For the discrepancies that must arise in this state of things, "A. K." is of opinion that the public would make reasonable allowance; and he thinks that we err in taking it for granted that less indulgence would be shown to a private company than is allowed to Government. On this matter of opinion we must be content to adhere to the view already expressed—a view which has not been taken without some experience of the sort of consideration the railway companies may depend upon, nor without a little observation of the slips that it is customary to overlook as matters of course in State arrangements. If any one who knows what railways have done for the public, and the spirit in which they have generally been worked for public accommodation, and has seen the reward they have met with from the public, has heard the outcry which greets every trivial accident or solitary case of inconvenience or disappointment, can rely on fair dealing from the latter, it is more than we can. We know something of the way in which railway arrangements are criticised, the impatience with which the most reasonable charges are borne, the thanklessness with which reduced charges are taken advantage of as matters of course, and used as pleas for exacting still further indulgences and allowances. If any one conversant with the working of an extensive railway business, who has felt the difficulty of appeasing complaint in all cases of extra charge, however just the charge may have been, can make light of the probable effects of the system as it must now be carried out, we cannot. From what we have seen, we do not think that the "public" would, by any argument whatever, be satisfied, supposing the same man in London to receive a parcel from

from Petworth or High Wycombe, by being told that, although the railway delivered in both cases, the extra in the latter arose from the "paid out" to the coach or omnibus, and was not therefore chargeable to the railway company's "extortion." There would be an endless storm of complaints at the office, letters in the Times, and, it may be, memorials to the Board of Trade; the effect of which would be, in the end, to get up by degrees an amount of odium, the very existence of which, unjust though it might be shown to be, would be made the pretext for some new encroachment on railway property,—as other equally unfounded complaints have been.

Considering this and other things, we are persuaded that the time is not yet come for uniform parcel rates on the Post-office system. The more clearly we see the nature and efficiency of the principle on which Mr. Hill's improvement took its rise, the more thoroughly must we be convinced that no such plan can thrive where the principle cannot be fully carried into effect. When there is a railway line or branch to every place where there is now a post-office, the attempt may perhaps be safely made to apply his method to railway parcels. Just now the experiment could only be the imperfect execution of a plan the very life of which exists in its perfection.

Report to the Directors of the Manchester, Sheffield and Lincolnshire R'adway Company on the Supply of Surplus Water from the Peak Forest Canal to Manchester. Salford and Stockport. By S. C. Homersham, C.E.

The Manchester and Lincolnshire Railway Company, among the many possession. which they hold and manage, very much for the benefit of the public, are the owners of the Peak Forest and Macclesfield Canals. The proprietors of these canals, previously to their passing into the hands of the railway company, had been in the habit of supplying water in bulk to a Manchester Waterwork Company;—that company not having been able to obtain from their own resources more than half the supply necessary for their customers, and even that half, without the supply from the pure water of the reservoir of the Peak Forest Canal, would have been scarcely fit for use, so much was it contaminated by foul drainage.

In 1847, the Manchester and Lincolnshire Company obtained powers to construct such additional works as would enable them to store, filter and supply the waters rising in the Peak Forest, and dispose of them to the inhabitants of Manchester and its neighbourhood. The outlay for this purpose will be comparatively trifling; they do not desire to become the retailers of these waters, but rather to supply it in bulk to other water companies. principle of drawing water for the domestic use of towns, from pure sources in hills at a distance, has grown greatly in favour of late years. Mr. Edwin Chadwick has, we have heard, a project for conveying water to London from the Cotswold Hills; and though this savours of the arbitrary extravagance of that celebrated economist, when the Thames flows purely within 20 miles of us, still it shows how grateful the people of Manchester ought to be on finding this indispensable element within their reach, without the cost of great works or the delays of an entirely new construction.

other duties of the railway servant, it could hardly be performed without frequently causing his absence at times when he ought to be at his post; and it would certainly be continual temptation to idling away from it, and a standing do not think that the "public" would, by any argument whatever, be satisfied, supposing the same man in London to receive a parcel from Edinburgh or Dorchester for 6d. and his neighbour to be charged 1s. 6d. for a lighter package of cleanliness, not a little aided by the smoke and

Digitized by Google

sewerage from 10,000 factories. Mr. Homersham has very elaborately examined the comparative qualities and quantities of the water supplied from the Peak Forest, and supplied or likely to be supplied from the reservoirs, the property of the corporation of Manchester, and has suggested that in economy, convenience and quality of water the inhabitants of the surrounding districts will be best supplied by the corporation taking the water they require in bulk from the reservoir of the Manchester and Lincolnshire Railway Company. On this subject it is impossible for us to pass any decided opinion, although Mr. Homersham certainly makes out a very good case. At any rate there can be no doubt that Manchester is very fortunate in having within its reach from 7,000,000 to 20,000,000 gallons of pure water daily ready to be supplied at 11d. the 1,000 gallons; -and that the railway company is very fortunate in having secured such a source of profit, with scarcely any outlay beyond the actual value of the canal property. If it were not for the foolish jealousy of Parliament, there are many instances in which railway companies could, with advantage to the public and themselves, undertake the supply of water. And without water and washing there is no civilization.

INSTITUTION OF CIVIL ENGINEERS. - April 18. General Meeting.—Mr. J. FIELD, President, in the chair.—The paper of the evening was a series of 'Observations on the Resistances to Railway Trains at different Velocities,' by Mr. D. Gooch, of the Great Western. For the purpose of performing the ex-periments, a dynamometer carriage was constructed at Swindon, in which all the results required were registered upon a large scale, on the same roll of paper, thus exhibiting at one view, and in the same period of time, the tractive power exerted upon the train, and the force and direction of the wind; the registration of the results was made upon the paper registration of the results was made upon the paper at every sixteenth part of a mile, and the time was registered in correspondence with the distance traversed during every fifth part of a second. The dynamometer spring used was 7 ft. 6 in. long, and very carefully arranged. It was only necessary to count the number of seconds, or fractions of a second, the second of the distance divisions and the in one or more of the distance divisions, and the in one or more of the distance divisions, and the speed was accurately ascertained. The force and direction of the wind was ascertained by a wind gauge, placed 5 ft. above the top of the carriage, with the connexions brought down to pencils which indicated on the same sheet all the results. Indicated the carriage was also then simultaneously from the steam cards were also taken simultaneously from the steam cards were also taken simultaneously from the steam cylinders as frequently as was practicable, but not continuously, as it was a service of some danger, the experimentor being obliged to sit on the buffer-beam of the engine at a velocity of 60 miles per hour, and in that windy position to take off four sets of cards in three quarters of a minute. The spot selected for paraferming the experiments was one mile of religious performing the experiments was one mile of railway perfectly straight and level, and nearly on the surface of the ground; and in the plan the height of the trees, hedges and every intervening object which could affect the influence of the wind is clearly marked. The experimental train consisted of first and second-class carriages, each on six wheels, 4 ft. diameter, taken indiscriminately from the working stock, and loaded with iron to represent a fair load of passengers, giving a gross weight for each of 10 tons. The experiments were tried with various weights and speeds up to 100 tons and to 62 miles per hour, and the results were classified and arranged in a tabular form, with copious explanatory headings, so as to render reference to them exceedingly easy.

The author first reviewed the deductions of Mr. Wyndham Harding's formula, which was given at the discussion at the Institution in 1846, and gave his reasons for dissenting from that formula. He then examined critically several experiments recorded in the tables, stating candidly all the exceptions that could be taken to them; showing that although there was a difference of as much as 52 per cent. shown was a difference of as much as 32 per cent. shows between the resistance as calculated by Mr. Harding's formula and the experiments made by Mr. Gooch, that difference might be accounted for by the methods employed by Mr. Harding, which were objected to, as calculated to produce erroneous results, viz., allowing carriages to run down inclines by their own gravity, using wheels of 3 ft. diameter instead of 4 ft.,

having a much greater length of train for the wind to act upon, &c. He reviewed the great effect of a side wind against a train—driving the flanches of the wheels against the rails; and argued that the length of a train of carriages was much more important than its own weight. The author did not offer any for-mula that should be applicable for calculating the resistance of all railway trains; but his tables gave examples of almost every case that could occur, and thence data could be supplied for those who wished to carry the investigation further, and make a formula for themselves. He arrived at the conclusion that in practice the friction of the axle journals was not a constant quantity at all speeds, and thought that the number and diameter of the wheels in a train, in proportion to the weight, should form elements in any general formula. He showed by experiments that the total atmospheric resistance to a train weighing 50 tons differed but slightly from that to a train of 100 tons weight, if the carriages were small and the train long in the one case, and the reverse in the other case. The general result of the diagram of resistance with trains of 100 tons and with 50 tons showed that the resistance calculated by the 50 tons showed that the resistance calculated by the narrow-gauge formula with a 50 ton train, at 62½ miles per hour, was 37 lb.; with a train of 100 tons, by the same formula, at 61 miles, it was 31½ lb. The broad-gauge resistance, with a train weighing 50 tons, at 62½ miles per hour, was under 23 lb.; and with a train weighing 100 tons, at 61½ miles per hour, was 22½ lb. We cannot, of course, give fully the results, 223 b. We cannot, of course, give fully the results, except in a comprehensive form, but such were the general results. The author concluded his paper by saying that it appeared to him necessary, before any general formula for calculating the resistances to railway trains could be made, that the value of the following elements, necessary in such formula, should be determined by experiments:—1. The axle journal friction, at different velocities and with different weights, per square inch of journal surface.

2. The resistance to the rotation of the wheels and axles per pair, at different velocities and with different diameters. 3. The resistance due to the rolling of the wheels upon the rails, with different weights upon them, and with different diameters. 4. The resistance due to the passage of the train through the atmosphere, at different velocities, with different proportions of weight, and length and breadth of train. 5.

The resistance due to the oscillation or unsteady motion of the train, at various speeds. The author considers that all these values might be determined, with a considerable degree of accuracy, by careful experiment.

It was announced that there would be no meeting on Tuesday, April 25 (being Easter Tuesday); and the meeting was therefore adjourned till Tuesday, May 2, when the monthly ballot for members will take place.

REPORTS OF THE ADMIRALTY under 9 & 10 Vict. c. 106), relative to applications for Railway Bills.

Railway Bills.

Edinburgh and Northern (Roscobie, Keltyhead and Gleneraig Branches).—It was at first proposed by the company to shut off some existing accesses from the town and links of Burntisland to the sen-beach, and purchase additional ground along the shore. They have, however, become bound by an agreement to keep these accesses open, and not to obtain any further ground; their lordships therefore have only to require that such agreement be adhered to. There are two other provisions in the bill which are not affected by this agreement. The first of these contemplates the enby this agreement. The first of these contemplates the en-closure of a considerable tide-covered area to the west of the closure of a considerable tide-covered area to the west of the low-water pier at Burntisland. Their lordships require that the company shall not extend their works below the high-water line, as shown on the plan, without the previous sanction of the Admiralty. The other provision is contained in the 29th clause of the bill, by which it is proposed to repeal the enactment of last session, "That in working the ferry between Ferry Port-on-Craig and the north shore of the river Tay, no ferry-boat used by the company shall cross the said river with any vessel or barge in tow or attached." As this enactment embodies one of the conditions on which the Admiralty sanctioned the bill of last session, whereby the company were authorized to acquire and work the Tay Ferry, and as no necessity has been shown for the repeal of the company were authorized to acquire and work the Lay Ferry, and as no necessity has been shown for the repeal of such condition, their lordships cannot assent to any such alteration. They will, however, sanction the addition of the word "astern" at the end of the above recited words "in tow or attached." On these conditions their lordships assent

#### LONDON, BRIGHTON AND SOUTH COAST. Report from the Committee of Inquiry appointed Feb. 14.

Gentlemen,-In pursuance of the resolution passed at the general meeting, the Committee proceeded to inquire into the state of the accounts, and into affairs

countant, with whose assistance the system of keeping the company's books as well as the accounts themselves have been carefully examined; and the Committee are able to assure the proprietors that the method of book-keeping adopted (which is by double entry) is satisfactory, and that it is carried out by the company's accountant in a clear and intelligible man-The Committee recommend that in the future half-yearly printed Reports there be inserted an abstract of the balance-sheet.

By the last half-yearly Report it appears that the authorized capital is 7,440,930l., and there is a bill before Parliament for powers to raise a further sum of money, which the Committee recommend the proprietors to sanction, to the extent of 240,0001; but of the sum 7,440,930l., it must be borne in mind that there is a sum of 426,666l. not yet raised under the Portsmouth Act, and which the directors state that they do not mean to raise, inasmuch as the Portsmouth Extension line has been constructed and will mouth Extension line has been constructed and will be completed out of the general funds of the company. Although, therefore, the total apparent capital will be 7,680,930*l.*, yet if there be deducted from this the above sum of 426,666*l.*, the real capital will be 7,254,264*l.* The Committee entertain great hopes that this last-mentioned sum will fully meet all the existing and future engagements, and allow the capital account to be seen based as result which capital account to be soon closed—a result which they, in common with the great majority of the proprietors, are most anxious to see realized. The suma already expended, exclusive of parliamentary expenses, and the estimated amounts necessary to complete the branch lines partly constructed, are given in the following table :-

The Committee, having regard to the large sums spent on these works, think it advisable that they should be finished, and recommend the early completion of the Thames Junction line, as requisite for the developement of the goods traffic; but they are not prepared to report upon the policy which induced their construction; for it is clear that in the short period which has clapsed since those which are already opened came into operation, no fair opinion can be opened came into operation, no fair opinion can be formed of their ultimate influence. The same observation applies to the amalgamation with the Croydon. The Committee, having carefully investigated the proposed arrangement with the South-Eastern, referred to in the last half-yearly Report, under all the circumstances recommend its adoption, and also that the accommodation for the goods traffic at the Brick-layers' Arms station should be proceeded with imme-The increasing traffic and the contemplated division of the London Bridge station, compulsory on this company, render it necessary to provide further accommodation at that station, the cost of which has been roughly estimated at 150,000l.; but should the

Digitized by GOOG

very considerable reduction in the above sum will be effected. The Committee have held a conference with the Board relative to the Direct Portsmouth line, and coincide with them in their views of the future course; and the Committee strongly recommend that the subject should be left in the hands of the directors. Although the Committee are anxious to see the intercourse between France and Newhaven and the south coast promoted by all legitimate means, they do not recommend the proposed subscription by the Brighton Company to the Brighton and Continental Steam-packet Company, or an incorporation of the latter with the Brighton Railway; and they accord-ingly suggest the withdrawal of that portion of the bill now before Parliament. The Committee have examined the resident engineer on the state of the permanent way, and find that part of the main line is being re-ballasted, and the old sleepers replaced with new where necessary; but a large portion of the ex-pense of doing this will be borne by the contractors. They have also consulted competent persons as to the state of the tunnels on the main line, and are assured that they are all in a perfectly safe condition. The Committee have likewise visited several stations for the purpose of inspecting the buildings, which are generally in good order-some few on the main line requiring repairs of a minor character, which may be effected by a small outlay. At Hayward's Heath and Three Bridges sheds for carriages are being constructed out of old materials brought from other stations, where it has been found necessary to keep extra carriages. It will also be desirable to increase the shelter for carriages and engines at some other stations. The directors have been recommended to consider the propriety of re-opening the former sta-tion at New Cross, as it appears that a considerable loss of traffic has been sustained by the company from closing it, and that an increase of traffic there will be in future the more important, because the toll hitherto payable to the South-Eastern will cease under the proposed arrangement with that company. The Committee have thought it their duty to inquire minutely into the working expenses, and to institute a comparison between those of the Brighton and of other lines similarly situated, for three years ending the 31st of December 1847. The working expenses of the Brighton line for the last year are certainly much above the average; but even these do not greatly exceed the averages of the South-Western and Eastern Counties lines for the three years, and the general average of the Brighton will be found much less than those of the two lines just mentioned, although not so low as that of the South-Eastern, as will be seen in the following table :-

Per-centage of Working Expenses on Traffic.

	1845.	1846.	1847.	Average.
South-Western	34.49	39.11	4275	38.74
Eastern Counties	38.88	34.98	36.26	36.70
Brighton	28-11	31.55	39:39	33.01
South-Eastern	32.46	29.39	28.62	30.15

In connexion with this subject the Committee examined into the state of the plant, and ascertained that the company's stock of engines, carriages, trucks and waggons, including those contracted for, which form an item in the statement of liabilities, will be amply sufficient to work the existing mileage. The present number of engines is 97, of which 67 are in sound working order, 18 are under repair and altera tions, and 12 are to be repaired and altered. The new engines, being of greatly increased power, will replace some of the present stock, which will be disposed of, and there will consequently be a considerable reduction in the above item. If the plant, when so completed, be fairly kept up, there will be no occasion for further outlay of capital under this head. The Committee have taken into consideration the office filled by Mr. P. Clarke, and, fully admitting his abilities and knowledge of railway business, they are, nevertheless, of opinion that there should be an efficient head of each department, who should be immediately responsible to the directors; and that it is undesirable that any one servant should interfere with the management of every other department, thereby destroying the responsibility of the officers so interfered with, and impairing the efficiency of the Board itself. The Lewes station is an illustration of this mischief arising from such interference. This, station, as originally designed, would have been parallel to the main line, which is obviously the proper position; but Mr. Clarke was permitted to take the matter out of the hands of the engineer, and to build the station on its present inconvenient site, and that, too, at a cost far beyond the original estimate. Observations having been made at the last general meeting, to the effect that the directors were holders of a considerable number of shares in both the Chichester and Hastings Companies, at the time of their union with this company, and consequently

derived large profits to themselves individually, the Committee directed their attention to the subject and found that, in many instances, the directors were merely trustees for the Brighton, and did not generally hold a large interest on their own accounts. The Committee, regarding the large sum spent by the amalgamated companies in law and parliamentary proceedings during the last five years, amounting to no less than 212,204l. 13s. 7d., and the necessarily expensive character of such proceedings, strongly recommend that all the bills of the several solicitors to the company should be regularly taxed, by which means a fair remuneration will be secured to them for their professional services, and at the same time they will be relieved from the possibility of any suspicion on the part of the proprietors that the charges contained in their bills are unwarrantable or extravagant. The Committee have carefully investigated the subject of the dividends paid during the last three years, and they have not detected any sum carried to the revenue account at all questionable, except the 4,774l. profit on the purchase of the shares in the Brighton and Hastings, which increased the dividend for the half-year ending the 30th of June 1846, by about 2s. per share. In order to explain the diminished dividend of the last half-year, there must be taken into account, besides the general falling off in the traffic from which all railway companies suffered, the increased amount of capital on which the division of the companies of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line of the line dend was payable, the increased mileage of new lines whose traffic is only yet partially developed, and the extremely low state into which the locomotive stock had been allowed to fall, which occasioned an extra ordinary and heavy deduction from the disposable revenue for repairing and working the engines and furnishing the requisite quantity of coke. The Committee, however, have the satisfaction of knowing that the plant is already and will be still further augmented, and that a material saving in the article coke will be effected by the company manufacturing sufficient for its own consumption, as well as from the improvements in the new engines; and they are convinced that in future the working expenses need not exceed the average of the last three years. In conclusion, the Committee conceive themyears. In conclusion, the Commission assurance selves justified in giving the proprietors an assurance of the present sound condition of their property, and the present sound condition of their property. The well-grounded hopes of its future improvement. probability that no further outlay will be required on account of capital beyond that already mentioned, the small number of contracts still open, the reason able anticipation of a large increase of traffic upon the lines recently opened, and a considerable saving in the working expenses, are the basis upon which the Committee form their judgment; and they enter-tain no doubt that this opinion will be verified by the exercise of a wise economy throughout the establishment. The Committee had intended to have gone into various other matters of detail upon which they had collected information, for the satisfaction of the shareholders, but, yielding to the urgent request of the directors, they thought it better to omit them than to delay the presentation of their Report. The Committee cannot close their labours without acknowledging the uniform courtesy and valuable assistance they have received from the directors and officers of the company in the course of their inquiry.

Dissenting to the clause objecting to the proposed subscription to the Brighton and Continental Steamboat Company, P. A. TAYLOR, R. STERRY.

London Bridge Terminus, April 13.

Statement of the Minority of the Investigation Com-mittee on the subject of the Brighton and Continental Steam packet Company :-

The South-Western having a steamboat communication with the Continent from Southampton, and the South-Beatern from Folkstone, it would probably be admitted by all persons interested in the Brighton, or some port in its immediate neighbourhood. The advantage of this route is the less distance, and consequently the less time occupied in passing between the two great points of attraction, London and Paris. The disadvantage is, the increased length of sen passage, about double, as compared with Folkstone; while its superiority, in this respect, over Southampton, is more than that proportion. The route by Brighton would therefore probably be preferred by those who did not object to the length of voyage—those who were pressed for time—for the conveyance of goods, and probably hereafter for the mails, in which the saving of even an hour would be of importance. It is not necessary to say more upon this part of the subject, because the desirability of a communication to and from France by the Brighton, would, without doubt, be acknowledged by all. On the 2nd of January 1814, an interview took place between three directors of the Brighton Company (see Appendix, No. 1). In pursuance of this sub-The South-Western having a steamboat communication

ject the resolution (No. 2) was passed on the 29th of February. On the 23rd of April 1844 there was an interview with Mr. Stewart, which is reported on the 9th of May 1844 (No. 3). On the 13th of May 1844, in consequence of further delay occurring in putting on the boats, and in order to urge the necessity of working the line between Brighton and Dieppe through the season daily, a conference was held, and the Report (No. 4) made on the 23rd of the same month. It appears that the General Steam Navigation Company continued to work the line through 1844, but not at all in an efficient manner, to the dissatisfaction of the Board, and the injury of the Brighton, thus destroying any hope of obtaining a fair share of Contine tall traffic. After making various attempts to induce the Steam Navigation Company to put on better boats, and to work the line in a spirited manner, the directors felt thas if the traffic was to be carried on with any prospect of success it was necessary for them to take the matter into their own hands (see No.6) Aug. 14, 1845; and on Sept. 16, 1845, a company was provisionally on with any prospect of success it was necessary for them to take the matter into their own hands (see No.6) Aug. 14. 1845; and on Nept. 16, 1845, a company was provisionally formed for the purpose. As the Brighton Act did not authorize the company to run steamboats, the directors in their Report, Aug. 7, 1845 (No. 5), proposed to the proprietors to form a separate company; and in the following February (1846) they recommended the formation of a line to Newhaven, expressly for the sake of the traffic to Dieppe, which recommendation was adopted by the proprietors. For the sole purpose of carrying out these views, and not doubting that the proprietors would support the resolutions they had agreed to and passed, the directors, and other parties connected with the company, became responsible for nearly 18,000L, for which amount they still remain liable, having already subscribed a large proportion of that sum towards the undertaking. The confidence which the Board felt in the body of the proprietors, who had gone hand in hand with them in the desirability of maintaining the traffic—in the necessity of taking the management and conduct of into the company's hands—and in the construction of the Newhaven line, which would have been useless for any other object,—would appear hitherto to have been misplaced; and the proprietors seem prepared to abandon the directors to the consequences of their reliance upon the good faith and fair dealing of the Brighton shareholders. The undersigned members of the investigation committee regret to say, that the resolution of that Committee sanctions the rejection of the proposition of the directors to apply to Parliament for power to unite the steambout undertaking with the railway company—a proceeding which they consider equally unwise and unjust. The subject has undertaking with the railway company—a proceeding which they consider equally unwise and unjust. The subject has been thus brought under the consideration of the propricbeen thus brought under the consideration of the proprietors, in the hope of inducing them to adopt a more liberal
course, and one, it is thought, more compatible with their
own interests. The amount necessary for paying for and
working the required number of boats is only 10s, per share
upon the entire capital; while the probable consequence of
refusing to adopt the scheme, either by supporting the application to Parliament, or, in case of that being unsuccessful, coming forward and taking a proportionate number of
shares, will be to give up the undertaking again into the
hands of the Steam Navigation Company, who have shown
themselves disinclined to conduct it in a manner advantageous to the interests of the railway company.

Appendix.

Appendix.

[No. 1.]—Feb. 1, 1844.—Mr. J. M. Parsons, chairman.—A letter of the 29th ult. was read from the General Steam Navigation Company, enclosing minute of an interview held on the 2nd of January last, between three directors from this company and the directors of the General Steam Navigation Company, to the following effect:—That our directors called to inquire what ships the steam company intended to run the ensuing season, between Dieppe and Brighton, when they were informed that it was intended to commence the season by putting on vessels of a superior class, about 400 tons each, which would perform the journey with regularity to and from Dieppe, with improved accommodation for passengers, and also increased speed. The General Steam Navigation Company, at the same time, strongly recommend that a director from each of the companies should take an early opportunity of proceeding to Dieppe obtain the establishment of additional daily diligences between Dieppe and Rouen, which recommendation was at once adopted by the directors from this company. The foregoing minute was considered by this Board very satisfactory.

[No [No. 2.]—Feb. 29, 1844.—Mr. J. M. Parsons, chairman.— That the deputy-chairman be authorized to communicate with the General Steam Navigation Company, and such other parties as he may deem proper, with reference to the communication by steamers between Shorcham and Brigh-ton, and Dieppe and Havre, and to enter into and conclude

munication, by means of these vessels, between Brighton and Dieppe. The chairman further stated to the Board that, in accordance with the suggestion of Mr. Stewart, he had sent Mr. Buckton to Peptford, to obtain from Mr. Beardmore the desired information, which that gentleman declined giving without written authority. Mr. Beardmore having reported to his Board the circumstance of Mr. Buckton's visit, that Board had addressed an irritable letter, couched in most uncalled for and gratuitually uncourteous ton's visit, that Board had addressed an interest couched in most uncalled for and gratuitously uncourteous terms, which had led to a correspondence between the chairman and that Board, the whole of which was read to

chairman and that Board, the whole of which was read to the Board.

(No. 4)—May 23, 1844—Capt. Kelly, R.N., chairman.—The following report was read of the conference held between a deputation from this Board and the directors of the General Steam Navigation Company, on the 13th inst:

—A deputation, consisting of the chair wan, Mr. Crowley and Mr. Hill, attended at the request of the General Steam Navigation Company's Board, to hear frex., them what were their views and intentions with respect to working the lines between Brighton, Dieppe and favre—when they stated that the Menai was now working too times between Kingston Wharf, Brighton and Dieppe early in June, when the Fame would be put on for Dieppe early in June, when that station would be worked four times a week. They were strongly urged by the deputation to work the Dieppe station daily—to which they replied, that it was necessary to act with prudence, and if they saw, after working four times a week, that there was a hope of making it pay, they would then work it daily. The deputation then observed, that the only way to ascertain the fact was to try it. The deputation then asked, whether they had ever considered of a guarantee by the railway, and they replied in the negative. A conversation took place on the subject, but nothing was determined upon. The tonnage of these vessels was stated to be as follows:—

Registered.

Mannet. 160, from Llovd's List. ... 377

was stated to be as follows:—

Registered.

Magnet . 160, from Lloyd's List ... 377

Fame. . 172, from register ... 393 86-94

Menai . 136, their report of register 268 The Chairman having subsequently directed Mr. Buckton to inspect the registration of the above vessels at the Custom House, he reported their tonnage therefrom as follows:—

| Register Engine space Total | Magnet | 166 | 130 | 296 | Fame | 172 | 122 | 294 | Menai | 136 | 127 | 263 |

Menat 136 127 263

[No. 5.]—Aug. 7, 1845.—Extract from Report passed by the Company.—Mr. Rowland Hill chairman.—The Dieppe and Fecamp having obtained a concession of the line from Dieppe, in completion of the direct route by that port to Paris, your Directors consider the opportunity favourable for improving the water communication to Dieppe; and as the Brighton Company's fund cannot be so applied, your Directors think it desirable that a company should be formed to provide steam ships of a superior class to ply to and from Dieppe, and a prospectus having that object in view will shortly be submitted to the proprietors. With reference to the Dieppe traffic, your Directors have turned their attention to Newhaven, which, especially when taken in connexion with the proposed harbour of refuge at Seaford, they consider may afford facilities which Shoreham does not at present possess. It is satisfactory, however, to state that the commissioners of Shoreham Harbour have reduced the tonnage dues on steam-vessels, and are taking reduced the tonnage dues on steam-vessels, and are taking steps towards improving the entrance and deepening the channel of the harbour. Your Directors are also on the

steps towards improving the entrance and deepening inchannel of the harbour. Your Directors are also on the point of erecting additional wharves, to meet the increased demands of the trade.

[No. 6.]—Aug. 14, 1845.—Mr. Rowland Hill chairman.—Mr. J. Wilkin and Mr. B. Attwood, attended by Mr. Wilson, the secretary, waited on the Board as a deputation from the General Steam Navigation Company, to urge their claim to be consulted with reference to any steps being taken to appoint any other steam-packets than their own in the conveyance of passengers and goods to and from France, conceiving that they had been at great trouble and expense in cultivating the Brighton station, and asking for an explanation of the conduct of this Board, which they claimed on the ground of the amity subsisting between the two companies. When they were informed by the chairman that it was not until after repeated attempts had been made to induce the Steam Navigation Company to take up the matter in a spirited manner, and after failure on their part, the only hope of success was in this company's taking it

matter in a spirited manner, and after failure on their part, the only hope of success was in this company's taking it into their own hands. The deputation then stated, that in case the Brighton Company put on steam ships, the General Steam Navigation Company would take it up, and would not be driven off by anybody.

[No. 7.]—Feb. 10, 18-46.— Half-yearly general meeting. Mr. Rowland Hill chairman.—Resolved.—That this meeting approves of the application made to Parliament in the present session for Acts for making the following branch railways, namely:—(inter alia) the Newhaven and Sleaford branch.

No. 8.—Feb. 10, 1846.—Extract from Report passed by the company. Mr. Rowland Hill chairman.—Conformably with a notification in the last Report, the directors had commenced the necessary steps for establishing the Brighton and Continental Stean-packet Company; but before the deed of settlement could be submitted to the shareholders, the state of the money-market became such as to induce the directors of the company to postpone taking further steps until a more favourable opportunity, of which they are fully prepared to take advantage, shall present itself.

[No. 9.]—Aug. 6, 1842.—Extract from Report passed by the company. Mr. C. P. Grenfell chairman.—In connexion with the Newhaven branch mentioned in the foregoing list, your Directors think it right to call your especial attention to the urgent necessity of improving, by the establishment of a steam-packet company, the communication with the Trench coast. The railway from Rouen to Dieppe is in carse of rapid construction; and it is indispensable to promise in time for the developement of a traffic with Paris, [No. 8.]-Feb. 10, 1846.-Extract from Report passed by

with Normandy, the south of France, and with the continent of Europe generally, the value of which to the railway in terests connected therewith must be of considerable importance. Your Directors stated in their last Report that they intended taking advantage of the first favourable opportu-

terests connected therewith must be of considerable importance. Your Directors stated in their last Report that they intended taking advantage of the first favourable opportunity for brinking this subject again before you: that opportunity has now arrived, and therefore your Directors have to inform you that, in the full confidence of receiving your cordial concurrence, and in conformity with the general opinion of the proprietors on the former occasion, they have recently formed the basis of a company for the purpose of affording superior steam communication between the Brighton lines and the French coast. A prospectus will be transmitted to each proprietor in the amalgamated company. [No. 10:]—April 7, 1847.—At an extraordinary meeting of the London, Brighton and South Coast, held at the London Bridge terminus, Mr. C. P. Grenfell chairman,—Resolved unanimously, that as efficient steamboats in conexion with the London, Brighton and South Coast would tend materially to facilitate the intercourse between this country and the Continent, and would be of great advantage to this company, the solicitors be and are hereby authorized to insert in either of the bills now before Parliament a clause or clauses to enable this company at any time, by and with the consent of three-fifths of the proprietors present, at any ordinary or extraordinary meeting of the company called for the purpose, to subscribe, advance or contribute any sum or sums, not exceeding in the whole 100,000L, for or towards the establishment of such boats.

[No. 11.]—Aug. 10, 1847.—Extract from Report passed by the company, Mr. C. P. Grenfell, M.P. chairman.—The engineer reports that the lines to Lewes and Newhaven are nearly completed. The first, by shortening the distance between London and Lewes and Hastings by eight miles, and avoiding the Lewes incline altogether, will afford great facilities to the direct intercourse with those towns; while the Newhaven Extension from Lewes will enable this company, by means of the very superior vessels employed

Boulogne. It were almost unnecessary to call the proprie-tors attention to the great benefit their railway property would derive from this rapid communication between the two coasts—not less as regards the Paris and general Con-tinental traffic than in reference to the manufacturing and trading population of the important districts of which Rouen

the capital. (Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 and 11 correctly extracted.)
T. J. Buckton, Secretary.

GLASGOW, DUMFRIES AND CARLISLE.

Engineer's Report for the Meeting, Feb. 16 (p. 135).

As requested by you, I have prepared the following Report as to the works on this line, and beg to submit it for your consideration. I have divided the line into two divisions, the one comprehending that portion extending from the Caledonian at Greina to Dumfries, and the other from Dumfries to Sanquhar, as the state of the works on those portions is so different in point of advancement. The progress of the works has not been so great as the time since the date of my last half-year's Report would have led you to expect; but, notwithstanding, the works on the southern portion of the line have been carried on in a satisfactory manner; and without going into the detail of each contract, I may state, that, of the whole earthwork, amounting to about 1,200,000 cubic yards, three-fourths have been removed. The important bridges, such as that over the Annan Water, are all but completed; the amaller bridges and masonry are in a very advanced state; the laying of the permanent way is being rapidly proceeded with, and is also considerably advanced. In short, I may state that the works are in such a position as to render the southern portion, in the month of July next, a matter of easy accomplishment. Again, with regard to the works on the northern portion of the line, that is, between Dumfries and Sanquhar—anything north of Sanquhar not having been contracted for—I may state that taking the state of the earthwork as a criterion Engineer's Report for the Meeting, Feb. 16 (p. 135). the line, that is, between Dumfries and Sanquhar—anything north of Sanquhar not having been contracted for—I may state that, taking the state of the earthwork as a criterion of the state of the whole works on that portion of the line, there has been a quantity of about 500,000 cubic yards excavated, and that out of a total quantity of about 1,700,000 cubic yards; the masonry and other works being carried on in about the same ratio.

J. MILLER. Edinburgh, Jan. 31.

#### Progress of Works.

BELFAST AND BALLYMENA .- April 11 .- The line was opened for public traffic, and all the arrangements were satisfactory to the numerous passengers taking the opportunity of making the first trip.

EAST LANCASHIRE.—April 10.—The extension line from Rawtenstall to Newchurch, says the *Halijax Guardian*, was opened for passenger traffic.

NORTH STAFFORDSHIRE (Norton Bridge).—April 17.
The line from Stable 14. Norton Bridge).—April 17.

-The line from Stoke to Norton Bridge, connecting the Potteries with the London and North-Western, was opened for passenger traffic, in the presence of an immense concourse of spectators. The electric telegraph has been completed, and is now at work. The day was kept as a general holiday by the inhabitants of the Pottery district. The directors, as previously stated, distributed 250l. amongst the poor, instead of treating the men employed on the line. The works on the other portions of the railway are being pushed

early in the month. A locomotive will be run from Totnes to Laira at the latter end of next week. directors have determined not to proceed with building the goods traffic shed at Laira for the present.

FOREIGN.

BOULOGNE AND AMIENS.—April 17.—The opening of the remaining seven miles between Boulogue and Neufchâtel took place. An uninterrupted route now exists from Boulogue to Paris; and indeed the service of communication is as perfect as it can be between Paris and London, as the sea voyage is performed by the noble boats of the South-Eastern. A considerable number of the shareholders availed themselves of the liberality of the South-Eastern directors, who placed a special train and a steam-packet at the service of those who chose to be present at the expected ceremony; but owing to the heavy sea, and consequent delay in making the sea passage, they were doomed to be disappointed. A party of the South-Eastern directors—Mr. Macgregor (the chairman), the Hon. Mr. Byng, Mr. J. S. Smale and others—also went to Boulogne, to give their advice and assistance if needed. With reference to the expected ceremony, nothing of a formal character took place. Messrs, Laffitte and Blount, and other of the Boulogne and Amiens directors, were understood to have been in waiting to receive the English deputation at the station at Capecure; but as the train was obliged to start at a fixed hour, the French directors were compelled to go on to Amiens, where they had business to transact, without having had any correspondence or communi-cation with the English party. The Morning Herald gives the following results of a brief inspection of the station and a portion of the line. The line appears to be exceedingly well made, but the staff is not yet in that complete working order, which can only be acquired by sufficient practical experience of the traffic. The carriages are very handsome and convetrame. The carriages are very handsome and convenient; and indeed they ought to be so, considering the very large sum they have cost. The station is neat, and apparently quite sufficient for the purposes of the line for years to come. The present station is a judicious substitute for that expensive structure which was at first contemplated. This economical change has saved the shareholders at least 30,000l. Some hundreds of the residents of Boulogne were congregated at the terminus to witness the departure and arrival of the first trains. Both these operations were accomplished with very creditable punctuality, and the number to and from Amiens was considerable.

MONTEREAU AND TROYES.—The inauguration took place on the 6th inst. The time fixed for this event has thus, in spite of all difficulties, been well kept. The Minister of Public Works assisted at the ceremony, and he congratulated the board of directors on the fulfilment of their work. He sedulously avoided all allusion, says the Journal des Chemins de Fer, to the present proposed purchase of the lines by the Government, contenting himself with an eulogy on the enterprize which furnished such channels as the railroads for the prosperity of France.

#### Law Intelligence.

SHARE PURCHASES. — April 13.— In the Vice-Chancellor's Court, in re the West Cornwall v. Mowatt, this was a bill filed by the West Cornwall. wall against the defendant, Mowatt, for the specific performance of an agreement entered into by the defendant for the purchase of 4,935 shares, and to restrain the defendant from proceeding against Messrs. Denison, bankers, for the recovery of a sum of money deposited by the defendant as security for such shares. When the line was projected it was agreed that there should be 25,000 shares issued, at 202. per share: 4.935 of these shares were unappropriated, and the defendant entered into an agreement to purchase the unappropriated shares at 15l. per share, and 4l. a share was to be deposited with Messrs. Denison as a security for the purchase-money. The defendant refused to complete the purchase, and this bill was filed. A demurrer was put in by the defendant, that the company had no power to sell the shares at a price less than 201., the amount fixed by Act of Parliament, and that the Messrs. Denison ought to have been made parties to the bill. Before the arguments were concluded, it was suggested that the better course would be to have the case decided by a court of law.—The Vice-Chancellor

agreed with this suggestion.

ENRRY ON LAND.—April 15.—In the same Court, in re Createll v. the Buckingham and Brackley Junction, Mr. Hall moved for a special injunction to restrain the company from entering and breaking forward with all possible expedition.

South Devon.—Mr. Brunel is said to earnestly desire the opening of the line on the 1st of May. If, however, that cannot be accomplished, it will take place or deposit of the purchase-money; and indeed they were bound by the terms of the General Railway Act not to do so. The company, however, had lately induced a tenant to give them possession, and were proceeding to make the line on the land without settling with the plaintiffs.—His Honour granted the injunction.

ENGROACHMENT ON PLANS.—April 18.—In the same Court, in re Holden v. the London and North-Western, this was a motion for an injunction to restrain the company in the construction of their line at the point where the line is nearest to the Crown Hotel at Leamington, from approaching nearer to the said hotel than was delineated in the plan deposited with the clerk of the peace. Affidavits declared that the company had deviated from their plans at this particular point, and had exceeded the limits prescribed by the Act of Parliament. For the company it was contended that the terms of the Act had been misunderstood, and that the company had not exceeded the limits prescribed by their Act.—The Vicc-Chancellor said he thought upon the evidence produced that the company had brought their line within a less distance from the hotel than, according to his view of the Act, they were entitled to do. He therefore considered there was a sufficient case for an injunction.

ENTRY ON PREMISES.—On the same day, in the same Court, in re Smith v. the Great Northern, this was a motion to dissolve an injunction obtained to restrain the company from entering upon certain premises belonging to the plaintiff, near Gainsborough, on the river Trent. The objection raised by the plaintiff was, that the company intended to take one part only of a certain warchouse belonging to his premises, and had deposited the value of that part only, whereas it was contended that, under the 92nd section of the Act, no party could be obliged to sell a part only of any building, if such party should be desirous and should have the power of selling the whole; and that the company ought not to take possession of the whole without making a deposit of the value of all.—The Vice-Chancellor said if it were the construction of the Act that the company were bound to take the whole of the land, then it was evident that the company ought to deposit the value of the whole; and if the proceedings should have been such that a security for all the property which the company might be compelled to take had not been deposited, then the Court ought to interfere. He should refuse the motion to dissolve with costs.

LIABILITY OF CARRIERS.—April 15.—In the COURT QUEEN'S BENCH, in re Shaw v. the York and North Midland, counsel moved to set aside a verdict conferring damages for the loss of a horse which had been sent by the plaintiff to be conveyed along the line, and which had died in consequence of injuries received during the transit (see ante, p. 237). The cause was tried at the Northern Circuit, before Mr. Baron Alderson, when the defence was, that on the horses being brought to the railway the plaintiff received a ticket, which, after stating the delivery of the horses, and the place to which they were to be carried, contained a proviso to this effect:—"This ticket is issued, subject to the owner's undertaking all risks of conveyance whatsoever, as the company will not be answerable for any injury or damage, however caused. occurring to horses or carriages travelling upon the line, and while loading and unloading." Mr. Baron Alderson did not think that this notice supported the third plea on the record, that the plaintiff had, by agreement, taken on himself all the risk of the carringe, but that the common law liability of the carrier still continued, notwithstanding the notice. The plaintiff therefore had a verdict.—The Court granted a rule to show cause.

LUGGAGE.—April 19.—In the COURT OF COMMON PLEAS, in re Richards v. the Brighton, in which the plaintiff sought to recover 1501. from the company for the value of a dressing-case, &c. belonging to him, entrusted to one of the company's servants for renoval from the carriage, in which the plaintiff's wife had been sitting (see ante, p. 142).—Mr. Serj. Talfourd now moved to set aside the verdict. The question was, whether the counts in the declaration were established. The breach in the first count was confined to the loss during the journey. There was no proof that the dressing-case was ever received by the defendants at the Woodgate station, and it was not seen by their servants there at all, and therefore was not in the situation of luggage which had been committed to their care. With regard to the second count, if there was no proof that the package was ever confided to the company at the Woodgate station, it could not be a part of their duty to convey safely from one part of the London station to another. But it was also a question, whether any such duty attached to the company at all. With regard to the third

count, it could not be said that the servants of the company could charge them as voluntary bailees by taking on themselves the duty of conveying from their carriages to the hackney-coach.—The Court granted a rule to show cause.

COMPENSATION.—April 19.—In the COURT OF EXCHEQUER, in re Rolt v. the Chester and Holyhead, the Attorney-General moved for a rule calling on the plaintiff to show cause why there should not be a new trial in this case, or the judgment conferring 250l. damages arrested. It was an action brought for the recovery of compensation for certain injuries, alleged to have been sustained by the plaintiff by the falling in of the bridge over the Dee.—The Lord Chief Baron said the Court wished to confer with Mr. Justice Williams as to the precise objections taken before him at the trial, before they determined whether the rule ought to be granted.

ADVERTISEMENTS.—April 19.—In the SECONDABLES' COURT, in re Chapman and another v. Holmes, this was a writ of inquiry to assess damages in an action brought by the proprietors of the Sunday Times, to recover 156l. 10s. 6d., for advertisements inserted in the Railway Director, published during the mania of 1845. The defendant was sued in his capacity as a director of a scheme called the Somerset and North Devon and Porlock Dock and Harbour Company, and failing to plead to the action he admitted his liability. The only question was as to damages; and evidence as to the order, the insertion and the fairness of the charges being given, the jury assessed the damages at the sum claimed.

STEAMBOATS AND THE MONOPOLY QUESTION .a recent article in the Railway Record, too long for quotation, Parliament, which is to consider the ques-tion of allowing the Chester and Holyhead to possess steamboats, is usefully reminded of a case in point, steamboats, is uscruly reminided of a case in point, furnished by the Manchester, Sheffield and Lincolnshire, owning steamboats that have already been of signal public advantage. It would be for public benefit that railway companies had docks at Southampton, Bristol, Plymouth, Falmouth and every other port where a railway ends. We should then see nominal dock dues, and other mercantile advantages, conceded as a matter of course. If we doubt the advantage of giving these appurtenances to rail-way companies, let us look at the way in which they have been used by those who have been fortunate enough to obtain them. The Sheffield and Lincolnshire has had parliamentary influence enough to obtain, and amalgamate in one homogeneous whole, three railways, one set of waterworks, two canals, a ferry with steamboats, and docks-that is to say, everything that is now considered illegal for other companies to hold in common with railways. Are the public likely to suffer? Quite the reverse. At this moment passengers are conveyed between Hull and New Holland, on new steamboats, the property of the Lincolnshire Railways, in less time and at less expense than when the ferry was in private hands. A pier for the accommodation of passengers is open, and a dock for the reception of coasting vessels is being pressed to rapid completion, at an expense of nearly 100,000l. No private independent company could ever have hoped to realize a profit on such expenditure. But to a railway company, 100,000l. expended on one of the main termini of a line 240 miles in length, is a reasonable and legitimate invest-ment, even if in itself it never pay more than 23 per cent. It is all-important that such a ferry should be worked in harmony with, and in strict subservience to, the interests of the railway. The Great Grimsby Docks are a still stronger case in point. If the powers granted to the Manchester, Sheffield and Lincolnhire had been asked by the London and North-Western, the Great Western, or the South-Western-in London, in Liverpool, in Bristol, Southampton Plymouth or Falmouth-each secretly, and on sham public grounds, would have opposed the other, and been assisted by the vested interests of dock-owners and warehousemen. But Great Grimsby being worth nothing to any one except the railway company in possession, that company has been permitted, while creating, at an expense of half a nillion sterling, a magnificent water terminus, to confer on the nation a floating dock, as useful either for commerce, defence or offence as the harbours of refuge on which it has been proposed to expend some millions of the Imperial funds. These docks, too, will be open at nominal rates. And this is, according to the theory of certain members of the House of Commons, a monopoly!

confided to the company at the Woodgate station, it could not be a part of their duty to convey safely from one part of the London station to another. But it was also a question, whether any such duty attached to the company at all. With regard to the third panies. The Scottish Railway Gazette, besides giving

a full report of the proceedings, furnishes the following explanation of the proposal:—Government is asked to advance, in the shape of Exchequer bills, 1,500,000l. to certain companies, whose works have been suspended in consequence of the difficulty of obtaining money to complete them, either by calls or loans from individuals. It is proposed at the same time that the companies should provide capital to a similar amount, to be raised and expended simultaneously with the loan from Government. Thus 3,000,000. would be provided to complete the suspended works it being calculated that were them. one-third of the capital required has been already expended. It is estimated that about 800 miles of railway are in this situation, which, at the rate of 15,000. per mile, would take up the capital proposed to be raised jointly by the companies and on the credit of the Government. We have no strictly exact data, of course, to determine the extent of the works in this situation; but we think that Mr. Dick's figures afford a pretty close approximation. He enumerates the Caledonian 30 miles, the Edinburgh and Glasgow 20, the Edinburgh and Northern 30, the North British 30, the Dumfries and Carlisle 40, the Scottish Central 20, the Aberdeen 40. There are, however, various other lines, not yet in operation, on which a third or fourth of the capital has been expended, and to these both the Lord Provost and the Treasurer in their remarks distinctly alluded, as falling under the contemplation of the Council. Amongst others, we may name the Stirling and Dunfermline, the Edinburgh and Bathgate, the Monkland, the Ardrossan, the Ayrshire and Galloway, &c., as entitled to consideration, in any estimate of the lines to be thus assisted. It is calculated that upwards of 15,000 men might be employed on the contemplated works for nearly eighteen months—and we have no doubt that this calculation is safe and moderate. The financial part of the case, to which the Government will narrowly look, is briefly this—that the million and a half would be advanced on the security of upwards of 16,000,000*l*. of capital, yielding a yearly revenue of 600,000*l*.; that an adequate interest should be paid for the use of the money, and that it should be repaid within a certain term of years. The machinery for regulating the application of the loan, it is suggested, should be similar to that provided by Sir Robert Peel's Drainage Act of 1846. It might even be of a much simpler nature, so as to avoid delay and expense.

IRON TRADE.—At the meetings at Walsall, Wolverhampton and Birmingham, the Birmingham Gazette asserts there was scarcely an average attendance, tardily assembled, and not very busily engaged; while at Dudley, on the 15th, the numbers present were still more scanty. Flatness and a disinclination to purchase have been the characteristics of each succeeding day, resulting from the very general impression that it would be impracticable to uphold prices throughout the week. This impression seems to have arisen from the supposition that the make of raw material again already exceeds the consumption, strengthened by a report that considerable negotiations for rails had been concluded, previously to quarter day, at receding prices—thusaffording ground for the manufacturers to hesitate in taking their supplies until the same concessions should be made to them. On the other hand, the determination of sellers not to give way was spiritedly supported, and orders have consequently been withheld, or given subject to any contingent reduction that may ensue. Upon the whole a limited amount of business has been transacted, and the trade still retains an unsettled aspect. Large houses and manufacturers of best qualities have sufficient orders to keep them at work, but other descriptions are very slack. The Shropshire pig-makers have resolved to maintain their prices, and the rates of Staffordshire are generally ruled by them; but holders of ironstone, limestone and other materials have at length been compelled to assume a more moderate tone. We are sorry to have to add to our list of disasters the respectable firm of Messrs. Crudgington & Southall. The committee of the Ayrshire Iron Company

The committee of the AYRSHIRE IRON COMPANY deserve much credit for their continued perseverance in extricating the affairs of this unfortunate concern, and they are right in having made the equalizing call of 201. per share, as parties who have already advanced this sum had a right to require that measures should be taken to insist upon every shareholder doing the like.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

MEETINGS.

DEMBRABA.—April 28. London Tavern, at 1.

LANCASTER AND CARLISLE.—April 28. Liverpool, at 1.

London Stock Exchange, April 20.—A very limited amount of business has been transacted during the

amount of business has been transacted during week, and at prices quite equal to our last quotations. Liverpool, April 20.—Our market has rallied during the present week; prices generally having advanced, and closing to-day firm at the quotations.

Sudlow, Brothers.

Manchester, April 20.—We have had a little improvement in our share-market this week

SAM. GRINDROD. York, April 20 .- There is an improvement in the market for railway stock, although few sales take GRAYSTON & EARLE.

Hull, April 20.—We have no particular change to report in the share-market during the past week; the report in the share-market during the past week; the same inactivity prevails, and must, we fear, so continue, until the aspect of the political world shall be more cheering. To-day, however, owing to the improved tone of the London market, stock has found more ready sales at highly improved prices.
FLINT & TOOTAL.

Paris.—Our list of prices shows an improvement Paris.—Our list of prices shows an improvement this week, consequent on the more favourable appearance of affairs. Thursday being the day appointed for the national fete, nothing, of course, was done at the Bourse. We are glad to see that all had passed off well up to 7 p.m. The question of the Government appropriation of railways must be left for the decision of the National Assembly, and we trust that justice will be done to all parties. We trust that justice will be done to all parties. We direct the reader's attention to the Strasburg manifesto on this subject, quoted in a subsequent column.

At Romilly, some workmen on the Montereau AND TROYES tore up the rails to prevent the approach of the National Guard at Nogent-sur-Seine. A locoof the National Guard at Nogent-sur-Seine. motive went off the rails in consequence, and the engine-driver was killed and the stoker severely

LONDON, SATURDAY, APRIL 22.

The half-yearly Report of the directors of the LONDON, BRIGHTON AND SOUTH COAST was at last received by the shareholders, after the disposal of the steamboat question, which we have elsewhere fully noticed. The retiring directors were re-elected, and the arrangements with the South-Eastern, respecting the Bricklayers' Arms station, were sanctioned, with only two dissentients.

The shareholders of the EDINBURGH AND NORTHERN, at their special meeting, formally approved of their bills before Parliament in the present session. All legal proceedings with the Edinburgh, Leith and Granton are suspended until a final explanatory report has been submitted to the shareholders.

At the adjourned meeting of the KILLARNEY AND VALENTIA proprietors the Report was

advocate an immediate commencement of the works and a call of 11. per share, 10s. payable in May and the remainder in the summer.

The deposit of 100,000l. required by the East India Company from the East Indian shareholders has not been obtained. The general mistrust of railway property has affected a scheme whose prospects were undeniably excellent. A call of 21, is to be made at once; and if the Board again fail to raise the deposit, the whole amount obtained, with interest, is to be returned to the parties paying the call, by the 1st of October.

At the half-yearly meeting of the DUBLIN AND KINGSTOWN shareholders a very useful discussion on the affairs of the company took place, previously to the adoption of the directors' Report. A dividend of 3 per cent. for the half-year was declared, and it was announced that the Waterford, Wexford and Wicklow had a bill before Parliament to confirm their arrangements with the Kingstown.

The completion of the GREAT IRON TUBULAR BRIDGE over the Conway, and the consequent opening of the CHESTER AND HOLYHEAD RAILWAY, are events of such importance both to the communication with Ireland and to the character of railway engineering in this country that we must refer to them once again. We formerly noticed the happy transference of the tube from the workyard to its position between the opposite piers. But it was then at a great depth below its final place. It had still to be pumped up by a Bramah press and steamengine to its height. The pumping up of this great mass—nearly as large as one of the rows of houses in Great George-street-by the two ends, is perhaps the most formidable lift ever attempted. It was effected at the rate of about 2 ft. per hour, and was done uniformly, quietly, and so insensibly from the large mass, that it seemed rather that the ground and sea and houses sank down below the bridge than that received, but the statement of accounts was the bridge itself was in motion. Trains have referred to a future assembly. The directors passed through with great loads, and without producing vibration'; and Capt. Wynne, the Inspector General of Railways, has simply had to do the duty of giving the lie to the predictions of his predecessor in office, the General Pasley. We understand that Capt. Wynne has sanctioned the whole line, with which he expressed great satisfaction, having made a very minute and critical examination of it. We congratulate Mr. Stephenson in having thus converted one "impossibility" more into a practical fact. We hope he will not delay to give the profession an account in detail of all the difficulties encountered and conquered. His Menai Bridge will give him little trouble, we trust, after this; of which the difficulties are different in degree rather than kind.

From our official returns it appears that the amount of traffic for the last week, on 3,663 miles of railway, was 175,4721., thus accounted for: — 86,3851. for the conveyance of passengers only, 44,942l. for the carriage of goods, and a remainder of 44,145l. for passengers and goods together, not respectively apportioned; being an increase of 14,536l. over the corresponding week of last year, when the mileage was 2,812. The average earnings per mile last week were 48l., whilst in 1847 they were 57l.

RESULT OF THE INQUIRY IN THE BRIGHTON AND SOUTH COAST BUSINESS.

The Report of the Brighton Investigation Committee, presented to the adjourned meeting on Monday last, was, on the whole, a more practical and temperate document than might have been expected from what had previously transpired as to the manner in which their inquiries were conducted. It is true that it does not afford much detailed information, nor make any disclosures of consequence; but the shareholders will be pleased, on the whole, to learn that the general result of the Committee's labours has been to produce a favourable impression both of the fairness of the Directors' proceedings, and of the sound condition of the The statement of the actual perconcern. centage of working expenses may be called satisfactory so far as a comparison with those of the adjacent concerns can make it so: the practical concern for the shareholders, however, still remains to be their proportion to the earnings of the line; and on this head the Committee do not appear to have arrived at any further views beyond what had already been pointed out by the Directors; in whose Report the prospects of reduced expenditure in the maintenance of way and in locomotive power were mentioned. The Committee recommend the completion of the lines on which the chief outlay has already been made; and anticipate the final closing of the capital account on an estimated sum of 7,254,264/.-after 261,904/. shall have been bestowed, amongst other expenditure, on a series of branches which have already cost more than two millions. It is scarcely needful to observe that a conclusion of the capital outlay is above all things to be desired by the proprietors; and that the two wisest things they can do are, first, to promote the accomplishment of this promise of the Committee by every means in their power; and, next, to refuse their consent to any proposals whatever that may have the effect of keeping it open, or of saddling it with new undertakings.

There are some remarks on the position and acts of Mr. Peter Clarke, the spirit of which is exceedingly questionable; and from what the chairman stated at the meeting on Tuesday, held to receive the result of the ballot, it appears that the sole instance adduced in illustration of the Committee's insinuation is, after all, at variance with matter of fact.

amendment, moved on the production of this Report, is too singular in its character to be passed over without reproof. The majority of the Committee had agreed to a clause suggesting the withdrawal of that part of one of the bills now in Parliament whereby it is intended to lay on the railway company the onus of the Brighton and Continental Steamboat Company; which was expressly undertaken as a separate enterprize, that was not to be maintained at the expense of the railway funds. From this part of the Report two only, out of the seven members of the Committee dissented; and instead of following the usual and proper course of submitting to the decision of the majority, these two dissentients have assumed the liberty, not only of signing their names with a reservation protesting against the clause, but also of drawing up a special paper, in which their reasons for dissenting from the resolution of their colleagues are drawn out at full length. This paper, too, was circulated along with the Committee's Report - apparently with the knowledge, at least, of the Directors, whose participation in such an exceptional proceeding cannot be at all commended.+ It is clear that no business whatever can be done by a body of men in committee without some difference of opinion arising; as, also, that the minority, after having done what they can to make their own views prevail in the committee, are then bound to accept the decision of the greater number, and have no right whatever to appeal to anybody without on the matter of the difference. The attempt to set aside this, which is the usual, and indeed the only practicable rule for the conduct of a deliberative Board, is to be thoroughly deprecated; and on the present occasion the attendant circumstances are such as rather aggravate the impropriety.

To show this, we have only to advert to the facts of the case on which Messrs. Taylor and Sterry, prompted, as it would seem, by other movers in the background, have tried to nullify one of the few practical results of the appointment of the shareholders' Committee of inquiry. The object of the Report on this subject was the very justifiable one of keeping the steamboat affair on the footing on which it was expressly started and presented to the proprietors. Had it been right to throw this undertaking on the company at all, it should have been at the beginning. But at the outset the very opposite course was pursued. The shareholders were, indeed, advised to promote a special steamboat establishment, with a view to cultivate the French traffic. But this they were distinctly informed, at the same time, was not to be done out of the railway purse. They were invited to subscribe as proprietors of a separate and independent company; and no opportunity was given them, while it was yet time to have avoided any expense, to say whether they would or would not have the railway funds bestowed on such a purpose. Thus the affair was begun; and the Directors have no right whatever now to complain of having been disappointed or left in the lurch by the proprietors, if they refuse to entertain it now; because the declared purpose of the former was to keep it a wholly separate concern. If such was their real meaning, they cannot complain of being taken at their word. And if they merely put the distinct understanding forward in order to get the thing started without difficulty, with a covert design of afterwards slipping the obligation upon the railway, they would still less deserve to be pitied on the shareholders' refusal to be so played with. The consent of the latter would be a bad precedent; and on

† We have inserted this document along with the Report in p. 285.

The circumstance which gave rise to an | this account alone they may have reason to withhold it on the present occasion, whatever be the plea for the special matter of liability itself; which, also, in the actual state of affairs, may be regarded as a very questionable one. It is absolutely requisite that Directors should be taught the necessity of pursuing a plain and consistent course in all transactions by which they may compromise the funds they administer. They should be discouraged from bringing forward proposals on one footing, and afterwards, on any mere argument ad misericordiam, endeavouring to get it changed to another, which had been expressly renounced at the outset. The result of allowing such after-proposals is simply to make Directors heedless what obligations they may incur, or what indiscretions they may commit, relying upon the willingness of the proprietors to make good the consequences of measures they had not authorized, and would probably have objected to, had they been consulted as to assuming the liability in the first instance, before the Directors had run into it.

The exceptional proceeding of the two members has for the moment been supported by those who appeared or sent proxies to the meetingthat is to say, there was a majority of votes from stock of 4,224 to 3,870, for an amendment expunging the passage in the Report which contains the Committee's advice on the steamboat question-the majority in number of the proprietors having been the other way-76 to 51. But this does not conclude the matter. It will have to be laid once more before a meeting specially held to consider the bill now in Parliament; and owing to the pointed manner in which attention has now been directed to the subject, it will probably be determined by a larger body of the proprietors than have yet taken part in the discussion. It will be well for them to bear in mind that the question they have to vote upon does not merely concern the expediency or otherwise of the ownership of steamboats by the railway company-although of this there must, we think, be serious doubts at all times; in this case, and in the present state of the Continent, there are particular reasons for being doubtful. The main thing in this affair is, however, after all, the fact that the ownership is about to be pushed upon them at a doubtful stage of the business, after they had been particularly given to understand at its earlier stage that they were not to be asked, as railway proprietors, to have anything to do with it. This, we think, is a kind of transaction it would not be well to encourage, even were the steamboats likely to be a gain, instead of a considerable annual loss, to the company. It is still in the power of the shareholders to refuse their approval to it; by doing which, they will at the same time be ratifying one of the few practical recommendations of the Committee, whom it is to be presumed they got appointed for some practical end; and rebuke a kind of proceeding on the part of its two protesting members both unusual and objectionable in the highest degree.

#### Carrespondence.

EDINBURGH AND NORTHERN.

I observe that you favourably notice the above line. I have been a shareholder from the commencement, and I intend to continue in it. At the same time, I must say that the directors have spent a good deal of money more than I calculated upon. But if the estimates bid fair to be exceeded, the traffic indicates, so far as a partial opening can, that the revenue also will be in excess of all expectation. We shall have upwards of 90 miles on which to collect fares towards a revenue for a dividend upon two millions. We have already a take per mile per week of 331.—the average for the United Kingdom being 43L; and this with goods traffic hardly begun, our minerals undeveloped, and neither of three

northern termini yet approached by 12 or 15 miles each, although these towns and cities have an aggregate population of upwards of 120,000,—viz., Dundee, Dunfermline and Perth. The expense of the finished portion of the line is under 23,0001. per mile. It does not do for traffic tables to assume that the reported outlay wholly applies to the opened portion of the line ;—there is a large expenditure on mileage just approaching completion. I have stated these facts much more in detail in our local paper, but I am glad to see the undertaking is beginning to be understood in England. The total population in towns upon the line, exclusive of villages and rich rural and mineral districts, is very much upwards of 300,000, and a great portion of this is spread over the whole line by a complete range of towns not destitute either of wealth or trade. I have compiled from statistical tables. As the control tors should study caution and economy.

Edinersis. from statistical tables. At the same time the direc-

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.

In your notice of the Grimsby Docks, at p. 270 of your number for the 15th of April, you say-"The balance-sheet to the 31st of December shows receipts at 402,527L, and a balance, less expenditure, of 91,603L 11s. 8d. The revenue account shows receipts at 3,533*l*. 16s. 3d., and expenditure of 3,507*l*. 14s. 1d., balance, 26*l*. 2s. 10d." This is calculated to mislead. The so-called "expenditure" contains 2,900% clear profit, carried as a loan to the capital account for new works, so that, in fact, the real expenditure is only 607l. 14s. 1d.

J. H. HUMFREY, Secretary.

#### Gassin.

The FACILITIES afforded by the Metropolitan railways for PLEASURE EXCURSIONS during the Easter holidays will be an excuse for drawing our readers' attention to the series of TRAVELLING CHARTS, a complete list of which is given in an advertisement in this week's Chronicle. As a companion to all and this week's Chronicle. As a companion to all and cach of them, the London pleasure-seeker will do well to provide himself with a copy of 'Felix Summerly's Pleasure Excursions,' now collected in a pocket volume; the whole having already appeared in our columns, we need not enlarge on their contents. Whether a trip is to be taken on the EASTERN COUNTIES to Panshanger, the seat of Earl Cowper (a delightful day's employment), -on the Cowper (a delightful day's employment),—on the South-Eastern, to Hever, the residence of Anne Boleyn (near Chiddingstone), full of interest,—on the Brighton, to Croydon, or Reighte with its "White Hart" and creature comforts,—on the South-Western, to Weybridge or Guilford or Winchester, each having its attractions,—or on the North-Western, to Harrow-on-the-Hill—the little volume will be found to comprise interesting notices of all will be found to comprise interesting notices of all that is worthy of observation. Those whose leisure will enable them to embrace a longer journey will find all the information required to employ most profitably their time, in the numerous details, given in the Charts, of the objects on either side of the respective lines. The distances from the several stations to the various places near them being given, the traveller can select the one to be explored according to his taste or fancy. For the visitor to the "Shakespeare festival," next Monday, the Chart takes him as far as Coventry; in the neighbourhood of which are Kenilworth and Warwick, each described and illustrated by numerous engravings, -and all for the small price of one shilling !

The works at the long neglected Folkstone harbour of the South-Eastern have always been jealously regarded by the Dover authorities. The Dover Harbour Commissioners have, it is now reported, determined to place Dover harbour in the hands of the Government. The works of the refuge harbour have now been commenced in good earnest. During the last few months vessels have arrived with a large quantity of stone, while the preliminaries for a commencement have been actively prosecuted; and within this week the foundation stone of the break-water has been haid and activation. within this week the foundation stone of the preak-water has been laid, and considerable progress is now making in its extension seaward. The very low tides we have had lately have greatly tended to facilitate operations here, as well as in the removal of the sunken apron at the old harbour mouth. By the removal of this apron, and a little other deepening, the steam-packets will be enabled to leave the har bour at all but dead low water.

Mr. Macgregor, of the South-Eastern, accompanied by Capt. Warren, has gone to Paris, to have an interview with the French directors, and endea-vour to come to some satisfactory understanding as to the future running of the BOULOGNE trains. Among the propositions Mr. Macgregor is about to submit, are those of allowing passengers to book through in London, and also to grant journey tickets to and from, giving 90 hours in Paris, for the small fare of 4l.

Mr. Labouchere took his seat on the 19th inst. at the Board of Railway Commissioners, at their office in the Board of Trade, and has since transacted public

business there.

On Easter Monday it is proposed to open the line of the CHESTER AND HOLVHEAD to Conway, in order to give the holiday folks an opportunity of inspecting the tube. The idea is said by the Liverpool Albion to have emanated from Capt. Huish, who, in his zeal for the interests of the London and North-Western, sees an opportunity of obtaining a large amount of sees an opportunity of obtaining a large amount of excursion traffic from Manchester and other parts of his own line. The line will be opened for general traffic to strangers on the 1st of May, and to Holyhead on the 1st of June.

The managers of the narrow-gauge lines have been holding meetings, in connexion with the business of the London Clearing House, to discuss various measures for improved accommodation for the goods traffic. The results of the late Post-office improvements have, doubtless, quickened the attention of the authorities to the increasing small parcel traffic.

According to the Chester Courant the Commissioners have not yet done with the DEE BRIDGE. In answer, we suppose to the tender inquiries of the hon. member for Middlesex (Mr. Osborne) Capt. Simmons is reported to have been making fresh experiments on it by heavy luggage trains, at a speed of 40 miles per hour. The utmost deflection obtained was three-sixteenths of an inch in the span of 30 ft.; and the vibration was scarcely perceptible.

