South-Western Companies.' Therefore, before publication in their own weekly paper on Saturday next, the committee of the Stock Exchange gratuitously send their questionable facts and figures to a morning paper, to the evident damage of their own weekly, which should have received the benefit of them. It is asked, and not unreasonably, whether this eccentric proceeding was intended to act upon the settlement of account in shares, which is fixed for Saturday, and to depress them accordingly in the interest of speculators for the fall, for which the committee's own paper would be too late in the field that day to be effective."

#### PROGRESS OF RAILWAYS IN AMERICA.

Whilst every effort is now making in the mother country to check the increase of railways, the last reports from America declare that the railway system is still progressing in the United States. There will be, without much doubt, more miles opened this year than in any previous one since these works were first commenced in that country. Independent of the many new lines about being completed, the extension of the old roads is progressing rapidly, and sections of country most remote from the Atlantic have been connected with the principal markets of the Union. About 300 miles of railway will be brought into use this year in the State of New York; about 500 miles in New England; in New Jersey, 30 miles; Ohio, 50 miles—making in those States nearly 900 miles of railway. Besides this there are at least 100 miles in progress, part of which will be completed in 1849. The Saratoga and Whitehall will be finished in October. The business already done on that portion which is finished exceeds the most sanguine expecwhich is innised exceeds the most sanguine expec-tations. The Hartford and Providence have con-tracted for 3,000 tons of iron rails, weighing 60 lb. to the yard. The contract is made at 50 dollars a ton, and the iron is to be delivered in New York next spring. The Auburn and Rochester have but 7 miles more of new road to lay, and this will be completed in a few days. By the middle of this month the new track will be completed from Albany to Rochester. Trains are now running regularly on the New York and New Haven, through Fairfield and Bridgeport. and in a few weeks the line will be opened between Bridgeport and New Haven. The whole line will be "graded" by the 1st of November, and by the 1st of graued by the 1st of November, and by the 1st of January the track will be laid in running order from New Haven to the connexion with the New York, Harlem and Albany-road, at William's Bridge. It will create not a little astonishment in Britain, says the correspondent of the Morning Herald, to hear that the Yankees are in trouble about the decrease of wood fuel, consequent on the consumption by the railways. All along the banks of the railways the timber has been cut down, and we now hear of the necessity of planting to keep up the supply. The supply in New England State will certainly be soon exhausted, and no substitute is yet at hand. The cost of railway fuel in the State of Massachusetts alone

will, during this year, amount to nearly 1,000,000 dollars. In and near the city of Connecticut there are, or soon will be completed, six parallel railways. These are, the Harlem and Hudson River, the Housatonic, the Nangatuck Valley, the Newhaven and Hertford, the Norwich and Worcester and the Stonington lines. The State is also intersected by Connecticut river, whose shores have long supplied fuel for steamboats. The prospect of Connecticut is the complete destruction of her forests, and here the people are planting trees for re-production. In the interior of Pennsylvania the Reading, leading from Philadelphia to the coal region, consumed last year a daily average of 290 cords of wood, making a sum total of 90,000 cords, at a cost of more than 370,000 dollars per annum. Assuming the Reading to be 100 miles in length, the same amount of wood burned on the large western steamboats would have transported 4,320,000 tons the same distance against the mighty current of the Mississippi. By trial on board these boats, seven bushels of coal are found equal to one cord of wood in generating steam.

#### Reports of Meetings.

DEMERARA.

Oct. 10.—Half yearly Meeting, London.—Mr. M. M'CHLERY in the chair.

Mr. HILL, the secretary, read the report :directors have to call upon the proprietary body, assembled at this general meeting, for their most serious consideration of their present position. It will be seen by the statement of accounts, made up to the 30th ult, that while there are existing and pressing liabilities to the extent of 36,301*l.* 5s. 4d., the sum received upon calls falls short of the amount payable thereon by 35,312*l.* 10s., and that there are no immediate funds available to carry on the works. Every exertion has been made by the direc-tors to collect the arrears. In addition to urgent appeals made to those shareholders who, having been regular in their earlier payments, have since neglected to meet their calls, suits have been instituted against the defaulters of the longest standing, while the shares of others, who, it was ascertained, had not the means of paying, have been subjected to forfeiture. Of this latter class, 570 shares have been absolutely forfeited; and with regard to 790 other shares, on which notices of forfeiture have been given, the directors still reserve to themselves the option of proceeding at law. Of the suits instituted, several produced the desired results, and in others judgments have been recovered; but the directors have abstained from acting on those judgments from the present inability of the parties to meet them, and the hope that by indulgence the money would be forthcoming. The directors, in their last report, apprised the shareholders that they had been obliged, from a deficiency of funds, to suspend, in a great measure, active operations upon the works; and a continuance of that cause, arising from the non-payment of the calls, has so retarded the progress of the line, that it has not advanced beyond Plaisance, a distance of five miles from George Town. That point has now, how-ever, been reached, and instructions were lately sent out to the engineer to work this first section of the line, if it could be advantageously accomplished. The progress of all the other works has, of necessity, been absolutely suspended, and the result of this day meeting must decide whether the project is to be abandoned, and a sacrifice made of all the capital (126,698l. 11s. 6d.) which has been expended upon it, or whether, by a cordial co-operation on the part of the shareholders with the directors, the undertaking may be yet brought to a speedy and prosperous ter-mination. One means which has presented itself to the directors of assisting the undertaking in its present difficulties is that of which notice is given in the advertisement convening the present meeting, -viz., the reduction of the capital of the company from 250,000l. to 175,000l. The details of this measure will be more properly considered at a subsequent part of this day's proceedings; but it is expedient now to state, that the immediate object which the directors have in view in this proposal is to put the company in a position to borrow money upon the security of the railway works—a power which they do not possess at present, as one-half of the existing capital is not, as required by law, paid up; whereas the borrowing powers of the company would come into immediate operation if the capital were reduced to 175,000L, more than one-half of that sum (viz. 89,687L 10x) having been actually collected from calls. It has been fully ascertained that the lesser amount of capital would enable the directors to complete the line. The shareholders are aware that the directors have been in negotiation with Her Majesty's Government for a loan. Their endeavours in this

respect have unfortunately proved abortive for immediate purposes; but it may be briefly stated that although no direct promise of pecuniary assistance was actually given by the Government, the result of frequent communications with the authorities at the Colonial Office had led the directors to entertain a confident belief that advantage would be taken of the passing of the West India Half-Million Loan Act, to insure to this company a definite portion of that fund; and it was only at the eleventh hour, after the Parliament had separated, that a letter was received from Earl Grey, referring the matter altogether to the decision of the combined court of British Guiana. The directors have no reason to doubt that if on the re-assembling of the combined court (whose sittings have been temporarily suspended owing to some differences with the Colonial Department), the claims of this company to partici-pate in the loan to be raised under the Act referred to, were brought before the combined court, they would be readily and favourably entertained; and at the same time their assent will doubtless be given to the legislative guarantee of 6 per cent. upon the capital expended—the principle of that measure having already received the sanction of the court of policy. Should the shareholders consider it advisable to pursue the course here adverted to, the question will still arise, how, in the meantime, is the company to be carried on, and the property protected from the claims of the creditors? The liabilities are immediate and heavy, and cannot be further postponed; diste and heavy, and cannot be further postponed; and the directors can see no way of meeting them, but by the prompt, resolute and combined exertions of the shareholders themselves. If all those who are now in default, but able to meet their calls, will forthwith pay up their arrears, and if the remainder of the calls to the extent of the reduced capital be punctually met, the directors feel confident that, with the money which they will be enabled to borrow on the security of the works, to make good any deficiency in the collection of the arrears on the part of those who are actually unable to meet their calls, the railway will be successfully completed, even yet, at a cost within the engineer's estimate. These prospective advantages must, however, be abandoned, the valuable property already embarked be altogether lost to the present sharcholders unless immediate funds are raised by them to meet the liabilities. is right also to remind the shareholders, that had the calls been punctually met, the company would at this moment have been free from debt, and the line have been in profitable operation. The directors have performed their duty in submitting these facts, thus plainly, to the shareholders, and the fate of the undertaking is now in their hands. If this last appeal should not be responded to, and the property of the company be left to the mercy of the creditors, (from whom further forbearance cannot be expected,) the shareholders must still recollect, that after such a sacrifice has been made, they would not be relieved from their liabilities to full extent of their shares under the existing capital while a single creditor remained unpaid in this country or in Demerara; and that the first and most imperative duty of the directors would be to enforce payment of all arrears due on calls made, or of those legal powers which have been conferred upon them for that purpose by the company's Act of incorporation and deed of settlement. But if, on the other hand, the shareholders concur with the directors in thinking that, by a united and vigorous effort, this important project may yet be successfully carried through, they may confidently rely upon a continuance of those exertions on the part of the directors to promote the interests of the company, which they can conscientiously state have been hitherto unceasingly given to the utmost of their abilit**y.** 

The following is a copy of the letter received from the secretary of Earl Grey, and referred to in the report:—

Downing-street, Sept. 14.

Sir,—I am directed by Earl Grey to acknowledge the receipt of your letters of the 9th and 12th inst., applying, on behalf of the Demerara Railway Company, for a portion of the loan of 500,000L to be advanced to the sugar growing colonies, to enable them to complete the line which has been commenced in British Guiana. In reply, I am to acquaint you that the Act of Parliament only authorizes the guarantee of loans to be contracted by the authority of laws to be passed in the colonies for such objects, within the description of those sanctioned by Parliament as the local Legislatures may select. It will therefore be for the combined Court to determine whether it will charge upon the colonial revenue a loan, part of which shall be applicable to the railway. And Lord Grey can only express his own opinion that such a loan would be a very proper purpose to which to apply a part of the money which the comoined Court may decide upon raising under the guarance of Parliament.

H. MERIVALE.

Digitized by Google

The statement of accounts showed the total receipts at 90,397l. 6s. 2d.; expenditure, 126,698l. 11s. 6d.; balance, 36,301l. 5s. 4d.

The CHAIRMAN, in moving the adoption of the report, did not think it necessary to make any lengthened observations; but he must be allowed to state, that it was very disagreeable to the directors to be compelled to make such frequent appeals to the shareholders for support, in consequence of the non-payment of calls. The matter was in the hands the shareholders for support, in consequence of the non-payment of calls. The matter was in the hands of the shareholders, to determine whether or not they would make an effort to save the property, or whether they would sacrifice all the money paid up to the present time.

During a short conversation,

The CHAIRMAN said that the directors would be happy to have a committee of the shareholders appointed to examine the accounts and consider the best means of raising money to meet their liabilities. Their engagements were most pressing, being principally upon calls, which though they only bore 6 per cent. interest, cost 25 per cent. if they were protested and returned to the colony. Half the line would have been opened before now if the money could have been obtained to pay the labourers; and even now, if they could raise the necessary funds, it might be opened within six months.

Several Sharcholders expressed an opinion that it

would be uscless to appoint any such committee, as there was no want of confidence in the directors, but they were blamed for not having more strictly en-

forced the payment of the calls.

Mr. MAYNARD, the solicitor, explained that all those worth powder and shot in arrear on the first and second calls had been already proceeded with, and judgments obtained, except where arrangements had been entered into for the payment of the arrears. With regard to defaulters on the third and fourth calls, a little more leniency had been shown, as they had already paid 7l. 10s. per share, and in many instances had expressed their intention of paying up their calls if allowed a little more time.

Ultimately the report was unanimously adopted, and a resolution passed authorizing the directors to instruct the solicitors to take legal proceedings against all parties who should be in arrear of calls on the 1st of November next, without distinction of persons.

The meeting was then made special, to consider the propriety of reducing the capital of the company from 250,000l. to 175,000l., so as to facilitate the

borrowing of money.

Mr. MAYNARD, the solicitor, read the draft of a bill proposed to be brought before the Colonial Legislature for the purpose, whereby the shares will be reduced from 25l. to 17l. 10s., and the directors authorized to borrow money at an interest not exceeding 10 per cent. per annum, or, if deemed necessary, to create preference shares. The bill also provides for the reduction of the directors from eighteen to eight, and authorizes the payment of interest not exceeding 10 per cent. on calls paid in advance.

The draft of the proposed bill was approved, and the directors were authorized to borrow any sum not

exceeding 50,000l.

GLASGOW, PAISLEY, KILMARNOCK AND AYR. Oct. 7 .- Special Meeting, Glasgow .- Mr. J. M'CALL

of Daldowie, in the chair.

The CHAIRMAN said—It falls on me to explain the object for which this meeting has been called. Our first duty is to relieve the parties who took shares in the Paisley, Barrhead and Hurlet on our account to such an extent as we and they may think expedient. such an extent as we and they may think expedient.
At the same time, gentlemen, I can assure you that
the directors are decidedly of opinion that it is not
for the interest of this company that the construction
of the Hurlet should be proceeded with under
present circumstances. The directors trust that with
this assurance you will leave this matter in their
hands; and should anything occur to induce the
directors to change their present views thou will directors to change their present views, they will take care that another meeting is called before any step is taken, to enable the shareholders to give instructions. He then moved a series of resolutions. First, that it is expedient for this company to take and hold shares in the Paisley, Barrhead and Hurlet, and that the directors be hereby accordingly authorized to register, in the name of the company, the whole or such part as they shall from time to time consider expedient, of the shares in that undertaking subscribed for at their request by five of their directors, amounting to the sum of 150,250l. Second. that the directors be authorized from time to time to appoint, under the common seal of the company, such person or persons as they think fit, to appear

contained in the Paisley, Barrhead and Hurlet Act of 1848, to raise by mortgage, over the Glasgow, Paisley. Kilmarnock and Ayr, a sum equal to the advances already made in respect of the shares so to be taken by them, and interest thereon. Fourth, that this

meeting adjourn sins die.

Mr. W. H. CRAUFURD, of Craufurdland, seconded the resolutions.

A Shareholder asked whether the directors ap-

proved of taking up the shares or not.

The CHAIRMAN: Yes; they do so unanimously.

A Shareholder: Have the directors agreed to do so

Woluntarily, or as the Act proposes?

Mr. A. Bannatune said that the subscriptions to the shares had already been approved of by a general meeting. Shareholders might have forgotten the precise terms of the agreement by which they had guaranteed a dividend of 6 per cent. to the Hurlet The directors thought that it was expedient this company should hold a large propor-tion of the Hurlet stock. If the meeting did not think it expedient to hold that stock, they were still bound for the 6 per cent. It would therefore be the interest of the shareholders to hold as much of that stock themselves as would give them an influence in that company. It might be the interest of the Hurlet Company to proceed with their line; and the more shares this company held in the Hurlet Company, the greater influence they would have over

Mr. WEIR said, as the contract has been made, it must be responded to. It is unnecessary to dispute it, as they must come back to the shareholders to take instructions. Would it not do to adjourn this

meeting for a fortnight?

Mr. BANNATYNE: That would be very inexpedient. After some further discussion as to whether the

Hurlet Company should go on or not,
Mr. BANNATYNE explained that the resolution to go on would be decided, not by them, but by the shareholders of the Hurlet Company, and that a meeting of that company would take place in about three weeks hence. They now stood in this position—that certain gentlemen had, by their authority, subscribed for a certain amount of stock in that company. The Ayr Company were bound to pay 6 per cent. by Act of Parliament to the holders of that stock. The Ayr Company could not get rid of the obligation to pay that 6 per cent.; and in place of throwing the stock they now held into the market,—seeing that they were, at all events, bound for the 6 per cent.,-it would be much better to take it up themselves, and obtain an influence in the affairs of the company Mr. Bannatyne also read the report agreed to at the general meeting of the 14th of January 1847, authorizing the taking up of stock in the Hurlet line at 6 per cent., and the Act of Parliament containing the

The CHAIRMAN stated that he, along with a number of gentlemen, had taken up those shares. He had not only taken them for himself, but for his family, and they had done so for the interest of this company,

Mr. AULD, accountant, believed the company was legally and morally bound to relieve the directors from their shares; and he thought they might leave the whole matter in the hands of the directors with all confidence.

The resolutions were then agreed to.

#### TINION CANAL.

(Now amalgamated with the Edinburgh and Glasgow.)

Oct. 10. — Special Meeting, Edinburgh. — Col. MACDONALD in the chair.

The CHAIRMAN, after alluding to the unproductive nature of the canal property, said that although the arrangement which had been entered into with the Edinburgh and Glasgow had not been so favourable as perhaps they might have expected, yet, considering the circumstances in which the two companies were placed, he believed they could not have arrived at an agreement on more favourable terms. Had the canal been a through communication between Edinburgh and Glasgow, and had there not been an interposing party, in the shape of the Forth and Clyde Canal Company, they would have still carried on their operations, notwithstanding all the opposition of the railway company. He considered that the arrangement which had been made would prove equally beneficial to the shareholders and the public.

Mr. Ellis then read the heads of agreement. These were to the effect that the two companies should be amalgamated, on the principle that the Edinburgh and Glasgow were to have the canal, and such person or persons as they think fit, to appear and vote at any meeting of the Paisley, Barrhead and Hurlet, in respect of such shares as may from time to time be registered in the name of the company.

Third, that the directors be authorized, underpowers debt.

The railway company, in return, undertake to

give 1,058 of their 100l. shares to the holders of the unburdened shares of the canal company, and 82 such shares to the holders of burdened shares; such stock to be issued to the shareholders of the canal company within one month after the passing of the Act for carrying the agreement into effect: and which Act both parties bind themselves to apply for in the next session of Parliament. The railway company are also to assume a sum not exceeding 95,000% of the debts to the canal company.

Sir J. GLADSTONE, of Fasque, as one of the most considerable shareholders, felt it to be his interest, as well as his duty, to move that they should agree to the proposed arrangement, and remit to the com-mittee of management with instructions to carry it

into effect.

In answer to a series of questions, the CHAIRMAN stated that as soon as the Act was obtained the stock would be issued to the holders of the burdened as would be issued to the holders of the burdened as well as the unburdened shares; the shareholders to receive a dividend according to the amount of their stock; that this stock did not go to pay interest on debt; that the Edinburgh Railway stock was valued not at its present market price, but at 100*l*.; that for every three canal shares, the canal shareholders were

A Shareholder asked if there was any balance or surplus of revenue divisible among the shareholders.

The CHAIRMAN remarked that the less they asked

about that the better.

After some further discussion, the motion of Sir Gladstone, approving of the arrangement, was adopted.

DUBLIN, DUNDRUM AND RATHFARNHAM .- Oct. 2. Meeting of Shareholders "to receive the answer of the directors to the proposition made to them, as agreed on by the meeting of the shareholders on September 26." Mr. F. T. Porter in the chair.—The Chairman said that at the last meeting they adopted certain resolutions, in a very fair spirit, and with every wish to meet the directors on terms equally advantageous to them and to the company. Every desire was manifested to wind up affairs in such a manner as not to throw obloquy on the directors, or inflict loss upon them, even on account of what might be termed their mistakes.—Ald. Boyce did not think it necessary to refer to past transactions further than by stating that at the last meeting a resolution was passed appointing three gentlemen to aid the directors in winding up the affairs of the company, a copy of which resolution had been transmitted to the chairman, Sir G. Preston, who had forwarded the annexed resolution :-Resolved,-That before the directors can take into con-

Resolved,—That before the directors can take into consideration the communication now read, as emanating from the meeting of sharcholders on the 26th inst., they (the directors) must refer the shareholders to the statement already submitted to them by this Board as a basis for a proposed union of action in the affairs of the company between the Board and the deputation of the 4th inst., and more particularly to that part essential for the providing for pressing liabilities required for the credit of the company by the 20th of Oct. next.

He (Ald. Boyce) certainly felt a good deal disappointed on reading that resolution of the Board, more particularly in consequence of a communication which he had had with Sir R. Baker. Having been impressed with the conviction that Sir R. Baker was entirely favourable to the views of the committee in favour of winding up the affairs of the company, he (Ald. Boyce) was therefore not prepared to receive the resolution of the directors. Accordingly, he called on Sir R. Baker, and told him that he conceived he must have misunderstood the object of the committee, and that their object was not to give unnecessary trouble to the directors, but to wind up the affairs of the company in as fair a spirit as the directors themselves could desire, without any reference to what the chairman very properly called their mistakes. He further told him that any contracts which had been entered into, with a view to benefit the interests of the company, would be considered with every possible desire for their adjustment, and impressed on him the great impropriety, in times like the present, of undertaking anything which could possibly be avoided. Sir R. Baker replied by asking what could be done in the absence of Sir G. Preston. He (Ald. Boyce) at once told him that he knew nothing of that gentleman; that he (Sir R. Baker) was chairman of the company, or at least signed himself as such, and that the course which he ought to adopt was to attend that meeting and explain his own views with regard to the subject in issue. Sir R. Baker assented, but subsequently wrote to excuse himself, and suggested an attendance of the committee at a special meeting on the 8th inst. He (Ald. Boyce) would strongly recommend that the committee already appointed should be confirmed, and that the two additional members should be

placed on it, making altogether a committee of five, which should have full power to institute ulterior proceedings, were those to become necessary. With that view he would propose the following resolution, which, however, he hoped there would not eventually be any necessity for carrying into effect :-

Resolved .- That the committee, as unanimously agreed Resolved,—That the committee, as unanimously agreed upon on the last day of meeting, be re-appointed, and that Sir R. Shaw, Bart., and Mr. J. W. Vance be added to their number. That such committee have full power to act for the shareholders, in order to dissolve the company by winding up its affairs.

In addition to the above, he had another resolution to

propose, viz.:—

Resolved.—That in the event of legal proceedings being Resolved,—Inat in the event of legal proceedings order necessary to take, such committee have the power to create a fund by a subscription per rate from the shareholders for that purpose, and that all the subscribers to such be protected from law proceedings as far as possible.

If they adopted the course marked out by those resolutions they would be taking a wise one. He had not the slightest doubt that they had got sufficiently strong grounds for an injunction to restrain any pro-ceedings at law for the recovery of the last call.— Mr. M'Birnie had been very much astonished by the refusal communicated by the directors, for they had declared that they would identify themselves with the shareholders.—A Proprietor: Perhaps it were better not to go into that now.—Mr. M'Birnie said he hoped the directors would enter into an arrangement beneficial to the company. He would move the first of the resolutions which Ald. Boyce had submitted.— Mr. Vance seconded the resolution.—Mr. Kennedy said he hoped it was understood that the committee would have no power to enter into any negotiation about the application for an extension of time. He (Mr. Kennedy) would give them all the powers they wished, provided they were only to be exercised with regard to the winding up of the concern.—The Chairman said that the application for an extension of time was a matter with which the committee had nothing on earth to do.—The resolution was then carried.—Mr. Lawson moved the second of the resolutions brought forward by Ald. Boyce.—Mr. Barnardo

seconded it.—The Chairman expressed his approbation of the resolution now before the meeting, saying it would enable them to go to the directors with every anxiety for peace, and at the same time to show that should state to the meeting that in the event of their being able to induce the directors to come to terms with them—and he had every expectation that they would be able to effect that object—they should show them (the directors) that, as regarded certain expenses which they had incurred, of the nature of which he (Ald. Boyce) would not now speak—he would attribute them to the best intentions, although, in strictness, perhaps, they were not legally appli-cable to the wants of the company; the committee would be permitted to use their own good sense and sound discretion in making an arrangement with regard to those expenses. He was sure that the knowledge of the disposition of the committee on that subject would greatly facilitate the arrangement of affairs. When the directors should see that they were not disposed to view those things in the light of wrong or fraudulent acts, nor inclined to be too particular on those concerned in the undertaking, but were only desirous to bring about an equitable arrangement, he (Ald. Boyce) was sure that they not experience much difficulty in winding up their affairs. It was, however, necessary to make it understood that their affairs could not be wound up without making another call. The present call of 5l. per share was ridiculous, and could not be upheld. Perhaps the only object in making it had been to prevent gentlemen from transferring their was no great harm in it; but it would be a great mischief to press for its recovery. It would only be necessary to see how much would be wanted, and then make a call for whatever amount would be necessary to enable them to wind up their affairs. It was impossible it could be much: but, much or little, if it receive the sanction of the committee, gentlemen ought to pay it.—The Chairman, so far as he should be concerned in sanctioning a call.

would do his best to make it as light as possible. taking that course, he disclaimed all idea of wishing to be complimentary to the shareholders. He would adopt it for his own benefit. He did not think that any shareholder need be ashamed of having joined the company, as nine-tenths of those who had signed the deed would have found it easier to lay down 30s. at the time they did so than to pay 10s. now.—The resolution was then carried unanimously.

GREAT SOUTHERN AND WESTERN (I.)-(Extension to Galway).—Baltinaslee, Oct. 6.—A meeting of the nobility and gentry of Galway, for taking measures for the extension of the great arterial railway to Galway, and thus providing the people with reproductive employment, was held in the Court House.—Lord Clancarty announced the objects for which the meet-Ciancarty announced the objects for which the meeting had been convened, and after strongly expressing his opinion of the great advantages which would result, not only to Connaught but the entire kingdom, from the extension of the Great Western to Galway, concluded by saying he hoped that his presence there on that occasion would be taken as a further proof of his anxiety to forward the undertaking.—The Marquis of Sligo, in proposing one of the resolutions, said that every man should strenuously exert himself to provide reproductive employment for the people.—Mr. O'Flaherty, M.P., said that they should all, as practical men, put their shoulders to the wheel, and pledge themselves to assist the undertaking in every way in their power.—Mr. J. Reynolds, M.P., declared that if the Government were properly and forcibly applied to, they could not refuse to grant the loan of 500,000*L*, which was all that was required, with the aid of the subscriptions which would be raised, and the assistance of the landlords, who were willing, most of them, to give their land free of charge, to go forward at once with the undertaking.—On the suggestion of Mr. Reynolds a working committee was formed, composed of all the noblemen and members of Parliament present, with several other gentlemen.

* For account, Oct. 17.

London Stock Exchange, Oct. 13 .- The share-market has been in a miserable state during the week, and the most exaggerated statements to the prejudice of railway property have been circulated. of railway property have been circulated. The shareholders are in many instances justly punished for not insisting on being furnished with complete and detailed accounts. In a period of pressure the timid are always alarmed at what may be disclosed; whereas if the worst be known, from that moment matters usually improve. The following are the latest transactions in foreign lines:—Boulogne and Amiens, 5½; Central of France, 5½; Namur and Liége, 4½; Northern of France, 6; Orleans and Bordeaux, 4; Paris and Lyon, 4½; Paris and Strasburg, 1½; Rouen and Havre, 7; Sambre and Meuse, 2½; Tours and Nantes, 1½. Tours and Nantes, 18.

Liverpool, Oct. 12.—Our market continues in a

very depressed state, and prices are without improvement. Suplow, Brothers.

Manchester, Oct. 12.—During the greater part of the week shares have been getting lower in price, though a moderate amount of business has been transacted. The last day or two prices generally have somewhat improved, and buyers have seemed more desirous to overstan. SAM. GRINDROD. desirous to operate.

Birmingham, Oct. 12.—Very little business has been done here during the week; the panic does not appear to have produced much disposition to press

sales in this quarter. W. Banks.

York, Oct. 12.—There has been great depression during the week in all our local railway stocks, and in any case where sales were forced lower prices had to be taken. The market is, however, somewhat firmer to day, but there is not much business trans-

acting.

Grayston & Earle.

Hull, Oct. 12.—Shares have again sustained a
fearful depreciation compared with rates of last week, and the question how it is to be checked is now agitated with earnestness. We believe the artificial supply caused by "bearing" and the want of uniform and intelligible balance-sheets are the main causes of the derangement of the share-market. Our transactions have been chiefly in the lighter descriptions of North British stock at the reduced quotations. FLINT & TOOTAL

Glasgow, Oct. 12.—Prices this week continue to exhibit a downward tendency, and buyers naturally feel inclined to be cautious in operating; the busi ness done however at the present low rates is considerable. The following are to-day's latest sales:—Caledonian, preference, 37s. dis.; Ayr, 50; ditto, 5 per cent. guaranteed, 98\(\frac{1}{6}\); ditto, halves, No. 1, 12\(\frac{1}{4}\) dis.; Great Northern, 13\(\frac{1}{4}\) dis.; North British, thirds, dis; Great Northern, 213.
4; Scottish Central, 213.

BUCHANAN, AITKEN & Co.

IRON TRADE.—Glasgow, Oct. 6.—There is no particular change to report in pig iron this week. The following note of the exports of pig iron in September

st as compared with the corresponding month of 1847, is from the North British Railway Gazette:-

1847. 1848. From Port Dundas and Kirkintilloch 13,290 5 604 tone Broomielaw...... 11,544 14,232 tons

Total..... 24,834 19 838 tons Birmingham, Oct. 12.—After the meeting at Walsall and Wolverhampton, the ironmasters held their third quarterly meeting. There was a large attendance of dealers as well as makers, and orders were more freely offered than accepted at current prices—still, the resolve, says the correspondent of the Daily News, as at Wolverhampton and at the preliminary Dudley meeting, was to adhere only to existing rates,—the unsettled state of affairs on the Continent not prognosticating a return of the full tide of trade there for some time to come : on the other hand, the demand for iron for the heavier description of manufactures, both for home purposes, for South America and other quarters, is so good that at present no fears need be entertained that prices will recede. Pig iron may perhaps creep up a few shillings should the demand continue as at present, stocks being unusually small. Beyond this there is nothing to add to the remarks under this head from Wolverhampton yesterday. The coal-masters report that the trade is looking better, and that they confidently anticipate a rise in the course of the next two or three months; the men are for the most part quiet and satisfied with wages as they now stand.

[Secretaries of companies are requested to forward notices of Meet-ings, and closing of Contracts, as early as possible.] MEETINGS.

## Joint-Stock & Commercial Gazette.

company which was projected in the beginning of 1846 for prosecuting the Southern Whale Fishery, and proved abortive in that year from the want of and proved aboretve in that year and a man-the necessary capital being provided, has again been brought to public notice, under the auspices of highly respectable merchants. The object of the company is to have a whaling station in one of the islands of the Pacific (the Auckland Isles) from whence ships can be fitted out and recruited; the produce of the fisheries to be discharged there by the "whalers" and transhipped by vessels freighted home. Messrs. Enderby, who are the promoters, are the Crown grantees of the islands in question. The prosecution of the fisheries in this manner, it is calcuated upon good data, will effect a saving of more than one half the expense at present incurred in fitting out a whale-ship from England. The pamphlet by Mr. Enderby gives in detail the expenses and profits as at present, what they may be, and the reasons that the southern whale fishery has of late years been almost totally abandoned by the British ship-

In our report of last week, for Union Exchange Company rad Union Arcade Company. This error originated in the Scotch journal from which we gleaned the information. Banks.

Last week we made reference to a change which had taken place in the direction of one of the Joint-Stock banks. It is now openly stated that the bank in question is the London and County, and that the director hinted at had been allowed to receive advances, and that bills of a questionable description have had his name appearing on them. The bank holds securities for part of the balance due to it; and the loss under the most unfavourable circumstances is estimated at below 5,000l.

In the proceedings at the Bankruptcy Court this week a proof was tendered on behalf of the London and County Bank for 2,600l. on the estate of Messrs.
Cooper, Wilson & Black.
The Morning Chronicle of Friday contains a state-

ment of the amount of coin held and required, with the surplus, by the four colonial banks of New South Wales.

Coin held. Required. Surplus £712,825 . £497,960 . . 593,889 . 490,000 . . 57,8839 . 501,577 . . March 1847 £214,863 103,889 December 1847 March 1848 Thus showing that the capital of the colony diffusing itself.

Steam Navigation. Mr. J. Matheson, M.P., has been elected a director Mr. J. Matheson, M.P., has been elected a director of the Peninsular and Oriental Company, in the room of the late Mr. P. M. Stewart, M.P., formerly chairman of the company. The vacancy had remained unfilled for some time past.

The general meeting of the ROYAL MAIL STEAM-PACKET Company was held yesterday, Mr. A. Colvill in the chair. From the report, which was read by

Mr. Chappell, the secretary, we find that the receipts for the six months ending June last are less than the corresponding period of 1847. The working ex-

Digitized by GOGIC

penses have been still further reduced, and the surplus shows an excess of 2,3761. 13s. 7d. The dividend proposed and carried unanimously is 2l. per share, to be payable within a few days. From the working account submitted to the meeting, the total receipts, including the mail contract, amount to 216,2111.0s.10d. and the disbursements to 148,758l. 3s. 8d., leaving a surplus of 67,452.17s. 2d. applicable to dividend, &c. Thanks were voted to the chairman and directors, after a short discussion on the report, and the meeting separated.

A vein of iron ore has been lately discovered at High Brow, Millom, near the line of the Whitehaven and Furness Railway at Carlisle, and preparations are now being made to raise the same.

A short time since an extensive set was granted by Mr. Fulford, at Dunsford, in Devonshire; since then another set has been granted by Sir L. V. Palk, adjoining to this, on the other side of the river Teign; the first is called the Wheal Anna Maria, and is said to be in the same strata as the Devon Great Consols; the set contains seven lodes, and the indications are promising; the lode the company are now sinking on is 7 ft. wide, with a very rich gossen on the back, and is composed of peach, mundic, quartz, pryan, fluor-spar, good stones of copper ore, the country being a beautiful blue killas and large granite rocks within half a mile, &c. A watercourse has been brought from about two miles up the river Teign for working the wheel; the men are now busily sinking the engine shaft, and intend to cut the lode at 20 fathoms level, and, in the opinion of practical men, it is calculated it will cut rich. The machinery and progress of the works gave much satisfaction at the general meeting held by a large and respectable body of shareholders about a fortnight since.

The advices received from Port Adelaide this week

come down to about the middle of May. From which we learn that the expectations formed of the Barossa Mines were in a fair way of being realized. Ore had been raised and was on its way to the wharf for

The following summary of South Australian mining news will be read with interest:—A meeting of the shareholders in the Princess Royal Mining Company had been held at Port Adelaide on the 12th of April last. From the report of the directors the prospects are good. Assets were, cash in hand, 534l. 17s. 3d.; bills drawn against ore shipped, 1,880l.; total, 2,414l. 17s. 3d., against liabilities, 510l. 13s. 6d. The original capital of the company was 14,000l. It appears that two pitches had been set up at a tribute of from 60s. to 80s., which had realized about twelve tons per month during the preceding six months, and about sixteen tons had been raised at different parts of the surface at a tribute of 80s. per ton. intersections of the "monster lode" had be had been made. which was found to vary at the different points of intersection from 1 ft. to 30 ft. The Greenock Creek Company are said to have found good copper at the depth of a few feet, whilst opening up a large ironbacked lode. The report of a new lode, discovered by the Adelaide Mining Company, is said to have been fully confirmed. The lode had been opened to the extent of 25 fathoms, and traced 50 fathoms or more. The directors have leased it for three months at 12s. in the pound, and the adventurer had raised four tons of rich ore in the space of two hours. The workings in the Mount Remarkable would have to be suspended during the winter months, owing to the impassable the miner months, owing to the impassaore state of the roads from the mine to Port Adelaide. The price of cartage of ore from the Burra Burra Mine to the port had been fixed from the 1st of May at 3l. per 21 cwt., which rate was to continue during the winter months. From the great quantity of ore accumulating at the mine, the company were prepared to accept tenders for the cartage during 1849 from a greater number of persons and drays than at present employed.

The latest prices of shares in Adelaide were as follows :-

Name of Mine or Company.	Shares	Capital	Paid up	P	aid	
Burra Burra	2,464	£12,320	£12,320	£150	U	0
Princess Royal	400	20,000	16,000	40	0	0
Adelaide	2,000	10,000	10,000	4	5	0
North Kapunda	436	21,800	21,000	15	0	0
Royal Mining Co	10,000	100,000	105.	0	15	0
Enterprise		3,000	2,000	3	0	0
Greenock Creek	300	1,000	1,000	6	Ó	0
Montacute	100	5,500	5,500	55	ŏ	0
Paringa		i	1	3	ŏ	ō

From New South Wales we learn that copper ore has been discovered of very good quality on the estates of Mr. Clements, between Sydney and Bathurst, and further searches were being made.

The letters received from Port Philip state that a valuable stratum of clay had been found in the Port Fairy district, and that articles of porcelain can be made to vie in quality with any of China manufacture. It was even rumoured that the clay was of so fine a quality that the English manufacturers would buy it up with avidity. Clay of this nature has been discovered elsewhere in South Australia, in three different localities.

The Geelong Advertiser, in referring to the rage for investing in Burra Burra shares, draws the attention of capitalists to the large seams of coal that have been actually penetrated on the Barrahool Hills, three miles from the town; and says that within a mile of Geelong there is a spring so strongly impregnated with copper that the blade of a knife, on being immersed in it, becomes instantaneously encrusted with the metal.

Letters from Minas Geraes, down to the 15th of July, speak very dishearteningly of the mines there; the produce of the diamonds was not paying the cost of labour expended. The gold mines was not so much exhausted as the former, still it was stated that capital must sooner or later find other channels for investment.

# Railway Chronicle.

LONDON, SATURDAY, OCTOBER 14.

A special meeting of the EASTERN UNION proprietors, after some opposition, adopted the agreement for the lease of the Colchester and Stour Valley, at a rent of 5 per cent.

At the LEEDS AND THIRSK special meeting the shareholders sanctioned the creation of preference quarter-shares of 121. 10s. each, to take a dividend of 7 per cent. per annum for the first three years, and 6 per cent. per annum in perpetuity on the amount paid up. The first deposit is to be paid on the 1st of November.

Authority was given to the GLASGOW, PAISLEY, KILMARNOCK AND AYR directors, by a special meeting of the proprietors, to hold shares in the Paisley, Barrhead and Hurlet, amounting to the sum of 150,250l., which sum is to be raised by

mortgage on the Glasgow line.

The directors of the DEMERARA have been forced to reduce their capital from 250,000l. to 175,000l. to call into operation their borrowing powers. The report adopted at the half-yearly meeting dwelt upon the increasing liability of the majority of the proprietors to meet their calls, but the directors anticipate some benefit from the West India Half-million Loan Act. The shares are consequently reduced from 251. to 17l. 10s., and the directors are authorized to borrow money at interest not exceeding 5 per cent.

It will come to be an urgent consideration with the shareholders of railways, whether they will reform the MANAGEMENT AND DIRECTION of their vast property, or continue it as at present. It is the misfortune of several railway companies that their directors and sub-committees dabble too much in the practical details of management. There can be no doubt that for all except general financial business paid officers are the only parties competent to the practical management of railways. duty of directors is not to manage the business, but simply to select fit managers and represent the interests of the shareholders at the Board on questions of general policy. The inefficiency of executive committees has long been known to all practical men, and the following remarks of M. Lamartine are applicable to railway government quite as much as to a political executive. The London and North-Western Company is one of the most notorious instances of the management of lines by committees, and those who are best acquainted with it will most readily admit the justice of the following remarks:-

venience, which appears incompatible with what I have just mentioned, but which is not the less real. Governments with several heads are always weak. From a natural consequence of the clashing of convictions and wills, government directed by several heads is composed of reciprocal concessions, and is not that which suits great epochs or the period of crises in which we live."-Lamartine's Speech on the Presidency.

From our official returns it appears that the amount of traffic for the last week, on 4,115 miles of railway, was 218,892l., thus accounted for:—111,185l. for the conveyance of passengers only, 52,708l. for the carriage of goods, and a remainder of 54,9991. for passengers and goods together, not respectively apportioned; being an increase of 13,0871. over the corresponding week of last year, when the mileage was 3,288. The average earnings per mile were 53l., whilst in 1847 they were 63l.

#### DEPRECIATION OF WORKING STOCK.

Capt. Huish has written a very interesting Report on this subject, as it affects the London and North-Western Railway. It is printed for the use of directors only, so that we cannot make extracts from it; but it has suggested to us the following remarks. His paper is, we should observe, a very elaborate and interesting one, and although his view of "real effective value" differs from ours, we nevertheless consider it a very valuable Report.

There is one, and only one sound principle, as our intelligent readers will readily comprehend, for the maintenance of the stock of a railway (which includes the permanent way), viz., that you shall at every period that you divide profit, be able to produce (before you divide) value in stock or money for the sum at which the stock stands in the capital account. If you cannot do this, your profits have eaten some of your capital—in other words, you have been paying dividend out of capital. This rule you will find, at every age of a railway, affords a test of whether the question of depreciation has been fairly dealt with or not. To take a case—a railway, for the first few years of its existence, in the ordinary course of things, charges every new article of stock to capital. Say it has gone on doing this for five years, and then it "takes stock"; it will find that the market value of its stock, even although it may have been kept in decent repair, will be less than its cost price has been; the reason for this being, partly in general deterioration from age, and partly from the greater cheapness with which, generally speaking, any machine can be constructed than it could be at a previous period. If this company, then, has made no allowance for depreciation before declaring its dividends, it has been, to the extent of this deficiency of market value below cost price, declaring dividends out of capital. That is, if the cost price of the stock purchased during the five years has been 100,000%, and when stock is taken, this stock at its market value is only 80,000l., 20,000/., which ought to have been laid aside to meet this depreciation out of revenue, (that is, in accountant's language, written off against revenue to the credit of stock, so that the stock in the capital account would only have "stood at" 80,000/. instead of 100,000/., as it does,) has been divided as profit, which ought not to have been so divided. And if this company wants to set its accounts right, it must now debit revenue with 20,000l. before it makes a dividend, and so reduce the stock in capital account, as that it will stand any test, and be worth, at its market value, the amount at which it stands, viz., 80,000l.

You can easily imagine how railway com-"Government by committees has another incon- panies will persuade themselves that this is not

necessary, by saying the stock is better than ever it was, and so on; but unless it can stand the test and be worth as much at its market value as it stands at in the capital account, this is a delusion. For example, suppose a railway had provided itself on opening with 100 small engines, at 1,000l. each, at the end of five years, even if these engines had been liberally kept up, their market value, from the change of fashion in engines, would probably not be more than 80,000l. To keep up the value, then, of the stock, revenue should now find ten additional new engines, costing say as much as 2,000l. a piece, and unless the railway paid for these entirely out of revenue, and not out of capital (as in whole or part it would be likely to do), it would be pro tanto eating its capital, or paying dividends out of it.

On the Bristol and Gloucester line, a contractor furnished the stock, and at the end of ten years the company were bound to take that stock at its then market value; the contractor, therefore, had to charge at such a rate for the use of this stock as would secure him from any loss at the end of ten years, in respect of the market value of his stock turning out to be less than the cost price had been to him. Call this contractor "capital," and you have a case in point; "revenue" should always pay "capital," as much as it was obliged to pay this contractor.

The stock consequently stands in the capital account at ... £1,462,90

Now, Capt. Huish says it is worth at present market value 1,535,640l. Consequently, that too much has, by this company, in its anxiety to avoid paying any portion of dividend out of capital, been written off against revenue, viz. 72,739l. He then argues, that if the market value is thus in excess, the effective value, or real working value, must be 200,000l. in excess: and this 200,000l. is available for division or transfer to a reserve fund. From this conclusion we entirely dissent, and should object to the introduction of a term which appears to us so ambiguous as "real working value"; cost price and market value we may deal with, but not this third value. To the extent, however, of the 72,739l., we regard Capt. Huish's argument good—assuming his estimate to be correct; but it must be observed that in 1846 the valuers made the market value of the London and North-Western stock 13,629l. less than the amount at which stock then stood in the capital account, whereas Capt. Huish now makes the market value more by 72,739l.; the safety of the conclusion, therefore, entirely rests upon the sufficiency of the valuation.

When you come to apply the results, you should see if you have laid aside enough to meet depreciation of rails, timbers, and so on, before you can talk of transferring from capital to revenue;—at least so it seems to us. On this part of the subject Capt. Huish does not enter.

#### Correspondence.

INDIAN BAILWAYS.

Mr. Chapman's Reply to our Strictures on his first

Letter.

You can hardly have expected that the article on Indian Railways in your last would pass without a reply. Although I seem to have lost with you the credit of the honesty of which "sincerity" is the better part, I cannot but attempt to set myself right by the help of such "talent" as you kindly attribute to me. Whether you have done well in now stripping me of the higher estimation you formerly vouch-safed will perhaps best be seen when the immediate matter of debate is further understood. Let me add,

however, that you are by no means the first to tell the public that I have a deep interest in the result; I have done it repeatedly myself; and fully expecting that some day or other this would be said by an opponent, I have scrupulously given the authority for every material statement I have made. Any one who will be at the trouble may easily follow me step by step, either on the scene of our inquiries, or by means of authentic documents in England, and so ascertain how far I have been faithful to my trust.

Three main points require investigation, for on them our controversy hinges. When these are disposed of we may look briefly to other matters. These points are—1. The probable amount of the goods traffic between Bombay and Callian, and the rates which may be realized from it. 2. The same for the passenger traffic. 3. The propriety of establishing a depreciation fund of 10 per cent. per annum, after payment of all current repairs.

I believe that as to the prospects of the line you have impugned nothing beyond these three particu-I conclude you admit the correctness of the My purpose is merely to rebut your objections. 1. The amount of the goods traffic. You quote a former estimate of mine of 10,833 tons of goods per annum, against my present one of 80,000 tons, from which Mr. Nicholson derived his reduced quantity of 60,000 tons. But you have confounded two very different cases. The earlier and smaller figure is taken from my estimate for the line as extended over the Ghauts; it is the amount of only one-tenth part of the goods believed to pass over two bridges a few miles from Bombay, the other nine-tenths being rejected from that estimate, for reasons but partially applicable to this; and it is only one item among several, the whole amounting to 180,000 tons per annum, the rest of the traffic which goes to make up the latter estimate of 80,000 tons finding place in the other items. Contrariwise, the latter and larger figure is the sole item for goods traffic in the estimate for the shorter line, and gives in one figure the total of that traffic. One is taken at a point where water carriage has already diverted from the land route the main stream of the trade from the interior, and where local transactions have mingled with the remainder; the other is the amount of the trade just before it reaches the coast for embarkation, on the waters of the Tannah estuary, for Bombay. One is taken at Sion and Mahim causeways, chiefly to obtain the small part of the total traffic of the extended line which may be presumed to take this route; the other is taken at and about Callian, in order to ascertain the main amount of goods traffic to be expected on the short line. The estimates could not be interchanged without gross and obvious error. estimates then are not inconsistent; they apply to two different sets of facts. The "influx" of 80,000 tons of goods is not "imaginary" but real; only you have mistaken the place where it is to be found. So far Mr. Nicholson is quite innocent of making the "revenue derivable from the transport of goods twenty-four times too great."

No doubt the question remains, how much of these 60,000 or 80,000 tons which come to the coast will go to Bombay by railway instead of water? The answer to this does not depend wholly on the charge for carriage, as the following extract from a letter now before me, and quoted in my Report, p. 59, will show. "Out of the 5,000 loads" (of cotton despatched from Berar), "2,000 were dropped on the "Some we road " (through difficulties of transit). managed by great exertion to push on to Kutchlee Bunder," (the place of embarkation for Bombay,) "but it arrived too late to be boated across the bay. They were housed there, and by accident burnt in October. We lost some 8,000 rupees. This would not have happened had there been a railway." So much for the facility of this navigation, and your belief in its immunity from inconvenience from the monsoon. Again, sugar-cane grown in the district, on the continent traversed by the railway, is used to a considerable amount in Bombay as an esculent; it is common for the grower to wait for a fair wind and then cut down and embark his canes in haste, in order to prevent loss by their rapid spoiling. And these are mere instances of the inconveniences here as elsewhere attending slow and uncertain carriage.

But even as to the charge; \(\frac{1}{2}d\), per ton per mile is that in the most favourable circumstances, But

the nature of the traffic is such that the most favourable circumstances can rarely exist. In nearly all cases a boat must be hired expressly for the job; and it is a mere chance if the load happens exactly to fill the boat. For the same reason smaller boats must often be used at a proportionately higher rate per ton, in order to avoid the greater gross charge for a boat larger than needful for the cargo. I trouble you very unwillingly with these very obvious considerations, but they are the real answer to your assumption, that because goods are carried in some cases at \$\frac{3}{4}d\$, per ton per mile, that rate is the true one for comparison. Are the Hindoos and Parsess so very indifferent to their affairs as to give 2d. per ton, which they now often do, if they could get their work done for \$\frac{1}{4}.\cong \text{Few who have dealt with them will think so. Is not ready adaptability to the various requirements of commerce one of the great advantages of the railway system? As I have already told you, I adopted, for purposes of estimate, the low rate of 14d per ton per mile, believing, from present facts, that with that rate 80,000 tons of goods, at least, per annum may be carried. Mr. Nicholson prefers reckoning on a larger charge and a smaller weight of traffic. In practice, for several reasons, I should propose to adopt at first the higher charge, and I should not change it without strong probability of advantage. I should fully expect a considerable goods traffic at higher charges than those by boat, just on the same principle as English railways succeed in obtaining it even when canals run alongside, and on which steamboats on the Ganges, according to Mr. Bourne, steamoats on the Ganges, according to Mr. boune, get 4d. per ton per mile, while the common boats of the country do not get 2d. Settle this matter, however, how we may, the magnitude of the passenger traffic renders it of no vital importance to present questions.

Next, then, as to the passenger traffic;—the mis-take you have here made would have been extraordinary if you had known the facts of the case. You say I "exclude from my estimate any credit for a passenger traffic at all,"—while Mr. Nicholson rests "his chief hopes" upon such a traffic. But the estimate from which I excluded the passenger traffic was that of the line as extended beyond the Ghauts; Mr. Nicholson's is only for the line to Callian. The difference in the circumstances is this:--for the long line there are no means of estimating the probable passenger traffic, and Mr. Crawford truly said, any such estimate must be "speculative or conjectural:" but of the passengers on the route close to the short line there is an unusually complete enumeration, lately made, under the authority of Government, for a year, wanting only thirtyseven days. This enumeration, which is strictly applicable to the short line, was not completed when my Report for the long one was drawn up; and if it had been I should not have used it: for the long line stretches 160 miles beyond the point where it was taken. We had no sufficient account of passengers for the long line, and we had no need to guess about them, for our case was strong enough without them; we had a very satisfactory account of them for the short line, and we have here better reasons for relying on them than on the goods. Hence their exclusion from one estimate and their admission into the other: and hence too you will perceive you are not correct in saying that, as to passengers, what is true of the whole design "must be equally true of a fragment." Our case is stronger even than this, for we have taken no credit for passengers coming over Mahim causeway, which are much more numerous than those by Sion, and would doubtless, to some extent, avail themselves of the railway-some at Tannah and others at points nearer to Bombay. Permit me, before I proceed, to point out an injustice you have done my statement of opinions as to the passenger traffic on the long line. You say "it is simply because he did not reckon upon any passengers being carried by the railway that he neglected to estimate their possible number." Yet you quote, from p. 21, a few words, which are part of a sentence, in which I expressly say that I believe the passenger traffic "will be great;" and at p. 49, I have stated it as my own conviction, that railway passengers will be found "as numerous, in proportion to the population, in India as anywhere else, if only suitable fares and regulations be adopted." My reasons for omitting the passenger traffic were the impossibility of estimating how great it would be, and the sufficiency of the case as resting on the goods traffic alone; but you have represented it, contrary to my express words, as founded on a belief that we shall have no passengers at all. I would rather attribute this to want of care than want of candour; but I confess I know not how to avoid the dilemma.

Proceeding now to the proposed charges for passengers, let me first ask how you make the average of them "14d. per head per mile." I can make it but 0.83d. Neither does the average seem to have much to do with the matter. To take it, however, in your own way :- You object to these charges that they are three times higher than those proposed for the other Indian railways, and you suggest, rather than assert, that therefore they cannot be maintained. This is one of the many cases in which facts drawn from one part of India are erroneously applied to another. Many costs are higher in Bombay than anywhere else in India,wages amongst the rest; the more the people earn, the more they are able and would be willing to pay. But apart from that consideration, the rates I suggested to Mr. Nicholson are drawn from a knowledge of the charges now actually incurred by the natives in travelling, and not from any proposed railway charges in other parts of India. I have a statement of the costs of 140 different journeys by natives, the travellers being persons of all ranks, and the journeys of every length and kind: most of these statements were copied verbatim from the daily accounts of the travellers themselves, made at the time, without any purpose but that of the scrupulous register of expenses which many natives keep. The paper is far too long for your columns, but it is much at your service for perusal. I have no doubt you will find it fully support our views. Meanwhile I may say that since a palkee costs 1s. a mile, and often more, we cannot be over sanguine in hoping for 2d. from first-class passengers; and that, as a native takes five days for a journey of 100 miles, and even on foot spends in very economical road expenses nearly 1d. per mile, we think we may safely hope to get 1d. from him by railway.

Believing then that I have shown, even to your own satisfaction, that neither in respect of the goods nor the passenger traffic have you successfully impugned my estimates, as exhibited in Mr. Nicholson's statement, I venture to conclude that much of your article requires no further comment, and that such expressions as "a tottering project, propped by the aid of artificial statistics," "facts tractable on paper," "loose methods of framing estimates," "feats of leger-demain," "apostasies of projectors," "exigencies of a mutilated project," &c. may be allowed to pass, as no longer supported by the needful show of reason.

The third chief point to be considered is that of the depreciation fund. This fund you fix, after Mr. Bourne, at 10 per cent. per annum, all current expenses of repair being first paid. This supposes nothing less than the entire waste and disappearance, notwithstanding all efforts to prevent it, of the whole of the railway and its stock once every eight or nine years, bridges, embankments, cuttings, stations, engines, carriages and all; for in that period your depreciation fund, with interest, would accumulate a sum sufficient to replace the whole. What possible countenance can either English or Indian experience give to so extraordinary an anticipation?

To look, however, a little at details :- First, as to maintenance of way and works,-the current repairs and restorations being already provided for by an annual charge. That climate will not render the maintenance of the earthworks much more costly in India than in England seems pretty clear from the fact that macadamized roads cost, for repair, very little more there than here; if there be any difference, it is attributable to the action not of climate but of wheel carriages on stone less fitted than ours to So also at the close of a heavy monendure it. soon, I saw no remarkable effects of it on the roads in the island of Bombay, which are fully exposed to that periodical visitation of rain and wind. As to the line specially considered in its mechanical character of a railway, the wear and tear, for aught I

* See Major Peat's 'Report on the Roads of the Bombay Presidency for 1833-4,' pp. 16 and 17.

can see, can be little more there than here, and will | probably destroy the substance of the line with no greater rapidity. If then embankments, tunnels and rails will not take to flight every ten years in England, why should they in India? — Stations, bridges and buildings in general may be classed with houses. On your supposition, a house in Bombay should be ready to fall when it is eight or nine years old, and at a dozen years it ought to tumble, without hope or remedy; and yet men seem to build for eternity as much in Bombay as anywhere, and appear about as likely to succeed in it. At any rate there seems reason to conclude that a temple stood there in an exposed situation for 500 years. The ordinary woods of the country, without paint, as well as the mud walls of towns, have stood the climate of the Deccan from a period long prior to our occupation of that part of India; a length of trial which, short as it is, suffices to show that the ten years' theory is untenable. I have a piece of common jungle teak, sent me by Mr. Clark, which is known to have been exposed for thirty years, on a pinnacle of the Ghauts, to the drenching rains of that mountain barrier, and it shows no signs of serious decay. I can hardly think, then, that our buildings will need renewal every ten years.

Finally, as to moving stock. I am at a loss to see what there is to make much difference in the rate of decay between India and England; and I learned, not long since, on the best authority, that on the London and Birmingham line no engines whatever had then been laid aside for age, the oldest even having been so repaired as to be deemed still capable of full duty :- these must then have been running more than eight or nine years. On none of these several parts of a railway then does there seem any necessity for the depreciation fund you require. indeed, a small annual reservation were made for renewing the moving stock, it might not be imprudent; but then, as the value of that stock would probably be not more than a fifth of the whole capital, and its duration (it being duly repaired) would probably not be less than twenty-five years, an easy reckoning shows that a sinking fund of a per cent. per annum on the whole capital would fully answer this purpose. If to this we add as much as would replace the whole capital in a century, or say per cent. per annum, I think we may conclude we have been prudent enough; and this would give us a depreciation fund of per cent. instead of 10. It must be remembered that this is only required to provide for any insensible decay which may remain after all possible repairs have been made and paid for.

I am quite aware that Mr. Bourne has quoted in support of his views an alleged practice by owners of mills and machinery of striking off annually 71 per cent. for depreciation; but the cases are by no means parallel. Machinery may be, and commonly is, more depreciated by the introduction of new machines or variations for the demand in the produce than by the wear or decay of the machinery itself and in establishments of this kind the machinery bears a much larger proportion to the value of the whole stock than it does in a railway. Mr. Bourne's rule would put a bridge or a tunnel, which will probably be much the same in 200 years as now, on the same footing as a power loom or a lace machine, which some advance of invention or caprice of fashion may deprive of half its value to-morrow, Nor is this all :_ the interests of the parties concerned put these two affairs on very different footings. In the case of a private permanent proprietor, it matters little, if he can afford it, what portion of his profits he leaves annually in the concern, through an excessive estimate of depreciation; for whenever his interest is appraized for transference, that value will be found there, in some form or other, among the tangible and enumerated assets, and will be paid for accordingly as capital. But the value of a share to a joint-stock proprietor is a capitalized estimate of the dividend; and if the dividend is unfairly affected by deductions for depreciation, it unfairly affects, in its turn, the actual value of the property in the daily and hourly transfers of it, which it is one object of the joint-stock system to facilitate. An error therefore which may be quite harmless in the case alleged by Mr. Bourne, may work extreme injustice in that to which he has applied it. That this error has already, yet in another way, worked great

iniustice to Indian railway companies, and to ours in particular, is my reason for noticing it at so much length. On the strength of estimates in which this monstrous item figures for more than half the total current cost, the prospects of the lines in Bengal have been attacked, and a question has thereupon been most needlessly raised about the sufficiency of the East India Company's guarantee: this question, and the doubts it has generated, have been transferred by the panic-driven public to our line, without the slightest practical necessity. If an enemy had done this, I could have understood it; but as matters stand I can only most vexedly lament it. After these remarks, it is needless to discuss your estimate of a total annual loss on the line of 16½ per cent. per annum. If, then, you have not shaken Mr. Nicholson's estimate of the amount and receipts of the traffic in either of its branches, and if your item of 10 per cent, per annum for depreciation be not sustainable. you have, in fact, said nothing which affects our case. We shall still venture to say, in the hope of being believed, that even the line to Callian will pay more than enough to relieve the Government of all payment on account of the guarantee.

Quitting the main case, I must now beg brief space for notice of a few incidental matters. The first of these relates to the limit of the annual loss which could be incurred in working the line. This I stated, in accordance with Mr. Nicholson, at 11 per cent. per annum for a line with two empty trains per day. You ask "why should Government be mulcted in an additional it per cent. for so futile a service." The answer is, that this is all the loss which could possibly occur if the service were perfectly futile; but the moment you carry any passengers, or any goods, the loss is no longer 14 per cent., but something less; diminishing, and eventually becoming profit, as your traffic increases. 11 per cent. is the utmost possible loss,—the figure which ought to limit the apprehensions of the Government as to the consequences of an unconditional guarantee. 64 per cent., instead of 5 per cent., is all they would have to pay, even on the extravagant supposition that the line carried nothing at all, not even their own troops, mails or stores.

As to the import of the terms employed by the East India Company in enunciating their offer of a guarantee; without wishing to pursue a question which I think ought never to have been raised, and which can never come into operation, I shall venture so far as to say that the construction put on the terms, as much by the public as by the railway companies, is not unreasonable. The words "guarantee," "dividend," "guaranteed dividend," bear, in ordinary use, exactly the sense which includes an indemnity against all loss;—in restricting the operation of these terms other contingencies are specified. but that of a loss on working is not mentioned :_ and the whole tenor and object of the arrangement requires, for consistency, that a sense be given to each of its component conditions which will secure the shareholder as much against a loss in working, as against a deficiency of profit. The majority of men of business not interested in the railway, to whom the document was submitted, did assert that it was a clear indemnity against loss in working; an eminent legal adviser inclined strongly to the same view; and even the talented editor of the Bombay Times, the earnest supporter of the India House, without knowledge of any such question having been raised at home, says (July 29)-"Should the railway not pay its own expenses, a common case at first, of course the deficiency falls on the shoulders of the Government." Surely then this sense of the document might be adopted without any defect of "quality" of which its supporters need be ashamed, however unambitious you may be "to define it," And I must beg even to bring yourself as a witness In your paper of Sept. 30 you refer in our favour. with pleasure to your early expressed opinion of the "unsatisfactory" nature of the Court's guarantee. Surely if it be "unsatisfactory" you do not blame us for trying to get it amended, nor do you mean seriously to assert that to have amended it would have been, on the part of the East India Company, a concession "which justice and prudence would equally deny." And yet if you do not mean this I cannot guess to what you refer.

As to "a cabal to harass the Government" and

"stratagems of faction," I shall simply say we are not concerned in any course of action to which the words apply. Our "self sufficiency," like that of every English railway company, lies in forming our own opinions, doing our own work, and endeavouring to carry out our views by the best practicable We have approximation to that which we prefer. nothing worse for the railway in Madras than hearty good will, as its supporters very well know; but we cannot see why it should be the only line in India, even for a beginning, nor do we believe its friends wish it. "Risks from slips, inundations and the conflagration or fall of viaducts" supply a capital bit of rhetoric, but what have they to do with a line with only 4-ft. embankments, rock cuttings, and but one bridge of any magnitude or importance in 35 miles?

I have now to thank you for the space which you have allowed me, and which is much greater than I have willingly occupied. I shall have to thank you more heartily still if you will but continue to criticize our undertaking in the present manner; for we shall then get, what we have long sought in vain, a full and public examination of the whole subject.

3, New Broad-street, Oct. 12.

J. CHAPMAN.

#### "A PLAIN UNVARNISHED TALE DELIVER."

Permit me to ask you whether the surest way to stop the succession of panics, which are from day to day pulling down to a still more ruinous price the shares of all the great railway companies, would not be to publish a fair and impartial statement, drawn up by the officers of each company and authenticated by the chairman, of the intentions of their respective Boards :--what branches and new lines, the Acts for which were obtained at a time when proprietors and directors were equally sanguine of success, are to be proceeded with ; and what, now that they have an opportunity of reconsidering their too hasty decisions, are to be abandoned ;-a statement of the amount remaining to be expended on new lines in progress, according to the latest revised estimates ;-what calls will be required to pay for all this work, and the periods at which it will be necessary to make them, taking, of course, the longest possible time to complete lines only just begun, and finishing as quickly as possible those which require a small additional outlay only to bring them into working order? In short, such a statement as a merchant involved by the failure of correspondents abroad would submit to the consideration of his creditors, for them to decide whether they should press their demands and take what share of the wreck they could, or allow the concern to be carried on under their inspection, if there were a prospect of all claims being honourably discharged within a reasonable time. The great body of shareholders, who are already afraid of having invested too large an amount in these undertakings, and still further dismayed at impending calls, would then see their real position,-while the directors themselves would be released from the most disagreeable part of their office, namely, the being exposed to those recriminations from their fellow proprietors for concealing the state of affairs, which, justly or unjustly, will not fail to fall upon them, should the course of action which they deem it advisable to pursue not be attended with entire success. Some such plan will have to be adopted to restore confidence, and the sooner it is done the better for the proprietors of those concerns where there is nothing to conceal, as well as for those whose managers are vainly endeayouring to stave off the evil day by practices which hardly bear being called by their proper name. This would be the true course to disabuse the minds of the public and counteract the exaggerations and mis-statements of interested or misinformed writers. which, if nothing is done, cannot fail to still further depress the value of really good as well as of inferior lines.

Park Village, Oct. 10.

#### RAILWAY REPORTS AND BALANCE-SHEETS.

In the City article of yesterday's *Times* are some excellent remarks on the importance of correct reports and balance-sheets, as a means of restoring public confidence in railway property. Having invested a considerable proportion of my whole property in railways, I am one perhaps of many thousands sensibly alive to this subject, and cannot but hope

that you will lend us your assistance in asserting the right of shareholders generally to a full and correct statement of the nature of their own property. This right is so clear and obvious that it is extraordinary any board of directors should venture to withhold it; but it is still more extraordinary that, even in these times, some of them should be incurring vast and dangerous responsibilities at the risk of the shareholders, without having made the slightest attempt to ascertain their feelings or opinions. For instance, the directors of the York, Newcastle and Berwick have agreed (so say the railway papers) without the consent of the shareholders, to guarantee a fixed rate of interest to the Newcastle and Carlisle and the Maryport and Carlisle, and are still, I believe, negotiating with the North British company for a similar lease. Can anything, I ask, be more preposterous than such a proceeding? What right have they to make such an agreement? especially after the innumerable and great errors which this and other Boards appear to have made in regard to such guarantees. In making these remarks, however, I beg it to be understood that I attach no other blame to boards of directors than that of assuming a power which, legally and reasonably speaking, does not belong to them. I am ready to make every allowance for errors in judgment, especially in cases which are new, and in which of necessity we have but little or no experience. What I ask and require is, that boards of directors put their shareholders in full possession of the state of their own property, and that they incur no further responsibilities in regard to other lines without the express and written consent of their shareholders. Until these demands are accorded or enforced, railway property will be, and A SUBSCRIBER. ought to be, depreciated. Oct. 11.

#### Gossin.

The Prince Consort has been determining, says the Morning Post, and marking out the precise line for the continuation of the Richmond line of the South-Western, through the Home Park to its termination in the town of Windsor. That portion of the Home Park, says the same correspondent, which is intended to be devoted to the completion of this line is the beautiful plain extending under the north terrace of the Castle, from the front of the "Slopes" to the banks of the Thames—a plain which, in "the age of chivalry," was frequently used for tournaments and other chivalric displays. In the reign of Queen Anne it was converted into an ornamental ground, and called "the Maestricht garden," and during the last two or three reigns it has been occasionally used for military reviews. As at present laid out by the proceedings of to-day, it appears there will be two parallel lines of road running diagonally across it, one of them for a continuation of the railway, and the other for a roadway for omnibuses. These parallel roads are to commence on the left or eastern side of the park, about midway between the castle and the river, and extend to the western side into the head of Datchet lane, close by the Hospital of the Naval Knights, near which building the terminus will be

The suggestion which a correspondent made a week or two ago respecting the visit of Prince Albert to Great Grimsby, for the purpose of laying the first stone of the new docks, is, we hear. likely to be acted upon. The ceremony is not to take place until the spring. For many reasons we are glad to know this. The stability of the coffer-dam and earthwork will have passed the test of a winter,—almost the whole, if not the whole, scheme of the railway from Liverpool to Grimsby, will be actually at work. The visitors in the spring are likely to be tenfold what they would be now, and the weather will be more genial. After next Monday the direct railway route to Hull will be through Grimsby, as the Great Northern then purposes to open its loop line.

A train of the EASTERN COUNTIES conveyed secondclass passengers at is, each, and third-class at 4s, to Newmarket and back (a distance of 130 miles), on Tuesday last. It was composed of thirty-one carriages, each containing nearly fifty persons, and the total number conveyed was 1,537. Two of the company's most powerful engines drew it at the average rate of 23 miles an hour, including several stoppages. The experiment has been so successful that the directors have determined to repeat it at the Haughton meeting.

we sted a considerable proportion of my whole property in railways, I am one perhaps of many thousands ment of an Insurance Company, which not only sensibly alive to this subject, and cannot but hope extends its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life and its operations to business common to life an

fire assurance, but also to the assuring the lives of those employed on RAILWAYS and other large works connected therewith; thus putting the benefits of assurance within the power of a numerous class who have hitherto been prevented, from their liability to accident, effecting assurance with any of the existing companies. We shall next week probably enter more into details.

On the first occasion of the assembling of the members of the Liverpool Board of the LONDON AND members of the Liverpool Board of Mr. Stephenson,
NORTH-WESTERN after the death of Mr. Stephenson, the following minute was entered. "The public papers having announced the lamented death of Mr. G. Stephenson, on Saturday, the 12th ult., Resolved unanimously-That the directors embrace this first opportunity of recording the strong sentiments which they entertain of admiration for the talents, and esteem for the character, of a man whose death they cannot but regard as a national loss. The directors, on the present occasion, look back with peculiar interest to their first connexion with Mr. Stephenson. in the construction of the Liverpool and Manchester, to a period now twenty years passed, when he floated their new line over Chat Moss, or cut his way through the rock cutting at Olive Mount. Tracing the progress of railways from that first beginning to the present time, they find Mr. Stephenson foremost in urging forward the great railway movement; earning and maintaining his title to be considered, before any other man, the author of that universal system of locomotion which has effected such mighty results, commercial, social and political, throughout the to Mr. Gibson, of Rome, the duty and privilege of producing a statue that might do honour to their friend, then living amongst them. They did not anticipate that on the completion of this work of art the great original would be no more; that they should be constrained to accept the marble effigy of the engineer in lieu of the living presence of the man. Resolved—That a copy of this resolution be transmitted to Mr. R. Stephenson, with an expression of the directors' earnest sympathy under the irreparable loss which he has experienced."

Strenuous efforts, we hear, have been made for some time past by the residents in the district of the Richmond and Datchet line of the LONDON AND SOUTH-WESTERN to obtain annual tickets. We think the issue of these tickets would at once bring a great increase from the RICHMOND inhabitants, and if the directors could remedy the fraudulent practice of lending subscribers' tickets, there certainly would remain no valid objection to meet in this manner the personal convenience of some of the chief promoters of the

Mr. Hudson has taken possession of the MARYPORT AND CARLISLE; and Mr. R. Cowan, one of the directors, in conjunction with agents, has been engaged in taking stock of the plant, materials, furniture, &c., handed over by the company. This step is taken with the view that the whole line and appurtenances may be restored to the company in the same state as at present, in the event of the success of the opposition to the transfer which it is anticipated will be made in Parliament by some of the shareholders. It is rumoured, says the Carlisle Journal, that Mr. Hudson intends to establish express trains from Whitehaven to London, by way of Newcastle.

The details of the arrangements for leasing the Scottish Central to the southern companies are now finally concluded, and the agreement has been signed by the chairman and other officials of the companies. The Scottish Central is now guaranteed in perpetuity 7 per cent. and half surplus profits by the Edinburgh and Glasgow, the Caledonian, Lancaster and Carlisle and London and North-Western, at which rate it will yield to purchasers at present prices a minimum return of 7t. 18s. per cent.

Messrs. Marvel & Co., of Liverpool, having written

Messrs. Marvel & Co., of Liverpool, having written to the secretary of the CALEDONIAN as to the truth of a rumour affirming the repudiation of the guarantee on their preference stock lately issued, the secretary on behalf of the Board declares "the rumour alluded to is one of the many on these shares all equally unfounded."

The expense of collection and delivery of goods on the LONDON AND NORTH-WESTERN will no longer be published in our Traffic Table; the goods traffic over the whole line being now conducted on the same principle as at the corresponding period of last

The directors of the LANCASTER AND CARLISLE have reduced the dues on the carriage of coal from Carlisle to Kendal from 1\frac{3}d. to 1\frac{1}d. per ton per mile,—on condition that the coal-owners in the east reduce the selling price from 18s. to 15s. per ton. This reduction, says the Carlisle Patriot, has been promptly met by the Blenkinsopp Coal Company, who are prepared to keep up a constant supply for the increased

demand of the Kendal district, even as far as the Milnthorpe station, and to Bo'ness on the Windermere line.

Lord Hatherton and several neighbouring gentry OI Drewood have memorialized the LONDON AND NORTH-WESTERN as to the inadequate accommodation between Stafford and Birmingham; stating that farmers were totally deprived of the means of timely conveyance to markets; and that the trains were too few and started at inconvenient times. Lord Hatherton said he had joined in the demand for further accommodation because he felt confident that it was required for the public; and he had no doubt that when the inconvenience to which the inhabitants of that locality were subjected was made known the company would give it their best attention and remove the cause of complaint. He was fully aware that at the present time economy was necessary in the vari-ous railway departments, but if any company could show that the present rate of fares was insufficient to enable them to supply adequate accommodation to the inhabitants along their line, he, for one, should not object to any extra demand which might really be necessary. It was ordered that a copy of the re-solutions embodying the views of the meeting be sent to the secretary of the London and North-Western.

A correspondent of the Morning Herald, calling himself 'An old London and North-Western Enginedriver,' writes-"About a month since a down goods train ran into some ballast-trucks that were standing on the main line just beyond Leighton tunnel, at which spot the ballast-driver had been shunting his waggons and altering the relative position of them, for about a quarter of an hour. The collision threw some of the waggons across the up line at the mo-ment that the York up mail was approaching. The consequence was a second collision, by which the driver of the engine attached to the York train had his right arm broken and a rib fractured. It was impossible for Ross to prevent his engine running into the waggons, and yet, in addition to his injuries and sufferings, the London and North-Western authorities have reduced him to half-pay."

The quickest passages made by the new steamers of the CHESTER AND HOLYHEAD have been from Holyhead to Kingstown, 3 h. 32 min., and from Kingstown to Holyhead, 3 h. 34 m.

An engine-driver on the Edinburgh and Northern was lately fined two guineas for being drunk while on duty.

The shareholders of the Boulogne and Amiens, through their directors, are seeking redress from the oppressive impost of "police," and for more equitable terms for conveyance of the mails. It discloses the curious fact of 177 policemen being employed, 94 by day and 83 by night, to watch the line between Amiens and Boulogne, 123 kilometres, or 761 English miles in length, at the annual cost to the company of 110,470f. (4,420l.), or 58l. per mile. The remuneration made by the French Post-office authorities for six months is only 85,623f. or (3,245l.)

The Belgian papers state that the mixed commission charged with carrying out a CONVENTION FOR REGULATING TRAFFIO in the French, Belgian and Prussian railways, have concluded their labours, and that their plans will be forthwith brought into operation.

#### Reports of Meetings.

[Continued from p. 728.]

EASTERN UNION.

Oct. 9 .- Special Meeting, London .- Col. BARLOW in the chair.

Mr. FEW, the solicitor, read the abstract of the agreement, providing that the Colchester and Stour Valley shall immediately complete their main line to Sudbury, and the Halstead branch as early as possible after being called upon by the Eastern Union to do so; but that the other branches shall not be proceed with without the consent of the Eastern Union. The lines to be made single, with bridges, culverts, &c., for a double line if necessary. All the lines to be leased to the Eastern Union for 999 years, at a rent of 5 per cent. on the capital to the extent of 83,000*l.*, and 3 per cent. on the residue of the capital, including all interest on loans, &c., to the 24th of June 1849, such rent to take effect from the completion of the line between Hythe and Sudbury, and to increase with the dividends of the B and C Eastern Union shares from 3 per cent. till they reach 5 per cent, when the dividend on the 83,000% is also to increase with those dividends to 6 per cent., beyond which per centage the rent is never to increase. Such agreement to be subject to the approval of the Stour Valley, on or before the 30th of November next.

The CHAIRMAN submitted a resolution confirming

the agreement.
A Shareholder asked whether the new guaranteed Stour Valley stock would have a preference over the Eastern Union 6 per cents.

The CHAIRMAN: Yes; it would be rent, and

therefore must be paid first.

The Shareholder: Then I think we ought to move

an amendment to prevent that.

The CHAIRMAN: We had entered into an agreement with the Stour Valley to lease for 5 per cent., to which we considered ourselves bound; but on dissatisfaction being evinced by our shareholders, we endeavoured to procure a modification, and the present agreement is the result. We have reduced the interest to 3 per cent., except on 83,0002, which is the sum the Stour Valley is entitled to borrow, and which they could not get under 5 per cent. The which they could not get under 5 per cent. The amount of our guarantee will be only 260,000*l.*, a sum

very much less than the original agreement.

Mr. Letchmere wished to ask, as the returns averaged 1,400l. a week, being a slight improvement, what interest the A B and C shares of the Eastern

Union were now paying.

The CHAIRMAN: I am in the same category as the proprietors. The line opened yields 3 per cent. on the cost of that portion.

Mr. LETCHMERE: Is there any project for lessing our line to the Eastern Counties?

The CHAIRMAN: I am happy to say there is not. A Shareholder asked had any calculations been made as to the profits of the Stour Valley line.

The CHAIRMAN: It is expected to be profitable, but our principal reason for leasing it was that it would interfere very much with our own projects. We are already bound by an agreement, and the only question now is whether the shareholders will agree

to the proposed modification.

A Shareholder said the proposed lease would not pay 1 per cent. Why ask them now to agree to a modified agreement if the first was binding?

The Chairman: As to the legality of the original

agreement, that point could be only settled in a court of law, but of its moral obligation he had no doubt. The company had taken advantage of that agreement, had acted upon it in union with the Stour Valley, and gentlemen would hardly approve of their now backing out. Besides, any attempt to get out would involve a suit in equity, and there was no knowing where the expense would end. The present modification had been agreed to by the Stour Valley as an equitable arrangement.

Mr. Letchmerethought that the present was not the proper time for entering into any final and permanent guarantee. He did not think that a company whose profits were only 3 per cent. was in a state to guarantee 5. When the Norwich line was opened there would be a great increase of traffic, and the case would be different. As to guarantees generally, he did not think there was one in ten of them which would hold water. He moved that the question of leasing the Stour Valley line be suspended until three months after the Norwich line had been completed.

The CHAIRMAN said the Norwich line was in a most forward state. A portion to Stowmarket would be open early next year, and he expected that the whole line to Norwich would be open in the course of the summer; that was to say, if the money should be forthcoming. The engineer did not complain of any obstruction on that score. As to their capabilities of paying 3 per cent., it should be recollected that the profits he had stated were only a local traffic, and that when they had a through traffic they might reasonably expect a great increase.

Mr. Letchmere wished still for postponement.

They might get much better terms from the Stour Valley. There were many companies in existence which would be glad to get a per cent. on their paid-up capital.

The CHAIRMAN, in answer to a Proprietor, said

that the Stour Valley payment would not commence until they had opened their line to Sudbury. Mr. Muskett said he had lived for fifty years in

the county through which the line proposed to be leased ran, and his belief was that it never would be profitable. He did not consider they were either legally or morally bound to the proposed agreement, and would therefore support the motion for adjournment.

The original motion was then put, and Mr. UPPLEBY defended it. He denied that they were bound either morally or legally to accept the agreement, but on the part of the northern shareholders, and under all the circumstances, he thought it better to support the

honourable men, but in their collective capacity they

had reduced the property of the shareholders.

After a lengthened discussion, a Shareholder complained that the agreement was now promoted by Mr. Uppleby and the northern shareholders, who had obtained a great number of proxies for the express purpose of opposing it.

Mr. Schofield defended the conduct of the

northern shareholders as the best thing that could be done under the circumstances.

Several Shareholders pressed for adjournment.

Mr. UPPLEBY disclaimed any intention of using his proxies otherwise than according to the intentions of those who had given them.

Mr. RICHARDSON thought that as the proxies had been given for one purpose, and could not be used for another, their owners were at present wholly powerless. He put it therefore to the directors whether, as men of honour, they did not feel bound to accede to the adjournment.

The amendment was then put and negatived by a

how of hands.

Mr. LETCHMERE demanded a poll, but subsequently withdrew his demand, and the original motion (for ratification of the agreement) was put.

An amendment, adjourning the meeting for a fortnight, was put and negatived, and the original motion was agreed to.

#### LEEDS AND THIRSK.

Oct. 7 .- Special Meeting, Leeds .- Mr. H. C. MAR-SHALL in the chair.

The CHAIRMAN said that he had stated the reasons which necessitated the creation of preference shares at the last half-yearly meeting. The proprietors had therefore now been called together to take such measures as they might deem advisable for prosecut-ing the several works, and to determine whether all or any and which of the sums raised, or authorized or any and which of the sums raised, or authorized to be raised, by mortgages, bonds or loans of the company, should be converted into capital by the creation of these new shares, and whether such shares when issued should have any and what preferential or other dividend, and of what amount, and for what time. He proposed a long resolution to the effect that in pursuance of the powers contained in the Companies Clauses Consolidation Act, 1845, the Leeds and Thirsk Act 1845, the Leeds and Hartlepool Act 1846, the Leeds and Thirsk (St. Helen's Branch Deviation) Act 1846, it shall be lawful for the directors, and they are hereby empowered to raise, by creating new shares hereby empowered to raise, by creating new shares upon the terms and conditions and in the manner hereinafter mentioned, and in augmentation of capital, such sums of money as are by the said Acts authorized to be borrowed, provided that nothing herein shall prevent the company from borrowing and re-borrowing from time to time, pursuant to the provisions of the said Acts, any sums of money which they may be entitled to borrow over and above the sums so raised by the creation of new shares; that is to say, that such new shares be of the nominal value of 121. 10s. each, and be denominated Preference Quarter shares. That such preference quarter shares shall be entitled to a dividend at the rate of 7 per cent. per annum for the period of three years, and of 6 per cent. per annum in perpetuity thereafter, on the amount actually paid up. That the new shares be offered to the shareholders now standing registered on the books of the company, in the proportion of one preference quarter share to every 50l. original share of 1845, and extension share of 1846, and one preference quarter share to every two new extension shares of 1848; and that all persons who are not yet registered in respect of their new extension shares of 1848, but who shall become so registered before the 21st of October inst., shall be entitled, in respect thereof, to the like allotment of preference quarter shares as though they had now stood registered in the books of the company for such their new extension shares 1848; that there shall be no allotment of preference quarter shares to any shareholder, in respect of any shares of the company on which any call made before the 1st of May last shall be in arrear on the 1st of November next, unless otherwise ordered, under special circumstances, by an express resolution of the directors; that all new shares thus appropriated shall remain at the disposal of the thus appropriated shall remain at the disposal of the directors, to be issued at such times, on such terms and in such manner as they may consider the most advantageous to the company. That a deposit of 2L per sharebe paid on such new shares on the 1st of November next, and the five next instalments shall agreement.

The amendment was then seconded by a Share-holder, who said that he had no confidence in the holder, who said that he had no confidence in the directors. As individuals they might be very 24. on the 1st of May 1849; 14. on the 1st of June

1849; and the remaining instalments shall be paid at such times as shall be hereafter fixed by the company. That each holder of such shares shall have the option of pre-paying such amount of his capital in respect thereof as is by the preceding condition determined to be paid up, or such further amount as the directors shall determine, and shall thereupon be entitled to interest at the rate of 6 per cent. per annum on the amount for the time being pre-paid; and that in case any shareholder shall neglect to pay any instalment or call due on the preference shares, interest at the rate of 5 per cent. per annum shall be charged on the instalment or instalments so in arrear until the date of payment; and the dividend or dividends due upon all such shares standing in his name shall, for the period during which any instalment shall be in arrear and unpaid by such shareholder, be absolutely forfeited.

Mr. N. Cash seconded the resolution.

A discussion of some length took place as to the precise effect of the various conditions proposed.

The resolution was then adopted, after some opposition from Messrs. J. SHAW and MAUNDER, and the directors were authorized and empowered to do, or cause to be done, all such acts as may be necessary to enable them to carry it into effect.

The CHAIRMAN then proposed to the meeting to determine whether any agreement should be made, confirmed, altered or renewed with the East and West Yorkshire, and on what terms and conditions.

On this latter subject, Mr. SHAW, of Huddersfield, contended that, in the present pressure on the railway interest, it was not desirable to continue the works now in progress, so that the calls for further funds might be lessened. As the proposed modifica-tion of the contract or agreement with the East and West Yorkshire would lead to a still further expenditure of the capital of the company, he would move that the agreement between the Leeds and Thirsk and the East and West Yorkshire of January 1846 be

The CHAIRMAN explained that the proposal to discontinue the works now in progress would be more disastrous to the interests of the proprietors than if they were to proceed as they were now doing. Under the circumstances in which they were placed with regard to the East and West Yorkshire, he did not think it desirable to adopt the proposition of Mr. Shaw

After a long discussion, the meeting was adjourned.

CHESTER AND HOLYHEAD .- Oct. 12 .- The second tubular bridge over the Conway Straits was floated on the pontoons to the piers. The operation, combined with the stupendous machinery employed in the process, attracted large crowds from Conway and other parts of the principality. At precisely 9 a.m., or 50 min. before high-water, Capt. Claxton, R.N., gave the signal, and almost immediately the tremendous freight was seen stealing to its destination. Next to him was Mr. R. Stephenson, M.P., attended by several other engineers. The tube was lifted in about 60 min., commencing at a few minutes past 9 a.m., and with its weight of 1,300 tons was got safely home at a with its weight of 1,300 tons was got safely home at a few minutes past 10 a.m., amid enthusiastic bursts from the by-standers, and a salvo of artillery from the castle walls. The entire operation was effected without the slightest accident. Three cheers were given for Stephenson. Now that the tube has been successfully raised, what is called the "testing process," a most important one, will follow. This will be done by removing the wedges that support the tube upon its cradle, the ends of the tube being left with a hold of 6 ft. each on the stone piers. To ascertain the flexure of the tube, about thirty ballast waggons, each filled with iron, in all 300 tons, will then be placed, and remain for a given period, in the centre. One advantageous feature in the operation centre. One advantageous feature in the operation was that the pontoons in their progress made no water. On Saturday or Monday the whole structure will be completed by means of the hydraulic machines. The masonry will be built in under the corballing, and in another fortnight the trains will run through uninterruptedly. The other tube will then be closed for a short time to allow of the alteration of the rails as as to educate the removal of the tion of the rails, so as to admit of the removal of the transverse timbers, which may be dispensed with, and trusting only to the transverse plates of iron. The first tube has now been subjected to five months' experience in all weathers, and it has been found, from the most minute and delicate observation, that the deflection varies only from the temperature up and down an inch, and although heavy rains have passed daily, the general deflection has not varied from what it was when first brought into use. On the return of the special trains, several hundreds went over the new line from Chester to Shrewsbury, the entire operation being completed before 11 a.m.

GENERAL TELEGRAPH COMPANY. This formpany are now prepared to undertake the execution, y Contract or otherwise, of the most approved ELECTRIC or the TELEGRAPH; particulars of which may be ascertained yapplication at the Company's Temporary Offices.

6, Gray's Inn-square, London.

PRANCIS WHISHAW, General MATH. J. HOLMES, Managers.

MONEY.—Messrs. KILLICK & CO. (mte WINSTANLEY, KILLICK & Co.), SHAREBROKERS, inform their Friends and the Public they make immediate advances to any amount on the deposit of English and Foreign Railway Shares, Scrip and Debentures, upon exceedingly advantageous terms. They also buy and sell every description of Stock at much less commission than usually charged.

DURIFIED BLACK LEAD PENCILS, perfeetly free from grit, may be entirely crased, and will ma tain a firm point. Manufactured by E. WOLFF & SON, No. Church-street, Spitalfields, London.

Church-street, Spitalfields, London.

E. Wolff & Son beg to inform Artists, Architects and Engineers that they are now manufacturing pure plumbago or black lead pencil entirely free from grit, which will easily yield to India rubber, and insure perfect erasure: it possesse great brilliancy and depth of colour, and will maintain a firm point. They have attained to so great a perfection in the manufacture of this lead as to be able at all times to make the same strength and colour when once found to be suitable for any particular purpose, and have produced a pencil fully equal to those used in former years, when they were made of the finest Cumberland lead, which at the present time cannot be obtained sufficiently pure for the best pencils. The following are the degrees: II. HIII, HHM, HIHIH, F, FF, HB, EHB, B, BB, BB, BBBB, W.*

* This pencil is particularly recommended for writing and

* This pencil is particularly recommended for writing and counting-house use,

To be had of Ackermann, 191, Regent-street; Houghton, 30, Poultry; and all respectable Stationers, &c.

E. Wolff & Son have the honour of supplying their Purified Lead Pencils to Her Majesty's Stationery Office, the Bank of England, and various other large establishments.

#### A MIENS AND BOULOGNE RAILWAY COMPANY.

The FOURTH GENERAL MEETING of this Company, called for by Art. 38 of the Statutes, will take place on Saturday, the 28th of October next, at 2 o'clock precisely, Rue de la Chaussée d'Antin,

19 bis.

Sharcholders having at least Twenty Shares, and who have held them for a fortnight previously, should attend at the Offices of the Company of the State of Admission, upon the deposit of the State of the State of Admission, upon the deposit of the State of Admission, upon the deposit of the State of Admission, upon the Lagrage of True will be ledged at the Office of the Company, at Paris, Rue Basse du Rempart, No. 48 bis; at MM. Al. Adam & Co. 8. Boulorne; and with Mr. Whitehead, Agent of the Company, at State of Admission to those Shareholders who desire to obtain them at Boulorne or Lordon.

of Admission to those Snarenousers and users.

Boulogne or London.

This Meeting will have to deliberate on the proposed modification of the Art. 24 and 25 of the Statutes, as to the number of Members that should compose the Board of Directors.

By order of the Board,

AUG. SEGUIER, Secretary.

THE DIRECTORS of the LONDON,
BRIGHTON AND SOUTH COAST RAILWAY COMPANY are prepared to receive TENDERS for the ERECTION
OF MIX COTTAGES and a RANGE of STABLING and CART
SHEDS, at the Brickinger's Arms Goods Station.

Plans and Specifications may be seen at the Engineer's Office, Brighton, on and after Monday, the 23rd inst.; and sealed Tenders, endorsed "Bricklayers Arms Tender," must be delivered to the Secretary at the London Bridge Station, not later than Saturday, the 4th of November next. By order, Dy order,
T. J. BUCKTON, Secretary.

London Terminus, Oct. 17, 1848.

## LONDON, BRIGHTON AND SOUTH COAST RAILWAY.

#### Statement submitted to the Proprietors.

In the present depressed state of railway property, it appears to the Directors to be a duty towards the proprietors to adopt any legitimate means of restoring confidence. For this purpose, they believe that a perfect understanding of the actual state of the company's affairs is the first requisite. Under ordinary circumstances, the next half-yearly Report would have afforded the proper opportunity of publishing such information as might seem desirable. But yearly Report would have afforded the proper opportunity of publishing such information as might seem desirable; but, in the meantime, so much mischief is done by the prevalent impression that there is some mystery in the accounts of railways, and by the partial and exaggerated statements which, in the present temper of the public mind, and in the absence of proper contradiction, find credence, that the Directors believe they shall best consult the interests of the proprietors by at once furnishing them with a short statement, showing, in the clearest and most precise manner, the actual position of the company's affairs, and the extent of actual position of the company's affairs, and the extent of its present and prospective liabilities.

The total capital authorized to be raised by the Acts of the Brighton Railway Company is 7,490,805. The total amount of capital raised up to the 1st of January 1849 will be, as nearly as possible, 6,955,000.; consisting of—

1. Loan capital (1,631,298L, at date of last halfyearly report, since reduced by the proceeds of the 6 per cent. stock applied in extinction

£1,303,000 

£6,955,000

The further expenditure requisite to close the capital account, by the completion of the different works in progress, is so limited, and most of the contracts are so far advanced, that the following estimate is given with a high degree of certainty that it will not be exceeded, unless the increase of traffic should be so considerable as to require an amount of accommodation not at present foreseen.

- 1. Arrears of accounts for works, land, law, &c., on
- in progress, viz.: the Hailsham and Eastbourne and Thames Junction Branch, the Bricklayers' Arms and Portsmouth stations, and materials
- ordered (turn-tables, cranes, sleepers, &c.) . . . Engines ordered, coke ovens, carriage sheds, improvement of Brighton station, &c. 68,800 70,000

#### Or say, including all contingencies, 240,000%.

The only remaining item is the enlargement of the London The only remaining item is the enlargement of the London Bridge station, the amount of which cannot be precisely ascertained, but it is confidently believed that in any event the estimate of 150,000*l.*, given by the Committee of Investigation in May last, will not be exceeded. Taking it at this figure, the extreme limit of further capital required to close the capital account will be :380,000*l.*, against which must be set about 145,000*l.* of available assets, consisting of 60,000*l.* to be paid by the South-Western Railway Company for the purchase of a joint interest in the line into Portsmouth; 15,000*l.* due from the Steam Packet Company; 32,000*l.* of calls in errear, surplus land, engines to be resold, atmospheric materials, &c. This leaves 245,000*l.* of additional capital which will be required during the next two years. As the materials. &c. This leaves 245,000% of additional capital which will be required during the next two years. As the existing shares of the Company are all fully called up (with the exception of a final call of 11, on the 6 per cent. preference shares, appropriated to paying off loans), this additional capital must be raised, either by the creation of fresh shares or by loan, for both of which sufficient powers are contained in the company's Acts. The directors fully expect to be able

to raise the requisite amount without the necessity of creating fresh shares, for the following reasons:—

- 1. The existing mortgage debt of the company is unusually small, being less than one-fifth of the total capital.
- 2. The existing debt falls due at periods which are distri-buted over the next eight years, only about 125,000%. falling due up to the beginning of 1850.
- 3. The security afforded is intrinsically superior to that upon which money is commonly advanced on mortgage, there being, upon the present actual receipts and expenditure, a nett income of at least 260,000% a year, after deducting all expenses, pledged for the payment of 60,000% or 70,000% a year of interest.

For these and other reasons, coupled with the fact of their having recently obtained renewals of several considerable sums which have fallen due, the Directors look forward with confidence to being able to meet the existing liabilities dis-tributed over the next eight years, and to raise the small amount of additional capital required, without creating new

In this case the final capital of the company will consist

of 7,200,000% viz.:-

1. Loan capital
2. Share capital entitled to preferential dividend 1,037,000
3. Ordinary share capital 4,615,000

The actual receipts of the company from traffic and other The actual receipts of the company from traine and other sources of revenue for the first half-year of 1844, were 194,805L; from the 1st of July to the 14th of October, they have been 168,350L; and for the whole of the year 1845, they may be estimated, with a slight margin for the contingencies of traffic during the next two months at

The expenses of every sort for the first half-year amounted

The expenses for the present half-year will not, as far as the expenses for the present nativear will not, as far as the Directors are able at present to ascertain, much exceed those of the first half-year, notwithstanding the larger amount of traffic; and on the whole they feel confident that the total expenditure of the year 1848 will not exceed

This would leave a nett income of about 260,000L, being

This would leave a nett income of about 260,000L, being equivalent to a nett return of nearly 4 per cent. on the whole productive capital which has earned revenue, or of about 34 per cent. per annum on the ordinary share capital, after providing for interest and preferential dividend.

With regard to the probable future return, when the whole capital of 7,200,100L, is expended, it is thought better not to go into any speculative estimate. Some of the proprietors may have seen an estimate lately given in the London Weekly Railway Share List, published under the authority of the committee of the Stock Exchange, by which it is made to appear that a gross annual traffic of 609,340L, or at the rate of 11,718L per week, would be required to pay a dividend of 4 per cent. on the share capital. This estimate is altogether erroneous, for the following reasons:—

1. The working expenses are assumed to amount to 274,203. per annum, whereas the actual working expenses for the year 1848 will be under 190,000. The mistake arises from assuming that the ratio of expenditure to receipt will be the same as it was for the first half-year of 1848, or 45 per cent.; while, in point of fact, the high ratio of expenditure to receipt for the first half-year, when the traffic is small, is counterbalanced by the lower ratio of the second half-year, when the traffic is large; and the general average of the year will only be about 41 per cent. Any estimate of expenditure by per centage is, however, quite fallacious, since by far the greater part of the expenses are fixed, and do not increase in proportion with an increase of traffic, as is shown by the fact above stated, that the ratio of expenditure to receipt on an average traffic of 7,500. per week during the first half-year, is 45 per cent., while on an average traffic of 10,000. per week during the second half-year the ratio is only about 39 per cent. A traffic of 11,700. per week might be carried with ease by ten trains daily each way between Brighton and London in summer and eight in winter, the number now running, and therefore the additional expenditure would be comparatively small. therefore the additional expenditure would be comparatively

2. The total ultimate capital is assumed to be 7,440,930L being 240,000*l*, in excess of what has been already given as the real amount; and the present amount of loan and preferential capital is stated as 2,737,454*l*, instead of 2,340,000*l*, which is the actual figure, from overlooking the facts that only 393,300% of guaranteed 6 per cent, stock has been issued instead of 461,85%, and that this amount is not a creation of new capital, but in substitution for an equal amount of loan capital.

3. The rate of interest on the whole of the loan capital is assumed to be 5½ per cent. This appears unreasonable, looking at the fact that the present average rate of interest paid by the company is only about 4½ per cent, and that only 125,000% of the debt falls due up to the beginning of

1850.

Irrespective, however, of any question as to the rate of interest, which may be a matter of opinion, the positive errors under the first two heads would diminish the nett sum available for dividend, by an amount which may be safely stated as at least equivalent to an additional 1½ per cent. of dividend on the share capital.

The principle and general accuracy of the accounts from which the above statement has been prepared have been already tested, both by the auditors appointed at the

which the above statement has been prepared have been already tested, both by the auditors appointed at the general meeting in April last, and by an independent accountant of experience employed by the committee of investigation. The Directors court the fullest inquiry, and will at any time be prepared to submit the accounts of the commany to any further scrutiny which may be considered desirable by the proprietors.

[8] LAING, Chairman

B. LAING, Chairman. Oct. 19, 1848. Digitized by GOOGIC

SATURDAY, OCTOBER 21.

CLOSING THE CAPITAL ACCOUNTS OF COM-PLETED RAILWAYS .- HOW IS IT TO BE

A principal reason of the distrust which prevails as to the accounts of railway companies, lies in the fact that the capital expenditure debited to the old trunk lines and their first branches, long ago opened for traffic, does not cease, but is continually creeping on. This is the gravamen of Mr. Arthur Smith's charge, mixed up with much tirade, and put forward with much ignorance. For instance, the Great Western Company's capital account, excluding altogether the recently finished or non-completed lines, stands thus :-

	Opened throughout.	Expenditure at the half-yearly balance next after opening.	Expenditure, Dec. 31, 1847.
London to Bristol Oxford branch	June 1841 June 1844	£. 5,877,000 68,000	£. 7,480,000 175,000
1		5,945,000	7,655,000

These lines when opened were 128 miles long, and were on the 31st of December 1847 still only 128 miles long, as before, and yet the expenditure upon them had crept up by 1,710,000l., or 29 per cent.

In the companies now amalgamated as the London and North-Western Company, it will be found that the capital expenditure has increased since their opening by about 4,000,000/... excluding altogether fictitious capital created on new lines undertaken, excluding even the tunnel to the docks at Liverpool. A similar increase, we believe, will be found on any of the old lines.

The London and South-Western Company appears best in this view of the case; for their expenditure on the line to Southampton and Gosport has only increased 200,000% since the opening, or by about 8 per cent. of the expen-

Now, what is the meaning of this extraordinary swelling of the cost of a concern long after it is apparently completed? Why should the capital of a trunk railway, say 128 miles long, have increased by 30 or 40 per cent. at the end of six years after it was opened, although a separate account has been opened for every additional mile of railway subsequently constructed, and the trunk line is now only 128 miles long, as it was before? Why was it not paid for, once and for ever, within the first year after its opening? and if so, how is it possible that its cost should have gone on increasing at this pace? These are the questions continually occurring to shareholders, and which lie at the root of much of the present doubt as to railway property.

What, then, is the explanation of this expenditure? The enemies of railways, Arthur Smith and others, will say, these items are old debts, which were improperly kept back to save appearances, but which, like murders, are out at last. The item of "locomotive stock," one large item of increase, is really the replacement of old stock, which should have been paid out of current revenue. The "stations" are the whole cost of the new and magnificent stations lately built, "capital" having already paid for the old ones, pulled down, and therefore having been charged improperly with two sets of stations. when there is only one to show for the money. These and similar charges will be the mode of explanation which the enemies of Boards will adduce. The directors and their friends will, on the other hand say, look at the arbitrary reduction of fares forced upon us, and the enor-

mously increased quantity of business we have | as they are able to show increased value of stock now to do to earn the same money. This has involved the necessity of a far greater quantity of locomotive stock, and of more extensive accommodation at stations and elsewhere. Look again at the increased mileage of the railways we are working in connexion with the trunk line. To do this we have necessarily increased the accommodation of the trunk line; and this accounts for the swelling of the expenditure on the trunk line. It is an expenditure really chargeable on the new branches, forced upon us by the public.

The latter view is no doubt in the main the true one: still there is probably some truth in the charges of the grumblers; and it appears to us that there never can be any end to the doubts on these points. Until stock is periodically taken on every completed railway, on the principle we have explained as to depreciation of engines (see p. 749)—that is to say, until the locomotive stock, the rails and sleepers, and the stations or other works which are about to be altered or enlarged, are periodically valued—any addition to the value, under any of these heads of expen-diture, being charged to capital, and any deficiency in the value debited against revenue,we shall then, and only then, be sure that for every addition to capital expenditure additional value can be shown.

We have so fully explained our meaning as to engines, that it is scarcely necessary to repeat the application of our rule as to permanent way, material and stations. Permanent way, indeed, speaks for itself; but, to avoid misapprehension as to stations and works, let us take a case :-Say the stations have cost 20,000l, at the time of our periodical valuation in January 1848, and are about to be enlarged and improved. In January 1849, when the periodical valuation recurs, we find 50,000l. has been spent on the station during the year, and the old station has disappeared—the materials having been sold for 5,000l. In this case, the station at D, being in January 1849 worth to value only 50,000l., should only stand at so much in the capital account; and the difference between 20,000l. and 5,000l., the cost of the old station which has been pulled down and the price at which the old material sold, should be charged upon revenue-such old station having been expended or used up since the line opened. In the ordinary way of keeping the capital account, probably this 50,000%, the cost of the new station, less 5,000%. for the old material. would be simply added to the 20,000l. before spent, and the station at D would then stand in capital expenditure at 65,000l., while there would only be a station worth 50,000l. to show for the money.

The principle for which we contend is, in short, the common mercantile principle of taking stock periodically, adopted in every private business; and until this is done on railways, we can have no security that the capitals in revenue accounts are respectively debited with their due burdens; and that we are not either on the one hand, as Mr. Smith says we are doing, paying dividends out of capital, or on the other, relieving capital by subtracting unduly from yearly profits, as Capt. Huish says the London and North-Western Railway Company were on the eve of doing.

This is the only way to close the capital accounts; the mere prohibition to charge any more to the capital of the old lines would be absurd and impracticable, if their receipts and business increased and are to increase, as it should be their constant effort to make them; and as in the nature of things they must, their capital expenditure must also increase-and this increase will be an honest increase or not, down the river id. per ton per mile; although

in trade or not.

INDIAN RAILWAYS.

Our readers, we suspect, by this time have had nearly enough of Indian railways-especially those of them who have been meritorious enough to work through Mr. Chapman's bulky letter, to which we last week gave insertion. We shall venture, nevertheless, to trespass so far upon their patience as to offer a few words of comment upon it; not that we feel any sort of anxiety as to its effect upon the conclusiveness of our former arguments, but because the articulate defence of the project we have condemned affords the fairest opportunity of expos-

ing still more clearly its inutility. The inconsistency we pointed out in our former remarks between Mr. Chapman's original estimate of the causeway traffic of the Great Indian Peninsula Railway and Mr. Nicholson's recent estimate, which is six or eight times as great, Mr. Chapman explains by saying that the estimates did not refer to the same thing, and that therefore their supposed inconsistency is wholly imaginary. "One," says sistency is wholly imaginary. Mr. Chapman, "is taken at a point where water carriage has already diverted from the land route the main stream of trade from the interior, and where local transactions have mingled with the remainder; the other is the amount of trade just before it reaches the coast for embarkation on the waters of the Tannah estuary for Bombay." But granting, for Mr. Chapman's accommodation, that the traffic "taken at the Sion causeway, which is 8 miles north of Bombay," can be properly understood to mean the traffic "just before it reaches the coast for embarkation on the waters of the Tannah estuary," 20 miles distant, still we cannot understand how the aspect of the undertaking is improved by the accepted definition. We have already explained that there is a water communication now subsisting between Callian and Bombay, affording a conveyance for merchandise too cheap to enable a railway to maintain a successful competition in that department of transport; and to discard an ascertained land traffic in favour of a water traffic of eight times the amount, is virtually to relinquish the assurance that the railway will obtain a goods traffic at all. To this conclusion, indeed, Mr. Chapman takes the exception that although under favourable circumstances goods may be carried between Bombay and Callian for 3d. per ton per mile, yet that the favourable circumstances rarely exist; and that since it appears, by the evidence of Mr. Bourne, that the steamers on the Ganges obtain 4d. per ton per mile for the conveyance of goods; and since in this country railways are found to acquire a goods traffic although canals may run alongside,—it is not to be supposed but that a "considerable goods traffic, at higher charges than those by boat," would be realized. Now, although it is no doubt undeniable that English railways, notwithstanding the existence of contiguous canals, succeed in acquiring a goods traffic, yet it is equally certain that in no case presenting large facilities of water carriage is the goods traffic a material source of revenue. We find, indeed, on referring to Mr. Bourne's pamphlet on Indian railways, that the Ganges steamers obtain an average freight, not of 4d., but of  $2\frac{1}{2}d$ . per ton per mile, for the conveyance of periodicals, millinery, opium, and such other costly or perishable articles as would pass between England and India by the overland route; while for the conveyance of the ordinary merchandise of the country, the average charge up the river is about  $\frac{3}{4}d$ . per ton per mile, and

the boats have to make a circuit of some hun- one estimate, it is hard to understand why he dreds of miles through the Sunderbunds, and to encounter the dangers of shoals, kunker reefs, and other impediments of a shifting river, which on the waters of the Tannah do not exist. In the estimates of the East Indian Railwayline exposed to the competition only of a difficult water carriage—the average goods traffic is taken at 1d. per ton per mile; while here, with a much better water carriage, the goods tariff is taken at three times that amount. what end, then, does Mr. Chapman cite the freights obtained by the Ganges steamers in illustration of the prices his railway might expect? Can the miserable village of Callian be supposed to consume 80,000 tons per annum of millinery and periodicals? And if not, how can a rate of water carriage be assumed which only such articles defray? In our eyes, the analogy Mr. Chapman has sought to establish, only adds weight to our estimate of ½d. per ton per mile as the common cost of water carriage between Callian and Bombay-an estimate which the researches even of the authorities Mr. Chapman has called to his aid contribute so singularly to

We turn now to the question of passenger traffic; - and here we find Mr. Chapman to be more ingenious than forcible in his attempts at confutation. In our former remarks we pointed out the singular fact, that while Mr. Nicholson derived most of the revenue of the railway from the passenger traffic, Mr. Chapman, on the contrary, did not take credit for a passenger traffic at all—although Mr. Chapman's estimate referred to the completed line, and Mr. Nicholson's to the fragment terminating at Callian, which it is admitted "would not pay a dividend to be compared with that of the extended project." Mr. Chapman explains the inconsistency by saying that at the time his estimate was formed there were no means of ascertaining the passenger traffic, whereas since that time a very complete enumeration of the passengers has been made, upon which Mr. Nicholson founds his computations. "We had no sufficient account," says Mr. Chapman, "of passengers for the long line, and we had no need to guess about them, for our case was strong enough without them. We had a very satisfactory account of them for the short line, and we have here better reasons for relying on them than on the goods. Hence their exclusion from one estimate, and their admission into the other." Now, if the long line present prospects incomparably superior to the short line, and if even upon the superior line a passenger traffic is not reckoned upon, how can it be supposed that upon the inferior line a more favourable result can be realized? What crowds are they who can need to be perpetually visiting Callian
—a paltry village, with few inhabitants, and
lying out of the track of commerce? It is idle to allege that the passenger traffic was not reckoned in Mr. Chapman's estimate because its amount was not known. If nothing but such an enumeration were needed to justify the acceptation of a passenger traffic as an element of revenue, it is clear Mr. Chapman could have readily supplied the information required; for when he took the goods traffic at the Sion causeway, what was to prevent him from taking the passenger traffic also? Of the salt traffic Mr. Chapman "had no sufficient account," any more than he professes to have had of the passenger traffic; yet he did not scruple, in spite of the deficiency, to supply an estimate of the traffic in salt-though here he has had to resort to a most transcendental process, while in the case of the passenger traffic a simple enumeration is all that was required. Since, then, Mr. Chapman has manifested so much courage in against it. On the one side we have the East

should exhibit so much fastidiousness, in a far easier one, as to decline to reckon the resultunless we suppose the conviction to have been irresistible that the traffic, whether large or otherwise, would not be acquired by the railway. Now, whether this conclusion as regards the passenger traffic be correct or otherwise, it is at least pretty clearly expressed by several of the railway authorities in the Report from which we formerly quoted. It is true Mr. Chapman impugns the fairness of some of our quotations, and accuses us of extracting a meaning from them which they do not properly sustain. In reference to our quotation respecting the uncertainty of a passenger traffic, Mr. Chapman observes, "You quote from p. 21 a few words which are part of a sentence, in which I expressly say that I believe the passenger traffic will be great;" and he proceeds, on the strength of this imputed perversion, to give us the alternative of carelessness or want of candour in our investigations. The misrepresentation, however, does not rest with us, but with Mr. Chapman, whose statement in his Report is, that he believes the passenger traffic will eventually be great-an admission, surely, if words have any meaning, that it will not be great for some time to come. The precise words of Mr. Chapman's Report are as follows:—"If, for instance, we believe, however confidently, that a large passenger traffic will spring up, and form eventually an important and a principal source of profit, still we have no facts adducible in reference to its probable amount. I believe it will be great; but if I had attempted to say how great, I should have had to make conjectures, much more easily objected to than supported." Mr. Crawford's language, which is still more doubtful, runs thus :- "It has been considered advisable, for many reasons, to exclude from the range of investigation all merely speculative or conjectural points of inquiry; and to this end no return whatever from passengers has been calculated on, and the amount of goods traffic looked to is merely that which at present exists. But that passengers in considerable numbers will eventually be obtained and the traffic in merchandise be greatly augmented from causes arising out of the establishment of the railway, the committee, I believe, entertain no doubt whatever." Now we have no difficulty in acquiescing in the opinion here recorded, that, if a railway were established, passengers in considerable numbers would eventually be obtained; but what temptation, we ask, does such a prospect afford to enter upon the commended undertaking? It will matter little to the present generation of shareholders whether a century hence, or even ten or twenty years hence, "passengers in considerable numbers" are carried upon the railway, if in the meanwhile they receive no return for their investments: and that the shareholders in the Indian. Peninsula Railway, in its present dwarfed proportions, are likely to receive any such return in the course of their natural lives, there is no evidence to show.

It is needless that we should follow Mr. Chapman far in his remarks on the subject of depreciation, as we do not feel called upon either to approve or condemn the "monstrous item" of 10 per cent. against which he directs his animadversions. That there must be a considerable depreciation in the case of all railways, and especially in the case of Indian railways, is obvious enough, but whether 10 per cent. is a just estimate of its amount we decline at present to inquire. It appears to us, however, that there is as good authority adduced in support of that estimate as there is at present arrayed

Indian Railway Company, with its managing director, Mr. Stephenson, and its engineers, Messrs. Rendel and Beardmore, and Mr. Bourne; on the other side we have the Indian Peninsula Railway and Messrs. Nicholson and Chapman. Those who judge by the preponderance of authority must each form an opinion for himself as to the side on which the pre-ponderance lies—bearing always in mind the propensity of railway officials to make their case appear more favourable than the facts really justify.

We close these remarks with an extract from an able minute by Mr. Williamson, a director of the Indian Peninsula Railway and late Commissioner of Revenue in Bombay :-

I would submit to the Board the obvious propriety of not venturing on so vast an undertaking, which, without the sought-for extension, does not promise adequate remuneration. I doubt if the returns would ever cover the working expenses. Mr. Chapman, a prudent calculator, observes of the Callian section,—"It would not only be a very unsatisfactory investment, but prove a discouragement to the extension of railways in India." †

What more need be said?

#### Literature.

Railway Rescue: a Letter addressed to the Directorates of Great Britain. By a Traveller of many Lands.