The directors of the WEXFORD, WATERFORD, WICK-

OW AND DUBLIN have entered upon possession of all the land required around Bray Head, so that the progress of the works during the fine weather will be

uninterrupted.

Some trial trips from Limerick to Tipperary have been made in an hour on the WATERFORD AND LIMERICK line, just opened for traffic.

Of the labourers employed on the portion of the

CORK AND BANDON contracted for by Mr. Bolton, some 250 to 300 walked into the company's offices, South Mall, Cork. They stated that Mr. Bolton, who was dismissed lately by the company, had not paid them for the last three or four weeks, and demanded their wages. The gentlemen in the office assured the men that their wages had been regularly transmitted to Mr. Bolton. They promised to investigate the matter, and see that their demands, if correct and proper, should be complied with. The men on this assurance peaceably returned towards Bandon. The portion of the line on which those labourers were employed will, we understand, be again contracted for this week, when the men will again be employed.

The greatest number of letters or signs which have yet been conveyed by telegraph in the United States is stated to have been 25,000 in 1 h. 30 m., being at the rate of 277 and a fraction per minute, while in England Mr. Bain has accomplished 1,000 per minute.

Another batch of the incendiaries on the ST. GER-MAIN were brought to trial on the 12th inst. at the assizes. The indictment on this occasion, says Galignani, was founded upon the devastation and burning of the station at Rueil and the bridge at Chatou. The number of the prisoners arraigned on these charges was nineteen, almost all of them men of the country or the immediate environs, of the working class, and of various ages, ranging from 16 to 49. The jury declared eleven of the prisoners not guilty, who were thereupon called in and discharged; and the rest guilty—six of them with extenuating circumstances. The Court passed sentence, condemning—one to hard labour at the hulks for five years; two to close confinement with labour for two years; two to simple imprisonment for two years; and two to the same imprisonment for one year.

The workmen on the line at AMIENS have struck for 12f. per day, and great difficulty is experienced

in carrying on the traffic in consequence.

In the discussion which followed M. Garnier Pages' statement of the intentions of the Government to the French RAILWAY DELEGATES, on the 13th inst., M. C. Laffitte, of the Rouen and Havre, wished to remind the hon minister that the amount of English capital embarked in French railways was exceedingly great, and that the English shareholders had invested their property in a full belief in the integrity of France. How would those gentlemen like now to be told that the contracts which had been entered into between the companies and the State were to be severed, and their property taken from them, whether they were willing or not? He trusted that nothing would be done to weaken the reliance of the shareholders in England on French good faith. Something clear and intelligible ought at once to be stated by the Provisional Government to the world relative to their intentions; he had to implore the hon-minister not to leave the matter undecided as it was at present, but to declare without delay in what way

the railway question was to terminate.

The bold snatch at private property by the present French Government has not yet gained its prize. Some of the gentlemen whose pockets were to suffer under the intrusive kindness of Messrs. Marrast & Co. have a word to say before the robbery is completed. The directors of the Strasburg have sent a letter to the Minister of Finance, from which the Daily News

directors of the Strasburg have sent a letter to the Minister of Finance, from which the Daily News furnishes the following extracts:—
You have, M. le Ministre, presented a project for the repurchase of the railways, on the ground that the companies cannot, since the events of February, carry on their operations with safety, nor fulfil their engagements to the public or the State. This may be true as to some companies, but has no relation to the company of the Strasburg. Certain companies may be desirous to surrender their lines to the State, but that is not the case with the Strasburg. There are not two distinct rights of property in the eye of the State; the will protect our property as it will defend its own. We are in a situation to meet the exigencies of the moment. Having no calls to make on our sharcholders we can wait for better days of credit without suspending our works. The money entrusted to us by the sharcholders has been expended with prudence and economy, and that which is still in hand is either invested in good securities or in Treasury bonds. We have fulfuled hitherto all our engagements, and only ask the State to fulfil its engagements. We are sure that you will not find any line of equal importance which can offer to the Government better guarantees or more advantages. If the Government better guarantees or more advantages. If the Government better guarantees or more advantages. If the Government in dispossessing the company, think it is called on by imperious necessity, which we cannot admit, at least we have a right to expect that the indemnity shall be real and substantial. Each of the projects that you have proposed will be as to us a spoliation in the full sense of the term. In taking the price of shares at the Bourse as the basis of re-purchase, the Government will sacrifice those railways more particularly that are in course of execution, because it is well known that the prices, when the railway is not yet in operation, neither show the real value of the shares, nor the degree of con shall become due, and the amounts of the guarantees given by us to the State as they shall become payable. With this we hope to finish, and bring into operation this year the section of the line from Paris to Eperpay, 140 kilometres, which will abridge by many hours the distance between the capital and the most exposed of our frontiers.

In addition to the above, we gladly observe that a memorial from the London shareholders in French lines lies for signature in the City. It will be forwarded to the Provisional Government through

Lord Normanby, whose zeal and activity will be sure to back the prayer of the memorialists.

#### Reports of Meetings.

LONDON, BRIGIITON AND SOUTH COAST.

April 17.—Adjourned Half-yearly Meeting, London.
-Mr. C. P. GRENFELL, M.P., in the chair.
The SECRETARY read the committee's Report.* He

also read the reasons given by two of the committee for their dissenting to the recommendation of the Report, that the steamboat company should not have appropriated to it any such sum of money as that which the directors, by the bill before Parliament, proposed to embark in it, viz., 100,000l.

Mr. Ald. Wilson objected to such explanations.

They formed a part of the Report of the committee. This appendix had already been forwarded to the shareholders, and he did not see why the time of the meeting should be taken up by such a document.

One of the committee asserted that he and his colleagues had not been aware that the explanations

referred to would be appended to the Report.

Mr. TAYLOR said it was not at the suggestion of himself or of Mr. Sterry, that the explanations alluded to had been proposed to be read. He would, how-ever, observe, in answer to one of the committee, who stated that the majority of the members were

> • See Official Papers, ante, p. 284. Digitized by Google

not aware that the explanations would be circulated, that it was only that morning he had learned they were ignorant of such having been the intention of himself and Mr. Sterry. He had distinctly stated that he and his dissenting colleague would take every opportunity to bring their opinions on this subject before the meeting; and when he stated that to his colleagues, he had in his mind the determination of drawing up such a statement as had been appended to the Report, and therefore this was entirely a mis-understanding between himself, Mr. Sterry and the committee.

Sir I. L. Goldsmid must observe that the course which had been taken in this matter was contrary to all precedent. He objected to a minority of a committee appointed by the shareholders occupying in this way time that might be spent in transacting the

proper business of the day.

The CHAIRMAN said that the proceedings out of which the Report under consideration had arisen, were not exactly in accordance with the usual prac tice observed by a body of proprietors towards the managers of their concerns; and he thought that if a little irregularity had crept into the publication of the Report and the documents appended to it—seeing that they involved matters of very grave importance—such irregularity might be tolerated, as the result would no doubt elucidate the fullest possible infor-

mation.

The SECRETARY then continued the reading of the

explanations adverted to. Mr. Ald. WILSON thought the committee were en

titled to the thanks of the shareholders for their labour, and he should propose that the meeting agree to it, and that the recommendations therein contained be adopted. He saw that the Report contained eight recommendations. The first recommendation was that in future half-yearly printed Reports there should be inserted an abstract of the balance-sheet. He thought every proprietor present would see the propriety of having laid before the meeting in future balance sheets a statement of the assets and liabilities. They would not see, in the accounts laid before them at the last half-yearly meeting, any statement of liabilities submitted, but they would find that in the last half-year 101,000l. was carried to the account against the company for plant; and they would see by the committee's Report, that the company were now under engagements for 129,000l. for plant, to be paid for in 1848 and 1849. He thought this showed the imperative necessity for the half-yearly publica-tion of their assets and liabilities. The second recom-mendation was the completion of the branch lines. He regretted that the committee had not been permitted to give the shareholders all the information which they possessed themselves, and perhaps the shareholders might think it desirable that the committee should, before the new lines were carried into effect, present a supplementary report, containing such information. He, for his own part, hoped the committee would present to the shareholders the actual income and expenditure in respect of the branch lines for each half-year since their opening, and that they would also give some idea as to what amount of dividend was returnable from those lines. He would suggest that these branch lines ought to be made to pay themselves. The company was affording too much accommodation to its various district towns and villages. The population of those places could now get to the metropolis in one-fourth of the time occupied by the old stage-coaches, and he would suggest that, instead of running four trains a day, the company should give them a morning train at as early an hour as they pleased, and another to take them home in the evening. He would give such a remunerative amount of accommodation, and whenever these morning and evening trains did remunerate the company, he would then call upon the different towns and villages to suggest the times at which another train should run, but he protested against a ruinous large number of trains through thinly populated districts and so largely accommodating the public at the expense of those who had embarked their property in the undertaking. The third recom-mendation, that the arrangement with the South-Eastern should be carried into effect, he should not now oppose, although he had originally objected to it. He had no doubt the committee had come to their conclusion on very good evidence. He begged to state that he had no objection to the fourth recommendation,—viz., that the question of the Direct Portsmouth line should be left in the hands of the directors. The fifth recommendation was, that the portion of the bill before Parliament which related to a subscription by the Brighton Company to the Brighton and Continental Steam-packet Company, or an incorporation of the latter with the Brighton, should be withdrawn. It was from this re-commendation that two of the committee had dis-

sented, and the reasons for their dissent had been appended at great length. Those two gentlemen had assumed that the steamboat question had been brought under the consideration of the proprietors, and that the steps taken by the directors in reference to it had been taken in compliance with their instructions. Now he thought that this was quite an error, for the proprietors had been most cautious to have the two concerns kept separate from each other. The dissentient members of the committee had referred to the South-Western and the South-Eastern Companies having steamboat communication with the Continent, and had declared that it was indispensable that the same accommodation should be afforded by the Brighton. He admitted that the Brighton had expended a considerable sum of money upon the line to Newhaven, but his own opinion was, that it was a pity that this branch, on which, he perceived, it was requisite still to expend 25,700l., had ever been undertaken; and there appeared to be no question that if a steamboat company were carried out, a loss to a larger amount than the money already expended on that branch would be He reviewed at length the merits of steamboat communication with Paris vid Brighton and Dieppe, vid Brighton and Havre, and vid Folk-stone and Boulogne, and contended that the latter would, from the shortness of the sea passage, be the one generally preferred, and that experience had shown that the Brighton could not expect, with any-thing like profit to themselves, to compete for the steamboat traffic between the metropolis and the Continent. The Brighton shareholders had agreed to help the directors in carrying out this steamboat scheme, but they had always evinced their anxiety not to involve themselves in it as a corporate body. They had had two documents forwarded to them inviting their connexion with the concern, in the way of taking up shares, but very few shares had been accepted. Ought not this to have convinced those who originated the steamboat undertaking that the Brighton proprietors would not sanction an application to Parliament for powers to embark 100,000l. in such a concern? If only 18,000l., as he saw by the appendix of the dissenting members of the committee, had been expended, or if gentlemen had rendered themselves liable only for this amount, why was the sum of 100,000%, now required? He thought there must be something more than met the

eye in this matter.

The CHAIRMAN thought the hon. proprietor was pursuing an unwarrantable course. He was assuming to be true that which was not in any degree correct. The assumption of the hon. proprietor was that the steam-packet company had been got up by the directors as a pecuniary speculation for themselves, and that finding it did not answer they were very desirous of thrusting it on the general body of proprietors. He begged to say that the directors entered into the steam-packet affair because they felt it necessary for the interests of the proprietors that the Brighton Company should have access to the French coast.

Mr. Ald. WILSON denied that he had made any insinuations—he had made assertions, founded on the documents that had been laid before the proprietors: and his belief was, that if the steam-packet company had been a profitable concern, the proprietors would

never have heard anything more of it from the persons whe originally took it up.

The CHAIRMAN must distinctly state that the assertion just made was not true. The hon, proprietor could find nothing to justify such a statement. It was most unfair thus to attempt to drag the directors through the dirt.

It was suggested that Mr. Ald. Wilson had an in-

terest in some of the steamboat companies.

Mr. Ald. Wilson said that the insinuation that he was present as an advocate of certain steamboat companies was a most impudent one. He did not hold, and never had held, a single share in a steamboat company, nor was he intimate with any person connected with such a company. He concurred in the propriety of the recommendation of the committee that the New Cross station should be re-opened, as well as in the recommendation that efficient heads of departments should be appointed in preference to leaving everything to be managed by Mr. P. Clarke, who, he understood, had acted the various parts of manager, head engineer, head builder, and, in fact, as the head of the directors themselves. He admitted that Mr. P. Clarke was a gentleman of superior talents and experience; but he was of opinion that too much responsibility had been imposed upon should be taxed had his hearty concurrence. He concluded by moving his resolution.

Mr. Flood seconded the motion.

He had been one of the first to recommend a steamboat company for running vessels from the Brighton line to the coast

of France, but had not taken shares in it because he considered the course pursued by the promoters of it was not a legal one. The committee had not referred to the charges made at the original meeting against one of the members of the direction. He wished that the committee had stated—he presumed such had been found to be the fact—that they had inquired into the charges, and found them totally false.

Mr. WHISHAW said that subject had been brought before the committee, who took every means in their power thoroughly to investigate the whole of the facts. The result of their inquiry was to exonerate entirely the directors, individually and collectively,

from the slightest imputation.

Mr. TAYLOR felt bound to move an amendment to the resolution proposed by Ald. Wilson. His amendment was that the Report be received with the excention of the steamhoat clause. He would state the grounds on which he and Mr. Sterry dissented from that part of the Report. The whole question turned on this point, viz., whether the proprietors had or had not assented to the formation of the steamboat company, and sanctioned the steps taken by the direcin reference to it. It was true that the directors had not proposed, because they knew they could not propose, that the Brighton itself should start steamboats; but they recommended the proprietors to do -what? Why, to meet the necessity of the case, and form an independent company. The directors did not, as Mr. Ald. Wilson put the case, ask the shareholders to permit somebody else—somebody out of doors—to form a company. The directors could mean only one thing, and that was, that the shareholders should assist them in forming such a company; and the contended that no gentleman could have heard the proposition made by the directors without tho-roughly, clearly and absolutely understanding it in that light, and no other. When the recommendation was received by the proprietors at three distinct meetings, and an assent given by passing the Report laid before them (no objection having been made to it by them as a body), they, he asserted, virtually pledged themselves to carry out that recommenda-tion. The shareholders ought, if they had as a body held any objection to the project, to have told the directors that they objected to the recommendation they ought to have warned the directors that they would not subscribe to the steamboats, and to have put the directors in possession of their decision in terms that could not possibly be mistaken. It was now too late for such a determination to be expressed with honour. Gentlemen could not suppose that the directors had stepped forward in the way they had done, and thrown themselves into the breach, except in the full expectation and understanding that they were to be redeemed when the time for action arrived. The directors had recommended the formation of a steamboat company, because they found that the passage between the Brighton line and the Continent could not be kept up profitably to the company without it.

Mr. Bigg seconded Mr. Taylor's amendment. He regretted that there was so little in the Report to grapple with. It was true that the committee had indulged in two or three expressions of hope that the concern was on a solid foundation, but he would much rather have had some reasons assigned for a prospective increase in the value of their property.

Mr. WILKINSON agreed with Mr. Taylor.
Mr. ROWLAND HILL said the question of the steamboat company must come before a special meeting, and he should move as an amendment that the Report be entered on the minutes, and referred to the board of directors.

Mr. KIRBY seconded the amendment.

After a few words from Mr. Cohen, Mr. Whishaw hoped the meeting would decide that it was for the benefit of the shareholders that the steamboat company should not be proceeded with. He was at the same time willing, if the shareholders were so disposed, that the accounts of the steamboat company should be wound up, and the Brighton debitted with the loss. The committee had not arrived at their conclusion that it would be wise to get rid of the steamboat company without having had the best evidence and given their best consideration to the subject.

After much further discussion, the amendment of Mr. TAYLOR was put, and lost by a majority of 5 or 6 to ]

Mr. TAYLOR demanded a ballot.

Several Shareholders urged the impropriety of demanding a ballot with such a majority against the dissenting committeemen.

Mr. TAYLOR said there were several thousand shareholders in the company, of which the present meeting, of course, was a very small portion.

In answer to a question, the CHAIRMAN said the directors had no proxies to make use of on this occasion.

 $\mathbf{U}\mathbf{U}\mathbf{U}$ 

It was believed that a considerable number of proxies would be used by some persons in favour of

Mr. Taylor's amendment.

Many Shareholders present declared their determination to present a petition against the steamboat clause in the bill which the company have before Parliament, should Mr. Taylor's amendment be carried.

It was ultimately decided that the meeting should be adjourned till 6 p.m., at which hour the poll would be closed, and that the proceedings should be

resumed at 11 a.m. the following day.

The CHAIRMAN formally resigned his seat at the

Mr. Parsons, the deputy chairman, said it was his intention also to resign.

April 18 .- Adjourned Meeting .- Mr. J. M. PARsons in the chair.

The votes taken on Mr. Taylor's amendment were thus declared :-

No. of Proprietors. Amnt. of Stock. No. of V. For, .... 51; £265,608 10 0 ... 4,224 Against, .. 76; ... 180,694 10 0 ... 3,870 No. of Proprietors.

£ 84.914 0 0 254

Mr. Ald. WILSON observed that this decision did away with the original motion for adopting the whole Report recommending the abandonment of the steamboat company. The amendment had now become a substantive motion, and was itself open to an amendment.

After some conversation, the CHAIRMAN decided that it was not competent to any one to move an amendment involving any alteration of the principle decided by the ballot. With regard to the steamboat question, the board of directors had no personal objection to throw it overboard altogether, but they had felt it a matter of public duty to a large body of the proprietary who two years ago had resolved that everything that was possible ought to be done to im-prove the traffic on the line, and who thought that this would best be effected by the establishment of a sort of sea bridge by which to connect the communication between Paris and London. However, the whole question must be brought before a special general meeting, and to the decision of that meeting the

directors would bow.

Mr. Ald. Wilson called attention to the secession of the chairman and deputy-chairman from the Board.

The CHAIRMAN said Mr. Grenfell had not resigned his post as a director, though he himself (Mr. Parsons) had done so. The directors had a very serious responsibility, not merely for their own extensive individual interests, but also to the welfare of a number of persons who had, till the diminution of the dividend produced the present state of feeling, received the measures of the directors with satisfaction. Before any change the members of the direction must be satisfied that they left the proprietary in a proper position. They could not allow this important undertaking to go to leeward and be kicked ant undertaking to go to recover this, howabout. ever laborious their duties, and however those labours might be appreciated by the gentlemen

in whose behalf they were performed.

Mr. Ald. Wilson thought that as four vacancies were to be filled up, the proprietors should have full opportunity to select fit and proper persons for the office, so that they might have a management different from that which they had hitherto had. It was not at a small meeting like the present that such a purpose could be carried out; and he should, for the purpose of giving the proprietors time to select candidates and send up their proxies, move that the

meeting be adjourned sine die.

The CHAIRMAN, after consulting with the solicitor, said the meeting could not under the Act of Parliament adjourn sine die.

Mr. Ald. WILSON said that he would alter his motion by making the adjournment to this day six

Mr. WHISHAW opposed so long an adjournment.

The CHAIRMAN informed the meeting that they were bound by their Act at once to fill up the vacan-cies at the Board. The four directors who retired by rotation offered themselves for re-election, and they must proceed.

A conversation ensued, in the course of which Mr. Ald. WILSON was understood to withdraw his motion,

Mr. Whishaw inquired whether the four retiring directors had given the requisite notice to the secretary of their intention to offer themselves.

The Solicitor replied in the negative, and said that in his opinion such notice was not necessary, and in that opinion he was fortified by that of Mr. J. Swann, of the Middle Temple, to whom he had subnutted the point.

Mr. Power contended that the law required the notices to be given, and quoted the opinions to that effect of Messrs. Waddington, Gale, Humphrey, and

other gentlemen of the bar.

After considerable discussion, the CHAIRMAN said it now became his duty to move that such portion of the directors' Report, viz., that submitted to the original meeting in February, as had not been adopted, be now adopted. That Report had for seven weeks been under the investigation of a committee, not selected by the directors, but by the proprietors themselves; and he believed he might say that no directors in the kingdom had gone through such an ordeal. That committee had investigated matter connected with the management, and had had all the assistance that could possibly be given to them by the officers. He commented on the Report of the committee, and alluded to the paragraph relating to the general manager, Mr. Clarke. appointment of a general manager was the conse quence of an express instruction, not a resolution passed, but an understanding on the part of the proprietors at large. At that time such an appointment was considered essential to their wellbeing, though now a contrary opinion appeared to prevail. as to the recommendation of the committee that there should be "heads of departments." He wished the proprietors to understand that the company had heads of departments. They had their locomotive engineer, their resident engineer, who superintended the permanent way, and other superior officers, as those belonging to other companies. As to the general power of the manager to remove clerks and other officers of that class, he begged to say that Mr. Clarke could only report his objections to such persons, and that it was with the Board that dismissal rested. The inferior officers, namely, the porters and policemen, were necessarily under the control of those immediately above them, and their dismissal did not always come before the directors. As to the stated interference of Mr. Clarke with various heads of departments, it was right he should observe that the general superintendence of a vigilant manager, such as that gentleman undoubtedly was, must be of great benefit. Mr. Clarke had, by his close attention generally to the whole management, and particularly to the engineering department, brought about considerable economical improvements. He was bound, in fairness, to bear this testimony. With respect to the Lewes station, the removal of which had been ascribed to the mischievous interference with heads of departments, he thought the committee were labouring under some misapprehension. The matter was, he understood, originally taken into consideration by the Hastings, and not by the Brighton; and the station was changed from its original site for the purpose of conveying passengers from Brighton to Lewes, so as to get rid of the then existing necessity of resorting to the omnibuses, which had at the time a great traffic. It was considered important so to arrange the station as to enable the company to take the people, as it were, to their own homes, and so to secure to the company the whole of the omnibus traffic on the Lewes road.

Mr. Schuster, one of the directors, observed that the company had perfectly succeeded in doing this. The Chairman was informed by Mr. Clarke that the question alluded to was agitated long before he (Mr. Clarke) became connected with the Brighton. He now came to the paragraph in which the committee alluded to the payment of the dividends. The paragraph was as follows:—"The committee have carefully investigated the subject of the dividends paid during the last three years, and they have not detected any sum carried to the revenue account at all questionable, except the 4,774l. profit on the purchase of the shares in the Brighton and Hastings, which increased the dividend for the half-year ending the 30th of June 1846 by about 2s. per share. He was not a member of the Board when the transaction spoken of took place, but Mr. Rowland Hill, the then chairman, was now present, and ready to give the meeting the fullest explanation.

Mr. ROWLAND HILL said the profit which had been carried to the credit, viz., the 4,774l., arose thus:— During the progress of the negotiation between the Brighton and the Hastings for the purchase of the latter, it became very evident to the Brighton Board that in all probability the negotiation would terminate in a purchase of the line. Some knowlege of the fact having reached the Stock Exchange, the price of the Hastings shares began rapidly to rise. He, with some other directors, proposed that they should secure to the Brighton shareholders a great advantage, by purchasing a large number of shares at the then market price. Some of the members objected, on the ground that by incurring the risk they might seriously injure themselves; that although their duty to purchase the line, they might not

succeed in their negotiations with the Hastings, or that, in the event of their succeeding, the measure might not be sanctioned by the proprietors, or that, even with their sanction, the sale might not be recognized by Parliament. Thus, in purchasing shares at a price somewhat above, probably, the real market worth, the directors were running a risk of severe loss. He then appealed to them that they must, if they purchased any of the shares, take care that it should appear on the minutes of their proceedings that they ere acting with a view to the general interests of the company, and not with a view to their individual interests; and that, if that fact were placed on record. he felt sure the Brighton proprietors would bear them harmless if their (the directors') expectations should not be realised; and that, although—as in the question of the steamboat company, so recently dis-cussed—they would have no legal claim on the proprietors, they would, he thought, have upon them an honourable claim, which they could not fail at once to recognize. Some of his brother directors did not view the question in this light, and he must admit that recent proceedings showed that they (his brother directors) viewed the matter correctly, and that he had looked at it most erroneously. However, some of the directors, more adventurous than the rest three or four of them-incurred the risk. The negotiation was brought to a successful issue; the matter was sanctioned by the proprietors, and permitted by Parliament, and the 4,774l. which the proprietors found mentioned in the committee's Report, was the profit on those very shares. He begged, in conclusion, to second the motion for the adoption of the directors' Report.

Mr. Cash (one of the committee) said the committee did not, in noticing the fact alluded to by Mr. Rowland Hill, mean to throw any blame on the directors; but they did doubt the propriety of carry ing the amount to the revenue account. They thought it should have been carried to the capital account.

The CHAIRMAN said it had been carried to the revenue account in consequence of the amalgamation with the Croydon. It was thought that this sum belonged to the Brighton proprietors proper, and not to the amalgamated company.

The Report of the directors was then carried, with

four dissentients only.

The CHAIRMAN then moved that the directors be authorized to carry into effect the arrangement with the South-Eastern, as mentioned in the directors Report read at the meeting in February last.

Mr. Schuster seconded the motion. The motion was carried, with two dissentients.

The CHAIRMAN then moved the re-election of the four retiring directors,—viz., Messrs. E. Wigan, E. Crowley, J. Whiskin and J. Lawrie. In doing so, the Chairman said these gentlemen held in the aggregate 40.000%, of Brighton stock.

The motion having been seconded

Mr. Power proposed Mr. H. Mills (who had given the required thirty days' notice) as a candidate for the office of director.

Mr. ADAMS seconded the nomination.

The names were put (as required by the Act) seriatim, when only four were held up in favour of Mr. Mills.

Mr. Power, merely with a view, as he said, to ulterior proceedings, called on the chairman to admit

that Mr. H. Mills was duly elected.
The CHAIRMAN declined to do this.

Messrs. H. Marriott and J. Reeve were elected as auditors, on the motion of Mr. Cash.

#### EAST INDIAN.

April 18 .- Special Meeting, London .- Mr. AGLI-ONBY, M.P., in the chair.

The CHAIRMAN, in explaining their present condition, said that since the last Report the chief feature was the failure of their engagement with the East India Company, who had granted them until the 1st of May for the payment of their deposit of 100,000l., which sum, however, the company had not succeeded in raising. The directors had received most satisfactory accounts from India with reference to the progress of the surveys and their prospects. The shares on which the last call had not been paid had been forfeited according to the resolutions previously agreed to; but he regretted to say that owing to the unsettled condition of Europe and the state of the money-market, not any of them had been taken up, otherwise there could be no doubt that the 100,000%. due to the East India Company would have been raised. Their bill was now going into committee as an unopposed bill, and might be considered to have passed. All the clauses had been arranged, and the shares reduced from 50l. to 20l. The meeting had been called to consider the course to be adopted with regard to the unpaid deposit with the East India Company. The East Indian had raised, in round

()()() Diaitized by

numbers, about 104,000L, out of which they had remaining; they therefore required another 50,000l. before the 1st of May, in order to complete the amount of the deposit. The question was, whether they were prepared to raise that amount in the time stated by a call of 2l. per share, or whether they would prefer to abandon the undertaking? There should be no hesitation on the subject, inasmuch as by the latter step they would not only forego their almost certain advantages, but stand a chance of losing all that they had spent at present. He proposed, therefore, that the call should be paid up on the security that the 21. per share, in the event of the company stopping before the cold season came on, should be placed as a separate fund, to be returned to the proprietors intact, according to the state of consols—supposing that it should be so invested—at the time of payment. There was sufficient money at present in hand to pay the liabilities, and carry on affairs for about six months. The proposed call would produce about 76,000l., which would be about 20,000l. more than was necessary for the fulfilment of their contract.

During a conversation upon the question of the call, some blame was thrown upon the directors, especially with reference to the late shareholders, whose shares had been forfeited, it being considered that they should be compelled to support their share of the burden, which should not be thrown upon the shoulders of a small number of proprietors.

After a protracted discussion, Capt. BARBER moved a resolution to the effect that the proposed call should be made upon those shares on which the 1*l*. per share had been already paid, and invested in Government securities; and that if satisfactory terms could not be obtained from the East India Company, on the reasonable prospect of a line, on beneficial terms, the money should be returned.

Capt. HENDERSON seconded the resolution.

Mr. Wilcox moved as an amendment, that the proprietors should agree to the payment of the call, with the proviso that in the event of its not reaching the amount of 100,000*l*. in sufficient time to enable the deposit to the East India Company to be paid, the amount, together with any interest accruing thereon, should be returned to the parties paying such call before the 1st of October; and that in the event of the money being paid, the call thus made should not be disposed of in any way without the con-

sent of a general meeting of proprietors.

Mr. Henderson seconded the amendment.

The Chairman stated, in answer to a proprietor, who thought they should have more information as to the consequences of each step which it was open for them to take, that their liabilities were about 15,000l. a year for three years, for which period nearly all the contracts were made. If they went on, every farthing which they had expended would be useful and profitable eventually; whereas, if they stopped, it would

be entirely thrown away.

Capt. BARBER having withdrawn his resolution, that of Mr. Wilcox was carried, an amendment in favour of dissolution being lost by a large majority.

It was then further resolved, on the motion of Mr. BEAUMONT, that the directors be requested to make an application to the East India Company to induce them to offer improved terms in the shape of interest, or an extended period for the duration of the existing guarantee, as being, in the opinion of the meeting, essential to the success of the undertaking.

#### EDINBURGH AND NORTHERN.

April 12.—Special Meeting, Edinburgh.—Mr. J. Balfour in the chair.

The drafts for the following bills before Parlis ment were submitted:—To make a line from North Queensferry to Dunfermline, with branches to Inverkeithing harbour and to the east pier of Queensferry, with branches to Inverkeithing harbour; for branches to Roscobie, Keltyhead and Glenoraig, and for certain other purposes, and to improve the harbour at Burntisland. A statement of the procedure to be adopted in the pending submission between the Edinburgh and Northern and the Edinburgh, Leith and Granton was also laid before the meeting.

The CHAIRMAN explained the object of the bills. The first was for the construction of a joint line with the Stirling and Dunfermline to Queensferry. They had a bill of their own for the same line, which, as they did not wish to incur much expense, they withdrew, in favour of that jointly promoted by them and the Stirling and Dunfermline. They were natural allies in that quarter, and their only object was to meet the wants of the population of the district to as great an extent as possible. The second bill was proposed for the construction of three short branches in the western district of Fifeshire, to extend their connexion with the mineral fields there, more especi-

ally as lime was found in great abundance at Roscobie. The portion of the bill relative to Halbeith had been stopped, in consequence of a blunder regarding the levels by their engineer, on a part of the line entirely under their own control. The directors were not to blame for it, but they contemplated endeavouring to have it amended in the present session. The last was for the improvement of the harbour at Burntisland, in confirmation of an agreement with the magistrates of that burgh, by which also they would obtain a considerable extent of ground. The company held stock to the amount of 20,000l. for the improvement of the ferry and pier, and although it was obvious that the pier was too short for the due accommoda-tion of the passenger traffic, he thought that it would be better to delay its improvement, and direct their whole attention to the harbour, which, by the present bill, it was proposed to do. For the purpose of this bill it would be necessary to raise additional capital to the amount of 25,000l., which would be sufficient to execute all the works proposed under the improvements. The next business was in regard to the opinion from counsel in reference to the pending submission between the shareholders of the Edinburgh and Northern and the Edinburgh, Leith and Granton, and also with regard to the position of the amalga-mated companies. He read the statement, which set forth that the opinion instructed them that the act of amalgamation supersedes the agreement; that the Edinburgh, Leith and Granton was under no obligation to complete their works for 310,000%; that they were entitled to expend the full amount, under the Edinburgh, Leith and Granton Acts-344,0001. and that the expense of works and furnishings on account of the Edinburgh, Leith and Granton, ordered by the joint committee, must now be conordered by the joint committee, must not sidered as a debt due by the amalgamated company, the former company. He without any claim upon the former company. He did not hesitate to say that that judgment was adverse to the opinions they (the directors of the original Edinburgh and Northern) formerly entertained. The directors recommended that the accounts of the Granton should be brought up and audited, and he believed that it would appear that when the sum for extra property was taken into account, the sum to be disposed of was taken into account, the sum to be disposed of would be exceedingly small, and that it would be a matter of easy arrangement. In the meantime the directors thought that all further proceedings in the submission should be suspended, when a final Report would be submitted at a future meeting, and also that the whole proceedings should be terminated without going to the arbiter, or incurring any further expense.

Mr. E. D. SANDFORD, advocate, seconded the resolution. For himself, he wished that the proceedings had not been merely suspended, but completely terminated, because, so far as the mere audit of the Granton accounts was concerned, it would take place at any rate, and if there were any objectionable items in these accounts, they would be struck out under the audit as much as they could ever be under the submission.

Mr. R. ROBERTSON said that not being aware of the course of the directors, he had not come there for the purpose of congratulating the meeting on their proceedings. He for himself felt it a subject of congratulation that the opinions which he had expressed at a former meeting had in every particular been corroborated by the opinions of counsel taken. The opinion he then gave was that the Granton and Northern were extinct, that the amalgamated com-pany alone existed, that actions between these companies are untenable and absurd, and that the whole legal debts and obligations of the separate companies had in consequence become the debts and obligations of the amalgamated company. He would give in his adherence to the resolution moved.

Col. GRAHAM moved that the word "abandon" should be substituted in the resolution for the word "suspension," which, he said, would have the effect once concluding the matter, instead of prolong-

ing it indefinitely.

Mr. G. Munko urged on the shareholders to improve their position in the share-market by not keeping in abeyance what should be a final and

determined measure.

Mr. A. SINCLAIR thought that after eight months' suspense the submission should be abandoned.

The CHAIRMAN assured the company that there was no wish on the part of the Board to prolong the settlement. He had been of opinion that it might have been deemed necessary to have called a meeting of the Granton shareholders, to have obtained their concurrence to the abandonment of the submission, and that it would also have been necessary to have another meeting of the amalgamated company to report the state of matters. He thought that until the exact state of the Granton accounts was in the hands of the amalgamated company the shareholders

could not be called on to abandon the submission altogether. That it should be suspended, with a view to its being abandoned, he was ready to admit, for they had no wish to carry it on. But it was the feeling of the Board that the resolution he had the honour to move was sufficient to meet the views of the company.

Mr. Sandford, in explanation of the withholding of the accounts of the Granton, stated that they could not be produced for the purpose of holes being picked in them, and details brought before the arbiter, unless at the same time they were furnished with the accounts of the Edinburgh and Northern for the same

purpose.

After some conversation, a combination of the motions proposed by the chairman and Mr. Munro was effected and agreed to, by which the submission was to be abandoned, and an investigation made of the various items in the accounts, a report of the pro-ceedings adopted to be submitted to a future meeting

of the company for its approval.

of the company for its approval.

The CHAIRMAN, in moving the approval of the drafts of the various bills, noticed the anonymous letter which had lately appeared in the North British Advertiser. He had also to remark that, on the motion of a relative of his in Parliament, Mr. E. Ellice, who had always taken great interest in the Northern line, the Edinburgh and Perth bill was through out by a large majority in the House of was thrown out by a large majority in the House of Commons. This company had caused a great deal of expense as well as trouble in opposing it in Parliament, but still he had had no idea that they could have been so successful. The Leith branch of the North British had been thrown out, which would enable the company to adopt measures for the promotion of the traffic on their line to Leith, and in the southern portion of their line. He trusted that the company would henceforth go forward as a united body, and carry on their works with the approbation of the whole of the shareholders of the company.

The bills were approved of, and the directors were authorized to prosecute the whole or any of them in Parliament, with the necessary alterations.

Mr. Munro, with reference to the practice of issuing proxies, said he saw no reason why it should be done at the expense of the company, and gave notice that, if it was continued, opposition would be made to it at a future time.

Mr. MACINTYRE asked what was the minimum

number of shares which entitled an individual to vote in the affairs?

The Secretary replied that it was two shares of the old stock.

Mr. MACINTYRE said that he had seen with much dissatisfaction, both in that and in other companies, that persons with the minimum number of shares initiated a motion, and prosecuted it, to the great expense and annoyance of the company.

Col. GRAHAM asked if it was clearly understood that, if proxies were sent out, they should be general and universal. As to the anonymous letter, the spite displayed towards the directors of both companies was so evident that it would cause it to have very little weight wherever it was read. So far from the circumstance of the Northern being taken in in their arrangement with the Granton, he held it to be exactly the reverse—it was the greatest feather in their cap.

Mr. Blackadder condemned the manner in which

the proxies had been sent out.

#### DUBLIN AND KINGSTOWN.

April 15 .- Half-yearly Meeting, Dublin .- Mr. J.

APRI 10.—Half-yearly Meeting, Liwith.—Mr. S. Kincald in the chair.

Mr. Pim read the Report of the directors, which showed a falling off in the revenues for the half-year, though since February there had been a progressive improvement in the receipts compared with the corresponding period in the past year. The outlay on the whole amounted to 5,600l. In addition to this expenditure, the rates and taxes have amounted to 6,643L, being more than double the taxes of last year. This increase, combined with the deficiency on income, amounts to 1 per cent. on the paid-up capital.

The balance of the profit and loss account applicable to dividends was 7,488*l.*, on which a dividend of 3 per cent. for the half-year was declared on the paid-up capital of 245,000*l*. The Report further stated that the Dalkey atmospheric had been regularly worked with a considerable diminution of expenditure, and that the Three W.'s had brought in a bill to legalize and confirm their arrangements with the Kingstown.

The CHAIRMAN, in proposing the adoption of the Report, expressed regret that circumstances did not justify them in offering a larger dividend. This was attributable partly to the general distress, but chiefly to the increased expenditure. The principal point in this increase was in the taxes. The new system of taxing

companies had caused an increase within the year of about 1.590l. in the item of taxes alone, and he had about 1,590% in the item of taxes alone, and he had no reason to expect that their expenditure in that respect would be less next year. Although there was a larger dividend given last year than could be allowed at present, yet there was a sum divided last year which was not a legitimate source of profit. He hoped the meeting would consider the statement laid before them as well considered and satisfactory, and that they would give credit to the directors for having used their best exertions to promote the interests of the company.

Mr. Gresham had great pleasure in seconding the motion, and in doing so observed that he had not a remark to make. Every company in Ireland, England and France had met with depressions similar to that which they had experienced.

Mr. PERRY considered the reduction in the dividend very serious. The whole amount of the falling off in their revenue amounted to but 2,300l., and that formed but a very small part in the reduction of the dividend. On looking over the receipts and expendi-ture for the past six years, he found that though for the first four there was a very considerable increase in the income, there was a comparative increase in the expenditure; and it was naturally to be expected that as their traffic was larger they should expend a larger outlay in producing it. But it was rather discouraging that while there was a decrease in their revenue for the last two years, their expenditure had increased enormously. In the year 1846, when their increased enormously in the year 1846, when their productions was highest, their expenditure amounted to 26,583l., while in the present year, when their receipts were nearly 3,800l. less, their expenditure was 6,880l. more. Finding the increase so large, he looked into the items to see how it arose, and found that in every individual department there was a rise. In the locomotive and carriage department their expenses were half as much more in 1848 as they were in 1846, and so with regard to the other departments. Therefore it was he was of opinion that the deficiency of income arose more from increased expenditure than from decreased revenue. Some two or three years ago it was suggested that the Board should borrow a sum of money equal to that received from the Board of Works, and capitalize day might receive their full proportion of the present day might receive their full proportion of the profits realized from the working. The suggestion, however, had not been acted upon. They had been paying on an average nearly 3,000% a year to the Board of Works in re-payment of the loan which they had received from that body; but that 3,000% was part of their profits, and the proprietors were entitled to have it divided amongst them now, instead of paying it in reduction of the original debt. He regretted it ut in reduction of the original debt. He regretted it was not disposed of in that way, but he supposed it was too late now. It appeared to him, however, that when there were many proprietors who had paid from 2001. to 2501. for their shares, every fair and legitimate means should be used in order to have the dividend something better than it was at present.

Mr. Ford (town clerk) was greatly encouraged by the Report, because he believed it to be a true statement of the affairs. He differed from Mr. Perry as to the paying of their debts. He was one of those (and perhaps the only one) who had paid 250l. for their shares; but he did so with the view of investment and with the view of investment and with the view of content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the conte ing; and such being the case, he was quite content at present to take a small dividend, and get out of At the same time he was of opinion that the expenditure ought to be reduced when there was a

falling off in their revenue.

Mr. HAUGHTON thought the remarks of Mr. Perry exceedingly important, and asked whether that gen-tleman's experience would enable him to suggest any mode of reducing the expenditure.

Mr. FORD observed that as the duties of the directors had become diminished, it was but right that the number of the directors should be reduced. If that were done the expenditure would be materially lightened.

Mr. HAUGHTON inquired whether the expenditure in the item of coke had not been found to be more than was usual in other railways.

The CHAIRMAN said that it was the general custom of companies to manufacture coke; and the con-sequence was, that they were always sure to have the best quality. Their own company, however, bought whatever coke they required, and, of course, they had it so much the cheaper. With regard to the suggestion of Mr. Ford, he agreed that the number of directors could be safely reduced, now that their duties were so much diminished. If the accounts were carefully examined, it would be found that the increase in the expenditure was not so great as Mr. Perry had stated. The error arose in this way. In 1846 there was a separate fund, called the contingent

fund, to which some expenditure was charged, so that if one looked for the expenditure in any par-ticular department, under its so-called heading, in the accounts, he would be liable to be misled. That fund did not exist at present, and the consequence was, that under each department there appeared its own entire expenditure.

Mr. KENNEDY called attention to a resolution adopted at a special meeting in August 1845, that it would be advantageous to raise additional funds for the purpose of paying off the debt to the Board of Works, and thus redeem the annuity now paid to the Board out of the profits of the company. He was disappointed that no allusion was made to that sub-ject in the Report. He thought the Board ought to purchase the shares held by him and others, who vere induced to embark their capital on the strength of that resolution.

After some observations from Mr. GRESHAM and the CHAIRMAN, the Report was adopted.

#### KILLARNEY AND VALENTIA.

April 15.—Adjourned Meeting, London.—Mr. SPOONER, M.P. in the chair.

The CHAIRMAN stated that he had been called upon

preside, but had not had time to examine the balance-sheet, which would be presented for approval. The Report would be read, but in the balance-sheet there were unquestionably several errors—mistakes to the extent of 2,000l. or 3,000l. He should therefore recommend that the meeting be again adjourned.

The SECRETARY read the Report, which commented on the obstacles incurred from the carelessness of their engineer, who at first (in 1845) informed them that the length of the main line was 1313 miles, and the branch to Tralee 14 miles, for the execution of which an adequate capital was then subscribed. It was subsequently found that the length of the main line was 179 miles, and the branch to Tralee 194 miles, being an increase of 53 miles, and requiring an additional capital of above 600,000l. For this large increase of capital the directors had in January 1846 to provide above 62,000*l*. to deposit with the Accountant-General. Owing to some informality in lodging this money, the bill was thrown out on Standing Orders. The whole of the expenses thus fell upon their present undertaking, which received the Royal Assent on the 25th of June 1847, for a line from Killarney to Valentia, 31\frac{1}{2}\$ miles in length. The shares were thus reduced from 25l. to 10l. each, and their capital to 300,000l. The directors had been in communication with the Government respecting the advantages of the harbour of Valentia as a packet station, with a view to obtain aid in carrying out the project. Negotiations had been entered into with the Great Southern and Western to obtain their countenance and assistance in carrying out the scheme; but this company had declined doing anything for the present, or until their line shall have been completed to Cork. The directors are of opinion that some progress should be made in the undertaking; and they recommend that a portion of the line should be commenced as soon as possible, extending from Killarney to Beaufort-bridge, a distance of of miles. For this purpose they propose that a call of 1l. per share be made, 10s. payable in May and the remainder in the summer. The accounts showed that 44,607l. had been received, and 51,561l. expended, leaving a balance advanced by the directors of 6,933l.

The Chairman said the Report correctly informed them of the actual position of their property. He had received from Mr. J. O'Connell a personal assurnade received from Mr. J. O Connell a personal assur-ance of that gentleman's high opinion of the capabi-lities of the harbour of Valentia as a packet harbour on the western coast, and that it was especially fitted for a packet station to America. For his own part, for a packet station to America. For his own part, he believed that Valentia was destined one day to be the Liverpool of Ireland, and the key to the American trade. He would say no more on this subject. The report of an interview they had had with Lord John Russell was on the table, when a deputation of landowners and others interested presented a memorial in favour of the formation of the Valentia harbour in connexion with the line. As he (the chairman) had before stated, he could not submit the balance-sheet for the approval of the shareholders, because he had not himself examined it.

After some discussion, the recommendation of the chairman was adopted, and the Report was re-ceived; but the statement of accounts was agreed to be referred to a future meeting, and a resolution was ultimately drawn up adjourning the meeting to the 11th of May, at the same place, at the same hour, the secretary in the meantime preparing a balancesheet, which should be ready on the 4th of May, and to lie at the offices of the company from that date up to the holding of the meeting for inspection.

VV holders are recommended to read a Correspondence in this day's RAILWAY Record, and attend the Meeting advertised for May 6. FLANDERS RAILWAY .- Share-

#### LONDON, BRIGHTON AND SOUTH COAST RAILWAY.

At the FOURTH ORDINARY MEETING of this Company, held by Adjournment at the London-bridge House Hotel, on Tuesday, April 18, 1848,—

JOHN MEESON PARSONS, Esq., Deputy Chairman, in the Chair,—

It was resolved .-

- That the Report of the Committee be received and adopted, with the exception of the clause relative to the Steamboat Company.
- 2. That such portion of the Report of the Directors as has not been already adopted, be now adopted.
- has not been already adopted, be now adopted.

  3. That the Directors be authorized to carry into effect by all such acts and deeds as they shall think proper the arrangements entered into by them with the South-Eastern Railway Company, with regard to the Tolls payable in respect of the Greenwich and Croydon lines, and the Brick-layers' Arms Branch, and the accommodation of this Company's goods traffic at the Bricklayers' Arms Terminus, the use by the South-Eastern Railway Company of this Company's station at East Croydon, and the intermediate Stations on the Croydon line, and the use by this Company of the South-Eastern Railway Company's Station at Reigate.
- 4. That Edward Wigan, Edward Crowley, James Whiskin and John Lawrie, Esqs. be, and they are hereby re-elected Directors of this Company.
- 5. That Henry Marriott and James Reeve, Esgs, be, and they are hereby elected Auditors of this Company

JOHN MEESON PARSONS, Chairman.

6. That the thanks of this Meeting be presented to the Chairman and Board of Directors.

THOMAS JOHN BUCKTON, Secretary.

#### EAST INDIAN RAILWAY COMPANY.

At an EXTRAORDINARY GENERAL MEETING of the Proprietors in the East Indian Railway Company, held this day,-

It was moved by B. M. WILCOX, Esq. M.P., seconded and

carried,—
That a call of 2L per share be made on the shares in the Company, to be placed in trust; and that in the event of the said call not being responded to in such a manner as to enable the Directors to pay the sum of 100,000L to the Hon. East India Company on or before the 1st of May, or any extended time that may be allowed, the amount realized by the said Call, together with any interest accruing thereon, be returned, on or before the 1st day of October next, to the parties paying the same; and that in the event of the said sum of 100,000L being paid into the East India Company, the Call now paid shall not be expended in any way without the sanction of another General Meeting of the Company.

It was moved by JAMES BEAUMONT, Esq., seconded and carried unanimously.-

That the Directors be requested to make an application to the Hon. East India Company, with a view to induce that body, under existing circumstances, either to give a guarantee of a larger rate of interest than 5 per cent, to extend over twenty-five years, or to extend the period which is now proposed for the duration of the 5 per cent. guarantee, one or the other of such modifications in the existing terms being, in the opinion of this Meeting, altogether essential to the success of the undertaking.

It was moved, seconded and carried unanimously,

That the thanks of this Meeting be given to the Chairman for his valuable services this day in the chair, and to the Directors generally for their attention to the affairs of the Company.

D. L. NOAD, Secretary.

London, April 18, 1848.

PORT OF GREAT GRIMSBY.

NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The ay communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

Les droits de tonnage sur les Navires qui entrent les bassins à Great Grimsby, ont été reduit à lu sols Anglais par tonneau de registre.

On compte que les nouveaux bassins seront prêts à recevoir les vaisseaux vers la fin de l'annec 1849.

Ces bassins offriront des avantages bien decidés sur la plu-part des autres ports de Mer de l'Angleterre en étant acces-sibles a toute heure, excepté pendant une couple d'heures à la marée basse, en tems de maline.

Le Harre présente un abrien tout tema. Les communica-tions par l'entremise des Chemins de Fer de MANCHES-TER, des MEFFFIELD, et des Liques du comté de LINGOLN, seront ouvertes avec tous les districts manufacturiers et avec toutes les parties de la Grande Bretagne.

#### TRAVELLER'S COMPANION. RAILWAY

By FELIX SUMMERLY.

#### TRAVELLING CHARTS:

Or, IRON ROAD BOOKS,

#### FOR PERUSAL ON THE JOURNEY.

IN WHICH ARE NOTED

THE TOWNS, VILLAGES, CHURCHES, MANSIONS, PARKS, STATIONS, BRIDGES, VIADUCTS, TUNNELS, GRADIENTS, &c., THE SCENERY AND ITS NATURAL HISTORY, THE ANTIQUITIES AND THEIR HISTORICAL ASSOCIATIONS, &c., PASSED BY THE RAILWAY.

With numerous Mustrations.

Constituting a Novel and Complete Companion for the Railway Carriage.

* Upwards of Eight Hundred Engravings, from drawings taken expressly for these Charts, by distinguished Artists, are comprised in the series.

The following, each in a Wrapper, are now ready, and may be had at all the Stations:

- 1. LONDON TO BRIGHTON, containing a Map and 83 Engravings, 2nd edit. price 6d. 2. TUNBRIDGE WELLS, with 52 Engravings, price 6d.
- 3. WOKING AND GUILDFORD, with 52 Engravings, price 4d.
- 4. WOLVERTON, with 85 Engravings, price 6d.
- 5. RICHMOND, with 15 Engravings, including a View from Richmond Hill, price 2d.
- 6. WINCHESTER AND SOUTHAMPTON, with 125 Engravings, price 1s.
- 7. GOSPORT, with 143 Engravings, price 1s.
- 8. READING AND OXFORD, with a Map and 74 Engravings, price 6d.
- 9. BISHOPS STORTFORD AND CAMBRIDGE, with a Map and 47 Engravings, price 6d.
- 10. FOLKSTONE AND DOVER, with a Map and 99 Engravings, price 1s. 11. RUGBY AND BIRMINGHAM, with 137 Engravings, price 1s.

Or, handsomely bound in morocco-cloth, price 6d. extra.

Also, in Octavo,

#### FELIX SUMMERLY'S

#### PLEASURE EXCURSIONS BY RAILWAY

On the Eastern Counties, Birmingham, South-Western, Brighton, and South-Eastern.

TO PANSHANGER, with 3 Engravings, price 1d. TO WINCHESTER, 11 Engravings, price 2d. HARROW, 7 Engravings, price 1d. SHOLBIAM, 4 Engravings, price 1d.

GURADEDRD, 9 Engravings, price 2d.

- CROYDON, 9 Engravings, price 1d.

- CHIDDINGSTONE AND HEVER, 7 Engravings, price 1d.

TO REIGATE, 10 Engravings, price 1d. - WALTON AND WEYBRIDGE, 18 Engravings, price 1d.

Or the whole in One Volume, 74 Engravings, price 1s.

Published at 14, Wellington-street North, Strand, by J. FRANCIS, and may be had of all Booksellers and Newsyenders.

SATURDAY, APRIL 29.

ENGINE RACING—ITS ENDS AND EFFECTS.

We observe the Morning Herald has been devoting no small space in its columns of late to dissertations on the speed of locomotives, to which the recent performances of some new engines on the Great Western line have afforded many occasions. In pursuance of the same theme, that journal a few days since also printed, nearly at full length, the paper on the resistances to the speed of railway trains, which was read by Mr. D. Gooch to the Society of Civil Engineers on the 18th inst. The meaning of the interest which the Morning Herald professes to take in this question, we have no concern to discuss. Our object in adverting to it is of far more importance than any such inquiry. It is to insist, as plainly and strongly as we can, on the fact that in the actual condition of railway affairs, revenues and profits, all companies have something else to do than to be striving which shall go the furthest in increasing the already high rate of the locomotive on our working lines;-that necessity commands all such attempts, indeed, to be peremptorily adjourned for the present-if, indeed, it would be expedient in any circumstances to run the least risk, or to incur the least extra expense, to add a few miles more per hour to the performance of

our passenger engines. To us, it has long been perfectly clear that this point, so far as it can have any practical influence on the gauge dispute, has been suffi-ciently determined. The average working performance on lines of the national pattern, (which is a far more decisive kind of evidence than any special exhibitions of power in prepared cases,) has shown for some time past that nothing entitled to any real weight can be brought on this head to counterbalance the many disadvantages of an exceptional system; -that for any despatch which it can be prudent or convenient to establish, our standard railways are perfectly well qualified. Were there no special reasons just now to forbid any more time and expense being wasted on vieing in the matter of speed, it might be seen that to do so can have no effect worth purchasing on any real interest to be promoted by experiment: -that after what has already been attained, and shown to be attainable, the further straining after victory in such trials can have no end but to amuse ingenious men, or to flatter the curiosity and impatience of a craving public, at the expense, it may be, of their safety, and most certainly at a perfectly fruitless cost to the owners of the competing engines. It is possible enough that this view of the business may not be apparent to some parties in this contest; and if they choose to go on spending money in trying to outdo their own and their rivals' former achievements, in the vain hope that some practical aid to the strength of the system they have espoused may be procured by this process,-it cannot be helped. But it would be foolish indeed in others to partake of any such delusion, and to follow an unprofitable example, which it is evident can now lead to no material result but that of wasting the funds that may be better spent on more useful objects.

Such, we apprehend, would be now the right view of this kind of competition, were there nothing to render it otherwise questionable. But in the present state of railway affairs, as we have said, its continuance, even were any outward end likely to be advanced by it, would be overruled by far stronger considerations. The Directors of railway companies have now no right to lay out another farthing of the shareholders' income (or capital) in adding to the speed of

ing what is now afforded to the public for the low remuneration they receive. Their duty is, on the contrary, to bring the expenses of the service into the narrowest practicable compass; to equalize the terms of the bargain between the railway owner and the railway customer, so as to lessen rather than add to the disproportionate share which the latter already enjoys at the expense of the former. While dividends are declining in consequence of the low charges for the business as it is done already—while calls are pressing hard on the shareholder for the completion of works that are far more certain to improve the means of travelling, than to add to the means of those who have undertaken them,-the proper course of all new exertions is imperatively marked by circumstances. It isto make what has already been undertaken more profitable to the undertakers-to manage the business in a way the best suited to lessen expenses and to increase nett returns-not to take a single new step, in the hope of doing still more for the public, until what has been already done shall have afforded a fair reward to its promoters.

There is, perhaps, no single item on which this caution more instantly falls than on the regulation of the speed of the locomotive. If this be not restrained within moderate limits, the growing cost of two most expensive departments will continue to increase, as it has been doing for the last three years, with most alarming rapidity. It is not merely in wear and tear of machinery and consumption of coke—to say nothing of the greater frequency and more destructive effect of collisions—that this railway racing taxes the half-yearly income. The road suffers in equal proportion with the locomotive; and every additional mile per hour adds something considerable to the plate-layer's work, and heightens the strain on the rails. Of this the experience of the last two years has given the most decisive proofs, that cannot be overlooked, except at the cost of all whose interests are concerned in railways. The vast improvements in the structure of engines, have reduced the expense of ordinary repairs under ordinary circumstances to less than one-third of what it was in the infancy of the system. Nor has the saving in the consumption of fuel been much less remarkable; and these two material items of progress would, other things being equal, have contributed largely to increase the profits, but for the great increase of speed, that has more than kept pace with the improvement in the machine. What is gained in this respect is more than lost in the maintenance of way alone, to say nothing of the effect of extreme speed on the engine itself. So that it may be truly said that the railway owner has rather been injured than benefited by the vast advance made in the mechanical perfection of the system. It is high time that this condition of things should be put an end to: it is surely no time, while such is the condition of things, to go on making new attempts to drive harder over the road, the result of which, however pleasing it may be to passengers, and suitable for newspaper notices, is simply to cause new reductions of the dividend of its owners.

The interest we have always taken in mechanical improvements will not be suspected; but these are seasons in which still more pressing interests must occupy the first place in the mind of any honest advocate of railways. Nor when we declare that the right limit has already been more than reached in the item of speed, do we thereby close the door against the further exercise of the engineer's skill, even during a season when this alone is of less consequence than the property of millions in a period of the locomotive, or in any other respect increas- universal suffering. There is plenty yet for him troops are concentrated. It is a fact that nearly all

to do: not to quicken the running, but to improve the working of the locomotive—to economize the fuel: to obtain the utmost tractive efficiency with a given weight of coke and water; to render its motion smoother, and thereby spare the rail; to adjust and strengthen its parts, so as to lessen the wear of the gearing. Here is ample scope for the exertion of talent; and it is in this that the engineers on our working lines can now most honestly distinguish themselves-far more so than by wasting money in trying how far they can go in a system every new degree of which adds a new per-centage to working charges. The pressing duty of Directors is now to see that their talents shall be properly applied; and we are sure that those who best employ them in saving expense will before long find it the surest way of advancing their professional reputation.

#### Railway Literature.

Speech of Mr. Cockburn on behalf of the Salisbury and Yeovil, Exeter, Yeovil and Dorchester, Exeter and Exmouth, and Blandford and Bruton Lines, on the 30th of June and 1st and 2nd of July 1847.

In looking over this speech, which at the time of its delivery was regarded by railway authorities as one of the most masterly combinations of telling facts ever pronounced before a parliamentary committee, we were struck with the tact with which Mr. Cockburn introduces the subject of a uniform gauge as essential to the national and public interests of the country:

"I have considered the case up to the present moment with reference to the commercial interests of the country—to the traffic and to the intercourse that exist, or are likely to exist, or that have existed and have been interrupted, but which would be resumed if you established your communication on a proper footing. But there is another and a most important view in which this question must be considered, and that is with reference to the national defences of the country; and upon this we have given you a body of evidence which has remained wholly without answer; it has not even been attempted to be answered; in fact, it could not be answered. We called before you several military authorities, whose views upon this subject are entitled to the greatest consideration at your hands. We called before you Lord Frederick FitzClarence, who is at present commanding the South-Western district, the very district under consideration, and who had taken great pains to make himself master of the subject, and who had gone into France with a view of observing the railway system in that country with reference to the military part of the question. We called also Gen. Brown, the Deputy Adjutant-General, and Col. Oldfield, who was sent for by the Ordnance from Plymouth. who was sent for by the Ordnance from Plymouth, We called Col. Williams also, whose views upon this subject were delivered with a remarkable precision and clearness. We called the Right Hon. Sydney Herbert, who told you he had taken the pains, while Secretary at War, with a view to giving evidence upon the subject, to collect the opinions of the military authorities, and he found that they all agreed on this point-that it was of immense importance to system of gauge. This is a matter of such serious moment to the real interests of the country, that I cannot help calling your attention to a few of the statements that were made by these military gentle-men. Col. Williams states, 'I look upon it that the whole safety of the kingdom depends upon railways, and, looking upon the facility there now is for making incursions upon the coast with large bodies of men, nothing but the power of concentration which railways will give will enable us to resist it successfully. Taking that into consideration, I consider that a Taking that into consideration, I consider that a break of gauge would be the greatest possible evil which could occur so to mar the rapid transit of troops from any one part of the south coast to another, or from the metropolis to any part of that coast. These were the words used by Sir J. Burgoyne, and I adopt them, and I wish to make them my own, as being far more expressive than any I could make use of; and most assuredly I attach the same importance which other witnesses have done to

the large depots in the east are either on the Thames or to the south, with the exception of one, which is of less consequence than any other, namely Pembroke: and I am aware that this scheme, connected with other schemes, and the existing narrow-gauge lines, will bring the whole of those into immediate and continuous connexion with the West of England.' I now turn to the evidence of Col. Freeth, the Deputy Quartermaster-General: he is asked, 'Will you be kind enough to state to the committee whether you adopt that which we have heard from other witnesses. that one admirable method of protecting the southern coast would be by lines radiating from the interior to the coast? That, I believe, is the best general plan.—The system, I presume then, would be, upon notice being given, to send your troops from those depots to the exposed point? Certainly.—With a view to that operation, do you think it most important to connect them with the southern and western points of connect them with the southern and western points. Do you also think it important to connect Sheerness and the arsenals upon the Thames, Woolwich particularly, with the South and extreme West of England on an unbroken gauge? Certainly.—I do not know when ther your attention has been called to the system of lines which is proposed by the South-Western Railway? It has; I am pretty well aware of it.—Your attention having been directed to that system, does it afford to the country that means of defence which you have already stated to be very advantageous in the connexion between the eastern arsenals and the centre of the kingdom with the south and western coasts? I conceive it does.—I believe you are aware that there is a proposal either by the Manchester and Southampton line, or by the narrow gauge, which the Great Western have pledged themselves to put down from Basingstoke to Oxford, to connect the south with the centre of England by a narrow-gauge line I have heard of it; I know nothing further. attention having been directed to that system, you see probably that the line from London to Basingstoke, and Salisbury to Exeter, and so on to the extreme west, would be a great artery in that sys-tem? Yes.—You observe that the Great Western propose to bring the blue line from Yeovil up to Salisbury? Yes.—To substitute the broad gauge line Sansoury; 1es.—10 substitute the broat-gauge line for the narrow-gauge line which is laid down between Yeovil and Salisbury? Yes.—Should you deem the interposition of a broad-gauge line between Yeovil and Salisbury extremely fatal to that mode of communication which you have already approved of? I consider that it would tend to considerable inconvented inconvented in the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of ence, inasmuch as it causes a break of gauge between Salisbury and Exeter.—Bristol has been suggested to you on the other side, as I understand you have no objection to a complete broad-gauge communication from London to Bristol, and so to the extreme west, Truro and Falmouth? None whatever.—But you also think it of great importance that you should have another communication from London to the extreme west upon the other gauge? Decidedly. Then I turn to the evidence of Col. Oldfield. He is asked, 'Has your attention been called to the system of railways promoted by the South-Western Company from London Bridge, by Salisbury and Yeovil, to Exeter?—I see upon the map that the railway as designed by them forms a complete chain of communication between the arsenal at Woolwich and our establishments at Chatham, and direct to Plymouth in the West of England; that is the red line. -In your opinion, is it a matter of great importance to effect such a communication by an unbroken gauge from the eastern arsenals to Plymouth in the west? I consider that the gauge ought to be one and the same from east to west, if it is desirable to use it for military purposes.—Are you aware that the Great Western Railway are under pledge to No.—I will assume that they are; in your judgment does it become matter of importance to connect the West with the centre of England and the depot there! Most assuredly.—As an engineer officer, I suppose your attention is more particularly directed to what may be called, in military language, materiel, stores and ammunition? My attention has been directed to and ammunition? My attention has been directed to it.—Will you allow me to ask you, do you think that a break of gauge, if objectionable for troops, is still more objectionable for the transport of heavy stores? A break of gauge is highly objectionable.—You have heard, I believe, the last witness examined? Yes, I have.—Do you concur in the opinion that gentleman has expressed as to the great difficulty consequent upon it? I am of opinion that it will be a most inconvenient difficulty for military purposes, especially if any movements are made upon the spur of the moment.—What do you think necessary, in case the southern and western coasts of the Channel are to a certain extent exposed, so as to make a quick move-ment from the interior? I consider it would be very

expedient to have the means of bringing troops from the centre of England to the western coast by one unbroken gauge.--Do you know the great importance which is attached to that at present in connexion with the arsenal at Plymouth? It being one of the largest naval arsenals in England, it is of great importance that it should have a railway communication with all parts of England.—I am going to ask you this: "The port of Plymouth being an object with a view to the national defence, are you of opinion the railway communication which is already sanctioned from Exeter to Plymouth is sufficient for the purposes of that garrison?" I am not : the fact is, there is at this moment no communication; there is one sanctioned, but it has not been carried out, and it is only upon one line of rails."—Then, in cross-examination, he is asked, 'Do you concur in the opinion that some have expressed, that, there being a diversity of gauges, it is inexpedient, where the broad gauge predominates, to send the narrow gauge there?
And he says, 'My opinion is, that it is necessary to have one gauge from east to west,-uninterrupted gauge; and whether you have a broad or narrow gauge, that is not the object: it is to have from your central depots in the North of England and the East of England an uninterrupted gauge.—You do not answer my question: the fact is, at present, from London westward even to the Land's End, there is a broad gauge, with many cross broad-gauge lines; and at present there is no narrow gauge to the westward of Salisbury: I put to you the same question that I put to those distinguished characters whom I have mentioned to you, that, there being an exclusive pre-dominance of the broad gauge in the West of Eng-land, do you think it desirable to produce a break of iand, do you think it desirable to produce a break of gauge by sending down the narrow gauge line there! I do not think it will introduce a break of gauge: it will insure one uninterrupted gauge from Chatham and Woolwich to the west.'—Upon the same question, with regard to the interruption of gauge, in answer to a question whether it will not be a scrious inconsistent in the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the con venience to introduce the narrow gauge, Col. Freeth replies, 'In this instance I do not see that it will be. We have now one excellent communication from London to Exeter by a broad-gauge railway. have this line made from Salisbury to Exeter by the nave this line made from Sansoury to Exeter by the narrow gauge, we shall then have two; and we can send double the number of troops, if it is necessary, to one point. He negatives the disturbance of the country, and it is obvious enough there would be no disturbance under the circumstances of the case. Here you have, without troubling you with greater details, a body of evidence conclusive upon the subject. If you look to the general testimony of the witnesses, you will find they concur in this, that in a military, and therefore in a national point of view, it is of the last importance to have these ports and arsenals placed upon a chain of unbroken communication. All these military authorities concur in the point that it is a matter of the greatest moment to place the whole south coast on one unbroken line of communication with a view to military operations and it stands to reason that it is so, when you bear in mind that the whole of the west and south coast of England may be, by means of the narrow-gauge communication, placed in continuous and unbroken communication with the south and south-east coast of England. Upon this coast are placed your great dockyards, your arsenals, and many of your most important garrisons. You have Deptford, Woolwich, Sheerness on the Thames, and up the Medway you have Chatham; and passing round from the cast to the south coast, you have not only Dover, which must be always an important point, but when you get to Hampshire you have Gosport and Portsmouth, two places of the highest importance, and further on to the west you have Plymouth; so that upon this coast are placed all the main points which are of importance are placed all the main points which are of importance to the defence of the country. Recollect always, too, that when we are speaking of the southern coast we are speaking of the coast which lies immediately opposite the shores of that country from which we have always more or less danger to apprehend. We have always more or less danger to apprehend. have lived now for so many years in peace, that few of us understand what war means. Few of us can remember the apprehensions that our fathers used to feel at the danger of foreign invasion; but who can say how soon the hour of peril may return? We have known, in our time, how the fate of Europe, with regard to peace or war, has hung upon the breath of one man; and if war should break out, can any one fail to see the immense importance of the southern coast, exposed as it is to the invasion and aggression of our ancient enemy, and under the totally altered state of circumstances which has been introduced through steam navigation, which would enable an enemy to make a descent upon our shores at any moment, and when it was least expected. Of course

especially to a country that does not tolerate an extensive standing army, and that has few military resources—to make every possible arrangement so that the force at its disposal may be concentrated at any given point in the shortest possible period of time. All this is obvious from the very nature of things. It does not require to be a military tactician to understand it, or to have grown grey in camps to be satisfied of the fact. It does not require the authority of the military witnesses to convince us of these things. One's understanding goes along with them :- one sees and feels at once the cogency and force of the reasons they assign. Who can fail to see, if an enemy were to land upon our shores, of what vast importance it would be to be able to draw your troops from Chatham and Canterbury, and to send military stores from Woolwich and from the various arsenals to any given point? Who can doubt that this is a matter of the greatest moment? If indeed, this were the whole of our case-if we could make out no commercial case—you might, perhaps, say that war was an anomalous state of things, and not likely to occur, and that you could not legislate upon such a contingency; but when you can combine the two—the interests of the country in time of peace, and its security in the event of war-when you can have both these advantages, who would be so blind to the welfare of the country as not to adopt the good which is the result of this combination? At this very moment we happen to have very opportunely an expression of opinion upon this subject, proceeding from the very highest authority, from one who, having himself for some time presided over the councils of the country, may be considered to have maturely weighed, and to be thoroughly acquainted with, its interests. I allude to Sir R. Peel, who, upon the occasion of the opening of the Trent Valley line, at which ceremony he at-tended, in the address that he made at that meeting, adverted to this very question. Speaking of the vast advantages of railway communication, I find the right hon. bart. using this language:—'My confident belief is that the effect will be for good—that it will promote the moral and social welfare of this country, and add to its moral, social, commercial and political importance. Within a few months we shall pa this railway; our bodies will be conveyed with the fleetness of the wind, and our thoughts through the agency and with the celerity of lightning. Gentlemen, let us all hope, as I confidently trust, that the effect of this will be for good—that it will cement family affection by facilitating the intercourse of rethat it will tend to abate prejudice, to advance knowledge, and promote civilization. Looking to its political effects, I see nothing but cause for unalloyed gratulation. I see this country, from its insular position, unable to support more than a limited military force. tary force; I see that in the event (which God avert!) of a renewal of hostilities, we may be exposed to a fearful conflict. It is difficult to say what may be effected by steam navigation on maritime waters; but of this I am sure, that the progress of railways, by or this I am sure, that the progress of railways, by enabling you to transport a small military force of arms and ammunition, actuated by the indomitable spirit of Englishmen and the glorious example set them by their predecessors, will enable us always to contend with armies more powerful in number, for I furthermore feel that a new element of political security is to be found in railway consequence, by enabling rity is to be found in railway conveyance, by enabling you to transport with certainty, and comparatively without fatigue, to a threatened point, any amount of military force that you may muster. No doubt these considerations, which are put forward so eloquently and powerfully by the great man whose name. have alluded to, are matters of great congratulation no doubt that, though our armies may be numerically inferior to those of an invading enemy, we shall be enabled by these means to concentrate upon any point of attack a force which, brought at once to bear on the point of attack, might enable us to offer a successful resistance. But then Sir R. Peel would have added, if this case had been before him, that all the advantage he anticipated as resulting from this new mode of communication must depend, as our military witnesses so well and truly pointed out, upon the communication being uninterrupted, and upon there not being interposed upon the line the obstacles there not being interposed upon the line the obstacles and delay which would necessarily result from an interruption of the gauge. Therefore, when I point out to you the great importance of the subject, and the fact that if you do allow this break of gauge to be interposed the inconveniences which have been referred to—the difficulty of having sufficient waggons and carriages to transport the troops and the stores and carriages to transport the troops and the stores the difficulty with regard to the transport of cavalry—and the delay which would necessarily occur in the change of carriages for bodies of men, for horses, for ordnance and for stores,—will inevitably amount to an evil that would neutralize and do away with the in this state of things it becomes most important—

Digitized by Google

the defence and security of the country, and, on the other hand, I show you that we offer you a system of railway communication by means of which all the desired advantages may be obtained without any of the inconveniences, can you for a moment hesitate which to choose ?"