However much we may be inclined to differ from the writer of this pamphlet as to his peculiar remedies for the present depreciation of railway property, we must at least allow that he shows an earnest and honest appreciation of the great interests he is battling for. We give the following extracts, as a specimen, premising that we shall probably notice the engineering recommendations on a future occasion :

"Railway property is at present depreciated from three causes:—First, the general depression of all trade. Secondly, the competition which is springing trade. Secondly, the competition which is springing up between approximating railways. And, thirdly, the large amount of branch lines, made far too expensively, and, worse than all, at the cost of ruinous contests. 'Suckers, and not feeders, I call them,' said a railway shareholder; but this is not quite a true statement. Many are not yet finished, and but few are in full work. They will all ultimately pay, notwithstanding the wasted outlay, because the profits are a growing quantity. But, as a financial calculation, there never was any course more abourd culation, there never was any course more absurd than the senseless oppositions made by almost all the main lines. It originated in the idea that it was possible to monopolize railway transit, forgetting the obvious distinction that canal water is a limited quantity, while railway land is all but unlimited. There is, it is true, a species of railway monopoly quite practicable to establish, and of which I will presently speak, but that is a monopoly peculiar to each railway and not to be abstracted from one by another. Railway directors are at the present time generally in a state of discomfort at their reduced dividends. To remedy this, they propose to make the public more uncomfortable, first, by increasing the fares, and secondly, by diminishing the number of trains. It requires no great amount of foresight to predict that one result of this will be the increase of trains. of horse transit, for it is an assured truth that people will travel as much as possible at their own convenience, and also as cheaply as they can. It is a question for consideration whether it is wise to tempt people to try new modes before every means have been resorted to to diminish the expense of the old. Light trains and frequent are the true policy, and it is worth the inquiry how far friction and gravity may be reduced by new or careful construction; otherwise new lines may be enabled to beat the old ones out of the market. It is a perilous experiment to practise on public patience. But little skill is required to see that the rolling-stock and the rails are mismatched to one another. Any man, woman or child passing through a turnpike on a highway, may observe a table of tolls regulated, or supposed to be regulated, with a progressive advance proportioned to the destructive powers of the vehicles travelling on the road. It is true that they are not graduated by any true perception of mechanical science or skill,

but still they have a perception of the truth that these gentlemen, Mr. Bruce, resident engineer, vehicles vary in their destructive powers, from the several of the railway officials and some ladies, light-sprung pony-gig up to the ponderous unsprung coal-waggon. But railway directors seem wholly coal-waggon. But railway directors seem wholly incognisant of this important truth. Not so, some of the contractors for 'maintenance of way,' who in their early contracts stipulated for the weight of the engines intended to run over the rails; and it is said that such prescient men have tabooed the passage of the locomotive rail-rolling mills of the present day, unless for an extra-consideration."

#### Progress of Works.

GREAT NORTHERN (Lincoln to Peterborough). - Oct. 17.—The opening took place as appointed, and thus was regularly commenced the passenger traffic on the loop line. The first train left the station at Lincoln within a few minutes of the time appointed—7 25 a.m. The scenery from Lincoln to Boston, though flat, is of a very interesting character. Near to Lincoln are the ruins of the Monks' Abbey. Five miles further down the remains of Barling's Abbey can be seen Nine flow from Lincoln the line near can be seen. Nine miles from Lincoln the line passe close to the site of Bardney Abbey, where one of the Saxon kings is buried. Various other ruins of monasteries and religious houses are in the neighbourhood, and 10 miles further on the route to Boston is Tattershall Castle. For the next part the line between Lincoln and Boston was on the banks of the Witham, leaving the river occasionally to avoid the bends in the stream. The train reached Boston at 9 a.m., where a large concourse of persons were waiting its arrival. From Boston, through Spalding to Peterborough, the line is entirely straight. About four miles from Peterborough the line forms a junction with the Syston and Peterborough, and in a manufacture was Peterborough with the London and meadow near Peterborough with the London and North-Western and Eastern Counties lines. The train reached Peterborough at 10 30 a.m., having performed the journey, 623 miles, in something less than three hours. Near Kirkstead the first train for Lincoln was passed, which would arrive there at 9 25 a.m. Five trains will arrive at and depart from Lincoln daily. At Boston they form a connexion with trains to and from Hull by the East Lincolnwith trains to and from Hull by the East Lincolnshire line; at Walton junction with trains to Leicester, Derby, &c.; and at Peterborough to the east and west of England, with the choice of two routes to London, by the Eastern Counties and London and North-Western lines, both of which run trains in conjunction with the Great Northern. In connexion with the Great Northern, and indeed leased to it, there is the East Lincolnshire, which was opened a fortnight ago. By means of this branch, or rather extension, of the Great Northern, the distance between London and Hull is shortened by no less than 40 miles, while the charge for travelling no less than 40 miles, while the charge for travelling between the two places is reduced 33 per cent. On the 14th a large train, heavily laden with ballast, went over the line, in order to see that all was in proper order for the opening. The line was found to be in the most excellent condition. The late rains, which have flooded a large portion of the country through which the line passes, have not in the slightest degree injured any part of it. The visitors to Peterborough left at 4 15 p.m., and reached Lincoln at 7 15 p.m. There were general rejoicings at Spalding on the 18th in honour of the opening of the line; and on the 25th, at Boston, there will be a very grand on the 25th, at Boston, there will be a very grand celebration of the event by a public dinner and a ball, which the chairman and directors of the company and several members of both houses of

Parliament are expected to attend.

NORTH BRITISH.—The opening of the new bridge across the Tweed, says the Berwick Warder, for public traffic cannot but be regarded as an event of the highest importance in the railway world. Whether it be considered in a merely commercial point of view, or regarded as a proof of the advancing skill and science of the age, it is equally calculated to excite our wonder. Temporary though it is, does it not excite unwonted ideas when we see the work of a few months produce what the continued labour of twenty years, two or three centuries ago, hardly sufficed to realize? Another point which lends an additional interest to the opening of this great bridge is the fact that it is the last connecting link in

proceeded at a slow pace from the station along the immense viaduct and the temporary wooden bridge to the North British station, where a large assemblage had been some time waiting. On the approach of the train three hearty cheers were sent forth, accompanied by the booming of three pieces of artillery, planted about the centre of the bridge, and which were frequently fired in the course of the day. Numberless flags were also hoisted at various parts along the line and the bridge. The wooden structure was completed a few weeks ago, as we then stated, only a portion of the adjacent earthen embankment being unfinished. The utmost earthen embankment being unninshed. The utmost exertions have since been made, day and night, to complete this part of the line, in order that the bridge might be opened by the time specified in the contract, and it was so far finished on the morning of the 9th that trains could have passed, a portion of the ballast only being required to be filled in. On the 10th, a train of 14 trucks, laden with coke and drawn by two engines, proceeded from the Tweedmouth station to that of the North British. It is estimated that the total weight of this train could not have been less than 180 tons. Beyond a very slight vibration, the train went as smoothly as upon the firmest rock. Several trains of the same kind, and one or two goods trains subsequently passed over during the day, and the regular passenger trains commenced running along the bridge on the 11th. The opinion of competent and uninterested persons skilled in engi-neering represents the wooden bridge to be perfectly substantial, and in fact as trustworthy as, perhaps more so than, any stone structure. The names of the scientific men under whose direction it has been raised are a sufficient guarantee for its security, and will put at rest any fears that might be entertained. The bridge was commenced in the early part of this year, and the quantity of timber employed in its construction amounts to nearly 300,000 cubic feet. It is 39 ft. wide at the base, contracting gradually as it ascends to 13 ft. in the breadth. The bridge itself is 1,200 ft. long, and the height from the bed of the river is 120 ft. Along the bridge is laid a double line river is 120 ft. Along the bridge is laid a double line of rails, the second line being within those on which the carriages run, and raised 2 in. above them; which plan is adopted to prevent oscillation, and render the passage safe and smooth. The embankment extending from the bridge to the station at Tweedmouth, nearly half a mile long, is estimated to contain 1,100,000 tons of earth. But while every exertion has been made to complete the temporary structure within the specified time, the permanent stone bridge, which is being erected on one side of the other, has already made considerable progress. This bridge, which it is expected will be finished in July next year, will contain twenty-eight semicircular arches, eleven of which, we believe, will be required arches, eleven of which, we believe, will be required to span the river; the others, on the Tweedmouth side of the river, are already nearly finished, and form a continuation of the present wooden erection. The whole length of the stone bridge will be 2,000 ft., and its extreme height, from the foundation to the roadway, 134 ft.

NORTH STAFFORDSHIRE (Crewe Branch).—A fine station has been erected at Stoke, which will be the chief station. It is an elegant building, in the style of the period of James II., and looks more like a baronial residence than a railway station. There is a large hotel attached to it, and the whole forms a very imposing quadrangle. At this station all the officers of the company will be fixed, and the future meetings of the company will be fixed, and the future meetings will be held here. The cost of the station, with the hotel, approaches, &c., will, when wholly completed, be 43,000l. Under the colonnade, in front of the booking-offices, the flooring has been laid with encaustic tiles of very beautiful design. Mr. H. A. Hunt is the architect. By the line lately opened a new route has been acquired from the midland countries to historical and the contribution of the state of the countries. counties to Liverpool and the manufacturing districts of Lancashire. The line, with the exception of the Harecastle tunnel and two smaller ones, has been easy of construction. The Harecastle tunnel is upwards of a mile in extent.

#### Law and Bolice.

RAILWAY RATING.—Oct. 12.—At the HANTS QUAR-TER SESSIONS, the London and South-Western were the respections, the London and South-Western were heard as appellants against a poor-rate in respect of the portion of the Southampton and Dorchester lying in the parish of Ringwood, and which had been rated at 2,400l. It appeared that the London and South-Western had in May 1847 taken a lease of the Dorchester line for 900 were but had shortly after. Dorchester line for 999 years, but had shortly after-wards become the absolute proprietors. That the line was not valuable in itself, but in the hands of the London and South-Western might become a useful adjunct.—The leading railway rating cases were cited, and it was shown how in those cases the Courts had sought to give effect to the provisions of the Parochial Assessment Act, by recognizing calculations founded on the carnings of the railway, minus certain allowances for interest, tenants' profit, working expenses, &c., with the view to ascertain the rent which a yearly tenant would give, and thus to fix the amount of rateable value. For the parish it was contended that as a rent was reserved by the lease, that rent was the criterion of rateable value; but the company met that argument by averring that the circumstances under which the lease was made, and the fact that in equity it had been long since surrendered, deprived the rent of its virtue as an evidence of rateable value. A case was to be sent to the Court of Queen's Bench embodying the facts, and the Court, after argument, ordered the rate to be amended by reducing the rateable value to 300l. 10s., granting a case for the opinion of the Court of Queen's Bench, whether, under all the circumstances of the case, the fact that the appellants had, before the making of the line, consented to guarantee to its promoters 4 per cent. on its assumed cost (500,000l.), which amounted to a rental of 20,000l. a-year, ought in itself to govern the rateable value of the railway.

The Sessions were of opinion that it ought not.
SOUTH-WESTERN.—Oct. 14.—At the WANDSWORTH
POLICE COURT, F. Wright, a labourer employed under Mr. Brassy, the contractor, was charged with neglecting to remove a plank from off the metals, whereby an obstruction was occasioned to an express train.
W. Hodgkinson, engine-driver, stated that on the W. Hodgkinson, engine-driver, stated that on the 10th inst. he left London at 10 17 a.m. with the express train for Southampton. They had reached the Kingston cutting in perfect safety, and before rounding the curve, which is a sharp one, he sounded his whistle, which was a signal to have the line clear, and was always given in sufficient time to effect that object. They had scarcely cleared the curve, however, when the engine met with some obstacle that caused it to jump from the metals, and threw it almost off. As soon as he could stop the engine, which was at the time going at the speed of 42 miles an hour, he examined it to ascertain whether any of the works were broken or disarranged. The life-guard, which is in front of the engine, was broken off, but the engine was not otherwise so much injured as to prevent the train proceeding on its journey. The distance the engine had got after the accident, before he could stop it, prevented him seeing what had caused it; but on passing Kingston station, which is a short distance from the spot, he left information of what had occurred.—Mr. W. Holditch, the station clerk at Kingston, said that being informed of the accident, he went to the spot. It is a deep cutting, where a slip had taken place, and was now being repaired by introducing chalk into the banks, and this chalk, being deposited between the up and down lines, has to be wheeled on a plank, one end resting on a horse-box on the left hand side of the down line, and consequently coming completely across it. He learned on inquiry that the obstacle the express train had encountered was one of these planks, which are 15 ft. in length, about a foot in breadth, and five inches in thickness. He found one of them removed on to the embankment; it had been shattered within 3ft. of one end. The men said the engine had come in conbridge is the fact that it is the last connecting link in that mighty chain of communication extending from the metropolis of the South to that of the North. London and Edinburgh, the capitals of two nations for centuries at enmity, now shake hands with each other. The bridge and viaduct were formally inspected on the 10th, by Capt. Simmons, the Government Inspector. He arrived at the Tweedmouth station by special train from Newcastle about 2 30p.nn., accompanied by Mr. Harrison, the engineer of the line. Shortly afterwards an engine, with a first and second-class carriage attached, containing tact with this plank, and the prisoner admitted that

or be committed for fourteen days; and he thought the foremen of those men should be responsible for the signals being attended to and obstructions removed.—[The magistrate should have inflicted the extreme penalty, as these accidents are by no means unfrequent.—Ed. Rail. Chron.]

London and North-Western (Newton Bridge).— Oct. 16.—The inquest on the body of Mr. H. Sherard was held before the Coroner of Birmingham. The was held before the Coroner of Birmingham. The evidence, as far as relates to the injuries supposed to have caused the death of Mr. Sherard, was the same as that given in the case of Col. Baird (see Rail. Chron. p. 661, et sey.).—Mr. Davis, surgeon, examined the body of the deceased, and could discover no trace of connexion between the accident and the death of the deceased.—The inquest was then adjourned, in order to give the Scottish Central an opportunity of making any statement they might think fit. — Oct. 16.—At an inquest at Blisworth, on the body of R. James, a railway porter, it was proved that the deceased, with three other porters, had been turning a carriagetruck on to a siding, when deceased proceeded to cross the line on the London side. The 5 p.m. goods train was coming in, the driver and fireman could not train was coming in, the driver and inclinational road as see deceased in sufficient time to avoid contact, and the off buffer struck him on the hip and drove him forward about 16 yards. He came in contact with some wagons, and was killed on the spot. Nine wagons and the tender were thrown off the line, waggons and the tender were thrown or the income blocking it up, so that it could not be cleared till after 10 p.m. The jury, after a lengthened consultation, returned a verdict that the deceased came to his death by accident; but at the same time they thought more caution ought to be used by the engine-drivers in approaching or passing stations, particularly one of such extent as Blisworth.

#### THE "STATEMENTS" IN THE TIMES.

The secretary of the London and North-WESTERN has furnished the following notice of the bugbear article in the Times of the 12th inst. :-

Euston Station, Oct. 13.—The statement copied from the Weekly Share List, and republished in the Times of yesterday, being calculated to mislead and alarm the proprietors of this company, I am instructed by the directors to acquaint you that the statement in question, so far as it refers to the London and North-Western, is grossly erroneous; and that there is being prepared, and will shortly be issued to each shareholder, a full and correct account. exhibiting the present position of the company, and all its engagements. C. E. Stewart, Secretary. all its engagements.

In reference to this letter, the Observer savs :-The statement about to be issued will be most elaborate in its character and will consist of about thirty parts, the results of the whole being reduced into one grand statement. It will show that the writer of the analysis to which we have referred has taken the loans of the company at 12,000,000*l*., whereas they are not 10,000,000*l*., and to that amount of loan he has added the whole of the authorized capital for branch lines, and upon that cal-culated the required dividend, whereas a considerable portion of those loans was contracted for the purpose of constructing those branches. That portion, therefore, should have been deducted from the gross amount which he has put down as being required for the branches. It will further be shown that the writer of the analysis in question in putting down the whole share capital above the loan debt at 21,000,000l. has omitted to state that the sum of 6,000,000l. of that capital is uncalled, which when called will go in diminution of the loan debt; and it will be fur-ther shown that the capital for abandoned branches has been added to the analysis, which capital of course will never be required. The writer of the analysis, after making these erroneous estimates with respect to the capital of the company, proceeds to calculate the amount that will be required to pay a certain dividend upon the amount so estimated, and the shows that the probable receipts will not be able to give anything like the existing dividend. He calculates that such a dividend will require a gross receipt of something like 2,350,000L per annum, and in the forthcoming statement it will be shown that this is greatly over estimated. It will also be shown that he has over estimated the necessary income to the extent of not less than 459,85%. which will be demonstrated in the following manner:—

Loan overstated 11 millions, at 41 per cent. Uncalled shares, 6 millions. Shrosphire i nion capital, 3,775,0002, authorized Only to be called .. 660,6007,

3,115,000l. {at } of 7 per cent.} 109,025 Difference Northampton and Banbury (abandoned) 13.333

The analysis referred to shows that there will be required a sum of not less than 25,000l. per week of receipts to pay the required dividend upon the various undeveloped lines; but the forthcoming official statement will show that only 9,552l. per week will be required, and therefore any receipts above that amount will go to augment the dividends.

The City correspondent of the Daily News, after allowing that Mr. Nash's answer is sufficiently exculpatory as regards any interference of, or communication with, the Committee of the Stock Ex-change previously to the publication of the incriminatory tables of the railways, fairly enough adds :-

But it says nothing in vindication of the accuracy of those tables, and, as they evidently appear under the authority of the Stock Exchange Committee the mischief which resulted is not at all extenuated. That mischief was of a very extensive nature. Acting upon what was deemed a high Stock-exchange authority, bankers and others who had advanced upon shares at a certain wide and sufficient margin pressed them upon the market, where security could not be obtained in a rapidly-falling market to re-establish a broader margin, and the property of individuals was thus ruinously sacrificed. Supposing that Wetenhall's official and authorized daily lists were published upon a similar principle, with remarks impugning the validity of one stock value, and crying up another, where would be the security of the public, and how might they come to be victimized by the manœuvres both ways? The Stock Exchange Committee, composed of many honourable men, cannot fail to appreciate the degree in which they might chance to be compromised, and to compromise the public, by lend-ing the authority of their corporate name to any species of publication over which they do not exercise a direct control.

We may add that "Dissections of Accounts" similar to those lately printed in the Weekly Share List were published last year by the same author (Mr. R. L. Nash), but wholly failed in their object, as no one gave credit to such statements coming from a private individual: - which proves that their character, as to being an authority, has been wholly due to their coming again before the public through a quasi undoubted channel.

SHARE PURCHASES .- The Daily News publishes a communication from a correspondent respecting a grievance rather more common than can be wished: —"Cambridge, Oct. 13.—Sir,—I purchased through my broker on the 14th of August, for money, fifteen shares of the London and South-Western, for which I sent the money, and in acknowledging the receipt of it they said they should not be able to get them transferred before the books closed for the dividends, but that they should be done by the end of that month, August; but instead of that I could not get them till the 30th of September. I have not accepted the transfer. Will you inform me if I have any remedy, and what !—J. C. PETERS.—P.S. I bought fifteen shares. They have sent the amount of five in odds and ends, such as sixteen quarters, 10%, &c. Surely that is contrary to my instructions."—We are not able to afford much consolation, says the City correspondent of the Daily News, to Mr. Peters. The transactions in railway shares, and with respect to transfers and registration, are conducted in a very irregular manner, and it would certainly appear to be the duty of the Stock Exchange Committee to place them on a more satisfactory footing. It seems strange that the transfers in question could not be effected before the 30th of September, seeing that the shares were purchased on the 14th of August. The books of the London and South-Western closed for the dividend on, we believe, the 11th of August, and therefore the transfers could not be admitted for registration before the 25th of that month, when the books were again opened. It might then take a week, or two or three days more, to pass the transfers; so that the shares duly registered might, and should, have been in the hands of the buyer in the first week of September. In fact, however, the transfer tickets might have been signed by the jobber or seller at the time of sale and purchase, or shortly afterwards, and delivered, although they could not be perfected by registration before the appointed time for the opening of the stock. The brokers making the purchase might, moreover, have bought in the stock in open market, at the price of the day, against the seller or sellers who failed in delivery according to the agreement for As the purchase was for money, it is evident that the shares should have been delivered by the brokers duly registered, at all events at the very earliest moment after the books of the company were £459,858 re-opened, supposing the buyer did not previously

require the transfer ticket to hold himself until the period for registration arrived. The regulations for the conduct of share business, continues the writer, would appear to be exceedingly loose, if we are to believe in a fact related in respectable quarters, that on one occasion an unsettled and disputed share transaction was held to be binding between the contending parties by the committee of the Stock Exchange at the expiration of twelve months after the date when entered into. We know, moreover, of a case where the purchaser of London and North-Western shares could not obtain the delivery of his shares for several weeks. It should be mentioned, by the way, that when Mr. Peters ordered the purchase of his shares, say the 14th of August, London and South-Westerns were quoted at 42 to 423; on the 30th of September, when they were offered for delivery, the quotations were reduced to 37 to 39. The sellers, not having the shares for delivery, must have speculated on a fall of prices to buy them in, and the object therefore was all possible delay in and the object therefore was an possible delay in completing their bargains. This sort of manœuvre the brokers should have laboured to defeat, as in duty bound to their client. Supposing the client to have purchased for re-sale, on the chance of a profit, his interest was entirely sacrificed in the business.

PROVISIONAL COMMITTEEMEN.—In a number of cases the creditor has no remedy whatever; for since 1845 many of the secretaries are either dead or have left the country; and unfortunately there are a few of the legal profession who prevent the creditors obtaining their money by (for obvious reasons) sheltering the members of the committee. It has come to the author's knowledge that these attorneys have taken the committeemen's quotas to pay the creditors; they have the evidence against them in their possession; and the committeemen and creditor are thus caught by the attorney, and the former is entirely at his mercy. The creditor cannot get justice, and the committeeman is threatened that unless he pays more money the attorney will hand him over to the creditor; and thus the attorney puts money in his pocket, by robbing the committeeman and cheating pocket, by rooting the committeeman and cheating the creditor. Nine-tenths of the committeemen were aristocrats, M.P.s., and gentlemen, some of whom drove to the different railway offices, attended the meetings and pocketed the paltry fees, and helped themselves and their friends to scrip and reserved themselves and their richas to scrip and reserved shares, pocketing the premiums wherever they could be obtained. These are the men who are to be protected, and tradesmen set at defiance.-Judge-mads Law versus the Law of the Land.

# Reports of Meetings.

EAST AND WEST YORKSHIRE JUNCTION. Oct. 13.—Special Meeting, Knaresborough.—Mr. J. DENT in the chair.

The CHAIRMAN said they were aware of their position with the Leeds and Thirsk and other companies, and it was now for the shareholders to seriously consider what was best to be done as regarded their future prospects. The greater portion of their line had been ready for company some time. of their line had been ready for opening some time; other companies were ready to work it, and it would be for the shareholders to determine whether they would advise the Board to try to make terms with those companies, or whether they would raise the additional capital required by that very unpalatable mode of raising capital, viz., by preferential shares.

It was here stated that the Leeds and Thirsk had

jected the agreement of amalgamating with the East and West Yorkshire.

The CHAIRMAN said he had long since lost his onfidence in the Leeds and Thirsk. For the good of confidence in the Leeds and Thirsk. the East and West Yorkshire shareholders, he had last year made an application to Mr. Hudson, and asked his advice with respect to the line. Mr. Hudson gave that advice very freely, and he made an offer of 5 per cent. for the line. The offer, however, was not b per cent. for the line. The oner, however, was not palatable to the shareholders of this company, and having made another application, Mr. Hudson offered 5½ per cent., which was to be paid from the 1st of July 1847. This was also rejected, and it was the July 1847. This was also rejected, and it was the object of the Leeds and Thirsk directors to prevent an alliance with Mr. Hudson, and they seemed to endeavour to make a bargain which they could either ratify or reject.

Mr. Robinson, of Leeds, thought it was a great disgrace to the Leeds and Thirsk refusing to ratify the agreement, and he wished to know whether they could not be compelled to do so.

Mr. Powell, one of the solicitors, answered in the negative. Parliament will not allow amalgamations to take place without the consent of the shareholders, and the Amalgamation Act was passed with that

mence, he for one would be most ready to try.

Mr. Palex did not quite agree with the remarks of
the chairman in the reflections passed on the directors
generally of the Leeds and Thirsk Board. He had
sat on the two Boards, and not agreeing with the
Leeds and Thirsk directors, he thought it most
desirable to resign. His impression was that the
Leeds and Thirsk directors had intended to carry out
the amalgamation, but he agreed with many of the
observations of the chairman that the shareholders
had been ill-treated had been ill-treated.

A Shareholder recommended a statement to be published, in order to show to the shareholders what had taken place.

A deputation to the Leeds and Thirsk directors had drawn up a statement containing the facts of the case, and it was read to the meeting. It is as follows :-

follows:—

In consequence of the absence of so many of the directors of the Leeds and Thirsk, when their Board met on Wednesday, the 36th of September, for the purpose of receiving a deputation from the East and West Yorkshire Junction Board, on the subject of the amalgamation, it has been thought desirable that the substance of what was advanced by that deputation, through one of the members, who was requested to explain their views, should be submitted in writing to the chairman and other members of the Leeds and Thirsk Board. In the commencement it was stated that it was presumed all admitted the validity and sacred-ness, as well as the imperative necessity, of scrupulously adhering to agreements. This being admitted, the reasons why the agreement between the two companies should be carried out might naturally be arranged under three distinct heads, any one of which appeared conclusive.

1. As to the legality of the agreement, and the propriety

neess, as well as the imperative necessity, or scrupinously adhering to agreement. This being admitted, the reasons why the agreement between the two companies should be carried out might naturally be arranged under three distinct heads, any one of which appeared conclusive.

1. As to the legality of the agreement, and the propriety of its taking effect at once. On the 6th of March 1847 are solution was adopted by the directors of the Leeds and Thirsk to the effect that on the 1st of January 1849, or so soon as that portion of the East and West Yorkshire which extends from York to the crossing of the Hay Park-road was opened, or ready to be opened, the Leeds and Thirsk would take that railway at a guaranteed interest of 6 per eent., which resolution was accepted by the East and West Yorkshire Board, whereupon an agreement was entered into between the parties; this agreement, though regularly made, was, however, prevented from immediately taking effect by the resolutions of the House of Commons, declaring that no unfinished line of railway should guarantee another line; but on the 3rd of July 1847, some time after these resolutions had been passed and commented upon, it being supposed this very agreement was not forgotten when they were passed by the house, the agreement itself was signed and mutually exchanged, the seals of the respective companies having been thereto attached; consequently it was admitted by both parties that virtually these resolutions should not affect it; and it was stated by both parties that so soon as legally could be it should be carried out fully and fairly. This intention is also evident by the whole of the intercourse between the two Boards, and also by what passed at the various half-yearly meetings of the two companies, as the reports testify. Reference may be made to the circular of the Leeds and Thirsk to their shareholders in November 1847—to the letter from the Thirsk Company in February 1848 to the East and West Yorkshire, stating that on the passing of the bill, which was fou

Mr. Robinson said if it were possible to make an example of the parties who had caused this inconvenience, he for one would be most ready to try.

Mr. Paley did not quite agree with the remarks of the chairman in the reflections passed on the directors generally of the Leeds and Thirsk Board. He had sat on the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agreeing with the two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and not agree two Boards, and quired to finish the line, either to provide it themselves, or to pay all cost and whatever interest is necessary to obtain it—as see clause 2 in the agreement, and clauses 45, 46 and 47 in the Act, by which all the powers of borrowing money which are possessed by the East and West Yorkshire are to be transferred to the Leeds and Thirsk—in fact, the former Act is to become de facto the Act of the latter company. The line, then, being finished, as stipulated in the agreement, the time has fully arrived for the Thirsk Company to complete their agreement, as they declared in February last so soon as the Act of Parliament gave them the power they would at once do. Now, it has been alleged, that though it has been mentioned in the agreement that the line should be in working order only from Hay Park to last so soon as the Act of Parliament gave them the power they would at once do. Now, it has been alleged, that though it has been mentioned in the agreement that the line should be in working order only from Hay Park to York, yet that it was contemplated the connexion between the two lines would also be complete and the works finished. This is undoubtedly a mistake; the points indicated in the agreement were expressly mentioned designedly and intentionally, with the full knowledge that the heavy works at Knaresborough would not be completed at the time the line should be taken possession of; and the Act of Parliament clearly contemplates that the works would not be finished—(see clauses 30 and 48). Besides, even had it been originally contemplated that the works would be finished, the Leeds and Thirsk directors having, on the 9th of November 1847, in the most decided terms desired that these works should be delayed as much as possible, such directions would both legally and equitably prevent them claiming that they should be delayed as much as possible. Neither can it be alleged that the cost of the line is a bar to the fulfilment of the agreement; this expressly contemplates the parliamentary capital not being sufficient to complete the line; and it is known that almost every line has cost far more than was originally estimated;—perhaps no company would more readily admit this than the Thirsk. Landowners claims, and various other items, unforeseen, will go a long way to account for this increase, which, however much to be regretted, has been unavoidable. The probability of it was foreseen and provided for, and is therefore included in the agreement, which, while it does this, also provided for the opposite contingency—that of the whole parliamentary capital not being required—stipulating, if such were the case, that interest should only be paid upon the money actually expended. Now, as it would have been regarded as a monstrous proceeding for the East and West Yorkshire to have claimed interest upon money whi

as their directors.

2. The agreement should take effect morally, on many considerations. Look at the position of the East and West Yorkshire when the agreement was made, and what other arrangement was prevented from being carried out by it. Mr. Hudson offered to guarantee 5½ per cent. upon 200,000 d. and to provide all surplus capital. Had this offer been accepted, interest upon 200,000, would have been now paid for more than twelve months, and there would have been no trouble about finding any additional capital; consequently, under the most favourable circumstances, this must have been a more advantageous bargain for the East and West Yorkshire than the present one with the Thirsk. This company having in the most indisputable manner prevented the offer of the York and Newcastle being accepted, it behoves them to carry out literally and without hesitation their own agreement. The altered state of the times must not enter into consideration at all; the agreement must be regarded with reference to the times and circumstances in which it was made. Were altered circumstances to interfere with the fulfilment of a bargain, no commerce could be carried on—no purchase would be and circumstances in which it was made. Were altered circumstances to interfere with the fulliment of a bargain, no commerce could be carried on—no purchase would be made—no property would be safe—morals there would be none—in fact, civilisation would be at an end. True it is, times are different now, and were the arrangement to be made de novo, must be considered; but regarding the times when the contract was made, and the advantageous offer which was declined for the sake of accepting it, certainly the agreement was, to say the least of it, quite as good a one for the Leeds and Thirsk as it was for the East and West Yorkshire. The mere delay, more especially if it be involuntary, in the mere formal ratification of a contract, can never for a moment be regarded as annulling or weakening it. The very title of the Act of Parliament—"East and West Yorkshire Junction Amalgamation Act"—the declaration in the preamble of the bill, and the spirit of its various clauses, all show that this course of amalgamation was the leading idea in the minds of the Thirsk directors; their correspondence, conversation and reports all confirm it. This is especially shown in the position they caused the East and West Yorkshire Junction Amalgamation is proposition to Mr. Hudson, when before Parliament for his Boroughbridge Extension Act. Certainly had the East and West Yorkshire to assume of active opposition to the considered that it was virtually a part of the Mr. Hudson, when before Parliament for his Boroughbridge Extension Act. Certainly had the East and West Yorkshire not considered that it was virtually a part of the Thirsk, it never would have done so; it had no direct interest in opposing the Boroughbridge line; on the contrary, if it were an independent company, the extension to Boroughbridge would have been advantageous to it, and it would have been the height of absurdity to have opposed Mr. Hudson. Their policy would have been, if not to have conciliated and acted with them, at least to have remained

neutral between the two parties. Besides this, when Mr. Hudson wished to pay a gross sum for works and the right of passing upon the line, which would have been far more to the interests of the East and West Yorkshire, this was not allowed by the Leeds and Thirsk directors; they stepped in, interfered, and virtually assumed the control of the clause preventing this being accepted, their chairman saying, "No, we will not have a gross payment, it must be by rent." As this could not have been conceded by the East and West Yorkshire, unless it had been supposed the amalgamation was virtually concluded, so it never would for a moment have been expected or assumed by the Thirsk, inasmuch as no honourable mind would, for an instant, have contemplated such an unnatural act of dictation; but considering the amalgamation completed, and the East and neutral between the two parties. Besides this, when Mr. much as no honourable mind would, for an instant, have contemplated such an unnatural act of dictation; but considering the amalgamation completed, and the East and West Yorkshire line to be a component part of the Thirsk, then the proceeding becomes natural, obvious and legitimate. A very strong consideration is, the fact of a great many of the shares liaving been purchased on the faith of the agreement; many, probably a majority, of the holders are so by reason of the agreement. They have relied upon the integrity of the Thirsk directors. Upon this we can speak positively, for those who now form the deputation have themselves, and they know many others, who have supposed that, in point of fact, they were buying the Thirsk preferential shares under the denomination of East and West Yorkshire Junction. The nature of the agreement for joint works, everything connected with the engineer and all his inferiors, the fact of so many of the same persons being directors and shareholders of both companies, all confirm the truth of the impression so universally felt, that the lines were virtually one. The good faith and manner in which the East and West Yorkshire have adhered to the Thirsk certainly shows the idea of identity to have been complete in their minds, and should be reciprocated.

3. Good policy and self-interest call strongly for the

3. Good policy and self-interest call strongly for the immediate fulfilment of the agreement. In the hands of the Leeds and Thirsk the East and West Yorkshire line would Leeds and Thirsk tho East and West Yorkshire line would be a most important branch, not merely for its own traffic, but as a feeder to their trunk line. Before making the agreement the traffic tables and all other information considered necessary by them were submitted to the Thirsk Board—as see the answers to their queries of the 21st of January 1847; the documents were examined by thoir officers, who were satisfied of their correctness; the traffic tables were furnished by Mr. Bayldon, and their correctness confirmed by Mr. Fountain, whose reports were given to the Thirsk solicitors in 1846, and certainly show a revenue by no means to be despised. In connexion with the Thirsk, the working expenses of the line will be very small, while it would materially increase the receipts, and greatly add to the profit of the main line. Not only would it enable them to command the traffic from Bradford and all Airedale, but from the west and the north-west of England to York, Hull, would materially increase the receipts, and greatly add to the profit of the main line. Not only would it enable them to command the traffic from Bradford and all Aircdale, but from the west and the north-west of England to York, Hull, the whole of the East Riding of Yorkshire, and to the east of England generally, by means of the Grimsby and East lines, but it would constitute an excellent and important alternative route from Leeds to York; and as this traffic would be carried as far as Knaresborough by the Thirsk north trains, which must under any circumstances run, without any additional expense, the whole fare thus far would be all absolute profit. Besides, the country itself is a good one, the produce considerable, much of it comes into this district, and will pass by York or Starbeck, according to who has possession of the line; and the mineral traffic must necessarily be very considerable, both in coal and lime. The possession of it would, in case of difference or difficulty with Mr. Hudson in other portions of their line, enable the Thirsk to treat with him upon far more advantageous terms, as here they would be the masters, they would even have acquired a right to a home in his peculiar head-quarters, they could claim accommodation within the York station itself. On the other hand, if the Thirsk do not carry out their agreement Mr. Hudson will have the line. His Boroughbridge Extension Act confers large powers, which it well behoves the Thirsk to look after without delay. If he obtains possession of the East and West Yorkshire line, he becomes master of the key to the positions of the Thirsk. The Thirsk powers to the use of the line, if the amalgamation be not completed, are not well defined, and it would be found a far different thing to be masters and to impose terms, than to be merely permitted, even if they were this, to use the line, not, as is self-evident, to the consulting of their convenience, but to his. How far the terms the two companies have been upon would conduce to their convenience bei

friends or foes they must be.

Lastly, and it is a point which is touched upon with great hesitancy, but it is yet an important element, the character of the Thirsk directors is at stake. Not only the share-holders in the East and West Yorkshire line, but the public also, have regarded, and still do, the agreement as binding in all honour; if then it be not carried out, not merely formally, so as to court its rejection, but entirely and heartly, so as to insure its adoption, by making it a ministerial question, staking their retention of office upon it, a calamity greater than any which has happened to Leeds at any time will have been consummated; for not merely would it be declared that personally they had taught that agreements were not valid, except when it may happen to suit convenience to make them so, but, considering their position in the town, the high and venerated names which more than one of them have inherited, and which are now the property of the public, and all the circumstances of the

case, it would reflect upon the character of the whole town, and Leeds must descend from its high position for honour and scrupulous integrity; indeed, it would be a national calamity, since it would raise suspicions against the faithful character of the English merchant and gentleman, for if such are to be found wanting, who should be faithful found? But such an event, we feel certain, never can or will be allowed to take place; the hesitation may possibly have arisen in part from mutual misconception; possibly also in part from wishing to consider matters fully, and not improably from not having the whole weight of facts impressed upon the mind. But only let the shareholders fully and clearly understand the nature of the agreement—let, if necessary, a circular explaining the facts be at once sent to them, so that proxies may not, in ignorance of the transactions, be sent in under a mistaken notion of what has occurred, and there is not any fear that the contract will be repudiated. No; only let it be known what you, as directors, from time to time, have done, and which the shareholders, by the adoption of the Amalgamation Act, themselves have sanctioned and approved of, and we have no doubt that the agreement will be at once ratified in its full integrity.

The CHAIRMAN looked upon this as a very lucid account of the transactions, and he thought it must have carried so much conviction to the minds of those directors who were so deeply involved in them that they would have scarcely shrunk from the agree-

ment.

Capt. Harrison agreed with the chairman, and thought this company ought not to act as the servants of the Leeds and Thirsk directors any longer.

The CHAIRMAN suggested that in consequence of the Leeds and Thirsk directors having (after tampering with the East and West Yorkshire for the last eighteen months) now cast them off, and thereby prevented the East and West Yorkshire accepting Mr. Hudson's offer of 5½ per cent. from the 1st of July 1847—also the offer of 30,000*l.* towards the joint works, together with a cessation of all liabilities and the taking up of all their unallotted shares—the financial affairs of the company being in an unsatisfactory state—he (the chairman) proposed that the working staff be reduced as low as possible. That those directors belonging to the Leeds and Thirsk Board be requested to retire from the Board of the East and West Yorkshire. One solicitor to be re-

tained, and he to reside in Knaresborough, and the bills at present sent in to be taxed. That Mr. Hudson forthwith be waited upon, and requested to work the line, and to advise as to the appointment of future officers, and completion of the unfinished part of the line. That means be used to compel payment from the Leeds and Thirsk of money expended on joint works, and to negotiate with them to give up the line from Starbeck to Knaresborough. To compel payment of all arrears of calls, and the forfeiture of shares. He also recommended the shareholders not to have recourse to preference shares at a high rate of interest, thereby injuring the original shareholders, and avoid the inconsistency and injustice of attempting to pay 6 or 7 per cent., but to get the line so far as it is ready into work, and wait the probability of getting legitimate funds to complete the remainder.

Mr. NUNNELY was glad to hear the remarks from the chairman, and he very cordially agreed with him as to the propriety of not issuing preferential shares. Some of the shareholders had made an effort to be present at this meeting, because they thought the determination of the Board was to issue preferential shares. If that had been so, he should have moved a resolution opposing their issue. He was of opinion that they ought to endeavour to come to terms with Mr. Hudson, but to take care that the directors did not accept a disparaging offer in these times of depression.

The CHAIRMAN did not believe that Mr. Hudson would offer any paltry terms.

Sir W. INGILEY inquired whether the line had been finished to Hay Park.

A Shareholder: Yes; and it will be in full operation next Tuesday (the 17th).

Mr. Jowett moved that the chairman and certain directors attend Mr. Hudson on the 16th, with full powers to agree as to working the line now finished, and to make any arrangements they may see proper.

Mr. Robinson seconded the motion, which was carried unanimously.

Sir W. Ingilby moved that those shareholders who are defaulters have writs issued against them after two weeks notice.

Mr. Barstow, of Nunthorpe, seconded the motion, which was carried unanimously.

Mr. Jowett moved that this meeting respectfully, but most decidedly, expresses its opinion that, considering the conduct of the Leeds and Thirsk directors and their shareholders, those gentlemen who are at present directors of that company and the East and West Yorkshire be requested to withdraw from that Board, inasmuch as their connexion at that Board will have the appearance of sanctioning the repudiation of the agreement entered into between the directors of the companies.

Mr. Barstow seconded the motion, which was

carried unanimously.

The meeting was adjourned to the 20th inst.

#### COLCHESTER AND STOUR VALLEY.

Oct. 17.—Special Meeting, Colchester.—The meeting was adjourned from the 29th of August last, for considering and approving of a provisional agreement between the directors of this company and the Eastern Union, for modifying the agreement between this company and the Ipswich and Bury St. Edmunds, dated June 8, 1847, for "demising and leasing the Colchester, Stour Valley, Sudbury and Halstead, and certain extension lines to the Ipswich and Bury St. Edmunds, and for working the same,"and if approved for the purpose of confirming the same.—A letter from the secretary, Mr. Bawtree, was read, by which the meeting was further adjourned until the 7th of November, when it will be held in the Town Hall, Colchester, and the whole subject discussed and finally disposed of.

TAW VALE.

Oct. 17.—Adjourned Meeting, London. — Mr. E. Cooper in the chair.

The meeting, which it will be recollected was adjourned from the 31st of August last, to afford the committee of sharcholders then appointed time to negotiate the sale or lease of the line, was still further adjourned, the committee not being prepared to make a full report at present.

[ For further Reports of Meetings, see p. 751.]

## PRICES OF BRITISH STOCKS.

Sat. Mon. Tues. Wed. Thurs. Fri. India Bonds.... 33#36p 34#37p 34#37p 33#36p 36#38p 34#38p Exchequer Bills 34#37p 34#37p 34#37p 34#37p 35#38p 36#39p India Bonds Cons. for Acct.* 841 841 8 843 8 841 8 841 8 841 85

* For account, Oct. 17.

London Stock Exchange, Oct. 20.—The share-mar-ket continues in a gloomy and depressed condition. The York, Newcastle and Berwick shares are still further depressed, it having transpired that this company are about to advance 50,000l. to the Aberdeen Company.

Liverpool, Oct. 19 .- With the exception of London stock (which is firm at present prices) there is no improvement in the share-market, very little business doing, and prices depressed. Sublow, Brothers.

Manchester, Oct. 19 .- We have had a tolerable amount of business in shares during the meen, and not much fluctuation in prices. There appears to be a considerable degree of uncertainty in judging of the future prospects of railway shares generally. To-da we have a flat market. Sam. Grindrod. we have a flat market.

Birmingham, Oct. 19 .- This market has been heavy throughout the week : there seems, however, to be but little disposition to press sales just now

York, Oct. 19 .- We notice several transactions in the old stocks, which are now beginning to come into the market. Mr. Hudson's refusal to accept the North British line in lease upon the terms offered by that company has had a tendency still further to depress that stock.

GRAYSTON & EARLE.

Hull, Oct. 19 .- Since our last the share-market has presented more firmness, which may, in some degree, be attributed to the promised statement of accounts made by the London and North-Western, in refutation of recent attacks upon railway property generally. During the last few days there has been rather more inquiry for North British stock. Local stocks without alteration.

Local stocks without alteration.

Newcastle-on-Tyne, Oct. 19 .- There are scarcely any buyers of shares in our market; consequently prices are merely nominal, but marked lower day by day, as they come from London or other railway markets.

On the other hand, however, there is very little stock —not so much as in ordinary times—offering.

W. FORDYCE.

Glasgow, Oct. 19.-Prices, although still low, have not fluctuated much this week, and a check has been given in the meantime to the prveious rapid progress downward. The willingness shown by the directors of several companies to give every information regarding the present position and prospects of their respective lines has contributed much to prevent the respective lines has contributed much to prevent the further fall in prices, but the disposition to improve is not very decided. The following are to-day's latest transactions:—Caledonian, preference, 40s. dis.; Ayr, 46; ditto, halves, No. 1, 12\frac{1}{2} dis.; ditto, No. 2, 12\frac{3}{4} dis.; ditto, preference, par; North British, thirds, 71s.; Scottish Central, 22\frac{1}{2}.

Buchanan, Aitken & Co.

IRON TRADE.—Glasgow, Oct. 13.—The market for pig iron is quiet, without change; price 43s. to 43s. 6d. for mixed numbers, cash.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible: j MEETINGS.

AMIEN'S AND ROULOGNE.—Oct. 2th. Paris, at 2.
LIVERPOOL, MANCHESTER AND NEWCASTLE-UFON-TINE.—Oct. 24. London Tavern, at 12.
ROUEN AND HAVEE.—Oct. 30. Paris, at 2.

## DIVIDENDS

MIDDLESBOROUGH AND REDCAR .- At the rate of 6 per cent. North Barrish.—12s. 6d. on the 25l. original shares, and 2s. 6d. on the 5l. shares.

# Joint-Stock & Commercial Gazette.

A project called "The Canadian Land and Railway Association" has lately been brought under notice by the medium of public meetings, at which its objects have been explained. The principal object of the association is to form a railway from Halifax to Quebec, and to carry on colonization simultaneously. The shares are to be of 5l. each. It is stated that several noblemen and gentlemen have approved of the scheme.

Steam Navigation. It is rumoured that a party in America are organizing a determined and spirited opposition to the Cunard line of steamers, which splendid ships run between Liverpool and Halifax and New York. The proposed new "Yankee" steamers are to be of about 3,000 tons burden, 290 ft. long, 46 ft. broad, and engines of the power of the Great Brdain; the cost of a single vessel is estimated to be 500,000 dollars, half of that sum to be appropriated for machinery. The subscription list has reached 2,500,000 dollars; and May 1849, it is said, will see two of the vessels on the ocean.

The annual meeting of the STAR Steamboat Company was held at Gravesend on Wednesday. earnings for the year ending 30th of September last, were 18,812*l.* 5s. 1d.; the addition of miscellaneous receipts made the total earnings 19,628*l.* 5s. 3d. The expenditure for the same period was 15,600l. 5s., leaving a balance of 4,028l. 0s. 3d. Out of this sum 3,400l. had been paid to Messrs. Miller & Ravenhill for the new boat Star; and after further payments there remained the sum of 8811. 2s. 7d. A dividend of 5 per cent. was delared, and a vote of thanks passed to the directors.

## Banks.

On Saturday last, at the Liverpool Bankruptcy Court, Messrs. Barton, Irlam & Higginson applied for their certificates. They were opposed on behalf of the Royal Bank of Liverpool, who are large creditors

Digitized by GOOGLE

for advances made to the firm. Mr. Higginson's certificate was refused, but protection granted for

A large box of bullion, consigned to the Bank of Australia, has been received this week from Hobart

The annual meeting of the BANK OF MANCHESTER was held at Manchester on Wednesday last, Mr. G. R. Chappell in the chair. Mr. Farrar read the report, which stated that in June 1847 the nett assets were estimated at 82,151*l*. 3s. 1d., and the liabilities at 20,210*l*. 3s. 10d. The assets at present were, 85,243*l*. 0s. 1d., whilst the liabilities amounted to 18,780*l*. 1s. 4d., leaving a surplus of 66,452l. 1s. 8d., of which 40,603l. 6s. was cash in hand. The report was adopted, and the retiring directors, Messrs. Potter, Spencer and Bannerman, were re-elected. A committee was then appointed to confer with the directors as to what steps should be taken to pay the shareholders a sum of 0s. 8d. per share, and also to consider the propriety of re-establishing the bank as a bank of discount, and

report to a meeting of proprietors the course they would recommend to be pursued.

A new joint-stock bank is about to be started under the title of "The Bank of London," to be managed by an influential and commercial board of directors. Their names are not at present mentioned, but the full prospectus is shortly to be published.

We will recur to it in a future number. Docks.

Last week the Earl of Auckland, accompanied by Mr. Rendel the engineer, inspected the docks and new harbour now in course of construction at Holy-

Mines.

The market for shares has remained this week in much the same state, the transactions being principally confined to Australian, St. John del Rey, and a few other companies. The prices are nominally the same, except Australian, which bring better

An extraordinary meeting of the BLAENAVON Iron and Coal Company was held last week, for confirming the resolutions of a previous meeting authorizing the creation of additional capital to carry on the company. Mr. R. W. Kennard was in the chair, who stated that the directors had been well supported by the shareholders in their proposal, and that notwithstanding the difficult nature of the times, the subscription list towards the new capital had been very numerously signed. After a short discussion the resolutions were adopted unanimously, and the meeting separated after voting thanks to Mr. Kennard, and to one of the local committee, Mr. W. H. West. The works are to be carried on under a new system of management as soon as the capital is provided to enable their commencing, and it is expected that the

company's affairs will then be prosperous.

The Morning Chronicle, of Monday, states that Dutch papers contain ample details respecting the discovery of rich ferruginous soil on the south-east coast of Borneo. The district in which this discovery has been made was ceded many years back to the Dutch. The deposits are chiefly found upon the western declivity of a high hill, which, it is said, has enormous blocks of ore scattered over its surface, some of which are represented to be as large as from 500 ft. to 600 ft., and evidently separated by some violent eruption of the soil. It is evident (so state these papers) that the hill referred to is one mass of metal, as, whether dug from the top or base, the ore is equally found at about a foot, or a foot and a half, from the surface. It is concluded that the mere super ficial layers would furnish material for very extensive operations, whilst the peculiarly favourable position of the place to a port of shipment would render the cost of labour but very slight. The sur rounding wood furnishes abundance of material for either construction or for burning, and would provide excellent material for charcoal for smelting purposes, whilst excellent coal was to be had at a place called Ram, at the cost of only four floring per ton. In the vicinity also abundance of sand and clay suitable for bricks, and also excellent calcareous deposits for lime were to be had. In other places of the island iron has likewise been discovered, but the quality of that referred to, at Tambaja, is considered the richest, and quite equal to the very best Swedish iron. Ac cording to an analysis by a professor of note, it would appear that the ore is one of the purest yet discovered, and belongs to the class of "red-iron." The Dutch East India Government have forwarded to Holland about 7,000 kilogrammes of the ore.

The mining interest of Australia, though the most recent, is perhaps the most important, next to agriculture, of any in that province. The increased home

only produce a direct drain on the labour market (which, it is to be deeply regretted, is so scantily supplied, compared with the demand for labourers.) for miners, labourers, draymen, &c., but they create work for hundreds of skilled workmen in every department of industry.

TO CORRESPONDENTS.

TO CORRESPONDENTS.

A SUBSCRIBER writes from Liverpool, "I have several times heard it asserted that an Act was lately passed, empowering Government, if at any time it should think fit, to PURCHASE all or any of the railways at a price equal to 10 per cent, added to the market price of the shares. Will you, for the satisfaction of a numerous body of your readers, be kind enough to state in your valuable paper, whether such is the fact, or whether any Act has been passed repealing the clauses in the 7 & 8 Vict., cap. 85, of faction the average of milways by the foregrappent?" when the purchase of railways by the Government?"—[We are not aware of any repeal of the enactment; but our readers should understand that the provision applies only to railways to be authorized by Parliament subsequent to the Act.—Ed. Rail. Chron.]

# Railway Chronicle.

LONDON, SATURDAY, OCTOBER 21.

Mr. Hudson has declined to lease the NORTH BRITISH line. The terms perhaps were (just now) too high. The report narrating the late negotiation, together with the last half-yearly report, were received at the adjourned meeting of the North British proprietors. Assent was given to the proposal to hold preference stock in the Aberdeen line, on condition that the sum of 276,000l. be sufficient to complete the works of that line.

The Leeds and Thirsk and the East and West Yorkshire have not come to terms. The agreement is asserted to have been repudiated by the directors of the former company. Authority was accordingly given at the special meeting of the EAST AND WEST YORKSHIRE to treat with Mr. Hudson as to working the line now finished, and the meeting was adjourned.

There is no want of prosperity to the shareholders of the Dublin and Kingstown according to their last received half-yearly report. A successful reduction of fares, the line and stock in good working order, and a dividend of 4 per cent. for the half-year, are not symptomatic of bad times. The loan from the Board of Works is being gradually liquidated.

The opening of the Great Northern, on Tuesday, was an event of considerable importance-both to the present interests of shareholders and to the future prospects and relations of all the lines of communication moving northwards from London. The shareholders in the Great Northern are to be congratulated on the wise management of their affairs, so as to give them at so early a period and so small a cost a beneficial return from the money already called. It was a most wise arrangement to push forward first that part of their line which was most needed, and which at small cost could open up an extended communication. By it a large district, formerly cut off from the benefits of railway communication, is now opened up, and one of the richest producing and agricultural districts of England is brought into connexion with the metropolis, and with the consuming districts which will henceforth be the most profitable market for its produce.

But the view in which the Great Northern opening is of the greatest consequence to the railway community is that of its influence on adjacent railway property. A new and direct line from London to Hull, through the eastern counties of England, that communication being forty miles shorter, is sure to exercise a material influence on all adjacent lines. This influ-

an impetus to all other employments; for they not | Northern traverses from Peterborough by Boston, Louth, Great Grimsby and New Holland to Hull is unparalleled in the cheapness of its first cost, in its straightness and its general excellence. It has cost little to make, and will be economical to work. Possessing the great virtue of a small capital this line can afford to run at cheap fares, and will be remunerative with a revenue and traffic on which more expensive lines could not be worked.

> From London to Hull the traveller can now be carried in a first-class train for 32s., a distance hitherto of above 240 miles: 1 cwt. of fish can be taken from Hull to London in eight or ten hours, for 2s. 6d.; a parcel of 56 lb. is taken from Hull to London at less than 1d. per lb. for the whole distance. These are fares which must invite traffic, and which the smallness of the capital expended can alone justify. It is also plain that a line constructed at such small cost must for the future occupy an important place among the avenues of northern traffic.

> This new line, as at present constructed, benefits very materially the London and North-Western, which carries its traffic as far as Peterborough, and the Eastern Counties. To the latter line, indeed, the Great Northern presents precisely such a northern extension as must always have been contemplated down through the eastern counties. It occupies the place of the line formerly projected in conjunction with the Eastern Counties, under the name of the Cambridge and Lincoln. To the North-Western also, which has a branch extending to Northampton and Peterborough, this is an extension that must materially add to its traffic.

> It is at Peterborough that the Great Northern proper commences. Here there is a station common to the London and North-Western, the Eastern Counties, the Midland, and the Great Northern. The line proceeding northwards follows the Midlands branch for four miles, and then diverges to the eastward. It passes in nearly a straight line, and almost entirely on the surface of the ground, by Spalding to Boston, a distance of 32 miles.

Of the engineering works of this line there is fortunately little to be said. "Happy the nation whose history has no great events, adage which may with equal truth be converted into another, "happy the proprietary whose line has no great works." The line is so straight, the country so level, that unless the engineer had gone out of his way to seek reasons for spending money, he could hardly have found the means of erecting any great work. Happily for the line Mr. Cubitt has not gone out of his way for any such purpose. He has wisely abstained from attempting to distinguish himself at the expense of the company. The few cuts and drains of the country are crossed at a low level on piles and by wooden bridges mainly, which, although well designed and substantial, and attended with some difficulties in construction, do not exhibit anything to attract the attention of the passenger. These timber bridges are specimens of good carpentry and iron bracing, and as such are worthy of Mr. Cubitt's reputation. The line, however, is in good order; its rails are well laid; the rail is a heavy one, about 74 lb.; the line has the peculiarities of Mr. Cubitt's usual works,-triangular sleepers and chairs close together at the joints, with joint chairs of unusual length, and the sleepers placed throughout at three feet spaces. There is a want of sidings at the stations, and the station accommodation seems small; but perhaps this is the safe side to err upon in these days of economy. On the whole, we may congratulate Mr. Cubitt on his having opened this line in a safe, efficient demand caused by the miners has been an important encouragement, and has given a remunerative value to agricultural produce. The mines have also given a stance especially. The line which the Great gratulate the company on the solid and satisfac-

tory state in which their contractors, Messrs. Grissell & Peto, have handed over the works to

From Boston, the line to Hull continues northwards about 33 miles to Louth and about 13 miles to Great Grimsby, where the great deep-water harbour of the East Coast is being formed, under the direction of Mr. Rendel. This part of the line is now the property of the Great Northern, but was originally formed as the East Lincolnshire, and it has been open and worked for a considerable time. This line is remarkable for its straightness, its general excellence, the absence of great works, and the solidity of those which are on the line. Here, it is to be observed, the works are not of wood but of masonry and iron, including a wroughtiron girder bridge, of great span. Our readers will be surprised when we inform them that the whole of this line has been completed at something like 12,000%, per mile, and that this sum includes parliamentary expenses and cost of land, as well as every expense of construction; and further, that it includes large and handsome stations, many of them covered over, which is a great advantage, and well worth the cost. This line, also, is in excellent substantial smooth working condition throughout, and does great credit to the engineer under whose superintendence it has been done-Mr. Fowler, engineer of the Manchester, Sheffield and Lincolnshire

At Great Grimsby the direct line continues by the line of the Sheffield and Lincolnshire Company to New Holland, which is a station directly opposite Hull, and where there is a work of some engineering interest in a timber pier and basin, of judicious construction, for landing the passengers beside the ferry boats which convey them in an easy transit of a few minutes into the town of Hull, and here serve the same purposes which omnibuses usually perform-of delivering the passengers from the station into the town; -and further improvements are in progress to give other facilities at this point. The passenger is thus landed at Hull in nearly 40 miles of less distance and at nearly 20s. of less cost than formerly.

We may congratulate the Great Northern on the general excellence of their working stock of engines and carriages. The former have been got together mainly under the superintendence of Mr. Bury, formerly of the London and North-Western, and of the late Mr. Benjamin Cubitt. It is well for the shareholders that they have started their line under a man of so much eminence and experience as Mr. Bury; for everywhere there are evidences of the management of the line with a prudence and judgment and economy not always displayed in new lines. The carriages are large, elegant, and fitted with every modern improvement. They are chiefly by Mr. Williams, of London, with some also by Mr. Wright. Mr. Pulford, formerly the manager of the New Cross establishment, and afterwards of the London Bridge station, is to be over the working stock, under Mr. Bury, as by a judicious arrangement all the working stock and stores are to be under one managementan excellent plan for efficiency and economy.

On the whole, therefore, we think we may congratulate the Great Northern on having commenced business under favourable auspices; with a small capital in works (as far as this part of the line is concerned) with a sound moving stock, and with an able and experienced set of managers, superintendents and engineers, on whom indeed much of the success of a new line must inevitably depend.

We find that we have incurred the heavy

has alleged, or at least broadly insinuated, that our STRICTURES ON INDIAN RAILWAYS have been furnished by Mr. Bourne. Although we do not conceive ourselves bound to notice any such gratuitous inferences, yet inasmuch as the article in question appears to have for its chief aim the vilification of Mr. Bourne, rather than the confutation of our arguments, we consider it due to that gentleman to state that we have never received any communications from him upon any subject—unless we except a copy of his pamphlet which we noticed about a year ago, and a second edition of the same work, which we lately reviewed. Our contemporary would do well to close his pages against the advocates of a system which appears to rely less upon sound argument than personal abuse.

From our official returns it appears that the amount of traffic for the last week, on 4,166 miles of railway, was 219,083l., thus accounted for:—108,034l. for the conveyance of passengers only, 53,136l. for the carriage of goods, and a remainder of 57,9131. for passengers and goods together, not respectively apportioned; being an increase of 24,168/. over the corresponding week of last year, when the mileage was 3,265. The average earnings per mile were 53l., whilst in 1847 they were 59l.

## THE OCTOBER PANIC.

The state of the share markets for the last fortnight, not in London only, but in every other quarter, has exhibited all the conditions of an absolute panic. The descent of prices has gone on rapidly, from the very low point they had already fallen to at the close of September, to others still more extreme; and although many of the best stocks have now descended to a scale which is below any that has yet been known under similar circumstances, it might not be safe, in the present state of feeling with regard to railway property, to assert that they have yet touched the extreme of depression. Were the causes that affect prices confined to the calculations which determine values in ordinary cases, a reaction, it is clear, must have taken place before now; inasmuch as the abundance of unemployed money, on the one hand, and the rate of interest to be obtained, on the other, from investments in railway stock at the ruling prices, computed by the last and lowest dividends upon it, establish a condition of things in which under common circumstances a large amount of capital must long before now have been attracted by such inviting terms. That this should not have occurred at the present crisis, proves not only the apprehensions and the embarrassments of those who desire to sell or cannot avoid selling, but also the existence of fears and prejudices that deter buyers, at a time when capital is lying idle in great masses, from taking instant advantage of their terrors or necessities. Under such circumstances to predict the term of this exceptional state of things, or the extent to which the decline in railway values may yet proceed before the ordinary laws of traffic once more begin to act upon them, would, as we have said, be somewhat hazardous. One can deal with matters of fact, and with the relations that depend upon them : - the excesses of imagination, whether in over-confidence or in undue alarm, are not to be measured by calculation in their momentary effects. This is a season of panic in railway matters, and while it lasts reason and prudence have little to do with

The question for the present therefore is,how long is such a feverish condition likely to prevail?-what period may be requisite to allow animadversion of our contemporary the Rail- the commotions of mere alarm to subside, and way Record, which in a leading article last week the caution, which now refuses the golden oppor- such a misapprehension at once of the actual

tunities offered, to give place to a more resolute feeling? To give an answer to this question in terms of days or weeks might be too confident; -but there can be no risk in concluding, from all the circumstances of the case, that the continuance of the railway panic, as we now see it, must, from the very nature of things, be limited. In the first place, the number of those who are forced to sell, or who, not being under compulsion, are so imprudent as to throw away their shares by selling now, is not infinite, and must already have been pretty well thinned by the operations that have forced down prices to their actual condition. In the next place, the progress of the decline, at each descending point of the scale, increases the temptation held out to those who are in a condition to buy, while at the same time the mass of capital lying unoccupied is gradually increasing—the present month having added some four or five millions sterling to the amount already floating abroad, by the payment of the dividends on consols and other stocks. Furthermore, the effect of what has been going on of late must be to elicit from the directors of all the great concerns so seriously affected some declaration of a policy calculated to remove the alarm which has now taken full possession of the public mind; and most probably, also, to induce them to silence, by accurate and detailed financial statements, rumours and notions, whether designedly or unintentionally false, which have got currency with regard to the liabilities and accounts of their several companies. It may be greatly regretted that the opportunity of doing both the one and the other in an effectual manner was not taken at the last half-yearly meetings. Had the course which we strenuously advised directors to follow on that occasion been pursued, it is clear that matters would not now have been in their present condition; and it may be added, that it will now be far more difficult to get rid of the consequences of this omission than it would then have been to prevent many of the apprehensions and errors that a want of plain speaking and prudent determination to correct past mistakes has given rise to. However, the thing, it is clear, must now be attempted; unless the presiding Boards are resolved to let matters take their course, and to meet the certain consequences of this supineness. What those consequences must be after another three months like the past, no one need be told. The owners of a property which has fallen in marketable value to the extent of nearly a hundred millions sterling, by the various proceedings of those who have governed it for the last three years, are not likely to remain quiescent under a loss that has affected them so deeply; nor to be content much longer unless they see some vigorous efforts made to remove such of the causes of this loss as are still capable of being dealt with. And they will not unjustly conclude that, if those who now sit at the head of affairs cannot or will not make any such effort, there will be good reason for trying if a change for the better cannot be brought to pass by a change of governors, and certainly no reason whatever to apprehend that any new governors can manage worse for them than those who show themselves unwilling or unable to propose the remedy and relief that every shareholder is now desiring. Without in any way partaking of the panic, we may plainly say that we quite share in this feeling. There is evidently a case that demands some effectual action by directors in the present emergency; - their fitness to preside will be shown by the promptitude with which they comply with this demand; and if they neglect it, or meet it by trivial and temporising means only, the conclusions from

state of things and of their visible duties under it, would plainly be that the railway interest can derive no particular advantage from their continuance in office.

But we shall not suppose directors to be the only class of men concerned in railways, or interested in their condition, on whom their present state makes no impression. It must fairly be expected that they will attempt to allay the apprehensions which could never have risen to their present excess had they better understood the position of affairs a few months since and been prompt in acting upon that understanding. We shall not, at all events, exclude the probability of a general movement in that quarter from our list of causes that may put an end to the actual panic in the railway body until we are convinced, by their own refusal or inability to act, that they are not sufficient to their duties in difficult times.

The London and North-Western, indeed, we are glad to observe, have already publicly announced their intention of shortly laying before their proprietors a complete and accurate view of the capital and liabilities of the company, present and in prospect, in contradiction of some extravagant mis-statements produced by Mr. Nash, of the Weekly Share List, to which, as usual, the Times eagerly opened its columns last week. These it will be easy to refute; their inaccuracy being visible on the surface to all who have the slightest acquaintance with railway figures—so much so, indeed, that some of the most glaring of the errors have already been exposed by an intelligent writer in the City article of the Daily News, and in a decisive paragraph of the Observer, merely from inspection of Mr. Nash's own ex parte misrepresentations. The official document, in which we may expect to see many of the assumed liabilities expunged by authority, will no doubt exhibit a still more important difference between the sinister calculations of the Weekly Share List, and the result of matter of fact. But this is not all that is wanted at present. It will not suffice merely to destroy false impressions as to the financial affairs of the concern; it will also be necessary to relieve the apprehensions of those who are acquainted with its real position, and who from this knowledge have reason to desire something more than the silencing of fallacies, by which they can never have been deluded. In order to this end, it will be expedient not only to show exactly how the company's accounts really stand, but also to exhibit something like a pledge that a course will be pursued henceforward diametrically opposite to that which has made them such as they actually are; the state of the property, after all lies and calumnies respecting it have been disposed of, being by no means such as to satisfy those who have invested their money in it; nor likely to become what they may fairly desire to see it, except by the substitution of prudence for extravagance, of restriction for ambitious enlargement, and by a mode of government in which the appointment to all places of trust shall be determined by merit and competence, not by jobbing or favoritism. This last is no trifling point; and we are assured that the late transactions, which we have already noticed, in the matter of the secretaryship, have done more than the directors may be aware of to dispirit and alarm those who are acquainted with the real state of the company, and who know the importance to its future prosperity of a principle which has visibly been contemned in the nomination to the highest post in the company's service, of a gentleman who cannot possibly have the qualifications requisite for serving it efficiently.

If, as we may sincerely hope, the directors,

not only of the London and North-Western, but [ of other companies, are preparing to come forward, not only with financial statements, but with other such effectual means as are calculated to tranquillize anxiety, and to allow of a settled prospect for the future, their appearance in this way, combined with those circumstances mentioned above, will do much to restore railway affairs to a more natural state; and the season of panic, which is now subverting every fixed notion respecting them, will before long give place to the usual action of the causes that determine value; the effect of which action must obviously be to add something considerable to the quotations of all the stock of the opened lines in the kingdom.

Since the above was written the Brighton and South Coast have issued a statement to their proprietors, (which will be found in our advertising columns,) and the South-Western have also intimated their intention of pursuing a similar course.

## DEPRECIATION OF WORKING STOCK.

To illustrate the principle of depreciation allowance, which we explained in our last number, (as distinguished from the vague, and, as it appears to us, fallacious views current on the subject,) let us regard the case of a railway that has provided itself on opening with 100 small engines, at 1,500/. each, and that at the end of five years the traffic was found to require new and larger engines in order to keep up the receipts of the railway to the amount to which they had attained during the last year, but which receipts under the circumstances of the time (such as lower charges and consequently increased quantity of traffic to make up the same receipts, increased competition as to speed and so on,) could only be maintained by the aid of these new engines-and this is the actual position of most railways at some period of their existence. The 100 original engines if they had been liberally kept up would not now be worth, at market value, more than 125,000%, although they had cost 150,000l. The 10 new engines required at 2,500%. each would cost 25,000%. Is capital or revenue to pay for these 10 new engines? We say revenue, because these 10 new engines only suffice to keep the stock up to the 150,000l. at which it stands in the capital account. Oh, but, say the shareholders clamouring for a dividend, you have now 110 engines in lieu of 100 as you had a year ago, and these 10 additional engines have cost 2,500l. each. Therefore, these 10 new engines should be paid for out of capital, or at any rate, the 1,000% each, by which they exceed the old ones in cost, should go to capital.

This brings the question between us to an issue. We say, if you charge any portion of these new engines to capital you are paying part of your dividend out of capital, and are on the road to ruin. You are doing, in fact, precisely what a landowner does when he pays for the repairs of his farm-houses, not by deducting them from his rent before he spends his income, but by raising the money on mortgage of his estate-a course which must at last make him a bankrupt. Railway proprietors must either consider themselves permanent owners of their railways, or occupiers of permanent owners; then you must keep your property in repair out of your income: if tenants or lessees, then you must keep up the property in such a state as that it shall be able to earn as much when you leave it as when you entered it.

We appeal to any mercantile man, to say if our principle-that of keeping up all the perishable stock of a railway to its market value-is not the only correct one; the only possible way of

and future shareholders of a railway. The practical application of this principle would be to lay aside such an average sum out of revenue as should be sufficient to pay for all replacements, so that the actual stock at the market value, together with the balance in hand, if any, of this fund, should at any moment be equal to the sum at which the stock stands in the capital account.

# Correspondence.

## THE DEPRECIATION MANIA.

It is difficult to account for the great depreciation of railway property as compared with other property in any other way than simply by a want of confidence arising from a continued reduction of dividends. There have been various reasons alleged for this falling off in the dividends: the principal, and perhaps most plausible, is, that railway companies have burdened themselves with too many branches and extensions, which are assumed to be unprofitable. I think this, however, is disproved by the fact, as stated by Mr. Harding before the British Association, viz., that in 1842, when railways connected only large towns, the receipts per mile per annum were 2,4891, as compared with 2,596L, the receipts in 1847, when double the amount of railway was opened, and the fares considerably reduced: thus, whilst we have more miles, we also have more receipts per mile. In the Railway Commissioners' returns for 1848, it is shown that the receipts per mile for the year ending the 30th of June 1843, were 2,442L, for the year ending the 30th of June 1846, were 3,0991., notwithstanding 584 additional miles of railway were opened. The increased prosperity of the country was unquestionably the cause of these increased receipts. Can it therefore be surprising that trade, becoming so completely paralysed as it has been during the last twelve months, should reduce the receipts per mile again to 2,5961.? This strongly points out the fact, I think, that the reduced dividends are due to the commercial depression alone: this will be more apparent, when it is understood that the principal expenses of railway management remain the same, irrespective of the amount of receipts: such expenses, for instance, as the directors, engineers, secretaries, clerks and office expenses, police, rates and taxes, and even maintenance of way, which is generally under contract for a number of years. Therefore any falling off in the receipts reduces only the amount that is appropriated to a dividend without materially reducing the working expenses; and, on the contrary, any increase in the receipts increases the dividend, without materially increasing the working expenses. This shows that we do not require a proportionally large increase of receipts to bring back our usual dividends, as every 1,0001. of receipts above an amount that clears the working expenses is nearly all profit. We may therefore unquestionably rely on a return of our accustomed dividends with a revival of trade. The higher rate of interest paid by railway companies upon their borrowed capital, is, no doubt, an unfavourable feature of the times, though this, I am persuaded, is fully compensated by the cheaper construction of modern railways, and the more economical management generally introduced. The late quarterly returns of the national revenue are so favourable, as compared with the corresponding quarter of the preceding year, notwithstanding the Continental disturbances, that we may hope the worst is past, and that our trade and commerce have already begun steadily to revive.

# BOULOGNE AND AMIENS FORTHCOMING MEETING.

A paragraph in the Daily News of this day states that a deputation of shareholders in the Boulogne and Amiens have had an interview with the London directors, in reference to the condition and prospects. of the line, the whole particulars of which I need not enumerate, as no doubt you will have an account of the transaction; but I cannot refrain from observing that it was said to be the intention of the Board to pay the coming dividend in coupons, to be liquidated at a future date. Now, as the dividend is the result of the surplus receipts, which are of course paid in cash, I cannot understand why the shareholders are to be deprived of the ready money. I suppose the adjusting the account fairly between the present | matter will not pass without some reason being asked

and given for this postponement of payment. But the shareholders ought to have been put in possession of the facts some time before the meeting, to take place on the 28th inst., that they might be in a condition to express their opinion, and, if need be, send their proxies to substantiate it. Perhaps this letter may be of some use in calling attention to the subject. I had no intimation of any meeting of shareholders for the purpose of appointing the deputation, or I should certainly have attended and enforced my views on the matter.

A SHAREHOLDER IN THE LINE. London, Oct. 18.

[The paragraph referred to by our correspondent will be found in another column. We may infer from the friendly relations now subsisting between the two Boards of the Boulogne and Amiens and the South-Eastern, that satisfactory reasons will be given in the annual report for the steps taken in regard to the dividend .- Ed. Rail. Chron.]

#### Gossin.

The ASSURANCE COMPANY which we briefly noticed last week is to be called the "Railway, Commercial and General Life and Fire Assurance Company. David Bartie, the secretary to the late Chelmsford and Bury, has for the past twelvementh been devoting his time and abilities towards the establishment of the company. "The most important feature," says the prospectus, "in connexion with railways and other extensive establishments is the formation of a relief society and benevolent fund. The advantages attending a well-regulated institution of this description, whose operations will be so widely diffused, must be apparent, but its advantages are still greater when it is considered that the class for whose especial benefit it is intended is, more than all others, liable to accident and temporary sickness,—the introduction, therefore, of such a fund, irrespective of the advantages of life assurance, is one of the leading features of this company, and a special table has been prepared which, from the many advantages it holds out, has met with the approval of almost all the leading railway companies. For instance, a person at 20 years of age may, by weekly instalments of 2s., receive a weekly allowance of 15s., besides which a person of the same age may, by the payment of 1s. 11d. monthly, secure to his wife and children or nomines at death, or to himself at the age of 60, a time when from advanced life he may be incapable of work, the sum of 50l. The peculiar facilities for investing savings in connexion with the relief society and benevolent fund afford another advantage to the numerous body for whose benefit this company is particularly intended. They will be allowed to employ their savings at interest, by making payments in advance in respect of their policies.'

Railway proprietors are looking about them on all sides. A memorial from Liverpool and other northwestern towns is to be forwarded to the directors of the London and North-Western and Midland, strongly urging on the attention of directories the following points:—That the capital accounts shall be closed as soon as possible; that all outstanding accounts of the legal advisers shall be examined and paid off; that the engineering expenses shall be placed on the most economical footing; that the expenses at present being incurred in enlarging stations be limited, and that no such further expenses be incurred without the sanction of a majority of the shareholders; also that no further engagements, whether contracts for new lines, the bills of which have been sanctioned by Parliament, and contracts for works not let, be entered into without such sanction. That the rates of fare and tolls of all kinds, not productive of a fair remuneration to the sharcholders for the outlay and risks, be raised at once, and where Parliament has limited the powers of raising such rates and tolls, that application be made next session to enable the directors to raise them to a remunerative scale. That the number of trains be reduced as far as practicable; that the express trains, except one per day at an in-creased rate of fare, be taken off; and that first, second and third class trains be run separately, at a speed in proportion to the amount of fare paid. That the boards of directors be reduced; that one-third posed by the proprietors, and not chosen by the Board.

We understand that the directors of the SOUTH-WESTERN are preparing a statement for the informa-tion of their proprietors, with a view to disabuse their minds on the points which have been so much the subject of recent comment in the Times and other

WESTERN, presented their medical officer in the Manchester district with a set of rich cut-glass castors in a silver frame, as a testimonial of his services at the late accident at Crewe.

Mr. Long has been specially confirmed in his appointment to the secretaryship of the BUOKING-HAMSHIRE. Mr. Long will continue to hold the office of assistant secretary to the London and North-Western, as the two offices will be combined; and all the business of the Buckinghamshire will in future be transacted in Euston-square, to which place the offices of the company will immediately be removed from Parliament-street.—Our correspondent Mr. C. Nash, the detector of the railway robberies, has solicited the office of secretary to the WATER-FORD AND LIMERICK, vacant by the secession of Mr. Saunders.

The various officers of the London and North-WESTERN, the LANCASTER AND CARLISLE and the CALEDONIAN have presented Mr. Braithwaite Poole with his portrait, at a cost of 300 guineas, and a handsome service of plate, consisting of a tea service, coffee service, and a salver. The value of the whole is 200 guineas. The salver bears the following inscription: "Presented, with a tea and coffee service, to Braithwaite Poole, Esq., by the members of the Railway Goods Managers' Conference, as a testimony of the great esteem in which he is held by them, and as an acknowledgment of his valuable services as origina-tor, and for some time honorary secretary, of these

useful meetings. Manchester, August 1848."

The death of Mr. Thomas Gray, of Exeter, has been announced. He was in his 61st year, and died rather suddenly. Had his practical ability been equal to his inventive powers, he would have better deserved the name he acquired of the "railway pioneer.'

A "Second-class Passenger" complains in the Times of a want of light at night in the second-class carriages of the GREAT WESTERN. It may be worth while to notice that the French introduce a lamp over the partition so as to light two compartments at once, thus economically supplying this desideratum.

Singular enough are the uses to which the arches of the SOUTH-WESTERN viaduct from Nine Elms to Waterloo-road have been turned. The Lambeth Infant School has been removed from the old schoolrooms, in Church-street, to the arch numbered 193, facing Doughty-street, which has been fitted up, and seems very well adapted. Some of the licensed victuallers adjacent have converted the arches into drinking-rooms and skittle-alleys. Several of them having commanding frontages in the principal thoroughfares are about to be turned into shops. A popular preacher is also in treaty with the company to convert one of the arches into an Independent chapel; whilst a society of philanthropists have it in contemplation to fit up one or two as shelters for the houseless during the approaching inclemency of the winter. It will be well to suggest that precautions should be taken against fire or other accidents from the occupiers of these arches.

Report says that the leading railway capitalists are setting about to further abridge the time required for the journey between Berlin and Paris, and between Hamburg and Cillev (in the direction of Trieste). It is probable that night trains will be placed on the line from Cologne to Brussels.

The much contested privilege of selling newspapers, &c. at the several stations of the London and North-WESTERN has been let by tender to Messrs. Smith & Son, newsagents, Strand, for the sum of 1,500l. a-year. The Builder declares that the person who has hitherto supplied Euston-station offered the sum of 610l. for a stand at that station alone.

The South Devon have been generally reducing

the salaries of the *employés* on their line.
Upwards of 170 cheap or third-class trains now run daily on the railways of the United Kingdom, extending over more than 4,000 miles. By the Act, it may be borne in mind, it is incumbent upon every com pany to run one such train every day, at 1d. per mile, and at a speed of at least 12 miles per hour. Children under three years are to be taken without charge, and under 12 years at half the charge for an adult. Any neglect of these regulations subjects the companies to penalties, and deprives them of the benefit of the remission of the passenger-tax, which is allowed on all cheap trains.

An instance of the easy modest demands by landowners occurred last week in Glasgow. Mr. Dixon claimed 10,466l. 10s. for a crossing made by the PoL-LOC AND GOVAN. The Sheriff's jury found that the complainant was entitled to nothing.

The completion of the viaduct across the Tweed, will enable passengers to perform the journey to been hitherto impeded by the existence of this and

the other break at Newcastle. More than ordinary indignation, says the Glasgow Scotch Reformer, has been evinced towards officials of the Scottish Central, in consequence of the unwarrantable if not unfeeling conduct they dis-played in declining to convey the Duchess of Sutherland along their line on Sunday the 8th inst., on the occasion of her being summoned to the bedside of her dying parent, the Earl of Carlisle, at Castle Howard, in Yorkshire. On the Friday evening previous, the duchess, who was sojourning at Dunrobin Castle, in Sutherlandshire, received intelligence of the alarming illness of her venerable parent, and summoning her grace with all speed to Castle Howard. She instantly posted off to Montrose, where she arrived on Saturday evening, and taking the last train reached Perth on Sunday morning. The mail train for the south was then preparing for departure, but, to the astonishment of her grace and attendants, on applying for seats in the train, they were told they could not be allowed to travel by it or by any other train on a Sabbath, it being against the regulations of the directors. Letters having been previously sent to all the stations to have engines ready to convey the duchess through, it was imagined some mistake had occurred at Perth, and the secretary was immediately communicated with, and informed of the sorrowing circumstances which compelled her grace's attendance at Castle Howard. The train was delayed for a short time in order to have a final answer from the secretary. But the reply was-No; the rules of the company could not be departed from. The train started with the empty coaches besides the necessary mail carriages, leaving the duchess standing upon the platform actually crying. Nothing was left but to post onwards. She hired a steamer and crossed the ferry on to Edinburgh, which occupied the whole day. By the time her grace reached Castle Howard the Earl of Carlisle was no more. Her Majesty recently, it may be remembered, travelled to London on a Sabbath morning.

The Scottish Railway Gazette, after alluding to the late reports respecting the advances likely to be made for the completion of the Aberdeen, says,—It occurs to us that it would be advisable to push on the works somewhat more rapidly than appears to be contemplated. If the arrangement be expedient and wise, let it be carried out vigorously and at once. instalments ought to be at least doubled, and the works, which are much more advanced than is generally believed, ought to be secured against the effects of the bad season. This will be a real saving in the long run. We would also strongly recommend that the line be completed and opened in sectious—a plan which we have always advocated. A very little effort would push the line on to Laurencekirk; and it would then be easy to carry it to Stonehaven. This would shorten the journey to Aberdeen by coach fully one-half. We do not say that the traffic on this part of the line would be great during the winter season, but the valuable works which are so nearly finished would be protected and rendered available. The more northern portion could be progressing in the meantime, and the whole line might thus be gradually brought into operation in the course of next spring.

At the moment of going to press we have heard of a singular accident that happened this morning to a goods train on the South-Eastern. A bridge near Canterbury gave way at the time the train was upon it, and the whole was precipitated into the river: happily no lives were lost.

A deputation of shareholders in the BOULOGNE AND AMIENS, representing 14,000 shares, waited by appointment on the English directors at the offices of Messrs. Carden & Whitehead, Royal Exchange-buildings, on the 18th. The directors stated that the weekly traffic, considering the present unsettled state of France, was highly satisfactory—that the company had no responsibilities—that the line was worked in the most economical manner, and that there was every reason to believe that when matters were thoroughly settled in France, the line would prove amply remunerative to the shareholders. It would be proposed at the meeting to be held on the 28th, at Paris, to pay the proprietors 4 per cent. per annum on the half-year up to the opening of the line, and 2 per cent, per annum from the opening of the line until the end of the present month. The payments are not to be made in money, but in dividend coupons, which shall be payable at a period to be fixed at the general meeting on the 28th. References were made to some annovances which were given the Boulogne and Amiens by the Great Northern of France in the working of the line; but these would not probably recur. The importance of a cordial understanding between the Boulogne and Amiens and High the control of the Lordon and North- Edinburgh and Glasgow without change of carriage. The importance of a cordial understanding between the Boulogne and Amiens and Capt. Huish, on behalf of the Lordon and North- for the through traffic of the North British has the London and South-Eastern was felt and expressed

by all present; and with a view to bring about a closer connexion between the companies, it was proposed and agreed to that one of the directors of the South-Eastern should join the direction of the Boulogne and Amiens, and that M. Adam, one of the French directors of the latter line, should be made a director of the South-Eastern.

We understand that the CALL on the ORLEANS AND BORDEAUX shares has been responded to, both in Paris and London, beyond expectation. This may be ascribed no doubt, to returning confidence, as well as the punctuality of paying the interest in cash, and facility of transacting the business of the company in this country through their office in London. We commend these particulars to other foreign companies.

The return of the caution-money of the BORDEAUX AND CETTE, amounting to 11,000,000f. (440,000l.), retained by the French Government, is being actively sought. The funds in hand minus the caution-money were returned to the shareholders twelve months ago, when 60f. per share was repaid. It was stated at the meeting held in July 1847, at which the company was declared dissolved, that in the event of the caution-money being returned, it would give 39f. 94c. per share to the shareholders. The French lawyers are of opinion that a perfect case of what they call force majeure was made out, which prevents the powers of forteiture coming into operation.

# Reports of Meetings.

[Continued from p. 744.]

NORTH BRITISH.

Oct. 18 .- Adjourned Meeting, Edinburgh .- Mr. J. LEARMONTH in the chair.

The CHAIRMAN suggested that the directors' halfvearly report (see aute, p. 670) should be read first

and then the report of the committee. The SECRETARY accordingly read both reports. The report of the committee, detailing the steps taken by them, stated that the directors had on the 14th of September last appointed the chairman and deputychairman, and Messrs. Turnbull, Cadell and Horne, a committee to carry out the negotiation. They immediately wrote to Mr. Hudson, as chairman of the Newcastle and Berwick, requesting to be informed whether he was prepared, on the part of that company, to re-open the negotiation for a leasing or amalgamation of the North British line, and suggesting that a conference should be held on the subject. Mr. Hudson agreed to the proposed conference which accordingly took place at Berwick on the 23rd of September. At that meeting the questions remitted to the directors were discussed, and it was agreed that they should be further considered at a subsequent meeting. Mr. Hudson asked the directors the sum which it would cost to complete the works commenced, and on which they would be prepared to treat with the company which they represented, as their fixed capital. The committee informed Mr. as their fixed capital. The committee informed Mr. Hudson that they thought the money which they were already empowered to raise would be sufficient for completing the lines in progress; but, in order to satisfy themselves, and to enable them to speak with greater confidence on the subject, they caused minute statements to be prepared of the contract price of all the works, and of the sum already paid, and to be paid, for them. After making a fair allowance for extra work, and for unsettled claims for land, they agreed to treat on the basis of the capital (including borrowed money) being fixed at (capital, 3,282,6681., loans, 817,332L.) 4,100,000L, independently of the cost of the Jedburgh and Selkirk branches, which have not been begun. Previous to the second meeting, the directors of the North British communicated the result of these calculations to Mr. Hudson, and intimated that they might be assumed as the basis of the proposed treaty. Having done this, they pro-ceeded to Newcastle on the 14th inst., when they met with Mr. Hudson and Mr. N. Wood, another director of the York, Newcastle and Berwick. The North British directors were at once informed by Mr. Hudson that it was the determination of the York, Newcastle and Berwick not to make any offer for the North British line; but he added that if an offer were made to him by the North British committee, it would be considered and an answer given. The committee would here have thought it incumbent on them not to have proceeded farther in the negotiation, but they feared that they might disappoint the expectations of the shareholders if they were to break off without giving an opportunity to the York and Berwick to go into the question in detail, and to state their views as to the terms on which they would be inclined to treat, not by making an offer themselves, in the first instance, but in answer to a question or proposal from the committee. They

had, however, great difficulty in doing this, because

they had no authority from the shareholders to make any offer of the line, on any specific terms, and they could not take it on themselves to commit the reholders on so important a matter by any direct offer on their part. The committee therefore resolved to propose that as the basis for a treaty Mr. Hudson should revert to his former offer, with this variation, that he should make an abatement from the percentage then offered, corresponding to the difference between the capital on which that offer proceeded (3,470,000L), and the increased capital (4,100,000L), on which he was now asked to treat. This would have reduced the offer from 8 to 64 per cent. Mr. Hudson, however, declined to proceed with the treaty on any such basis, and he repeated that as he and his colleagues had made up their minds not to make any substantive offer for a lease the negotiation must be held as closed. The negotiation was therefore ended; and at its conclusion Mr. Hudson said that he hoped both companies would go on working harmoniously together, and doing what they could for their mutual benefit. In this wish the committee concurred. The CHAIRMAN said, although he had not been

present at the meeting on the 13th of September,

when it was agreed to appoint a deputation to open up a correspondence with Mr. Hudson, yet he expected a different result from the interview with that zentleman. Nevertheless he did not despair of the line. Their traffic was at present upwards of 3.000%. per week, without any terminus at their northern extremity, and without having a complete station at Edinburgh. When the branch to Hawick was finished and in full working order the revenue would probably amount to 6,000l. per week. The cost of the line had been greatly increased by paying interest out of capital during its construction—a period of four years. The directors would judiciously reduce all expenditure. They expected to be able to diminish considerably the working expenses. Respecting the stalf-shares the directors did not mean, after the present time, to ask them to pay interest on these hares; and they were of opinion, in regard to the third shares, that the holders of them would share in the profits of the line as worked to Dalkeith, or wherever they might go to. They expected to be able to carry the line to St. Boswell's early in the ensuing year,-by perhaps the end of December or beginning of January; and the third shares would participate in the earnings of the line from Dalkeith onwards, at the next division of the profits, which took place in February. With regard to the progress of the works, he had to state that they were in a foras far as St. Boswell's, but further than that they could not press them, owing to the position of their finances. They were obliged from the same cause to delay all the works on the branches, and also the proceeding with the line from St. Boswell's to Hawick. He did not anticipate that they would enter into any discussion at that meeting as to how they should raise the 600,000l. to carry on the works. That could be considered at next meeting. The directors had never hesitated to interpose their personal security, being convinced that they were connected with a perfectly good concern; and it was their intention, by their own personal security, to raise in the meantime what money was needed to prosecute the works, without asking them what was to be done as to the 600,000l. which they were empowered to raise by the issue of shares. By their Act they were bound to make an offer of these shares to the scripholders of the Carlisle extensions. They, however, would most likely insist on winding up that concern, by which they would get back, as nearly as could be calculated, about 4s. 3d. a share. He might mention that, to as great an extent as it could be done, the directors intended to raise the rate of the fares

Mr. FLINT, from Hull, asked if, when it was proposed to return 4s. 3d. to the holders of the Carlisle extension shares, it was intended to mulct these parties of the expenses of the two sessions that the bill for this extension was before Parliament.

The CHAIRMAN replied in the affirmative, and justified what was proposed to be done in this re-

Mr. FLINT maintained that the holders of the Carlisle extension shares should only at the furthest be made to pay the expenses of one session.

The CHAIRMAN promised to give the matter his consideration.

The CHAIRMAN then submitted a motion to the effect that the report read at the meeting on the 13th of September, with the exception of that part of it which proposed to go to Parliament for a branch to Leith and increased station accommodation at Edinburgh, should be approved of

Mr. Eagle Henderson seconded the motion. The CHAIRMAN said he had omitted to mention line from St. Boswell's to Hawick would only be about 30,000l. or 50,000l.

Mr. Gillow, of Liverpool, was not surprised at the termination of the negotiation, as he never expected it would be gone into. He did not take so gloomy a view of the line as some did, if it were properly managed. He had expected that a statement of their liabilities would have been laid before the shareholders. as well as the report read to-day, showing them what was their true position. There was at present a great want of confidence in railway concerns, and he was not at all surprised that so strong a wish was expressed by shareholders to know their true position. He concluded by moving that three shareholders be appointed as a committee to inquire, in conjunction with some of the directors, into the past management, as far as might be deemed necessary, of the affairs, and that in order to enable them to do so, they be empowered to call for all books, papers, and documents, and also, if they think proper, papers, and accuments, and also, it they think proper, to employ an accountant to go through the accounts; and also, that it should be the object of the committee to consider and suggest what retrenchments might be made, and how far it was desirable to complete the works under construction, and how the funds for such works, if any, should be raised.

Mr. Hodgson would resist the proposition now made, as it would entail considerable expense upon the proprietary, and would take much longer time than if the matter was left to the directors to give in a statement of the liabilities and affairs.

During a long discussion,
The Chairman suggested that Mr. Gillow should withdraw his amendment, on the express understanding that the directors were ready to make arrangements for a full statement of the whole liabilities and future prospects of the company. He also stated that he did not think the directors would have been justified in making a lower offer than that which had been proposed to Mr. Hudson. They knew full well the fearful engagements which Mr. Hudson's line had undertaken, and they also knew that at present it paid no higher premium than their own; and he must say he had his doubts, if an amalgamation had been entered into with the York, Newcastle and Berwick, whether it would have been proper to have done so without a searching investigation into all its liabilities and guarantees.

Mr. Gillow declined to withdraw his amendment

and a vote was in consequence taken, when the motion of the chairman approving of the report of the 13th of September was carried by a large majority.

The CHAIRMAN then proposed that the suggestion made in the report regarding the payment of interest on the half-shares, and the dividend on the third shares out of the free revenue upon the Hawick branch should be adopted only in so far as related to the current half-year; and that the negotiations with the York, Newcastle and Berwick be approved of.

The motion was carried unanimously.

A motion submitted by Mr. BLACKADDER against the running of trains on the Sabbath day was lost

by a large majority.

The meeting was then made special, for the purpose of considering the propriety of entering into an agreement with the directors of the Aberdeen with a view to the taking of certain preference stock or shares in that line.

The report stated that the directors had ascertained that an attempt was being made by the western companies to secure all the truffic between England and the north of Scotland to themselves. They therefore entered into communication with the Aberdeen and the Edinburgh and Northern directors, and with Mr. Hudson, on the subject, and the result was, that an arrangement has been come to, subject to the approval of the shareholders, by which the directors think the injury which would otherwise have been done to their property by the proposed agreement with the western companies will be prevented. It is this:—By the original Aberdeen Act the capital of the company is fixed at 830,000*l.*, and they are authorized to raise by loan 276,666*l.*; total, 1,106,666*l.* By a subsequent Act they were authorized to raise an additional capital of 276,000%, and by loan, 92,000*l*.; total, 368,000*l*.: making together 1,474,666*l*. The new capital of 276,000*l*. is proposed to be issued as guaranteed stock, and to be made preferential over all the other stocks of the company, to the extent of 6 per cent. per annum for the first five years, and 5 per cent. thereafter, in perpetuity, and to participate along with the other stocks in any dividend exceeding 5 per cent. per annum which may at any time be declared on the whole stock. This preferential stock is proposed to be issued and allotted in the following proportions: to the York, Newcastle and Berwick, 50,000*l*.; to the Edinburgh and Northern, 113,000*l*.; to the North British, that the sum that would be required to complete the | 113,000L; total, 276,000L, and to be paid up by

 $\mathbf{G}\mathbf{U}\mathbf{U}$ 

monthly instalments of 20,000l., so that it will not require to be fully paid up for about fourteen months from the date when the agreement shall be finally completed. No part of the money raised is to be applied to the liquidation of any existing debts or liabilities of the Aberdeen, but the whole is to be expended under the view of the other companies (who are to be represented at the Aberdeen Board) exclusively in the construction and completion of the new works on the Aberdeen line. Until the Aberdeen line shall be opened to the south bank of the Dee, it is to be worked by the Aberdeen. Thereafter the plant is to be taken at a valuation, and the line worked for a period of not less than 21 years by the other companies. For this service they are to be paid by quarterly instalments, 40 per cent. on the gross receipts of the Aberdeen; but an account of the actual expenses, including the interest on the cost of the plant, and the expenses of wear and tear, is to be made up at the end of every three years and submitted to the Aberdeen, and should there be any difference of opinion with regard to the amount, or should it be considered that the per centage entails loss on either party, the amount of the per centage is to be determined by engineers to be mutually chosen. At the termination of the working agreement, should it not be renewed, the Aberdeen are to take and pay for the plant at a valuation. They are also to maintain the line and works in good order, to provide repairing shops, machinery, &c., and to send all the traffic which they can control along the east coast lines.

After a good deal of discussion, in the course of which the heads of the agreement were read, it was resolved to enter into the arrangement on the distinct anderstanding that the sum of 276,000l. would complete the Aberdeen line, and that there should be an adequate representation of the directors of the North British and Edinburgh and Northern at the Aberdeen Board

A number of shares were then declared forfeited.

#### DUBIAN AND KINGSTOWN.

Oct. 14 .- Half-yearly Meeting, Dublin .- Mr. G.

Roe in the chair.

Mr. J. Pin, the treasurer, read the report, as follows:—We now submit a short abstract of receipts and expenditure ending the 31st of August last, and sithough it shows a trifling decrease of income, yet it may be considered rather as a cause of congratulation that there is not a much greater falling off, when you recollect the extremely unfavourable weather which prevailed during the summer months. During the half-year we have made a considerable reduction of fares on the Dalkey line. We have also tried the experiment of occasionally reducing all the fares one half, and we have revised and re-modelled the fares between the intermediate and re-inducted the large between the intermediate stations; and so far as we can judge, we have reason to be satisfied with the result. We have the satisfaction to state that the line of railway and the working stock is in excellent order. The rates and taxes on the line have been still further increased, and now are quadruple what they were two years since. This important subject continues to occupy the anxious attention of the Board, and we are now seeking to obtain a more equitable valuation. In our report of October 1847 we apprised you of a new and amicable arrange ment into which we had entered with the Waterford, Wexford, Wicklow and Dublin, modifying in some important respects the original agreement; and in last April you were informed that that company had brought a bill into Parliament to legalize this Act has been obtained, and that it authorizes the South Wales to subscribe 250,000l. to that under-taking. The abstract of accounts shows a profit from the six months of 11,456l. 7s.: from which, in pursuance of the 9th section of the Extension Act, the Board have apportioned the sum of 9,800l. for dividend for the past half-year, being at the rate of 4 per cent. on your paid up capital of 245,000l. This will leave a balance of 1,650l. 7s. to the credit of the next half-year, when the detailed and comparative statement for the whole year will be laid before you.

The CHAIRMAN: I have scarcely a word to add to the report which you have just heard read. have endeavoured to make it as short and as clear as possible: and I have only to congratulate you upon the result of the last half-year's operations. We have laid the accounts before you in the most simple and intelligible shape, and have endeavoured to remove all complication from them, so that any person can understand them without the slightest difficulty. It is now my duty to move that the report be adopted. The dividend which we have announced will be payable on and after the 23rd inst., at this office.

Mr. J. Perry: I have great pleasure in rising to second the motion. There is one trifling question upon which perhaps it would be satisfactory to the meeting and the public that some explanation should be given. We are all aware that there has been a reduction of one half of the fares on the Dalkey line, in addition to the further reduction on particular days. Now it would be gratifying to know how the concern has worked since the reduction was made. That there has been some falling off, I anticipate; but it would be an interesting fact to know what is the exact result.

The CHAIRMAN: We have stated generally that the result of all our experiments has been satisfactory; but it has been particularly so with regard to the Dalkey line. There has been no falling off whatever in the receipts; on the contrary, there has been an increase.

Mr. J. Pim: Yes; although there has been a trifling reduction of about 250l. in the receipts of the company for the half-year, yet there has been an increase of 30l. in the Dalkey line, for the same period, at the reduced fares.

The report and statement of accounts were then

received and adopted.

Ald. Boyce said it was very complimentary to the directors to be enabled, in the present depressed state of affairs, to declare so good a dividend as 4 per cent. for the half-year; if the same care which was paid to that company were observed with regard to others, he had no hesitation in saying that different results would be the consequence.

Mr. J. Piw observed that it was very gratifying to witness the circumstances under which they met on the present occasion; but particularly so when they recollected that that company had no engagement for guarantees of any kind whatever—nor did they their loan from the Board of Works was being gradually liquidated—and so long as they paid 4 per cent. interest on their debenture loan of 70,000l., the principal could not be demanded; and they had no other pecuniary engagement of any kind. On the whole, he considered the concern to be in as sound

and healthy a state as possible.

Mr. Gresham said that in the course of his life he had never seen a railway so well and efficiently conducted as the Dublin and Kingstown.

COST OF BROAD GAUGE.—We do not appear to be alone in our inquiries as to the comparative cost of the broad-gauge system. "An occasional Engineman" thus writes to Herapath's Journal respecting one of its details:—" Permit me to call attention to a fallacy which one of your correspondents falls into as to a supposed economy in the eight-wheeled engine of the Great Western for the ordinary work of a railway. He imagines, because the repairs of these new engines are slight, that they are economical; but he forgets that they cost far more and weigh more than the old engines, and that on this additional cost and weight interest and depreciation must accrue,-call the excess only 1,000l. per engine and tender, that is, there is in each engine and tender 1,000l. worth more of iron, copper and brass in a highly wrought state. For interest and depreciation on this at least 20 per cent. must be allowed; 20 per cent. is 200l. per annum;  $200 \times 20 \times 12 = 48,000$  pence. Say you can get 40 miles per day, all the year round, out of an engine, that is 14,600 miles per annum;  $48,000 + 14,600 = 3\frac{1}{2}d$ . per mile per engine. Now the whole repairs of narrow-gauge engines, quite capable of doing the ordinary work of the line to which your correspondent would apply the eightwheeled engines, vary from 2d. to 4d. per mile run. * * According to Mr. D. Gooch, of the Great Western Railway, a train, with the same number of passengers, weighs on the average 65 tons gross on the broad gauge, and only 40 tons on the narrow, and that this additional 25 tons consists of very expensive and perishable materials, they will find, on working this sum out, that a charge of from 6d. to 1s. per train per mile is chargeable against the broad gauge on this score only. As the whole expenses of a train per mile run should not exceed 3s., and the fares often do not exceed 5s. per mile, we see what an enormous

#### THE MOLD RAILWAY.

THE MOLD RAIL WAY.—
SECOND CALL of £3, payable by Instalments:
£2 10s. on the 13th November 1848; £2 10s. on the 13th January 1849,
making the amount called £11 11s. 6d. per Share.
In pursuance of a Resolution of the Be and of Directors, Shareholders in this Company are required to pay to Messrs Glyn & Co.
Bankers, Lombard-street, on or before Monday, the 13th of November next, £2 10s. per Share; and on or before the 13th of January
1849, a further amount of £1.10s. per Share.
By order,
ANDREW G. GIFFORD, Sceretary.

WESTERN LIFE ASSURANCE
AND ANNUITY SOCIETY.
3, PARLIAMENT-STREET, LONDON,
NEW AND IMPORTANT FEATURE IN LIFE
ASSURANCE.
In addition to the ordinary plans of Life Assurance, this Society
possesses several features which present peculiar and important
advantages to the Fublic. Amongst which it is provided—
That if a party, from unforeseen circumstances, should be
UNABLE 197 IAY A PREMIUM when it becomes due, by
making application to the Directors, he will be allowed one for
the Holey of the Televial the time of the application permit it), to have of the Felicy at the time of the applicaMEAT of that Premium provided he has freedy said three
whole Premiums at least on the Policy in all his Policy will be
endorsed to the effect that it continues in force, as if the Fremium
omitted were paid, being however charged with a dobt equivalent
to that Premium, and its interest at 5 per cent, which will be
deducted from the amount of the Policy when the assured dies.
The Policy holder shall, however, have it in his power to free his
Policy from the debt at any time, by paying the amount due.
The pricat advantages of this feature must at once be seen, since it
removes the usual objections to the ordinary system of Life
Assurance, by which an Assurer often leses all the benefit he
sought in paying regularly the Premiums for many years on a
Policy, because, from temporary difficulties, he is unable to pay a
Premium when it becomes due, and the Policy consequently
lapses to the Office.
The uncessary Forms, with every information as to the mode of
effecting Assurances, Endowments for Chaldren, or Provisions for
Old Age, may be obtained on application to the Actuary, No. 3,
Parliament-street, London, or to any of the Society's Agents in the
Country.

ARTHUE RES ACTULIESY, Actuary.

EMIGRATION AND COLONIZATION.—

Lamingration being much required in Australia, New Zealand, &c., and as the supposed expense of an OUTFIT often prevents individuals emigrating, S.W. SILVER & Co., CLOTHILLES, OUTFITTERS and CONTRACTORS thaving a large interest to maintain in those Colonies), have been advised to make known that they can supply a confortable buthfi, including bedding, for make or female emigrants, from 44, theth upwards, or less cl. if needful, and for children in proportion, at 4, Bishopsgate-street Within (opposite the London Tavern, where lists will be given on application. S. W. S. & Co. being the makers of nearly every article in all the outfits they supply, and as one of their objects is to promote emigration, they netther receive from agents, nor pay the too usual commission to any person introducing passengers to be fitted out, so that the passage and outh may be precured at the least possible expense; but they will, on application, advised the last possible expense; but they will, on application, advised the least possible expense; but they will, on application, doines a service of the control of the control of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the decision of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the proposition of the

#### IDLAND RAILWA Newby Park, October 24, 1848. On behalf of the Directors of the Midland Railway

Company, I am requested to acknowledge the receipt of an address from a number of shareholders resident in Liverpool address from a number of shareholders resident is Liverpool and the neighbourhood which you have transmitted to acknowledge the receipt of the address, had it not contained an imputation upon them, which they cannot pass over insilence. The shareholders commence their address by ascribing the depression of their property to "the want of public confidence in the integrity of the management." The Directors therefore desire that you will immediately furnish them with a list of the specific charges involved in this statement, in order that they may convene a special meeting of the company, and have the opportunity of refuting the accusation thus brought against the integrity of a body of gentlemen who feel that they stand as high in the estimation of the public at large as the individuals who have appended their names to this calumnious document, which comes with a peculiarly bad grace from a body of have appended their names to this calumnous documents, which comes with a peculiarly bad grace from a body of shareholders who, prior to the appointment of the present Directors, were only receiving a 2½ per cent. dividend. Since that time the dividends have been increased to 6 and 7 per

In the meantime I may be allowed to offer to you, as one of the shareholders who have signed the address, a few remarks upon the several suggestions contained in it.

remarks upon the several suggestions contained in it.

1. You call upon the Directors to close the capital account. No person is more fully aware than yourself that the shareholders have had the power of passing a vote to that effect at any half-yearly meeting. But supposing the developement of a new traffic, producing a revenue of 20,000%. or 30,000% per annum, should require an outlay ought to be taken out of income.

2. You call upon the Directors to expense and new call.

ought to be taken out of income.

2. You call upon the Directors to examine and pay all outstanding accounts of the solicitors. These accounts are now undergoing a strict examination, and as soon as the solicitors are satisfied to accept the amount the Directors think due to them their bills will be paid. But surely this is a matter which must be left to the discretion of the Directors. Had they given way to the pressure of the proprietors when they were urged to settle the demands of the contractors, they might have sacrificed a very large sum for the sake of an immediate settlement. They succeeded in making great reductions, and so much was saved to the company. The claims of the contractors amounted to \$9.577L, and were finally liquidated for 17,732. 15s. 7d. Your objection to any further parliamentary expenses being 89,5/1., and were many inquisated to the second of the second of the shareholders is fulle; it is clear that no parliamentary expenses of any importance can be incurred without such sanction.

3. You call for a reduction of the salaries of your engineers. We have only one engineer employed upon the lines, and, considering the abilities of that gentleman, the Directors do not think him overpaid.

4. You require that stations shall not be enlarged.

Should traffic increase, how is it to be conducted without increased accommodation? If the shareholders think the Directors incompetent to decide upon matters of this kind, they had much better remove them, and appoint others in whom they have greater confidence.

6. The Directors are called upon to enter into no further

6. The Directors are called upon to enter into no further contracts. It must have escaped your recollection that at the last half-yearly meeting I gave an assurance that the Directors did not intend to engage in any further contracts. 6. You allude to traffic which you do not consider remunerative to the company. The Directors are entitled to ask you to be more explicit, and to state specifically what traffic is meant.
7. You think the number of trains ought to be reduced.

You think the number of trains ought to be reduced 7. You think the number of trains ought to be reduced. This is a question which must be left to the judgment of the Directors; for nothing can be more difficult than to determine, from time to time, what trains ought to be run. I consider it would be an unwise and impolitic measure to take off the express train, which you suggest should be

done.

8. The alteration you propose in the mode of appointing Directors would require a new Act of Parliament.

9. You ask the Directors to purchase all stores by public contract. I have no doubt you are aware that this is generally done; but it not unfrequently happens that the

generally done; but it not unfrequently happens that the Directors can purchase articles in the market much below the contract price, and when they can do so, they often avail themselves of the opportunity.

I have now answered or commented upon every point of the address, except that which relates to the depreciation of the value of shares, with which the directors feel that they have little or nothing to do. Their duty is to obtain all the traffic they can, and to pay the shareholders good

The address you have sent is signed by seventy share The address you have sent is signed by seventy share-holders. This is a small proportion of the entire number, which exceeds 8,000. You are a holder of capital stock in the company to the amount of 350%, and you describe yourself in the address as a broker. From your experience in that business I have no doubt you are well able to inform the public how the old railway stock of this country has become a much described.

nne puone now the old railway stock of this country has become so much depreciated.

In my position as chairman of several railway companies, I have received numerous complaining letters, all, I am bound to say, couched in a courteous and respectful manner; and I have answered them by assuring the parties of the soundness and stability of the concerns over which I preside. The acknowledgments I have received in reply have been generally satisfactory; many of the parties stating that they were holders of stock in a variety of foreign and other new lines, and that they were compelled to sell the stock of sal digestic say for the new. When the supply stockeds the demand, and when a regular combination exists to depress railway property, I believe any course which Directors may surane with be of little avail. Yet, after all, the amount of stock transferred in the companies over which I preside has been lest than usual, which shows that

many of the quotations of sales are merely nominal. I have no fear of not seeing railway property again placed in a better position in the market, though not at the extravagant price it has heretofore arrived at, and then its proper and real value will be maintained in a manner that will be more satisfactory to all parties. Consols have been at 47, they are now at 844, and have been at 100. If you or your friends can, by any effort, advance them to 92 or 93, I have no doubt you will see a great difference in railway property. The Bank Stock has paid 10 per cent., and is now only paying 7, and the price has fallen considerably; but no one ever doubted the integrity of the management of the Bank. The surprise to me is, that in the excitements and commotions which have prevailed, railway traffic has been so well supported. Even the present amount of traffic justifies the anticipation that the rate of dividends will not undergo any material diminution; and this remark applies to all the lines over which I have the honour to preside. I wish I could call the serious and grave attention of the chairman many of the quotations of sales are merely nominal. I have any material diminution; and this remark applies to all the lines over which have the honour to preside. I wish I could call the serious and grave attention of the chairman of the London Stock Exchange to a publication which is issued weekly, professing to be under the sanction of that body. I am aware that the statements which appear in that paper are stated not to be published under the authority of the Stock Exchange; but I cannot close my eyes to the effect that they produce on the mind of the public, who naturally consider that they have that sanction. If these statements were correct and true, no person would have a right to complain—but when they are almost in every instance incorrect, and their general tendency is to depreciate railway property, it would be well that the Stock Exchange should disavow a publication which is calculated to do so much mischief. I must, in conclusion, request that you will call the requisitionists together, and that there may be no delay in sending a list of the charges impugning the integrity of the Directors, who are anxious to meet and repei the calumnious imputations that have been made against them. Nothing but a sense of duty to the large body of shareholders who have hitherto given them their confidence induces the Directors to retain their seat at the Board; and as soon as that confidence is withdrawn, they will most readily and gladly reaign their trust into the tends by the property of the company withdrawn, they will most readily and gladly resign their trust into other hands, by whom the affairs of the company

trust into other hands, by whom the affairs of the company may be more ably conducted.

I perhaps might observe before I conclude my letter, without pledging myself to the statement, but merely giving it as my own individual opinion, that I believe another 5t. call upon the 50t shares, with the arrears of calls now owing, will complete all the works in course of construction, and the remaining 25t, per share will remain applicable to the liquidation of the debt. The liabilities of the company are under the consideration of the Directors, in order to enable them to lava statement before the proin order to enable them to lay a statement before the pro-prietors, which it is anticipated will be done within a very early period.

I am, sir, your obedient servant,
GEORGE HUDSON.
To J. Houghton Brancker, Esq., Liverpool.

# EDINBURGH AND NORTHERN RAILWAY.

At an EXTRAORDINARY or SPECIAL GENERAL MEETING of the Edinburgh and Northern Railway Company, held in Gibb's Royal Hotel, Edinburgh, on the 24th of October 1848,—

JOHN BALFOUR, Esq., of Balbirnie, Chairman of the

Company, in the Chair,—
The Advertisement calling the Meeting having been read It was resolved.

It was resolved,—

1. That the Report submitted to the Meeting, in regard to the proposed arrangement with the Aberdeen Railway Company, and the terms of the arrangement itself, be approved, with this recommendation, that the Directors satisfy themselves that the works of the Aberdeen line to the south of the Dee can be finished, including Stations, for the sum of 276,000k of capital, and 92,000k of loans, authorized to be raised under the Aberdeen Company's last authorized to eraised under the Aberdeen Companies, parties to the Agreement, have a fair representation in the Aberdeen Direction; and the Meeting recommended that such representation should be provata, and equal to the number of the Aberdeen directors.

2. That the Directors be authorized to subscribe on behalf of this Company for 113,000%. of the Stock (which is to be made preferential) of the Aberdeen Railway Company, and to provide their proportion of the Plant for working that

3. That they be further authorized to raise the fund necessary for these purposes, and, if need be, to interpose the security of this Company for so doing. And also to take all other measures requisite for completing and carrying out the transaction, and for obtaining a valid and effectual guarantie for the Stock to be subscribed for in the Aberdeen Company being made preferential, in terms of the minute of the proposed agreement,—and to adopt such further meaas may be necessary for the effectual carrying out of

JOHN BALFOUR, Chairman. The thanks of the Meeting were then given to Mr. Balfour for his conduct in the Chair.

HENRY LEES, Secretary.

EAST LANCASHIRE RAILWAY CONTRACT FOR WORKS.

CONTRACT FOR WORKS.

PRESTON EXTENSION LINE.

NUTIOE IS HEREBY GIVEN, that the Directors will meet at their Offices, Burny station, Bury, on Monday, the 90th day of November next, at 1 o'clock in the Afternoon, to BECEIVE TENDERS for the above Contract, which includes the EXECUTION of all necessary EXCAVATIONS, EMBANKMENTS, and BRIDGES, Culverts, Vidaducts, Laying and Ballasting of the Permanent Way, and all other Works necessary to complete the Railway.

Permanent Way, and all other Works necessary to complete the Hallway.

The above Contract commences at a point on the Blackburn and Preston line of the East Lancashire Hallway, in the township of Watton-le-Dale, and parish of Blackburn, being about one mile and a quarter from the point where the above line joints the North Union Railway at Parington, and terminates at the town Union Railway at Parington, and terminates at the town Preston, near to Town Gardens, in the township and parish of Preston, near to Town Gardens, in the township and parish of

reston.
Plans and Specifications will be ready for inspection at the Com-any's Offices, 21, Tower Chambers, Liverpool, on and after the

pany's Omoes, ii, Tower Chambers, acceptance, and no others will be attended to. These must be delivered to the Secretary, at the Company's Offices, Bury, properly filled up, before 10 c'clock on the Morning of the 30th day of November next. The parties tendering, (or an authorized agent) must attend at the hour appointed, to give any explanation which may be required.

By order.

By order,

JAMES SMITHELLS, Secretary.
Oct. 24, 1848. equired.
The Directors do not pledge themselves to accept the lowest

DURIFIED BLACK LEAD PENCILS, per-

PURIFIED BLACK LEAD PENCILS, perfectly free from grit, may be entirely erased, and will maintain a firm point. Manufactured by E. WOLFF & SON, No. 23, Church-street, Spitalfields, London.

E. Wolff & Son beg to inform Artists, Architects and Engineers that they are now manufacturing pure plumbage or black lead pencil entirely free from grit, which will easily yield to india rubber, and insure perfect erasure: it possesses great brilliancy and depth of colour, and will maintain a firm point. They have attained to so great a perfection in the manufacture of this loss as to be able at all times to make the same strength upones, and when nonce found encil fully equal to those used in former years, when they were made of the finest Cumberland lead, which at the present time cannot be obtained sufficiently pure for the best bennils. The following are the degrees: H. HH. HHH. HHHH, F. FF, HB, EHB, B, BB, BBB, BBB, W.*

"This pencil is particularly recommended for writing and counting-house use.

To be had of Ackermann, 191, Regent-street; Houghton, Sq. Poultry; and all respectable Stationers, &c.

E. Wolff & Son have the honour of supplying their Purified Lead Pencils to Her Majesty's Stationery Office, the Bank of England, and various other large establishments.

# LONDON AND NORTH-WESTERN RATLWAY.

The erroneous statements and calculations which have recently appeared in some of the public journals, in relation to the present and prospective financial position of the London and North-Western Railway Company, have induced the directors without delay to place in the hands of each of the proprietors a detailed account of the engagements and liabilities of the concern.

It will be in the recollection of the proprietors, that, at the last half-yearly meeting they were assured by the directors that a careful revision of all existing engagements should be made, and that no new responsibilities would be incurred without the previous knowledge and approval of the shareholders. This promise has been fulfilled, and the directors are now enabled to estimate, with more accuracy than at any former period, the total cost necessary to complete the various works in which the company are pecuniarily interested.

The expenditure and liabilities of the undertaking may be conveniently classed under the following

- heads:—

  1. Main line and branches producing revenue.

  2. Branch lines in course of construction, but not
- 3. Subsidiary lines, in which the company have an interest by subscription, contribution, or gua-
- 4. Lines for which powers have been obtained, but which have not been commenced.
  5. Summary of capital to be provided by the London and North-Western.

## EAST INDIAN RAILWAY.

The approaching crisis in the affairs of the East Indian Railway Company demands from us some remark, and we think it may not be without benefit to the proprietors to recapitulate briefly the facts and arguments upon which were based our conclusions respecting that undertaking, the soundness of which have commended them to a general adoption, the more flattering to us from the displeasure with which they were at first regarded.

We set out with the fact which is now universally admitted, that to make any line out of Calcutta profitable it must be prolonged to meet the Ganges, and that any portion of the line falling short of this point would fail to return its expenses. We also showed that the line suggested in the upper provinces, between Cawnpore and Allahabad, had only a fifth of the traffic which existed upon the road leading out of Calcutta, and was consequently even less eligible. If the guarantee of the East India Company had been an unconditional one, irrespective of losses in working the line, it would have signified but little, comparatively, to the shareholders whether the line selected were remunerative or otherwise; but we showed by a reference to the terms of the guarantee that the interest received from the Hon. East India Company might be entirely swallowed up in meeting the losses incidental to working an unprofitable line; and in this obvious interpretation of the guarantee we have been subsequently borne out by the authorities of the India House themselves, who expressly state that the guarantee "does not provide for any dividend to the shareholders." Seeing then that the capital of the company upon which a guarantee was given was insufficient to construct a profitable line, and that an unprofitable line would absorb the limited guarantee of 5 per cent. in working expenses, we pointed out the folly of squandering the remaining funds of the company in a hopeless struggle for existence.

Such were the views we at various times expressed, and everything that has since occurred has only tended to strengthen our conviction of their soundness, and to add to the number of our supporters. Had our suggestions been adopted some months ago, we are of opinion that a few shillings per share would have reverted to the proprietors, but now it is doubtful whether any bond fide funds remain to be divided, unless the India House consent to make some compensation for the plans and sections of the We are aware that there is a sum of 60,000/. deposited in the hands of the Hon. East India Company, 14,000l. of which is admitted to be borrowed, but we are also aware of a very prevalent suspicion that a large portion at least of the remaining sum has been advanced by capitalists, and that it is not lodged in the names of the ordinary trustees of the company. We do not know what is the exact degree of confidence to be placed in these rumours, but we think that if unfounded they should not be suffered to remain unconfuted. If, on the contrary, the deposit does consist mainly of horrowed money, and is so lodged as to secure the lenders from loss, then our anticipation of a few shillings per share reverting to the proprietors will be a very doubtful realization. It is not however of less importance to the shareholders that they should take steps to relieve themselves from further responsibilities; for if it prove to be the fact that no assets remain to be divided, it is equally certain that the continuance of the company will entail further expenses, to defray which the proprietors must be mulcted.

According to the terms of the last agreement between the Hon. Company and the

to deposit the sum of 60,000l. in the treasury of the India House, but also to produce on or before the 4th of November a satisfactory list of registered proprietors, representing a capital of one million sterling. The first condition of this agreement has been fulfilled, though not without resorting to an artifice of which the Hon. East India Company has reason to complain, even if its legality were clearly established: the second condition of the agreement is, we believe, still unfulfilled, and in all probability will remain There is only one mode that we can perceive of evading the difficulty, but it is one of so peculiar a character that we cannot imagine the directors would sanction its adoption: it is to deposit the present list of registered proprietors rating each share at 50%. Against the adoption of this course, however, there are several serious and, as we think, insurmountable objections: many of the shareholders have engaged in the undertaking on the distinct understanding that their responsibilities should be limited to 201. per share, relying on the assurances of the directors, and the recognition of the limitation contained in the official reports. In the special report of the directors, dated the 18th of July last, we find the extent of the proprietary thus defined :- " The directors think it right to report that the shares, in respect of which the first call of 20s. has been paid, amount to 37,441, and the capital thus represented to 1,872,050l. but inasmuch as it has been understood that the shares are to be treated as shares of 201. each, the capital actually represented amounts to 748,880/." Since the publication of that report the prices of railway stock have been unprecedentedly low; and it is not to be supposed that, with the best English lines at par, there can have been additional bond fide investments in a tottering scheme, -suffering as it is under our exposition of thetrue character of its guarantee. If then the shareholders have had no augmentation of their numbers since their last meeting, we are driven to the belief that the East Indian Railway Company will be unable to fulfil its agreement with the India House unless by a breach of faith with its shareholders, in the mere supposition of which we feel that we are doing injustice to the directors.

Even if by any possibility the shareholders were induced to consent to an increased responsibility, we do not conceive that the Hon. East India Company would be disposed to attach much value to the sacrifice. Already the proprictors have shown their appreciation of the prospects of the undertaking by declining to pay the last call of 2/. per share; and no declaration of faith in the scheme can be of much avail, so long as the holders of nearly seven-eighths of the shares are actual defaulters, and liable to the penalty of forfeiture. If then, with all the seductions of the guarantee, the proprietary was virtually reduced to the holders of about 5,000 shares, representing, at the most, a capital of 250,000l., what may be supposed to be the extent of the proprietary now that the guarantee has been stripped of its fictitious attractions? We are not, however, left merely to infer the disposition of the shareholders, since at the last meeting the conviction was unanimous, that without the unconditional guarantee further progress was impossible; and even the chairman himself declared that "if the agreement were capable of such a gloomy construction as some put upon it, he would never ask them to be at the trouble to entertain it.'

We are not insensible to the benefits which would arise from the introduction of railways into India. It is because we recognise the importance of the object that we are desirous for the removal of every obstacle which stands in railway company, the latter was bound not only | the way of its attainment. For some years the

East Indian Railway Company has occupied the field in an obstructive capacity:-too feeble to accomplish any useful result, and too tenacious of existence to die with dignity, it has squandered the funds of a passive proprietary, embarrassed the Indian Government, and retarded the introduction into our Oriental possessions of the benefits of railway communication.

Note. On the eve of publication we have received another letter from Mr. Chapman on the Hombay line, which we shall insert in a subsequent page: of course we can take no further notice of it this week.

## Progress of Works.

AMBERGATE (Ratcliffe).—The viaduct over what is called the Wharf-road and the osier plantation has been finished some time, and the other in Mr. Brewster's Islands is in a very forward state. The abutment for the bridge over the Trent, says the Nottingham Journal, is also making its appearance above the earth, but the floods have been very frequent since the commencement, and have greatly hindered the workmen. The bridge over the Shel-ford-road will very soon be completed. BUCKINGHAMSHIRE.—Much progress is being made

with the main portion, which, as previously arranged, will probably be opened by September next. From Banbury to Brackley numerous hands are engaged along the line. From the latter place to Bacon's Wood, the works will in a few weeks be ready for the permanent way, and on to Buckingham they are in a forward state. In six weeks the line from Buckingham to the Claydon Junction will be ready for the ballast, to be taken from the neighbourhood of the former place, which is a good gravel. Near Winslow, about three quarters of a mile of the permanent rails are laid, and at the Salden-hill cutting, which is the deepest on the line, workmen are engaged both night and day. From Claydon to Oxford but little is now doing. The Islip cutting is to be resumed forthwith.

CHESTER AND HOLYHEAD.—The works at the Bri-

tannia tube across the Menai Straits have been suspended for the present. Last week some hundred men were discharged.

FURNESS.—The Ulverstone people are seeking the extension of the line to their town, according to the late Act of Parliament, and also with the view of avoiding the construction of a tunnel at Crookland.

GREAT WESTERN (Oxford and Rugby) .- The works on this northward extension, of fifty miles in length, have been stopped during the past week, and all active operations will be postponed until the spring. — (Reading and Basingstoke).—The extension from Reading, 35 miles up the main line, to Basingstoke, on the London and South-Western, has been officially

inspected, and will be opened on the 31st.
South Devon.—In the neighbourhood of Laira the works have been interrupted. The company had commenced the formation of a double line from Crab-tree towards Mitley, and as it has to pass the Dart-moor line, of which Mr. Ald Johnson is mortgagee in moor line, of which Mr. Ald Johnson is mortgagee in possession, that gentleman makes claims for a certain amount of compensation, which the company have as yet declined to meet. On the 21st, Mr. Johnson placed himself in a hostile position with the company, and by his representative, Mr. Filmer, and his solicitor, and his solicitor, and his solicitor is the placed on a large blocks of gravite to be placed on caused some large blocks of granite to be placed on the new line that is in course of formation. Mr.Carr. the secretary of the South Devon, was on the spot, and warmly protested against this act; but the opposing parties, in spite of every protestation, proceeded in their work of obstruction, which for the present they have most effectually accomplished. Nearer Plymouth the works are proceeding with the utmost industry. At Pennycomequick the builders, having prepared the material, have begun to throw the area, excess the Saltack and the arch across the Saltash-road. The excavations have now reached the road running abreast of the Five Fields, though there is still much work to be done in levelling them. The masons are engaged in turning the arch which runs across Kingstreet, and the road is filled in nearly through Rendle's nursery-grounds to Union road. Here the masons are actively engaged in erecting the buttresses, &c. for the arch that is to be thrown across Union-street. The works at the terminus in the field at the back of the Union Baths, are also rapidly developing themselves. Very much of the timber and masonry work is erected, so that the buildings begin to assume something like a fixed character.

WILTS, SOMERSET AND WEYMOUTH.—The works are entirely suspended in the neighbourhood of Maiden Newton and are not likely to be resumed before the next year.

FOREIGN. Bounges.—The section of the line from Bourges to the viaduct of the Allier is rapidly proceeded

with For some time past the works have been finished as far as Nerondes, and the rest of the distance is fast progressing.

CHATEAUROUX AND LIMOGES.—The Minister of Public Works has just decided that another credit of 1,300,000f. (52,000l.) shall be applied to this line. By this grant the works, which have been progressing but slowly, will be continued with all possible activity along the whole line.

PARIS AND LYON.—The portion of the line between Chalon and Dijon, says the correspondent of the Chemins de Fer, is finished, with the exception of the stations—that of Dijon is in rapid progress, and will be one of the finest in France. The rolling stock is ready at the depot, where sheds are erecting, and all the necessary buildings and workshops. It is expected by some that this part of the line will be ready for working by the end of next month, though according to others it will not be till Easter. This section was commenced in 1842, at the same time as the Orleans and the Vierzon lines, which have now been in operation for two years past. M. Ducos, the engineer, has under his direction the works of the line in the department of the Cote d'Or, and was appointed engineer in chief on passing from the service of the company to that of the State. The Government has begun operations on various other parts of the line;—at the long tunnel near Blaizy the works are pushed forward with great activity, and it is thought it will be finished in eighteen months time, when the whole line from Paris to Chalon is expected to be ready for traffic, if the necessary funds are provided. The various parties employed have had their salaries reduced on being turned over to the State-no very satisfactory result of the Revolution, we imagine. Between Blaizy and Tonnerre the works have not yet been commenced. It is said that an allocation of 30,000f. a month will be expended on this part of the line during the winter, in order to keep the workmen employed, but nothing official has yet been announced on this point.

SAMBRE AND MEUSE. - A correspondent in the Obscreateur writes from Walcourt, "It is impossible to regret sufficiently the delays in the opening of the section of the Entre-Sambre-et-Meuse, comprised between Charleroi and Walcourt, and of that of the mines of Morialmé. These branches have been, however, finished long since. But a few difficulties of no importance, which have sprung up between the admimistration and the ponts et chausses about a tunnel cause this dilatoriness. The Government should therefore interfere and give a prompt solution. Government might even require that the company should employ a certain number of hands this winter. The company is much disposed to do this; arrangements are proposed by them to Government, and they would consent to a mortgage being taken on the finished section, if means were supplied them for pushing the works forward. About a month ago, M. Rolin, Minister of Public Works, M. Frère Orban, Minister of Finance, with Messrs. Veydt and Malou. went over the line, and expressed themselves very well satisfied with the examination they had made. If Government wished, they could, thanks to the cahier des charges and the conditions adopted by the Cham-ber, take measures favourable to the whole country. For instance, the branch from Walcourt to Philippeville might be commenced this winter; the plans are all ready, and that part of the line which comes up to the furnaces of Fairont is finished. If Government acted in this manner, they would render a signal

service to an important district."

Tours and Nantes.—The works have been continued so rapidly that the line will be opened for thetransit of goods in the course of December next.

# Accidents.

ABERDEEN .- Oct. 17 .- On the line from Friockheim to Montrose, from some defect in the machinery, an engine was thrown off the rails, and after running a short distance was thrown over with the workmen on it. None of the carriages were upset, the steam having been turned off as soon as the engineman was aware that something was wrong.

GREAT NORTHERN.—Oct. 17.—The last down train,

at 10 30 p.m., did not arrive at the Boston station till 12 30 a.m., when it dashed through the closed gate in Skirbeck Quarter. It appears that the man at the gate having, as he states, no orders to stop after the usual time, left the train to open the gate for itself, which it summarily did. Fortunately no further accident occurred.—Where this line passes across the river Brayford, at Lincoln, an iron bridge of modern construction has been made to allow of veswas opened to allow it to pass. This was not at first noticed by a navvey employed with a train train, and he only discovered it just in time to loosen his horse nd thereby save its life. The waggons, having noa brakes, ran on and toppled over the bank into the river, some of them falling on the boat underneath and swamping it. No one was hurt, and but comparatively little damage was done, but this occurrence, says the Lincolnshire Chronicle, demonstrates the necessity which exists for the utmost caution being used at the point in question, when the passenger trains begin to run over the pool.

GREAT SOUTHERN AND WESTERN (I.) .- Oct. 17 .-There is but one line of rails laid down between the Limerick Junction and the town of Tipperary, and on the above morning both trains started almost simultaneously from their respective stations at Tipperary and Limerick, and as a natural consequence came one against the other about midway on the line. The collision was fearful, both trains having been travelling at the time at a very rapid rate, each trying to reach its terminus before the starting of the other. Fortunately there were no persons in either, with the exception of the guards and engine men; two of the former were very seriously injured, and had to be removed immediately to Limerick for medical treatment; the enginemen were not so severely hurt. The carriages were completely shattered. nearly two hours in the arrival of the Cork mail resulted from this accident.

SOUTH-EASTERN.—Oct. 29.—The following are the particulars of the accident to which we briefly alluded last week. From the quantity of rain which had been falling for nearly 48 hours incessantly, the fiver Stour, about 2½ miles from Canterbury, over-flowed, and the waters covered the rails of the line in one or two places. The up luggage and fish train, which left Margate at a late hour on the 19th, arrived at Chilham shortly after I a.m. In order to reach Wye, the trains have to cross the river Stour by means of a wooden bridge, which was thrown over the river. The driver of the train, upon getting within a few feet of the bridge, discovered that it was of the steam for the purpose of proceeding very slowly along the portion of the line between himself and the bridge. The impetus of the train prevented the driver from entirely stopping it, and the moment the engine got upon the bridge the driver and stoker saw sufficient to satisfy themselves that the arch was falling. Without an instant's delay the arch was falling. Without an instant's delay both the driver and stoker jumped off the engine, which they had barely accomplished when the bridge sunk with the weight of the engine, the latter falling over on its side, and rolling down the embankment into a field. The luggage trucks were pulled over by the weight of the engine, and several of them fell beneath—some into the river and others into the field. Those which remained above were forced into terrible confusion across the line, and were all more or less damaged; some of those which fell into the field were shattered and the goods partially if not entirely destroyed. The driver, stoker and guards, upon recovering in some measure from their fright, beheld a fearful scene of desolation. Upon the ground was lying the engine with its steam escaping, and the fire lying at its side as it was falling from the furnace; the broken luggage vans were heaped together, and by the giving way of the bridge all com-munication by the rails was cut off. The first object therefore sought to be attained was to send intelligence of the disaster to the chief stations both up and down the line, to prevent any other train from meeting with a similar accident. A message having been conveyed to Wye station, it was soon telegraphed to London and also to Dover. A number of work-men, with the proper officials, soon arrived with a special train. The water was then found to be considerably higher than the level of the bridge, and the sole cause of the misfortune was the excessive rains having made the river rise to such a height as to wash away the supports of the arch, and the moment the weight of the train came upon it it was forced down. Seeing that the arch could not be repaired until the water should subside, a number of omnibuses and other conveyances were placed at the spot, and the passengers as they arrived by the trains were landed and conveyed to the next station, where they again entered the train kept there in waiting for them. On the 21st a minute examination was made to ascertain the precise cause of the occurrence, which completely satisfied the officials of the line that the excessive floods and they alone had caused the mischief. The water had ascended to such a height as to enter the apertures between the supports of the arch on either side, and having washed away the mortar and cement of the uprights, had so weakened the structure that it was unable to bear the weight of any train. Two sells passing through to the wharfs. On the 20th, as a vessel, laden with stone, neared the bridge it passinger trains had passed over it shortly before the

luggage train was due. By the 23rd, through the activity of the contractors, a footway was carried across and the traffic was resumed.

#### Law and Bolice.

No RECOVERY FOR LOST LUGGAGE.—The following details of a decision at the BATH COUNTY COURT are of such general importance that we give them at full length to our readers:—The Rev. Mr. Rogers on the 1st of May last travelled by the first-class train from Bath to Paddington. He arrived at the Bath station by coach; his luggage, which consisted the partmentage containing which partially and the station of a portmentage containing which partially are stationary to the station of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the partmentage of the of a portmanteau, containing chiefly articles of clothing, was handed down from the coach by one of the porters of that vehicle, and immediately one of the company's porters asked Mr. Rogers where he was going to. Being informed Paddington, he pasted one of the company's luggage tickets on the portman-teau and placed it in the luggage receiving room, where it was drawn upon the platform above by a machine used for the elevation there of passengers luggage. The plaintiff paid for his ticket, and proceeded to the platform, where he saw his portmantcau, with other luggage, in the care of the company's servants. He watched one of these wheel it to the luggage van on the arrival of the train, and was informed by one of them "it would be all right."

The rev. gentleman then took his seat in the carriage, and on arriving at Paddington he got out again and went to the luggage van for the portmanteau, which, however, could not be found. It appeared to have been lost or stolen in the transit from Bath. Inquiries were made of the superintendent, but no tidings had been heard of the portmanteau, and consequently this action was brought against the company to obtain 191., the value of the articles of clothing which the portmanteau contained. The company disclaimed their liability under a bylaw, said to be made in pursuance of a clause in their Act of Parliament, 5 & 6 Will. 4., c. 107, authorizing them to make by-laws for the regulation of the com-pany. The by-law was in these words:—

pany. The by-law was in those words:—
Every first-class passenger will be allowed 112 lb., every second-class passenger 56 lb. of luggage, free of charge; but the company will not be responsible for the care of the same, unless booked and paid for accordingly. All surplus luggage and merchandise of every description will be charged for. The company's porters will load and unload the luggage at the different stations free of charge.

It was contended for the plaintiff that the company had no power by such a by-law to restrict their liability in respect of passengers' articles of clothing not exceeding 40 lb. in weight, and contained in a package not exceeding 4 cubic feet in dimensions, because by section 169 of the Railway Act it was enacted, enacted.-

That without extra charge it shall be lawful for every passenger to take with him his articles of clothing not exceeding that weight and those dimensions, though the company should in no case be liable for the safe carriage or company should in no case be made for the sate carriage or custody of any articles other than such and such dimensions. By the same clause it was provided, that nothing therein contained should extend to charge the company further than where, according to the laws of the realm, stage coach proprietors and common carriers would be liable. If the company agreed to take an excess over 40 lb.

weight, they must do so on the footing of common stage-coach proprietors, who could not rid themselves of liability in respect of such articles to any amount, except by special agreement with the passenger. except by special agreement with the passenger.—
The plaintiff then deposed to the facts stated, and
added that he was wholly unaware of the existence of the by-law in question.—On the part of
the company Mr. S. Clarke produced a parchment,
upon which was printed a copy of the original bylaws attested by their scal.—His Honour observed
that no doubt the by-law in question had been
legally passed by the company, and allowed by Mr.
Justice Patteson. By the law, any luggage, of whatever weight, in order to entitle a passenger to charge
the company with its loss, must be booked and paid
for by the passenger. The regulation had not been for by the passenger. The regulation had not been observed in the present case. That was an answer to the present action. He saw nothing in any other Acts affecting the question, and although it must be admitted to be a hardship on the plaintiff, the only question with which he had to do was, whether the company were legally liable for the loss. He was of company were legally liable for the loss. He was of opinion they were not, and consequently that the laintiff must be nonsuited.

LONDON AND NORTH-WESTERN (Newton-road Bridge).

LONDON AND NORTH-WESTERN (Newton-road Bridge),—Oct. 20.—The inquest on the late Mr. H. Sherard was resumed at Birmingham. The Coroner had since the adjournment received a letter from the secretary of the Scottish Central, stating that the directors deemed it altogether superfluous to offer evidence in the case, after the evidence already given by Capt. Simmons, in which the company concurred. Holland, the guard of the train, and Gibbons, the fireman on the 'Colonel' engine, were then called, and repeated

Digitized by

the evidence given at the inquest on Col. Baird. Several witnesses were called, who spoke of the health of the deceased. They all represented him to have been for some time previously to his death progress ing towards recovery. The medical attendant who made the post morten examination was also re-examined. The jury returned a verdict—"That at the accident which occurred to the train at the Newtonroad Bridge station on the 2nd of September, the deceased received a fracture of the thigh of which he languished until the 10th of October, when he died of a sudden fainting, but by what means caused no evidence appeared."

HUTCHISON'S PATENT FOR THE INDURATION OF STONE.—In connexion with this important subject STONE.—In connexion with this important subject, says the Builder, we have recently examined specimens of soft sandstone from the Calverley quarries, Tonbridge Wells, after being subjected to the indurating process practised by Mr. Hutchison under a patent, and the change effected in them is very striking. The effect of the process, according

to the patentee, is not merely to indurate soft stone, but to render all kinds of stone, &c., impervious to atmospheric action, vermin, &c., which important qualities cannot be too highly estimated for hydraulic, aving, building, decorative and monumental work. He professes to transform the Caen, Bath and other stone into materials invincible to destructive agents, to equal marble for beauty and quinomity, and for water-pipes, reservoirs, cisterns, mangers, troughts, sinks, &c., neither iron nor other material can equal need scarcely say that time is the great test for such an invention, but are bound to add that the specimens we have seen entitle the process to the considerate examination of those who are interested in the

The Carlisle Journal gives the following particulars of Mr. Stephenson's first celebrated engine, the Rocket', which was bought in the year 1837 from the Liverpool and Manchester, by Mr. J. Thompson, of Kirkhouse, the lessee of the Earl of Carlisle's coal and lime works. Here the engine was worked for

five or six years on the Midgeholme line, a local line belonging to Mr. Thompson, for forwarding his coals from the pits towards Carlisle. Soon after the engine Irom the pits towards carrise. Soon after the engine was placed on the line the great contest for East Cumberland took place, when Sir J. Graham was superseded by Major Aglionby; and it was used for conveying the Alston express with the state of the conveying the Alston express with the state of the poll from Midgeholme to Kirkhouse. Upon that occasion the 'Rocket' was driven by Mr. Mark Thompson, and accomplished its share of the work, a distance of upwards of 4 miles, in 43 minutes; thus reaching a speed nearly equal to 60 miles an hour. On the introduction of heavier and more powerful engines, the 'Rocket' was "laid up in ordinary" in the yard at Kirkhouse, where it now stands, no less a monument of the genius of the inventor than as a a monument of the genius of the inventor than as a mark of the esteem in which his memory is held by Mr. Thompson. Such an engine, says the same journal,—the first constructed on the principle which has brought railways to such a height of perfection in this country and throughout the world—ought to have its abiding place in the British Museum.

# Money Market.

# PRICES OF BRITISH STOCKS.

Sat. Mon. Tues. Wed. Thurs. Fri. 182 84 182 84 182 85 184 87 185 87 185 87 Bank Stock 

* For account, Nov. 14.

London Stock Exchange, Oct. 27.—Railway property having undergone great depression from the total absence of investment had reached such prices as have tempted numerous capitalists to come into the market, and the quotations have consequently im-proved. This has been aided by the pledges extorted from the various directions that future operations shall be on a limited scale, and from the belief that the shareholders will sanction no more jobs in the shape of amalgamations, leases and guarantees.

Liverpool, Oct. 26.—Since our last communication our market has remained without any very material alteration. This morning, however, business commenced with some briskness, and prices assumed a more favourable position, and although at the close the demand had somewhat abated, yet prices generally had continued firm and without decline. We quote:— London and North-Western, stock, 105; ditto, new quarters, 1g dis.; Midland stock, 69½; ditto, halves, 14 dis.; London and South-Western, 37; Brighton, 26½; South-Eastern, 21½; ditto, No. 4, 6½; North Staffordshire, 7½.

Suplow, Brothers.

Sublow, Brothers.

Manchester, Oct. 26.—During the former part of
the past week our share-market was flat and rather gloomy, but within the last day or two an improvement has taken place. From concurring circumstances it does appear that a less discouraging view is taken of railway matters generally. Actual transactions this day:—Caledonian, preference, 1½ dis.; East Lancashire, preference, par; Lancashire and Yorkshire, fifths, 5l. 16s. 3d. dis.; ditto, preference, 16s. 3d. dis.; London and North-Western, quarters, ½ prem.; North Staffordshire, 8½ dis.; South-Eastern, 6.

SAM. GRINDROD.

Birmingham, Oct. 26 .- During the last two days this market has decidedly improved. Buyers have come in, and prices have gone up considerably. To-day North Staffords have been done at 84 dis.

W. Banks.

York, Oct. 26.—The share-market is firmer to-day, arising from the brokers becoming buyers of stock. A general impression is prevailing, that in order to restore the confidence of the public in railway property the shareholders should appoint compe perty the shareholders should appoint competent accountants to inspect and report upon the state of each company's affairs. Our quotations to-day are North British quarters, 2\frac{3}{4}; York, Newcastle and Berwick preferences, 4; York and North Midland, East and West Ridings, 20.

GRAYSTON & EARLE. Hull, Oct. 26.—Our market is still in a very languid state; but we notice rather more disposition on the part of the public to invest in the current low rates. FLINT & TOOTAL.

IRON TRADE.—Glasgow, Oct. 20.—The market for pig iron remains quiet; and prices may be quoted at 43s. for No. 1, and 42s. for No. 3, cash.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

AMIENS AND BOULOGNE.-Oct. 28. Paris, at 2. -Nov. 1. Glasgow. GLASGOW, KILMARNOCK AND ARDROSSAN ROUBN AND HAVEE .- Oct. 30. Paris, at 2.

# Joint-Stock & Commercial Gazette.

Banks.

At Trinidad a new banking company is likely to be incorporated. It is to be called the Trinidad Agricultural Aid Bank. The capital is to be 200,000l., and 50,000l. of that sum is to be devoted to trading. The business of the bank is to be commenced as soon as the scheme has been approved by the Government. The "trading capital" of 50,000t. is to be first subscribed for by the local Government, and the Government to hold half the shares. Such institutions as the above will prove highly beneficial to the West India Islands, and would supersede greatly the present mode of raising capital by means of mortgaging the estates.

At Jamaica the commissioner of public accounts had resolved to issue "Island Checks," to the extent of 50,000*l.*, to meet the present exigency owing to the stoppage of the banks and scarcity of money in the colony, and to carry on the cultivation of the estates. The advices received this week from America

Digitized by GOOGLE

mention that many of the joint-stock banks in the States had declared dividends ranging at from 3 to

5 per cent.
The North of Scotland Banking Company of Aberdeen, supposed to have suffered severe losses owing to extensive failures, has, however, declared a dividend of 2 per cent. for the half-year.

The news by the Indian mail mentions that there had been another sheriff's sale of debts due to the Union Bank of Calcutta. Part of the lots advertised were stated to be debts owing to the bank by the family and firm of the late Dwarkanauth Tagore.

The shares in the Bombay Bank were at 34 rupces per cent. premium, the Agra Bank 15 rupces, and the Bank of Madras 5 rupces per cent. premium. The shares in the Oriental and the Commercial Banks were at a discount of 11 to 15 rupces.

The stoppage of the West India Bank at Barbadoes, and the curtailment of the circulation in the notes of the Colonial Bank, have caused much inconvenience

to the planters in general.

The clerk of the Margate Savings Bank, who ab sconded some months since with 2,000l. of its monies,

has surrendered himself to justice.
Several forgeries have been committed on the banking firm of Gurney & Co., of Peterborough, by a party named Stephen Aveling, who is under sentence of transportation for the offences.

## Steam Navigation.

The General Steam Company have lately added a new fust boat, called the Albion, to their already

Mr. Carleton, one of the managing directors of the Peninsular and Oriental Company, died on Sunday This gentleman was largely connected with the Irish steamboat trade.

The Canada, the last of the four new steamers upon the Cunard, or North American Steam Com-pany's line, is nearly ready for sea, and will shortly make her first trip across the Atlantic. The directors of this company expect that they will be able, by the increased power of their vessels, to run from "port to port" in ten days.

A new shaft for opening out a large field of coal, has for months past been in course of sinking at the Blenkinsopp collieries, near Sunderland. The miners have penetrated the coal seam, at a depth of 53 fathoms, and find it is 6 ft. in thickness, and of very

A meeting was held on Wednesday last of the Galvanized Iron Company, in accordance with the Act obtained for the dissolution of the company. It appears that circumstances prevent the directors at present laying a full report before the proprietors, but that negotiations are pending for the disposal of the property of the company. The trading operations were carried on on a very small scale, but had resulted in a profit of several thousand pounds, notwithstanding the adverse condition of the iron trade. The annual meeting of the Tanuar Silver and Lead.

The annual meeting of the Tamar Silver and Lead Mining Company was held on Thursday. From the report it appears that the South Mine, considered separately, had produced a profit of 1,900l., but that amount had been reduced by the excess of expenditure on the North Lode, where there has been erected a steam whin-engine. The prospects of the coma steam whin-engine. The prospects of the company were good. The total credit balance was 9191.

4s. 5d., and a sum of 1,723(. 13s. 3d. held in reserve.
The balance-sheet stated the receipts during the year for silver ore at 17,216%. 5s., which, with the balance from the previous year of 896l. 4s. 2d., made the total receipts 18,112l. 9s. 2d. The disbursements amounted to 17,296l. 14s. 9d., and left a balance of 815l. 14s. 5d. The chairman, in reply to questions from the shareholders, said that dividends would be declared next year; and the concern was in a flourishing state. The quantity of silver which had been extracted in twelve months had been 144,095 ounces. The report was unanimously adopted; thanks were voted to the chairman and the directors, and the meeting terminated.

The Morning Chronicle states that the Boston apers speak of the existence of rich copper mines in Old Concord, Massachusetts, about four miles from the town. Three or four companies are said to be at work, one of which has obtained a quantity of ore yielding from 40 to 60 per cent. of pure copper. Another company has eight or ten Cornish miners engaged sinking a shaft on to a lode, about 5 ft. thick, of what is pronounced very pure ore. A specimen furnished for analysis yielded, it is stated, 36½ per cent. of pure copper, and the miners are reported to have declared that they never saw better indications of copper than are found in that district.

The share-market is dull; the same feeling pervading it as that which has prevailed in the railway share market.

TO CORRESPONDENTS.

A correspondent having inquired if our statement of mileage of the York, Newcastle and Berwick (269) ought not to be 361, so as to include the Maryport and Carlisle and Newcastle and Carlisle, now worked by the former company, we have ascertained from the secretary that the receipts of the latter lines are not included in the published that the first in and consequently, that our mileage we statement of trailic, and consequently, that our mileage re-turn is correct. As no signature was attached to the note of inquiry, it has been suggested that our correspondent must be a " Bear."

Mr. H. Brow , M.P., is thanked for his communication. Mr. H. Brown, M.F., is thanked for his countries of Cause and Effect is declined. Received: A. N.—E. D. C., Methley.—D. P.

# Railway Chronicle.

LONDON, SATURDAY, OCTOBER 28.

The new directors of the LIVERPOOL, MAN-CHESTER AND NEWCASTLE-UPON-TYNE, headed by Mr. Leeman, were appointed at the adjourned special meeting of the shareholders. It was also resolved to authorize the directors to pay either the 14s. promised, or any other sum that the funds would allow. The first instalment of 10s. is to be paid on the 1st of November. The meeting was then adjourned till the 15th of November.

Mr. Hudson has the unreserved management of the working of the EAST AND WEST YORK-SHIRE JUNCTION. He was invested with this power at the adjourned special meeting of the proprietors who at the end of three months are to receive the surplus profits. Strong measures are to be immediately enforced against defaulting proprietors.

The directors of the EDINBURGH AND NORTH-ERN, at the special meeting of their proprietors, and after an opposition backed by certain highly influential and intelligent parties, carried their proposal for assistance to the Aberdeen. The Edinburgh and Northern, with the North British and the York, Newcastle and Berwick Companies, are to contribute (as our readers have already been informed) 276,000%, for the completion of the unfinished and new works of the Aberdeen. After the opening of that line to the south bank of the river Dee the traffic is to be worked by the three above-named companies. The Chairman's resolution was amended by a recommendation for the three companies to be represented in the Aberdeen Board, pro rata; and also for a certificate to be obtained from the engineers that the required sum of 276,000l. was sufficient.

The STATEMENT published by the LONDON, BRIGHTON AND SOUTH COAST direction in one respect thoroughly fulfils its object. It demolishes Mr. Nash; and shows the worthless quality of the data which the Times greedily adopts and makes the basis of its comments on railway affairs. We have no doubt, moreover, that it gives a more authentic scheme of a final settlement of the undertaking than any that has yet appeared. It has the rare merit of showing a fair hope of reaching, before long, that Utopia of anxious proprietors,-the close, namely, of capital expenditure.

All this is excellent. Yet we cannot say that as a result of some ten years of labour, outlay and hope deferred, it can be called a very brilliant one. To arrive, after so much pains and such heavy contributions, at something like the certainty of a 4 per cent. dividend, is not exactly what the promoters of the line desired, nor what its prospectus and the reports of following years promised them. One is tempted to ask, on comparing the result with what has been expended to attain it-cui bono?

It has been for the good of the public in the first place. Of this there is no doubt. They are positive gainers by a part of the expense and labour of the last eight years, which now turns out to

have been a mere dead loss to the shareholders. No small amount of both, too, has been wasted without doing good to either the one or the other party. Many workmen have, indeed, been employed, of various classes, and vast sums of money circulated, as the phrase is. But as for the shareholder, it is probable that he would have been a much richer man now had nothing been done beyond simply making a line from the bridge at London to the hill over Brighton. All the risk, and above all, the cost of obtaining leave to make the trial of those experiments that have failed at the outset, and those that have been carried further—this now lies like an incubus on the only profitable body of the company's system. Well may the proprietors rejoice that the purpose of the late Board, to extend it still further by launching into the business of sea trading, was defeated at the last moment, and that the only form in which that project now stands in the accounts is in a claim of 15,000l., set down as an available asset—we hope it may prove so—for money advanced to the Steamboat Company.

Altogether, the proceedings of this concern, from the evil days of Mr. Harman's chairmanship to the close of the last directory, are full of instruction for those whom facts can teach. The present chairman shows a disposition to get face to face with the realities he has to deal with,—which is a good sign; and by such a course there is some chance of improvement for this undertaking, hitherto anything but fortunate or well managed.

The Statement issued by the LONDON AND NORTH-WESTERN reached us at the eleventh hour. It will be found among the Advertisements in a preceding page.

The fact of London and North-Western stock having changed hands this week, in many instances, AT A DISCOUNT, is too serious to be passed over without a brief notice. In order to estimate its full bearing, many considerations would have to be weighed; but a mere comparison of the share lists of the last week with those of corresponding dates in previous years, will at once show, in a rough manner, the gravity of the circumstance. In October 1847 -there having then been some 20 millions (in round numbers) expended - the price of the stock was 139 to 145. In October 1846-not quite 16½ millions having been laid out—the quotation was 195 to 199. The contrast must, of course, be viewed with reference to the state, at the several periods in question, of other kinds of business and of other money values. But, every allowance being made for both, there will remain enough to prove a change wholly in-dependent of any general conditions of prosperous or adverse times. In October 1847, 3 per cent. consols were quoted at 78 to 81; last week they ranged between 83 and 85. It is evident that the prestige of this, formerly the most popular of railway stocks, must have vanished before such a difference as this could

It is not, we have said, and again say, the libels of any Mr. Nash or Mr. Smith that have done this; nor is it the use the Times has invidiously made of such rubbish in throwing dirt on railway securities. The mistaken notion that it was dangerous, when it led Mr. Glyn to enter the lists against a paltry pamphlet, was perhaps the only thing that could have made it really mischievous. On the strength of the August speech at Euston-square, the publisher has disposed of two more editions since then. People began to think that there must be something important in an attack which called forth such an emphasis of defence.

We said at the time that it would have been

well to leave mere fallacies to those who could be impressed by them, and take some pains to deal with the real grounds of the disappointment which blanked the countenances of the shareholders on hearing the directors' report. The task, if then undertaken, might have rendered a more difficult one unnecessary now. That something will be attempted to allay the increasing fears and discontents—of which the prices of the day afford an unwelcome proof we may confidently expect; — and what that something must be need not be insisted upon now. We have already anticipated the necessity, and pointed out the only effectual way, of meeting it.

We are compelled to defer until next week some observations of a practical tendency, from one of our well-known correspondents, on the closing of capital accounts, the theory of which we discussed in our last number.

From our official returns it appears that the amount of traffic for the last week, on 4,166 miles of railway, was 220,334l., thus accounted for:—111,137l. for the conveyance of passengers only, 55,246l. for the carriage of goods, and a remainder of 53,9511. for passengers and goods together, not respectively appor-tioned; being an increase of 30,081*l*. over the corresponding week of last year, when the mileage was 3,309. The average earnings per mile were 541., whilst in 1847 they were 571.

# CONTINUED RUMOURS OF AMALGAMATION.

[Since we wrote the following remarks, we learn, from pretty good authority,—1st. That there has been pending a negotiation for an alliance, if not an entire fusion. 2ndly. That it has just been broken off. 3rdly. That powers, however, are to be asked from Parliament to make such an alliance hereafter, if the parties can agree. There is much to surprise and something to regret in this affair; but we see no reason to apologize for the doubts we have expressed below, in reliance on the good sense of directors. The scheme we do not think attainable; and as it is said to be laid aside for the present, we can afford to wait for details until next week.]

While nothing official has transpired respecting the object or result of the CONFERENCES which have been held since the latter end of last month between the directors of the London AND NORTH-WESTERN, LONDON AND SOUTH-WESTERN and GREAT WESTERN Companies, rumour has naturally been busy with the purpose of their meetings; and we find the Morning Herald this week positively declaring that it is to effect an amalgamation of the three great bodies-a plan first announced as under consideration, by the Atlas, three weeks since. The terms in which the Morning Herald speaks of this alleged design are more than usually emphatic. They are as follows :-

No doubt now exists in the railway world of the accuracy of the information we communicated some three weeks since relative to the great object of the negotiations pending between the above companies, viz., AMALGAMATION, by which it is considered the protracted and unhappy differences between them may be settled, with as much advantage to the public

as to the shareholders. For our parts, we must take leave to form an exception to this general remark as to the opinions of the "railway world"; and this not because we pretend to any secret information of the design of the negotiation, but simply and wholly because we deem the plan so questionable in every respect, that we cannot—as we have already said-give credence to the report on any grounds less certain than an express public declaration by the parties concerned.

this appears, we shall continue to hope that the | measure founded in the nature of the conrumour is a mere distortion of more rational intents of the directors; and it may be, in some quarters, a feeler put forth, in order to suggest what may naturally enough be desired, by one party, at least, to the conferences.

Some of the objections that render any such measure inexpedient we stated in our notice of the first circulation of the rumour. There are others, which will have occurred to many of our readers before now, and which it would not have been worth our while to point out, but for the positive manner in which this rumour has been repeated. Of these, the principal one is the discrepancy of gauge. pretty evident that the first step to any beneficial union of the three undertakings—to any union, indeed, which shall be otherwise than iniurious to the two which are founded on the national system-must be the adoption of that system by the Great Western. It is not very probable that the latter are yet prepared to accept this condition-which, however, is the sine qua non of any effectual treaty for a satisfactory combination of interests; and it is obvious that unless this main point is secured, the effect of amalgamation, in the present state of railway affairs, would simply be to give the exceptional party an important guarantee at the expense of both its neighbours. The tendency of such a concession is, indeed, too apparent, we presume, to escape the view of the representatives of the latter; and while, as we have said, under existing circumstances, it might be convenient to the Great Western to effect a composition with its rivals, on the basis of preserving the system which has cost its proprietors so dear, we cannot imagine a single object to be promoted by amalgamation on that basis, which would not clash with the interests of the other two companies.

There is no good to be possibly gained by such a process that cannot be classed under one or the other of the two following heads:viz., a release from strife; and a more profitable mode of working. For the first of these there is no need now to resort to actual fusion of capitals, the rivals being sufficiently "bound over to keep the peace" by the state of their funds and liabilities. The second can in no wise be promoted by amalgamation while the difference of gauge continues to forbid the interchange of traffic in the same carriages and by the same engines. There is no mystery in the process itself by which discordant arrangements can be made harmonious; if it be not preceded by the removal of the causes of discrepancy, the loss or gain of working will be just the same as if no junction had taken place. And if we truly apprehend that the Great Western would make no treaty on the sole basis which could give any promise of advantage from its results, the plan could only be realized with an original defect in its construction that must vitiate all the good which has ever been expected from amalgamation.

The real good derived from past transactions of this kind, under far more favourable conditions, may, indeed, be questioned. In no instance yet have we seen the several interests thus combined more prosperous than they might have been while separate. There has been no considerable improvement in the economy of working; on the contrary, it would appear that the effect of throwing together many individual bodies into a great mass, has been to deprive them in some measure of that close communication between the managers and the interests at stake, which was formerly the advantage in our scheme of Until notoriously costly and inefficient is in a great member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the weekly member it every time that the railway enterprize over State administration.

ditions under which it exists; and we approhend that by depriving railway concerns of the compact and manageable dimensions property private business, they can hardly avoid falling into some of the very evils which those who resisted their absorption by the State have me: strongly deprecated. At all events, there's nothing in the experience of the two or the years since the great amalgamations ser-formed to allay this apprehension; and med to give a prima facie ground, at least, for entertaining it. The several vast bodies there's formed have gained nothing in security for without; they have, on the contrary, only be: contending on a wider field than before; #: by the temptation of large means, the command of which has postponed the day of reckess. the cost much longer than could have been the case in smaller concerns, their rulers as to have often had to point out, have been sedent into grand operations, that seemed for a will to blind them to every view of the economic results of what they were doing. Nor care easily be shown that any effectual economy indiservice of railways has been secured by amage mation. On the contrary, we fear that some the concerns thus increased have been in man ways more expensive in their outlay in seren departments. The whole administration because too vast for a due control in this respect by a head, its division, in consequence, amouseveral has become inevitable. Each of the while studying the efficiency of his own department. ment, will rarely keep in view the bearing its conduct on the general exchequer. And 2 this way alone it will be seen how easily 1 12 way concern may become too large for comand management, in the class of details which all others bear on the result of its well and determine its rate of profits. We have? hesitation in affirming that an establishment the size which a combination of the three companies above named would produce, could \$5. from its very nature, be as cheaply or ever mically managed as its component parts parts or might have been while separate. And we see, indeed, little difference between the racter of such a management as the united is must have and that of any department of the vernment. The process would, indeed, be rapid advance towards a State system imm very ground which hitherto has given the way its advantage over State government would, moreover, bring the ultimate abserve of the property by the latter many steps presthan it has hitherto been; and perhaps, il class would leave us no great reason to regret sale probable consummation.

This, however, it can only effect by sinkthe especial principle on which railways 135 formerly been prosperous; and how 12 measure not unlikely to produce such a reby such means can be regarded as suital improve a declining property, any share-one will scarcely need to be told.

We must again observe that, over and 23. these considerations, the necessity of good Parliament for leave to combine must be garded as a serious object of alarm. opportunity of striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking a fatal blow at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the striking at the str whole interests concerned will be a most gerous one; and those must be bold in who can advise that it should be afferded proposals that would necessarily exceed kind and in degree, all that a certain learning party in the State has always viewed suspicion. That the directors of the and North-Western can overlook what the last amalgamation inflicted on that concer11

reports come before them, telling of a diminished receipt on a mileage largely increased,—which they well know is the consequence of the tariff which was the parliamentary price of the union brought to pass in 1845. One of their Board, Mr. Boothby, we have lately heard describing in public the results of this, which he confessed to be a "ruinous" condition. Will any one undertake to say that Parliament will show more indulgence to a far larger combination, a far more questionable process, a much more decided establishment of "monopoly"?

To conclude, we see so many objections to the measure that we cannot bring ourselves to believe it is really in progress-in spite of the very positive assertions of the Morning Herald. That the directors have been meeting we know: as also that they may, if so disposed, meet to very good purpose, and adopt many conclusions tending to the peace and profit of all their respective concerns - without falling into an extreme that, however pacific in appearance, would certainly be anything but profitable to two-thirds of the interests at stake. The condition of the whole, indeed, is so discouraging at this moment, that some may hastily think it cannot be made worse; but serious difficulties will not be relieved by rash conclusions; and we must hope that they have not so far perplexed the directors' judgment as to throw them upon an expedient that would not touch the root of the evil, while it must create many new, and perhaps worse, disadvantages.

# Carrespondence.

INDIAN RAILWAYS.

Mr. Chapman's Third Communication.

Such of your readers as are in the habit of reading topographical details with a map before them, or who are personally acquainted with the locality of Bombay, may safely be left to decide between us, on the statements already made, as to the propriety of the amount of traffic taken credit for in the esti mates for the line between Bombay and Callian, put forth by Mr. Nicholson and myself. Two things, however, I have to beg of them ;-first, to read the whole of the third and fourth paragraphs of my letter of the 12th of October, and not confine themselves to the few lines on which you hinge your answer of last week; and next, to remember that the case, as to acquiring a right to the guarantee of the East India Company, and even as to intrinsic profits, rests on the goods traffic only in an inferior degree. It seems I have failed to make myself understood as to the reason for omitting the passenger traffic in my early estimate, viz., that for the long line, and including it in the later estimate, which is for the short one. Let me attempt the explanation again, in a different way. Suppose no railways to be yet existing in England, and it is proposed to make a line from London to some point north of the Trent, with the view of bringing southward, by that one line, the traffic of all England north of that river. I apprehend it would be found impracticable, even in this country, within a limited time, to make out any trustworthy account of the number of passengers to be expected; it would require the watching of some hundreds of roads, and when all was done, perhaps, nobody would trust the deduction. We might, it is true, count the travellers at Highgate Archway, but then the number at that point would tell us nothing as to how many were to be expected from all the country north of the Trent; they might be more or fewer than those at Highgate, for a thousand probable reasons ;-in fact, we should have so far obtained only an inapplicable enumeration. But let it now be proposed to make the line, in the first instance to St. Alban's only : in that case, the enumeration at Highgate might fairly become an available datum. This would be precisely our case if the Trent stretched completely across the island, was fordable at a thousand difficult places, and had but two or three bridges. For the Trent put the Ghauts;—for the northern counties

put Central India and the Deccan :- for Highgate Archway, Sion (8 miles from London), and for St. Alban's, Callian. 1 then leave it to your readers to judge whether "it is idle to allege that the passenger traffic was not reckoned in Mr. Chapman's estimate' (of the long line), "because its amount was not known," and whether there is not ample reason for admitting the Sion (say St. Alban's) enumeration of passengers into the short estimate, and excluding it from the long one. As to an enumeration at the Ghauts, it is hardly necessary to say that such an operation would not be at all like counting gigs and horses at a turnpike: we must have watched hundreds of tracks which no horse could climb, words quoted above seem to imply that I knew the amount of the passenger traffic for the long line, but would not use it; and afterwards you suggest a supposition that the "conviction" in my mind "was irresistible, that the traffic, whether large or otherwise, would not be acquired by the railway, that this was my reason for omitting it. On this point I have to affirm, with all the "sincerity" for which you say I have "acquired a prestige," that you are utterly wrong, and to add that, if you have read my report with ordinary care, you must know that the insinuation is wholly without foundation.

My calculations for the salt traffic afford no parallel whatever for the like in respect to the passenger traffic, as you would easily see. Of the salt trade, I had, at first, "no sufficient account," and I ascertained its amount approximately by means of the consumption per head, and the estimated numbers of the population to be supplied from the western coast; this was afterwards tested by the Government returns of the quantity made on the coast, the amounts of that retained in the coastward districts, and of that exported being deducted; the two results were found to agree within one-fifth. But how can the principle of either of these estimates be applied to the ascertaining of the probable number of passengers? Can anybody tell us how great a percentage of the population travel, or say where the inducements to travel originate, and to what extent they act? If not, how does it follow that if I ascertained the quantity of salt to be carried I could also have ascertained, if I had pleased, the number of

Your inference that because the long line, with better prospects, has not calculated its passengers, therefore the short one, with inferior prospects, will actually carry none, is worthless on the face of it. The long line has so many goods to rely on that it will pay better without passengers than the short line with them. But how does that prove that the short line will carry no passengers? Do you set a mere inference against "an actual enumeration," made by the officers of Government, for purposes altogether independent of our undertaking, carried on for nearly a year, and attested in due form by the signatures of the head of the department acting in this matter and of the chief secretary of Government? Is this "no evidence"? What better evidence do you get for passengers expected to be carried on English railways?

As to the "monstrous item" of 10 per cent, depreciation, no doubt Messrs. Rendel and Beardmore and Mr. Macdonald Stephenson, when they adopt it, will give their reasons for so doing; till then, I shall take leave to surmise that their approbation of the total effect of an estimate is not intended to imply an approbation of each separate item of which it consists. But how is that now you "neither approve nor condemn" this item? A few weeks ago it was the main support of your argument; on the strength of it, you told us that Government, in giving an unlimited guarantee, would incur a risk of loss to the amount of 16‡ per cent. How do you mean the estimate to stand now?

Finally; you quote a paragraph from a paper by Mr. Williamson, in which is embodied a part of a sentence from a report prepared by me for the private use of our directors; private or public, however, I am ready to stand by my words when rightly quoted, and with the facts of the case as they then stood kept in view. Your quotation from Mr. Williamson is this:—"Mr. Chapman, a prudent calculator, observes of the Callian section, 'It would not only be a very unsatisfactory investment, but prove a discouragement to the actors in of railways in India."

The date of the report on the Government terms, from which these words are taken, is November 30, 1847, not two months after that of the "terms themselves. We were then, as all the world knows, in the midst of the commercial panic, and we had an additional difficulty (since removed) arising from certain expressions in the Court's letters to us, which might possibly have so worked as to exclude us from undertaking the extension beyond Callian on any acceptable terms. These circumstances forced me to the consideration of our prospects under suppositions wholly different from present circumstances, and my words, which are now entirely inapplicable, are as follows: ... "The best approximate calculation I can offer" (i. e. of the profit on the short line) 'shows a probable dividend of 5 per cent. It may be taken, I suppose, as quite certain, that for a probable profit of only 5 per cent., no sufficient amount of capital would be subscribed in England for Indian railways under ordinary circumstances, much less at present. (Nov. 1847.) It follows therefore that the line to Callian, as an integral line, would not only be a very unsatisfactory investment, but prove a source of great discouragement to the extension of the railway system in India." The words I have now The words I have now marked for italics are so marked in the original report; and the whole paragraph, with its context, deals with the subject on the supposition which the marked words express. But nobody has proposed that this shall remain an integral line: nor would the interests either of India or England permit It was, indeed, once feared that Government it. might take a course which would practically for a time make it so, and hence it was necessary to consider it in that view; but that apprehension has long since passed away, and anything "unsatisfactory" in the prospects of the Callian line, which might have depended on that supposition, is now wholly beside the mark. But more; you quote my words virtually in support of the view for the sake of which all your articles on the subject are written, viz. that the line will not pay its working expenses, and so the shareholders will lose part of the Government guarantee. My assertion, or rather inference, even viewing the line as integral, was, that it would be unsatisfactory, not because it would fail to pay its expenses, but because it would not pay more than 5 per cent, beyond its expenses! I had proved it would pay 5 per cent., but with that I thought people would not be satisfied; but if through change of times people are now satisfied with 5 per cent, realizable from Government on the line merely paying its working expenses, how am I to be made to sa that the prospects of the line remain "unsatisfactory, while I am ready to maintain that it will pay not only its expenses, but 5 per cent, beyond them? And if my assertion is so wide of your purpose even when the line is considered as integral, what is it when the line to Callian is taken, by Government and all other parties, to be only the first portion of a much more extensive and profitable system, the option of undertaking which is reserved to this company.

Mr. Williamson's opinions on all local and public matters affecting Western India are entitled to great respect: but I am satisfied he will claim in this case to be relied on no more than if he were a well-informed country gentleman habitually acquainted with a country through which an intended English railroad would pass. Country gentlemen in one case and old Indians in the other have first opposed railways altogether and then changed their views from subsequent knowledge of facts, uscertained by special inquiry, which they did not suppose to exist. Mr. Williamson has not been an opponent, but I have good reason for thinking that he would not again "doubt" whether the returns on the line to Callian "would ever cover the working expenses."

Having now dealt with the principal matter which I take to be erroneous in your last article, I respectfully await your next mistake; and I cannot but think I should have to wait till I was well tired if your knowledge of the facts were only equal to your capability of dealing with them. I am, Nc.

Oct. 25. J. Chapman.

# CALEDONIAN AND THEIR LEASES.

a very unsatisfactory investment, but prove a discouragement to the extension of railways in India."

At the meeting of this company in London, next month, the expediency of the leases entered into by our directors with other lines is to be considered.

My object is to advise my fellow shareholders to judge for themselves, and deliberate before they repudiate them and be "penny wise while pound foolish." For example, the Dundee, Perth and Aberdeen is now clearing above 5 per cent., after paying expenses, though little more than a year open. Our directors, it is believed, are still convinced of the propriety of the leases, and they should be competent judges; but, without reliance at all on their advice, let every shareholder judge and prove my statement by facts and figures, and he will see, not only that the present deficiency between the above return and the guaranteed amount is so trifling as not worth being named in comparison with the advantages of securing the Dundee and Northern traffic, but that the deficiency must altogether disappear so soon as the traffic is developed by the completion of the line and of the Northern railways. We shall then have the benefit of it for nothing. I have facts and figures in proof of this, but I do not give them, knowing that they are not generally attended to. I therefore simply announce the result, and advise each shareholder to test it for himself. If he has not the materials, let him apply to the respectable secretaries at Dundee, who never shirk giving every information. In short, he will find that, so soon as fully opened and developed, it will pay the guarantee and expenses, and that we ought not for the sake of a trifling deficiency, for only a year or so, to lose the means of increasing and controlling traffic, by opposing and repudiating the engagements and policy of our directors formed for our benefit. EXAMINER.

#### SHARE PURCHASES.

You quoted from the Daily News a paragraph about share purchases, but omitted to notice that they inserted explanations which they themselves said exonerated the Stock Exchange. Irregularities or rather delays in the delivery of shares arise chiefly from the operation of the Stamp Act, making it desirable to transfer them in certain lots, because cheaper than in others, and from the circumstance of parties who have to sign the same deed frequently residing in distant parts of the kingdom, and not being always at home when the transfers are sent thither. Shares are dealt in for the middle and end of the month. That is, the buyer is then bound to furnish the seller with the names into which the purchases of the past fortnight are to be transferred, and the seller, for the reasons I have mentioned, is reasonably and fairly allowed fourteen days to deliver them in. If not then delivered the broker can, on the order of the purchaser, buy them in against the seller, who is liable for any consequent loss. Parties may wish to buy for immediate delivery, but a seller for money cannot always be found. A jobber may not have stock in his name, or he may not choose to make a special bargain at an ordinary price. A special bargain too would not be marked in the authorized list, and that alone would set your testy and suspicious gentlemen who think brokers and jobbers in a league to cheat them, quite aflame. If such parties will do business in a mode not provided for by the ordinary rules, they must pay extra for the accommodation. And it does not vet appear in this Daily News case that the parties supposed to be in fault belong to the London Stock Exchange at FAIR PLAY.

#### THE PANIC __ MANCHESTER, SHEFFIELD AND LIN-COLNSHIRE.

Whilst the present unwarrantable panic continues in railway shares, and whilst the Times and others interested in reducing the value of railway property as low as possible continue their misstatements and dolorous prophecies, it seems to me that it would be well if shareholders generally, who are not desponding, were to endeavour to prove the grounds of their confidence in the railways in which they hold shares, and to give their own reasons and calculations independently of directors, who, at present at least, are supposed to be not so disinterested. The only railway in which I have a great interest is the Manchester, Sheffield and Lincolnshire, and though its shares are at a terrible discount, a calm review of its prospects shows me that this depreciation is founded only on terror. Of this line, not more than 58 miles are working, and although they are at work under the most unfavourable circumstances, they yield a weekly traffic of more than 3,000%. We have already

spent above 4,600,0001., and before the works are finished, shall have spent perhaps as much as 6,000,0001. For this sum we shall have to show about 220 miles of railway and one of the largest and best docks in the kingdom. Now, supposing traffic is never better than in these gloomy times, we may fairly reckon to have a weekly receipt of 11,000*l*., without reckoning anything from the docks ;the old docks already pay 5 per cent. on their purchase, we may take credit for something in respect of the new docks. I reckon, therefore, that after the whole scheme has been at work a year, we shall have an annual gross income of more than 580,000L, and probably 600,0001. Now this amount, after deducting working expenses, would yield more than 5 per cent. on the original outlay. But it is too absurd to suppose that times are never again to be brighter than the present; with a very little improvement our dividends would be 6 per cent, and more. I for one, therefore, am not alarmed at the City articles of the Times or the London Stock Exchange statistics, and as I am not a speculator, it does not trouble me when I see shares quoted at 50 per cent. discount, in such a case as the present.

Altrincham.

## Gossip.

We trust we may now consider that the prices of railway stock have seen their lowest; and as the companies are all on the alert to assure their proprietaries, parties will be looking with interest to the quotations and the correlative values of the different stocks, with a view to investment. In order to aid their calculations, we have introduced some new matter in our lists. The London prices, from the facility of instant communication by the electric telegraph, may now be taken to govern wholly the country markets in bond fide transactions, and thus render superfluous the duplicate lists of prices hereto-fore given. We have therefore inserted in the space so occupied useful information for the investor as well as the speculator. In addition to the prices of the week for business done, the closing prices of buyer and seller will now be found in parallel columns, as well as the amount of interest and dividend on each denomination of stock, and the per-centage on each, the dates when payable, and when first dealt in exclusive of such payments. This will avoid the use of notes, and be a record for after reference. The latest prices in the provincial markets will now be found in our various correspondents' weekly letters.

We have just learnt that the Committee of the Stock Exchange has resolved that nothing but official statements shall hereafter appear in the Weckly

Railway Share List.
The GREAT WESTERN announce that the Berks and Hants, from Reading to Basingstoke, will be opened for general traffic on Wednesday Nov. 1. Coupled with this is the unwelcome intelligence that they are forced by circumstances to discontinue the issue of day and return tickets: this will have a bad effect on the short traffic out of London.

Surveys for a line are now being made, prior to the publication of the usual November notices of intention to proceed to Parliament in the ensuing session, for a line to connect with the CHESTER AND HOLY-HEAD, from Bangor to the port of Carnarvon, the chief seat of the mineral trade of North Wales.

General celebrations and rejoicings in commemora-tion of the opening of the Great Northern took place, as previously announced, at Boston, Spalding and other towns in Lincolnshire. The day was observed as a general holiday by the closing of shops by festivities and gratuitous railway trips. The grand dinner took place in the theatre at Boston, which was boarded over and decorated, as on the

occasion of the grand dinner in 1841.

The London and North-Western are vigorously setting about to reduce their rating in various districts. At a petty sessions, the rating of the line, in the parish of Stoneleigh, near Rugby, was brought under the consideration of the magistrates, by an appeal from the company, and was reduced from 1,500l. to 3001. per mile, the amount at which the company offered to be rated.—At the special sessions at Great Barr, the parish of Dalston, by their solicitor, resisted an application made to the Bench by the company to reduce the amount of rate imposed upon them, 900l. per annum. An objection was raised that the notice of appeal by the company against assessment was invalid, because it had been served upon the newly-appointed overseers, instead of their immediate predecessors, under whose term of office the rate had been imposed. After taking the opinion of Mr. Hebbert as to the point of law, the objection was over-

ruled, and the amount of the assessment reduced by consent from 900l. to 377l.

Mesers. Smith, of the Strand, have concluded a contract with the MIDLAND and CHESTER AND HOLY-HEAD, for the privilege of selling newspapers, books, &c. at the various stations. As we have previously announced they already hold a similar contract with the London and North-Western, they have now secured the right to supply periodical literature to passengers over 1,000 miles of rail. In case of irregularities of any description, or of deficiencies in the present arrangements of this important service, the public will know to whom in future to apply for

remedy.

The South-Eastern have been experimenting a NEW SIGNAL, to effect an instantaneous communication between the guards and the engine-drivers, or from any station or post of watch to a train. machinery is said to be so simple that it is in the power of the slightest touch to render it effective. By the forcible expulsion of air striking upon the extreme edge of a bell-shaped contrivance, sound is conveyed four miles around. It has been found that in dense foggy weather its shrill cry penetrates the atmosphere with a facility unknown to the whistle raised by steam: and as it does not depend upon the latter agency its small and compact machinery may be fixed inside any one of the carriages far removed from the engine, and there worked by hand if desired, or acted upon by gear attached to the axle. The patentee is a Mr. Wells; and Mr. Farniough, the chief locomotive engineer, and the rest of the officers of the South-Eastern line have afforded facilities for its trial and adoption.

The first instance upon record of a CHANGE in the NAME of a RAILWAY STATION comes into operation on the EASTERN COUNTIES on the 1st of November, when the Wenden station, 43 miles down the line, and the stopping-place for passengers to Saffron Walden, will in future be known by the name of "Audley's End."

Mr. W. Graham has just issued a circular, addressed

to the shareholders of the CALEDONIAN, on the subject of guarantees. He objects to the company granting additional guaranteed dividends, because, in the opinion of competent parties, the Caledonian is laid down upon a wise and comprehensive plan, and in itself comprehends such advantages, that if all guaranteed dividends to other lines and other heavy and unnecessary expenses are avoided, it may yet pay a fair dividend to its shareholders, but that the course presently proposed by the direction is perilous in the extreme. Because the revenue necessary to pay the extreme. Because the revenue necessary to pay the guarantees on lines south of Castlecary, working expenses, and 5 per cent. upon the stock and loan capital of the Caledonian, amounts to 526,151l. per annum, or 10,119l. per week. Because, if the proposed additional guaranteed dividends are approved of, north of Castlecary, the further sum of 328,3931. per annum, or 6,315*l*. per week, making in all 851,547*l*. per annum, or 16,433*l*. per week, is required to be produced by the conjoint lines, a revenue which no one could possibly be found sanguine enough to expect. Because, after the Caledonian proprietors have, for a series of years, laid out of their money, it is unreasonable and unfair to call upon them to guarantee large dividends upon other lines of railway, previous to their having themselves realized any dividend whatever; and should those additional guarantees be sanctioned, as is now proposed, it is certain that the sanctioned, as is now proposed, it is certain that the original capital of the Caledonian will be altogether swamped. It is therefore proposed, at the forthcoming special meeting in London, to submit a motion on the subject.—[A letter of one of our correspondents (see p. 764) shows an opposite view of the question, and well sustains the measure proposed by the directors. -Ed. Rail. Chron.

There is already a great increase in building in the districts in and near Richmond. A new class of inhabitants is springing up from the increased travelling facilities of the RICHMOND BRANCH of the SOUTH-WESTERN. The directors are reported to adhere to their determination of not issuing season tickets for the present; - amistaken step to our mind, as the short traffic tickets under proper restrictions have been found in most cases to pay well and to increase the general business of the lines on which they have been

Mr. Hudson is reported to be ready to lease the STOCKTON AND DARLINGTON, which has always paid 10 per cent. since its opening in 1835, and is almost exclusively devoted to the conveyance of coals from the coal-fields of Durham and Stockton, at from 10 to 15 per cent.

The trustees of WHITEHAVEN HARBOUR, presided over by the Earl of Lonsdale, have agreed to an extension of the line to run close upon the harbour, which is to be deepened eight feet. Retaining walls are also to be put to the present quay. A second berth

will be constructed for vessels, in consequence of the increased traffic between Newcastle and Liverpool.

The trustees are contemplating a reduction of the town dues and tonnage as an additional incentive to the line and coast traffic.

Memorials from the Chamber of Commerce and

inhabitants of Llanelly have been forwarded to the directors of the SOUTH WALES, seeking the immediate completion of the line between Swansea and Llanelly, a distance of nine miles, contemporaneously with the portion between Newport and Swansea, so as to accommodate the collieries and lead and copper works of the district and the trade of those places with Bristol, Manchester and London.

Mr. Richard Lucas Nash, of the Stock Exchange Meekly Railway Share List, author of 'Railway Accounts,' &c., and Mr. Charles Lacy Nash, the solicitor in the prosecutions for the railway robberies, &c. are not one person, as generally supposed, and

they advocate opposite views.

A door of one of the carriages of a Liverpool train on the 16th being unfastened, a child fell out of its mother's arms from the carriage on to the line. The train was stopped about a mile from the place where the child was supposed to have fallen out. A search was immediately made, and the child was found to have fallen in the soft mud of a ditch, and to be uniniured.

The Lincoln papers state that a man who says he lost his leg by a railway accident has adopted the plan of exhibiting in the market-place of Lincoln a rough sketch of himself and the rail at the moment the carriage was passing over his leg; underneath the picture being written, "They won't give me nothing."

We inserted in our Gossip last week the substance of a paragraph from the Glasgow Scottish Reformers' Gazette, relating the incident of the Duchess of Sutherland being refused a passage in the Sunday train on the Scottish Central, the truth of which, in some particulars, has since been impugned by the secretary, and we therefore make room for his state

Ment:—
On the morning of Saturday, between 9 and 10 o'clock, when accidentally at the station, I was informed, through a second hand, that Her Grace had sent to inquire if she could be carried forward by the mail train on the following day. To the question, I replied that, being precluded by a vote of the shareholders from carrying passencers on Sanday, it would be impossible to comply with Her Grace's wishes, the inquiring party answering that the Duchess would in that case proceed by the Edinburgh and Northern train, advertised to carry passengers on Sundays, and which starts 40 minutes before the Central mail train, or perhaps wait till the following day. The messenger did not call upon me; I received no letter upon the subject. I am sure every one connected with the railway would have been ready to facilitate Her Grace's journey by every possible means, had the circumstances attending it been made known to them; but no candid man will blame the parties complained of for not doing what in ordinary cases they had no power to do, nor yet for decliming to incur the responsibility of making a special exception in favour of Her Grace, ignorant as they were of those facts of the case which constituted the elements of its specialty, and seeing there were twenty-four hours to make other arrangements, and other On the morning of Saturday, between 9 and 10 o'clock, twenty-four hours to make other arrangements, and other means of accomplishing the object with equal speed.

R. D. Ker.

Our Paris contemporary, in noticing the fact, says 'no one in France would guess the motive" for the refusal!

A meeting of the contractors on the ABERDEEN was lately held at Stonehaven, in consequence of certain orders having been given to them by the directors to suspend their works entirely, and in consequence also of certain misunderstandings in regard to the company's engineers and the referee for the contractors. The chair was filled by Mr. Forbes. The meeting, says the Scotsman, were unanimous in their resolution to disregard the company's order to suspend the works, and resolved to apply to the court for authority to finish their respective contracts, under the inspection of the original referee, Mr. Gibb.

The directors of the GLASGOW AND AYRSHIRE ave resolved to present their shareholders with a full and distinct statement of their affairs.

The works of the IRISH SOUTH-EASTERN, which were to connect the Carlow line with our city, says the Kilkenny Moderator, and the completion of which by next summer was so positively promised in a recent report of the directors, were discontinued in the early of last week, and it is not probable that they will be resumed this year. Only eleven miles were necessary to complete the line from this to the present terminus at Bagnalstown, and it is most unfortunate for the interests of Kilkenny that want of funds should cause the discontinuance of the works at present. The Tralee Chronicle, however, reports, that finding such was the intention of the directors, Mr. H. A. Herbert, M.P., who is chairman of the Board, repaired immediately to Dublin, and prevailed on them to continue the works, pledging himself that he

would endeavour to get the proprietors throughout this county to subscribe or take 1.000 shares—the amount required for perfecting the work. shares, and the Earl of Kenmare has taken, we believe, 150 shares. Mr. Herbert is now making application to the Marquess of Lansdowne, the Earl Listowel, Lord Monteagle, and other proprietors to aid in completing this important element in the developement of the resources of the county.

Our contemporaries in the provinces are so much in the habit of using their scissors on the substantive matter contained in our "leaders," and passing the extracts off as their own, that we have thought it a vain labour to seek redress at their hands; but the Athenœum last week called for retribution on a special offender in this way, and also a London paper (the Observer), that has committed the double injustice of taking matter from the Railway Chronicle without acknowledgment, and, consequently, be-traying our worthy contemporary as well as others into attributing the ownership to the purloiner. This week the Daily News has been betrayed in like manner into copying from the Glasgow Courier a portion of one of our leaders, inserted by the latter without acknowledgment,—and attributing it of course to that paper. The paragraph was headed "Safety of Railway Travelling,"—but was taken from an article published by us on the 7th of October, on the Improvised Trip of the Queen. It may possibly have gone the round of the press unacknowledged during the interval. The same thing recently happened in another journal copying what originally appeared in the Railway Chronicle as from the Gateshead Observer. We would beg these Observers to observe that we pay a handsome price for such matter; but we should think ourselves repaid if they would just state the true source whence the extracts are taken. When quoting matter of information peculiar to any parti-cular journal, we follow this rule,—and expect equal justice from others in like cases.

A note to correspondents in the Chemins de Fer. as to the paying of dividends on coupons, explains the operation-the obligations incurred by votes of the general meetings have first to be liquidated from the funds;—and this "bonne nouvelle" is superadded, that no long time will elapse before the cash will be forthcoming to pay these coupons, with interest:—which our own correspondent on this subject of last

week will we hope consider satisfactory.

The reduction in the staff of the ORLEANS and the VIERZON lines, for the winter service, as the present traffic does not require so large a body, has been made (says the Chemins de Fer) with every consideration for the persons selected for reduction;—they will receive their usual salary (and in the Orleans their per-centage) to the end of the present year, even should they find employment elsewhere; and if they do not, they will for six months longer be considered as belonging to the company, receiving monthly the moiety of their former appointments, until they find other employment, or are again taken into the com-panies service. If at the end of this second period any remain unemployed, the directors reserve to themselves the power of making exceptional cases, according to age or service.

The FRENCH GOVERNMENT does not seem to extend its patronage to the railways of the country. Some members of the Government are reported to have it seriously in contemplation to suppress the bureaux de poste ambulans, established for some years on the railways. These bureaux, in which the business of sorting and arranging all the letters is carried on, by which much additional time is afforded to the public for posting letters, are found too costly.

The directors of the PARIS AND STRASBURG deny all connexion with the petition now in the course of signature for the purchase of the line by the State. They say that they have kept all their engagements the State since the concession of the line, and with they hope in a short time to be able to open a portion. The petition, they affirm, has been got up entirely for stock-jobbing purposes by a few proprietors who have not been in possession of their shares more than a month.

The line from Ruhrort (Rhenish-Prussia) to the town of Oberhausen, where it branches on the COLOGNE AND MINDEN, has just been inaugurated and opened for public traffic.

# Reports of Meetings.

EDINBURGH AND NORTHERN, Oct. 24.—Special Meeting, Edinburgh.— Mr. J. Balfour, of Balbirnie, in the chair.

The following report was submitted:—

The directors have called a meeting for sanctioning certain important arrangements proposed to be entered into with the Aberdeen. The object contemplated by the direc-

tors is to enable the Aberdeen to complete and open the unfinished portion of their line between Montrose and Aberdeen, by providing the funds necessary, in conjunction with the North British and the York, Newcastle and Berwick. It is further proposed, in conjunction with the same parties, to undertake the working of the Aberdeen for a term of years. The directors foel themselves not only warranted but bound to recommend to their shareholders the adoption of this arrangement, in order to secure a legitimate control over the traffic of the north of Scotland, and to protect the interests of this and the other eastern lines against the injurious effects of those leasing and working agreements which have been entered into by the western companies, and which have already placed entirely under their influence all the northern railways, with the exception of the Aberdeen; for the possession of which also companies, and which have already placed entirely under their influence all the northern railways, with the exception of the Aberdeen; for the possession of which also arrangements were lately in progress. The aim and tendency of these arrangements, it must be obvious, is to impede and embarrass the natural course of traffic, to the loss and injury of this and the other east coast lines. The Aberdeen, by their original Act of 1845, were authorized to raise share capital to the amount of 826,666£; together, the sum of 1,106,666£. The whole of which, or nearly so, has been raised and expended on the works. By an Act of last session the company were authorized to raise additional capital to the amount of 276,600£; and loans to the amount of 276,600£; is proposed to be issued by the Aberdeen as proference stock, and to be taken in the following proportions. By the York, Newcastle and Berwick, 50,000£; the North British, 113,000£; the Edinburgh and Northern, 113,000£. This stock to be made preferential over all the other stock of the Aberdeen to the extent of 6 per cent. per annum for five years, and 5 per cent. per annum thereafter in perpetuity; and to participate along with the other stocks in any dividend exceeding 5 per cent. This stock to be paid up in monthly instalments of 20,000£.—the annum thereafter in perpetuity; and to participate along with the other stocks in any dividend exceeding 5 per ceambilith may hereafter be declared on the whole stock. This stock to be paid up in monthly instalments of \$20,000%.—the first instalment to commence on the expiry of one month after the agreement is ratified by the shareholders of the respective companies; and the several instalments to bear interest at the rate of 6 per cent, per annum until the completion of the works. No part of these instalments is to be applied to the liquidation of any existing debts or liabilities of the Aberdeen, but the whole is to be expended at the sight of this and the other two companies (who are to be represented at the Aberdeen Board) exclusively in the construction and completion of the unfinished and new works of the Aberdeen. It is further proposed, until the Aberdeen is opened to the south bank of the river Dee, that it shall be worked by the Aberdeen; thereafter, the plant is to be taken at a valuation of the constraint. is opened to the south bank of the river Dee, that it shall be worked by the Aberdeen; thereafter, the plant is to be taken at a valuation, and the line worked by the other companies for a period of not less than twenty-one years. For this service, and to meet interest on cost of plant and expenses of wear and tear, these companies are to receive, by quarterly payments, a per-centage at the rate of 40 per cent. on the gross receipts; but an account of the actual expenses is to be made up at the end of every three years and submitted to the Aberdeen; and should there be any difference of opinion with regard to the amount, or should it be considered that the per-centage entails loss on either party, the amount of the per-centage is to be determined by it be considered that the per-centage entails loss on either party, the amount of the per-centage is to be determined by engineers mutually chosen. The Aberdeen are to maintain the line and works and to provide repairing shops, with the requisite machinery and all necessary fixtures. No interchange of plant is to be made with other lines without the consent of this and the other companies. Such are the lending features of the arrangements. The great majority of the shareholders are sufficiently conversant with the peculiar position of this railway to enable them to perceive the full bearing and importance of these arrangements on its permanent interests; but to assist those at a distance the full bearing and importance of these arrangements on its permanent interests; but to assist those at a distance who are not so familiar with its position, a sketch of it and the various connecting railways is appended to the present report. The directors may add, in explanation, that they obtained for the company in the last session of Parliament power to run a limited number of trains over the Dundee power to run a limited number of trains over the Dundse and Arbroath, and certain restrictions in the rates and dues, which are of importance in connexion with the business now before the proprietors. In conclusion, the directors bring forward this arrangement as one likely to prove highly beneficial to the company. They feel confident that it will be so considered by the proprietors, and that the requisite authority will be given to the directors to complote the agreement and implement the conditions thereof. It will not a present be necessary to appropriete for that will not, at present, be necessary to appropriate for that purpose any part of the proper funds of the company, as the directors hope to be able to provide the monthly instalments in connexion with the shares which are to be received from the Aberdeen.

The CHAIRMAN said the published proceedings at the North British meeting had doubtless made the shareholders fully aware of what the directors were about to propose. The questions they had to discuss were simply these:—Was the arrangement which they proposed to enter into with the Aberdeen one for the interest of the Edinburgh and Northern, or was it not? And secondly, were the terms of that arrangement such as could be safely entered into? It would be asked, what was their object in entering into this arrangement? To this he would answer, that it was impossible for them to shut their eyes to what was going on in other quarters with respect to, he would not say the diversion of, the traffic, but to having such a control over the traffic from the north as to allow it, in a great measure, to be diverted from its natural course. If therefore they saw their way to entering into an arrangement which would give them the legitimate control of the traffic, and if this arrangement was safe, then he considered that it was

Digitized by **GOO** 

their bounden duty as directors to carry out such an arrangement. The proposed arrangement would materially strengthen their position; for by it they enabled the Aberdeen to obtain sufficient funds to complete their line, and thus to complete the great line of communication to Aberdeen, which was their northern point. At present the works on that line were at a stand-still for want of funds. The first object was to provide funds to carry these works on. But it had been said that this was an inopportune period for entering into any arrangement with other companies; that they were themselves in a posi-tion of difficulty; and they ought to confine (he knew, at least, that this was Sir J. Gladstone's argument) their operations to their own line, and not go elsewhere to seek to place themselves in a position of still greater difficulty. He maintained this arrangement placed them in no difficulty at all; it was secure and safe; the security was ample for the interest which was guaranteed on the stock; and there would not be any difficulty in raising the funds which they required for their part of the transaction, which amounted to 113,000t. It was a mistake to suppose that any portion of the funds of the Edinburgh and Northern would be appropriated for This was not the case. this measure. This was not the case. The directors were at all times unwilling to interpose their personal security, except where it was absolutely necessary; but they had no hesitation to do so in this case, the money being raised on the security of the Aberdeen, backed by the Edinburgh and Northern the North British and the York and North Midland And surely, if it was a good transaction for these companies, it was a good transaction for the Edinburgh and Northern. With regard to this being a disadvantageous period for entering into this arrange ment, he thought it must be obvious to every one that, were it not for the peculiar period at which this transaction had been entered into, they should not have had an opportunity of making any such favourable arrangement at all. There was no question of that. Let them now look to what the real security was for the stock which they proposed to raise. They had the Aberdeen line, which was 58 miles in length. The loans in toto of that company amounted to 369,000t.; and the interest of that sum at 6 per cent. gave an amount of 22,000l. a-year, which they required to raise to meet these loans. The preference stock which it was proposed to raise was 276,000L, and this at 6 per cent. would be 16,600L a-year. Therefore they required to raise 36,800% in order not only to meet the 6 per cent. on the loans which the Aberdeen were empowered to raise, but also to niect the interest on the preference stock. Now 58 miles of railway, with 25l. a mile of revenue, which was a very low estimate on the gross revenue of the line, and much less than the calculations made by the Aberdeen directors, would give a revenue of 84,000l. per annum. Then, if they allowed 45 per cent. for working expenses, this would make a deduction of 37,000%, leaving 47,000% a-year of revenue, to meet 38,000%, or a surplus of 9,000% They would see that, as regarded the revenue and working expenses, he had understated what would, in all likelihood, be the result in the one case, while he had overstated it in the other. That, he thought, was, very shortly, the position of the transaction which they proposed to enter into. He was told that it had been said that the Aberdeen had undertaken obligations exceeding their statutory powers. He had the assurance of the Aberdeen directors to say that such a statement was wholly without foundation. From the inquiries and the examinations which had been made, the affairs of the Aberdeen were shown to be in a position in the highest degree satisfactory. They stood well, both in regard to their liabilities and their assets. He should not enter into any statement of the affairs of that company, as this formed no part of the business before them. He would, however, just repeat that they were in an excellent position. He was entitled therefore to maintain that the arrangement which they proposed to enter into was a good one for the Edinburgh and Northern, and the terms of the transaction rendered it a safe one. He thought it would materially strengthen their position, and that it would enable them to carry on their traffic with security and punctuality; besides enabling them to obtain a certain control over the truffic, which would otherwise, perhaps, be inevitably taken out of their hands. The directors were not anxious, and they had, in general, kept aloof from making arrangements with other companies; but he thought that, in this instance, they had an opportunity of commencing the details of an arrangement, in regard to which the directors considered that they would have been wanting in their duty had they not brought it before the shareholders. He concluded by proposing a

series of resolutions to the effect that the report

should be approved of; that the directors be authorized to subscribe on behalf of the company for 113,000% of the stock of the Aberdeen, and provide their preportion of the plant for working that line; and that they be authorized to interpose for this purpose the security of the Edinburgh and Northern, and to take all other methods for completing the transaction, on the distinct understanding that the stock so taken should be preferential.

At the request of Col. Graham, the clause in the

Aberdeen Company's Act, authorizing them to raise 276,6661. as preferential stock, was here read.

Mr. M'INTYRE protested against their going to Parliament to sanction this arrangement, with the prospect of being opposed there. The proposal would ultimately be advantageous for the company, but he was afraid that the attempt to raise money at the present time for such a purpose would have the effect depreciating the price of their stock in the market.

Dr. M'FARLANE thought that, whether it increased

the traffic to the extent expected or not, it was a right thing for the directors to see that they had a continuous line to Aberdeen. Considering it in that light, he had no objection to the agreement; but he did not think the resolutions were expressed so clearly as that the company might not suffer in a variety of ways. He thought, for instance, that the outstanding debts of the Aberdeen were not sufficiently guarded against. He also thought that it should be seen that the line was taken into the town of Aberdeen, and likewise that it should be distinctly ascertained that the sum stated in the agreement (276,000l.) was amply sufficient to complete the line. The direction of the three lines involved in the arrangement should be adequately represented at the Aberdeen Board.

The CHAIRMAN believed that the Aberdeen directors were perfectly willing to enter into the arrangement on the understanding that the 276,000l. should be paid into a separate account, to be under the control of the companies who were responsible for that advance; and that this money should be applied solely for the purpose of completing the line. They had also, he might mention, the assurance of the engineers of the Aberdeen that they could complete the line for 276,000l., with the sums which they were authorized to borrow, and which he (the chairman) had included in his estimate of the expense. The share in the direction had been considered at the time they were making the arrangement with the Aberdeen directors. It was not, he thought, finally arranged; but he believed that the understanding seemed to be that four directors would be sufficient. Whether an Act of Parliament was necessary was a subject which the directors had had under considera tion; and it did appear to them that no Act was necessary to carry out this agreement. The highest legal opinion would be taken on this subject; but, at present, so far as the opinion of people acquainted with such matters at the Board were concerned, it was considered that no Act of Parliament was necessary

Mr. J. Thompson, of Gogar Mount, considered that the arrangement would be very much for the interest of the company, but was of opinion that, in the present state of the money-market, it would not be practicable to raise such a sum. As individuals they should desire to have their own house in order before they sought to complete others; and he must say that he thought the Edinburgh and Northern busi ness was not in a sufficiently advanced state to war rant them to go into such an extensive transaction When he saw railways of long standing, such as the Great Western and Midland, with their stock in the market at 20 per cent. below par, he did not think that it would be prudent for the directors of the Edinburgh and Northern to go into the money-market with a stock that would saddle the company with at least 20 per cent. discount.

Sir J. GLADSTONE, of Fasque, had, from the for mation of the company, taken a deep interest in its affairs, independently altogether of the fact that he had been and still was a considerable shareholder. He had looked with great care into the proposal embodied in the report, and he had come to the conclusion that this was a most unwise and injudicious proceeding. He considered that it would be impossible to raise such an amount of money in the present state of the money-market; and he held that, if practicable, it would be at a disastrous sacrifice.
The parties interested in the Aberdeen had themselves held out various inducements to make the public assist them with the loan of money to complete their works; but all these inducements had been in vain. The Edinburgh and Northern were incompetent at present to pay their own debts; and if that were the case, how could they form any reasonable ground of expectation that this large sum of money

altogether incompetent to induce the public to come altogether incompetent to manor the public we come forward to lend this money. But, independently of that, he had a strong opinion that such an arrangement would prove disastrously hazardous to the shareholders of the Edinburgh and Northern. He considered it his duty to oppose this measure in limine, and he was prepared to move a direct negatime, and he was prepared to move a direct nega-tive on the Chairman's resolutions, as the shortest way of dealing with the matter. He would have no connexion in a pecuniary sense with the Aberdeen, as he considered it to be an unfortunate concern. They had had thirty odd miles of railway open for several months, and the receipts upon it, in his esti-mation, were not equal to the expenditure. The directors of the line might anticipate an improvement, but he must say that he did not. He had at once to say that he was not only prepared to propose a direct negative to what was proposed, but he was prepared to oppose it whenever the opportunity might be offered to him. He believed, even if the shareholders present were unanimously to support the proposal, this would have no effect whatever in binding the absent shareholders, because they had no power to borrow this money without the authority of Parliament; and if they went there they would unquestionably be opposed, and it was more than likely that they would not succeed. He concluded

by moving a negative upon the chairman's resolutions.

Mr. E. Ellic, jun. M.P., said that the only drawback to the satisfaction which he felt in connexion with the arrangement, was the disapproval of Sir J. Gladstone, to whom the Edinburgh and Northern had been under great obligations ever since its formation. He felt it difficult to think that a young man like himself should have more confidence in his own opinion than in that expressed by a gentleman of such long and extensive experience as Sir J. Glad-stone; but as he (Mr. Ellice) had an intimate knowledge of the two lines, as well as of what was going on, from his connexion with the board of directors, he had no hesitation in saying that he had come to a different conclusion from Sir John. He was most thoroughly convinced that this arrangement was not only for the good of the company but essential to its interests. He did not hesitate therefore strongly to recommend it for adoption. Sir John had called it a disastrous agreement as far as the Edinburgh and Northern were concerned, but he (Mr. Ellice) should have liked to have known why it was so. Had the directors asked them to burden themselves with a large additional capital to pay another company's stock, he could conceive that it might deserve to be called so; but they did not do so; they merely asked them to be intervening parties by whose means money was to be raised to complete a line which, in another state of money matters, would be absolutely a profitable transaction. Looking to the position and importance of the town of Aberdeen, and looking to the populous and improving country to the north, he could not conceive that the Aberdeen line, although it might not be an extremely profitable one to the shareholders, would not be a much better line than most people supposed. But, taking it at the low estimate made by the Chairman, of 25l. a mile, and after paying the interest on all legal debts, that was to say, all debenture debts, it was found that it not only left 6 per cent. on the preference stock, but a surplus of 9,000%. That could not be called a burden on their stock. He could not see how such an arrangement could influence the price of their stock; for it appeared to him that the price of stock was chiefly influenced by the necessities of sellers. Instead of depressing their stock, he held that the knowledge that they had now the power of a source of great and increasing traffic would give confidence to the shareholders, and thus tend rather to raise the price of their stock. As to the amount not being sufficient to complete the Aberdeen line, he had to state that Messrs. Locke and Errington, who had not been the original engineers of that line, had declared that the 276,000l., taken in connexion with what they were authorized to raise by their borrowing powers, would be more than sufficient to complete the line. The opinion of these gentlemen was above all suspicion. As to the agreement, it was said that they should be particularly cautious. To this he had to answer that they did not mean to rely on their own legal knowledge; that the agreement would be drawn up under the advice of Mr. A. Anderson, the late Solicitor-General, which would be a perfect security that there would be no mistakes. With regard to the prowould be no mistakes. With regard to the pro-ceedings in Parliament, it was not their intention to go to Parliament. The Aberdeen had already power to offer that stock, with a guarantee of 6 per cent.; and the directors of the Edinburgh and Northern proposed to take it on their own risk, relying solely on the kindness of the shareholders. might be dissentient shareholders, but if the majority could be raised? He considered the security offered | considered the arrangement to be a beneficial one,

the directors were prepared to go into it at their own risk, trusting hereafter to the honour of the shareholders. An Act of Parliament might, at some future time, be required to sanction this arrangement; and he trusted that the proposal would result in an anicable arrangement being effected with all the companies concerned. As regarded the simple policy of the transaction, it was evident that if the traffic from Aberdeen was of consequence to the North British and to Mr. Hudson, it would be of much more consequence to the Edinburgh and Northern, seeing that they would get, to a great extent, everything that came from Aberdeen. They should recollect that, although theirs was the shortest line between Aberdeen and Edinburgh by a great many miles, yet it was clear that if that line was in the hands of a hostile company a great portion of the traffic would be diverted from them. The Calcdonian had lately entered into an agreement with the Scottish Central and the Scottish Midland. so far as a working agreement was concerned. They had also lately come to an understanding with the Edinburgh and Glasgow, and they had agreements, not of course yet authorized by Parliament, with the Dundee and Perth and the Dundee and Arbroath lines. If. therefore, they got possession of the Aberdeen line, they would have an opportunity of diverting into their own lines almost every atom of traffic from the They could not, of course, compel the public to go by their lines, but they could throw so many conveniences in the way of the traffic as in a great measure to secure it all to themselves. All that the directors of the Edinburgh and Northern wished was a legitimate share of the traffic; and it was with

this view alone that the proposal was made.

Col. GRAHAM thought that Mr. Ellice had not spoken in favour of the resolutions of the Chairman. Mr. Ellice had told them that the directors were to be responsible for this stock in the Aberdeen line, but the resolutions of the Chairman stated that the com-

pany were to be responsible.

Mr. ELLICE stated that what he said, or meant to say, was, that the directors would take the security legally, as far as they could, against the company. In his own opinion, however, he doubted whether they had a legal power as a company to take that stock.

Col. GRAHAM thought the resolutions, if passed would bind the meeting to an illegal act; for Mr. Ellice had no doubt on his own mind that it was an illegal act. He (Col. Graham) considered that, as the arrangement was incompetent to be entertained by them in their corporate capacity, the directors bad no power to intervene their personal security, unless at their own risk, which he held to be a hazardous one.

Mr. W. E. GLADSTONE, M.P., said he entertained the opinions expressed by Sir J. Gladstone, Mr. Thompson and Col. Graham. There were those who said that it would be worth while for this company to pay a heavy price in order to get the agreement with the Aberdeen line, which it was intended to secure. He thought it was desirable that they should have it clearly before them, whether it was intended that the company should pay or not. For himself, he would not entertain a doubt that, if they entered into this transaction, the company would be required to pay. Mr. Ellice had said that he would not ask them to pay for their shares one shilling more than they were worth. Well, the question was, whether these shares, in the present state of things, would come out at par, at a premium, or at a discount. He could not read the share-list for months past without thinking that they would come out at a discount; and if so, that discount, whatever it might be, must be borne by the Edinburgh and Northern. The difference between the price at which the shares would sell and the stock price of them at par must be borne by this company, and to that extent their funds must be responsible.

Mr. ELLICE: But the stock need not be issued.

Mr. W. E. GLADSTONE understood the case to be this,-that it would take a period of fourteen months to call up this money; that was to say, the whole of this stock must come into being within fourteen months; and, under the circumstances, what had they a right to expect in that time! No man was more sanguine than himself as to the ultimate value of railway property, and as to the ultimate change for the better in the money-market; but he was not so sanguine as to suppose that the railway and money-markets would be materially alleviated during the next fourteen months. He would not go into the question of the value of the two railways, but he would urge, as a principle of general policy in times of difficulty, that directors ought to have patience, in the hope that they would escape from their diffi-culties. Was this company, in such a state of secu-rity, in regard to its own plans, as to warrant them

in going beyond them ! He thought not. Considerations of general policy and prudence should induce delay in such an arrangement; and they should rather, in the mean time, seek to complete their own An Act of Parliament was necessary to give effect to this arrangement, although in some quarters an opinion was expressed that no Act was It was said, however, that the directors necessary. were ready to proceed on their own responsibility. Was that a position in which they ought to be placed! Certainly not. But would the proceedings of the directors bind the dissentient shareholders? He apprehended not. He held, therefore, that they should give no vote to-day which would be of the smallest validity or value, unless they resolved that the directors should apply to Parliament to get legal powers. What was the consequence? He apprehended that if they went to Parliament the western companies would go to Parliament also; in conse-quence of which many thousands might be spent without accomplishing anything, as he did not think that Parliament would allow any of them to do substantial injury to the other. He hoped, therefore, that the directors would be content to wait for better times, and that they would attend to the finishing of their own works and to the development of their own traffic.

Mr. Ellice said he thought it would be imprudent, in present circumstances, to go to Parliament; and so far he agreed with Mr. Gladstone. At the same time it should be remembered that there might be as much money spent in opposing as in obtaining measures in Parliament, which might be the case if the Aberdeen line fell into other hands.

Mr. J. AYTON was perfectly convinced of the truth of what was stated by Mr. Gladstone, and that the transaction must be entered into by the directors solely on their own responsibility; and if the directors were willing to do so, he did not think they ought to be balked by the shareholders in a matter so commendable. Mr. Ayton concluded by suggesting that there should be added to the Chairman's resolutions a recommendation to the effect that the three companies should have a representation in the Aberdeen Board pro rata, and equal in number with the Aberdeen direction; and also, that the engineers of the line (Messrs. Locke and Errington, or engineers of equal eminence) certify that to the best of their judgment the line can be completed south of the Dee,

with stations, at the required sum of 276,000l.

After a few words from Mr. J. Cowan, expressing the utmost confidence in the directors being able to raise the money,

The CHAIRMAN assented to the addition to the motion recommended by Mr. Ayton.

A vote was then taken on the motion of the Chairman and the amendment of Sir J. Gladstone, when 493 votes were given for the motion and 168 for the amendment. This was independently altofor the amendment. This was independently altogether of proxies, 1,375 of which had been received in favour of the motion. The motion was accordingly carried.

# EAST AND WEST YORKSHIRE JUNCTION.

Oct. 20. - Adjourned Special Meeting, Knares borough .- Mr. DENT in the chair.

The shareholders met to receive the report of the deputation of directors appointed to wait on Mr. Hudson, chairman of the York, Newcastle and Berwick, to make some arrangements for working the line, in consequence of the Leeds and Thirsk having declined a provisional agreement made about a year and a half ago.

The CHAIRMAN reported that in pursuance of the resolution at the last meeting, the deputation had waited upon Mr. Hudson, and had been received with every attention by him and his colleagues. After hearing them at length, Mr. Hudson decidedly objected to do anything more at present than to undertake to work the line. He would not take any other responsibility, but he would work it, if the company would leave it to him to carry out the work, to the best of his judgment upon the most economical terms. If they were determined to make a bargain with him he was ready to do so, but he must make his own stipulations, and this company must make theirs: but he gave them to understand that he would do it more liberally if left to himself than otherwise. This course coincided with his (the Chairman's) views, and he was quite disposed to leave the result to Mr. Hudson's generosity and justice. The deputation had thus virtually left it in Mr. Hudson's hands to take the management of the working of the line, he having the power to retain, or change, or discharge the officials now in the service of the company. At the expiration of three months' notice they might, if dissatisfied, put an end to the arrangement. Meantime this company might have access to the books,

over to the directors of this company. These were the terms arranged, and he thought they were as much as could be expected at the present time. In accordance therewith, Mr. Hudson had sent over some of his officials, and arrangements were made for passenger trains to commence running on the 23rd.

Mr. ETESON said that the trains would not com-

mence running until the 30th.

The CHAIRMAN said he was sorry for that, but it seemed to be part of their fate that they could never carry out their original purpose. Mr. Oldham, the contractor, had intimated that as he had not got the whole of the money, he would block up the line, and prevent its being opened.

Mr. ETESON said that the York, Newcastle and

Berwick did not wish to commence running until the 30th, unless they could positively enter into uninter-

rupted possession.

The CHAIRMAN said he was sorry for the delay. He had told several of his friends of it, and he believed that they had projected a pleasure trip on the

Mr. J. O. March asked if any agreement had been

committed to writing.

The CHAIRMAN said that the deputation had full power to arrange with Mr. Hudson as to what should be done, and they had decided to leave the matter wholly in the hands of Mr. Hudson.

Mr. MARCH: Then there is no agreement to receive

The CHAIRMAN: Yes; at the end of three months you are to receive the surplus profits of working the

Mr. March: I think Mr. Hudson should have made

a more definite offer.

The CHAIRMAN: He will offer you nothing. I knew that last week. You will remember that Mr. Hudson has been played fast and loose with by this company.

Mr. MARCH thought that they might have obtained something more definite from the Leeds and Thirek

Capt. HARRISON: But the last decision of the Leeds and Thirsk shareholders was that they would have

Mr. Nell: But that agreement had nothing to do with the working of the line; and even Mr. Hudson tells you that it is a distinct subject. He says he will work the line, but he will say nothing about taking it from you. I understood from the chairman that Mr. Hudson, if pressed, would propose terms, but he thought it better to leave the whole matter to him, especially as Mr. Hudson said, "You don't know what to ask nor I what to offer in its present crude. unfinished state.

Mr. MARCH: I have a high opinion of the honour of Mr. Hudson, but I don't think we are in any better circumstances than we were last week.

Mr. C. Powell asked who would have the arrangement of the fares

Mr. ETESON said that the fares had been arranged on the previous day, and that three trains would run daily each way.

Mr. NUNNELLEY did not understand what was to be done with regard to the traffic on the line. appeared to him that the traffic which would legitimately pass along the line was an important consideration.

Mr. ETESON said that as to what might be done with regard to the goods traffic he did not know; but as to the passenger truffic, the York people did not appear to regard the Church Fenton line at all. All the coal traffic of the district must necessarily come upon the line.

Mr. Barstow thought that the East and West Yorkshire directors ought to retain some control over the line, and not to be totally thrown out of all power in the direction.

The CHAIRMAN: If you will study the interests of the line, you will agree with me that the sooner we are thrown out the better. He had the fullest confidence in Mr. Hudson's integrity and judgment, and the books of the concern would be open to their inspection at any time. He thought that they ought to reduce their staff immediately, and that the number of the directors should be reduced to two or three in whom they could place confidence residing at Knaresborough.

Mr. NUNNELLEY did not object to a reduction of the number of directors, but he thought that as many of the proprietors lived at Leeds, one of the directors should be chosen from that vicinity. He also suggested that for the same reason the meetings of the company should be occasionally held at Leeds. He did not think that it was desirable to continue the discussion which had been commenced, as it could do no good, and might possibly do harm. As the chair-man and the other directors had confidence in Mr. and the surplus, when ascertained, would be handed! Hudson, it was not for the shareholders to shake that

confidence, but rather to confirm what they had done. They could not work the line themselves, and as Mr. Hudson was willing to do it, he thought they could not do otherwise than sanction that course. He should therefore move—" That this meeting sanctions the arrangement which the chairman and the directors have entered into with Mr. Hudson for the working of the line."
Mr. J. FORSTER seconded the motion.

Mr. NELL doubted if the meeting could lawfully pass that resolution as it had been originally called for two specific objects, neither of which compre-hended the confirmation of this arrangement. The meeting could, however, express its opinion in approbation of what had been done, and another meeting

could be called to pass the resolution now proposed.

The CHAIRMAN: Do you propose any amendment?

Mr. Nell: No; I have only stated the difficulty

which occurred to me.

The resolution, however, was adopted unanimously. No other business was transacted; but the share holders remained, and discussed the various modes suggested for raising the capital necessary to meet the obligations to which the company was liable.

The CHAIRMAN objected to borrowing very largely until they knew what their probable income would be,—and several shareholders were opposed to the raising of money by preference shares, which always depreciated the original stock.

Eventually the meeting broke up, on the under-standing that after the steps ordered last week to be taken against defaulting proprietors had been re-sorted to, the shareholders would be again called together to take further action in the matter.

# LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON TYNE.

Oct. 24.—Adjourned Half-yearly Meeting, London.
-Mr. R. T. W. FFRANCE in the chair.

Mr. G. LEEMAN moved that this meeting stand over until the conclusion of the adjourned extra-ordinary general meeting, and the extraordinary general meeting called for this day, respectively.

Mr. MURRAY having seconded the proposition, it

was carried unanimously.

The CHAIRMAN then said: We shall now pass to the adjourned extraordinary general meeting; where-npon Mr. Leeman, seconded by Mr. Parsons, moved that that meeting should also be postponed until the adjournment or termination of the adjourned halfyearly meeting.—Carried unanimously.

The CHAIRMAN: Now then we must proceed to the third meeting announced for to day—that will be

Mr. LEEMAN said before they entered upon the business of the present meeting, he would call the attention of the shareholders to their precise position. The meeting would observe that they had been convened that day for five distinct purposes-first, to reduce the number of directors to six, or such number, less than sixteen, as might be agreed upon secondly, to reduce the number accordingly; thirdly, to consider what number should form a quorum fourthly, to consider in what order the directors should retire from office; and fifthly, to nominate directors in lieu of those who had resigned. He would move that attention be immediately directed to the last named object, and his reasons for adopting this course were, that he understood that three members of the Board had either resigned or become disqualified. There were, therefore, three vacancies to be filled up; and he strongly urged upon the meeting the necessity for proceeding to do this in the first

instance, before they took up any other business.

Mr. M.FARLANE having seconded the motion, it

was acceded to nem. con.

Mr. M. FARLANK then proposed, in accordance with the resolution just passed, that Mcssrs. G. Leeman, of York, C. B. Courtnay, of Leeds, and J. Audes, of Heddingley, near Leeds, be elected directors, instead of Messrs. N. Plews and W. L. Ogilbie (disqualified), and J. Matthic (resigned).

The motion was seconded by Mr. Parsons, and

The motion was seconded by Mr. PARSONS, and carried unanimously; and the election of the three new directors was confirmed by the Board forthwith

Mr. LEEMAN then moved that the number of directors be reduced to six, and that the Board should consist of the following gentlemen, viz., Messrs. C. B. Courtnay, J. Audes, F. Bilham, R. Gill, A. Gray and G. Leeman. This step on his part might be considered a very ungracious act with which to inaugurate his entrance upon office as a director, but he would ask the meeting to assume that he was recommending them to adopt a course which mature deliberation pointed out to his mind as the best that could be resorted to in order to accomplish the wishes of the shareholders for a division of 14s. per share.

Mr. BURCHELL (an ex-director) said he had no wish whatever to oppose the motion, but he must be

allowed to repeat the opinion he had formerly expressed against the legality of the 14s. division. however, trusted that Mr. Leeman and his friends would succeed in realizing their most sanguine hopes but as he (Mr. Burchell) was not prepared to under-take the responsibility of carrying out the division, he was much obliged to Mr. Leeman for expunging his name from his list of directors.

Mr. LEFMAN wished to explain, that it was out of no disrespect to any gentleman that he had omitted his name from the Board. Knowing the views enter-tained by the old Board to be adverse to the carrying out of the wishes of the vast majority of the shareholders, he had for that reason alone selected gentlemen who were prepared to act more in accordance

with the present sentiments of the proprietors.

The CHAIRMAN hoped he would be permitted to say a few words before parting. He had obtained the opinions of five eminent counsel upon the question of the division of the 14s., but he did not think it necessary to state now what the nature of these opinions was: he would leave them on the table for the benefit of his successors. He (the chairman) had come to that meeting prepared to declare what the position of the company was with respect to the solicitors' bills, and the other liabilities; but he was not called upon, after what had taken place that day, to go into these matters now. He would only say, that if the proprietors dared, with all these things before their eyes, divide 14s. per share, it was not his affair, but their own.

The motion was then seconded by Mr. PERT, and adopted nem. con. It was next agreed to unanimously that two members of the Board should con-

stitute a quorum.

The chairman and those of his brother directors who had to retire through the adoption of the motion for reducing the Board to six members, were then about to withdraw, in order to give place to their successors, when Mr. Leeman applied to the exchairman to hand over the seal, &c. of the company to the new directors. The retiring chairman, however, demurred a little before acceding to this request, and said the seal was not in the room, but was lying at his hotel, and he could not deliver it up until he saw what resolution his successors would come to.

Mr. LEEMAN earnestly remonstrated with Mr. Ffrance, and begged him not to leave the meeting until he had surrendered the seal. At length, after much pressing, the ex-chairman consented to wait at his hotel until he could learn what determination the new Board arrived at. He was not disposed (he said) to occupy the chair a moment longer than he could help it, after the shareholders had expressed their disapproval of him. [Mr. Ffrance then quitted the room]. The new directors next retired from the meeting to hold a brief consultation together. On their return, after an absence of about twenty minutes.

Mr. LEEMAN took the chair. He said he had to announce to the meeting that the new Board of directors had just held a meeting down stairs, and had there done him the honour of electing him their chairman. He could only say that it would be his anxious endeavour to promote the interests of the shareholders to the utmost of his ability. He was of course quite aware of the feelings of the proprietary as to the mode in which they wished the future business of the company to be conducted, and it should be his first object to carry out the resolution so unanimously passed at their last meeting, held in the early part of the current month. He would now move that the order of the rotation in which the directors shall retire from office, should be in accordance with the provisions of the Companies' Consolidation Act, 8 Vict. c. 16. By this system one-third of the Board would go out of office every year; and it would be left entirely with the Board to determine specifically who the retiring directors should be.

The motion having been seconded by Mr. Bur-

CHELL, was unanimously agreed to.

The meeting then passed from the extraordinary general meeting back again to the adjourned half-

yearly general meeting.

The CHAIRMAN would ask the shareholders to pay no regard to the opinions of counsel which the predecessors of the new Board had just placed in their successors' hands, because, after taking only a few glances at these opinions, he had discovered that they set forth matters which he had never heard a word of before, and which he, as a shareholder, must utterly repudiate and deny. The position of certain ntterly repudiate and deny. The position of certain landowners, as described in the case, was not such as he considered they really occupied with relation to the company. Statements as to certain arrangements between this company and the Manchester and Leeds were set out as facts, although it must have been perfectly well known to those who drew up the case that he (the chairman) held the proxies for

7,000 of the latter company's shares; and a handle had been made of some supposed contract by which it had been thought that the Northern Counties Union might insist upon this company making the line, notwithstanding that the Northern Counties Union had themselves actually passed a resolution suspending their own works for twelve months. The case presented to counsel declared that a landowner named Preston had given notice that he would file a bill against this company for the non-performance of a specific agreement with him. Now the fact of the matter was, that Mr. Preston was to have received 1,000l. for land in the event of the company requiring to pass through his estate, and also 3,000l. for damage to his residence; and surely it was perfectly clear that Mr. Preston's claim must remain a nonentity until the line was constructed. Indeed, he (the chairman) looked upon all these various matters foisted into the case submitted to counsel as like so many mere stalking horses, for the simple purpose of getting up an opposition to the share-holders. With regard to the return of the money, the company would at once see that it was important that the directors should take these statements and notices, which had been unexpectedly put into their hands by their predecessors only that day, and which he and his colleagues had therefore had no opportunity of investigating, into their immediate consideration. This the directors would carefully do; and in order to provide against their liabilities, as set forth in the documents thrust into their hands at the cleventh hour, as it were, turning out to be much heavier than he had previously had any reason to anticipate, he would ask the meeting so to modify the resolution for returning the 14s. per share on the 1st of November next, as to authorize the directors to pay either the 14s, or any other sum that the extent of their funds would allow.

Mr. Parsons considered the liabilities with regard

to the contracts with the landowners to be more bugbears, started to frighten the shareholders, and therefore saw no reason why the original resolution for paying the whole 14s. should not be strictly adhered to. It was to carry out that that the new directors had been elected.