And in concluding his appeal Mr. Cockburn

"It is impossible to estimate too highly the importance of the subject. We know that the welfare and prosperity of the country, and the full developed and productions depend in a and prosperty of the country, and the fun develope-ment of its resources and productions, depend in a great measure upon the perfect character of its means of intercommunication. And now, in modern times, for the old system of communication between one portion of the country and another, the genius of man has substituted a great and mighty power, which, while it seems about to burst its bounds and scatter confusion and dismay around it, is yet by his intelligence converted into an instrument of power in his hands, for enabling him to pass, almost with arrowy speed, from one point to another. If you keep all in unity—if you keep all on the same uniform gauge, you have harmony in the system, and you realize all the benefit which must arise from increased facilities given to the national means of communication; but, if you allow the intervention of a different system of gauge to interpose obstacles and to create delays and difficulties, you destroy the advantages which would otherwise result from this great, noble and harmonious system. Therefore it seems to me it is a great public calamity, that the daring, but in this instance erring, genius of one man should, in an evil hour, have brought in the exceptional gauge to mar the uniformity of the great system of communication of this empire. I stop not here to discuss the superiority of one gauge over another: Mr. Brunel may wrong, or may be right—I care not which; but the country, from one end to another, with the exception of the district into which his peculiar gauge has been introduced, is covered by a system which is acknowledged to be the national one. The resolutions of the House and the enactments of the Legislature have been directed to arrest this evil of a diversity of gauge wherever it does not already exist. Are you prepared to act according to the suggestions and views of the Legislature of which you are a com-ponent part? I believe you are; and when I show you the disadvantages which would result to the West of England from the introduction of this gauge, and the great advantages that would result from a system of consonant and harmonious action, I am sure I am only asking you, consistently with public interest, to prevent a result which could be considered only as a national calamity."

#### Proceedings of Societies.

SOCIETY OF ARTS.-April 19 .- Mr. J. WALKER. F.R.S., V.P., in the chair.—A paper was read on some 'Flans for Railway Improvement,' by Mr. W. Birch, of Sewardstone. The first of these was a spring; the second a sort of water clock for railway signals; the third and most important part of the communication is that relating to an invention for breaking the shock of railway trains in cases of collision. We shall confine the present notice to the last of these, as it is both the most original, and also the most important and valuable part of the essay. We may premise that this paper is one of no ordinary value, both its general tone and specific object being superior to the great majority of propositions designed for purposes of this nature. There is much sound reasoning and practical common-sense as well as accurate science in it. We trust the Society will use its influence, as we do ours, to obtain for it a candid hearing. The general nature of the proposition is, to provide for the destructive agency of collisions, something to be destroyed, which shall not cost much money. This is done by providing pieces of iron, i.e. certain hoops of iron to be widened out, and finally torn as unler by conical mandrils on the buffer-rods. These rives are to be subsected by forther the forther transmission of the provider the subsection of the forther transmission. rods. These rings are to be replaced by Iresu one. This is an object on which, from the establishment of these has been a great railways to the present time, there has been a great expenditure both of ingenuity and money:—" I was informed by a gentleman connected with one of the leading companies, to whom I submitted my plan, that shortly after a scrious case of collision they were receiving plans at the rate of twenty-five per day; that they had received upwards of a thousand plans, the greater proportion of which were very crude, whilst others displayed considerable ingenuity; but there were very few which showed, on the part of the inventor, an intimate knowledge of the enormous developement of power with which he proposed to contend; whilst all were more or less objectionable, on the ground of great cost, great weight and lia-

bility to derangement. I find by experiment that the resisting power of each buffing-spring of an ordinary railway carriage is equal, in round numbers, to I ton working through a movement of I foot; the pair of springs therefore is equal to 2 tons through 1 ft., and is not adapted to resist the shock resulting from a greater speed than about 5 miles per hour, supposing the carriage to be driven up against a dead obstacle. The momentum due to a speed of 10 miles per hour is four times that at 5 miles, and at 20 miles per hour is sixteen times that at 5 miles, and consequently sixteen times greater than the spring buffers are capable of resisting; and as the weight of the pair of buffing springs is about 31 cwt., it follows that it would require an addition of about 12 cwt. of steel to break the shock of 10 miles per hour, or about 24 tons to break a shock of 20 miles. A carriage of such weights is obviously impracticable, and I feel justified in the assertion that the object is not to be attained by any kind of steel springs. Other plans have consisted in some kind of cylinder and piston, but the same objection of great weight has applied where it has been attempted to develope an effective resisting power, and the result is, that rail-way carriages have at the present time no safeguard in cases of collision; the present spring buffers are only adapted to bear the small shocks incidental to the regular working of the line, and any extraordinary shocks expend themselves in greater or less injury to the railway, the carriages and the passengers. I find by calculation that, supposing one train to run into another at a speed of 12 miles per hour at the moment of collision, the resistance of the buffing-springs would be used up in reducing the force of collision to that equivalent to a speed of rather more than 10 miles per hour. rather more than 10 miles per hour; or, supposing the train to consist of engine, tender and ten carriages, and to weigh 60 tons, its total momentum at 12 miles per hour would be about equal to 300 tons through 1 ft. Of this enormous devolopement of moving force about 25 tons might be accounted for by the first compression of the springs, and the re-maining force, equal to 275 tons working through l ft. of movement, would be expended in various kinds of destruction. Every piece of wood broken, every piece of iron bent, the torn-up rails, the crushed carriages, the ploughed up gravel, are each an evidence of an effect of which the expenditure of the momentum is the cause: for it is with railway collisions as with everything else, an effect cannot be produced without the expenditure of an adequate cause, nor can a cause be expended without the production of an adequate effect; and could each of the effects I have named be valued, it would be found that their total amount was precisely equal to the force of 275 tons through 1 ft. movement by which they were produced. My proposition consists simply in copying this effect, in placing substances of great strength in such positions that the momentum of the train shall be caused to act in their destruction, and in the effort shall be expended without injury to the carriages and without danger of recoil. In considering the question of the substance best suited both for strength and cheapness we naturally refer to iron; and as the resisting strength of iron is greatest when pulled in the direction of its length, I propose to use it in that form; that is, to expend the momentum of the train in a case of collision in the legitimate de-struction of iron by pulling it asunder lengthwise, and thereby to avoid the destruction of the carriages themselves. In the tables on the strength of materials, we find that a half-inch bar of good iron requires a force (which works through a small space) of 8 tons to pull it asunder; and it will be apparent that this enormous resisting power, provided it can be practically applied, will be sufficient even to contend with that fearful development of power in motion the momentum of a railway train. The plan I consider best adapted for the practical as plication of this principle is to form the iron into a ring, and to cause the momentum of the train to act upon it in the direction of its length, by forcing a circular wedge or cone through it. Fig. 3 shows a series of rings (which are made flat and thin, in order to their giving an equable resistance rather than a succession of shocks) placed loosely on a mandril, on which is mounted a cone, by which, on the application of power, the rings are broached in succession, thus giving a resisting power graduated by the amount of the iron destroyed. This plan is intended to be used subsidiarily to the spring buffers, and is not intended to come into operation except in the case of a greater shock than the spring buffers are capable of resisting. will observe that I consider inventors generally have erred in attempting too directly to resist the momentum of the train; this principle differs from all others I have seen in giving way to and expending that breaking the shock of collisions with safety to both the momentum in detail instead of resisting it. It passengers and carriages, is considered to be imposhas also the advantage that whereas other plans con-1 sible. This impossibility is an idea I am averse to

sist in an elastic resistance gradually increasing in amount with the length of stroke, my principle offers the opportunity of continuing the same amount of expending power throughout the whole length of movement. Fig. 2 shows the application length of movement. Fig. 2 shows the application of this plan to the buffers of a common railway carriage. A portion of the buffing-rod is removed, and a tube, in which the buffing-rod sides, is substituted; the rings and cone are mounted on the buffing-rod. In this case the action is first on the spring, and when that is driven home the cone commences its action on the rings, broaching a number due to the power employed. I consider this plan, which is adapted to the present system of building carriages, would be capable of expending the mo-mentum of a train up to 12 or 14 miles per hour at the time of collision; but I do not consider that our present system of buffing and connecting the car-riages is the best, as regards either economy or safety. The plan I would prefer is to place a powerful bar lengthwise under the body of each carriage, on which I would throw all the strainage by fitting it with the apparatus for common buffing and traction, or cases of extraordinary shocks; I would make this bar independent of the load in the carriage, so as to ensure at all times a horizontal line of action by taking its support from the top of the axle-box; and I would also adapt it to prevent lateral motion in travelling and in cases of collision, when the spaces between the carriages become smaller, so to unite them as to prevent any single carriage being thrown out of its place by the shock. The momentum of a train of 60 tons at 20 miles per hour is equal to about 900 tons working through 1 foot: but it must be borne in mind that in the case of one train of that momentum running into another, supposing the apparatus to act efficiently, there would be three distinct effects produced; first, the momentum of the moving train would be partially expended on the buffing and expending apparatus of both trains; secondly, a portion of the momentum would be expended in giving motion to the stationary train; and thirdly, a further portion of the momen-tum would be accounted for by the moving train not being actually stopped by the collision; but it will be readily perceived that the two last-named effects could only take place if the apparatus acted efficiently. If the apparatus was sufficient to expend two-thirds of the momentum, the remainder would be harm-lessly expended in motion on the rail; but if the apparatus, as at present. was not sufficient, the stutionary train would not be set in motion, the moving train would be brought to a dead stop, and the whole of its momentum expended in destruction. Offering, then, as this last-named plan does, the opportunity of obtaining a greater length of movement for the expending apparatus, I consider it would be practicable to break the shock due to a speed of 20 miles per hour at the moment of collision; and in consequence of the guards using their skids on the approach of danger, there are few collisions occur over that speed; in fact, I believe that a majority occur at a speed under 12 miles per hour. There would, however, be a considerable difficulty in introducing in this country the change of system this would render necessary, and it is better suited to a country in which railways have not been developed, say, for instance, India or Canada : and as far as this country is concerned, probably the plan first mentioned would answer every practical purpose. I feel justified in stating that among a considerable number of gentlemen to whom I have submitted my principle, there is a general impression in its favour, as compared with other plans for the same purpose. There appears to be no objection on the ground of expense, and the developement of an intense resisting power in small compass as to weight and size is unquestionable. It is generally conceded that this plan would be effective in saving the carriages from destruction at a moderate speed; but at the same time it is objected that it would not prevent the passengers being injured, by being thrown from their seats and coming in violent contact with the carriages. This, it would appear, is the most fertile source of accident in cases of collision of trains; experience shows that the number of persons who are injured by the carriages being crushed are small in comparison with those who are injured by being thrown from their scats by the violence of the shock. Railway engineers consider that this effect could only be obviated by some method of obtaining a great length of buffing movement (say, for instance, 6 ft.) between each carriage; but I believe this would be found to induce so much inconvenience and objection as to be perfectly impracticable. At all events it has not been adepted, and in fact I find, from communication with railway engineers,

admit; I have consequently carefully considered the subject, and am convinced that although it is necessary to admit the position assumed, that no method of breaking the shock to the carriage would of itself prevent passengers from being thrown from their seats, and that if so thrown the blow they would receive would be equal (or very nearly) to that they would receive under present circumstances, yet that beyond this there is a further effect to be considered, namely, that the difference in the nature of the shock to the carriage itself would render it comparatively easy for the passenger to retain his seat, provided he some notice of danger. In deliberately advancing this opinion, which places me to some extent at variance with the views of the most eminent railway engineers, it is necessary I should explain my view distinctly; and I cannot do so better than by showing the different conditions under which a collision would take place, with or without an apparatus for breaking the shock to the carriage. I will first consider the case of the last carriage of a train struck by an engine at a speed of 12 miles per hour, and provided only with the present buffers. The first effect would be to drive the buffers home, which would be effected in about a seventh part of a second, and the carriage would be driven forward during that time 3 or 4 in., when the engine would strike the body of the carri age with a dead and unbroken blow, and drive it forward with a velocity, generated instantaneously, of about 10 miles per hour. On the other hand, supposing the carriage to be provided with the expending apparatus, the time occupied in equalizing the motion of the carriage would be about half a second, the forward movement would be 2 or 3 ft., and the carriage having acquired the same velocity as the engine during the destruction of the iron rings, there would be no sudden jar from the engine striking the body of the carriage. Still this difference would not, I admit, of itself keep the passengers on their seats; but I contend that if they had some intimation of danger, say by a succession of sharp whistles, they might in the last case, by placing one foot against the opposite seat, so far identify their own motion with that of the carriage as to retain their seats with comparative ease; while in the first case, although they might adopt the same plan of case, attnough they might adopt the same pair of placing their foot against the opposite seat, the sudden jar of the engine coming in contact with the carriage at 10 miles per hour, and the instantaneous generation of that velocity, would still dash them from their seats, or rather would dash the seats from From a full consideration of the case I feel so confident in the correctness of my view, that if it was first proved by actual experiment that the carriage could be made safe, I would have no objection to demonstrate personally the safety of the passenger, provided the motion of the carriage was gradually generated, through a space of 1 ft. for 10 miles per hour, 2 ft. for 15 miles, and 3 ft. for 20 miles; for I have no doubt whatever that the difference in the shock would be as great as between jumping from the heights necessary to generate the respective velocities of 10, 15 and 20 miles per hour on to a hard substance in one case, and from the same height on to a bed of some yielding substance, as soft clay, in the other, in which the motion would be gradually stopped by sinking in to the depth of 1, 2 and 3 ft. respectively. Supposing the carriage to be made safe, all that is necessary for the safety of the passenger is to prevent himself becoming loose in the interior of the carriage, and as far as possible to dentify himself as a fixture with it. I believe that the velocity of the carriage being acquired gradually, although at comparatively short space, would enable him to effect this, whereas with the present instantaneous shock he cannot. I admit unreservedly the position taken by engineers on this question, that breaking the shock to the carriage does not necessa rily ensure safety to the passengers, but I contend that the different nature of the shock would enable them to accomplish their own safety, provided they had notice of danger. It has been suggested to me that, if even there was a signal of danger made, the public (females especially) would not have sufficient presence of mind to act as I propose; but I believe that nothing is so conducive to presence of mind as the knowledge that danger may be avoided by a little exertion; and it might be desirable to place some short loose straps, the cost of which would be trifling, at the back of the seats, by which passengers could hold on in case of a signal of danger. It is too much to expect that any plan that can be devised will give absolute safety in railway collisions, but the danger may be reduced to a minimum by, in the first place, providing a yielding medium for the safety of the carriages, which would avoid that class of accidents resulting from their crushing, and secondly, by showing the passengers how they may avoid, upon proper warning of danger, being thrown from their

seats, by which the number injured from that cause might probably be reduced from twenty to two. It appears to me that the successful working out of the object in view resolves itself into two main questions; the first and most important is, whether any practical plan of saving the carriages will also tend either directly or indirectly to save the passengers; and secondly, whether any plan can be devised on sufficiently favourable terms as to cost, weight and certainty of action as to induce railway companies to see their interest in adopting it. I have been unable to make more than an approximate calculation; but it appears to me that a resisting or expending power may be obtained from the destruction of 1 cwt. of iron, equal to the effect to be obtained from nearly a ton of steel springs. I believe that in a case of collision the momentum may be expended up to 20 miles per hour, at a cost of about 20s. per carriage, and that carriages may be built to break a shock up to 20 miles per hour at no greater cost than at present."

#### Brogress of Works.

BUCKINGHAMSHIRE.—Near Bicester there is a promise of progress. Messrs. Dockray and Horn have this week been surveying and making arrangements. A number of workmen, says the Bucks Herald, have been put on the works; the pest-house on the line is in the course of removal, and the station is marked out. At Langford-lane workmen have also been put on, and at Islip they work by night as well as day.

Dundalk and Enniskillen.—The works, says the Dundalk Patriot, are being vigorously carried on, now that the fine weather has returned; the engine has commenced cutting the sleepers for the permanent way, a single line of which is being laid; and we are positively assured that the line will be opened to Castleblaney by the 1st of August, as the Ulster Company have their line now open to Armagh, which brings it within twelve miles of Castleblaney.

REAT NORTHERN (Askern branch).-One portion of the line will be assuredly, says the Doncaster Chronicle, ready for opening on the 1st of June, the time fixed, we believe, for the opening of the Askern branch of the Wakefield, Pontefract and Goole. A deputation from the Lancashire and Yorkshire (with which the Wakefield, Pontefract and Goole is now incorporated) had an interview lately with Mr. Denison, the chairman of the Great Northern, for the purpose of ascertaining at what period the Great Northern line from Doncaster to Reedholme, near Askern, would be completed. The deputation were assured that the portion of the Great Northern from Stockbridge to Reedholme would be ready for opening on the 1st of June, and that the remaining portion from Stockbridge to Doncaster would be ready in September next. After the interview the deputation walked over the line from Doncaster, and expressed themselves satisfied with the result of their visit. Arrangements have been made with Mr. Pve. of the New Angel, for the conveyance of passengers by omnibus from Stockbridge to Doncaster until September next. The cutting of the Greetwell hill is proceeding very rapidly, although a portion of the stone, composed apparently of petrified sea shells, is of the most obstinate character. The loop line is rapidly progressing towards completion. The stoppage of the Grimsby and Sheffield line, says the Line coinshire Chronicle, at Lincoln, owing to the dispute between that company and the Great Northern, has occasioned the discharge of several navvies. This is the more to be regretted as the works were proceeding so rapidly and so creditably to the contractors.

The injunction obtained at the suit of the Great Northern has, we hear, been discharged, so that these works will, we trust, soon be proceeded with.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.

Manchester, Sheffield and Lincolnshire.—The works are progressing slowly but satisfactorily in the neighbourhood of Retford. The tunnel of upwards of half a mile in length, through the Clarbro' hill, is being worked through, and the bridge over the line on the North-road, a little to the south of Retford, is fast progressing towards completion. After the tunnel, says the Doncaster Chronicle, the next work of importance in the immediate neighbourhood of Retford is the bridge of three arches across the river Idle, in the Ordsall Lows. The ground is here a complete peaty bog, and such was its defective nature, that after the workmen had dug full 7 ft. deep for foundations it was still found so insecure, that it was then deemed necessary to pile the whole. In digging out these foundations, large trees were found imbedded full 7 ft. deep, and the whole space was found full of firs, the same as are found in the levels of Hatfield Chase, and no doubt they have lain here for several centuries. When taken out at first the wood was as soft as clay, but after having been exposed to the atmosphere for some time it shrinks greatly, and then turns as hard

as stone. The bridge consists of three wide arches, one of which crosses the entire stream, and the other two are intended as flood arches. The quantity of bricks already swallowed up amount to upwards of 600,000, and the work will be ready for the battlements in a few days. The key brick (being the completion of the arches) was laid in the afternoon of the 13th, amidst a large concourse of spectators, by Mr. Bullivant, jun., of East Retford. Several speeches were made by the gentlemen of the town and some of those connected with the works, after which there was plenty of wine, and an abundance of ale for the workpeople, and the whole passed off in a highly satisfactory manner.

North British.—Operations have recommenced

NORTH BRITISH.—Operations have recommenced on the Hawick extension, with a view to complete the line to Galashiels as early as possible. Numerous labourers are thronging towards different points in search of employment. It is deeply to be regretted, says the Scottish Railway Gazette, that the existing derangement in monetary matters presents an almost insuperable obstacle to such an extensive application of labour as might now be obtained at a moderate rate, to the great benefit of the working classes, as well as railway undertakings in general. No stronger proof of the existing evil could be adduced than the present state of the works on the Hawick extension, a line which is so imperatively called for by the wants of the district.

Oxford, Worcester and Wolverhampton.—Negotiations are said to have commenced between the directors and those of the Midland, for a lease of the loop line from Abbot's Wood to Stoke Prior to the latter company, until the completion of the whole line. If a satisfactory arrangement should be concluded, says the Worcestershire Chronicle, it may be expected that the laying of the present permanent way, for which the line is ready, except in two others with the laying of the present permanent way. Grant of the proceeded with with all despatch.

Scottish Central.—The whole of the line from

Scottish Central.—The whole of the line from Stirling to Perth is now in such a condition of forwardness, says the Scottish Railway Gazette, that in all probability it will be opened throughout its entire length, from Castlecary to Perth, in about a fortnight or three weeks from the present time. Intimation has been sent to the Board that the directors will be prepared to receive the official inspector on the 28th inst., and the line will be opened to the public immediately after his report is made. The most arduous part of the undertaking—the stupendous tunnel through Moncrieff hill—is now finished, and will, of course, be opened for public traffic along with the rest of the line. On the 19th Lord Duncan (the chairman) and the directors, together with a party of friends, traversed the whole line from Castlecary to the terminus at Perth. The tunnel was lighted up with torches on the occasion, the engine being driven by Mr. Tasker, the resident engineer. The trip afforded the utmost satisfaction, as all the works appear to be in the most perfect and substantial state. The Central station at Perth is now in progress, but as it will require some time to complete so extensive a building, accommodation of a temporary kind will be provided on a scale commensurate with the business of the line.

WATERFORD AND LIMERICK.—The official inspection of the line between Limerick and Tipperary was concluded on the 19th by Capt. Simmons. The solidity and construction of the bridges and embankments especially engaged his attention; and having tested all the materials and apparatus, he certified his approval of the entire works in a very satisfactory manner. The line is to be opened for passengers and traffic on Monday the 1st of May.

#### FOREIGN.

Boulogne and Amens.—Trains now run both ways four times a day, accomplishing the distance (166 miles) in 7 h. 30 m. The fares from Boulogne to Paris are 28f. 10c. in the first class, 21f. 15c. in the second, and 15f. 70c. in the third. Goods are now taken from the Boulogne station both to Paris and to all the intermediate stations. On the day of the opening a deputation of the Chamber of Commerce and a number of the principal inhabitants of Boulogne waited on M. Adam, the late mayor, and presented to him two splendid gold vases, which were voted to him two years since, in consideration of his services in bringing about the construction of the line, and the prosperity Boulogne had enjoyed during the eighteen years in which he occupied the position of mayor.

#### Accidents.

CALEDONIAN.—The North down luggage train, which leaves Carlisle at 9 30 a.m., reached Beattock in safety, though about 25 m. before its right time. When within half a mile of Abingdon station, and

Digitized by Google

proceeding down an incline, it ran into an empty ballast train remaining on the line, and did considerable damage to several waggons and also to the engine. The fireman and brakesman were thrown to the ground with great violence, and both taken up insensible. The accident was owing to the signalman being away from his proper place, and the danger was therefore not seen in time to prevent the accident

EAST LINCOLNSHIRE. - A man named Glasgow, employed as brakesman to the loaded ballast-waggons was thrown down by a start of the engine whilst standing upon one of the waggons. He fell upon the standing upon one of the waggons. He left upon the iron rails between the engine and waggon. The iron guard in front of the engine-wheels caught him by the thigh and cut it about six inches and hurt his back.

#### Law Intelligence.

April 26 .- In the VICE-CHANCELLOR'S COURT, in re the West Cornwall v. Moratt, the Vice-Chancellor allowed the demurrer to a bill filed by the company against the defendant, Mr. Mowatt (see ante, p. 286 for the specific performance of an agreement entered into by the defendant for the purchase of 4,935 shares in the railway, and to restrain the defendant from proceeding against Messrs. Denison, bankers, for the recovery of certain shares, deposited by the defendant

as security for the purchase-money.

FALSE IMPRISONMENT.—April 20.—In the COURT OF QUEEN'S BENCH, in re Newton v. the London, Brighton and South Coast, this was an action tried at the last Sussex assizes, when the plaintiff was non-suited, the defendants having pleaded a justification (see ante, p. 223). On the 16th of October 1847, Mr. Newton, the father of the plaintiff, took a second-class return ticket from London to Worthing, on a visit to his son. The next morning the plaintiff and his father arrived at the station rather late, and Mr. Newton, sen., having taken his place in one carriage, his son endeavoured to enter another whilst the train was in motion. Mr. Woodcock, the station clerk, interfered, and, on the plaintiff persisting in his attempts to enter the carriage, took him into custody for having broken one of the by-laws of the company against entering a carriage whilst the train was in motion. The plaintiff, however, returned to Worthing. Here he was met by Mr. Woodcock, who Worthing. Here he was met by Mr. Woodcock, who compelled him to accompany him to the Town hall, were he gave him into custody for the offence against the by-laws. On the charge, however, being heard the magistrates dismissed the case. Mr. Newton (the father of the plaintiff) now moved for a new trial, as the justification pleaded by the defendants had only reference to the proceedings at the station, and not to the second arrest and examination before the magistrates, that being in fact the assault and false imprisonment .- The Court refused the rule, being of opinion that the justification had reference to all the proceedings. If there had been a second arrest on which the plaintiff founded his action he should have traversed the defendant's plea of justification; but having admitted it to be a good plea as to what occurred on the platform at the station, it must be taken to apply to the whole case.

IMPUTED FRAUD.—April 20.—In the COURT OF EXCHEQUER, in re Landon v. Beisty, the plaintiff, a conveyancer, sought 78t. from one of the provisional committee of the Metropolitan Railways Junction Company, upon the ground of fraud. At the trial before the Lord Chief Baron, at Guildhall, the plaintiff declared that he had paid the sum in question as a deposit, and executed the usual deeds. The fraud complained of was, that the directors had "rigged the market," and had allowed the plaintiff to execute the deeds at a period when they well knew the scheme would be abandoned for want of money. The directors should have apprised the plaintiff of the exact condition of the company's affairs before he executed the deeds, and as they had not done so he might set aside his own deed, and upon the authority of Wontner v. Shairp he was entitled to recover back his deposit.—Council obtained a rule nisi for a new trial, on the ground of misdirection.

ENTRY ON LAND.—April 26.—In the same Court, in re Herrington v. Moore and another, Mr. Atherton moved for a rule to enter a nonsuit or a verdict for the defendants in this case, an action of trespass for assault and false imprisonment. The cause was tried before Mr. Baron Alderson, at the last assizes for Carlisle, and on that occasion a verdict passed for the plaintiff for 7s. The plaintiff, with a railway labourer, and two other men, who had also brought similar actions, on the 17th of September 1847, being in the service of the North-Western, repaired to the land of the defendant, Moore, across which the line was intended to run under their Act, and proceeded to dig in certain parts thereof. The defendant, Moore, and his

bailiff the other defendant took upon themselves to treat the plaintiff and his fellow labourers as offenders under the Malicious Trespass Act, and they accordingly took the supposed offenders, vi et armis, before a neighbouring magistrate, who, on the complaint of Mr. Moore, fined each of them 5s. That sum and 2s. costs having been paid by the men, they were dis-charged, and thereupon the three actions were brought in their names by the company, whose object was to justify themselves. They accordingly relied on the Lands Clauses Consolidation Act, the 8th section of which empowers companies to enter on lands after having given not less than three days' notice, nor more than fourteen, to the owners; but it appearing that the requisite notice had been given in November 1846, and that the entry was deferred till September 1847, when the plaintiff was sent on the lands of the defendant by their orders, his lordship was of opinion that the entry could not, strictly speaking, be justified, and that the plaintiff and the other men were trespassing. At the same time, however, as the defendants knew who they were, and the occasion of their presence on the land in question, they ought not to have acted as they did. The result of the causes therefore was a verdict for the plaintiff with 75. damages in each case; and it was now contended that the learned Baron was wrong in his direction, and that inasmuch as it was admitted that Mr. Moore acted bond fide, he was entitled to a verdict under the issue raised by the plea of not guilty by statute.—The Court was, however, of opinion that there was no ground to disturb the verdict. It must have been clear to the defendants that the plaintiff and his companions were, to a certain extent, justified in coming on the land, and that being so they could scarcely be fairly treated as malicious trespassers, while the defendants ought not to have taken the law into their own hands in the way they had done .-Rule refused.

South Devon.—An arbitration, says the Devonport Telegraph, had been fixed for Wednesday last, at Dawlish, for determining the sum to be paid to Mr. Pennell by the company, in respect of certain lands required by them for the construction of the Parson tunnel, and portions of the line contiguous, of which they took possession very nearly four years since, and they have been paying rent, under an agreement that the question of value must be settled within a month after the completion of the line Mr. Pennell claimed 2,000l. for the value of his land and the amount of damages sustained by him from the operations of the company. This valuation was made on the assumption that the land was suitable for building sites; that Mr. Pennell had been prevented from enjoying the benefit of the sea weed as before, and that the company had taken stone belonging to him from the beach for the construction of their line. The company were prepared to show that the formation of the line had been beneficial to the collection and preservation of the sea weed, and that numbers of persons had exercised a public right to the sea weed for the last forty years. They were likewise ready to prove that the stone which they had used had been taken from the sands below low water mark, and were therefore the property of her Majesty. These points had been referred tumpires. The proceedings were eventually rendered. needless by an amicable arrangement. The sum to be paid by the company to Mr. Pennell is 1,300%. each party paying his own costs.

April 22 .- In an arbitration case between the Shreesbury and Wellington and Mr. Baddeley, of Wellington, the further hearing to ascertain the value of a house, ironmonger's shops and premises at Wellington, came on at Wolverhampton. The claimant required at first 8,000*l.*, and finally 7,000*l.*, and the company offered 5,400l., depositing 5,000l. as security, previously to taking possession of part of the premises. On the 13th it was announced by the counsel for the claimant that, after conference, he regretted to say he was unable to furnish any explanation of the different items in the books and circumstances which had been pointed out by the company, and therefore he deemed it right to withdraw all the books, accounts and statements which had been put in on the part of the claimant, and to consent to the evidence of the claimant and of his servants being struck out of the notes of the arbitrator, and for the case to proceed entirely upon other and independent testimony. This the company of course consented to waiving all imputation on Mr. Baddeley's witnesser This the company of course consented to; for their misapprehension of the account-books, &c. Offers of compromise were made, and the company consented to give 4,300l. in full for Mr. Baddeley's premises and damages, being 1,100l. less than had been offered, Mr. Baddeley paying his own expenses, which are very heavy, and half the arbitrator's costs.

At the Wandsworth Police Court a porter-named Croft, in the goods department of the South-Western, was charged with plundering the company. —R. Judd, a clerk in the audit office, proved that a portion of the goods warehouse had been set apart for the reception of miscellaneous goods, which, being unclaimed, had become the property of the company. A great quantity of property of almost every variety had been missed during the last three weeks, and amongst the articles stolen were 150 um-He had lotted the goods himself, and he identified the boots and other articles produced as forming a portion of those lots.—In answer to Mr. Paynter, the magistrate, Mr. W. W. Young, the assistant-superintendent, said the porters did not give security on taking their situations.-Mr. Paynter said the Continental system of exacting security was one that might be acted upon with advantage in England.—The prisoner was fully committed for trial at the Central Criminal Court.

NORTH UNION .- April 20 .- J. Heterick, late superintendent of the Preston station, was brought up before the magistrates, charged with committing numerous robberies. Several witnesses who had lost their luggage on the railway, and who now identified the articles found in the prisoner's possession as theirs, were examined.—The prisoner was fully committed to take his trial at the next Preston Quarter Sessions. Bail was refused. A large number of articles, some of value, all supposed to have been abstracted from the luggage of railway travellers, still remain at the Preston Police-office unowned. prisoner was not particular in his choice of objects, as the following catalogue of articles found in his house will show :- They are valued at from 1501. to 2007. There are three dressing cases, one a valuable one, marked "W. T. Roper, Plasteg, Mould, Flintshire;" one small book-case, several portmanteaus, carpet bags, numerous umbrellas, parasols, walkingsticks, whips, &c., a new hat-box, a richly embroidered black velvet shawl, very valuable, six bottles of otto of roses, and wearing apparel in abundance. Several of the articles of wearing apparel are marked "E. Atkinson," "A. G. M." "J. S. Walker." There have also been found several rich silk and satin shawls, scarfs, mantles, visites, top coats, police capes and woollen shawls. Among the articles discovered is a photographic likeness, which, on being handed to the bench of magistrates, was immediately recognized by the mayor of the borough as being the likeness of Mr. Fairbourne, C.E. of Manchester. Three bunches of keys, nearly 200 in number, and of various sizes, were found in the possession of the prisoner when apprehended.

PLACING STONES ON THE GREENOCK LINE .- A week or two ago a man, after having been guilty of the crime of placing stones on the Greenock, absconded. crime of placing stones on the Greenock, absconded. The Scottish Railway Gazette censured the parsimoniousness which had only offered 10L reward for the apprehension of the fellow, reminding the parties interested how liberally others act in matters of infinitely less moment. The culprit was subsequently brought back; and, although brought back, likely at a great expense, from a distant place of hiding, and although the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the co was only awarded sixty days in prison. The journal above quoted properly remarks—"Had the offender stolen a pocket handkerchief, or picked a navvie's pocket of 2d., he might have had a year's durance for the crime; and how often are persons transported for seven years for the theft of a few articles of wearing apparel! Here, where human life is endangered, and that on a large scale, by one of the most fiendish deeds, by an act which, of all others, merits the title of constructive murder, a punishment of the most paltry sort is bestowed by the local magistrates. Is this either an award in panam of the crime, or will it serve as an example to others? Magistrates should have their sentences reversed when grossly severe. The same justice should be dealt out when these are grossly disproportionate to the offence punished."

IRON TRADE.—Glasgow, April 22.—The market has been dull for pig iron. In consequence of holders asking advanced rates, hardly any business has been done. To-day some small parcels have been sold at 41s. 6d. cash for all numbers. The dealers are very shy, and will only come in for their immediate wants. The make continues undiminished; and what with the Continental demand entirely suspended, and a diminished demand for home consumption, it is difficult to see any reason for improvement at present.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

#### Money Market.

PRICES OF BRITISH STOCKS.

Sat. Mon. | Tues. | Wed. | Thurs. | Fri. 

† Ex Dir. * For account, May 9.

London Stock Exchange, April 28.—It will be observed by the list of prices that the share-market has assumed a better appearance. Many considerable purchases have been made, and the markets are firm at the quotations. The continued quiet of the Continent and the steadiness of our own stock-market is producing a return of confidence in railway property.

Liverpool, April 27.—There is no particular change to notice in our market. The business transacted has been very limited, and not much fluctuation in The market closes stronger this afternoon. Suplow, Brothers.

Manchester, April 27. - We have experienced so little change in our share-market this week that there is nothing particular to notice. Sam. Grindrod.

is nothing particular to notice.

Birmingham, April 27.—This market has been heavy throughout the week, with rather more stock offering. To-day North Staffords were done at the stafford of the stafford were done at the stafford of the stafford were stafford.

Fork, April 27.—Indications of firmness are still visible in the market, although the amount of actual business done is small.

GRAYSTON & EARLE. business done is small.

Hull, April 27.—During the past week there has not been any material alteration in the share-market; prices continue about the same, with a very limited demand. The accounts from London and the provincial markets received to-day present a rather more FLINT & TOOTAL. cheerful appearance.

Glasgow, April 27. — There has been a better Glasgow, April 27.— There has been a better demand for shares this week, at slightly improved prices. Edinburgh and Glasgow and Caledonian are in request, but very little of either stock offered. The following is to-day's latest business:—Stirling and Midland Junction, 5 per cent. guaranteed, \(\frac{1}{2}\) dis.; Dumfries and Carlisle, \(5l.\) 13s.; Ayr, 70\(\frac{1}{2}\); ditto, halves, No. 1, 8l. 6s. dis.; Greenock, 15\(\frac{1}{2}\); North British, thirds, \(45s.\) 6d. dis.; ditto, quarters, \(42s.\)

BUCHAMAN, AITERE & Co. Buchanan, Aitem & Co.

Paris.—The question of the purchase of the railways by the Provisional Government has this week been the subject of various rumours, which caused a rapid advance in the share-market, as will be seen on referring to our Share List: the terms last announced will be found in our Gossip columns: the decisions, however, as we suggested last week, must be left to the National Assembly. It is said that several directors had stated to M. Garnier Pages that now the elections were over the National Assembly had alone the right to determine the question, and that the Minister appeared to attach such importance to the observation that the decree will be postponed. Other reports stated that the English holders had delivered a protest through the ambassador, who had informed the Provisional Government that it had been resolved to lay an embargo on all Franch vessels in English ports, it justice were not done to the share-holders. The general improvement in the Bourse is traceable to the support of MM. Rothschild, who have been largely importing silver for the Government.—The correspondent of the Daily News naïvely asks, in reference to the firmness of the funds, which has not been affected by the anticipation of a new oreation:—Have the great capitalists already got rid of their 5 per cents.! Have they purchased shares without paying any attention to the funds? Can they hold their stock until better times arrive? Or has the few days' grace granted by the brokers to their clients for the delivery of their stock anything to do with it?

# Railway Chronicle.

At the special meeting of the Scottish CENTRAL, the bill for leasing the line to the London and North-Western, Lancaster and Carlisle, and Caledonian Companies, has at last been approved of. The new chairman (Lord Duncan) announced that he had traversed the line, and, from the satisfactory condition of the works, the Government Inspector would be forthwith called upon for his report.

The Report was adopted at the half-yearly meeting of the DEMERARA shareholders. The directors, like most others just now, feel the want of money, and urge the immediate payment of calls for the completion of the works. A bill is being introduced into the Court of Policy guaranteeing a minimum dividend of 6 per cent. on the amount expended as soon as the works have reached ten miles beyond the

From our official returns it appears that the amount of traffic for the last week, on 3,663 miles of railway, was 171,610l., thus accounted for: — 81,660l. for the conveyance of passengers only, 46,842l. for the carriage of goods, and a remainder of 43,108l. for passengers and goods together, not respectively apportioned; being an increase of 2,185l. over the corresponding week of last year, when the mileage was 2,845. The average earnings per mile last week were 471., whilst in 1847 they were 581.

GOVERNMENT ASSISTANCE TO RAILWAYS.

In our last week's number we reported the petition from the Edinburgh Town Council to Government, for an advance of Exchequer bills in aid of Scottish railway works, at the instance of Mr. Treasurer Dick, and professedly on the * That week being the Easter holidays does not offer a just comparison.

Digitized by Google

ground of a necessity-not felt in the North only-of something being done to find work and wages for the numbers of unemployed men whom the hard times have thrown into idleness. We see from a leading article in the Daily News of the 25th, that this object is beginning to produce similar movements throughout England as well; and the copy is given of a petition now in course of signature in Hull, by merchants, bankers, and tradesmen, praying that such assistance may be given by the Treasury to railway companies as may enable them to resume the works now suspended—and thereby reduce the mass of labour seeking to be emploved, and now threatening at once the pockets of the rate-payers and the peace of the country. This, we have been given to understand, is not quite a solitary proceeding, but one that it is intended to set in motion in various other districts: the parties directly appearing being, not railway promoters in general, but others who now discover the effect of stopping the industry that was at once a source of occupation for vast numbers of the working class, and a valuable means of support to the tradesmen and dealers of all descriptions who furnished supplies for their consumption or for the work they were engaged in. Such is the comment given by events, in less than six months, to the stupid brayings of the Times at the close of last year, against railway operations, as destructive of the capital of the country,-to the proposal, which, it is now known, that journal was all but directly employed by the Chancellor of the Exchequer to put forth, of a measure to bring them forcibly to a stand-still!

The fact, however, being once admitted that any such process would have been a most mischievous one;-that the restraint actually imposed by circumstances, without the action of the State having been needed, on the progress of railway operations, has greatly aggravated the pauperism and the stagnation of trade and manufacture which other causes have tended to create; -and that, consequently, it would be greatly beneficial to the country could anything be done to revive so material a branch of employmentwe have still made but little practical progress to railway, would be a fact in any case to be a remedy. From the railway companies them regretted by all who take a real interest in selves, as the Daily News justly observes, it cannot be expected to proceed just now. They dering bystander. We are sorry to hear of are likely to wish rather to narrow than to enlarge the sphere of their works and engagements. If the welfare of the nation demand a quickening of their enterprizes, it must be the care of the nation to give them a helping hand. Hitherto the attempts of those who govern its affairs have been to lame rather than to encourage their endeavours.

That they should be assisted just now from without might indeed be a thing greatly to be desired by the railway companies themselves. But it is a concern, we apprehend, of far more importance to the country at large, to assist them,-for the reasons above mentioned. We are not, however, sanguine as to the probability of this view being admitted by the Ministry who now have charge of the public interests. are more busy in trying to fill the Exchequer than inclined to let anything issue from thence which can be kept in official hands; and of railways, especially, they had shown a peculiar dislike, long before Lord George Bentinck's Irish proposal gave a tone of political acrimony to their jealousy of that interest. Nor can the urgency of the case be taken as a certain reason for attention being paid to it by a Government that has as yet shown scarcely any sign of being impressed by a state of things that has long filled all considerate minds with anxiety. We therefore rather wish than believe that anything of consequence may come of this movement.

LOCAL ACCOUNT OF THE PARTIAL OPEN. accommodations, or will pay high rates. ING OF THE NORTH STAFFORDSHIRE Pottery traveller and the Pottery crates, LINE.

We have already reported the opening of the STOKE AND NORTON BRIDGE BRANCH of the NORTH STAFFORDSHIRE RAILWAY last Monday week; - an event on which the district it will accommodate may be congratulated, as well as the promoters of the line,—the main object for all, in these times, being to get into fruitful operation, as soon as may be, whatever has already been partially advanced; and to lay aside, until better times, the works on which nothing has yet been expended. The cause of our returning to this event, however, is not exactly one on which we should be the most inclined to offer any felicitation to any company about to be opened for traffic,-certainly not to the North Staffordshire, whose lines will be costly, and the greater part of whose business will be of a kind that must be cheaply worked on any line, however cheaply made, if it is to become profitable. We find the details that have attracted our notice in the account of the opening which appears in a local paper. In the fulness of its rejoicing over the event, the Staffordshire Mercury, after other things, describes the moving stock and other apparatus of the concern prepared or in course of preparation in terms which will be apt to chill rather than to quicken the satisfaction of considerate

owners of shares in that railway. The reporter informs us that the "circular engine-shed at Stoke" is an "immense building,"-" one of the largest, if not the largest. in the kingdom,"-for a group of lines which is anything but considerable in their distance from the central point at Stoke. For this, however, there may be better practical reasons given than for such expensive coaches as the paragraph goes on to admire, as "splendid," "beautifully fitted up with gilt cornices at the top,"and "lighted in the interior with four lamps in each carriage;" adding that they have been "built and fitted up almost regardless of expense." This, if truly stated, and still more if applicable to the other arrangements of the such concerns, however it may please a wonanything whatever being done on any line, new or old, "regardless of expense,"—being persuaded that a regard to expense, as far as consistent with substantial requisites, is the first thing to be studied in the execution and working of all railways just now; -is, indeed, a thing, the neglect of which will render hopeless that revival of the declining value of property in them which is desirable, not only for the sake of the owners, but for the encouragement of further enterprize hereafter, in which the public have a deep concern. The best praise that can henceforth be given to the works and apparatus of any line whatever will be that they have been planned and completed with the strictest economy consistent with an effectual performance of the business they are meant for. And we apprehend a time is coming, if not already arrived, when directors will have no reason to thank the party who informs the shareowners of any-the least-part of the establishment having been prepared in a manner "regardless of expense. What this disregard means may now be read in reduced dividends and stock at ruinous discounts.

Least of all could the well-wishers of the North Staffordshire desire to see any such principle admitted into the management of a concern situated as it is. Its works must be heavy, however sparingly conducted; its traffic will not be of a kind that either demands showy inquiry and suggestion, will become scenes of tumult

Pottery traveller and the Pottery crates, alike demand a cheap accommodation; and if it be made handsome as well, it must be at the proprietors' expense altogether: the Staffordshire travellers will not pay one stiver for the interest on such extras, nor for the cost of maintaining or replacing them. It is a trade requiring perhaps as much as any in the kingdom the utmost economy in the working to produce a fair dividend on a line that must be made at a heavy charge—(the estimates, indeed, average 30,000/. per mile). We therefore should rather hear, in this case especially, of modest preparations and sober apparatus than of anything whatever in the concern, produced on a principle "regardless of expense," and hope that no such disregard will be found to have really obtained in its operations.

#### Correspondence.

LONDON, BRIGHTON AND SOUTH COAST.

The report of the committee appointed by the shareholders at the last half-yearly meeting completely invalidates the charges, and removes the suspicions which had been east upon the directors. I should have thought, and fully expected, that upon the presentation of such a report some of the gentlemen who signed it would have stood forward at the meeting on the 17th to move a vote of confidence in the directors, and candidly admit that the suspicions which had been entertained with regard to their conduct were unwarrantable. The first signature to the report is that of Mr. Whishaw, the gentleman who brought several of the charges against the directors and their management, and moved for the appointment of a committee of inquiry; and that gentleman was almost entirely silent during the discussions on the 17th, with the exception of rising to state, that, having investigated the matter brought forward by Mr. R. Cohen, as to "certain parties connected with the company having used the knowledge acquired in the offices for speculations in the shares of the line," the committee found that the charge was entirely without foundation. And Mr. Ald. Wilson, notwithstanding the refutation of the charges he had made at the meeting on the 14th of February by the statements of the report of the committee, had neither the good taste nor the good feeling to acknowledge that the report had removed his suspicions, and exonerated the directors from the blame which he had previously thought fit to throw upon them. Your readers will ere this have seen how distinctly the charges brought against the directors at the meeting on the 14th of February have been disproved by the report. As to the agreement with the South-Eastern, it does not seem likely that the committee, with Mr. Whishaw at their head, could have recommended its adoption, unless they have now discovered that it was not as represented by Mr. Whishaw, "a one-sided agreement." With regard to the charge brought against the directors by Mr. Ald. Wilson-who said that, though "it was far from his wish to east any imputation on the directors or their officers, it was quite evident that there had been most unfair play, and that a plot had been concocted to mislead the public," and which "he was prepared to prove"-I should like to know what steps that gentleman took to prove that such a plot had been concocted. Most assuredly he did not prove it to the committee of inquiry, for their leader, Mr. Whishaw, emphatically stated at the meeting that no shade whatever of so abominable a transaction was found to attach to the directors or officers of the company. And such being the fact, I am surprised that the Alderman was not ashamed to take the course he did at the adjourned meeting. He told the share-holders, somewhat boastfully, that he had been accustomed to do battle at the Common Hall, and he was not to be put down or silenced. All I can say is, that if railway directors and shareholders are to be thus assailed at the periodical meetings of this and other companies, railway property will be subject to additional shocks, and railway meetings, instead of being assemblies for calm deliberate discussion, useful

and confusion unfit for quiet-minded and respectable shareholders to frequent.

A SHAREHOLDER OF THE BRIGHTON COMPANY.

[Having already given the Report quoted by our correspondent, we thought it unnecessary to insert the quotations made by him. This omission, however, does not lessen the force of his observations.—ED.]

The proprietors of the London, Brighton and South Coast Railway Company are greatly indebted to you for your able article upon the Report of the Committee of Investigation, which appeared in the last number of your valuable journal. I have, however, to request that you will allow me to give an explanation of that paragraph of the Report relative to Mr. Peter Clarke and the Lewes station, which you seem to think was contradicted by what fell from the deputy-chairman at the last adjourned meeting of the proprietors. The following are the facts upon which the paragraph in question was founded. During the inquiry, the committee examined Mr. Rastrick, the engineer who constructed the Brighton and South Coast lines; and the subjoined is his evidence on the subject of the Lewes station:

"I intended to have made the station at Lewes where there was not a house to be purchased for it. One of the directors of the Hastings line wanted the station behind his house, which I explained would render it necessary to back the trains in and out at a great inconvenience. I told the directors that the station, if made there, would cost them 28,000l., exclusive of land and buildings, but if made in the situation proposed by me it would cost only 12,000l., exclusive of land, and there were no buildings. I believe it will be found to have cost 20,000l. more than it would have done if made in the situation proposed by me; and all this to save some few of the inhabitants of Lewes to walk about 200 yards. This business of the station was several times discussed before the directors of the Brighton, Lewes and Hastings Railway Company, and each time I succeeded in prevailing on the directors not to alter the site, as it would be more convenient for the towns of Lewes and Southover to make it in the situation I had planned, agreeably to the Act of Parliament. But the Brighton Company sent Mr. Clarke, shortly after he came into their service, and he prevailed with the directors to make the station at Lewes where it now The construction of it was then taken out of my hands, as well as all the other stations on the line and Mr. Clarke had the whole under his own direction; and therefore I am in no way responsible for the stations, and I consider the Lewes station one of the most inconvenient in the kingdom. Clarke deposited the plans and made the estimate for the alteration of the Lewes station, as the company were obliged to have parliamentary power, both for the alteration of the station at Lewes and the alteration of the tunnel on coming from the Keymer line, under the town of Lewes into the station, and changing it from a straight to a curved tunnel. And he signed the estimate for the Lewes station as engineer, and gave evidence thereon before the parliamentary committee. Part of the tunnel is now at a sharp curve of 10 chains radius. The distance from my way station at Lewes would have been only 340 yards from the main street. Mr. Clarke was obliged to have a curve of 5 chains radius to back the trains in and out of the Lewes station, and the rails were 6 in. higher on one side than the other, notwithstanding which the carriages were continually getting off the rails."

The actual cost of the Lewes station, exclusive of the purchase of land and buildings and the additional parliamentary expenses, was 20,3751., being upwards of 8,0001. more than the original estimate. Mr. Rastrick is likewise fully borne out in his opinion of the inconvenience of the station by several other eminent engineers, who consider also the plan of it to be most "unprofessional." I think you will agree with me that this evidence alone would have justified the statement in the Report on this subject, independently of other precautions taken by the committee to satisfy themselves of its accuracy.

J. WHISHAW.

#### SOUTH WALES.

I cannot reconcile to my mind that the Great Western Company are acting fairly and honestly by their agreement with the South Wales, so long as their guarantee of 5 per cent, in perpetuity with half profits stands more depreciated in the public estima-

mouth, not enjoying the same terms from the same company. Is it because we have made two improvident bargains, with the Vale of Neath and the Waterford, Wexford, Wicklow and Dublin Companies, and are now called together to be made to confirm them? Or is the cause connected with Capt. Claxton, who after expending a large sum of our money and eight months of time in trying to discover a fitter place for a terminus, seats himself again quietly down at Fishguard, but makes no A CONSTANT READER. report?

#### Gossin.

Among the notices of motion for the session, after the recess, we observe one by Sir D. L. Evans, to move (with reference to a petition presented to the House from 102 engineer work-people suddenly expelled from France) an address to her Majesty, praying she will be graciously pleased to direct that a representa-tion be made by her Majesty's Government to the Government of France, with a view to obtain a just indemnity for the heavy losses sustained respectively by those petitioners through the violence to which they have been exposed;—and another by Mr. Bankes relative to the repeal of the Railway Commission.

Mr. Cash, of Wood-street, has been writing to the Home Secretary on behalf of the "NAVVIES." He says the late lovalty of the coal-whippers during the Chartist agitation was owing to the benefits they had derived from the Government attention to their grievances; and he thinks that similar attention might be afforded to railway labourers, particularly as to the mode, time and place of the payment of wages. The Home Secretary has referred the matter to the Railway Commissioners.

EXCURSION TRAINS have been running during the week on the CHESTER AND HOLTHEAD between Chester and Conway; so that the holiday folks have had an opportunity of admiring the splendid mountain and marine scenery along the line, and the great scientific wonder, the iron tube bridge.

A grand DINNER is to be given to Mr. ROBERT STEPHENSON, M.P., by the inhabitants of Conway, on the 17th prox., to celebrate the triumphant completion of his master-piece of engineering-the Conway tube

The dissenting shareholders of the WATERFORD, WEXFORD, WICKLOW AND DUBLIN have memorialized the Railway Board as to the conduct of the Great Western and South Wales Companies. An investigation is sought, and the strong necessity urged for

Amongst the published subscriptions for the British workmen expelled from France, we are glad to observe that the London and North-Western and Great

Western Companies are set down at 50l. each.
The Glasgow DEPUTATION (including Mr. Fairfull Smith, whose efforts we have already noticed) to the Home Secretary on the subject of GOVERNMENT ASSISTANCE towards the employment of the ablebodied labourers out of work, was well received last week. Communications on the same subject have also been forwarded from the English manufacturing districts; and the Government will doubtless consider the suggestions lately made of assisting railway works generally at the same time that they are providing

for the present surplus labour.

As a move somewhat in the direction advocated by our correspondent "H. C.," we have to announce that the GREAT WESTERN have resolved to carry parcels not exceeding 12 lb. to distances not exceeding

20 miles for 6d., including delivery.

At the Greetwell-hill works of the GREAT NORTH-ERN, upwards of 200 silver coins are reported to have been picked up, as also a couple of antique silver rings. The local paper says the coins comprise a few of William the Conqueror, a large number of Henry II. and a still larger number of those of Stephen. All are small and very imperfectly diestruck, so that it is not without difficulty that the different reigns can be distinguished. At the time Doomsday Book was prepared, Greetwell, which now comprises two or three farm-houses, was a populous hamlet, and it seems not improbable that this treasure was hidden during the struggle for supremacy between Matilda and Stephen. An old historian relates that "the Empress (Matilda), finding her measures broken by the crafty Bishop of Winchester, hastened to Lincoln; but the King followed close, and besieged that city and took it, yet she made her escape." The spot of the deposit of the coins was marked by its being covered with a quantity of shells.

The following instance of intrepidity of Mr. HIRST, profits stands more depreciated in the public estimation than either the shares of the Oxford, Worcester and Wolverhampton, or Wilts, Somerset and Wey-dian. Some of the porters of the MANCHESTER AND

HUDDERSFIELD line, connected with the goods department, had been removing luggage waggons, upon which they carelessly neglected to put on the brakes after unbooking the horse. The consequence was, that two trucks set off slowly at first, but soon at an increased speed down the incline, at the rate of nearly 20 miles an hour. Mr. Hirst, coming up a moment after, was informed by a boy that two waggons had set off by themselves, and being out of sight, Mr. Hirst instantly mounted an engine at the station, and, accompanied by the head porter and the driver and stoker, set off at full speed after the runaways. Upon catching sight of the trucks near the Bradley station, they increased their speed, and when a little past that place they came up with them; and the porter daringly got upon the buffers of the engine, was then reversed, and the trucks were brought back without any injury being sustained. Had the waggons gone down to the junction, and on to the Manchester and Leeds line, a collision would most likely have taken place, as the express train, leaving Lecds at 1 45 p.m., was just about due at the time.

The amount received for passengers and parcels

during the three past weeks, on the Hull and Grimsby portion (16 miles) of the Manchester, Surpfield and Lincolnshiie, was 704l. 0s. 73d. Goods are not

yet carried on this portion.

The first engine for the use of the WATERFORD AND KILKENNY was received in Kilkenny on the 22nd. The line to Thomastown will, according to official rumour, be completed by the middle of May.

All the depression attendant on the uncertainty of the working the Dowlais IRON-WORKS, which for some months past has kept thousands in suspense, and many out of employment, is being cleared away. The difference existing between the executors of the late Marquis of Bute and Sir John Guest was finally settled last week. The news was fully confirmed on Fourteen furnaces out of the eighteen will be in blast in the course of a few days, and the other four as soon as they can be repaired. So that it is anticipated trade will be resumed in all its activity and vigour.

It would be well if all parishes could obtain their RATES from the inhabitants as easily as they do from the RAILWAY COMPANIES. In the returns, from the Daily News, of the parish elections, we read—"In Lambeth, on the election of the Board for the superintendence of the highways, a ratepayer inquired what arrangement had been come to on the part of the late Board with the SOUTH-WESTERN, relative to the repairs of the road rendered necessary by the formation of the extension line through the parish; and it was stated in answer, that the Board had received from the company 1,000l. towards the repairs of the roads, which was considered a most satisfactory arrangement. They had also received from the company a further sum of 250l. on account of the rates.'

The council of the Provisional Government were reported to have fixed the following terms for the TRANSFER OF THE LINES completed and in full operation. The shares of the companies are to be valued at the average of the prices which they bore, according to the official returns of the Bourse, for the six months preceding the revolution of February; and this price will be paid by the Government to the company in 5 per cent. stock, to be also valued at its average price during the same interval. As to the unfinished lines, the shareholders are individually to have the option either of accepting the same terms as have been decided for the finished lines—that is to say, to receive 5 per cent. stock in exchange for their shares, the value of the one and the other being taken at the average prices of the six months before February; or they may pay up the remainder of their capital and receive 5 per cent. stock at par for the whole. On the other side, the directors of several lines have demanded of the Government the following conditions: — 1. For the companies having lines completed and in operation, and producing a nett profit above 4 per cent., 5 per cent. stock, producing dividends equal to the nett profit of the last year, increased by one-third. 2. For lines at work and producing a nett profit of from 3 to 4 per cent., the reimbursements of their capital in 5 per cents. at par. 3. For companies whose nett profits are below 3 per cent, reimbursement of capital in 4 per cents, at par. 4. For companies whose nett profit is nothing, or below 3 per cent., reimbursement of capital in 3 per cents at par. 5. For compacies too recently in operation to calculate nett revenue, reimbursement of capital in 5 per cents. at par, with a bonus of one-third to those who have not borrowed, and without a bonus to those who have borrowed;—the State in each case taking the liability of the loans. 6. To companies whose lines are in construction, and whose realized capital assures their engagements, reimbursement of capital

Digitized by GOOGIC

in 5 per cents. at par, with a bonus of one-third. 7. For companies not able to fulfil their engagements to the State, reimbursement in 5 per cents. at par without a bonus.

PROTESTS against the appropriation scheme are pouring in on all sides. We have ourselves received thanks from various quarters for the incessant opposition we have offered to the measure since it was first named. We subjoin the "considerations" submitted to the Provisional Government by the directors of the ORIEANS AND BORDEAUX:—

to the Provisional Government by the directors of the Orleans and Bordaux:—
Considering that the railway companies have been constituted in vitue of laws of concession made by the legislative power, and by ordinances from the executive power;—considering that their relations with the State have been regulated by cahiers des charges, agreed upon between the State and the companies;—considering that the companies have been constituted by authentic writings; that their working had been subject to the authorization of the Government, under whose superintendence all their management has been placed;—considering that the laws, ordinances, cahiers des charges, statutes, rights, obligations and guarantees have, in their different degrees, an absolute character and an obligatory force for all without distinction;—considering that if legislative acts may be revoked by the legislative power, that faculty cannot extend to special acts, the object of which is to create rights and give guarantees to nunerous private interests engaged in railroad enterrize;—considering that the cahiers des charges stipulated with the State, the statutes of the companies stipulated with the State, the statutes of the companies stipulated with the State, the statutes of the companies stipulated with legislative authority, it has lost that authority since the general elections of the 23rd inst.; that it has become an executive power, called on only to make acts of high administration, and watch over all the interests connected with the general march of affairs. From the above considerations and motives the railway companies who have obtained concessions consider it their duty to protest as they now do, as well for the present as for the future, against any measures which may be taken by the Provisional Government to take the railways ompanies who have obtained concessions consider it their duty to protest as they now do, as well for the present as for the future, against any measures which may be taken by the Provisional Government to take the r

country.

The following is the substance of an appeal to the French nation agreed to at a large meeting of holders of shares in French lines just held in London, and which is now in course of signature, as we announced bet made.

We, the undersigned British shareholders in French railways, having been informed that the Minister of Finance of the Provisional Government has called a meeting of delegates of the several companies for the purpose of having plans suggested for the purchase of their railways by the State, and that he has invited an expression of opinion on the subject, do declare—1. That a large amount of British capital has been invested in French railways under the sanction of the law, and in full reliance on the integrity of the French nation. 2. That the laws of concession provide for the resumption by the State of the railways, at certain fixed periods, and on specified terms, and that we should deem any deviation from these terms a direct violation of solemn and legal engagements. We therefore confidently appeal to the justice and honour of the French nation against any such proceeding.

GERMANY is threatened with visitations similar to those in France. In consequence of the disturbances, the trains have ceased running from Carlsruhe to the Baden Oberland. Another journal says, the rails on the line between Friburg and Offenbach have been broken up by the people, who, in the latter place, erected barricades, which, however, they removed when the soldiers threatened to make use of their fire-arms.

Besides the vigorous defence of the rights of foreign shareholders in the French lines which he made at the discussion before the Finance Minister, M. C. Laffitte, in his character as a director of the ROUEN, HAVRE, BOULGONE, NORTHERN and LYON Companies, has published a letter in the Journal des Débats, on the proposed confiscation. This letter energetically demands equitable compensation, to all classes of shareholders, for the transfer of their property. Dismissing the question of the power of the State to act in this manner, and admitting, as he says, the "fiction" that it is necessary for the Provisional Executive, on grounds of public utility, to assume the management of railways, notwithstanding the solemn engagement entered into when the concessions were ratified that no redemption should take place, till after a lapse of at least fifteen years from the date of the completion of the lines, still he declares that the Government is bound at the same time to consider the various interests who have risked their wealth and exertions to bring them into existence. He then urges that no general plan can be adopted with the view of settling the amount of compensation due to these companies, inasmuch as each one presents peculiar features, some having been in operation for years, others recently opened, and others only in part completed, or their

works just commenced. Besides advocating boldly the claims of that class of French investors who have laid out the whole savings of their lives in these shares, and who ought, he maintains, to be dealt with liberally, he also takes occasion to impress strongly upon the attention of the Government the fact that the people of England, Belgium, Holland, Germany and Switzerland have, on the faith of the national honour of France, which it was never presumed could be suspected, contributed largely towards these works.

Eleven other persons have been arrested, on warrants issued by the parquet of Pontoise, for the pillage, devastation, and incendiarism on the Northern. They were removed to Paris for examination.

A notice has been published by the EBERFELD, MINDEN AND HANOVER Railway directors, stating that no volunteers will be allowed to pass free upon their lines, and that the arms of those presenting themselves at the stations will be examined to ascertain if they are loaded.

The Spanish Government, according to the Railway Record, has recently issued a decree in reference to JOINT-STOOK COMPANIES. The decree was dated January 1848, and ordained, in reference to companies anonimas, that in reference to all such as were already established, they should, within two months after the sanction of the decree, call a meeting of their shareholders, and at such meeting obtain a sanction of the majority of such shareholders to sign a petition to be presented at Madrid for royal authorization of such term, and within fifty days after the meeting of such shareholders, the petition must be presented at Madrid for royal approval.

OPENING OF THE NORTH STAFFORDSHIRE (STOKE TO NORTON BRIDGE).

We last week recorded the opening of this branch on the 17th, an occurrence of no slight importance to the Pottery district. The Staffordshire Mercury affords the following details respecting the line:

—The preliminary inspection took place on the 14th, when Capt. Wynne, one of the Government Inspectors, traversed it, and expressed his entire satisfac-tion. He also inspected the principal station erecting at Winton's Wood. The opening did not pass of unnoticed. At an early hour in the morning numbers wended their way to Stoke from the different Pottery towns, to witness the starting of the first train from the temporary station at Wieldon's Grove. On the bridges, too, and along the line, wherever a good view could be obtained, hundreds were assembled to enjoy the novel sight. At 8 a.m. the first passenger train, drawn by the No. 1 engine, 'Dragon,' started from the station at Stoke amidst the cheers of the assembled spectators, and accomplished its trip to Norton Bridge, safely and satisfactorily, under 30 min., stopping by the way to take up passengers at the several stations. The trains continued running throughout the day, taking with them each time a goodly number of passengers for London, Liverpool and other stations on the North-Western line; the majority were, however, parties on pleasure trips to Trentham, Stone and Norton Bridge. The weather in the afternoon was delightful, inducing many who had been deterred by the showers of the morning to fly from the smoke of the potteries for a breath of fresh country air. Upwards of 1,200 were booked at the several stations on the line in the course of the Stoke presented quite a holiday appearance. The bells rung merrily at intervals, on the tower of the church a fing was displayed, and in the vicinity of the station a number of standings were ranged, stored with all sorts of good things for refreshment. The line from Stoke to its junction with the London and North-Western line at Norton Bridge is 104 miles long. It follows very nearly the course of the canal to within a short distance of Stone, were the canal is crossed. It is nearly straight for the first seven miles, then, taking a rapid and beautiful curve to the west, it crosses the canal near the Stone station, and runs on by Walton to Norton Bridge. The earthworks are not of more than average difficulty or magnitude. There are several cuttings through beds of marl, and a rather heavy one, between Trentham and Stone, through a rock of yellow sandstone. The most important embankment we noticed is that near Stone. forming the approaches to the viaduct which crosses the canal and turnpike-road near the station. The the canal and turnpike-road near the station. The trains travel very smoothly, with no perceptible shaking or jolting greater than on older and more consolidated lines. The country through which the line passes affords some pleasant views to the mere traveller for pleasure. After passing the station at Trentham, near to which was a sight seldom seen, a street formed of two rows of sod huts erected for the temporary use of the labourers on the line, with a

little wooden church, surmounted by a bell turret, we pass through the Trentham estate, and have for some distance a fine view of the extensive domain of the Duke of Sutherland. A pretty little valley is seen on the west side of the line, and beyond it rise the "wood-crowned heights" of Trentham and the hill surmounted by the monument to the late duke. On the east we have a view of the seat of Mr. R. Alderley, Barlaston Hall, and a little further on we catch a glimpse of Tittensor heath, with a number of picturesque cottages and homesteads in the fore-Meaford, the seat of the Earl St. Vincent, may be descried on the west; then a fine sweep of the line takes us past the junction with the branch to Colwich, and shows us the town of Stone lying almost at our feet. Beyond this there is little needing notice. The stations are at present but temporary; that at Wieldon's Grove is, however, very conveniently arranged for conducting the traffic until the main line and the permanent station at Winton's Wood are completed and opened. The old station on the North-Western line at Norton Bridge, some half-mile northward of the junction with the North Staffordshire line, is not now used. A new station and inn are about to be erected at the point of junction, where there is now in constant use a complete set of the Semaphore signals. Here, too, there is in course of erection an extensive goods station for the use of the North Staffordshire. At Trentham there will be a rather extensive station, with a turntable and carriage platform for the use of the family at the hall. The circular engine-shed at Stoke is rapidly approaching a state of completion. This immense building is 200 ft. in diameter—one of the largest, if not the largest, in the kingdom—and has accommodation for twenty-four iron horses with their tenders. The turntable in the centre (one of Elliss patent ones) is certainly the largest, yet constructed; it is 40 ft. in diameter—sufficiently large to turn an engine and tender at once—and so admirably contrived that the slight exertion of one man is sufficient to turn it in any direction. The centre of the building will be open, in order that the smoke and steam created by the engines may pass off at the top. The stock of locomotives at present in use is six, several of which are immensely powerful engines with double driving-We were parwheels, built on Stephenson's patent. in use on the new line, which appear to have been built and fitted up almost regardless of expense, to secure the safety, comfort and convenience of the passengers. We found, too, that all the latest improvements and inventions had been adopted. Most of the carriages are furnished with what are called solid wood wheels. The tires and naves of these wheels are of iron, but the interstices are filled up with pieces of English ash, first boiled in a composition and then forced into their places by a hydraulic pressure of 200 tons. The advantage of this construction is that the wheel is much strengthened, and there is no danger from the breakage of spokes. There is but little addition of weight, whilst the sound made by the wheels is to a great extent deadened. We noticed, too, that to the luggage vans were attached powerful brakes of a new construction; and in the building of the horse-boxes the comfort of the grooms had been catered for by allowing them seats in a compartment of the same carriage with their horses, with openings through which they can keep watch over their charges. The passenger car-riages are generally 6 ft. high inside, and are lighted up with four lamps, on Bassano's patent principle, in each carriage. Their wheels are 3 ft. 6 in. in diameter; those of the luggage vans are 3 ft.

#### Reports of Meetings.

SCOTTISH CENTRAL.
April 20.—Special Meeting, Perth.—Lord DUNCAN in the chair.

Mr. KBR read a series of resolutions passed at a meeting of the directors of the Edinburgh and Glasgow, stating their willingness to enter into a joint lease of the line, but declaring that if such offer was refused, they should oppose the leasing bill to the southern companies.

The CHAIRMAN was exceedingly happy that on that, the first opportunity of his being among them since his election as chairman, he was able to make a gratifying announcement—namely, that he was the first individual who had come from London to Perth on the rails. He had traversed the Scottish Central, and had come through the tunnel under Moncrieff Hill, and was happy to find everything in that state of forwardness which they had a right to expect from their contractors. He had also to make the still more gratifying amouncement that on that part of the line opened from Stirling to Castlecary the trains was weekly increasing. Active preparations

were also making to forward the goods traffic, and otherwise to draw on the line the other anticipated traffic. Every preparation had been made to carry out the views of the directors, and with all the speed possible, consistently with the safety of the public, to open the line from one end to the other; and he could announce to them, that about the 28th inst. they would be in a position to call upon the Government Inspector to make his customary official report. In looking around at neighbouring lines, they found on all sides a great desire to enter into amicable arrangements with them. With respect to the Dundee and Perth and the Scottish Midland, he was happy to report that in every way where their interests were concerned their wishes had been most actively responded to. With regard to the Edinburgh and Northern, they had been in negotiation with them, and it was only proper to give them credit, as well as their engineer, Mr. Grainger, in saying that they had asked nothing but what was reasonable; and there-fore their relations with that line were amicable. He then came to their relations with the lines in the south; and he would assure them that in speaking of those lines he would say nothing which might appear hostile to any party present. In looking to those lines the question now was, as to the connexion with the great metropolis of England; and they were not now confined to the narrow question of a connexion with Edinburgh or Glasgow. He must not, and could not, disguise that unfortunate differences had arisen between two of the lines to the south-that there had been a most unfortunate war waged in the south between the Edinburgh and Glasgow and the Caledonian. Their interests were somewhat involved in that warfare; and it would be for the Scottish Cen tral shareholders that day to adopt their own line of policy. They should first consider the state of the line. Some parties thought that they ought to keep They should first consider the state of the that line independent of all other lines; but that policy was not, in his opinion, desirable, because in that case they would find that, whether in Parliament or elsewhere, they would invariably be opposed by parties much stronger than themselves. He was of opinion, therefore, that such a course was neither wise nor judicious as regarded their present or future prospects. They then had to consider with which line, south of their own, they should connect themselves. Both offered advantages; and it would be for the shareholders to decide which line offered those advantages which would tend to improve that district and place their line in the most desirable position. An offer had been made to which he should shortly allude, as he considered that all letters of the Edinburgh and Glasgow should be distinctly stated to the shareholders. Although he did not wish to allude to any former meeting, it was in his recollection that an offer of that nature had been amply discussed, and they had come to a decision that it was not prudent to accept it. An offer, however, had been made previously, not by a small company, but by a great company, the London and North-Western—a company presided over by a gentleman (Mr. Glvn) of undoubted integrity, and who, having once made proposals, had through all these transactions acted in the most forbearing spirit. Those proposals had been submitted to a meeting of the Scottish Central shareholders. and was accepted. He fully concurred in the agree ment entered into; and it was his duty to tell them that they were in honour, and he believed also in law bound to adhere to that agreement. He rejoiced most fervently that a very large majority of the shareholders in that company would sanction a line of policy which would enable them to carry out that agreement, to which, when it was made, not a dissen-tient voice was raised by any shareholder of the com-Edinburgh and Glasgow and the Caledonian, he did must be clear to every one that some day or other those differences would be finally arranged; and should the Scottish Central be leased before that time, he did not think they would get the same terms offered as those which the shareholders had already agreed to accept. Such was his opinion; and he must frankly tell them that they were not only in honour, but in policy, bound on that occasion to carry out that agreement. The London and North-Western and the Caledonian had placed a bill before Parliament sanctioning that agreement, and they were there that day to consider the bill. It was impossible they could stand aside and be idle spectators; they must take the side which was most advantageous to them; and he, as chairman, was about to call upon them to place such power in his hands, and in the hands of his colleagues, as would enable them to do their best to complete the agreement formerly assented to by the shareholders. He called upon them to support the directors, and he hoped they would in this matter act in a reasonable manner, and that the question

having been brought to an issue, the minority would yield to the majority, and the matter be set at rest for ever. He was happy to see the chairman of the Edinburgh and Glasgow in the room; and with their permission he would advert to a few remarks made by his hon. friend at the last meeting of the Edinburgh and Glasgow. He (Mr. Blackburn) had said at that meeting, that in the negotiations with the Scottish Central they had not been treated as they ought to have been. His hon, friend cheered that statement, but he must say that he was surprised to hear him make such a statement. He would wish his hon. friend to point out an instance in which they had not been treated fairly. But he would beg to remind him that when he came down from London the other day, he was told at the Edinburgh station that they did not book for the Greenhill station. He was sure he did not wish to treat his hon. friend with disrespect, but they would observe that there had been, on the part of the Edinburgh and Glasgow, an assumption of dictation to the company which he Duncan) represented. He (Lord Duncan) would never sanction any person connected with the Scottish Central attending any meeting of another company, for the purpose of throwing the apple of discord into the meeting, under the claim of being a shareholder. He was always ready to meet a fair and open enemy, but he would not countenance any other proceeding. Standing there as chairman, he considered that—whether they looked at their pecuniary resources—whether they looked at their station in the market—he felt that they had a perfect and entire right to be treated rather as superiors than as inferiors to any other line. They had as good a right, and were as capable of guaranteeing dividends to his hon. friend (Mr. Blackburn), as he was able to guarantee them to their company. Such was his opinion and he trusted that he should find his hon. friend ready at all times to treat him as he (Lord Duncan) would treat his hon. friend, on terms of the most entire equality. Without entering into that question, so often discussed, and which he trusted would be finally brought to an issue that day.-namely, as to which party they ought to connect themselves,he would leave it to the meeting to settle. They would be happy to hear all sides; but he also trusted that if, at the conclusion of the meeting, it was found that there was a preponderance of anxious to carry out the agreement with the southern companies, they would be allowed to carry on their affairs without being called upon to have meeting after meeting to decide the same question over again. He thanked them for the patience with which they had listened to him, and would conclude by moving a series of resolutions which had been prepared. The resolutions were six in number, and were to the following effect:-The first resolved that the actions now pending in the Court of Session, with reference to the lease to the southern companies, should be abandoned. The second, that the company resolve to carry into effect the agreement with the southern companies. The third, that all actions, resolutions and proceedings of the Scottish Central inconsistent with that agreement should be declared null and The fourth resolution was, that the directors should be instructed to enter into the working agreement with the southern companies as sanctioned the shareholders, and to affix the common seal of the company to such agreement; and in the fifth resolution the directors were instructed to observe all the stipulations contained therein. The sixth resolution was the approval of the bill for leasing the line to the London and North-Western, Lancaster and Carlisle and Caledonian.

Mr. R. ROBERTSON seconded the resolutions. There had been charges made against the directors of sacrificing the interests of the company, and disregarding the declared opinion of a large majority of share holders; and as they were not made by obscure individuals, but also had been repeated since the last meeting by the chairman of a large company, he trusted the meeting would bear with him while he shortly gave a refutation to those charges, for he could say, without the slightest fear of contradiction, that those charges were unfounded. No directors in the country had ever devoted themselves more to the advancement of the interests of their company than had the directors of the Scottish Central; and on every occasion they had carried along with them a very large majority of the bond fide shareholders. He did not pretend to say that they had been anxious to promote another class of shareholders, whose interest in the company was not of a permanent character, a temporary kind-gentlemen who purchased on speculation, or who had bought shares for the purpose of forwarding the interests of other companies; but he could say that they had generally carried on with them a large majority of their share holders. There was only one matter to which he would allude, and that was a statement in the letter of Lord Breadalbane, that half profits never realized anything. Now, he would ask his lordship if he ever knew of a line where the government was vested in the hands of the leased company, and not of the leasing company, where the traffic of the line was not fully developed. He would content himself by simply seconding the resolutions, in the confident hope that they had now nearly arrived at that goal to which they had so long looked—namely, 7 per cent. and half profits.

Mr. P. BLACKBURN rose to explain the small episode introduced by the chairman with reference to the Edinburgh and Glasgow. He did not, however, appear there as the chairman of that company; and he thought it was a very inexpedient and awkward thing for any gentleman, because he had shares in two railways, to be called upon to explain matters between one railway and the other. He saw gentlemen at that Board who were also in the Caledonian direction, and it would be wrong of him to attack them as to the transactions of that company; they were there on Scottish Central matters, and they should confine themselves to them. With regard to the working of the Castlecary and Stirling line, the Edinburgh and Glasgow offered to work the line altogether without any charge, but the offer was refused. They then offered to run their engines through to Stirling from Edinburgh and Glasgow, and vice versa; but that was also refused, on the statement of Mr. Errington that such a thing had never been heard of; but he believed Mr. Bruce had received subsequent information, which showed that Mr. Errington was mistaken. The shareholders would thus perceive that if there were any complaints as to the delay or inconvenience caused by the stoppage at Greenhill, it was not the fault of the Edinburgh and Glasgow.

Mr. Kinnear objected to the fourth and fifth resolutions being put, as not being included within the terms of the notice.

Col. MACDONALD, Mr. SWIFT and Mr. REID, the law agent of the company, held that the resolutions were competent, as they had reference to the agreement with the southern companies.

It was agreed that the sixth resolution, approving of the leasing bill, should be taken by itself, and the other resolutions in the mass.

Mr. BLACKBURN said, in reference to the resolution now put, he would shortly state the reasons why he should move a negative to it. In the speech of the chairman there was considerable allusion to past events, and he had told them that they were bound in honour to the Caledonian, whether they were legally bound or not. He would not touch on the legal question at all, as that was in course of being tried elsewhere, and whatever decision that meeting might come to as to the law of the matter it would not be much worth; but if he thought the company was bound in honour to the Caledonian and southern companies, he would not have moved any amendment. But supposing it was to be held that when a company had once made an agreement, any person coming into it afterwards was bound by that agreement, the argument would not in this case apply. The first arrangement entered into was with the Edinburgh and Glasgow; and he held in his hand a copy of an agreement for amalgamation with the Edinburgh Glasgow on terms specified therein; but there was no specification contained in that agreement that either company should be free if the bill for the amalgamation should not pass through Parliament; and therefore, if there was any honour in the case, they ought to go back to the old and bad bargain, as they now called it. That disposed of the question of honour. Well, it was now held that it would be a great satisfaction to them that their line should merge from an independent company into being a branch of the London and North-Western-to become a small branch of the great North-Western, which would thus become a still greater monopoly than ever. He strongly recommended them to hold by their own country and their own neighbours, whether by themselves or in connexion with the Edinburgh and Glasgow. It was in vain to tell them that six directors of the Scottish Central were to form part of the Board to work this line; for no company could lease another line unless it had the entire control of the line. Another point which had been made by the chairman was, that the minority in that meeting should yield to the wishes of the majority. That was a very satisfactory doctrine when the directors had. or thought they had, a majority of votes in their pockets; but they heard nothing of it at the meeting in July, when a bond fide majority of shares voted against them. They heard nothing then of the minority giving way to the majority, although he thought they should have done so; but at the adjourned meeting the directors, by selling a number

Digitized by GOOSIC

of shares, and by splitting their shares into lots of | had been reduced by subsequent payments to 40,906L; | abandonment of the undertaking? or, 2ndly, to defer ten each, in order to give the greatest number of votes, managed to rescind the resolution by a majority of votes against a majority of shares. Another thing which the chairman said was, that the Edinburgh and Glasgow line was on an equality with the Scottish Central. That was what they wished; but they had offered to make the Scottish Central better. As to the Scottish Central leasing the Edinburgh and Glasgow line, he should have no objection, if they

would guarantee them a certain dividend.

The CHAIRMAN: I would guarantee you a better dividend than you divided at your last meeting.

Mr. Blackburn: He had now exhausted all he

had to say on the question, and would conclude by moving that the bill should not be approved of.

Mr. L. Davidson seconded the amendment.

After a few observations from Mr. Swift and Col.

MACDONALD, the vote was taken.

Messrs. Kinnear and Davidson were appointed scrutineers for the opposition, and Messrs. Shiel and Oliphant for the directors.

The scrutineers returned with the following report of the state of the vote :-

For the approval of the bill .... 22,620 .... 6.623 7,404 .... 2,505

Majority for the directors ..... 15.216 .... 4.118 The other resolutions were then agreed to, the same vote being taken on each.

Mr. BLACKBURN protested against the fourth and fifth resolutions being put.

Mr. W. BRUCE moved a vote of thanks to the directors, for their exertions in endeavouring to secure for the shareholders the advantages conferred by the agreement with the southern companies.

Mr. J. L. WALKER seconded the motion.

After some discussion as to the propriety of pressing the resolution, the same vote was taken upon it, and it was declared to be passed.

DEMERARA.

April 28.—Half-yearly Meeting, London.—Mr. M. M'CHLERY in the chair.
Mr. Nott, the secretary, read the Report, which stated amongst other matters that since the last meeting the attention of the directors had been addressed to the realization of the large amount of arrears then outstanding on the first and second calls. The strong appeal then made had been so far responded to that 8,125l, had since been paid in, and the total payments on the first call amounted to 18,9121., and upon the second to 16,8001., reducing the arrears upon both calls to 14,2871. Further sums from these sources might also be calculated upon, as the amount payable by the colonial shareholders on the second call is not yet due in this country, and the names of those still in default had been given to the solicitors of the company, who are taking active steps for the recovery of arrears. The third call, made on the 25th ult., had realized 9,387*l*.; the smallness of it being attributable to the pressure of the times. The directors had been compelled from a want of funds to suspend active operations in the colony, and that too at a time when the prospects of the company were even more encouraging than they have yet been. All the out-door works which had been finished have been found, after exposure to the vicissitudes of the weather, admirably solid and enduring. The experimental trips with the locomoenduring. The experimental trips with the locomotives, which, as mentioned in the last Report, had been made for short distances along the portion of the line already completed, have shown practically the very great advantages which the estates would derive from this means of transport, and the voice of the community had been universally expressed in favour of the undertaking. Moreover, when the last advices were sent from the colony, a bill, under the direct sanction of the Government of this country, was on the point of being introduced into the Court of Policy, guaranteeing to the company a minimum dividend of 6 per cent. on the capital expended, so soon as the works should reach to the village of Buxton, ten miles from the capital. The sum now required for the construction of the works to Plaisance, being the first section of the line, and five miles from Georgetown, will be 4,000*l.*, and a further sum of 10,000*l.* will carry them on to Buxton, five miles beyond where the guarantee will come into operation and surplus profits arise.

A letter was then read on the prospects of the undertaking from Governor Light, in which he stated his conviction that the Demerara would prove of essential benefit to the colony and a lucrative investment to the shareholders, besides announcing his intention of giving his warm advocacy to the proposed measure of a guarantee.

The statement of accounts showed that the liabilities to March 30th were 44,4281. This amount

and the arrears of calls at the present date amount to 29,900l.

The CHAIRMAN, in proposing that the Report be received, said he only had to reiterate the assurance contained in it, that unless the shareholders in default paid up, the directors would be placed in a very embarrassing position, and the company in impending difficulty.

The Report having been received, the retiring directors were re-elected.

Mr. Earle, of Liverpool, wished to know what measures had been taken to enforce the payment of calls in arrear. He had no sooner paid his last call than another had been made, and this he had hesitated to comply with.

The CHAIRMAN said that those who were in default had been handed over to their attorney, who had orders to take stringent proceedings. The calls on orders to take stringent proceedings. The calls on the shares of the directors were all paid, and they would see by the accounts that would at a future day be put in their hands, that the directors had not only paid their calls, but had borrowed from the bankers on their own responsibility.

Mr. RIDGWAY felt convinced that the non-payment of the last calls did not so much arise from the unwillingness as from the inability of the holders to pay up. It was a want of confidence on the part of certain individuals in Mincing-lane that had deteriorated their property and produced a panic in West Indian property. Mercantile houses had pledged the property of their constituents with certain colonial brokers, in order to keep the property in their hands until there was a favourable rise in the market. They had put afloat immense masses of waste paper, or, in banking parlance, had filed "pork upon pork," so that individuals had been alarmed as to the resources of British Guiana, the interest of which colony was only suffering under a temporary embarrassment

Mr. EARLE was of opinion that a good deal that was said about the capabilities of these British colonial possessions was all "humbug." He had a reservation of faith, however, in the future prospects of Demerars and its railway.

The CHAIRMAN gave an exposition of the present financial position of the company, showing that owing to the defalcation in calls there was a present increase of expenditure over receipts of 36,000l.; but with 5l. per share at present unpaid on the 7,000 shares and the 14,000l. guarantee, they would be able to complete the line to Buxton.

After some observations from Mr. MAYNARD, the solicitor, with respect to the proceeding against the defaulters, a vote of thanks was proposed and carried to the management here and at Demerara.

LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION.

The directors have just issued a special Report, which states that the directors, in their Report of February last, explained their course of policy during the monetary pressure. They recommended that no works should for the present be commenced, but they were not prepared to recommend an immediate and total abandonment of the undertaking, inasmuch as their confidence that the line would prove ultimately remunerative to the shareholders continues unabated and they were not without hopes that their efforts to obtain the co-operation of other companies to assist in its construction would be in time successful. They therefore proposed to defer all active operations for the present, to reduce the amount of expenditure to the minimum, and if the undertaking, at the expira-tion of a year or two, appeared doubtful in its prospects, then to call the shareholders together, and take such steps as should be thought most advisable. In the soundness of these opinions the committee appointed at the last half-yearly meeting for inquiring into the prospects of the undertaking concurred. The committee advised that the progress of the bill for the dissolution of the company should be suspended, and that the directors regret that this advice given by the committee was not followed by the promoters of the bill, and that consequently the funds of the company had been diminished to a serious amount. The directors considered they had fully carried out the recommendation of the committee, "that a thorough change should be made in the constitution of the Board," by the election of Messrs. Plews, Nicol and Gibb, in the room of Messrs. Houldsworth, Harper and Yates. They are aware of the strong feeling that the line should be immediately abandoned; and as in a former circular they stated it would be utterly impossible to carry out any undertaking of this nature without reciprocal confidence between themselves and the shareholders, they have now determined to submit to the consideration of the shareholders the simple questions, viz., "Are the shareholders in favour of the immediate and total

the consideration of the propriety of such a step for a period not exceeding two years?" The directors can have no interest apart from the shareholders; and although they see insuperable difficulties, on public grounds, in the way of the promoters of the dissolution bill obtaining the sanction of Parliament to such a measure, nevertheless they would withdraw opposi-tion to the bill, should a decided majority of the shareholders desire an immediate abandonment. Probably the course to be pursued might be as follows:—1. That the bill be confined to a simple abandonment of the undertaking, with all necessary clauses for carrying the same into effect. 2. That all clauses for carrying on the undertaking with a new directory should be withdrawn from the bill. The directors are anxious to ascertain the opinion of each shareholder forthwith on this question of immediate abandonment, in order that they may be in possession of the views of the proprietors as soon as possible.

#### DUBLIN AND DROGHEDA.

The Report of the Committee of Investigation, to which we briefly alluded in our notice of the adjourned meeting (see ante, p. 263), has received a published commentary from the Directors. We accordingly submit the principal points in each docu-ment, so as to give our readers the opportunity of judging between the committee and the board of directors.

The report from the committee commences by declaring that "the statement of accounts presented at the last half-yearly meeting do not show the outstanding claims up to the 31st of December last, upon directors acceptances becoming due, bankers' balances, with contractors' and tradesmen's accounts, amounting to 78,483*l.*, exclusive of liabilities for the current half-year. To meet such claims the committee estimated the assets at once available to amount to 61,733l., and, to be realized at a later period, a further sum of 17,569l., independent of the balance authorized to be raised on loan, of upwards of 7,000l. A very large outlay had been incurred in the construction of the line above the original estimate, attributed to the following causes: the alteration from a single to a double line of rails from Malahide to Drogheda; increased weight of rail; estimated toost of iron, 7l. per ton, the actual price was 12l. per ton; additional working stock, and the anxiety of the directors to open the line for traffic at the earliest period. No available balance for dividend equal to the amount set out in the half-yearly report could be realized, because it was principally composed of stock and materials on hand and debts due to the company; that it was necessary to provide funds from some sources, within the next eighteen months, to complete stations, buildings and works to accommodate the expected increased traffic on the completion of the Navan, Kells and Belfast Junction lines. The official expenditure in salaries amounts to 992l. 10s. They recommend a reduction, which would only necessitate an expenditure of 400l. a year. In consequence of the want of sufficient carriagesheds, upwards of twenty carriages and vans have been constantly exposed to the vicissitudes of the weather, and thereby the cause of increased annual expenditure. A committee of three directors and one or two shareholders should be appointed to consider and revise the several traffic tables for passengers and merchandise on an equitable scale, to induce all classes to avail themselves of the railway. time should be lost in providing moderate and permanent stations and warehouses along the line; the resident engineer should devote his entire time to the service of the company, at a salary of 2001. a year. They recommend the remodelling of the mode and extent of the solicitor's remuneration in future, the salary of 400l. per annum appearing to them excessive, and that his bills of costs, amounting to several thousand pounds since his appointment, should be classed, audited and duly vouched with proper receipts, in place of being left in their present state, and upon which there is an undischarged claim of 2,087t. They advise the settlement of three small accounts, standing over eighteen months. Since the year 1838, it seems that a sum exceeding 14,000*l*, had been paid to several bankers, under the heads of discount, interest and commission, on money raised by the directors for the use of the company, with a further sum of 18,088l. paid to shareholders previous to the opening of the line, thus imposing an expenditure out of capital of 32,088*l*.; that the raising of money on such expensive shares should at once cease. They regret that a loss of 4,622l. to the company by a failure should have arisen in a great measure from irregularity, and through the interference of the board of directors. Every legitimate means should be used to impress upon the directors of the Belfast

Junction Company the necessity of completing the Navan branch without delay. The committee ap-prove of the manner in which the accounts and cheques for the due performance of the ticket-agents' duties have been arranged, which guard against any loss arising from the neglect or misconduct of an agent beyond a single day's receipts without being detected; but at the same time suggest some more efficient and punctual plan for lodging the daily receipts, when received and checked by the cashier, and preventing his retaining in hand, on any grounds, any portion of the cash received, whereby similar losses to that arising from the defalcation of a former officer will be avoided. A practice also exists of allowing a reduction or rebate on all accounts for merchandise exceeding a certain amount, whilst the party who pays ready money receives no such reduc-tion. If the rates are brought to such an equitable scale as to induce parties to take advantage of the railway to transmit goods, this practice, so unsound in principle, should be at once put an end to.

"Your committee beg to offer for your considera-tion two modes by which the administration of your affairs might be greatly improved:—1. The Board of directors to be reduced to eleven, including chair-man and deputy-chairman. The responsible management of the railway to be entrusted to a person of high character, and to be selected for his experience of railway management, practice and traffic, at a liberal salary, with an executive committee of three directors, who should meet twice a week, supervise the secretary's, cashier's and all other officers' books, and require them to be daily posted, and closed weekly, prepare an estimate once a fortnight of all sums necessary to be drawn for by the board of directors for wages, articles and goods, and a sum of 150% to be allocated for their remuneration. The board of directors meet only once a fortnight; the reduced number to contain the names of three English gentlemen, who, by arrangement amongst themselves, might attend in rotation on all important occasions, and that a sum of 50t. be allocated to cover their travelling expenses, no further remuneration to be paid to the general board of directors. 2. Whilst the funds of the company are in so depressed a state, the Board might select, as deputy chairman, some shareholder duly qualified, who would undertake the responsibility of managing the railway, and making such suggestions from time to time as his experience would point out, and as soon as the funds improved sufficiently to afford remuneration, to resort to the first proposal.

"The capital represented by 5,714 original shares amounts to 411,408., and 5,673 new thirds to 136,152. total 547,560%, subject to dividend, but which, owing to forfeiture, produced only a sum of 519,236L. In addition to this amount there has been raised by loan 104,821., at 5 per cent., and by mortgage, 87,600., at 4 per cent., total, 192,421., leaving 7,579. to be raised. To complete the necessary additional buildings and permanent stations would require an estiings and permanent stations would require an esti-mated sum of 50,000l. Assuming the traffic only equal to that of 1847, being 44,096l., the committee estimate the working expenses at 28,849l., leaving a balance of 15,147l., which would give a dividend of 2½ per cent. on the capital stock of 600,000l., to which an addition of 5,000l. for carrying the mails may be expected." expected.

The Directors have submitted a few observations on the foregoing Report. With respect to the accounts, they state that it was not the practice of this or any railway company to publish a statement of their liabilities and unsettled accounts at the end of each half-year. The directors consider that it would not be prudent to pull down the wooden stations that have been erected for the purpose of raising per-manent buildings in their stead; nor do they think the present a proper time to build extensive stores along the line to accommodate traffic which has not yet arisen. During the ensuing year they intend to erect a shed for carriages. The 50,000*l*. mentioned for completing the buildings will not be required for ten years to come; it would only be necessary in case the traffic were increased to three times its present amount. The directors consider that the reductions suggested by the committee in some cases could not be carried out, while in several other cases where the committee think it impossible to make reductions, the directors are of opinion that considerable reductions may be made without impairing the efficiency of the establishment; that it is possible to diminish the expenditure as compared with the last half-year at the rate of 3,000*l*. per annum; and they have already made reductions to the extent of 2,600*l*. per already made reductions to the extent of another annum, and they propose to make further reductions to the amount of about 600ℓ. per annum, by dispensing with the services of some officers. The cur-

pensing with the services of some officers. The current half-year will only reap a portion of the benefit arising from these reductions, in the working ex-

penses. penses. It also unfortunately happens that the receipts for some time back have been rather less than those of the corresponding period of last year, owing to the stagnation in trade. The directors think it fair to inform the shareholders that they cannot expect any considerable increase of the nett profit for the current half-year as compared with the last half-year, but they do anticipate a large increase to these profits during the latter half of the year, in consequence of the expected opening of the lines to Dundalk and Castleblaney next August.

RAILWAY SPRINGS .- Messrs. Blake & Parkins, of Sheffield, have recently registered a triple bearing spring for carriages on railways and common roads. It consists of three inverted curves; two of these curves unite and flow into one another, and have, consequently, three bearings; the other curved spring is placed lower, and bears with its ends against the central swell part of each of the upper curves, to which it is attached by bolts. By this arrangement, elasticity and great strength are obtained with a few light plates. These improvements, they say, com-bined with the quality of the steel and workmanship used, render the spring lighter than that of the old form, and at about one-third less cost.

POPULATION INTERSECTED BY THE MANCHESTER, SHEFFIELD AND LINCOLNSHIRE.—It commences at Manchester with a population of 383,390; branches to Ashton-under Lyne, population, 46,304; passes through Sheffield, population, 78,176; Worksop, population, 6,197; Retford, 2,680; Newark, 10,218; Lincoln, 16,000; Market Rasen, 2,022; Gainsborough 6,948; Glanford Brig, 2,600; and ends in a fork at Barton-on-Humber, with a population of 3,475, opposite Hull, and at Great Grimsby, with 2,700, opposite

HIGHLAND AND AGRICULTURAL SOCIETY .- At the meeting on the 5th inst., Mr. Stephens called attention to the drainage of RAILWAY SLOPES. He remarked, says the Scottish Railway Gazette, that every one who had travelled along railways may have observed that large masses of earth had slipped down the face of the deeper cuttings, and on inquiring into the particulars of such accidents they will find them to have arisen from the action of water on retentive clay. A common method adopted by the railway people in draining cuttings is to form open channels in a slanting direction down the face of the custing, in narrow parallel lines, terminating in an open channel, which conveys the water to the drain by the side of the railway. Another method consists of making drains with tiles under ground from the spots at which the water is seen to issue to the above-mantioned drain. Notwith the distributed in the contraction of the spots at which the water is seen to issue to the above-mantioned drain. mentioned drain. Notwithstanding these drains, landslips still take place, and do not excite surprise, for such a mode of draining only attempts to struggle with the effect, and not with the cause, of the acciwith the effect, and not with the cause, of the accidents. The water should be prevented doing any harm at all; and this is quite practicable. The ground at the top of all railway cuttings exists in one of three states,—sloping to the top of the cutting,—on a level with it,—or inclining away from it. When rain falls on the sloping ground, it will either run down the face of the cutting, carrying away the replaced soil with it, or be absorbed by a porous stratum, by which it will be led to appear as a spout or spring of water near the top of the face of the cutting. In the former case, an open channel formed a little way above the top of the cutting will prevent the water running down the face of the cutting and, in the latter case, an under-ground drain through the porous stratum will prevent the water going to the cutting. When the rain falls on level ground, it descends perpendicularly, and, on finding an inclined porous stratum, will appear at a lower level in the face of the cutting. The obvious remedy for this case is to cut an underground drain into the porous stratum and carry away the water where it can do no harm. On ground inclining away from the top of the cutting, the rain cannot affect the face further than what falls directly upon it; but on reaching level ground and finding porous strata, it will find a way to the bottom of the cutting, where it may bring down on a level with the railway a large mass of the superincumbent clay. Here, also, is the obvious remedy of making an underground drain into the porous matter, and carrying the water elsewhere. In regard to draining the ground on which embankments are formed, where there is a ditch or a rivulet, the conduit forms a very good outlet for any superfluous water that may have percolated through the porous material of which the embankment may be formed but where there is no need of a conduit, the part of the ground occupied by the embankment should be furnished with well formed drains to carry the water quickly away to the adjacent ditches. In neglecting to provide such drains, large landslips from embankments have not unfrequently occurred.

## OXFORD, WORCESTER AND WOLVER-

XFORD, WORCESTER AND WOLVER-HAMPTON RAILWAY.
CALL FOR EIGHTH INSTALMENT of 5L per Share,
making 42 culled up per Share,

PORT OF GREAT GRIMSRY

## NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

PORT DE GREAT GRIMSBY.

A VIS AUX NÉGOCIANTS, AUX AR-MATEURS ET AUX CAPITAINES DES NAVIRES ÉTRANGERS.

Les droits de tonnage sur les Navires qui entrent les bassins à Great Grimsby, ont été reduit à 10 sols Anglais par tonneau de registre.

On compte que les nouveaux bassins seront prêts à recevoir les vaisseaux vers la fin de l'année 1849.

Ces bassins offriront des avantages bien decidés sur la plupart des autres ports de Mer de l'Angleterre en étant accessibles à toute heure, excepté pendant une couple d'heures à la marce basse, en tems de maline.

Le Havre présente un abri en tout tems. Les communications par l'entremise des Chemins de Fer de MANCHESTER, de SHEFFIELD, et des Lignes du comté de LiNCOLN, seront ouvertes avec tous les districts manufacturiers et avec toutes les parties de la Grande Bretagne.

## EASTERN COUNTIES

## NORTHERN AND EASTERN RAILWAY COMPANIES.

At a SPECIAL GENERAL MEETING of the Share-holders of the Eastern Counties Railway Company, held pursuant to Advertisement, at the London Tavern, Bishopsgate-street, on Tuesday, the 2nd of May 1848, it was resolved :-

resolved:—
That the sum of 675,920l. shall be raised by 67,592 shares of 10l. each, which shall be entitled to a minimum dividend of 6 per cent. per annum, in preference to the dividends payable on the Consolidated Stock of the Company, and when a dividend exceeding that rate shall be payable on the said Consolidated Stock, the said new shares shall be entitled to participate rateably and proportionately in such higher rate of dividend.
That each of the said 10l. shares shall be paid up as follows, that is to say.—

follows, that is to say,-

Per share.
24. 10s. on the 25th day of May 1848;
24. 10s. on the 25th day of July 1848;
24. 10s. on the 25th day of September 1848;
24. 10s. on the 25th day of November 1848.

21. 108. on the 25th day of November 1848.

That the Directors be authorized to issue such new shares rateably amongst the Shareholders of Consolidated Stock in the Eastern Counties Company, and Holders of 5 per cent. shares in the Northern and Eastern Railway Company, who shall be registered on the 6th day of May inst., in the proportion of one 102. share for every 1002, of capital so held, and generally to take all steps in reference to such issue, and to obtaining payment of the deposits and to the issue of certificates.

certificates.

That the Directors be authorized, at such times and in such manner as they think fit, to sell and dispose for the benefit of the Company all such of the said new shares as shall not be accepted by the proprietors to whom the same shall be allotted.

shall be allotted.

That the Calls paid on the said shares shall carry interest at 6 per cent, per annum from the times when the said Calls shall be paid, subject as after-mentioned.

That in case any holder of such new shares, as aforesaid, shall neglect to pay punctually any one of the said instalments on any of his shares, on the respective days herein-before mentioned, he shall be charged with interest at the rate of the same than the rate has a proper part and the part of instalments. ments on any of his shares, on the respective days hereinbefore mentioned, he shall be charged with interest at the rate
of 5 per cent. per annum upon the instalment or instalments
in arrear, until duly paid; and furthermore so long also as,
and during the time, such instalment or instalments shall be
in arrear and remain unpaid on any of his shares, the instalments he shall have paid to the Company, on all the shares
held by him, shall cease to carry interest, and no interest
shall accrue or become due thereon, until his arrears of
Calls on each and every share held by him shall have been
duly paid and satisfied.

That all parties paying up their shares in full, on or before
the 1st day of June, shall be allowed a rebate or discount on
the Calls at the rate of 6 per cent. per annum.

That this Meeting do approve and sanction the agreement
of amalgamation proposed to be made with the Norfolk
Railway Company, and do authorize the Directors to place
the Common Seal of the Eastern Counties Railway Company
thereto, and to take and adopt all such measures in Parliament, and otherwise, as they think fit, for the purpose of
more effectually ratifying the said agreement.

That this Meeting do approve and sanction the agreement
of amalgamation proposed to be made with the Newmarket
Railway Company, and do authorize the Directors to place
the Common Seal of the Eastern Counties Railway Company
thereto, and to take and adopt all such measures in Parliament, or otherwise, as they think fit, for the purpose of more
effectually ratifying the said agreement.

That the thanks of the Meeting be given to George Hudson,
Esq., for his able and impartial conduct in the chair.

GEORGE HUDSON, Chairman.

DAVID WADDINGTON, Deputy Chairman.

GEORGE HUDSON, Chairman. DAVID WADDINGTON, Deputy Chairman. By order, C. P. RONEY, Secretary.

Bishopsgate Station, May 3, 1848.

SATURDAY, MAY 6.

MR. STRUTT'S FAREWELL PERFORMANCE, AND ITS CONSEQUENCES.

On the publication of the Commissioners strange Order and Minute on the TAW VALLEY GAUGE, we noticed the perverse character of their decision in that matter; and expressed the opinion that it would not be submitted to by the suffering party without some attempt being made to expose its injustice and to refute the fallacy of the arguments on which they professed to have founded a sentence which would have the effect of causing two breaks of gauge within a distance of 33 miles,—with the de-clared motive of "obviating as far as possible the inconvenience of a break of gauge. Taw Valley Company, it appears, have taken the course the expediency of which we then suggested; and are preparing to apply to Parliament for a reversal of the unaccountable order of the Railway Board, by the insertion of clauses repealing its operation in the two leasing bills promoted on behalf of that concern and of the Exeter and Crediton. In support of this appeal, the Directors have drawn up for general circulation statements of their case; in which the hardship to the company of a sentence which threatens the very existence of their property, and the injurious nature of its effects on the district in question, and the futility of the Commissioners' reasons for an act which hits in the teeth all the parliamentary decisions of 1846 and 1847, with regard to the Western railway system-are pretty clearly shown. One of these remonstrances is in the form of a pamphlet; and gives a complete summary of the origin, progress and present aspect of the affair, which, as here exhibited, will be found to give to the last measure for which Mr. Strutt was responsible, a character more censurable. perhaps, than that of any of the previous acts of the Board while he presided over it. is proved that the practical result of this order would be destructive to the railway and injurious to the county; it is shown that in framing it, most of the essential features of the case have been either slighted or mistaken, and others wholly overlooked; - and facts are arrayed against its execution, of such weight and number, that we do not see how the appeal can be resisted, unless Parliament shall determine to hear nothing more on the subject. This determination, we conceive it will not be apt to take, when it is shown that the proceeding of the Railway Board, as we have said, directly contradicts decisions of the former House, which happen to have been given, on the questions involved in this case, with more point and after a more deliberate inquiry than is usual in such instances.

To this full explanation of the Taw Valley affair, the Directors have added a short dissection of the arguments and statements of the Minute, in which the clauses objected to are successively cited, and answers given to them in paragraphs ranged in an opposite column. This paper is well drawn up, though with less order and completeness than the pamphlet; and disposes very handsomely of the Minute, within the compass of a few pages. Besides these two papers, the Directors circulate a third appeal, from the residents of the district threatened by the sentence with a railway derangement that would be fatal to its traffic. This, too, although less correctly written than the others, contains a good many strong facts, and some pungent remarks, conveyed in a homely style; it is just such a composition, indeed, as one might expect from the "farmers and miners of Devon and Cornwall," who here come forward to protest

vigorous statement, more conversant with facts and intent on upsetting an absurd sentence which will damage important interests, than attentive to the niceties of grammar. Altogether we have rarely seen a stronger case presented: and it is quite in keeping with the previous tenor of the Railway Board's conduct, to have made one of the few practical exercises of power that have fallen into its hands, the just occasion for a protest so forcible and indignant as this Taw Valley decision has called forth.

These are all the remonstrances that have so far been made public:-but, if we are rightly informed, they are not the only ones which Mr. Strutt's concluding performance has provoked. Strong representations, from a quarter where there exists both the right to take a lively interest in this question, and some power to make its interest available, are rumoured to have been directly transmitted to the responsible Commissioner and to other members of Her Majesty's Government more immediately connected with the Duchy of Cornwall. And if there be any ground for the general suspicion that the order has been too much biassed by the personal efforts and persuasions of one noble earl, who is known to be a strong partisan in this question, it may turn out that in yielding to this bias the Commissioners will have run their heads against an interest equally powerful in an opposite direction. It need hardly be said that no such influence, in whatever way, ought to determine a sentence which should be framed on public and just grounds solely. But if it should happen that this mistake has been committed, so as to produce an erroneous decision, it will not be amiss that its effects should be counteracted by any counter influence that may coincide with the public interests, as well as those of the suffering railway party.

The result of this affair, if it be looked into by Parliament as it deserves to be, will come pretty strongly to strengthen the view, lately presented in its debates, of the propriety of doing away with the Railway Board altogether. Surely it will hardly be thought desirable by any number of sane men, in times like these, to continue to tax the suffering public for the pay of men whose only practical doings are such as appear in this notable business. We trust, therefore, that it will be duly examined; not only because of the necessity of redressing the great wrong which the Commissioners' order would inflict on the railways affected by it, and of reversing a sentence at once highly injurious to the western counties and contemptuous to Parliament,-but also because of the light it throws on the general fitness of the Railway Board to be trusted with any decision whatever affecting the property vested in large and useful enterprizes, and the internal intercourse of the country. For such an examination the several documents we have been describing-and which we shall add are now published by Messrs. Smith, Elder & Co., of Cornhill-will supply as strong prima facie grounds as have ever been adduced for the reversal of an act of official perversity or indiscretion.

## Railway Literature.

The Scottish Railways and Shareholders' Companion. By an Accountant.

This is an unpretending, useful little manual, embodying the general details of railway business, and the statistics of all the Scottish lines, with the appendage of a very clearly executed map (by Messrs. Johnston) showing their connexion. We extract from the general remarks the following observations on the Government purchase of railways:—

Cornwall," who here come forward to protest "Several rumours have gone abroad of late that against the Commissioners' decision: a rough Government contemplate the purchase, at a fair

valuation, of all the railway property in the kingdom, and to work it under their own superintendence; nay, a proposition, it is asserted by a leading journal, has been actually laid before them, embracing, under clear and distinctly defined heads, the principles upon which this transference might be effected; but there is little probability of such a plan being either entertained or carried out. Its supporters appear to have very visionary ideas of the effect of such a measure on the monetary value of their property, and imagine that in exchanging their share certificates for Government consols, these securities would not be affected by the accession of such an enormous anount of debt. Laying this proposition, then, aside as visionary, we come to consider the probability of Government interfering to any extent with their management and control; but, notwithstanding all the threats of Mr. Strutt and the Railway Commissioners, very few apprehend danger from this source. The most perfect security is afforded to the public by the regulation already referred to, of limiting the dividend to a certain amount, and fixing the rates at which goods and passengers should be carried; and it is vexatious that, with such restrictive measures in full operation, such agitation should have been raised against railway property on the ground of its monopolizing tendency. While passengers were obliged, in former times, to travel in the depth of winter on the outside of a coach, or on the deck of a vessel, exposed to all the vicissitudes of weather, no exertion was made by a humane public or the Legislature to provide additional comfort to the poor traveller; but no sooner are railways introduced, securing a greatly increased rate of speed with diminished expense of travelling, than all the sympathies of the public are let loose, and legislative enactments provide to the traveller what kind of carriage shall be provided for him, and the degree of comfort he is to enjoy. Coaches in former days might upset—vessels sink beneath the ocean, destroying their hundreds of passengers; but no one dreamed of bringing these events before the Government. Not so with railways. Doomed to be attacked in every quarter, an accident is most eagerly laid hold of by the opponents of the railway system, and forms another of the reasons adduced for legislative interference. Travelling by railway shows an immense degree of superiority in regard to safety of life and property, and it is very gratifying to find the public evince their confidence in them by the continued increase of the passenger

The compiler is said to be in the service of the Scottish Central Company.

#### Anecdotes of the Electric Telegraph.

This is the first of a series of shilling books, issued by Mr. Bogue, entitled, 'London Anecdotes for all Readers;' and being suitable for railway reading-the subject forming a remarkable feature in the system-we therefore introduce it to our readers. Railway travellers, we believe, find continuousrea ding on a journey not quite agreeable or practicable, and are induced to have recourse to the flying sheet and other ephemeral prints. Those who desire something more than a pastime will find many curious facts brought together and amusingly told in this brochure. The great diversity of use of the telegraph as an agent of communication, is fully exemplified; but we must content ourselves with a single quotation, for the use of those who do not read:-

"Telegraph-posts indicators of Time and Speed.—
To calculate the speed at which you are travelling on
a telegraphed railway, multiply by two the number of
telegraph posts you pass in a minute, by four those
you pass in half a minute, or by eight those you pass
in a quarter of a minute, and the result in each case
will be the number of miles you are then travelling
per hour—the posts being arranged thirty to a mile."

## Proceedings of Bocieties.

Institution of Mechanical Engineers.—April 26.—Quarterly Meeting, Birmingham.—Mr. G. Stephenson in the chair.—The first paper was 'On the Fitting-up of Cylinders for Locomotive Engines.' In the absence of Mr. Beyer, Mr. Fothergill proceeded to describe the machine introduced at the last meeting. Its object is to attain a uniformity in the make, bore and general size of cylinders, so that in the event of an accident to any they may be replaced by spare ones. The bed upon which it is placed is that of a common slide lathe, sufficiently long to carry a double set of driving gear, and admitting of the sufficient

traverse of the boring carriage. The boring bar is supported by three bearings, the former of which is stationary, and firmly fixed to the bed, to resist the and pressure of the cut, when boring. The latter are end pressure of the cut, when boring. The latter are fixed upon the carriage, and travel with it along the boring bar. To cause the boring carriage to move edgeways, a train of wheels descends at the back of the machine to give motion to the shaft, and is transfixed by means of a feathered worm to the worm-wheel and pinion, both of which move loose upon a fast stud of the carriage; this same stud serving as a fulcrum for a lever carrying upon two opposite projections the intermediate pinions. To hold the cylinders while boring, the top of the carriage is formed in a kind of square panel, by means of two plates, planed on the inside and fastened to the sides of the bearings, and two cross stretchers. These latter are also planed upon their inner faces, and are secured to the sides and top of the boring carriage, and have holes bored in them when secured in their places by means of the bend on the bar, cor-responding in diameter to the turned projecting ends of the cylinder to be bored. This arrangement is for the purpose of securing uniformity between the external and the internal surface, so that the cylinder be fairly perforated, without the dangerous fault of thick and thin sides.—Mr. M'Connell bore testimony to the advantages of a uniformity of cylinder. An accident occurred to one of the cylinders in use on the line with which he was connected. An order was forthwith despatched to Manchester, and in three days he had another which fitted exactly the place occupied by the other.—The members generally concurred in commendation of the machine.

'On the Formation of the Teeth of the Drivers of Pin-Wheels.'—Mr. Kintrae read a paper contributed by F. Basforth, M.A., Fellow of St. John's College, Cambridge. The paper was accompanied by a model. Beferring to Prof. Willis's demonstrations, that the proper form for the teeth of spur wheels is a com-pound of portious of epicycloids and hypocycloids, he remarked that no self-acting machinery had been applied to give those forms to metal wheels when mounted on their axles. The principle of the invention submitted to the Institution was the well-known one, that if the pins be supposed to be mathematical lines, the proper forms of the teeth of the driver will be portions of the epicycloids, described by a point in the circumference of the pitch circle of the pin-wheel, when caused to roll on the pitch circle of the driver The tracer being replaced by a cylindrical cutter this, as it revolves on its own axis, will form with accuracy the interval between the two teeth of the driver. By turning the wheel to be cut through the proper angle, the interval between the next two teeth will be formed, and so on till the whole be completed. He proposed that the pins should be formed in two parts; a solid cylinder surrounded by a tube of iron, and when the tooth of the driver came in contact with the outer case of the pin, it would revolve through a small angle, and thus all abrasion of the teeth of the driver would be avoided. -Mr. M'Connell was unable too see wherein the model before them differed from the plan now in use. In fact it was nothing more than the old cog and drum plan. Probably the idea occurred to the inventor without any knowledge of the existing machines, and if so he deserved commendation.—
Mr. Cowper could not entirely agree with Mr.
M'Connell. The teeth by this machine were made by a given mathematical rule. That was the only self-acting machine he had seen that struck a real epicycloid.-Mr. Fothergill was unable to see anything in the machine practically different from those longer in use. If, however, the inventor was an amateur, great credit was due to him for the inven-tive ability he had displayed.

'Craddock's Boiler and Condenser.'—Mr. Craddock, of Birmingham, read a paper explanatory of their advantages in point of economy and in prevent-ing explosions. The conclusions said to be arrived at by the experiments made with this boiler are—an increased extent of grate surface, a slow state of combustion, great extent of heating surface for the fire to act upon, increased facility for generating the quantity of steam required, water free from deposit for the use of the boiler, removal of the atmosphere from the exhaust-side of the piston, insurance of safety from explosion, great facility for generating the steam under higher pressure, by which the expansive principle is much extended, diminished steam blowing away at the safety-valve, and self-adjusting means for keeping the steam at a uniform pressure, whatever the pressure desired may be. The boiler under notice was estimated to reduce the

per square inch. The removal of the atmospheric pressure from the exhaust side of the piston, and the power of using high-pressure steam with safety, which is claimed for this boiler, yield an economy of 38 per cent. Considerable discussion ensued upon the reading of this paper. The principal objection to the conclusions said to be arrived at was the absence of any definite and satisfactory test, in the performance of actual work. Its powers had been tested at Smethwick, but it was objected that no comparative experiment between the power of the single and the double cylinder boilers had been made It was argued by Mr. Crampton that the only advantage which a double cylinder boiler possessed over the single one, was a greater steadiness; but this did not compensate for the loss of power which he considered the use of the double cylinder caused, by the exhaustion of the steam from the one cylinder to the other. He had made some elaborate experiments on that very subject some years ago, and his conclusions then were that the loss amounted to 14 per cent .-Mr. M'Connell remarked that he was somewhat sur prised that, after the length of time which Mr. Craddock had devoted to the subject under dis-cussion, he had not arrived at some accurate data. and had not made up his mind as to the real capability and the comparative advantages of his boiler. Mr. Craddock, in reply to these and some other objections urged, remarked, that although he had certainly devoted much time to the practical consideration of the subject, he was not wholly engaged on that invention, and therefore Mr. M'Connell's remarks did not apply to him. He so far agreed with Mr. Crampton as to the general principles affecting double and single cylinders, but he maintained, and practical experiments had proved, that his invention diminished the risk of explosion, thereby admitting a high pressure of steam; the great atmospheric condensing surface obviated the necessity for fresh supplies of water, thus diminishing the volume of the boiler, and keeping the water always pure.-After some further conversation, Mr. Jackson proposed that, in order to test the relative value of the single and double cylinders, and set that question at rest, at least so far as that society was concerned, Mr. Crampton be requested to prepare a paper and designs on the subject, to be laid before the members at a subsequent meeting.—This was carried unanimously, and Mr. Crampton consented to

comply with the request.

'A Hydraulic Starting Apparatus.'—Mr. Fothergill read a paper, contributed by Mr. Jackson,
descriptive of a hydraulic apparatus for connecting heavy machinery, and disengaging the same from the prime mover, without producing those sudden shocks which the use of ordinary clutchers occasions. principle of the machine is-A level pinion is supposed to be connected with the engine or other prime mover, and gears into a bevil wheel, to which is cast a rim, which is turned internally. The wheel turns loose upon a shaft, being lined with a brass bush; the shaft, however, is provided with four projections, through each of which a hole is bored, the centre lines of these holes lying in one horizontal plane, and meeting in one common central chamber. In these holes four rams, which are respectively cast of one piece, with blocks, are fitted, the blocks being lined with copper, and turned so as to fit the internal surface of the rim. Supposing that the machinery which is assumed to be connected with the shaft required to be started, hydraulic pressure is applied to the under rams by pressing the ram which is in the shaft down upon a column of water, also contained in the shaft and the common central chamber, by means of a fly-wheel, which, with its nut and a screw, forms one piece with the ram—this ram, the nut and screw being guided and supported by a brass box, which is screwed into the upper end of the shaft. It is evident that on the ram in the shaft being thus pressed down, the under rams will gradually and simultaneously press the segments against the internal surface of the rim, with a power proportionate to the force applied at the circumference of the fly-wheel, until the friction produced by such pressure shall be equal to the resistance of the machine to be set in motion. machine will therefore gradually assume the velocity which, according to the speed of the driving-shaft it ought to have at the same time that any extraordinary momentary resistance, such as might be supposed to occur occasionally in rolling-mills, or other machinery of a similar nature, instead of caus ing the wheel to break, will have a tendency to make the rim to slip on the segment until the obstacle he removed or overcome. In order, however, that too great a pressure may not be applied to the lower rams, the upper one and the screw are perforated with a small opening, the extremity of which is closed danger from explosion caused by a large volume of with a small opening, the extremity of which is closed by a raive acted upon by a spiral spring, encased in the brass box, so that if at any time the pressure ex-

erted upon the rams should exceed that to which the spring is regulated, the water would lift the valve, and escape through it into the box, and through an opening in the lid of the latter into the atmosphere, until the balance of the pressure was again esta-blished.—Mr. M'Connell wished to know whether there was any other means than that supplied by the safety-valve, if he might so call it, whereby the maximum of pressure could be ascertained .- Mr. Fothergill remarked that in fact the machine was a selfacting regulator. A certain amount of resistance was required to make the rains work, and whenever the resistance became too great the spring and the valve carried off the superfluous power.—It was remarked by several of the members that the cone seemed to answer every purpose which this machine was intended for. But it was argued by Mr. Fothergill that Mr. Jackson's machine removed the greatest objection to the use of the cone, viz., the backward pressure. By the present invention the pressure was confined altogether to the direction in which it was wanted. It was resolved to print the communication and lithograph the diagram for the use of the members. (To be continued.)

#### Official Bapers.

THIRD REPORT FROM THE SELECT COMMITTEE ON RAILWAY BILLS.

The Select Committee of this session, empowered to report their opinion from time to time to the house, have made further progress in the considera-tion of the matters referred to them, and have agreed to the following additional Report :-

Your Committee, in their last Report, recommended to the house that measures should be taken for strictly enforcing, with regard to the bills of this session, the Standing Orders adopted in the last session of Parliament, on the recommendation of the committee on railway bills. They would now submit to the house some considerations with reference to the same subject, to which, in their opinion, the attention of the committee on the bills ought to be specially

By the Standing Order No. 126, it is required,-" That By the Standing Order No. 126, it is required,—"That no powers of purchase, sale, lease or amalgamation shall be contained in any bill for the construction of a railway, unless the same shall have been suspended in the session of 1847." And by the Standing Order No. 127 it is further required,—"That no powers of purchase, sale, lease or amalgamation shall be given to any company or companies unless previously to their application to Parliament for such purpose, they shall have proved, to the satisfaction of the Commissioners of Railways that they have reprocisely the Commissioners of Railways, that they have respectively paid up one-half of the capital authorized to be raised by any previous Act or Acts, by means of shares, and have expended for the purposes of such Act or Acts a sum equal

A question has arisen under these two Standing Orders as to the proper construction to be placed upon the words "powers of purchase, sale, lease or amagamation." It appears to your Committee that these Standing Orders should be considered applicable to any railway company proposing to take powers of purchase, sale, lease or amal-gamation, with reference to any other undertaking carried on by a public company, under an Act of Parliament, whether railway, canal, dock or other public work; and also to any public company, whether for canal, dock, or other public work, proposing to take powers of purchase, sale, lease or amalgamation, with reference to any railway. It may be desirable that, on the next revision of the Standing

may be desirable that, on the next revision of the Standing Orders, these words should be rendered more clear.

It seems also desirable that the 127th Standing Order should be so amended as to prohibit such powers of purchase, sale, lease or amalgamation being made applicable to works to be authorized by Acts of future sessions, and that when they shall be proposed to be applied to works intended to be authorized by bills of the same session, it shall be proved that the company have paid up one-half the amount of their capital including in such amount the the amount of their capital, including in such amount the capital proposed to be authorized by such bills. It appears that in those cases in which railway companies propose, by bills of the present session, to take such powers as applying to works proposed to be authorized in this session, they have actually paid up the amount of capital here suggested. There is one case, that of the bill entitled Dundee and Porth Abere is one case, that of the Bill chittee Plandec and Perta thease of Dundee and Arbroath, in which the company propose to take powers to lease all undertakings for which they may obtain power by bills of future sessions. Your Committee are of opinion that a power so repugnant to the spirit of the Standing Order ought not to be allowed to remain in the bill.

With reference to the same Standing Order, your Committee think it right to observe that, by an Act of last session, the Aberdeen were empowered to amalgamate with the Great North of Scotland, and that they now propose the Great North of Scotland, and that they now propose thefore such amalgamation has taken place) to take powers by a bill of this session to raise additional capital. Your Committee are of opinion that, in conformity with the spirit of the Standing Order, a clause should be inserted in the bill, requiring one half the capital proposed to be authorized by the bill to be paid up previously to amalgamation, and that it may also be desirable to make a provision in the Standing Orders for necting such cases in future.

Standing Orders for meeting such cases in future.

Your Committee would further suggest, that it is desirable that committees on railway bills should in future give increased attention to the money clauses of such bills, and more especially that they should refuse to allow any power of raising money unless the general application of such money is set forth in the bill. With reference to this sub-ject, they would call the attention of the house to the follow-

Digitized by GOOQIC

ing bills, which appear to contain irregular or undefined powers of raising money, or other provisions which require special inquiry by the committees.

special inquiry by the committees.

Edinburgh and Glasgow, No. 1 (Amendment of Acts and Branches, Alterations of Line and Stations, &c. Increase of Capital); No. 2 (Amendment of Acts, New Branches, Abandonment of Branch, and Increase of Capital). By each of these two bills it is proposed to raise 300,000% "for general purposes," the application of the money being altogether undefined.

Great Northern Amendment and Deviations (Deviations in Linealphire, Notte &c.). By clause 19 power is pro-

or the content amenoment and Devintions (Teviations in Lincolnshire, Notts, &c.) By clause 19, power is proposed to be given to the holders of shares in the Great Northern, to divide each share into two equal haif-shares, and a dividend of 6 per cent. is guaranteed on one of these half-shares, at the expense of the other half-share.

London, Brighton and South Coast (London Bridge and Northeast Steiners artheasts to wheath to the best

New Cross Stations; authority to subscribe to Steam-boats, &c.) In this bill a power is taken to raise a capital of 300,000L, and a corresponding loan for purposes not specifled in the bill.

Manchester, Sheffield and Lincolnshire (Crossing of Sheffield-street). In this bill a general power is inserted for mising money to pay off the debts of the Macclesfield Canal, and of the Peak Forest Canal, the sums not being stated. Shropshire Union and Canal (Extension of Time for Purchase of Land, Alteration of Line, Purchase of Shropshire Union and Canal (Extension of Shropshire Canal). In this bill a general power is inserted for raising money to pay off the debts of the canal, no sum being stated. Whitelaven Junction (to Alter and Amend the present Act, and to raise a further sum of money.) A general power is proposed to be taken for indemnifying directors and proprietors, out of the assets of the company, for any liabilities which they may have incurred on behalf of the company; the bill contains no distinct recital of the facts, or specifithe bill contains no distinct recital of the facts, or specifi-cation of the amounts.

Manchester, South Junction and Altrincham (Enlarge-

ment of Stations in Manchester, Improvement of Road Approaches' and Amendment of Acts.) The estimate de-posited for this bill amounts to 51,000%, but the capital proposed to be authorized under the bill is 250,000/... and the bill does not define the appropriation of this large excess of

capital.

It appears desirable, also, that the attention of committees on railway bills should be directed as well to the mode in which it is proposed to raise capital as to its amount and appropriation. It seems to have been a common practice for railway companies to take a power of raising capital by shares "on such terms as may be agreed upon," or by similar general words; and under these general words they would be enabled to issue shares either with guaranteed dividends or subject to other peculiar conditions, a power which, in the opinion of your Committee, ought on no account to be granteed without its appearing distinctly in the bill, and without the special attention of the committee on the bill having been called to the subject. Your Committee would therefore recommend that, in future, committees on railway bills should direct their special attention to the mode in which it is proposed to raise the share capital, and should require it in each case to be clearly and strictly defined in mine stoning direct their special attention to the mode in which it is proposed to raise the share capital, and should require it in each case to be clearly and strictly defined in the bill. Another subject to which the attention of your Committee has been directed is the power frequently taken under railway bills to enable one railway company to subscribe to the undertaking of another. Although this practice is by no means free from objections, there appear to be some advantages attending it; and your Committee are not prepared to recommend that it should be discontinued in all cases. They are, however, of opinion that it should be limited to a power of subscription by one company to the undertaking of another, and that a company should in no case be permitted to purchase in the market the shares of another company. They are also of opinion, that much evil has arisen from the practice of railway companies subscribing to or purchasing shares in other undertakings without authority, in the hope that they should afterwards be able to obtain parliamentary sanction for these illegal proceedings. This has been done in some instancts, with the view of supplying funds to another company which was unable to raise capital for the completion of its undertakings; in others, with the more objectionable intention of overruing or controlling the proceedings of an independent company. or controlling the proceedings of an independent company. The attention of your Committee has been more particularly called to the following bills, in which it would appear nary cause to the following bills, in which it would appear to be proposed to give parliamentary sanction to proceedings of this kind:—Taw Vale and Dock (Lease to the London and South-Western); London and South-Western, Excter and Crediton, Taw Vale and Dock, and Bodmin and Wade-bridge Arrangements; Direct London and Portsmouth; Edinburgh and Glasgow; Airdrie and Monklands Junction (Amendment of Acts) (Amendment of Acts).

Considering the practice which appears to have prevailed upon this subject, your Committee are not prepared to express a decided opinion that in no case in the present session piess a decided opinion that in no case in the present session should any subsequent sanctions be given to these unauthorized proceedings; but they would recommend that the committee on the bill should, in each case of this kind, carefully inquire into the facts, and in case they should be of opinion that the bill ought to be allowed to proceed, they should specially report their reasons to the House. They would further recommend that, in future sessions, no subsequent sanction should be given to such transactions.

Chester and Holyhead, London and South-Western (Acts Amendrent), London Brighton and South-Western (Acts

Amendment); London, Brighton and South-vestern (random Amendment); London, Brighton and South Coast; Furness These bills contain provisions for the establishment of steamboat arrangements by the above-mentioned companies. which appeared to your Committee to involve principles requiring investigation on the part of the Board of Trade and the Railway Commissioners. These Boards have accordingly, at the wish of your Committee, concurrently considered the provisions in question, and have addressed a

joint report thereupon to the chairman of your Committee. With respect to the first of the above-mentioned bills, the Board of Trade and the Railway Commissioners suggest that the Chester and Holyhead should be allowed to establish and conduct a steamboat communication between

Holyhead and Dublin; and they further recommend that the proposed powers in reference to steam-vessels should only be granted to the railway company for a limited period of years, so that Parliament may have the opportunity of reconsidering the question, in case any unforeseen inconvenience should result from it. They add, that there appears to be no adequate reason for authorizing the railway company to employ any other vessels than steam-

venience should result from it. They add, that there appears to be no adequate reason for authorizing the rail way company to employ any other vessels than steam-vessels; and they suggest, therefore, that the expression "steam or other vessels" should be altered throughout into "steam-vessels." Your Committee, having considered the grounds stated for these suggestions and recommendations, are prepared to concur therein; and, with regard to the duration of the proposed power, your Committee think that it should be limited to fourteen years.

With regard to the Furness, the eighth clause, which authorizes the company to expend 25,0002. On the purchase of steam-vessels, and to employ them between Pile and Barrow and Fleetwood, your Committee agree with the Board of Trade and the Hailway Commissioners in thinking that this very short passage is almost in the nature of a ferry, for the convenience of the railway, and that accordingly the railway company principally interested may be permitted to purchase steam-vessels and employ them between these ports.