An Ex-director also complained of the condition-"or any other sum that the extent of the funds will allow" being attached to the former resolution. also denied that any new additions had been made to the liabilities as handed in that day. They stood precisely as they did before; and therefore no modifica-tion in the resolution for giving the 14s., which it had so confidently been asserted could easily be returned, should be submitted to by the shareholders.

The CHAIRMAN believed there would be no diffi-culty in carrying out the former resolution. The directors would be quite prepared to pay back the 14s. per share if they found that there was 14s. within their reach for such a purpose. He could say nothing fairer than this.

The adjourned half-yearly meeting was then further adjourned to Wednesday, the 15th proximo.

The CHAIRMAN then said: Now we must go back to the adjourned extraordinary general meeting.

Mr. Parsons moved-" That the resolution passed at the last meeting for returning 14s. per share be now confirmed, and that any sum not less than 10s. per share be paid as the first instalment thereof on the 1st of November next; and that this meeting be further adjourned to November 15, at this place.

The CHAIRMAN was quite ready to accede to this proposition; there would be no difficulty in carrying it out

After being duly seconded, it was accordingly carried unanimously.

EMIGRATION AND COLONIZATION.

Zealand, &c., and as the supposed expense of an OUTFIT often prevents individuals emigrating. S.W. # ABERDEEN RAILWAY.

At an EXTRAORDINARY GENERAL MEETING of At an Exhaustrative the Shareholders of the Shareholders of the Aberdeen Railway Company, held, pursuant to Advertisement, within the Royal Hotel, Aberdeen, on Thursday, the 26th day of October 1848,—

The Right Hon. the Lord JAMES HAY, Chairman of the Company, in the Chair,—

The following Resolutions were unanimously adopted, viz.:

- rne following Kesolutions were unanimously adopted, viz.:

  1. That this Meeting approves of the proposed arrangement with the Edinburgh and Northern Raliway Company, er with that Company in conjunction with the North British Raliway Company, and the York, Newcastle and Berwick Raliway Company, in terms of the heads of agreement before the Meeting: and the Meeting authorizes the Directors, on behalf of this Company, to enter into a formal Contract accordingly. accordingly.
- 2. That the sum of \$76,6664. 13s. 4d. sterling, which this Company are authorized to raise by virtue of 'The Aberdeen Railway Act, 1848,' be now raised by the creation of 33,200 Shares, of the nominal amount of 8t. 6s. 8d. sterling 30, NO chares, or the nominal amount of 86. 64. 8d. sterling each, which shares shall be entitled to a guaranteed interest or dividend of 6 per cent. per annum, for a period of five years, and 5 per cent. per annum thereafter in perpetuity and to participate in any dividend exceeding 5 per cent., which may at any time be declared on the whole stock of the Company. the Company.
- the Company.

  3. That the Directors be authorized and empowered to issue the said Shares to the said Edinburgh and Northern Railway Company, or to the said Company, and the North British and the York, Newcastle and Berwick Railway Companies at the par value, to be paid for by instalments at the rate of 20,0000, per month, subject to the option of such of the present Shareholders as may choose to do so, to take a rateable proportion of the new stock, corresponding to the number of original or 50t, shares held by them, provided the said option be intimated to the Secretary within one month from this date.

  4. That such of the said Shares as may be taken by the
- 4. That such of the said Shares as may be taken by the present Shareholders of the Company shall be paid up as follows, viz.:—

- 11. 6s. 8d. per Share on the 37th day of November 1848.

  11. 8s. 4d. per Share on the 37th day of January 1849.

  11. 3s. 4d. per Share on the 27th day of March 1849.

  11. 3s. 4d. per Share on the 27th day of May 1849.

  11. 3s. 4d. per Share on the 37th day of July 1849.

  11. 3s. 4d. per Share on the 37th day of September 1849.

  11. 3s. 4d. per Share on the 27th day of September 1849.
- 5. That the Directors be authorised to make such further arrangements with the said Company or Companies, and take such measures as may be requisite for completing and carrying out the said transaction.

  JAMES HAY, Chairman.

Thereafter, on the motion of Thomas Blatkie, Esq., the thanks of the Meeting were given by acclamation to Lord James Hay for his conduct in the chair.

By order,

GEORGE REITH, Secretary.

# WESTERN LIFE ASSURANCE

8, PARLIAMENT - STREET, LONDON NEW AND IMPORTANT FEATURE IN LIFE ASSURANCE.

NEW AND IMPORTANT PRATURE IN LIFE

In addition to the ordinary plans of Life Assurance, this Society possesses several features which present peculiar and important advantages to the Public Amongst which it is provided,—
"That if a party, from unforeseen circumstances, should be UNABLE TO PAY A PREMIUM when it becomes due, by making application to the Directors, he will be allowed once for oftener should the value of the Policy at the time of the application permit 10, to have the privilege of OMITTING THE PAY.
MENT of that Premium (provided he has already paid three whole Premium at least on the Policy); and his Policy will be endorsed to the effect that it continues in force, as if the Premium omitted were paid, being however charged with a debt equivalent of the provided to the second that it continues in force, as if the Premium of the Continues and the Premium of the Continues and the Premium of the Continues and the Policy from the debt at any time, by paying the amount due." The great advantages of this feature must at once be seen, since it removes the unual objections to the ordinary system of Life Assurance, by which an Assurer often loses all the benefit he sought in paying regularly the Premiums for many years on a Policy, because, from temporary difficulties, he is unable to pay a Premium when it becomes due, and the Policy onsequently lapses to the Office.

The necessary forms, with every information as to the mode of effecting Assurances, Endowments for Children, or Provisions for Old Age, may be obtained on application to the Actuary, No. 2, Parlisment-street, London, or to any of the Society's Agents in the Country.

ARTHUR SCRATCHLEY, Actuary.

PURIFIED BLACK LEAD PENCILS, perfeetly free from grit, may be entirely crased, and will maintain a firm point. Manufactured by E. WOLFF & SON, No. 23, Church-street, Spitalfields, London.

Church-street, Spitalfields, London.

E. Wolf & Son beg to inform Artists, Architects and Engineers that they are now manufacturing pure plumbago or black lead penell entirely free from grit, which will easily yield to india rubber, and insure perfect erasure: it possesse great brilliancy and depth of colour, and will maintain a firm point. They have attained to so great a perfection in the manufacture of this lead as to be able at all times to make the same strength and colour when once found to be suitable for any particular purpose, and have produced a pencil fully equal to those used in former years, when they were made of the finest Cumberland lead, which at the present time cannot be obtained sufficiently pure for the best pencils. The following are the degrees: H. HH, HHH, HHHH, F, FF, HB, EHB, B, BB, BBBB, BBBB, W.*

* This reactil is ratificularly recommended for writing and

* This pencil is particularly recommended for writing and counting house use.

To be had of Ackermann, 191, Regent-street; Houghton, 30, Poultry; and all respectable Stationers, &c. E. Wolf & Son have the honour of supplying their Purified Lead Pencils to Her Majesty's Stationery Union, the Bank of England, and various other large establishments.

EMIGRATION AND COLONIZATION—
Immigration being much required in Australia, New Zealand, &c., and as the supposed expense of an UUTFIT often prevents individuals emigrating, S.W. SILVER & CO. CLOTHIERS, OUTFITTERS and CONTRACTORS (having a large interest to maintain in those Colonics), have been advised to make known that they can supply a comfortable dutifit, including bedding, for male or female emigrants, from 44 (nett) upwards, or less (34, if needful), and for children in proportion, at 4 Bishopsgate-street Within topposite the London Taverni, where Lists will be given on application. S. W. & Co. being the makers of nearly every article in all the outfits they supply, and as one of their objects is to promote emigration, they neither receive from agents, nor pay the too usual commission to any person introducing passengers to be fitted out, so that the passage and outfit may be procured at the least possible expense; out step will, on application, a drive passengers how to obtain the most communities to the obtain the most communities of the colonism they ship clothing monthly—thus they would forward small parcels free of expense. Naval and military officers, midshipmen, cadeta, civilians ladies, &c. are outfitted as heretofore, at the Cabin Passenger Outfitting Warehouse, &6 and 67, Combill the Emigration Outfitting being exclusively at 4, Bishopsgate-street Within, London; and each branch at 8t. George's-crescent, Liverpool. EMIGRATION AND COLONIZATION

SATURDAY, NOVEMBER 4.

EXPENSE OF PERMANENT WAY: ITS CAUSES AND ITS BEARING ON PROFITABLE RE-CEIPTS.

Our observations on the Speed and Weight OF ENGINES, as tending to affect the items of profit and loss,—not only in the charge for locomotive power, but still more in the wear and tear of the permanent way, have just received an important illustration, in a report, by Mr. Dockray, resident engineer on part of the London and North-Western, — drawn up for private circulation among the directors of that company. The immediate object of this document was to describe the different methods of laying down rails, adopted by various engineers, here and in Ireland, which Mr. Dockray has been examining, with a view to the introduction of any improvement that may be found practicable in repairs of the London and North-Western line; and the particulars he has collected from the practice of various eminent engineers are highly interesting. These, however, it is not our intention to dwell upon at the present moment. The basis of Mr. Dockray's remarks is the necessity of imparting greater solidity to the road, and of using heavier metal in the rails, to meet the constantly increasing pressure of the engines, which is increased in order to render higher rates of speed possible-both conditions acting together with a multiplied effect on the derangement of the way. Now, from what we have already said, it is clear that a previous question arises, and ought to be decisively settled, before we come to the means of resisting this increasing strain. The cause of the increase, itself, ought, in fact, to be positively and finally controlled. if the profitable working of the railway is to be promoted; and while the resident engineer naturally confines his attention to the means of adapting the road under his care to the pressure to which he finds it exposed, a larger view of the subject is incumbent on those to whom the interests of the whole concern are entrusted; and this, it is quite clear, must enforce the necessity of controlling the cause, as well as trying how to repair the effects of a system that is pulling our great lines to pieces, and eating up their receipts by the charges for annual maintenance. Of this process Mr. Dockray's report incidentally affords striking evidence: it results from his account of the wear and tear of the permanent way on the London and North-Western, that the structure is unable to sustain, with the aid of ordinary repairs only, the weight now thrown upon it; and the conclusion to which he arrives, — keeping his views, of course, on one side of the question only,—is, that a still heavier rail, a still more expensive construction of permanent way, must be adopted. He informs us that the road must be gradually relaid; and he recommends the substitution for the 82lb. or 85lb. rail, one of 100lb. per yard, laid on a system of bearings, estimated to cost, exclusive of the platelayers labour, 2,171l. per mile. Such is the practical outcome in figures of the process to which we lately called the attention of those interested in railway reform; and it will hardly be said, in the face of such evidence as this, that we erred in laying too much weight on that item.

Let it be observed, that the matter in question here is not merely the heavy cost of renewals on this substantial plan. The necessity of renewing at all has been anticipated by some years, owing on for the last two or more; and it may be added, that not even the increased solidity which may be imparted to the permanent way, by the relaying with so much heavier metal and on such expensive bearings as we now hear of, will sults of Mr. Dockray's investigations.

secure it from disproportionate charges for maintenance hereafter, unless a determined check be put to the prime cause of the derangement.

Here, then, the attempt must be made to arrest a serious evil, if any good is to be done of a kind that the proprietors will be the better for. And in a time like the present, when their property is sunk into a fearfully low condition, the necessity of looking at this side of the question is the most imperative of all that are involved in the matter. It is clear that while the gross weekly receipts of the very company we are speaking of, on a greatly increased mileage, are, on the whole, lower than they were last year, it is not merely the engineering methods of fortifying the line that ought to be taken into account:-the means of preventing all extra wear and tear of the line itself are the first things to be regarded; otherwise we may continue to witness the unwelcome spectacle of a service conducted with far too much expense in those points which really make up the bulk of annual charges on income, in face of a scale of receipts progressing in a downward direction-more work done, at more cost, and for less pay than before.

We have spoken in another place (p. 778) on the subject of what has been put forth to arrest the panic; and have often declared our opinion on the means of substantial improvement. It may now be hoped that these also will meet with due attention, as the directors have found it necessary to attend to the former. We may expect that in future remarks from head quarters on the affairs of the company, something more practical will be offered than general disclaimers of questionable motives, which nobody imputes, general complaints of bad times, promises too vague to mean anything, assertions of the "impossibility of putting a term to capital outlay," or repudiations of the least intention of impairing "the liberal accommodation hitherto afforded by the railway," or of responsibility for past expenditure. In short, after disposing of mere errors from without, there still remains the task of dealing with the realities within the concern; in order to which effectual measures must be taken to make a better return upon the money already laid out, which can only be made by moderating expense in its chief items, and by laying a firm hold on the causes of heavy current charges,-such, for instance, as the one we have been discussing.

Mr. Dockray's report is, as we have already said, full of interesting matter in an engineering point of view; and it is possible we may hereafter examine it on that side. But our more immediate concern, and the concern, too, of all directors who are alive to their duty in the present state of things, lies with the previous question out of which the necessity for any such report has arisen. It shows in a light that cannot be mistaken the tendency of an excessive rivalry in speed to diminish the current nett earnings, as also to destroy before its time the structure from which those earnings are obtained:-and this exhibition-which would be serious enough in the most prosperous timesbecomes of the utmost gravity in a season when, as we have seen, the income of the company has for some time past been rather declining than increasing, while the public are paying less than heretofore for a more expensive service. It contains an instructive lesson, which ought not to be overlooked,-cannot be passed over, indeed, by those who desire to raise from its present state what was once the first of railway properties. On this account the conclusions which must be incidentally drawn from it are far more important just now than the direct re-

# Literature.

A Letter to the Right Hon. Lord John Russell, M.P., on the Subject of Indian Railways. By an East India Merchant.

This pamphlet is evidently the production of a partizan of the East Indian Railway Company, and who probably is or has been a member of its Board. It contains the bulk of the official correspondence between the Hon. East India Company and the railway company; and its object is to coerce the Indian authorities into the concession of an unlimited guarantee. With this view, it chiefly aims at showing that the received interpretation of the guarantee is not justified either by the terms of the agreement or the tenor of the correspondence respecting it.

We have on a former occasion (see ante, p. 553) given an extract from the "Terms and Conditions" of the guarantee, and think it quite unnecessary again to insist upon the obvious fact that a maximum contribution of per cent. was both intended and clearly expressed; but we propose to show that the correspondence now published, evidently under the auspices of the railway authorities, affords good grounds for suspecting that they were themselves quite aware of the real meaning of the guarantee which they now affect to have heard expounded for the first time.

It is quite certain that, as the writer of this pamphlet alleges, the railway company demanded at the outset a certain profit, totally irrespective of all contingencies, but it is equally certain that from the first the East India Company objected to make such a concession. In the minute of the Court of Directors, which was sent out to the Bengal Government, and was referred to in the hon. company's letter of the 8th of May, in reply to the suggestion by the railway company of "a guarantee of a very low rate of profit for a limited time," the following paragraph occurs :- "With regard to a guaranteed return on the capital laid out, which the parties who have applied to us request, we consider that mode of co-operation liable to many objections and likely to prove very unsatisfactory; but when the information now called for shall have been received, we shall be prepared to take into consideration the mode and extent of such pecuniary assistance as it shall be proper for the Government of India to afford towards the execution of at least the first approved line of railway in that country. From this it is evident that the hon. Court had strong objections to a guarantee in any shape, and reserved to itself perfect liberty of action in the matter; yet even this qualified intention of affording assistance was considered by the promoters of the railway company to be sufficient to justify the formation of the company, although a guarantee was not promised at all. Hence, in the letter to the India House announcing the formation of the company, it is based not upon any guarantee, but simply upon the intention "expressed on the part of the East India Company to give encouragement and support to railways in India.'

The next communication from the railway company in which a guarantee was required contained this paragraph:—"The Hon. East India Company to guarantee, out of the proper funds of the East India Company, a dividend equal to 5 per cent. per annum on the capital, for the time being, paid up." This proposal, however, was declined by the East India Company, who finally brought forward their paper of the "'Terms and Conditions' upon which support will be extended by the East India Company to the introduction of railroads into

India." In this document, which obviously must be held to supersede all previous negotiations, the nature of the pecuniary assistance which the hon. Court intended to afford, in addition to the concession of various important privileges, was thus expressed :- "That interest at the rate of 4 per cent. per annum be allowed on sums which, in the course of three years from the date of the railway company signing the first contract with the East India Company, shall be paid into the East India Company's treasury by the railway company, to an amount not exceeding three millions sterling." This paragraph then was announced as explaining the nature of the guarantee which the East India Company had decided upon conceding; and it was for the railway company to ascertain its meaning, and seek for a solution of any doubts that might arise before entering into an agreement based upon it. On receipt of this document the railway company wrote a letter to the India House, which, suspiciously enough, is not given entire in the pamphlet; but from the extracts given, we learn that they requested the hon. Court to grant better terms, stating that they desired " to place the whole matter on the basis of a moderate but certain return." This language clearly implied that the railway com-pany did not consider the published "Terms and Conditions" to secure a certain return; but, as if to put the question beyond the possibility of doubt, their application was again rejected, and they were informed, "that the Court was unable to depart from the terms and conditions specified in the paper already noticed." Subsequently, the India House consented to increase the rate of interest to 5 per cent., and the duration of the arrangement to twenty-five years; guarding this further concession, however, against misconstruction in these words: -"It is to be distinctly understood that all the conditions contained in the paper of 'Terms and Conditions,' furnished to the chairman of the railway company in the month of January last, under which the guarantee of dividend then proposed was to be continued, are to hold good with regard to the longer term of twenty-five years now conceded." In this letter it is abundantly evident that the only alterations in the original paper of "Terms and Conditions," were those relating to the duration of the guarantee and the rate of interest-the nature of the guarantee itself was not in the least affected. Much weight is sought to be placed by the writer of the present pamphlet on the words "guarantee of dividend," which occur in the paragraph just quoted, and also in various letters of the East India Company; but this is a mere evasion of the reasonable requirement that any incidental allusion to a formal document must be interpreted by the document to which it refers. From a review, therefore, of the circumstances attending the concession of the guarantee, we cannot avoid the conclusion, not only that the East India Company did not contemplate an unlimited guarantee, but that the railway company was aware of that fact.

Although the preceding remarks apply chiefly to those who conducted the early negotiations with the India House, there are some subsequent circumstances which seem to confirm our suspicion that the real character of the guarantee was understood by some, at least, of the railway authorities. We first called attention to the possible absorption of the guarantee in working an unprofitable line on the 22nd of July; yet, although our exposition attracted much attention, and formed the basis of some remarks in the moncy article of the Times, which occasioned, we believe, many applications to the railway office for information on

the subject; and although the apprehensions of the shareholders were so great as to induce the secretary, in his circular convening a general meeting, to warn them against putting any faith in reports prejudicial to the company,yet no steps were taken between the dates of the first exposition of the guarantee and the general meeting-a period of thirty-nine daysto remove the anxiety of the shareholders. The report of the directors, which it was promised, by the secretary's circular, should contain full information respecting the affairs of the company, did not contain any allusion whatever to the question of the guarantee; and even at the meeting the chairman seemed desirous to evade the question; and when he found it impossible to do so, he "deprecated the discussion of the guarantee," although that, above all others, was the point upon which the success of the undertaking turned. Seeing, then, that the company, so far from seeking a solution of the doubts which had been thrown upon the guarantee, actually deprecated any discussion on the subject, what reason have they to complain that, when other parties applied to the India House for the information of which they should have possessed themselves, the hon. Court should hasten to set the public right upon the subject?
And does not their continued silence respecting it, as long as silence was practicable, justify us in concluding that they knew the real character of the guarantee, but were desirous of withholding the knowledge from their shareholders and the public?

The writer of the present work seeks to screen the managers of the East Indian Railway from the odium of failure, by attributing the miscarriage of the scheme to the new construction put upon the guarantee, and the enforced withdrawal of the railway company's bill; but it will not be difficult, we conceive, to show that this position is untenable.

At p. 107, he says, "the disposition to invest money in the enterprize continued in England up to the date of the withdrawal of the company's guarantee." We find, however, on re-ference to the special report of the directors, dated the 18th of July, before a word was said depreciatory of the guarantee, that the directors were aware of the existence of discontent among the shareholders; for they plainly refer to the alternative of a dissolution of the company. The report, after announcing the failure of the railway company to complete the engagement with the East India Company, by the deposit of 100,000l., and the refusal of the hon. Court to extend the period for making the deposit, or to increase the rate or duration of the guarantee, goes on to say, "Under these circumstances two alternatives presented themselves to your directors-the one, of winding up the company, taking the chance of obtaining a return of the whole, or a part of the expenses incurred, in the event of the East India Company proceeding with the undertaking; the other, of bringing back the Court to a consideration of the views originally submitted to them by this company.' After detailing the subsequent negotiations with the hon. Court, the report continues:— "The company has only to make the deposit of 60,000l., on which they will at once be entitled to 5 per cent. interest; and on satisfying the Court of Directors of their ability to expend one million, for which a period of four months is allowed them, they may proceed to complete a contract with the East India Company. If, on the contrary, they are unwilling to proceed, they may wind up the company, subject to the consequences necessarily attending such a proceeding. Should the proprietors resolve to pro-

it from the first) a work of great national importance," &c. Towards the close of the report these words occur: "In concluding this report the directors desire once more to repeat, that it is entirely for the proprietors to determine the question, whether they prefer the prosecution to the abandonment of the scheme." From these extracts it is evident that the shareholders were so disinclined to proceed with the undertaking previous to the 18th of July, that they actually contemplated the possibility of the company being dissolved; and this, too, before the weakness of the guarantee had ever been hinted at: but this fact is even more clearly shown by a letter to the India House, dated June 17 (p. 64 of pamphlet), in which the directors offered to dissolve the company on receiving pecuniary compensation for the expenses they had incurred. In addition, however, to these proofs of the disposition of the shareholders and directors to wind up the company in June and July, we have evidence to adduce that even so early as April, four months and a half before the official declaration of the real import of the guarantee, the shareholders had lost all faith in the undertaking. At the meeting of shareholders held on the 18th of April last, the following resolution, which was afterwards transmitted to the India House, was unanimously adopted:—
"That the directors be requested to make an application to the Hon. East India Company, with a view to induce that body, under existing circumstances, either to give a guarantee of a larger rate of interest than 5 per cent., to extend over twenty-five years, or to extend the period which is now proposed for the duration of the 5 per cent. guarantee; -one or other of such modifications in the existing terms being, in the opinion of this meeting, altogether essential to the success of the undertaking."

If, then, the guarantee, even in the unlimited sense in which it was then understood, was insufficient in April, is it not idle to assume that the failure of the scheme is a result of the alleged withdrawal of the guarantee in September?

It is unnecessary we conceive to follow the writer into the consideration of the propriety of granting an unconditional guarantee; the question at present is, whether such a guarantee ever was granted; and we believe we have shown very clearly that the railway company never did obtain such a concession. As regards the contemptuous tone in which the writer speaks of the 5 per cent. contribution, we think it may not be out of place to mention that, by their guarantee upon 3,000,000l. sterling, the East India Company incurred a yearly liability of 150,000l., which at simple interest would make their total liability amount to 3,750,000l.; or more than the whole capital of the company; and the amount of this annuity improved at compound interest would be not less than 7,159,064l., or more than twice the capital of the company. Yet this is the contribution of which the writer asks, "in what respect would the (railway) company be benefited by it"; and it is for declining to increase this enormous liability that the East India Company is now abused!

As the remaining topics discussed by the writer are either of minor importance or have been already considered in our pages, we may safely decline any further notice of them. In conclusion, we have only further to add that this pamphlet exhibits some ability in special pleading and a fair amount of clap-trap, and can only be regarded as a desperate and expiring effort of the East Indian Railway.

# Official Bapers.

LONDON AND NORTH-WESTERN. Statement to the Shareholders.

We last week gave the whole of the TABLES on which the Statement was based, but by some extra ordinary accident the subsequent observations and orunary accident the subsequent observations and calculations (which appeared in the morning papers of Saturday) never reached us on Friday night for publication. As, however, from a letter of one of the secretaries (Mr. Stewart), printed in the Morning Chronicle of Monday, it appears that the calculations on white of monday, it appears that the caronations of given were erroneous in some particulars, we are enabled, in now giving them, to rectify these errors, and insert the correct statement. Mr. Stewart says:—

A revision of the calculations, and of the principle upon which the estimate of weekly traffic required to pay a dividend of 7 per cent. upon the total capital when called up of 21,047,7471, has made it appear that the nominal addition to the capital stock in the adjustment of the terms of amalgamation with the Grand Junction Company, 1846, was, by an omission, regarded as an asset available for reduction of loan; and on the other hand, that working expenses at 40 per cent. have been charged upon a portion of the income to which, being nett, such expenses do not apply, viz., rents from houses, &c., and interest upon bankers' balances arising from revenue.

Accordingly, the statement below is now made consistent with these corrections. We cannot but regret that, from circumstances over which we had no control, our readers were deprived of seeing, in the first instance, the whole of the valuable document; yet the fact of there being an inaccuracy in the first printed statement, mitigates that feeling, since we are now enabled to present it in a correct form.

In preparing the preceding tables, † it has been the In preparing the preceding tables, it has been the earnest wish of the directors to exhibit, in as clear and intelligible a form as possible, not only the whole expenditure already incurred, but an estimate of all future liabilities. It will be seen, from the summary No. 5, that the sum required in addition to the amount expended on the 30th of June last, to complete all the works at the state of the present in preparate in estimates.

expended on the 30th of June last, to complete all the works at present in progress, is estimated at £3,136,626

And that the total contemplated outlay of the company will then amount to £25,862,012

And that when the present share capital is fully called up, which will probably be in 1852, the capital stock of the company will amount to £21,047,747

In which case the amount of loans on debentures will be reduced to ... 4,814,265

£25,862,012

£25,662,012

For this outlay the company will possess 500 miles of rail-way, and a pecuniary interest in 641 miles in addition, which may be considered as tributary to the parent line.

In proceeding to state the views they entertain in regard to future prospects, the directors, of course, am liable to error, since the results are problematical; but it will be for the shareholders to determine whether their anticipations are reasonable or otherwise, taking all the circumstances into consideration, and being guided by the experience of the past.

into consideration, and being guided by the past.

With the view of arriving at an estimate of the future prospects of the railway, it will be convenient to reverse the order of the schedules, and to consider each head in detail.

The liabilities contained in the 4th schedule may be briefly disposed of. Several of the lines therein enumerated were obtained under circumstances which no longer press upon the company. It is not intended to proceed with them at present, and therefore it is proposed to confine the following remarks to the undertakings which are actually in course of progress.

Guaranteed Lines .- It is scarcely necessary to remind the Guaranteed Lines,—It is scarcely necessary to remind the proprietors that these guarantees were undertaken in most cases as much with the view to the ultimate protection of the large income of the company as to any increase of its profits. It will be observed that in no case (that of the North Union and Preston and Wyre lines excepted, in which the London and North-Western and Lancashire and Yorkshire Companies unite in the guarantee) is any dividend guaranteed beyond a moderate per-centage on the outlay; but as in the aggregate these liabilities are apparently large, it may be desirable here briefly to repeat in substance the information respecting them, which has been given in a great ineasure on former occasions in the half-

given in a great measure on former occasions in the half-yearly reports of the company.

On the Buckinghamshire lines the original plan has been considerably modified, and the capital reduced; the gua-rantee is 4 per cent. This line may hereafter become of great importance, as affording a second line to Birmingham, having obtained powers by Act of Parliament to work its traffic over that portion of the Birmingham and Oxford line from Banbury to Birmingham.

The Coventry and Nuneaton is a short line, which will open important collieries. In the extent of the mineral traffic which will be brought on the main line consists its chief value.

The Huddersfield and Manchester and Leeds and Daws bury provide the most direct line that can be constructed between Manchester and Leeds—the distance being 42 miles against the present route of 62, passing through the large manufacturing towns of Dewsbury and Huddersfield, and a very populous intervening district, and with excellent termini in Leeds and Manchester. The prospects of traffic have always been considered favourable; and when it is have always been considered favourable; and when it is remembered that the guarantee is contingent on the divi-

† See ante, p. 755.

dend of the main line, and that while the returns of the London and North-Western continue 7 per cent. it is limited to 44. 18s. per cent., there seems every reason to hope that the result of this undertaking will be satisfactory.

The Preston and Wyre is leased to the London and North-Western Company jointly with the Lancashire and Yorkshire Company—the latter having two-thirds and the London and North-Western one-third of the risk.

Yorkshire Company—the latter having two-thirds and the London and North-Western one-third of the risk.

The North Union line is also a joint lease with the Lancashire and Yorkshire Company at 10 per cent. per annum; the loss on this undertaking has been charged in the revenue account of the general concern, and in both cases it is not improbable that any loss will entirely disappear with the return of commercial prosperity.

The Shropshire Union lines are guaranteed a dividend equal to half of that of the London and North-Western Company, but are entitled to any profits on their own line as far as 6 per cent.; further profits to be divided equally between the two companies. The nominal capital is large, but the Shropshire Union Company has at present confined its outlay to the formation of a line from Shrewsbury to Stafford; the calculations appended refer only to that work which brings a new and important district into immediate connexion with the centre of the London and North-Western Company's lines. The canal forms a portion of this guarantee; but as it has produced a net profit considerably above the guarantee, and is not likely to be seriously affected by surrounding interests, the directors feel much confidence in assuring the proprietors that they do not anticipate any drain on their resources from this undertaking.

The Stour Valley line will be an expensive work, and the cent will account the original estimate in consequence of the

The Stour Valley line will be an expensive work, and the

The Stour Valley line will be an expensive work, and the cost will exceed the original estimate, in consequence of the line passing through a densely-peopled district, which rendered it difficult to calculate its expense.

The guarantee of two-thirds the dividend of the London and North-Western Company is on 565,750. The guarantee of the Birmingham Canal is also connected with this undertaking; but as the revenue of the canal is now yielding more than sufficient to cover it, this liability, the directors that the confidence as normal.

of the Sirmingam Cana is also connected with this directors taking; but as the revenue of the canal is now yielding more than sufficient to cover it, this liability, the directors trust, may be considered as nominal.

It may not be out of place here to allude to the negotiations which have been for some time pending with the Great Western and South-Western Companies. A principal object has been to save capital on new lines by a union of interests where the parties occupy the same districts. It would be premature to specify the particular points at which they contemplate this economy; but should the arrangements now proposed be carried out, the effect would be materially to reduce the general expenditure.

The only remaining guarantee is that to the Scottish Central Company, which is taken in concert with the Lancaster and Carlisle, Caledonian, and Edinburgh and Glasgow Companies. The lease is 7 per cent on a capital not exceeding 1,020,000. (of which this company's proportion is one-fourth); and as the loss, if any, is to be borne only in proportion to the traffic which each company receives from it, the risk is inconsiderable.

The directors may therefore dismiss this description of engagements with remarking, that if they do not offer any early or flattering prospects of profit, neither as a whole taking into account the additional traffic to be brought on the old lines) are they calculated to prove a lasting burthen on the company; and further, that the control of the working of these important branches will add to the strength and security of the whole undertaking is beyond doubt; and when time has been afforded for the full developement of their resources. It is not unreasonable to expect that profit also will be derived from them. In dealing with these engagements therefore the directors assume that the liabilities will be met by the proceeds.

The next class of obligations is that in which the company hold stock in undertakings not yet opened, or only partially so. The anount of capital thus contributed,

pany hold stock in undertakings not yet opened, or only partially so. The amount of capital thus contributed, as per schedule 3, is 4,945,231*l*.

per schedule 3, is 4,945,231L

The directors are aware that the nett revenue to be derived from these several lines may be variously estimated; but however sanguine may be the expectations of those competent to form an opinion of what may probably be realized in a few years, they desire in this statement to take a safe view of the probable result.

In estimating, therefore, the nett proceeds of these undertakings at 3½ per cent., they by no means wish to convey an impression that such is likely to be the issue, but rather to place the calculation on so low a scale as not to be open to question.

The subscription to the Caledonian Company is so limited in extent that a very small dividend would not entail much

The Lancaster and Carlisle line has paid the company Aper cent. on its stock since the opening, and the traffic has so largely increased, that an early advance of dividend may be expected. There will consequently be a direct profit on this stock, and one which the directors feel confident

must steadily improve.

The branch lines embraced in the second schedule com-The branch lines embraced in the second schedule comprise extensions into new districts—such as the Stamford and Rugby Railway, the Clifton branch, connecting the East Lancashire with the Liverpool and Manchester line, the tunnel and new stations in Liverpool, and the enlargement of station accommodation. The last-named portion of this capital cannot be expected to prove remunerative per se, but will be necessary to enable the company to obtain the traffic expected to arise from the new lines and extensions about to be opened in various directions. The means of conducting the goods traffic at Liverpool are now quite inadequate to the demand; and, comparatively speaking, a small portion only of the traffic to and from the interior of the country is yet transferred to the railway. The new station at the north end of Liverpool, and the expected junction with the Sheffield and Lincolnshire line at Manchester, are calculated considerably to increase this at Manchester, are calculated considerably to increase this business. The capacity of the London and North-Western line for receiving and conveying a very large accession of traffic is undoubted; but without the terminal enlargement

now in course of being provided, the directors would have found it difficult to manage such an increase as, on a revival of the commercial prosperity of the country, may reasonably be expected. Having now rapidly glanced at their various liabilities, it remains for the directors to point the attention of the proprietors to the present state of the capital and revenue accounts, and to supply materials which may enable them to form their own judgment of the future

[Corrected Statement.]

From the summary, it will be seen that the total ultimate expenditure is expected to be 25,862,012%. The account will therefore stand thus:—

Dividend upon total share capital, 21,047,747L, Dividend upon total share capital, 21,047,747 at 7 per cent.

Loans, 6,779,141L at 4½ per cent.

Less interest at 3½ per cent. on 4,945,231L, assumed return on capital invested in subsidiary lines as per schedule 3. £173,083

Interest on bankers balances, as per report, year ending June 30, 1848 22,970

Rents, nett receipts, ditto. £13,887

Estimated increase by year 1852, per annum

4,000

17,887 £1.473,342 £260,061

Working expenses 40 per cent. on gross receipts 1.013,442

from traffic

£2,533,605 Total

Average per week to pay 7 per cent., 48,7231. from traffic. The gross revenue for the year ending the 30th of June 1848, was . £2,194,093, average £42,194 per week. Deduct dividend

on Lancaster and Carlisle £17,900 Interest upon bankers' balances .. Rents (nett re-.. 22,270 13,887 ceipts) 54.057

£2.140.036, average £41.154 per week.

It therefore remains for the shareholders to consider It therefore remains for the shareholders to consider whether the preceding calculations are sound and moderate, and if so, whether there is a reasonable probability of the gross revenue of the company from the traffic of the main line and branches to be opened increasing to an extent of 7,569l.4 per week by the year 1852, when all the capital will have been called up, and the subsidiary lines in opera-

tion.

To produce such an increase, there is the additional revenue to be derived from all the lines enumerated in schedules 2 and 3; and that steady annual increase, which, with the exception of periods of severe depression, has taken place since the lines were opened—to which should be added that economy of management which increased experience will enable the directors to introduce.

On the other hand, the directors do not overlook the fact that a certain amount of traffic will be abstracted by competing lines. It will be much less than is usually supposed, and the general traffic is secure to the concern.

In conclusion, the directors beg to remark that they have

posed, and the general traffic is secure to the concern. In conclusion, the directors beg to remark that they have endeavoured to avoid giving an undue colouring to the prospects of the company. At the same time they have deemed it their duty to arm the shareholders with an answer to the misstatements that have gone forth; and it will be satisfactory to them to have imparted to the proprietors that confidence which they themselves continue to feel in the undertaking. By order. the undertaking.

By order,
H. BOOTH,
C. E. STEWART,
Secretaries. Euston Station, Oct. 28, 1848.

# Brooress of Works.

ABERDEEN.-The works will be resumed immediately, with the utmost activity, and we believe it is expected that the line will be opened to the public

about the middle of next year.

Berwick and Kelso.—The works have latterly been prosecuted with more than usual spirit. To the west of the village of Sprouston, the line is in course of formation, and if the weather prove favour-able will probably be extended to Mellendean Burn-foot, by the end of the year. The whole line will probably be opened for traffic about the month of May.

CHESTER AND HOLYHEAD.—The final operations connected with the permanent fixing and disposition of the tubular bridge over the Conway, for the transit of the trains, were delayed until Monday, owing to the top of one of the castings, used as a lifting-frame at the Chester end of the tube, having broken last week while the workmen were driving in the wedges under the lifting beam.

Dundee and Perth.—The viaduct across the Tay,

says the Scottish Railway Gazette, is rapidly progressing towards completion. Locomotives are now daily passing upon it from one side of the river to the A temporary station in the town will be provided until the series of arches, by which the line is carried to the General Terminus, shall have been

† By the first-printed statement the extra sum required to be realized was estimated at 6.424/.

finished. The works are now so well advanced, that the junction of the rails will be effected, and the traffic carried onwards without interruption, most probably in the course of a few weeks.

DUBLIN AND BELFAST JUNCTION.—The foundation piles of the tubular bridge over the White river, near Dunleer, have not yet been fixed; and this work, says the Irish Railway Gazette, has proceeded exceedingly slowly. If the line is opened in good and efficient working order by the first of the new year, the directors will have achieved all that could be expected from them under the circumstances, as they were obviously deceived into making the statement that the line would be completed and ready for

opening on the 5th of September last. EAST AND WEST YORKSHIRE. - Oct. 30 .- On the public opening of the section accommodating for fif-teen miles the east and west districts of Yorkshire. three trains ran each way, connecting the adjacent districts with the York and Newcastle and Leeds and Thirsk system. The inhabitants of the neighbour-hoods of Knaresborough and Harrogate will be much benefited, as the trains touch at Allerton, Marston and other places in their transit. The farmers of the districts will be enabled to convey their corn, cattle and agricultural produce to market with double the rapidity and at half the usual expense. The line has cost between 200,000?. and 300,000?. The chief works are, a tunnel under a portion of the town of Knaresborough, and a viaduct in the castellated style of architecture, to correspond with the neighbouring castle at Knaresborough, over the river Nidd, 300 ft. long, and 80 ft. above the river. Mr. Hudson, according to agreement, has undertaken the working management of the line, to ascertain its probable income, prior to entering upon an expected leasing

GREAT WESTERN (Berks and Hants, Basingstoke Branch).—Nov. 1.—The first train left Reading at 9 5 a.m., and did the distance (15) miles) in 45 min., arriving at the Basingstoke station at 9 50 a.m. There are to be daily (for the present) four trains each way. There is but one station between Reading and Basingstoke, viz., at Mortimer, about 74 miles

or nearly halfway. The buildings, offices, waitingrooms, furniture, are all of firstrate quality, and are most substantially built. The Great Western runs parallel with the South-Western to the terminus. An opening is being made, so that passengers arriving by one to go to the other line have but a few yards to walk, under cover. The advantages are expected to be considerable to both Basingstoke and Reading, particularly to their markets—Basingstoke, on a Wednesday, for corn and stock—Reading on Saturday, also for corn and other agricultural produce. sengers coming from Southampton, Portsmouth, Salisbury, and other important towns on the South-Western—as well as from Chichester, and other places on the South Coast lines, instead of their going places on the South Coast lines, instead of their going as formerly, by way of London, to Reading, Oxford, Cheltenham, Gloucester, &c., will now be enabled to get out at Basingstoke, and go directly to Reading, saving a distance of 66 miles by line, and 3 miles from the Waterloo to the Paddington station. By this line therefore the connexion will be complete between the South-Western, Great Western, North-Western and South Coast lines. Goods also will be conveyed at a great saving in cost, as well as being delivered in less than half the time, without being damaged, as has frequently been the case, by being removed first from the South-Western trains into wagons or carts to be taken to the Paddington or other stations, many also being lost in their transit. The passengers from Alton and other places in that part of Hampshire will also save 7 miles in distance going from the Basingstoke station, instead of, as they have been in the habit of doing, going from the Winchfield station on the South-Western line, even to Reading. Graziers attending the large fairs in Hants, Wilts and Dorset will find also this connecting branch a great benefit to them, enabling them to send their stock in a more safe and expeditious manner than driving them across the country. More persons attended the Basingstoke market, says the *Morning Chronicle*, this day than had ever been seen before, many corn-dealers from Reading, who before seldom thought of attending, being present, besides many more millers and farmers. The road throughout is generally upon a level, and

exceedingly well laid, the rails being chiefly on chalk, running very easy. The curiosity for opening lines seems to be much abated. This day being wet, very few were seen looking on, excepting those interested in the undertaking.

South Wales.—The contractors are advancing

the works between Newport and Swansea satisfac-torily; and this portion is expected to be opened within ten months. Mr. Armstrong, the secretary, has replied to the memorials from Swansea and Llanelly, urging the completion of the line to the latter place, contemporaneously with that to Swan-sea. He says:—"Whilst the directors fully intended the completion of the entire line, at as early a period as circumstances will permit, they consider the course they have now determined on, of hastening, in the first instance, the construction of the portion eastward of Swansea, to be that which is best calculated to benefit the permanent interests both of the shareholders and of the principality at large.

An exhibition was given on Monday at the Hanoversquare Rooms of the new ELECTRIC LIGHT. This, we believe, is the same system by which it was proposed some time ago to form an artificial sun to light Paris. Mr. Staite, the inventor of the modification, proposes to parcel out his sun into little bits, so that any of us may have three-farthings' worth of sun to light our private apartments,—which it will do with the bril-liancy of 500 wax candles. One bit of sun was exhibited to the meeting; and in its light even the famous lime-ball of Drummond grew dim. The difficulty has been to compensate for the carbon consumed, so as to keep the points of the carbon always sumed, so as to keep the points of the carbon and in contact. Mr. Staite seems to have overcome this difficulty. At present, the light is not quite perfect, as it is difficult to obtain the carbon quite pure. It is, however, so nearly so that there seems little doubt of final success. The battery consisted of forty plates of Grove's battery, with iron in lieu of platina: the surface being only one and a quarter square yard. The light burns under water. We may hope to hear further of this beautiful invention, since it is likely to be of such great use on railways.

† See Foreign List. 
# To present date: corresponding period in second column. 
| From May 1, 1848. 
| From May 1, 1848. 
| Expenditure includes cost of Lincolnshire lines (partially opened) and Grinishy Docks. 
| 8,117,506. remains available to complete the works—double, it is supposed, the amount required.

London Stock Exchange, Nov. 3 .- The whole proess of business in the share-market has been satisfactory, and prices have greatly improved. There is a great restoration of confidence, by reason of the Bank having reduced the rate of discount. Much of the stock that has been delivered this account has been transferred from the Scotch banks and other public offices, where it has been held as security for advances. But as it has now gone into new hands, it is to be hoped that the market will be thus permanently benefited. The following are the latest trans-Luxembourg, §; Namur and Liége, 4½; Northern of France, 6½; Orleans and Bordeaux, 1½; Rouen and Havre, 7½; Sambre and Meuse, 2§.

Liverpool, Nov. 2.-A considerable reaction has occurred in our market during the present week. Prices have fluctuated very much. The following are the actual transactions of to-day:—Caledonian, 19½; ditto, preference, å dis.; Great Northern, 12å dis.; Great Western, quarters, 4½ dis.; ditto, new 17l., 3 dis.; London and North-Western, 117½; ditto, new 251., 2 pm.; Lancashire and Yorkshire, fifths, 4g dis.; ditto, 321., 10 dis.; ditto, preference, 2 pm.; Manchester, Sheffield and Lincolnshire, 374; Midlands,

chester, Sheffield and Linicolnshire, 37.5; Midlands, 78½; ditto, 50l., 11½ dis.; North Staffords, 6½ dis.; South-Easterns, No. 4, 6½. Suplow, Brothers.

Manchester, Nov. 2.—We have had a very general and considerable rise in shares during the week, and though for the last day or two there has been a little reaction, prices are much better than they were a week or ten days ago. Our market is much improved this afternoon. Actual transactions this day:—Caledonian, preference, I dis.; East Lanca-shire, new, 103 dis; Great Northern, B, 33 dis.; Lancashire and Yorkshire, fifths, 48 dis.; ditto, West Lancashire and Yorkshire, fifths, 4g dis.; ditto, West Riding Union, 5g dis.; ditto, 6 per cent. preference, pm.; London and North-Western, stock, 116; ditto, new quarters, 2 pm.; ditto, fifths, 3 pm.; ditto, Man. and Birm., A and B quarters, 2 pm.; ditto, ditto, C quarters, 3 pm.; Manchester, Sheffield and Lincolnshire, 6 per cent. preference, 9g; ditto, Grimsby 50l., 31 dis.; North Staffordshire, 6 dis.; South-Eastern, No. 4, 6g; York, Newcastle and Berwick, preference, 1g dis.; York and North Midland, 51 3. SAM. GRINDROD.

Birmingham, Nov. 2.—There has been a tolerable amount of business done in this market throughout the week. To-day the chief transactions have been the week. To-day the chief transactions have been in North Staffords, which it appears have been

greatly over-sold during the panic: -to-day this stock opened at 6g dis. and closed at 5g dis. W. BANKS. York, Nov. 2.—The market, as might have been anticipated, is lower for railway stock. We are glad to learn that the directors of the York and North Midland and the York, Newcastle and Berwick are about to furnish to the shareholders a full statement of their respective affairs and position. Our transactions to-day are, North-Western, 14 pm.; York, Newcastle and Berwick, 253; ditto, preference, 64. GRAYSTON & EARLE.

Hull. Nov. 2.—The unparalleled depression of last week has been followed by an advance, extraordinary in its suddenness and extent. When we remark that since the 23rd ult. London and North-Westerns have since the 23rd uit. London and North-Westerns have sprung from 99 to 120, the quarters (7l. paid) from 4½ to 8¾, old North British from 11½ to 16, and Great Northerns from 2¾ to 4¾, some idea may be formed of the rapidity and importance of the change. The chief causes of the enhanced values are to be found in the satisfaction afforded by the statement furnished by the London and North-Western, and the fact of the press having come to the rescue of the railway interest, and also as a collateral reason to stock having been very much "beared" or oversold. The highest quotations have not been maintained, but a great improvement may be considered fairly established.

FLINT & TOOTAL.

Glasgow, Nov. 2.—The market during the last eight days has been in a very feverish and excited state. In the early part of the week prices rose rapidly, but have again been lowered by heavy speculative sales. At the present low rates there are speculative sales. At the present low rates there are a good many buying orders on hand, and the market closes with a firmer tendency. The following are the latest sales:—Caledonian, preference, 1\(\frac{1}{2}\) dis.; Dumfries and Carlisle, 4\(\frac{1}{2}\); Ayr, 46\(\frac{1}{2}\); ditto, halves, No. 1, 12\(\frac{1}{2}\) dis.; Gitto, preference, 2\(\frac{1}{2}\) ditto, thirds, 3\(\frac{1}{2}\); Scottish Central, 23. BUCHANAN, AITKEN & Co.

IRON TRADE.—Glasgow, Oct. 27.—The market for pig iron for the last three days has been very dull; and prices may be quoted a shade lower than last

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

# Joint-Stock & Commercial Gazette.

The half-yearly meeting of the Vauxhall Bridge Company was held on the 2nd inst. From the report we perceive that the assessment for the land-tax upon the Middlesex side of the bridge had increased from 500l. to 5,198l., and an appeal was made against it, but the Commissioners refused to entertain it. The directors had likewise been compelled to pay an advanced assessment of 225l. to the parish of St. John's, Westminster, to enable them to come forward to make the appeal. The report concluded by recommending a dividend of 14s, per share. The accounts for the half-year show a total receipt of accounts for the harryear show a total receipt of 8,1714. 13s. 9d., and an expenditure of 6,1584. 10s. 3d., leaving a balance of 2,013t. 3s. The report and accounts having been received, in answer to questions by Mr. Learon, the Chairman stated that the receipts of the pier for the half-year ending the 24th of October had been 1971. 19s. 6d., and that the gross receipts and expenditure of the pier for the whole year ending the 24th of October exhibited a profit of 2741. 19s. 4d. in favour of the company. After paying the dividend as stated, there would remain in hand 51l. 9s. 6d. The report being adopted and the dividend declared,

the meeting separated, voting thanks to the chairman.

The Lambeth Waterworks Company are raising additional capital for the extension of works, the object being to bring a supply of pure soft water from Thames Ditton, in Surrey, under their new Act. This company dates its establishment from 1785.

The Metropolitan Sewage Manure Company have completed their works. Through the district in

which the works are, they have laid down pipes for the conduct of the sewage over a space embracing 900 acres of land. This is but a small portion compared with the powers of their Act of Parliament. The benefit the district will derive is stated to be very great, both in relieving the sewers of a superabundance of matter, and preventing, although to a small extent, the river Thames from receiving the soil. When new works are erected, and pipes laid down along the river's banks, it may be expected that the Thames will be less polluted than at present. The shareholders and the directors look forward to large profits from the sale of the manure for agricultural purposes, its powers from irrigation being

far superior to the usual manures consumed by farmers

Steam Navigation.

The Peninsular and Oriental Company, owing to the civil war and the stoppage almost entirely of the trade, have wisely withdrawn, for the present, their vessels from the Italian route.

Banks.

The latest advices from the Mauritius mention that the Mauritius Bank had not declared any more dividends. The want of a system of credit was much felt there. It was expected that the Commercial Bank would unconditionally surrender its right to issue its own notes.

At the Exeter District Bankruptcy Court last week, in the matter of the Honiton Bank, it appears that the accounts have been kept very badly erroneous, debtors being on investigation creditors.

The official assignee, Mr. Hirtzel, read his second report. He reported that on the 18th of April last debts due to the estate had been applied for amounting to 136,249. 15s. 8d.; besides 7,779l. 14s. 5d. on promissory notes; and that there was about 1,000l. more to be applied for, that he had then 8,000l. cash in hand, that the assets might possibly realize 43,0011. 19s. 11d., and that he did not consider a dividend of more than 6s. 8d. to 7s. 6d. in the pound would be ultimately realized; but he hoped in the latter end of May to be able to declare a dividend of at least 2s. 6d. in the pound. The report gave the following analysis of the debts due to the banking firm. Total applied for from balances of accounts was 158,280*l.* 4s. 11*d.* Of these there were—good, 31,931*l.* 2s. 11*d.*; doubtful, 10,189*l.* 12s. 10*d.*; bad, 91,002*l.* 3s.; set off in Honiton Bank notes, deposit notes, &c., 25,157*l.* 6s. 2*d.* The total amount applied for on promissory notes, &c. was 16,4481. 18. 3d. Of these there were—good, 5,7511.; doubtful, 3,2211. 9s. 3d.; bad, 4,7101. 8s. 2d.; set off in Honiton Bank notes, deposit notes, &c., 2,7591. 0s. 10d. The amount of assets, according to the new estimate, would therefore be—good on balances of accounts, 31,931. 2s. 11d.; doubtful, at 5s. in the pound, 2,547l. 8s. 2d.; good on promissory notes, 5,751l.; doubtful, at 5s. in the pound, 805l. 7s. 4d.—amounting to 41,0341. 18s. 5d. Nothing was assumed for the bad debts; they were considered to be irrecoverably lost. The examination was further adjourned.

The Indian Mail in this week mentions that an assessment had been made by the executive Committee of the Union Bank of Calcutta, of the amount to be contributed by each shareholder to pay off the liabilities of the bank. The total assessment amounted to 520,000l., the number of shareholders assessed is 433 out of 600, the remainder of the shareholders being out of 000, the remainder of the snareholders being considered as insolvent. The highest assessment of any one proprietor is 30,000L, and the two Messrs. Day, of the firm of Day, Brothers, are both assessed for that sum. Claims on the bank, it is said, have been offered at 25 to 30 per cent. discount. Some complaints were made that the assessment was un-

fairly proportioned.

A notification has been made to the effect, that A notineation has been made to the effect, that should the Bank at Vienna be attacked and pillaged, the notes of the bank shall be declared void.

The Newcastle-upon-Tyne, Shields and Sunderland Union Banking Company, which stopped payment in October last year, have, through the exertions of the committee for winding-up its affairs, paid four-fifths of the liabilities of the establishment. In consequence of this satisfactory result, the bank will resume business at North and South Shields, and this day the Berwick-on-Tweed Branch will again open. The head office is to be at Newcastle-on-Tyne. The London agents are Hoare & Co. as previously.

Mines.

On Monday a meeting of the bondholders in the Real del Monte Company, was held at the offices, Sir R. Price in the chair. It appears from the advices received from Mexico by the last packet, that unless 20,000L was sent to the manager, or a positive assurance that it would be transmitted without delay, such was the state of the Mexican law, that their creditors would seize the whole of the property, and place it in such jeopardy that he could hardly hold out any hopes of anything being left to the bondholders. Under these circumstances, the present meeting had been called to ascertain if it were not possible for the mortgagees to raise the necessary sum, which he believed would be fully returned to them, with a great deal more in addition. The sum for which they were at present pressed at Mexico was 20,000l., and the total amount of their liabilities out there could not exceed 30,000l. The engines of the company were worth 250,000 dollars, and the stores (including quicksilver, tallow, and such other articles as were eadily saleable) were worth 80,000 dollars more The whole of this money could be realized in time, if they could only obtain the 20,000l. advance, but without that sum they would be compelled to dispose

of all this valuable property at a tremendous sacrifice. The chairman moved a resolution for dissolving and winding up the company. The resolution was carried unanimously; the bondholders not feeling inclined to advance any more money. One or two offers had been made to buy up the company and its effects.

Another discovery of porcelain clay has been made at Port Adelaide, making the fourth of the kind. The new clay is represented as beautifully white, and apparently quite free from mica or any other deteriorating substance. A specimen would be forwarded to England for examination. The quantity of ore lying at the port ready for shipment was large, and still increasing. The proposition for smelting the ore on the spot had been revived. The saving of expense, it is shown, would be very considerable, and repay any company establishing a furnace. Several companies had, however, been projected, but nothing of a practical nature had resulted.

The Van Diemen's Land accounts are to the 27th of May. The rental of the coal mines of the colony had been offered to public competition. The highest

contract was 1,200l. per annum.

The St. Louis Republican, in reference to the eported discovery of extensive gold mines in California, says:—We were yesterday visited by a gentle-man who has been for many years a conductor of gold mines in Mexico. He examined our specimen, and then informed us that he had travelled over a large portion of the Sacramento region in search of gold mines, described the evidences he found, and concluded by assuring us that, after spending 5,000 dollars in experiments and attempts at discoveries, he came out minus the investment.

A cake of native silver from Lake Superior has been forwarded to the United States Mint at Philadelphia, weighing 6 lb. 10 oz. avoirdupois, or 96 80 oz. troy. The following is the analysis:—To determine fineness, pieces are taken from opposite ends, and their assay by cupellation gave an average of 950-thousandths pure silver. The humid assay was impracticable from the presence of earthy matter. An ounce of the metal was then cut off from the two ends and carefully melted with protective flux, which should remove all the earthy constituents and retain all the metallic, and the result was a loss in melting of 5 per cent. The assay of the silver resulting proved to be 9993-thousandths, or within a minute fraction of absolute purity. The two results confirm each other, since 96.80 (original weight) at 950 fine, or 92 oz. (weight after melting) at 992, fine, give the same value within about 3 cents. The native metal or ore is therefore composed of 95 per cent citizen and 6 per cent cents.

cent. silver and 5 per cent. earthy matter.

The Morning Chronicle mentions that the letters from Port Adelaide, received this week, state that the mining wealth of the colony was developed daily more and more, and the Adelaide share-market has become a mart of considerable importance. Wheal Gawler Mines Association was about being brought into more active operation. The silver mine of this company, although not hitherto very productive, still promised favourably. Much excitement has been created by a recent purchase and opening of the mineral block of land on the river Light. The shares of this undertaking had been eagerly pur-chased at a very great premium. The undertaking originally comprised only sixteen shares in 640 acres, purchased as agricultural land, at 1l. per acre, a deposit of 4l. per share paid; but these were subsequently divided into thirty-two, 2l. paid, upon which 18l. remains to be paid up. The competition for these shares had been so great, that their price had risen to 75l.! Subsequently, some specimens of Argentine lead ore arrived, a ton of which had been raised in one hour, with scarcely any digging, and the price had suddenly advanced to so high a point as nearly to exclude buyers altogether. It was subsequently asserted, with good reason, that the ton of ore found so readily was owing to certain speculative proceedings of a small number of persons who sought to "rig" the market. The Port Lincoln Mine Company had been formed; 600 shares of 5l. each; capital 3,000l. Purchases were freely made at 40l. to 42l. 10s. per share. Shares in the Burra Burra Mine had been done at 141l. There was some demand for Adelaide shares. It was reported from Port Philip, that the Captain of the Woodlark, from China, had declared that a small island, name unknown, of the Philippine group, near to Manilla, had been discovered to contain copper ore to an immense extent. The ore is mentioned as being stratified, and is described as abundant throughout the island. A Capt. Beech and two Cornish miners from Manilla had proceeded thither for the purpose of ex-amination. A Government land sale of 4,380 acres had taken place at Adelaide, and was numerously attended. The biddings were brisk, and realized

TO CORRESPONDENTS.

TO CORRESPONDENTS.

In answer to a South-Western Sharbholder, as to the effect of non-payment of the last call on the third shares, we have ascertained that it will not prejudice the amount of dividend on the calls paid up.

E. E. M. did not send his address. Any newsman will furnish copies of the Railway Chronicle, if ordered.

J. T.—Our correspondent in America does not particularize the banks which have declared dividends; but from

the present and previous account it appears that all the American banks, more or less, are declaring dividends for

The half-year of from 3 to 5 per cent.

F. J. H. is in the wrong. The directors had previously announced such an intention; and nothing could justify his very intemperate letter.

RECEIVED: A. L., Lynn.—E. M., Downpatrick.— A. J.— ANDREW FAIRSERVICE.—A CITY SUBSCRIBER.

# Railway Chronicle.

LONDON, SATURDAY, NOVEMBER 4.

We have little to add to our remarks of last week on the great AMALGAMATION scheme. It will have been seen, from what we said on the mere aspect of the rumour concerning it, that we guessed where and how the plan had originated. Its first authors appear actually to have been the Great Western, to whom a combination to secure them what they may otherwise fear to lose-in part at least-must naturally have been a tempting idea; -exactly in the degree to which it would have been unpromising to the other parties in question. The course of the treaty—which seems to have never got beyond the range of preliminaries—and must, owing to the different views and demands of the several parties, have broken down on the first discussion of positive conditions, -is said to have shown pretty clearly the views of its original promoters. It was proposed, we have heard, to lay down an absolute determination that the three concerns should become one, as a first step in the business-previously to any discussion whatever of the terms of the arrangement between each-which were on this plan to have been handed over for settlement afterwards to some third party, who should be appointed umpire and assessor. Of course the attempt to dispose in this summary way of nearly all that could really be matter of vital consequence in the original proposal, brought the plenipotentiaries to a sudden pause;—and whatever subsequent resolutions have been or may be adopted, will serve rather to save appearances and avoid the charge of wholly refusing all plans of accommodation, than give any rational prospect of more effectual results hereafter from an arrangement of this nature. We have already shown what, in our view, must be the sine qud non of any union between the three concerns; -what has taken place shows that, far from agreeing to this, or even approaching the idea of any such concession, the design of the Great Western was to have procured an absolute engagement to preserve the status in quo as the preliminary to any discussion of conditions afterwards. It is not likely therefore that in the future course of a measure originated in this spirit, means will be found to effect a substantial or practical union; so that we need not further concern ourselves just now with the objections to which it might otherwise be liable.

It would be far better for all parties, we think, to attempt some less unlikely arrangement, and try what can be settled, to end hostility and aggression-instead of amusing themselves or suffering themselves to be triffed with and compromised by schemes of a kind of union that cannot be brought about, except either by a renunciation which one of the parties will not make, or by an act of imbecile self-sacrifice by the other two. We know the cleverness of the chief rulers of the Great Western; but we hardly

expect that it will succeed in tempting both their neighbours into a voluntary act of suicide; —which appears to have been something like the plan of Messrs. Russell and Saunders on this occasion.

a separate table, stating, in one view, the several divisions of share capital; the calls still payable on each; and in what order of dates it is proposed to apply for them,—is an omission that somewhat impairs the practical character

The shareholders of the ABERDEEN have agreed to the terms presented by the directors of the Edinburgh and Northern, the North British, and the York, Newcastle and Berwick, for the completion of the works, working the line, &c., which have been before our readers in our accounts of the respective meetings of those companies to formally sanction the necessary agreements.

A large majority of the shareholders of the PAISLEY, BARRHEAD AND HURLET refused to adopt the report presented at the half-yearly meeting, "except that portion of it which recommends that no step be taken at present towards the execution of their works." They also determined to negotiate with the Glasgow, Kilmarnock and Ayr to extend the time for the

completion of the line.

The report received by the proprietors of the BOULOGNE AND AMIENS exhibits a praiseworthy activity and management on the part of the directors. In spite of the almost annihilating influences of the Revolution, the promise respecting the opening of the line was faithfully kept. The principal creditors of the line accorded a delay of two years, and the calls were then sufficient to complete the works. The interest of 10f. accrued on the shares will be paid in coupons, to be afterwards consolidated into bonds bearing interest at 5 per cent., and to be liquidated according to a scheme proposed and adopted.

From our official returns it appears that the amount of traffic for the last week, on 4,167 miles of railway, was 207,257l., thus accounted for: — 99,890l. for the conveyance of passengers only, 55,490l. for the carriage of goods, and a remainder of 51,877l. for passengers and goods together, not respectively apportioned; being an increase of 23,089l. over the corresponding week of last year, when the mileage was 3,309. The average earnings per mile were 50l., whilst in 1847 they were 55l.

# OFFICIAL STATEMENT OF THE LONDON AND NORTH-WESTERN.

In adverting to the STATEMENT officially published by the Board of the LONDON AND NORTH-WESTERN, we need not dwell upon that part of the accounts which merely goes to confute erroneous estimates, and to rebut fallacies calculated to mislead the ignorant only. These are not likely to have ever deceived our readers; and it will therefore be sufficient to confine our attention to those views of the actual position and future prospects of the concern which depend upon the course to be pursued hereafter, and to judge of which, consequently, it was necessary to know the directors' resolutions.

These are not, indeed, stated as fully on all points as might have been desired;—there is, for instance, an entire silence on one which is of pressing interest to many at this moment —the subject, namely, of forthcoming calls. It would have been well, besides giving an estimate of the specified capital required to meet the engagements in the schedules, to have said precisely in what way it is intended to provide for these, during the next two vears at least; and what portion of the four millions, or thereabouts, of which this item consists, is to be raised within that period by calls, and in what order, on what classes of shares;—so that the volue of their anx-lations accordingly. The absence, indeed, of

several divisions of share capital; the calls still payable on each; and in what order of dates it is proposed to apply for them,—is an omission that somewhat impairs the practical character of the document, for those whom it most nearly concerns; and we think it would be prudent in the directors to issue a supplement to remedy this important defect,—as they have already put forth one appendix to correct oversights in the original statement. To this might be appended a specific list of the loans, describing the rate and terminal periods of each, and what particular funds are provided for the liquida-tion of debt which the corrected statement appears to take for granted to an extent of nearly four millions, within the next four years. This, we say, is a kind of information which shareholders in general are particularly anxious to obtain; and it is clear that the object of any official report on finance just now should be quite as much to satisfy them as to refute the mis-statements of libellers who have no stake in the property.

Another desirable piece of information is given precisely enough. Fifteen projects, for which Acts have been procured, involving an outlay of 3,876,000l. (say at least four millions), are classed in a kind of schedule A. as cancelled or, at all events, laid by until the proprietors shall consent to proceed with them; and these, -if the decision be really left with them, and not forced, as such decisions have usually been. by the Board making their assent a "question of confidence,"—are not likely to be resumed. Looking at the details of the list, we believe there is not one that ought ever to have been undertaken, or that is likely to repay the com-pany for the outlay upon it. We shall, for the present, consider these four millions as expunged from the table of liabilities, -to the great advantage of the concern.

For the remaining works, whether in the company's hands on the older parts of the system and on its various extensions and supplements, or in progress by other bodies which it assists with contributions or guarantees, a period of about four years is allowed; over which time the expenditure of the four additional millions above mentioned is to be spread—and at the close of which, if the directors are able and willing to keep the promise of their present estimate, the vast body of the London and North-Western series of lines will have arrived at its maturity; and those who have contributed to its formation, throughout a period of nearly twenty years, may at length see the term of their anxieties, and reap the fruit of their outlay, whatever it may be, without being any longer adjourned, as heretofore, to a future continually eluding their grasp. This is the promise implied in the directors' statement; it is the main thing which, to all parties really concerned in it, will give value to the calculations of the financial steps by which the estimate of capital now put forth may be reached; and upon its fulfilment will depend the credit hereafter of the Board, which has now pledged itself to bring about this welcome result. That it is in the power of the managers of the company to accomplish it, -with a reasonable allowance of margin, of course, both in money and time,-we have no doubt whatever; and we earnestly hope that the purpose, to which this document virtually binds them, will be honestly and stedfastly adhered to. It will be in a great measure the proprietors' fault hereafter if any deviation be permitted from the plan it sets forth, which the directors, having thus deliberately drawn, cannot fairly object to be held by.

to avoid the renewal of such a crisis in its condition as has taken place lately, they must make it their business to maintain this scheme of settlement, to keep it perpetually in the foreground, and let their determination to suffer no deviation from its principle be timely and decidedly known. Nothing short of this, —as may be seen by the experience of the last ten years,—will ever bring a railway under-taking to a close; and as the directors have fulfilled their part, for the present, by showing what may be done to conclude it, the onus of securing this arrangement is thereby virtually thrown on the company at large. It has paid dearly enough hitherto for its readiness to incur all kinds of liabilities; and this may be regarded as an opportunity afforded for the remedy of the error. If what has been seen and suffered in the present year will not enforce the resolution to take due advantage of it, and to keep this advantage, there is no certainty for the future of the London and North-Western or of any other railway that any one in his senses would purchase for a farthing.

We have no wish to run over the items of past expenditure. It is of little use to point out here and there how much of it has been merely dead loss - how much has been done in a profuse manner, that might have been sufficiently effected for half the cost-what enormous sums have been sunk for ever in parliamentary feints never meant to come to anything, or in contests that left the object contended for as distant as before—in purchases huddled up at twice the real value of the thing purchased -in all the various extravagance, in short, of a system continually attacked and attacking, and seeking for "protection" by reiterated sacrifices of what it was intended to protect. They belong to the conditions of the erroneous policy that has governed the whole railway world more or less for the last ten years-with what effects the present year has pretty clearly disclosed. They are either direct consequences of that system, or they flow from it indirectly by its tendency to look for advantages from without, which can only be pursued through profusion and strife, and are never secured; -and to overlook the real security from within, which can only be promoted by judicious vigilance and economy. The tenor of the directors' remarks on this state of things leads us to expect that a more moderate policy will guide their future measuresthe whole condition of railway affairs, indeed, has of late strongly tended to enforce it; and we trust that its results will appear in a more cautious use than heretofore of the large sums which have yet to be expended.

On this supposition the estimate of future dividends may not improbably be realized; and this result, although by no means a dazzling one, if we consider the point from which the amalgamated concern started, will, on the whole, be gratefully accepted. But even this result, as we have said, must depend on the adherence to the promise of finally settling the limits of the concern, and to the estimates of the cost at which this settlement can be concluded:—a prospect full of hope to all concerned, who of late have visibly been near losing hope in the undertaking altogether.

The considerable re-action in the share-market since the document came out, is due, no doubt, in part to causes independent of the shareholders' feeling, and arises merely from the correction of mis-statements that speculators had used to depress the price of the stock. A very short time, however, would in any case have disposed of all that belonged to mere Stock-Exchange panic; and it is now, as it has ever been, on the confidence of actual holders and investors that the ruling value of the pro-

Digitized by Google

perty must be founded. To confirm this we hope will be the uninterrupted study of the directors; who must be well aware that a hopeful statement of affairs may easily produce a temporary effect on a market kept down by fictitious accounts; but that in order to sustain the solid interests of the property it will be necessary not merely to exhibit a promising scheme, but to take care that its promises shall be strictly fulfilled.

# PLEA OF A CORRESPONDENT FOR THE CLOSING OF CAPITAL ACCOUNTS.

The following communication, on the subject of CAPITAL ACCOUNTS, has been sent us by a correspondent, whose experience in railway business entitles him to an attentive hearing. It will be seen that his remarks do not impugn the correctness of the principle laid down in the paper we lately wrote on the adjustment of capital expenditure; but chiefly dwell on a practical view of the causes whereby the item has been hitherto swelled by additions at variance with our principle. We agree with him that it would require great care to insure its strict observance; that the temptation to cover extravagance by capitalizing outlay is so strong as to justify every possible precaution against it; nor shall we deny that the tendency up to this point may have been in a direction which a contrary pressure is needed to rectify.

I have read (says our correspondent) your article on the closing of capital accounts; and have nothing to object to the theory set forth in it. I am, however, well assured, that if the rule you describe were put in force upon any one of our existing companies, it would produce a heavy claim against revenue account for the difference,-ascertained as you propose it should be, in many items of cost that have been written up to capital altogether. Besides this, the method of "taking stock" would in practice leave the main question of distribution subject to the decisions of opinion after all. Suppose, for instance, a new station built in place of one already existing. The difference in cost is easily found: the estimate of what has been gained by the outlay, or whether it was needed,-which must really decide what part should go on this principle to capital, and what to revenue, is altogether a fluctuating one. Those at whose instance the work has been done, will, of course, make out a plausible case of expediency, want of enlarged accommodation, &c., that cannot be readily appraised; and thus the balance for or against is not of a kind that can be ascertained in account like the market price of an engine, &c. I do not see how the rule could be certainly acted upon with respect to a very large part of the expenditure, which has been added for years to the capital of all our great concerns, for

From what I have seen of this process, and of the influences that affect it, I am convinced that, on the whole, the demand for the positive close of capital outlay on long-established lines, is not an untimely one now; that it may be usefully enforced as the general rule, and that no exception should be allowed unless upon express and particular notice, and the production of evidence of its necessity far more complete than has ever yet been required by directors. The vast size to which the most of our railway concerns have grown, renders them continually more and more subject to relaxation on this head. There is virtually a complete division between the exchequer and the executive; in consequence of which the heads that decide upon the works are not sufficiently controlled by the hands that hold the purse. The latter office has become little better than that of a cashier, to the great detriment of economical control; for where the finance department is not practically supreme in any business which is carried on mainly with a view to profit, there will always be some relaxation of the proper check upon expenditure. It is this circumstance that mainly accounts for the wastefulness of all Government works; and I fear that the progress of the railway system, since the great amalgamations, has been towards a condition resembling that which makes the State an

extravagant manager. Every head of a separate department is apt to look to the perfection of his own establishment only-studying what can be done, not to make the best use of what exists, but to add to it some new convenience. He has no daily reminder of the effect of the outlay thus incurred on the company's funds; for it is not his business to study the money matters of the concern. zeal prompts him to give the first place to the objects he superintends; and as the bearing of this in £. s. d. comes upon another department, it is natural enough that he should represent and think everything necessary which can possibly improve the department he controls. The question of whether the cost is or is not more than the improvement is worth, in a financial point of view, belongs to another, which often does not come into contact with the matter of expense until it is already incurred. Against the natural tendency of this division of labour, there are only two effectual means of resistance. The one is giving the supreme direction to the head of the treasury; the other putting a general veto on all demands for capital expense after a line is fairly completed.

Of these expedients the former is not likely to be practised now. The concerns are grown so large that it would be deemed an undue accumulation of power to put the charge of the purse and the authority over the heads of works into any one person's charge; even were it easy to find men sufficiently qualified to unite these offices, or certain that such men would be chosen to fill them, and not some object of directors' patronage. Yet I must remark, in passing that no lucrative private business is otherwise managed. The individual owner of any large undertaking not only keeps the key of the strong box, but also insists on deciding for himself, in the last resort, in all matters that tend to outlay; for he knows that on these depend the profit or loss of the funds he hopes to employ with advantage. Nor can a sensitive regard to what acts on profit and loss be so well preserved on any other system; so that the further you depart from it, the stricter care must be taken to guard against the effects of wanting this natural connexion between the keeper of the purse and the operations by which its returns are affected. And it should never be forgotten that in railway business profit is the main thing to be considered by those who are appointed to manage it. It has been from too much overlooking the priority of this consideration, from the disposition to view it preferably in other lights, and to do grand things with funds raised for very different purposes, that railway accounts and railway values have become what we now see them. The plan, however, of a return to the original method of administration, I have no present hope of seeing adopted; and as my purpose s a practical one, I must fall back on such means as may rectify the obvious tendencies of the system as it is now managed.

The most effectual of these would, as I have said, be a general resolution of the owners of this property to close their capital accounts at the earliest possible period. This decision once taken, the several heads of departments of a company would be informed that from thenceforth their business must be to make the best use of what is now completed, instead of devising new additions to it—to husband resources and not to exhaust them. It will be found, wherever this rule is firmly applied, how materially the whole face of things will, by degrees, be changed in the internal management; how much can be well spared that had been represented as indispensable; how many arrangements can be made which but for this would never have been tried; how much can be done in a cheap way that was meant to be got up at an extravagant cost. I have seen and this is but one of many instances that occur to me_a plan suggested for extra station buildings, to cost 6,000L, cut down by a single act of resolute prudence, to the more modest figure of 1,2001., the object proposed being admitted, after the work was done, to have been thoroughly attained by the cheaper method. There is scarcely a station in the kingdom where this kind of control would not have saved thousands; and where thousands will not continue to be spent from year to year until the veto I speak of has been absolutely promulgated.

It was but the other day that I read in the account of a meeting at Chester, the complaint of the Birkenhead Company of having to pay their onethird quota of 180,0001. for a joint station, planned, at this enormous cost, in a city where two of the companies running into it had already long since provided themselves, each with a sufficient separate station of its own. The whole traffic to and from the place could barely pay the interest on the cost of these; and yet this piece of extravagance was afterwards committed (by the influences I want to see controlled) during the amalgamation fever two years since. Such cases as these explain the decay of railway profits; and there is no hope for their future revival, until the principles tending to excess are once for all replaced by others more suited to present difficulties.

For some time past the mileage of traffic has not increased on our railways generally; so that there is no pretext for opposing on this head a course which the decline of their profits from traffic justly enforces. Let us see economy tried for a few years, at least, until the balance between outlay and returns is a little more evenly adjusted; we shall then be all the better able to provide for any real demands of the business hereafter: and if it should somewhat exceed our means of accommodation in the meanwhile, it will be no very grievous or intractable circumstance. At present, the means of all our chief companies far more than suffice for their traffic, if both were properly adjusted. But no such adjustment will ever be made until it is once for all understood that the existing apparatus, buildings, station room, &c. must be made to serve, __not that provision shall be made for every want or even whim that may be started in each department, or applied for by "the public." And in order to this, I can see no effectual method but the practical one of drawing the purse-strings closer. We see what letting them loose has done to impair the value of railway property. I am persuaded that scarcely onehalf of the past outlay on old lines, written up to capital account has been really called for by the exigencies of traffic: __nor will these be ever economically served, nor various kinds of incidental waste prevented, so long as that account is left to bear all the extras that, if cast upon revenue, on the principle you have laid down, would eat it up at once, bodily. The process of making them a permanent charge on the stock is a slower one; but it will accomplish the same effect by degrees, if a check be not applied very soon, and in a very peremptory manner. The experience of the last two years has proved that directors, in regarding income as a constantly increasing element, and in disregarding the growth of capital outlay, in the belief that a corresponding growth in receipt would cover any amount of extravagance,—have committed two grievous mistakes. Henceforth, it is quite clear that, the only security any railway concern can have for its profits,-condemned as all are to low charges and inevitable competition,—is by keeping its capital within moderate bounds. In order to this, I repeat, the pressure ought now to be laid on the side of absolute restriction-and after the excess that has long prevailed on the opposite side, it can do no harm whatever should it even prevent or postpone in a few instances what might be of itself advisable, had not past excess imposed the necessity of present I am, &c. retrenchment.

## INDIAN RAILWAYS.

If Mr. Chapman has succeeded in making but few converts to his views respecting Indian railways, his imperfect success cannot, certainly, be attributed to the want of a fair field of controversy or the refusal of a patient hearing to any of the doctrines he has been anxious to expound. We last week gave insertion to his third letter in reply to certain exceptions we felt called upon to take against the Indian Peninsula Railway in its present mutilated form; yet although these letters are manifestly the production of a man of talent, who has given years of exclusive attention to a subject which we can only incidentally refer to, the whole of our main objections remain unconfuted, and, in spite of all Mr. Chapman's assaults, are as steadfast and inexorable as ever.

Indeed Mr. Chapman, instead of improving his position, has only made it worse by each succeeding letter-a result, certainly, not attributable to an inexpert or feeble advocacy, but rather to the hollowness of the project he has endeavoured to commend. Schemes which are intrinsically unsound cannot bear the shock of controversy; at the first touch of opposition they crumble into dust, and the Indian Peninsula Railway would need to be a much sounder project to enable it to endure without damage the perilous test to which it has been subjected by its supporters. Never was there a fairer opportunity afforded of setting forth the merits of the project now commended to public approbation, and the attempt has been made with great courage and singular address, yet never have the arts of persuasion been employed with more conspicuous inefficacy, and never did the attempts at extrication more deplorably increase the entanglement it was their purpose to remove. As, then, Mr. Chapman has been enabled to say as much upon this subject probably as is worth being said, and as the discussion has occupied a larger space in our pages than we anticipated, or, we fear, than can have been interesting to our readers, we shall next week close the controversy with a short recapitulation of the several points which we look upon as having been completely established in the course of the discussion, and leave each reader to form his own judgment of the validity of our conclusions.

## Correspondence.

#### THE CALEDONIAN LEASES.

I have been much surprised at the manner in which the directors of the Caledonian Railway have been attempting to secure numerous of the Scotch lines, by their proposed absurd guarantees, and my attention has been directed to the subject by the remarks of "Examiner," in the Railway Chronicle of the 28th ult. Should the directors at the ensuing meeting sanction the leasing of these lines at the proposed guarantees, I can assure them they will soon see their stock at a much lower quotation in the share list than at present—already, I should think, low enough. Do any of the lines they have already guaranteed pay themselves? In the case of the Dundee and Arbroath, one of the best in Scotland, they have regularly to advance out of their own funds, in order to make up the deficiency. The same may be said of the Glasgow, Paisley and Greenock, and indeed of all the others they have leased. But, bad as they are with their present guarantees, they are to be incomparably worse with their prospective. Although not the sole lessees of the Scottish Central, it is sufficient that they are to be a conjoint and responsible party in the transaction. I conceive that the clause in reference to the division of the surplus profits beyond 7 per cent. might, with perfect safety, have been dispensed with. The weekly reserve since its opening, inclusive of the tollage of the Edinburgh and Northern, will not admit of a dividend beyond 3 per cent. per annum; and I can see no prospect or probability of its being able to pay more than 4 or 5 per cent. In reference to the Dundee and Perth, I am disposed to question whether it is paying 5 per cent. at present; but admitting it is, is this a sufficient reason why the Caledonian should be saddled with an additional 3 per cent.? In regard to the Scottish Midland Junction, I question whether it is paying the working expenses. From the knowledge I have ascertained as to its present traffic, and from my personal acquaintance with the locality, I should consider it did well should it pay 2 or 21 per cent. The best illustration I can give in support of this conclusion is, the experience of the proprietors of the 'Defiance' coach, which ran between Perth and Forfar for a number of years. In the advertisement in the local papers at the time, announcing its withdrawal, they state that the district was always to them a

* We have received on the eve of publication another communication from "Examiner." We shall give it next week if it be not sent for publication to any other journal. losing one, and that it never paid them. And yet the directors of the Caledonian Railway wish to guarantee the proprietors of this line an annual dividend of 6 per cent.! Could anything be more absurd? If the proprietors, therefore, wish to save themselves, they must repudiate every new guarantee. It is as absurd on the part of these lines to expect to receive, as it is on the part of the Caledonian to expect to be able to maintain, such high guarantees. T. P.

[The writer ought to know that there are peculiarities in the case of the Caledonian, which should be thoroughly weighed. The Caledonian can only pay as a grand central trunk line for all Scotland to England. This was the original principle of its construction. The local traffic on the trunk must always be small. If our correspondent had read the Railway Chronicle carefully he would have seen that it was as a main trunk, with ramifying extensions all over Scotland that we considered it as most likely to be remunerative.—Ed. Rail. Chron.]

#### ON RAILWAY DISSOLUTIONS.

Sir,—As the dissolution mania appears to have reached its height, and it is generally admitted that railways alone are the cause of the present depression of trade and business, permit me to lay before the public my proposals for effectually carrying out a measure in which I, in common with many of your readers, are so deeply interested. I would propose,—

1st. That all Acts of Parliament for the construc tion of new railways be at once declared null and void;—that all lines not commenced be abandoned, and all works commenced be suspended, and the workmen, overseers, &c. be immediately and finally discharged. 2nd. That all railways in the United Kingdom be at once closed, and the companies dissolved; -that the excavations be filled up, the embankments and fences levelled, the bridges, via bankments and fences levelled, the bridges, viaducts, stations and other works pulled down and their materials sold by public auction, and the rails, engines, carriages and working stock disposed of to such foreign nations as are weak enough to purchase the same,—and the proceeds divided among the former sharcholders. 3rd. That all engineers, solicitors, parliamentary agents, surveyors and stockjobbers, as well as all stock-brokers, newspaper proprietors, contractors, and all other persons who have prietors, contractors and all other persons who have realized profits from this nefarious system of national realized profits from this herarious system of national swindling, be compelled to disgorge the whole of their ill-gotten gains,—together with 5 per cent. interest thereon;—such sums likewise to be divided among the aforesaid shareholders. 4th. That should any company be found stupid enough to refuse to immediately shut up their line of railway, all persons shall immediately be cautioned not to travel or send goods by such railway, but return at once to the old and palmy days of stage-coaches and broad-wheeled waggons, without delay. 5th. That the land, &c. at present occupied by the railways be ploughed over and re-cultivated, and then returned to the original proprietors, who have been so very unjustly deprived of the same;—that all locomotive engines, shops, and carriage or truck manufactories be shut up, and the workmen, &c. discharged; and heavy penalties be imposed upon any person or persons attempting again to revive the obnoxious system. 6th. That grand réunions be held in London, Liverpool and all the great commercial towns of the empire, to celebrate the triumph of the principles of American repudia-tion in England;—and at such réunions subscriptions be entered into for a splendid testimonial to be presented to Messrs Slaughter Nash, Spackman, Smith & Co., which testimonial shall consist of the figure of a monkey, as large as life, wearing a cap surmounted with a pair of ass's ears, surrounded by a troop of admiring jackdaws, and trampling upon the efficies of Truth and Justice, the whole to be formed of iron from the Manchester and Liverpool Railway, and splendidly gilt. At these meetings likewise resolu-tions might with propriety be passed condemnatory of the character and career of such persons as Messrs. G. Stephenson, Hudson, Brunel, &c., and warning the youth of Great Britain to shun their pernicious example. 7th. All railway engineers, surveyors, contractors, secretaries, &c. be allowed a free passage to Australia, or the United States, or any other distant portion of the globe, upon condition that if they choose any British settlement they at first be compelled to pledge themselves never again to attempt the construction of a railway. 8th. That all railway labourers, navigators, &c., and all the humbler class of workmen and servants of railway companies be formed into a Garde Mobile, paid by the Government, whereby they will at once be converted from the mere producers of wealth to the more honourable position of the actual consumers thereof, and enable the Government more effectually to crush Chartism, Socialism, Communism, or any other ism that is apt to appear among the ranks of the unemployed operatives of the empire. 9th. That an Act be passed during the next session of Parliament, declaring that the signature of an Englishman to any document whereby he engages to perform certain stipulations shall no longer be considered binding, except it is his interest to fulfil such stipulations or agreements.

Having thus slain the monster bubble which has hitherto weighed like an incubus upon the prosperity of the country, there can be no doubt that peace, plenty and happiness will again return to our devoted land, as was even the case before the introduction of railways involved us in distress and ruin.

Oct. 27. Humbuggery.

### "WHO IS MR. ARTHUR SMITH?"

As Mr. Arthur Smith, by his pamphlet, has contributed materially to create and encourage the distrust which has of late so generally prevailed in regard to railway investments, and seriously to endanger the pecuniary welfare and happiness of whole classes of his fellow subjects, and to occasion, great loss, misery and anxiety to many individuals and families, it seems proper that the public, now that it can look more calmly upon the subject, should be enabled to appreciate the value of his assertions, and the more especially as he has written with such a degree of confidence as nothing but the knowledge and experience of an able engineer and accountant should have justified. He, however, is simply a young barrister, with little business, the son of a Devonshire attorney, who proposed to publish a book on the laws relating to railways, but who, having abandoned that project, fancied himself capable of dealing with the practical part of the subject; and knowing how few persons are able and willing to involve themselves in statistical investigations, compiled from the half-yearly reports of various companies, the several little works to which I have alluded. In these he has boldly affected, from vast multitudes of figures, to draw conclusions which, although generally unsupported by his premises, are set forth under such titles, and in such a plausible and authoritative manner as were likely to be more captivating and profitable than the work which he had previously contemplated, but which would have been more consistent with his profession.

A LAWYER.

### OPENING OF THE TOURNAY AND JURBISE.

Oct. 30.—The inauguration was celebrated by due festivities in the ancient town of Tournay. the first railway in Belgium that has been wholly carried out by English capitalists. Flags floated from every steeple and military bands paraded the streets. A special train left Brussels at 10 a.m., conveying the directors of the company and their English friends, the corps des Ponts et Chaussées, and a very large party of Belgian and English guests. Platforms were erected at the various stations on the line of road for spectators, and at the station at Tournay a very large tent or canopy had been erected, emblazoned with the united colours of France, Belgium and England. Under this canopy the Burgomaster of Tournay, the Governor of Hainault, and the authorities of the town and district, attired in their various uniforms, had assembled to receive the Ministers, the directors and the guests. The special train arrived opposite this canopy at 3 p.m., and M. Rolin was conducted from the train to the authorities, when an address was delivered to him by the Burgomaster and by M. Bruneau, the resident director, respectively, to both of which he gave a suitable reply, in the course of which he congratulated the town upon that day obtaining a direct communication by railway with the metropolis, and with Paris and the north of Europe; and he concluded by calling upon the authorities to join him in the cry of "Vive le Roi!" which was heartly responded to. The civic authorities and about 1,000 of the military then formed in procession to the Held do Ville At Forms. cession to the Hotel de Ville. At 5 p.m. a banquet was given by the directors. About 200 guests, mostly attired in brilliant uniforms, sat down, presided over by Mr. Kennard. After the healths of the sovereigns of England and Belgium had been toasted, the health of the Chairman (Mr. R. W. Kennard) was warmly received. The Chairman, in returning thanks, said, that he looked upon the compliment which had

just been paid him as one of no ordinary character. After a period of unexampled difficulty they had succeeded in accomplishing the work they had promised. But not to him alone was the credit due. To M. Bruneau especially they were indebted. There were others also who deserved their consideration. He had never seen works better directed or better executed than those of the Tournay and Jurbise. He had therefore to request them to do honour to the engineers and to the contractors, and, above all, to the honest artizaus. During the period of their financial difficulties the company found themselves in a position which compelled them to suspend their works. Orders were given, therefore, to dismiss the workmen, upon which upwards of 300 of their own accord came forward and informed the contractor that they sympathized with the directors, and, as they knew the difficulties they had to encounter they felt that if they were not paid then, they would be ultimately, and they were therefore ready to resume their work, and they would be willing to be paid at any future time. He thought it was due to them that he should relate this gratifying circumstance. In conclusion he begged to propose the "Health of the engineers, M.M. Desart, Drugnum and Grosfils, and the contractor."—The toast was heartily responded to; after which the Governor of Hainault (the Baron Duvrière), proposed the "Health of M. Bruneau, the managing director."-M. Bruneau made a suitable reply, and shortly afterwards the company broke up. In the evening a grand ball was given at the Hotel de Ville to upwards of 2.000 persons. The next day the directors and the Ministers returned to Brussels. The line which has just been inaugurated unites the two chief cities of Hainault, Mons and Tournay, and connects with the general reseau of the Belgian railways the district of Ath and the surrounding cantons. The West Flanders lines will doubtless be much benefited by the opening of this new line, which is 30 miles in extent.

## Gossip.

We understand that a meeting of the proprietors of the SOUTH-EASTERN is likely to be held in the course of the present month, and that it is the intention of the directors to take this opportunity of presenting to the shareholders a clear and detailed ac-

count of the financial position of the company.

The FLOODS have somewhat interrupted the Windsor traffic of the SOUTH-WESTERN, which, as we previously announced, was steadily on the increase. The heavy rain caused the Thames to overflow its banks, and all the low lands and roads for some miles around Windsor Castle were completely under water. We never recollect to have seen the waters so high. The castle, on the north, seemed rising out of immense lake. About two miles short of Datchet the railway was overflowed, and passengers had to walk about a furlong on planking laid from train to train. The officers, from highest to lowest, were on the alert to reduce the inconvenience, and showed their gallantry to all the ladies, both young and old, in piloting them safely along. All direct communication between Datchet and Windsor was suspended. The new omnibuses established for conveying passengers from the terminus of the Windsor and Richmond were of course laid up in ordinary, and, in the interim, the directors engaged a small steamer to convey their passengers from Datchet to Windsor by the river, but this answered very imperfectly, for the steamer could not, for various reasons, approach Windsor Bridge, to the great inconvenience of the passengers.—The flood also extended for some miles along the GREAT WESTERN above and below Reading. The roads were in many instances rendered impassable. It appears in many instances rendered impassable. It appears that the rain has been pretty general throughout the country, the Avon, the Welland, the Ouker, the Leain, the Soar, having likewise overflowed their banks, and caused much inconvenience to the inhabitants of Newton, Clifton, Market Harborough, Daventry, Leicester, Coventry and Leamington. The cuttings on the COVENTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER OF THE COUNTRY AND NUMBER O cuttings on the COVENTRY AND NUNEATON were laid a considerable depth under water, and the works were consequently stopped. There was but little loss of property.—In the north also the continuous rains had swollen the Ettrick, Tweed and Gala. It is nearly two years since the Gala was so much flooded. A considerable quantity of railway sleepers and some temporary bridges erected between Galashiels and Bowshank were swept away. No serious injury, says the Border Advertiser, has been done to any of the permanent railway works; but it is said that upwards of 100l. worth of wood belonging to the contractors was swept away, the most of which, however, has been secured and brought back.

The directors of the East Lancashire are now prepared, says the Preston Chronicle, to contract for the extension of their line from Farington to Preston, involving the erection of another bridge across the Ribble.

Amicable arrangements, reports the Lancaster Gazette, have this week been come to between the LANCASTER AND PRESTON and the LANCASTER CANAL Company, so that now there is little doubt that the long-pending suit with the Lancaster and Carlisle will be shortly settled also.

Lord Villiers, the chairman, accompanied by the

engineers and officers, has been over the works in progress on the VALE OF NEATH, running for 22 miles through the county of Glamorgan. Additional contracts have been let, the company being desirous of completing their lines to certain points by the time that the South Wales is completed to Swansea, and thus accommodating visitors to Merthyr.

On the announcement, at a meeting of the proprietors, of a REDUCED TOLL across the VAUXHALL BRIDGE, the chairman said that one cause of the great reduction in the toll was, that the South-Western allowed only two of their long thins, that is, those which went long distances, to stop at the Nine Elms station daily. Numerous remonstrances and memorials, urging the directors to give that portion of the metropolis the same accommodation it formerly had done had been sent in, but no change The Railway Commissioners were had been made. then written to, but with no better success, as the reply received was to the effect that the matter was not within their jurisdiction. Another memorial (very naïve in its suggestion, as our readers will observe) was, however, about to be sent in, calling attention to the great danger of allowing the trains to pass at such speed over the Nine Elms viaduct, and stating that the trains must of necessity run over it more slowly if they had to stop at the station there.

A new eight-wheeled engine, says the Morning

Chronicle, has been running on the London and NORTH-WESTERN, with 100 tons, at an average running speed of 51 miles, and at a maximum running

speed of 53 miles an hour.

The Railway Commissioners, as the result of investigation in thirty-seven CASES OF COLLISION, recommend that in large trains there should be a sufficient number of guards to work the brakes, and conclude that collisions are to be attributed to their deficiency. A brake should be attached to every fourth carriage; and, by a royal ordinance of the late Government of France, a similar proposition was enjoined for all the trains on the French lines. They consider it questionable, however, whether, with the extraordinary speed now commonly in use even this proposition would afford sufficient security The Commissioners assume that the same power which can stop a train within a given distance from a speed of 25 miles an hour would require nearly four times that distance, under similar circumstances, to stop a train from a speed of 50 miles an hour—a speed now frequently adopted. To attach a number of guards duly proportioned to its weight and the speed at which it is to travel would cause a considerable increase in the working charges of railways; but the Commissioners consider the question too important to be abandoned on such grounds, and that it requires the serious consideration of every railway company in the kingdom. They have pointed out to Capt. Huish, of the London and North-Western, these their views as to the evil of a deficiency of brake power in magnifying the effects of collisions, in order to the making some joint recommendation to be generally adopted for public safety. The Commissioners are also of opinion that the unequal height and gauge of what are called "buffers," tend to aggravate the injuries arising from accidents by collision, and they recommend uniformity as far as possible. As respects the CASUALTIES CAUSED BY engines or carriages LEAV-ING THE LINE, as was the case with the Caledonian express train on the 31st ult., out of twenty cases, in five only the carriages appear to have left the line, while in fifteen the engine left the rails. In the majority of this description of accident on record, passengers have been killed, and others have been seriously injured; but the case of the Caledonian express is in these points a remarkable exception, nobody having been killed and scarcely any one injured. The Commissioners, in reporting upon the cases in question, have come to the conclusion, that in several of them the engines or carriages appear to have left the line in consequence of a previous accident of another description, such as a faulty rail, or a broken axle or tire, but that in other cases the cause however, has been secured and brought back.

A correspondent informs us that surveyors are at present engaged in surveying for a line from Fleet-have called particular attention to the security or

wood to Lancaster, to pass a little to the west of insecurity of different descriptions of engines, the possible insufficiency of the permanent way to break the action of powerful engines at high speed, and they have directed their inspecting officers upon the various lines to investigate the whole subject of engine speed, construction and economy.

There has not been any reduction in the wages of the porters and of the salaries of the other officials of the South Devon, but the shareholders have presented a memorial to the chairman and directors, urging a complete revision in the management and the strictest pecuniary economy; and noticing the great expenditure of capital in the construction of the line, the enormous sums spent in the atmospheric traction, the depreciated value of the shares, and the suspension of interest, not only on the original capital, but also on the preference shares. The Chairman intimated in reply that considerable reductions have been made, and that further reductions will be carried out to the utmost extent practicable.

The half-yearly meeting of the proprietors of the LONGRIDGE was held at the Fleetwood, Preston and West Riding Junction offices on the 26th ult., Mr. T. B. Addison in the chair. The business was merely of a formal character. A dividend of 12s. per share,

clear of income-tax, was declared.

At the late meeting of the directors of the Nxw-CASTLE AND CARLISLE a dividend of 3 per cent. for the half-year was declared.

Herapath boldly affirms that a Government bill is in preparation for the next session of Parliament, Its main object is twofold; first, for a considerable extension of time in the construction of new railway works, which it is not desirable to altogether suspend, but to proceed with slowly; in fact, to enlarge the powers of the bill promoted by the Chancellor of the Exchequer, now in force as an Act; second, to enable those companies which have obtained their Acts, but radically unfortunate in their plans, which might be better destroyed than made, to wind up and be for

ever abandoned.

At the last quarterly meeting of the Society of MECHANICAL ENGINEERS, in Birmingham, the loss which the members had sustained by the death of the president, Mr. G. Stephenson was specially. the president, Mr. G. Stephenson was specially recorded:—"That the members of this Institution desire to express their deep regret at the decease of their late president, George Stephenson, Esq., whose early support of this Institution has greatly contributed to bring it to its present state of success.—Mr. Scott Russell contributed a long memoir of Mr. Stephenson, which was read, with general approbation.
Mr. R. Stephenson, M.P., was elected president, in
the room of his deceased father, and Mr. Marshall,
connected with the locomotive department of the Norfolk, appointed secretary.

Mr. Campbell, of Monzie, has written the following letter to Lord Duncan, the chairman of the Scottish

Callart, Fort William, Oct. 21.—Dear Lord Duncan, I had the honour to propose the resolution adopted by the shareholders of the Scottish Central in reference to Sabbath snarehousers of the Scottish Central in reference to Casonam travelling, I feel called upon to address you, as chairman of the directors of that company, in consequence of a para-graph, which I assume to be correct, and in which it is stated by the Scottish Reformer Gazette that the Duchess stated by the Scottish Reformers Gazetle that the Duchess of Sutherland, Instening to attend the deathbed of herather, reached Perth on Sabbath morning, just as the malk train for the south was about to leave that city; that here grace stated her object in desiring to proceed by that train, but that, nevertheless she was not allowed to do so. I attach no importance whatever to the circumstance of its being the Duchess of Sutherland who was so treated, or to the fact that even had she been carried forward it would have been altogether unavailing, seeing that the Earl of Carlisle expired on the previous day; but I do wish in a few words to say—and I believe I speak the sentiments of those with whom I have the honour to act in these matters—that, it is all provision for unnecessary travelling on the Sabbath. it is all provision for unnecessary travelling on the Sabbath, or anticipated cases of mercy which may never occur, that I am opposed to, and that I do trust that in future, and so. I am opposed to, and that I do trust that in future, and so, long as you are compelled by Government to carry themails on the Sabbath day, you will leave a discretionary power with your secretary, and others in whom you cam place confidence, to forward by the mail trains any one, whether peasant or peer, who can satisfy them that his is indeed a case of necessity and mercy, as the one in question most certainly was.

ALEX. CAMPBELL, Monzie. Lord Duncan in reply quotes the amount of shares which supported Mr. Campbell's anti-Sunday travelling resolution, and states that by such a resolution having been put and carried the board of directors were deprived of any discretion in the matter of Sunday traffic.

The Irish Railway Gazette publishes a suggestion of a very novel character from Sir S. O'Mailey for assistance to railways, which we give in the words of our contemporary:—He proposes that the capital required should be raised by loan, and that the Government should sanction LOTTERIES, to be drawn only in Ireland, to be called "Irish Railway Lotteries," for the purpose of paying the interest on the

Digitized by GOGIE

capital so raised, until such times as the railways He also proposes that the capital are completed. thus raised should be loaned without interest for three or five years to existing companies, to enable them to proceed with extensions, or in case they declined to undertake extensions, then, to new companies or to Government Commissioners, &c. And also it is suggested that the purchase money of the land required should be sunk as a perpetual

annuity, payable by the railway.

The GERMAN RAILWAYS have especially suffered during the Continental Revolutions. The Emperor's troops have taken up the rails within the district of Vienna, to prevent any reinforcements to the inhabitants of their city. On the other side two of the great bridges near Florisdorf were fired by the Viennese to delay the advance of the imperial

forces.

#### Reports of Meetings.

ABERDEEN.

Oct. 26 .- Special Meeting, Aberdeen. - Lord J

HAY in the chair. The Secretary read the report. The present meeting was called to consider and determine on the two following propositions:—The first is a pro-posal by the London and North-Western to take into valuation the present working plans of the Aberdeen, and advance on account thereof a sum of 80,000%. on the completion of the agreement, until the exact value shall be ascertained; also to furnish the necessary additional plant required, and to work the Aberdeen line from the present time, and for a period of five years after the opening of the line to a point near Aberdeen, at a mileage rate to be fixed by Mr. Locke, the engineer of both companies. The second is a proposal by the Edinburgh and Northern, in conjunction, it is understood, with the North British and the York, Newcastle and Berwick, to take, and pay for by instalments of 20,000*l*. per month, the whole of the new stock authorized to be raised by the Aberdeen Act 1848, amounting to 276,000l. (subject to the option of such shareholders as may choose to do so to take a rateable proportion of the new stock corresponding to the number of shares held by them), on condition that the said new stock shall be guaranteed a dividend of 6 per cent. per annum for five years, and 5 per cent. thereafter in perpetuity, participate in any dividend exceeding 5 per cent which may at any time be declared on the whole stock of the company. The Edinburgh and Northern also agree, on the completion of the line to a point near Aberdeen, to take and pay for at a valuation the Aberdeen's working plant, and to work the line thereafter a period of twenty-one years, at a charge of 40 per cent. of the gross receipts; but an account of the actual expenses is to be made up at the end of every three years and submitted to the Aberdeen and should there be any difference of opinion with regard to their amount, or should it be considered that the said per centage entails loss on either party the amount of the per centage shall be determined by engineers to be mutually chosen. These are the terms, and your directors are bound to state that they consider the proposal by the Edinburgh and Northern the more advantageous one for the shareholders to accept, for this reason, that while the acceptance of the London and North-Western's proposal would leave the Aberdeen no alternative but to give off the new stock at such rate of guaranteed dividend as would induce the public to take up the shares, the proposal of the Edinburgh and Northern secures the disposal of the whole stock, on what appears to your directors to be very favourable terms.

The heads of the proposed agreement with the Edinburgh and Northern were then read.

The proposed articles of agreement with the London and North-Western were also read.

The CHAIRMAN said as the meeting has been called for the special purpose announced in the circular, I may state that the annual meeting will be held in a few weeks, when a full statement of affairs will be presented. The amount of present claims upon the company is about 80,000%, to meet which there are of arrears of calls, 40,000*l*.; amount still to borrow, under powers conferred by original Act, 58,000*l*.; in all, 98,000l. I now beg to move the following resolutions :-

1. That this meeting approves of the proposed arrangement with the Edinburgh and Northern, or with that com-pany in conjunction with the North British and the York, Newcastle and Berwick, in terms of the heads of agreement before the meeting; and the meeting authorizes the direc-tors on behalf of this company to enter into a formal contract accordingly.

2. That the sum of 276,666l. 13s. 4d. sterling, which this company are authorized to raise by virtue of the Aberdeen Act, 1848, be now raised by the creation of 33,200 shares,

of the nominal amount of 81.6s. 8d. sterling each, which shares shall be entitled to a guaranteed interest or dividend

shares shall be entitled to a guaranteed interest or dividend of 6 per cent. per annum, for a period of five years, and 5 per cent. per annum thereafter, in perpetuity, and to participate in any dividend exceeding 5 per cent, which may at any time be declared on the whole stock of the company.

3. That the directors be authorized to issue the said company, and the North British, and the York, Newcastle and Berwick, at the par value, to be paid for by instalments at the rate of 20,0000, per month, subject to the option of such of the present shareholders as may choose to do so, to take a rateable proportion of the new stock, corresponding to the number of original 50% shares held by them, provided the said option be intimated to the secretary em, provided the said option be intimated to the secretary within one month from this date.

4. That such of the said shares as may be taken by the

4. That such of the said shares as may be taken by the present shareholders of the company shall be paid up as follows, viz.:—11. is. 8d. per share on the 27th day of Nowmber 1848; 1l. 3s. 4d. per share on the 27th day of January 1849; 1l. 3s. 4d. per share on the 27th day of March 1849; 1l. 3s. 4d. per share on the 27th day of May 1849; 1l. 3s. 4d. per share on the 27th day of July 1849; 1l. 3s. 4d. per share on the 27th day of Nowmber 1849; 1l. 3s. 4d. per share on the 27th day of Nowmber 1849; 1l. 3s. 4d. per share on the 27th day of Nowmber 1849; 1l. 3s. 4d. per share on the 27th day of Nowmber 1849; 1l. 3s. 4d. per share on the 27th the shid company or companies and

arrangements with the said company or companies, and take such measures as may be requisite for completing and

carrying out the said transaction.

Mr. PIRIE seconded these resolutions

Mr. J. S. GIBB inquired whether the agreement bound the Aberdeen to observe any hours or days of arrival and departure which the Edinburgh and Northern might think fit to appoint.

The SECRETARY read the article in the agreement referring to this question, which provides that the Aberdeen is to regulate the hours of the arrival and departure of the trains by those of the Edinburgh and Northern.

Mr. Gibb wanted to know whether or not the Aberdeen was, by the terms of the agreement, bound to run trains on Sundays for twenty-one years.

Lord J. HAY said that the meeting had been called for the special purpose of considering the proposal of the Edinburgh and Northern. They could not there

fore take up the question of Sunday travelling.

Mr. Gibb was speaking to the proposal, and asking an explanation as to how far the meeting would be committed by it.

Mr. PIRIE said that the present proposal was merely to work the Aberdeen line; the Aberdeen had still the entire superintendence of their line in so far as their own traffic was concerned. The Aberdeen only pledged themselves to run their trains in connexion with those of the Edinburgh and Northern. This did not affect the discussion at a future time of the question as to whether they should run passenger trains on Sunday or not.

The resolutions were carried.

PAISLEY, BARRHEAD AND HURLET. Oct. 30.—First Meeting, Paisley.—Mr. J. WILSON, of Auchineiden, deputy-chairman, in the chair.
The SECRETARY read the report:—

The directors have now the satisfaction of congratulating shareholders on their success in obtaining the sanction Parliament. This has been accomplished in the face of of Parliament. of Parliament. This has been accomplished in the face of opposition of an unprecedented nature, during no less than three different sessions, and after a most minute investigation of the merits of the scheme. The first of these competing projects was started by the Glasgow, Barrhead and Neilston Direct, in the same session in which your bill was first introduced. Their bill was thrown out on the merits, unanimously, by a committee of the House of Lords. Your bill had a long the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the company of the properties of the properties of the company of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the properties of the bill had been previously lost in the Commons, on a point of form connected with the engineering department. In the next session, bills for nearly similar lines as yours were promoted by the Glasgow, Barrhead and Neilston Direct, and by the Glasgow, Paisley and Greenock. These were remitted by the Glasgow, Paisley and Greenock. These were remitted to the same committee with your bill. Both of the competing projects were rejected: your bill, however, was suspended till the following session. Your directors were then unexpectedly met by a third bill, promoted by the Glasgow, Barrhead and Neilston Direct, which was, however, fortunately thrown out by the House of Commons without a first the control of the common without a first that the control of the common without a first that the control of the common without a first that the control of the common without a first that the control of the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that the common without a first that th An expensive investigation was, at the instigation of the Glasgow, Barrhead and Neilston Direct, afterwards in stituted into the sufficiency of the parties to the parliament ary contract. The decision of the committee was in your layour. The question was afterwards agitated with much keenness in the House of Commons, but the objections were overruled by a great majority. The bill was then brought into the House of Lords. There it was opposed at every stage. After a long contest on the merits, the preamble was carried by a unanimous vote of the committee. A running clause was, however, unexpectedly proposed by the committee, in favour of the Glasgow, Barrhead and Neilston Direct, which till then your directors were not aware was to be insisted upon by that company. Your directors op-posed this provision as long as they could do so with safety; but after the final decision of the committee in favour of the clause, they, acting under the advice of the Bord Advocate of Scotland, and one of the most eminent counsel in England, considered themselves bound, under the share-holders contract, to persevere with the bill. The Glasgow, Paisley, Kilmarnock and Ayr, who hold a preponderating interest in the stock of your company, and who were bound to guarantee a return of 6 per cent, per annum upon the capital, viewed the clause in a very objectionable light Your directors next met with the opposition of that com-

pany; but after a keen contest with them in both houses of Parliament, your bill was triumphantly carried. It is not for your directors to determine what course shall be pursued in reference to this unfortunate provision in favour of the Glasgow, Barrhead and Neilston Direct. It is sufficient for them to bring the subject prominently before the shareholders. The course which the directors have hitherto followed was dictated solely with the view of protecting themselves from responsibility. They trust, however, it may not be out of place here to remind the shareholders that this company was formed on the basis of the most that this company was formed on the basis of the most perfect good faith with the land and mineral owners and lessees of the district, who promoted and supported the company on the express understanding that the line would be made within the time prescribed in the bill. Whatever resolution may be therefore adopted in relation to the running clause your directors hope, that nothing will be done resolution may be therefore adopted in relation to the run-ning clause, your directors hope that nothing will be done to weaken the obligation or to lessen the good feeling that now exists among the land and mineral owners towards your company. From the great interest held in the com-pany by the Glasgow, Paisley, Kilmarnock and Ayr, your directors have not deemed it to be expedient to enter into any new contracts since the passing of the Act for the for-mation of the line. They thought it would be more decorous to the shareholders, as a body, to postpone committing them on any important point, until they have had an op-portunity themselves of electing a board of directors, which, agreeably to the Act of Parliament, requires now to be done. No time should be lost in commencing operations, after the money-market has recovered its former elasticity, At present the directors conceive a call for such a purwould with difficulty be responded to. But as the company are bound to make and complete the line within two years and six months after the passing of the Act, your directors would recommend that this obligation should be kept by their successors prominently in view. Prior to the passing of the Act, your directors, in virtue of powers conferred on them by the shareholders' contracts of agreements, entered into arrangements with the Earl of Glasgow and Messrs. Wilson, of Hurlet, and also with the proprietors of Houselill, for a purchase of their private lines, which would otherwise have competed with the present undertaking, inasmuch as by these lines and by the canal from Glasgow to Johnstone the minerals raised at company are bound to make and complete the line within canal from Glasgow to Johnstone the minerals raised at Hurlet could have been forwarded to Paisley. The price is to be left to arbitration, although in the case of the Earl of Glasgow and Messrs. Wilson a minimum sum is fixed by the Glasgow and Messrs. Wilson a minimum sum is fixed by the agreement. They also entered into a contingent agreement with the road trustees for adjusting all claims of damage they might make on the opening of the railway, and one with the Marquess of Abercorn for a piece of feuing ground that would be required for some contemplated improvements near the proposed junction with the Paisley and Renfrew. From the great opposition made to the undertaking, the expenses incurred have been considerable. The directors have taken every precaution for keeping those directors have taken every precaution for keeping those within reasonable bounds. The result of the whole may be Amount contributed by shareholders .. £24.150

Interest thereon 1,759 19 1

£25,909 19

Out of which there has been paid of expenses 16,741 9 10

Leaving a balance of which will be somewhere about 20s. per share, subject, of course, to such abatement as a general meeting may allow the directors and provisional committee for their trouble and personal expenses, and to the expenses incurred since the passing of the Act.

Mr. BARR, of Drums, said it would ill become him to offer any opposition, as, when it was intended to divert the line to Barrhead round about by Hilling-ton for three miles, he had given his decided disapprobation to that course, and had strenuously advocated, on all occasions, a more direct route. He could not accord in his conscience in the congratulalations offered by the directors as to their great success. The line might ultimately be successful, but never under this bill. It would be jesting with the company to imagine that the report was serious in supposing that the line should now immediately be proceeded with. He believed that a decided majority of the Ayr were determined that it should not be proceeded with. He would not make a motion to the effect, but he would protest against any new expenditure in Parliament, which he believed was intended, on what was called the running clause. That was a clause of which there was slightest chance of their getting any alteration. It was a fair clause. He did not understand it in the light in which it had been read, that another line should have the privilege of running over this line. He should have thought that the more lines that were running over their line the better, if fair tolls were paid; and he did not think that Parliament or the public would look on it in any other light. There was no hope of battling with the Ayr on that line. There were two ways; either to battle with these people before the works were constructed, or see if they were willing to withdraw their bond ride paid up money. It was proposed to go to Parliament to ask an alteration of that clause. would say that any such attempt would be suicide to the line itself, and a positive act of injustice to the shareholders. The only fair course was to let them retire, and divide the surplus, or at all events, to do so with those who were willing to retire. He saw nothing in the bill to convince him that there was

any intention of promoting or of carrying through this great and desirable object. Such had been publicly avowed at the last meeting of the Ayr, and for that purpose there was a majority of that

ompany here to-day.

Mr. D. J. BANNATYNE appeared there as proxy for the Glasgow, Paisley, Kilmarnock and Ayr. He did not think that this was the place for discussing the matters referred to by Mr. Barr, in any attempt the Ayr might make with a view to get rid of the running clause. He did not mean at present to propose that any application should be made to get rid of that clause. This was a subject for the serious consideration of the directors now to be elected. The only other remark he would make was in answer to Mr. Barr, as to the predominant interest of the Glasgow and Ayr. He wished, in the name of the company, decidedly to disavow their holding any shares except those for which they had originally subscribed, and were authorized by Act of Parliament to hold. As to the view which Mr. Barr had taken, as to the Ayr taking powers to purchase the line, he would say that the directors did not contemplate purchasing it at present.

Dr. QUINLAN moved the adoption of the report.

Mr. W. HATRICK seconded the motion.

Mr. W. H. CRAUFURD, of Craufurdland, moved as an amendment, that the report and the proceedings of the directors be not approved of, except that portion of the report which recommends that no steps be taken at present towards the execution of the works authorized by the Act of Incorporation.

Provost MILLER, of Ayr, seconded the amendment which was carried by a large majority.

Mr. D. J. BANNATYNE, as proxy for the Ayr

and Mr. Barr declined to vote.

Mr. A. Gardner, of Nethercommon, observed from the report, that 16,7412, ys. 10d. had been paid to the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common of the common away in expenses for obtaining this bill; in other words, the funds of this company had been taken to rose to speak in regard to a matter of principle. He and other individuals had made their investments in good faith, and he did not think they were now well

Mr. W. BARR moved that it be recommended to the directors not to incur any further law or parlia-mentary expenses, without the sanction of a general meeting

Provost MILLER seconded the motion, which was agreed to.

Mr. T. M'GUPPIE moved that the directors be authorized to enter into a negotiation with the Gliasgow, Paisley, Kilmarnock and Ayr, to extend the time within which they are entitled to insist upon the works being completed, viz., within two years and a half from the passing of the Act.

Mr. LINDSAY seconded the motion, which was

carried.

## AMIENS AND BOULOGNE

Oct. 28 .- General Meeting, Paris .- M. C. LAFFITTE, the president, in the chair.

The meeting was numerous, not less than 10,293 shares being represented.

The SECRETARY read the report :-

The report commenced by alluding to the meetings in Paris on the 22nd of May last, and in London on the 31st of the same month, relative to the threatened assumption of the line by the French Government. After that danger had been averted by the energetic remonstrances of the combeen averted by the energetic remonstrances of the companies, the Boulogne, like the rest, found its efforts seriously impeded by the shock which credit of every kind had received from the political convulsions. Still, notwithstanding the inevitable difficulties so produced, the line was opened in the spring of 1848, as originally promised; and this, too, when a tunnel was executed in the forest of Hardelot, in place of a cutting, as originally intended. With the exception of the definitive stations at Boulogne and Abbeville, the whole of the works of the line were terminated. As the intercourse between England and France had for the moment fallen off, the board of directors had determined to fit up for present use, as a passenger station determined to fit up, for present use, as a passenger station at Boulogne, part of the erections originally intended for goods—a saving of 500,000f, (20,0004) had been thus effected. The station of Abbeville was also provisionally constructed, the Government authorities not as yet having come to a decision on the plan sent in. If you consider (says the report) the events which have been accomplished during this period of our direction, the financial embarrassments, the discredit, and even the absolute ruin which the Revolution discredit, and even the absolute ruin which the Revolution of February has caused for many great undertakings; if you consider that, notwithstanding the difficulties of all kinds which beset us, our enterprize has been brought to a termination by means of our own resources alone, without any extraneous assistance, and without the activity displayed in the completion of the works having been for one instant slackened; if you take all this into consideration, you will appreciate, we are well convinced, the efforts which for the property of the property of the convention of the works have been made to prive a such year. must have been made to arrive at such a result. We shall now place before you an account of your financial position. When the last General Assembly was held, we gave you an account of the employment of the social capital, and of the sums which then remained disposable. The table which ou have before you indicates the manner in which the

expenses of establishment, incurred since the commencement to September 30, 1848, have been divided. It runs

Chap. 1. Expenses anterior to t.	he cor	astitut	ion	F.	c.
of the company	••			418,713	63
Chap. 2. Administration		• •		650,691	11

(1.462.562L) 39.064.066 19

In order that you may the better comprehend the different in order that you may the better comprehend the different figures which compose the statement of the disposable values, we consider it our duty to lay before you the state of your financial situation at the moment when the Revo-lution of February took place. The debts of the company to the contractors and furnishers of articles of various kinds to the contractors and furnishers of articles of various kinds amounted to about 2,600,000. The assets were composed—
1. Of the balance of the caution-money. 2. Of the balance of receive on the capital. 3. Of various values in hand, amounting to 1,639,414f. 86c. 4. Of disposable sums at the bankers of the company, handed over to them for the payment of the bills which we had drawn on them. But the general discredit which resulted from the events of February was such, that it was impossible for us to get the values which we were possessed of discounted, although of the which we were possessed of discounted, although of the very best description, and we were obliged to wait for their successively falling due. On the other hand, the financial crisis, which weighed so heavily on all kinds of enterprize and on the whole country, also struck the bankers of the company; so that the holders of our bills having delayed to present them for payment, we found ourselves creditors for a sum of 973,287f. 9c. In presence of that difficult situation we were bound at the same time to realize our resources in the most speedy manner possible, and to obtain from our creditors the delay necessary for our liberation. Steps were accordingly taken to obtain from our liberation. Steps were accordingly taken to obtain from the Government the reimbursement of the balance of the caution money; and necessity as well as justice rendered it a duty for us to invite the shareholders who were behind-hand to complete the payment of their calls. On the other hand, we obtained from our creditors a delay of two years; and although at present that latitude is no longer necessary to arrive at our entire liberation, the success of our endeavours spared us, in the difficult times that we have passed vours spared us, in the difficult times that we have passed through, the embarrassments which pressing exigencies might have created for us. At the same time, we successively received on account of the values which we held in hand, and which amounted to 1,633,414,86c., a sum of 1,399,226f. 21c., or 85 per cent; and one of 20 per cent. of the amount of our credit account with the bankers of the company. This amount of sums received permitted us to finish the works on the line, and to reduce our debt to the contractors and furnishers to 561.2916 80c. (22.448). for contractors and furnishers to 561.220f. 80c. (22.4484.), for ayment of which there remain to us the following assets: F.22.350 00 Balance to receive on the capital

2. Balance to recover on the values which we .. 340,188 59 3. Balance of debtor account .. 795,420 29 4. Cash in hand 79,494 46

(49,4984) 1,237,453 34 Total In deducting from the amount of these assets

1. The residue of the debts, or F.561,220 8

 The residue
 The sum of .. 450,000 00 1.011.290 80

There will remain to us a balance of (8,8494.) F.226,232 54 We are therefore perfectly justified in declaring that the social capital, with the addition of the interest which it has as a loss on the difference of exchange on the sums paid up in England of 431,558f. 19c., making in all 1,181,558f. 19c. (47,282£). There were three modes of arriving at a liquidation of these charges:—1. A deduction from future receipts; 2. A loan; and 3. The consolidation of these debts into bonds, the mode of paying off which could be fixed by the general meeting. The third mode is recommended as best suited to the present state of business. We therefore (says the report) propose to you to decide that in exchange for the acknowledgments of liquidation of interest and difference of exchange which were to be delivered to you, there ference of exchange which were to be delivered to you, there shall be given to you bonds of 500f., bearing interest at 4 per cent. per annum, and which shall be reimbursed in the following manner:—A sum of 47,262f. 33c. shall be, during five consecutive years, appropriated to the payment during five consecutive years, appropriated to the payment of the interest of those bonds, and from the expiration of those five years a sum of 100,000f, shall be devoted part to the payment of the interest and the remainder to the reimbursement at par of a certain number of the bonds so issued, selected by lot, the drawing of which shall take place in the month following the general meeting. This debt, by the sinking fund thus calculated, will be paid off in sixteen years. The report then notices the results of the working of the line for the past year. The receipts have amounted to 1,512,493f, 44c., and the expenses to 928,607f, 73c., leaving a clear profit of 583,885f, 71c. If you consider, first, the onerous service imposed on us by the Post-office—a service for which we are obliged to keen up a special personnet for night; and.

The state of the works and of the stock, both fixed and The state of the works and of the stock, both fixed and moveable, is highly satisfactory, and a high compliment is paid to M. Ybry, the working manager, for the zeal and intelligence which he has displayed in the management of the concerns of the company. The report concludes:—"A protest concerning the expenses of the surveillance, signed by a great number of your colleagues residing in England, has just been addressed to us, and we are about to lay it for examination before the Government authorities. We have now to make known to you the motives which have determined us to demand from you the motives which have determined us to demand from you the modification of the statutes as far as demand from you the modification of the statutes as lar as regards the number of the board of directors, which we propose to increase from nine to eleven; but the number of shares represented at this meeting being insufficient, we are compelled to postpone our proposition to a general meeting, which will be convoked in a month from this time. The current interest from the 23rd of October 1847, time. The current interest from the 23rd of October 1847, to the 17th of April 1848, will be regulated at the rate of 10f. per share, in "réconnaissances de liquidation" delivered at Paris, at the offices of the company, 48 bis, Rue Basse du Rempart; at Boulogne, at Mesers. Al. Adam & Co.'s, bankers; and in London, at Messrs. Carden & Whitchead's, 2, Royal Exchange-buildings, from the lat of December next. The division of the difference of exchange will take place amongst those who have a right to the same, by the deliverance of a "reconnaissance de liquidation," at the offices of the company, after verification, at the rate of 70c. per tenth for each share. Conformably to the proposition submitted to you as above, we demand your authorization to exchange these "reconnaissances" for 2,363 bonds of to exchange these "reconnaissances" for 2,365 bonds of Souf. each, subject to an interest of 4 per cent., and which shall be reimbursed in the following manner:—During five years from this day, a sum of 47,262f. 33c. shall be appropriated annually to the payment of the interest of the bonds so issued. At the expiration of these five years, a sum of 100,000f. shall be appropriated annually to the payment lat, of the interest of the bonds; 2ndly, to the paying off of these bonds. In this manner the whole sum of 1,181,538f. of these bonds. In this manner the whole sum of 1,181,5581, 199. (47,2621) of bonds issued will be paid off in sixteen years from the expiration of the five years above mentioned. Every year, in the month succeeding that in which the general meeting is held, the drawing shall take place, by lot, of the bonds to be paid off. The result of the drawing shall be made public conformably to article 6 of the statutes.

This report was received with favour and satisfaction, and the different propositions contained in it were adopted.

MIDLAND.—Oot. 28.— Meeting of Shareholders, Liverpool.—Mr. J. H. Brancker in the chair.—The Chairman said that meeting had been called before Mr. Hudson and the directors had promised the shareholders a full statement of accounts. He thought that as that promise had been made, it would perhaps be better to adjourn the meeting, and to appoint a committee to answer the letter which had been addressed to him by Mr. Hudson, in answer to the memorial presented to the directors. He thought there was some misapprehension from the answer of Mr. Hudson. The simple object of the memorialists was this—they saw that public confi-dence in the line was being reduced to a very low ebb, and they had only taken such a step as they considered would be calculated to promote their own claims and rights as shareholders. The memorialists had no intention to cast any reflection upon the directors either individually or collectively; what they seemed to have discovered was that public confidence in the integrity of the line had been shaken, and they had considered that steps should be taken to arrest the progress of such a ruinous influence upon their property. He considered that had the Midland directors come forward in the same way as the directors of the London and North-Western had done, their shares would not have been at such a low ebb. —Mr. König said the great fault he found with the directors was the making themselves responsible for worthless branch lines. The Leeds and Bradford, for instance, was not earning 4 per cent., and the directors had allowed it 6 per cent. at present and 10 per cent. in perpetuity.—The Chairman: No; 5 per cent., I believe, at present, and 10 per cent. in perpetuity.—Mr. König: There were several other lines in which the same course had been pursued, chiefly under the influence of the chairman (Mr. Hudson); and he (Mr. König) thought that gentleman had been rather too sensitive in his reply.—Mr. Glenton observed, that in reference to the leasing of the Leeds and Bradford line the directors had sanction of the shareholders.-In answer to a Shareholder, the Chairman said that some of those who had signed the memorial held from 200 to 300 shares. -Mr. Glenton said that he considered Mr. Hudson and the directors were clear of any blame as to the leasing of the Leeds and Bradford line. To that objection the directors had an excellent answer, by saying to the shareholders, "If you did not agree to the leasing, why did you not at the proper time attend the meeting and upset what we proposed to do?"-The Chairman observed that in reference to imposed on us by the Post-office—a service for which we are obliged to keep up a special personnel for night; and, secondly, the various extraordinary expenses of working a newly-opened line, the above expenditure can bear comparison with that of any other railway. The commercial transactions interrupted by the events of February were gradually improving, but still remained below those of 1847.

Digitized by GOGIC

the last half-yearly meeting, and told him that if he would take that line to himself it would meet with

the views of nine-tenths of the Midland shareholders. —Mr. König desired to know from the chairman whether Mr. Hudson continued to hold the same large stock in the line which he had formerly done. The Chairman replied that Mr. Hudson had the key of the registry of shareholders, and he had not.

—Mr. Montgomery, in answer to a remark of a
Shareholder, said that the chairman had always refused to say whether there was a profit or a loss on the branch lines which had been referred to .- Some discussion here took place on the reply of Mr. Hudson to the memorial.—Mr. Healey was inclined to think that the meeting should not appoint any committee to reply to Mr. Hudson's letter. He considered there had been a great mistake in supposing that Mr. Hudson wished to treat the shareholders with contempt. He thought they ought to look upon their directors as honest men until they found that they were sacrificing their interests. After defending the general conduct of the directors, Mr. Healey concluded by observing that it was not fair, in the present state of railway matters, to lay all the blame upon directors. Being satisfied that each director held his proper stake in the company, they had no right to expect more; neither were they justified in insinuating that railway directors were a parcel of rogues.—During a long conversation, the Chairman said he did not consider the terms of the memorial to the directors were offensive. The depreciation of their stock was sufficient to justify it. The funds, 3 per cents, were worth 85, and he was sure that if public confidence had not been shaken in that railway, it would be impossible that, paying 6 per cent., it would stand at the reduced price of 70.—Mr. W. Webb: The fact is, that public confidence is entirely destroyed in the line. Calculating the value of the funds, our stock ought to be worth 150*l.*—Mr. Healey: Yes; but you have not the security of the whole country for the investment.-A resolution for the adjournment of the meeting was then carried unanimously.

CALEDONIAN.—Oct. 31.—Meeting of Shareholders, Manchester.—Mr. Julott in the chair.—Mr. Higson commented upon the present position of the company, and asserted that the directors, though the great body of shareholders resided in England, were Scotch-men, and had very little capital invested in the Caledonian beyond the amount necessary to qualify them to act.—Mr. Kynaston said, in answer to a question, that 38-40ths of the shares in the Caledonian were held in England, that 1-40th were held in Scotland, and 1.40th in Ireland and elsewhere.-Resolutions were passed declaring that a majority, or at least an equal number, of directors ought to be chosen from shareholders in England, and that the meetings ought to be held alternately in England and Edinburgh; that it is highly expedient, before the proprietors give their consent to the proposed future policy of the company, in respect to leasing and guaranteeing other lines, that they should have the position and prospects of the company investigated and reported upon; and that the proceedings for leasing or pur-chasing the Scottish Midland, Scottish Central, Dun-dee and Perth, and Aberdeen Junction, ought to be suspended until such report has been considered.

BELFAST AND BALLYMENA.—Oct. 31.—Meeting of Shareholders, Liverpool.—Mr. Maunder in the chair.—The object of the meeting was to adopt such measures that at the next half-yearly meeting, in November, at Belfast, the directors might be required to improve the management of the line. Letters from Belfast and various other places complaining of the inefficiency of the directors, &c. were laid upon the table. It was suggested by the chairman that a professional accountant should be appointed by the shareholders, and that the number of directors (nineteenan absurd amount for so small a line) should be reduced, men of business habits residing at Belfast, Carrickfergus and Ballymena (together with some of the English shareholders) being appointed. Various instances of mismanagement were adduced, though not in a spirit hostile to the directors; and it was resolved that as many of the shareholders as could go should attend at the half-yearly meeting in November, to ask information on many points; to seek for the appointment of an accountant, the reduction of the appointment of directors, and the appointment of some English shareholders upon the Board. It was stated that the total number of shares in the company was 7,700. Of these 3,600 were held in England, and 540 in Scotland (forming one-half of the whole), the rest in various parts of Ireland.

DUBLIN, DUNDRUM AND RATHFARNHAM.—Oct. 31.— Meeting of Shareholders, Dublin.—Mr. F. T. Porter in the chair.—Mr. Kennedy announced that, from August 1846 to August 1848, he had received from fifty-three subscribers a sum of 23l. 10s., which had been collected in order to defray the expenses of the meetings. off the rails; the two last, with the guard's brake, re-

There was a sum of 241. 15s. expended during the time—in paying for advertisements, rooms for meetings, postage, stationery, &c., and he begged to hand in his own additional subscription of 1l. 5s., which would square the account.—Mr. Ald. Boyce said that on the last day the proprietors met on the subject, a committee was formed to confer with the directors of the company on the propriety of winding up the concern; but until the 26th the directors had not arrived at any conclusion. As far as the committee could see, the majority of the directors were for making the line. They (the committee) remonstrated with the directors on the impropriety of demanding more money for the purpose of carrying on a project which was so perfectly foreign to any-thing like success. By the daily papers, he saw that several companies in England had resolved to wind up their affairs, and pay back the surplus (if any), without calling on the proprietors to pay more money for the winding up of their concerns. The present directors of the Dundrum had received 15,506l. 10s. on the first deposit, and they had received 1,500l. on the second call of 1l. 5s. each share. The prospect of making the line was quite visionary.— Mr. M'Birney moved the following resolution, which was

seconded by Mr. Armstrong, and passed unanimously:
That it is the opinion of this meeting that the sum of 3t,
per share, proposed to be accepted by the directors, is more
than is necessary to discharge the existing liabilities of this

Mr. Kennedy handed in a letter, which he had just received from the Railway Commissioners, which stated that no extension of time would be granted to this company.-Mr. Boyce thought the letter of importance, as it recognized the feelings of the pro-prietors on the subject. It even recognized the rights of the shareholders who had not paid up the call .-The Chairman said, if the directors persisted in this course, they would do so not only against the will of the proprietors but against the public board ap-pointed for the purpose; and if the directors did persist, he would say that they did so for a purpose which perhaps it would be better to say nothing about.—Mr. E. Brown then moved the following

passed unanimously:—
That in order to avoid litigation and all its consequences this meeting recommends the shareholders to pay 2l. per share in the manner suggested by the directors of the com-pany, and that the existing committee be authorized to communicate this to the directors in order to carry out this arrangement.

resolution, which was seconded by Mr. Crofton, and

Dr. Graghan moved the following resolution, which

was seconded by Mr. Kennedy, and passed:—
That in the event of the directors refusing to accede to this proposition, such legal proceedings as may be deemed advisable be immediately instituted for the purpose of protecting the shareholders, investigating the conduct of the directors, and the manner in which the funds of the com-

Mr. Kennedy said it was more than probable that the directors were not aware of the letter which he had received, and most likely the first intimation they would have of it would be on the next day, when they would read it in the papers .- Mr. Boyce called the shareholders to come forward and do their duty, as he was resolved not to do other people's business in future.—The meeting was then adjourned to the 7th inst.

### Accidents.

EDINBURGH AND NORTHERN.—Oct. 20.—The flange of one of the wheels of the engine of the 7 a.m. train gave way near the bridge of Earne. The engine started off the line and ran down a low embankment The couplings of the engine luckily snapped, so that neither the tender nor any of the carriages were displaced. Mr. M'Glashan, the chief manager of the goods department, and Mr. Thomson, who has charge of that department at the Perth station, were on the engine with the driver and stoker. Mr. Thomson, and the driver and stoker, jumped off the engine, and escaped with a few slight bruises. Mr. M'Glashan fell upon his head, and received a severe contusion. Four women and a man, who, for want of accommodation in the carriages, were obliged to travel in an open van or truck, were much hurt. The other passengers, by the force of the shock, were driven against each other, and several received wounds and contusions. Some of the rails were broken and twisted, but the line was soon repaired.

LONDON AND NORTH-WESTERN .- Oct. 31 .- The following account of an accident to an express train was received in town by the electric telegraph from the locomotive superintendent at Wolverton :- "I beg to inform you that the engine of the Caledonian express train, down this day, No. 167, E. Eaton driver, ran off the line at the curve about half a mile south of Weedon station. Four of the carriages were drawn mained on. The carriages were damaged very much but none of the passengers were injured except two, who received slight scratches. The driver and fireman were scalded severely. The traffic proceeds as usual.

MIDLAND. Oct. 14 .- An engine without attendants ran down the line from Nottingham to Fiskerton, a distance of about 15 miles, pushing some carriages before it. Happily no accident occurred.
YORK, NEWCASTLE AND BERWICK.—Oct. 29.—

About seventeen of the company's workmen had been repairing an engine on the Stanhope and Tyne branch, and were returning home to South Shields. They had got upon the main line, and the engine stopped to take in water at a place called the Dan. It wa about 10 30 p.m.; and one of the men, putting his head out of the window, saw the lights of the mail train coming from behind. He immediately gave the alarm, and jumped out; some of the others did the same; but three of them remained in the carriage, and the mail train dashed into it and broke it to atoms. Two of the men inside were killed on the spot, and the other was so frightfully injured that it is believed he cannot long survive. One of the men who jumped out was knocked down by the engine of who jumped out was knocked down by the engine of the mail train, which was forced off the rails by the violence of the collision. The poor fellow was crushed to death by the engine, which, having knocked him down, passed over his body. With the exception of a few slight bruises, the passengers of the mail train escaped without injury. The driver, however, had his arm broken. Owing to the forgy state of the his arm broken. Owing to the foggy state of the atmosphere, he could not distinctly see anything before him until the collision actually took place, when he was thrown with great violence from one end of the engine to the other. The fireman was also much injured, and one of the bones of his leg was fractured. The engine and tender of the mail train were shattered, and a horse-box which was next to the tender was broken to pieces. That the passengers of the mail train escaped with their lives is, perhaps, only to be accounted for by the fact that the engine, shortly after it was thrown off the line upset. The bodies were taken to a public-house close to the spot, to await the coroner's inquest.

We have lately had occasion to notice the frequency of accidents among the employes of several lines. We see in the Scottish Railway Gazette the particulars of four cases which might have been avoided by a common degree of caution. One man, on the ABERDEEN, incautiously put his head between two buffers while chaining some carriages together. the North British, two workmen engaged in repairing carriages were run over by a goods train. guard on the Edinburgh and Granton, again, in passing along the line with a train, rose from his seat as the carriages were approaching an iron bridge, near Granton station, and was struck down and killed. Such accidents as these, in which the unfortunate men were alone to blame, swell the census of the railway casualties, which are so loudly urged as proofs of the insecurity of the system.

## Law and Bolice.

ARBITRATION ON LAND .- Nov. 2 .- In the Bail Court, in re the Queen v. the South-Western, counsel moved for a rule to show cause why a rule for a mandamus, &c., should not be quashed, which had been obtained by Messrs. Brown, Ward & Dunn, the lessees of certain premises required by the company. At first the arbitration was sought, but subsequently the first two gentlemen thought it would be better that it should be settled by a jury, and a mandamus was granted to that effect, upon an affidavit stating that all the partners joined in the application. That, however, was not the case, as the mandamus was obtained without the knowledge or consent of Mr. Dunn, who was still desirous that the question should be referred to arbitration .- The

Judge granted a rule.

Nov. 2.—At the NEW COURT, T. Debenham, a porter at the Shoreditch station of the Eastern Counties, was sentenced to three months' imprisonment

for drawing wine from a hogshead.

At the Irswich Quarter Sessions, A. B. Broadbent, clerk at the Haughley station of the Eastern Union, was charged with embezzling various sums of money, amounting to 240*l*., but proceedings were taken against him for three small sums only. He was sentenced to two years' imprisonment and hard

Nov. 1, 1848.

BELFAST AND BALLY MENA
RAILWAY.
NOTICE IS HEREBY GIVEN, that the ORDINARY
HALF-YEARLY MEETING of shareholders in this Company
will be held at No. 11, Donegal place, Belfast, on Thursday, the
30th day of November ins., at 1 o'clock afternoon.
By order of the Directors.
GEORGE HANDCOCK, Chairman.
The Transfer Books will be alled from the 20th day of November

GEORGE HANDUUUR, Unsirman.
The Transfer Books will be closed from the 20th day of November to the 30th, both inclusive, and Proxise are required to be lodged with the Secretary forty-eight hours before the time of meeting.

THOS. H. HIGGIN, Secretary.

#### BELFAST AND BALLYMENA RAILWAY.

To the Chairman, Vice Chairman, and the Directors of the Belfast and Ballymena Railway, Belfast. Gentlemen,—I solicit your perusal of the enclosed two printed otices.

Gentlemen.—I solicit your perusal of the enclosed two printed notices.

At a meeting on the flist ult, there were several letters complaining bitterly of your management, want of attention and ordinary civility from porters, guards and clerks.

Too much favouritism in their appointments.

Jobs in compensation for land, &c. &c.

Jobs in the manner in which you had borrowed moneys at 6 per cent, when you might have obtained it at 5 per cent.

Jobs in your contracts.

Jobs in your contracts.

Jobs in your contracts.

Jobs in your contracts.

A railway is a public company and a co-partnership; and however high a list of directors may stand in private society, still their acts as directors are public, and as such will be investigated by the co-proprietary.

acts as directors are public, and as such will be investigated by the co-proprietary.

I do consider that the failure, up to the present moment, of this railway, is an odium on the directors: I and other shareholders had an elevated opinion of you gentlemen in the North, which induced me to hold on to my shares. We, shareholders, will not quietly submit to have our money mal-appropriated, or to be muleted.

quietly submit to have our money man-appropriated, or to be mulcited.

There has been trust-money—money from widows, orphans and old men—invested in this line, on the faith of the high standing of you, directors; and depend upon it you will be called upon to render a Just account:

to appear before you at the end of this month with an unfriendly feeling; but, in justice to myself and others. I shall require a lucid and honest statement of expenses from the commencement.

Your very obedient servant,

JOSEPH MAUNDER,

Belfast and Ballymena Board-Room, Belfast, Nov. 6, 1848. Sir. - Your letter of the 4th inst. has been this day submitted to be Directors.

Sir.—Your letter of the 4th inst. has been this day submissed when Directors.

The charges it contains are of so grave and serious a character that nothing short of a public investigation into all the de anis alluded to by you can satisfy them; and they direct me to acquaint you that your presence at the half-yearly meeting is each lated upon with certainty, and that every facility shall be afforded you in the meantime for obtaining such proofs us you may think proper to bring forward.

Thos. II. Higgin, Secretary.

To Joseph Maunder, Esq. Liverpool.

### SATURDAY, NOVEMBER 11.

MOVEMENTS TOWARDS OUR SCHEME OF PRACTICAL REFORM.

The RAILWAY WORLD seems at last to be coming round to our side on many points which we have long maintained alone. Since the papers on Practical Reform were published. there have been not a few movements in the direction which they were designed to point out; and we can see in various quarters that "the straw"—to use one of Cobbett's vigorous phrases-"is beginning to be moved." Curiously enough, the stir has shown itself most decidedly in a quarter where our views on things in general are not likely to meet with any particular favour; and one, too, where certain especial difficulties lay in the way of the changes attempted. That the Great Western should have come forward with the discovery that it is doing more for its customers than it can afford for the money, was certainly not the circumstance most likely to appear at the head of the movement; seeing that on that line the fares were already higher than on any of its neighbours. We have no doubt-as we, indeed, intimated twelve months since—that the necessity of either getting more, or of dividing much less, was strongly felt in that quarter; and that the result of its magnificent and politic doings might have appeared earlier, had there not been strong reasons for adjourning the disclosure. Still the circumstance of the first move at this crisis being made by the company that has the highest tariff, is significant, and may be taken into account in many ways,—among others, in reference to what we offered not long since with respect to the "Profits of the Wide-gauge System.

This is not the only stir in the Great Western quarter. It may be taken for granted that the Morning Herald's new light on the necessity of reducing unprofitable trains - another of the points we have lately discussed - has dawned upon it from some point in the Paddington district; although the illustrations are made to embrace the London and North-Western as well. The coincidence, at all events, between the Morning Herald and the Great Western in practical matters is so uniform, however this may happen, that we may venture to prophecy what the latter are going to do, or at least feeling about for means to do, when a column of the Morning Herald is discharged upon a railway topic. On this occasion we entirely applaud the intention of the Great Western to reduce the number of their trains so as to insure a profitable service to all that are kept running. This is a measure of practical improvement highly effective in reducing expenditure, and far less obnoxious than raising fares, or doing what the Great Western has lately done,-which amounts to the same thing. We shall be glad to see the principle thoroughly carried out, and resolutely persevered in, of working no more trains than are found to suffice for the traffic; and we trust that other companies, many of which are not yet acting on this principle at all, will follow the example.

This, as well as every other attempt to balance outlay by making traffic more productive, is sure to call forth remonstrances from certain portions of the "public." But they will not be reasonable complaints; and it is the duty of directors, who are bound to administer to the best advantage the property they have undertaken to manage, to disregard unreasonable demands and expostulations, from whatever quarter, when they clash with this paramount obligation. There is no point, perhaps, in which members of Boards are apt to err, and

their constituents' property, than in over-sensitiveness to impulses from without. They are exposed, we know, to many solicitations and appeals, public and private—the latter not the least effectual; and it is easier to yield, in the hope "that the company can bear it," than to provoke displeasure by denying. But the question is not what is most pleasant to do, but what it is right should be done; and where the rule lies, in this class of cases, no one who is conscientiously determined to do his duty to those whose business he has undertaken, can be at any loss to ascertain. The quantity of loss and unprofitable expense inflicted on the railway system by too much easiness on this head, can only be estimated by those who have sat at directors' Boards, whether during the constructive period, or after the time of opening. And we have thought it well to advert to it expressly on the present occasion, because no reform of the kind most wanted, and most effectual, can be carried out except in the teeth of many outward demands and complaints,which must not be listened to hereafter, unless when it can be shown that they are reasonable as well as peremptory. It will therefore be necessary to adopt a manner of dealing with such appeals the very reverse of what has too much prevailed until now at railway Boards. If this be not admitted and acted upon, there can be no great amendment attained in any department of railway working.

## INDIAN RAILWAYS.

We now proceed to offer a few words of reply to some of the points discussed in Mr. Chapman's last letter (p. 763). In reference to the passenger traffic, Mr. Chapman states that the reason for which he excluded it from his first estimate and adopted it in his last, is, that the traffic at any point near Bombay could not be taken as properly representative of the pas-senger traffic of a long line, although it would be truly representative of the passenger traffic of a short line; and he gives the illustration of the traffic at Highgate Archway being inapplicable to any estimate of a railway running to the north of the Trent, although applicable enough, perhaps, in the case of a railway running to St. Albans. He also maintains that the inference is manifestly worthless that because the passengers on the long line were not reckoned, the short line would not therefore obtain any passengers at all; and that any such inference cannot with propriety be set against an actual enumeration, made by officers of the Government for purposes altogether foreign to the railway undertaking. But the question is not whether there are passengers at present on the roads leading out of Bombay, but whether the railway will obtain the conveyance of them; and this doubt applies to the short line as well as to the long one. There is no evidence at all to show that the passengers now travelling over the Sion causeway will go to Callian any more than to Alleh or to Mhuse; and since Callian is nothing better than a paltry village, there is but little temptation to passengers to visit that place. It is no doubt true that in the majority of cases the traffic in the neighbourhood of a city which would be applicable in the estimates of a short line would not be applicable in the estimates of a long line; but the case of the alternative projects of the Indian Peninsula Railway does not come under this rule at all. The long line penetrates through the inhospitable regions of the Concan into a populous and productive country, from which a large traffic might be derived at remunerative rates of transport; the short line stops short in this desolate country, and has to suffer the dis-

line, on which a large traffic was expected. passengers were not counted upon; upon the short line, with a traffic "not to be compared with that of the extended project," passengers are mainly relied on. But, says Mr. Chapman, we had no enumeration of the passengers on the long line, and we had on the short line; therefore we are justified in reckoning them in the one case and rejecting them in the other. Does, then, the mere enumeration of the passengers on a road adjacent to Bombay make it certain that they will proceed by railway to an obscure hamlet 35 miles distant? Or is it permissible to found an estimate, not on the facts of the case, but the necessities of the project? In the case of the long line Mr Chapman says he did not need the passenger traffic, and as it was admitted to be of doubtful realization, except eventually, it was rejected accordingly: in the case of the short line, however, the traffic was found to be so bad that the passenger traffic had to be reinstated to swell the returns. and its doubtful character had to be concealed to enable it to serve the turn. In his salt estimate Mr. Chapman manifested sufficient courage in guessing to justify the belief that he would not be deterred by the want of precise returns from any vigorous attempt at approximation; and although he might fail in so curious an inquiry as the determination of the per-centage of the population who travel, yet had he succeeded in ascertaining the passenger traffic out of Bombay in the direction of the railway, and had reckoned that traffic as through traffic upon the longer line, he would have been guilty of no greater solecism than he has committed in the case of the goods traffic. which is reckoned in the very manner he now condemns. As, then, the method whereby the goods were reckoned upon the longer line was equally available for the estimate of the passengers, and as the passengers were nevertheless not reckoned, what else can we believe than that it was seen the passengers would be an unsafe dependence? Mr. Chapman, indeed, assures us that such a doctrine is a wrong one, and we therefore refrain from saying it is otherwise; yet in spite of all the explanations he has been able to furnish, we are unable to come to any other conclusion. We fear it would far too greatly transcend our powers of imagination to attempt any reconciliation of Mr. Chapman's present expression of the certainty of a passenger traffic with the declaration that it is "speculative or conjectural," or with the more sanguine expectation that "a passenger traffic will eventually be obtained"—and consequently cannot be obtained at present; but our readers may try their penetration upon the enigma, if they think the profit will repay the pains.

through the whole distance. Upon the long

We now come to the question of depreciation; and here Mr. Chapman asks us how it comes we neither approve nor condemn the estimate of 10 per cent., when it was lately the main support of our argument respecting the risks of the guarantee. He adds, that there is no doubt Messrs. Rendel & Beardmore, and Mr. Stephenson, "when they adopt it, will give their reasons for so doing. Till then," he adds, "I shall take leave to surmise that their approbation of the total effect of an estimate is not intended to imply an approbation of each separate item of which it consists." When they adopt it! Is Mr. Chapman, then, ignorant that they did adopt it more than a year ago? In the reports of the railway company, and also in Mr. Stephenson's estimates, from which the statements appearing in the reports were taken, the amount of 10 per cent. for depreciation is specifically set down; and in reference to this have more frequently erred, to the detriment of advantage of a competing water carriage item, Messrs. Rendel & Beardmore, in their

report to the directors of the East Indian Railway, make the following statement:-"The allowance for working expenses and depreciation appears to have been taken, in the estimate of your managing director, at so fair a proportion compared with European lines, as to justify the greatest confidence being placed in their accuracy." Surely Messrs. Rendel & Beardmore, and the various authorities who concur with them, are as safe guides in such a matter as Messrs. Nicholson and Chapman; and surely, too, it must be needless for us to interpose our opinion of an estimate resting on such authority.

We have so fully expressed our views on several recent occasions on the subject of depreciation, that we may be excused at present from repeating them here; but we may incidentally mention, that the doctrine that depreciation should only be charged upon the rolling stock, and not upon the permanent way at all, is, in our judgment, unsafe and untenable. We are quite prepared to admit that all persons may not concur in the opinion that 10 per cent. is the proper sum to set down for the depreciation of an Indian railway; but nobody will deny that it must be nearer the truth to reckon the depreciation at 10 per cent. than not to reckon it at anything; and whether it be taken at 10 per cent. or at 5 per cent., the result is equally fatal to Mr. Nicholson's hypothesis that 11 per cent. is the utmost loss the Government would have to sustain by making the guarantee unconditional. Upon all railways the depreciation must be something; and in the case of Indian railways there are peculiar causes of mischief in activity which must make the depreciation upon them greater than upon railways at home. In reference to this very Callian line, Mr. Williamson, one of the directors, says: -"Were it to prove a failure—were the floods of the 'Elephanta' to sweep away the embank-ments, or the sleepers to fall a prey to the white ant, the fact will be discovered;" and the loss thus incurred would go in aggravation of the other losses to be sustained by the Government if an unconditional guarantee were to be conceded to such a scheme.

We suppose Mr. Chapman's remarks explaining away a former assertion of his own, to the effect that the Callian line "would not only be a very unsatisfactory investment, but prove a discouragement to the extension of railways in India," abate in his apprehension the awkwardness of his present dilemma; but we are really at a loss to suppose of what other person the same result can be predicated. Mr. Chapman says that although he looked upon the line last November as an unsatisfactory investment, yet that the aspect of commercial affairs has so much improved since that time as to make the case very different now; and he adds, that although he reckoned the investment a bad one, he did not reckon it would produce nothing at all, which it appears to be our object to demonstrate. Now we think it very doubtful whether shareholders are likely to weigh nicely the alternative attractions of a scheme producing nothing, and of a scheme producing so little as to constitute "a very unsatisfactory investment;" neither do we imagine anyone will experience much difficulty in appreciating the present merits of a railway which it is admitted was a very unsatisfactory investment last November. Have railway shares risen so prodigiously since that time in public estimation, or in their market price, as, without the introduction of any new feature of advantage, to reverse completely the character of a project then deservedly in disfavour? But, says Mr. Chapman, my opinion of the unsatisfactory nature of the railway to Callian rested on the supposition that it was to be an integral line, I that Mr. Nicholson has taken the tariff, in his

which nobody has proposed it should remain. What have we to do with what it may remain, or with what it may become eventually? It is sufficient for us to show that a line stopping short at Callian, and with a capital only sufficient to carry it to that place, must be an integral line at present, and as such must not only be an unsatisfactory investment but must operate as a discouragement to subsequent railway undertakings. It is idle to array against such a conceded fact the hypothesis that the line will not stop at Callian, but will be immediately prolonged from thence into the interior, for any such dependence is quite uncertain, and would be probably overturned by the result. Does the collection of a capital for a railway become more easy in proportion as discouragements are multiplied? And if it be so hard to collect a capital now, in consequence of the doubts cast upon the realization of profits upon the experimental line, what would the result be when doubts were swelled into certainties by the discouraging issue of the first experiment? If the first railway proved a failure, a damp would be cast upon subsequent adventure, which many years would be required to remove; and it is because we perceive this to be an inevitable result that we are unwilling to see the great cause of Indian Railways, fraught as it is with such benefits to humanity, put in jeopardy by the prosecution of any "unsatisfactory" project.

We have now only briefly to recapitulate the conclusions arrived at during the present discussion, and it will be remarked, that they embrace all our original propositions, which derive a new authority from the fact of having successfully gone through so searching an ordeal.

1. The line from Bombay to Callian cannot be profitable. Mr. Nicholson, indeed, by taking six times the causeway traffic reckoned by Mr. Chapman, and by reckoning a passenger traffic though Mr. Chapman reckoned none, endeavours to show that the line will return from 7 to 9 per cent.; whereas Mr. Williamson, a director of the railway, conversant with the locality and certainly a safer and more scrupulous authority than Mr. Nicholson, "doubts if the returns would ever cover the working expenses." Mr. Chapman admits that he thought a line stopping at Callian "a very unsatisfactory investment last November; and if he be of a different opinion now he must excuse vulgar persons if, in the absence of any grounds for a change of opinion, they should decline to exhibit a similar versatility.

2. The Government guarantee offers no security of a minimum dividend to the shareholders; and any arrangement which assured such a dividend would throw an unlimited responsibility upon the Government. The nature of the dividend is now sufficiently well understood, not from any explanations afforded by the Indian railway companies, but from Mr. Dickenson's letter to the Secretary of the Stock Exchange; and it is clear that if the East India Company were to give a minimum dividend of 5 per cent. to the respective shareholders, instead of an interest of 5 per cent. upon the capital invested, there is no amount of yearly loss which they might not be called upon to make good. Mr. Nicholson has attempted to show that the maximum loss to the Government, over and above the 5 per cent., could not exceed 14 per cent.; whereas we have shown that by the method of computation adopted by the East Indian Railway Company, under the advice of its engineers, the yearly loss to the Government on the Callian line, over and above the 5 per cent., would be 111 per cent. We have shown, moreover, on the authority of Mr. Chapman,

estimates of profits, at a higher rate than is at present obtained in a district possessed of excellent water carriage, with which any short railway could not successfully compete; and if this inaccuracy of the tariff be corrected, Mr. Nicholson's supposed profits spontaneously melt away, even if the quantity of goods and passengers he reckons be retained. Since, however, Mr. Crawford, the chairman at Bombay, reckons the passenger traffic, on which Mr. Nicholson's estimate mainly relies, as "speculative and conjectural" on the long line, and since Mr. Chapman, in his estimates of the returns of the long line, did not reckon a passenger traffic at all, and recommended such possible profits as might arise from passengers to be set down "to cover unforeseen expenses and errors which may be overlooked," how can we be sure that Mr. Nicholson's quantities of traffic rest on any more solid basis than his prices for its conveyance? It is true there is an enumeration of passengers upon the road now which Mr. Chapman says did not exist at the time of his original estimate; but the question is not whether there are passengers at present upon the road near Bombay, but whether any railway to Callian will carry them thither. Neither Mr. Crawford nor Mr. Chapman originally anticipated any other than an "eventual" passenger traffic; thus recording their belief that a passenger traffic would not be obtained at present; and if they now change their opinion merely because the short line needs the supposition of a passenger traffic, which the long line does not require, are they not warping facts to answer their own emergencies?

3. A line stopping at Callian, while failing to accomplish any service to Bombay, would operate as a heavy discouragement to the general intro-duction of railways into India. Mr. Chapman himself admits "that the line to Callian, as an integral line, would not only be a very unsatisfactory investment, but prove a source of great discouragement to the extension of railways in India," and as it is precisely as an integral line that this railway is now proposed to be undertaken, though some day, perhaps, it may possibly be carried farther, Mr. Chapman's admission settles the whole question. Mr. Williamson, one of the directors of Mr. Chapman's railway, and well acquainted with Bombay, doubts, as we have already mentioned, if the line to Callian "would ever cover the working expenses"; and Mr. Crawford, the Bombay chairman, says, in reference to such a railway, "if the first considerable attempt should fail to be a profitable one, great discouragement to future enterprize will necessarily ensue; on the contrary, a successful railway will be the precursor of many more.'

In now bringing to a close this protracted controversy, we cannot refrain from expressing our regret that Mr. Chapman should have been induced to embark in it, as the display of the many inconsistencies and trimming statements which it has brought to light must, we fear, have an unfavourable effect upon his reputation. How much better would it have been for him now, if, disregarding all minor considerations, he had remained consistent in his first position, instead of staking all upon a throw which it is certain cannot be auspicious! If the Callian Railway was a bad thing twelve months ago, it must be equally a bad thing now; and the attempt to unsay now what was said formerly, on the strength of an intermediate improvement in the railway market, which has never taken place, only shows into what deplorable shifts men of talent-aye, and of sincerity, too-may be seduced by the exigencies of an indefensible

## Brogress of Warks.

AMBLE BRANCH.—This line is in that state of forwardness that it will be partially opened this week, to enable the collieries of Earl Grey and Mr. Smith to transmit their coals to the main line, both north and south. Additional staiths are being constructed, in deep water, at Warkworth harbour, in connexion with this branch line, which will facilitate, says the Gateshead Observer, the shipment of coals from these collieries.

BASINGSTOKE AND SALISBURY.—Proceeding from Basingstoke to Andover, through Whitchurch, Overton, Monxton and Thruxton to Appleshaw, the works are reported to be all standing still. The line appears to be in a very forward state as far as Andover; the rails down a great part of the distance, the embankments finished off, and the bridges across the cuttings complete. It is said that the South-Western do not intend carrying this branch further than Andover for the present; and to that town it is expected the line will be open by the 1st of June 1849.

BARTON AND NEW HOLLAND.—These works are slowly progressing to a finish: men are employed in converting the house lately occupied by Mr. Wilkinson into a temporary station. The embankment is completed, says the Lincoln Mercury, to within about 120 yards of the Barton extremity of the line, and the wire fencing is also completed for nearly the same distance. Not more than twenty men are now engaged upon the works, the company having drafted their available force to hasten the opening of the Market Rasen branch. This latter object being accomplished, no time will be lost in bringing this line to a conclusion.

BLACKWALL (Extension to the Eastern Counties).—
The two stupendous iron bridges of the extension, over
the Commercial-road and the Regent's Canal, are
erected on a new principle, and in point of extent are
the largest railway bridges to be found in the vicinity
of the metropolis. This branch, which was expected to
have been opened in the course of this month, will,
it is said, be completed on the 1st of January next
year. It is about two miles in length, and is formed
on brick arches. It joins the Eastern Counties line
at Bow. The gauge on the Blackwall is being altered
to admit of locomotive traffic.

LONDON AND NORTH-WESTERN.—The works on the

LONDON AND NORTH-WESTERN.—The works on the unfinished portion of the Huddersfield and Manchester, a line of 20 miles in length, and one of the subsidiary lines in which the London and North-Western are interested by subscription, contribution or guarantee, are to be resumed, one part being a contract of 4 miles, by Stalybridge, and the other of 3 miles, between Huddersfield and Marsden.

or gurantee, are to be resumed, one part being a contract of 4 miles, by Stalybridge, and the other of 3 miles, between Huddersfield and Marsden.

Manchester, Sheffield and Lincolnshire.—Six hundred labourers have lately been discharged from the portion in course of construction near Sheffield. Difficulty in getting in the calls and of obtaining loans is assigned as the cause of this reduction. The extensive viaduct across the Wicker, says the Leeds Mercury, is to be proceeded with; and operations are commenced for the re-erection of the twenty-two arches of the Rother viaduct.

SOUTH DEVON.—The progress of the works is very satisfactory, leaving little doubt of the line being ready for opening on the 30th inst., the time agreed upon by the contractor to deliver up the line.

BARCELONA AND MATANO.—This line is the result of the speculative spirit of English capitalists happily contrasted with the Spanish national indifference to commercial enterprize. We quote from the Morning Chronicle the details of its opening on the 29th ult.:

—The line from Barcelona to Mataro is about 173 miles (English) in length. Starting from a point just outside the fortifications of Barcelona, it runs nearly the whole distance along the sea-shore, the line for the most part being nearly level. There are in all seven stations, viz., Barcelona; Badelona, 6 miles; Mongat, 71; Masnou, 93; Premis, 12; Vilasa, 133; Mataro, 173. There is a short tunnel formed near Mongat, through rocks, for about 500 yards. At present only a single line is laid down, but the tunnel is made, as well as the whole line, so as to allow a double line to be laid down, all that is now required being the rails and ballast. There are several bridges, the two principal being those of the Bessos and Argentona. In all, there may be about a mile of bridges on the whole line. The whole line has been constructed under the superintendence of Mr. W. Locke, nephew of Mr. J. Locke, M.P., who is engineer-in-chief of the line. On the 29th of October the inauguration took place, with all the ceremonies usual on such occasions in Catholic countries. The day was fine. The parties present at the Barcelona station were the Bishops of Barcelona and Porto Rico, the Captain-General of Catalonia, the second

in command of ditto, the Chief Political, the county authorities, the mayor, aldermen and corporation of Barcelona, besides the principal law officers; several of the foreign consuls, Government engineers, and in fact all the authorities of the town and province, including the heads of all departments, both civil, including the heads of all departments, both civil, naval and military. The proceedings commenced with the blessing, given by the bishops, assisted by numerous clergy, for which purpose an altar had been erected on the platform. The station was gaily decorated with flags, but we missed that of England; this evidently must have been an oversight, as it was owing to English capitalists that the line was first commenced, and we believe that they have furnished about helf the capital. The train containing about commenced, and we believe that they have turnshed about half the capital. The train, containing about 200 guests, started at about 10 a.m., amidst the enthusiastic cheering of thousands congregated outside the station, and who in fact lined the road. The train proceeded at a good pace, stopping at all the intermediate stations to take up the local authorities. At Masnou an altar was erected, and the line and locomotives were again blessed. After this the train proceeded, stopping, as before, to take up the locals.

At every place the train stopped it was greeted by cheering and wwas, the troops of all the towns being drawn up, whether out of respect to the line or to the Captain-General we do not know. Upon arriving at Mataro, it appeared that the whole town had turned out to receive it, such was the multitude that had assembled. The cheering here was immense. The governor, mayor and corporation, and all the The governor, mayor and corporation, and all the other authorities attended to receive the train. A battalion of infantry and a troop of cavalry were drawn up in the station-yard. At this station the third blessing took place. After this a procession was formed, which proceeded to the church, passing through the principal streets, the windows in all of which were adorned with damasks and tapestry. The The Te Deun was sung by a good choir, consisting of the principal artists of the theatre, and had a good ct. After this the procession was re-formed, and returned to the station, where a marquee was erected, and a dejedner à la fourchette laid out. At the dejedner the Railway," which was suitably responded to by Don Juan Miret, the president of the board of directors. He spoke in very grateful terms of the conduct of the principal English shareholders, mentioning the names of Messrs. Chaplin, J. Locke, C.E., Urielli and Masternan and stating what great and Masternan and stating what great stating what great stating what great stating what great stating what great stating what great stating what great great stating what great great stating what great great stating what great great stating what great great stating what great great stating what great great stating what great great stating what great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great great gre Uzielli and Masterman, and stating what great assistance had been derived from them, &c. After the breakfast, the train started for Barcelona a little after 3 p.m., and completed the distance to that city in 33 min.; the concourse at the different villages being, if possible, still greater than before. On the following day (Sunday) the line was opened to the public, when upwards of 3,000 persons availed themselves of the facilities offered for a ride into the country, &c. There are now six trains each way per day the distance being performed in one hour. The day, the distance being performed in one hour. The following is a brief historical sketch of the scheme:-The Spanish Government granted the concession to Don José Maria Roca, on the 23rd of August 1843; but soon after the disturbances in Catalonia took place, which paralyzed the project for a considerable time. However, after encountering many difficulties, a provisional Board was formed in 1844, and a a provisional Board was formed in 1844, and a prospectus was issued, stating the advantages that would result from the establishment of a line between Barcelona and Mataro. The capital of the company was fixed at 1,000,000 dollars, divided into 10,000 shares of 100 dollars each. Bases were formed for the constitution of the company; and article the third says:—" the company shall be constituted, and begin to operate as soon as 1,000 shares shall be subscribed." Here it is to be observed that the shareholders paid no deposit whatever, but merely subscribed their names in the company's books. On the 30th of July 1844 a general meeting of the shareholders was held for the purpose of electing the directors, seven in number; and soon after that the directors so elected wrote to Mr. Roca, in Loudon, to choose a competent engineer to make a general survey, and take levels of the ground between Barcelona and Mataró. Mr. J. Locke was named, who sent to Barcelona for that purpose his assistant, Mr. W. Green. Mr. Locke made his report on the 11th of February as to the proposed line being highly 11th of February as to the proposed line being highly satisfactory. Some difficulty was encountered in subscribing the capital in Spain, and Mr. Roca negotiated with some English capitalists for the purpose of raising one-half of the capital, in consequence of which the Board was increased by the addition of four English directors. The English capitalists deposited in the Bank of Barcelona the value of 4,750 shares, in April 1846; the deposit of about 2.250 shares was paid by Spanish shareholders. about 2,250 shares was paid by Spanish shareholders, and the remainder of about 3,000 shares were taken

up and the deposit was paid in Barcelona in December 1846, mostly by Spanish West India merchants. Soon after the works of the line were given to Messrs. Mackenzie & Brassey by contract, including the laying of the rails, chairs, &c., for the sum of 112,000. The works were commenced in April 1847, excepting the tunnel at Mongat, the making of which was begun some time previously.

### Law and Police.

COMPENSATION.—Nov. 8.—In the LORD CHANCELLOR'S COURT, in re the South-Western v. Coward, this was a motion to discharge an order of the Vice-Chancellor restraining the defendant, a starch manufacturer, in Lambeth, from summoning a jury under the Lands Clauses Consolidation Act, to assees the compensation to which he is entitled for his interest in the works taken by the company to complete their line to Waterloo Bridge. The defendant's tenancy expired pending the negotiations with the company, and in that interval the company purchased the fee simple from the landlord. He remained as a yearly tenant, and paid one half-year's rent before the company took possession.—The Vice-Chancellor thought the interest of the defendant was not one that could be determined by a jury until it had been considered by a court of equity.—His lordship said it was a very clear case. The interest of the defendant was one that had not been determined, and where was the propriety of summoning a jury to consider it? The matter was one exclusively for a court of equity, and the appeal must be dismissed with costs.

COMPENSATION.—Nov. 3.—In the VICE-CHANGELLORGE COURT, in re Hopkins v. the Great Northern, counsel supported a demurrer for want of equity to the amended bill. On the 4th of November 1847, an agreement was entered into between the plaintiff and the defendant Joyce, by which Joyce agreed to sell a certain piece of garden and orchard land, containing two acres and three perches, at Boston, in Lincolnshire, for 1,800L, the contract to be completed in April then next. On the 28th of September the Great Northern gave notice to Joyce that they should require the land in question, and the amount of compensation for the same was assessed in the February following, when the plaintiff's claim was commented on, and 1,500L was fixed as the value of the land. The company proceeded to construct the line, but paid no deposit, and the plaintiff charged that under the circumstances they were not at liberty to take possession or to compel him to sell the land of which he was the equitable owner, and that they had deviated more than their Act authorized them to domannely, more than ten yards on lands continuously built upon, and more than 100 yards on other lands not so continuously built upon, and prayed that the company might be declared not entitled to the possession of the land comprised in the agreement, and that the agreement might be specifically performed, and Joyce directed to deliver up possession, and for an injunction to restrain the company from prosecuting the construction of the line.—The Vice-Chancellor thought that the plaintiff Hopkins, by his contract with Joyce, acquired every benefit in the land, clothed as it was with the incipient contract, and had a right to say that everything should be strictly pursued. The demurrer must therefore be overruled.

Contracts.—In the same Court, in re Jackson v. the North Wales, counsel also supported a demurrer for want of equity in the bill. The company advertised for tenders for contracts for the execution of the works. The plaintiff, Mr. Jackson, on the 5th of February 1846, sent a tender for forming 83 miles, within the terms and in the manner offered by the advertisement, and at a stated price, and on the 16th, Sir J. Rennie accepted his tender. The plaintiff, at the board of directors, was told that Sir J. Rennie had been directed to accept the tender, upon the faith of which, the bill alleged, he had incurred expenses in order to complete his contract. He was subsequently informed that the works were not to be proceeded with. No contract was ever executed according to the requisitions of the company's Act, and the equity made or attempted to be made by the bill was that the company were trustees in respect of a fund which they had in their hands for the express purpose of paying the plaintiff for works. It was therefore prayed that an account might be taken of this fund, and that out of it payment might be made of the damages and expenses the plaintiff had incurred.—His Honour thought there was just enough in the charge in the bill, as to the company being trustees, however shadowy such a charge might be, and however possibly such a charge might be founded mainly on the fancy of the pleader, to prevent the demurrer being allowed, and he must therefore overrule it.

PREFERENCE SHARES.—Nov. 6.—In the same Court,

in re Edwards v. Shrewsbury and Birmingham, a bill was filed by a shareholder in the above company praying a declaration that the company had no power to create new or preference shares, or any other shares, bearing a fixed rate of interest or dividend of 8 per cent. per annum for ten years, and 6 per cent. per annum thereafter in perpetuity, or to apply or appropriate any part of the profits of the company until after the profits had been actually ascertained and declared, and that the defendants had no power to raise or apply 155,000*l*. otherwise than according to their Branches Act of 1847. Counsel supported a demurrer to the bill, which stated that the directors had formed the plan of creating preference shares, and had called a special meeting. Certain resolutions were proposed, but were met by an amendment, in favour of which there appeared, by the show of hands, a considerable majority. A scrutiny took place, and while it was in progress at eleven o'clock at night, the chairman told the scrutineers to communicate the result at nine in the morning. Accordingly at nine on the following morning, the chairman attended, but the scrutineers, the secretaries of the company, and the solicitor, were the only other persons present. The chairman was then informed by the scrutineers that the majority was against the amendment, and he declared it to be lost, and thereupon put the original resolutions, which he declared carried; but nevertheless unauthorized alterations had been since made in them, on which the directors now proposed to act.—The Vice-Chancellor doubted whether the bill was sufficiently clear in the description given of the persons on whose behalf, as well as his own, the plaintiff professed to sue. In the next place, he doubted whether the allegations respecting two of the defendants were sufficient to bring them technically and formally into the position the plaintiff wished them to be understood as being placed in. In the third place, his Honour doubted whether this bill was not defective by it not appearing upon the record that there was any party to the suit, who was a shareholder in what was called Class A, not being also a director. He thought that

a suit by a shareholder on behalf of himself and others against the directors and the company, complaining of such alleged wrongs as were alleged in this bill, was within the influence of the doctrines to which he had referred. His Honour could not overrule the demurrer, which must therefore be allowed, but the plaintiffs might take liberty to amend generally within four months.

DEPOSITS. — Nov. 6.—In the COURT OF COMMON PLEAS, a rule nisi was granted in re Corry v. Norfolk. The action was tried at the last Surrey assizes, and was in assumpsit for money had and received brought against the Norfolk to recover back deposit money paid by plaintiff to the company on shares, which shares were to have borne a guaranteed interest of 5 per cent. out of the nett proceeds of the company; and the plaintiff rested his right to recover on the ground that no such shares were obtained by him.

and the plaintiff rested his right to recover on the ground that no such shares were obtained by him.

COMPENSATION.—Nov. 2.—In the COURT OF EXCHEQUER, in re Readdie v. the London and North-Western, this was an action brought to recover compensation for the death of the plaintiff's husband, who, with another man, was unfortunately killed, last June, by the falling of a stone, nearly two tons weight, which was being elevated for the purpose of constructing one of the viaducts on the Leeds, Dewsbury and Manchester, amalgamated with the defendants' line some time before the fatal accident. The case was tried before Mr. Justice Cresswell during the last assizes at York, and a verdict having passed for the plaintiff, Mr. Knowles, Q.C., moved for a rule to enter a verdict for the defendants, or a nonsuit, upon the ground of misdirection.—The Lord Chief Baron observed that in many instances contractors escaped responsibility themselves, but still made their employers answerable for their misconduct or negligence. There were also innumerable instances in which contractors, and nobody else, could be held responsible. The question as to the defendants' liability was, however, worth discussing, and the rule might therefore be granted.—Rule nisi accordingly.—On the same day, in re Sharrod v. the London and North Western, counsel

moved for a nonsuit. It was an action in trespass, brought to recover compensation for the loss of sheep, which strayed on the defendants' line, in consequence of defects in the fences, and were killed by the train. At the trial, during the last assizes at Stafford, it appeared the train was driven as usual by the servants of the defendants and under their general orders. It was contended that the form of action was misconceived, and that it should have been "case." instead of "trespass." The Judge was however of an opposite opinion, but reserved leave to move. A verdict having passed for the plaintiff for 10l., counsel submitted that "trespass" was not under the circummitted that "trespass" was not under the circumstances the proper form of action.—The Court granted a rule to show cause; Mr. Baron Parke observing that the question would be whether the death of the sheep was the necessary consequence of the orders of the company.—Oct. 31.—In re Popplewell and others v. the Leeds and Bradford, a sheriff's jury was impanelled at Shipley, to assess the amount of com-pensation for those claimants who are devisees of the mortgage estates of the late Mr. J. Sharp, of Bingley, mortgage estates of the late Mr. J. Sharp, of Bingley, for damages, in consequence of a worsted mill at Bingley, now occupied by Mr. D. W. Sharp, having been injuriously affected by the company's works. The amount demanded of the company in the notice of claim was 7,220l. The company in raising the ground at their station at Bingley, had placed an embankment upon a field of boggy earth, in front of Mr. Sharp's mill, whereby the light of the lower floor was seriously injured, and a great amount of damp forced from underneath, below the foundations damp forced from underneath, below the foundations of the mill, which rendered the floor unfit to stand upon, and injured the walls and the machinery. Witnesses were examined for the claimants, and their evidence went to show damages varying in amount from 1,570l. to 1,960l. The company altogether denied that any extra damp had been caused by their works, or that the light was materially injured, the embankment in front of the weaving-room being less than 2 ft. in height and at a distance of 30 ft. from the mill. The inquiry closed on the 2nd inst., when, after an hour's absence, the jury gave a verdict for 100%.

## Money Market.

PRICES OF BRITISH STOCKS.

* For account, Nov. 14.

London Stock Exchange, Nov. 10.—Without the excitement of the previous week, there has been a steady and fair demand for railway property. The firmness of the consol market has given assurance to those who were waiting to take advantage of the low prices, and large investments have been the consequence. If the statements of the companies that have not yet published are as good as those that have appeared, considerable improvement is anticipated.

Liverpool, Nov. 9 .- Our market continues to wear an improved appearance: the business transacted is not to a very large extent: prices close very firm. The following are the transactions of to-day:—Caledonian, 194; Lancashire and Yorkshire, fifths, 64 Caledonian, 194; Lancasnire and Yorkshire, fitths, 64 dis.; London and North-Western, 1184; ditto, new 25l. shares, 4 prem.; ditto, A and B quarters, 18s. 9d. prem.; Midland, 83; ditto, 50l. shares, 94 dis.; South-Eastern, 24; ditto, No. 4, 64; Shrewsbury, Oswestry and Chester, 13. Sublow, Brothers.

Manchester, Nov. 9.—We have not had much change in our share-market during the week, and no great amount of business has been transacted. Addearances, however, are in favour of an improve-

Appearances, however, are in favour of an improvement. Actual transactions this day :- Caledonian. preference, 3 dis.; East Lancashire, preference, 3s. 9d. prem.; Edinburgh and Glasgow, halves, 54 dis.; Lancashire and Yorkshire, 32l. shares, 9 dis.; ditto, preference, 4 prem.; North Staffordshire, 64 dis.

SAM. GRINDROD. Fork, Nov. 9.—There is very little business doing in the market this week; the guaranteed stocks are looked after by purchasers. To-day's prices are:—Wakefield, Pontefract and Goole, 32; Great Northern, 3½; North British, thirds, 3½; York, Newcastle and Berwick Extension, No. 1, 132. 6s. 3d.; ditto, preference, 6½.

We have to retire more disposition York, Nov. 9 .- There is very little business doing preference, 64. GRAYSTON & EARLE.

Hull, Nov. 9.—We have to notice more disposition

to invest in shares to a limited extent, and the panic-feeling is evidently subsiding—slowly, perhaps, panic-feeling is evidently substituting—slowly, perhaps, but certainly, and we trust nothing untoward will

occur to change the present more favourable current

occur to change the present more favourable current of public opinion.

**FLINT & TOOTAL.**

Newcastle upon Tyne, Nov. 9.— Our market has been quiet during the week, with a moderate demand for shares for investing purposes. Newcastle and Carlisles have been done to-day at 86, ex div.; North British, 15½; North Staffords, 6g. W. FORDYCE.

**Glasgow, Nov. 9.—Since our last notice a steady business has been dead with the day with the first state.**

business has been done, with less fluctuation in prices, business has been done, with less fluctuation in prices, which have gradually improved. To-day's latest sales are as follows, and the market closes firm:—Caledonian, preference, 11s. 6d. dis.; Clydesdale Junction, 56; Edinburgh and Northern, 11½; ditto, Newports, 6½; Glasgow, Barrhead and Neilston, 18; Dumfries and Carlisle, 4½; Ayr, 50; ditto, halves, No. 1, 11½ dis.; Greenock, preference, 6½; Great Northern, 13½ dis.; North British, thirds, 3½.

BUCHANAN, AITERN & Co.

IRON TRADE.—Glasgow, Nov. 3.—The market for pig iron is again dull. Some little excitement was experienced at the beginning of the week, but now it is abated, and quotations are dull at 42s. 6d. for mixed numbers, cash.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

## Joint-Stock & Commercial Gazette.

On Monday evening a meeting was held at Rad-'s Hotel, Bridge-street, of the promoters and others interested in the success of a project entitled "The Natal Land and Emigration Society." After a short outline of the objects of the promoters, resolutions were adopted approving of the scheme. In the course of the evening, Mr. Byrne, the author of books on emigration, stated that land was being sold at Natal at 4s. 8d. to 6s. 8d. an acre, and to show the accuracy of some of the members of the Government, gave an instance in which Mr. Hawes had stated that land at Natal was upwards of 20s.! an

Ranks.

The Discount Bank at Hamburg is winding up its affairs.

The advices from the United States mention that the Mechanics' Bank had declared a half-yearly dividend of 4 per cent., and an extra dividend or bonus of 5 per cent. The Fulton Bank had fixed its dividend for the same period at 5 per cent.; the City Bank at 4 per cent.; the Bank of New York at 5 per cent., and the Mechanics and Farmers Bank at Albany at 5 per cent. A new banking establish-

Digitized by GOOGLE

ment had been opened at Somerville, N.I., called the Somerville County Bank.

The issue of irredeemable notes at Jamaica has been resolved upon to the extent of 50,000l. The effect it was feared would prove far from beneficial to the inthe above step, the bank had decided upon suspending discounts, withdrawing its paper circulation, and altogether restricting its operations. The press of Jamaica decried the issue of the above notes in no unmeasured terms. The banks will refuse to cash the notes, and the calling in of their paper circulation will only make things still worse in the island.

A new joint-stock bank, to be called the "British

Bank," has been mentioned to be in course of forma-tion. A preliminary meeting was held at Messrs. Mullins & Paddison's offices in Bedford Row, on Wednesday. Mr. John Macgregor, M.P. for Glasgow, was in the chair, and stated that the business of the bank would be carried on on the Scotch system, being the first bank that will introduce with exactitude the above principles of banking. Mr. Macgregor and two other gentlemen were appointed a committee of formation, and within a few days it is expected a list of opulent and influential persons will be given forth to the public as directors of this new bank.

A false rumour was spread on the Paris Bourse on

Monday last, that owing to the recent events at Vienna and other places, the banking firm of Roth-schild, Brothers, had resolved to liquidate. Since the Revolution of February, the concern has been kept

in a position to wind up at any moment.

The shareholders in the National Discount Bank of Marseilles met on the 2nd inst., when a dividend of 3 per cent. was declared for the past six months. The capital of the bank consists of 1,000,000f, subscribed by the Chamber of Commerce, and 1,380,000f. by shareholders. The total amount of discount business up to the 30th of September last, it appears, was 30,925,523f. for Marseilles, and 8,313,095f. for the provinces, giving a profit after paying all expenses of 140.287f.

The amount of cash deposited in the banks of New South Wales on the 31st of December last was 573,529L; in the colonial treasury, 30,600L; and in the military chest, 30,056L; making a total of 634,185L, which is a decrease of 193,120L on the total of 1846

In the Bankruptcy Court, this week, in the matter of Allan Gilmore, described as a Calcutta merchant, a claim was made on his estate on behalf of the Union Bank of Calcutta for the sum of £242,000. The consideration of the claim was adjourned to the certificate meeting.

Canals.

The tolls on the New York Canal to the 8th of October last show a decrease compared with the same period last year, of 483,000 dollars.

The Morning Chronicle gives the following table, showing the amount of tolls collected on the canals

in the United States for the month of September. It may be interesting to many, as exhibiting the extent and movements of the internal traffic in the different

localities :	Sept. 1847.	Sept. 1848.
	doll. c.	doll. c.
Erie Canal	410,167 88	478,974 56
Champlain	16,139 12	15,387 62
Oswego	10,521 50	11,328 24

Seneca River towing-path	33 54	40 82

451,756 99 520,853 42

The half-yearly meeting of the Basingstoke Canal was held on Monday last. The accounts presented to the shareholders were passed; and on the motion of a proprietor, it was resolved that the sum of 1,500t, invested in Exchequer bills, should be sold out, and that amount be invested in debentures of one of the great railway companies. A committee of three was nominated for the purpose of selecting the company in whose debentures the investment should be made. After the transaction of some other business the meeting terminated.

Docks.

Several statements have lately gone forth to the public, prejudicial to the Liverpool Docks, owing to the discussions that have taken place respecting the project for rating the dock company. One idea given out as fact is, that the company are paying their dividends from borrowed capital: this is distinctly. From a statement made by the chairman of the directors, it appears that from 1824 to 1848 the wages paid exceed the whole of the value of the bonded debt, the disbursement for wages amounting to 3,882,000l. The dock estates are upheld by the chairman as being the best security for advancing money on loan that can be obtained.

Mines.

Letters from Santiago to the 7th of August mention that upon all silver exported from the province of Atacamu a tax of 1 per cent. per mark would be enforced.

The advices from Valparaiso mention that a ship-ment of about 500 tons of copper was being made

from Ariaca for London. This week several English miners leave England for the Asturian Company's mines in Spain to work the iron. The report of the directors of this company is favourable, and the aspect of affairs improving. The committee advise the calls being paid in advance, to enable them to carry on the works with greater vigour. We believe that the want of capital alone

has prevented the company's prospects assuming

a brighter appearance.

The Real del Monte Company have issued a prospectus for the purpose of forming a new company, with a capital of 100,000L, in order to purchase the whole of the property of the old company, and prosecuting the working of the mines with greater vigour and more profitable results. The want of further capital was the cause of the old company's

The accounts from the National Brazilian Mines are very encouraging, and further advices are anxiously looked for, as it is expected the results will

be still more favourable.

Shares in the Burra Burra Mine, by the last accounts from Adelaide, had been done as low as 1416. but advanced to 1556.

The letters from the seat of the St. John del Rey Company's works show a considerable improvement increase in the returns. Further discoveries had been made, and the prosecution of the workings were being vigorously carried on. The value of ore raised at Morro Velho in July was 6,340l., and after paying expenses left a profit of 1,973l. on the month's operations. The working expenses would, it is stated, be further reduced.

During the month of September the amount of ore raised at the Alten Company's mines was a little better than 149 tons. Several of the mines showed signs of improvement, and the next reports are

expected to confirm those now received.

The share-market shows signs of improvement, inquiries for shares being more general, and taking a wider range.

TO CORRESPONDENTS. RECEIVED: E.S., Brentwood. -D. J.-H. S., Manchester. C. F.—Estimated about 35 per cent., but their intended statement will better inform you.

# Railway Chronicle.

LONDON, SATURDAY, NOVEMBER 11.

The FINANCIAL STATEMENT of the directors of the London and South-Western Com-PANY has just made its appearance. We have only time to notice its general features. The examination of it shows-

1st. That the shareholders may reckon with certainty, as the worst possible case, on never having a smaller dividend than four per cent.

2nd. That there is a fair chance of their having 6 per cent.

It is true that this is no great triumph after years of labour and negotiation and struggle. It is a sad result of a complex policy. But it is a sound and sober conclusion, which leaves no room for the irrational panic which has been spread abroad. It is also a strong motive for the rigid adoption of a sober, economical, practical policy for the future.

3rd. The most important feature we find in it is, that the amount of debenture bonds of the company is unusually small, both in proportion to the paid-up capital and the nett revenue. This is truly a cheering feature. In short, a large debenture capital is a certain symptom of a property unsafe to the shareholders, and safe only for the debenture-holder, who has a mortgage on the property giving him a priority of claim over all shareholders.

In this respect the South-Western stands in favourable contrast to the Great Western, which has an overwhelming amount of money raised This is one of on such bonds or mortgages. the bad features in the proposed amalgamation, that shareholders of the South-Western and North-Western would ally themselves with a most perilous property, instead of retaining their present comparatively safe investment. Great Western knows this-Mr. Saunders knows this, -and it is one of the hidden reasons which goads him on to urge, with his characteristic shrewdness and energy, the amalgamation on the other companies, whose shareholders he may deem less clear-sighted. This statement of the South-Western will, we trust, do much to clear up the views of South-Western shareholders on this subject.

Such are our conclusions from this statement. The conclusions which the directors themselves have drawn are nearly as follows:-

1. The expenditure may be limited to the sum already mentioned (8,071,703L), and the capital account speedily closed by the completion of those works now in progress, unless the proprietors should at some future time deem it expedient to extend their operations.

2. There are no positive guarantees or liabilities whatever of any comparative importance in respect

of lines actually commenced.

3. The amount of the debenture bonds of the company is unusually small, in proportion to the capital paid up and to the nett revenue; the company has always kept below its powers in this respect. There are no loan notes, promissory notes, or bills of any kind whatever affoat, or debts beyond ordinary current expenditure unpaid.

4. The line in possession of the South-Western is, with the exception of a small proportion of the Windsor capital not yet purchased, and the line from Cosham into Portsmouth (4 miles), held jointly with the Brighton, wholly its own; there are no tolls to pay to any other company; and notwithstanding the heavy parliamentary expenses, the loss that may possibly arise from some of its engagements, entered into at a period of great excitement and difficulty, and the great cost of the two miles to Waterloo station, it is still believed to be the cheapest line terminating in the metropolis, and occupies within it

the most central position.

5. If the parliamentary expenses have been great, the outlay has been attended, on the whole, with marked success; it has driven off injurious competi-tion, and has so fenced the line in all quarters, that any serious interference with its main traffic in the future is highly improbable. A friendly alliance has just been concluded with the Brighton, under the powers of an Act of Parliament, mutually beneficial to both companies, and the sanction of the proprie-tors of the South-Western only is required to give it permanence.

Lastly. The directors will venture to affirm that, taking all the foregoing circumstances into consideration, they are justified in coming to the conclusion that, though temporarily, the South-Western will be obliged to submit, in common with most other railways, to a reduction in its dividends, its position, both as respects its finances and its prospects, is one of peculiar safety, and that time and a restoration of general prosperity only are required to prove that the expectations they have deliberately expressed are well founded.

There is one passage more, worthy of comment. The directors anticipate an amount of local traffic on their short suburban lines, hitherto unprecedented. We think them right in this. We may yet expect to see dwellings cover the lines to Weybridge, to Richmond, to Windsor. They will become, in short, omnibus lines.

On the whole, we heartily congratulate the shareholders of the South-Western on the " statement."

The STATEMENT of the GREAT WESTERN, which has just reached us, is a voluminous document, and so full of intricate details, that we defer till next week any observations we may have to make on its contents.

We cannot quite pass over the NOTICE of a PARLIAMENTARY APPLICATION, which we regret to see has been thought necessary by the LAN-

CASTER AND CARLISLE; but we are compelled | that improvement has since that time been to be brief in our remarks upon it. We shall only observe that, at the present juncture, any proceeding for new works may well be thought surprising; and that the Lancaster and Carlisle is the last concern that one would think apt for such a venture at present, seeing that the works on the main line are not yet all paid for, if completed; and that the whole future prosperity of this particular railway depends on its restriction to a low capital. We had reason to hope that this policy was resolved upon by the directors; and that the undertaking promised to distinguish itself by their prudent economy, and by the success likely to result from it, as it has already been distinguished by the best kind of railway engineering, the accomplishment, namely, of practical ends, by means at once elegant, skilful and inexpensive. But in this hope, it would seem, we are to be disappointed; and indeed there seems to be reason to apprehend, in good earnest, for the railway interest in general, that nothing will impress the heads that determine such matters with the truths that past experience emphatically proclaims; -- when we see that a young undertaking just beginning to develope itself, cannot wait a year, even, for its supplements, but must hasten to Parliament, in a season like this, for "powers to make a branch," &c. ending, as usual, with "raising of additional capital."

This is disheartening enough.
We know very well the usual routine answers to observations of this unwelcome class, and do not think it needful to inquire which of the standard pleas may be advanced on the present occasion :- whether the step be taken for "protection," or to bring a neighbour to terms, or as the means of getting valuable traffic, &c. The answer to all or any is the same, viz., that at present no consideration whatever can justify a railway company in going to Parliament to raise new capital for new works, unless it be impossible to go on working without them. Any necessity short of this absolute one must be overridden by others of greater immediate urgency, until the difficulties which have fallen upon the sytem by what it has already undertaken, are thoroughly removed; and of these we are yet far enough from seeing the consummation; nor shall we ever see it, unless the rule stated above be fully and finally adopted.

The shareholders of the CALEDONIAN have authorized the directors to admit the Edinburgh and Glasgow to a participation in the agreement for the leases of the Scottish Central, the Dundee, Perth and Aberdeen Junction, and to join the first-named company in an agreement for leas-

ing the Scottish Midland Junction.

The proprietors of the COLCHESTER AND STOUR VALLEY have specially approved of the lease of their line to the Eastern Union at a rent of 5 per cent. from the completion of the line between Hythe and Sudbury, to increase with the Eastern Union dividend to 6 per cent.

The meeting of the BIRMINGHAM, WOLVER-HAMPTON AND STOUR VALLEY proprietors, summoned to confirm the lease of their line to the London and North-Western, was adjourned till the 5th of December.

The report received by the proprietors of the ROUEN AND HAVRE presents a vivid picture of the embarrassments undergone by commercial traffic from the late French Revolutions. "Only in the month of July," says that document, "the first improvement manifested itself in your receipts; the deficiency which for the preceding months was more than 60,000f. a month, and had in April even reached 85,371f. 74c., was reduced in July to 29,987f. 6c., and in August you obtained, after payment of all

kept up.' The directors, however, hope for a continued improvement, and the best vote of confidence in their management of affairs was the surprise expressed by many shareholders present that the results of the past six months had not been more disastrous than those mentioned in the report.

The accounts from Spain inform us that the BARCELONA AND MATARÓ RAILWAY, of whose progress we have given occasional reports, is at length completed, and was opened on the 28th of last month "with great ceremony." The Barcelona journals contain many details of the inauguration of the railroad, the first that has been executed in Spain,—and not unlikely to stand alone there for some time to come, in many respects. Besides the festivities common on such occasions, in which the sturdy Catalans expressed their satisfaction at an event so important to the prosperity of their chief emporium and the populous region dependent upon it, there were some peculiar to the soil. The ceremony was introduced with ecclesiastical pomp; and the line and working material received the solemn benediction of the Archbishop of Barcelona—at three several points; there was also a Te Deum at Mataró, previously to the repast, at which the authorities, civil and military, partook, with other notables of Barcelona and Mataró, and an elo-quent discourse was delivered by the chairman, Don Juan Miret. All this being now over, the substantial part of the business remains, the completion, namely, of a railway executed at a remarkably cheap cost, com-manding a traffic already extensive, and likely to increase greatly—a probability which may be better estimated when it is known that the road it supersedes is rougher and more dangerous than most by-ways in this country. It s, moreover, intersected by the Besos, a river liable to sudden and heavy floods, which have often closed the passage for days together, within an hour's journey of the capital. When the intercourse hitherto exposed to such disadvantages-and nevertheless active, in spite of them-is enlivened by the ease, despatch and certainty of railway transit,—which can make a profit on this line without charging more than is now paid to carts, diligencias and tartañas, we may justly look for an increase somewhat above the usual average. The journey of 19 miles, we see, is run in about 35 minutes by English locomotives.

The shares of this concern not being circulated in the London market, we might have regarded it as lying out of our province, but for the peculiar circumstances of the country in which it has been founded, and the general interest belonging to an experiment, exceptional in many of its conditions, to which Spain owes the advantage of one specimen, at least, of an improvement that has made such rapid progress in other European nations. We have long since expressed our conviction of the improbability of any extensive system being applied in the Peninsula with the least success, in the way of profitable enterprize: - and from the death or decay of the extravagant projects of this class which were started in 1845-6-it may now be seen that so far our impressions have been confirmed by the result. The more humble undertaking from Barcelona we have always thought likely to succeed; and we shall look with some interest to its results, after sufficient time has been allowed to ascertain them.

From our official returns it appears that the amount of traffic for the last week, on 4,167 miles of railway, was 199,4401., thus charges and expenses, a nett profit of 86,336f.; accounted for: -93,456l. for the conveyance the pecuniary effect of the supplementary works

of passengers only, 55,466l. for the carriage of goods, and a remainder of 50,428/. for passengers and goods together, not respectively apportioned; being an increase of 21,580l. over the corresponding week of last year, when the mileage was 3,309. The average earnings per mile were 48l., whilst in 1847 they were 53l.

LESSON IN FIGURES FROM THE ESTI-MATES OF THE LONDON AND NORTH-WESTERN.

here is one point in the statement of the LONDON AND NORTH-WESTERN Board, respecting the future income of the works allowed for in the estimate, to which it may be worth while to advert: as it will be found to place in a distinct light the nature of the supplements and branch extensions promoted during the last four years, as lucrative appendages to the com-pany's main system. The calculation may be taken on the directors' own showing-indeed, we see no reason to apprehend that it is under the mark, — but, on the contrary, that no revisal of it would justify the adoption of higher figures. As it stands, therefore, in the published estimate, we have the terms - of outlay on unopened works and future additions to capital on their account, and of future income to be earned by them-in the following proportions :-

The capital spent and to be expended for branches, &c., and in contributions, is estimated, including the engines, working stock, &c. set down in schedule 1, at . £7,363,456

To which add the expense, past and future, of branches in schedule 1, which either add nothing to the present gross revenue of the company, or do not cover their expenses 586,032

£7,949,488

say certainly eight millions.

The expenditure on the main system (including the Trent Valley, of which we shall speak presently) is estimated in the same way £18,012,574

The revenue to be added from the operations that are to cost eight millions, as above, is set down at 7,500l. per week.

The revenue derived from the main system, including the Trent Valley, averaged in 1847, 42,0001. per week. So that, on the basis of these figures, it would appear that whereas the additions will cost nearly one-half as much as the trunk lines, the revenue to be drawn from them is set down at less than one-fifth; and this, we have said, it would not be safe to rate higher, while the certainty of the eight millions not being exceeded, is more than problematical. This comparison establishes pretty clearly the effect in £. s. d., on the profits of the concern of the efforts which have been made to stud it with branches in all directions.

But even this does not show the whole of the In the capital of the main system is included the cost of the Trent Valley, which has been at least one million and a half, and which has not added one penny to the receipts of the concern; also one million of stock added on the amalgamation; to say nothing of the terms on which the Manchester and Birmingham was bought, which, reduced to terms of capital, can hardly be taken at much less than one million more. Accordingly, from the eighteen millions, the works represented by which are now earning 42,000l., there ought to be at least three millions deducted, in order to arrive at the effective capital that makes this earning; and we should then have the proportion of 15 millions capital with a gross receipt of, say, 41,000, to 8, with one of 7,500. Such is

Digitized by **GOO** 

on the amount of nett dividend; and certainly plan, they will, of course, be readily stated; if does not greatly recommend them.

Or if we take the estimate by its mileage, the same result will come out: the 120 miles of new line, (independently of the guaranteed mileage,) being compared to the traffic they are computed to bring, with the 435 now earning; or rather with some 300, inasmuch as the Trent Valley, as we have said, adds nothing to revenue, nor can the short branches already at work do more than pay the working expenses, if even so much.

It will not be amiss to bear in mind such considerations as these, for reference, whenever a new fit of enterprize, or whatever else may put the desire of additional works in motion, shall make its appearance. For the present, the feeling to which the desire appeals is somewhat chastened by immediate difficulties; but there can be no security against the appeal being renewed in any future time of abundance, but in the distinct understanding of the consequences of listening to it—consequences which survive the season of excitement in which they are too readily incurred.

# THE AMALGAMATION SCHEME, AND HOW IT SHOULD BE DEALT WITH.

The parliamentary notices for the GREAT AMALGAMATION SCHEME have now been published by the London and North-Western and Great Western Companies, and meetings summoned of the proprietors of each for the 13th prox., to sanction the proposed application. They will no doubt consider what they are asked to do with more than usual attention—the scheme being at once the most extensive and the most hastily brought forward of any that has yet been started of its class; while it is altogether novel in its character—the notion of combining the rival gauge parties, without a previous settlement of the gauge dispute, being about as hopeful as that of mixing oil and water. At this early stage of the business the incoherence of the plan has already begun to show itself. It appears that a triple alliance is nearly out of the question already—as may be seen from the significant mention of a union of the two, if the third should refuse to join in the plan. The plan, indeed, is altogether afflicted with the vice of inconsistency and haste; to a degree which does not add to our respect for the judgment of one, at least, of the parties to the negotiation.

In anticipation of the meeting, it is our duty to suggest to the proprietors of the London and North-Western a few considerations that we think ought to determine their method of dealing with the proposal when it comes before them. To the Great Western shareholders we shall not address ourselves; because they are not very likely to regard any counsel we should give; and the London and South-Western would appear to be already in no very close agreement with the tenor of the proposal.

In deciding on a measure of this extent, it is clear the proprietors are entitled to make the two following conditions preliminary to any vote on the subject :- 1st That the specific advantages to be derived from the union with a system of a character irreconcileable with theirs, shall be clearly and positively explained. By specific advantages clearly explained, we do not mean general prospects of peace, or of the good to be secured by friendly agreement; but a tangible and express description of the particular points in which it is expected that amalgamation will promote the London and North-Western interests; - of the particular arrangements of a profitable nature that have been discovered and will be carried out in consequence of the union. If the Board have any such grounds for their adoption of the

plan, they will, of course, be readily stated; if no such grounds have been positively secured, the proprietors may well object to undertake a plan of such vast importance, entirely in the dark—to declare themselves willing to embrace the Great Western, with all its liabilities and discrepancies, before anything is known of the nature of the terms on which this is to take place hereafter. They may well require the matter to be adjourned until the nature of the proposal can be shown in a form that will enable those concerned to judge of its effect on their interests. The transfer of fifteen millions' worth of property is not a thing to be even conditionally thought of in the off-hand manner in which the measure, so far, seems to have been discussed.

The next point to be insisted upon is that the Board shall satisfactorily explain how they are prepared to meet the specific difficulties risks of such an arrangement-those, namely, which lie in the total diversity of the two systems, and those to which the parliamentary application will expose the company. Here, again, it will not be sufficient to slide over the ground with assurances that all will be settled hereafter; or if not settled, then no use of the powers will be made. It is, as we have said, far too serious a business to allow of any step whatever except on sure and well-defined grounds. The mere act of proceeding for a permissive bill will in itself gravely commit those who are promoting it; and they ought not to make even a show of asking the permission, without good reason for knowing why it is asked, what use can be made of it, and how far any use to which it may avail can be beneficial to the owners of the property. Such are the two descriptions of information on which alone-ratified by satisfactory, positive, and substantial particulars—the proprietors can, without the blindest precipitation, give even an inchoate sanction to a scheme of this extraordinary nature.

We shall next week discuss the kind of arguments that may be advanced in favour of huddling up a provisional agreement, and show what answers may be given to them; nor shall the subject be laid aside so long as the decision respecting it continues open to the judgment of those whom it concerns. Whether our reasons and cautions are or are not regarded, we shall do our best to aid the right determination of a question the most important that has yet come before the railway world; and if the parties decide otherwise, the consequences—serious enough, in all conscience—will be chargeable on their own want of firmness and foresight.

In the meanwhile, it may be seen already what kind of ordeal the Amalgamation Bill will have to endure in Parliament-what kind of animosities it will provoke-what dangers will certainly meet the companies in their pursuit of this questionable sanction. The diatribes of this week in the *Times* on the chapter of "monopoly," describing the control which "monopoly," describing the control which must be laid on the railways that venture on this amalgamation, and pregnant with every kind of menace obnoxious to the owners of the property-will perhaps somewhat enlighten the authors of the movement on the treatment to which they will expose their concerns by applying for any bill of this kind. It may be judged already whether our apprehensions on this chapter were causeless or not. The very dangers we pointed out-the very jealousy and determination to take advantage of the step to the utter detriment of the railway shareholder on behalf of "the public,"—which we said would be provoked,—has already found a pretty loud voice in a quarter that, however discredited, still which will certainly come to bear on the Amalgamation Bill in Parliament; and those who can resolve, on the spur of the moment, or on any vague hope, to encounter such attacks, on behalf of a plan visibly open to them, which has not even the advantage of anything mature, positive, or even tolerably probable, to recommend it, must indeed possess a kind of daring that bespeaks more rashness than wise resolution.

RAILWAY PROPERTY: THE CAUSES OF ITS DE-PRECIATION, AND THE REMEDY.

After so severe a trial as that from which the railway interest of this great country is now emerging, it is due to the large body of public-spirited proprietors who have invested their wealth, to search in every direction for a cause commensurate with the suffering that has been endured.

When the exchangeable value of any property, be it land, houses, mills, machinery, stock in trade, produce, railways, or the public funds, becomes suddenly depressed, those who are obliged to realize in such forms as the necessities of trade or the winding-up of estates, arising from the decease perhaps of the owners, are involved in the most tremendous and heart-rending losses.

This will be apparent, more particularly, with regard to railway property, when the market value of the great lines from town, now called the London and North-Western and the Great Western, are viewed with reference to their marketable values at different periods. If the market price of the London and Birmingham, now the London and North-Western, be taken in the years following, an extraordinary difference will appear:—In 1844, the market rate of 100L stock touched 235L; in 1845, 242L; in 1847, the market rate fell from 184L to 117L; in 1848, the stock fell to 117L, having for a moment touched par;—the dividend falling from 10 to 7 per cent. So with the Great Western: 1844, saw the 100L stock rise to 149L; 1845, to 200L; 1847 exhibited a fall to 117L, and 1848, from 90L to 79L;—the dividend varying from 8 to 7 per cent.

It is true that subsidiary lines have been taken up by these companies severally; confidence in the directories has been on some occasions shaken by presumptuous and meddling writers of City articles; and communications of correspondents, on which comments might be made, have appeared in the columns of a leading journal; but looking to the fact that railway conveyance has become the rule in this country, there is no reason why, in common with well considered and well executed canals or other undertakings opened up in former days, the enterprize of individuals uniting to perform so great a national work, should not be amply and permanently rewarded. The Times may recklessly write, and after the mischief has been done change its tone,-but let our social system be right, sound and unvarying in its operations, as it might be, and railway property will afford a security to the public as stable at least as the National Debt itself.

It is admitted that the proprietors of shares in railways should scrutinize with care the periodical reports of the directors of the companies respectively—the statements made on these occasions should be full and explicit—the system of auditing should be unexceptionable,—and the directors should be fairly remunerated for the heavy mental responsibility they incur in the management. If these things be done and perseveringly maintained, confidence will be entire and permanent.

Having made these preliminary remarks, it will be our object to remove from the opponents of railway investment all pretences for those fallacies which have been rife; to show that there is no valid reason why all well-devised lines, sanctioned by Parliament, should not forthwith be proceeded with, due consideration being had to the means available. It will be our object further to point out, with a view to its effectual removal, the main cause that has occasioned such alarming depreciation as has manifested itself of late years.

be provoked,—has already found a pretty loud voice in a quarter that, however discredited, still we bespeak the candid and patient consideration of is known to represent not a few of the opinions our readers till the whole is before them; and we

much mistake if we do not in the issue irrefragably establish as a fact, that there is no imprudence of the kind that has been alleged in the railway system—that if the proprietors properly exert their influence in their several circles, they may see their property reinstated in its former healthful, and in a solidly valuable, condition; and that, on a scale of accommodation and of rates considerate and beneficial to the public, they may look forward to an extent of traffic some per-cents. higher than they have recently enjoyed, or perhaps have of late contemplated. But to effect this great and desirable end, they must be prepared to surrender all petty jealousies, all prejudices, and combine the strength that really appertains to a body of men who have already advanced from surplus capital, for a meritorious public object, a sum total amounting to nearly half the national debt.

KAPPA.

### LAND FOR RAILWAYS.

The Government have received intimation, pretty plainly expressed, of the injurious operation of the Lands Clauses Consolidation Act as regards the taking of land for railway purposes in Ireland.

The provisions of the said Act operate injuriously to railway companies, and tend to waste the funds which ought to be employed in the construction of which ought to be employed in the construction of the works sanctioned by the Legislature, in the fol-lowing particulars:—That the power thereby given of appealing to a jury where the sum claimed exceeds 50l. is greatly abused, inasmuch as all claimants, no matter how trifling their just demand may be, claim a greater sum than 50l., in order to have the power a greater sum than 30t., in order to have the power of forcing companies to go before a jury; as evidence whereof your petitioner refers to the claims made on the Navan branch of the Dublin and Belfast Junction, in which, out of 165 cases, there were but nine demands under 50l., except from such as had not estates qualifying them to go before juries. That the claimants make such demands well knowing that companies would rather pay exorbitant sums than be subject to the costs of proceedings before juries; in evidence of which your petitioner refers to the sums agreed to be paid to the claimants on the said Dublin and Belfast Junction line, being on an average 300% per acre, which is fully three times the value of the lands required. That the reluctance of companies to go before juries arises from the practice of juries in awarding in too great a majority of cases such sums as shall always exceed the sums previously offered by the company, so as to exonerate the claimant from any part of the costs; in evidence whereof your petitioner refers to the inquisitions held at Slane, in the county of Meath, in the months of April and May 1847, in which, out of twenty-eight cases tried, companies would rather pay exorbitant sums than be May 1847, in which, out of twenty-eight cases tried, the verdicts were all for amounts greater than that previously offered, although such previous offers were greatly more than the real value of the lands required; and, in further evidence that the suffi-ciency of the previous offers is considered to be no ciency of the previous offers is considered to be no protection from such findings, your petitioner refers to the practice adopted by the Newry and Warrenpoint of tendering only nominal sums, their agents being convinced that the company would have to pay the costs in any event, and well knowing that any amount they might offer would be exceeded by the verdict. That the costs of inquiries before juries are excessively great and oppressive, inasmuch as claimants usually examine a great number of wit. claimants usually examine a great number of wit-nesses, and are allowed, on taxation, the costs of two counsel, besides charges for valuators, maps and witnesses' expenses; and the proceedings in the most trifling case are rarely concluded in one day, and claimants often protract the proceedings with a view of forcing a settlement by the pressure of accumulated costs; in evidence whereof your petitioner refers to the before-mentioned inquisition held at Slane, in the month of May 1847, in which twelve days were occupied in trying fifteen cases, of which oays were occupied in trying niteen cases, or which six only received a full trial, and nine were compromised by the company under the pressure of costs, as before alluded to, and the amount awarded in those six cases was 2,421l. 2s. 7d., and the total costs of these six cases which received a trial were 2,202l. 7s., as taxed, of which costs the claimants had not to bear any part, exclusive of the expense which the company were put to, besides the time and expense of purchasing the interest of the owner in fee of the property and occupying tenants. That the oppressive effect of such proceedings before juries is greatly increased by the necessity of issuing warrants for separate juries, so that a jury in each matter has to be in attendance, while the sheriff can only entertain one case at a time, and the current costs are payable from the commencement of the inquisitions, which (particularly where special juries

are summoned, and who receive two guineas a day each for their attendance) renders such proceedings ruinously expensive; in evidence whereof your petitioner refers to the said proceedings before the sheriff of Meath at Slane, in the month of May 1847, where fifteen juries were in attendance, and the costs for attendance of jurymen and sheriff's expenses alone amounted to 1411. 8s. 9d. a day, independent of the claimants' costs against the company, and the company's cost for counsel, agent and witnesses. That the costs incurred are so oppressive that companies are often obliged to submit to exorbitant demands in order to shorten the proceedings; in evidence of which your petitioner refers to said last-mentioned proceedings, in which verdicts were taken by consent for amounts respectively greatly exceeding any just demand for the claimants, to the waste of the funds designed by the Legislature to be employed in the constructing said railway, and the general discouragement of railway enterprize in Ireland. That the practice of delaying the proceedings with a view to cause companies to come into such arrangements is general and notorious; and in evidence thereof your petitioner refers to the case of Dr. Alfred Hudson, tried at said last-mentioned inquisition, where the verdict of the jury for the purchase of his interest as lessee of 1 acre 1 rood and 21 perches of land, besides damages, was for 1561. 6s. 2d., and the proceedings lasted three days, exclusive of the day of view, and cost the company 2421. 16s. 4d., exclusive of the claimant's costs, which have been taxed to the sum of 1201. 2s. 4d., making a total of 5691. 4s. 2d., for the purchase of his interest in that quantity of ground, exclusive of that of the landlord.— Irish Railway Gaz.

## Correspondence.

### EAST INDIAN RAILWAY.

Sir,—I have read with much pleasure your able critique upon the "East India Merchant's" Letter which appeared in your paper last week. There is one point, however, which you have omitted, and which is of much importance. You have not shown and perhaps are not aware that the bill in question is most objectionable in its character, and was such as to justify the opposition of the East India Company. This you will be enabled to judge from the following description of the objects of the East India Railway Company, as explained in the preamble of the bill.

the bill.

"A company under the name and style of the East India Railway Company for the purpose of acquiring and holding lands in the East Indies and Great Britain, and making, acquiring and working one or more railway or railways in India, with all necessary works, stock and conveniences, and of doing and performing all such matters and things as are generally done by persons or companies engaged in business of the like and as extensive a nature as might be deemed advisable or desirable for efficiently carrying into effect the objects and purposes aforesaid, including therein the working of mines of coal, iron and other minerals in the East Indies, and manufacturing the produce thereof, and the erecting and carrying on all necessary and convenient works, furnaces, forges, smelting-houses and gas-works, for furthering the objects of the company, and selling and disposing of such of the produce thereof as from time to time should not be canted or necessary for the making, repairing or carrying on any railway of the company."

Let shareholders judge from this specimen of the prudence of their directors what prospect they would have of a profitable return under such management.

A SHAREHOLDER.

London, Nov. 6.

### Gossip.

This year's November has not received many notices of intended application to Parliament on the part of railway companies, as compared with the past session, when there were 140 new bills before Parliament. The only one of the great companies that has yet given notification of an intention to proceed to Parliament, is the Lancashire and Yorkshire, who will apply under the enlarged title of the "Lancashire and Yorkshire and London and North-Western," for a transfer of interest in the Preston and Wire Harbour and Dock Company, and for regulating the management of the undertaking. Another company, the Lancaster and Carlisle, a subsidiary line to the London and North-Western, and in which the latter are interested by subscription to the amount of 457,574., apply for a railway from their own at Lancaster to Preston, and to use a portion of the existing Lancaster and Preston which it is said nobody owns; also for a branch to Glasgow Dock, and for an amendment

of Acts. New lines, as we have previously stated, are talked of from Bangor to Carnarvon, and from Lan-

caster and Fleetwood.

Tuesday's Gazette contains the formal certificate of the Railway Commissioners, in favour of the Cornwall, and of the Deliabole and Rock, for an extension of time. By the extension Act passed last session, a large number of companies have relieved themselves: 125 applications have been received and considered. Of these 121 have been entertained, and in most cases the applications for the extension of time asked for has been granted for the full additional term of two years allowed by the Act. Four applications were refused, on the ground that there were special provisions in their several Acts making the completion of the line compulsory.

completion of the line compulsory.

Owing to the declaration of the London and North-Western that it is their intention to enter upon no new works, the intended new line between Bangor and Carnarvon, from the Bangor station of the Chester and Holyhead, has been abandoned.

The directors of the Belfast and County Down abandon for the present the extension of the line from Comber to Downpatrick, and also the branches to Donaghadee and Bangor, and intend to reduce the capital of the company from 50l. shares to 25l. shares. The works on the main line to Comber are proceeding steadily; and the Holywood branch, which has now been for some time opened to the public, is yielding satisfactory returns.

ing satisfactory returns.

The directors of the EASTERN COUNTIES having become the proprietors of the pier at Southend, have recently had a line formed on that structure for the conveyance of passengers to and from the steamboats. The pier is about 1½ mile in length, and this accommodation is understood to be only a preparatory step to more extensive improvements. Railway communication with the metropolis will no doubt render Southend a favourite watering-place to the Londoners.

The Quadrant Colonnade has been sold, and the principal portion of it is said to have been purchased by the EASTERN COUNTIES. The columns were divided into lots (of two, four and six each) for the convenience of purchasers; and on the first lot being put up, consisting of six columns, the auctioneer stated that each column weighed 35 cwt., and cost the sum of 35L in putting up. The first offer for each column was 1l. 10s. Eventually the six columns in this let sold for 7l. 10s. each, exclusive of the granite plinths, which were sold separately. The other columns forming the twenty-nine lots fetched sums averaging from 6l. 5s. to 7l. 10s. each. The entire number of columns sold in one day was 144, out of the 270 forming the colonnade, and the sum they realized in the aggregate was upwards of 1,000l. The granite plinths upon which the columns stand were next sold. They were lotted in a similar manner to the columns, and fetched from 1l. 2s. to 1l. 4s. each.

columns, and fetched from 11. 2s. to 11. 4s. each.
We have been amused by the complaint of "A
TRADEMAN" (addressed to the Manchester Times,
for the benefit of the London and North-Western),
that the trains did not work conveniently for his
going home to Patricroft to dinner! It seems the
train starts at 1 15 p.m. and returns at 2 45 p.m.,
whereas he would have it return at 2 30 p.m.;—it is
a quarter of an hour's ride, and this would just fill
up the two hours, including the time to walk to and
from his place of business and the station. We should
have thought that the "early closing" movement
would have led to devoting these two hours (the best
in the day) to business. Who would expect to find
a tradesman in the City or the Borough going home
to Greenwich or Croydon to dine in the middle of
the day! But it seems they manage these things
differently in Manchester.

A mechanic writes to the Times from Godalming

A mechanic writes to the Times from Godalming respecting the Caledonian express train running off the line, drawing four carriages along with it, the driver and fireman being severely scalded and the carriages much damaged. He suggests that a remedy may be applied which would prevent these most serious consequences in future, which is by fixing a spring bar to the carriage adjoining the engine, so as to separate from it immediately the pull became oblique, precisely in the same manner as a man is separated from his horse when dragged by the stirrup straps; and, for further security, the carriage next the engine should be provided with a brake, that the train may be stopped when separated, and if required a few of the leading carriages may also have the spring bar as an additional security.

Dismissals are reported to have taken place on the GREENWICH of several of the *employés*. Boys in some instances supply their places, and the police, with one or two exceptions, are discontinued at the intermediate stations.

The GREAT WESTERN have been assessed in the sum of 1,100*L*, instead of 500*L*, as previously, for that

portion of the line which passes through the town of Cheltenham; their total contribution to the poorrate of which place is now 1,900% per annum.

The LEEDS AND BRADFORD, within the township of

Armley, was rated by the parish officers at 1,662.

By an appeal the rating has been reduced to 1,120.

A man named Hunter, the person who was arrested

on a charge of placing an obstruction on the BELFAST AND BALLYMENA, near Andraid, has been fully committed for trial. It is gratifying to observe that by the statement in the Northern Whig, in addition to the reward offered by the company and that got up by private subscription, a third is offered by Government, for the conviction of the offenders.

The Sydney people are bestirring themselves for railroads. Further arrivals from Sydney announce that public attention was now directed to the formathat public attention was now directed to the forma-tion of lines through the colony. Some idea was enter-tained of laying down a line of rails from Newcastle along the course of the Hunter river. The estimated expense was about 1,500l.

STATE ASSISTANCE to railways is more beneficial than State seizure or State absorption. The French Minister of Public Works has arranged for the continued construction during the winter months of such tinued construction during the winter months of such portions of the various lines as are to be formed at the expense of the State. The present large number of labourers employed on the Central line in the departments of the Cher and of the Haute Vienne will be kept on, and in a few days nearly 1,000 will be added to the works near Nerondes. The Paris end of the Paris and Strassurg offering great resources to the unemployed labourers of the capital grants of money have been recently made, sufficient to provide for the works in three departments, those the Marne, the Haute Marne and the Meuse. Many of the workmen from the national workshops have been sent to the department of the Maine et Loire. The works of the PARIS AND LYON, at the expense of the State, which had been for a time interrupted, have been resumed. By the activity of M. Jullien, the engineer-in-chief, the operations will be spread over such an extent that by April 10 the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control o next the line will be sufficiently advanced to allow of public traffic as far as Tonnere, a distance of about 148 miles. The Western line has fully sufficient funds to provide for the continuance of the works. Among the public works, says Galignani, to be undertaken during the winter season will be the viaduct over the Chaussée du Maine at the Barrière du Maine, between the present and the new station. This viaduct will be formed upon a single arch of cast-iron, upwards of 65 ft. in span, springing from

abutments of solid masonry.

M. De Vienne has been appointed special commissioner of administrative surveillance on the line from COMPIEGNE to St. QUENTIN. M. Gellion has received the same appointment on the STRASBURG AND BASLE.

the same appointment on the STRASBURG AND BASLE. The French Central Railway Commission has decided upon the plan for the line from PARIS to STRASBURG, at that part between Vitry-le-Français and Bar-sur-Ornain. The course of the line between those places is arranged to be by Blismes and Sermaise, on condition that St. Dizier should be united to the principal line by a branch at Blismes.

The Railway Congress, for settling the transit of trains running through France, Prussia and Belgium, has met again at Brussels, but from the continuance of the German disturbances no very immediate or settled results can be anticipated. The agreements will be only carried out as the times permit.

## Reports of Meetings.

### CALEDONIAN.

Nov. 10.—Special Meeting, London, to obtain the consent of the shareholders to admit the Edinburgh and Glasgow to an interest and share in the existing agreements with the Scottish Central and the Dun-dee, Perth and Aberdeen Junction, and the Scottish Midland .- Mr. J. J. HOPE JOHNSTONE in the chair.

The CHAIRMAN said that the meeting were aware that for a long time past very serious attacks, circulated by the medium of the press, had been made on the directors of the Caledonian—attacks which, though they could be disproved, had been at once injurious to the company's stock in the market and influenced a large portion of the subscribers. It was essential that this state of things should not continue. The line, it was to be remembered, in the first place, was not yet developed—although he had every confidence that it would be so very shortly; and in the second place, having been working in very bad times, afforded no practical test hitherto of what its returns would be when it was in full operation under improved circumstances; but he had every reason to adopt the calculation that within the next four or five years its receipts, from their present amount of

5,000l. per week, would rise to fully 10,000l. or 11.000l. One very great advantage would be almost 11,000. One very great advantage would be almost immediately conferred on the company by the completion of the accommodations on the Glasgow pletion of the accommodations on the Glasgow and Edinburgh line, which would enable the Caledonian to carry any extended goods traffic. In reference to the junction with the northern lines, it was said that these lines must inevitably bring their traffic to the Caledonian, whether they liked it or no, for that there was no chance of their being adapted for any other company than the Caledonian; but this was an entire fallacy. Before the arrangement made by this company with the Scottish Central line, the that the had been offered a guarantee of 9 per cent. by the Edinburgh and Glasgow. The arrangements with the Scottish Central and the Dundee and Aberdeen he considered to be completed—and to the Scot tish Midland a junction with this line still remained open for the determination of the Caledonian proprietors. He had no doubt that a junction with that line would be not merely safe but advantageous. Its capital did not reach beyond 500,000£; and, running as it did through forty-five miles of a productive as it did through tory-five miles of a productive country, it was surely not excessive to anticipate from it a return of 1,000l. per week. At present, indeed, its returns were only 400l. per week; but then it had been only opened twelve weeks, and it was only six weeks that goods or minerals had been carried on it. Dissatisfaction had been expressed at one feature in the composition of the direction. To remove these objections he could state that, a director having resigned for that purpose, an English director would be immediately appointed in his place, and another English gentleman would be placed on the direction as a vacancy occurred. He would add, that when any question involving a matter of importance was to be submitted to the proprietary, the meeting for the purpose would be held in London, Liverpool, or elsewhere in England, so as to suit the convenience of subscribers in the south. The Chairman concluded by moving the first resolu-tion—"That this meeting authorizes the directors to communicate and give over to the Edinburgh and Glasgow an interest and share in the existing agree-ments with the Scottish Central and Dundee. Perth and Aberdeen Junction, in regard to the lease and working of the said lines, and enter into such agree ments and adopt such measures as may be found necessary for that purpose."

necessary for that purpose."

The resolution having been seconded,
Mr. Abrat said he desired to call the attention
of the proprietary to the fact, that in the list of shareholders published in July last and again in October
last, the names of ten out of the fifteen directors
did not appear. That gentlemen should manage
the affairs of a company in which they were not
shareholders was so monstrous an evil that the circumstance to which he referred required immediate
explanation. He then read the names of Messra.
Fox Maule, Hodgson Hinde, Barstow, Houldsworth
and Monteith, and other gentlemen, as those of the
shareholders to whom he alluded. He added that
he had sent notice to the secretary, Capt. Coddinghe had sent notice to the secretary, Capt. Coddington, of two questions he desired to press:—1. What amount of original stock of the Caledonian was held by each director at the last half-yearly meeting?

2. What amount of shares was held by each director in the Scottish Central, the Dundee, Perth and Aberdeen Junction and the other northern lines in

question?

Messrs. Fox Maule, Barstow, Macdonald, Mon-TRITH and several other directors having, in answer to questions categorically put to them by Mr. Abbatt, proved their qualifications, this point of objection was abandoned.

Mr. ABBATT said that, as the representative of 1,000 shares, of which he himself held 25, he begged distinctly to declare his fear that the principle on which these arrangements with northern lines had been entered upon, as well as various features in the commenceupon, as well as various features in the commencement of the line, were adverse to the interests of the proprietary. He therefore moved as an amendment that "inasmuch as the various non-parliamentary guarantees and engagements referred to in the directors' report," and the more important of which have been already refused by Parliament, must, if legalized, fall exclusively upon the Caledonian ordinary shareholders; and as the report proceeds from a Board in which influences opposed to, or not necessarily in accordance with the existing interests of the Caledonian ordinary shareholders may have of the Caledonian ordinary shareholders may have operated even unconsciously, this meeting considers that before further proceeding with the consideration of this report, the magnitude and importance of the questions embraced in it make it essential that it should be referred to a committee of shareholders,

* See the Supplementary Report, p. 799.

to be now named, and having a preponderating pecuniary interest in the Caledonian ordinary shares, whose duty it will be to report on the various ques-tions to an adjournment of this meeting to be now fixed upon, and at which adjourned meeting the report of the directors shall be further considered, and that the report of the directors be therefore not now received, but that the further consideration of it be adjourned accordingly.

adjourned accordingly."

Mr. Bowden seconded the amendment.

Mr. Fox Maule said he could only regard the amendment as a proposed vote of want of confidence in the directors. Mr. Abbatt, by his questions, had clearly shown that he had no confidence in the policy and that he even doubted the personal honesty of the directors. Supply a director than the second confidence in the policy and that he even doubted the personal honesty of and that he even doubted the process and that he directors. Surely, a director who was charged with having alleged a qualification he did not possess underwent an imputation upon his honesty. As to the circumstance that the stock of the Caledonian had not risen in the market as that of the London and North-Western had done, the comparison between an old and an infant line being, in itself, altogether unfair, this circumstance, independent of the general depression of railway property, had a solution in the strenuous efforts that had been making by a portion of the shareholders themselves to cry down their own property. For himself, he had every confidence that were this line left to appeal to the public on its own merits, its stock would improve in due course with the improvement of other undertakings of a similar character. He earnestly called upon the meeting to bear in mind that were the Caledonian line to refuse a junction with the northern lines, these lines would find a way for their traffic to the southern lines by some other medium, the oppor-tunities for which already existed under parlia-mentary sanction, and the Caledonian would thus be mentary sanction, and the Caledonian would thus be segregated from both one and the other series of lines. With reference to the proposed guarantee of 8 per cent. to the Dundee, Perth and Aberdeen Junction, the sum certainly appeared large, but it was to be borne in mind that the cost of their line had only been 600,000l., or 18,000l. per mile. So that, in point of fact, the guarantee of 8 per cent. was not more than the force of their line had only then the force of the percent. than the 4 per cent. which was now paid by many lines as guaranteed interest upon lines which had cost 36,000l. and more per mile.

Mr. CAMPBELL protested against any further appeal to Parliament with reference to the Scottish Central.