As respects the others of the above-mentioned bills, namely, the London and South-Western (Acts Amendment,) and the London, Brighton, and South Coast, your Committee feel that the case made out for a departure from an important general principle is not so strong; but they have arrived at the same conclusion with the Board of Trade and the Railway Board, i.e., that the London and South-Western should have permission for fourteen years to establish and conduct steam navigation to Havra and to the Channel Islands and French ports adjacent; and that the London, Brighton, and South Coast should have the like permission for the like period, with respect to the voyages to and from Dieppe and Havre. In these several bills a clause should Brighton, and South Coast should have the like permission for the like period, with respect to the voyages to and from Dieppe and Havre. In these several bills a clause should be introduced, securing equality of treatment and of fares to passengers using the steam-boats, whether they do or do not use the railway; and the attention of the committee to which the bill may be referred should be directed to the establishment of a reasonable rate of fare as a maximum, having relation also to the fares on the railway.

## Progress of Works.

CHESTER AND HOLYHEAD .- May 1 .- The line to Bangor was opened for public traffic, after having been subjected to various trial trips by parties of the directors and officers of the company. The line passes under part of Chester by a tunnel, through red sandstone, 400 yards in length. It crosses the Dec and continues along the estuary of the Dee through the town of Flint on a level, between Bagilt and Greenfield and the shore (about 2 miles from Holywell) and by the side of Mostyn Quay, cutting off a part of the dock and reservoir. The gradients, pre-vious to reaching the town of Flint, are 1 in 168, or a fall of 43 ft. in the first 3 miles. About 3 miles beyond Mostyn Quay, near the point of Air, the line turns in the direction of Rhyl, which it passes on the land side of the town, and crosses the river Fforyd by a pile and draw-bridge; it thence proceeds close to the shore, through the Rhyddlau marshes, to within three-quarters of a mile of Abergale. For the entire distance (after descending to the banks of the Dee) the course of the land is somewhat undulating. Owing to the irregular line of property towards the shore beyond the Dee navigation embankment the line at several points abuts upon the shore, which is raised for the purpose by gradual slopes. Passing the town of Abergale, it continues upon the shore between Islandulas and the sea, where the coast is bold. About 11 mile beyond Llandulas is the promontory of Ponmaen Rhos. Here the line rises very considerably at about 78 ft. in 31 miles, being an average of 21 ft per mile, or 1 in 250; 23 miles at the rate of 1 in 400 and for 60 chains at the rate of 1 in 100. It then descends again towards the shore, the promontory, which is of limestone, being tunnelled through for a length of 530 yards. The tunnel, which is on a descending inclination towards Conway of 1 in 100, has two shafts, one 100 ft. to the upper part or onfit of the arch of the tunnel, the other 140 ft. The line thence proceeds along the beach for about 3 miles, on leaving which it passes through a narrow valley to the south of the Great and Little Ormes Head. We then come to the Conway Bridge, which we have already described. The line, skirting Conway Castle, enters Conway through the eastern wall, and passes out again by a tunnel through the rock, 90 yards long, considerably below the wall of the western end, thence curving in a north-western direction, and passing through another short tunnel of 22 yards, it enters the Conway marshes, about half a mile from the town, and continues its progress along the sea shore towards the promontory of Penmaen Bach, through which it is carried, by means of a tunnel of 630 yards, through the solid greenstone. The tunnel was worked by driftways, or side openings, from the face of the rock towards the sea. There were seven of these driftways, of the aggregate length of 574 yards. The depth of water at the foot of the promontory, is about 10 ft. at high-water spring tides, and the railway is

considered 8 ft. above the high-water level. From Penmaen Bach its course lies between the present read and the sea shore, round the promontory of Penmaen Mawr, and through its projecting point by a tunnel of 220 yards. Between this and the Ogwen river the mountains recede some distance from the shore, and the line is carried forward to the latter point with easy works and in nearly a straight line, about midway between the turnpike-road and the sea shore. Approaching the Ogwen river the works are very stupendous—executed by Mr. T. Jackson. The river and valley are crossed by a viaduct of 246 yards river and valley are crossed by a viaduct of 246 yards in length; the extreme height is 42 ft. Between this and the Menai Straits the line passes through three ridges of mountains, perforated by tunnels of the respective lengths of 440 yards, 902 yards and 726 yards. The first has two shafts, one of 60 ft., the other 32 ft. in depth; the second, four shafts, of the respective depths of 165 ft., 200 ft., 218 ft., and 182 ft.; the third, four shafts, 48 ft., 82 ft., 97 ft. and 80 ft., the presuperpent height in each case only to the the measurement being in each case only to the soffit, or upper part of the tunnel. The material of the first tunnel was slaty rock; of the second, slaty rock and greenstone; and of the third, greenstone and primary sandstone. Between the first and second ridges runs the small river Cegyn, which, with the valley, is crossed by a viaduct of 132 yards, the extreme height of which is about 57 ft. It extends past treme height of which is about 57 tt. It extends past Bangor about three-eighths of a mile south of the cathedral, and is intended to cross the Menai Straits at the Britannia Rock, exactly 1 mile below the present suspension-bridge. The rock at this point divides the stream into two equal widths, and upon it the centre pier of the Britannia Bridge is founded.

CORNWALL.—The immense cylinder, which is to be employed in examining the bed of the river off Saltash, preparatory to the erection of the bridge across the Tamar, was launched from the wharf at 11 p.m. on the 25th ult., and floated off to the hulks moored in the centre of the river for depositing it in the Plymouth Herald, throughout the progress of the work, which occupied the comparatively short space of six hours. The purchase-blocks, which were made for the occasion, were manufactured upon Mr. Bothway's new principle of internal iron binding; and although they were not more than 24 in., they were considered to be equal to the Government blocks of 30 or 36 in.

HULL.—The new station now in course of erection at the entrance to the Anlaby road is nearly approaching completion. The large shed for the passengers will be 468 ft. long, and 132 ft. wide. Amongst the conveniences of this station, says the Hull Packet, will be the booking-offices, reception-rooms, refreshment-rooms, engine-sheds, besides apartments for the special use of the Electric Telegraph Company, who are about to extend their communication to that place. It is expected that the station will be opened in the early part of this month.

LANCASHIRE AND YORKSHIRE. - May 1. - The Heywood Extension, forming a new route from Man-chester, was opened. The excavation on each side of the river Roach alone contained half a million cubic yards, and the stream is crossed by a substantial tim-ber viaduct, 70 ft. above the river. The first express train occupied 22 minutes in running from Bury to Manchester, 13 miles. The works have been excuted under the direction of Mr. Hawkshaw, the acting engineer being Mr. Brumlees, and the contractors, Messrs. G. & P. Thomson.

MIDLAND (Syston and Peterborough) .vernment inspection took place satisfactorily. The party walked through the Manton tunnel, with which Capt. Simmons expressed his perfect satisfaction, as, indeed, he did with the works generally, both lines being travelled upon, for the first time, the entire distance. Through the exertions of Mr. Colthurst, the resident engineer, says the Lincolnshire Chronicle, upwards of 700 labourers have been kept on the line day and night for the past fortnight. The stations at Stamford, Ketton and Luffenham are now completed, with the exception of the galvanized-iron roof for the platform of the former. These stations have been skilfully erected under the superintendance of Mr. Cleverley.

South Devon .- The line to Laira has been virtually opened. On the 27th ult. a train, weighing upwards of 100 tons, ran from Totnes to the Laira station, which it reached at 2 p.m., returning at 5 p.m. The locomotive by which the train was drawn was the property of the Great Western, and called the Pisces. The first trip seemed successful. The passage over the viaducts, says the Plymouth Times, was stated to have been effected without the least evidence of vibration, and the other parts of the line opened equally satisfactory. The inspection of the opened equally satisfactory. The inspection of the Government officer, Capt. Simmons, took place on the 29th ult. The tunnels and viaducts were passed and

re-passed, and the latter were examined most carefully. The Ivybridge and other viaducts proved on trial to be perfectly safe, and were passed over with The Ivybridge and other viaducts proved on out the least vibration. Mr. Brunel will now defi-nitively fix the day for the public opening of the line. The 5th of May, or the 8th, are the days on which it is asserted the opening will take place.

#### Accidents.

CALEDONIAN .- A man walking on the rail, near West Calder, was run down by the 8 a.m. train from Glasgow to Edinburgh. In his alarm at the train approaching, he crossed from the rails on which he was walking to that on which the train was. He was instantly killed.

EDINBURGH AND NORTHERN .- On the Lochgelly branch, chiefly used for mineral traffic, there is only one line, and on the 25th ult. a train of empty waggons and a truck of grain left Thornton for Loch-gelly. On reaching Cardendean the truck of grain was uncoupled from the rest of the waggons, and left in the siding. The train then proceeded direct to Lochgelly, and returned in about half an hour afterwith forty loaded waggons of coals. The wards with forty loaded waggons of coas. The switches, owing to some oversight, had not been altered at Cardendean, and the train, in coming down the incline from Lochgelly, ran directly into the siding. The engineer at once reversed the steam, and the guard applied his brake, but the momentum was so great that it dashed the truck of grain, which was still standing there, in pieces. The engine, tender, and nine of the coal-waggons went over the embankment into the public road, a height of fully 16 ft. The guard and stoker leaped off the engine before it went over, and both escaped with a few bruises. Some labourers were upon some of the waggons, but all of them escaped except one, who, in jumping from the train, had his arm broken in two Considerable damage was done to the engine places. and tender, while the waggons were smashed almost to pieces.

MIDLAND.—April 24.—About 11 a.m., as the mail

train from York arrived at the Normanton station, and the engine had just been detached, an explosion took place in the fire-box attached to the boiler. The engine-driver was severely scalded. Four other persons, amongst whom was a railway clerk and his assistant, were severely injured. The mail train from Normanton to Manchester, which was standing at a short distance on another line, just on the point of starting, was bespattered with dirt and ashes by the explosion, but none of the passengers received any injury. Several pieces of the fire-box were found scattered about, at a distance of 30 or 40 yards, and some were forcibly projected through the windows of the offices in the station. The Manchester Guardian says it is supposed that, as the engine was an old one, the plates of the box were too weak to bear the pressure of the steam. The door of the fireplace was shut at the time the explosion occurred, and fortu-nately it was the lower part of the box which gave way, otherwise the consequences might have been

## Law Intelligence.

In the Vice-Chancellor's Court, ex parte Roden in re the Shrewsburg and Birmingham, Mr. Bigg presented a petition in behalf of Mrs. Roden, for payment to her of the sum of 25l., as her share of the compensation money awarded in respect of land taken by the company. Mrs. Roden was tenant for life, but on a former occasion had failed to prove that the sum she claimed had been in fact awarded to her as such tenant for life. Under the 73rd clause of the Lands Clauses Consolidation Act the Court had a discretionary power to order payment of a part of the compensation money to a tenant for life, and on production of an affidavit by the person who had acted as valuer, in the matter, the Vice-Chancellor made the order.

May 4.—In the same Court, ex parte Clarke in re the Tring, Reading and Basingstoke, an appeal was made from the decision of the Bankruptcy Commissioner, allowing a proof by an allottee under the fiat against the company for the amount of his deposits. The Vice-Chancellor, after entering minutely into the law of the case, determined there was no reason for placing the respondent in a better position than the others. His Honour was relieved from the embarrassment which he might otherwise have felt in differing from the Commissioner by the circumstance that the case before the Court, and that before the Commissioner, including the arguments and the evidence, were not the same. The right of proof had not been established. As to the costs, his Honour postponed deciding whether the respondent's costs should be given out of the estate.

LIABILITIES OF PROVISIONAL COMMITTEEMEN.-April 29.—In the COURT OF COMMON PLEAS, in re Jacett v. Kennedy, the plaintiff sought the amount of 311. 10s., his deposit upon fifteen shares in the Manchester, Leeds and York Direct, of which the defendant was a provisional committeeman. The history detailed was that of a project in the mania year 1845. Only 400 shares had been paid upon. The noblemen and gentlemen advertised had withdrawn their names and repudiated all connexion with the line. The plaintiff could not get back his The committee of management, before the company was disembodied, appeared to have reported that the original prospectus having been drawn up by persons wholly unacquainted with engineering, contained several false statements, and that the capital sum set down in it was totally inadequate for carrying out the scheme, &c. The summing up, however, was clear enough. -Mr. Justice Maule told the jury they were not to allow the consideration that Mr Kennedy, the defendant, stood alone from his codirectors in his defence to the action to operate on their minds in determining whether or not he should refund the money, for if Mr. Kennedy was held liable to pay that money he had a remedy against his co-directors for their respective shares in that liability. The ground on which the plaintiff sought to recover his money was that the purpose for which, in subscribing it, he intended it should be applied having now been given up, he was entitled to receive back his money; and in such a case as that a plaintiff, generally speaking, was entitled to have his money returned. Generally speaking, the promoters of a scheme were liable to repay to the persons who were not the promoters of it, but merely subscribed money towards it, the whole of the money subscribed, unless there was some express or implied authority on their part to retain some of it in the event of some part of the scheme not being carried out, for the purpose of paying the preliminary expenses; but there must be some authority for that. In such a case a man whose deposits had been applied under his own authority to the preliminary expenses of a project which had gone off could not recover. The plaintiff would be entitled to have his money back, unless he had given authority to pay the preliminary expenses, even if the railway was a bad one. There was no doubt the plaintiff's money had been applied to the paying off the expenses; and then the question would be, on that part of the case, whether it had been applied with the authority of the plaintiff. The jury would have to consider also whether this company was either abandoned altogether, or not proceeded with in reasonable time; and in that case the plaintiff would be entitled to recover, unless they should be of opinion that he, by a deed executed on the 13th of December, authorized the directors to make the application which they did make of his deposits, and supposing, too, the plaintiff had been induced to execute that deed by means of the false statements contained in the prospectus.—The jury found for the plaintiff for 311, 10s., the full amount claimed, with liberty to the defendant to move to enter a nonsuit hereafter.

CARRIERS .- April 28 .- In the CITY SMALL DEBTS COURT, in re Heck v. Chaplin & Co., a poulterer sought 20l. damages sustained by the non-delivery of baskets of game by the carriers on the Peterborough line. After three days' delay plaintiff called two or three times, and requested the baskets might be for warded to him by defendants. A clerk promised that the baskets should be forwarded to him, but on their arrival, instead of sending them direct to plaintiff, they were left at a booking-office for the Hackney carrier, and he did not bring them till the afternoon of December 24, when plaintiff refused to take them, having given notice that he would not unless defendants guaranteed to pay him loss from delay, and this they would not agree to. The game, for which plaintiff had paid 14l. 14s. 6d., was sold by the carrier, on the 8th of January, for 4L 15s. The plaintiff estimated his loss of profit at 5L. The defendants urged that they were merely agents for the London and North-Western to deliver goods free within a certain distance; and several witnesses were called to prove that it was the custom to leave goods at the booking-offices for the errand-carts to the outskirts of town.-The learned Judge held that the defendants were liable, though agents, if their clerk had undertaken to forward the goods immediately. The jury then gave a verdict for 15t. 3s. 8d., in addition to the 4l. 15s. for which the game was sold.

GREAT WESTERN .- May 1 .- At the MARYLEBONE POLICE COURT, C. Abbott was charged with robbery. On the previous night, on the arrival of the S p.m. Exeter train at Paddington, the prisoner was seen by one of the company's porters to take a portmanteau from within the barrier on the platform and hand it

to the conductor of an omnibus, by whom it was put upon the roof. The prisoner got inside, but had not been many minutes seated before a gentleman, who had come up from Bristol in the train, recognized the portmanteau as his own. The prisoner, upon finding that there was a chance of his getting into trouble, hastily alighted and made off, but was taken into custody, and he denied all knowledge of it .- Mr. Collard, superintendent of the company's police, said that in the confusion which ensued, the owner of the pro-perty, the Rev. Mr. Marsh, obtained possession of the same and went off with it in a cab; he (Mr. C.) added that on a future day he should no doubt be able to bring the rev. gentleman forward .- Mr. Long remanded the prisoner till the 4th inst .- Mr. Collard subsequently informed the magistrate that he had discovered, in a room in Salisbury-place, Lisson Grove, property of different descriptions to a very considerable amount; the greater part of the goods were in all probability stolen at various times from the railway by the prisoner, who had left them at the house in question. Mr. Collard thought that he could soon get up evidence to show that the prisoner had been engaged with other parties in carrying on a system of plunder to a large extent.—May 4.—The prisoner was again remanded on charges of plunder at the other London stations.

#### Reports of Meetings.

EASTERN COUNTIES AND NORTHERN AND EASTERN.

May 2 .- Special Meeting, London .- Mr. G. Hub-

SON, M.P. in the chair.

The CHAIRMAN hoped that every gentleman in speaking would strictly confine himself to the matter before the meeting. The directors would not have before the meeting. The directors would not have called them together for the purpose of raising new capital if it had not been necessary to complete the line at present in the course of construction, and to meet liabilities. Having tried every other means of raising money, the directors felt bound to resort to the only legitimate course open to them, and ask the proprictors to find the capital required on a guaranteed rate of interest. It was now between two and three years since he first addressed them in that room, and since that the vicissitudes over all other companies had affected theirs; but it was consolatory to reflect, that whereas when he first addressed them the receipts for the half-year were only 114,000L, for the last half-year they amounted to 325,000L; and at their last meeting he told them that the receipts were still augmenting, and that the last week of which they had a return was larger than of any week since the opening of the line, with the exception of the one in which the Queen visited Cambridge. They would announce that their returns were still improving, and that they were last week again over 13,000%. Last half-year they met to declare a diminished dividend, but he hoped that that would prove to have been the last time they would have to do so; and he felt satisfied that the next time they met he would be able to show them an increase in their revenue. He had always stated, that when the Syston and Peterborough line was opened, they would have a large accession to their traffic, and he believed that they would shortly have cause to congratulate themselves on their connexion, by means of that line, with the Midland. Since he and his friends had been in the management, they had had an increase in the revenue from 228,000%, for the year, to 325,000l. for the last half-year; and he expected the receipts for the year to be upwards of 700,000l. But it might be said that there had been a large increase in the capital account during that time. When, however, he told them that there had only been an addition of 2,700,000l.-2,000,000l. being raised by shares and the remainder by loan — while their revenue had increased from between 200,000*l*. and 300,000l. per annum to 700,000l., he did not think they would say that they had made a bad return for an outlay of 2,000,000. That undertaking Digitized by

had been decried, and he was aware that that cir- | he had no manner of doubt that they had the power cumstance had prevented him from obtaining loans for the Eastern Counties, which he had obtained with facility in other companies; and he therefore felt bound to come before them, and, having told them their position, ask them for the means of fulfilling their engagements. There was no company in a better position with regard to liabilities than the Eastern Counties. They had a borrowed capital of only 700,000l., which, compared with the amount borrowed by other companies, was only as a drop in the ocean. He thought that a matter of congratulation; and he told them at their last meeting that he be lieved there would be no difficulty in borrowing the amount of capital they required, nor would there have been if the recent events on the Continent had not taken place-events which no human foresight could foresee, no calculation provide against. only difference between borrowing money at 5 per cent. and raising it on shares as now proposed was, that in the former case there would have been a saving of 7,000l. per annum. Now it was proposed that they should borrow the capital from themselves at 6 per cent., and when the dividend the company would pay went beyond that amount, the new shares would participate in the increase, but the holders could never receive less than 6 per cent. on them The directors had carefully investigated the liabili ties, and they were not about to incur any new ones but they were compelled to complete what they had begun and to meet their present engagements. He hoped that would be the last appeal he should have to make to them for money; but he was only performing his duty in asking them to put the directors in a position to secure their property, and to increase the dividends on the capital advanced. He wished it to be understood that they had power to do all that they now proposed, under their present Acts of Parliament, they having power to borrow 3.500,000l., of which only 700,000l. had yet been borrowed. The resolution authorizing the creation of 675,920l., new stock, in 67,592 shares of 10t each, bearing a minimum interest of 6 per cent., to be rateably distributed among the holders of the present stock of the company, was then read.

Mr. Waddington seconded the resolution.

Mr. Tozer wished to know whether the attention

of the solicitor had been drawn to a prior clause in their Act of Parliament to that which appeared to give them the power of creating these new shares which declared that no new shares should be created until the York Extension stock was called up; and for what purposes this new capital was wanted.

The CHAIRMAN: The money was required to complete the Witham and Braintree and the Edmonton lines, and for the completion of the carrying stock and stations.

Mr. Duncan, solicitor, stated that under the 10th clause of the Stations Enlargement Act, they had the power to borrow 3,500,000l., but they also had the option of raising that sum by new shares. The 4th clause provided that no new capital should be raised until the York Extension shares were called up; but it was clear to him that both clauses being contained in the same Act they had sufficient power. clauses were read in support of his argument, and Mr. Duncan stated that the Eastern Counties York Extension shares were divided into classes A and B, which were all called up; and C and D, which were only options. Those options expired in July, and as parties taking them up could only do so at 20%, there could be no hope, at present prices, of their being taken up, and the directors therefore could not practically consider them to be in existence.

Mr. Serj. GAZELEE said that it was pretty clear to him that they had not the power to raise new capital under their Act, as the negative words overrode the affirmative.

The CHAIRMAN said the words of the Act were that they might "raise the remainder by new shares

or stock."
Mr. Serj. Gazelee felt convinced that they had no right to create a preferential stock of 6 per cent., as all they could at any rate do was to create them at a similar interest at which they were entitled to borrow, viz., 5 per cent. He believed, also, that they had no right to pay interest upon the money as it was called up, a fresh arrangement being necessary with regard to the 4 per cent. payable on the calls of the York Extension stock, in consequence of the resolutions of Parliament.

The CHAIRMAN contended that they had the power of so borrowing money under the Lands Clauses Consolidation Act, and he had done it in other companies over and over again. If any gentleman had any other means to propose of raising the money, let him bring it forward for discussion. He had had sufficient experience of law to know that opinions might be got all ways upon the same question; but

to raise the capital with a guaranteed interest, and, even if they did commit a slight irregularity, he felt satisfied that a body of English proprietors, representing a capital of eight or nine millions, would not allow them to be sufferers for a sum of 6,000l. a year interest on money raised to save their whole property being jeopardized.

Mr. PETERSON said that the money might be raised by mortgage, on the consent being given by a majority of the shareholders, or it might be raised by the issue of shares, under the Lands Clauses Consolidation Act, at a discount, but they could not give a

guaranteed interest for money.

The CHAIRMAN assured the hon. proprietor that the Lands Clauses Consolidation Act had an effect exactly the reverse of what he stated.

Mr. Peterson felt certain that he was correct with regard to his interpretation of the Lands Clauses Consolidation Act.

Mr. Duncan declared that the only power they possessed under the present law was to issue shares at a guaranteed interest, Parliament having determined last session that no new shares should ever be issued at a discount. If at the time of the creation of new shares the existing shares were at a premium, they must be issued to the proprietors; but if the original shares were at a discount, the new shares might be issued in such way as the directors might see proper; and that was the reference in the Act to creating shares at a discount. With regard to the preference of these new shares over others, he might state that the Northern and Eastern proprietors had a prior lien on that portion of the line between Stratford and Newport; the Extension stock No. 1, on the line from Newport to Brandon and Peterborough; and the Extension stock No. 2, over the same portion of the line. The whole of these amounts did not exceed 80,000L, and the whole of the remainder of The whole of these amounts did not the revenue would be answerable for the guarantee on the new shares now proposed to be created.

Mr. E. KEAT moved an amendment that the proposed new shares would inflict a gross injustice upon the original proprietors, and that no new shares ought to be created bearing a greater interest than

5 per cent.
Some further discussion ensued, in the course of which it was stated that the 400,000l. stock forfeited at the last meeting had not been re-issued, and that the arrears of calls amounted to about 200,000l., the only means of enforcing the payment of which was the exercise of the rights of forfeiture, which the directors were loath to do.

The original motion was carried, with four or five dissentients.

The CHAIRMAN then stated that the next matter vas a recommendation to approve of the terms for amalgamation with the Norfolk. Individually, he and his colleagues had no interest whatever in the Norfolk line, nor had he in that (the Eastern Counties) until the proprietors invited him to take the chair; and as he had heard an hon, proprietor complain that day of shares for which he had paid 24/ being now so much depressed, he might mention that he himself bought 300 or 400 at that price, and still held them; and though the disastrous circumstances of last August and the present spring had impaired the value of their shares, still it was gratifying that their receipts were gradually rising, and that their prospects were as good as those of any line. In order properly to develope the traffic of a line, they ought to have the utmost facilities for getting to the places from whence the traffic came. It would never do for them to end their line at a barren waste like Brandon, without they had the power of getting to Norwich and Yarmouth for traffic. His first essay with railways was to take a line which had never paid 3 per cent. to the proprietors, and recommend the York and North Midland to give 5 per cent. for it. It eventually paid a surplus beyond 5 per cent. He then undertook the bringing about an amalgamation between the Midland Counties, the Midland, and the Birmingham and Derby; and such had been the effect of the arrangement that the traffic, which had never before amounted to 300,000l. per annum, was now upwards of 1,200,000l., a very fair instance of the results of unity of management. Now, why the Eastern Counties had not, in the first instance, made the line to Norwich and Yarmouth, he could not say, but perhaps it was that the times were not then favourable; but he thought that there could be no dispute that it would be good policy to amalgamate with the Norfolk, so as to put that and the Eastern Counties under one management. Under the present system the Norfolk had no peculiar inducement to send the traffic by the Eastern Counties line to Lon-

prosperity of both the Eastern Counties and the Norfolk, by putting Norwich and Yarmouth in direct com munication with Bradford and the West Riding of Yorkshire. One element of success of an arrangement between the two companies was the great saving that could be effected in the working, and he believed that in the locomotive department alone there would be a saving of not less than 12,000l. or 14,000l. a year; while great advantage would result from their engines, instead of blowing off their steam at Brandon, running direct on to Norwich. Another advantage would be also gained by Norwich being placed in direct communication with Bradford, Leeds, the North of England, and Scotland, and, indeed, he could see nothing but unmixed good to arise from an arrangement between the companies. though there might, perhaps, be some difference as to the terms. The capital of the Norwich amounted to 2,300,0001.

A Proprietor: How much per mile has it cost? The CHAIRMAN: The cost had been about 23,000%. per mile, including station, warehouses, and every requisite for the traffic. Of course they were aware requisite for the traffic. Of course they were aware that there was some guaranteed stock in the Norfolk. It amounted to 300,000l. at 5 per cent., 105,000l. at 5 per cent., 130,000l. at 4 per cent., and 120,000l. at 6 per cent., being an average, on the whole, of a little more than 5 per cent. He had no doubt that the receipts of the Norfolk, when complete and in full operation would appear to 2,500l. per week. Now operation, would amount to 3,500l. per week. Now it would take 115,000l. to pay 5 per cent. on 2,300,000l., and, consequently, if they got 3,500l. a week, it would give them more than 5 per cent.; but, independently of the increase in the traffic, they could not fail to derive great benefits from the reduction which would be made from a conjoint management, and the facilities for carrying a large amount of goods without having to get the permission of one or two other companies. He was satisfied that the savings which would be effected by the amalgamation would not be less than 20,000L per annum, and that the result would be such as to justify the measure. He would also put the case of the line falling into hostile hands. The terms of the amalgamation were that they should take equal dividends, the 16l. paid up in the Eastern Counties counting equal to 20l. paid up in the Norfolk, so that they still continued to receive the advantage of the 4l. bonus. He concluded by moving a resolution approving the amalgamation, which was seconded by Mr. WAD-DINGTON

Mr. Brown believed that the last dividend declared by the Norfolk was 5 per cent., and that that was partly paid out of capital, like a recent one of their own.

The CHAIRMAN denied that such a course had ever been pursued in that company.

Mr. Brown, amidst disapprobation, suggested the appointment of a committee to inquire into the whole question of amalgamation.

Mr. Tozer did not object to the amalgamation, but considered the terms altogether unfair, and that they would involve the Eastern Counties in considerable The receipts of the Norfolk, as compared with the amount of capital, bore a less ratio than did the receipts on the Eastern Counties as compared with their capital, that being, in his opinion, the only fair way of considering the question. Then, with regard the market price of the shares of the two companies, it would be seen that the advantage was in favour of the Norfolk, and that price, such as it was, was only kept up by the prospects of the amalgama-tion. Again, the Norfolk was a line more exposed to competition than any other, though it might be a distant day before any competing line could, under present circumstances, be made.

Mr. Waddington, deputy-chairman, stated that the directors had not brought the resolution forward without due consideration of the proposed arrangement. With regard to the price to be given for the Norfolk line, it must be recollected that the Eastern Union, which went into the same district, offered some time since 71 per cent. for the line, which the Eastern Counties were now about to obtain at par. Then they (the Eastern Counties) at present received a traffic of 80,000l. from the Norfolk, which might be endangered by other companies, if some arrangement was not made to secure it. With regard to the price of the shares in the market, while the 100l. shares of the Norfolk were at 65l., the 20l. shares of the Eastern Counties were about 1311, so that there was not much difference in that respect. again, at present a great portion of the traffic of the Norfolk line was sent to London by water from Yarmouth, whereas if the Eastern Counties had the management of it, they would have an interest in endeavouring to bring it over their own line, which

Digitized by GOGIE

would thereby gain at least 2l. on the Eastern Counties.

Mr. Letchworth argued that they never could expect to obtain more than 4 or 5 per cent. from the working of the Norfolk line.

It was proposed by Mr. Peterson that the meeting should be adjourned for a week, to give time for inquiry into the prospects of the Norfolk; which being seconded,-

Another Proprietor proposed that a committee of Eastern Counties shareholders should be appointed to inquire into the affairs of the Norfolk and Newmarket Companies.

The original resolution was carried by a majority of about 30 to 1.

The CHAIRMAN then brought forward the resolution for confirming the agreement of amalgamation on the same terms with the Newmarket Company The total amount of capital subscribed was 280,000l. and borrowed, 120,000*L*, making together about 400,000*L* for a line of 24 miles. This company did not involve any guarantees, and the line being but recently opened, of course, they could not do much more than speculate with regard to the traffic. At present he believed the receipts did not much exceed 500l. per week, but it was impossible properly to develope the traffic of a line in one, two or even three years—a fact which was proved by their own line, the development of which was still going on, though it had been open for some time. The great object the directors had in view in undertaking to amalgamate with the Newmarket was, to prevent the line falling into other hands and the into other hands, and thereby damaging the Eastern Counties line; one of the conditions of the arrange-ment being that the extensions of the Newmarket line should be totally abandoned, unless the Eastern Counties saw fit to make them. That there was danger of the line getting into other hands might be seen from the fact that the London and York could not be looked upon as altogether dead, as they were proceeding with their line, though slowly, between London and Peterborough, and had expended nearly a million of money upon it, which it would not be easy to persuade men altogether to abandon; and should the branch to Thetford be made, and the London and York obtain possession of the Newmarket line, it might do them (the Eastern Counties)

serious injury. He did not say that the line would pay for one or two years to come, but he had a character at stake, and would not advise them to incur any risk which he did not believe would result to the benefit of the company; while he might observe that the expense of working a few additional miles was very trivial, they having themselves last year added 20 miles to their own working without any perceptible increase in their expenditure.

After a few observations, the resolution approving the amalgamation was adopted, with only one or two dissentients.

[ For further Reports of Meetings, see p. 325.]

IRON TRADE.—Glasgow, April 28.—There is a decidelly better feeling, and for ten days past prices have steadily advanced. No doubt the large amount of pig-iron shipping, says the North British Shipping Journal, and the continued large consumption have materially decreased the stock, and tend to make holders stand out for higher rates. No sellers appeared for the last two days under 43s. 6d. per ton, cash.

[Secretaries of companies are requested to forward notices of inga, and closing of Contracts, as early as possible.]

London Stock Exchange, May 5.—As might be judged from our statement of last week, we have now to report a further and considerable rise in railway shares. Business has been active, and but for a fear of Continental politics, the transactions would have been more considerable.

Liverpool, May 4.—There has been a considerable improvement in our share-market the last few days. Prices are higher, and stock scarce and in fair demand.

SUDLOW, Brothers.

Manchester, May 4.—A change has come over our share-market—there is more life and spirit in it. A fair business has been done during the week at advanced prices.

SAM. GRINDROD.

Fork, May 4.—The tone of the market has much improved since our last report, and a considerable amount of business has been transacted during the last few days in Great Northerns, North British, and York, Newcastle and Berwick shares at improved prices.

GRAYSTON & EARLE.

Hull, May 4.—Business in the share-market is still limited; but yesterday and to-day a much better feeling has manifested itself, attributable chiefly to the advance in consols, the subsidence of popular commotion, and last, not least, to the very fine weather. The weather, as affecting the forthcoming harvest, will begin by-and-by to form the most important element in share calculations; for we think there never was a time when more turned on the result of

a good or bad harvest.

Glasgow, May 4.—We have had a good demand for shares here this week, and a large amount of stock has been taken up. Investors have come forward with considerable confidence, in the hope that at length the worst is over; and although a partial re-action on such a sudden and rapid rise may perhaps be looked for, there is every appearance of a continued improvement—one of the best features being, that the demand has been chiefly forthe old dividend-

paying lines.—Dundee and Perth, quarters, 10 pm.; Stirling and Midland Junction, 5 per cent. guaranteed, § dis.; Dumfries and Carlisle, 6; Ayr, halves, No. 1, 7l. 19s. dis.; ditto, No. 2, 8 dis.; Great Northern, 9l. 9s. dis.; North British, thirds, 35s. 6d. dis.; ditto, new quarters, 7s. dis.; Scottish Central, 263; York, Newcastle and Berwick Extension, No. 2, 20s.; Great North of England purchase, 16s. pm.

BUCHANAN, AITREN & Co.

# Railway Chronicle.

LONDON, SATURDAY, MAY 6.

The proprietors of the EASTERN COUNTIES AND NORTHERN AND EASTERN, after having specially authorized the creation of 675,920l. new stock, in 10l. shares, together with the shareholders of the Norfolk and the Newmarker, mutually ratified the agreements for amalgamation proposed by their respective Boards.

At the special meeting of the SOUTH WALES the bill for raising the rate of interest on calls of the purchase of the cup of disasters.

Vale of Neath, and the Waterford, Wexford Wicklow and Dublin were strongly opposed, but ultimately carried; the secretary being desired to enter on the minutes "that the latter company [namely, the Great Western] become absolute guarantees of the money to be raised to the extent of 5 per cent. per annum."

The dissentient shareholders of the LIVER-POOL, MANCHESTER AND NEWCASTLE JUNCTION are to obtain their object, viz. the dissolution of the company. Mr. Hudson has withdrawn his offer for a lease of part of the line.

The Report of the investigation committee of the DUNDALK AND ENNISKILLEN has not yet been printed, but it was adopted at the special meeting.

The AIRDRIE AND BATHGATE shareholders increase the number of their directors, who are left to their own discretion in the settlement of their disputes with the Edinburgh and Glasgow.

The dissentient shareholders of the WATER-FORD, WEXFORD, WICKLOW AND DUBLIN having received a statement from one of their own body, resolved to take the most determined measures for a dissolution. They will at once oppose the bill in Parliament authorizing subscriptions from the South Wales.

The shareholders of the Paris and Strasburg adopted the Report and accounts presented at the annual meeting. All the disposable working force had been concentrated on the works at Epernay, till the propagation of the rumour of the Government measure respecting railways, which the directors had firmly protested against, but which had paralysed operations.

In the Report presented to the shareholders of the ROUEN AND HAVRE a dividend of 10f. was exhibited. The traffic, in spite of commercial disorders, was said to have been satisfactorily increasing, when it was interrupted by the revolutionary outrages. The bankers of the company had suspended payment, and the rumour of the purchase of the line by the State filled the cup of disasters.

Digitized by Google

At the half-yearly meeting of the NORTHERN OF FRANCE the directors declared a dividend of 9f. 95c. per share, and the Report and accounts were received. The late revolution and its consequences had stopped the payment of the last call, and those only who have paid that call, or shall now pay 25f., can receive the dividend.

We need hardly add that at each of the abovementioned French assemblies (including also the PARIS AND ORLEANS, ROUEN AND DIEPPE, and CENTRAL OF FRANCE), the shareholders were unanimous in declaring their distaste for the Government proposition of purchasing their property.

From our official returns it appears that the amount of traffic for the last (Easter) week, on 3,658 miles of railway, was 177,303l., thus accounted for: — 88,624l. for the conveyance of passengers only, 45,44ll. for the carriage of goods, and a remainder of 45,237l. for passengers and goods together, not respectively apportioned; being an increase of 17,013l. over the corresponding week of last year, when the mileage was 2,845. The average earnings per mile last week were 48l., whilst in 1847 they were 57l.

## NASCENT OPPOSITION AT GENERAL MEETINGS.

The SPECIAL MEETINGS, under the LORDS STANDING ORDERS, in the parliamentary course of the Great Western and its connected schemes. have not passed over this week without the appearance, in each several instance, of expressive signs of discontent, in the proprietary, with the system that has been producing notable effects on the capital embarked in that group of lines. The organ of this feeling, at the Paddington meeting on the 2nd inst., was Mr. Stanford; who made some pointed objections to the measures then submitted for approval, and concluded with an account of the practical effect on the shareholder of the policy hitherto pursued,—the truth of which, not confined to Great Western shareholders only, is general enough to explain the growing impatience visible on the subject of railway extensions :-

He thought they should have paid more attention to the policy of confining themselves, as far as possible, to their own trunk line; and it would have been time enough to think of constructing feeders or branch lines when the trunk line had realized 10 per cent. He thought the Great Western had been, in a measure, carried on with a greater consideration for the welfare of the public than the benefit of the shareholders. It appeared to him that this opinion was borne out by the history of the line from its very opening. Every year he found that when he took 11 as provit out of the railway, he had to pay, as capital, 51, for new lines or new works, and instead of the dividend increasing, or there being any prospect of its increasing, it was decreasing, and there was every probability of its decreasing still jurther.

The South Wales meeting, held at the same place, on the following day, was marked by similar expressions of dissent; in which the arrangements with the Vale of Neath line, and that strange connexion with a railway on the other side of the Channel-the questionable principle of which we pointed out long sincebecame the topics of discussion. While this was going on at Paddington, there was being held in Palace-yard a meeting of shareholders in the same Irish concern, convened to resist the Directors' proceeding in this very affair with the Great Western; and a petition to Parliament was voted against the prosecution of the bill now pending. The most notable fact, perhaps, at this meeting at Fendall's, was the new evidence it elicited of the nullity of the Railway Board. The Commissioners, it seems, were asked to take some step, on the shareholders' representation of the uselessness of the line, and of the inexpediency of forcing it on, in connexion with the Great Western; but declined to act at all in the matter, and referred the petitioners to the Law Courts or to Parliament. Now, there can be, on our side, no objection whatever to the Board refusing to take part in questions of that very kind which the country was informed it would be its chief business to regulate. It is pretty certain that no good would have resulted from the interference of that body, constituted as it is. But what, then, can be the use of maintaining it any longer, since it cannot take a directing or even advising part in such cases as this?—cases, we say, of the class most decidedly calling for counsel or determination from a special controlling authority? The answer is obvious, and the fact should be noticed.

The Bristol and Exeter meeting, on the same day, at Bristol, was like the preceding in its character. Certain shareholders set forth, in strong terms, their disapprobation of measures pregnant with new liabilities, and of schemes for subsidies and arrangements foreign to the proper objects of a railway company—both doubtful at any time, but especially questionable in times like the present;—and an attempt was made to pledge the Directors against the practice of making treaties of this kind without consulting the shareholders, and afterwards coming to ask their consent when the engagements are already settled.

In all the cases where dissent was thus expressed, it was overruled by a majority, and the Directors' resolutions were ratified. But the effect of such protests is not lost, although they may not be immediately successful. There must always be time allowed for the gradual developement of reforming tendencies, when the ruling powers employ the means at their command in an opposite direction. It is something to have made a beginning, by the distinct uterance of principles that will not be silenced by one nor by many negatives;—and we have no doubt whatever that they must in the end make themselves decisively heard in the councils of the Directors of the railway interest, if they are prudent enough to read the signs of the times—in opposition to these councils, if they are incapable of being instructed thereby.

## SUSPENSION OF THE FRENCH RAILWAY CONFISCATION SCHEME.

If we have said little of late on the shifting appearances of the French RAILWAY QUESTION. it has not been because we were indifferent to its importance, or careless of the anxiety it must have caused to numbers of our countrymen who sent over their money to enrich France with useful works, in reliance on the good faith of that nation. It soon became evident to us, that the matter would probably be found harder to transact in the rude fashion designed by the Provisional Government than its members may have suspected; and it could have served no useful purpose whatever to comment upon results announced by rumour from day to day as certain, but of which there seemed to be good reason to distrust the probability. It was clear that nothing our press could urgewhile the matter was in the hands of the Provisional Government-on behalf of the British proprietors, would have the least chance of in-fluencing the violent men who were trying to effect the spoliation of their property; and we therefore felt it unnecessary to offer any remarks on the issue of the business, which could only be founded on surmises, while the solution depended on events that no one, not even the French themselves, could venture to predict. This reserve has been justified by the fact :we now learn that the confiscation has been adjourned, for the sentence of the National

Assembly,—which ought from the beginning to have been regarded as the only authority competent to deal with a question of such immense importance.

It appears that the French interests concerned in opposing the robbery of their property by the State. were only reduced to silence by the stupor in which all who had anything to lose were plunged during the absolute supremacy of the classes who have nothing. The late movement, by which the middle classes and the friends of order succeeded in vindicating their claim, at least to partake in the decision of public affairs, gave confidence to the railway bodies, that had scarcely dared until then to protest against the injustice with which they were threatened. It seems they have so far prevailed as to make the majority of the Provisional Government aware of the gross indecency of committing an act of enormous plunder at the last hour of their temporary rule; and it now remains to be seen in what spirit the Assembly-which, we are glad to see, will not be a mere representation of the lowest classes-may be disposed to handle this momentous affair. To say that we rely with any confidence on their fair dealing in such a matter, would be at variance with the truth. We have seen, in a Legislature of no revolutionary tendencies, too many proofs of the proneness of public men to the short-sighted policy of robbing a single prosperous interest for the supposed profit of the State, to expect that entire justice, or a large view of the mere public advantage of public honesty, will prevail in the delegates of a nation wholly disorganized. Nevertheless, the railway body will have less to fear from such a court than from the rash violence of one or two unprincipled tribunes of the mob; and there may now be a chance, if not of averting the confiscation, at least of get-ting it transacted on terms less disastrous than a few provisional demagogues would have imposed on the owners of this property.

We have said that we do not expect that the decision will be much affected by anything that can be urged on behalf of the foreign shareowner. The state of France is too far gone beyond the limits of precedent and of international standards of right, to allow of much regard for any reasons which cannot be brought to bear immediately on the ruling power in France itself. And unless the Governments of other countries are prepared to go all lengths in maintaining the private claims of their subjects who may have invested money in French concerns-a course which it is not likely they will take—it is not very probable that even their representations can have much effect; while it is clear than none from the individuals themselves alone have the least chance of being listened to. The issue, we apprehend, will have to be determined by the weight which the French interests affected may be able to throw into the scale of a just decision, against the craving of a bankrupt Administration to get hold of a property, the income of which would be welcome to the necessities of the treasury.

The case of the foreign shareholders is indeed a very strong one; and could be passed over only in a state of things so extraordinary as that which now prevails in France. We gave a summary last week of M. Charles Laffitte's letter, published in the Débats of the 24th of April, in which their claims—which must be irresistible in any country that has not practically repudiated every notion of public honour and virtue—were powerfully urged. These have since been still more effectually stated in a remarkable letter, printed in the same journal three days later, from M. Lemoinne, an eminent French lawyer; who adduces some matters of fact directly bearing on the case of the English

Digitized by GOOGIC

proprietors, that ought to be quite decisive if the Assembly are not prepared to exhibit France as a country that has cast itself loose from all principles of international right; while they press with perfectly crushing weight on some of the very men who have shared the responsibility of the late plan of robbery devised by the Provisional Government.

M. Lemoinne's letter places before the public the fact that to him, as an experienced French jurisconsult, there was expressly referred by English capitalists-at the time when proposals first came over from France asking for the aid of English capital to make railways there-the question, "whether, in case of war between the two nations, the property of the English in France would not run the risk of confiscation." This question was distinctly put with reference to the safety of English investments in French railways. M. Lemoinne goes on to say, that from his knowledge of the laws and public feeling in France, he had no difficulty in affirming the safety of such investments; and that he was thereupon desired by several of the capitalists to whom French overtures had been made, to draw up a formal statement of this in writing, which we call an "opinion." This M. Lemoinne did; but before transmitting it to the parties that had consulted him, he took the judicious precaution of "strengthening it by the names of the most celebrated French lawyers. No less than seven leading members of the Paris bar were successively applied to by me" (says M. Lemoinne) "on this point, and they were unanimous in confirming my view-' That in the existing state of international law, the breaking out of a war between France and any other nation would not affect the private property of individuals, personal or real. In short, that the hateful term "confiscation" was for ever erased from the French vocabulary."

It only remains to point out, firstly, that a proceeding which was declared impossible in case of war between the nations, would only be the more monstrous when committed to the prejudice of the subjects of a country at peace with France. Secondly, that it was on the strength of this formal assurance by such high authorities that the English capital was trusted to French good faith. And, thirdly, that of "seven members of the Parisian bar" who supported M. Lemoinne's "opinion," MM. Marie, Crémieux, P. Dupin, Odillon Barrot, Chaix d'Est Ange, Duverger, and Joly, "were among the most cager," says M. Lemoinne, "to repel the very notion that confiscation could again take place. Nearly all of them added to the "opinion" various forcible arguments, and more particularly M. Marie."

Of these advocates, Marie and Crémieux became members of the Provisional Government; and it need not be said what their course, under all the circumstances of the case. was "bound in honour and justice," as M. Lemoinne says, to have been. Nor could anything stronger than the whole transaction be adduced to establish, on behalf of the English subscribers, an irresistible case against the spoliation of their property-irresistible, we say, by any Government that professes to regard the plainest laws of probity and national honour. How far the proceedings of the French Assembly in this matter will show their practical respect for such principles, we have yet to learn. wish it could be truly said that what has been seen of the public evidences of this character in France for the last two generations, at least, would justify the hope of their efficacy,-even in a case so clear and cogent as that which M. Lemoinne's protest has exhibited to all Europe.

#### Carrespondence.

THE VITALITY OF RAILWAY PROPERTY. During the year 1792, a frenzy existed in England for making canals, and in the Gazette in August no less than nineteen notices appeared of intended applications to Parliament respecting the internal navigation of the country. On shares for which Acts had been obtained the premiums ran up to an extravagant height. The re-action was followed by the prostration of credit and an alarming monetary pressure. The canals, however, were completed, the country soon profited largely by the increased facility of transit, and the proprietors found their investments profitable, in some cases enormously so. The price of carriage was reduced to a considerable extent, in some districts two-thirds and in others even more. It is immaterial to inquire whether the demands of the country urged on the formation of canals in the first instance, but certainly when made they gave a stimulus to manufactures and commerce which had hardly been anticipated by the most sanguine. In the United States and Canada like effects have followed canals, though many Americans deprecated the formation of the Erie canal when it was first proposed, as being fifty years a-head of the age. Subsequent events have since negatived this idea. In 1825 the mania for South American mines reached its culminating point, and England awoke from her dreams of El Dorado and Potosi, poorer by many millions than when she went into these ill-judged speculations, with the additional mortification of knowing that the money was utterly lost, as much as if it had been thrown into the sea. The losses sustained at this period very effectually prevented for some time any more vagaries in the employment of capital. The Liverpool and Manchester Railway was opened a few years afterwards, but a long period clapsed before public attention was much attracted to the new invention, and several of the lines subsequently projected broke down for want of funds, and appeared in great danger of total extinction. The subsequent stages of the progress are too well known to need much description, although the insane rivalry of opposing companies, the lavish expenditure on lawyers and parliamentary agents, the crowds of witnesses, the extortion of landowners, the futility of the attempts at legislation, the imbecility of the Railway Board, and the Proteus-like evidence of Messra. Brunel and Saunders on the gauges, might each serve for a long essay. The system, however, in spite of all these hindrances has taken firm root, and though now in a deplorable state of depression, I cannot see just grounds for such a tremendous fall. Your paper has ably exposed the folly of which directors have been guilty, in times of high premiums and excited hopes, in running madly into opposition lines and useless extravagance; but that day is gone by, never I trust to return, and if political matters settle down moderately well, I see no reason why railway property should not recover rapidly; and supposing a war to come upon us, investors at present rates must have a high per-centage on their outlay. As regards the nation, a similar advantage to that derived from canals must accrue. I look for no such profits, be it observed, as their owners have made, but to the proprietors who have been able to hold through the hurricane I anticipate a fair remuneration. The system is not yet complete, but every day is adding rapidly to its development. Buonaparte called us a nation of shopkeepers, but our capabilities of defence against his attacks were greatly aided by our steam power. Locomotives are only a new adaptation of the same mighty element, and in spite of our errors at the commencement, we have now the force of many thousand horses and a well-organized army of men employed usefully and profitably every day, in increasing the national wealth and comfort, and who must, I firmly believe, prove a very important assistance in enabling us speedily to surmount the difficulties by which we are surrounded at the present moment. X. Y. Z. May 1, 1848.

#### Gossiu.

In connexion with the increasing necessity for COMMUNICATIONS in emergency BETWEEN THE PASSENGERS AND GUARDS OF A TRAIN, the Birmingham Journal narrates a singular and desperate encounter between an officer and three thieves, whom he was

taking to Warwick gaol by railway. When the train had passed Stitchford, the fellows suddenly sprang upon the constable, and attempted to force him out of the window. The officer, named Pearson, struggled against his opponents, and cried aloud for help. cries were unheard; and overpowered by the desperadoes, they would probably have accomplished their purpose but for the smallness of the aperture through which they endeavoured to thrust him. Failing in this, he was pinioned to the floor of the carriage, while two of the villians pressed their knees on his chest with such force that the blood gushed from the officer's mouth. During this dreadful gle one of the thieves contrived to slip his handcuffs, and, getting out of the window, threw himself off the train, and succeeded in escaping, as no trace of him has since been discovered. On the arrival of the train at Marston Green, Pearson apprised the guard of what had occurred, and one of the railway constables was placed in the carriage as an additional security, and accompanied the prisoners to Warwick, where they

were safely lodged in gaol.

With all the despondency with which railway property is just now regarded, no provincial town considers its interests properly cared for without a railway. The Inhabitants of Devizes have been WHY. THE INITIATIS OF DEVICES HEW BEING SOMERSET AND WEYMOUTH the completion of the Devizes branch. The chairman fairly enough answered that the memorial was entitled to the best attention; and he was persuaded that the directors would feel much pleasure if they could meet its wishes; but the deputation were well aware of the difficulties with which companies had to contend in consequence of the pressure on the money-market. Besides, influential persons were still carrying on an opposition to the Devizes branch; and owing to some of the inhabitants seeking to divert the approach to the town, the works were much suspended during the past autumn and winter. Nor would the directors do justice to other parts of the line were they to devote their entire strength to that of Devizes. The branch to Radstock would prove of considerable advantage to the company, and the inhabitants of that district were equally anxious to see the work completed as speedily as possible. Radstock, therefore, would have great cause to complain if a peculiar favour were granted to Devizes. Commencing at Chippenham. the directors had intended to proceed, as fast as their funds would enable them, to the manufacturing towns. They would shortly open to Westbury; but they would not, he thought, open to Warminster before they opened to Devizes. The number of shareholders in Devizes was comparatively speaking very few; and as it would take 160,000l. to construct the line, it would be an act of injustice towards the company, in the present state of their funds, to apply so large an amount on one particular branch, to the entire

neglect of other portions.

A new route to the North has just been completed by the opening, on Monday last, of the Syston And Petershorough, thereby forming a junction, by a somewhat circuitous mode of transit, between the Northern and the Eastern lines. There was no ceremony. The first train from Leicester, consisting of an engine and tender and four carriages, arrived at Stamford, 40 miles, in an hour and a half.

On Monday the Hon. J. Dundas, Lord of the Admiralty, Mr. Ward, M.P., secretary thereto, and others, travelled from London to Holyhead in 14 hours, being the first passengers who as yet have made a through journey of that extent, to inspect the arrangements for the proposed new naval station at Holyhead, preparatory to the transfer of the mails from Liverpool. The railway company are perfectly prepared to "run" the mails, but as yet it is altogether undetermined when the Government will call upon them to commence their contract, which dates from the 1st of June next.

Fancy Mr. Jonathan Oldbuck reading such a paragraph as this:—The express train which left the Euston station, as appointed, at 9 a.m. on the 1st of May, arrived at the Lothian road station of the Caledonian, Edinburgh, precisely at 9 28 p.m. The first through passenger train transit was thus effected within 12½ hours. The corresponding train from Edinburgh to London (which also performs the journey in 12½ hours) started from the Lothian-road station at 10 15 a.m., and arrived at Carlisle in three hours; and the passengers, after partaking of some refreshments there, proceeded to Manchester, Liverpool, Birmingham and London, without any change of carriage.

Mr. J. W. Lyon, of Edinburgh, has been furnishing the following plan for the frequently urged "Government and to Railways":—

Railway companies to be assisted by an issue of Government railway notes of 5t. value, payable to bearer twelve months after date, to bear interest at 4 per cent. and to be

Digitized by 1008 1

loaned at 5 per cent. The loans to be granted for twelve loaned at 5 per cent. The loans to be granted for twelve months to such companies as have expended half their par-liamentary capital on the works. The amount of loan to any one company not to exceed the amount of the three next calls, exigible to the borrowing company under their Act, to be conceded in Heu of such calls, and at the inter-Act, to be conceded in field of such calls, and at the fire-vals of such calls. The loans to be preferentially secured. The payment of proprietary dividends to be suspended until the liquidation of the Government loans.

The advantages of this mode of assistance are as

follows:-

The issue of these 5L notes would not interfere with the market value of any class of existing securities; would provide a special currency for a special service, not contemplated or provided for by the Bankers' Act of 1844, and ter pinted or provided for by the namers Act of 1444, and ter-minable with the necessity requiring it; would aid the revenue to the extent of 1k per cent, on the amount loaned; would be held by savings bank depositors, as affording a larger interest, and in this way relieve the revenue of a portion of the charge of savings bank deposits; would be sought after as an investment all over the kingdom, and being neptiable everywhere, they would not press inconveniently on any locality in particular.

The immediate effects of Government assistance

To give employment to a mass of labour now depending on the poor rates and private benevolence; to rescue these masses from the demoralization attendant on pauper labour; from the ruinous pressure of calls upon property, depre-ciated through inefficient monetary laws; and to relieve merchants and manufacturers from the competition of rall-way companies for banking accommodation.

The Edinburgh Town Council have received an

answer to their memorial to Government for an advance of money to the railways in Scotland, declining to accede to the request, on the ground, first, that the Treasury could not make an advance to one party without doing the same to other parties in the United Kingdom, where, as well as in Scotland, a considerable number of persons were out of employment; and also on the ground of the present state of the public finances.

In spite of the coldness of Government, Mr. Fairfull Smith is not easily disconcerted.—He has again published another letter on the EMPLOYMENT OF THE WORKING CLASSES. The railway companies in Scotland will now make a combined application for aid, not to commence works, but to complete them, and render productive a vast amount of capital, which

has been already sunk.

The SOUTH-EASTERN started a special train (with free passes for members of the press) for parties deairous of being present at the enthronization of the Archbishop of Canterbury, on the 28th ult.

An arch of the Oxford, Wordster and Wolver-

HAMPTON over the Dudley and Birmingham turnpike road, near the Castle, had a second time given way. The workmen had begun to build the side wings to the bridge, says the Worcester Journal, and had sunk about 18 ft. below the foundation of it. and by so doing the foundation was exposed to the atmosphere, which so acted upon the stone which supported it that it caused it to slack. Before the work could be finished, a few bricks fell, and after several more parts had fallen a large portion of one end of the bridge, together with a considerable segment of the arch itself, came down with a tremendous crash. Fortunately no accident happened to the workmen.

The last bi-monthly Indian mail gives an unfavourable prospect for Indian lines. The worst effect of the recent monetary shock appears to be in the disastrous consequences it may have, at least for delay. With investments of 10 per cent. and upwards offering in Calcutta, the East Indian Railway Company had not found it practicable to raise the first sum even, of 100,000l., necessary to secure the gua-rantee of the Court of Directors, and for which the period of payment had been extended to the end of last month. The greater part of the working staff last month. The greater part of the working staff had already been sent back from India. The inauspicious circumstances of the last half-year, and the fact of a large Government loan having been kept open during the period of the company's probation, rendered it impracticable, as regarded the direction in India, to comply with the primary returns of the

## Reports of Meetings.

[Continued from p. 318.]

GREAT WESTERN.

May 2 .- Special Meeting, Paddington .- Mr. C. RUSSELL in the chair.

Drafts of bills for making a line from the Berks and Hants at Hungerford, to join the Wilts, Somer-set and Weymouth at Westbury and Devizes; to construct a loop line from the Birmingham and Oxford Junction through the town of Leannington, and for other purposes; to enable the Birmingham and Oxford Junction to make a deviation of the Birmingham and Oxford Junction from Learnington to Warwick, and for other purposes; to confer additional

powers on the Great Western, with reference to an agreement of the 12th of November 1846, for the purchase by them of the Birmingham and Oxford Junction and the Birmingham, Wolverhampton and Dudley: for making a line from the Great Western. near Slough, to the town of New Windsor, in the county of Berks; to enable the Plymouth Great Western Dock Company to raise further capital, and to authorize the Great Western, the Bristol and Exeter and the South Devon to subscribe to the Plymouth Great Western Docks, and for other pur-

poses,—were submitted.

The CHAIRMAN alluded to the promise made by the Board as to their applications to Parliament, which were confined within the limits of necessity. The first draft, for making a railway from the Berks and Hants at Hungerford, to join the line of the Wilts, Somerset and Weymouth at Westbury and Devizes, is identically the same as that promoted in the last session. Its main importance consists in the fact that it forms a link in a new, shorter and better line of communication with Exeter and the West of England -from Hungerford to Westbury, from Westbury to Castle Carey, from Castle Carey to Taunton, and from Taunton to Exeter-a line as short, or within a mile as short, and of much better gradients, than the line projected by the South-Western, and therefore constituting their best defence, if the South-Western should still persist in their purpose of carrying forward their line by Salisbury, and if the Legislature should deem it expedient to sanction a third line to Exeter. The next two bills are to construct a loop line from the Birmingham and Oxford Junction to the town of Learnington, and for other purposes; and to enable the Birmingham and Oxford Junction to make a deviation of the line of the Birmingham and Oxford Junction from Leamington to Warwick, and for other purposes. One of these bills (said the Chairman) will of course be dropped, and we shall proceed with that which may seem most expedient, and as circumstances may suggest. The object is to approach much nearer to the town of Leamington go further into that town, and make a better station: and I think hardly a stronger proof can be given that such a deviation is judicious, than that the dissentient shareholders of the Birmingham and Oxford have themselves a third bill for the very same purpose, to meet the event of the construction of that line falling under their control. The next bill is to confer additional powers on the Great Western, with reference to an agreement of the 12th of November 1846, for the purchase by them of the Birmingham and Oxford Junction and the Birmingham, Wolverhampton and Dudley. Now, the main purpose of this bill is to enable us to carry down the broad gauge from our own broad-gauge line at Fenny Compton, through Birmingham, to our own broad-gauge line near to Wolverhampton, and to insure to us also a sufficient control over the expenditure of the Bir-mingham and Oxford. Both these conditions are stipulations in the engagement of the 12th of November 1846, but they require the sanction of Parliament. Our opponents, the dissentient shareholders, have presented a petition to Parliament, the prayer of which is also that the agreement in question may be carried into full effect. It would therefore seem that we are both of us seeking the same object; and if that purpose be carried out in a bond fide spirit by all those who have made themselves parties to the agreement, there can be little doubt we shall be successful; but of course it will be necessary to watch the proceedings before Parliament with the utmost vigilance, in order to see that the agreement, as far as it can be accomplished, is fully carried into effect. The fifth is for making a line from the Great Western near Slough, to the town of New Windsor. This bill is also very nearly the same as that promoted in the last session. We have made only such modifications as were necessary to remove the objections raised by the masters of Eton school. The sixth bill is one proposed to be brought in by the Cornwall; but the directors of that company have very judiciously thought it inexpedient to prosecute the measure under present circumstances. The last bill is to enable the Plymouth Great Western Dock Company lymouth Great Western Dock Company to raise further capital, to authorize the Great Western, the Bristol and Exeter and the South Devon to subscribe to the Plymouth Great Western Dock, and for other purposes. Now, gentlemen, a harbour and dock are almost a natural terminus to a coast line, particularly to a line terminating in Plymouth. The South Devon line will be opened within two miles of Plymouth at the close of the present week; and it has always seemed to us extremely desirable that when such opening took place, every encouragement should be opening took place, every encouragement should be afforded to the mail and steam-packets departing from the West of England, to induce them to come to the port of Plymouth. The three companies who will be benefited by such dock, viz., the South Devon,

the Bristol and Exeter and the Great Western screed to contribute, in certain proportions, towards its completion. The utmost that, under this bill, we can be called on to subscribe is 12,500*l.*; and we think, therefore, that the proprietors will not, under existing circumstances, deem it inexpedient to give their sanction to the measure. Our opponents-the South-Western-have borne testimony to the importance of the object sought to be carried out by this bill; for although they have not got their line-and I hope they never will get it-still they have thought it expedient to enter into similar arrangements for the purpose of securing steamboat accommodation to Plymouth.

Mr. SAUNDERS, the secretary, read the preamble and side-notes of the bill for making a line from the Berks and Hants at Hungerford, to join the Wilts, Somerset and Weymouth at Westbury and Devizes.

A Proprietor inquired the length of the line.

The CHAIRMAN said it was 23 miles.
The Proprietor: And what is the estimated cost?

The CHAIRMAN thought about 600,000l.

The Proprietor thought some information might be given to the shareholders respecting the probable amount of the traffic of the line, and as to whether the outlay was not likely to reduce the present rate of dividend.

The CHAIRMAN said the line passed through several manufacturing towns, and the whole of the Exeter traffic, as well as that to and from London and the

west of that city, would pass over it.

The Proprietor thought the monomania of directors for branch lines and extensions had been most inju-

rious to the interests of proprietors.

The CHAIRMAN remarked that the line from Hungerford to Westbury was essential to the Great West-ern, in order to protect it against the contemplated schemes of the South-Western. Besides, the prosecution of the measure was a matter of good faith with the Great Western, who was under an agreement with the Kennet and Avon Canal Company to carry the bill forward, the latter body having to find 500,000*l*. out of the required capital of 600,000*l*., and on which 500,000*l*. the Great Western was to pay

5 per cent. interest.

Mr. STANFORD thought the preference-share clause a very objectionable one, and would like to know, before the meeting sanctioned the six bills, what amount in the gross would be raised under because proprietors would recollect calls would neces-sarily follow the legislative sanction of the measure in question. He alluded at much length to the falling off in the dividend with an increased mileage. thought they should have paid more attention to the policy of confining themselves as much as possible to their own trunk line; and it would have been time enough to think of constructing feeders or branch lines when the trunk line had realized its 10 per cent. He thought the Great Western had been, in a measure, carried on with a greater consideration for the welfare of the public than the benefit of the shareholders. It appeared to him that this opinion was borne out by the history of the line from its very opening. Every year he found that when he took 1*L* as profit out of the railway, he had to pay as capital 5*L* for new lines or new works; and instead of the dividend increasing, or there being any prospect of its increasing, it was decreasing, and there was every probability of its decreasing still further.

Mr. DUNN would support the bills, as being necessary against the encroachments of the South-Western. The CHAIRMAN said Mr. Stanford had stated that since the commencement of the year the receipts had fallen off. He did not know where Mr. Stanford had obtained that information, but he begged to assure him that he had been misinformed, for that the receipts had decreased only in a slight degree. He defended, on reasons he had already repeatedly given, the introduction of the bills, which were necessary

for them in self-defence. Mr. Saunders, in explanation of the preference shares already alluded to, said that the granting of them was an arrangement made in 1846, when the bill was first introduced. The arrangement was, that the Kennet and Avon Canal Company should, instead of pressing forward a competing line through the

same district, be allowed to subscribe 500,000l. out of the necessary capital of 600,000*l.*; and that they should be paid 5 per cent. in respect of the former amount. The clause that he had previously read was the result of the agreement that he referred to. was before the proprietors in May last year, and approved of by them. The present bill was the same that had been carried from 1846 to 1847, and was, in

Mr. STANFORD asked if the Kennet and Avon pro-

fact, word for word with that of last year

prietors had taken up their shares.

Mr. Saunders said they had already subscribed 450,000%, and had paid to the Great Western 45,00%.

Digitized by

contract deed, and it seemed to him to be one of the most bona jide instruments he had seen.

Sanction was then formally given to the bill. The other bills, with the exception of the Cornwall bill. were also unanimously approved.

SOUTH WALES.

May 3 .- Special Meeting, London .- Mr. C. Russell in the chair.

Drafts of the following bills were submitted:-To amend the laws relating to the South Wales; to enable the South Wales to hold shares in the Vale of Neath, and for other purposes; and to amend the Acts relating to the Waterford, Wexford, Wicklow and

Dublin, and for other purposes.

The CHAIRMAN said the directors had resolved not to enter on any new undertakings during the present session. The first bill sought legislative sanction (to which the Great Western had agreed) for raising the rate of interest on calls from 4 to 5 per cent. The two other bills are promoted by the two companies to which they relate. We have subscribed to the Vale which they relate. We have subscribed to the Vale of Neath for 6,359 shares, which, when entirely paid up, will amount to a capital of 127,780L, or an excess of about 3,000L over the sum I mentioned. We have always looked at the valleys which skirt our main line for a considerable portion of our traffic. Among those valleys there is none more important than the Vale of Neath for the number of works and mines it contains; and we have always urged on you the pro-priety and necessity of supporting the Vale of Neath. Our subscription to the Waterford, Wexford, Wicklow and Dublin has been for 11,200 shares, or, when the entire capital shall have been paid up, a sum of 224,000l., or an excess of above 1,000l. over the amount mentioned by me. Next to the mineral produce of the South Wales line, we have always considered that the passengers from the South of Ireland would constitute one of the most important elements in our traffic. I have already stated that these sub-scriptions are not included in the capital which is guaranteed by the Great Western for the promotion of the main line of the South Wales, and that a separate guarantee will be given by the Great Western for these separate subscriptions. They are for works not contemplated in the original agreement, and it is perfectly just and equitable, therefore, that we should obtain a separate guarantee for these works. The works have been steadily and carefully progressed with, and the directors look forward with anxiety to

improving times. On the motion for confirmation of the first bill a discussion ensued.

In reply to a question,

Mr. BRUNEL stated that the cost of completing the line would not amount to a larger sum than was estimated, viz., 4,000,000l.

The CHAIRMAN also stated that he believed that they would be enabled to open a portion of the line in the course of the summer, but he did not consider it advisable to press forward the works in order to open any particular section.

ie resolution was adopted.

The second bill was then submitted. Several Proprietors objected, considering that it would cripple the resources of the South Wales, which had quite enough to do with its capital.

It was stated by the CHAIRMAN that the measure

had been agreed to at a former meeting, on the faith of which the directors had already paid an instalment of the sum proposed to be raised.

Some conversation arose as to the amount of risk which would fall upon the South Wales by the arrangement, and how far the Great Western were bound to the payment of 5 per cent., which it was stated they had guaranteed.

It was stated, however, by Mr. Saunders, secretary

to the Great Western, that there was no doubt as to the guarantee being bond side.

Two separate amendments were moved, one postponing the consideration of the subject for six months, and the other providing that no further works should be undertaken by the South Wales until their arrangements with the Great Western were con-

The latter proposal was, however, eventually withdrawn, and the original motion was carried by 19 against 17.

Mr. MORTIMER, the mover of the amendment, then demanded a ballot, but ultimately withdrew his demand, on the distinct understanding, reiterated by the CHAIRMAN, that the Great Western guaranteed to pay 5 per cent.

The bills relating to the Vale of Neath and the Waterford, Wexford, Wicklow and Dublin were at length agreed to.

A resolution was then passed to the effect that Mr. Saunders's statement with reference to the guarantee

for the 10 per cent. deposit. He had inspected the | of the Great Western should be entered on the minutes

A resolution was also proposed by which the directors were restricted from entering into any fresh engagements in addition to those which had that day The CHAIRMAN, however, said that the resolution

was out of order, and could not be put.

#### BRISTOL AND EXETER.

May 3. - Special Meeting, Bristol. - Mr. J. W. BULLER in the chair.

Drafts of the following bills were submitted : purchase the Glastonbury Navigation and Canal, and for amending the Acts relating to the line and canal; to enable the Plymouth Great Western Dock to raise further capital, and to authorize the Great Western, the Bristol and Exeter, and the South Devon to sub-scribe to the Plymouth Great Western Docks, and for other purposes; to enable the Great Western, the Bristol and Exeter, and the South Devon respectively to increase their subscriptions towards the undertaking of the Cornwall.

The CHAIRMAN said the third bill had been, as announced elsewhere, withdrawn. The other two

bills had been approved of at previous meetings.

In reply to questions by Mr. Boucher and other shareholders, it was explained by the CHAIRMAN and SECRETARY that the purchase money agreed to be given for the Glastonbury Canal was 7,000t., which, in consideration of the canal company assisting to carry the bill through Parliament, was to be paid upon its passing. The present traffic of the canal was 300l. a year, but was considered capable of improvement. The purchase of the canal was considered advisable as a defensive measure against rival companies. In addition to the purchase money there would be other liabilities, but not to any large amount.

Mr. BOUCHER objected to the resolution, and begged to enter his protest against their extending their liabilities by engaging in other speculations. In such times as the present every tub should stand upon its own bottom, and their railway should not be called upon to support other unprofitable concerns. He considered that they had already gone beyond the bounds of prudence by investing so large a sum in the South Devon, from which he did notanticipate anything like an adequate return.

Mr. TARTT and some other shareholders expressed similar views to those entertained by Mr. Boucher, and objected to the directors calling upon them to increase their capital for the establishment of branch lines and the support of collateral sources of traffic.

As to the proposed purchase of the Glastonbury
Canal, he did not consider it could be justified by any necessity or any prospect of a profitable return. subscription towards the Plymouth Great Western was in principle still more unjustifiable, as the merchants of that port ought to provide accommodation for their shipping, and not require it from a company which had given them the advantages of railway com-

munication.

Two or three Proprietors strongly urged upon the directors the importance of studying, in the depressed state of money matters, the strictest economy

The CHAIRMAN said the directors were fully alive to the importance of economy, and agreed with all that had been said as to the desirability of their not recommending any addition to the capital outlay. The present measures, however, did not recommend any new outlay. The Cornwall bill, the only one open to that remark, had been withdrawn, and the two which remained had been already assented to by the proprietors, upon whose requisition the directors had acted in endeavouring to carry them out.

After some further conversation, the resolutions sanctioning the bills were carried with but few dissentients.

#### NORFOLK.

May 2 .- Special Meeting, London .- Mr. S. M. Peto. M.P., (in the absence of Mr. Duff) in the chair.
Mr. Tile (the Secretary) read a Report, which

after alluding to the original position of the line, de tailed the terms of the proposed amalgamation with the Eastern Counties:—That the lines of the Norfolk shall be placed in the hands of the Eastern Counties, and worked by them in conjunction with their own line, under the direction of a joint committee; a lease being granted by this company, under the powers of their present Act, of their rates and tolls to three or more of the directors of the Eastern Counties, as the legal means of carrying out the arrangement until the sanction of Parliament can be obtained. obtained. The Eastern Counties shall take upon themselves the payment of the interest on borrowed capital and guaranteed shares of the Norfolk and Lowestoft, and shall pay to the shareholders a dividend after the same rate as shall from time to time

be declared on the capital stock of the Eastern Coun-That the debts and liabilities of the Norfolk and Lowestoft shall be liquidated under the direction of the joint committee, aided by the Eastern Counties, who are to have a lien charge upon all the property of the Norfolk for any sums advanced. Application shall be made to Parliament at the earliest practicable period, for an Act to authorize the permanent amalgamation of the companies, in which provision shall be made for giving to the Norfolk shareholders the same rights and privileges as are enjoyed by the Eastern Counties shareholders.

The CHAIRMAN said that the Report left him little to say beyond answering any question which the shareholders might be desirous of putting to him. By the proxies received, representing nearly threefourths of the capital, the course recommended by the directors was generally approved. He expatiated on the frankness with which the proposed amalgamation had been received on both sides. In investigating the affairs of their own company, he (the chairman) and his colleagues had the utmost difficulty in making any deductions as to what was likely to be the amount of their future dividends. But, in going into the question of amalgamation with Mr. Hudson, he found that there would be a saving from a blending of the interests of the two companies, and working them with one plant, of no less than 25,000l. per annum alone. The company would also from the unity of management, obtain largely increased receipts, while the public would be gainers by the greater punctuality and regularity of working. Next week the line from Syston to Peterborough would be opened, and he need not say that they expected that that would much increase the traffic on their line. From the experience of the goods traffic of the last fortnight they felt justified in that anticipation. The Norfolk directors had determined not to exercise their borrowing powers, in consequence of the assistance afforded them by the Eastern Counties.

Major Court thought that there was no necessity for them to come to any immediate decision with respect to an amalgamation. It was proposed to grant a lease of the line to the Eastern Counties for seven years, and he considered that if a proper account of the working was kept during that period, that they could then better form a judgment on the subject. The Eastern Counties had never paid more than a dividend of 5 per cent., while that (the Norfolk) company had paid 7 per cent. What were the terms for the Norfolk line during the continuance of the lease; were they to have a fixed dividend of 5 per cent., or be dependent upon the proceeds of the line?

Mr. PARKER (the solicitor) explained that the lease was only adopted as a means of at once putting the Eastern Counties into legal possession of the Norfolk line, so that they might be worked together prior to an Act of Parliament authorizing the amalgamation being obtained. The term of seven years was mentioned, the Norfolk being anthorized by their Act to lease it for that period, but immediately upon the Amalgamation Act being passed, the lease would at once determine. The terms upon which the Eastern Counties were to lease the line were these :- During the continuance of the lease the Eastern Counties were to pay the interest on all the debts of the Norfolk, and to give to the shareholders in that company the same dividend as they took themselves.

Mr. YETTS stated that they had been always led to believe that the Norfolk would pay them a dividend of from 7 to 8 per cent., and it was notorious that their shares were remarkably well paid up, while they were now called upon to sanction an agreement by which they would receive a dividend of 1 per cent. less than the Eastern Counties. Why the Eastern Counties 20*l*. shares were only in reality 16*l*., so that they had but 80*l*. paid against 100*l*. in the Norfolk, and, taking equal dividends, the Norfolk would consequently receive 1 per cent. less than the Eastern Counties-so that, looking at the last dividend of that company, they could not in future expect to obtain more than 3 per cent. on their Norfolk shares.

Mr. NEWBERRY, a director, stated that in defending the proposed amalgamation the directors were so placed that they apparently disparaged their own property. Undoubtedly they were placed in great difficulties with regard to money matters, and they could not raise money efficiently to work their line without depreciating the value of their shares. If they did not amalgamate with the Eastern Counties a large additional stock must be created to meet their liabilities—perhaps 200,000/. Gentlemen might laugh, but if, in times like the present, the directors were to make calls, they would not be cordially responded to, and without they obtained capital they could not work their line. There were many other reasons which had weighed in favour of amalgamation which he could not then fully enter into, but when he told them that he had given 1501. per share

Digitized by GOGIC

for every one he held, he thought they would give him credit for not having any desire to depreciate the property. There was one point, however, to which he might allude, namely, that the Eastern Counties had recently entered into an arrangement for an amalgamation with the Newmarket; and should an amalgamation be effected with the Eastern Union, a line might be easily constructed to Norwich, by which that (the Norfolk) line would lose half its traffic. He had always looked upon the Norfolk as a 10 per cent. line, and it was therefore with great regret that he which he did with the most gloomy feelings. There was only one other point to which he would allude, viz., the difference of value between the shares of their company and those of the Eastern Counties. When the deputation of the two companies first met to consider the subject of amalgamation, the shares were equal, the 100l. shares in the Norfolk being worth 65l., and the 20l. shares in the Eastern Counties stood at 13l., and though there had been a little difference since, it had been in favour of the Eastern Counties, their shares having been slightly raised, while those of the Norfolk were depressed. must accept the terms of amalgamation now offered or none, since he believed the Eastern Counties were indifferent whether they had the line or not.

Further discussion took place on the subject, in which Mr. Rawson contended that under the agreement they could never hope to obtain more than 4 per cent., and declared his determination to oppose the ratification of the arrangement. Resolutions were, however, carried with two dissentients (Mr. Rawson protesting, with a view, as he stated, of taking ulterior proceedings), to the effect that the amalgamation on the terms stated be approved; that the line be leased in the meantime for seven years, or until the amalga-mation be sanctioned by Parliament; and that the directors be authorized to concur in an application to Parliament for power to carry the amalgamation into complete effect.

#### BIRMINGHAM AND OXFORD JUNCTION.

May 2.—Adjourned Meeting, London.—Mr. Mat-THEWS (in the absence of Mr. Muntz) in the chair. A resolution was passed for the further adjourn-ment of the meeting to Thursday, the 11th inst., at the same hour and place, viz., 2 p.m., at the King's Arms. New Palace vard.

## LIVERPOOL, MANCHESTER AND NEWCASTLE JUNCTION.

May 4 .- Adjourned Special Meeting, London .- Mr. W. FFRANCE in the chair.

Mr. Parsons, as a matter of form, protested against Mr. Ffrance taking the chair, because he had refused to register a large number of votes tendered at the last meeting. He would have legally enforced him to register them, but he found the legal process was so slow that it may be three or four years before a mandamus could be obtained for the purpose.

The CHAIRMAN acted under the advice of eminent counsel in refusing to register the proxies alluded to.
During a long discussion respecting the legality of

the proxies, it was contended that their vagueness rendered them invalid. It was contended on the other hand that, inasmuch as the 28,400 proxies conveyed the feelings of some of the shareholders, technical legal points should be allowed to give way to the general wishes of the majority.

The CHAIRMAN had no wish to contend legal points, but he was forced to do so by the gentlemen who held the proxies. He was willing to carry out the wishes of the majority to dissolve the company, although he believed it would be much better to keep the concern in abeyance for two years and see what could be done

Mr. MYTTHEY moved a resolution, seconded by Mr. ASHLIN—"That it is expedient to dissolve the company and wind up affairs."

Mr. MARRIOTT moved an amendment, that it would

be better to wait for two years and hold the under-taking in abeyance rather than abandon it, after having expended 100,000l. in obtaining the Act. Only three hands being held up in its favour, it was lost.

The original motion was then put and carried. The meeting was eventually adjourned to the 8th of June, as was also the adjourned half-yearly meeting.

A special meeting was next held, to consider an agreement with Mr. Hudson for a portion of the undertaking.

Mr. Plews was authorized by Mr. Hudson to withdraw that agreement.

A resolution was then passed that the agreement be not confirmed.

The directors, solicitor and secretary then left the room, after which the shareholders elected Mr. AshLIN to the chair.

Mr. Parsons read the preamble and side heads of the bill for dissolution. It provided for the compensation of persons with whom agreements for the purchase of land had been entered into, and that within twelve months from the passing of the Act the money should be distributed.

The bill was then unanimously approved.

## AIRDRIE AND BATHGATE JUNCTION.

April 26 .- Special Meeting, Glasgow .- Mr. J. L. Ewing in the chair.

The meeting was convened for the purpose of deciding as to a proposed increase of the number of directors to the highest number authorized by the Act constituting this company, or to any other increased number within the limits prescribed by the said Act, and, if requisite, to determine the order of rotation in which such increased number shall go out of office, and what number shall constitute a quorum of their meetings, and all other matters and things relative thereto. Also to consider the disputes and differences, and particularly the lawsuits now in dependence between this company and the Edinburgh and Glasgow, and to instruct the directors thereupon. The proceedings were mostly formal.

After some discussion it was agreed to increase the number of directors from nine to thirteen, and a resolution of confidence in the board of directors as now constituted was carried, affirming that it was not necessary to give them special instructions with regard to the existing disputes and lawsuits, but recommending them to take the subject into their early consideration.

## DUNDALK AND ENNISKILLEN.

May 1 .- Adjourned Meeting, Dublin, to receive the Report of the committee appointed at the pre-vious meeting.—Lord Roden in the chair.

the request of the CHAIRMAN, Mr. DUNLOP read the Report (which we shall shortly give to our readers, which was of considerable length), containing several suggestions for adoption by the directors.

The CHAIRMAN said the directors were most anxious to do all in their power, and it was the desire of the directors to adopt all the suggestions of the committee. They had elected the chairman of the committee. mittee of shareholders to be a director, and he could

take his seat at the Board as soon as he pleased.

After some conversation respecting the Report, which it was stated would require some correction before it could be delivered to the press, the meeting adjourned.

NORTHERN OF FRANCE

April 29 .- Annual Meeting, Paris .- Baron J. DE

ROTHSCHILD in the chair.

The Report stated that in consequence of the increased traffic it had been found necessary to add largely to the sidings, to the number of carriages, locomotives, &c. Measures had been taken for estab lishing workshops on various parts to repair the stock, so as largely to economise. Additional locomotives were now being built which would ensure greater were now being built which would ensure greater rapidity than the company had hitherto been able to accomplish. During the first half-year of 1847 the receipts had increased 61 per cent. as compared with the corresponding period of the preceding year, and in the last six months not less than 50 per cent. company had not lost one sou by the financial crisis of 1847, or by the revolution of 1848. They had made a call of 75f. for March 6, with the option to the shareholders of paying it in advance, on receiving interest on the sum so placed at the disposal of the company. Some shareholders had adopted that course, but the events of February had prevented the rest from responding to the call as they would otherwise have done. Even after the revolution the payment of the call was going on regularly, though slowly, when the rumour began to prevail that the Provisional Government intended to take possession of all the lines. The payments then stopped. The Board, however, now hoped that before long the shareholders would be able to pay, if not the whole, at least part of the sum demanded. The Report shows that the late outrages on the line were considerable, and that the line was stopped altogether for about a week. The works on the branch lines are stated to be going on satisfactorily, and that to Calais, should no interruption take place, would be finished in the course of the present year. Notwithstanding all the late events, the company had thought it their duty to keep up their full establishment of workmen, thus employing continually not less than 40,000 persons. The Report proceeds to speak of the intention manifested by the Minister of Finance to take possession of all the railways. The board of directors of the Northern did not consider themselves authorized to treat in any way with the State on the point in question, seeing that it had not been anticipated or provided for in the statutes. Should the Board

consider that any new circumstances called for a meeting of the shareholders, the necessary notice would be immediately issued.

The statement of accounts for the year 1847 showed the expenses, including the cost of the central administration, &c., 326,213f. 56c., working of the line. at 6,468,870f. 66c. (258,754L); the receipts, including passengers, 8,464,888.7 f. 79c., luggage, dogs, parcels, ing passengers, 8,405,8361. 19C., luggage, uogs, parceis, 1,476,808f. 43c., carriages, malles-postes, horses, 495,205f. 87c., goods, 4,934,301f. 10c., cattle, 155,984f. 90c., storage, porterage, &c., 135,245f. 81c., nett returns of the branch from Creil to Compiègue, 25,705f. 73c., at 15,693,138f. 63c. (627,725/.). There remains after all a balance of 10,224,923f. 53c. (408,996l.). If again from that sum were deducted the interest to shareholders for the year 1847, amounting to 2,514,499f. 93c., the interest on the funds due to the State being 1,712,287f. 50c., and the sum set aside for the reserve 2,000,000f. there would be left a clear balance of 3,980,000f. (159,200l.), which would allow a dividend to be declared of 9f. 95c. per share.

The Report was favourably received.

The exceptional position in which part of the shareholders are placed from having paid by anticipation the 75f. demanded for the fourth call was then discussed. The revolution of February had com-pletely changed the position of a vast number of the shareholders, and it was now almost impossible for out of 400,000 had been paid on. At the Bourse the persons holding the shares that had been paid on found great difficulty in disposing of them, and several shareholders proposed to the meeting various remedies. Some that a call of 25f. (out of the 75f.) should at once be demanded, as that would produce a sum of 7,750,000f; others said that if that was done 50f. of the 75f. already paid should be returned; others suggested that the Board should apply to the syndicate of the Agents de Change to have two quotations made at the Bourse, one for the shares on which the 75f. had been paid, and another for those not paid on.

M. E. Pereire gave explanations on all the points

raised, and observed that the twenty millions due to the State had not been called for, the late events

constituting an evident case of force majeure.

Eventually it was decided that the sum of 75f. paid up could not be returned; that the dividend of 9f. 95c. should be paid only on the shares that had paid the last call; that the shareholders should be recommended by the Board to pay 25f. as soon as possible, so as to enable the line to be worked as usual; but as there was a sum of 9f. 95c. coming to all the shares, the real sum to be thus paid would really only amount to 15f. 5c.; and finally that all ulterior proceedings should be left to the prudence

and good feeling of the Board.*

A committee of five members was chosen from amongst the shareholders to examine the accounts, M. DE ROTHSCHILD declaring that every shareholder might at all times examine the books, as the Board always so acted as to be anxious to court the fullest inquiry.

The Report and accounts were then adopted.

The meeting unanimously exclaimed against the proposed purchase by the Government of the line on any terms.

#### PARIS AND STRASBURG.

April 28. - Annual Meeting, Paris .- Count DE SEGUR in the chair.

M. Bossange, the secretary, read the Report. It detailed the favourable prospects of the company when the late revolution so suddenly took place. the 22nd of February the situation was this: general works and earthworks at the charge of the State had been urged on actively during the preceding season. Everything had been so well proceeded with on the first section, from Paris to Epernay, that the opening of that portion might be fixed with certainty for September next, and at the same period the company would have had delivered 65 locomotives (50 of which are already in its possession), 30 first-class carriages, 110 second, 80 third, 502 goods waggons and 60 tenders. The financial situation was exceedingly favourable; out of 18,750,000f. (750,000%) to be produced by the call of 75f. demanded in May, not less than 18,641,940f. (745,6771.) had been received, so that only 108,060f. (4,322l.) remained to be recovered. The receipts were 49,731,936f. 32c. (1,989,277l.), and the sums paid 15,799,023f. 61c. (631,960l.); leaving, on the 31st of December last, a balance of 33,932,912f. 71c. (1,357,316l.) Thus it was evident that, up to the 22nd of February, the situation of the company was most satisfactory, but from the decided change after

* No provision seems to have been made as to the interest due, which was to be allowed on paying the original call.

that period in public credit, the company felt itself called on to change its intended course, and determined to concentrate all its disposable resources on the section from Paris to Epernay, so as to open it as speedily as possible, and to suspend the other works as much as possible until better times should arrive. Instructions had accordingly been given to that effect, when a rumour began to gain ground that the Government intended seizing on the railway lines. This was soon found to be correct, and the company received an invitation to send three delegates to the hotel of the Minister of Finance. Nothing was de-cided at that meeting, but the Board thought it their duty to address a letter to the hon, minister, protesting energetically against any plan of expropriation being applied to the Strasburg, which had constantly met all its engagements, and was quite prepared to meet all that it had entered on, demanding only that the State should on its side observe those which it had agreed to. The letter showed that, even by the most favourable hypothesis of those proposed by the hon minister, there would be a confiscation of the property of the company of not less than 71f. 16c. per share, since the disposable funds, if distributed, would afford that sum more per share than the minister's plan offered (see ante, p. 292). To that letter no reply had been received, but the Board had every reason to believe that it had been the subject of a very serious examination. The company had taken efficient measures to prove to the Government the precise financial condition of the undertaking, which runs thus:—In real property, 5,394,746f. 59c. (215,789l.); in moveable property, 13,159,624f. 82c. (526,384l.); in financial securities, 30,200,083f. 88c. (1,203,003.); total, 48,754,454f. 29c. (1,950,178.); representing 195f. 2c. per share. The inevitable conclusion to be drawn from this statement was that the social capital remained still intact, and that the company, in preserving the full amount of the calls had not weakened any of the favourable chances of success from the very commencement.

The Report then dwelt on the conditions agreed to between the company and the State, and expressed a firm conviction that if the question of the re-purchase should be brought before the National Assembly, that body will act with perfect justice, and not disregard the vested rights of the various companies; by confirming the contracts already existing it would the Report observes, best strengthen in the country property and order. It recommended to the meeting to confirm the nomination of M. Simon, banker, at Metz, as one of the directors of the company.

M. Lugor, one of the shareholders, proposed that a vote of thanks should be passed by the meeting to the directors for the very able manner in which their interests had been throughout attended to.

This proposition was carried.

From a conversation which ensued, it appeared that the caution-money, amounting to 12,500,000f. (500,000l.) had been deposited at the Caisse des Dépots et Consignations, principally in bons du Trésor, and that the funds held by the company were held partly in excellent available securities and partly in hard cash at their bankers'.

The nomination of M. Simon as a director was then confirmed and the accounts adopted.

PARIS AND ORLEANS.

April 27.—Special Meeting, Paris.—M. BARTHO-LOMY in the chair.

The Report, detailing the circumstances of the sequestration of the line, as well as that of the Vierzon, and proposing to make an energetic protest against the threatened appropriation by the Provisional Government, was adopted.

The shareholders viewed with suspicion this pro osal, which, however, they did not consider at all likely to be carried into execution by the Provisional Government, much less by the National Assembly.

A lengthened discussion then followed in reference to a renewal of the obligations of the company, the payment of which has been prevented by the recent state of affairs. In the discussion the shareholders dwelt on the justice of their having a preference in obtaining the bonds proposed to be issued on terms very beneficial to the lenders.

CENTRAL OF FRANCE.

April 27.—Special Meeting, Paris.—M. Bartho-Lomy in the chair.—The vigorous protest of M. Godin against the proposed appropriation of the Provisional Government was unanimously adopted.

ROUEN AND HAVRE.

April 30 .- Half-yearly Meeting, Paris .- M. C. LAP FITTE in the chair.

The Report was read .- The expense of the construction of the line was 54,029,097f. (2,161,160L). The late general expenditure amounted to 2,694,453f. April 29.—Annual Meeting, Paris.—A committee 117,778t.). From total expenditure the sum of 163,235f. of five shareholders was appointed to proceed the

must be deducted, arising from the re-sale of land. The traffic receipts amount to 1.742.441f. The total The trame receipts amount to 1,42,4411. The total expenses amount to 1,399,192f. 36c. The Report states that, in order duly to appreciate the proportion between the expenses, properly so called, of the working and the receipts, it is necessary to deduct from the sum of 927,414f. 25c. the sum of 59,109f. 65c. representing the reserves of 15 per cent. on the expense of the locomotion, placed apart as guarantee to meet the depreciation of the rolling stock, by taking which circumstance into account, the proportion between the expenses properly so called of the work-ing and the receipts is, for the last half-year, 49.83 per cent. In the accounts of the preceding half-year, a sum of 58,680f. 86c. is down as the amount set apart for the sinking fund after taking the interest at 5 per cent. to the shareholders; but as by the terms of article 19 of the statutes a dividend of 5 per cent. a year must be distributed before any sum can be taken for the sinking fund, it is right to add to the sum of 344,582f. 13c. that of 58,680f. 86c., provisionally reserved for the sinking fund, which will carry to 10f. the dividend due for each share, leaving a balance of 3,262f. 99c. for the next half-year. The Report then details the particulars of the passenger and goods traffic:—It results from the details that, in spite of the disastrous state of commerce and industry during the first year, a revenue of about 5 per cent. has been realized over and above the service of loans, and that there is reason to hope for a marked improvement next year. The facts of the late outrages on the line are then set forth, and the consequent interruption to traffic. The Report then alludes to the crisis which followed the revolution. The bankers of the company could no longer negotiate their securities in the money market; the Bank of France refused to discount them The reimbursements of these engagements placed the bankers under the painful necessity of suspending their payments, and of making a statement of affairs to their creditors, by whom they were maintained to manage the liquidation of the concern. At this period the bankers of the company were your debtors in the sum of 313,733f. 51c.; but, on the other hand, they were responsible towards the holders of your engage ments for a sum of 2.560,408f, 56c., which they had negotiated; so that at the approaching payment of their first dividend, the sum for which they are your debtors will be considerably reduced, while they will still remain charged with the responsibility at tendant on their endorsement of your engagements. Just on the eve of a definitive arrangement with the holders of our engagements the question of the re-purchase of the railways by the State interrupted the negotiations. The delegates of the companies were convoked by the Minister of Finance, to receive the The delegates of the companies were intentions of the Government. The president of your Board declared that the delegates had no power to treat on a subject of that nature; that the cahiers des charges had determined the conditions on which the re-purchase of the concessions could be effected, and that beyond those conditions neither the board of directors nor the general meeting had the right to alienate what was the property of all. The solution of the question is henceforth reserved for the National Assembly. The statement we have laid before you does not permit us to distribute amongst you in money the amount of the last half-year's dividend, but we propose to settle it by bonds (bons) without date, bearing interest, which is the same plan as has been adopted by the St. Germain, Orleans, and Northern. These bons will be delivered to you in exchange for the coupons of the second dividend from the 10th of May next, at the office of the company. The coupons of the first dividend, which have not been paid, will be settled in the same manner.

In answer to various questions,
The CHAIRMAN stated that the falling off which had of late been perceptible in the receipts must be attributed, in the first place, to the general decline in commercial transactions, and, at a later period, by the circumstances of the line having been damaged after the revolution of February. But what particularly affected the credit of the company, and rendered it difficult for them to raise funds under the power granted by the preceding general meeting, was the rumour of the purchase by the That matter would be carried before the National Assembly; but that body would at first have so many important questions to decide, relative to the fixing the constitution, that a length of time might elapse before the railway project could be settled. During that delay, however long it might be, railway property must inevitably suffer.

The accounts were approved, and the receipts for the dividend delivered.

ROUEN AND DIEPPE.

following day to examine the line and ascertain what sum will be required to finish the whole.

NAMUR AND LIEGE.

April 26.—Special Meeting, Brussels.—The same resolutions as those approved by the meeting held at the London Tavern on the 30th of March last (see ante, p. 264), were proposed by the directors and unanimously adopted. These resolutions authorize an increase of the capital of the company and approve of the proposed method of raising money on loan.

WATERPORD, WEXFORD, WICKLOW AND DUBLIN.— May 3.—Meeting of Shareholders, London.—Mr. C. Nash in the chair.—A statement from a shareholder who has lately visited Ireland was read. It declared that the company was got up in 1845 by the officials of the Great Western and South Wales. The capital was fixed at 2,000,000*l*., divided into 100,000 shares of 20% each, with a deposit of 2% per share. The company ultimately settled down into a line from Dublin to Bray, Wicklow, Wexford and Waterford, but it was now proposed to be carried out as a continuation of the Dublin and Kingstown, which had power to make a line to Bray. There were applications made for more than the whole number of shares, but only about two-thirds of them were allotted. The panic occurring, a number of shares were not taken up, and the company were not in a position to go to Parliament for their bill in the session of 1846, and ought to have been dissolved, but the directors got the subscription deed signed by a number of the officials of the Great Western and South Wales Companies, and other parties, and large promises having been held out to the shareholders that half the capital would be taken up by the South Wales, under the guarantee of the Great Western, with a view of competing for the Irish traffic with the London and North Western, the Act of incorporation was obtained in July 1846, and the scrip called in. A committee, however, organized by Irish shareholders, was formed in September 1846, with a view of staying the further progress. At the adjourned meeting in February 1847, the directors obtained a majority in their favour. An allowance of 1,000l. a-year was voted to the directors, and a similar sum to the secretary, being more than double the average amount. The directors then made a call of 10%. per share, with a balance of 75,000l. in hand at the time, although they did not state where it was invested, or whether it arose from bond fide subscriptions. In the session of 1847 the directors applied to Parliament for power to proceed with the line when they should obtain a subscribed capital of 1.500.000l.. thus admitting that the capital had not been previously bona fide subscribed. The shareholders' committee opposed the bill, but the committee of the House of Commons decided that they had no locus standi; and some other opposition having been settled by the directors agreeing to lease the Kingstown, the bill was carried, and the remnant of the Irish shareholders, to a great extent, paid the call of 10s. per share, and transferred their shares, so as to avoid further liability. The directors were now applying to Parliament for leave to the South Wales to subscribe a sum not exceeding 250,000%. to the capital of the company, and to nominate half the directors, although it had always been previously held out to the proprietors that the South Wales were to take up 500,000l. of the capital under the guarantee of the Great Western. The Report The Report then stated that it appeared the application was for the furtherance of some scheme for the benefit of some other parties than the shareholders. From various causes the number of shares has dwindled down to about 22,000, and it was ascertained that of the number held in Ireland not three-tenths would ever be paid up. The directors have refused to allow the shareholders to inspect their books. During some conversation, Mr. Nash stated that, by a resolution of Parliament of the present session, the shareholders might obtain an inquiry into the subscription contracts. He expressed his belief that the only way of obtaining justice for the shareholders would be by an application to the Court of Chancery. Ultimately a series of resolutions were carried, adopting the Report, denouncing the conduct of the directors, adopting a petition to Parliament praying for an investigation into the subscription contracts, and against the proposed bill, and appointing a committee to consider the expediency of taking further steps at law against the directors.--The meeting, at which the holders of about 4,000 shares were said to be represented, adjourned for a fortnight.

## STIRLING AND DUNFERMLINE

RAILWAY.

THIRD CALL—9. PER SHARE.

NOTICE IS HEREBY GIVEN, that the Directors of the Stirling and Dunfermline Railway Company have made a CALL, of 22 per Share on the Shares of the Company, payable on the 5th day of June next.

Luterest at the rate of 5 per cent. per annum will be charged on all Calls not paid at the above date.

No Tran-fer of Shares in this Company can be registered after the 12th inst. until the Call now advertised has been paid, as the Circulars intimating the Call must be posted on that date.

Interest at the rate of 5 per cent. per annum will be allowed on all sums paid in advance of Calls.

By order of the Directors,

J. ANSTRUTHIR, Chairman.

JAMES MONTEATH, Secretary.

Stirling and Dunfermline Railway.

Company's Office.

4. 8t. Andrew square. Edinburch, May 6, 1848.

Company's Office, 4, St. Andrew-square, Edinburgh, May 6, 1848.

## DUNDALK AND ENNISKILLEN

NOTICE TO CONTRACTORS.

The Directors of the above Railway will receive TENDERS for WOIRING THE LOCOMOTIVES on their line for Twelve Months, or such further time as may be agreed on. The work to be commenced early in August.

Full particulars and details of what will be required from Contractors may be had at the Olice of Sir John Macneill, 28, Rutlandaquars. Oscaled Tenders to be sent, directed to the Chairman of the Company, under cover to the Secretary, on or before Friday, the 26th inst.

ROBERT PRESCOTT, Secretary.

Dublin, 1, Talbot-street, May 3, 1848.

Dublin, 1, Talbot-street, May 3, 1848.

## DUNDALK AND ENNISKILLEN

NOTICE TO CONTRACTORS.

The Directors of the above Company will receive TENDERS for supplying FIRST AND SECOND CLASS CARRIAGES, also HORSE BOXES and CARRIAGE TRUCKS, by the mile, for one year, or such further time as may be agreed on.

For particulars apply at the Office of Sir John Macnell, 28, Rutland-square. Seaded Tenders to be sent, directed to the Chairman of the Company, under cover to the Secretary, on or before Friday, the 25th inst. By order, ROBERT PRESCOTT, Secretary.

Dublin, 1. Talbot-street. May 3, 1888.

Dublin, 1, Talbot-street, May 3, 1848.

## LONDON, BRIGHTON AND SOUTH

COAST RAILWAY.

The Directors of the London, Brighton, and South Coast Railway Company are prepared to receive TENDERS for 20.000 RS.EEPERS, either of Larch, Quebec, Yellow Pine or Memel Timber.

The Sleepers, if of Larch, must be not less than 9 inches by 43 inches at the smaller end under the bark, and 9 feet in length; if of Pine or Memel, they must be rectaugular, 10 inches by 5 inches, and from 8 feet 6 inches to 9 feet in length.

The Sleepers must be delivered free of expense to the Company, upon their wharf, either at New Cross, Newhaven or Shoreham; one-half within six weeks of the received of the order, and the reasoning half within two months afterwards.

Payments one month after delivery, subject to a deduction of 14 per cent. discount.

For further particulars apply to Mr. R. J. Hood, Engineer's Office, Brighton.

Office, Brighton.

Office, Brighton.

To Jabluckton, endorsed "Tender for Sheepers," to be delivered to the Severtary, London Bridge Station, on or before 10 o'clock on Monday, the 22th inst.

T. Jabluckton, Secretary.

## UNITED KINGDOM LIFE ASSURANCE

8. Waterloo-place, Pall-Mall, London; 97, George-street, Edinburgh; 12, St. Vincent-place, Glasgow; 4, College-green, Dublin, Established by Act of Parliament in 1834.

In 1841, the Company added a bonus of 2 per cent. per annum on the sum assured to all Policies of the Participating Class, from the time they were effected.

When the Insurance is for life, only one-half the Annual Premium need be paid for the first five-years.

Every information will be afforded-on application to the Resident Director, No.-8, Waterloo-place, Pall-Mall, London, where Prospectures, &c., may be had.

PORT OF GREAT GRIMSBY.

## NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accossible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

#### LOCOMOTIVE TRIALS ON THE MIDLAND LINE.

We read in last Monday's Morning Herald the detailed account of some recent EXPERI-MENTS with new NARROW-GAUGE engines on the Midland line,-the publication of which in that paper we must ascribe, in due fairness, to the proper wish to avoid the appearance of an exclusive regard to the performances on the Great Western. These experiments consisted of a trial between two classes of locomotives,—one of Messrs. Sharpe, Roberts & Co.'s manufacture, with 5 ft. driving-wheels; the other, Messrs. Wilson & Co.'s, with those wheels of 6 ft. diameter. The performances of both kinds of engine, as reported, appear to have been admirable. The average speed with a dead-weight load of 64 tons, exclusive of the engine, having been by the former at about 43. by the latter at nearly 47 miles per hour. In another experiment, with gross loads of 101 tons, the result was of 43 by Messrs. Sharpe's, and 44 by Messrs. Wilson & Co.'s engines. An inspection of the tables given afford some particulars that must be thought curious if accurately reported; as for instance, that while in ascending an incline of 1 in 330, an advantage in rate equal to 2 miles per hour seems to have been with the 6 ft. wheel; the 5 ft. wheel descended the same gradient with greater speed than the other; -a conclusion, other things being equal, quite at variance with theory and experience. It would, however, be quite out of the question to attach any minute consequence, on a mechanical point like this, to the details recorded by any but a professional witness. The reporter of the Morning Herald may be accepted, however, as competent evidence of the fact that both classes of locomotives performed admirably. The conclusion from such performances, as to the settlement of any practical question between the rival guages on the chapters of speed, we have noticed in some former remarks on this subject.

There is another item as to which the reporter of the Morning Herald may also be trusted, that we could not pass over without wincing as we read it. The weight of the Sharpe engine, without tender, is set down at 21 tons 9 cwt.; with tender, coked and watered, 34 tons! The figures referring to the Wilson engine are heavier still, 24 tons 9 cwt. and 39 tons 16 cwt., respectively. We could not but think of the effect on the permanent way of these enormous weights dashing along the rails at a speed described as having for miles together exceeded 50 miles an hour, and in some cases rising to a maximum beyond 58! Such speeds with 24-ton engines must produce an effect on the heaviest and best laid rails, that cannot be reconciled with what ought now to be the principal object in all railway working-namely, the profitable, and not the surprising performance of the service.

On this chapter we have little to add to what we recently took occasion to say on the subject. It was there remarked that the mechanical improvements now wanted are those which will economize, not those which may astonish. In so far as the new engines can accomplish their work, at less extreme rates of speed than we have been speaking of, with less expense of gear and fuel, &c. than others of inferior running powers, to that extent, and no further, will they be really valuable now; and we trust that such may be found one of the results of the improved construction which enables them to accomplish the wonders we have been describ-To employ them only as the means of

far enough, would be rather to abuse than to take a prudent advantage of the mechanical skill that has produced engines of such marvellous capabilities.

While we are writing this, we regret to receive the report of a fatal mishap to one of the Great Western express trains, that is but too well calculated to strengthen our opinion. We have already expressed that, even putting economics out of the question, it is anything but desirable to quicken the maximum rate of speed, on other grounds. In the instance in question, it seems pretty certain that, while the cause of the collision, which has resulted in the loss of several lives, may have been some negligence of the porters at the station, the extensive mischief it produced could hardly have taken place but for the rapid rate at which the express was running through, the driver supposing that the line was all clear. It appears to us, that a serious responsibility will be incurred by those directors or engineers who may undertake to push railway speed to a still further point than the very extreme one it has already reached, on all the chief lines of the kingdom.

## Mechanical Emprobements.

## MOWBRAY'S CHEMICAL RAILWAY WHISTLE.

The following are some particulars of a very ingenious invention which the inventor conceives he has now brought to a state of perfection likely to admit of its daily use. This is the inventor's account of it :-

The necessity of some means whereby the guards of a train may signal to the engine-driver, or to another train approaching on the same line of rails, is now admitted on all hands. The engine-driver can now, by means of his whistle, give notice of his approach to persons on the line, or at the stations, and direct the guard to employ the brake; but the guard himself, under whose control the whole train is supposed to be, and who is seated on the top of one of the posterior carriages, should he observe anything wrong, such as the unfastening of a truck, the opening of the door of a horse-box or luggage van, the breaking of an axle, the connecting chains of carriages given way, any portion of the train off the line, or the approach of a faster train behind, has no power of communicating with the engine-driver except by clambering over the intermediate carriages, at the risk of breaking his neck against bridges, &c., or vainly attempting to raise his voice above the noise of the engine, or putting the brake on when the object may be, in fact, to accelerate the speed. It would seem, therefore, difficult to exaggerate the importance of a simple and readily-worked machine by which the guard may be enabled to communicate distinctly and effectually with the person in charge of the motive power. The means employed may be described as consisting of fixed air evolved under pressure, in communication with a whistle. The apparatus, which is extremely simple, is composed of an iron or copper box, termed a generator, divided into two compartments, having a small communication at the bottom, and may be placed beneath the seat of a carriage like a passenger's luggage. Into one of the compartments fragments of marble are introduced; a small pipe leads thence to the guard's box on the top of the carriage, where a pressure gauge and the whistling key are fixed, passing on through the roof to a whistle similar to those now used on the locomotive. Into the second compartment diluted muriatic acid is poured, which flows through the communication before referred to, and, acting upon the marble, evolves a quantity of fixed air, which expels the acid from the marble precisely in the same ratio as the pressure rises to a certain required point; all action is now suspended, until the pressure is lowered by sounding the whistle, when the acid immediately returns to the marble, to be again displaced as the given pressure is obtained. This description may appear complex, but a generator, three stopcocks, and a few feet of pipe con-

steam to sound a whistle on a passenger carriage, the superiority of this invention over the locomotive whistle must be admitted, since, with fixed air at a pressure of 6 lb. to the inch, a sound is obtained sufficient for all purposes of signalling, and quite equal to their steam-whistle when the pressure of the latter is 60lb. to the inch. This is explained by the greater density of fixed air as compared with steam. The inventor has been long occupied in perfecting the details of construction. Altogether a period of three years has been occupied by him before he has ventured to demand the attention of the railway world to his apparatus. Some idea of the improvements effected may be gathered from the fact that, whereas the first vessel made weighed upwards of 15 cwt., the present improved arrangement barely exceeds 30lb.: in point of weight, therefore, it leaves little to be desired. It has been tried on a train measuring 225 ft. in length, and proceeding at the rate of from 30 to 45 miles per hour. On every occasion of the whistle being sounded, it was replied to by the engine-driver, although the sound was interfered with by a stiff breeze blowing athwart the line. It may be distinctly heard at the distance of a mile, by parties on the line. As respects power, therefore, it is efficient under every disadvantage. The cost of charging a vessel weighing 30 lb., and capable of yielding upwards of 200 signals, is less than 8d. It requires no attention on the part of the guard, except on giving a signal, when he is required to turn a stop-It always remains charged at the pressure at which it has been set, even when laid aside for months, and no loss can be sustained except by sounding the whistle. It is complete in itself, may be placed on any carriage, requires no alteration in the construction of carriages, and is as readily applied or removed as a lamp. To empty the charge and refill the vessel occupies less than five minutes. The principle of action is, the production, by chemical means, of power to the extent of 500 lb. to the superficial inch if required. The locomotive whistle is usually sounded by steam, at a pressure varying from 40 lb. to 80 lb. to the inch; but as fixed air is the medium adopted in this invention in lieu of steam, it has been found that, for the purpose of obtaining sound, owing to its greater density, a pressure of 6 lb. to the inch of fixed air is equivalent to 60lb. of steam.

Expense.—The present commercial price of muriatic acid is about \$d. per pound; quantity required, 12lb.; 6lb. of marble or chalk, cost nil: 71d. above charge will yield at least 200 signals, dependent on the length of time each whistle is continued. Time required for the whistle after being exhausted to recover itself, 10 to 15 seconds only. If set aside for a day or a week there is no loss of gas, nor expenditure of charge. The pressure obtained by blowing through a whistle or pipe by the lungs, is sufficient to support a column of mercury from three to four inches in height, or about one and a half to two pounds per square inch; and the quantity of air emitted from a healthy pair of lungs of a robust man, from five to six pints. The advantage of this whistle, then, in point of power, is, -1. Carbonic acid gas or fixed air being more dense than air, namely, 1,500 sp. gr., air being 1,000, the sound is more sonorous at equal pressures. 2. As 35 grains of marble yield 1,000 grain measures of gas at ordinary pressure of the atmosphere, then 6lb. will yield 750 gallons of gas, or at 15 lb. pressure, 375 gallons. 3. Any pressure can be obtained consistent with the strength of the vessels.

## Proceedings of Bocieties.

Institution of Civil Engineers. - May 9. General Meeting.—Mr. J. FIELD, President, in the chair.—The paper read was 'Observations on the Causes that are in constant operation, tending to alter the Outline of the Coasts of Great Britain, to affect the Entrances of Rivers and Harbours, and to form Shoals and Deeps in the Bed of the Sea, by Mr. J. T. Harrison. — After noticing the gradual deterioration which the harbours of Great Britain are undergoing, the paper gave as the causes of these effects, the action of fresh water, of the tidal wave, the wind waves, and springs, and atmospheric changes; dwelling principally upon the tidal and wind waves. Prof. Airy's and Mr. Scott Russell's still further increasing what has already gone apparatus. Apart from the impossibility of adapting and the oscillating wave (second order), were exThis safety buffer would be placed in

side buffers.

amined; the peculiarity of the former being, that the motion of the whole mass of the water was in the same direction as that of the wave itself; whilst, in the latter, the motion of the water was alternately opposed to, and in the direction of, the wave. The tidal wave was considered as a purely oscillating wave in the open sea, changing its character as it passed into shallow water. It was supposed that a wave of the first order was generated whenever the water, heaped up by a projecting headland, passed and made its escape into the adjoining water, at a lower level and that it canada it is the same and that it canada and the state of the same level and that it canada and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and the same level and t lower level, and that it carried with it gravel and shingle into mid-channel. The regularity of the bottom of the English Channel, and the material of which it is composed, were instanced, to prove that which it is composed, were misaniced, to prove that the bottom was now in progress of formation from the aqueous action of this deposition of matter. The effects of the tidal wave along the coasts at Poole and in the Isle of Wight were given, to show that such a wave of translation was generated and crossed the Channel from the Departement de la Manche. The results of a series of experiments upon the action of waves on transportable materials showed that certain definite forms were assumed by sand, or shingle, under given circumstances. For instance, that the depth of the end of the foreshore below the water depended upon the size and character of the wave acting upon it. It was urged that the end of such a foreshore was to be found at 90 or 100 fathoms under water, stretching from Ushant to the south-west coast of Ireland, and that the tidal wave, in its progress up the Channel, drew down to the mouth the material thrown into it by the waves of translation from the headlands. The accumulative action was seen in the carriage of sand through the Straits of Dover to be deposited on the sand banks of the North Sea. Referring to Mr. Palmer's paper 'On Shingle Beaches,' the destructive, accumulative and progressive actions of the wind waves were considered. cases most favourable for the display of the effective action of each were adduced. The influence of tides by varying the height of the water, and that of an on-shore wind in facilitating the destructive action, by retaining the water at a higher level, were pointed out. A flat foreshore was shown to prevent, in a great degree, the destructive action; whilst, on the other hand, deep water, whether from a strong inshore tidal current, or from other causes, had a contrary effect, facilitating encroachments on the coast. The progressive action was shown to depend prin-The progressive action was shown to depend principally upon the angle at which the waves strike the beach. The general question of the travelling of shingle, and of its ultimate destination, was considered at great length, instancing particularly the accumulation of shingle at the Chesil Bank and Dungeness. The state of the great western bay, between the Start Point and Portland, was examined, and arguments were offered to show that it had been formed, in a great measure, by the encroachment of the sea. The process of this encroachment, and the alterations in the mouths of the estuaries falling into the bay were analysed, and extracts were given from Sir Henry de la Beche's work on the geology of Devon and Cornwall, to prove that this process was still in operation. The summary of the arguments in the papers was that the observed changes in our coasts and the mouths of the rivers were the result of the combined action of the wind-wave and of the tidalwave, and the attention of engineers was particularly directed to these actions in different localities, in order that, by presenting to the Institution the result of their observations, an invaluable collection of recorded facts might be assembled, which would be of great benefit to the profession and to the scientific

Institution of Mechanical Engineers .- Quar-

terly Meeting—(concluded from p. 316).

'Patent Safety Buffer.'—Mr. Buckle, in introducing Mr. Chesshire's invention to the notice of the meeting, took occasion to express his satisfaction with the principle of the machine, which, with the spiral brake of the worthy President, would, he conceived, be the means of saving many valuable lives. In a former notice of the proceedings of the Institution, we have briefly described the principle of the invention. It is proposed that each railway carriage should be supplied with a strong moveable rod of iron, solid or otherwise, as might be deemed advisable, supported in the centre of the under framework by bearing sockets. This rod is merely to have an end-way motion, and is to have a head at each end, similar to the present side buffers, although it is not intended that these heads should act against each other, except in cases of collision. When the carriages are screwed up into their ordinary travelling state, there will be a space between the safety buffers of some few inches, which would permit the independent action of the

the van at the end of the train, and also in the tender in front, so that it cannot have an end-way motion In front, so that it cannot have an enu-way motion further than being fixed against strong elliptical springs will admit of, if such springs should be considered advisable. It was shown, by experiments on a small model railway, that the effect of this continuous buffer was exactly that which its inventor claimed for it. A train of carriages supplied with the rods was brought into collision with an ordinary train, and while the former was unhurt, with the exception of the last carriage, which had broken from its couplings, the other was thrown into the utmost confusion. The whole force of the shock, in so far as the former train was concerned, seemed to be conveyed to and spent on the last carriage, which the inventor proposes should be filled with goods or lug-Considerable discussion followed. objections were, that the absence of all uniformity in the size and make of carriages would, even if the principle was sound, make the invention practically useless. Then again the force of the shock of a collision could only be conveyed throughout the length of the buffer and to the last carriage when the train was on a straight line. If, for example, it was on a curve that the collision took place, the centre carriages, or the one where the bend was greatest, would receive the force of the shock, and the lives of the occupants of the carriage be sacrificed. Mr. M'Connell was the principal supporter of this objection.—It was, moreover, argued by Mr. Ramsbottom and others, that the application of the invention would be a practical disadvantage except in one case, viz. as a strengthener of the bottom of the carriage. By the present side buffers the force of a shock was dis tributed over the whole train, the first feeling the greatest amount of force, and thence it sensibly diminished, until the passengers in the centre or the extremity of the train scarcely felt it at all. Now, making the shock simultaneous throughout the whole train, as it was proposed to do, would have the same effect on the passengers as if the train had run against a dead wall. They would be thrown into each others faces in every carriage in the train. Besides, if the train was run into, the engine and tender and the men upon that would be sacrificed.—Mr. Chesshire replied, that with respect to the indisposition of railway companies to go to the trouble and expense of applying the invention, he thought that the lives of the public was the first great consideration, and no expense and no trouble should be allowed to operate against any invention that promised to reduce the number of casualties. As for the principle of the invention, he was convinced that it was perfectly sound. Accidents seldom took place in curves; there the engine-men were always on the look-out. force of a collision must be spent somewhere; and he could not understand how it could be an objection to his invention that he carried it off from the carriages where damage to life would be done, and concentrated it where nothing of the sort was to be apprehended. He was convinced that if the Institution would recommend some of the railway companies to adopt the invention, it would be found to act most beneficially. After some further remarks by Messrs. Wright, Peacock, Crampton, Cowper, Fothergill and others, Mr. M'Connell recommended that the consideration of the subject should be handed over to the Council, who would discuss the merits of the inven-

'Banks's Patent Steel Tyres.'-Mr. Fothergill read paper. The statement of facts relative to Mr. T. Banks's patent plan of steeling the tyres of railway wheels, is the result of nearly five years' trial, and shows the cost and durability of Staffordshire tyres steeled on his plan, as compared with Low Moor tyres. The present cost of Low Moor tyres, for 3-ft.

wheels, will be-

tion with Mr. Chesshire.

Four tyres of 3 cwt. each, 12 cwt. at 22s... £13 4 Putting on the tyres ready for work ... 8 0 0
Twice turning up after wearing hollow ... 1 0 0

> .. 22 4 0 Total cost ..

Suppose these tyres to run 50,000 miles on an average, that is 50,000 miles at a cost of 22l. 4s. The present cost of Staffordshire tyres will be-

Put tyres of 3 cwt. each, 12 cwt. at 12s... £7 4

Putting on the tyres ready for work ... 8 0

Steel for steeling one set, 1½ cwt. at 42r... 3 3

Man's wages for turning grooves in the wheels 0 10

Smith's wages for inserting the steel ... 0 10 Man's wages for turning up after steeling.. Men's wages for drilling and rivetting

> Total cost £20 4 6

These tyres are proved to run before steeling 18,000 miles, and after steeling 100,000 miles; making a total work of 118,000 miles, at a cost of 20*L*. 4s. 6d. Now, subtracting 50,000 miles, the work of Low Moor tyres, from 118,000 miles, the work of Stafford-

shire tyres steeled, we have 68,000 miles which the latter will run more than the former, and at a cost of 39s. 6d. per set less. From the above statement we see the cost of Low Moor tyres per 1,000 miles is 8s. 103d., while the cost of Staffordshire tyres steeled is only 3s. 5\frac{1}{2}d. per 1,000 miles. The truth of this statement is proved by a test of nearly five years trial on those lines on which the plan has been most used. We are aware that railways do not all wear out the tyres alike; but on those lines where the iron tyres will run more than stated above, the steeled tyres will run more in proportion, and the plan is attended with no danger whatever. The above statement shows only the advantage of steeling the tyres once; but we have steeled many a second time, after they have run the above distance. The same tyres may be steeled a second time at a cost of 5*l*. per set, when they will run 100,000 miles more, making a total of 218,000 miles, at a cost of 25*l*. 4. 6*d*., or 2s. 4d. per 1,000 miles. The advantage of steeling a second time is secured by taking the tyres in time, while they have the requisite strength for steeling the first time. The general objection raised against the plan is that there will be a deal of trouble to carry it out; but this objection, if properly examined, will be found to be without foundation. When the wheels want turning up, they must be taken from under the carriage or waggon; and when taken from under, the cutting of the grooves in the tyres for the steel will not cost more than 5s. per pair in men's wages; and when the grooves are turned, one smith and three strikers will insert steel segments with ten pairs of 3-ft. wheels in one day of ten hours; after which turning up the steeled wheels will take very little turning up the steeled wheels will take very little more time than turning up without steeling, which proves that the trouble will not be so great as some people imagine, and nothing when the durability and saving which is effected by the tyres being steeled on this plan are considered. The paper was accompanied by a letter from Mr. Jenkins, of the Manchester and Leeds, declaring that "since the statement was sent showing the working of the locomotive engines which have Mr. Banks's patent steeled segments inserted in their wheel tyres the engine segments inserted in their wheel tyres, the engine 'Oldham' had run 58,866 miles when her crank Ottnam had run 5,500 miles when her crank axle broke. The wheels were then taken off, and not used until they were put under the engine 'Queen,' November 12, 1846. Since then, to December 31, 1847, they had run 29,482 miles, making a total of 88,348 miles; and if no accident happen to them, I conclude they will run from 40,000 to 50,000 miles more. The reason we have not more locomotive engines running with the steel segments is that they have been neglected, owing to our being so busy preparing to make and making new engines and tenders, which has engrossed the whole of our time. But now, as we are better provided with locomotive power, we wheels. We have a considerable number of 8-ft. and 3 ft. 6 in. wheels with Banks's patent steel segments running on this line; the number of miles has not been attended to, but is very considerable. My opinion is, that if the segments are properly put into tyres sufficiently thick, it will be a great saving of expense in tyres."-Mr. Peacock remarked that he had tried the wheels steeled by Mr. Banks's process, and the result was, that whereas he was formerly obliged to repair the wheels of the tenders every four months, those with steel tyres did not require repair oftener than once in twelve months. He had not fully tested their wearing qualities, but he had no doubt that they would be found to be most economical as well as useful.—Several other members spoke as to the value of this patent.

as useful.—Several other members spoke as to the value of this patent.

LEEDS, DEWSBURY AND MANCHESTER.

Directors' Report to the Shareholders. The works of this undertaking being now so far advanced as to warrant the Directors in holding out to the shareane works of this undertaking being now so far advanced as to warrant the Directors in holding out to the share-holders the near prospect of entering upon the fruit of their labours, and the circumstance of the property in the line having now passed into the hands of a large and powerful company, with the management of which it will shortly be so identified as to preclude any opportunity for a separate Report from the Directors in whose hands its conduct has hitherto been, induce the Directors to place the present statement in the hands of the proprietors, though at an unusual period of the year. The Directors have felt this to be the more desirable, because at the period when the notice for the last half-yearly general meeting should have been fasted, the proceedings were far advanced for verifying the accounts of the company in the office of the Commissioners of Railways, on the completion of which a certificate from the Commissioners would have had the immediate effect of perfecting the amalgamation of the company with the London and North-Westers, and would have rendered the holding of the meeting impracticable, by reason of the accounts of the company in the office of the Commissioners of Railways, on the completion of which a certificate from the Commissioners would have had the immediate effect of perfecting the amalgamation of the company with the London and North-Westers, and would have rendered the London and North-Westers, and would have rendered the London and North-Westers, and would have rendered the London and North-Westers, and the thought better to defer any Report until nearer the time when the works might be expected to be completed, in other to render the information to the shareholders, which the theorem is convey, as full as possible. The certificate of the Commission of this company with the London and North-Western is converted to the Line. The Directors now the date of the Commission of this company with the London and North-Western is converted to the Engineer's Report annexed; from which the propriet of the Engineer's Report annexed; from which the propriet will be midst of the general pressure, been felt somewhat the midst of the general pressure, been felt somewhat the midst of the general pressure, been felt somewhat the midst of the general pressure, been felt somewhat the Directors feel in the expenditure, but they have enabled the Directors feel in the expenditure, but they have enabled the Directors feel in the expenditure, and the important public advantages of this line be realized; and for the punctual way in which the calls have been responded to, the Directors feel it due to the proprietors to express their best acknowledgments. The advantages referred to, the shareholders well know, are not to be estimated by the length of the line, but by the summounting of the natural difficulties of the countries and reducing a circuit of \$2\text{ miles to a length of 11 miles, in now nearly cogh, but have been responded to, the Directors feel it due to the proprietors to express their best acknowledgments. The great work of the Summit Tunnor, and the summounting of the natural difficulties of the countries and th

## Engineer's Report to the Directors.

There are few circumstances connected with this under-There are new circumstances connected with this under-taking which should be more gratifying to you as directors, and myself as engineer in chief, than to find that the prin-cipal works upon it are in a very advanced state; and that they are so far completed in a manner which I hope will be satisfactory to all interested in this important line of railway

communication. It is well known, not only to you, but to the shareholders generally, that the Leeds, Dewahury and Manchester involves the execution of works of great magnitude and considerable variety. Indeed, it is now generally admitted that but for the rugged nature of the country through which it passes, the great lines of railway from Leeds to Manchester and Loadon would have been earried in the direction in which this line is laid down, by which not only would the distance between these important places from Leeds have been much shortened, but that town placed upon, and thereby brought into, more immediate connexion with the great leading lines of the centre of England. Moreover, the railway now so nearly completed is brought into immediate connexion with that part of the West Riding of Vorkshire, which has been described as "one great hive of manufacturing industry." On reference to my former Report, it will be found that the principal work on the line is the tunnel under the ridge at Morley, which divides the basin of the river Calder from that of the river Aire. This tunnel extends to 3,378 yards. It is all but finished, and a portion of the permanent way has been laid in it. The building of the main drain and laying of the permanent way are in progress. As respects that portion of the Morley contract south of the tunnel, the embankment are nearly completed, and a single line of permanent way all aid. The calverts, bridges and level crossings are quite finished, and a considerable portion of the alopes of the custings has been soiled. From the north entrance of the Morley tunnel to the Churwell-road the works are also in a forward state, the embankments being quite finished, and the permanent way all laid; the cutting at the north entrance is the only work of importance requiring attention; but this, I expect, will be completed in the works are also in the course of the embankments at Batley and Ravens Wharf still require about 10,000 or 15,000 yardseach. These embankments are now proceeding rapidly, a communication. It is well known, not only to you, but to the shareholders generally, that the Leeds, Dewabury and Manchester involves the execution of works of great mag-(single) viaduct north of the river Aire five of the arches are turned and the centres withdrawn; three others are keyed, and four others are in progress; and the works generally are being proceeded with rapidly. The works for the temporary station south of Wellington-street and west of the Wellington hotel have been contracted for and commenced. The Birstal branch has been marked out, and the works contracted for by Messrs. Simpson & Field. All the temporary fences are recreted and above 16 Mess. menced. The Birstal branch has been marked out, and the works contracted for by Messrs. Simpson & Field. All the temporary fences are erected, and about 20,000 cubic yards of cutting is being removed, to make up the Battey embankment, on the main line. The time for the opening of the main line, even yet, depends a little on the weather, and other matters beyond my control; but I am not at present aware of anything to prevent its being opened about the middle of June next. The temporary station at Leeds may not then be quite ready for receiving the passenger traffic, but if so the train may at that season of the year, and without any great inconvenience to the public, stop at the northern extremity of the double viaduet. The precise time for the opening will be made known to you at the earliest possible period; and so as to give ample time for making arrangements for the working of the traffic, which I hope will be such as will not disappoint either the proprietors or the public.

5, South Parade, Leeds, April 24.

South Parade, Leeds, April 24.

## GREAT SOUTHERN AND WESTERN (IRELAND). Engineer's Report for the Meeting, March 15 (p. 230).

Engineer's Report for the Meeting, March 15 (p. 230). Herewith I beg to send you my report of the works between Ballybrophy and Cork. From Ballybrophy to Castle Fleming, a distance of three miles, which formed part of the seventh contract, as let to Mr. Dargan, has been completed for some time. The eighth contract, which extends from Castle Fleming to Templemore, a distance of 3½ miles, has been nearly completed by Mr. Moore. Some ballasting and boxing still require to be done. The water tables and slopes of the embankments and cuttings are not yet finished off, as it has been impossible to accomplish it in a proper manner during the late rainy season. Both lines of rails, with the necessary crossings and sidings at the stations, have been completed. A portion of this contract passed through the bog of Knockahaw, which has caused some trouble by subsi-

dence; the distance however to which this extends is only 400 yards, and it has been rendered quite firm by raising a platform composed of young fir trees, on which a frame of pine timber has been laid to receive the cross-sleepers for the rails, which has rendered the line as secure and eafe as the rails, which has rendered the line as secure and safe as any portion. Then inith contract extends from Templemore to a mile beyond Thurles, a distance of 8½ miles. This contract was let to Mesara. Hammond & Murray, who have very nearly completed it. All that is required to be done is some ballasting and boxing, and clearing up the water tables and slopes of the embankments and cuttings, which will not interfere with the working of the line, and may be done in a fortnight or three weeks of fine weather.

Cork Extension.—This contract extends from near Thurles Cork Extension.—This contract extends from near Thurles to Cork, a distance of 78½ miles, and is let to Mr. Dargan. It is divided into nine divisions, including the tunnel ast Cork. The first division extends from near Thurles to Dromonclara, a distance of 10 miles. All the fencing is finished along this division, with the exception of 670 yards, through the marshes in Miltown and Rathkennan. The total quantity of earthwork was 285,339 cubic yards; of this more than seven-eighths have been executed. A large force is now employed on it, and the whole will be completed in three weeks or a month. There are twelve bridges on this division, all of which are over the railway. Some of these bridges are completed, and all the others are in a very forward state. The approaches and fixing the lattice-girders are the principal works to be done. About twe-thirds of this division are ballasted and ready for the permanent way, some of which has been already laid. All the very forward state. The approaches and nxing the language girders are the principal works to be done. About two-fibrids of this division are ballasted and ready for the permanent way, some of which has been already laid. All the culverts on this division are complete. Some of them are of large dimensions, being as much as 12 ft. and 8 ft. span. The second division extends from Dromonclara to Ballykisteen, where it crosses the Limerick and Waterford, a distance of 10 miles. The fencing is nearly all complete; about one-fifth still remains to be done. The earthwork consisted of 201,946 cubic yards; of this about one-eighth part remains to be done, which I expect will be completed in three weeks or a month. Seven miles are quits formed and ready to receive the ballast; 56,000 cubic yards of which are already spread, and ready to receive the permanent way. Fortunately there are two large hills of excellent gravel about the middle of this division, which will facilitate this portion of the work very much, and will prove of great value to the fluture maintenance and repair of the permanent way. There are ten bridges on this division, exclusive of those for private accommodation—eight for public roads and two croasing the river Multeen. One of these and two road bridges will be spanned with iron lattice-work. The abutments and piers are finished; and the two remaining ones, those in Pallas and Newtown, are partly built and will be finished in a fortnight. The fifth division extends from near Charleville to Buttevant, a distance of nine miles. The works have been commenced in several places. About three miles of fences have been formed, and excavations made to the extent of 60,000 cubic yards. No masonry has yet been built. The sixth division extends from Buttevant to Quarterstown, one mile south of Mallow. The works now executed and those still to be done are as follows:—About one-half of the fences are complete, and there are a number of men employed fencing those portions of the land. The total quantity of earthword impossible (at the cutting at Gooldshill on the south end of this embankment) to work many waggons for the last three months, but the difficulty may however be expected to ccase immediately as the weather improves. The other cuttings of this division are in a forward state, with the exception of the heavy rock cutting through Lord Doneralle's property, of which we have only lately got possession; and that through Grange, where the land has not yet been procured. There are twelve contract bridges on this division, including the Mallow viaduct; only three of them have yet been proceeded with. The sixth bridge, over the road from Two-pot-house village to Killarney, is complete. The seventh bridge, over Lodge-road, is sheeted and will be completed in a few days. The eighth bridge, over the road from Mallow to Kanturk, is complete. A large quantity of excellent stone has been laid down for the Mallow viaduct, and a large number of stone-cutters are employed, both on and a large number of stone-cutters are employed, both on the ground and at the quarries, in preparing material; so that when the viaduct is commenced it can rapidly be proceeded with. One farm-road bridge in Annabella is commenced with the commenced with the commenced with the commenced with the commenced with the commenced with the commence of the commence with the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commence of the commen ceeded with. One farm-road bridge in Annabella is complete. The total quantity of culverts and drains on the division are 285 lineal yards, nearly all of which, including one of 12 ft., 57 yards long, are complete. The seventh division extends from Quarterstown to Kilmona, nine miles from Cork. All the land has been got possession of, and considerable progress has been made with all the works, with the exception of the bridges, which could not be done during the winter. The fences on this division are complete, with the exception of about a quarter of a mile. The total quantity of earthwork on this division is 352,476 cubic yards, nearly all of which have been excavated, leaving only 12,678 quantity of earthwork on this division is 352.476 cubic yards, nearly all of which have been excavated, leaving only 19.078 to be done. The total quantity of rock cutting is 536,123, of which about one-sixth part has been executed. As the remaining is nearly equally distributed along the division, great progress will be made in it during the summer, so as to complete it early in autumn. There are ten contract bridges on this division, of which only one has been commenced, over the Abbey stream; the abutements and wings are built. Some stone is laid down for the fifth bridge, over llumfort river. Four accommodation bridges under the railway are complete, and three others are in progress, and will be finished Four accommodation bridges under the railway are com-plete, and three others are in progress, and will be finished in the course of this month. The eighth division commences at Kilmona and extends to Blackpool. Some portion of land we have not got possession of. The fencing of upwards of

one-half the whole length is completed. The total quantity of earthwork on this division is 677,429 cubic yards, of which 100,400 have been removed. The total quantity of rock cutting is 333,000 cubic yards; of this 56,200 has been excavated. Upwards of 400 men are daily employed in Rathpeacon rock cutting, which is the heaviest on the line, and with which considerable progress has been made. There are two viaducts and ten contract bridges on this division; the viaducts have not been commenced; four of the bridges are in hand. The first bridge, over Ballymartin-road, has been commenced. The fifth bridge, over Coolowen-road, has also been commenced. The eighth bridge, over the Cork and Mallow new road at Carhoo, is nearly complete, only wanting some coping. The tenth bridge, over Kilharry old turnpike-road, has been commenced. The total quantity of culverts and drains is 203 lineal yards; 150 yards have of culverts and drains is 203 lineal yards; 150 yards have

been completed.