Mr. H. HINDE said that in the one case Parliament had distinctly prohibited the company from having the interest referred to, whereas in the other, a com-mittee of the House had simply rejected the bill before them, principally on the ground that it would give a monopoly of traffic to either the Edinburgh and Glasgow or to the Caledonian line. Amicable arrangements made between these lines placed the case that might be submitted to Parliament on quite a different footing.

A Proprietor asked whether, before the arrange-

ment of the Caledonian directors with the Scottish Central, an offer had not been made to the latter by the Edinburgh and Glasgow, of a guarantee of 9 per

The CHAIRMAN answered in the affirmative. After a long discussion, the passage in the amend-ment suggesting undue influences to have operated

upon the directors was struck out by Mr. ABBATT.

The amendment and the resolution were put to the meeting.

The show of hands was largely in favour of the resolution, but a poll having been demanded, the votes of the proprietors present were all re-taken, with the proxies held by them.

with the proxies held by them.

It was previously stated by the CHAIRMAN that the directors held 7,300 proxies against 1,600.

The CHAIRMAN then proposed the second resolution:—"That this meeting authorizes the directors of the company, along with the Edinburgh and Glasgow, to enter into an agreement for the lease and working of the Scottish Midland Junction, upon the terms stated in the report of the directors, and to adopt such measures as may be necessary for the

Mr. LITTLE moved as an amendment, "that the meeting do now adjourn until to-morrow at noon," on the ground that many shareholders had gone away supposing that the only subject to be discussed on the present occasion would be that comprised in the first resolution.

After a long conversation the question of adjournment was put and negatived by 25 to 20.

Mr. CRUM then moved a direct negative to the motion, which was seconded by Mr. FAWGETT.
Mr. H. HINDE supported the resolution.

There was a further conversation, and another division, resulting in a majority of twelve to the directors.

Digitized by GOOGLE

Upon this a second scrutiny took place. Messrs. R. Abbatt, R. Bowden, J. Shiel, and J. Brown, being appointed scrutineers. At 5 o'clock they commenced their labours, and at 9 o'clock returned and made the following report :-

94	shareholders present 1,216 votes
	by proxy 1,551
239	2,767
	FOR THE MOTION.
113	shareholders present 1,655
737	by proxy 7,779
850	9,434

Majority in favour of the motion ... .. votes 6,667 £314.654 1.263.037

Excess of value in favour of the motion

The announcement was received with loud cheers. While the scrutiny was going forward, a long discussion took place relative to the leasing of the Scottish Midland line, which lasted till past 10; and on a vote and division there appeared 53 (including the directors) in favour of the lease, and 47 against it Another poll was demanded, which lasted until 12 o'clock, when the result was announced as follows:-

FOR THE AMENDME	NT.
36 shareholders present	490 votes
145 by proxy	1,551
	2,041
181	-,
FOR THE MOTION.	
47 shareholders present	532
737 by proxy	7,779
	8.311

.. votes 6,270 Majority in favour of the motion ... Ditto in favour of motion

£785,486 Excess of value in favour of motion The scrutineers appended to their report a statement to the effect that they had been much assisted in the discharge of their duties by the clear, accurate and satisfactory manner in which the registry depart ment of the company had been kept.

## BIRMINGHAM, WOLVERHAMPTON AND STOUR

VALLEY.
Nov. 7. — Special Meeting, Birmingham, for the purpose of confirming the deed for the lease of the line to the London and North-Western .- Mr. J. F. LEDSAM in the chair.

The CHAIRMAN announced that the Commissioners of Railways had certified that half the subscribed capital of the company had been paid up.

Mr. P. WILLIAMS stated that although the terms, as already known, were agreed upon, the lease was not yet completed. Under such circumstances he begged leave to move that the meeting be adjourned until Tuesday, the 5th of December.

Mr. Sparrow, of Wolverhampton, seconded the motion, which was unanimously agreed to.

## COLCHESTER AND STOUR VALLEY.

Nov. 7 .- Adjourned Special Meeting, Colchester. Mr. T. L. Ewins in the chair.

The shareholders were summoned to consider the leasing of the line to the Eastern Union.

The CHAIRMAN stated that since the last meeting negotiations, conducted without prejudice to the legal position of either company, had, under the existing agreement, taken place, and had resulted in a provi-sional agreement, by which the capital to be guaranteed by the Eastern Union would be considerably diminished, and the extent of liability lessened. The objections by some shareholders in the Eastern Union to the large amount of capital over which that company's guarantee would be extended was thus got rid of, and the lease, after a vote and division, had been affirmed by the Eastern Union on the 9th ult. The agreement submitted to the meeting provided that the Colchester and Stour Valley shall immediately complete their main line to Sudbury, together with the branch to Halstead, on being called on to do so by the Eastern Union, and that the other branches (which would interfere with the projects of the Eastern Union) shall not, without that company's consent, be proceeded with. The lease to be at 5 per cent. from the completion of the line between Hythe and Sudbury, to increase with the Eastern Union dividends to 6 per cent., but not beyond that percentage.

After some discussion of no public importance, resolutions in ratification of the agreement were passed.

The transfer of this new subsidiary to the Eastern Union gives that company an aggregate railway territory in the eastern districts of some 150

Harwich, and the towns of Colchester and Norwich | which took place between Havre and Rouen. There was with London by the Eastern Counties, at a cost of about 3,000,000l.

#### ROUEN AND HAVRE.

Oct. 30 .- General Meeting, Paris .- M. C. LAFFITTE

in the chair.
M. THIBAUDEAU, the secretary, read the report It referred at length to the various events which had necessitated the last two special meetings—the troubles of the Revolution-and the intended assump-

troubles of the Revolution—and the intended assumption of the line by the State.

The directors had now therefore to present an account of their administration during these trials. By the attacks of incendiaries on the line, which had interrupted their traffic, the circulation of passengers fell 50 per cent., and the receipts generally in April suffered a reduction of 100,000f. (4,000f.). Whilst the receipts were diminishing the expenses were however increasing. No less than 80,000f. per month was paid for the interest of loans and other engagements. was paid for the interest of loans and other engagements. This interest was necessarily suspended, and this the creditors agreed to when the state of affairs was fairly set before them. In fine, this was the condition of the property:—The railway was no longer anythin, but an isolated piece, without direct communication with Rouen and Paris: your working, broken up into parts, beheld each day its conditions of security and its resources diminished; a pressure from without sought to impet the men in your service to acts of disorder; the State refused you every kind of cassistance, and even what it owed you; the charge of considerable debts, and which might be demanded, weighed on your capital, and menaced to absorb it in a speedy liquida-tion; and, as if your enterprize had not been loaded with sufficient perils, the State came and aggravated them consumment perus, the state came and aggravated them considerably by its project of repurchase, or rather of taking possession of the lines. The question of the State assumption was however virtually settled, but (continues the report) when the bill for the repurchase of the railways was withdrawn by the Government the state of affairs became still more difficult, and your creditors became more exacting. But the more fact, became affairs and continues the more fact, became ing. By the mere fact, however, of your property remaining in your possession, your credit was not re-established. Your receipts did not recover themselves. The comparison xour receipts an not recover themselves. In ecomparison with the corresponding months of the preceding year presented a still increasing diminution. The falling-off was for April, 100,074f. 75c.; May, 143,404f. 85c.; June, 151,002f. 20c.; July, 193,250f.; and that disastrous diminution did not stop until the month of August, when the general state of business began to improve, and when the falling off did not any longer exceed 106,204f. 70c., and we had to meet engagements for nearly four millions payable to order, by the only and uncertain resource of five millions of bonds, which we were authorized to issue, and the 500,000£ which remained due to us from the State on the grant of 8,000,000£ What rendered this settlement still more difficult was that it could not take place singly. It was necessary to resume at the same time the payment of the interest due on our at the same time the payment of the interest due on our loans. This was nothing more than just, and was the more indispensable as, without resuming these payments, we could not offer to the holders of our engagements payable to order for a part of their debt the new bonds which we were authorized to issue. It was not until the end of last month that we were able to obtain this twofold result, which

have now the honour to submit to you. ... days and days since obtained from the Government a payment of you must on account of the 500,000f, due to us. By the aid sou,000f, on account of the 500,000f, due to us. By the aid of that sum, and a payment from your bankers, added to the bonds which we had to issue, we have liquidated a great part of your engagements payable to order; the other holders of them have granted us time to pay them, and which we shall do by means of the 200,000f, which we have

consequently cannot be included in the accounts which we have now the honour to submit to you. We only a few

which we shall do by means of the 200,000f, which we have still to receive from the State, and of other receipts. As to the payment of the interest due, we have provided for it by means of the receipts of August, which, after deducting all the expenses and charges of the working, presents a nett produce of 86,336f., and of those of September. We have settled the account of the builders of your materiel in loan bonds, conformably to the authorization given us by the general meeting. In order to provide for those different settlements, we have created 9,000 bonds of 1,000f. each, bearing interest at 6 per cent., and reimbursable in seventy-eight years by means of successive drawings, with a premium of 250f. These bonds have been accorded by your creditors of 250f. These bonds have been accepted by your creditors at the rate of 750f. The amount of this liquidation will be submitted to you in detail at the next general meeting, but

it was necessary for us to satisfy you at the present time as to the state of those liabilities, and to inform you that there is now no longer any debt standing against you. Up to the 31st of August last, for the construction and the establish-51st of August last, for the construction and the establishment of the line, the total expense may be estimated at 56,830,702f. 3c. (2,273,22hl.). The total receipts from the 1st of March to the 31st of August 1h4B amount to 1,133,372f. 95c. (45,334l.). The total of the expenditure and

charges of the working amounts to 1,349,589f. Ic. (53,983/.). The expenditure and the charges of the working in the . F.1,349,589

half-year having been ...... F. And the rec ipts, 1,129,622f. 55c., to which must be added the settlement of the last esti-

mate, amounting to 3,262f. 99c., making .. 1,132,885 54

The excess of expenses amounts to ... F.916.703 45 In this half-year your receipts have covered the 883,1086-36c, expenses of your working and have given a surplus of 244,514f. 19c, applicable to the charges of your working, that is to say, to the interest and the sinking fund of your loans and engagements to order, which amounts for this half-year to 4-4,460, 65c. (18,5796.). It is more particularly in the first four months of the half-year that your receipts have been insufficient to meet the charges of your working. Your transports of merchandise during three months and a miles, uniting the ports of Yarmouth, Ipswich and half were compelled to be confined to rare transactions

on one side a port in which all kinds of export trade had ceased; where every arrival brought merchandise, which, not finding purchasers, accumulated in the warehouses not making purchasers, accumulated in the warehouses—on the other, a great centre of industry in which all the workshops were closed. It was not until the 15th of April that the direct communication of your line with that of Rouen could be re-established, but at that period the circulation of that line was obliged to stop at Maisons, four leagues from Paris; a month later, by the re-opening of the bridge of Bezons, a little more progress was made, but still not enough to be available for the transport of merchandise. It was only on the 15th of June that the direct communication between Havre and Paris was re-established by the It was only on the 15th of June that the direct communica-tion between Havre and Paris was re-established by the completion of the bridge at Asnieres, but, at the same time the insurrection of June struck a fresh blow at all kinds of business. Only in the month of July the first improvement manifested itself in your receipts; the deficiency which for the preceding months was more than 60,000 f. a month, and the preceding months was more than 60,000f. a month, and had in April even reached 85,371f. 74c., was reduced in July 29,937f. 6c., and in August you obtained, after payment of all charges and expenses, a nett profit of 86,336f., that improvement has been since that time k-pt up. We have now to lay before you the comparative account of the receipts and expenditure in the two corresponding periods of 1847 and 1848. In order to establish an exact comparison between those two accounts, we have been obliged to bring them up to a uniform period. The corresponding account of 1847 only comprises five months and ten days. It was only from the month of April that your railway was open for the transport of merchandise. In order usefully to compare the results of the term which has just expired with for the transport of inerchandise. In order usefully to compare the results of the term which has just expired with those of the period of 1847, we have taken the month of April for the common starting point of our comparison. He results from a comparison that during the period of 1848 the receipts have decreased 692,860f. An increase has taken place on three articles:—Special trains, 35,604f. 65c.; warehousing (heavy trains), 38f. 15c.; sundry receipts, 1,443f. The increase on special trains in this account is caused principally by the transport of troops and National Guards during the days of June; that of 1,443f. on sundry receipts proceeded from the sale of the grass cut on the slopes of the embankments of your line. From the comparison of the proceeded from the sale of the grass cut on the slopes of the embankments of your line. From the comparison of the expenditure and charges of the working, it results that the charges present in 1848 an increase or 58,888.4 &c. (2,3.32.1), and the expenses, properly so called, of the working, a nett decrease of 51,208f. 82c. (2,0.8f.). In the expenses of the working the partial augmentations bear on the personnel of the central administration for a sum of 14,36f. 29c., and on the service of the line, for 1,299f. 40c. But the expenses of your personnel, which in their cuserable present a decrease of 17,07f. 69c. are next silk increased by the personnel of of 17,97f. 66c., are partially increased by the personnel of the engineers, placed to the charge of the working since the lst of April 1848, and previously included in the expenses of the establishment. It is the same with the increase which figures for 114,346f. 24c. under the head of repairs of the line, embankments and works of art. That expense, according to the terms of the engagements entered into with the contractors of your line, remained at their charge until the 31st of March 1848. It was from that period only until the 31st of March 1848. It was from that period only that you had to provide from the resources of your working for the expense of the repairs. From the 1st of November of this year the repair of the line will, according to the terms of our engagements with the Rouen, enter into the system of mixed working. In consequence of this change, Mr. Newman, who has taken so important a part in the construction of the Rouen and Havre, will hand over his service to M. Thozot, the chief engineer of the Rouen line. rhe increase of 5,800f. 10c. for grants is explained by the extension which, for the developement of your traffic, we considered it necessary to make to the conveyances in correspondence with your line, and by the necessity to establish a service of onnibuses for crossing through Rouen, during the interruption of the direct communication of your line with that of Rouen. The increase on the insurances and on the fines and law expenses is very trifling, and that which figures under the head of taxes for a sum of 2,75%. which figures under the head of taxes for a sum of 2,750f. 80c. only acts on the period of 1847, because since the working of your line it was only in the last half-year that the taxes have been paid. This part of your expenses has, moreover, had this year to support the additional charge of the tax of 45c. In fine, the excess of 5,093f. 60c. on the general expenses of 1847 is principally composed of the charges of giving publicity occasioned by the frequent changes, which the partial and successive re-establishment of the communications between Paris and Havre has imposed on the service, and of the sums given by way of assistance to the widows and children of the employers who have died in the service of the company. As to the increase assistance to the widows and children of the children whave died in the service of the company. As to the increase of 58,838f. 4c. in the charges of your working, it represents the interest and expenses of the engagements which, at your general meeting of the 30th of September 1847, you authorized us to issue to the extent of 5,000,000f., and which on the 31st of August last amounted to 3,869,309f. 78c. The diminution of your expenses bears on eighteen articles, making together 204,281f. 22c. Several of these differences, it is true, are the natural consequence of the diminution of your traffic, and particularly the reduction of the expenses of haulage, the repair of the rolling material, and of the tenth tax; but the important savings effected on the other heads testify the exertions which we make to reduce your working expenses. To sum up, there appears, from the comparison of the two corresponding periods of 1847 and 1848, that deductions made on the one hand of the savings 1848, that deductions made on the one hand of the savings resulting from the diminution in your traffic, and on the other of the expenses of the engineers and of the repair of the line, included last year in the account of the establishment, and carried this year to that of the working, your expenses of the working, properly so called, have undergone a remarkable diminution. From the 1st of March to the 31st of August 1848, we carried 175,982 passengers, the proceeds of which amounted to 588,974f, 55c. The transport of merchandise by heavy trains gives the following results—Weight, 32,40,354 king.; proceeds, 276,13.1, 25c. In conclusion, gentlemen, your thoughts, like ours, should

be incessantly turned on what may be reserved to your enterprize in the future. When we think on all that has passed during the last eight months, we may be permitted to hope that no more such rude trials will be imposed on us; but should that be the case, you will always find us as devoted to the defence of your interests. If the improvement which has manifested itself in the two months which ment which has manifested itself in the two months which have just expired continues, your enterprise will successively resume its original conditions of working; its proceeds will suffice to pay all the charges; and the least proceeds will suffice for you to find the just remuneration for the capital you have embarked in it. Two directors go out and are to be replaced or re-elected. The members of the Board designed by lot are Mr. W. Reed and M. Dailly.

After the report had been read some conversation.

After the report had been read, some conversation ensued as to the various causes which had so seriously affected the receipts. Considering the many afflict-ing causes which had occurred to injure the line, there was a general expression of surprise that the loss had not been greater.

The out-going directors, MM. Reed and Dailly, were re-elected.

DUBLIN, DUNDRUM AND RATHFARNHAM .- Nov. 6 —Adjourned Meeting of Shareholders, Dublin.—Mr. P. Croiton in the chair.—Mr. J. Boyce said that the resolutions adopted at the last meeting had been sent to the directors and an answer received from them. He had received so many letters from parties absent from Dublin, who were anxious to attend the meeting. but could not do so from the shortness of the notice that he felt disposed to recommend a further adjournment of the meeting to Friday next, which would give those parties an opportunity either of would give those parties an opportunity etter to the proposition which had been made, namely, of paying 2l. per share upon being released from all further liability. The adjournment would also give the shareholders generally an opportunity of addressing him by letter in reference to the proposition; for the directors seemed to desire a formal intimation of the number of persons who would consent to They were anxious to have bond ride information as to the amount they could get in without resorting to proceedings against the shareholders, and if the course now suggested were taken, they would be able to come to a more satisfactory conclusion at the next meeting. If the shareholders were about to take proceedings in a court of equity, it would be necessary to be prepared with a statement of the number of persons who were willing to pay their share of the liabilities attaching to the company. It was also material that those shareholders who agreed to the proposition should address letters to him (Mr. Boyce), signifying their assent to it. He moved the adjournment of the meeting till the 10th.—Sir J. Dombrain ment of the meeting till the 10th.—Sir J. Dombrain seconded the motion.—The Chairman stated that since the last meeting he had communicated with some absent friends on the subject of the proposed arrangement, who had all written letters to him expressing their willingness either to pay the charge of 2l. per share, or to subscribe towards the defence of the shareholders.—The motion was carried.—The meeting then separated.

RAILWAYS IN CANADA.—A letter on emigration from a Mr. Stephen Vere, in Canada West, was lately read before the select committee of the House of Commons. The following passages aptly point out the necessity for railway communication. "The progress of Cana-dian improvement is slow as compared with the natural capabilities of the province; this I attribute, in the first instance, to the miserably defective state of its internal communications. The best and largest portion of the land lies idly unprofitable, contributing nothing to commerce, the spread of civilization, or the support of man. At the interior markets the prices of all articles of agricultural produce are so low, in consequence of the difficulty of transmission to the ports, that a professional farmer cannot afford to employ his capital in developing the productive-ness of the soil. The inland settlers therefore, who have been enabled, by the high rate of wages which they have earned as labourers, to purchase small freeholds, are mere squatters, employing no hired labour, consuming what they produce, amassing no capital, and contributing but little to the resources or improvement of the country, cultivating only so much of the land as they require for their support. Let a few lines of railway be constructed, with planked or macadamised roads, connecting the main lines with the surrounding country; let small piers be erected at the little straggling ports along the navigable waters, and a new era will have dawned upon Canada. The emigrants will be employed until they have acquired capital and skill enough to become good settlers. Having become settlers, they will soon become capitalists by the increased facilities of transit and the enhanced value of produce which will result from the great works at which they have themselves a misapplication of it.—Railway Property as it is, dec.

assisted. Having become capitalists, they will soon become employers of other men's labour, because they will find that that labour can be profitably employed Their produce having found its way to the ports will stimulate commerce and generate that commercial capital which will again by its reaction become the main spring of social improvement and extended civilization, and Canada will open her eager arms to embrace the thousands whom she would now reject and who from being the locusts of the old world will become the honey bees of the new. A remarkable example of what I have here ventured to anticipate may be found in the railway terminating at Buffalo, U.S. When it was commenced many people conceived that it would ruin the Erie Canal, but since its completion the traffic of the canal has been doubled. It is now literally choked with the produce of the industry of those men whom that railroad has trans ported to the western wilds; and the cultivation of the reclaimed lands, through which the railway runs, employs a much larger number of labourers than the construction of the railway."

IRISH RAILWAYS. — A correspondent writes to Herapath—"You will be amused to hear that in Ireland, where they widened their gauge (at Gen. Pasley's recommendation) for the very purpose of giving more room for the cylinders, &c. between the wheels, they are using several outside cylinder engines. have in that country, by widening the gauge, got into the expensive forms of carriage and engine of the Great Western, and with a beggarly traffic. Their trains weigh, exclusive of the engine, 40 or 50 tons, and their engines, which burn a full allowance of coke, weigh 20 tons, or with the tender 28, making the gross weight of a train 80 tons, where 40 should suffice. Now this 40 tons of extra carrying stock will be worth something like 90t. per ton, or 3,600t. per train, which requires continual repair and renewal besides the interest upon it, 20 per cent. will not be too much for this-20 per cent. on 3,600l. = 720l., or 21. per day. Say you get 40 miles of running throughout the year on each train of carriages with the engine, here is a charge of 1s. per mile per train imposed by this uncalled for widening of the Irish gauge, in carrying stock only.

IMPROVED BAILWAY CATTLE CARRIAGES .tent for a new carriage, says the Mining Journal, for the conveyance of cattle, sheep, &c. on railways, has been taken out by Mr. W. J. Cannon, of Cambridge, the object of which is to save the manure which is now wasted. The improvement in the construction of the new trucks consists in the introduction of an open floor of transverse bars, slightly ridged or reeded, to secure a sure footing, made of galvanized cast-iron, or other metal, or wood. Beneath the floor, a vessel or tank is attached to the bottom of the carriage, to receive the dung and urine that passes through the floor; and this tank is pro-vided with a sluice, by which the contents are drawn off at the end of the journey, and deposited in a proper receptacle. The ordinary trucks may be rendered suitable to the purposes of this invention by the application of an open floor above the former floor, which is to be converted into a tank, by lining it with galvanized iron, and providing it with a sluice. The patentee recommends that the trucks for cattle, sheep, swine, &c., should be divided into compart ments for holding one animal each.

WEIGHT OF LOCOMOTIVES .- Mr. Samuels has a patent for a locomotive and carriage combined, for working lines of small traffic. The whole weight of one I saw making (for the broad gauge), I am told, will not exceed 10 tons, and will be worked at a very small cost. If successful (of which there is but little doubt), it will be peculiarly adapted for branch lines. The difference in wear and tear, and maintenance of permanent way with such engines, would be enormous. 8 tons to 10 tons, in place of the ponderous engines now in use, absolutely rolling out the rails, would form an incalculable saving in the wear and tear. The destruction of rails in the manner I have mentioned is not ideal. I have lately seen rails 75 to 80 pounds to the yard, in use only six or seven years, literally crushed and destroyed by the heavy weights passing over them. However, that effect need not be wondered at, when we reflect that railways generally were constructed for and adapted to locomotives weighing from 15 to 20 tons, travelling at the rate of 25 to 40 miles an hour, whereas, the locomotives now in use vary from 20 to 35 tons and upwards, travelling 50 and often 60 miles an hour. By such an unwarrantable use of railways (a use to which they are not adapted), the wear and tear of permanent way becomes enormous (much more so than those most interested in it can conceive); and if directors were thoroughly conversant with the effects on the road, I cannot think they would sanction such

## CALEDONIAN RAILWAY.

#### SUPPLEMENTARY REPORT TO THE SHAREHOLDERS.

The Directors, in submitting the following calculations, amently recommend the shareholders to weigh well the considerations contained in the report recently issued, and to contrast the results which these tables being out with the exaggerated and fallacious statements recently promulgated, which, from whatever motives they have emanated, have no doubt damaged your property in public estimation. In leaving these tables to your unprejudiced consideration, the leaving these tables to your unprejudiced consideration, the Directors feel confident you will arrive at the conclusion that your prospects are very different from what has been represented, and that the guarantees which you are urged to throw aside form the elements of your strength. Deprived of these connexions, you lose one of the chief sources to which you should look for a remunerative return from your investment.

J. Statement of the Capital of the Caledonian Company— Guaranteed Dividends—Working Expenses—and Calcu-lations showing the Weekly Revenue required to pro-duce Dividends of 4, 5, 6 and 7 per cent. on the ordinary Share Capital.

1. Abstract of the Cavital of the Company.

The total amount of capital authorized to be raised by the company for the construction of the main line and branches which are already in operation or in course of construction, including working plant, will, when the whole is paid up, consist of the following sums:

1. Loan capital ... £1,030,200

1. Loan capital ... £1,030,200
2. Preference share capital, bearing 7 per cent.
for five years and 6 per cent. thereafter... 745,180
3. Ordinary share capital ... 2,687,950

## Capital when the whole is paid up £4,463,330

The above is the capital required for the main line from Carlisle to Edinburgh, Glasgow and the north of Scotland, including the connexions with the lines west of Glasgow, the Buchanan-street station, and improvements on the Garnkirk and Wishaw lines, and which will be sufficient for their construction, and for the plant necessary to work

The Acts authorizing the share capital contain powers to raise an additional sum of 200,000% on loan, but it has not been found necessary to take authority to exercise these

9 Guaranteed Lines. The following is a list of these lines:-

	Miles	Capital	Rate of Divi- dend	Amount of Divi- dend
		£	Per cent.	£
Clydesdale Junction	17	450,000	6	27,000
Wishaw and Coltness	13	240,000	101	25,200
Glasgow, Garnkirk and Coatbridge	11	156,355	8	12,508
Glasgow, Paisley and }	22	{ 150,000 500,000	5 4 }	27,500
Loan capital of Wi- shaw, Garnkirk and Greenock Companies		250,000	_	12,500
	63	1,746,355		104,708

N.B. The rate of dividend payable on 150,000. of the Greenock Company's capital is 6 per cent. till November 1853, and thereafter 5 per cent.

3. Working Expenses.	
The length of the Caledonian line is:-	Miles.
From Carlisle to Carstairs Junction	724
Edinburgh branch	271
Branch from Carstairs to Junction with Wishaw line	12
Castlecary branch	10
Short branches connecting the Clydesdale Junction with the Greenock and Ayrshire lines, the Castle-cary branch with the Garnkirk, and the Garnkirk	
extension into Glasgow	4
Total Caledonian proper Add length of subsidiary lines worked by Caledonian	127

Company, on which guaranteed dividends are payable as above

.. 190 Total mileage

The expense of working the Caledonian Railway has not yet been sufficiently tested by experience; and until the line has been open for a year longer, so as to bring all its arrangements and connexions into a complete and permanent condition, it must be impossible to calculate the amount with absolute precision. The actual cost of working the lines now open in the districts which lie nearest and bear the greatest resemblance to those traversed by the Caledonian—namely, the Lancaster and Carlisle, the Glasgow, Paisley, Kimarnock and Ayr, and the North British, as given in their last published statements, are at the fol-

	Lancaster and Carlisle	Glasgow and Ayr	North British	Average	
Total per mile per annum	£.	£. 848	£. 668	£. s. 712 0	
Expenses per mile }	12	16	13	13 14	

If the results of the experience on these lines may be taken as applicable to the Caledonian Railway, 144 per

mile per week, or 728l, per mile per annum, amounting, for 190 miles, to 138,320l, will be sufficient to work the amount of traffic indicated in the following table, as yielding dividends of 4 and 5 per cent. From the amount of mileage which the Caledonian Company will work under one management, and the peculiar character of the traffic, passing as it does to a great extent over a long mileage, it is probable that the above sum of 138,320l, may ultimately, when all the works are finished, prove sufficient to work even a larger amount of traffic; but in order to provide for an increase beyond 5 per cent., the working expenses are estated below as 15l, per mile when the nett return reaches 6 per cent., and 16l. per mile when it reaches 7 per cent.

4. Table showing the Weekly Resenue required to produce Dividends of 4, 5, 6 and 7 per cent. on the ordinary Share Capital.

Weekly Revenue	Total Revenue per Annum	Working Expenses	Interest on Loans, Guaranteed Dividends and Preference Shares	Remaining for Dividend on Ordinary Share Capital	Rate per Cent. of Dividend
£. 8,592 9,109 9,816 10,523	£. 446,784 473,668 510,432 547,196	£. 138,320 138,320 148,200 158,080	£ 200,928 200,928 200,928 200,928	£. 107,536 134,420 161,304 188,188	4 5 6 7

The present weekly revenue derived from the Caledonian and the guaranteed lines above mentioned, situated to the south of Castlecary, taking into account the carriage of mails, rent of extra land, and other items not included in the published returns, may be stated at

turns, may be stated at The weekly revenue of the Glasgow, Paisley and Greenock Railway averages fully 1,0002, but on the opening of its connexion with the Clydesdale is estimated at

And the Clydesdale Junction, now nearly ready for being opened, is estimated to produce at least

792

> Amount as above £8.592

It will be seen from the above table that an increase of 517l. per week over this sum of 8,592l, will add 1 per cent. of dividend. Therefore—
To produce 5 per cent., the increase over the revenue of 7,800l. above given will be £1,369
To produce 6 per cent., the increase over 7,800l. will be 2,016

will be
To produce 7 per cent, the increase over 7,800%. will be

The Directors trust that these estimates and figures may be of use in enabling the shareholders to form an opinion as to the future prospects of their property, and as to the expectation that the return will exhibit an increase corresponding with the experience of railway undertakings

generally.

In framing the above tables, the preference share capital is taken at 6 per cent., that rate forming the permanent charge against the company. On the other hand, the loans are stated overhead at 5 per cent., while some of the money is borrowed at a lower rate; and it is probable that the high rate of 5 per cent. interest will not be permanent.

The Glasgow, Barrhead and Neilston Railway is not embraced in these tables, as it could not be properly classified with the above guaranteed lines, nor with the northern lines referred to below. In any view the transaction is of small amount, and the loss, if any, cannot be of material importance, or such as to affect the general result of the calculations now submitted. The guarantee to the Barrhead was undertaken entirely with a protective object. The Directors do not anticipate a profit out of it, but the security it affords to your interest is of considerable value and importance. and importance.

M. Statement of Liabilities under proposed Arrangements with Scottish Central, Scottish Midland Junction, and Dundee and Perth and Aberdeen Junction Railways.

	Miles.	Capital guaranteed.	Guaranteed Dividend.	Proportion of Dividend guaranteed by Caledonian Company.
Scottish Central	4.5	£. 1,020,000	£. 71,400	£. 17,850
Scottish Midland }	33	500,000	30,000	22,500
Dundee, Perth & ) AberdeenJunc.	47	530,000	42,400	31,800
	125	2,050,000	143,800	72,150

This table shows that the liability of the Caledonian in connexion with these lines amounts to 72,150L, even on the supposition that they earn nothing beyond their working expenses and the interests of their loans.

ing expenses and the interests of their loans.

The Directors, in their report recently issued, have explained the grounds of their belief—that the receipts of these lines, when properly developed, will be sufficient to cover their expenses and guarantees, so that no pecuniary loss will ultimately fall upon the Caledonian. It should be borne in mind also that the connexions with these lines have been formed more with a view of protecting the traffic

of the Caledonian, which might otherwise be diverted from it, than from any direct profit to arise out of the lines them-

selves.

For example, suppose the Scottish Central to produce only sufficient to pay 5 per cent. instead of 7, as guaranteed, the loss to the Caledonian. assuming the through traffic to be equally distributed amongst the Caledonian and Southern Companies, would be one-fourth of the deficiency of 20,4004., or 5,1002. per annum, equal to 992. per week; but the gain to the Caledonian, on passengers only, between Castlecary and Glasgow (which would be diverted from it without the established connexion) is already, on the average of several weeks, 1502. The Dundee and Perth is earning a dividend of nearly 7 per cent., as an isolated line, with scarcely any goods trade, and absolutely no mineral trade. Suppose its dividend to continue 1 per cent. below the guarantee of 8 per cent., the loss to the Caledonian would be three-fourths of the deficiency of 5,000%, or 3,7502—equal to 722, per week. The goods alone which pass between Dundee and Liverpool and Manchester, and the transport of which over the whole length of the Caledonian will be secured by the connexion, would cover the loss many times told. Besides the large trade of Dundee with Liverpool, Manchester and the West of England, it carries on a goods traffic of scarcely less importance with Glasgow and Greenock, the whole of which, according to the proposed arrangement, will pass along the Caledonian Company's lines. Should this arrangement not be carried out, this traffic will probably be in a great measure abstracted. In Dundee, as well as in all the towns in the north, there is a large demand for gas coal and iron, and a very limited supply. These materials abound on the Caledonian line, and it is highly important to secure a market for them.

The Scottish Midland is too recently opened to calculate very closely what its earnings will be; but the amount of For example, suppose the Scottish Central to produce

and it is highly important to secure a market for them.

The Scottish Midland is too recently opened to calculate very closely what its earnings will be; but the amount of traffic in cattle, sheep and agricultural produce alone from the districts which it will accommodate, the transport of which to the South is secured to the Caledonian by the proposed connexion, is sufficient of itself to cover any loss arising from a short-coming of the dividend earned on the line. The Scottish Midland, moreover, commands three entrances to different parts of the Highlands, Dunkeld, Blairgowrie and Forfar, and thus secures a large passenger traffic from the South. The proposed arrangement with that line will prevent the traffic from being diverted in its course south of Perth.

When, in addition to the portion of traffic already men-

course south of Perth.

When, in addition to the portion of traffic already mentioned, we take into consideration the trade of Arbroath, Montrose, Perth, Aberdeen, Inverness, and the whole of Scotland north of the Forth, with England and the south-west of Scotland, and the increase of the whole traffic which the improved accommodation afforded by the allied companies will occasion, it must be evident that the certain gain to the Caledonian Company will greatly exceed any contingent loss which may be apprehended.

The whole of this traffic may be either carried over or carried away from the Caledonian, according as the concavions are maintained or abandoned, and it is thus as feeders and protectors to the Caledonian trade that these northern lines are so valuable.

III. Lines for which Powers have been obtained, but which will not be further acted on without authority from the Shareholders.

	Amount authorized by Acts.			
	By Shares.	By Loans.	Total.	
Motherwell Branch Act, 1847 Lesmahagow Branches	£. 250,000	£. 83,300	£. 333,300	
Act. 1847	550,000	183,000	733,000	
Act, 1847 Dumfriesshire & Cumber-	250,000	83,300	333,300	
land Branches Act, 1847 Edinburgh Station and Branches Act, 1847,—	<b>3</b> 00,000	100,000	400,000	
Capital £200,000 Less Preference Shares issued 79,180	120,820	66,600	187,420	
Branch across the Clyde, &c. Act, 1848	250,000	83,800	333,000	
ments Act, 1848	45,000	15,000	60,000	
	1,765,820	614,530	2,380,350	

Several of the lines authorized by these Acts pass through districts of great importance from their mineral resources, and the Lesmalingow and Motherwell branches in particular would not only form valuable focders to the parent line, but would also in themselves yield a large return for the capital necessary for their construction. After the severe ordeal, however, which has been encountered in accomplishing the opening of the Caledonian line itself, the Directors consider it out of the question to attempt to proceed with any works beyond those which are absolutely essential, and all of which are embraced by the capital already issued and borrowing powers. These branches, therefore (with the exception of a few miles of line to bring the Wilsontown coalfields into connexion with the Auchengray Station, and some of the improvements authorized by the last-mentioned Act, which are in course of execution), must of necessity be postponed till the true value of the main undertaking has been tested by experience, and the state of the times is such as to render it an object to the shareholders to authorize their construction. Several of the lines authorized by these Acts pass through their construction.

By order of the Directors,

J. J. H. JOHNSTONE, Chairman. J. W. CODDINGTON, Secretary.

Caledonian Railway-office, Edinburgh, Nov. 3, 1848.

## CALEDONIAN RAILWAY COMPANY.

At an EXTRAORDINARY GENERAL MEETING of the Shareholders of the Caledonian Railway Company, held in the Euston Hotel, London, on Friday, the 10th day of November 1848.

J. J. HOPE JOHNSTONE, Esq., Chairman of the Company, in the Chair,

The advertisement calling the Meeting having been It was resolved,

It was resolved,—
lst. That this Meeting authorizes the Directors to communicate or give over to the Edinburgh and Glasgow Railway Company an interest or share in the existing agreements with the Scottish Central Railway and Dundee and Perth and Aberdeen Junction Railway Companies, in regard to the lease and working of the said lines and to enter into such agreements and adopt such measures as may be found necessary for that purpose.

2nd. That this Meeting authorizes the Directors of this Company, along with the Edinburgh and Glasgow Railway Company, to enter into an agreement for the lease and working of the Scottish Midland Junction Railway, upon the terms stated in the Report of the Directors and to adopt such measures as may be necessary for such purpose.

J. J. H. JOHNSTONE, Chairman. J. W. CODDINGTON, Secretary.

The Chairman having left the chair,

The cordial Thanks of the Meeting were given to the Chairman for his able conduct in the chair.

J. W. CODDINGTON, Secretary.

London, Nov. 10, 1848.

ASTHMA.—Another Cure this Month of Thirtynine Years' Asthma, by

DR. LOCCCK'S PULMONIC WAPERS.

Bit.—I have suffered more than I can describe from the effects
of an asthma, which has for years rendered my days irksome and
my nights sleepless. It was brought on by cold while accompanying the retreat of Sir John Moore. I have had the nibest advice,
but nothing has given me one-tenth part of the benefit which your
Dr. LOCCCK'S WAFERS have, &c.

(Signed) WALTER ERRINGTON, late Grenadier Guards.

DR. LOCCK'S WAFERS aive instant relief and a rand cure

(Signed) WALTER ERRINGTON, late Grenadier Guarda DR. LOCOCK'S WAFERS give instant relief, and a rapid cure of Asthma, Coughs, and all Disorders of the Breath and Lungs.

To SINGERS and PUBLIC SPEAKERS they are invaluable for clearing and strengthening the voice—they have a most pleasant taste.

## YORK AND NORTH MIDLAND.

A general desire having been expressed by share-holders in railway undertakings for an explicit account of their financial position, the Directors of the York and North Midland, in compliance with that desire, beg to submit the following statement of the affairs of the company, and the extent of its liabilities in respect of the works now in progress, and the completion of such as are at present in contemplation.

The share capital of the company on which dividend is payable out of the revenue derived from the lines, comprising the whole of the consolidated stock, and the East and West Riding shares, on which the full amount is now called up, is 3,147,500L. Of this amount, however, 250,000L, being 5L per share on the East and West Riding capital, will not be entitled to dividend until next half-year. The loan

capital of the company is at present 1,023,931.

The amount expended on the lines which have been constructed or purchased up to the present time (including the sums advanced to the Hull and Selby Company to complete the lines under lease from them) is 4,290,4154. 8s. 4d.

These works being now very nearly completed, the amount to which the company will be liable in respect of them can be accurately stated; and estimates have been prepared of the works required for the extension from Burton-Salmon to Knottingley, and for that which will connect the Market Weighton line with the Hull and Bridlington line near Beverley. The Directors compute the amount which will be required for all these purposes (after deducting the value of the surplus land) at 330,000*l.*, making the gross expenditure of the company about 4,620,000l. The whole, when complete, will give to the company a total mileage of 211 miles (exclusive of the Hull and Selby lines under lease), at an average cost pe mile (after deducting the sums advanced to the Hull and Selby Company as above mentioned) of 20,000l.

The Directors having no present intention of constructing the other lines for which powers have been obtained, the arrears of calls, together with the sum which the company has yet power to raise on deben-tures, will amply supply the amount required for meeting the expenditure above mentioned.

The Directors estimate that the traffic to be de rived from these lines and the lines under lease will produce a gross annual revenue of 520,000t., being at the rate of 10,000t. per week, and that the working expenses will amount to 137,000%. The interest of debentures, including the sum which will have yet to be provided for the works before mentioned, will be be provided for the works before mentioned, will be 66,281*l*. per annum; and the annual rent of the Hull and Selby and Bridlington lines, together with the interest on debentures on those lines, is 76,572*l*. After deducting these charges, a nett income of upwards of 240,000*l*, will remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the remain applicable to divide the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form the form dends, being more than 73 per cent. on the amount of the share capital. The rate of interest at present paid on the debentures of the company is at an average of nearly 5 per cent.; but the Directors cannot anticipate that in future years it will amount to that per-centage. It may fairly be hoped that in times of ordinary prosperity the loans will be re-placed as they fall due at a rate of interest not exceeding 4 per cent.

The Directors feel the greater confidence in their

estimate of the produce of the traffic, when they compare it with the receipts of the last twelve months, during which the traffic on the lines of this company has suffered not only from the commercial distress which has generally prevailed, but also from their peculiar character, a considerable portion being in a great measure used as pleasure lines to Scar-

borough, Harrogate, Bridlington, &c.

The Directors have much pleasure in stating that they have made an arrangement with the Great Northern, by which the two companies will have mutual advantage in working the traffic of that line between York and Doncaster, when the intended Knottingley extension shall be completed; and the Directors think they are not too sanguine in expecting that a very considerable amount of new traffic, both in passengers and minerals, will be thereby secured to this company, as the traffic from the dis-tricts through which the Great Northern line passes will thus be brought to York over 21 miles of the manufactured on the branch lines.

Part of the traffic of the York and North Midland line, which was temporarily diverted to the lines on the Western coast previously to the opening of the bridges across the Tyne and Tweed, may now be expected to be regained.

opened by the arrangement for the supply of coals from the North at Hull, and for its shipmentiat that

The Directors have still a 'confident hope that it The Directors have still a 'confident hope that it will not be long before the undertaking resumes its former position with regard to remuneration to the shareholders. They would remark that an average increase of 700l. per week in the receipts, which would not necessarily involve any material increase of expenditure, would yield 1 per cent. additional on the share capital; and it affords them great satisfaction to know that the new lines, some of which were forced upon them by the competition of other parties, have placed this company beyond the possibility of sustaining injury by their traffic being diverted, as they are not aware that any line can possibly be constructed which will not tend rather to increase than diminish the business on their own lines.

The Directors have subscribed 40,000l. to the Malton and Driffield line, but they have entered into

no engagement with any other company.

The Directors, having regard to the general interests and wishes of the shareholders, do not at pre-sent propose making any calls on the Hull and Selby purchase (preference) shares. The shareholders will have observed that the sum of 300,000l. appears in the last two half-yearly statements of account as having been appropriated to the general construction account, on loan from that stock. The Directors are of opinion that the interest on this sum ought not at present to be paid out of the revenue of the company, inasmuch as a large proportion of it has been applied in providing rails and other materials for the extensions about to be made, and the remainder in the construction of lines which are not yet productive to the company, and they are confirmed in this opinion when they consider that the whole amount of interest with which the capital account of this company has hitherto been charged, is no more than 6,085l. By order, WM. GRAY, Jun., Secretary.

York, Nov. 14.

## YORK, NEWCASTLE & BERWICK.

In accordance with the wish expressed by a considerable number of the shareholders in this railway, the Directors have prepared the following statement, showing the present position of the company, and the estimate which, after careful consideration, they have formed of its present and future liabilities and prospects.

The total amount expended in the works under-taken by the company to the 1st of November £5,375,483

The estimated amount of the gross sum which will be required for the completion of the works now in progress and of the new works proposed to be executed, viz., the Washington, Kelso, Alnwick and Warkworth branches, the Tyne and Tweed Bridges, the Auckland Valley line, and the Tyne Docks, and including also the completion of the Pontop and South Shields purchase and the Sunderland Dock subscription, is

1.869.228

£7.244.711 £7,300,000 tingencies, say

It will be satisfactory to the shareholders to be informed that this amount of capital can be realized by calling up what remains unpaid on the extension shares, No. I and No. 2, and by exercising the powers of borrowing to the extent of 1,550,000t., including the existing mortgage debt, which at present amounts to no more than 722,073*l*.

When all the works shall have been completed the aggregate length of the several lines of railway in the possession of the company will be 330 miles; and the Directors calculate that the gross income they may fairly expect to derive from the whole will be not less than 1,040,000*l*. per annum, which is after the rate of 20,000l. per week.

This income will be subject to the following annual charges, viz.-

Working expenses Working expenses
Interest on borrowed capital, taken at 1,550,0002, at 44 per cent.
Rent payable to the Great North of England, including interest on their debentures

151,400 Rent payable to the Hartlepool Dock and Railway, including interest on their debentures 39.880

Total Showing a clear annual profit of 478,970L, which, after yielding a dividend of 7 per cent. per annum upon the share capital of 5,750,000l., will leave a surplus income of 76,470l.

the window was temporarily diverted to the miss on the wasterial costs previously to the opening of the idges across the Tyne and Tweed, may now be recently to be regained.

A large source of traffic has also been recently produced by the traffic upon the 270 miles of line at

present in operation, is after the rate of about 720,000. per annum or 13,846. per week. This it must be remembered is the produce of a year of severe commercial depression, during which the decrease of passenger traffic upon railways has been unprecedented. But there can be no doubt that the revival of commerce will restore that steady progressive improvement of railway traffic in all departments which has been previously experienced. In the article of coal alone the published returns show that the quantity exported from the ports of Durham and Northumberland during the last four years has in-creased after the rate of 45) per cent. in that short period. The Auckland Valley line, which the Direca rich coal-field, and the Directors confidently expect will prove in the highest degree productive. The formation of the Tyne Docks and the completion of the Sunderland Docks will afford vast facilities to the exportation of coal, and cannot fail to assist most materially in the developement of that traffic, which is now suffering considerably from the want of dock accommodation. The improvement of the general traffic of the lines by the opening of the bridges across the Tyne and Tweed has not yet had time to exhibit itself to any extent; but that it will produce a very large accession of revenue there cannot be the slightest doubt. Upon all these grounds the Directors feel great confidence in anticipating that by the time the additional 60 miles of line shall have come into operation the gross annual income will reach the amount at which they have estimated it.

It is not the intention of the Directors at present to commence any of the works for which parliamentary powers have been obtained besides those already

The proprietors are aware that out of the money raised by the calls already made upon the guaranteed stock created for completing the purchase of the Great North of England, a large sum has been passed by way of loan to the general construction account. This it is the intention of the Directors to replace; but they do not propose to make any further calls upon the guaranteed stock for some time to come. They have little doubt that when the period arrives North of England stock will be content to accept the debentures of this company at a moderate rate of interest. Presuming such debentures to be taken, the calls already made upon the guaranteed stock of this company will then come into dividend; and calculating that such dividend will be after the rate of 7 per cent., the amount of extra dividend and interest thenceforth to be paid beyond what is already charged will be about 40,000*l*. per annum; and this will be amply met by the estimated surplus income.

The Directors are happy to state that their engagements with subsidiary undertakings are of trifling amount. This company has a collateral interest in the Sunderland Dock Company, to which the shareholders authorized the Directors to subscribe. Parliamentary sanction has not yet been obtained for this subscription, in consequence of the requisite power having, from accidental circumstances, been omitted to be sought for last session, but in the ensuing session this will be remedied. Another undertaking to which the Directors propose that the company shall contribute is the Aberdeen; and they have agreed to recommend to the shareholders to subscribe for 50,000l. of the preferential stock issued by that company. The Directors think it highly expedient that this company should possess an interest in the lines on the eastern coast of Scotland, when they find competing companies using great exertions to secure the whole of the traffic north of Edinburgh.

Many of the proprietors are aware that the Directors have entered into a provisional agreement for leasing the Newcastle and Carlisle and the Maryport and Carlisle, and a considerable number have intimated their disapprobation of the measure. The Directors trust it is unnecessary for them to state that they would not embark in any new undertaking unless they were persuaded that it would prove advantageous to the company. They do not, how-ever, intend to press the acceptance of these leases upon the proprietors in opposition to their wishes, being quite prepared to take upon themselves the responsibility they have incurred on behalf of the company.

In conclusion, the Directors beg to assure the proprietors that nothing can be more satisfactory to the Board than the present position of the company, whether in reference to its traffic or to the expense of working it; and they have no hesitation in expressing their unshaken confidence in the soundness and stability of the undertaking with the management of which they are entrusted. This confidence is founded upon their experience of the steadily in-creasing traffic which every year has brought upon

the lines notwithstanding the check occasioned by the recent extraordinary commercial depression, and upon their conviction that as a railway undertaking the property is wholly unassailable—that no traffic can be abstracted from it by competing lines—and that an unfailing source of continually improving re-venue is secured to it in the inexhaustible mineral wealth of the counties of Durham and Northumberland. By order, J. CLOSE, Secretary. York, Nov. 14.

## LANCASHIRE AND YORKSHIRE.

## Statement to the Shareholders.

Statement to the Shareholders.

In compliance with the prevailing desire for authentic information on the position and liabilities of railway companies, the Directors have prepared the following statement in reference to their undertaking. The following accounts ahow the extent of the company's liabilities and expenditure under four separate heads, viz.—1. The lines opened for traffic. 2. The lines in progress. 3. The lines leased by the company. 4. The lines not yet commenced. The payments are all up to the 21st of October last. The estimated amount for completion includes a sufficient sum for additional stock for the new lines, and for the enlargement of stations on the old lines. the old lines.

(a) These amounts represent the company's contributions, the emaining capital being found by independent parties.

(a) These amounts represent the company's contributions, the remaining capital being found by independent parties.

From accounts Nos. 1 and 2, the past payments amount to 8,900,1764; leaving to be paid, fully to complete the lines opened and in progress, 2,352,8242; total, 11,223,0004; por miles of railway and 16 miles of canal; and in right of the three lines leased by the company they will have the use of 59 miles more. The total amount of expenditure on the West Riding Union lines now in progress, including the whole of the parliamentary expenses,—viz. 174,0004, will be 1,247,0004; or should the proprietors hereafter determine to make the line from Bowling to Leeds, the additional 9 miles of railway would increase that amount by 320,0004, leaving a total expenditure on the West Riding Union railways, in that event, of 1,567,0004, for about 284 miles of railway, in that event, of 1,567,0004, for about 284 miles of railway. The company's Acts authorize an expenditure of 2,666,660s on the lines in this locality. With regard to the lines classed in statement No. 4, one general observation may suffice. They will not be executed unless the proprietors should think fit to authorize them. There is one line, however, in this class—viz., that portion of the Manchester and Southport line from Pendleton to Wigan, involving an outlay of 310,0004, to the early completion of which the directors attach the tumost importance. The 74 miles of old line belonging to the company—comprising the Manchester and Leeds and Manchester and Bolton lines proper and their branches, produced, for the twelve months ending June last, 440,0004, of gross traffic, or 6,0004, per mile per annum, being more than double the average mileage traffic of all the railways in England. Some of their new lines, as the Liverpool and Bury, for instance, are not inferior in position nor in the importance of the towns served by them to the old lines.

#### FUTURE CALLS.

## Calls will be required for three purposes -

1. To pay off "Loans in anticipation of calls," subject to the provisions of Mr. Gladstone's Act of 1844, for which the remaining calls and arrears on the Manchester and Leeds 10W., 504, and 234, shares are answerable, and will be required in the amounts and at the dates following :-

	Manchester and Leeds.		
	£100	£50	£25
Now called	£. 36 6 6	£. 43 8 - 3 1	£ & 17 10
	100	50	25 0

2. To pay off mortgages capitalized in the creation of fifth shares, or so much of the same as may fail to be renewed. Upon this point there can be no certainty, but the directors wish to observe that during the last twelve months they have succeeded in renewing at least one-half of the loans from time to time falling due, and supposing the extreme case of no future renewals being obtained, the calls upon the fifths would extend over a period of five years, viz.:—1848, 20s.; 1849, 32s. 6d.; in 1850, 40s.; 1851, 50s.; 1852, 50s.; and in 1853, 27s. 6d. 1853. 27s. 6d.

In the above cases, it should be observed that the capital account of the company will not be increased, except to the extent of 15s. 5d. per share on the fifths shares, which will be applicable to new works. Should one-half of the fifths mortgages be renewed, it is estimated that a call of 20s. per annum, for the next three years, will be sufficient to cover the repayments.

 To meet future payments for works embraced in state-ments Nos. 1 and 2. From those statements it will be seen that the total amount required for the completion of lines already opened or in progress, is 2,352,8241., towards which the company will have the following resources, viz:-

Calls on Manchester, Bolton and Bury shares on Manchester and Leeds fifths, 15s. 5d. per on Manchester and Leeds Extension shares	share	£43,407 92,331
tion applicable to works in progress on Manchester and Leeds six per cent. p		377.863
shares, issued on Liverpool and Bury shares		187,662 133,420 74,060
on West Riding Union shares, proportion a to works in progress  Arrears of calls past due	 pplicat	412,976 841,000
Less calls for the above objects paid in advance		1,602,722 20,000
Balance to be raised by mortgages or otherwise		1,642,722 710,102

The mortgage powers of the company not yet exercised a more than adequate to cover the above balance.

List showing the probable amount of calls to meet the foregoing objects, which must however be taken as subject to modification from time to time by the directors:—

By order of the Directors.

£518,338

JOHN S. HERON, Secretary. Manchester, Nov. 10.

Since the accompanying statement was in the press, the directors have received the annexed report (the first) from a committee of shareholders, who have undertaken to examine into the present position of the company, which they hasten to lay before the proprietors generally without comment, assuring them, at the same time, that it will receive their careful attention, and that immediate steps will be taken to ascertain the views of those principally interested in the prosecution of the works, and the extent to which the recommendations contained in the report can be practically carried into effect. tically carried into effect.

"Manchester, Nov. 7.—Gentlemen,—We have for a con-£2,352,824 aiderable time entertained the opinion that it was the in-

Digitized by

terest of the leading railway companies to suspend the construction of all works that were not imperatively called for by the necessities of the public, or which being begun and considerably advanced would not, if completed, materially and immediately contribute to the profitable working of the original trunk lines, on which dividends have been declared. The present state of the railway and money market has greatly confirmed this opinion, and, in our judgment has made that line of conduct absolutely imperative, which before might be considered only highly expedient. We feel that this duty devolves upon the leading railway companies in general more than on any one company in particular; and from the feeling entertained and manifested, too, by many infallible signs at the last half-yearly meeting of the shareholders in the Lancashire and Yorkshire, as well as subsequently, and in which, to some extent, we participate, we have been led to consider how far its expenditure could be restrained without damage to the general interest of the concern and yet afford relief to the shareholders. We consider it a duty which we owe to you, and have great satisfaction in making the acknowledgment, that the moment we had the opportunity of intimating our opinion to some members of your Board in casual intercourse, we were assured that the directors would rejoice to give us every facility to enable us as proprietors, anxious for the advancement of the general welfare of the company, and not that of assured that the directors would rejoice to give us every facility to enable us as proprietors, anxious for the advancement of the general welfare of the company, and not that of any personal or favourite object inconsistent therewith, to arrive at an accurate knowledge of your position, both as respects the state of the accounts and of the works, whether in progress or completed, and likewise to receive our views upon any or all of these important matters. Encouraged, therefore, by the favourable reception which was so promptly and cheerfully given to our first movement, and availing ourselves of the means placed at our disposal, we have engaged in what we feel to be an arduous, though necessary duty. We have not had time to accomplish much, but have first turned our attention to the two points about which we, in common with yourselves and the public at large, naturally feel considerable solicitude. The first is whether the capital and revenue accounts have been kept perfectly distinct, so that that only has been charged to large, naturally feel considerable solicitude. The first is whether the capital and revenue accounts have been kept perfectly distinct, so that that only has been charged to capital account which belongs to the formation of the plant, and all that has been debited to revenue account which actually arises from working the plant and keeping it in a proper state and working condition. The second is, what works are not begun, or being begun, may be suspended without any material loss of income to the company, or diminution of dividend to the shareholders. With respect to the first of these subjects, we considered it of so grave and important a character as to justify us in our own view, and as we believe it will do in that of the shareholders, in recommending a competent accountant to be employed, who should be responsible to us, and assist us in drawing our own conclusions, and we have engaged such a person, and with him are prosecuting the inquiry. And in regard to the second department, from which alone we could expect any immediate relief from calls upon the shareholders, three of our number proceeded last week to examine the works of the company to the east of Manchester. On Tucsday evening, the 31st of October, we proceeded to Bradford, and on Wednesday morning examined the line and works of the Bradford contract, extending from Low Moor and connecting the Cleckheaton branch and all the other lines from Manchester and Liverpool on the west, and Wakefield and Goole on the east, with that important town and neighbourhood. We subsequently proceeded to examine the works included in the Halifax contract, which embrace the line from Low Moor to Halifax and Sowerby-bridge, and which, when completed, will make the shortest line of railway communication between the eastern and town and neighbourhood. We subsequently proceeded to examine the works included in the Halifax contract, which embrace the line from Low Moor to Halifax and Sowerly-bridge, and which, when completed, will make the shortest line of railway communication between the eastern and western termini, or the important districts of Lancashire and Yorkshire. The result of our visit to these districts, and of our examination of these works is,—keeping in view that the great desideratum of the day is to save the proprietary as much as possible from additional calls, and the directors from having recourse to the money-market for louns, on what must be unfavourable terms,—that the Bradford contract offers advantages so multifarious as to justify its completion at as early a period as the convenience of the directors and contractor will allow. We are glad to find that the object you have in view in the Bradford contract, which forms so important a link in connecting your lines together, may now be attained, and yet a considerable saving to the company's capital be secured. But in the case of the Halifax contract (involving a larger outlay of money than the Bradford contract, and not so immediately or essentially affecting the general interests of the company, our opinion is, that it ought to be put in abeyance and its works suspended, provided that the directors can make an arrangement with the contractors to their own satisfaction, and with all other parties interested in these contracts, or affected by their suspension, upon terms just and equitable. From the hasty view which we were able to take of these works, they seem to be in a safe conclusion, see think it our duty to acquaint you with them without delay. Allow us to state, in conclusion, that our visit along the line from Halifax to Wakefield and Goole inspired us with feelings of lively satisfaction at the extending prospects of the company; and that we returned to Manchester with the conviction that by restricting the expenditure of capital, and practising the stric district on the other, the Lancashire and Yorkshire Railway proprietors may reasonably expect soon to see their property greatly increased in value.—We remain, &c., J. HEALD, R. GARNETT, J. WOOD, J. C. HARTER, J. DUNCUFT."

"P.S.—We have not thought it necessary to touch upon the lines for the making of which parliamentary powers have been obtained, but which have not been begun, as we find your views have already been explained to the shareholders."

#### Literature.

Railway Rescue. By a Traveller of many Lands.
[Second Notice.]

We return to this pamphlet for the sake of some curious and not altogether sound or unsound remarks it contains on the mechanism of railways.

Is the use of the large engines of the present day sound or unsound? This seems to be the great practical question which the pamphlet proposes to argue. For our parts we must answer "no" and "yes." Large engines must be used for large trains to work them economically. In such cases one large engine is unquestionably better than three little ones cheaper and more effective; therefore, for large trains, we say-yes; large engines are essential. But are large trains themselves essential? are they better than smaller trains and more numerous? We answer again, conditionally—yes! If you have a line like the London and Birmingham, crowded with traffic, large trains are essential to safety, efficiency and economy: the traffic must be got out of the way quickly and securely; therefore large trains, and with them large engines, are best. Now for the negative:—large engines are very objection-able—chiefly because they injure the road and destroy the rails; they also, in injuring the road, damage themselves and the rest of the moving stock, which pass over the road;therefore we say-no; don't have larger engines than you are compelled to have by the amount of your traffic. In short, have as small engines as will get the traffic conveniently and with certainty out of the way.

The conclusion we reach is thus very different from our author's. Let lines burdened with large traffic have large engines, and those that are not, as light engines as will efficiently work the line.

Our author's reasoning is curious and his style quaint. The following passages may be read with interest. Defects of permanent way are thus noticed:—

are thus noticed:—
"If there be any doubt expressed as to the discrepancy of strength between the rolling-stock and the rails, a very plain answer may be found in the fact of the general renewal of rails now required. If this be not enough, let the proportions of the periphery of a locomotive driving wheel be compared with the rail beneath it. The former weighs upwards of 200lb. beneath it. The former weighs upwards of 200lb. per yard; the latter from 70lb. to 80lb. Yet the former is of an arch-form (supported by the spokes at intervals of 9 in.) while the latter is a simple straight beam, supported at intervals of 3ft., with intervals of 15ft. which invariably deflect. joints at intervals of 15ft., which invariably deflect beneath the passing load and destroy the continuity of support. To make a perfect railway, the rail bar should be of sufficient vertical depth to resist all deflection, with the heaviest load passing over it. More than this, it should be sufficiently hard to prevent lamination. And the joints of the rails should be so re-inforced as to be equally inflexible with the solid part of the rail. None of these conditions are yet attained as regards the modern class of engines, and it is a problem whether they can be attained at all. Even as there is a limit to the height of architectural structures relatively to their base, by reason of the friability of the material, so there is a limit to the weight of engines, by reason of the compressibility of iron and the impossibility of increasing surface-bearing; for whether a driving wheel be of 3 ft. or 8 ft. in diameter, the contact with the rail can only be a point, or that which geometers call a flowing point, viz., a line. Iron, according to its density, will bear a given weight without compressing, the point of bear a given weight without compressing, the point of contact being a line. When iron has done its utmost, steel may be resorted to; and, possibly, a rail of 200lb. per yard, of deep vertical section, with a surface of hard steel, 3 in. in width and three quarters of an inch in depth, supported by cross sleepers at intervals of 18 in., might be available to construct a real 'permanent way,'—for the modern engines. 'Permanent way' is at present a lucus à non lucendo. 'Permanent maintenance of way' is a practical fact, as shareholders' pockets can house in on lucendo. Permanent maintenance of way is a practical fact, as shareholders pockets can testify. You, gentlemen, will doubtless be startled at the contemplation of the outlay of capital involved in

the real permanent way before described. If you will not agree to this proposition, you must "try back." If you cannot suit the road to the wheel, you must suit the wheel to the road. Having the fear of 'no dividends' before your eyes, you must turn to the practical maxim of the Manchester and Liverpool directors of old, gathered from the experience of the road, and keep down your weights. Light horses for the high speeds. Brewers' horses for the drays. Small trains and frequent, with small station-room, few police and porters, and fewer clerks, a slight increase of drivers and stokers, and a huge decrease of platelayers, and a reduction in iron invoices, would do more for your dividends and the public accommodation than the present system of elephantine traction, with a yielding foothold—a power developed and wasted. For it must be obvious that if, after expending millions to secure 'good gradients,' a deflecting rail be laid down, it is equivalent to converting them into bad gradients."

Resistance from flexure is discussed as follows:—

"In water-transit a steamboat drives a greater or lesser wave of water before her bows. In rail-transit a slocomotive drives a wave of rail before her drivings wheels equivalent to ascending a constant incline, and demanding a far greater expenditure of steam power to surmount it. The difference in the two cases is, that it is impossible wholly to surmount, though we modify the difficulty with the steamboat, whereas in the case of the rail it is practicable to surmount the difficulty altogether by proportioning the load on the wheel to the strength of the rail. The wave line of the rails might fairly be adopted as a standard in estimating the value of a railway, for in proportion to the depth of the wave, will be, cateris paribus, the power of steam and the cost of coke. You must be aware that, to ascend a constant hill, requires more horse-power than to travel along a level. Your horse-power is steam, and the railway oat is coke. If your drivers and ostlers and road-trustees increase the consumption of oats, the coach will soon be run off the road."

The following is wrong. The longitudinal bearing is not equable, for the sleeper has a joint in it as also the rail;—these are points of greatest flexure:—

"But even wave lines vary. For example, rails laid on longitudinal timbers, as the Great Western, yield an equable wave line."

The propriety of railway companies making accurate experiments cannot be doubted, and the uses are shown as follows:—

A given amount of steam-power developed should perform a certain amount of work, i. e., lift or draw a given load, after making allowance for friction. This friction should be a known quantity: Nicholas Wood will tell you that on the axles of a grindstone it is precisely 4 lb. per ton. Now, if you, gentlemen, were to cause dynamometers to be attached to your locomotives whereby to draw the trains, you would gain the knowledge how much surplus steam-power you are expending, precisely as the old coachmen understood, by the sweating of their horses, whether the coach was alive or a drag. There is a generally received opinion amongst railway authorities, that waggon traction on good rails in a still atmosphere is 8 lb. per ton. If this be so, we have here 4 lb. per ton added to Nicholas Wood's 4 lb. of axle friction, which must arise from some quarrel between the peripheries of the wheels and the rails, and conperipheries of the wheels and the rails, and consequently is capable, under favourable circumstances, of being reduced to nil. Now, it is possible that, by the application of dynamometers, you might discover the friction in some cases to be 25 lb. or more, in which case you would be tripling your consumption of steam—a patient drudge, who, unlike the horse, does not break his wind at road-work or quite drop down in harness. If comparisons be thus instituted between the power developed and the work done, it will not be difficult to hunt the sources of resistance will not be difficult to hunt the sources of resistance into a corner, whether arising from defective rails, undue gravity, or undue friction between the wheels and the rails, which ought not to be friction, but simply a rolling change of surfaces. Whether all these things are to be done by yourselves, or whe-ther all the working of railways is to fall into the hands of individual contractors, feelingly alive to pecuniary savings as the condition of their existence, precisely as was the case under the old system of transit by horses, is a problem yet to be mooted. But it is quite clear that the sheep-men amongst shareholders, who object to using steamboats or omnibuses as part of the links of transit, are of the class who ought not to work railways, but simply to own tolls, like the canal owners of former times. such case they must be content with a mere invest-

Digitized by GOGIC

ment interest a little above the public funds. But if railway directors are to work railways as a source of extra profit, they must engage in many things indirectly promoting traffic."

Bradshaw's London Railway and Conveyance Guide.

Who would have expected a new "Bradshaw"? Such, however, has just made its appearance, and seems to supply what has certainly been a desideratum (and which, we believe, others have been thinking about doing)—that is, a hand-book for the denizens of the metropolis, indicating "the hours of departure and arrival of all the trains DIRECT from the metropolis to all parts of Great Britain, and also the departures from all parts of the country to the metropolis, so arranged as to be understood at a glance. It also contains an alphabetical list of the sailing of all the steamers on and from the river and port of London,—a complete omnibus route, with the cab fares to and from the various railway stations, and to all parts of the metropolis—like-wise the London Post-office arrangements," &c. By way of illustration, there is a good Street map of London (from that of the 'Post-office Directory')-but, strange to say, wanting the MAGIC CIRCLE—which, by an accident, carries out the doctrine of compensation, for while the dwellers without are charged extra for back fares by the cabs, they are favoured by having London newspapers through the post free-the in-dwellers having to pay an extra penny for the same service.

(We have received a copy of Mr. Whitehead's 'Letter to G. C. Glyn, Esq., on Railway Management, "which shall receive our earnest attention;—and also an interesting work by the Rev. Mr. Dixon, on the "Management of Poultry,"—which will be found full of amusement and instruction for the lover of Nature.)

### Progress of Warks.

CHESTER AND HOLYHEAD .- Nov. 15 .- The final operation of lowering the second tubular bridge at Conway, for the return line to London, was accomplished. The ponderous mass of 1,300 tons was plished. Institute of the political mass of 1,500 bits was suspended on chains, hanging and swinging 2 ft. above its permanent bed, over an area of estuary of 400 ft., and 20 ft. above the Straits, for a period of ten days, during which the engineers and pilots were engaged in adjusting the bed-plates and rollers and masonry for its support. The tube was likewise lengthened 12 ft., by the addition of 6 ft. of similar tube to each end of the mass so raised, this additional length alone weighing upwards of 60 tons. Under the direction of Mr. Stephenson, Capt. Claxton and Mr. E. Clarke, the whole bridge, with its permanent way for the passage of the trains, complete and ready for use, was then gradually lowered by means of the hydraulic presses, which raised it on to a bed of red and white lead, spread over the creosoted timber, which equalized the weight on the cast-iron bedplates and rollers, to allow for the constantly varying length of the tube from changes of temperature. The tube is now in use for the transit of the trains.

EAST AND WEST YORKSHIRE JUNCTION.—This line opened on the 30th ult., is about 15 miles in length, forming a junction with the York and Newcastle about 2 miles from Knaresborough. Leaving Knaresborough, says the Yorkshire Gazette, the line takes its course to Flaxby, 2 miles distant, which it leaves about 200 yards to the left. It then extends to the New Inn, on the great North-road between Wetherby and Boroughbridge, about a mile from Lord Stourton's seat, passing through his lordship's property, and also through the estate of Mr. J. Dent, the chairman of the company. It then leaves Hopperton half a mile to the left, and after passing Cattle-street (an old Roman road) approaches Kirk Hammerton, about 300 yards on the right, and Green Hammerton about half a mile on the left. The river Nidd is then crossed by means of an iron skew-bridge, and the line afterwards extends about 8 miles through a fertile country, joining the North line as we have already stated. This line throughout its entire course is within a mile of the York and Knaresborough turnpike-road, and was commenced in November 1846, but owing to circumstances with which the public are pretty well acquainted, the opening has been delayed until the present week.

impracticable to present it in the usual weekly form in the traffic list with the other lines. This will be done in the course of a week or two. It has been a subject-matter of remark that since the opening the receipts of the York and North Midland have fallen off, owing to the fact of the Great Northern line presenting with the Lincolnshire lines to Hull a shorter route of transit over any that pre-existed, though it is thought probable that much of this falling off may be attributed to the general decrease in travelling, arising from commercial depression. The new line has already proved itself of great advantage to the agriculturists of Lincoln as well as to the fishing trade of Hull. 1 cwt. of fish may now be taken from Hull to London in eight or nine hours for the sum of 2s. 6d.—(Grantham).—The preparations, says the Lincoln Mercury, for commencing the line are actively proceeding in this neighbourhood.

GREAT SOUTHERN AND WESTERN (I.) .- The Board have at last decided to open the line to Buttevant in January and to Mallow in March. The works at the January and to Mallow in Marcu. And Cork terminus have been suspended until spring.

LIVERPOOL, BOLTON AND BURY.—Nov. 11.—The line, which will be opened for traffic on the 20th, was inspected by Capt. Wynne, the Government Inspector. The Liverpool Mercury furnishes the following particulars:—The works were commenced in January 1846, and the line has thus been com-pleted within three years, notwithstanding the delay occasioned by the stoppage of the works last winter, in consequence of the panic in railway property. A double set of rails has been laid the whole way, and the estimated cost of the line is 900,000l., including the expense of the land. By this opening the whole of the goods and passenger traffic from Yorkshire, and the whole of the coal traffic from Bolton, Wigan and that district will be diverted from the Liverpool and Manchester, to secure which more effectually an and Manchester, to secure which more electrary an amalgamation has taken place with the Lancashire and Yorkshire. Coal-pits are being opened up along the whole of this new line, and there is every prospect of an immense traffic. The line passes over twenty-six bridges, and forty-eight bridges cross the road. There are six viaducts on the line, two of wood, two lattice of iron, one of brick and one of stone. A considerable portion of the line is horizontal, and the greatest incline is only 1 in 94. There are twenty cuttings, the deepest of which is 48 ft., and twenty-two embankments, the greatest height of any of them being 44 ft. The train, with the Inspector, started from Bury about 11 a.m. The first object of interest is the large stone viaduct over the Irwell. It consists of five skew arches, 72 ft. span each, and is a very fine piece of workmanship. The next remarkable work is the large viaduct at Darcy Lever. This is of a peculiar construction, being made of wrought iron, on the lattice principle. There are eight arches, of 84 ft. span, and they stand 90 ft. high from the bottom of the river. On entering Wigan the line passes over a large timber viaduct 200 yards long. Several of the bridges on this yards long. portion of the line are on the tubular principle. The sleepers are prepared by machinery, and a groove is cut in them in which to put the rails. This acts as a preventive for their getting out of gauge, and as a further precaution, at each of the joints the rails are secured to the sleepers by four fang-bolts. 13th Capt. Wynne passed over the line from Liverpool to Wigan. The line enters the town at the north end, over a viaduct of 117 arches; and as it is intended that the principal station shall be erected in Tithebarn-street, the viaduct will have to be extended into the centre of the town. The first duty of Capt. Wynne was closely to inspect the whole of the arches supporting the viaduct. This he did in company with the engineers. Opposite the Stanley Dock the line crosses the dock-work. All the arches are constructed with brick and cement, with the exception of those which cross streets, and for these dressed stone has been used. After passing the viaduct the next object of interest is the bridge across the Leeds and Liverpool Canal. It is 65 ft. span; is constructed of wood, iron and stone, and is of a very peculiar construction. The next point reached is the Walton tunnel, which is 1,140 yards in length. It is cut through sandstone, rock and clay, and is thoroughly dry. Across the river Alt a very fine stone bridge has been thrown, 40 ft. in span, and 45 ft. in height. In approaching Upholland there is a long excavation, 45 ft. in depth, cut through rock and coal measures. Here there is another tunnel, 960 yards in length, also cut through the same material. The heaviest cutting on the line is from Rainford to Pemberton, and the highest bank is that at Wigan. Before entering Wigan on this side, there is a viaduct of forty-five arches, of 30 ft. GREAT NORTHERN.—Since its opening the traffic has worked with great regularity, although, from the intricate character of the returns, it has been found Leeds and Liverpool Canal, and the other of 60 ft.,

which crosses the turnpike-road. The train reached Wigan about 2 p.m. Capt. Wynne expressed himself entirely satisfied with the line. The workmanship along the whole distance is considered to be of firstalong the whole distance is considered to be of first-rate description—quite a pattern in its way. The saving in the distance to Wigan is about 5 miles, and in going from Wigan to Bolton the distance will now be accomplished in about 15 minutes, but previous to the opening of this line Bolton could not be reached under two hours.

LIVERPOOL, ORMSKIRK AND PRESTON.-The works on this line have been very much retarded during the last few weeks, owing to the frequent slipping of the embankment at Rufford. One part of the embankment, says the Preston Chronicle, has slipped three or four times at the same place as often as it has been filled up again. Only one side has given way, which appears to be owing to the soil having been moved from that side to form the embankment.

NORTH-WESTERN.—A further extension of two miles, running from Skipton, and uniting the Leeds and Bradford with the Lancaster and Carlisle, has just been opened. The works on the branch to Poulton are proceeding actively. The part just opened

gives access to large slate quarries.

South Yorkshire.—The works are being proceeded with very rapidly and satisfactorily in the neighbourhood of Conisborough and Levit Hagg especially. At the latter place, says the Sheffield Times, the work is extremely heavy and tedious, the massive rock being blasted and cut to the immense depth of upwards of 70 ft. A singular occurrence has taken place in the formation of this line near to Warmsworth church, where it crosses a valley parallel with the river Don, at a distance of nearly 100 yards. An embankment is here raised 30 ft. or 40 ft. high. The weight of this material is so immense that the land has given way, and pressed the river bank 2 or 3 yards further into the water. Thus it is somewhat of an obstruction to the river traffic.

#### Accidents.

EAST LANCASHIRE.—Nov. 14.—As the passenger train, due at Bury at 11 10 a.m., was going through the tunnel at Summerseat, about four miles from Bury, the front wheels of a first-class carriage broke. The engine dragged the broken carriage after it until the train had got out of the tunnel, when the passengers succeeded in making the engineer aware of what had happened, and he stopped the train. None of the passengers were seriously hurt, and only two of the carriages sustained any damage. The train consisted of two first, two second and two third-class carriages, and the occupants of the first and secondclass carriages had to ride to Bury in the third-class carriages and on the tender. The train was delayed at Summerseat about a quarter of an hour, after which it proceeded to Bury, where several carriages were attached, and it reached the Salford station at 12 7 p.m. instead of 11 37 p.m., the proper time.

## Law and Bolice.

Nov. 11.-In the VICE-CHANCELLOR'S COURT, in re Cridland ▼. Lord de Mauley, this case came before the Court upon two motions—the one for expunging certain amendments made in the bill in August, the other for leave to make certain further amendments. The defendant represented the directors of the Bridgewater and Minehead. The plaintiffs were three shareholders, who sought to recover their deposits, the project being represented as having turned out a failure.—The Court declined interfering with the amendments as they already stood, and directed the costs to be costs in the cause.

Nov. 14.—In the Ball Court, in re the Queen v. the Manchester and Southport, counsel moved for a rule to show cause why a mandamus should not issue, commanding the defendants to make a temporary road, or a new and permanent road, in lieu of the one interfered with by the works of the line. The parties on whose behalf the present application was made were owners in fee of a farm in the neighbourhood, and claimed the right of free passage to and from the market town of Wigan. The usual applications had been made to the company on this subject without effect.—Rule nisi granted.
Nov. 6.—In the Court of Queen's Bench, Dublin,

in re Reid v. Sir G. Preston, chairman of the Dublin, Dundrum and Rathfarnham, counsel moved for an arrest of judgment. It was an action in which a writer for 4,000l. had been given against the defendants, on a deed which they had entered into while seeking for an Act of Parliament authorizing the construction of a line from Dublin to Rathfarnham or Dundrum .- Counsel submitted that the

Digitized by GOOGIC

perfectly entitled to do, the provisional registration of the company having already taken place. From the beginning to the end of the deed there was not a single covenant for the defendants themselves; every agreement was for and on behalf of the intended company.—Mr. Justice Crampton: What is the legal meaning of the covenant —Mr. Fitzgibbon: It binds the company, my lord, being an agreement made between the plaintiff and the defendants, for and on behalf of the company.—Mr. Justice Perrin: Will you show that it binds the company at law?—Mr. Fitzgibbon: I think it does; the 7 & 8 Vict. c. 110, s. 23, enacts that the provisional registration of any joint stock company having taken place, it shall be lawful for the promoters thereof to assume the name of the intended company, but for the performance of such acts only as are necessary for its constitution or incorporation.—Chief Justice: You are badly advised to take a writ of error in this case; we shall make no rule upon the present motion.

WATERFORD AND LIMERICK.—At the Limerick Petty Sessions, J. Webster, the driver of the engine that ran into a mail train, and destroyed a carriage and luggage van, was convicted, at the instance of the directors, of neglect of duty, and fined in a penalty

of 101., or two months' imprisonment.

RAILWAY BILLS FOR THE SESSION OF 1849.

The following companies have given notice of their intention to apply to Parliament during the ensuing session for various powers, stated under their several heads :-

Ambergate, Nottingham and Boston and Eastern Junc-TION: Amendment of Acts—Relinquishment of portions of line, and powers to transfer undertaking to other companies

BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNCTION: To abandon portions of the present line—Powers to extend the line to the London and North-Western at Birken-head—Alterations of levels of Chester branch—Extension of time for purchase of land and for completing works-Powers to alter tolls and decrease capital, and to amend Acts—Power to sell or lease to the London and North-Western, to the Chester and Holyhead, or the Shrewsbury and Chester, or to amalgamate therewith, and to enable

the two latter companies to take shares.

CALEDONIAN: Powers to lease or purchase the Scottish Central, in conjunction with the London and North-Western and the Lancaster and Carlisle.

East Anglian: Extension of time for purchase of land and for constructing lines.

Eastern Counties: To amalgamate with the Norfolk, and

amendment and consolidation of Acts. EASTERN UNION: Power to amalgamate with the Eastern

Counties. East Indian : Powers to make one or more lines in the East

EDINBURGH AND GLASGOW: Powers to enable the company

to lease, purchase or amalgamate with the Wilsontown, Morningside and Coltness lines. Edinburgh and Northern: Purchase of shares in the Stirling and Dunfermline and Aberdeen, and confirming powers in relation thereto.

ELY AND HUNTINGDON: Extension of time for completing

GREAT NORTHERN: Powers to amend previous Acts-en-

largements at and near Boston, Bentley and Lincoln.
GREAT WESTERN: To construct a branch from the Windsor
line of the Great Western to the Windsor, Staines and
South-Western at Datchet—Powers to amalgamate with the London and North-Western and London and South-Western.

LANCASTER AND CARLISLE: Powers to lease or purchase the Scottish Central—Line to Preston and Wyre, with branch to Glasson Dock, and amendment of Acts.

vious alter tolls-Power to form a junction with the East Lancashire at Preston.

ANCASHIRE AND YORKSHIRE: Extension of Ashton and Clifton branches, and abandonment of part of the latter— Extension of time for purchase of land—Regulation of capital and amendment of Acts.

— and London and North-Western: Transfer of interest

with Preston and Wyre, &c., and regulating management

of undertaking.

LEEDS AND THIRSE: Powers to guarantee interest on certain shares, and for increasing the capital.

LLYNYI VALLEY: Alterations and enlargement of powers

Extension of time for constructing line LONDON AND BLACKWALL: Amendment, and extension of time.

+ The secretary of the Eastern Counties has announced that this notice was given without the sanction of the Easern Counties' Board, no negotiations having taken place.

LONDON AND NORTH-WESTREN: To lease or purchase the Scottish Central, in conjunction with the Lancaster and Carlisle and Edinburgh and Glasgow and Caledonian—To repeal former Acts—To amalgamate with the Great Western and London and South-Western.

LONDON AND SOUTH-WESTERN: Powers to enable this com-

pany to amalgamate with the London and North-Western and Great Western.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE: Consolidation

MANUFACTURE AND CARLISLE: Powers to lease, or sell to, or amalgamate this undertaking with the York, Newcastle

NORTHERN COUNTIES UNION: Powers to abandon the under-

taking. ORTH STAFFORDSHIRE: Arrangement with Staffordshire

Potteries—Water-works, and amendment of Acts.

RRADING, GUILDFORD AND REIGATE: Brauch to South-Western—Extension to Great Western, and Berks and Hants.

SHREWSBURY AND BIRMINGHAM: Amendments of previous

SHERWSBERT AND CHESTER: For branches to the river Dee
—Agreement for joint station at Shrewsbury—Power to
subscribe to the Shrewsbury and Hereford.

SOUTH-EASTERN: Removal of restriction against opening
the Tunbridge-Wells and Hastings, and Ashford and
Hastings—Compulsary powers for purchasing land—Al-

the Tunbridge-Wells and Hastings, and Ashford and Hastings—Compulsory powers for purchasing land—Alterations of roads and levels—Steamboats.

STOCKTON AND DABLINGTON: To amalgamate the line with the York, Newcastle and Berwick—Powers to alter the present line at Eaglescliffe and Stockton-on-Tees—To consolidate Acts—To increase capital—To lease or purchase the Middlesborough Docks.

WILDONTOWN, MORNINGSIDE AND COLTNESS: Lease to Edinburgh and Glasgow line.

WINISOR, STAIRES AND SOUTH-WESTERN (Windsor Extension): Powers to allow the London and South-Western to

sion): Powers to allow the London and South-Western to subscribe capital towards the undertaking. YORK AND NORTH MIDLAND (Deviations): Abandonment of

several lines for which the company have powers, namely, between Market Weighton and Beverley, and Copmanthorpe and Tadcaster.
YORK, NEWCASTLE AND BERWICK: Powers to enable this

onk, NewCastle and diskingth towards the construction of Sunderland Docks—To purchase or lease the Newcastle-upon-Tyne and Carlisle—To amalgamate the Mayport and Carlisle—Branch to quays at Newcastle—Branch to Barmouth and Alnmouth—Extension of time for making Newt Tibel and Maken benefit Blyth, Thirsk and Malton branches.

* For account, Nov. 14 and Dec. 12.

London Stock Exchange, Nov. 17 .- The sharemarket has been active during the week, and considerable business has been transacted. The Great Northern Company having come to a favourable understanding with the York and North Midland Company, the price of the former has improved, as it is thought it will be the commencement of an arrangement with all the north-eastern lines. The following ment with all the north-eastern lines. The following are the latest transactions in foreign lines:—Boulogne and Amiens, 5\(\frac{1}{6}\), ex coupons; Luxembourg, \(\frac{3}{6}\); Namur and Liége, \(\frac{4}{6}\); Orleans and Bordeaux, 1\(\frac{1}{6}\); Sambre and Meusc, 2\(\frac{3}{6}\).

Liverpool, Nov. 16.—Prices have fluctuated to some extent this week: the market has not been so firm during the last four days and to days along without the second content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the co

some extent this week: the market has not been so firm during the last few days, and to-day closes rather heavy, more perhaps in feeling than in price. We quote—Caledonian, preference, § dis.; Lancashire and Yorkshire, fifths, 4½ dis.; London and North-Western, 117; ditto, new quarters, § prem.; ditto, fifths, 3½ prem.; Manchester, Sheffield and Lincolnshire, eighths, 7½ dis.; ditto, preference, 9½; Midland, 82; ditto, halves, 9½ dis.; North Staffords, 6½; South-Eastern, No. 4, 6l. 16s. 3d.

Suddow, Brothers.

Sublow, Brothers. Manchester, Nov. 16 .- We have had but a moderate amount of business doing in our share-market during the past week, although there has been a fair demand for good stocks. Prices are without much alteration. for good stocks. Prices are without much alteration. We close this evening rather in favour of buyers. Actual transactions this day:—Caledonian, preference, § dis.; Lancashire and Yorkshire, fifths, 4½ dis.; ditto, West Riding, 5½ dis.; ditto, preference, 6 per cent., 1½ prem.; London and North-Western, 117; ditto, new quarters, ½ prem.; Manchester, Sheffield and Lincolushire, Grimsby Docks, 15½ dis.; North Staffords, ½ dis.; South-Eastern, No. 4, 6½; York, Newcastle and Berwick Extension, No. 2, ½ dis.

**Rismingham. Nov. 16.—This market has been very

Birmingham, Nov. 16.—This market has been very heavy throughout the week. The chief business has been in North Staffords, which have fluctuated between 53 and 6l. 11s. 3d. dis., at which they close to-day. Shrewsbury and Birmingham A's have been done at 7, 8 and 9 dis., and the preference shares at

1s. 3d. prem. W. BANKS.

Hull, Nov. 16.—The share-market remains steady, without much variation in price, and seems to have found its level for the present until again operated upon by external influences. Although the statements furnished by the leading companies are generally considered favourable, those parties who take a gloomy view of the aggregate amount of capital required, and which may not be deferred, are not quite satisfied. quite satisfied.

York, Nov. 16.—An unsettled and unsatisfactory feeling has shown itself in the share-market on the appearance of the printed statements of the directors of the York, Newcastle and Berwick and the York and North Midland, as to their present position and rospects. The prospectively assumed traffic is given higher, and the expenditure and payments out of re-

venue are given lower, than the present appearances of trade and the cost of working railways and the value of money would seem to warrant. The following are the latest transactions:—Great Northern, 19t. paid, 6; original York, Newcastle and Berwick, 25§; ditto, No. 2, late new Berwicks, 12§; ditto, Great North of England purchase, 6§.

GRAYSTON & EARLE.

Newcastle upon-Tyne, Nov. 16. - Purchases for

Newcastle upon-Tyne, Nov. 16.—Purchases for investing purposes have continued during the week to a moderate extent, and prices have not altered materially; Newcastle and Carlisles are doing at 97; North British at 154.—W. Fordyce. Glasgow, Nov. 16.—There has again been a good demand for shares this week, although previous quotations are scarcely maintained. The Ayr statement has caused a material fall in the price of the stock except in the 5 per cent, guaranteed, which ment has caused a material fall in the price of the stock, except in the 5 per cent. guaranteed, which continues in request. To-day's latest sales were as under:—Caledonian, preference, § dis.; Glasgow General Terminus, 9; Ayr, 46; ditto, halves, No. 1, 12§ dis.; ditto, halves, No. 2, 12§ dis.; Monkland, 63; Scottish Midland, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Scottish Grand Junction, 18; Sco BUCHANAN, AITKEN & Co. 28 dis.

IRON TRADE. - Glasgow, Nov. 10. - No improvement for pig-iron is remarkable. There is little iron offering for sale. Prices steady at 42s. 6d. for mixed numbers, cash.—The tendency to do business at lower rates has been temporarily checked by the more promising incidents of the last few days. The more promising incidents of the last few days. The revival of our South American connexion, says the correspondent of the Daily News, the reduction of bank discounts, the favourable news from the Continent, and, above all, the dissipation of much of that apprehension which had overwhelmed the affairs of our great railway companies in causeless panic, all operate beneficially upon the feeling of the trade, and assist in re-establishing a tone of confidence to its every-day transactions. But the most material draw-back, so far as Staffordshire is concerned, appears to be the formidable rivalry of the Welsh and Scotch markets. And although the article produced must be acknowledged to be inferior in quality, yet it is now so much improved that it can be substituted in a considerable proportion of those uses where Staffordshire was formerly the only material consumed. Hence the demand for the latter has become more limited, and confined to better purposes; consequently, the market is more easily glutted, and the rates obtainable must in a great measure be dependent upon the prices at which Welsh and Scotch can be brought into the same locality. These at the present moment are excessively low, and as yet without any tendency to improvement. The immediate home market of this district has, however, experienced a slight impulse during the past week, consequent upon the renewed activity of the merchants and manufacturers of hardware; and although this is insufficient to disperse the gloom through which the prospects of the winter trade have hitherto been viewed even in our own neighbourhood, yet in addition to the considerations before mentioned, and with a prospect of a better export trade early in the spring, more firmness may be expected in maintaining present rates, and a fair employment will be provided for the workmen.

## MEETINGS.

## Joint-Stock & Commercial Gazette.

The Natal Land and Emigration Society are memorializing Government for a relaxation of the

emigration regulations, in favour of their society.

At the Court of Bankruptcy, on Tuesday, in the matter of the Merchant Traders' Ship Loan and Insurance Company, there was a meeting for the proof of debts under the fiat issued in May last against the company. It will be recollected that two directors, Messrs. Winthrop and Price, were severally outlawed. They have not yet made their surrender. There was a numerous attendance of creditors on the present occasion. Mr. Bagley appeared for the assignees. Viscount Ingestre and another director were called on summonses, in order that an account of the company might be obtained from them; but they did not attend. A proof for 800l. was tendered on behalf of Messrs. Sturge. It was opposed on the ground that judgment for the amount had been given, which security had not been given up. On the other hand it was contended that the creditors could not issue execution on the effects of the company under the Joint Stock Companies Act whilst the commission was in course of prosecution, but they were not precluded from doing so on the private estates of the members composing the directory. His Honour reserved his decision. The

Digitized by GOGIC

amount of the debts proved in the course of the day was upwards of 10,000l.

Banks.

At the Birmingham Court of Bankruptcy, on Tuesday last, Messrs. Matthews, who have carried on business as bankers at Chipping Norton and Chipping Camden, came up for their last examina-tion. No opposition was offered, and the bankrupts passed. Upon winding up the estates there will be passed. Upon winding up the estates there will be 16s. to 17s. 6d. in the pound for the creditors. The deposit accounts, which formed nearly the whole of

deposit accounts, which formed hearly the whole of the debts, was about 20,000.

Letters from Hungary, to the 1st inst., speak of an intended paper issue by the Government Bank, in notes of 100 florins, the repayment of which is to be guaranteed by the State.

to be guaranteed by the State.

The following banks and other public companies in America have declared half-yearly dividends:—
Princeton Bank, N.J., 3 per cent.; Greenwich Bank, 4 per cent.; American Exchange Bank, 4 per cent.; Bank of the State of Georgia, 3 dols. per share; Commercial and Farmers' Bank of Baltimore, 4 per cent. cent.; Baltimore and Ohio Railroad Company, 31

Steam Navigation.

The annual meeting of the "Diamond" Company was held last Friday, at Gravesend; Mr. H. Warren in the chair. The receipts for passage-money, &c., together with a former balance, amounted to 23,516.6s. 10d., and after making the necessary disbursements there appeared a balance in hand of 1,558. 16s. 4d., independent of 1,000l. in the Three-and-a-Quarter per Cent. Stock. The directors observed that they had purchased shares agreeably to the desire of the proprietors, whenever they could be cancelled thereby was 3,472*l*. 10*s*. The report was adopted, and a dividend of 5 per cent. declared, Mr. Birchall was, in return for his previous services, appointed managing director, at a salary of 200*l*. a year. The directors retiring were re-elected, the business of the meeting transacted, and the share-holders separated after voting thanks to the directors. holders separated, after voting thanks to the direc-

Life Assurance.

Within the last few days a new and highly respectable company has been started, and seeks public patronage, as the "Gresham Life Assurance Society." The inducements held out to assurers embrace all the features of existing companies, and they likewise assure lives declined by other offices. Loans are likewise granted on liberal terms. The trustees of the society are Mr. Matthew Marshall and Mr. Smee, of the Bank of England, and Mr. Olding, of Messrs. Rogers, Olding & Co., the bankers.

In the Court of Chancery this week, the Cromford Canal Company, which had obtained an injunction against Messrs. Coutts, restraining them from sucing for compensation, showed cause in support of the rule. It appeared that the canal company was established by Act of Parliament, in the reign of George III., under which Act the canal was made, many years ago, since which it had been in constant working. In 1842, the defendants, who were the owners of a certain coal mine over which the canal passed, commenced working the same, but it appearing that their doing so would occasion considerable injury to the canal, the company gave notice to them of their apprehension, and stated that they should require the defendants to cease from working an acre and a half at least of the mine. The defendants thereupon claimed 2,000% by way of compensation; but conceiving that the Act under which they were established restrained the owners of any mines along the route of the canal from working them in such a manner as to injure the canal, and that they had already, by the purchase of the land required for the same, compensated the owners of such mines, the company refused to give the defendants any com-pensation. The Lord Chancellor dissolved the inpensation. junction, he considering the defendants entitled to compensation, both from the nature of the case, and the clauses in the Canal Company's Act.

Mines The half-yearly meeting of the Imperial Brazilian Mining Association was held at the London Tavern, on Thursday; Mr. Joshua Walker in the chair. The secretary, Mr. Thomas, read the report for the halfyear ending 30th of June last. The accounts showed, upon the debtor side, a total of 23,490l. 15s. 6d., consisting of a balance on statement of 31st Decemconsisting of a balance on statement of 31st December last, 5,331l. 9s. 1d.; general expenses at Gongo, Bavanal, and in London, 5,976l. 11s.; salaries, 5,562l. 15s. 2d.; expenses on account of lease of new mines and properties at Bavanal, &c., paid within the half-year, 6,138l. 1s. 9d. The credit side included 3,392l. 13s. 5d. as the proceeds from the sale of gold-dust and nalladium and 7,543l. 10s. on account of dust and palladium, and 7,543L 10s. on account of

calls; and showed a total of 11,318l. 1s. 11d., leaving a balance against the company of 12,172l. 3s. 7d. The reserve fund amounted to 41,117l. 8s. 7d., less 10,000l. of Three-and-a-Quarter per Cent. Stock, standing in the name of the trustees, sold and divided amongst the shareholders in May 1842, making 31,117l. 8s. 7d. The loans and investments in Brazil amount to 5,966l. 13s. 4d. None of the shares upon which the last two calls of 1l. and 10s. respectively remained uppaid had yet been forupon which the last two calls of It. and los. respectively remained unpaid had yet been forfeited, but the directors intended to proceed to forfeit them if they continued unpaid. The number of shares at present in arrear was 116. The company had a total of 644 persons, including the black population, in its service at Brazil, all in a state of good health and contentment; and the rate of mortality amongst them during the last sixteen years had not

Acceeded I per cent. per annum.

Proceedings are being carried on in the Court of Chancery against the Copper Miners Company by a Mr. Lord. The ground of complaint is stated to be, that the company has assets far beyond the amount of their liabilities, and are winding up their affairs under trusteeship, and are now asked to adopt a more expensive method, by having recourse to the

Court of Equity.

The share-market has been more active, and generally firmer. Dealings have been more extensive of late, and in some instances at improved quotations.

#### TO CORRESPONDENTS.

The proprietors of the Journal des Chemins de Fer have sent us by post (for which we paid 3d.) a prospectus of their journal, but neglect to send the journal itself, for which we have long subscribed!

E. M. has no remedy. The late Great Western decision

is a case in point.

E. F. W., Peterborough.—Limited to 30t. per share.

# Railway Chronicle.

LONDON, SATURDAY, NOVEMBER 18.

The new directors of the LIVERPOOL, MAN-CHESTER AND NEWCASTLE-UPON-TYNE JUNC-TION have effected a distribution of 10s. per share amongst two-thirds of the shareholders, and at their adjourned meeting announced their readiness to meet the demands of the remaining third portion. The balance of 4s. from the sum which the meetings had previously voted should be returned, is to be paid in such instalments as the Board think necessary. A deduction of 3d. per share is to be made for the expenses of the committee of negotiation.

The traffic results of the WEST FLANDERS have not altogether answered the expectations formed by the Board and their agents. The directors report that they are establishing a system of rigid economy in all departments of the line,—that their time-bills are to be admitted in the Government list,—and that they hope to induce the Government to work the line. The forfeited shares not having been taken up in sufficient numbers, a call of 5s. had been made. At the half-yearly meeting, Mr. R. Stephenson declared he should stay the legal proceedings which had been commenced on the part of his late father; and the shareholders present agreed to allow the forfeited shares to be resumed at 7s. 6d. per share, being 2s. 6d. beyond the call.

The shareholders of the KILLARNEY JUNC-

TION at the half-yearly meeting adopted the directors' report without comment. The whole expenditure during the past half-year amounted to little more than 3,000l.

From our official returns it appears that the amount of traffic for the last week, on 4,167 miles of railway, was 194,798l., thus accounted for: —89,473l. for the conveyance of passengers only, 55,903l. for the carriage of goods, and a remainder of 49,4221. for passengers and goods together, not respectively apportioned; being an increase of 24,710%. over the and to raise this large sum the means now pos-

corresponding week of last year, when the mileage was 3,309. The average earnings per mile were 471., whilst in 1847 they were 511.

HEADS OF THREE MORE OFFICIAL STATE-MENTS.

We briefly adverted last week to the general results of the OFFICIAL STATEMENTS of the London and South-Western and Great WESTERN, both of which appeared for the first time on the day of our going to press. On the Monday following the LANCASHIRE AND YORK-SHIRE published its accounts in the morning We shall, as heretofore, direct our attention, in speaking of these, to such features and conclusions only as have a marked and permanent character; presuming that the ordinary elements of these accounts will require no explanation to readers of a railway journal.

In drawing up the London and South-Western report, the care appears to have been to keep within the line of strict moderation, in estimating the costs and proceeds of those works which are included as certain elements of the financial scheme. The effect of this is to produce a less showy result than might have been made to appear by the aid of the usual arts of a financial programme; and for the moment the aspect of the accounts is decidedly a drooping one. The managers of the company will, however, reap the reward of this moderation hereafter, if they bestir themselves in the meanwhile to give the settlement now sketched all the advantage of which it may be capable; and it will be better to have promised too little now than to be blamed hereafter for exciting unfounded expectations at a time when there could be no excuse whatever for trifling with the anxieties of shareholders. In this scheme there are two points which strike us favourably. The sum borrowed is not large; and the estimate for further outlay to complete the works included in it is less than one million; whereas the company have still power to raise more than twice that amount.

In this scheme, however, the Western Extensions do not find a place; they are wholly struck off the record for the present, and laid by in the schedule of works that may or may not be resumed hereafter. The necessity of taking-with a series of lines that belong to the class of main continuations—the step which has been forced on other companies with respect to branches merely, is certainly a grave feature in this case; and it recalls what we said last year as to the disadvantages under which the bill for these schemes was promoted. For the present, it appears that the whole of the enormous expense that has been incurred in battling for the possession of these lines is to lie on the active funds of the concern, inasmuch as the them has to be adjourned sine die. This is mortifying enough. The only way of reviving this mass of capital lies in the completion and success of the works now in progress. This gives an additional motive to do them justice in all possible ways. If the concern thrives on the completion of the eight-millions scheme, there may be a fair hope of making use of its powers to go further. If not, the whole of what has been spent in gaining these powers is lost for ever, while the loss will be pressing on a capital otherwise overweighted.

The Great Western statement will seem more flourishing only to those who are unable to scrutinize such estimates as it is composed of. To practised eyes the following points will be apparent. The sum to be laid out before the programme can be fulfilled, amounts to nearly one-half of the whole capital already expended;

Digitized by GOOGIC

sessed by the company will not suffice by nearly three millions; which will have to be provided by a further creation of shares, and by new loans. Of the money already borrowed the account is not quite so precise as could be desired; but it appears from the various schedules to be nearly three millions and a half on the portion of the system described as productive; or about one-half of the share subscription on that part of the system—a proportion, we need not say, larger than ordinary.

The estimate of traffic on the lines remaining to be completed is computed from the receipt of the Great Western proper, as for its own, and of the Bristol and Exeter, as for its guaranteed lines. This calculation in both cases might be regarded as extremely sanguine, even were not there an additional circumstance in prospect which is not taken into account in any waythe reduction of rates, namely, which must be introduced on the whole system whenever the Birmingham lines are opened. Now, since the directors, while still enjoying the high tariff, have lately declared themselves compelled to stop their return-tickets, on the ground of receipts being insufficient to keep pace with their growing charges, it will be seen that this way of estimating future income is anything but sound or satisfactory. It is easy to make a statement look promising by this kind of varnish in the eyes of the ignorant; but it will not improve the prospects of the company with those that can look beneath the surface.

The list of schemes scheduled for suspension is not a very long one—the capital thus written off for the present, as far as it is stated, being something more than two millions. It may be strongly doubted whether the branches, &c. adjourned will ever be resumed hereafter, seeing what the company has on its hands already.

The Lancashire and Yorkshire statement appears to have been carefully drawn up. It is not by any means an encouraging one; whether the extent of unfinished works be considered, or the amount which must still be called from the proprietors before they can be completed. The loans in this case, too, bear a large proportion to the share capital; and more must still be borrowed to realize the estimate now drawn up-in addition to calls exceeding one million and a half in amount, of which the larger portion is to be levied in 1849. The lines in progress are now estimated to cost altogether more than four millions and a half for 77 miles -the productive part of the system having so far cost, for 125 miles, a trifle more than six millions, while the estimate for their entire completion will add some half-million more. There is, as in the other cases, a schedule of adjourned lines, the estimates for which amount to 1,777,000/.; but of some of these the directors strongly urge the prosecution. When we add that the statement is silent on the chapter of the future revenue to be produced by this outlay; and that there is an awkward-looking list of "shares not issued," "including those of doubtful ownership"—we have said all that may be needful as to this company's official report; inasmuch as it is obvious on its face that the affairs it describes will require much care and energy in the managers, considerable efforts and some patience from the proprietors, before they can be brought into that condition which all concerned in railways have now learned to regard as desirable above all things. The directors must let it be seen that they are stedfastly resolved to fulfil their part in effecting this, if they wish the shareholders to continue their aids to it without repining.

Two general observations will force themselves on all who have viewed these several reports considerately. In the first place, all the

companies find that the measures for which so much trouble has been taken and so much money spent in the last two or three years, must be dropped wherever it is still possible to drop them; and the result of the sacrifices of those years has been to give them a possession which it is necessary to throw overboard if they would continue to keep afloat. One and all have to perform the same penance; and the most acceptable feature of their statements is felt to be the striking off of those very projects the contention for which has been turning the railway world upside down. What a commentary on the general wisdom of the process!

In the next place, with respect to what is retained, the common feature is, that one and all have to come down, in consequence of their additions, to a lower scale of profit now and in prospect. After all the battle for "protection," this is the plain and pitiable result. The neighbours that have been fighting have done this for themselves and for their opponents; and nothing more. No one is any better "protected," but every one is sorely reduced in prosperity. A little further progress in the same direction, and nothing would remain for either party to "protect." The fable of the Kilkenny cats, which they have been rehearsing for the last five years, would have become an actual reality in a very few years more of the same policy. One would think some suspicion might have crossed directors' minds before now, that in a system of which nothing was certain but its immediate pressure on all, there must be some desperate error somewhere. However, they have gone upon it to the last moment, until the force of circumstances, and not the force of reasons, has compelled them to pause; and has brought forth this series of public confessions of the effect of the process on their respective concerns. The exhibition can hardly fail to produce an impression, even on bodies whom it seems to be impossible by mere strength of argument to reason out of routine. The future health or decay of the whole interest depends, we believe, on the degree to which this impression may be permanent.

In addition to the statements above noticed, those of the York and North Midland and of the York, Newcastle and Berwick have appeared later in the present week.† They will be noticed in our next number, in which we may, perhaps, be enabled to review the forthcoming report of the Midlands also.

THE AMALGAMATION SCHEME, AND HOW IT SHOULD BE DEALT WITH.

Before proceeding, as promised last week, to consider the arguments likely to be urged on behalf of the application to Parliament, it may be as well to state what is understood to be the stage of the treaty from which the power to unite hereafter is to be sought. The whole pith of the question which the proprictors will have to decide lies, as it seems to us, in this part of the transaction. The project itself is not less extraordinary in its character than enormous in extent; and has been framed, if not with absolute precipitation, at least in less time than is usually required for measures of the simplest kind. It is one, moreover, that cannot be advanced a single stage in Parliament without committing the interests concerned in it to a serious degree, which no subsequent retirement from the attempt, should the danger of prosecuting it be found too great, will completely retrieve. And it must now be seen that, however well matured, however strongly recommended by definite views of advantage, it could not pass the

† These will be found in a preceding page (802).

Legislature without incurring a series of attacks which there is scarely any object valuable enough to justify the railway interest in provoking. But if the only certain part of the affair is that the total capital to be affected exceeds thirty millions sterling, which on coming before Parliament will be exposed to attempts of which the sound has already been pretty loudly heard in the press; -if, on the other hand, there is nothing to set against these certainties beyond a conditional possibility of doing something hereafter, which would be of doubtful value if wholly unrestricted, which would be more than valueless if restrained on the only point that could justify a future union,—if such be the state of the transaction on which the proprietors have to vote, -we cannot see that their consent would be much better than a blind plunge, with the whole of this enormous property on their backs, into a mere chaos, where the good can hardly be discerned in the distance, and evils and dangers are floating around them, near, vast and threatening. They may well pause before they take such a leap as this; and insist, at all events, that it shall not be a leap in the dark:-it must be shown that demonstrable advantages are certain, - that palpable obstacles have been actually removed. -before the adoption of such a scheme as this -the mere consent to try whether any such scheme can be realized hereafter, can be made to wear any character but that of the most stupendous imprudence.

If we are rightly informed, the plan on which the application is to proceed has no such definition on the one hand as we have been describing, and on the other is limited by an implied if not a positive restriction on the very point which may be regarded as the sine qua non of any natural amalgamation. It appears to have advanced no further than to the general conclusion that some kind of union may be effected hereafter, and that in the prospect of this being brought to pass, the battles of the rival companies at the several points where their systems clash may be suspended, with a view to the promotion of mutual security and the saving of expense. We cannot learn that the negotiations have gone further than this; except in the matter of accounts, schedules of which have been exchanged,—their contents being now patent to all without any such process; and it is said that the condition of the gauge question remaining intact has been assumed from the beginning-as indeed must naturally have been the case in a treaty the authors of which are the sole partisans of the exceptional system. What the proprietors of the other concerns are to affirm would therefore seem to be pretty nearly to this effect:-that it may be possible to frame an agreement hereafter with the Great Western, on terms to be decided by treaty, or arbitration, or in some other manner, for the consolidation into one common stock of the capital of the three adjacent companies, or, if need be, of two out of the three—i. e., the London and North-Western and the Great Western:—that it may be found expedient to adopt on certain terms the liabilities and become part owners of a system which is irreconcileable with theirs, and the discrepancy of which it is not intended by the treaty to remove :- and that in the present aspect of railway affairs it is desirable to obtain at once the power of effecting this species of arrangement hereafter,-on a basis the fundamental details of which are left altogether to be laid down after the powers shall have been given by Parliament.

Now it seems to us that on the very face of such a proposal there is a defect which the proprietors cannot avoid perceiving. We are asked, they may say, to affirm the expediency

of uniting with the Great Western, on terms which are to be ascertained hereafter. Now the whole question of this expediency or its reverse is plainly one of terms; and we cannot allow it to be expedient at all, and certainly are not in a condition to say whether it may be expedient or not until the terms are known to us. The matter here is not-as we have heard it argued by some advocates of the measure-like those which it is usual to deal with in this summary manner, -as, for instance, in the case of partners intending to separate, where all are entirely agreed on the point of dissolution, and hereupon make a positive compact to carry it through, leaving the adjustment of matters of account to indifferent arbitrators, in order not to embarrass by possible differences an arrangement on the main end of which all are of the same mind. It must, on the contrary, altogether depend on the nature of this ulterior settlement whether the union shall be a benefit or an injury. We cannot in any way make up our mind on the first question without seeing a definite scheme of the results likely to ensue from our affirming it. All, indeed, that can be seen at present presses wholly in the opposite direction. The system is one that cannot be worked in concert with ours, unless the gauge is made the same as ours: and of this assimilation the plan says nothing, while it is understood to have been one of the excluded points that are not even to be touched by any future settlement. Now this being the only condition which would justify us in joining the Great Western, its exclusion will forbid any rational approval of the proposed junction. And if we are informed that not only is this point left untouched now, but that it is not to be disturbed hereafter in the settlement that is to be, we then must declare at once that no settlement with such a proviso can be expedient.

Then, passing from this point, which of itself would be decisive, we should find in the accounts now made public a conclusive reason for insisting on an express statement of the terms of amalgamation in this respect also, before we can decide whether it would or would not be expedient. We see in the Great Western statement a capital heavily burdened with loans; a deficit of capital not yet provided for on the estimates for purchases and works undertaken, even if those estimates are not exceeded; -we see that the calculations of traffic on the new lines are made on a scale taken from the best-employed parts of the lines now opened,-and while this seems to be a more than hazardous computation, we see that on the main line itself the profit from traffic is declared by the Great Western Board as insufficient to meet their dividends at the rates they have been charging hitherto, - those rates being higher than ours, and being under a parliamentary sentence of reduction at no distant period. These circumstances make it exceed-ingly necessary to know positively on what terms our capitals are to be combined, before we can be justified in declaring that any combination can be safely attempted. We see enough in the Great Western estimates to decline altogether to accept them as the basis of a settlement in which their results shall be adopted in calculating what shall be given or received, by a comparison of these results with our own,-which are more moderately estimated, and not exposed to the future operation of a reduced tariff. This is a question we cannot allow to be handed over to arbitrators hereafter; -the amount of our capital is somewhat too large to be left, on this essential point, at the mercy of the opinions of any two or three or more gentlemen whatever, who may or may not, for aught we know, take very hasty

views of a matter which is a vital one to us; and who may place more faith in the plausibilities and flourishes of a statement got up for effect than we see any reason to do. On this ground therefore we must again decline to prejudge the transfer of our capital or the adoption of our neighbour's, until we see plainly how the transaction is to be settled.

Such are the first objections that will occur to any proprietor of the railway which runs the largest risk in the amalgamation. They are not the only ones; but they are sufficient, were there no others, to forbid any consent to a parliamentary application, until they are removed in a manner the most positive and satisfactory. We shall next week review what may be urged on the other side, and endeavour to ascertain the weight of such arguments as can be advanced in favour of a provisional determination to agree, without any agreement being settled on these principal heads.

It is proper here to observe, in the meanwhile, once for all, that to the objections already stated, or to many others which must arise on considering the evident risk and apparently vague character of the proposal, it is no answer whatever to say that the bill is merely permissive; that it may be withdrawn in Parliament, if it should provoke any severities there; or that if passed, it will not be put in force until a fair arrangement shall have been found practicable, and approved of by the proprietors. The Board, in a case like this, ought not to go to Parliament at all, unless for some purpose which is already mature in its essential details—is demonstrably certain to benefit the company-is likely to be granted without more than ordinary difficulty, or without hard terms being exacted by the Legislature for its consent; and, if granted, has more than a doubtful chance of being carried into effect. If the application can be justified by proof of this character, then such proof should be distinctly and fully submitted to the proprietors, before they are asked to sanction the bill; if it cannot,—if, indeed, it be deficient in any one of the points enumerated, it is clear that the scheme is too hazardous and too unripe for the company to entertain it safely—the matter at stake being nothing less than the whole of their property, which any step whatever, in a direction that may turn out to be false, or apt to bring them within sight even of new aggressions from the State, will be sure to compromise, whatever pains may be taken to retrace it. It may be added, too, that past experience throws some doubt on the certainty of the recall being made with due promptitude, should untoward circumstances arise. have seen too many instances of measures still persisted in, in spite of unforeseen crosses, from reluctance to abandon a course once taken .to rely on the retreat being always made the instant that prudence might demand it. And let it also be remembered that the application is a joint one; and that the prime movers in it have already shown a gift of persuasion and a skill in winning over their late opponents which may well be somewhat alarming, in such a case as this, to proprietors of the London and North-Western. It is already feared by many of them that Mr. Glyn is anything but a match for Messrs. Russell and Saunders, in the art of managing joint transactions.

This, we say, is the feeling of many share-holders in the London and North-Western; and we are mistaken if the majority of them view the proposed measure with any sentiments but those of surprise and apprehension. Already these have been publicly uttered by a correspondent in the Morning Herald—(one wonders to find him there)—who gives plain and forcible reasons, as a London and North-Western share-

holder, for wishing to know why the directors can now be in such haste to marry a concern the character of which they have until lately averred to be questionable, if not utterly damaged. He insists on the necessity of an explanation of the cause of their sudden change, and of the grounds on which it can be justified, being laid before the proprietors previously to the meeting—very nearly on the same view of the question which we explained last week, and have continued to-day. It is probable that this is merely a prelude to other similar representations, private and public; which may perhaps give the directors a clearer idea than appears to have presided over their late discussions, of the very serious nature of the plan which has been brought with such extreme despatch into its present shape.

RAILWAY PROPERTY: THE CAUSES OF ITS DE-PRECIATION, AND THE REMEDY.

Experience has sufficiently proved that, legislate as you will, Englishmen will never cease to express, in the way of premium, their confidence in a new invention, or in a new and extensively applied project. When so large and beneficial an application of the power of steam and the construction of railways prevailed, and the Liverpool and Manchester, the Grand Junction, the London and Birmingham and the Great Western proved beyond doubt that these undertakings were as prosperous to the subscribers as they were convenient to the public, it is not surprising that lines of communication between other towns, of more or less importance, were devised and effected. Hence in its degree, the speculative spirit in this country, that rose to its height through 1843, 1844 and 1845. Nor is it surprising that the fever of excitement led sanguine persons too far, and that this disposition gave rise to competing lines, and lines which, had they been more maturely considered by those who embarked their property in them, would have been discovered to be calculated only to answer the professional purposes of the projectors. But when it is considered how many of these competing and inferior lines passed through the scrutiny of parliamentary committees, and received the sanction of both houses of the Legislature, the subscribers to the projects cannot fairly be censured as they have

As we before remarked, railways, as a mode both of travelling and of the transit of merchandise, are now become the rule in this country; and wherever there exist two distant points desirable for commercial interchange within these islands, between those points, sooner or later, railways will surely be constructed,—no doubt, at greatly diminished expense with respect to parliamentary litigation, the cost of land, the outlay in construction, and the cost of locomotive apparatus.

Concurrently with the origination of railways, there was another cause in operation which tended greatly to divert capital from employment in the ordinary channels of trade, and to induce its investment in objects from which, by the facilities of the share-market, persons could often realize larger profits in a given time and more readily, at pleasure, as they calculated, withdraw, in favour of others, their property invested, and renew its activity in other directions.

The depression experienced in all production and trade in the years 1839, 1840 and 1841—brought on by the action of the Bank of England, in the endcavour of its directors to conform to the monetary system as settled in 1819, and under which the gold, into which our circulating medium had become compulsorily convertible, had left the country, only to be forced back by the sudden restriction of discounts—involved a vast number of persons, if not in absolute ruin, in the loss of the profits of legitimate trade by which they had formerly benefited. This process swept away in one year from the industrious trader on the former recognized principles of business, the properly calculated and accumulated profits of several other years—disposed too many to resort to any shorter method that offered itself, and to employ in extraordinary adventure a portion of what remained to them.

The speculations thus provoked by our monetary

system were most emphatically and eloquently traced by the received monetary authority of the day, Sir Robert Peel, in the well-known speech in which that right hon, baronet introduced the Bank Charter Act, to causes altogether remote from their reality. Sir Robert did not perceive that to his own legislative system introduced in 1819 was ascribable the very tendency he professed to correct, - namely, the concentration of the power of money on objects of speculation, and the consequent withdrawal of a portion of it from ordinary manufactures;—thus mistaken and too confiding in the opinions of one man, and that an interested one, he was induced to aggravate this very tendency by the enactment of the measure of 1844. The conception of this last act of monetary legislation, in its application to the employment of industry, was about as consistent with true wisdom, as if with our present overflowing traffic along Fleet-street and Holborn, it were legislatively determined, spite of growing population and increase of vehicles, that the traffic from east to west of the capital henceforth should be confined to Fleet-street alone.

Scarcely had this Act of the Legislature passed and come into operation in the way we have described when the conductors of the most powerful daily newspaper of London perceived the glaring effects of this great social change, this "complement" of the Act of 1819, without being able to discern their cause. The real difficulty seized by the writers of the Times was, in point of fact, a manifest proof of the utter impracticability of the existing monetary system which it has, of late years, been the strenuous effort of the Times' writers to uphold—a proof undeniable of the inability of a recently "fettered" currency to express, in transfer from the banking-houses in London, the sum, amounting to about fifteen millions, which had been actually paid up by the proprietors as deposits on railways at that time before Parliament; and which, in conformity with law, had to be paid over to the Accountant-General in a given space of time.

These deposits, be it remembered, had actually been paid up, and were ready to be transferred, but under the existing system there were not bank notes available with which they could be transferred. Seeing the difficulty, and without the patience necessary to the discovery of the real cause,-to attribute no other unbecoming motive-the writers in the Times determined, if possible, to strike a deadly blow at the entire railway system, uniting sophistry the most determined with a species of power which too often currently passes as evidence of truth, these persons, regardless of the misery they were inflicting, continued from week to week to inflame the minds of their readers with a succession of fallacies as besotted and mischievous as that to which we have alluded; and at length these wrong-headed men did produce a panic, which ultimately spread to other slasses of producers,—led to the most serious losses not only among those who had invested in railways, but disabled those engaged in trade from withdrawing the portion they might require to meet the consequent extraordinary financial pressure. The issue of this wicked proceeding is seen in paralysis upon all industrial operations, and in a panic which not only destroyed the largest of our commercial houses, very nearly brought the Bank of England to a suspension of payment, spread dismay and misery among all ranks, and in fact brought into imminent jeopardy our entire social system.

Fortunately for future statesmen, the proof of this consummate folly of the Times, and of our present presiding public men, is amply recorded in the published evidence of the recent parliamentary committees on "national distress,"—to passages of which we shall hereafter more particularly refer, in treating on one or two more of the fallacies of the Times.

### Correspondence.

KAPPA

GREAT WESTERN FINANCE. To the Bristol and Exeter Shareholders.

Gentlemen, -On reading the financial statement of the Great Western, you must have felt great surprise at Mr. Secretary Saunders's unneighbourly attempt to depreciate your valuable property to a level with the Wilts, Somerset and Weymouth, and

still greater surprise at his assertion that " the Bristol and Exeter is without direct access to a port in the English Channel." Your directors, if they do their duty, will refute that assertion and show to the public that your line does possess direct access to an extensive trading port in the English Channel; for ships of large burden lie afloat at the city of Exeter, and at only about a mile distant from your Exeter station, and also that your line runs direct into the South Devon, which has termini at the English Channel ports of Teignmouth and Torquay, as well as at Plymouth and Devonport, the two finest harbours not only in the English Channel, but, all points considered, perhaps in the whole British Empire. And even the small town of Totnes probably enjoys more sea-borne and tide-water traffic than either Bridport or Weymouth. Your directors will of course inform you that they intend to reform themselves by reducing their number to nine, seven of them to be resident at or near the chief places on your line, viz., two at Bristol, two at Exeter, one at Bridgewater, another at Taunton, and the other at Yeovil, when the branch thither from Durston shall be opened. They will likewise convince you all that the goods traffic on your railway is not yet half developed; that the passenger traffic, notwithstanding the bad times, is gradually increasing; that soon after the expiration of your lease to the Great Western, on the 30th of April next, you, with your cheaply constructed and easily worked line, will receive an honest dividend of 54 per cent., in two years 64 per cent., and that in four years you will begin to receive a permanent dividend of 8 or 9 per cent. And your directors can moreover tell you, supposing the intended amalgamation of the three western companies to be effected, and the values of the North-Western, Great Western and South-Western stock to be respectively estimated at 1251., 1001. and 751., that the Bristol and Exeter with their small capital and trifling engagements is fairly entitled to reckon their stock to be worth upwards of 1251. If so much Great Western influence were not exercised on you, the Midland would soon be the lessees of your property at 6 per cent. in perpetuity. The Times naturally opposes perpetual leases and amalgamations because they sadly curtail the opportunities for share-gambling.

Nov. 13. MERCATOR.

GREAT WESTERN FINANCIAL STATEMENT.
The following summary will be found to contain
the general features of public interest of the accounts of the capital and expenditure of the Great Western, which, as the directors themselves assert, have been drawn out in a similar form to those of the London and North-Western.

The first schedule shows the capital and expenditure upon the main line and branches producing revenue. The authorized share capital is set down revenue. The authorized share capital is set down at 8,160,000*l*; of this, received in calls, 6,970,450*l*.; leaving 1,189,550*l*. to be called up. Receipts upon mortgage loans and loan notes appear to be 4,486,827*l*. Total receipts are therefore 11,457,277*l*. Total receipts are therefore 11,457,2771. The total amount expended on these lines, being 1983 miles, is 9,313,320L, and the probable additional

amount required is 130,000l. In the second schedule appears the financial state ment of the lines in course of formation,—not yet producing revenue. These are subdivided into two producing revenue. Incse are succivined into two classes, viz., 1st, Great Western lines, in length 56 miles, on which 955,923%. has been expended, and a sum of 495,000%. is still required; 2nd, lines purchased by the company, which are the Birmingham and Oxford and the Birmingham, Wolverhampton and Dadden of these the company are liable to On these the company are liable to repay, within six months after the opening of the lines, the capital subscribed, with a premium of 10t. 5s. per share. The Great Western have already paid to this account 310,116/., and are further liable for 2,666,3841.

The various subsidiary undertakings of the com-The various subsidiary undertakings of the company (by subscription, contribution or guarantee) are set forth in the third schedule. Here are five lines in course of construction, a canal and docks, and two lines not yet begun (these last two having absorbed 55,7092, will only require 22,0002, for all other liabilities). On the five lines 956,2052, have been advanced, and the amount yet to be paid is 743,6252. Of the guarantees the highest parameters is the advanced, and the amount yet to be paid is 140,0201. Of the guarantees, the highest per-centage is on the South Wales line, viz. 5 per cent. on the share capital, with half profits after five years. There are four lines guaranteed; a share in the surplus profits of each has been reserved, and the total estimated rent is 276,2107, per approximately. is 376,210l. per annum.

The fourth schedule declares the lines or portions

of lines for which powers have been obtained in which have not been commenced. diture at present incurred is 350,000% (including a estimate for existing liabilities of 80,5441.) total amount authorized to be raised is 2.6% (3) These are for the present to be abandoned. The directors have therefore excluded from their mary of liabilities the amounts which would have been applied to these undertakings if they had be persisted in.

The result, which is summed up in the fifth as last schedule, is briefly as follows:— Amount expended up to the 30th of June 1849.

Total £15.40 93 A statement here follows of the assets and cares ments. The aggregate amount of liabilities yet with provided for under the several schedules, indite the loans and loan notes in schedule I, which rhave to be paid off between the present time and 1854, is stated to be 2,768,0704. But if to its 1854, is stated to be 2,768,0704. amount be added the purchase moneys of them lines before referred to in schedule 2, the acrulabilities will be 5,434,454. The assets, of which particulars are given in the statement subject the schedules, stand at 2,616,088. Wearnington fore, at a deficiency in the capital required is company's actual engagements, to the extent of 2,818,356/. New capital must be found to meet the deficit, which it is proposed to provide partly by-New shares to be created probably in 1851 ... £240.00 Additional mortgage loans ..

The return to be anticipated, from the future traff of the entire completed schemes, upon the above capital, is of course, in a great degree, based resconjecture. The result anticipated by the drawn conjecture. The result anticipated by the direct is this: They speculate on a loss, upon the list of scribed for, of 22,100l. On the other hand to reckon on being gainers by their guarantees the extent of half the surplus profit which they are share (if any there be) with the guarantee list. They take credit, under this head, for 71,100 for the uncompleted lines in achedule? they seeked to the uncompleted lines in schedule 2, they recket and receiving, when the additional 974 miles are that added to the Great Western system, the same at the of receipts per mile, viz., 4,423l. per annun sut they have taken during the preceding twelve a upon the 186 miles already in operation. It is estimate be verified, the gross annual returns and the entire 2961 miles (without assuming at gressive increase of traffic), will be 1,310,314 for ducting from this total the working expension per cent., and making certain other deductions and distinct the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the additions, we arrive finally at the estimate of the an earnings of the entire and completed system. 883,100%, from which, again, subtracting the days on income, the interest on mortgages, &c., the stage of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the system of the s is a balance applicable to dividend of following sum will yield, upon the permanent capital, fraction more than 63 per cent. ### Anddip.

We have received another letter from Mr. [14] man on the subject of the INDIAN PENINSCIA BIT way, in which exception is taken, with his wad ability, to the conclusions we put forth his red. We are unable, however, to give up any more say to a discussion which would necessarily decimint on a wrangle, when all the material petition of troversy had been exhausted; and it appears to a that the matter row stands presty much in its troversy had been exhausted; and it spices to a that the matter now stands pretty much in the predicament. We do not find in Mr. Chapter old points so amended as to be calculated to rest or even modify our former opinions. Whele, it apprehend, now doubts that the callian raises the catter in the callian raises the catter investment. ject must be an "unsatisfactory investment. Chapman himself declared it to be; and index opinions respecting both this railway and the fact Indian appear to have become nearly uniforming of these companies have failed in presenting the less House with a share list representative of the air of capital required of capital required to be subscribed and behavior of capital required to be subscribed and behavior of the subscribed and behavior of the subscribed and behavior of the subscribed and behavior of the subscribed and very subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavior of the subscribed behavi and yet will not retire, so as to render possible to arrangements. All the concessions heretoff List by the India House have been fruitles for purest of good, and have only resulted in me emission ments, from which extrication has become more at more difficult. Now the Government can make a

stand: the railway companies have made their attempt and have failed, and we call upon the Govern-ment to clear the field, so that any arrangements may thereafter be practicable which the public interests prescribe.

The Brentford people are doubtless stimulated to open up their town by the railway accommodation which is to be afforded them by the loop line from the WINDSOR branch of the SOUTH-WESTERN. wishson branch of the South-Western. They are about to raise 10,000% for a new town-hall and market-place, to be erected on the site of the present unsightly and inconvenient buildings. It is to be carried out by shares which have been taken up by the inhabitants of the district. The works will be

commenced forthwith.

Due arrangements are being made for the working of the Bristol AND EXETER as an independent line, on the termination of the lease in May next. The three chief officers, says the Western Times, have been appointed, namely, the superintendent of the line, the superintendent of the locomotive department, and the chief accountant. Mr. M. C. Rea, of Exeter, is appointed locomotive superintendent. He has held office under the Great Western.

Cheltenham correspondent of the Morning Herald writes to complain that the day and hour of meeting of the LONION AND NORTH-WESTERN and GREAT WESTERN SHAREHOLDERS on the AMALGAMA-TION QUESTION is precisely the same :—"I would suggest," says the writer, "that the times of meeting should be so fixed as not to clash with each other, and thus afford those who wish an opportunity of attending both. And as I presume it is the wish of the directors to ascertain the opinions of as many of the shareholders as possible on this occasion, I would further suggest that all shareholders should on that day be furnished with free tickets on their own lines, an arrangement and a privilege which I consider justly due to them on this peculiarly important occasion, and one which I cannot but think would meet with the cordial approbation of a vast majority of the shareholders.

Great dissatisfaction amongst the settlers on the line exists in the West of England and other districts at the sudden discontinuance of the RETURN-TICKET system .- The LONDON AND BRIGHTON have announced system.—The LONDON AND BRIGHTON have announced that they do not intend to follow this practice. By the return and periodical system on the Brighton line a man may go to and fro between London and Brighton as often as he pleases for 121. for one month, 201. for two months, 251. for three months, 351. for six months, and 501. for a year.—The directors of the LONDON AND SOUTH-WESTERN are said to be seriously re-considering the applications

which have been made for annual tickets both from Richmond and Staines.

In their returns of the opening of Railways during the last two years, the Commissioners report that a very large addition has been made. At the end of 1845, 2,441 miles were available to the public 595 miles were opened in 1846, and 780 miles in 1847, making the whole extent of railways completed at the end of 1847, 3,816 miles; of which 3,257 were in England, 440 in Scotland, and 219 in Ireland. Between November 1846 and the end of 1847 the Between November 1846 and the end of 1847 the Commissioners directed preliminary inspections, prior to public openings, in 100 instances. In twenty-one cases it was considered necessary by the Commissioners, on considering the reports of the inspecting officers, to postpone the opening of the whole or a part of many of the railways inspected, and in more than one instance, to point out to the company applying for the inspection the impropriety of requiring the attendance of a public officer before the works were sufficiently advanced to justify their the works were sufficiently advanced to justify their proposal to open them to the public. In forty cases, when allowing the opening, the Commissioners thought it necessary for the public safety to make suggestions respecting a temporary or permanent restriction of the speed on certain portions of the line, and as to the arrangement of signals.—[Our readers will recollect the value of these inspections, as tested in the case of the Waterloo Bridge extension of the LONDON AND SOUTH-WESTERN, when the

immediate officers of the company discovered a flaw, which had been passed over by the Inspector.

Some of the inhabitants of the Barrhead district have been fitting Mr. Graham, of Fereneze, for his exertions in connexion with the GLASGOW, BARRHEAD AND NEILSTON DIRECT. Mr. Graham, in returning thanks at the dinner when his health was proposed, thanks at the dinner when his health was proposed, gave the following particulars respecting the early history of the line:—"The Barrhead had had many difficulties from first to last, which were well known to the public. They had seen in the neighbourhood of that place how another powerful company had dealt with their little, though important, railway. It would have surprised them to have seen the masses of stamped paper that were prepared for the purpose

of annihilating the Barrhead as they did the Hurlet. The Hurlet was obtained, and the directors thought they had got all they wanted, but when the first meeting took place they were all turned out. Although everything was done to defeat the Barrhead project, there was found among the shareholders, and more especially among the directors, men who came forward, and at considerable risk to themselves undertook to carry the line through. thanked them in the name of his brothers in the direction. On an occasion such as this it was well to refresh their memories as to the position in which they were at one time. It was not from any hostility to the Ayr that this line was introduced. It was not from hostility to any interest whatever; but although such was the case, there was not an individual in the company that was not aware of the opposition which it received, and consequently nothing less than attempts to crush the mercantile interests of the district through which it passed. When it was proposed to reduce the tolls on the line, the Ayr also objected to that, and was the means of preventing it being carried into effect. When the suggestion of making a line was thrown out, that company contemplated a line, which they never intended to make. Not content with such promises, they (the Barrhead) had come forward themselves and made the line, and now they had it. It ill became him (Mr. Graham) to say anything of himself, but they would allow him to say of the company with which he was connected, that from the very first, they were determined to give the utmost impetus to the mercantile interests of the district. Every one knew that this line was not contemplated as a passenger one; in fact they did not expect one-fitth of their traffic to be derived from passengers. His brothers in the direction, however, had been gratified beyond measure at the immense amount of passenger traffic that had already gone along the line.
The lists of passengers since October had been nearly double what they expected would go along the whole line when it was opened to Neilston and the Clyde. When he saw gentlemen carrying their goods for the short distance of 13 mile along their line, he was satisfied of the immense advantage the line was to the district, and also of what advantage it would prove to themselves. He believed there would not be a line of the length that would have one-half of the traffic that would be carried over the Barrhead. He was sure they would rejoice in the results of the passenger traffic, the only traffic, so to speak, that had been opened. It had greatly exceeded their most sanguine expectations, and he had no doubt that it would be the same in the mineral traffic.

It is reported, in reply to the memorial of the proprietors of the AMIENS AND BOLLOGNE to the French Government, that although, in the event of apprehended disturbances, the expensive police staff the line will not be reduced, it is likely that relief will be granted with respect to other imposts, and that a larger amount of remuneration will be given for the conveyance of the mails.

## Reports of Meetings.

LIVERPOOL, MANCHESTER AND NEWCASTLE-ON-TYNE JUNCTION. Nov. 15.— Adjourned Half-yearly and Special Meetings, London.—Mr. G. Leman in the chair.

The adjourned half-yearly meeting was first pro-

ceeded with.

The CHAIRMAN explained that some delay had arisen in effecting the transfer of stock necessary to be made in order to carry out the resolution of the 24th of October last for the distribution of 10s. per share. That sum had, however, now been divided amongst two-thirds of the total number of shareholders, and the remaining third could obtain their quota as soon as they chose to apply for it. The 15,000l. loan to the Lancashire and Yorkshire, which at the previous meeting was stated to be immediately returnable, could not be made available to the purposes of a distribution until three months' notice for its re-payment. The new directors had, on discovering this mistake, immediately given the requisite notice. They had also found various agreements in existence between this company and different landowners; and since the last meeting they had likewise received several notices from such landowners, insisting on their fulfilment of certain engagements. The directors had been using their best endeavours to accomplish the most advantageous arrangement in behalf of the company, and there was every prospect of their successfully doing so in nearly all cases, only they would require in the first instance to be

agreement with the Lancashire and Yorkshire, to contribute one-half of the outlay necessary for constructing three-quarters of a mile, called the Burnley link, and the Lancashire and Yorkshire declined at present to relieve them from their engagements with regard to this line, but he hoped they would be induced to reconsider their decision. In order to enable the directors to adjust this matter, the meeting would also be called upon to invest them with power to negotiate. Several other engagements had also been entered into by this company, under Acts of Parliament, with the Northern Counties Union, one of which was to construct a piece of line, 12 miles in length, called the Bedale branch of the York and Newcastle. Now this was an obstacle in their way of winding up affairs: still they were not liable to be called upon to fulfil this contract until the Northern Counties Union had commenced its own operations; and of this there was very little probability, because he had observed notices (whether issued by the directors of that company or not he could not say) already advertised of an intended application to Parliament for leave to abandon that line. With regard to the loan of 15,000% to the Lancashire and Yorkshire, that company held 6,000 shares in this company, and 3,000l. had been written off from that loan, in lieu of paying the allowance of on from that loan, in feet of paying the anowance of 10s. per share upon the whole of the 6,000 shares. The Chairman then concluded by moving—

That powers be and are hereby given to the directors to negotiate and conclude arrangements with any company or

regarded and conclude arrangements with any company or companies, landowners, or other parties who have, or profess to have, claims or demands upon this company on any account whatever, and to modify or compromise any existing agreements or liabilities on the part of this company, and to pay such sums of money for any of the purposes aforesaid as the directors may in their discretion think prome. ink proper.

This proposition was carried unanimously.

The adjourned special general meeting was then held

The CHAIRMAN moved-

That the resolution passed on the 3rd of October last, and subsequently confirmed, for the return of 14s, per share on the paid-up capital (an instalment of 10s, per share of which has already been paid) be now again confirmed, and that the return of the balance of 4s, per share be paid in such instalments and at such times as the directors may think newspars. think necessary.

Mr. PARSONS was anxious to see some more of the money refunded to the sharcholders as soon as possible, and wished an early day to be fixed when a

further distribution should take place.

The CHAIRMAN said their next half-yearly meeting would be held in February 1849, and it would then be sufficiently early to attend to Mr. Parsons' suggestion, for he was sure the directors would have enough to occupy them for the whole of the ensuing three months, in concluding the necessary negotiations with the companies and the landowners. He was, however, of opinion that the interest not exceeding 4 per cent. upon the 2l. paid up should be allowed, agreeably to Act of Parliament, before Christmas next, and this would be equivalent to dividing another shilling per share.

The motion was carried unanimously.

The CHAIRMAN proposed that the thanks of the proprietors be given to the committee of shareholders recently formed at Manchester for the purpose of promoting the winding up affairs, and the return of the available capital to the shareholders; and that the directors be authorized to pay the expenses incurred by that committee in prosecuting its labours. from a deduction of any sun not exceeding 3d. per share from the amount to be returned to every shareholder. He felt justified in submitting this proposition, because it was mainly owing to the active exertions of this committee that any money at all had been refunded to the shareholders; and as they had been compelled to expend a considerable sum in paying for stamps, &c., and as the general body of the proprietors had largely participated in the benefits accruing from the successful issue of their agitation, he thought it only just and fair that all parties should contribute to defray the expenses incurred by the committee in their behalf.

Mr. Parsons and others strongly opposed it, but after a warm and protracted discussion, it was eventually carried by a large majority.

WEST FLANDERS

Nov. 16 .- Half-yearly Meeting, London .- Mr. W. P. RICHARDS in the chair.

The SECRETARY read the report:—
At the last general meeting in May the traffic receipts for the preceding six months, ending the 29th of February, were reported at 6.8121. Is. 2d.; expenditure, 4.1416. 19s. 7d., exclusive of repairs of the permanent way. The year expired on the 15th of July, from which, according to the empowered by the present meeting to take the proper steps for settling with the landowners. The directors also found the company to be bound by an other forms the 29th of August amounted to 6,6198.

maintenance of road, to 5,962l. 13t. 10tl. The directors were, however, prepared to make further economical changes. Their liability in Belgium, as detailed in the last report, amounted to 8,000l., to meet which certain resolutions had been unanimously adopted, empowering the directors to distribute rateably among the proprietors who wished to take them, all the shares forfeited for non-payment of calls. A sufficient number of shares had not been applied for to enable the directors to effect their intentions; they had been therefore obliging to abandon that scheme ment of calls. A sufficient number of shares had not been applied for to enable the directors to effect their intentions; they had been therefore obliged to abandon that scheme altogether, and to make a further call of 5s. per share, stating, in the same advertisement, their probable necessity for a further call to the same amount. The call had been paid on 20;737 shares, producing 6,684.5s. The present liabilities of the company in Belgium amounted to 2,127l.; the balance in the hands of the bankers to 2,25sl.; so that the directors had no reason to anticipate any further call for the completion of the line from Bruges to Courtral. The number of shares upon which the calls had been regularly paid amounted to 26,737. The Belgian Government had granted an extension of time till May 1851 for completing the works, but had not acceded to the request to work the West Flanders with their staff, and thus save the expense of two establishments at Bruges and Courtral. An agreement had since been concluded with the Government for the mutual passing of each other's traffic on their respective lines, which would afford considerable facility to the public, and was calculated to benefit this railway. The Tournay and Jurbise line had been opened on the 11th inst. for traffic, and must necessarily tend to an increase of traffic upon the West Flanders line. The directors expressed their hope that they had nearly surmounted their greatest difficulties, and reported that they had nominated Capt. Tyndale as a director, which nomination awaited confirmation.

The CHARRMAN observed, that to the report of the

The CHAIRMAN observed, that to the report of the directors two others were affixed, that of the engineering the directors that of the engineering the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that the directors that neers and that of the directeur-gerant. The director had no reason whatever to doubt the perfect truth of those reports, but were not responsible for them. He regretted to say that the traffic of the past year had fallen short of the expectations formed from the result of the second year's traffic. The opinion of the most experienced persons in this country had been obtained, who had gone over to Belgium to examine into the matter on the spot, and either those persons had been deceived, or circumstances in that country had materially altered, and the directors had thus been misled. The stake which he (the Chairman) individually held in this undertaking would be a sufficient guarantee that it was to his interest to adopt that course which should prove most advantageous to it. Discouraging as the prospect might be at present, there was, however, no reason for despair, or for relaxing in those exertions to better the affairs of the company. A little patience and good feeling among themselves, and better times would come. The necessity for the most rigid eco-nomy was admitted, and much progress had been made that way, considering the disadvantage of not having a resident direction; but a considerable por-tion of the benefit to arise from economical proceedings must unavoidably be postponed until the directors had had an opportunity of reorganizing the engineering department, which they hoped to do in January next. Few persons, however, were aware of the difficulties in effecting retrenchments. In this country the directors had already made enemies by such proceedings; and in Belgium an opposition had been organized, and, for aught he knew, enemies had been created also. The directors, however, were bound to fulfil their duties to the proprietary, and would do so. The Board had succeeded in making an advantageous convention with the Belgian Government, as to the passing of the traffic of each on the lines of the other, by which all the stations on the company's lines would be included in the lists published by the Government, so that the public would have an opportunity of judging of the most advantageous route, and thus a considerable amount of traffic might be expected to accrue to the West Flanders lines. The negotiation to induce the Government to work the line with their staff had unfortunately not been hitherto successful, but he did not think all chance of a favourable issue was gone, and hoped it was merely postponed. The convention that had been effected was a step in the right vention that had been enected was a step in the right direction, and nothing was more likely to lead to a general amalgamation of the company's line with those of the Government. The Tournay and Jurbise line had been opened for traffic on the 11th, and very favourable anticipations regarding it were formed by the agents abroad. Without attaching undue importance to this point, he might say that the increased facility thus afforded for communication from Ostend to Namur, Liege and the towns of East Flanders over this line, could not fail to be beneficial to the company. In allusion to the late call, he said he must notice a rumour that was abroad; namely, that there was a prevalent opinion that the shares on which the 5s. had been paid ought not to be dealt in, inasmuch as the call was illegal, and therefore the shares on which the be had not been paid were the only shares n which the gentlemen on the Stock Exchange

thought proper to deal. How such a notion had originated he could not conceive. The call had been made with all the forms required by their Act, and in accordance with the law of Belgium, and it really seemed an extraordinary proposition to lay down that the shareholders had vitiated their property by paying 5s. more upon it. But, on the other hand, the truth was that those shares on which the 5s. had not been paid were forfeited by the statutes, and absolutely gone. He wished it to be generally known that that was the real state of the case. One advantage accruing from making the call was, that the creation of preference shares had been avoided,—such shares were an awkward incumbrance. At the last general meeting the liabilities amounted to about 8,000L, but he was happy to say that they were now reduced to about 2,000*l*, and the balance in the hands of the bankers was about 2,500*l*. A clerical error in those figures had crept into some of the copies of the re port, which he was glad of that opportunity to correct. The sum had been there erroneously stated at The directors would not about 3,200l. require the further call of 5s., which it had been in-timated they would be likely to make, unless indeed the working of the line should exceed the receipts. That question it was necessary to consider in all its bearings. Last year the receipts amounted to 6,019l. and the expenses to 5,962*l.*, leaving an insignificant balance in favour of the receipts. It was not likely that the expenses would exceed that amount when economy had been introduced, but that economy was only commencing, and was not sufficiently established for the results to be sensibly felt in the present halfyear. It might at the very least, therefore, be said that the expenses were not likely to increase and that the receipts were not likely to fall off. During the recent commercial disasters in Belgium, with her trade with France annihilated, the West Flanders had been dependent upon internal resources while opening their traffic, and he could not well conceive more disadvantageous state of things to work against. When, however, it was remembered that a convention with the Government had been concluded. that the Tournay and Jurbise line had been opened, which would complete the communication between Ostend and East Flanders, and open up a communication with Hainault, it could not be conceived but an increase of traffic was reasonably to be expectedto what extent he would not then anticipate or decide.

Mr. R. Stephenson did not rise to offer any remarks upon the report, but merely to announce, as the representative of his late father, Mr. G. Stephenson, his intention to drop all legal proceedings against the company. So far, therefore, he offered them a proof of his wish to disembarrass them as far as he could, and any further aid to the company which it was in his power to render he would cheer The proceedings alluded to were comfully give. nuity give. The proceedings aliuded to were com-menced in his father's name, in conjunction with other shareholders, without his (Mr. R. Stephenson's) knowledge, but he believed that the statements upon which they were grounded were many of them incor-rect, and that was his first reason for abandoning them. His second reason was equally strong, and it was this—were it even supposed that those statements were accurate he could conceive no worse way of settling a difference between shareholders and directors than by a suit in Chancery. It was unsatisfactory, expensive and ruinous. Already, though only on the threshold of the proceedings, the costs amounted to some 400l. Supposing then the allegations to be true, which he knew they were not, this was not the course to be adopted. If the course of the directors had been injudicious or even dishonest, let the matter be referred to independent parties-that was a better way for the shareholders to arrive at a clear statement of facts than by an appeal to the Court of Chancery.

The CHAIRMAN, in proposing the adoption of the

report, thanked the honourable gentleman for the statement he had just made. The late Mr. G. Stephenson-whose name every one must venerate who was acquainted with the state of England at the close of the last century, and knew how much that eminent man had done to forward her prosperityhad not been influenced by his own feelings in the matter which had been referred to, and he (the Chairman) could only thank Mr. R. Stephenson for the very handsome manner in which he had voluntarily come forward to make the announcement the meeting had just heard, relieving, as it did, the minds of the shareholders from their apprehension of a Chancery suit.

Some conversation here arose as to the expediency of having a director or agent resident in Belgium. It was suggested by a proprietor that such a resident agent should be a shareholder, but not a director.

Mr. Warren observed that the Sambre and Meuse

had adopted that course; and if the gentleman who

acted for them could be induced to take charge also of the interests of this company expense would be saved.

The CHAIRMAN said that the directors were anxious to receive suggestions and assistance of all kinds. There were difficulties in the way of the proposal, but if some practical course could be proposed, the directors would offer no obstruction; and if the shareholders desired to communicate with the gentleman just alluded to, there could be no objection.

A Proprietor wished to know in what manner the reduction spoken of by the chairman had been effected. They had been working engines that were too heavy, which caused much expense in the wear and tear of the line.

The CHAIRMAN said that the saving had been chiefly in wages and labour—in the reduction of the staff. As to engines and carriages, they could not be altered, but must be renewed-an expense which could not be afforded.

Mr. HERAPATH had been informed that the Belgian Government would be willing to purchase the heavy engines, and it was a question whether the best policy would not be to substitute lighter ones.

Mr. BLOUNT wished to know if the shares on which the 5s. call had not been paid were really forfeited.

The CHAIRMAN replied that by the statute they were all forfeited.

A Proprietor: Will the directors exercise that

The CHAIRMAN said that the wish of the directors was to do that which would be acceptable to the general body of the shareholders. Those shares upon which the call had not been paid were all forfeited by the statutes, and it was left to the directors to dispose of them as they thought best for the benefit of the company. It was proposed to consider them as so much annihilated capital.

Mr. BLOUNT wished to know how it was that a charge of 500l. was made for "directors' remuneration" in the account, inasmuch as the directors had formerly stated that they relinquished remuneration. Was it a part of the 800l. a-year received by Mr. L. Cubitt !

The CHAIRMAN explained that there was an arrear

on the preceding half-year to Mr. Cubitt.
Mr. WARREN, as a large shareholder, thought the roprietors should support their directors. If an able person were appointed to look after their affairs

in Belgium, a considerable improvement might be looked for, though shares were now at a deplorable

Several proprietors wished to have an exact understanding with respect to the forfeiture of the shares on which the 5s. call had not been paid.

The CHAIRMAN again explained that they were forfeited by the statutes; but it was no act of the direction: they were forfeited for non-payment of call, and left at the disposal of the directors. At the last general meeting the directors had been required not to restore shares so forfeited. To restore them would be an act of the directors, and they could not do so without an order to that effect.

Mr. HERAPATH contended that it was not fair that

gentlemen who had become defaulters when one call was made, on the suspicion than another would follow, should now come in and share alike with those who had paid up.

Mr. P. BURKE was the holder of shares on which the call of 5s. had been paid, and was therefore interested, as far as that went, in keeping out those who had not paid it; but every one there would be anxious that their affairs should be conducted, not only in strict conformity with the statutes, but as far as practicable for the benefit of the proprietors at large. He could tell them of a case in which a gentleman living at a distance received the notice that two calls would be required, and having doubts upon his mind as to the legality of the call, he did think it necessary to pause before he paid the first of them; and were his shares to be at once forfeited?
Would it be right to adopt such sharp practice? he did not apply that term to the directors, but to the statutes-towards shareholders who had paid up 81. or 101., merely because they had not paid a call of 5s.! He recommended the Board to grant a locus panitentia at least to these shareholders

The CHAIRMAN read the clause by which the directors were authorized to dispose of the shares thus forfeited in the manner they should judge most suitable to the interests of the company.

Mr. P. BURKE argued therefrom that, as the directors were to be guided by the general voice of the proprietors as to the disposal of these shares, it was but just that a reasonable time should be given to those in arrear to pay up the call.
Further discussion followed, in which Mr. HERAPATH

and others decidedly objected to the admission of the shareholders who had not paid the 5s. call; while

several proprietors urged the expediency and justice

Mr. BURKE moved a resolution to the effect that one month be given to all those in arrear on the 5s. call, but that all shares on which the said call should not be paid at that period be forfeited.

Mr. Lindo seconded the motion.

The CHAIRMAN said the directors could have no objection to the substance of the motion, but to make it in accordance with the statutes, which required the directors to have the disposal of the shares, he suggested that the wording be so altered as to make the esolution an instruction from the general body. The directors had only one feeling in the matter—to do that which was just and equitable. The shares were absolutely forfeited, and the directors would be stretching their power in restoring them. Meanwhile, perhaps the meeting would pass the resolution which was formally before them.

The resolution for the adoption of the report was carried unanimously.

After some further discussion, Mr. Burke proposed

his motion in an altered form :-

That it is the opinion of this meeting that the directors would be exercising a sound discretion in dealing with those shares on which the call of 5s. has not been paid, in allowing one month from this period for payment of the call.

Mr. HERRELEH moved, so a proportional of the call.

one month from this period for payment of the Mr. HERAPATH moved, as an amendment,— That the directors be required to act in strict accordance with the statutes.

Considerable discussion ensued

Mr. Burke wished to know if the directors had ver before accepted payment of a call after the time limited by the statute; for, if so, they were in as good a position to do the same now.

Another Proprietor suggested a fine of 10s. a share upon the recusant shareholders; and

Mr. HERAPATH protested against those parties being reinstated.

The CHAIRMAN said that the object of the directors was to divest themselves of the responsibility of acting of themselves in this matter; and if the gene ral body of the owners of capital in the company would let them know their desire, it should be fol-lowed. In answer to Mr. Burke, he stated that the directors had accepted calls after the day fixed. The directors had accepted calls after the uny natural course adopted in that case had been, to declare the shares forfeited, and then to re-sell them to the proprictors, and that course might be taken again. case, he apprehended stood thus :- The shares were forfeited, and the directors could re-issue them on any terms they thought right.

Mr. Herapath's amendment and Mr Rucke's re solution were then put to a show of hands, and

The CHAIRMAN declared the result to be-for the amendment, 25; for the resolution, 10. The amendment was consequently carried.

Mr. Russell then moved a resolution, the first part of which was in the same terms as that of Mr. Burke, but with this difference at the conclusion-

That the directors would be exercising a sound discretion in dealing with those shares, in respect of which the last call of 50 only has not been paid, by allowing the parties so in arrear to re-purchase within one month of this period, at a price to be fixed by the directors.

discussion arose on this-

Mr. BLOUNT stating he should propose as an amendment, that the price should be fixed by the directors at 7s. 6d. instead of 5s. a share.

This amendment was not put to the meeting.

During this conversation,

Mr. R. STEPHENSON recommended the meeting to consider that by the absolute forfeiture of these shares they would be narrowing the basis of their company. It might be to the direct interest of himself perhaps, or of Mr. Herapath and others, to carry such a resolution as that he had proposed, but it would permanently injure the general interests. A large part of their works had not yet been commenced, and the forfeiture of these shares would narrow the basis for the completion of an essential portion of their undertaking.

During the scrutiny of the votes a resolution was carried placing Capt. Tyndale on the direction.

The result of the scrutiny was shortly afterwards declared to be—for the resolution, 157; against it, 96. Mr. Russell's resolution was therefore carried by a majority of 61.

BELFAST AND COUNTY DOWN.
Nov. 7.—Special Meeting, Belfast, to consider the application for an Act in the ensuing session to abandon the portion lying between Comber and Downpatrick and the branches to Donaghadee and Bangor, or so much of them as may be necessary to reduce the capital and the shares therein to one-half the prescribed amount .- Mr. W. ALLEN in the chair.

The CHAIRMAN stated that since the original project had been agreed to, the company had made considerable additions to it, by forming branches to Newof the money-market and from their own general position it was not desirable to carry them out. large number of the shareholders having become insolvent, the actual number of solvent shareholders was reduced to such a limit that the capital they might be enabled to raise would only be sufficient to execute the works already under contract. The directors were of opinion that it would be madness to go further than Newtownards at present.

Mr. GRIMSHAW said he was satisfied that if the shareholders were at present assured by the directors that the line would not be proceeded with further than Newtownards, many of them would pay who would not do so in the absence of such a guarantee.

The CHAIRMAN said that 301, per share would be sufficient to complete the line to Newtownards, but the directors did not expect that calls on more than

5,000 shares would be paid.

A conversation ensued, in which Messrs. WALLACE, Dolling, Grimshaw and Gray, and others, took part It was stated that 220,000l. would be the whole sum required to complete the line to Newtownards; and that the company could not borrow money until 250,000l. was paid up. There were thirteen directors, and they held 1,600 shares among them. It would cost the company 4,000l. to get a bill, even if they should be unopposed; and rather than incur that expense, the proposition for going to Parliament for a bill to reduce the number of shares to 8,000, and the nominal amount from 50l. to 30l. per share, was negatived by a large majority. On the understanding that the directors would limit their operations as proposed, and the amount of calls to 30t. per share, making them as light as possible, it was the opinion of those present that calls on 6,000 shares would be paid up.

KILLARNEY JUNCTION.

Nov. 15 .- Half-yearly Meeting, Dublin .- Dr. Long-FIELD in the chair.

The SECRETARY read the report :-

You are herewith furnished with an accurate statement of the accounts. The continued and hitherto increasing depression of undertakings of this nature, particularly in Ireland, induced your directors to limit their expenditure during the past half-year to as small a sum as it was possible to do, consistent with the continuation of the work; and the whole outlay of that period has only amounted to the sum of 3,150%. So. 9d., including all expenses of works, engineering and payment of interest. The receipts for the half-year amount to the sum of 4,220%. So. 9d. The work that has in the interval been completed has consisted in finishing the very heavy embankment near Killarney, constructing two large bridges—one under and the other over the railway, for the mail-coach road near that town—and finishing the necessary accommodation works on the first You are herewith furnished with an accurate statement the railway, for the mail-coach road near that town—and finishing the necessary accommodation works on the first section of the line. The hast certificate of the engineer, up to the 10th of October, showed that the large quantity of 421.326 cubic yards of earthwork had been finished on this part of the line. A full report having been given of the state of the work by Sir John M Neill at the last half-yearly meeting, it has not been thought necessary to call on him for a report, which would necessarily be but little more than a repetition of the details given on that occasion. The shareholders in arrear will be furnished, in addition to this report, with a statement of the arrears due by them to the company.

The statement of accounts showed total receipts at 49,8794. 7s. 2d.; expenditure, 46,9504. 12s. 7d.; balance in Government securities and bankers' hands 2.922l, 14s, 7d.

The CHAIRMAN said that the report scarcely called for any observations. He believed there was nothing in it of which they were not aware before the report was printed. They could have finished their line before the present time had the necessary funds been supplied; but he believed that if they had compelled the shareholders to pay in the sums due on their calls, they would have ruined many and inconvenienced all; and a further effect of such a course would have been to cause the transferring of their shares into the hands of many persons who would afterwards have failed to supply the necessary funds. With regard to future proceedings, their course would be to suspend the works during the ensuing months of January and February, and they would then see what would be the position of the holders of their stock. He had very little doubt that their shares would rise to a premium before their line was finished, and that they would thereby be enabled to prosecute it with vigour, and that in the meantime they would have finished a great portion of the line at an expense not exceeding one-half, and in some places one-third, of what it would have cost them to make the railway with despatch.

A resolution adopting the report was passed. The common seal was affixed to the registry of

proprietors.

AMBERGATE, NOTTINGHAM AND BOSTON .- Nov. 17. -Meeting of Shareholders, London, to receive the townards and Donaghadee; but from the present state | report of the committee appointed on the 6th inst.,

and to adopt such-measures as in the present state of the affairs might appear expedient .of Lewes, in the chair.—There were some forty shareholders present, representing 8,000 shares. The report stated that in pursuance of the instructions given, the committee had caused the necessary parliamentary notices to be given of application to Parliament to limit the undertaking to the construc-tion of the line between Bulwell, Nottingham and Grantham; to reduce the capital to 650,0001.; and to obtain powers for the amalgamation, sale, or lease of the line to the Great Northern or Midland. This application had been considered by the Board, but upon a division a majority decided against any such application. The condition of railway property generally, and of this company in particular, rendered it of importance that every means should be taken to limit the responsibilities of the proprietors, and to reduce the outlay on the construction of new works. The adoption of the course suggested would remove all apprehension from the minds of the proprietors as to the extent of their liabilities, and restore their property to its fair value. The refusal to adopt such a course would postpone until the session of 1850 the opportunity of finally closing any arrangement for the lease or sale of the line to either of the companies with whom such arrangements were likely to be brought to a conclusion, and was calculated to excite prejudicial suspicions as to the position of the company within the resolutions of Parliament, which require that one-half the capital should be paid up before amalgamating powers should be exercised. Thus, if the capital were now reduced to 650,000l., more than one-half had already been paid; the very object required by the shareholders of seeking powers to reduce the capital would be to bring the company within the beneficial operation of these resolutions. Another suggestion was, that the powers sought would deprive the company of advantages which would be the main inducement to the neighbouring companies to treat with this company; but so far from this being the case, the incumbrance of vast liabilities attached to portions of the line proposed to be relinquished, were the main impediment and difficulty in the way of bringing to a successful issue the sale or amalgamation of the line.-The Chairman proceeded, in a speech of some length, to amplify on the report, and a long discussion ensued, in which Messrs. Field, Killrick, Brooks, Fitzgerald, Phillips, Nicholson, Nicholls, and others, took part. An amendment to the adoption of the report was proposed by Mr. Nicholls, to the effect that the directors having pledged themselves to abide by the recom-mendations contained in the report of the 5th of May, by the committee of shareholders appointed on the 25th of February, for the future management of affairs, it was the opinion of the meeting that further litigation on the company's affairs would, at the present time, be only detrimental to its interests. -The amendment was lost by a majority of about 35.-A requisition was then agreed to, calling upon the directors to convene an early meeting, signed by twenty shareholders, representing an aggregate share interest of 20,000% in the company, to take into consideration the question of limiting the undertaking and capital, and to obtain powers to amalga-mate with either the Great Northern, Midland, or Eastern Counties: also to take into consideration the entire management of affairs; to adopt measures for an improved management; to consider and determine on a change in the present directors, who in the meantime are required to abstain from making any further calls.

CAMERON'S COALBROOK, SWANSEA, &c.-Meeting of Shareholders, London .- Mr. N. P. Cameron in the chair .- A question arose as to the legality of parties who were in arrear of calls being present or taking any part in the proceedings. The matter was referred to the solicitor of the company, who decided that, by the 26th clause of the Joint Stock Companies' Registration Act, no parties should be present at such meetings, or vote therein, but those who had paid all calls previously made.— The Chairman suggested that all parties who were in arrear of calls should retire, but after a stormy discussion the parties in arrear were allowed to remain by courtesy. It was then stated that the main object of the meeting could not be obtained, as the committee of investigation had not completed their report, and requested further time, in order to do so in a manner satisfactory to themselves .- This was resisted by the Chairman and several others, and after some consultation between the solicitor and Mr. Fry, the solicitor of the committee, a friendly agreement was come to for adjourning the meeting until December 15, previously to which the report of the committee w be laid before the directors, so that they might have the opportunity of making any replies they should

deem necessary.—The meeting then adjourned.

### BOSTON, NEWARK AND SHEFFIELD

The Directors beg to announce that they have at length so far actited the disjutted claims on this Company as to be able to PAY A FINAL DIVIDEND of 18 64 per Share; and they request that Shareholders who may not have received a Statement of the Accounts will apply for the same to the Chairman, to whom their Serip Certificates are to be sent, accompanied by the form of application for the Dividend, the amount of which will be remitted them in a Bank Cheque.

EASTERN UNION AND COUNTIFS RAILWAY.

To the Shareholders of the Eastern Union Railway Company.

Company.

An advertisement, dated 16th inst., having appeared from the Directors of the Eastern Counties Railway Company, informing their shareholders that the notices issued by the Eastern Union Company have been issued without the authority or knowledge of the Directors of the Eastern Counties Company, and that no negotiations have taken place on the subject, deem it due to their own shareholders to lay before them shortly the reasons which induced them to issue their parliamentary notices for the ensuing Session, in the form in which they have appeared.

They believe that they cannot better do this than by lay-

in the form in which they nave appeared.

They believe that they cannot better do this than by laying before the shareholders the resolutions passed by the Directors at Ipswich, on Friday, the 10th inst. a copy of which was delivered to the Eastern Counties Company on

RESOLUTIONS.

**The Board having had under their consideration the draft of a notice for an application to Parliament for an amendment of their Acts, and having referred to the suggestion made in the month of October 1846, by the Eastern Counties Company, that the parliamentary notices then about to be given by the Eastern Counties Company should include an application for powers to lease or sell the undertaking of this Company, which was then declined by this Company, on the ground that the Directors would not be in a sufficiently advanced condition to enable them to ascertain its fair value before the lapse of another Session of Parliament.

"Having also referred to the important arrangements recently announced by the other leading railway companies

having termini in London;
"And lastly, to the arrangements made for opening the
Eastern Union Railway throughout its whole extent to
Norwich before the probable lapse of another Session of Parliament:—
"Resolved,—That the notices for amendment of Acts now

"Resolved,—That the notices for amendment of Acts now proposed to be given include an application for Parliamentary powers to carry into effect an arrangement with the Eastern Counties Company, in the event of any agreement being come to between the shareholders of the two Companies, and that the notices be given accordingly. "Ordered,—That the Secretary or Solicitors of this Company communicate hereon with the Secretary or Solicitors of the Eastern Counties Company."

The Directors of this Company readily confirm the statement in the advertisement above alluded to, that no negotiations have taken place on the subject.

By order of the Board,

JAMES F. SAUNDERS, Secretary.

London, Nov. 17, 1848.

#### DIRECTORS FINANCIAL STATEMENTS.

#### EASTERN COUNTIES.

The Directors of the Eastern Counties, in compliance with the wishes of many of the shareholders, publish the following statement in relation to the present and prospective financial position of that company.

They have endeavoured so to class the expenditure and liabilities of the company as to render easily intelligible a complete view of the company's affairs.

Table A is a statement of all the capital of the Eastern Counties Company raised, or requiring to be raised, to complete all works in hand, and discharge all liabilities, upon which interest and dividends will have ultimately to be paid out of the nett revenue. In this table is stated the utmost liabilities of the company, if no new lines or works be undertaken. The amount of these liabilities, after crediting the realizable assets, is treated as so much additional capital to be raised by loans. The company has power to construct additional branches, but these will be proceeded with only under the express direction of the shareholders. In the meantime no expenditure upon them, beyond procuring the Acts of Parliament, has taken place. It is therefore unnecessary to enumerate them.

Table B is a statement of the financial position of the Norfolk Company, amalgamated by agreement with the Eastern Counties Company. It is made up on like principles to Table A. This company authorized new branches, not commenced, will be suspended in like manner to those of the Eastern Counties

Table C is a summary of the capitals of the Eastern Counties and Norfolk Companies, drawn from the tables of detail A and B.

Table D is a statement of the probable revenue of the company, with the anticipated amount of working expenses, and the fixed charges of guaranteed interest upon the same, the nett surplus being applicable to dividend upon the consolidated stock of the two companies.

Eastern Counties Company's Consolidated Stock, including all York Extension shares, registered or entitled to be registered ... £5,886,980 N.B. This includes a bonus capital of 1,087,000t. Northern and Eastern capital, guaranteed 5 per cent. perpetual ... £920,800 Ditto, guaranteed 6 per cent. perpetual 269,600

TABLE D.

The total receipts for the current half-year will, it is expected, exceed 400,000f.; but looking at the additional mileage recently opened, and to be opened—at the further mileage recently opened, and to be opened—at the further natural developement of the traffic through agricultural districts, which experience shows is of slow but steady growth—and at the great and unprecedented depression in the present trade of the country, it is considered that the income for the year commencing July 1849, will be not less than 940,000£; and it is to be anticipated that this revenue will be susceptible of increase. A deduction of 350,000£, per annum for working expenses will be found, it is hoped, to exceed what those expenses will be actually reduced to the the country which will be constantly experied in every by the economy which will be constantly exercised in every department of the undertaking. The guaranteed interests on the Northern and Eastern capital, and on the Eastern Counties and Norfolk stocks, debentures and liabilities, will, as appears by reference to tables A and B, amount in the aggregate to 320,548. The nett surplus will be applicable

N.B. It will be found that in the above sum of 320,5481.

N.B. It will be found that in the above sum of 320,5481, interest at 5 per cent. has been charged on all the borrowed capital and liabilities. Any saving upon that rate will tend to increase the dividend.

During the current half-year a considerable portion of the capital will be unproductive, and during next half-year the same will be the case, and the interest on that portion will not, therefore, be chargeable to revenue, but due allowance has been made in the liabilities for providing this interest. The calculations of revenue and the full charges upon it, before referred to, will therefore take date this interest. The calculations of revenue and the full charges upon it, before referred to, will therefore take date from July 1849.

When the dividend on the 20% shares exceeds 5 per cent., then 920,800%. of the Northern and Eastern capital has the right to participate equally and rateably in the dividend beyond 5 per cent.

When the dividend on the 20% shares exceeds 6 per cent.

269,600. further of the Northern and Eastern capital, and 675,920., the amount of the 6 per cent, perpetual stock, will have the right to participate equally and rateable in

will have the right to participate equally and rateable in the dividend beyond 6 per cent.

It is impossible not to foresee that at intervals, in a series of years, the nett revenue will be called upon to contribute more than ordinary sums for the replacement of the perishable portions of the permanent way and working stock. The only practicable method of dealing with this contingency is the creation of a depreciation fund, if the proprietors think fit; or to leave to the shareholders of the day, when the extra outlays are made, to bear them. when the extra outlays are made, to bear them.

#### Observations on the above Tables.

It will be observed that exclusive of 87.070l, to be called up on certain Norfolk Company's shares, the

entire amount of further capital required by both the Eastern Counties and Norfolk Companies will by receipts from farther surplus property, &c. This amount will be required in various sums over next year; a large portion being liabilities for working stock not yet delivered, and for property not yet conveyed to the company.

The total number of miles of railway belonging to the Eastern Counties Company, after the entire expenditure of the capital comprised in the summary table C, will be 322 miles. Neither the Eastern Counties Company nor the Norfolk Company has subscribed to any other line of railway, and each is entirely exempt from this species of burden.

On the other hand, the company will have the On the other hand, the company will have the advantage, without such burdens, of the Great Northern Company's loop line, as a temporary feeder, at Peterborough, and of the following mileage as permanent feeders, viz.:—Eastern Union, when completed, about 150 miles; Midland, Syston to Peterborough, and at Syston communicating with the north and north-west, 48; East Anglian, 64; Newmarket and Chesterford and Cambridge branch, 24 miles. When the Great Northern line shall be finished and onen between Peterborough and London finished and open between Peterborough and London, and when the Eastern Union line between Stowmarket and Norwich shall also be completed, some traffic will be abstracted from the company, or lessened in the mileage run upon the Eastern Counties line, and consequent productiveness; but the amount of traffic abstracted or lessened by these new lines will, it is considered, be compensated for by the additional cross traffic brought from the Great Northern Company's districts upon the portions of the Eastern Counties line in the counties of Camor the Eastern Counties line in the counties of Cambridge, Suffolk and Norfolk, and also by the additional traffic likely to be received on the Colchester line, from that part of the agricultural district between Stowmarket and Norwich, at present without railway accommodation.

It will be observed, with satisfaction, that the debenture debts of the two companies form little more than one-tenth of the aggregate amount of their capitals. Large borrowing powers still exist unexercised; therefore ample means can be thus provided for discharging the remaining liabilities.

The guaranteed interests are all permanently placed upon the firmest commercial footing, and entitled to the utmost confidence as investments.

As regards all that portion of the capital of the Eastern Counties and Norfolk Companies which participates in dividends derived from nett surplus revenue, it is certain that the traffic of the lines is yet far from being fully developed to the extent which further exertions will produce, aided by the advantages of the London terminus at the river Thames and the East India Docks, and by the probable opening up of new connexions with the north of Europe, through Lowestoft and Harwich.

#### MIDLAND.

According to public announcement, the Directors of the Midland have prepared the following tabular statement for circulation among the shareholders, with a view to exhibit-

 The stock, share and loan capital.
 The cost of lines producing revenue, and of working stock.

3. The probable cost of lines in course of construction not producing revenue.

4. Lines guaranteed and leased by the company. 5. Lines in which the company is interested by subscription.

6. Lines for which Acts have been obtained, but which are not under contract.

7. Summary of capital to be provided by the com-

Stock, Share and Loan Capital. Midland consolidated stock, including 25,000%. Midland preferential stock, gua-

ranteed a minimum of 6 per cent. .. £6,580,786 13 4

12) miles under construction, to connect the Erewash Valley with the Mansfield and Pinxton, the cost of which is included in table No. 3.

table No. 3.
Of this sum, 19,3161, 168, 1d, is to be found by other parties, if the lines are made, powers having been taken only for their accomthe lines are made, powers having been taken only for their accommodation.

§ The branch to Southwell, 23 miles, has been made, and the cost is included in that of the Nottingham and Lincoln.

No part of these works will be undertaken without

the previous sanction of the proprietors: a pledge to this effect was given at the last half-yearly meeting.

The Leicester and Nuneaton Act contains powers for the London and North-Western and Midland Companies to purchase the lines, either together or separately. The Directors are of opinion that it ought to be wholly in the hands of this company, and they have so agreed with the London and North-Western, subject to the sanction of the shareholders. Although the Act contains powers to raise 360,000*l*., the line from Leicester to Nuneaton is estimated to cost only 250,000%

Summary of Capital to be provided by the Company (No. 7).

	11,957,960	768,245	12,726,205

It will be seen on reference to table No. 7, that the amount of capital required to complete the main line and branches, with the subscriptions to other companies, is 708,245/.
To meet this outlay, the company have the power of making calls, which with the arrears will

£2,602,615 9,007 shares of 40L each, not yet issued ... 360,280

Deduct for completion of main line, branches, &c. 763,245

Balance available for repayment of loans When the lines now in course of construction are completed, the company will possess 498 miles of railway, 30 miles of canal, and 13 miles of tramway, under its own control; and a pecuniary interest in 924 miles of railway the traffic of which is likely to

increase that of the main line.

In looking at the future prospects of the company as to dividends, the Directors give the following facts for the guidance of the shareholders :-

ne average receipt per	HILLIE	ואט נטין	IIII UIII I	U	LIIC
year ending June 30,	1844,	was			£2,426
Ditto	1845			٠.	2,948
Ditto	1846				3,391
Ditto	1847				2,702
Ditto	1848				2.623

The estimated average receipt per mile per annum required to pay 6 per cent. when the works under

required to pay 6 per cent, when the works thater contract are completed and paid for, is about 2,850!. In considering the probability of an increase of 230!. per mile per annum, as compared with the average mileage receipt of the year ending June 30, 1848, it is necessary to bear in mind that more than 150 miles of railway have been opened by this company since Midsummer 1846, and a considerable portion within a few months only; that the traffic of a district is not thrown all at once upon a railway, but that it requires some years for its developement; that

the traffic of this line has suffered severely from the depression which has been felt in all departments of commerce; that it has also suffered from the abstraction of traffic, caused by the opening of the Trent Valley, Caledonian, Great Northern and other lines but it is hoped that a general revival in trade and the opening of the East Lancashire to Colne; the Manchester, Sheffield and Lincolnshire, from New Holland and Great Grimsby to Lincoln; the Matlock and Midland to Ambergate; and the South Stafford-shire Junction with the Birmingham and Derby, all of which are within a few months of completion, will enable the company to realize the above increase.

GLASGOW, PAISLEY, KILMARNOCK AND AYR.

In their statement just issued to the shareholders. the Directors set out by declaring that less than onehalf of the obligations consist of debentures, on which the present average rate of interest is 4 per cent., and which do not wholly become due until 1853, and that the company have not a single bill or pro-missory note in circulation. The company have granted no guarantee to other undertakings except in the case of the Paisley, Barrhead and Hurlet. in the case of the Paisley, Barrhead and Hurlet. By it they were bound to pay 6 per cent. on 230,000., but more than two-thirds of the stock belong to this company, and it is not expected that the Hurlet Company will proceed at present with their line. The company, however, are under an existing obligation to the Ayrshire and Galloway to complete the connexion between Ayr and Smithstown within a specified time; but the Directors will endeavour to effect an arrangement to postnone any further proeffect an arrangement to postpone any further proceedings until an improvement in the state of the ceedings until an improvement in the state of the country takes place. The 250,000t. of preference stock, created in August last for the Glasgow, Dumfries and Carlisle line, with a dividend of 6 per cent. for three years and 5 per cent. thereafter, has been all taken up. The Board has acquiesced in a proposition made by the Caledonian to renew their agreement of last session, that neither party shall in the approaching session introduce any hostile measures into Parliament. The whole plant is in excellent into Parliament. The whole plant is in excellent order; it is adequate for a large trade; and no additional outlay on this account will be necessary for a long time, except for mineral waggons. The works also are in a good state, and the capital account for the main line may be considered practically closed, as no farther outlay will be necessary unless sidings or short branches are required for additional traf-fic. If the receipts for the portion which has passed of the current half-year be compared with an equal period of the preceding half-year, and if the moderate estimate of the revenue of 2,400l. per week for the remaining weeks of the current half-year be also made, there appears a fair prospect of an increase of about 14,000*l*. The traffic on the main line and Kilmarnock branch fell off last year, in consequence of the depressed state of trade, to an extent which very materially affected the dividend; and the same very materially affected the dividend; and the same cause must continue to operate until a return of commercial prosperity. The traffic on the new lines recently opened is still far from being fully developed; no goods have been carried on them. The local mineral traffic has scarcely commenced; and there is as yet no traffic passing between Dumfries and Ayrshire. The revenue of these new lines must also be suffering from the same depressing causes that are operating on the main line; but notwithstanding these unfavourable circumstances, the gross revenue of the new lines, from passengers alone, is very en-

couraging.

The Directors are unwilling to run the risk of misleading the shareholders by saying much as to the future; but their intention is—first, to commence no new works without the sanction of the shareholders; and second, to reduce the expenditure, whether of capital or revenue, to the lowest point. By an adherence to such a course the Directors trust that and reflect to such a course the Prectors trust that the very trying crisis will be passed through without any permanent injury to the valuable property committed to their charge, and that the revenue of the company will again rise with the returning prosperity

[†] Only 5 per cent, is payable for the present half-year, but the full dividend will be due in July 1849.

<sup>This has become part of the Manchester, Sheffield and Lincoln-hire Railway and Canal Company. It is understood that no further calls will be made.

These shares came into the possession of the Company through the purchase of the Bristol and Birmingham.</sup> 

£124,304 4 1
The total amount of capital created is 2.804.550l. The total amount of capital created is 2,804,5500. The capital which the company is empowered to raise by various Acts amounts to 2,066,000t., but no part of this sum has been called up. Of their several lines and branches there are 100 miles open, and six now under construction. The amount expended on the several new lines which have recently been completed, and on which interest was chargeable against the capital account at the balance on the 31st of July last is 705 3691 15s 7d.: and an additional burden last, is 705,3691. 15s. 7d.; and an additional burden must be borne by the dividend account for the cur-rent half-year. These new lines were opened at the rent half-year. These new lines were opened at the earliest possible period, for passenger traffic only, so as to take advantage of a good season of the year; and as yet they have been scarcely suitable for goods and mineral traffic, from the want of the requisite shed accommodation and sidings. It would therefore seem unfair to burden this half-year's revenue account with more than one-half of the interest on the cost of these new lines. This will amount to 8,8171.2s.5d. exclusive of what may accrue on further expenditure during the current six months. There must also be placed to the debit of this account a charge for re-laying about 4 miles of the line between Kilwinning and Irvine with heavier rails, those originally laid down having been of a lighter and different description. The working expenses in the current half-year must likewise be increased by the opening of about 83 miles of new branches and extensions. This item, however, cannot yet be correctly estimated, although the mileage proportion ought to be considerably less than that hitherto incurred on the main line. The half-year's dividend on the preference stock created for the Glasgow, Dumfries and Carlisle must also be paid out of revenue. There are besides some arrears of poor's assessments, amounting to about 3,800l., due by the company in several of the parishes intersected by the line, which could not hitherto be settled on account of a dispute as to the principle of assessment.

#### Literature.

#### WHITEHEAD ON RAILWAY MANAGEMENT.

We took up Mr. WHITEHEAD'S Letter to Mr. Glyn on RAILWAY MANAGEMENT in some expectation that it would show a clearer knowledge of the causes of falling profits, and give better advice for their improvement, than are usually found in such pamphlets. In the office which the writer formerly filled, opportunities for obtaining some insight into railway affairs could not have been wanting; and it was natural to look for proof that they had been turned to good account. Mr. Whitehead's pamphlet, however, we must say, shows that his railway occupations have not taught him any comprehensive knowledge of railway business.

The Letter, indeed, we find defective in both of the points on which experience might have rendered such a composition useful. The view it takes of the topics on which it most insists, is radically erroneous; and the suggestions it offers,— with a single exception, perhaps,—could not be adopted with any advantage; while on the subject which occupies two-thirds of the letter, they are altogether perverse and dangerous. We shall briefly notice the arrangements Mr. Whitehead censures, and the changes he recommends; on both of which we disagree with him totally.

His chief object is to prove that the goods traffic on the system now adopted by the London and North-Western, is conducted at a loss. The process by which he attempts to prove this is founded on an omission in the material parts of the case, which can hardly be excused in a writer formerly employed in a railway office. He compares the earning in single passenger coaches of the ordinary classes, at the rates now received, with that of single luggage waggons, at the current charge for goods; and as the receipt per coach is of course much higher than that per truck, he concludes that, inasmuch as the former is not enormously over-profitable, the latter must be worked at a great loss. Hereupon he exhibits a pro forma balance-sheet, showing the merchandise trade largely in debt to income, as an absolute drawback on the coaching profits. The express trains also figure in the same category; but we shall confine our attention to the main subject, in which the error is most considerable, and can least be justified.

To show the fallacy of the comparison in question, it will suffice to remark that no difference whatever is allowed on the head of locomotive power; nor could it be inferred from Mr. Whitehead's contrasted statements, that there was any modifying circumstances whatever in the respective speed or weight of passenger and luggage trains. He computes, we have said, by the single coach and waggon only, as if not aware that the average goods train, say of thirty to forty waggons, running at 18 miles per hour, may produce a lucrative total receipt, even though each waggon may not earn more than his estimate of 3l.; and that the comparison, if stated between such a train and a passenger train of six to eight carriages, running at 35 miles per hour, and earning in money 151. to 201. per coach, would not present any such total difference as he pretends to have discovered.

This misstatement alone would be enough to condemn his argument. But it is damaged by another omission, scarcely less accountable in a writer claiming to be thought a practical man. Our railways are made and kept open for and by the passenger traffic: the chief current expenses being already required to keep that traffic going, the earning for goods, as to a large section of outlay, is therefore in the nature of a receipt, the charges on which are already covered; so that any per-centage of nett receipt on this kind of business, after the special expenses of porterage, waggons and moving power are paid, is, in fact, so much clear profit. Where railways are not maintained by the coaching business, very moderate charges for goods might not, perhaps, be productive enough to meet the dividend on expensive works; as they are, the case, so far as it regards that traffic, is quite the other way; and a comparison that omits this main circumstance is merely deceptive.

Under the actual conditions of the company in question, it will be seen, it may be worth while to carry goods at a very moderate nett earning per ton; provided that the low charges from which it is derived are found—as they are in fact-to bring such a total bulk of tonnage as will produce a large total of nett receipt. The surplus of receipt beyond the special expenses of the department being, as we have said, in the nature of clear gain, it follows that, within reasonable limits, very moderate charges will suffice to make a profit; the two necessary conditions of the business so conducted being, that it shall be an extensive one, and, of course, that it shall produce a certain, however small, surplus profit per ton above the special charges above mentioned. We believe that these conditions are fulfilled

and North-Western. We know that on the Grand Junction part of the line, which Mr. Whitehead perversely blames for setting a good example, the business conducted by the company without the intervention of third parties, was always highly profitable at moderate rates; and whatever drawback may be found to its profits on the whole series—now that the noxious system, established by Mr. Baxendale's influence on the southern portion, has been exploded-arises from the arrangement for gradually ridding the concern of its burden, by transferring the deliveries and collection in London to certain carriers, as agents to the company, for a certain period, at rates which are supposed to exceed the actual cost of the service. Whatever may be the amount of this tax on the business and on the company's profits, it is clearly a penalty for the prime error of the London and Birmingham management; and now that that error has been abandoned, it is strange enough to see any one claiming a knowledge of the subject coming forward to advise a return to the absurd system which put one-half of the merchandise profit into the hand of strangers-and strangers, too, attached by their interests to the rival process of canal carriage - as a means of improving railway income. The fallacy is transparent. If the carrier system is to enrich the concern. it must be by the third party paying more for toll only than the company now receive for toll and carriers' profit on the goods. The carrier must have his profit on the business; and the position therefore clearly is that either the company that gives him the goods must receive less, or raise its charges for toll-or that the carrier will have to work at a loss. The latter supposition is absurd;—the others equally so, if gain is the object. The raising of the charges to cover the double profit must tend to throw the tonnage on the canals; and we have shown how the prime condition of the business is that it shall be extensive. Indeed, the vice of Mr. Whitehead's logic may be seen at a distance: it does not require minute exposure.

His bias in favour of a notorious error, and his advice to Mr. Glyn to hand over the goods traffic to the canals, may perhaps be explained by the fact that he served the South-Eastern during the rule of that line by Messrs. Pickford & Co., and left it, we believe, nearly about the time when, on Mr. Baxendale's removal, the goods traffic ceased to be worked for the chief benefit of that gentleman's firm. Since that period Mr. Whitehead may have had little occasion to study the principles of a system which he cannot have had the means of learning while secretary; and his prejudices in favour of the "Baxendale" fallacies may be charitably ascribed to his training under their influence.

His other suggestions we shall briefly dismiss. He is right in dwelling on the expensive effect of trains at express speeds; but wrong in the proposal he makes to retain high speeds, adopting a graduated scale of charges for trains, ascending by their rates of running above an average of 30 miles per hour. One practical objection to this is that no one would travel by the swifter trains, at the excessive prices he would charge for them—while others were running at 30 miles an hour at low standard fares. The true regulation must be, not to raise charges to an absurd height—but to limit speed and weight of engines—as we lately pointed out in a special essay on this subject.

one, and, of course, that it shall produce a certain, however small, surplus profit per ton above the special charges above mentioned. We believe that these conditions are fulfilled in the whole of the goods trade on the London | When Lord Monteagle's jobbing bill was brought

forward not long since. The welfare of the interest can be secured in no other way than by the honest administration of the property by those concerned in it. They have full power to manage it themselves; and if they have not the vigilance to see to its conduct, and the probity to determine that its accounts shall be precise and faithful, nothing whatever can save the business, and it will not deserve to be saved, from ruin. A process that can only be justified on the supposition that the parties whom it professes to serve are either imbecile or knavish, or both, cannot be admitted in any scheme of railway reform - because nothing whatever can redeem a partnership concern, when its own members cannot be trusted without a public keeper to watch them. The vital condition of railway enterprize is the very reverse of this; and it will only prosper so long as the parties concerned in it can rule their own affairs, and are fit to rule them. When they cease to be thus qualified, it will be of little use to call in help from without, and attempt to "revive confidence" by proclaiming the concern an association of incapables or rogues, whom the "Public Auditor" will hereafter prevent from blundering and cheating. The business must be doomed past help before such an appointment as this could be anything but an impertinence and an absurdity.

With Mr. Whitehead's remarks on the arrangement of directors' duties and on the expediency of introducing a more special responsibility, we are inclined to agree; and the few lines on that subject, we must say, are the only part of his pamphlet that contains any suggestion of the least practical value. Nor should we have noticed at length a production that cannot be favourably described, but for Mr. Whitehead's former position; which, in some quarters, may gain for his errors of judgment and imperfect representations of fact an access—on the ground of a supposed knowledge of the subject,—which the character of his letter by no means justifies.

#### Progress of Works.

ARDWICK JUNCTION.—This line, nearly two miles in length, linking together the Lancashire and Yorkshire on the north and the Manchester, Sheffield and Lincolnshire and London and North-Western lines on the south side of Manchester, was thrown open for traffic purposes on the 14th. It has been made at the expense of the Lancashire and Yorkshire, at a cost of 120,000*l*, for the accommodation of goods traffic only, and leaves the Ashton branch of the Lancashire and Yorkshire line about two miles from Manchester, and crossing the roads to Oldham and Ashton, joins the North-Western at the point where the Manchester and Sheffield line runs into that line, near Chancery-lane, Ardwick, about half a mile from the London and North-Western Company's station in Manchester. It is carried on a viaduct of brick arches nearly the whole distance. The only thing remarkable in the engineering department on this line is a bridge, at 40 ft. elevation, and of 100 ft. span. crossing the river Medlock and the Rochdale Canalthe canal being at that point carried across the river— so that the river, canal and railway are presented to the eye one above the other at one view, and have a singular appearance. The bridge is of wrought-iron, and of the tubular construction, after the plan of the bridge at Conway. When the South Junction line of the London and North-Western is completed, Manchester will be completely encircled by railways the whole circuit being made by a chain of lines about six miles in extent.

CHESTER AND HOLVHEAD.— Every exertion is being made to finish the stupendous tubular bridge over the Menai Straits by the middle of next summer.

GREAT WESTERN DUCKS.—The Pipmouth Herald thus reports a visit lately made to these vast works at Millbay, which are progressing very rapidly:—Between 400 and 500 men are employed, and the work is continued day and night, as the tide suits, so that no time is lost. We were on the spot, says the writer, at low water, near the top of the spring; we crossed the intended line of sea-wall from Millbay to Stone house, and consequently had ample means of seeing the second through the second through the second the will be carried; the walls on either side are built, and on the 15th inst. the first iron column was brought to the spot; there will be five on each side, and between these columns and the walls will be the foot-paths. The station at Millbay is in a

all the operations. The fine bay within and without | the intended docks presented a scene of the greatest activity; wherever the eye was directed groups of workmen were seen, pursuing with every energy their avocations; some in the coffer-dam laying the foundation of the sea-wall, others moving the ponderous machines on the line laid for facilitating the transit of the immense blocks of stone, others again employed in forming the embankment between the inner and the outer wall of the docks; many were pile-driving, cutting stone, excavating, &c.; while, to complete the animated picture, two steam-engines, one at either end of the works, were in full operation, pumping the water from the dams, &c. The south dock wall, on the Plymouth side, is the principal work now in hand, and a considerable portion of it is already carried up to its proper level. This wall has a most carried up to its proper level. This wall has a most substantial appearance, being built with large blocks of limestone, procured from Mr. Gill's quarries. In the middle of the bay, near the reef of rocks, which all who remember the spot must be well aware of, an immense timber stage has been erected, and the dock wall on this part will be supported on piles, there being, as we are informed, in this place a channel of mud, about 250 ft. wide and 46 ft. deep, lying between the strata of limestone and that of slate, of which latter material the west boundary of this channel is composed. We also observed from the stage that the reef of rocks, composed of limestone, which has stood for centuries so prominently in the bay, is fast disappearing, from the repeated blasts of gunpowder, and from the exertions of the excavators, and in the course of a short time it will be classed with the things that were. On descending from the stage, we shortly arrived on the Stonehouse side, where a steam-engine has been just erected, to pump the water from a moveable coffer-dam, which we found crowded with men, clearing the foundation, so that the wall will be commenced on both sides of the harbour. We are informed, from what we may deem good authority, that the south wall for the docks will be finished by about next Midsummer. We should also observe that the excavations for clearing the outer or tidal basin, the extensive area between the docks and the pier, are going on with much spirit and in a short time a quay for the accommodation of shipping frequenting this part of the harbour will be erected opposite the soap factory. The area which will be inclosed for the docks is about 13 acres, and we venture to say, a finer harbour or a better access will not be found in any part of the kingdom; and the works will be completed in less than three years from this time. There can be no doubt that the formation of these docks will enhance the character of the port by affording that accommodation which has been so long required by the shipping interest.

KILLARNEY JUNCTION.—The works are to be suspended during the winter for want of the necessary funds.

LIVERPOOL AND BURY.—Nov. 20.—Public traffic was commenced, opening up a direct communication between Liverpool, Manchester, Wigan, Bolton, Bury and the whole of the Yorkshire districts, without change of carriage. There are four trains daily to all these points.

these points.

NITHISDALE.—Nov. 9.—The keystone of the bridge over Ballocher Linn, on the Blackwood estate, was fixed, in the presence of the lord of the manor, Mr. Copland and a party, so vigorously have the Messrs. Jeffs got on with the buildings. The good conduct of the workmen was specially noticed by Mr. Copland, who broached a large barrel of ale on the occasion. The wooden bridge at Portrack, over the Nith, is also advancing rapidly. There are eight spans, of 50 ft. each; two ditto, 13 ft.; one of 5 ft.; and pier work, 70 ft. The timber used is of the finest Memel, commissioned on purpose from some port in the Baltic, and amounting to 26,000 ft., or 52 tons in all. The expense is estimated at 7,0001.

South Devon (Torquay).— The works on this branch are fast drawing to a close, and it is probable that the line will be opened in a month or six weeks' time. The station is now in a very forward state. The inhabitants of Torquay are looking forward eagerly for railway accommodation.— On the main line, says the Plymouth Herald, the timber and rails are laid about half-way between Laira and Plymouth; the tunnel under Mutley Plain is completed; the skew-bridge on the Saltash-road, at the bottom of Penny-come-quick Hill, is fast approaching completion; and the excavations near Five Field-lane will soon be finished. The arch over King-street is equally forward, and the embankment is nearly brought to the frontage in Union-street, over which an elegant iron bridge will be carried; the walls on either side are built, and on the 15th inst. the first iron column was brought to the spot; there will be five on each side, and between these columns and the walls will

forward state, and in a few months the line will be ready for traffic into the very heart of the town. A great number of men are employed, and every energy appears to be used to complete the undertaking.

SUTTON POOL.—The contractor, Mr. Clift, is employed in facing a portion of Vauxhall Quay with a substantial sea-wall. Some difficulty has been experienced in keeping back the water, but the foundation of the wall for a considerable distance is now laid, and the work begins to show itself. A similar process, says the Plymouth Herald, will be followed in front of Sutton Wharf, opposite to which the water will be deepened; a northern wharf will then be built. A large portion of the mud has been already removed, and a number of men are daily employed in clearing the harbour. We have no doubt, as the spring advances, a greater number of workmen will be placed on the works.

WATERFORD, WEXFORD, WICKLOW AND DUBLIN.—
The tunnel through Killiney Point was completed last week as far as gaining a passage through the hill. In making this announcement, says the Dublin Advocate, we cannot allow the opportunity to pass without stating that this is the first tunnel opened in Ireland, and we believe the first in the United Kingdom where the whole excavation extended through granite rock, which was here of the most solid description. Indeed, from the sharpness of the curve and the difficulty of working the material, the contractor, Mr. Burke, deserves credit for the accuracy with which the proper direction of the excavation was maintained, and the energetic manner in which the work has been conducted.

#### Accidents.

GLASGOW AND KILMARNOCK.—Mr. Finlay, belonging to the station at Busby, was standing on the platform, waiting the arrival of the 11 30 a.m. train from Glasgow, which reached Busby, within two miles of Kilmarnock, about 1 p.m. While stepping from the platform on to the train, before it had come to a stand, he was tripped by the footboard of one of the carriages, and thrown back on the platform, when the footboard of one of the succeeding carriages caught him, by which he was thrown in upon the line, when a carriage passed over his body in a slanting direction. He died shortly afterwards. Scottish Central.—Nov. 9.—Between 2 and 3

Scottish Central.—Nov. 9.—Between 2 and 3 p.m., at the Bridge of Allan, a special train from Dunblane, loaded with cattle, from Doune fair, came in collision with a heavy train of coal waggons, standing on the rails at the station-house. The engine and tender were destroyed, and several of the waggons much shattered. Fortunately there were no passenger carriages attached to the train, but three of the drovers in charge of the cattle were seriously injured. The guard and several others leaped off the train on seeing a collision inevitable, and thus escaped with slight burts.

seriously injured. The guard and several others leaped off the train on seeing a collision inevitable, and thus escaped with slight hurts.

SOUTH-WESTERN.—Nov. 17.—As the 5 35 p.m. express train was approaching Richmond, it ran into a ballast train which was being drawn on the down line against the express orders and warnings of the officers of the company. A man on the ballast train was killed, and the driver was severely wounded. Several passengers received contusions. Incessant activity and attention was afforded by all the officials belonging to the Richmond station and the passenger train.—On the same night a travelling hawker, attempting to step out of a train, near Barnes, whilst the train was in motion, was killed.—Nov. 21.—An inquest was held on the body of Perry, the man killed, but was adjourned till the 30th, for the attendance of the driver of the ballast train, who was severely wounded.

SUNDERLAND.—Nov. 14.—At Brocklywhins station, four miles from Sunderland, the 9 p.m. up train from Shields came into collision with a special train conveying the London passengers from that station to Sunderland. Several passengers were injured.

#### Law and Bolice.

Nov. 16.—In the Vice-Chancellor's Court, in rethe South-Eastern v. Martin, this was a motion to restrain certain surveyors from proceeding in an action. The action was brought to recover between 6.000% and 7,000%, being the balance claimed to be due for work and labour done. The action commenced in November 1847, and in May 1848 the company filed their bill for relief in equity, on the ground of the complicated state of the accounts between the parties, by reason of the number of persons to whom it was alleged the defendants had made disbursments, and for discovery.—The Vice-Chancellor refused the notion with costs.

On the same day, in the same Court, in re Goodman v. De Beauvoir, a motion was made to withdraw an appearance entered for Mr. Fisher, one of the managing

Digitized by GOOGLE

committee of the Warwick and Worcester. That company agreed to amalgamate with the London and Birmingham Extension, advancing 15,000L, but several shareholders with the plaintiff filed this bill, containing several charges of mismanagement against the directors, and prayed for an injunction to restrain the transfer of the 15,000L. The directors, with a view of endeavouring to liberate the fund, which was tied up by the injunction, at a meeting held on the 28th of May 1846, but at which Mr. Fisher was not present, resolved to authorize the solicitors to the company to defend the suit, and they, in pursuance of such resolution, actually entered appearances for all the defendants, and among others, for Mr. Fisher. As soon, however, as Mr. Fisher was informed of this circumstance, he immediately wrote to the solicitors, repudiating the proceedings, and positively objected to being entangled in a suit in Chancery.—The Vice-Chancellor refused the motion with costs.

Nov. 16.—In the Sheriff's Court, in re Holmes v. the South-Western, the plaintiff, a guard of the company, sought to recover the sum of 6l. 10s., balance of wages deducted by the company, on the ground that he had misconducted himself, by acting contrary to the rules, in stopping an express train to obtain lamps. His salary, as a second-class guard on the Southampton line, had been 25s. per week, but on the 22nd of January last a deduction, by way of fine, was made at the rate of 5s. per week, and he was paid 1l. per week up to September (when he resigned), with the exception of three or four occasions, when the full amount was paid. The plaintiff declared he was not the head guard, and that the neglect of the lamps was by no fault of his.—The Jury after an absence of more than an hour, returned into court with a verdict for the plaintiff for the full amount, on the

ground that there were no specific fines in the rules. Mandamus.—Nov. 17.—In the Bail Court, in rethe Queen v. the Ipsvich and Bury, counsel obtained a rule to show cause why a mandamus, which had been obtained against the company, should not be quashed. A mandamus had been issued against them, commanding them to erect sundry bridges over

certain carriage roads, in the parish of Thurston and two other parishes, situated in the county of Suffolk, and the parties who had succeeded in obtaining the mandamus had called upon the company to construct certain works, which were not mentioned when the matter was argued before the Court of Queen's Bench, works which the learned counsel contended were not directed by the mandamus to be done, and which were never in the contemplation of the parties themselves.—It was submitted upon principle that parties had no right to obtain a mandamus ordering certain acts to be done, and then seek to have something else entirely different carried out by virtue of that mandamus.

WAGES DUE.—Nov. 21.—In the same Court, in re Holmes v. the London and South-Western, counsel obtained a rule to show cause why the verdict had in the above case should not be set aside and a new trial granted. This was an action for debt on account of wages due. Plea, never indebted. It was tried before the Under-Sheriff on the 16th inst., when a verdict was obtained for the plaintiff for 6l. 10s., the jury adding as a reason for such a verdict, "because there were no specific fines." The present application was made upon three grounds—the erroneous rejection of evidence, misdirection, and the verdict being against evidence. As a question most important to all railway companies was involved in this case, the present application was made for the purpose of settling it.

ACCOMMODATION ROAD.—On the same day, in the same Court, in re the Queen v. the London and Brighton, counsel moved for a rule to show cause why a mandamus should not issue commanding the above company to make, provide and set up a proper bridge, arch, or passage across, over, or under the railways os as to form a communication to and from the lands of Mr. W. Bristow, in the parish of Beddington, in Surrey, in the place where the railway obstructs a certain driftway running through the said lands.—Rule nisi granted.

LUGGAGE.—Nov. 17.—In the BARNSLEY COUNTY COURT, a Mr. Tradd, a commercial traveller, sued the

Midland for 13l. 10s., the value of a portmanteau with the contents, proved to have been put into the luggage basket at the Barnsley station, but which was lost between that and the Masborough station. The company pleaded non-liability, and proved that a notice was affixed at all stations, warning passengers that they would not hold themselves liable for luggage left in the offices or with their servants—to one of whom, a porter, the portmanteau in question had been handed by the plaintiff.—The Judge, however, pronounced in favour of the plaintiff for the amount claimed.

COMPENSATION.—Nov. 16.—An inquiry took place into the value of some property, belonging to the Free Grammar School, at Birmingham, and required by the London and North-Western. The property, which consists of no less than seventy houses and 14,000 square yards of land, situate in the neighbourhood of New-street, in the very heart of the town of Birmingham, is required, in consequence of the powers obtained in an Act of Parliament passed in the year 1846, extending the London and North-Western line and erecting a central station in the town, and the amount claimed by the governors of the school as compensation for this property was 42,000l. Within the last few years they had paid no less than 22,000l. for a portion of this property, and a great number of witnesses were called to speak to its value. A considerable part of the property was re-let on leases, but in the year 1846, Mr. Robins, a land-valuer, in Birmingham, valued it at 43,000l.; another person named Fowler valued it at 33,000l. In 1847, the question still remaining unsettled, the company bought out the tenants at high rates of compensation, and commenced their works. The interest now possessed by the governors of the school was partly in freeholds, partly in ground rents, and the remainder in reversions.—Counsel for the company insisted that the governors of the school had greatly over-estimated the value of the property, and that, in reality, 25,000l. was much beyond its absolute value. The assessor having summed up, the jury gave a verdict assessing the value at 39,856l. 10s.

† See Paris Share List. 

* To present date: corresponding period in second column. 

Expenditure includes cost of Lincolnshire lines (partially opened) and Grimsby Docks. 3,117,5661, remains available to complete the works—double, it is supposed, the amount required.

#### Money Market.

#### PRICES OF BRITISH STOCKS.

* For account, Dec. 12.

London Stock Exchange, Nov. 24. - During the past week the prices of shares have been drooping. Large purchases were made in anticipation of favourable statements from the northern lines, but favourable statements from the northern lines, but as these have not realized the anticipations of the buyers, a great deal of stock has been pressed upon the market. Consols have shown improvement, and at the close great firmness. The following are the latest transactions in foreign lines:—Boulogne and Amiens, 5%, ex coupons; Luxembourg, ¾; Namur and Liége, 5; Northern of France, 5¾; Orleans and Bordeaux, 1¾; Paris and Strasburg, 1¾; Tours and Nantes, 14.

Liverpool, Nov. 23.—Prices continue to fluctuate, and on the whole our market is rather dull. The

and on the whole our market is rather dull. The following are the actual transactions of to-day: Birkenhead, Lancashire and Cheshire Junction, 9 dis.; Caledonian preference, 4 dis.; Lancashire and Yorkshire fifths, 4\frac{1}{2} dis.; Great Northern, 12\frac{1}{2} dis.; London and North-Western, 116\frac{1}{2}; ditto, new quarters, 6s. 3d. prem.; Midland, 79; ditto, 50l. shares, 10\frac{1}{2} dis.; North Stafford, 6\frac{1}{2} dis.; South-Eastern, 23\frac{1}{2}; ditto, No. 4, 6l. 13s. 9d.; York and Newcastle, Great North of England purchase, 1g dis

Sudlow, Brothers.

Manchester, Nov. 23.—The amount of business in our share-market during the week has again been but moderate. Though we have experienced some fluctua-tion, and within the last day or two a slight decline in prices, yet the tone of the market on the whole is in prices, yet the tone of the market on the whole is not discouraging. Actual transactions this day:—Caledonian preference, 3s. 9d. dis.; Lancashire and Yorkshire fifths, 4½ dis.; ditto, 32d. shares, 9½ dis.; ditto, West Riding, 5½ dis.; Manchester, Sheffield and Lincolnshire eighths, 7½ dis.; ditto, 6 per cent. preference, 9½; ditto, Grimsby 20d. shares, 12 dis.; ditto, Grimsby Docks, 15½ dis.; ditto, Sheffield and Lincolnshire, 13½ dis.; South-Eastern, No. 1, 11½ dis.; ditto, No. 4, 6½; Macclesfield Canal, 40½.

**Rirmingham. Non. 23.—This market has been

Birmingham, Nov. 23 .- This market has been languid throughout the week, with but little varia-tion in prices. North Staffords have oscillated between 64 and 64 dis.; to-day they close at 68 dis. In this stock the chief business of the week has been transacted.

York, Nov. 23.—We have few business transactions to record. The statements of the directors of several companies are receiving grave attention, and although they are not the sort of statements the generality of the shareholders expected to see, yet they give much useful information for their guidance. A correct railway map could now be made, and is much wanted by the public. The following are the latest transactions:—Great Northern, 6‡; Leeds and Thirsk, 17; North British 'quarters, 3‡ ex int.; York, Newcastle and Berwick, original, 25; ditto,

Extension, No. 1, 124. Grayston & Earle.

Hull, Nov. 23.—During the past week the sharemarket has evinced tolerable firmness, but transactions are almost solely confined to bond fide purchases

for investment, and these chiefly in paid-up stocks. The statements lately issued by the various leading companies are still much discussed; and public opinion is far from being perfectly satisfied with the results as exhibited. FLINT & TOOTAL.

Glasgow, Nov. 23 .- The market this week has not been quite so buoyant, and the demand for shares less. Quotations generally are rather lower, Great Northerns being almost the only exception. We add Northerns being almost the only exception. We added to day's latest sales: —Caledonian preference, 4 dis.; Clydesdale Junction, 55½; Edinburgh and Bathgate, 8½ dis.; Glasgow General Terminus, 9; Ayr, 4½; ditto, halves, No. 1, 12l. 13s. dis.; ditto, No. 2, 12½ dis.; Greenock halves, 6½; Great Northern, 12¾ dis.; North British thirds, 3l. 19s.

Buchanan, Aitken & Co.

### Joint-Stock & Commercial Gazette.

A special general meeting of proprietors in the British American Land Company was held on Monday, at their offices in New Broad-street, to receive the annual report. Mr. Gillespie in the chair. A letter dated the 25th of September, from Mr. A. T. Galt, the resident commissioner in Canada, was read, by which it appeared that the sale of the company's lands in the eastern townships, up to the 1st of September, amounted to 12,776 acres, yielding 8,803*l*.

7s. 3d., against 9,654 acres for 6,331*l*. 11s. 10d. in 1847. The receipts from mortgage debts amounted to 1,957*l*. 6s. 6d., against 2,381*l*. 11s. 4d. in 1847. The land sales were expected before the year closed to exceed 20,000 acres. Great expectations were entertained of the benefits which the company and the settlers would derive from the construction of the St.
Lawrence and Atlantic Railway. The directors had
not pressed the sale of land; they stated as their
reason, that the land will be greatly enhanced from the above causes. The report was received; and on a vote of thanks to the directors being passed, the meeting terminated.

In the Court of Exchequer this week, a shareholder in the Western Australian Colonization Company appealed against the conduct of the directors of the company, inasmuch as they had sued him for calls, and obtained judgment and issued execution, and the judgment claim not being satisfied, the directors forfeited the shares. The Chief Baron stated that the directors by the deed of settlement had the option of two things—either to sue for the calls, or forfeit the shares. The forfeiture of the shares was declared to shares. The forfeiture of the shares was declared to be a nullity, and the directors could only enforce the judgment previously obtained.

Letters from the Mauritius mention the holding of an adjourned meeting of the shareholders in the Commercial Bank, when it was resolved that, in order to give the Mauritius the advantage of a circulating give the Mauritius the advantage of a circulating medium, they would accept bills drawn against shipments of produce. The Morning Chronicle says that "the note circulation of this establishment had for some years been declining. In 1843 the amount was 872,465 dollars, with a dividend in 1840 of 74 per cent. In April last its circulation was only 8,505 dollars; cash accounts, 412,132 dollars; deposits—specie in chest, 577,156 dollars; bills in portfolio, 75,679 dollars; amount of accounts current, 97,858 dollars; and its dividend nil!"

On Tuesday last another meeting was held at the On Tuesday last another meeting was held at the London Tavern, consisting of many of the mercantile and wealthy of the City circles, to discuss the formation of a bank on the Scottish system, to be styled "The British Bank." Mr. M'Gregor, M.P. for Glasgow, presided. The committee previously appointed reported favourable progress, and it is expected that a list of influential directors will shortly have buildighted.

be published.

The following banks and other public companies in America have declared half-yearly dividends:— Bank of the State of New York, at the rate of 32 per cent.; Firemen's Insurance Company, 6 per cent.; Nashua and Concord Railway Company, 5 per cent.; Ohio and Mississippi Telegraph Company, 3 per cent.; Onloand Mississippi Telegraph Company, 5 per cent.; Sun Mutual Insurance Company, 40 per cent. on earned premiums for the year ending the 31st of October last, and also 6 per cent. on scrip; Eagle Fire Company, 8 per cent.; New York, Providence and Boston Railway Company, 54 dollars per share; Brooklyn Union Ferry Company, 34 per cent.

Papers from Sydney, New South Wales, to the 12th

Digitized by GOGTE

of August, contain statistics relative to the banks of the colony, from which it appears that the circulation and deposits of all the banks collectively amounted in June 1847 to 1,540,100*l.*; in March 1848 to 1,504,700L; and in June last to 1,468,000L. The amount of coin actually held and required to be held by the four establishments was as under:-

Coin required. Coin held. Surplus. June 1847 . 513,400 . 740,200 . 226,800
March 1848 . 501,600 . 571,190 . 77,210
June 1848 . 489,300 . 587,200 . 97,900

The amount of coin held and required to be held by each bank was as under:-

The amount of discounts had decreased during the quarter largely in all the banks, with the exception of the Bank of New South Wales

A meeting is called of the shareholders in the London and County Bank, to agree to the suggestion of the directors, viz., that the qualification of a director, instead of being 20 shares, shall be doubled. This step will have a good effect on the public mind, as a director's risk has hitherto been very small, when compared with that of some of the shareholders.

The following may be interesting to some of our readers, as showing the progress and benefits arising from savings banks. The statement given is that of the operations of the Marylebone Bank for Savings, for the last seven years :-

Mines.

The market shows signs of continued improvement. The price of tin is advancing, and this gives an in-

creased value to tin mining companies.

The reports from the seat of the Copiapo Company's mines come down to August. The report shows a very favourable aspect of affairs. During the month of July, 76 tons of ore had been raised, and would shortly be shipped for the London markets.

The Morning Chronicle states that a company has just been formed at Loredo, in Mexico, for working a just been formed at Loredo, in Mexico, for working a gold mine which lies between that city and Mondora. The capital amounts to 400,000 dollars, and the works are to be commenced immediately. The greater portion of the machinery was already on the spot. It is said that the mine is exceedingly rich, and has not been worked since the Spaniards held possession of

The inquiries for shares have been more general this week, especially for Australian, St. John del Rey, and some of the more promising of the Cornish

IRON TRADE.—Glasgow, Nov. 17.—The advices received do not report any improvement in price or transactions for pig iron. Consumers purchase only for immediate want. Our quotations are 42s. 6d. for mixed numbers, and 43s. for No. 1, cash.

NORTH BRITISH (Chascow).— The operations at Paul's Work, for the enlargement of the station, according to the North British Mail, continue to be prosecuted with much vigour. The site of Trinity College Church, now altogether removed, has been filled up with earth to raise it to the level of the line, and but his prema a large addition has been to be the state of the line. and by this means a large addition has been made to the coal depot of the company, which is situated at that place. Massive retaining-walls have been erected on each side of the road leading from the Low Calton to Leith Wynd, and an arch is to be thrown over it, to form a connexion with the ground acquired by the removal of the houses at Paul's Work. The granaries and other warchouses are to be erected on the site of that locality, and the buildings will be a storey in height above the railway, though higher at the back, from the difference in the elevation of the ground.

### Railway Chronicle.

LONDON, SATURDAY, NOVEMBER 25.

At the last special meeting of the BIRMING-HAM AND OXFORD shareholders, the directors were empowered to raise the sum of 333,000l., as authorized by their several Acts.

The chairman of the Monmoutiishire Rail-WAY AND CANAL had the pleasing but rare duty of congratulating the shareholders at their half-yearly meeting on the prosperous condition of their property. With a reduction of 25 per cent. in their tolls, there had been an actual increase of 600%. in the half-year's income. A dividend of 4 per cent. for the past half year was declared, leaving a working balance in hand.

At the half-yearly meeting of the WATER-FORD AND KILKENNY, after much discussion on the items of the report (which stated, however, that the goods traffic was increasing), a committee of shareholders was appointed to examine the accounts and present position of the whole undertaking.

From our official returns it appears that the amount of traffic for the last week, on 4,205 miles of railway, was 187,686/., thus accounted for: -81,170/. for the conveyance of passengers only, 55,312/. for the carriage of goods, and a remainder of 48,204/. for passengers and goods together, not respectively apportioned; being an increase of 27,206l. over the corresponding week of last year, when the mileage was 3,317. The average carnings per mile were 45l., whilst in 1847 they were 48l.

#### HEADS OF FURTHER OFFICIAL STATE-MENTS.

The accounts of the York and North Mid-LAND and of the YORK, NEWCASTLE AND BER-WICK appeared in our columns last week. In all their main features they so far resemble those others of which we have previously had to speak, that no additional comment will be required on the fact that the directors first make it their business to show they are preparing to close the engagements of their respective concerns, and then proceed to prove, by estimates of receipt from the new works, not, indeed, that a dividend equal to those of past years will be derived from them, but that one of fair amount, at least, may be relied upon. Besides this, we have, as usual, the notice that proceedings are suspended with regard to certain lines, for which parliamentary powers have been taken; followed by the intimation that by avoiding the outlay on these, sufficient means will be left available for completing those parts of the system which are to be prosecuted. The York, Newcastle and Berwick report ends with the expression of the directors' very decided confidence in the future safety from injurious competition, and in the ultimate financial prosperity of the concern; and a similar, if not quite so strongly expressed | traffic, and to work it economically, which we

opinion, is conveyed in a paragraph of the other company's statement.

The estimates of future receipts and working expenses in both these cases have given rise to remark; the former being computed on a more liberal scale of advance, and the latter at a lower per-centage than has yet been counted upon for this class of liabilities in other concerns. We do not say that there may not be grounds for the marked difference in these respects, especially as to the rate of current charge, which has been tested in some degree by experience on the lines now open; but it will be felt that estimates of this marked character lay a more than usual weight of responsibility on their framers; and, were we not reminded of the business-like qualities which have been shown in the past management of the concerns in question, we might be apt to think the colouring more sanguine than prudent on an occasion like this. We must, however, believe that in the instances under notice the directors know what they are about too well to put forth these accounts at random; that they are quite aware of the tenor of such a pledge as they have now made public, and would not have ventured upon it without first duly considering the probability of its being redeemed, or without being themselves prepared to work out to its conclusion the estimate they have now drawn up, with a deliberate appreciation of what is meant by the large promise it conveys at a critical period, when all promises must be strictly weighed. There is no reason, if they have been guided to their opinion by sound calculations, for abstaining from stating it; aware as they must be that the estimates are thus placed on record with more than usual formality, and that the duty of realizing them brings with it no common weight of obligation when assumed under the present special circumstances

The Eastern Counties statement exhibits some favourable and some less encouraging features. Of the former, the best are the moderate outlay wanted to finish the works now in progress, estimated under 400,000%; the unusually small proportion of debt to share capital, and the promising appearance of the traffic, which is already large. To the bondholders and to the possessors of the several guaranteed stocks, these circumstances give a security more complete, perhaps, than any other extant company can show.

The prospect of a less encouraging kind concerns the holders of the consolidated stock, whose dividend is intercepted by the payments to the guaranteed shareholders and bondholders to the extent of 320,548l. annually. The capital thus affected being nearly seven millions, it will be seen that the nett income must very greatly increase before it can produce to them a satisfactory result. The estimated future revenue, of 940,000l., with no more than the low proportion of 350,000l. allowed for expenses, will produce about 5 per cent. on this part of the capital, after the prior claimants have been satisfied; and this result may be qualified by a larger per-centage of working expense than is set down, as well as by the calculated gross revenue falling short of the estimate. For the present half-year the receipt will probably reach 400,000/.; and it remains to be seen whether the lines now in construction, when completed, will afford the expected further addition-due allowance being made for a loss of traffic that may ensue on the completion of some parts of adjacent railway systems. There is accordingly every reason to desire in this concern, especially on behalf of the holders of its original stock, the continuance of those efforts to improve its

Digitized by GOGIC

believe have been strenuously made during the last eighteen months.

There is no special account given of lines for which Acts have been obtained, but whichaccording to the general rule now enforced by necessity, and by the pressure of earlier works of the same kind-it is not intended to prosecute. We presume, therefore, that they may be regarded as absolutely withdrawn, to appear no more in the company's records; in which case the final closing up of its engagements will soon be reached; and then the whole future attention of its managers may be turned to the cultivation of the territory they will thereby command-a district which, in some respects, offers more than usually favourable prospects both of increasing business and of security from injurious rivalry.

The MIDLAND special report shows—as might have been expected, from the central position of the concern, and the various efforts it has been thought necessary to make, on all sides, to secure its territory by the established methods -a large and complicated series of engagements, the result of no small portion of which must, for some time to come, be wholly conjectural; while more than ordinary exertions will no more than suffice to bring into complete economical order a system so widely spread, and containing such a variety of elements. The past attitude of the company is shown in no respect more clearly, perhaps, than in the list of schemes authorized by Parliament, but suspended until further orders-eleven in number, and requiring, by estimate, more than four millions and a half of capital. These, we apprehend, the company will be in no condition to resume with advantage within the next five years, at least,-if ever. The estimated sum needed to finish new works actually in progress does not amount to a million; and as the funds which there is power to raise exceed two millions, there will be a balance of above one million available towards the reduction of bond debt,which at present is heavy, say, 3,766,419l. provided the suspended works are not again There can be no doubt that the surplus will be far better employed in paying off the loans, as far as it will go, than in resuming those dropped lines. The guaranteed annual payments are pretty large, amounting to 226,894/.; none being at lower rates than 6, and 10 per cent. being secured on 900,000l. of Leeds and Bradford stock. In addition to this class of obligations, there are 435,750l. worth of shares held in other companies; of which 75,000/., in the unlucky South Devon, is an obligation incurred by the Bristol and Birmingham before its amalgamation with the Midland.

The directors calculate that an increase of the receipts to the extent of 230%. per week will give 6 per cent. on the whole capital, if the works in the present scheme are finished for the estimated total of 12,726,2051.: - the productive mileage then being, of railway 498, canal 30, of tramway 13:-besides the interest in 92 miles belonging to other companies -which last cannot be expected as likely to contribute much to the Midland's dividend. The estimated traffic is an addition of nearly 10 per cent, on the actual mileage earned since 1847: and if, on the one hand, the growth of intercourse and the hope of better times may justify expectations of so much improvement, there is, on the other hand, to be noted the decided progress of coaching traffic towards the inferior class of fares; which is now constantly tending to reduce the mileage receipts on all lines in this country, and may, for some time yet, be expected to neutralize a very large proportion of any increase in money from growing traffic.

Altogether, we may say that the condition of the Midland Company and its prospects, as shown in this official statement, are not worse than might have been apprehended after years of a difficult struggle—the nature of which all railway companies are now for the first time beginning to understand. There is every reason to hope that the warfare of the Midland Company may now be considered as ended. The effects of the past season of trial will long be felt on the profitable outcome of the system: and of course a reduced dividend must be expected for the present:-it will henceforward be the duty of the directors to study the internal improvement of the concern, and to bring it to the settlement now sketched with as much dispatch and precision as possible. With this care—which we may fairly trust will not be wanting while the present management continues-and under a régime of peace, there may yet be results obtained for the consolidated property more satisfactory than any witness of the strife and outlay of past years could have ventured to hope for. But these conditions, we take it, are quite indispensable to any future state of prosperity in a concern thus heavily burdened.

### THE AMALGAMATION SCHEME, AND HOW IT SHOULD BE DEALT WITH.

The longer we consider the triple amalgamation scheme, and the more we try to frame anything like the sketch of a plan in which the parties in question could possibly unite-the stronger becomes our conviction of the impracticable nature of the proposal. Nothing, we apprehend, can conceal its want of any common base of union, but the hesitation to handle it practically. The instant the negotiators proceed beyond mere generalities, they must fall upon the radical differences of the several elements they have to deal with; and the duration of the treaty may therefore be viewed as depending upon the length of time it shall remain on a preliminary basis. If it be found possible to tide over the applications to Parliament with the measure in this unfashioned state, then the dissolution of the scheme may be postponed until after the bill is passed; -- if circumstances make it necessary to come to the settlement of any one material point before going to Parliament, then the difference will be apt to show itself in a way that may shelve the affair at once at this earlier stage. And we think it by no means improbable that such circumstances may begin to act before the measure advances much further. The shareholders in all the three companies will hardly vote for a measure like this without knowing something more of its nature than is expressed in the mere word "amalgamation"; and if efforts be made, before they meet, to bring it into such a practical shape as they can safely pronounce upon, the difficulty we have mentioned will arise on the first attempt to define its terms precisely. It would by no means surprise us to find that the flaws in the heart of the scheme have been discovered, by some such process as this, in time to prevent the directors from even laying it before their respective proprietaries. In the meanwhile, however, we shall proceed with what we have to say on the subject, as if the treaty were certain to be brought up for judgment at the general meetings in December next.

We shall suppose the objections, stated in former papers, urged against the approval of any bill before the method and particulars of the amalgamation itself are completed and ready for discussion. The promoters may insist, in reply,-What, then, are we to do? Must we

better to make the attempt at a friendly settlement, even though we are not yet agreed on the details, than to refuse all offers of treaty, and relapse into the old condition of strife?

To this the proprietors of companies on the standard gauge, (we do not suggest the reply to the Great Western for obvious reasons, the scheme being virtually a ruse of their own Board,) the London and North-Western and London and South-Western shareholders, we say, may answer,—'" Seek peace and putrue it" by all fair means, but not by means that can only be effectual at the expense of all you have hitherto been advising us to contend for, and of all we have gained by that contention, the cost of which we must in any case have to endure. If the Great Western be willing to unite with us by identifying its system with ours, so that we can really work together as a joint concern, the basis of a just combination is at once laid; and we can then well afford to adjourn all mere questions of detail. But if this point, or others of essential importance, be not duly arranged, then the concerns, though nominally united, would, in fact, be as much divided in reality as ever. And whatever else can be gained by a positive union, will be no more than can equally well be compassed by a friendly treaty between the two, as independent concerns. In fact, the advantage of union, with any point of total discrepancy left standing, would be null; while the combination of capitals and obligations might be a positive disadvantage to us, unattended with any adequate compensation. You would make us one body in respect of conditions we do not wish to share, while we are to remain two in those which alone could render union desirable. Whatever is to be done by amicable means-leaving the gauge question as it ismay be equally well effected by treaty as be-tween company and company. The pressure of the times, which has been the ostensible plea for amalgamating, will urge this means of compassing a peace equally with the other.

'But the Great Western will not consent, as an independent company, to any terms which we can accept for the adjustment of our border differences. Why not? Because our views and interests lie too far asunder. If so, then the same difficulty will meet you whenever these matters come to be settled under the amalgamation, unless one party expects to overreach and deceive the other by some kind of hocuspocus, - which we cannot take for granted. That process cannot, in fact, change the essential points of any settlement; nor will either party consent to it in the prospect of being less able then to maintain its supposed interests than it now is. If, therefore, the sense of necessity, the desire of peace, and the want of money will not bring the dispute to a practicable end in one way, neither can it in the other.

But suppose the treaty given up, and the Great Western resolved, at whatever cost, to continue a policy of assault and encroachments, are we, then, to go on cutting our own throats with counter-measures, as heretofore? Are we to bid premiums of 15, against the Great Western's offer of 10, for lines that would be dear at par? Is this kind of insanity to continue? By no means. We now see pretty plainly what the effect of the bargains thus made, the schemes thus promoted has been on the finances and prospects of those who have undertaken them; and that they are, on the whole, more injurious to the projectors than to their rivals. We will absolutely do no more in this suicidal way of "defending ourselves"; but husband our means, and bring our present affairs into order, according to the programme lately drawn up. refuse this last chance of making peace? Are Let the Great Western, if it will and can, go on we to go on squabbling for ever? And is it not adding to its capital and debt, buying up more lines on ruinous terms, and planning more costly their advertisement contains, it is surely premature extensions, that will not return 3 per cent.-we know who will suffer the most by such a process as this. Another two or three years of the same career will bring the Great Western stock to a rate at which we can dictate our own terms of treaty, if we then are still disposed to treat, and have, meanwhile, had the good sense to avoid following an erroneous example any further. Let us be ready to compose our differences fairly at this moment, if the composition is possible; if not, let the Great Western decide for itself whether to continue or not in the course that has brought its balance-sheet already into the state we have lately seen. For our parts, we need not and ought not to determine our course by any such contingencies of a neighbour's conduct: our way is pointed out by facts imperative on all whom experience can teach. We will have done, now and for ever, with "protection" at the rate of 3 per cent. taken off our dividends every twelve months. There is no injury a rival can do by abstracting our traffic that can harm us one-half so much as the works which have been undertaken on the pretence of keeping it; and while we have already been forced to stop many of those which we spent so much in getting leave to saddle our productive funds with, it is plain that we, at all events, are in no condition to project any more, to "protect ourselves" any more in this egregious way. Our part is determined, whatever our rivals may do; and in order to act it properly—to pursue the only course that prudence enjoins or necessity, indeed, allows of, -we need not run into the extreme of blindly embracing another concern, with which we cannot interchange traffic, or join capitals on even terms, except at a sacri-The Great Western cannot be expected fice. to form the alliance on terms which would place it in any worse position than it now holds: and while in that position, we can only adopt it to the disadvantage of our own, which, deeply damaged though it has been by the "protective" measures of the last four years, is still less impaired than the Great Western's, and may be greatly improved, if our directors will but at length understand the true character of the policy we have hitherto suffered by; will keep the promises they have publicly made; and, in short, act like men of good sense, character, and moderation. On these grounds we are quite prepared, if need be, to bear anything the Great Western can do to us, if it will and can continue to attack our position-persuaded that the process must be ruinous to that concern; and that we need no other defence than simply that of remaining as we are, and making the best of what we have, which no rival can take from us.