Extension into Cork.—This division extends from Kilbarry Extension into Corn.—I has divinon extends from Kiloarry to the terminus at Penrose's Quay, in Cork, and includes the Rathmore tunnel, through the Barrack Hill. The total quantity of rock cutting is 13,256 cubic yards, 10,483 of which have been excavated. The total quantity of earthwork is 11,169 cubic yards, of which two-thirds have been executed. The cutting at the northern end of the tunnel is executed. The cutting at the northern end of the tunnel is complete, and the heading has been driven 58ft. Four shafts are being sunk, which hitherto have advanced but slowly, owing to the hardness of the rock and the quantity of water. Their respective depths are as follows:—Shaft No. 1, 40 yards, present depth 22 yards; No. 2, 57 yards, present depth 18 yards; No. 3, 73 yards, present depth 18 yards; No. 4, 50 yards, present depth 21 yards. The shafts will make much better progress when the engines for two. Possession of the land at the southern end of the tunnel has just been obtained, and the heading there has commenced. 20 yards of heading having been completed. commenced, 20 yards of heading having been completed. There are three contract bridges on this division which are not vet commenced.

not yet commenced.

By the extensive arrangements which Mr. Dargan has made, I have no doubt whatever he will be enabled to complete the works oas to open the line to within three or four miles of Cork by the end of this year, as he has made the most ample arrangements to carry on the different works with the utmost energy and expedition, provided he be supplied with the necessary funds and gets immediate possession of the land. I am happy to be enabled to state that, with the single exception of the short space of unfavourable ground through Knockahaw bog, already alluded to, I am not aware of any extra work that will be required between Dublin and Thurles, and between that and Cork. Mr. Dargan has undertaken to open the line for a fixed sum of 600,000L, which includes the tunnel and every extra work which can arise, with the exception of some of the accommodation bridges, which could not be included in the contract, as they will be contingent on agreements made with the owners and occupiers of land along the line. The goods warehouse and the cattle platform at King's Bridge will be ready for traffic very shortly, and the station-houses at Monastereven. Maryborough, Mountrath, Ballybrophy, Templemore, Thurles and Dundrum are provressing rapidly. I am happy in being able to state that the whole of the works on those portions of the line which have been already opened for public traffic, a distance of 88 miles, remain in the most perfect order. The bridges, culverts, embankments and permanent way have not suffered in the slightest from the heavy and continued rains of the last three months, which have proved so injurious to many other railways. It is also satisfactory to be enabled to state that the culverts and drains are now proved, from one of the wettest seasons on record, to be of ample and full size to carry off By the extensive arrangements which Mr. Dargan has culverts and drains are now proved, from one of the wettest seasons on record, to be of ample and full size to carry off all the water ever likely to accumulate in the country, as in of, made as to the deficiency of the water-ways.

J. Machella.

## Progress of Works.

AYRSHIRE AND GALLOWAY.—May 5.—The first sod was cut by Mr. Walker, of Drumgrange, Major Guthrie, of Dalmallington, conveying the first barrowful of earth to its destination.

CHESTER AND HOLYHEAD.—The North Wales Chronicle, after noticing the bustle attendant on the opening of the line on the 1st inst., says "there were four up trains and four down trains, great punctuality being observed in the arrivals and departures. From the nature of the equipments we should say that the company have made a fair start. Several excursion trains arrived during the first three days of the week and some long and heavy experimental trains have been passing through the Conway tube during the week in presence of the Government Inspector. One train consisted of 37 ballast waggons, drawn by two powerful engines, and weighing altogether about 200 tons, causing a deflexion of less than three-fourths of an inch, thus proving the perfect success of the principle and strength of the tube.

DUNDEE AND PERTH JUNCTION.—Rapid progress is now being made with this large timber erection across the Tay. Owing to the bridge being built in the form of the segment of a circle, its length, which would at any rate have been necessarily great, from the width of the river which it spans, is still further increased, and the quantity of woodwork in such a structure is almost inconceivable. This, too, has been further increased by the original plan of an embankment across the island having been abandoned, and wooden arches substituted in its stead. An improvement in the structure of the arches has also been adopted,

says the Scottish Railway Gazette, by which additional safety will be insured both for the bridge itself, and also for the inhabitants of Perth, in the event of a flood taking place in the river. The arches, instead flood taking place in the river. The arches, instead of being constructed of straight logs of wood, according to the original intention, are, as the name properly implies, to be really curved, by which means an additional 5 ft. of space between the water and the bridge will be gained. At the western side of the river operations have been commenced for constructing the draw upon the bridge, about which so much has been both said and written.

LANCASHIRE AND YORKSHIRE (Heywood Branch).

-The works on the newly-completed extension are rather heavy, as the country through which it runs is of a boldly undulating character. There are several embankments, cuttings and bridges, all of which are well constructed. There are no tunnels. At present there is only a temporary erection as a station at Bury, but a large building will be erected on its site, as from its contiguity to the market, on the south side of the town, it is exceedingly convenient. By means of the newly-opened line, not only is there a new direct communication between Manchester and Bury, but the numerous manufactories, and the large manufacturing villages of Heap-bridge and Pymhole, lying between Heywood and Bury, are accommodated. Bury is now, by this branch, connected with all the great markets of the West Riding of York-shire, and with Rochdale; and Rochdale, again, is connected with the important manufacturing district upon the East Lancashire line. The new line forms the link of communication between Manchester and the Liverpool and Bury line, the works of which are under contract to be completed in July.

SCOTTISH CENTRAL.—The entire line from Castlecary to Perth is now ready for opening. Both rails have been laid along every part, including the tunnel. Mr. Tasker and some of the directors examined the line last week; and the Government inspection is to be immediately consequent on this examination. The line will most probably be opened for public traffic on the 15th inst. The contractors, Messrs. Stephenson & Co., have well executed their work, and as they have completed their contract within the stipulated term of three years, they will receive their stipulated premium. The temporary station at Perth is making rapid progress, and ample accommodation will be provided for the traffic.

SCOTTISH MIDLAND.—The first locomotive engine traversed the line from Cupar-Angus to the end of the embankment near Forfar, on the 2nd. Some of the engineers were along with it, inspecting the state of the line. The engine is to be employed in conveying earth to level those parts of the line which have given way to the force of the elements, and from other causes, and then to be used in completing the embankment near Campbelton Toll, which seems to be pretty far advanced. From the progress that has been made a few weeks, says the Scottish Railway Gazette, will complete this section of the line.

South Devon.-May 1.-After the inspection and trial tests by Capt. Simmons, the line was duly opened trial tests by capt. Siminous, the line was duly opened for traffic. The usual festivities were exhibited in the district of the line, and the directors celebrated the occasion by a déjeûner in Plymouth. The mile-posts are erected as far as lvybridge; the one to the west of the viaduct at that place has on it "235 miles from London." The electric telegraph posts are fixed as far as the Ivybridge station, and the wires will soon be run on. The tunnel on Mutley Plain will be finished in a week or two, and fresh negotiations have been entered into with Mr. Rendle, jun., for the field he occupies behind Devonshire-terrace. houses required on the south side of Union-street, near the baths, we understand have been purchased. There will be six trains up and six down; the first starting at 7 30 a.m., and the last arriving at 12 20 p.m. It is not yet known when the mails will be conveyed on to Plymouth, but the arrangements will probably be finished in a few weeks, when the public will reap another advantage from the railway communication. The 'Quicksilver' and the Bath mail-coaches will therefore continue to run till further notice, but the other coaches have ceased. The proprietors of the well-appointed 'Tally-ho' coach intend, in the course of a few days, to run to Truro, taking on at the Laira station from the London express train. This, with the 'Telegraph' coach in the morning, will afford excellent accommodation to travellers proceeding west. When the regulations are perfected, the Cornwall mails will probably be conveyed down the rail to Plymouth, and thence to Falmouth, &c., and consequently the mail-coaches from Exeter on the northern road will be dispensed

STIRLING AND DUNFERMLINE.—A portion will be opened for traffic in the course of the summer. The whole distance between Dunfermline and Alloa, with 30 a.m., says the Sun, as the mail train was ap-STIRLING AND DUNFERMLINE.-A portion will be

the branch to the extensive manufacturing villages of Tillicoultry, Alva, &c., will probably be ready about the end of the year. This communication will districts of the country, and access will be afforded to it from the east and west by means of the Edinburgh and Northern and Scottish Central, to both of which it will be a considerable feeder. By means of this line, also, the chain will be completed between the populous counties of Fife and Stirling and the West of Scotland, besides affording ready access to the large manufacturing town of Dunfermline from all parts of the country.

WATERFORD AND KILKENNY .- May 6 .- The line

was inspected by the Government officer. The result was satisfactory. On the 9th the ceremony of opening it as far as Thomastown took place amid much re-

ioicing.

#### Accidents.

EDINBURGH, LEITH AND GRANTON.-April 29 .number of trucks passing down the Leith incline gained such a momentum as to be beyond the control of those in charge of them, the consequence of which was that they ran through a wooden shed for goods, and dashed out a great part of the gable wall at the further end, precipitating a number of large stones, composing the wall, into the middle of the street, where the Leith terminus is situated. The part thus driven out was at the west of the gate by which loaded carts enter from the docks, and the support of the arch having fallen at that side by the shock, it caused also a considerable portion of the superincumbent weight to give way, leaving a part still standing, in the form of a wide and serrated arch, the want of a proper support for which renders it also very liable to yield.

GREAT WESTERN.-

- May 10. - The 12 30 express train from Excter met with a collision at the Shrivenham station. The train consisted of two first-class and four second-class carriages, which were drawn by an engine (the 'Sultan') and tender. Next to the tender was a luggage van, which was followed by a second-class carriage that was unusually full of passengers. On its approach at the Shrivenham station the signal was given by the signal telegraph that the line was clear, in consequence of which the speed was continued, as this station is passed by the express train.

At this part of the line there is a branch line for turning off the carriages. At the angle of divergence of the off line was an empty horse-box, with a truck attached, on which was a gentleman's carriage, which, it is supposed, just overlapped the main up line, as a collision took place, the effect of which was, that the engine struck the horse-box, when, owing to the velocity with which the train was progressing, the horse-box, with the truck, were swung round, and, in a moment, the second-class carriage, which was connected with the luggage van in the rear of the engine, was dashed to pieces, and the passengers were flung out in every direction. The driver of the were flung out in every direction. The driver of the engine, who was unable to avoid the collision, used the utmost exertions to arrest the progress of the train, and he promptly reversed the engine. He fortunately checked its speed sufficient to prevent any other carriage of the train being thrown over, the second carriage being the only one which went off the line. Upon returning back to the Shrivenham station the line was seen to be strewed with the wreck of the carriage, while a number of the passengers, wounded and dying, were lying in different parts, to whom every assistance was being afforded by the servants of the company and by others who had arrived at the station, having heard of the disastrous occurrence. Four of the passengers exhibited no signs of life. All those who were wounded were conveyed in carriages to the Swindon station, for the better accommodation of medical advice, which was promptly received. There was only one passenger who received no serious injury, and who was seated in one corner of the carriage. It is unnecessary to say that the greatest alarm prevailed among the passengers in the other carriages. The 'Sultan' received so much injury that another engine was provided from Swindon, for the purpose of conveying the train to Paddington, and which arrived there a few minutes after 7 p.m., being about 2 h. 30 m. beyond its usual time. On the information being obtained at the terminus, Mr. S. Clarke and other officials connected with the establishment proceeded to the scene of the accident to afford every proper assistance. From all accounts there is no doubt that the horse-box had been negligently left at the point where the accident occurred by some of

proaching within a few miles of Derby, a violent noise was heard, caused, it appears, by the breaking of a wheel of a second-class carriage. After proceed ing upwards of 2 miles, having passed through a tunnel, it was discovered the carriage referred to was off the rails, and the train was stopped. The gentlemen in the next carriage, a first-class one, were for a considerable time in the greatest alarm, having discovered the cause of the fearful jolting and clouds of gravel, &c., which were consequently occasioned, long before the servants in charge of the train did. After a delay of an hour and a half the passengers were taken into the foremost carriage, the others being left behind, in consequence of the second-class carriage being so much damaged. One gentleman, from jumping out before the train was stopped, was much hurt about the shoulders. The above is another in-stance of the absolute necessity of some means being adopted whereby passengers may communicate with the guards, continues our contemporary, as our cor-respondent was fully aware of the great danger of his situation some minutes before the officials discovered it. The servants of the company acted in the matter with the greatest attention.

## Law Intelligence.

DEPOSITS.—May 3.—In the LORD CHANCELLOR'S COURT, in re Silson v. Edgeworth, this was an appeal from the Vice-Chancellor Bruce. The bill was filed by the plaintiff as one of the shareholders in the projected Wrexham, Nantwich and Crewe Junction (see ante, p. 70), on behalf of himself and all the others, complaining of the management, and asking for an account and division of the residue, after the payment of joint and necessary expenses. The defendant, one of the committee, put in a plea, in which he admitted that there was a sum of 7,950l. in the hands of the managers, but pleaded that one Jones, holder of 100 shares, on which he had paid a deposit of 2121., had commenced an action for repayment of the whole amount, that the action was still pending, and that under such circumstances the managers were not called on to answer, as there would be a double and inconsistent demand on the part of Jones, who was in one instance made a party to a bill, asking for the repayment of his deposit, minus the expenses, and in the other suing at law for the whole amount. The Vice-Chancellor allowed the plea.—His Lordship said that the mere plea of an action being brought by a person who thought proper to withdraw himself from the other members of the company could not answer a bill filed in that court. It remained to be decided whether Jones was a shareholder or no. ceeded in his action, then the bill was not filed in his behalf, but in the meantime the defendants must answer .- Plea overruled, with the usual time to answer.

SECRETARY AND SHAREHOLDER.—May 3.—In the VICE-CHANCELLOR'S COURT, ex parte Greene in re the Tring, Reading and Busingstoke, counsel supported the petition of the secretary. The commissioner had rejected a proof tendered by the petitioner for his salary, amounting to 170L, on the ground, as it was alleged, that a sharcholder could not prove against a bankrupt company. All the company's debts were paid. It was argued for the assignees, that the Act, under which alone the Court had jurisdiction, did not authorize such a proof, but expressly provided a remedy, by petition to the Court of Chancery.—The Vice-Chancellor said that as all the creditors had been paid, he thought the Act would authorize the admission of a proof under the jurisdiction in bankruptcy, and his Honour directed the commissioner to take the account between the petitioner and the company, to ascertain in whose favour the balance was, a debt being alleged to be due from him to the company.

May 2.—In the Court of Excheoure.

May 2.—In the Court of Exchequer, in re Chilton v. the London, Brighton and South Coast, the rule for a new trial was discharged; the Chief Baron and Mr. Baron Platt contending that all the facts had been duly considered by the jury, and Mr. Baron Parke and Mr. Baron Rolfe opining that the damages were totally disproportionate to the trespasses complained of.—[We do not hesitate to declare our coincidence with the opinions of the two lastmentioned Judges.—Ed. Rail. Chron.]

May 4.—In the BAIL COURT, in rethe Queen v. the Oxford, Worcester and Wolverhampton, his Lordship granted a rule calling upon the directors to show cause against a writ of mandamus issued commanding them to empanel a jury to assess certain compensation.—Mr. Robinson was the owner of some property on the line, and in May last year he was served with a notice that the company would require a portion of it. The question was, whether the company, having given notice of their intention to purchase of Mr. Robinson part of a manufactory, would not be com-

pelled to purchase the whole. A question would also arise on the correspondence that had taken place between the parties, whether the defendants had not in fact agreed to take the whole of the manufactory. They have since declined purchasing any part of it.

RATES.—May 8.—In the same Court, a parte the London, Brighton and South Coast, in this case a rate had been made in the parish of Croydon, and the station and property in that parish were assessed. The company objecting to the rate appealed against it at the Surrey Quarter Sessions. The appeal was respited, but eventually the company did not appear, and the appeal was dismissed, and the Quarter Sessions awarded 115t. to be paid for costs as against the company.—Counsel moved for a certiorari to bring up the order for the purpose of quashing it.—Mr. Justice Coleridge decided that on a certiorari the Court could not be expected to go into a calculation as to the reasonableness of the order, and it was the duty of the appellants to have attended and objected to the order at the time.—Application refused.

May 9 .- At the Worship-Street Police Court the following curious application was made against Mr. T. Fuller, of No. 91, Herbert-street, Hoxton, by Mr. T. How, for having on the 1st of August 1846, and on sundry subsequent occasions, falsely and unlawfully advertised the names of divers persons as directors of a certain company called the Great Southern of Madras Railway Company, well knowing the same to be false, and contrary to the provisions of the Act 6 & 7 Vict., c. 110, s. 65, entitled 'An Act for the Registration, Incorporation and Regulation of Joint Stock Companies,' whereby he had incurred for every such offence a penalty of 10l. A second summons was also directed against the defendant for having, as the promoter of the aforesaid company, unlawfully failed to make to the Registry-office the necessary returns of the names of the directors and other particulars connected therewith, as required the 5th, 6th and 7th section of the Act, whereby he had incurred a further penalty of 20%. The whole case is one of such public interest that we give it as laid down by the applicant's counsel, Mr. Ballantine. Mr. How unfortunately became a shareholder in a scheme denominated the Great Southern of Madras, professing to run from Negapatam and Nagore, vid Trichinopoly and Paulghaut, to Calicut and other places, and in which it was also enticingly specified that no shareholder should be responsible to a greater extent than the mere amount of his deposit. The capital was set forth at 2,000,000l., divided into 40,000 shares of 50l. each, of which 10,000 were to be considerately reserved for parties in India, and the amount of deposit-money was 5s. per share, that being the highest amount of deposit allowed by the Act. Certain individuals, comprising allowed by the Act. Certain individuals, com "Daniel Rhodes, Esq., of Intake, Mansfield, Rutledge, of Claremont-square, and late of Madras, and a variety of others, all purporting to be persons of station and condition, were likewise set forth as the The defendant, Mr. T. Fuller, and two others, might be said to be the original promoters of the scheme, and it was their duty, in that capacity, by the 4th section of the Act, and before proceeding to make public its objects and intentions, to make a provisional registration of them, which was accordingly done, and the capital and shares were then spe cified at the amounts he had respectively stated. was also their duty to register the names of the provisional directors from time to time as they might be appointed: but although these parties were constantly represented in the advertisements circulated all over the kingdom as the directors and promoters of the scheme, it would create much surprise when he stated that no such persons had favoured it or been in any respect at all registered as belonging to This provisional registration, by the terms of Act, only endured for a twelvemonth, when a fresh registration, with the names of the committeemen must be made, under a penalty; but he should prove, by the registers he then had in court, that so far from that being done in this case, the defendant and his co-mates went on with the company till the October following—a period exceeding the term by two months, when by the next registration it appeared that the whole of this Nagore, Trichinopoly and Calicut line quietly subsided, somehow or other, and became centered in the single person of the promoter, Mr. Fuller, who alone was then entered at the Register-office as representing the entire company; not only so, but as soon as the whole responsibility had thus devolved upon a single private person, the defendant at once reduced the capital from two millions to half that amount, and the shares from 40,000 to 20,000; so that, supposing the entire number of shares to have been circulated. (which he understood them all to have been in reality,) the defendant thus contrived to get into his own

hands the produce of the entire difference between the 20,000 and 40,000 shares, or if he had not, it was impossible to ascertain where it had gone to, as not a single farthing had been recovered, nor the slightest benefit derived, by any of the bond fide holders of the shares, who in number must, by both transactions, have pretty well equalled the whole number issued, or at least that of the scrip certificates representing them. Counsel then called the secretary or clerk of the Union Bank, apparently to prove the amounts paid in to their establishment, and handed up a newspaper containing one of the company's advertisements, and a scrip receipt for five shares, signed by two of the alleged directors, named Sercombe and Rutledge, and was proceeding to prove their con-nexion with each other, when the defendant's counsel, who had previously taken numerous objections of a technical nature, chiefly relating to the competency of the magistrate's jurisdiction and the use of the Attorney-General's name as a sanction for proceedings in an inferior court, when it was limited, he contended, by the law governing such matters, to causes before the superior tribunals, but all of which were overruled by the bench, again objected to this course also, inasmuch as the statutory term of six months had more than expired since the alleged commission of the offence, and that so the magistrate's jurisdiction was barred. This objection eventually stopped the case. Both summonses were thereupon discharged, the complainant, Mr. How, who was accompanied by a perfect train of witnesses, and who was stated to represent a large body of the shareholders, expressing his intention to adopt different proceedings elsewhere, where the same objections would not avail.

PROPITABLE EMPLOYMENT OF RAILWAY EMBANK-MENTS .- Some time ago, attention was drawn (in the Daily News) to the subject of planting railway embankments with vines; but I agree with you that this scheme would not answer, our summers being too short for out-door grapes to ripen with any degree of certainty. To turn those now large tracts of waste land to a source of profit, and at a comparatively small expense, they should be planted with larch. Then sleepers, of which immense numbers are wanted, could be grown by the companies themselves, and would realise a handsome profit after all expense as to labour, &c. was paid; for not only could each company grow sufficient for its consumption, but would every year be able to sell quantities for hoppoles. The number of plants required for an acre would be, say 4,000, at 10s. per 1,000, or 2l. per acre. About 2l. per acre would also be expended in labour, making a total expense of about 4l. per acre. I should plant a portion of line each year, and when the poles become sufficiently large, which will be in eight or nine years, in favourable situations, thin for hop-poles. In about fourteen or fifteen years from the time of planting the remainder would be fit to cut for sleepers. I would then clear off and re-plant the ground in the same season, and so continue cutting clearing and planting a portion with young plants each year. It may be said this plan will not pay; but look at the beautiful young plantations of larch which have sprung up in the barren wastes of Scotland, even in some places where there scarcely existed soil to plant in; yet they thrive; and where this plan is carried out large unproductive wastes will be turned to good account, in a pecuniary point of view. Had the plan been adopted on railway embankments when the lines were completed, the different companies might now have been enjoying the profits of their labours .- Gardeners' Chronicle.

TIMBER VIADUCTS .- The following extract from a paper read before the Civil Engineers strikingly illustrates the economy of timber-built viaducts:-Messrs. Green have just completed a large viaduct, on precisely the same principle as those of the Ouse Burn and Wellington Dean of the Newcastle and North Shields, for His Grace the Duke of Buccleuch, across the South Esk at Dalkeith, in connexion with the Edinburgh and Dalkeith, and for the transit of coal from the collieries of His Grace in that neighbourhood. It has only a single line of railway and a footpath. The total length of this work is 830 ft., It has only a single line of railway and a the height is 87 ft. to the platform, and the width across between the railing is 14 ft. It has seven arches, five of 120 ft., and two of 110 ft. span each, with a versed sine of 30 ft. There are only two ribs, 8 ft. 4 in. apart, in each arch, and of a deal and a half (1 ft. 4 in.) in width, and ten deals (2 ft. 7 in.) in depth. The longitudinal beams are half balks of in depth. The longitudinal beams are half balks of timber, 13½ in. by 6½ in. There are two stone abutments, each 40 ft. long and five stone piers. The largest pier is 91 ft. high from the foundation, which is 5 ft. below the surface. All the piers are 10 ft. thick at the springing, 12 ft. 10 in. wide, and 5 ft. 4 in.

Digitized by Google

thick at the top, underneath the roadway. The total cost was:—Masonry, 3,617l.; carpentery, 3,358l.; May 13. together, 6,975l.

## Money Market.

## PRICES OF BRITISH STOCKS.

Sat. Mon. Tues. Wed. Thurs. Fri. 

+ Ex Div. * For account, June 9.

London Stock Exchange, May 12.—During the past week there has been a decided improvement in all railway shares, in consequence of considerable purchases contingent on the improvement in the consol market. But a re-action in both markets has taken place to-day, thereby implying that the purchases have been for speculation; and we must see the result of the settling days on Monday and Tuesday before it can be fully understood to what extent these operations have been carried on. One thing, however, appears certain,—the market is much in-clined to improve whenever external circumstances

are favourable.

Manchester, May 11.—The improvement we noted last week is continued; more business has been done, last week is continued, more and prices are gradually advancing.

SAM. GRINDROD.

SAM. GRINDROD.

Birmingham, May 11.— This market has fully participated in the general improvement, and the very stupid panic in which the holders of railway property have been participators, seems to be fast subsiding. To-day, North Staffords had so far recovered that sales were effected at 1½ dis., and Birmingham and Stour Valleys at 1½ dis. W. Banks.

York, May 11.—The market is much firmer, and several stocks have advanced from 1l. to 2l. per share. The shares dealt in have been the North British, the York, Newcastle and Berwick, the Great Northern, and several others.

Northern, and several others.

GRAYSTON & EARLE. Hull, May 11 .- The fine weather we have experienced since our last report has improved the prices of many stocks, and prevented others from falling. North British have participated only to a slight extent in the advance: in fact, thirds are lower than they were this time last week; old shares, halves and FLINT & TOOTAL. quarters being firmer.

Newcastle-upon-Tyne, May 11.—Our market has partaken only to a limited degree in the buoyancy

which has pervaded the other markets during the week. A few investments in local lines have been the extent of our transactions. To-day, Newcastle and Carlisles are at 8 pm.; ditto red, 5 pm.; North British, 22%; ditto thirds, 36s. 6d. dis.

# Railway Chronicle.

LONDON, SATURDAY, MAY 13.

In the course of a month the proprietors of the WAVENEY VALLEY AND GREAT YARMOUTH will receive the proposed agreement between them and the Norfolk and Eastern Coun-TIES, which are now amalgamated. All proceedings were consequently adjourned at the meeting of shareholders until the production of the agreement.

The shareholders of the BIRMINGHAM AND OXFORD JUNCTION adjourned their meetings from day to day to the 16th inst., pending the parliamentary decision on any of the Great Western bills affecting the former company.

The proceedings at the adjourned half-yearly meeting of the shareholders of the KILLARNEY AND VALENTIA consisted simply in receiving the Report and accounts. A call of 11. is to be made, in two instalments of 10s. each. The line is to be staked out on the payment of the first instalment.

At the half-yearly meeting of the shareholders of the WEST FLANDERS, the directors Report was received. A committee of investigation was asked for by some of the proprietors, but refused. There were one or two unpleasant circumstances stated as connected with the disposal of the shares by the directors, and with the inability of one of them to meet his calls to the amount of some thousand pounds.

The improvement of the Humber Ferry, belonging to the Manchester, Sheffield and Lincolnshire net of lines, is a railway question of public interest, now before a parliamentary committee. This company desires to make the landing on the Hull side of the Humber as easy and commodious as possible, and to do this by a sort of floating-pier; but it is said that the Admiralty hesitate to give assent, and that the Corporation of Hull violently oppose the plan, with a blindness parallel only to that of Oxford and Northampton and other towns, which opposed formerly the advent of the railways to them, and afterwards sought them beseechingly. The committee sat yesterday for the first time, when the case was opened. The Manchester, Sheffield and Lincolnshire already own railways, canals, docks, steamers and this ferry -powers obtained with singular tact; and we do not imagine that the perfection of a scheme, which, for its magnitude, is of a positive national character, is to be arrested by any petty local jobbing or official obtusity. The public will have the best means of crossing the Humber sooner or later, and anyhow it is obviously but a question of time.

From our official returns it appears that the amount of traffic for the last week, on

3,658 miles of railway, was 186,436l., thus accounted for: — 93,365l. for the conveyance of passengers only, 46,594l. for the carriage of goods, and a remainder of 46,477l. for passengers and goods together, not respectively apportioned; being an increase of 20,364l. over the corresponding week of last year, when the mileage was 2,845. The average earnings per mile last week were 51l., whilst in 1847 they were 58l.

## THIRD REPORT OF THE SELECT COMMITTEE.

The SELECT COMMITTEE ON RAILWAY BILLS continues, we see, to take cognizance of the business of this session. Its THIRD REPORT, which we printed last week, is occupied with matters of detail that do not seem to fall very clearly within the province understood to be particularly assigned to it at the date of its appointment. It might have been supposed that its labours would have been closed on the conclusion of the experiment, which resulted in a declaration that it could do nothing in the way expressly marked out for its consultations. But it is no new thing in public affairs to see a body, which has once been set up for a given purpose, and has failed in effecting that purpose, reluctant to accept the plain consequences of the failure, and desirous of vindicating its existence by falling upon anything that may afford the means of escaping from the censure of having existed altogether in vain. The course now taken by the Select Committee - if the circumstances and design of its appointment in November be kept in view-will be seen to partake of this character; and the contents of its third Report may be regarded as a kind of skirmishing fire, kept up to cover the retreat of that body from the main attack on the bills of the session,-which it was put forward to make, and has found it expedient to abandon.

On adverting to the matter of the advice given in the document just issued, it will be seen that, whether good or bad in itself, it is, for the most part, defective in the same way that the Reports of the railway department have always failed in. If we except certain explanations of the meaning to be assigned to Standing Orders Nos. 126 and 127—which one can hardly think were much in want of an interpretation so obvious-and a corollary drawn from the latter, and applied to a particular instance (that of the Great Northern amalgamation with the Aberdeen), the chief remaining matter of the Report will be found to consist of advice to the several railway committees, on the bills specified, to pay attention to certain features of the business to be laid before them-advice which is at once superfluous from its nature, and of no certain authority over the decision of the parties advised. The subjects named are certain to attract the special consideration of the committees in each of the cases named; and it remains at their option whether they will or will not be guided by the hints thrown out from the select body on these subjects-hints, indeed, so far from distinct in the way of positively recommending any particular course whatever, as to leave the committees the fullest opportunity, if so inclined, of paying no regard to them in fact, while seeming to respect them in appearance. This way of fulfilling any consulting office we have always thought, and still continue to think, merely futile. It is, perhaps, the only course likely to be taken on most occasions by a body that is restricted to the office of advising, without being invested with decisive power. Those who are aware that the party to whom any suggestion is addressed may or may not attend to it at pleasure, will rarely choose to assume the responsibility of a positive recommendation, any disregard of which cannot be

concealed, and any failure of which must render the mischief of the counsel conspicuous. This circumstance alone, which lies in the nature of all separations of the deliberative from the decisive judgment on practical business, is fatal to the usefulness of the former; and as this notable expedient has been much in favour in the public transactions on railway business of late years, we have had repeated opportunities of seeing the objections, which must arise in any considerate mind on a theoretical view of such a system of quasi-interference, confirmed by the plain matter-of-fact results of the experiment.

of-fact results of the experiment. At the close of the Report we find, indeed, something like positive advice offered, on the chapter of the steamboat engagements of certain companies. This, however, is merely an echo of similar conclusions on the same subject, adopted by the Railway Board. The view presented by the circumstance of two advising organs appearing in this department, has more than one aspect that may be worth a brief remark or two. In the first place, it cannot be overlooked that their agreement is not, after all, decisive; that the committees advised are not, after all, bound to adopt the counsel thus jointly offered, should they find cause, on the inquiry which this advice will not exonerate them from making, to take a different view of the matter in question. In the next place, it must be seen that one of these accordant suggestions, at least, is evidently one too many. In any practical view of the office of either, it is plain that one must be superfluous if the least value is to be assigned to the other; while neither, after all, is allowed to do more than offer a mere opinion on the subject. The awkwardness of the process is not less ludicrous than its ineffectual character. Here, we have the Railway Commissioners reporting, with no power to decide, and the Select Committee, equally destitute of decisive power, saying ditto to that report; and if this double process be becoming or necessary, it can only be so on a principle that would recommend a further increase of the number of mere advisers, from every quarter that could pretend to have anything to say on the subjectthe Admiralty, the Post-office, the Home-office, &c., &c., and so on to infinity-all suggesting, and none empowered to do more than suggest: a spectacle ridiculous enough to any practical understanding, even where the multitude of counsellors should happen, as in this instance, to agree. But let us, further, suppose the quite possible contingency of the parties having disagreed in opinion. What would have been to be done had the Select Committee taken one view, and the Railway Board its opposite? This contingency, we say, lies in the very nature of such a division of labour, which, indeed, is calculated to produce nothing but increased confusion. How many advisers are to be given to a parliamentary committee; and which, in case of their happening to differ, must that body prefer? Altogether, it must be seen that the system is verging rapidly to the point at which it will become supremely ridiculous in all eyes; that it is not by such devices as this that any real business can be advanced or any real necessity provided for; but that if Parliament means to retain in its hands the power of deciding, and with it the process of inquiring, by its Private Bill Committees, into the matter of each decision, it is a mere mockery to keep up the show of setting any other body whatever to prepare consultations on the subject; in other words, that it must either depute the power of doing some one or more part of the business in real earnest, or if it be resolved to retain its own powers, as they are now exercised, determine to put an end to the tedious jest of such futile arrangements as we have been discussing.

## RAILWAY DIVIDENDS AND CALLS.

An occasional correspondent, on the accuracy of whose statements of any matter of fact we can rely, has sent us the following comment on a remark we made, en passant, in our last week's notice of the Great Western meeting. After some other observations, which he will excuse us for omitting, he goes on to say:-"The state of things described by Mr. Stanford in your quotation, is, and has been for many years, that of every proprietor in every one of the great companies, who has not been willing to part with his shares, but has kept holding on and paying on, in the hope of seeing the capital account closed at last, and of reaping some positive reward for his ever-increasing investments. In the more flourishing times, even, before dividends began to fall, I always found a call ready to eat up the income to which I was nominally entitled; and while I know this to have been generally the case of all other permanent holders, I have often been indignant at hearing the assertion put forth from time to time by the enemies of railway property, that we were receiving dividends out of capital! Why, sir, instead of this, we have been for years, and still are, and, if the directors are not induced to take some better order with their proceedings, ever shall be, constantly raising a great part of our capital out of dividends. I wonder that no one should have insisted on this fact, when the Times proclaimed that great mare's-nest which its 'correspondent' discovered last winter. Now there was some comfort in paying and hoping on, while the rate of income was kept up; and the answer you used to get from secretaries and directors, on complaining of the constant absorption of dividends by calls, was still this plausible one :- 'Why do not you sell your new shares, if you do not like to pay any more? You can dispose of them at a premium, and thus get at once in another way the advantage you might ultimately have by keeping them. Many, and myself among others, have been thus pacified in former days. But how does the business stand now? Can we now sell if we are tired of paying, except at a great sacrifice? And while calls keep going on, what is the state of the account in £. s. d., as regards the profits on the sums already expended, on the original shares, and in the new additions? From the memoranda I keep of such things, I will give you a single instance. I am a small holder of London and North-Western stock-and have kept the new shares which were allotted to me in some of the companies united under that name a few years since. From my shares in that concern, I received in January 1846, the half-yearly dividend of 89l. 4s. 6d. Since that date, I have paid in calls on new shares in that concern 386l., previously to the end of 1847,-and my dividend on the investment, thus increased, for January 1848, was 85l. 17s. 11d., or less than it was before a penny of that addition, of nearly 400l., had been thrown into the concern. I am told by well-informed people that no increase in the dividend is to be expected in the future; and indeed, from what I see published of the course of the receipts on that series of lines, there can be no great reason to expect an improvement. Now this plain result of the growing outlay we have been advised to make there is no gainsaying. It must show to all concerned and the instance I have cited is but one amongst a thousand similar ones-what the shareholder has gained or lost by all the magnificent progress of the last four years. We have been told, I know, that all this was needed for our 'pro-Let me ask if anything from which tection. we sought to be protected could have punished us worse than these protective schemes, with

Digitized by Google

their expensive concomitants of parliamentary bills, &c. &c., have actually done? and whether it would not have been better for us to have let our enemies do their worst, to have kept our outlay within a moderate compass, fostered our profitable traffic, and economized our expenses, instead of running after such questionable means of security-which I am now told, and believe, have not secured us after all? These are practical questions, which it must become every day more important to consider; unless we are willing to give up our shares in railway undertakings as a bad business, and submit to think them a mere 'bubble,'-as I see one ingenious Mr. Arthur Smith has just written a pamphlet to prove (!) they really are."

We quite agree with our Correspondent, that it is worth while to look seriously at this practical view of the question—in order that the proper instruction for future proceedings may be derived from the results of past transactions.

## NEW OUTBREAK OF THE MORRISON MONOMANIA.

That the ex-member for Inverness is not a man to be convinced by plain facts, or converted from his fixed ideas by any reasoning process, we have long known. Our readers have seen, often enough, his notable exhibitions on the railway question; and how he kept on teasing and try ing to mislead Parliament with his one-sided view of certain parts of the railway system here. and his imperfect reports of its condition abroad; while neither on the Continent nor at home had he been able at any moment to extend his view to the whole of any material part of this business. He now comes forward to show that he is not to be rebuked by a past disgrace, however notorious, nor instructed by present events, however impressive. After his attempt to pass off on the country a pamphlet of his own as the Report of the Select Committee had been punished by the censure with which that document was rejected in the following session, one might have thought he would have been silent afterwards, from the mere sense of a humiliation so well deserved. In the present condition of the railway interest, in the actual state of railway tariffs, one might have thought he would have learned to give over bawling about railway profits and railway extortions. But no! Mr. Morrison is determined to show that no reproof can abash, and no facts illuminate his prejudiced mind. In a pamphlet which was published last week by Messrs. Longman, he repeats his old blunders; with new comments, that merely serve to exaggerate them, and prove how utterly incapable is the Morrisonian mind of drawing the most obvious conclusions from evidence the most palpable. He now republishes his speeches in the House on his ruling idea, and the disgraced Report to which he tried to give a spurious currency—as the appendix to a pamphlet in which all his former perversions of fact and reasoning are repeated, with fresh misrepresentations of later events, and conclusions drawn from them which outdo the perversity of his earlier fallacies in argument. Whether we shall think it worth while hereafter to note a few of the strange items in this performance, will depend upon the space that may be allowed us by more important matters. To refute his unreason would be mere labour wasted: the only answer it requires will be suggested of itself to all who have considered the whole of the question he insists upon meddling with, on his propositions being simply extracted and laid on the table. The process would administer some amusement, but it may be that duties of greater consequence will claim the space that it would require. We cannot advise our readers to study the pamphlet, even as a thing to be protested against, whether

in word or in act,—because we know they can learn from it nothing but the extent of the Morrison monomania; and we apprehend that its exhibition in this extravagant way will be altogether harmless.

## RETROSPECTIVE SKETCHES, FINANCIAL AND CONSTRUCTIVE.

## LANCASHIRE AND YORKSHIRE.

The Lancashire and Yorkshire, originally a line of only 80 miles, between Manchester and Lecds, has expanded until its aggregate share capital has increased from two and a half to ten millions; while its mileage in prospective (that is, when the extensions now constructing are completed) will have increased from 80 to 340 miles. Of these 172 are nearly completed, leaving 168 to be constructed. Add to this the lines of last session and the result will be a possession, by the Lancashire and Yorkshire, of 366 miles under one superintendence,-establishing a central system of communication through the heart of the manufacturing district, touching, at every alternate 10 miles, some seats of industrial activity, allying them with Liverpool, Manchester and Hull, the markets of raw material, with those for its manufacture and finish, and accommodating in its ultimate design a population of three or four millions. The works on which the Lancashire and Yorkshire are at present progressing, are those granted in 1845, which with their length, and the labour force employed on them up to June last, may be enumerated as follows:-

		Mile	<b>28.</b>	in June.
Liverpool and Bury		38		3,975
Hudderstield and Sheffield		15		3,268
Alterations of main line				84
Oldham and Heywood branches		5		1,458
Creswick and Ashton branches		2		215
Burnley branch		9		1.121
Wakefield and Goole		46		1.300
West Riding lines		45	••••	1,000
Total	•	160		19.491

Up to June last 2,500,000% had been spent on these lines; subsequently to June, and up to the present period, less than half that amount. Since then the working staff of labourers has also been reduced to less than one-half, and the number of workmen now employed upon sections of the 181 miles may be taken at some 7,000 or 8,000 less than in June last. The expenditure also has been rather more than correspondingly reduced. The rate of expenditure at the beginning of the year was about 200,0001. per month: but it is now at a rate of less than one-third that amount. It is calculated that if the usual force had been employed on the above lines, and provided also the expenditure had not been diminished, the contractors might have thrown open 110 miles out of the 160, for immediately productive traffic, by the beginning of the year; but under the present system of retrenchment, this result will of course be delayed. The company are pledged to proceed with the completion of these lines, having entered into engagements and contracted liabilities for them, and consequently they consider that to retard them would be worse than to go on, more particularly when by the outlay of a few thousands, in conjunction with the sums already spent, the undertakings may be brought into profitable operation and active public service. The policy of the company, as to the progress of works, is the general policy that now actuates the railway system, and exhibits the desire that a limited rate of expenditure should be rendered as effective as possible, by concentrating the means at their disposal on those portions of line most indispensable and furthest advanced.

The first line, the Liverpool and Bury, to be opened speedily, will unite Rochdale, Bury, Heywood, Wigan, and Bolton, with Liverpool. The Huddersfield and Manchester passes through a populous district; will save 14 miles over the present route between those towns, and 9 miles between Manchester and Leeds, besides incorporating a canal that pays no dividend. The West Riding connects, by a direct network of communication, Leeds, Halifar, Bradford, Huddersfield, Wakefield, and various iron districts. The Barnsley Junction opens up the Silkstone coalfield to the manufacturing districts, and the general advantages to be derived from the opening up of all these lines will be something similar to the benefit that has accrued from the opening up and operation of the main line. In 1840, before the

railway between Manchester and Leeds was opened corn was charged 11. 4s. per ton between Manchester and Hull, it is now conveyed by rail for 13s.; cotton, in 1840, 1l. 12s. 6d. per ton, now 1l.; manufactured goods 2l. 5s. per ton, now 1l. 4s.; saving, on a rough calculation, to the district 300,000l. per annum in the cost, exclusive of the quickness of the conveyance.

The calls in connexion with all classes of shares of the Lancashire and Yorkshire for 1847, have amounted to 1,705,291t., as follows:—

#### Gossip.

A deputation of gentlemen, headed by Mr. D'Israeli, representing local interests in connexion with the BUCKINGHAMSHIRE, attended upon Mr. Labouchere and the Commissioners on the 8th inst. Mr. Wyndham Harding, the secretary, explained the views of the deputation.

the deputation.

The directors of the Newcastle and Carlisle have met to receive proposals from the Caledonian and the York, Newcastle and Berwick, for leasing the line at 7 per cent. The directors did not think themselves at liberty to accept the offer, and accordingly a meeting has been called for the 16th inst. to

settle the question.

The arrangement which has been some time pending for the lease of the Scottish MIDLAND JUNCTION to the CALEDONIAN is now completed. The agreement guarantees 6 per cent. in perpetuity to the shareholders of the Scottish Midland upon a capital of 600,000L, including both the old and new stocks. The Scottish Central, says the Scottish Railway Gazette, which forms the northern continuation of the great trunk line from the south, the Caledonian, unites with the Scottish Midland at Perth, and the Aberdeen is connected with it at Forfar; so that the whole through communication from London by the North-Western, Caledonian and Central route will be worked in connexion. On the east coast, the Dundee and Perth and Dundee and Arbroath lines being also leased to the Caledonian, the traffic will be entirely in the hands of this enterprizing body, who have made every possible arrangement to do ample justice both to the public and their own immense business. The system is now so far perfected, that passengers will shortly be enabled to proceed from Montrose, and in a little while longer from Aberdeen to London, a distance of about 600 miles, without a shift of carriage.

without a shift of carriage.

A correspondent of the Times pertinently asks why
the ELECTRIC TELEGRAPH is not laid down on the
GREAT WESTERN beyond Slough, as the authorities at
Paddington were not apprised of the fatal accident
that happened at Shrivenham, on Wednesday, at
3 30 p.m., till 7 p.m., consequently the sufferers were
dentised of their assistance for nearly even hours.

deprived of their assistance for nearly seven hours. The following is the summary of traffic for four weeks, ended the 29th of April, including the Lincolnshire division, on the MANCHESTER, SHFFFIELD AND LINCOLNSHIRE:—Passengers, parcels and goods, 9,779!. 15s. 4d.; corresponding period in 1847, 8,023l. 4s.; increase, 1,756l. 11s. 4d. We have understood that the traffic on the little fork line between New Holland and Great Grimsby, open only for passengers and light parcels at present, is, even in these early days, nearly double what was expected. In another part of our paper is recorded the monthly return for the revenue of Grimsby Docks, which belong to this company. The progressive increase is something surprising, when it is remembered that there have not been created as yet any additional facilities whatever for importing the merchandise brought to the docks.

The traffic on the CHESTER AND HOLYHEAD line between Chester and Bangor, for the six days it has been opened, to the 6th of May (exclusive of toll) from the Shrewsbury and Chester), has amounted to 562l. 6s. 7d. This is strictly local and passenger traffic only. It seems that the utmost the directors

Digitized by GOOGLE

have ever calculated on was that the local traffic should amount to sufficient to pay the working charges; and assuming that it does so, they have the greatest confidence in their success.

The ABERDEEN directors are determined to move the Government for a loan to complete their line. They make out a strong case for assistance, 900,000%.

having already been expended on the works.

The manager of the Lindsey and Lincoln Banking Company at Brigg, named Sylvester, has decamped with 8,000%. Dabbling in railway shares (of course) is said to be the primary cause of his ruin.

The shareholders in the Hull and Lincoln Direct hasten to wind-up their affairs. A meeting

has been held in the north of Lincolnshire, and

prompt measures resolved upon.

The shareholders of the PLYMOUTH GREAT WEST-ERN DOCKS have sanctioned, with one dissentient, the bill to enable the company to raise further capital, and to authorize the Great Western, the Bristol and Exeter, and the South Devon to subscribe to the docks. The bill has been read a first and second time, and is going forward now as an unopposed bill. It was stated that the extreme limit to the amount of capital which the bill in its present shape enabled them to raise was 200,000t., whilst by the former powers they were limited to 120,000t.

We have received a report of the history of the HUMBER FERRIES, laid before the SOCIETY OF ARTS; which we are compelled to defer from want of space The Report of the DUNDALK AND ENNISHILLEN committee of inquiry has been presented. The following are their principal recommendations

committee of inquiry has been presented. The iol-lowing are their principal recommendations:—

1. That the directors be reduced in number to ten or twelve. 2. That a committee of directors be appointed by the reduced Board, under the Companies Clauses Consolidation Act, 1845, for the purpose of maintaining a constant and vigitant superintendence over the company's affairs.

3. That for the present the sum of 400% a year be allocated for direction. 4. That an arrangement on a more economical basis should be entered into with the solicitor. 5. That the line beyond Castleblaney should not be proceeded with this year, but that the lithographed ground plans, as well as the necessary working plans, be deposited in the office of the company, with a view to carrying out the line to Clones as soon as expedient. 6. That the opening of the line from Dundalk to Castleblaney should be made to depend in point of time on the opening of the Dublin and Belfast Junction between Drogheds and Dundalk. 7. That an equitable arrangement should, if possible, be entered into with the Dublin and Belfast Junction, by which both lines should be worked by one company. 8. That the immediate construction of the Boyne viaduct should be attended to. 9. That the qualification of directors should, in amount of capital, be in conformity with the spirit of the qualification required by the original Act of Incorporation. 10. That immediate and earnest attention should be paid to the collection of the large amount of arrears now tion. 10. That immediate and earnest attention should be paid to the collection of the large amount of arrears now due. 11. That until such arrears shall have been collected it is not expedient to make any further call. That all shares on which arrears of calls are now due, and are ascertained to be in insolvent hands, should be immediately placed in

The writer of 'A Letter to the Shareholders of the East Indian Railway stoutly declares in favour of the following course for the line :

course of forfeiture. The committee having conferred with

the board of directors on the above recommendations, re-ceived from them a concurrence therein, and an assurance that, with all practicable diligence, the same will be carried

From Calcutta then, I say, as others better informed have said before me, your first railroad must be made to connect Calcutta with the nearest permanent spot on the banks of maid before me, your first railroad must be made to connect Calcutta with the nearest permanent spot on the banks of the Ganges:—Calcutta is your emporium, and a road on these principles is of universal benefit. The Ganges Valley is your manufactory—your trading ground—your source of wealth. I look not to towns, to provinces, to districts or to individuals—I look not to transporting sepoys, or cannon, or gunpowder, or arms, or to any one thing exclusively—not to Manchester twist, or Welsh iron, or Swansea copper, or French brandy, or Burton ale—I look not to Purneah indigo, Patna opium, Benares sugar, or Chuppar saltpetre, Mirzapore cotton, or the grain of the Doods, or the coals of Burdwan, Palamow or Pachete; but, on the broad principle of the greatest benefit to the greatest number, I say that by the Ganges you catch the whole: it is the natural descending road and the natural ascending road to the millions of population east and west, north and south of its course. Take a general map, and run your finger upwards from Calcutta: you will find in the Delta of the Ganges many rivers running in several directions without rule—you will find several rivers running into the Hoogly and the Bhagiruttee, from the western hills. But continue on till you reach the point where the Ganges issues from between the hills: you will find here. from Cology to the Morung hills, the opening is about 100 miles; and here, at right angles to the Gangetic Valley, blocking it, as it were, and compelling all the trade to one narrow pass, is the formidable river Cossye—rapid, impetuous, subject to floods, and full of quicksands. Here, then, is the whole accumulated trade of the Gangetic Valley obliged to pass—through one narrow neck of country, not five miles in width, is poured in a continued torrent the drainage and the trade of a population of 40,000 on cure miles—95,000,000 acrea—containing a population of 40,000 on cure miles—95,000,000 acrea—containing a population of 40,000 on cure miles—95,000,000 acrea—eac-containing a populati walley of 150,000 square miles—96,000,000 acres—containing a population of 40,000,000 souls, and paying to the Government an amount of land revenue equal to 5,000,000. sterling.

The Times, in a money article, thus comments on the effects of the statement of the Minister of Finance, presented to the lately-opened National

Assembly: - Neither the financial exposé of M. Garnier Pages, announcing an estimated surplus of 45,000,000f. in the ordinary budget for 1848, nor the hope expressed by M. Arago that the maintenance of peace would admit of a reduction of the French army by 150,000 men, appears to have created much impression in London, although in Paris they were followed by a rise in the funds. To what extent the receipts either from the various railroads, whose independent existence is pronounced to be "incom-patible with the democratical and unitarian principle of the Republic," or from the "progressive system of taxation" with which the already exhausted capitalists of the country are further threatened, go to augment the estimate of revenue, we have no means of judging; nor is it intimated if the 3,200,000l. lately decreed for war purposes has been included on the adverse side, although probably this is to be regarded as part of the "extraordinary expenditure" exclusively estimated at 140,000,000f. The details furnished by M. Pages, however calculated to strike a popular convention, would be wholly useless in the hands of an accountant. All, therefore, that can actually be arrived at is, that after having in little more than two short months expended two millions sterling which existed in the Treasury at the time of the revolution, nearly three millions additional borrowed from the Bank of France, and all the incoming revenue, swelled by whatever aid could be derived from gifts to the Republic, by patriotic payments in antici pation, and by doubling the taxes payable by pro-prietors and capitalists, M. Pages finds, from data best known to himself, he can conscientiously announce to the Assembly, at the moment of rendering his office into their hands, that he has brought the nation to a position in which it can live within its means, and lay by annually two millions sterling.

At the annual meeting of the Montpellier and

CETTE. in Paris, it was stated that the traffic receipts for the year 1847 amounted to 659,211f. (26,368L), and the expenses to 489,920f. (19,596/.), leaving a profit of 169,291f. (6,772/.). The directors stated that 19,000f. (760l.), included in the current expenses, belonged more properly to the construction account, so that the nett earnings were 188,000f. (7,5201.). A dividend of 25f. per share was declared, which would leave a balance for the next account of 28,666f. (1,146t.). Auditors were elected to examine the accounts.

There was a countryman who had a goose which laid golden eggs. The fellow greedily slew the goose to possess himself at once of all her rich qualifications. Such is the Frenchman's love of his and such will be its result, as exhibited in their late expulsion of foreigners and foreign manufactures The last instance is reported to be that of a vessel, which has arrived in the river from Boulogne, bringing an entire cargo of railway materials, consisting of 190 waggons in pieces, 49 crossings, and 380 wheels and axle-trees, being British manufactures returned.

In our report of the proceedings at the meeting of the Northern of France last week, we were trayed into repeating an error, originating in the Paris papers, that it was decided that a part payment (25f.) of the last call would entitle the shareholders to the dividend. The proposition was made, but we now learn from a Paris correspondent that it was eventually agreed to leave the whole matter regard-

ing the call to the discretion of the directors.

NORTHERN OF FRANCE.—We last week gave a summary of the Report presented to the general meeting, but we have since received the complete document, from which we extract a few additional particulars. It appears that the company have constructed in their own workshops in the past year, independently of what has been supplied from other sources, 1,180 goods waggons, at the average cost of 124l. The number of locomotives amount in all to 177, which have been found inadequate to the traffic, and the number is now to be increased to 199. The new ones for passenger trains are on a new principle, to accelethe speed. The company possessed before the revolution 490 passenger carriages, of which 20 were destroyed in February. The number of waggons and trucks were in all 2,405, of which 49 were then destroyed. The increased traffic has called for a further supply, and 107 more have been ordered. The total loss inflicted on the company by the revolution was estimated at 11,000,000f. The directors have made a reduction of one-half the sum paid for their attendance, and the salaries of the various officers will be so reduced as to diminish these expenses one-third. The principal officers have spontaneously offered to follow the example of the Board. The directors have also been devising means to secure the welfare of their employés by the creation of a retiring fund. and by giving them a direct interest in the success of the railway. Two plans have been suggested, which

the late attempt at expropriation has necessarily stponed. The branch line from Hazebruck to Calais is expected to be opened about the middle of this year. The Calais station not being yet decided on, the works are necessarily postponed; but this will not prevent the opening at the time mentioned.

## Reports of Meetings.

WEST FLANDERS.

May 5 .- Half-yearly Meeting, London .- Mr. W. P. RICHARDS in the chair.

The Report was read. It declared that in the Report made by the directors at the last general meeting the entire line from Bruges to Courtrai, a length of about 33 miles, was announced to have been completed, and that the traffic had commenced. The directors entertained sanguine expectations as to the prospects of the company, partly founded on authority of the highest engineers, and partly from previous experience. Those expectations, have, however, not been fulfilled, in consequence of the bad harvest and the failure of the potato crop in 1846. The country was gradually recovering from the effects of these disasters when the recent events in France happened. These events have peculiarly affected the movement of passengers and the general trade of the district, which, as lying close on the French frontier, has been almost the sent of war. The extent to which the recent political events have influenced the traffic may be gathered from the following facts:—In April 1847, when the line was opened only from Bruges to Roulers. 20 miles, the number of passengers carried was 13,166; in March 1848, the line being opened throughout from Bruges to Courtrai, 33 miles, and the communication being complete from Ostend to Paris and to Tournai, the number of passengers carried was 13,914. In August last the receipts were 400% per week. From September 1847 to February 184 to repruese. From september 184 to repruary last the produce was:—From passenger traffic, 4,490l. 15s. 6d.; from goods, 2,321l. 5s. 8d.; total, 6,812l. 1s. 2d.; making a weekly average of 262l. During the same period the working expenses amounted to 4,141l. 12s. 7d., making a weekly average of 169%, exclusive of the maintenance of the way, which for the first year is carried to the construction account. The efforts of the Board have been constantly directed towards the reduction of the working expenses, which has been materially effected, and will be carried still further. The cost of working was in August 1847, 781l. 0s. 10d.; maintenance of way, 512l. 17s.; total, 1,293l. 17s. 10d. The cost of working in February 1848, 615l. 7s. 4d.; maintenance of way, 2221. 7s. 5d; total, 837l. 14s. 9d.; difference of total cost, 456l. 3s. 1d. The maintenance of way will cease to be carried to construction account from the 15th of July next. The Directeur Gérant, who has carefully investigated the subject, affirms that the maximum of expenditure per month, including maintenance of way, will not exceed 1,000*l*., and this sum may be further materially reduced. In October last the directors made application to the Belgian Government to undertake the working of the line. Such an arrangement would unquestionably be advantageous to both parties. The subject has been constantly pressed on the Government, who received it with every promise of attention, and appointed one of their principal engineers to examine the question; but to this time no answer has been received. and the matter is still under consideration. The Board have repeatedly, in person as well as by correspondence, ineffectually represented to the Minister of Public Works the serious consequences of this delay. The definitive answer was promised during the month of April. The directors are satisfied that in the hands of the Government the line might well be worked and maintained at a cost of 9,000l. per annum. At the date of the last general meeting the directors had every reason for believing, from the statements transmitted to them from Belgium, that the call of 10s, per share then mentioned would more than clear all the liabilities. Further claims have subsequently been made, and the present liabilities, beyond the amount in hand, are, as nearly as it is possible to ascertain them, 12,000l., and beyond this sum it is necessary that a balance should remain for contingencies. The directors, therefore, consider it requisite that a sum of from 15,000t. to 16,000t. should be raised. It will be for the proprietors to determine whether this shall be done by the apportionment among them of the forfeited shares. The number of forfeited shares is 11,236. These, if taken by the proprietors of existing shares rateably, at the price of 30s. per share, would produce more than the required amount. If this course be adopted, the proposition would be to issue them, on the payment of 30s. each, by three instalments of 10s., declaring them to be entitled to a preferential dividend of 4s. 8d. per share; that they shall be liable to further

Digitized by **UO** 

calls only to the amount of 11. 10s. per share, making up 10l.; and in the event of such further sum being called the preferential dividend be increased from 4s. 3d. to 5s. per share, the holders having the option of bringing them in as half-shares, to rank with the

other shares, if they shall so elect.

The CHAIRMAN alluded to the disappointment of the directors in their expectations as to the increased traffic to Courtrai. For the advantage of all parties, certain shares had been held over from the last call, which would now be forfeited. He hoped that there would be no interference just now with the proceedings of the Board, who were acting for the best interests of all. He reviewed the topics of the Report, which he moved should be adopted.

Mr. Lindo argued that there ought to be about

9,000l, more in hand.

Mr. Atkinson was about to put a series of questions, which he hoped would result in the appointment of a committee of inquiry. Among the first questions he wished to put was this: Was 3 per cent., amounting to 25,000l., paid out of the first deposit to the concessionnaires?

The CHAIRMAN: It was.

Mr. ATKINSON wished to know whether Messrs. Richards, Hayter, Fearon, Cubitt and Chantrell were those concessionnaires?

The CHAIRMAN: They were.

Mr. ATKINSON would also like to know whether, in the allotment of shares, 5,000 were given to Mr. Richards, 4,000 to Mr. Hayter, Her Majesty's Judge Advocate General, 5,000 to Mr. Fearon, 5,000 to Mr. Cubitt, 4,000 to Mr. Chantrell, and 1,000 to Sir E. Ryan, amounting altogether to 24,000 shares !-- whether some were not reserved for the Sambre and Mcuse, and if so, how many had been left to be distributed among the public, and how many had been applied for?

The CHAIRMAN replied that whatever number was

left was fairly distributed.

Mr. Atkinson would next ask whether it was a fact that the calls had not been paid on 11,236 shares?

The CHAIRMAN: Yes.

Mr. ATKINSON would like to know how many of them belonged to directors?

The CHAIRMAN did not know to whom they belonged Mr. RICHARDSON said that one of the directors had forfeited in that way no fewer than 4,650 shares.

Mr. ATKINSON would ask whether the resident directors had been paid by a per-centage on the outlay of the line?

The CHAIRMAN replied in the affirmative, that

being the best principle.

Mr. ATKINSON would then ask what was the amount of per-centage, and whether he received anything from the company beyond the amount received as concessionnaire? he would also ask whether Mr. Chantrell had had allotted to him a number of shares when they were at a premium-whether he had paid anything upon them-how much he had received for his management, and what had been the outlay on the line?

The CHARMAN replied that no such shares had been allotted to Mr. Chantrell, but a number had been given him to dispose of in Belgium at the time

of the concession.

Mr. Atkinson would then ask whether the deposit was or was not paid on those shares out of the funds of the company? He did not ask for replies to these questions, but he thought he had suggested sufficient to show that an inquiry ought to take place. There was nothing more disastrous in a partnership than not looking their circumstances fairly in the face. He did not wish to wound the feelings of others, but this was a pounds-shillings and pence affair. They had carried capital and enterprize into a foreign country, They had and, having a due regard to their own breeches pocket, he called upon the meeting to second him in procuring a committee of five gentlemen to investigate the state of their accounts and liabilities, and report the result at a special meeting. The hon. gentleman then moved a resolution to that effect, which was seconded by Mr. MEDLEY.

The CHAIRMAN could not see the advantage of carrying out the measure now proposed, or he would

be happy to give it his support.

Mr. BURKE had heard a great deal calculated to bias gentlemen in support of the amendment, but thought that without something more definitive they ought not to consent to this committee. Under ordinary circumstances, probably, it might be advisable to have some inquiry, but the present case appeared to him rather an exception, and he thought that they should now protect their property, and secure what little they had left. When they heard that the chairman had 5,000 shares, the whole of which had been paid up upon, they could not but feel assured that the direc-They were tors had a deep interest in their affairs. told that negotiations were going on with the Belgian

Government that would at once give a value to their property; and surely they would not injure those negotiations by their own conduct, and tell that Government they considered their property worth nothing. He would therefore support the original motion

Mr. MEDLEY did not consider the accounts faithful. He felt he should be quite warranted in saying that they were false. In the Report twelve months it was stated that the call on all the shares had been paid with the exception of 321, whilst by the present Report it appeared that there were no fewer than

10,500 shares on which that call had not been paid. Either that was a fact or it was not; and if it was. he thought it a sufficient reason for the appointment of a committee, or else they might as well state at once there was no use in having accounts, or even directors. They had also been told, in a printed Report, that the traffic in August in the previous year amounted to 4001. per week; that in September it exceeded that amount; and that in October it kept on the increase. Now, 400l. per week amounted to something like 1,800l. per month, and yet it appeared that in no one month had such a sum been received.

The CHAIRMAN said that when that Report was made the directors were not aware that they were carrying on a joint traffic with the Government, which constituted a drawback on the receipts. He admitted the statement to have been made in an entire mistake.

Mr. Medley stated that at the last meeting they had been told that a call of 10s. per share would be amply sufficient for every purpose; and now, in six months afterwards, they were informed that not only was that 10s. expended, but that a further sum would be required. That of itself was, in his opinion, sufficient reason for the formation of the committee.

The CHAIRMAN replied that the directors had been led to make the statement in their last Report that a call of 10s. would be sufficient for all purposes by mistake, they having been deceived as to the amount of their liabilities in Belgium.

Mr. MEREWETHER considered the amendment altogether unnecessary, from the readiness and candour with which every information was given at the

office by the directors.

After considerable discussion, during which Mr. G. STEPHENSON observed that he knew nothing of the traffic case, and that he had only given an opinion of the value of the line looking at it in an engineering point of view, and stating that if Mr. Sopworth traffic estimates were correct, it would prove a good and valuable line-

Capt. JESSE (the late secretary) thought it necessary to deny that he was responsible for anything which had taken place in the company.

The amendment for a committee was negatived by a majority of 24 to 13.

Mr. ATKINSON then moved an adjournment for a month, which was negatived, and the original motion agreed to.

A resolution was then carried for creating new shares, in accordance with the recommendation in the Report.

BIRMINGHAM AND OXFORD JUNCTION.

May 10.— Adjourned Half-yearly Meeting, Birmingham.—Mr. P. H. Muntz in the chair.—The meeting was merely formal.

Mr. COLEMAN moved an adjournment till the following day to the King's Arms, Palace-yard, Westminster.

The meeting, it is reported, will be adjourned from day to day, pending the parliamentary decision rela-tive to the Great Western bills now before it, which in any way affect the interests of this company.

May 11 .- Adjourned Meeting, London .- Mr. MAT-THEWS in the chair.

The CHAIRMAN explained that this was one of the series of adjournments of the meeting convened by

requisition in December last.

Mr. Peyton proposed a resolution that Messrs. Dobie & Co., and they only, be instructed to appear by counsel, if necessary, on both or either of the two petitions which had been presented to Parliament in the name of the Birmingham and Oxford Junction against the bill for conferring on the Great Western powers to purchase the Birmingham and Oxford Junction and the Birmingham, Wolverhampton and Dudley.

The CHAIRMAN refused to put this resolution, on the ground of precedent, Mr. Muntz (the chairman of the company) having, on a previous occasion, declined to put a similar resolution.

Mr. PEYTON then moved the further adjournment of the meeting, as agreed upon; which was put and carried, and the meeting adjourned accordingly.

May 12 .- On the re-assembling of the meeting, it was again adjourned to 4 p.m.; when Mr. Coleman moved the resolution mentioned above, which was seconded by Mr. Wood; and the CHAIRMAN having declined to put it, it was put by the mover, and carried unanimously.

On the motion of Mr. COLEMAN, seconded by Mr. Woon, the meeting was adjourned to the 16th inst., at 11 a.m.

KILLARNEY AND VALENTIA.

May 11.—Half yearly Meeting, London.—Mr. R.

SPOONER, M.P., in the chair.

The Report and statement of accounts were those read at the former meeting (see ante, p. 296). They were in substance as follows:—The shares had now been reduced from 25l. to 10l. each, and the capital to 300,000l. On payment of the remaining 3l. 7s. 6d. per share the borrowing powers of the company would commence. On the completion of the Great Southern and Western to Cork there was a prospect of co-operation with this company. The directors now deemed it necessary to take decisive steps for the construction of this important line, and therefore made a call of 11. per share, payable in two instalments of 10s. each. The accounts laid before this meeting were unprepared at the last, and showed that there had been received a sum of 48,5721. 16s. 6d.. and that beyond the same expended there was a sum of 2,787l. 7s. due to sundry creditors.

A Proprietor asked how much the first call of 10s.

would produce.

The CHAIRMAN said, about 6,000l. or 7,000l. Mr. MERRALL, the engineer, said the line of six miles, now proposed to be completed, would cost about 7,000*l*. per mile, and that about 3,000*l*. or 4,000*l*. would be sufficient to stake the whole line out, which could be done in about nine months.

A Proprietor saw they had no balance in hand. The Chairman said they had no money, and that this first instalment would be appropriated to laying out the line and paying that 2,7871. 7s.

Mr. J. Attwood had advanced to the company 9,700l. more than the amount of his calls, but there was no demand to be made for that at present. He expressed a strong desire to see this line completed, being connected with the trade of the midland counties, and having no doubt of its being highly advantageous to the commerce of this country and America; besides which he thought that no place in Ireland was so well suited for a packet station as Valentia harbour.

After some discussion the Report was agreed to and the accounts were passed, subject to the approval of two auditors, now appointed. The directors were also elected. The meeting again adjourned.

WAVENEY VALLEY AND GREAT YARMOUTH .- May 11. — Meeting of Sharcholders, London. — Mr. W. Willshere in the chair.—The Chairman said that the scripholders present were aware that at the last meeting a resolution had been passed requesting the committee of management to take such steps as they might be advised with reference to the agreement with the Norfolk, and to report thereon to an early meeting. A deputation of the directors had had an interview with those of the Norfolk, and would have been prepared to lay a Report before the present meeting, but that within the last few hours Mr. Wilkinson had seen Mr. Parker, who stated that as the Norfolk was now amalgamated with the Eastern Counties, the matter of the agreement with the former must be submitted to the latter. Mr. Parker added that the subject had already been considered by the two companies, and that in the course of three weeks or a month he should be prepared to duly make an offer. In the belief that this opened a fair prospect of satisfactory arrangement, the directors proposed that the present meeting should be adjourned to this day four weeks, in order to give time to the Eastern Counties and Norfolk to prepare such an arrangement as could be submitted to the shareholders.—The suggestion of the Chairman, embodied in a resolution, was agreed to, and the meeting adjourned to Thursday, the 8th of June

TAW VALE .- On the 29th of April and the 3rd and 4th inst. numerous and highly respectable meetings were held at Barnstaple, Eggesford and Chawleigh, consisting of the magistrates, gentry and clergy of the district, to protest and petition against the decision of the Railway Commissioners on the gauge of the Taw Vale. At the meeting at Chawleigh, the chair was taken by the Hon. Newton Fellowes, who was supported by nearly a hundred of the leading landowners of the neighbourhood. From the tone manifested it is quite evident that the Taw directors have the invaluable assistance of those parties who are practically interested in an efficient railway communication being established at the earliest possible date.