#### NORTH-WESTERN AND GREAT WESTERN AMALGAMATION.

The substance of the notice calling a meeting of the North-Western for the 13th proximo, is perhaps the most extraordinary upon record. The directors require the shareholders to determine whether authority shall be given to the Board to amalgamate with one or two other lines, the three embracing a capital of 40,000,0001, without offering to their constituents the slightest means of forming an opinion; they do not even condescend to give them their own, but demand that four-and-twenty persons be possessed of full authority to make or mar the undertaking for ever, as in their judgment they may resolve. This is too much—it is carrying confidence as far beyond any limits hitherto sought, as it is beyond the limits which reason can approve; moreover, there is no necessity for giving, or for asking for such latitude. If the directors' project is still in that wide or wild state of calculation, or of no calculation at all, that they are unable to say more than

to request the shareholders to deal with an arrangement so involving their permanent interests; if, on the other hand, having thoroughly investigated the thousand considerations comprised in the equitable settlement of so enormous a subject —if they have debated—(to cursorily touch only two of the more vital points of the great attempt) _ whether the 7-feet gauge (and to this hour its adopter has assigned no better reason for it, than it is 7 ft., because it is not 6 ft. 11 in., or any other given number of feet and inches,) is to be continued or to be reformed; whether, if reformed, it is to be reduced to 4 ft.81 in. at the expense of Great Western capital; and whether they have come to a conclusion that will bear the test of adverse scrutiny, as to the price at which they are prepared to recommend the proprietors to bind themselves to a partnership in per-petuity, with lines of different traffic, of different gauge, of different proportions of receipt to expenditure, of different ultimate prospects, and of capital raised upon different terms, if, I say, they have debated these points, and have arrived at a conclusion favourable to amalgamation, they behave ill to us in requesting the blind assent, which it is evidently the object of the call for the 13th of December to obtain. I hold them to be bound in fairness and in honour not to compromise us by forcing us to an opinion, if they have not formed one themselves, nor if they have satisfied themselves, to coerce us into expressing similar satisfaction, without similar means of judging. Before I vote, I want to know whether 1001. stock in each railway is to be taken as 1001. amalgamated stock; and if not,—as I suppose not,—at what price each is to be respectively written in. Before we have this information, I, for one, shall vote against granting the solicited authority to directors. wise vote against amalgamation until I am assured that the Great Western gauge shall be altered to the NATIONAL gauge, from a conviction that its introduction was a great engineering mistake: that it is detrimental to the public convenience and advantage, and that its continuance can produce nothing but the same work for more money. Almost on any terms I dread this amalgamation, and my fear of it is not lessened when I turn to the character of the parties engaged in the negotiation. We are still groaning under the effects of former arrangements of this kind, and I much apprehend, if the proposition take effect, that we shall be outwitted on the present occasion. The recollection of the capital, equal to 2 per cent. to the Grand Junction, which Mr. Glyn permitted to be added to the stock of the North-Western, inspires me with grief and apprehension.

#### A NORTH-WESTERN SHAREHOLDER.

Sir,-I have read with approbation your remarks on the proposed "amalgamations," contained in the Railway Chronicle of the 18th inst. Our directors owe it, to us and to themselves, fully to explain the history of this unexpected émeute, under which they have been so suddenly heaved from the policy of past years, and made to see through the eyes of their late bitter opponents, by whom they have been so often deceived, although now, with Lord Hatherton, become their disinterested advisers. such a scheme have ever originated in the mind of any one wishing well to the interest of the London and North-Western Company? - and if it be a device of the quondam enemy, is our proprietary to look on it with the more confidence, being traced to such a parentage? Our past experience justifies the strongest distrust of them, and a solicitude that such distrust should be ever present to the minds of our directors in all their dealings with these clever men. It would be inconsistent with Mr. Glyn's habitual straightforwardness to withhold from us any information that might be useful for our decision on the question to be brought before us on the 13th prox.; and we may then reckon on a full and, as usual, luminous statement. But we ought immediately to have the history of this monstrosity ab ovo, or insist that there be an adjournment and an interval of two or three weeks to turn it over and over again and examine its features, whether it bear not the lineaments of Saunders, Russell and Hatherton,-before we take any part in the thing. "Evil communica-tions corrupt good manners;" and you would seem, with others of us, to fear that our directors have

been too long closeted with the "smart" men of Paddington.

A LONDON AND NORTH-WESTERN PROPRIETOR.

#### YORK, NEWCASTLE AND BERWICK.

_Now that the directors have issued their financial statement, the public are placed in a position to judge accurately of each description of shares. But several of my friends are still under misapprehension at to the relative value of the Preference shares and the Extensions; and as some of your readers may also be in this position, I shall be obliged by your inserting these few lines. The Preference shares are guaranteed 6 per cent. till 1850, when they rate for dividend same as the old stock, whether it be 7, or 8, or 9 per cent.; the Extension shares now take dividend on the entire amount paid, precisely the same as the old stock; so the latter are of greater value than the Preference, though many of the public are not aware of thisas the share lists prove. 1,000l. bought in Extensions receives exactly the same dividend as 1,000%. laid out in stock. Amidst the wreck of too many railway properties, it will be satisfactory to the shareholders in this line to know that the directors, even in these bad times, show their capability of paying 7 per cent. and having an annual surplus of .\000i3

Liverpool, Nov. 21.

#### Gossip.

Mr. Ward, the secretary to the Admiralty, is said to have suggested the introduction of railways or TRAMWAYS IN THE DIFFERENT DOCKYARDS of the kingdom, for the transmission of timber and stores to the water's edge, and to one part or other of the neighbourhood. A considerable saving is expected to be made in the item of "teams." There will be thus a further outlay of 6,661*l*, during the present year at Deptford, Woolwich, Chatham, Sheerness, Plymouth, Portsmouth and Pembroke.

At the last county meeting at Berwick, at which Lord Lauderdale and several of the large landholders were present, it was resolved that, as in all counties through which railways passed an assessment to the rates was made to their property, it was desirable that the county of Berwick should derive a similar benefit from the assessment of the NORTH BRITISH, which passes through it for 26 miles, and the assessed value of which per mile will yield, it is computed, between 6,000*l*. and 7,000*l*. per annum. Glancing over our traffic table of last week, it appears that out of the thirty-nine companies enumerated in it the case three whose possible for the

merated in it, there are three whose receipts for the present half-year up to the 11th of November, are already greater than their receipts for the half-year ending the 31st of December 1847: these being the LANCASTER AND CARLISLE, the MANCHESTER, SHEF-FIELD AND LINCOLNSHIRE and the South Devon.

On Wednesday last the Queen and her royal family experienced for the first time the discomforts of the BREAK OF GAUGE. Her Majesty went from Slough to Basingstoke by the broad gauge, and from Basingstoke to Gosport by the narrow gauge. We may hope that the journey will have made her Majesty a convert to NATIONAL UNIFORMITY.

In the "Summary of Public News," given in the Indian News, of the 20th of November, it is stated that in Calcutta "the East India Railway Company's shareholders do not respond cheerfully to the last call, although aware of the reduction in the required deposit to 60,000l. and of the guarantee of a million. The preliminary expenses and arrangements are considered flagrant, and people silently shrink from further association with those who have incurred them. The guarantee now offered by the Court of Directors is by prudent men thought sufficient."

Our railway share market is reported as healthy, compared to that of the United States. There, shares, as the saying is, are to be had for asking. The decline in some of these stocks has been so great that the iron alone on which the trains run is said to be

worth the whole current value of the stock, to say nothing of the locomotive depots and other property. Since the opening of the Great Northern the steam-packets that run on the Witham navigation, between Lincoln and Boston, parallel with the line, have lowered their passenger charges. Before the line opened they charged 2s. 6d. per passenger for the 60 miles run between the two places and within the 60 miles run between the two places, and within the last few days an additional boat has been placed on the route at considerably lower rates, in opposition to the line. The Great Northern, finding that most the line. The Great Northern, finding that most of the persons on the banks of the river still keep to

UU

the steamers, intend, it is said, to start a boat of their

own, to carry passengers at 3d. per head.
On the 11th the new POSTAL ARRANGEMENTS between the English and Belgian authorities, vid Dover and Ostend, to and from Belgium and Germany, came into operation. In the transit between Brussels and London, the letters were thirty-nine hours from the time of being posted to their delivery in London; they will now be delivered in nineteen. The mail train leaves Brussels at observed at Malines by the train from Cologne and Berlin; the mails are embarked at Ostend between 10 45 p.m. and 2 a.m.; reach Dover in time for the 8 a.m. express train (which conveys the French mails), and reach London at 10 30 a.m. To passengers the gain will be fully twelve hours in time, and considerable saving of expense and trouble, as the journey from Brussels will be performed without stopping. From Cologne the journey will occupy 24 hours; from Hamburgh, 44; Berlin, 48; to Vienna, 31 days; to Trieste, 5 to 6 days. From London to the Continent the new arrangement is a great to the Continent the new arrangement is a great improvement, particularly as regards the points beyond Brussels. The mails leave London (as usual) at 8 30 p.m., but instead of waiting at Dover and at Ostend, as they did frequently, until the next morning or aftermoon, they will be embarked at once, and will leave between 11 15 p.m. and 2 a.m., so as to arrive in Ostend about 7 a.m., in time for the first train. Should they be desired at the first train. the first train. Should they be detained at sea, a special train will be in readiness until 8 30 a.m., to take on the mails and passengers to join the first train at Malines, from whence they will reach Brussels or Antwerp at noon, Cologne the same evening, Bremen at 2 a.m., Hamburgh at 5 a.m., and Berlin at 9 30 the next evening, &c. Great as these improvements are, they are but the prelude to more important ones, which the extension of railways on the Continent has entirely suggested.

The following petition to the Minister of Public Works, already signed by the holders of 12,000 shares, now lies for additional signatures in Paris:—

now lies for additional signatures in Paris: — Sir,—The undersigned, all shareholders of the Paris and Strasburg, have the honour to represent to you, that in becoming holders of this line, and obliging themselves to pay up the value of the shares of which they are sub-scribers, they could not foresee that, as an effect of the financial crisis, they should find themselves all journeymen without work, clerks out of place, tradesmen without business, and consequently in utter inability to pay up business, and consequently in utter inability to pay up their instalments; that the financial crisis creates for them a case of imperious necessity from which they cannot extricate themselves, and which calls for the attention and the interest of the Government. That if, some months ago, they refused the offer of purchase which was proposed to them, they were led to it, first by the rate of that purchase, too inferior to the real value of their shares, and then by the assertions of their company, which in its report then by the assertions of their company, which, in its rep of the 28th of August last, affirmed that it should have of the 28th of August last, affirmed that it should have no call of funds so long as the crisis should last, and especially not sill the opening of the first section of the line; that, nevertheless, though the crisis is not ended, nor the first section opened, a call has been made of 50f. per share. That, setting aside the illegality of this call for 50f., to which they claim your attention, they are utterly unable to answer it. In consequence, they have the honour to beg that you will deign to take into consideration the exceptional case in which they stand, and accept the offers which they make to sell to the State the line of which they are shareholders, for a price which, fixed by you, in concurrence they make to sell to the State the line of which they are shareholders, for a price which, fixed by you, in concurrence with their mandatory, can but be the sincere and legitimate representation of the labour and values which they shall make over to the State; they hope, at all events, that you will deign to authorize that the works be suspended and the affairs of the company liquidated.

The orders of the French Minister of Public Works respecting the prevention of ACCIDENTS are, that the employment of four wheeled locomotives for passenger trains be interdicted; that every carriage do rest on six wheels at least, in order that if one of the axles should break, the carriage should still rest on supporters and continue its course. Locomotives to be placed at the head of the train, and never behind. At least one luggage carriage always to be placed at the head of each train of five carriages, and two carriages without passengers, when the carriages in the train shall exceed five. Carriages with passengers never to be locked.

In a review of the progress of the Northern or FRANCE, in the last Chemins de Fer, we find that the increase in its receipts, so marked in the last half-year of 1847, has been maintained in the first half of this present year, though the next three months have not been equally productive. It appears, however, on estimating the probable results of the year, that a dividend of 6f. a share may be safely reckoned on for the shareholders—which at the present prices would give 13 per cent. on purchases for investment.

The last settlement on the Paris Bourse for RAIL-WAY SHARES was effected easily, on account of the few transactions which have taken place in those securities. The North was the only line quoted in the settlement. Several "reports" took place on the prin- experience had such a report submitted from any

cipal lines, and the greater number of transactions ere profitable to sellers.

The advices lately received from New York declare that the capital is gradually becoming benefited by the opening of NEW LINES. Another movement in drawing towards her hitherto comparatively unfamiliar districts has just occurred, and which brings close at hand a rich section of New England. The Nashua and Worcester have completed their line to the crossing of the Fitchburg-road, 27 miles from Worcester, and will open it at once. A railway commu-nication will thus be opened to the public of a section that now looks to Boston for its goods, and as the market for its produce. This opening, says the correspondent of the Morning Herald, must draw to New York a large trade, which will soon be increased by another extension, in December, to Nashua; and the whole line of country east, vid Concord, New Hampshire, from whence passengers can reach New York by an inland route, without a change of cars, from Portland to Allen's Point.

#### Reports of Meetings.

WATERFORD AND KILKENNY.

Nov. 22 .- Half-yearly Meeting, London .- Mr. G. NDERSON in the chair.

Mr. J. M. Currie, the secretary, read the report: Mr. J. M. CURRIE, the secretary, read the report:
At the half-yearly meeting in May last, the directors announced to the proprietary the opening of the line between Kilkenny and Thomastown. This portion has since then been in steady operation, and although the receipts have been small, they have gradually increased from an average of 25t. a week in June to 47t. a week in October, a sum sufficient with the rent payable by the Irish South-Eastern to cover all the expenses incident to working the line. There is every prospect of a still greater increase in the traffic receipts, which on an insulated section of only 11 miles the directors look upon as highly encouraging, and as a proof of the soundness of the undertaking, when it shall be completed in all its integrity, by its extension to shall be completed in all its integrity, by its extension to Waterford on the one hand, and its connexion with the metropolis of Ireland on the other, by the completion of the line from Carlow; and here the directors have again to express their regret at the unfortunate delay on the part of the Irish South-Eastern Company, for whose convenience a heavy expense has been incurred in passenger and goods traffic accommodation at the Kilkenny terminus, much beyond the wants of their own line at present, but which they were compelled by agreement to have ready by the lat of September in last year—two years before there would now appear to be any prospect of that company benefiting by it. On this subject an extract from the report of the directors of the Irish South-Eastern to their proprietary, on the 28th of September last, is subjoined:—"Agreements for the remainder of the land are concluded; the sleepers are in course of delivery, and there is nothing to prevent the line from Carlow; and here the directors have again to are in course of delivery, and there is nothing to prevent the opening of the line to Kilkenny within six months from the present time, if the directors shall be enabled to press the present time, if the directors shall be enabled to press forward the works with vigour, and they feel bound to add, that until the whole line is opened they cannot expect the traffic to be remunerative, or the real value of the undertaking to be at all fairly developed." The directors have devoted their time, since the last meeting, rather to the developement of the traffic than to the extension of the works, but they are now engaged in purchasing the land between Thomastown and Knockwilliam, with the view of extending the line in the direction of Waterford. The directors have to report that the Amendment Act received the royal assent on the 22nd of July last; and the proprietors will remember that by this Act certain deviations have been authorized, whereby improved gradients have prietors will remember that by this Act certain deviations have been authorized, whereby improved gradients have been obtained, the earthwork diminished, and a saving of \$20,000 the effected after paying all expenses attending the application to Parliament: the Act also provides for the abandonment of the Kells Branch, and for an increase or capital. Being aware of the necessity of practising economy in every branch of expenditure, the directors have only drawn half their salary for the last quarter, and have reduced the general expenses of management to the lowest rossible amount. A statement of accounts is annexed as possible amount. A statement of accounts is annexed, as usual, in which the proprietors will observe an item of 4,515L, as paid to the executors of the late Mr. H. Devereux, The directors think it right to state that this sum was not arrived at until after a very close and rigid examination of the accounts, and a deduction made therefrom of an amount larger than would have been obtained on taxation. A special meeting will take place at the conclusion of the ordinary business, in order that some shares may be forfeited, on which the prospect of procuring the arrears was utterly hopeless.

The statement of accounts showed the receipts on capital account at 266,546l. 0s. 9d.; expenditure, 240,376l. 0s. 9d.; advanced to revenue account, 1,037l. 14s. 10d.; balance at bankers, 15,132l. 5s. 2d, The receipts on revenue account from the 26th of May to the 29th of Septamber, including 1,315l. rent due from the Irish South-Eastern Company, amounted to 1,961l., and the working expenses, to 1,686l., leaving a balance of 2771.

The CHAIRMAN would not occupy their time with any observations in moving the adoption of the report. The directors had tried to make it as straightforward as they could.

Mr. Bates was a proprietor in many lines. He must say that he never in the whole course of his

company as the present. It was a proof, in his judgment, of the total incapacity of these gentlemen to ment, of the total incapacity of these gentlemen to conduct their affairs. No gentleman ought to assume the position of a director, either in this or any other company, unless he was qualified for the management of its concerns. What was the state of their affairs? They had expended the sum of 266,546l., and in return they had 11 miles on a single line, costing, of course, at the rate of 23,000l. per mile; and this in Ireland, too, where labour and everything else was exceedingly cheap. He was a proprietor in one of the most difficult lines ever constructed in England—a line where the difficulties constructed in England-a line where the difficulties were such that some of the greatest engineers said it never could be made; and yet that line was completed, and was now in profitable working order as a double line, having cost only 20,000l. per mile. He would ask, how had their money been expended? Had the estimates been submitted to public competition? Who were the parties to whom payment had been made for the land? He should like exceedingly to know who had received the money. He knew it was originally intended that this should be a wood line, and it had been stated that two of the directors were interested in Ross's patent for that purpose; if so, he should like to know what were the details respecting the 15,000*l*. which had been paid to abandon that project. He should leave it to others to refer at length to the details, but there was one item on which he should like to have some information—he meant the sum paid to the executors of the late Mr. H. Devereux.

The CHAIRMAN: The sum was for law expenses especially during 1845, when there was a great deal of madness among all parties, and perhaps the directors were no better than the shareholders. The expenses were incurred for projected extensions or such matters, which were intended to keep competing parties out of the way.

Mr. BATES had referred to the matter, because at the last meeting a gentleman asked what were the outstanding legal expenses, and he was told that they would not amount to more than 600l. or 700l. But it now turned out that this sum had been kept in the background. They had received from the traffic 640*l*. since the line was opened. That was eighteen weeks ago, so that it appeared they were eighteen weeks ago, so that it appeared they were receiving on the average 30l. per week. Their expenditure during the same time had been 1,692l., or at the rate of 94l. per week. There was, in his judgment, at the last meeting, an improper anxiety on the part of the directors and the chairman to buy up the shares. They were told, when one gentleman said the shares were as low as 13 discount, that this must be a mistake and that if the sharelydders would be a mistake, and that if the shareholders would come to Delahay-street (the office of the company), they would find a much better market. What would they say now had the directors taken the shares at 13 or 15, or even 16 discount?—(A Proprietor: Or 17?)—They knew the worth of these shares better than the shareholders did. And yet they were told by the directors to look to the traffic as highly encouraging and as a proof of the soundness of the undertaking. At the last meeting the engineer had formed a pretty correct estimate of the working expenditure of the line; he estimated it at 75 per cent.; but he had been far out in his estimate of the receipts, which he calculated at 801. Now either he was acquainted with the district or he was not. If he was not acquainted with it he ought not to have ventured upon such estimates as these. And yet they were told that this traffic was an encouragement for them to go on and make the remainder of the line. And they were also told the directors had devoted themselves to the developement of this traffic-to the developement of 364. per week on 11 miles! He regarded the concern as bankrupt, and that the idea was altogether absurd of supposing that it would be better to go on with it. It would be far better to stop altogether. They had been victimized by engineers and lawyers from the very commencement to the present time. The directors, indeed, took credit to themselves for having only drawn the half of their allowance during the last quarter. The directors of one of the most flourishing companies in England had voluntarily come forward and given up the whole of their allowance out of sympathy with the suffering proprietors at the present time. His opinion was, that they ought to take the concern out of the hands of the present directors and avail themselves of the powers conferred by a recent Act of l'arliament to

stop the concern altogether.

The Chairman said the directors would be only too happy to resign their places to any gentlemen the proprietors might appoint.

Mr. WILLS wished to know how they made out a balance of profit in their accounts. They had advanced a large sum from the capital account to the working expenditure, and he did not see any

Digitized by GOOGIC

counter entry on the other side. He wanted to know how they could prove a balance in their

The CHAIRMAN: There is a profit on the traffic account, decidedly.

Mr. FRANKLIN thought they were getting out of order. The questions which Mr. Bates had put ought to be answered in detail.

The CHAIRMAN had already answered the only question he had understood Mr. Bates to put.

Mr. Bates had certainly attempted to lay down reat general principles, but he did not know that he had asked any specific questions.

Mr. WILLS begged to repeat his question, how the directors made out a balance of profit on the traffic, when it appeared that a large sum had been advanced

from the cupital account.

The CHAIRMAN: That is a debt undoubtedly.

Mr. Wills: Isit usual to put it down in this way?

The CHAIRMAN: There is no other way of showing

Mr. WILLS thought this system was calculated to deceive, though perhaps it was not intended to do so. He wished also to have some explanation regarding the item put down to the Irish South-Eastern.

The CHAIRMAN: It was for rent due to us. It had

not yet been received, but it was due.

Mr. FAGAN: For how long—for four months?

The CHAIRMAN: No; certainly not.

Mr. FAGAN: Then the fallacy consists in this;
that by these accounts it is made to appear that the South-Eastern owe us every four months the sum of 1,315l., when that is not the case.

The CHAIRMAN: Certainly that is not the case.
Mr. FAGAN: Then there is not a profit even upon
your own showing.

Mr. WILLS wished to know whether this rent was to be paid, whether they worked their own line or not.
The CHAIRMAN: Certainly.
Mr. WILLS: Then that is so much gain; but if

this item were left out, there would appear to be a

deficiency of upwards of 1,000l.

Mr. Fagan: This does not appear to be a straightforward account. That which is due on a six months' transaction is here brought forward on a four months' account, and then it is assumed that you have a profit.

Mr. WILLS: Besides, you bring it forward without

having received it.

A Director: We have told you how it stands as a matter of fact, at any rate; nothing has been kept back from you.

Mr. FAGAN: Why should the South-Eastern get

credit from us; why is it not paid!

The CHAIRMAN: The account has been sent in, and if it is not paid soon, we shall take steps to

recover it; we have no wish to let them escape more

than other parties.

Mr. Fagan: Then on 11 miles we are losing at the rate of 3,000t. a-year. I wish to know what is the amount of capital the directors are authorized by their late Act to raise.

The CHAIRMAN: 120,000%.

Mr. FAGAN: And have the directors made up their

mind as to the mode in which it is to be raised?

The CHAIRMAN: Certainly not; because we agreed not to do so till we had obtained the general

opinion.

Mr. FAGAN thought the money could not be raised, and that the most prudent course would be to dissolve at once, to sell their line to the Limerick or Cashel, or even to the Government, for he was satisfied it would be impossible to make the line. As did not expect that; and in England he was satisfied they would not get a shilling, even at 20 per cent. He was as much interested in this matter as the directors, of whom he had no wish to say anything angry; but he said it was a question of pounds, shillings and pence, and he believed they would gain more by dissolving than by going on with the line.

Mr. Franklin would not charge the directors with

indecency, or any such thing, neither should be think it was prudent to expose the state of their affairs in the way the last speaker had done. He could not, however, shut his eyes to the present state of the line, and if the directors had any further information to give he should be glad to have it, for the report before them was certainly very meagre. There was one observation he must make. He had not before attended the meetings of this company, and he could scarcely believe his ears when he heard that the whole of the original capital had been expended

the whole of the original capital had been expended in making eleven miles.

The CHAIRMAN said that was not quite the case. The original capital would be expended in making the line to Knockwilliam.

Mr. Franklin: And how much further is that? The CHAIRMAN: About five miles.

Mr. FRANKLIN: Then the whole capital is expended in making half the line?

The CHAIRMAN said there could be no doubt they had been deceived as to the cost of constructing the line, but their eyes were now open, and had been so for some time; and therefore last year they applied to Parliament for powers to increase their capital. The line was under-estimated from the first.

A Director: We were also deceived as to the value of the land. The first calculation was, that land would be obtained at the rate of from 20l. to 30l. per acre. But from the multiplicity of charges, and the claims of tenants, it was now found that land was dearer in Ireland than in England. Their first engineer had been quite out in his calculation, which was the source of all their subsequent difficulties. He had entered into the undertaking with the same expectations as the rest of them, and ever since he had been struggling to overcome their difficulties.

Mr. FRANKLIN was sorry to hear the directors attempting to shelter themselves under a responsi-bility which he thought they had no right to do. He knew nothing about the difficulties of the line, the engineering expenses, or the value of the land; but he had had confidence in the directors—he relied upon their good faith and experience, and therefore he became a shareholder.

The CHAIRMAN said the directors had been labouring for years to remedy these original mistakes, and he could assure the shareholders they were suffering in common with them.

Mr. FRANKLIN wished to know whether, in the opinion of the directors, it really was desirable to

abandon the line, or to carry it out.

The CHAIRMAN had not the slightest difficulty in replying to that question. If they could complete the line, and their engineer assured them it might be completed for the additional capital of 120,000l., he had no doubt whatever of the ultimate results. He did not like to animadvert upon his neighbours, but he might state, for the last year and a half they had been expecting the Irish South-Eastern to come in upon them, when they should of course have the whole Dublin traffic running upon their line. But now the Irish South-Eastern told them that they could not complete their line to Kilkenny for six months to come, and then only if they got the

A Proprietor: You should have bound them in forfeits.

The CHAIRMAN: So they were bound to pay the rent of 1,300l., but that was nothing to the traffic they expected if the line was opened.

Mr. FAGAN wished to know if the line was to be

rated to the new poor-law.

The CHAIRMAN stated that perhaps the proprietors would like to hear the opinion of Capt. Moorsom, the engineer, on the state and prospects of the line.

Capt. Moorson was a little surprised to hear proprictors speak of their prospects in the way they had done; because, representing as he did 40,000l. in this line, he fancied that it was his interest to obtain an accurate knowledge of its affairs as much as any other gentleman in the room. He had endeavoured to obtain such a knowledge, and if he had failed it was not from want of care and attention-it must have arisen from want of capacity and experience. He had, however, come to certain conclusions, and he was prepared to abide by them. The proprietors must remember that it was one thing to commence a line with a weak proprietary and an inadequate capital, and it was quite another thing to commence one with a strong proprictary, and all the means at hand to carry out their designs. There could be no question that there was a large traffic between Waterford and Kilkenny. But when the company had hung fire, so to speak, in purchasing that traffic, when they had executed only a portion, and that an isolated portion of their railway, they must not be surprised at the smallness of their receipts. He was a proprietor in the first line that was opened—the Liverpool and Manchester. Not an inch of that line was opened till it was opened throughout, and the consequence was that the receipts were immediately remunerative. The next that was opened throughout was the Grand Junction, and it was also remunerative from the commencement. But what was the case with the London and Birmingham —certainly not an unimportant line—one that was of small remuneration. Two isolated portions of that line were opened in the first instance, and the consequence was, that the first half-year's working resulted in a loss. And if, because their own line was now working at a loss, it was to be assumed that there would also be a loss when the whole line was completed, he must say that he saw no correctness in such a con-clusion. All experience told him the reverse. Mr.

construction of which more difficulties were encountered than any other in England.

Mr. Bates: I referred to the Lancaster and Carlisle.

Capt. Moorsom considered that line a most success-Capt. Moorson considered that line a most successful one. It was originally intended to construct it as a single line, but it was not in the hands of proprietors who did not pay up their calls. They paid them well. They opened the railway as a single line; they got a small profit, somewhere about 5 per cent.; they then went on and made it a double line, and now it yielded 7 per cent., or thereabouts. But he believed Mr. Bates would find that it had cost more than 20.000. per mile. At all events he should like than 20,000*l*. per mile. At all events, he should like to see the capital account; for he knew that several years ago they had paid between 16,000*l*. and 20,000*l*. per mile. But he did not see any parallel between that railway and the Waterford and Kilkenny, which that railway and the Waterford and Kilkenny, which had cost 16,500l. per mile for bond fide expenses of construction—all that had been spent beyond that was irrespective of the expenses of making the line, and ought to be put down to the weak state of the company. If they continued in that weak state, there would be no question that they would go on to expend more than they ought bond fide to do. But how could the board of directors help that? The next could the board of directors help that? The next question was, whether the contracts had been submitted to competition. He would answer, there was no contract which had not been put in the first instance to open tender. The engines were obtained in the same way; that was to say, sixteen different letters were written to sixteen different engine-makers; and the result of their offers was, that the present contractor was accepted. The works were put to open contract in the first instance; but when they had established a set of excellent workmen, and Irish workmen too, they no longer let their works to large contractors, but employed these workmen to take small contracts, which they did as efficiently, and much more cheaply. But these small contractors required to be paid in cash, and the difficulty of getting cash to meet their demands had forced them, and would still force them, into the hands of the larger contractors, to whom they must eventually pay more money than they would otherwise need to Then it was said that the engineer had miscalculated with regard to the traffic in estimating it at 80*l*. per week, when it only averaged 36*l*. Now, he had no doubt the statement of the engineer was, that in the course of twelve months the traffic would amount to 801. per week. But let them bear in mind that the traffic, which was 25*l.* in June, had risen to 47*l.* in October; and if this went on, and they included the rent due from the Irish South Eastern for that time only, he thought that by twelve months the traffic would be even higher than 80l. per week. Then Mr. Wills had made an observation with regard to the profit. Now it did appear to him that there was not a profit on their accounts if these accounts were strictly analysed. Well, they would at all events see that he was not inclined to blink the black side of see that he was not mented to bink the black sude of their affairs. He took the fair view of the matter to be this. Their expenditure was about 1,690l., in-cluding the maintenance of the permanent way, from the 1st of September 1847. There were several other of the expenses which had not been incurred during the last 18 weeks, but went much further back. The receipts of traffic during that period amounted to 6861.; and the proportion of rent due from the Irish South-Eastern to about 4291.—in all between 1,1001. and 1,200%—so that the loss they had sustained was somewhere between 400% and 500% in eighteen weeks' working.

A Proprietor: You allow nothing for the wear and tear of engines.

Capt. Moorson: That was entering into a large question. It was now a moot question among engineers whether anything ought to be reserved for the wear and tear of engines; and his opinion was that their engines were in a better state now than they were in May, when they first began to run. They had already been told that their traffic had increased in a large ratio. Mind, he said, in a large ratio, not to a large amount. He had been over in Ireland lately, and the manager told him that the goods coming to them for conveyance were more than they could carry, and that he expected an increase to nearly double the amount within a very short time. they took the loss for the last eighteen weeks at If they took the loss for the last eighteen weeks at 400L, that would give a loss of about 1,200L on the year, and along with that they must take into account that they had an increasing traffic which they were not able to carry. The only remaining question was as to the rating for the poor-law. That, perhaps, might be better answered by the solicitor; but as heavened to be present when the judge gave his decihappened to be present when the judge gave his decision, he might mention that the rating was to be clusion. All experience told him the reverse. Mr. assessed in the same way as the land would have been Bates had said he was a proprietor in a line in the if it had not been a railway. Thus, supposing they

Digitized by GOOGIG

had one hundred acres, which would have been rated as land at 25s. or 5l. an acre, they would be assessed

at precisely the same rate.

Mr. WILLS said it was evident from this statement that the accounts were not understood by any of them, and the best course they could adopt would be to move the appointment of a committee of investigation. This had been done on other lines with the greatest success, and he believed that it would be so here. He knew of nothing that would impart a feeling of confidence among the shareholders equal to this; and he would therefore move, as an amendment to the adoption of the report, that a committee of five shareholders be appointed.

The CHAIRMAN would with great pleasure second the motion, in order to show that the directors had nothing to conceal.

Mr. TAUNTON said, having been chosen auditor of

the accounts at the last meeting, he might perhaps be allowed to make a few observations. The shareholders would observe that the Board, as now constituted, was not the same as it was originally. Two or three gentlemen had since been added, who re-presented a large amount of shares, and they devoted a large portion of their time to the welfare of the company. There was one point he would impress upon the committee that was to be appointed, and that was to examine closely into the legal and engimonstrous. Then there were certain directors in Ireland whose existence they only heard of by their drawing their salaries. With regard to the legal expenses, they had already heard something of Mr. H. Devereux's account, and he might add that the sum of 4000, was charged by the Loan Commissioners upon the last loan obtained from Government. Of course the directors could not help that, but he thought they should endeavour to get it altered.

After some further conversation the motion for a committee was carried unanimously, and the following gentlemen were named:—Messrs. Wills, Bates, of Mr. Wills, the meeting was adjourned till the second Wednesday in January, as was also the special meeting for the forfeiture of shares.

MONMOUTHSHIRE RAILWAY AND CANAL Nov. 15 .- Half-yearly Meeting, Newport .- Mr. R.

BLAKEMORE in the chair. The Chairman, in remarking on the finances of the concern, had to congratulate the shareholders upon their being very prosperous and satisfactory. They might congratulate themselves that they were not in the condition of some similar undertakings, having heavy responsibilities laid upon them by Act of Parliament, and yet destitute of the means of carrying out their powers. He had no doubt that would find themselves in a position fully equal to their engagements. They had had offers of the money necessary to enable them to execute the powers with which they were charged; these offers were most satisfactory, and to be fully relied upon. The provisions of the new Act of Parliament came into operation on the 1st of August last. Concurrent with these provisions, there was an order made for a reference with respect to a question of compensation urged upon the parliamentary committee by a gentleman of this town, Mr. Cartwright. The matter was at present under arbitration. The powers of the Act limited their operations, with reference to the Western Valley, to one year; and the prompt and persevering attention of the committee must there fore be given to the completion of the line within that time. They had already given the matter their fullest consideration, and hoped their object would be satisfactorily accomplished. For the Pontypool line they had a period of two years, and the committee had instructed their engineer to carry on the rorks accordingly; and there was every reason to think, from the progress of the undertaking, that the powers now intrusted to the company would be amply sufficient for the accomplishment of their purpose and that both lines would be completed within the time prescribed. The committee were now negotiating a loan for 45,000%, under their Act; this amount would, he believed, shortly be in the hands of the company's banker. The Act of 1845 would then be fully carried out; and they would then be in a position to tender the new shares to the proprietors, go forward with the provisions of the Act of 1848. The committee therefore thought it would be better to fulfil their engagements with reference to the old concern, and to defer the offering of the new shares until that had been done. With respect to the state of the company's trade, he had the greatest satisfaction in announcing that there had been considerable improvement. The income for the last half-year had exceeded that of the corresponding period in 1847 by more than 600%. This, he thought, must be regarded

as a very pleasing feature—that, with a reduction of 25 per cent. in their tolls, there had, nevertheless, been an actual increase of 600l. in the income of the half-year. Another very gratifying point in the transactions of the last half-year was a great reduction in the expenditure. Without giving any undeserved credit to the committee, or to their agents, he thought there was the greatest reason for satisfaction, for the current expenses of the past half-year had been at the rate of 1,500l. per annum less than those of last year. The committee felt, and he had no doubt the company also considered, that the conduct of the chief clerk and engineer with reference to this point had been of the most satisfactory descriptionfor this saving had been effected without withdraw ing any proper remuneration from persons employed by the company; and, at the same time, the works ere in a better state than at any former period.

Mr. Ruscou then read the minutes of the proceedings of the committee. Their report was as follows: Canal-office, Nov. 15.—Your committee have to announce that the bill for the amendment of the company's Acts has Ings of the committee. Their report was as follows:
Canal-office, Nov. 15.—Your committee have to announce
that the bill for the amendment of the company's Acts has
been duly passed into a law, and is now in operation. Your
committee have since the last general meeting surveyed the
various lines of the company, and found them much improved, and in a good and workable condition. They have
also inspected the Newport and Pontypool, and works connected therewith, and found them proceeding satisfactorily
under the execution of the several contracts pertaining to
their construction. That portion of the line extending between Crane-street, Pontypool, and Crindau, is in so advanced a state as to be ready for ballasting should be
commenced forthwith, so as to allow time for subsidence,
and the reception of the rails in the early part of next year.
Your committee would recommend that the formation of
the line lying between Crindau and the Marshes-road, Newport, should, if found practicable, be let by contract, so
that the line between the latter point and Crane-street,
Pontypool, may become operative. A sum of 120,0000, has
been already expended, and a further sum is requisite to
complete the contracts for the construction of that part of
the line. The Newport and Pontypool Railway has, however, less immediate claim to the attention of the company
than the Western Valley lines, which the law imperatively
requires should be completed and in operation by the 1st
of August next, whilst the completion of the Pontypool
may be deferred until the subsequent year. The means,
then, which the company may possess should not be weakened by any attempt to accelerate the railway, so as to
retard in any degree the improvements in the Western
Valley lines. These lines are progressing in their change
as rapidly as circumstances will permit. That part of the
line extending from Court-y-bella to Risea has been already
altered by widening the road and improving the curves, and
on other parts of the various lines the same chang and no doubt need be entertained of the company's ability to meet the first immediate requirements of their Act, if not to complete that portion of the Pontypool above alluded to by the 1st of August next. Your committee would re-commend that the allotment of the new or preferential shares be deferred until the works are in a more advanced shares be deferred until the works are in a more advanced state than at present. A model tram has been constructed under the direction of the company's engineer. It is built so as to work either upon the tram-plate or edge rail, to allow a gradual substitution of the one for the other, being calculated to allow a progressive conversion of the tram-ways into railways without a stoppage of the traffic, by a change of gauge, wheels, or otherwise. Your committee are negotiating, with every prospect of success, a loan of 45,000.C, which, with the sum still authorized to be raised by calls, will enable the company to effect the projected improvements in the Western Valley lines, and assist in the completion of the Pontypool. The half-yearly statement of accounts now submitted to the proprietary shows, not-withstanding the reduced scale of tolls charged upon the company's line during the past two months, a small increase as compared with the statement for the previous half-year, company's line during the past two months, a small increase as compared with the statement for the previous half-year, and corresponding one for last year. The ordinary expenditure for the past half-year, as compared with the corresponding one of 1847, has been considerably decreased. Your committee suggest that there be declared a dividend of 44. per share for the last half-year, which would be equal to or after the rate of 11 per cent. to the 30th of June last, and 5 per cent. to the 30th of September.

The entire proceedings of the committee were

The entire proceedings of the committee were dereupon confirmed.

The CHAIRMAN said the next business he had to introduce to their attention was the account for the 

Total .. Expenditure, including a div. of 4 per cent. £26,252 0 3

£6,926 14 6

The CHAIRMAN said there was one expense which he very much regretted, and which they would all regret—the item of 5,700l. for law and parliamentary charges. They must certainly be sorry to see that item in their account; but the determined and persevering opposition they had met with in their appli-cation to Parliament necessitated that outlay. The Canal Company had always wished to do what was Canal Company had always wished to do what was right and just to all parties; and it was with the greatest reluctance that they had submitted to the payment of such heavy parliamentary expenses. The calls upon shares had been well responded to. Out of calls, amounting to 80,000*L*, the defalcations, up to the present time, only amounted to about 6,000*L*; and the whole of this 6,000*L*, although not paid was and the whole of this 6,000l., although not paid over, was perfectly secure; and interest of the same amount paid by the company was paid to the bankers by the paid by the company was paid to the bankers by the holders of the shares upon which this defalcation existed. The committee had, as the shareholders saw, determined to recommend to divide 4l. per share for the last half-year. There was, upon the current account for the half-year, a balance of 10,742l. 5s. 5d. in favour of the company; but that amount included bad debts, incurred some years since—none of them being of recent date—and some of which would, probably, never be realized. In the present half-year they had also paid off debentures to the amount of 4,000l., out of the current income; and the committee now proposed that the shareholders should declare a dividend of 4t. per share out of these two sources. They could not, as they were aware, divide more than 5 per cent. after this time; and any income above a sum sufficient for that purpose must be carried to a reserve fund, to be disposed of under the supervision of the Railway Commissioners. The committee thus considered that they were entitled to take into the account the 4,000l. paid off in debentures. This dividend of 4t. per share would leave a working balance in the hands of the bankers and the official managers of the concern quite adequate to their necessities, whilst the present quarter's ton-nages would place the company in a very secure and satisfactory condition, leaving amply sufficient for the 11 per cent. dividend, and an amount to be carried to the rest fund, to be disposed of as the Railway Commissioners might direct.

Mr. O. Morgan moved that a dividend of 4l. per share be declared for the past half-year.

Mr. W. W. Phillips seconded the proposition.

Mr. Blewitt should like to inquire from what

sources the increased income alluded to by the chairman had arisen.

The CHAIRMAN said a reference to the accounts would show that the increase had arisen from coal and iron.

After a brief discussion as to the payment of the income tax out of the future dividend, the motion

was carried unanimously.

Mr. Blewitt wished to make a few observations

with reference to the remuneration of members of the committee. Some of their directors came from considerable distances to attend their meetings, and were not paid their travelling expenses; and only received two guineas a day for their attendance on committees. There was the chairman, for example, who was a loser annually to a considerable amount. in consequence of his attendance at the meetings; and other gentlemen were in a similar situation. Now, he certainly thought that the proprietors ought not to expect gentlemen to work for nothing; or, worse than that, to be out of pocket by their attention to the general affairs. He would therefore move that, in future, gentlemen coming from a greater distance than 10 miles, to attend meetings of the committee, should have their travelling expenses paid, in addition to the ordinary remuneration of two guineas a day.

Mr. Fraser thought all gentlemen who travelled to attend meetings of the committee, whether more or less than 10 miles, should have their expenses paid. The CHAIRMAN said his attendance at the meetings

of the committee cost him at least 50l. a year. After some further conversation, during which it was suggested that an addition should also be made to the amount of remuneration allowed to the directors, it was resolved that the committee should be paid three guineas a day for their attendance at meetings, and that their travelling expenses should be also

defrayed by the company.

BIRMINGHAM AND OXFORD JUNCTION

Nov. 21 .- Special Meeting, Birmingham, for empowering to raise, on mortgage or bond, the sum of 333,000*l*., authorized by the Birmingham and Oxford Junction Act, 1846, and the Birmingham and Oxford Junction (Birmingham Extension) Act, 1846.—Mr.

The CHAIRMAN moved and Mr. G. WHATELEY seconded a resolution in accordance with this object. The motion was carried unanimously.

BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNC-TION.—Nov. 20.—Meeting of Shareholders, Liverpool, to consider a circular issued by the directors to the shareholders, in which they proposed that the 45,000 Cheshire Junction shares of 31*t*. nominal value should be cancelled, and that in lieu of them new shares of 7l. value be created; and also in considera-tion of the 10l. paid on the 3ll. shares, and of the loss that may be sustained by the Chester and Birkenhead shareholders, by reason of the postponement of the works, it should be understood that 25s. per share had been paid on such shares.—Mr. Wills in the chair.—The Chairman said, that the directors intended to submit the above proposal at a special meeting which had been called to consider the propriety of limiting the works and of making arrangepriety of limiting the works and of making arrangements with other companies.—A lengthy discussion followed, in the course of which the proposal of the directors was strongly condemned. Ultimately the following resolution was adopted by the meeting:

"That in the event of the details given by the directors not being satisfactory, this meeting pledges itself to support a motion for the adjournment of the meeting and the appointment of a compiler of an expeling, and the appointment of a committee of an equal number of Chester and Birkenhead and Cheshire Junction shareholders to investigate the accounts, and report as to the equity of the proposed financial changes."—Several other propositions of the directors were afterwards discussed.

Dublin, Dundrum and Rathfarnham.—Ad-journed Meeting of Shareholders, Dublin.—Nov. 10. —Mr. P. Crofton in the chair.—Mr. J. Boyce stated that the committee not having received any satisfactory communication from the directors, had submitted a case to counsel. He would read one which showed the exact facts and position. The case, which had been submitted to the Attorney-General, together with his opinion thereon was, that the directors could not enforce the payment of the last call of 3l. 15s. per share until they proceeded against all the shareholders for the recovery of the preceding call of ll. 5s. per share, so as to place all the parties on an equal footing; and also that a bill should be filed to restrain the directors from proceeding until such call had been enforced, the bill to be filed by a shareholder who had paid the call of 1l. 5s. The following resolutions were then unanimously adopted :-

11. 5c. The following resolutions were then unanimously adopted:—
That, from the opinion of the right hon, the Attorney-General, there is no doubt that the shareholders have a valid defence to the payment of the calls now made by the directors of the company; but viewing the whole affair as an unfortunate speculation, we feel we should pay our just proportion of all proper liabilities that now remain due, and in order to carry the same out, still agree to our former offer of 22, per share, and to pay such 27, on or before the 10th of December next. That a subscription be now entered into of 5s. per share as a protection fund, to be applied as counsel may direct, to oppose any proceeding that may be taken by the directors of the company; and that all parties paying such subscription be protected to the fullest extent practicable. That the following be a committee to conduct the proceedings on behalf of the subscribers:—Sir J. Dombraine, Messrs. P. Crofton, W. Vance, J. Boyce, F. T. Porter and Dr. Gaphran; and that Messrs. Boyle, Low & Co. be appointed treasurers to the fund—the committee to have power to take an office and employ a person competent to add them in the performance of their duty. That in the event of the directors re-considering their position, and agreeing to accept our proposal of 2l. per share, and transfer our shares on such payment of 2l. each, the money subscribed by the shareholders to this fund be returned, after deducting, pro rata, any expense that may be incurred. That a copy of these resolutions, with the case and opinion of counsel, be sent to the chairman of the company for the consideration of the board of directors.

of directors. In the course of the proceedings, Mr. Boyce men-tioned that he had received twenty-nine letters from different shareholders, seven of which were from Cork, and all expressing a wish to be governed by the opinions of the committee in every particular. Those letters represented a large number of shares, independent of those represented by the attendance at the present meeting. —The foregoing resolutions were unanimously passed.

chairman of the company for the consideration of the board

ACCIDENT ON THE RICHMOND BRANCH. Nov. 18.—At the Richmond bench of magistrates' court, W. Watkins, the fireman of the 'Vulture' engine, was charged with driving the 'Vulture'

engine against the 'Hornet' engine, thereby causing the death of R. Perry, at Richmond. We give the evidence in detail here, as proving dictinctly that the officials of the company were entirely free from blame.

T. Webber: Was pointsman. Knows the prisoner. He was the fireman of the ballast-engine. Witness was attending to his duty as pointsman at the Richmond station, at 6 o'clock on the previous evening. He saw the prisoner get on his engine, the 'Vulture,' which was thinder the shed blowing off the steam. He propelled the engine out of the shed towards New Richmond. As he came up,towards him, witness said, "you must not go up the line, because there is a train coming." He made answer, "My mate is not here; I only want a little water in the boiler." Witness again told him he could not be allowed to go, but he did so. He was not away half a minute. The prisoner then is a train coming." He made answer, "My mate is not here; I only want a little water in the boiler." Witness again told him he could not be allowed to go, but he did so. He was not away half a minute. The prisoner then returned to the shed, as the witness thought, to put the engine up for the night. He (the witness) then went to put back the points to allow Hunt, the driver of the Southampton engine, to back in for the 7 o'clock, p.m. train, when he heard a rush of steam, and saw the 'Vulture' again coming on the road, and said to Hunt, "They are on the other road." The ballast engine then rushed past with all the cocks open, and surrounded with steam. He called to them to stop, askedi where they were going to, and turned on his red light to the engine. The Datchet bell was then ringing for the down express train, and that train was momentarily expected. The Vulture' passed on at a very rapid rate towards the points at New Richmond. He did not hear any crash. The night was windy, but the Datchet train did not appear to her time. It was usual for a train to go out of the station at the rate the ballast engine went. It was contrary to orders, but he heard there were four men on the engine beside the driver and the prisoner; and they blew the steam and went very fast to blind the "gaffer, who, if he had seen any person on the engine, would have reported it. He could not say whether the prisoner was drunk or sober. Witness then went to the junction at New Richmond, and when he got there he saw the two engines had met. The 'Hornet' and train was thrown off the line, and lying twenty or thirty yards from the 'Vulture'. He afterwards returned to the station to turn on the red light to stop the up train from Datchet, and then returned back. He saw the deceased, Perry, pulled out from between the engine and tender.—E. Burchell, one of the company's policemen knew Perry, the deceased; he was employed by Mr. Ker, the engineer, some months since; he had no business to be on the engine; Mr. Cooper, the superintendent of the

Nov. 23.—Adjourned examination.

Nov. 23.—Adjourned examination.

Mr. J. V. Gooch, superintendent of the locomotive department. Knew the prisoner, as acting fireman for the last three years; for the last month he had been fireman to a ballast-engine. The printed rules that more particularly referred to engine-drivers and firemen ranged from rule 63 to 93, but at the commencement of the book there were instructions that every person in the company's service should make himself acquainted with the signals, and have a copy of the same always in his possession. The driver of the ballast-train had violated the several rules applying to engine-drivers. He was besides, when he arrived at the conclusion of his journey, bound to report himself to the foreman of the out-door locomotive department, and he was not on any pretence to take out any engine without an order to that effect from this person. The engine, after coming from Datchet, was very properly moved into the siding, and there it should have remained. The book of rules produced had been given to the prisoner, having been first signed by witness. Every additional person on an engine, besides the driver and fireman, impeded the working of it.—Nathaniel Dear was an engine-driver, and had been so for three years. On the evening of the 17th inst. was the driver of the 'Hornet' engine, which left Waterloo-station with the 5 35 p.m. express train to Datchet. G. Lane was the fireman. They were two minutes over time when they left Waterloo-station, and were detained two minutes and a half at Vauxhall. The train was due at Richmond at 6 p.m. In coming by Mortlake it was 2½ minutes past 6 p.m. Mr. J. V. Gooch, superintendent of the locomotive depart-

The intervening space between that and Richmond was generally done in four minutes. When about sixty yards from the Blackhorse-gate he shut off his steam, and saw a white light there, denoting all was right. When he had come nearly to the wooden-bridge, which is on the London-side of the signal-posts at New Richmond, he saw that the signal-man had turned his hand lamp from him, which caused him to suspect that something was wrong. He reversed his engine and put on the steam, and, looking round his engine, he saw another one coming out of the Richmond siding. He took hold of the regulator and hand railing, and pressed his chest tightly against the firebox. He felt a shock immediately afterwards, and the engine recoiled about the length of a carriage, and was thrown off the line when the collision took place. The Vulture' was just crossing the points on to the up-line. One half-minute sooner or later would have prevented the accident. Witness knows the position of the engine and side-line. If they had been looking out, he did not think they could have stopped, the curve is so very great, and they could not have seen him in time to avoid the collision, and they must have come very slow to pull up in time. He considered it would have been his duty to have gone slow round a curve. When he drove to the old station, before the Datchet line was open, he could not see the signals at New Richmond from the old station.

Mr. Lacy, M.P., the chairman, who was in the

Mr. Lacy, M.P., the chairman, who was in the passenger train, was also examined. He considered the preservation of the passengers arose from the superior construction of the carriages.—It was then agreed that the prisoner should stand committed for agreed that the Prisoner should stand committed for trial at the Central Criminal Court, for the man-slaughter of Richard Perry, but he would be brought up again on the 25th, for the depositions to be com-pleted. The driver would probably not be able to undergo an examination for a fortnight or three weeks.

### CALEDONIAN RAILWAY

THE CONVERSATIONS of JITTLE

HERBEIT and his MOTHER on ZOOLOGY; or, the

CLASS MAMMALIA.

By EMILY ELIZABETH WILLEMENT.

Authores of The Catechism of Familiar Things.

"Miss Willement has amply proved her ability as a practical
educational writer, by the admirable "Catechism of Familiar
Things, which has already become a text-book in schools. She is
peculiarly happy in conveying a clear comprehension of her subject
to the most youthful mind, in coneise and simple descriptions.
This is just the book that should be put into the hands of children.
It will lead them at once to a love for the most attractive branch of
human knowledge. There is a fine poetic feeling and beautiful
moral tone which will render Miss Willement's charming little
book attractive to children of a larger growth than those for whom
it is professedly written. We most cardially recommend it to the
notice of parents and teachers; and while on the subject, we cannot
refrain from questing the following brief but sensible remarks:—
'I have observed that nothing pleases children so well as movelty
in their books of study. In reading for exercise, it is a great
encouragement where the matter is entertaining,—something
they can illustrate for themselves, and apply to the habits of everyday life, related in a style as nearly recembing that of conversation as is compatible with the rules of grammar and purity of
diction. On this plan, then, have I written the little work now
presented. I have not thought it needful either to measure the
words into those of stort and easy syllables, or seek the casiest
terms in treating of the different subjects: considering that as
children must, at one thesoner, method of the one of the casest
terms in treating of the different subjects: considering that as
children must, and the books which ought to be in every infant
studio. Simple and correct—qualities of essential importance,
'This is one of those books which ought to be in every infant
studio.

THE SECOND EDITION OF

WILLEMENT'S CATECHISM of FAMI-LIAR THINGS, and the Events which led to their Discovery and Improvement; with a Short Explanation of some of the Principal Natural Phenomena. For the Use of Schools and Private Families. Price 36.

London: Simpkin, Marshall & Co.

EMIGRATION.—UNITED STATES of MIGRATION.—UNITED STATES of AMBRICA, in the State of GEORGIA.—FOR SALE, 120,000 Acres of PREEHOLD LANDS, in large or small lota. The Lands lie between 31 and 32 degrees north, distant from the Atlantic Ocean 120 miles, and at an elevation of 400 ft. above its level, free from swamps, climate salubrious and healthy, distant from England 18 or 20 days sail. They are bounded by the navigable rivers the Flint and the Comulece: by the former a communication is open to the Gulf of Mexico, by the latter to the Atlantic; a Railroad, two-thirds finished, passes through the Lands, which will connect both these rivers. Every information may be obtained relative to the above, &c., from RICHARD KEILY, Esq., 1, Royal Exchange-buildings, London.

CAPT. HUISH ON BAILWAY MANAGEMENT.

ETTER to GEORGE CARR GLYN, Esq.

LA M.P., Chairman of the London and North-Western Railway Company, on some Points of Railway Management, in reply to a late Pamphlet. By MARK HUISH, General Manager of the London and North-Western Railway, London: W. H. Smith & Son, 136, Strand; also to be had of Willmer & Smith, Liverpool; B. Wheeler, Exchange-arcade, Manchester; and at the Book-stalls on the London and North-Western Railway. Price 18.

### LONDON AND NORTH-WESTERN

MR. WHITEHEAD'S REPLY to CAPT. HUISH'S LETTER has been published this day.

Smith, Elder & Co., 65, Cornhill.

# THE DISSECTIONS of RAILWAY ACCOUNTS, hitherto published in the London Westly Railwey Share, List, having been discontinued by order of the Committee of the Stock Exchange, will be resumed in a NEW WEEKLY PUBLICATION, to be edited by Mr. ROBT. L. NASH (the exclusive author of these articles), the first number of which will appear on Dec. 2 next. Analyses of the statements now put forth, or about to be put forth, by various railway companies will be the chief features of the early numbers of this paper, added to which it will be found to contain contributions upon Railway and General Finance, from sound and eminent authorities. Annual Subscriptions, 424, 1 Half-yearly, 225, 64; Quarterly, 125, 64; to be paid in advance. Persons desirous of becoming Subscribers are requested to apply immediately to the publisher of the Money Market Examiner, 17, Throgmorton; street, London.

#### MONEY MARKET EXAMINER. The FIRST NUMBER of this publication, conducted by the late Editor of the London Weekly Radicaly Share List, is issued THIS DAY. Contents,

The opinions of the MONEY MARKET EXAMINER, and the course it will pursue.

The Financial Statements.

Dissection of the London and North-Western Financial

Dissection of the London and North-Western Financial Statement.

The Market.

Working Expenses.

With the usual Traffic Table, Share List, Tables of Calls, Meetings, Proceedings of the Week, &c. Annual Subscriptions, 42e.; Half-yearly, 22s. 6d.; Quarterly, 12s. 6d.; Single copies, Is, each. Apply at the Publishing Office, 17, Throgmorton-street, or to any Newswender.

to any Newsvender.

N.B. A very comprehensive HALF-YEARLY SUPPLEMENT will be given gratuitously to Subscribers, the First Number of which will be issued on the 1st of June next.

A BOON COMPANION FOR RAILWAY TRAVELLERS.

A BOON COMPANION FOR RAILWAY TRAVELLERS.
Now ready, a New Edition, handsomely bound in cloth, reduced
from 5e, isd. to 3e, isd.
JOE MILLER'S JEST BOOK
A work everybody quotes, and few have read. A reprint
from the genuine edition, free from all impurities, with copious
Additions in press and verse.
The First Edition of this work having been exhausted, it has
been reprinted equal to the original, and now issued at a greatly
reduced price.

MR. WHITEHEAD'S EVIDENCE AGAINST HIMSELF ON THE MERCHANDISE QUESTION.

Having sufficiently exposed last week the character of Mr. Whitehead's advice on railway management, we should not certainly have concerned ourselves any further with his view of the subject, had he not chosen to publish a new instance of his want of information or partiality-it matters little which-on the question of goods traffic. The new exposure has fallen out in this way :- The fallacies of his pamphlet were dissected last week with considerable skill and sharpness in the Morning Herald; and its criticism has provoked a hasty reply; in which Mr. Whitehead, while changing his ground, and bringing forward a new distinction of which not a hint was breathed in the pamphlet, falls, as it will be seen, on a dilemma worse than before.

Says Mr. Whitehead: "I did not say there was a loss on the goods trade"—(the pro formâ balance sheet in his pamphlet, showing a total deduction from passenger profits on the whole of that trade, flatly contradicts this denial);-"I did not say the whole trade was unprofitable; but merely that the gross merchandise at the gross tonnage rates charged, was so. The total result of the business is, in fact, made profitable by the high prices received for carriage by luggage trains of goods in small parcels, charged at a rate per package, which realizes a very high freight—in some instances as high as 20l. per ton. The great profit on this class of the merchandise business makes up for the loss on its bulkier portions, so that it may in fact be lucrative, taking all together; and thus, also, it is no answer to my first objection,-which was, that it was a losing trade on the whole—to say that it is profitable on the whole; because I was speaking of a part of it only, and that part is a losing trade, but is compensated by the high gain on the other, which I have now first mentioned.'

We need not insist on the strange logic of such a defence, or on the weak attempt to explain away the unqualified misstatements of the former pamphlet: nor shall we inquire how it happened that not a syllable was said of this profitable part of the traffic, when the first estimate of a total "deficiency" was set down: why no allowance was made for it, as part of the usual loading of an average goods truck, when a calculation of the small average receipt from its loading was given, to show that it could not pay. will simply take Mr. Whitehead on the ground to which he has now indiscreetly shifted; and point out how, unluckily for himself, in trying to mend, on a mere afterthought, one bad place in his argument, he has taken up an instrument that upsets its main conclusion The circumstance which Mr. altogether. Whitehead now discovers is precisely one of the strongest among many strong objections against the system he advises Mr. Glyn to return to. He has advanced a point on which the common carrier most enormously profited at the expense of the companies foolish enough to have admitted him to their lines; on which the companies that have wisely ejected or kept him out, have perhaps received the greatest benefit from their prudence. The general vice of the principle of the Baxendale systemto say nothing of its abuses — was that it blighted and drained dry the whole business, by exacting from it two profits. It thus at once absorbed the cream of the proceeds of the bulky traffic, and threw an undue portion of it on the canals, by charging high tonnage rates, while the railway company were only receiving moderate tolls. But one way in which it was abused, so as to plunder the latter most

unmercifully, was chiefly in the carriage of minor articles, varying from 5 cwt. to the small parcel of a few pounds only, which are forwarded in great quantities through every merchandise office, and which in all systems are charged at a rate per package. These the common carrier loaded on his waggon as gross goods in bulk, and as such paid for them a railway toll, say of some 20s. to 30s. per ton, while to the customers they were of course separately charged,—and, as Mr. Whitehead says, at rates often equal to 201. per ton;—indeed, while the carriers had the business they often far exceeded that amount for "goods out of trade." enormous difference the carrier pocketed, and the company totally lost, on the Baxendale system, which Mr. Whitehead regrets so much to see exploded. Nor was this, even, all. In many cases attempts were made—fraudulent attempts as we must call them-to deprive the railway of all but the lowest scale of toll, even on such high-priced articles. It was a common practice to make them up in bulk and describe them for toll as rough general goods; so that quantities of them were smuggled through in this way at the lowest tolls; † and when this clandestine proceeding was detected, and the managers of a company thus robbed took measures to procure a true declaration of the real quality at least of the articles brought by the carrier, the latter, with the utmost effrontery, asserted a right to make such declaration as he thought fit, and to have it accepted without inquiry; and denied the company's right to examine suspicious packages, with a view to prevent a continuance of the system of fraudulent declarations. Of the actions at law between Pickford & Co. and the Grand Junction Railway Company, some years since, the most part turned on the attempt on the one hand to continue and on the other to check abuses of the traffic in small parcels. Such having been the result of the intrusion of the common carrier on one very profitable part of railway merchandise business, and the resumption of that business by its proper managers having brought this item of gain, which Mr. Whitehead himself now finds to be considerable, out of the hands of the former into the railway coffers,-it will be seen how entirely the admission demolishes his original attempt to prove that the exclusion of the canal carriers was a mistake, and that the best thing Mr. Glyn can do is to invite them to come back and take the traffic out of the hands of the London and North-Western,-parcels and all, of course. So that, as we have said, in trying to stop one leak in his argument, he has let in or let out a very material fact that swamps it altogether. The traffic in small articles is indeed, as he says, a very profitable one, far too profitable to be handed over again to Messrs. Pickford & Co. or any other strangers. The railway owner has had the benefit of it since the business was taken out of their hands; and this benefit alone might suffice to recommend the process, even were no additional gain secured by it on the bulky merchandise; which, however, is also the case-whatever Mr. Whitehead may allege to the contrary. Indeed the value of his allegations may now be seen, on comparing his second letter with his first, and noting how in the one he argues as from a total loss, saying nothing of any compensating gain in any part of the loading of his average "single truck," or of the train to which it belongs, - while in the other he admits a balance of gain, produced by an important class of profitable loading, of which no reader of the letter to Mr. Glyn could have been led to suspect the existence. Mr. Whitehead's newspaper

† We have even known them concealed in "empties" returned, to escape toll altogether—packing cases, &c. being usually taken free when sent back empty.

reviewers have indeed chastised him pretty smartly; but the hardest blow of all he gives himself, by this act of unscrupulous self-contradiction.

The Morning Herald, on publishing his letter, noticed how oddly it jars with the statement in the pamphlet, and visited the inconsistency with due reproof. But the reviewer in that paper, although he writes with considerable acuteness, is evidently not conversant enough with the subject to see all that lies in the exposure of Mr. Whitehead's errors and admissions. He says that the item of small articles cannot have any place in the merchandise estimates, because they all go by passenger trains, and are taken to account in the coaching receipts. This, of course, is an error of the reviewer's. The bulk of small parcel traffic, properly so called, is, indeed, so conveyed. There is, however, no small part, even of this, sent by luggage trains, at somewhat lower prices than the coach parcels, but still at rates amounting to a very high tonnage on the gross weight. Besides this class of small goods, there are also those which altogether belong to the merchandise department, separately consigned, and of various weights under 5 cwt., which again are charged at a rate per package much higher than the rate per ton of bulky goods or general mer-chandise in quantities. On both classes of "smalls" a large profit has always been made by the luggage trains; and the only change now is, that whereas under the system Mr. Whitehead advocates, the common carrier made on such articles a clear profit of some 15l. to 201. per ton—if not more—and the company got no more than its toll of a few shillings per ton; -the gain of this valuable class of business, since the exclusion of the common carrier, has returned to the railway coffers, and forms a lucrative part of its merchandise receipts. We are not sorry that Mr. Whitehead's eagerness to repel a deserved censure of his first argument, has induced him to bring forward this supplementary fact,-the admission of which places him more helplessly in the wrong than before. Such is the certain result of writing, ignorantly or disingenuously, on any subject, on which men are concerned, to mark the difference between truth and error.

Since the above was written, we have seen Capt. Huish's letter to Mr. Glyn, in reply to the misstatements of Mr. Whitehead's first production. It does not call for any return on our part to the main question, since it merely establishes, by a reference to precise figures, the views we had already stated in general terms, on first noticing Mr. Whitehead's perversions. There are, however, topics incidentally brought forward by Capt. Huish, illustrative of other questions of importance in railway management; and these we may take an early occasion of extracting and commenting upon. With Mr. Whitehead we have done. His forwardness in obtruding himself as a reformer, without a single quality to justify the pretension. has been sufficiently rebuked; and it would be a waste of exertion "thrice to slay the slain."

### AMALGAMATION OF THE THREE GREAT COMPANIES.

This scheme, as we anticipated, and have elsewhere spoken of, having fallen through, it will not be necessary to give all the correspondence that has appeared. The following statement, issued to the shareholders of the Great Western, contains the resolutions adopted at the conferences between the deputations from the three companies:—

Paddington station, Nov. 23.—Resolutions considered at several conferences held in London in the months of September, October and November, between deputations of the London and North-Western, the Great Western and the London and South-Western-Companies, in consequence of the unprecedented demand for additional capital to be em-

Digitized by GOGI

ployed in constructing simultaneously many new lines of railway not immediately or imperatively required—the prejudicial effect thereof on the commercial and manufacprejudicial electricity of the commercial and manufacturing interests, (as affirmed by committees of both Houses of Parliament.) and the serious depreciation of investments in railways thus occasioned, with a view to adopt, as well for the sake of the public as of the proprietors, some immediate and efficacious measure for counteracting such results.

1. That it is in the highest degree important to make arrangements for uniting the interests of the three com-panies represented at this conference, in some manner cal panies represented at this conference, in some manner cal-culated hereafter to prevent, so far as they are concerned, any wasteful expenditure either in unnecessary schemes or parliamentary contests, while they may at the same time be enabled, by maintaining a fairly remunerative income, to provide liberally for the safety and accommodation of the public, by means of efficient establishments under a well-organized system of management.

2. That upon a careful consideration of the means calcu-2. That upon a careful consideration of the means calcu-lated to attain such important public and private objects, the most effectual plan seems to be that of creating a per-manent and absolute identity of interests among the share-holders of the three companies, under the sanction of the Legislature.

3. That as some months must now elapse before the Act of Parliament for authorizing such union can be obtained and carried into effect, it is essential that an arrangement and carried into effect, it is essential that an arrangement should be forthwith made for placing the expenditure of the three companies under control, and for facilitating such measures as may seem conducive to the accommodation and convenience of the public in the use of stations, and the working of lines connected with each other, so as best to develope traffic without interruption and with due regard to cconomy. That for these purposes, as well as for deciding any question relating to the guarantee or lease of other lines, or the general policy of the companies, it is requisite to appoint a joint board of control, consisting of seven directors of each company, with all necessary powers; that the quorum shall consist of not less than three members of each company; that at all meetings a majority shall bind the minority and all absent members, the chairman having at each meeting a casting vote, and being chosen by turns from the several companies represented.

4. That a bill shall be introduced into Parliament in the

4. That a bill shall be introduced into Parliament in the next session for the above purposes; and that the joint board shall have the charge and control of it, and shall take such steps as they may deem proper for obtaining the sanc-tion of the Legislature; but in the event of at least five of tion of the Legislature; but in the event of at least five of the seven directors, representing either company, considering any provision inserted or proposed to be inserted in the said bill inconsistent with the principles herein agreed to, or detrimental to the interests of their shareholders, it shall be referred to two referees, one chosen by the directors of the dissentient company, and the other by the remaining members of the united board, or to an umpire, previously to be chosen by them, to determine the matter in dispute. The joint board to have the power in case of need to renew the application to Parliament from session to session.

5. That no new pecuniary engagements, excepting in discharge of liabilities already existing, or in fulliment of present legal obligations, shall be incurred by any one of the three companies without notice to and consent of the joint board, but full freedom of action is reserved by the

joint board, but full freedom of action is reserved by the South-Western as to their extension into Windsor, the Great South western as to their extension into Windsor, the Great Western protesting against such reservation, for the reasons stated in the accompanying declaration, paper A, and re-serving their rights thereupon—the South-Western adding as their reply to such declaration the accompanying paper B. The joint board shall not be authorized to over-ride any existing pecuniary engagements or liabilities of any one of the contracting companies, nor to compel arrangements for the use of stations, or for the working of connecting lines of railway, against the protest in writing of five out of the seven directors representing any one of the companies,—it being, nevertheless, in the power of such directors to with draw such protest upon arrangements being made to their satisfaction.

That nothing in these resolutions shall be understood to debar any one of the three companies, previously to the passing of the Act, from applying to Parliament for extension of time respecting any railway, the powers of making which are about to expire, but so that no additional liability shall be contracted under such new Act without the consent of the joint board.

7. That the broad gauge shall be laid and maintained over the lines for which it has been authorized by Parlia-ment, or over any lines in substitution thereof, whenever such railways may be constructed; and that no steps shall be taken, by application to Parliament or otherwise, for relinquishing or abandoning the use of the said gauge as re

spects those lines, subject to the question of any existing engagement to the contrary.

8. That in any united board to be created under the Act, 8. That in any united board to be created under the Act, each of the companies shall in the first instance be equally represented in number, and such first joint board shall continue in office for a fixed term of five years from the passing of the Act, and that due provision shall be made in the Act for the local administration of the several railways.
9. In the event of any of the directors appointed by either of the three companies being unable from any cause to attend any meeting of the joint board, or when the Act shall have passed to attend any meeting of the first united board, the directors of such company may appointed aparther.

board, the directors of such company may nominate another director for the occasion out of their own board or com-mittee to attend such meeting; and such director shall have

the same power at such meeting as the director in whose stead he may be nominated would have had.

10. That the functions of the joint board shall continue during the proceedings in Parliament and for four months thereafter, when they shall cease, unless renewed by mutual

That the principle of the Act to be obtained is for empowering the three companies, or two of them, (not being the London and North-Western and London and South-Western Companies,) to be united into one company, upon

terms to be consented to by general meetings of the respective proprietors, specially convened for the purpose; but no amalgamation between two companies is to be authorized to take place until after the expiration of six months from

to take place until after the expiration of six months from the passing of the Act.

12. That the general meetings of the three companies shall be called for Wednesday the 13th of December next, to consider this arrangement, and, if sanctioned, to approve the draft of a bill to be submitted to Parliament as required by the Standing Orders; and that in the meantime the solicitors give the requisite notices and prepare such bill.

13. That it be the duty of the chairman of this day, so soon as the draft bill is ready, or sooner if needful, to convene a meeting of the joint board for its consideration prior to the general meeting—the companies being requested to appoint in the meantime their respective members of such joint board.

int board. London, Nov. 1.

Declaration of the Great Western, referred to in Resolution No. 5, dated October 31.—(A.)

The London and South-Western directors having signified The London and South-Western directors having signified their intention to apply to Parliament in the next session for a bill to extend their railway through the Home Park into Windsor, and to authorize a separate station in that town, without submitting it to the decision of the joint board already resolved upon, that step is protested against as being at variance with the objects and principles of the arrangement, occasioning a renewed contest in Parliament, and involving an expense prejudicial to the interests of any united company. The Great Western directors having been willing to submit every question of their own to the joint board, can only consent to the reservation insisted upon by the London and South-Western directors upon the declaration that such measure must receive their uncompromising opposition if attempted in the next session. compromising opposition if attempted in the next session, as being injurious, if no union shall be agreed upon, to the Great Western Company, and, on the other hand, if it shall take effect, injurious to the united company—inasmuch as the scheme will render it impracticable to join the two railways, and will necessitate permanently two distinct stations and the maintenance of two separate establishments in the town of Windsor for the management of that traffic.

Reply of the London and South-Western to the preceding De-claration, (also referred to in the Resolution No. 5,) dated November 1,—(B.)

The London and South-Western directors having read the and South-Western directors having read the paper presented by Mr. Russell at the meeting of yesterday, feel themselves called upon to affirm—I. That they did at the second meeting of the delegates declare their intention to aid in the execution or to execute themselves the exten to aid in the execution or to execute themselves the extension of the line to Windsor, (say about 14 mile), and that they cannot and never will admit that any proposition entertained or approved since that time precludes them from taking such a course in respect of the Windsor line as to them shall seem fit. 2. That they do not admit the correctness of the assertion contained in the paper delivered yesterday by the Great Western Company, that they (the Great Western Company) have been willing to submit every question of their own to the joint board; on the contrary, the Great Western Company have reserved the right of excluding from the decision of the joint board the question of the breadth of gauge on the lines which may ultimately be constructed, as they have also the right to prevent the other two companies from amalgamating to their exclusion. The South-Western directors now reiterate their original and early expressed determination to complete the extension of South-Western directors now reiterate their original and early expressed determination to complete the extension of the line to Windsor; and they cannot but view with exterem regret the declaration that the mere fact that the South-Western Company seeking to complete a line which has already occasioned so great an expenditure of money will receive the uncompromising opposition of the Great Western Company—involving, as it will, not only an unseemly appearance in Parliament, but perhaps jeopardizing the success of the grand object for which the conference has been constituted. been constituted.

On the 27th of November a circular was issued from the offices of the London and North-Western, stating that the refusal of the Great Western and South-Western to submit either to the decision of a committee of the House of Commons on the bill, or to reference, the question of representation at the proposed amalgamated Board, the holding of that meeting was considered unnecessary. The resolution on which the companies thus disagreed was the 8th, in which (says the circular) is involved the principle of nominal equality of representation for a period of five years, irrespective of the much larger capital of this company as compared with the capital of the other company or companies, as the case might bea principle which our deputation had from the carliest stage and throughout objected to, and which they finally reserved for the special consideration and decision of their Board. The Board then refers to the present position of the companies in support of its views. As, for instance, the Great Western, the larger of the two, having a capital paid up of only 7,000,000., and with an annual revenue of 822,000. as compared with the paid-up capital of the London and North-Western, amounting to 14,000,000*l*., with an annual revenue of 2,195,000*l*. But with an anxious desire that the negotiations should not be broken off upon a point which it was hoped might be adjusted hereafter, it was proposed that the question should be left either to the decision of the committee on the bell or to reference. "This proposal, so reasonable in itself, (the principle involved being in strict accordance with the precedent afforded by the London and North-Western Amalgamation Act, quoted by the

Great Western,) has been rejected—and on grounds oreat western, has been rejected—and on grounds, the force of which this Board, after the most careful consideration, are unable to recognize." The correspondence which follows, between Messrs. Swift, Stewart and Saunders, is simply the notification of this determination to the Great Western and South Western Companies, and the reply from the Great Western, retaining the provisions of the 8th resolution, but refusing, as above stated, to render its adoption contingent upon future reference.

#### Progress of Works.

CHESTER AND HOLYHEAD.—The preparations for the Great Britannia Tubular bridge, of twice the character of those over the river Conway, have been commenced, and are already in an advanced state The platform across the Menai Straits, alone, is half a mile long, and four large tubes, each weighing 1,700 tons, are now nearly completed. Each tube is 472 ft. long, and will have to be floated half a mile along the Straits, and then raised 106 ft. home. The weight to be raised this height will be 1,800 total tons, which is 300 tons more than the weight of the Great Britain steamer, with her hulk, rigging, engines and boilers. The end tubes are also much advanced, and they are constructed on the largest mass of scafand they are constructed on the largest mass of scaffolding ever erected. The scaffold or platform on which they are being put together is 100 ft. high, 230 ft. long, and 60 ft. broad, capable of sustaining a weight of 1,500 tons on the top. The cast-iron work of the bridge weighs upwards of 2,000 tons, and the chains used for raising it will alone weigh 100 tons. It will be floated on eight pontoons. Two of them are of iron, 100 ft. long, 28 ft. broad, 10 ft. deep, and capable of carrying 400 tons each. The middle pier, rising out of the water from the Britannia rock, after which the bridge is repend in 69 ft. headle 100. which the bridge is named, is 62 ft. broad by 53 ft. square. The blocks of stone are 7 and 8 ft. long, and they rise, stone upon stone, until the pier is 230 ft. high. There are two other piers of the same eleva-tion, and the entire length of the tube bridge across the Straits is 1,420 ft., or nearly one-third of a mile. The entire experiments and processes are carried on under the superintendence of Mr. E. Clarke, C.E.

DUBLIN AND BELFAST JUNCTION.-Nov. 29 .first trial trip, under the personal inspection of Sir J. Macueill, was made on that part of the line between Drogheda and Dundalk. The trip was performed in 58 minutes, including two stoppages. Sir John was accompanied by the contractors, Messrs. Killen & Moore, and a number of engineers. The state of the line (says the Morning Chronicle) reflects great credit on Messrs. Moore & Killen, the contractors, as it was pronounced to be as firm and even as some lines which have been at work for many years. Sir J. and Lady Macneill set off for Dublin by the 5 o'clock train.

EASTERN UNION.—Owing to the recent heavy rains the opening of the extension line to Diss will be delayed some weeks; and for nearly three-quarters of the distance to Norwich, the soil being of a clayey and treacherous character, engineering operations are rendered difficult.

GRIMSBY AND SHEFFIELD. - Nov. 22 .- The first girder of the bridge over the Witham has been placed. The girders are made of wrought sheet boiler iron, and the amazing strength required appears to be gained by the peculiar way in which they are made. Persons unuse d to such matters, says the Lincoln Mercury, would pronounce that the first train would bear down the whole of the work into the river; but it is said the deflection of such girders as these is very slight indeed. The crossing of the line over the High-street into the Midland station has also been commenced, and it is said to be purposed to open the line on the 18th of December. Whether the portion line on the 18th of December. Whether the portion of the Great Northern line between Lincoln and Gainsborough will be ready for opening by the same period is not yet stated, but it is said that the company find the disadvantage of having to set down passengers at Lincoln, from whom large additional profits might be obtained if the Lincoln and Gainsborough line was complete.

KILLARNEY JUNCTION.—Nov. 24—The Killarney terminus was fixed by Mr. Griffin, the company's engineer, who commenced the operations of levelling and staking.

LEEDS AND THIRSK .- The two extremities of the tunnel through the Bramhope Ridge have met. The junction was effected on the 27th inst., and was duly commemorated by the workmen. During the last fortnight the works were much slower than had been expected, owing to the rock having become considerably harder. There is a large influx of water, also, which impedes the operations of the contractors. It will be remembered that the tunnel is 2 miles and 200 yards long, nearly in a straight line, and nearly all dipping to the north.

SHREWSBURY AND CHESTER (Oswestry),-This ex-

Digitized by GOGIC

tension, connecting the mineral regions of Mont-gomeryshire, as well as Welshpool, Newton and other manufacturing districts, with the main line, is now ready for opening. It was to have been ready for public traffic simultaneously with the main line, which was opened about a month ago, but the heavy

rains retarded its completion.

SOUTH YORKSHIRE. - We ( Doncaster Gazette) have stated on a former occasion that the embankments of the permanent line and the adjoining "spoil," situated on this side of the gullet, near Warmsworth Church, had, by their superincumbent weight, forced the right bank of the Don into the stream to a con-siderable distance. That distance, indeed, extended full 15 ft., even threatening to close the navigation. Some idea of the pressure may be formed when it is stated that the spoil bank sinks about a foot per day. Indeed, last week it sunk no less than seven feet. We perceive that, under these circumstances, the river company have placed a number of workmen to skirt the bank, as it is termed, and wheel the earth of the bank to the base of the embankments. Whether this operation will have the effect of preventing any further sliding into the river remains to be seen But it seems questionable whether such will be the case, as the weight above is daily increasing and must, in the course of a short time, be enormous, as there is yet an immense amount of spoil to be taken out of the gullet before the proper level is attained. The scene presented in this locality is one of an extraordinary character; and it has been visited by a traordinary character; and it has been visited by a considerable number of persons. In some places the turf has been forced upwards, and in others large fissures have been opened even down to the edge of the stream. The general opinion appears to be, as we have before hinted, that the river bank is sliding on a stratum of clay, which lies about 9 ft. or 10 ft. from the surface, in consequence of the great pressure from above. Presuming that such is really the case, there seems little likelihood, as the "tipping" is proceeding with considerable rapidity, that the movement will be stayed unless any skilful operation of piling should accomplish the purpose. It is doubtful whether two laden vessels could pass each other at this point. Indeed, only a few days ago, a billyboy, with a heavy cargo, had seven horses attached to towing lines, whilst a number of workmen afforded their assistance from the opposite bank, before the

vessel could be got past to proceed on her destination.
WATERFORD, WEXFORD, WICKLOW AND DUBLIN.— Nov. 22.—A large party of spectators, headed by the Archbishop of Dublin, assembled to witness the blasting operations on the works at Bray Head. For a couple of hours, says the Freeman's Journal, explosions took place in rapid succession from heavy blasts, with the ordinary safety fuse, and masses of rock, gravel and slate were projected into the air along the line of the works on the face of the cliff. But the grand feat of the day was the displacement of an immense mass of soil and slate, to the extent of over a thousand cubic yards of earthwork, of enormous bulk, and of more than two thousand tons weight, which was effected by a simultaneous explosion of three mines discharged together by the agency of a galvanic battery. At 2 30 p.m., all being in readiness, the great explosion took place. Three excavations were made, 27 ft. deep, and 4 in. in diameter, each being charged with 85 lb. of the stroi gest gunpowder, as used in the army: in all 255 lb. Over each of these mines was planted a staff with a small silk flug, so that the spectators might observe the effect as the displacement was effected. The galvanic battery was then disposed on the road adjoining, at a point selected, and a triple conductor adjoining, at a point selected, and a triple conductor of strong copper wire, slightly united by the finest platina wire, having been placed in connexion with the igniting point, was attached to the plates, its length being 130 ft. Mr. Copeland, the superintending officer, then discharged the battery, on a given signal, standing at the moment within 42 ft. of the spot to be exploded. The pressure of his finger had not been removed from the apparatus he forest head. not been removed from the apparatus before the loud rumbling sound, as of a volcanic shock, was heard, and the surface around slightly agitated. Nothing of a loud report followed, but instantaneously the little flags were observed to incline, and the mighty mass to roll over, as if by some magical agency, and down the face of the cliff into the surging waters beneath, leaving an extensive range of gallery thus prepared for the further construction of works, prior to laying down the rails. The general works appear to proceed in a very quiet, satisfactory and effective manner, those entrusted with the conduct of them exercising the most economic management in carrying them out, and through which they have now brought them to a very advanced state.

FOREIGN.
ORLEANS AND BORDEAUX.—The works on the line between Tours and Poitiers, which had arrived at an

unexpected degree of advancement, are, it is said, to be partially suspended during the winter. The reports drawn up by the engineers assigned a period not far distant for the commencement of traffic over a space of 120 kilometres. By the beginning of next year the company would receive from the State, completely finished, that portion of the line which passed Nerpuy, la Palu and la Folic, and the whole section would be terminated by September next. The 80 kilometres which separated Chattellerault from Tours might be opened for traffic by the end of the winter.

#### Accidents.

LONDON, BRIGHTON AND SOUTH COAST .- Nov. 27 At 6 30 a.m. the goods train started from Brighton for Portsmouth, and stopped at the Kingston station, 5 miles off, to put down and take up goods, Kingston station being the station for Shoreham harbour. stop or danger signal was immediately hoisted, as it was known that a special train, called the "butchers' train," put on for the purpose of conveying the Brighton butchers to the Arundel fortnightly market, was to follow. The latter train left. Brighton 5. was to follow. The latter train left Brighton a few minutes after 7 a.m., and on arriving at Kingston notwithstanding the danger signal was hoisted, and the guard of the goods train as well as the stationmaster gave an extra danger signal by going to meet the "butchers' train" and waving their red lamps, ran into the goods train. Fortunately the butchers escaped with a few bruises. The line was blocked up for two hours, and the butchers had to wait for the parliamentary train. The driver Pemberton was then taken before the Brighton magistrates. The prisoner's defence was, that rain was falling, and that the rails were in consequence greasy; that as soon as he saw the signals he reversed the engines, but that the works slipped into forward gear twice, and that the wheels were actually turning in a direction opposite to that in which the train was going at the time the accident happened. He called no witnesses, and receiving an excellent character, he was fined in the mitigated penalty of 5l.; but as he could not pay he was committed for a month.

#### Law and Bolice.

Nov. 25 .- In the Court of Queen's Bench, in re Newton v. Belcher, Lord Denman said that this was an action by a newspaper agent for the cost of in-serting advertisements for a railway company, between September 1845 and January 1846. There was a particular, specifying dates. The items on was a particular, specifying dates. The items on and after the 7th of October constituted the principal subject of contention. The particulars did not specify the order of the 15th of October, nor was any given between the 10th and the 17th of October. The defendant paid the sum of 1,000*l*, into court, and the question was, whether he was further liable. The names of certain persons were published in a prospectus as those of the provisional committee. Joined with these names were those of a firm of attorneys in London. The orders for these advertisements were given partly in the names of these attorneys and partly in those of the members of the provisional committee. The order of the greatest importance was that on the 7th of October, purporting to come committee. from these attorneys, directing the prospectus to be inserted in the newspapers; and under this order the advertisements of the 15th of October were There was some difficulty about the proof of the order of the 7th of October, and one of these attorneys disclaimed all knowledge of the writing; nevertheless this order was read in evidence by consent. As to the insertion of the 15th of October, there was no evidence of a validating of the order of the 7th by any direct act of the defendant. But the defendant took part in the business of the committee upon the 15th of October, and from that time forward. When the project failed, the defendant joined with other persons to effect a settlement of the concern, and they employed an attorney to draw up a statement. This was treated by the plaintiff as equivalent to an admission that the defendant was liable for all the orders on and after the 15th of October. The Judge was of opinion that that admission must be applied to the bill of particulars, which had been looked at throughout the trial, and he restricted the amount of damages by that document. The verdict was taken accordingly. A rule had since been obtained to set aside that verdict, and for entering a verdict with increased damages, on the ground that the defendant was liable for all the advertisements inserted after the 15th of October, under any orders given before that day. There was no principle shown which authorized the doctrine thus attempted to be established, that persons were to be held liable on existing contracts, merely because they joined a company after such contract had been made, and the

jurors by their finding had negatived that liability, and the Judge had negatived it by the way in which he had used the bill of particulars. The rule for

increasing the damages was therefore discharged.

Nov. 25.— At the MARYLEBONE POLICE COURT,
Mary Hill was charged with having ridden a greater
distance on the London and North-Western than that for which she had paid her fare. Mr. Caldwell, ticket collector, proved the case, showing that on the previous evening, at 6 45, the prisoner came up by a third-class train, and at the Camden station, when asked for her ticket, she presented one which entitled her to ride no farther than from Leighton to Tring. The excess fare, 2s. 73d., was demanded, but she declared that she had nothing about her but a few halfpence; but on the arrival of the train at the terminus, the sum of 14s. 6d. was found in her pos-She was fined 10s. for the offence.

Arbitration. — Nov. 28.—At the Wandsworth Police Court, Mr. G. W. Cockerell complained against the London and South-Western for having taken and used a certain portion of his land for the Richmond line, and, after effecting a severance, neglecting to make and maintain a convenient bridge. arch and passage over the said railway. The company contended that full and ample compensation had been made. The case is one of interest, as exhibiting the usual exorbitant expectations of the owners of property adjoining a railway. On the formation of the Richmond line in 1845, it was necessary to cut through a meadow situated in the rear of Mr. Cockerell's house at St. John's Hill, Battersea, and this severance cut off all direct communication with a number of cottages belonging to Mr. Cockerell, one of which was used as a laundry and another as a sleeping place. At this time a surveyor was engaged by Mr. Cockerell to ascertain the value of the ground required by the company,—not quite a quarter of an acre,—the loss and inconvenience sustained by the severance, and the damage done to the entire property by bringing a railway almost close to the house, the building of which had cost Mr. Cockerell 15,000l. Mr. Fuller, it appeared, put in his valuation at 3,000 guineas; and as it was necessary for the company to obtain possession of the required land, the sum of 3,150%. was paid into the Bank of England. The piece of land containing the cottages was not included in Mr. Fuller's valuation. After the amalgamation between the South-Western and the Richmond, when Mr. Tite, the surveyor to the South-Western, was deputed to attend to this and other claims upon the company, Mr. Hardwicke acted as surveyor to Mr. Cockerell. These gentlemen could not agree as arbitrators, and Mr. J. W. Higgins, surveyor, was called in as umpire, and in the latter part of the year 1847 that gentleman made his award of the sum of 2,600l. as full and entire compensation to Mr. Cockerell, and, as the company contended, without any reservation whatever. Mr. Cockerell had repudiated the idea of his having been compensated for the severed land, and now required the company to build him a bridge for a cart to go over, which would cost 800l., and a foot-bridge, which would cost another 300l. The company, relying upon Mr. Higgins's testimony in maintaining their non-liability, caused that gentleman to be subpoened. That gentleman said that in 1847 he was employed by Mr. Tite, of the South-Western, to estimate the compensation to be given to Mr. Cockerell, and that he went over the property with Mr. Fuller, who acted as agent to Mr. Cockerell, and explained questions. He believed the ground required was under half an acre, and the entire property was about four acres. The cottages were pointed out to him, one of which was used as a laundry, and all the matters were brought under his notice. He awarded 2,6(0L, and considered it of all converses to the constant. it a full compensation against any loss Mr. Cockerell might sustain. He dealt with it as a complete severance; but still supposing there might be an appeal to a magistrate, under the Lands' Clauses Consolidation Act, for a bridge, he gave him sufficient for all his losses or inconveniences, whether he got a bridge or not; and one gentleman connected with the company took umbrage at his being so liberal. He believed that there was some idea of purchasing the severed land, otherwise he should not have inquired about the rents of the cottages. The inconvenience of getting to the laundry and the stopping up of a cartway were mentioned, and he considered them in his Had Mr. Cockerell had no uses for the cottages, his property would have been improved by their severance. He was certain he took into con-sideration the fact of Mr. Cockerell having no communication with the other side. He was a month or six weeks before he made his award.—Mr. Tite, surveyor to the South-Western, was examined at considerable length. He stated that a foot-bridge would cost 3001., and a bridge for a cart to pass over 800%. Ordinary land for building was not worth more

than 500l. per acre, and 1,000l. per acre was a high price for ornamental land. He considered more than six times the value had been given for the land in question. Mr. Tite was further understood to say that the company's engineer would not sanction the construction of any bridge after a line was finished. Whilst the works were in progress they would have built the bridge, if required, and saved themselves some 900l. in the award.—Mr. Paynter said the case was of too important a nature for him to give his decision immediately, and deferred it for a few days.

LONDON AND SOUTH-WESTERN.-Nov. 30.-The inquest on the engineer's labourer killed in the late collision on the Richmond line was resumed. Various witnesses were examined, but nothing further was elicited. The Coroner descanted upon such parts of the depositions as had a more direct reference to the subject of inquiry, particularly upon that point where it was proved by Mr. Gooch, that the driver and fireman had no business to have an engine on the main line or on a siding when the steam was up; and it was shown that Healey and Watkins, the driver and fireman of the ballast engine, had not only left their engine in such a condition, but were found in a beer-shop. They were thus neglecting their duty, and they further neglected their duty when they left the station with the engine, the result of which was the killing of a man. Had they run this man down on the line, it would have been wilful murder, but the deceased being with them altered the case.— After a discussion of 20 minutes, the Coroner said Gentlemen, in this matter the jury have thought it their duty to return a verdict of manslaughter against Samuel Healey, the driver, and William Wat-kins, the fireman of the 'Vulture' engine, i.e. the one belonging to the ballast train.

THE INDIAN PRESS ON THE GREAT INDIAN PENIN-SULA RAILWAY.—The Gentleman's Gazette (a Bombay paper) of Oct. 2, after stating the doubts which had arisen as to the guarantee being more than a guarantee of interest at the rate of 5 per cent., proceeds to

tee of interest at the rate of 5 per cent., proceeds to say, that—

If the line should be worked at any greater loss than that (i.e. 5 per cent.), while the East India Company would still be obliged to contribute the agreed on 5 per cent., the shareholders would not only lose all interest for the time on their money, but would be losing capital too to the extent of the depreciation of the railway company's stock in the market at the time. It may be said that in all this we are arguing on contingencies not likely to arise, that the railway is sure to be a paying concern, and that, but for an assurance to the timid, the East India Company's guarantee is of no use, and will never have to be put in force, &c. We would rather not say much on those points one way or another. The speculation is new to the country, and we own promising; but those who make fewest prophecies respecting it will doubtless be found least wide of the mark when experience brings such prophecies to the test. We own promising; but those who make fewest prophecies respecting it will doubtless be found least wide of the mark when experience brings such prophecies to the test. We decline making any prophecies, but have been requested to remark on a decided oversight—if that is the right word—on the part of the local committee, which certainly put forth statements here giving the public to understand that the guarantee of the East India Company was practically unconditional, at least wholly irrespective of such a contingency as the line being worked without a particle of loss—which at the commencement of an undertaking so entirely novel and strange in the country, he would be a more confident than reliable person who would positively affirm. A native gentleman has assured us that he put his name down for a number of shares on the distinct and unequivocal assurance of two members of the committee that he was to have 5 per cent. certain on his capital invested—that, in fact, it was like putting so much money into the Government 5 per cent. loan now open, but in addition promoting a work of great public utility. As he has expressly requested us to state this, we break no confidence, of course, in doing so. But the published statements of the committee were precisely to the same effect. They stated that it was "a guarantee of interest at the rate of 5 per cent.," * * "such interest to endure for the term of twenty-five years; that the profits of the railway, so long as they are under 5 per cent., shall be applied towards the reimbursement of the East India Company's advance in the shape of interest, '&c.; but nothing is said of the contingency of loss, which under no circumstances will be made good by the East India Company beyond their agreed upon 5 per cent. Whether it was that the committee could not imagine such a thing as a loss, even for a single day, on the undertaking, we do not know. It is possible that they may have worked themselves into such an idea, certainly; but as they are—

at least a great proportion of them-gentlemen accustomed to all sorts of calculations, and have lived all to learn that, as the Scotch poet says-

The best laid schemes o' mice and men gang aft a gley, And leave us nought but grief and pain for promised joy, And leave us nought but grief and pain for promised joy,—we can with difficulty believe so much. Some of the parties who have subscribed, at least, did not and do not look upon the undertaking with such unbounded confidence; and some of them now declare that having been misled in their apprehension of the terms of the proposed guarantee, they no longer hold themselves bound to take up the shares for which they have applied; and they say that they will sooner go into the Supreme Court about the matter than do it. Such was the talk at a large private meeting of Parsee and other native gentlemen in Bombay a few evenings are, we know. It is much to be desired that the matter should not come to this; but such is its present position—and for that the local committee are certainly to blame. They would without doubt be supplied with an early copy of the terms and conditions upon which the East India Company agreed "to afford encouragement" to the line. They should have published such copy literatine of verbatim, instead of communicating what they thought the scope and tendency of it, which we are very willing to believe they did, as they thought, fairly, but which it is now manifest they did not.

The ELECTRIC LIGHT was exhibited at the meeting of the Society of Arts on Wednesday evening, when the prismatic ray and the ray concentrated by means of a lens were shown. Messrs. Staite and Petrie promised on an early evening to submit a paper on the leading feature of the invention, viz., rendering the light permanent by means of a self-regulating magnetic apparatus, and to make a statement as to the cost of producing and maintaining the light. On Thursday evening the light was exhibited in Trafalgar-square, the portice of the National Gallery being chosen for the purpose; a large assemblage of persons were present, and seemed to be both astonished and delighted. By means of a reflector the light was thrown vividly on St. Martin's Church tower, enabling the spectators to read the hour on the clock dial and on the Nelson Column, rendering the statue of the hero more strikingly visible than by daylight. The performance was concluded amidst a round of

‡ See Pr	ris Share Li	st.	* To	presen	t date: corresponding period in second	col	umn.		From	n May 1				clusive of t	all from Ed	inharah na	•	022

# See Paris Share List.
 # To present date: corresponding period in second column.
 # Expenditure includes cost of Lincolnshire lines (partially opened) and Grimsby Docks.
 3,117,508, remains available to complete the works—double, it is supposed, the amount required.

London Stock Exchange, Dec. 1.—The share-market has not experienced much fluctuation during the week: the business has however been satisfactory, and some exceedingly good names have been passed for stock and shares. The following are the latest transactions in foreign lines:-Boulogne and Namur and Liége, 5; Northern of France, 5½; Orleans and Bordeaux, 1½.

Liverpool, Nov. 30.—Our market has not been so good this week; Midland stock and 50l. shares have

fluctuated considerably in price. Although the general quotations are lower, the market closes rather general quotations are lower, the market closes rather firm than otherwise. The following are the actual transactions of to-day:—Birkenhead, Lancashire and Cheshire 20l. shares, 9\frac{3}{3} dis.; Caledonian pref. \frac{1}{3} dis.; East Lancashire pref. 6l. 8s. 9d.; Great Northern, 12\frac{7}{3} dis.; Lancashire and Yorkshire fifths, 4\frac{7}{3} dis.; London and North-Western, 117\frac{1}{3}; ditto, new quarters, \frac{7}{3} prem.; Huddersfield and Manchester, 22\frac{7}{3}; Manchester, Sheffield and Lincolnshire, 40; Midland, 78: ditto, 50l. shares, 11\frac{1}{3} dis.: South-Eastern, No. 78; ditto, 50L shares, 11½ dis.; South-Eastern, No. 4, 6½; York, Newcastle and Berwick, G.N.E., 1½ dis. Suplow, Brothers.

Manchester, Nov. 30.—The business in shares in our market this week has been very limited; prices have not altered much. There are no shares pressing on the market. Actual transactions this day:— Eastern Counties, 111; Lancashire and Yorkshire fifths. 4g dis.; ditto, preference, 4 prem.; Manchester, Sheffield and Lincolnshire eighths, 7g dis.; North Staffordshire, 6g dis.; North Wales, 2g dis.; South-Eastern, No. 4, 6l. 11s. 3d.

SAM. GRINDROD. York, Nov. 30.—The share-market is flat, and we rork, Nov. 30.—The share-market is nat, and we notice few business transactions. The Eastern Union stock has been in request. The following are the latest transactions:—Eastern Union, class B and C, 6³; Great Northern, 6l. 1s. 3d.; York, Newcastle and Berwick Extension, Nos. 1 and 2, 11l. 6s. 3d.; ditto, preference, 6⁴g.

Grayston & Earle.

ditto, preference, 64. Grayston & Earle.

Hull, Nov. 30.—Since our last, transactions have been of very trifling extent, without much disposition to realize on the part of holders. Sheffield and Grimsby shares have been more in request lately at the present low rates. Darwens, which fetched 71. the present low rates. Darwens, which fetched 7*l*. a week or two ago, were down on Monday to 6*l*. The 6 per cent. preference shares of this stock were sold the other day at 17*l*. per share, 25*l*. paid (32 per cent. dis.). When the North British statement shall have been thoroughly sifted, the value of that stock will be more clearly arrived at, and the late random calculations tested. late random calculations tested.

FLINT & TOOTAL. Glasgow, Nov. 30.—The demand has not been brisk this week for the lighter class of shares, and the prices of these are generally lower; Ayr (old) has been well taken up at reduced rates. Several of the been well taken up at reduced rates. Several of the guaranteed stocks, however, have advanced materially and continue in good request. To-day's latest sales are:—Clydesdale Junction, 56\(\frac{3}{2}\); Dundee and Perth, 25\(\frac{1}{2}\); Dunfries and Carlisle, 4\(\frac{3}{2}\); Ayr, 40\(\frac{1}{2}\); ditto, halves, No. 2, 13t. 1s. dis.; Great Northern, 12\(\frac{1}{2}\) dis.; North British thirds, 3t. 14s.; Scottish Central, 25\(\frac{1}{2}\); Wishaw and Coltness, 44\(\frac{1}{2}\).

Buchanan, Aitken & Co.

Paris Bourse, Nov. 30 .- The market has not varied much during the week. The following are the latest prices in the leading lines:—Orleans, 600f.; Rouen, 352f. 50c.; Northern, 342f. 50c.; Vierzon, 215f.; Bordeaux, 363f. 75c.; Strasburg, 325f.; Lyon, 357f. 50c.

### Joint-Stock & Commercial Gazette.

The half-yearly meeting of the Hungerford Market Company was held on Thursday. Mr. M. Stutely in the chair. The report submitted to the proprietors stated that the disputes with the Bridge Company had been amicably settled, and that a better feeling ervaded the respective boards. The profits for the half-year showed a sensible increase, and the dividend proposed amounted to 2l. 10s. per share. The report was adopted, the dividend declared, and a vote of thanks unanimously passed to the directors.

#### Banks.

Letters received this week from South Australia mention that the banking operations of the colony were increasing; and the business for the half-year to June last showed a considerable augmentation. both in discounts and coin deposited.

At the Bristol Bankruptcy Court, on the 28th ult., in re Dunn and others, brewers, of Neath, the Commissioner delivered his judgment on a claim on the estate by Messrs. Rogers, Olding & Co., the London bankers. It would appear that the bankrupts had received advances from the Maestig Iron Company, on their promissory notes, which were subsequently handed to Messrs. Rogers, Olding & Co., as security for money they had advanced to the iron company. The bankers sought to prove for the sum of 8,000*l*, being the amount of ten promissory notes, and 1,285*l*, interest. His Honour, upon duly weighter the constitution of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum of the sum ing the evidence adduced in reference to the several transactions, admitted the claim.

The following banks and other public institutions in America, have declared half-yearly dividends:— Bank of Albany, 4 per cent.; Exchange Bank of Pittsburg, and all the other banking establishments of that State, 4 per cent.; Bowery Bank of New York, 4 per cent.; Farmers and Mechanics' Bank of Philadelphia, 2 dollars per share; Manufacturers and Mechanics' Bank, 3½ per cent.; Kensington Bank, 5 per cent.; Eagle Fire Insurance Company of New York York, 8 per cent.; Manhattan Fire Insurance Con-pany, 6 per cent.; American Mutual Insurance, 6 per cent.; Delaware Mutual Insurance, 6 per cent.; Delaware and Hudson Canal Company, 20 dollars per share; Concord (N.H.) Railway, 5 per cent.

#### Life Assurance.

A meeting of the Mutual Assurance Society took place on the 20th ult., for the election of a director, in the room of Mr. Cole, deceased. The contending candidates are Mr. Hayne and Mr. Mollett, for whom a ballot is fixed.

By the advices received this week from South Australia, we learn that the mining districts were in Australia, we learn that the mining districts were in active operation, and progressing satisfactorily. The directors of the Burra Burra Company had declared a quarterly dividend of 200 (!) per cent., or 10l. per share on each 5l. paid up, payable on the 1st of the month. Out of a capital of only 12,000l., this company has therefore, in an incredibly short space of time, paid the shareholders a clear profit of 73,000l., and at the present moment is giving them a return for the capital embarked to the extent of 100,000.

Art. Correspondents are reper annum. This cannot but be encouraging to all their addresses in confidence.

connected with the Australian colonies and its mining interests.

The last quotations for shares in the several companies are to the 9th of June last, and as follows:

The raisings at the Imperial Brazilian Company's works at Gongo Soco and Bananal, from the 1st of July to the 12th of September last, amounted to 127 lb. 7 oz. 9 dwts. The operations at the new openings had been successful, although no new discoveries had taken place.

The produce of the National Brazilian Mines is progressing by the advices received, which date to the 12th of September last.

On the 14th of September last, the workmen em-On the 14th of September last, the workmen employed in the King's mine, (which is one of the Konigsborg silver mines,) in Norway, found a lump of pure native silver weighing 208lb.; and on the 6th of October another lump of virgin silver, equally pure in quality, of no less weight than 436lb., was dug out of the same mine. It is a fact worthy of being recorded, that about twenty years ago this mine was offered for sale in London for the sum of 10,000/.; but the capitalists of that day had not sufficient confidence in the treasures it was represented to possess, to advance this comparatively small price. Subsequently the Norwegian Government was strongly urged by the scientific of that country to work the mines at the expense and for the benefit of the State. The operations were commenced, and prosecuted with vigour; and for a considerable number of years this mine has annually yielded to the Government of Norway a much larger revenue than the price which could not previously be obtained for the mine itself.

The miners of Devonshire are meeting with renewed employment, owing to several companies having resumed their workings.

The unemployed Cornish miners are emigrating in large numbers to Port Adelaide. They will be found very acceptable in developing the mining resources of the colony, and wages there are higher and living cheaper than at home.

The directors of the Devon Great Consols have declared a dividend of 5*l*. per 1,024th share for the months of July and August workings, making the sixth dividend, or 30,720*l*., paid during the year, nothwithstanding the depressed standard for copper ore. The balance in hand, after payment of the dividend, appears to be about 14,357\ell., being nearly 700\ell. above the previous balance. The mines are represented to be returning 1,500 tons per mouth,

from the levels already developed.

At a half-yearly meeting of the Treviskey and Barrier Companies, a dividend of 31. per 120th share on the former, and 1t. per 120th share on the latter, has been declared. Treviskey made a profit of 163t. 3s. 2d., and Barrier 153t. 16s. 8d., on the two months working. A balance of 72t. 13s. 2d. was carried to the credit of the next account of the united mines.

The Wheal Trelawney adventurers have held their The Wheal Trelawney adventurers have held their bi-monthly meeting for auditing accounts for August and September. The statements show a balance of 650l. 12s. 3d., carried to the credit of the company, and a profit of 353l. 14s. 5d. on the two working; the silver-lead ore raised during that time amounts to 2,890t. 1s. 3d., and October ores sold, computed 96 tons, at 16t. 10s. 6d. per ton.

The shareholders in the Mary Ann Mine met last

week. The profit on the two months' workings amounts to 1761. 13s.

The Royalty upon minerals in New Zealand has

been altered from 15 per cent. on the value to onefifteenth portion of the material raised.

The market this week has been steady and inquiries for shares general. Transactions have taken place in Australian, Asturian, St. John del Rey and other companies shares.

IRON TRADE. - Glasgow, Nov. 27 .- The market for pig iron has no feature requiring notice. Prices remain the same as last week.

LONDON, SATURDAY, DECEMBER 2.

THE AMALGAMATION SCHEME, AND WHAT HAS COME OF IT.

The conjecture stated at the head of our last week's observations was prophetic; and the prophecy has been justified with more than usual suddenness. The ill-assorted parties to a scheme of union, started from a basis of separation, have fallen out—as, in such a process, we foresaw they must—before the crudest preliminaries, even, could be adjusted. The only resolutions they managed to get provisionally framed could not be drawn up without opening a rough breach on both sides of the party that first set the treaty on foot; and the consequence is that the London and North-Western announce the total rupture of the treaty; so that their proprietors will not have the trouble of meeting to quash it—as it would have been their duty to do, had it lived until the 13th.

Before the schism had broken out in the northern quarter, there had already been one equally decisive on the other side; yet, curiously enough, the plenipotentiaries had contrived to go forward, leaving that sore openly festering on the face of the treaty. It may afford a measure of the practical sagacity of the managers of these conferences, to observe that they could pass over this glaring contradiction of a so-called "amicable arrangement"; and proceed with a show of believing they could carry it further: while to the very body of the first "pacific" resolutions there hung a declaration that two of the parties named in them were to appear at daggers' drawing in the coming session, on the windsor ground. The Great Western threatens, in its appended "protest," to fight to the last extremity in this affair with the London and South-Western—its ally, according to the preceding resolutions; and that company throws back the menace in a counter-note; while the London and North-Western, for aught that appears, saw no absurdity in this-no sign of the rottenness of a scheme that could not even take the first move in harmony; and did not throw up its share in the treaty until something was insisted upon that directly touched its own pretensions. Hereupon the mine exploded, with "universal applause," we hope. Yet the course of the affair is calculated, on the whole, to lower exceedingly the reputation for clear-sightedness and ability of those who have so readily fallen into the snare of a deceptive proposal-condemned by its very nature to defeat. Whether we regard the haste with which wily overtures were swallowed-the want of a comprehension of the first conditions, on which alone any overtures could be admissible—the readiness to patch up a show of agreement vitiated at its root by an express surrender of those conditions-the willingness to proceed after the outbreak of rival discrepancies-or the manner in which the authors of the plan were suffered to grasp at all, while conceding nothing, -to whatever point we turn we must say that the exhibition betrays a proneness to be misled by appearances, and a want of clear, large, and practical views, in the London and North-Western deputies, which are quite unaccountable in men reputed fit to direct the proceedings and take charge of the interests of an immense property. If such be the maximum of perspicacity and wisdom that can be applied to questions of incalculable importance, we need not wonder that railway affairs should have been reduced to their present condition; nor ask for further explanation of the manner in which such grounds could never advance beyond pre-

directors have gone on from year to year, plunging forward in a vicious routine, and apparently unable to see the real demands of the case, or to conceive the altered policy required by the altered position of railway affairs, —until the positive failure of means, and not any comprehension of past errors, at length compelled them to pause.

This, we say, is the most considerable and far from satisfactory result of a scheme, the futility and radical unsoundness of which we saw and denounced from the beginning. is discouraging to find men entrusted with vast interests unable to rise to a level from which the whole bearings can be commanded; to observe the precipitance with which a project could be taken up that any capacious judgment must have seen at once to be delusive. The idea of uniting what was to be kept virtually sundered; of bringing into concert parties, not one of which could trust the other, and each determined to insist on irreconcileable pretensions; of effecting, by a mere form of combination, what could only substantially be realized on terms that were expressly excluded, -this, we must say, bespeaks a narrowness of vision, if not a weak proneness to accept shows for realities, that cannot be noticed without regret in the holders of great offices. When to this are added the visible external and internal objections, for which a crude, ineffec-tual plan offered no compensation whatever; the risk of facing Parliament with a measure sure to provoke hostility; the oblivion of what was imposed by that authority on a former amalgamation, or the utter folly of expectingif such an expectation were really entertainedto repair that injury on the present occasion; the whole hazard and precipitation on one hand. and on the other the loose and lame proposal, for the sake of which the risk was embraced,we may well feel our confidence in the discretion of ruling bodies shaking; and apply to our special world the exclamation of the old Swedish Chancellor, "Parvá sapientia regitur mundus!" In this affair, indeed, the account of "wisdom" has been all on the minus side.

On the other hand, we may at least congratulate our readers, interested in either of the companies on the national gauge, on the bursting of this flatulent bubble; while we shall leave it to them to judge how far, on this occasion, we have or have not maintained any reputation already gained by the Railway Chronicle for practical judgment and foresight, by having, from the first moment, declared the treaty to be what it is now proved to have been-a scheme, namely, that must come to nothing, on the hollow grounds from which it started: while on these and other grounds it was altogether repugnant to the interests it was professedly designed to benefit.

As to the past course of the transaction, it is now abundantly clear that the Great Western, the first movers of the plan, had no other purpose in view than to secure, by sleight of hand, what they are no longer well able to compass by mere force. Throughout the conferences they have continued to demand concessions from both sides, refusing to concede anything material to themselves. This character of the treaty is abundantly visible on the very face of the resolutions as put forth by Mr. Saunders himself; and this not merely in that egregious clause insisting on the statu quo of the gauge-a proposition in itself fatal to any rational union. It is, as we have said, not creditable to the sagacity of the other parties, that they should have gone on so long on premises visibly false from the beginning. It was, of course, certain that a negotiation on liminaries; and that the rupture was only a question of time. It has taken place, however, before even the rudest skeleton of the plan could be brought into shape; so that the conjecture we threw out last week has thus been verified to the letter. It seems that at the moment when our remarks were passing through the press, the event was taking place, just as our readers were prepared to expect it.