Digitized by

GREAT WESTERN FATAL ACCIDENT.

An inquest took place at Shrivenham, on Thursday, on the bodies of the four persons who met their deaths from the late accident on the preceding day. Before giving the particulars of the inquest, we enumerate the following published list of persons killed and wounded:-

Killed and wounded:—

Killed.—The Rev. W. Phillips, of Penzance, travelling with his wife and son; the Rev. Mr. Sandys, of Stroud, residing at Woolwich; Thomas Wiltshire, valet of Sir Alexresiding at Woolwich; Thomas Wiltshire, valet of Sir Alexander M'Kenzie, Bart., who, also, was a passenger; a livery

residing at Woolwich; Indinas Wintshire, value of Sh' Alexander M'kenzie, Bart., who, also, was a passenger; a livery servant, unknown.

Wounded.—Mr. Conway, of the Middle Temple, with lacerated wounds of both legs, and wounds of the scalp; Mr. Sargent, son of Mr. Sargent of the Treasury, and residing at Putney-heath, has wounds of the scalp and temporal muscles, with several contusions; Mr. Seymour, son of one of the Commissioners of Customs in Ireland, of the Cove of Cork, compound fracture of the thigh, and several wounds of the scalp; Capt. Blair, R.N., Inspecting Commander of Coast Guard, a dangerous fracture of the cervical vertebre, which has completely paralysed him, respiration and circulation alone going on: Mr. Pearce, of Crickhowel, with compound comminuted fracture of the elbow-joint, and several severe scalp wounds; amputation of the arm has been performed; Mr. Cohen, of 49, Mansellstreet, Goodman's-fields, with several contused wounds of the head and face, laceration of the lips and severe contusion of the ankle; Mr. Machin, of 4, Pelham-villas, Brompton, lacerated wounds of the face, contusions of the body and fracture of the fore-arm; Charles Pearce, servant of Mr. Bethwick, severe injuries of the arm and ankle-joint; Mr. Hedditch, Red Lion, Long-lane, near Stourton, Somerset, concussion of the brain and severe contusion of the face; Mr. J. Ellis, of Packhorn, near Penzance, contusion of the leg; Mr. Carleton, fractured ankle; Mr. Paul Lindsey, of Cork, severe injury of the knee and bruised shoulder; Mr. W. Ellis, nephew to Mr. J. Ellis, slight injuries of the knee-joint; Mr. Arthur A. Lee, Kidderminster, and Wadham College, fracture of the thigh and comminuted fracture of the bones of the leg; Mrs. Phillips, of Chasewater, near Truro, severe wound of the scalp; Master Phillips, son of of the bones of the leg; Mrs. Phillips, of Chasewater, near Truro, severe wound of the scalp; Master Phillips, son of the above, contused face.

Evidence of the identity of the Rev. Messrs. Phillips and Sandys, and of the causes of the accident, was given by the personal friends of the deceased, and by the medical gentlemen who had examined them, and who declared that their deaths must have been instantaneous.—Thomas Higgins, driver of the van from Highworth to the Shrivenham station, stated that he arrived with his master's (Mr. J. Kent's) van at about 3 p.m., and that he then assisted the two porters, Maybury and Willoughby, in pushing a horse-box on to the line. They were all three so engaged, and in removing a loaded truck from out of the siding, when he (witness) heard the train coming. They were then going back for two more empty trucks, and he got out of the way and called out to the others. Maybury then ran out and held up his hand, but it was of no use. Directly they came in sight the whistle was sounded, and the engine ran into the trucks, which were driven up the embankment and thrown on the platform. looked and saw the bodies lying on the line, and assisted in removing them. He saw three dead, and there were several other persons thrown out who were injured. They were pushing the horse-box out of the siding to make room for the other loaded truck, but the train came before they had time to push it back. Witness was at the station at about 2 45 p.m., but he did not know whether the up ex-2 40 p.m., but he did not know whether the up express train had passed or not.—The two prisoners, James Maybury and William Willoughby, were then brought in, and, the evidence having been read, the prisoner Maybury wished to make a statement.—They had been moving the trucks, and were just going to turn the turn-table, when, as he was stooping down to do so, he suddenly heard the whistle of the up express train, and immediately exclaimed,-"Oh, dear! why didn't you tell me that the express train had not gone by?"—that he had gone off duty to his dinner at 2 p.m., and returned at 3 5 p.m., and did not know but that the express train had passed. When he returned he assisted in loading a waggon, and was the training of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement of the statement and was not cautioned in the slightest manner, although there were three servants on duty at the station; and if the express train had not gone by they ought to have cautioned him. The truck was on the line for more than four minutes, and yet he was not cautioned by the policeman.—The most important depositions are those of the station-clerk and the engine-driver of the train, which we append at full length :- Mr. C. Hudson deposed that he is a stationclerk at Shrivenham, and has been so for upwards of three years. He was at the station when the accident happened. He had not given the porters orders to move the trucks, nor was he aware that they were doing so. He had been at the station for about a quarter of an hour before the accident happened. Witness has the general business of the officer water. itness has the general business of the offices, issuing tickets, &c., to attend to, being the only station clerk there, and therefore, although the porters are supposed to be under his superintendence, they move carriages, trucks, &c., without any specific instruc-

tions from him. Witness was in the office from the time he came, with the exception of his having gone over to the down platform for the 3 17 down train. When he so went over he did not know the express train had not passed; but seeing the signal that the line was clear and open, he then, of course, knew that it had not passed. It generally passes at 3 p.m., if punctual, and it is the duty of the policeman at the gate to look out for and signal the trains. He was at his post at the time, and when the trucks were shoved on to the line, they must have been between him and the approaching train. When witness went across the line all was clear, and it must have been after that that the horse-box was shoved on to the line. It was so shoved on not for the purpose of being attached to any train, but to make room for the removal of a loaded truck, after which it would have been again placed in the siding. It was not necessary that it should have been shoved on the line when it was, and it was their own act and deed. The signal that the line is clear and open is made when a train is expected, if it be so, whether the train is in sight or not, and it remains so until the train has passed, when it is immediately turned the other way. The porters are aware of that, and they might have known that it had not passed if they had looked at the signal. Maybury goes to dinner at 2 p.m. and returns at 3 p.m. Without asking any one he might have been aware of its not having passed if he had looked at the signal. If they had used the commonest observation, by looking at the signal, they would have waited until the train had passed; and it must have been neglect on their part in not looking at the signal. From where the policeman stood at the time of the accident there was a good view of the line, and if he had looked down the line he might have seen the train, and been in time to have stopped it before it came up to the station.—By Mr. Saunders: May-bury has been on the line ever since I have been here, and was here when I came; his conduct has been that of a good and careful man up to the time of this accident, and I fancy he has been on the line nearly eight years.—R. Roscoe, the driver of the train, had been an engine-driver in the service of the Great Western for upwards of three years and a half, and had previously been so engaged on the Midland Counties-he was the driver of the express train from Swindon to Paddington, and had been so for three years. When they started from Swindon the train was 21 min. late. Shrivenham is the next station, and is six miles distant from Swindon. We were not going faster than usual when the accident occurred. We do not attempt by increased steam to make up for lost time. There have been orders issued within the last fortnight that if we lose time we are not to try to make it up. The usual speed in passing this station would be from 55 to 60 miles per hour. When we come in view of the signal at this station, if it was turned to indicate danger, we should be able to stop in plenty of time before we came to the station, because I see it as I pass the canal bridge, which is a distance of 1, mile. When I saw it it indicated that the line was open and clear, and I did not see the obstruction on the line until I came up to the goods shed, and was within 150 yards of the trucks. I instantly blew the guard's whistle and made every effort to stop the train, but it was too late, and the engine dashed into collision with the horse-box, and so caused the accident and the deaths of the deceased.—By Mr. Saunders: I was driving one of the new eight-wheel heavy engines. In my judgment the accident would have been far worse if it had been one of the six-wheel engines, and if it had not been for the strength and weight of the engine it would have been driven off the line, and we should have all gone together. Now only one carriage went off. The accident would have occurred, and been quite as serious if it had been an ordinary train instead of the express. I saw the signal all right at the canal bridge, and after I stopped the train the signal was still all right, and I called the attention of several of the passengers to it.—The policeman here said that was quite correct; the signals were on for the line being clear. He turned it on a little before 3 p.m., and kept on the look-out for the express train, and in the meantime the 3 17 down train came and went all right. He then saw the express train coming, and held his hand out that all was right, and immediately afterwards he saw the horsebox on the line. He then ran as fast as he could to turn the signal, but before he got half-way to do so the accident had occurred.—Mr. Saunders, in reply to a juryman, explained that the porters received general instructions when they were employed, and special instructions from the station clerks; and that the signal rules were printed and in the hands of the policemen. He should not think that a person who

duty of the station clerk to give him proper instructions.

—Hr. Hudson recalled. He said: Willough by has been occasionally employed as a supernumerary porter ever since I have been here; he has been employed for fully three months, in consequence of the illness of Copler, a porter. He knows his general duties; he does know that he ought not to have put anything on the line unless the danger signal is showing, and that is the rule. I also endeavour to employ as supernumeraries persons who understand the duties, but they are subordinate to the porters. I have every reason to speak well of Willoughby up to this time, and Mr. Wilson, who was clerk here before me, can give him a similar character. There are three porters at the station, and when these trucks were put on, the signal was that the line was clear.—The Coroner summed up the evidence. The jury returned a verdict of "Manslaughter" against both the prisoners. Similar verdicts were given in the other cases .- At the scene of the accident abundant evidence appeared of the force of the collision-the wall of one side of the platform of the station is torn up, and the horse-box and luggage-truck beaten into small pieces-the axle of the former, although composed of wrought-iron full three inches in diameter, being doubled up as if it had been a roll of paper. On hearing of the occurrence of the accident, Mr. Russell the chairman, Mr. Saunders the secretary, Mr. Seymour Clarke, and others of the officials, re paired to the scene of the accident, attended by Mr. Cæsar Hawkins and other surgeons, and used their utmost exertions in alleviating the sufferings of the wounded.

#### Parliamentary Proceedings.

May 11 .- The Broad and Narrow Gauges .- Lord REDESDALE said their lordships would recollect a resolution which he moved last session on the subject of the broad and narrow gauges between Birming-ham and London, that the Commissioners should be directed to inquire into the lines between Birmingham and London, and report as to the best manner in which the public interests could be consulted. Eleven months had passed since that period, and although he knew there had been difficulties in the way, still it was important to know when the report would be presented.—Earl Granville made a few observations which were quite inaudible.

## COMMITTEES ON OPPOSED BILLS. COMMONS.

GROUP 2.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE (Humber Ferries Improvement at Hull and New Holland).—Promoters' Case.— May 12.— Mr. Paget intimated to the committee a wish on the part of his clients that the inquiry should be adjourned until the 15th, to enable them to be better prepared with their models.

After some discussion, the committee, with the consent of the opposing parties, adjourned.

GROUP 5.

CHESTER AND HOLYHEAD.—Promoters' Case.—May 9.—Mr. Austin said this case involved the question of allowing railway companies to become the proprietors of steam-vessels. In the last Parliament a private bill was passed, authorizing the company to contribute their quota towards the Holyhead Harbour, which contained a clause enabling the company to become the proprietors of steamboats; but the select committee appointed to examine into the merits of the public bill authorizing the Government to expend 800,000l. of the public money upon the harbour, by an accident omitted to pass the clause enabling the Chester and Holyhead to establish a line of steamboats: and this circumstance led to the withdrawal of the private bill. Since then the proposal had been fully examined by the Board of Trade

Evidence.-May 9.- Depositions before the select committee last year were put in, and in support.

Opponents' Case.—May 10.—Mr. Alexander and

others, for the Steam Shipping Association and the Dublin Steam-Packet Company, said the bill would destroy all competition in the district.

Decision .- May 11 .- Preamble proved

LONDON AND SOUTH-WESTERN (Purchase of Steam-loats).—Promoters' Case.—May 11.—Mr. Austin declared the intention of his clients.

Evidence .- May 11. - Witnesses to prove that great advantage and convenience would accrue to the public if the company were allowed to establish, on their own responsibility, a line of steam-packets between Southampton and Havre.

Decision .- May 12 .- Preamble proved.

was only a supernumerary porter, as Willoughby was, London, Brighton and South Coast (to enable was as responsible as a regular porter; still it was the the company to become the proprietors of the boats

running between Brighton and Dieppe).—Promoters' Case.—May 12.—Mr. Talbot opened the case for the promoters.

GROUP 12.

GROUP 12.

EDINBURGH AND GLASGOW (to raise 300,000L, to pay off debts, and to give powers to form branches).

—Promoters' Case.—May 12.—Mr. Austin said, the bill was opposed by the Scottish Central, but the committee decided that they had no locus stands, and declined to hear counsel on their behalf.

Evidence. - May 12. - Witnesses were called on

behalf of the promoters.

Decision.—May 12.—Preamble not proved, on the ground that the bill had been reported against by the Board of Trade, because it did not define for what purpose the capital was to be raised.

GROUP 14.

EXETER, YEOVIL AND DORGHESTER.—Promoters' Case.—May 8.—Mr. Hill announced that the scheme was a remanet from last session, which had not passed the Lords.

Opponents Case.—May 8.—Mr. Keating contended that the subscription contract did not bear the names

of bond fide subscribers.

May 10 .- The committee decided that the solvency of the contracting parties was to be all-sufficient. Their motives in signing the contract were not to be taken into consideration .- The opposers then stated that they would bring the question before the house.

Decision.—May 11.—Preamble proved.

NORTH-WESTERN.—Promoters' Cass.—May 11.—

Mr. Merewether declared the object of the bill, which was to authorize the construction of three deviations at Skipton, Casterton and Sudburgh.

BRISTOL AND EXETER (to enable the company to make a branch from Taunton to Castle Cary).—Pro-moters' Case.—May 12.—Mr. Hope was heard on be-half of petitioners alleging that the subscription contracts were defective.

## UNOPPOSED.

GROUP 2.

GROUP 2.

MANCHESTER, SHEPPIELD AND LINCOLNSHIRE (Crossing to Sheffield-street, in Manchester). South Yorkshire, Doncaster and Goole. Manchester South Junction and Altrincham. — Decisions.— May 12.—Preambles proved.

GROUP 4.

VALE OF NEATH. OXFORD, WORCESTER AND WOLVERHAMPTON, No. 1 (Increase of Capital). No. 2 (Deviations, and to empower the Shrewsbury and Birmingham and the Birmingham, Woverhampton and Dudley to contribute towards the capital).—Decisions.—May 12.—Preambles proved.

GROUP 5.

GROUP 5.

WATERFORD, WEXFORD, WICKLOW AND DUBLIN.—
To enable the company to extend the time allowed them by their original Act for taking a lease of the Dublin and Kingstown; to authorize the alteration of the existing gauge of the Dublin and Kingstown; and to empower the South Wales to subscribe towards the Waterford, Wexford and Wicklow undertaking to the extent of 250,000l.

Decision.—May 9.—Preamble proved.

GROUP 14.

GREAT WESTERN (to enable the company to extend the Berks and Hants from Hungerford to Westbury, with a branch to Devizes) .- Decision .- May 12. Preamble proved.

A KEY TO THE MISTAKE OF THE COMMISSIONERS. —The fact is, that the Railway Commissioners have made a mistake in their functions. They considered and decided the question like clerks, or like a proand decided the question like clerks, or like a pro-visional government, instead of exercising the calm foresight of statesmen. In vulgar parlance, they "took things as they were." They ignored every-thing that was not before them. They acknowledged only the existence of railways open and railways actually sanctioned. The probability of the national gauge being extended to Exeter and into Cornwall, from responsibility, by narrowing the grounds of inquiry, is more lawyerlike, more red tape-like, than statesmanlike. The presumed advantages of official arbitration are, that questions are considered in a national, and not a merely local view. The Commissioners took on a terrowice in a fine three conditions are the results of the second missioners took an attorney's view of the case, and decided without taking the trouble of looking at anything but the company's squabbles and Bradshaw's map.—An Appeal on behalf of the Farmers, dec. of Devon and Cornwall.

SAMBRE AND MEUSE.—If the "facts and figures" affirmed by "A Shareholder of the Sambre and Meuse" in his pamphlet to the proprietors, be correct, the economic policy he therein insists upon is inevitable. The three following are the recommendations of a resolution to be submitted at the next half-yearly

meeting:—"1st. The amount already expended upon the line, distinguishing the amount expended upon that portion about to be opened for traffic, viz. the main line to Walcourt and the Morialmé and Leneffe branches, and the amount expended upon the other portions thereof. 2nd. The additional capital required to construct the main line with the Morialmé branch with a double line of rails, distinguishing the amount required for constructing the line so as to receive the double line, and that required for the cost of the second line of rails. Srd. The propriety of applying to the Belgian Government to extend the time for completing the works until the expiration of five years, and of applying the whole resources of the company to the completion and working of the line to Walcourt with the Morialmé and Leneffe branches.'

FINANCIAL EFFECTS OF THE FRENCH REVOLUTION. —The following summary, gathered by the Daily News from the columns of La Presse, offers such a striking commentary on a revolution effected by the audacity of the lower and the apathy of the middling classes, that we offer it without further comment to our readers. La Presse (which, it should be remembered, is opposed to the Provisional Government) thus calculates the loss of property which has taken place in consequence of the destruction of credit and consequent depreciation of every species of invest-ment, which has followed the political catastrophe of the 24th of February:—
The depreciation of securities at the Bourse since the

The depreciation of securities at the Bourse since the 23rd of February to the 12th of April, amounts, on the funds, the Bank of France and railways, to the enormous sum of 3,749,060,811f., and there may be added to this more than 1,000,000,000,f000, for other securities, such as canals, bonds, mines, gas, assurances, &c., the greater part of which

bonds, mines, gas, assurances, etc., the greater have not been quoted for six weeks past. The 3 per cents, amounting to 68,114,833., represented on the 23rd of February, at the then price of 74f. 70c., a capital of ...

The 4 per cents, amounting to 26,507,375L, at 199., a capital of ... . 1.670.021.959 656,057,531 at 991, a capital of ...
The 4 per cents, amounting to 1,026,600f, at 104f, a capital of
The 5 per centa, amounting to 146,752,528f, at 116f. 10c., a capital of ... 23,725,866 3,407,573,700

On the 12th of April the 3 per cents, had fallen to 42f. 50c., representing a capital of ... The 4 per cents, to 40f. ... The 45 per cents, to 50f. ... The 5 per cents, to 61f. ... 5,757,379,056 964,960,849 301,834,962 1,190,380,841

PORT OF GREAT GRIMSBY.

## NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

## Sketches of Bew Railways.

LINES OF 1845.

EDINBURGH AND NORTHERN.
In the Edinburgh and Northern, an important railway has been added to the few main Scottish lines now in operation. It must be admitted that the Scotch lines have not, generally speaking, adequately remunerated their proprietors; and for this reason, that the "canny" Scot has been slow to understand what the Englishman has long since perceived, and acted upon, that time is money, and that railways, by reason of their speed, are cheaper for conveyance than river or canal navigation. Unparalleled cheap fares on the river Clyde, and on the Forth and Clyde and Union canals, have for many years tied down the dividends of the Glasgow and Greenock and the Edinburgh and Glasgow lines; but even these have, we confidently believe, a bright future before them. The Edinburgh and Northern has neither river nor canal to contend with; it will supersede both coaching and waggon traffic,-which, neither in England nor Scotland, have been able to contend with railways; and it will open up new channels of traffic, which have never before been thought of. Fifeshire is really one of the pleasantest counties in Scotland, and celebrated as well for its agricultural and other productions as for its ancient royal grandeur. Still it never has been a popular place of resort for travellers, nor have its inhabitants associated, or commercially connected themselves much, with their populous neighbours of Glasgow and the West. All this exclusiveness will rapidly melt away, under the all-powerful influence of the locomotive.

We had for some time prepared a "Sketch" of the Edinburgh and Northern, and our attention has been recalled to it by a neat little book, published by Mr. Tullis, of Cupar, the capital of the "kingdom of Fife," a copy of which the Bailie has forwarded to us. The Guide to the Edinburgh and Northern Railway' is well got up as a county guide, and fairly illustrated with engravings. It is a very useful book to the tourist, being a historical and descriptive account of the manufactures of the county of Fife, and of its ancient nooks and corners; but it contains comparatively little concerning the advantages of the railway. A few details of the financial, prospective and general character of the line, we now beg to lay before our readers, in the hope that they may find them interesting.

Independently of its great agricultural resources, Fifeshire is studded with woollen and linen manufactories, especially on the banks of the Eden and Leven. It also abounds with lime and coal fields, some of which are many miles in extent, and the population is consequently large and industrious. Several extensive distilleries are in operation; and the numerous fisheries on the coast afford the means of supplying Glasgow and the neighbouring towns with fresh fish daily. It will therefore be seen, that the Fifeshire Railway, as we would term it, will come into the possession of a large and miscellaneous traffic, capable of being greatly extended, and which, if judiciously and assiduously cultivated, must be amply remunerative.

The chief characteristic of this railway is, that it may be said to span the two widest rivers in Scotland, the Forth and the Tav. thereby connecting the city of Edinburgh with Dundee and with the fair city of Perth. The original scheme-promoted chiefly by the gentlemen of Cupar, so early as 1837, with the engineering assistance of Messrs. Grainger and Tay by a floating bridge, a distance of 13 mile. —on the right hand to Leith, 1 mile and 500

Another early idea was, to throw over that river a number of stone arches, the centre one of which was to have been 150 ft. in width, and 150 ft. above the water-mark. The estimated cost of the latter was set down at 150,000l.: the largeness of the amount put an end to the idea. A third plan was proposed, in connexion with the then projected Dundee and Perth line, to cross from Newburgh to Dundee, 400 yards apart, on a swing or floating iron bridge; but the Dundee and Perth Company drew back. After several surveys had been made, a company was formed early in 1843, and within a very short time after the prospectus was issued, the whole number of shares were subscribed for. When, however, the deposit of 25s. per share fell due, only one-third of the applicants responded to the call; and the result was, that the scheme was curtailed to meet the financial difficulties.

The project having been rejected by Parliament in 1844, its promoters materially strengthened their position by procuring the co-operation of His Grace the Duke of Buccleuch and Sir John Gladstone (formerly Mr. John

Gladstone, of Liverpool). Lord Leven and Mr. Ellis (M.P. for St. Andrew's) likewise lent their influential assistance. Mr. Thomas Grainger, of Edinburgh, was appointed chief engineer; and in 1845 the Act of Incorporation was obtained; but not without heavily assessing the company for compensation to all sorts of trusts. The main line then sanctioned, with the branches to St. Andrew's, Dunfermline, &c. since added, comprises 72 miles of way,extending from Burntisland (opposite to Granton), viâ Kirkaldy, to a point a few miles south of Cupar; from whence it branches off to the right, onward to the ferries opposite to Dundee, and on the left, to a junction with the Scottish Central line, at the entrance to the Moncrieff tunnel, about a mile short of Perth. No power was given to bridge the Tay, but clauses were included, authorizing the company to work the Forth and Tay ferries with powerful steamboats: and it has been agitated whether the entire trains should not be boated across from Newport to Dundee.

The details of the capital account up to the present date are as follows :-

Capital Account.

Shares, 411,000 <i>l</i> .; Loans, 33,600 <i>l</i> .

(1) 4 per cent. guaranteed, and division of surplus profits.
(2) Guaranteed 5 per cent. in perpetuity: 4 per cent. of which is to be paid from the revenue of the amalgamated company, and 1 per cent. from that of the new or postponed shares. To participate in new issues of shares, and in the general dividend, if above 5 per cent.
(3) 52,000V. of this stock is created to capitalize loans. Should the amalgamated lines pay less than 5 per cent., the dividend on this stock will be reduced by the sum necessary to make up 5 per cent. on the preference shares,—4 out of such 5 per cent. being paid from the general revenue, as stated above.

Bill passed session 1847, for amalgamation of the Edinburgh, Leith and Granton with the Edinburgh and Northern, under which the capital of this company is to be taken as 310,000V. Until the Edinburgh and Northern is open, the revenue from this line to be applied to its own dividend.

revenue from this line to be applied to its own dividend.

seen that the Edinburgh, Leith and Granton Company has been amalgamated with the Northern. We know of no two lines whose interests more clearly lie in a close bond of union. Isolated, the Edinburgh, Leith and Granton Company could not expect to work their line either advantageously or economically; but in the hands of the Edinburgh and Northern, it can best be worked with profit to the proprietors and with comfort to the public.

A few words on one of the oldest lines in Scotland may not here be without interest. The Edinburgh, Leith and Newhaven, as it was then called, was projected in 1834-5, and sanctioned by the Legislature in 1836. The estimated cost of construction was set down at 100,000l., for about 3 miles of railway, single line, and the promised annual dividend was 15 per cent.! Very soon after the Act was obtained, it was found that the estimates were utterly fallacious, and that the engineering difficulties of the Leith branch were insurmountable. No active steps were, in consequence, taken to carry out the work until 1839, when a new company took up the scheme, and obtained a bill to abandon the original plans, and in lieu thereof construct the existing line, namely, from Princes-street, (where it now joins the Edinburgh and Glasgow and North British lines,) passing through a very narrow and steep tunnel, which terminates in Scotland-street, to Trinity Pier, Newhaven-Miller, of Edinburgh-proposed to cross the a length of 2 miles and 138 yards, with branches

From the above financial statement it will be | yards in length; and on the left, to Granton, 1,551 yards in length, forming a total mileage of 41, constructed at a cost of 310,000l.; being for parliamentary expenses, 10,913*l.*; land, 81,606*l.*; engineering, 7,534*l.*; works, 175,480*l.*; general charges, 22,127*l.*; and plant (for animal traction), 12,530l. The tunnel is 1,000 yards in length, and is 90 ft. below the surface of the streets. The incline falls at the rate of 1 in 27.45; the same gradient as on the Surrey side of London Bridge.

Until May last year this little line was worked by horses, starting from Scotland-street, the tunnel not having been completed till about the middle of that month; when a stationary engine, constructed by the Messrs. Hawthorne, of Newcastle, was erected, and now works the

trains through the tunnel.

Although the Granton is one of the oldest Scottish lines, it has never remunerated its proprietors. Previous to 1846 the average annual number of passengers was only 110,000; and the very unsatisfactory result was, that the expenses rather exceeded the receipts; but in 1846 matters began to improve, and the number of passengers increased to 322,166 in that year; the receipts from which amounted to 4,010/., derived from fares of 2d. per mile, and from trains running every quarter of an hour, from 7 a.m. till 9 p.m. The passenger traffic of this little district is large throughout the year, and immensely so in the summer months; but the greater part remained with the omnibuses - spiritedly and cheaply con-

CIU

ducted-until of late. It would therefore seem that animal power on the rail could not contend with animal power on the road. No doubt the omnibuses had the advantage of bringing the passengers into the very centre of the town, while the railway station was a little distance off; but we should suppose that had cheap fares been charged, combined with the great number of trains which were run, the relative proportions of the receipts and disbursements would have been materially altered.

To return to the Edinburgh and Northern proper. The company did a wise thing when they purchased the lease of the Tay ferries from the lessees, His Grace the Duke of Buccleuch and Sir John Gladstone, as it gives them the entire control of the route from beginning to end of their line-from Edinburgh to Dundee and Perth. The duke's splendid pier at Granton is well known to travellers as one of the finest in the country; and it, no doubt, along with the excellent landing-pier at Burntisland, is included in the purchase money of 90,000/. This sum, payable in half-yearly instalments of 10,000%, includes also three steam ferry-boats, hotels, stabling, &c. We understand that the cost of all these to the late lessees was 55,000%. which deducted from the sum to be paid by the railway company, leaves the handsome bonus of 35,000/. on an unexpired lease of twenty-five years. The present annual revenue from these purchases is about 6,500l., and the expenditure consequent upon that is 300%. A fourth large steam ferry-boat of 100-horse power has been ordered, the cost of which will be 8,000l. This sum ought certainly to procure a boat strong enough for all tides and weather, even on the Frith of Forth.

That portion of the line between Burntisland and Cupar, 24½ miles, with the branch from Ladybank to Lindores, 4½ miles, was opened for traffic on the 3rd of September last. Considering the laborious nature of the works,including a tunnel and many heavy embankments and cuttings,-it cannot be said that the contractors lost much time; and we believe, that had the Fifeshire landowners been less exacting and, in fact, overreaching, a much larger portion of the line would now have been opened. Although the loss of time to a company, whose capital the while remains unproductive, be a serious and vexatious matter, yet we hold that the company were perfectly justified in resisting the monstrous claims which were on all sides made upon them.

The various arrangements which have been made by the directors, satisfy us that they are actuated by an enterprizing and energetic spirit. They have bestowed great attention on their duties during the construction of the line, but the future is the more difficult task. They have a great and important property committed to their trust; and we are satisfied, from our inquiries, and from our own personal knowledge of the country occupied by the Edinburgh and Northern, that with them mainly rests the responsibility of its turning out remunerative or otherwise. The cost of construction has been large; but the shareholders must keep in mind that the directors have been obliged to bend to circumstances, and make payments which, without the necessary explanations, might appear to have been somewhat unnecessary.

It is worthy of notice, that this company have arranged to start all their trains by Greenwich time. This is a significant fact, and will lead to the adoption of the same rule by all the Scottish railway companies.

The propriety of amalgamating with some one of their neighbours at the south end of the

negotiations are actually pending with the Edinburgh and Glasgow; but we have no doubt that but for the countenance which Mr. Learmonth, the chairman of the North British Company (and then also chairman of the Edinburgh and Northern), bestowed upon the projected direct Edinburgh and Perth, an arrangement would ere this have been concluded between the Northern and the North British, which run into each other, and both of which would be benefited by a unity of interests.

(To be continued.)

#### Proceedings of Bocieties.

Society of Arts.-May 10 .- P. Le Neve Foster, M.A., in the chair .- A paper was read 'On Ferries on the Humber in connexion with Railway Communica tion, by Mr. S. Sidney.—How soon (says the writer) the management of a ferry became a trade we have no means of learning; evidently in Virgil's time the calling was ancient and accustomed, for he describes Charon as a character perfectly familiar to his hearers. In the mediæval ages, when commerce began to take those strides which have since given the go-by to its feudal patrons, ferries became important sources of revenue, which the universal desire for a peaceful arbiter on so important a point commonly placed in the hands of the religious houses, frequently established in pleasant valleys near inland streams. The ancient ferry of Barton, on the Humber, was the property of the great Abbey of Thornton. Improvements in the science of bridge-building made the first inroads into these ancient monopolies, and steam-rafts and steamboats have superseded many more, by making that regular and mechanical which was before a matter of personal caprice and manual skill. But these changes have only been partial and gradual; many here present have crossed ferries, now made perfect by steam, in boats of the rudest description. I think it is Xenophon who describes how the 10,000 crossed a Persian river, after the then manner of the country, on inflated goat-skins. The same practice is still in use in Syria, and it may happen in these vagabondizing days, when the world seems scarcely wide enough for the industrious or idle investigations of our own wealthy inquirers, that a traveller leaving London may in one month experience every kind of ferry, from the perfect steam machinery at Gosport, the rude rope-drawn rafts on some points of the Rhine and Danube, down to the Syrian goat-skins, the most ancient of life-preserving nautili. In England, on all points of important traffic wherever the local and physical circumstances would admit, boat ferries have been superseded by either bridges or rafts. An ancient free royal ferry over the river Dee, on the way from Chester to Flint, is served by a raft of sufficient capacity to contain several stage coaches at one time, worked by a rope passing round a wheel or gear, turned by a horse. A single passenger can command the use of this raft at any hour of night or day without fee or reward. The ferry over the Tamar, between Plymouth and Devonport, is one of the most powerful and perfect adaptations of the raft principle with the aid of steam power, designed and executed by Mr. Rendel, a distinguished member of this Association. There a steamboat had been tried and failed, the stream being too rapid and too narrow. By the present arrangement a flat-bottomed raft of great capacity is propelled by a steam engine, acting upon a fixed chain stretched across the stream. This raft has held at one time three carriages, each with four horses, one carriage with a pair, seven saddle horses and sixty foot passengers. On the same plan are the bridges at Portsmouth and at Southampton, and it is impossible to imagine anything more perfect of their kind. I remember, when a child crossing the Rhone on a raft-boat with a mast, to which a rope, extending across the stream, was attached by a pulley, and with the aid of the current and a long oar we were sculled across with the freight of a loaded diligence and a number of passengers. Some years afterwards I heard of the rope of one of these not unfrequent Rhone ferries breaking, and sending a diligence load on a winter's evening on a most unpleasant voyage of discovery down the river. I do not remember whether any one was drowned; but from what I know of Government management at home and abroad, I do not expect that any immediate amendment in the system would take place unless the passengers were men of weight on the right side of the Chamber of Deputies. But it is not with ferries where it is possible to line, has frequently, and more frequently of late, been agitated. We are not aware whether

stances in which the depth and breadth of the stream afford no other alternative than the employment of a boat. In such instances, until the adaptation of steam power to purposes of navigation, it was impossible that any great intercourse could take place between the opposite shores :- nothing but certainty and rapidity of transmission can keep alive a traffic where a stream intervenes. We see this proved by the wonderful increase which has taken place in the ferry traffic of the Thames since the introduction of steamers. At Blackfriars Bridge pier alone the number of passengers passing and re-passing frequently amounts to 30,000 a day. In all parts of the world we may see the effect of steam navigation in bridging opposite shores. Perhaps one of the most remarkable instances occurs on the Mersey, at Liver-pool. About twenty years ago one flat bottomed boat, with a paddle-wheel in the centre, travelling at the rate of about four or five miles an hour, formed the only certain communication between the Liverpool and the Cheshire shores. The other ferries were conducted by sailing-boats. At that time the population of all the villages on the opposite shore did not exceed a few hundreds. At present, under the influence of regular steam-boat communication, Birkenhead alone has attained a population of nearly 20,000, and supports two ferries, which ply every five minutes during the greater part of the day, while five other villages have grown into importance, and support a continued steam communication with Liverpool, under the influence of which the Cheshire side, as a sort of suburb of that port, has increased in population to upwards, probably, of 50,000;—a population which may almost be said to have been created by steam ferry-boats. It is an invariable rule in the history of the Anglo-Saxon race, that the demand for improvement grows much more rapidly than improvements themselves. Horse-litters, leather conveniences, such as those painted by Hogarth and abused by Monkbarns genus Tally-ho and Tantivy, and the posting chariot, have all been improved away until we reach the steam-drawn first-class carriage. In the time of George II., as Horace Walpole tells us, running footmen were fully employed on the rutty, broken highway roads in supporting the king's carriage with their stout shoulders; and within our own recollection, we, who are so impatient at being detained a few minutes while the guards of a railway train collect the tickets, have often descended in the mud to relieve the tired horses of a stage-coach by walking up hill the tired horses of a stage-coach by walking up hill without any extraordinary discontent. And so with ferries. Formerly, we resignedly made our way through mud and shingle, or down a slimy, slippery pier, to reach a damp, not over-clean boat, and there endured in patience the chances of wind, tide and unskilful oarsmen. But now travellers, especially those who have saved hours in the day by railway conveyue are extremely discontented to a private or the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the sam conveyance, are extremely discontented at a minute's delay, and a boat less comfortable than only a firstclass carriage is indispensable. At any rate, that a demand for the best possible means of conveyance exists is undoubted; and also that, in a commercial point of view, it pays to concede to that demand wherever there is a large moving population. In wide steamboat ferries, where the rise and fall of the tide is considerable, as on the Mersey, and still more on the Humber, with its flat, muddy shores, there are great difficulties in the way of providing for the accommodation of a large passenger traffic at all times of the tide. It is quite clear that to have to descend a long line of steps, to pass by planks, by small boats, and on men's shoulders, at night, in stormy, inclement weather, to or from the shore, involves the exclusion of a large amount of traffic, which a bridge or lowwater piers would foster. On the Mersey, the parties interested in the value of land on the Cheshire side found that if landing-places, convenient for passing to and from steamboats dry-shod at all states of the tide were not provided, the difficulties of low-water transit would act as a most injurious barrier to the increase of the population-most injurious in a pecuniary point of view. The means of transit that were sufficient for hundreds of passengers and hundred-weights of goods, were absurdly deficient when thousands of the one and tons of the other came to be a daily necessity. On the Cheshire side fixed piers were constructed without any difficulty. To construct a fixed pier on the Liverpool side was impossible—the trade carried on along the existing piers was too frequent and important to endure such an interruption. For many years a small floating stage, con-nected with the shore by draw-bridges, was used for foot passengers alone. This being found insufficient, a number of plans were sent, in competition for a premium offered by the corporation; and from an inspection of these Mr. Cubitt designed the arrangement at present nearly completed and in partial use, consisting of a wooden stage 600 ft. long and nearly 100 ft. broad, formed upon wrought-iron pontoons,

**JUU** Diaitized by

placed transversely to the stream, connected together by strong wooden framing, upon which pine planking, 5 in. thick, forms a surface level throughout, like the deck of a vessel. This enormous stage is moored parallel to the shore, at a distance of 150 ft., and is intended to be connected with it by two wrought-iron tubes. similar in construction to those now erecting at Conway and over the Menai Straits, but resting on the pontoon, and of course rising and falling with the tide. I do not know of any other floating-pier in England upon a large scale which could serve as a precedent for the arrangements I am about to de-The river Humber at Hull is about 23 miles broad at high water, flowing over a bed of deep, soft mud on either shore at avery rapid rate, with a sand bank ridging up in the centre, which renders the adoption of a steam-raft impossible. Although Lincolnshire is the most productive agricultural county of England, and although Hull is the greatest town adjoining the northern division of that county, the obstacle of the river flowing between Yorkshire and Lincolnshire prevented much communication until steam navigation was established, although ferries between Hull and Lincolnshire have existed ever since the time of Edward I., and probably even earlier. Forty years ago the only communication between Hull and the opposite shore was carried on from the ancient decayed town of Barton by a packet once a day either way. Ten years ago a ferry was established at New Holland, by which the passage of 2½ miles was effected in a sailing-boat in time varying from two hours to half an hour. Within the last five years the time has been reduced to an average of half an hour by steamboats. A small wooden pier has been erected for the convenience of passengers, saving them from a walk through mud, though not from a transfer to small boats at low water. On the Hull side several attempts have been made to improve the landing, but with very little success. At present, a pier near the Victoria hotel receives steamers at high water. low water, unfortunately, nearly 100 ft. of mud and water interpose, requiring the assistance of a temporary communication, formed by small boats, planks, and, as a continuation, of slippery, slimy slopes, descending from the piers, to be climbed by the For goods and carriages no efficient transit has been provided. As long as New Holland on the Lincolnshire shore had no further population than that contained in a few farms, and barely supported a small inn, where travellers waited for the boat or refreshed after a stormy voyage, no great im-provements were to be expected or needed. But in 1845-6 this obscure ferry became a terminus of one of two of the most important railway undertakings in the kingdom—the Great Northern and the Manches-ter, Sheffield and Lincolnshire; and it became abso-lutely necessary to open up the best possible means of communication with the port of Hull and with the northern roads, through Yorkshire, beyond Hull. The ferry was purchased by the Manchester, Sheffield and Lincolnshire Railway Company, and preparations were made for diminishing to the utmost possible amount the inconvenience of the intervening Humber. It will be seen, by reference to a railway map, that the most direct route to Hull, and beyond Hull, from London, by nearly 40 miles, lies through the Eastern Counties to Peterborough, and thence by the Great Northern and East Lincolnshire (leased to the Great Northern) through Boston, Louth, Grimsby and New Holland, which will be open in the course of Septem-It will also be seen that Liverpool, Manber next. It will also be seen that Liverpool, Manchester, Sheffield, Lincoln and Nottingham, which all transact a very considerable import and export business with Hull, will find, by means of the Manchester, Sheffield and Lincolnshire Railway, the most direct course over the New Holland ferry, if the delay and inconvenience of the transit do not outbalance the saving in mileage and in the cost of land and water carriage effected by the difference between the straight line and the circuitous route over the Hull and Selby. To these railway companies, then, it is vital to render the passage across the Humber as nearly as possible equal in convenience to a fixed bridge. For this purpose very simple means only were within their reach. A complicated machine might have been reach. A complicated machine might have been produced—the merit of the engineer in this case lies in the very simplicity of his arrangements for effecting great ends. At New Holland, where no valuable property and no active commerce interfered, the task was comparatively easy; the railway has been carried out on piers, 1,500 ft. long, into the river—a sufficient distance to enable steamers to run alongside at the lowest state of the tide; a covered station and stairs will protect passengers from the weather, and steamboats of an improved construction will effect the passage in about ten minutes. The arrangements for goods are on an equally comprehensive scale. A tidal basin of about three acres will receive the vessels for loading or unloading and enable them | eminence.

to discharge their cargoes either into warehouses into railway trucks waiting on the quays. For the transit of cattle the provisions are equally complete. The effect of these improvements on local traffic has been already enormous,-with only 30 miles of railway open and the fares reduced one-half, the steamboat receipts have increased more than fourfold. But the work of bridging the Humber and drawing closer the relations between Yorkshire and Lincolnshire is only half done so long as the landing at Hull remains in its present imperfect condition. The pier at Hull, sufficient for the old traffic, is quite incapable of accommodating the new. Those who formerly trudged down to the water's edge at New Holland were more content with the imperfect old-fashioned arrangements at Hull than the passengers who now reach the pier of Hull by merely stepping from the steam-carriage at New Holland to the steamboat. Hence the proposed arrangement. The models re-Hence the proposed arrangement. The models re present a complete first-class railway station, pro posed to be erected close to the water's edge at Hull, consisting of the usual accommodation for booking clerks and passengers arriving, a large open yard surrounded by piazza, for the accommodation of carriages and omnibuses waiting for passengers on one side, and on the three other sides, two of which face the water, warehouses provided with cranes, the arched basement piazza forming a convenient series of sheds. From the passenger station, a fixed wooden pier, completely covered in, forming a platform 25 ft. square, runs out 200 ft. into the river, where it ends upon a stone arch—being the utmost distance to which the Admiralty will permit a fixed pier to extend. Beyond the stone arch it is proposed to place, at a distance of 300 ft., an iron caisson, 200 ft. long and 40 ft. broad, sliding up and down with the tide between two triangular lattice-like piers, and to connect the floating caisson with the fixed pier by a tube of wrought iron, similar in principle to that used at Conway, 15 ft. square. There are several points in this scheme well worth the attention of those who are interested in the labours of our committees on agriculture or manufactures The passenger from London, or Lincoln, or Liverpool is to be conveyed to the furthest possible limits on the borders of the Humber; under cover he descends, and is placed on board a fast steamer, ten minutes convey him to the opposite shore: then, again, at all times of the tide he will be received under cover, and dryshod proceed to his destination. It will easily be understood that arrangements on so extensive and comprehensive a scale could only be effected by the large means of a great company looking not to profits upon this local transaction, but to the ultimate effects on their gigantic undertakings. This case of great national and public convenience, effected for the purpose, not of supplying an existing, but of creating a traffic, is a good answer to those who object to entrust railway companies with the power required for exe-cuting such additional works as these. Be it remarked, that these works—part of a great and comprehen-sive scheme for improving the internal communication of this kingdom—are one example, out of many of the results of private enterprize as exhibited in England. No Government assistance has been asked or required for the promotion of an undertaking which has added, and will add, thousands on thousands to the revenues of the State; which will almost bridge the Humber, which will bring Hull within six hours of London—within a day's journey, and much less, to every town between the Humber and the Mersey. Private individuals conceived the scheme; engineers educated and rewarded by private means, have de vised the plans; an army of workmen, salaried by a private company, have pushed forward the works to their present advanced stage, in spite of convulsions, financial and political, such as the world has seldom seen. I call attention to this as one monument out of hundreds, in docks, in ferrics, in roads, canals and railroads, upraised by private funds, and dedicated to public uses by the spirit of British commerce—a spirit which disdains to call for the aid of an official Jupiter, but with independent self-reliance, stubbornly per severing, drags the wheel of enterprize from the slough of difficulty and depression. I would invite the at-tention of those theorists who see some mysteriously beneficial advantage in Government interference, to the numerous public works silently and steadily pushed on to completion by comparatively humble, unknown men, while the time and the talents of our ministers of State are fully engrossed, occupied in watching the balance of Europe amid the crash of thrones and the upheaving of nations. And I would ask whether to these habits of independent, uncontrolled enterprize, we are not indebted as much for our comparative immunity from political convulsions, for our inestimable powers of self-government, as for our wonderful commercial and manufacturing pre-

INSTITUTION OF CIVIL ENGINEERS. - May 16. - General Meeting. - Mr. J. FIELD, President, in the chair .- No paper was read, in order to afford time for the discussion on Mr. Gooch's paper 'On the Resistance to Railway trains at different Velocities,' read at the meeting on April 18 (see ants, p. 284). The principal speakers were Messrs. Brunel, Gooch, Bidder, Locke, Harding and Russell, and their arguments were necessarily so complicated by calculations as to render it difficult to convey, within reasonable limits, even an outline of the discussion. It was con-tended on one side that the subject had been so treated in the paper as to make it almost a question of the comparative gauges; that the experiments upon which the arguments were founded could not be received as applicable to railways in general, inasmuch as it was presumed from the statements that the portion of the line was selected as being in the best working condition; that the engine and the carriages were also picked as being in the best order; and that therefore the results were due to these peculiar circumstances, and not to the ordinary working state of the line; that the amount of resistance per ton was understated by Mr. Gooch on these accounts, and that the rate of resistance arrived at by the committee of the British Association, by projecting trains of carriages down inclined planes, was nearer the truth than the expression of resistance arrived at with the locomotive and the dynamometer: that the tables were partly made up from the actual results of the experiments and by using Mr. Harding's formulæ, which had been repudiated in other cases as incorrect; that the greater weight of the trains in the late experiments, as compared with those of the British Association, &c., reduced the value of the deductions; that the atmospheric rail-way could alone give the resistance due to the way could alone give the resistance de to the frontage, which was not given when a locomotive was used, as it covered a portion of the carriage frontage, and the dynamometer being behind the engine, the resistance of the train of carriages alone could be arrived at; and that the valuation of the pressure of the wind upon the train at various angles was not satisfactory. Such was the general tenor of the arguments; and on the other side it was urged that Mr. Gooch had endeavoured, as much as possible, to avoid introducing, in any degree, the question of the gauges, and to give the actual results of the experiments, in order that any persons examining them might draw his own conclusions; that the portion of the line on which Mr. Gooch's experiments were tried was not selected for its good condition; were tried was not selected for its good condition; that it was fixed upon by Mr. Brunel himself only the night previously to the experiments, and was not that part which had been originally intended to be used; that the engine and carriages were such as could be spared from the working stock and were not picked—in fact, that they were not the set of their class; that therefore the results were best of their class; that therefore the results were not due to peculiar circumstances, but were those of the average working of the line; but that even had the line, engine and carriages been selected, engineers would, from the results, have been able to make allowances for other cases, and that the value of the experiments would not have been diminished; that it was believed that in descending Wootton Basset incline by gravity, without the aid of an engine, a greater velocity had been attained than the maximum recorded in the experiments of the British Association; that the tables were divided into columns, distinctly showing what resulted from experiment and what from the use of formulæ; that it was impossible, with engines of the ordinary weight, as now constructed, with an ordinary train, to limit the experiments to such small weights as had been formerly used; that in all cases the surface of the locomotive was allowed for in calculating the frontage resistance; that it was expressly stated in the paper that the apparatus for the wind gauge was not so satisfactory as could have been desired, and therefore its results were kept separate in the tables; that Mr. Gooch had not intended to cast any reflections upon the former experimentalists, but merely to point out the errors into which he thought they had fallen, and to induce, by his experiments, others which should fix more certainly the amount of resistance; this, it was still contended, was less than had been formerly stated, and although other experiments would be necessary to set the question completely at rest, it was unanimously agreed that Mr. Gooch's experiments and paper were very valuable contribu-tions, and it was hoped he would continue his obser vations on this most interesting subject.

The President's annual conversazione was announced to be held on Tuesday evening, the 30th of May, at the Institution, and members were requested to use their influence in procuring good models and works of art for exhibition on that occasion.

MATERIALS FOR BRIDGES .- A communication was lately made by Mr. Buchanan to the Scottish SOCIETY OF ARTS, containing an interesting exposition of the strength of materials applicable to the construction of cast or wrought iron bridges. writer presented the following notices of some interesting experiments made on the tensile strength of stone from Hailes and Craigleith quarries. Hailes stone bore on the square inch 360 lb., the Craigleith considerably more; and a remarkable effect was observed here after the load had hung a little; it was suggested by a member to give it a slight tap with a hammer, and on this being done, it immediately snapped asunder, showing the effect of vibration or concussion when the materials are greatly strained in aiding and completing the frac-ture, a circumstance which appears to throw light on what may sometimes occur by the rapid and violent actions of the trains on railways. The compressive strength of the Hailes and Craigleith stones was then The compressive shown, by experiment, to be much greater than the tensile strength; and as it required, indeed, more weight and a more powerful apparatus than could be commanded, these experiments on different stones were deferred to another evening. The compressive strength on posts and pillars was then considered, and the remarkable effects of the length of the pillar in diminishing its strength. On this subject much light has been thrown by the experiments of Messrs. Hodgkinson and Fairbairn. Pillars or rods were tried of different lengths, from 3 in. to 5 ft., and of different diameters; rods half an inch diameter, with \$\frac{3}{2}\$ in. length, bore 11 tons; but when the length was 7 in. it only carried 5 tons; when 15 in. long 3 tons; and at 30 in. only 13 cwt. From these experiments a general rule may be drawn for different lengths. Taking the strength of cast iron as formerly given at 50 tons per square inch, this will hold good in pillars till the length reaches five times the diameter, and then it begins to diminish. When the length is ten times the diameter, the strength is reduced in the proportion of 13 to 1; with the length at fifteen times the diameter, it is reduced as 2 to 1; twenty times, as 3 to 1; thirty times, as 4 to 1, and forty times as 6 to 1. Hence the great advantage in cast iron of using hollow pillars or tubes in place of solid metal, whereby, with the same area or section of fracture the diameter of the pillar is increased, and with it the resistance to flexure, and an increase of strength in proportion to the length. A solid pillar, for instance, 6 in. in diameter, if extended to 7½ ft. in length, would be weakened one half, but if cast hollow, 10 in. in diameter, and three-fourths of an inch thick, in the strength of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of t giving the same weight of metal per foot in length, it might then be extended to 12 ft., and still possess the same strength as the other. In all these cases a the same strength as the other. In all these cases a remarkable circumstance was observed in regard to the mode of applying the strain. With the ends of the pillar turned flat, and a flat plate interposed at top and bottom, which is the case in supporting buildings, this was found to sustain nearly three times as much as when the pillar was rounded on the ends, so as to make the force pass directly through the axis, as occurs so frequently in machinery with the connecting rods of steam-engines, and in other cases. The effect of the length of pillars in weakening the strength was illustrated by a striking experiment with a spiral wire, quite flexible, yet, when set up as a pillar, and tied in the middle laterally, with slender threads, carried a weight of 56 lb., and would have carried much more, but the moment the threads were cut, the wire gave way by flexure, and, oversetting the balance, the weight immediately sunk. In regard to the transverse strain, he had already explained the nature of this compound action, and particularly the manner in which, under it, the beam becomes exposed at once to the effects of tension and compression, the one side being distended and the other compressed. On this most interesting and important subject he had still much to say, but would defer it to another evening, as the time was short, and he was anxious to proceed with another part of the paper which had been particularly referred to, namely, the subject of the tubular bridges. The application of mallcable iron had been already used in the shape of tensionrods in cast-iron girders, and was applied, as we have seen, in the high level bridge at Newcastle; but the application of girders constructed of malleable iron alone is a new idea. It has been applied on railways in the case of skew bridges of wide opening and limited depth between the railway and the road; in these cases the girder consists of a rectangular hollow tube or square box, extending over the whole span, and of such depth as can be attained. have hence received the name of tubular bridges, and have excited much attention since the grand experiment has been determined of trying these struc-tures on such a magnificent scale as is now in pro-gress of execution in the crossing of the Straits of

Menai by the Britannia Bridge, and the estuary of the Conway by the Conway Bridge, and which form, without doubt, the most remarkable engineering enterprizes of the present day.

#### Official Bapers.

#### DUNDALK AND ENNISKILLEN.

Engineer's Report for the Meeting, Feb. 16 (p. 156).

In making the following Report on the state of the works In making the following Report on the state of the works on that portion of your railway now under contract, extending from Dundalk to Castleblaney, I have gone more into detail than is usual; but, considering it desirable that the shareholders and the public should have the fullest possible information on the subject, I hope I may be excused in taking up so much of your time, more especially as I hope it will be the last one that I shall be called on to make to you before the line is opened to Castleblaney.

The first contract, which extends from Dundalk to Mullabunchus, a distance of 29 miles was let to Mr. Dergan for

The first contract, which extends from Dundalk to Mulla-hunchna, a distance of 9½ miles, was let to Mr. Dargan for 48,000. Of this amount there has been paid to him 29,430. 5s. 2d., which leaves 18,569. 14s. 10d. still to be paid to him when the contract is completed. The works which he has executed and those still to be done are as follows:—The fencing is all completed except through a field belonging to Mr. Noone, which is not yet in possession of the company; and in a few detached portions along the line of very inconsiderable extent, in some places which line of very inconsiderable extent, in some places which were first made and left exposed to the trespassing of cattle, it must be made up by the contractor. The whole of this and the portion before mentioned as not yet commenced, might be finished in a week. The total quantity of earthwork on this contract was 340,500 cubic yards, and of rock cutting, 55,000 cubic yards; of these quantities there now remain to be done only 14,000 yards of earth, and 6,000 yards of rock; of the 14,000 yards of earth, 4,000 yards are in the cutting on the grounds of Mr. M'Kane, of which possession has not been obtained. The remaining portion of earth [10,000 yards is in detached places along the line. possession has not been obtained. The remaining portion of earth (10,000 yards) is in detached places along the line, and can easily be removed in a fortnight or three weeks. The 6,000 yards of rock are principally contained in three cuttings, viz., Thomastown, wet side of Ardee Bridge, and Lannet, at the western end of the contract. This rock is required for ballssting the line, and for completing the metalling of the approach to the bridge over the Dublin road. The embankments are all completed, except in a few detached places, which can be done in a fortnight or three weeks. The slopes of the embankments are not yet dressed off or soiled, but this will be better done in the suring, when the line is nearly completed: if necessary, it dressed off or soiled, but this will be better done in the spring, when the line is nearly completed; if necessary, it could be done in a week after the embankments are finished. The first bridge on the line is over the Runfort river, near Dundalk; this is a timber bridge laid on piles; it is well executed and lins been finished some time. The second bridge is close to Dundalk; it is to carry the turnpike-road over the railway; the abutments and wing walls are of solid and substantial stone masonry, on which metal girders are placed, and the space between them is filled in with brick styles set in cement. The stone masonry is computed placed, and the space between them is filled in with brick arches set in cement. The stone masonry is completed, except a small portion of the wings, the coping and part of the pilasters. The road approaches are in a forward state, and most of the post and rail fence is ready for fixing. The third bridge, which is to carry the Louth-road over the railway, is not yet commenced. The fourth bridge is to carry the Thomastown farm-road over the railway. This bridge is to be of stone; the abutments are finished, the impost course is set, part of the arch is turned, and the wing walls are nearly completed; it will take a fortnight or three weeks to finish this bridge. The fifth bridge is at Rice's Cros; it is to carry the railway over the Carrick-macross turnpike-road. It is a skew bridge, built of stone abutments and wings, and brick arches; it is all completed with the exception of a small part of the retaining walls and the coping. The road approaches are not yet finished, as possession of Rice's public house and two calins which and the coping. The road approaches are not yet finished, as possession of Rice's public house and two cabins which are in the way has not been obtained. The sixth bridge is to carry the county road to Ardee over the railway; it is of stone masonry with brick arch, and is all completed except the road approaches, which cannot be completed until pos-session of a 'ew perches of land on the north side is obtained the road approaches, which cannot be completed until pos-session of a 'ew perches of land on the north side is obtained. The seventh bridge is to carry the Drumcob county road over the railway; this bridge is of stone masonry, and is completed, with the exception of the coping. The eighth bridge is of stone masonry, and is to carry the railway over the county road to Inniskeen; this bridge is completed. The ninth bridge is of stone masonry; it is to carry the county road at Mayor's Cross over the railway; this bridge is not are convenient as its probable it may be done county road at Mayor's Cross over the railway; this bridge is not yet commeuced, as it is probable it may be done away with; there being now no traffic on the road, it is almost impassable. The tenth bridge is over the river Fane; this bridge is of masonry, the abutment and wings are set in cement, and is completed, except the coping, the greater part of which is ready for setting. The eleventh bridge is of masonry; it is to carry the railway over the stream at Kearneys; this bridge is finished, with the exception of the greater part of which is dressed and tion of the coping, the greater part of which is dressed and ready to set. All the drains and culverts are completed except some 18-inch drains, which will be done as the works are completed. About 4 miles are ballasted; one-half is for a single line, the remainder for a double line. No works of any importance remain to be done on this contract. or any importance remain to be done on this contract, except the bridge for the Louth road, which is to be carried over the railway, and the short branch or course to communicate with the Dublin and Belfast Junction, where they cross each other. Both these works may be completed in a mouth or six weeks. The second contract extends from Mullahunchna to a short

distance beyond Castleblaney, and is 10½ miles in extent. It was let to Messrs. Atkinson & Coyle for 66,742L, which was subsequently reduced to 61,284...17s. They have already done work to the amount of 37,120s. 3s. 1d., which they have been paid; when the contract is completed they will have to receive 24,155s. 13s. 11d. The fences on this con-

tract are three-quarters completed: the portion required to be done is in the bog and marshy ground, and along some of the cuttings which may require to be widened more than they are at present if the earth be required for the embank-ments over the soft ground; where the permanent fences are not made there have been temporary ones erected in ments over the soft ground; where the permanent fences are not made there have been temporary ones erected in their place. All the fencing could be easily completed in a month. The quantity of earthwork on this contract was 637,132 cubic yards, of this 506,116 cubic yards have been excavated; 131,016 cubic yards still remain to be done; of this 40,000 cubic yards are required for the bog embankment near the centre of the contract. Two other embankments near the same place will require about the same quantity. The bog embankment near Castleblaney will require about 30,000 cubic yards, and the remainder will be required to complete some small banks along the contract. One cutting, in which there are about 15,000 cubic yards, cannot be removed or proceeded with until a house and some land belonging to a person of the name of Guinness, and a small portion belonging to a person of the name of Donghamoyne, are purchased. Both of these parties are temants to the Marquis of Bath. 97,000 cubic yards of rock have been excavated, and there now only remains 13,645 tenants to the Marquis of Bath. 97,000 cubic yards of rock have been excavated, and there now only remains 13,645 yards to be taken out. This quantity is in the cutting near Castleblaney, between the tunnel on Mr. Savage's land and the turnpike-road; to complete this work will require two months. The first bridge on this contract is for a farm-road months. The first bridge on this contract is for a farm-road in the townland of Colgagh, under the railway. This is of masonry, and is completed. The second is for a farm-road under the railway, in the townland of Kilmurry. It is completed, with the exception of some of the coping of the wings. The third is of masonry. It is to carry the railway over the Cullavill-road. This bridge is completed, with the exception of some trilling work that will require 3. or 4. The fourth is of masonry. It is to carry the railway over the turnpike-road. It is finished except some parapet coping, and a few copes on the wing walls. The fifth, to carry the railway over a country road in the townland of Carralenv, is completed, except some wing and parapet Carraheny, is completed, except some wing and parapet coping. The sixth is to carry the turnpike-road over the railway. The masonry is all completed, except some parapet coping. The approach is to be formed and metalled. The coping. The approach is to be formed and metalled. The seventh is of timber. It is to carry the railway over a stream. It is situated in soft ground, and has given a little, which will be repaired next month. The eighth is to carry the railway over the turnpike-road. The bridge is completed. The ninth is to carry the Dundulk turnpike-road over the railway. It has not yet been commenced. The tenth will not require to be built, as the road can be diverted and carried over the bridge No. 9. The abscent he stream and carried over the bridge No. 9. The eleventh is situated in Mr. Swanzy's land. It is of masonry, and is carried over the railway. All the abutments and three quarters of the the railway. All the abutments and three-quarters of the arch are completed, as also one of the parapets and cope. The length of this arch is 300 ft.—All the culverts, some of which are 9 ft in span, are completed, and all the drains, except one of 2 ft., in the townland of Corcullan. 4 miles of this contract are ballasted for one line of rails; 3 miles of this are continuous; \(\frac{1}{2}\) of a mile is ballasted for a double line. In several places along the line rock has been left in the cuttings for ballast. The work yet to be done on this contract will take three months to complete, reckoning from the time when recessing will be obtained of the whole of the time when possession will be obtained of the whole of

A very favourable contract has been made for the sleepers to lay the permanent way from Dundalk to Castleblancy, as also for the rails, some of which, about 250 tons, have arrived at Dundalk, and the remainder are about being de-livered. A contract has been made for cutting the sleepers and proving the rails, also for the bolts and nuts, and for and proving the rails, also for the bolts and units, and for the points and crossings, so that the permanent way may be commenced as soon as the sleepers are ready, which will probably be in a month or less. The four locomotives making by Messrs. Grendon, of Drogheda, are very nearly ready: they can be on the line, if required, in a month or is weeks. The cattle and goods wageons and ballast waggons are also in a forward state, so that there will be no difficulty in opening the line for traffic early in the summer, and by the time that the Belfast junction will be ready between brogheda and Dundalk, which will give a continuous line of railway communication from the north towards Dublin of 42 miles, besides the Dublin and Drogheda of 32 miles; and as the Uster from Belfast to Armach will be Diffin of 42 mies, bestee the Diffin and Disperded of 32 miles; and as the Uster from Belfast to Armagh will be opened shortly, there will be railway communication from Belfast to Dublin, with the exception of about 12 miles between Armagh and Castleblaney, and a mile between the temporary terminus of the Dublin and Belfast Junction and the terminus of the Dublin and Drogheda. This will, until the remaining portion of the Dublin and Belfast Junction from Dundalk to Portadown be completed, insure all the passenger traffic from Belfast to Dublin over the Dundalk and Enniskillen line—a distance of 20 miles, which in itself will produce a considerable revenue, independent of the traffic of passengers from the north-west of Ireland to Dublin, and the goods from Dundalk to the interior, and grain and cattle from the counties of Monaghan, Cavan, Tyrone and Fernmanskh to the port of Dundalk. On the whole, therefore, I can see no reason to change the favourable opinion I have always had of this undertaking. The present low price of shares is no criterion to judge by. miles; and as the Ulster from Belfast to Armagh will be present low price of shares is no criterion to judge by. Every railway in the kingdom has been depressed—many of them much more than the Dundalk and Enniskillen; besides which it must be remembered that it can never be besides which it must be remembered that it can never be interfered with by any competing line; and when the times become more favourable than they are at present for rail-way enterprise, it cannot fail to be extended to the west-ward, and ultimately to Sligo, thus opening a main line of communication from the eastern to the western coast of communication from the eastern to the western coast of Ireland, in the nearest part of the island, by which English merchandise can be taken by the cheapest and most expeditious conveyance to the western counties, and agricultural produce will find its way from the west and inland counties produce will find its wito the English market. JOHN MACNEILL.

Rutland-square, Dublin, Feb. 15.

#### Progress of Wiorks.

AYRSHIRE. - The Government Inspector, Capt. Wynne, R.E., recently went over the Irvine and Busby branch, and the Commissioners have since intimated to the Board their approval of the line, and have accordingly sanctioned its being used for passenger traffic. The line will be opened for this purpose when the summer arrangements commence, on the 22nd inst.

CORE AND WATERFORD .- The works, having been so long in abeyance, will be commenced with vigour on the completion of the twelvemonth's delay, in ac-cordance with the late Act of Parliament. That part of the line from Waterford to Tramore will be first taken in hand, which will require a call of only 21. per share to complete it. When that is done, the remaining best-paying portions will be gradually proceeded with; and it is clearly understood that the directors will take especial care to make the calls as

little onerous to the shareholders as possible.
EDINBURGH AND NORTHERN.—An additional portion being now finished, and the preliminary inspection having afforded every satisfaction, says the Scottish Railway Gazette, the directors have arranged to open the whole line for public traffic, from Cupar to Ferry-Port-on-Craig on the one fork, and from the station at Lindores to Clunie, about 13 mile beyond Newburgh, on the branch to Perth. These extensions will enable the passengers from Edinburgh to reach Dundee by rail, excepting, of course, the short distance to Newport and the intervening ferries. The works at Ferry-Port-on Craig are not yet completed, but they are making rapid progress, and, when finished, will enable the passenger to proceed direct by steam to Dundee in less than 20 min. The natural attractions of the country along both branches of this line are remarkable. The whole of the journey from Lindores Loch abounds in varied and picturesque objects.
GREAT NORTHERN.—The works between Lincoln

and Peterborough are proceeding so satisfactorily, that the promise for the opening of this portion of the line in September will probably be redeemed. Orders have been given that the works shall be so far advanced as to allow the locomotive to proceed with ballast over the new bridge by the Grand Sluice in a week hence.

LONDON AND SOUTH-WESTERN (Windsor and Staines).—May 10.—The ceremony of turning the first sod of this loop line was performed in the immediate vicinity of Isleworth, by Mr. Henry Pownall. In the evening a dinner was got up, at the Northumberland Arms Hotel, Isleworth, by the inhabitants of the town and neighbourhood, and was attended by about sixty of the most influential gentlemen of the district. Mr. Pownall presided, and was sup-ported by Messrs. H. C. Lacy and W. Chadwick and several other gentlemen connected with the forma-tion of the project. The bridge over the Thames, near Richmond, which has been the cause of so much dispute, is being rapidly progressed with.
SCOTTISH CENTRAL. May 15.—The directors, ac-

scottish Central.—May 15.—The directors, accompanied by their friends, made a trial trip on the newly-finished part of the line between Perth and Stirling. The journey (a distance of 33 miles) was performed in 1 h. 20 m., including two or three stoppages. The carriages are commodiously constructed. The second and third class are of a very superior description. The proceedings of the day gave great satisfaction. The line, as we have already announced, will be opened to the public next week.

SOUTH DEVON.—The line newly opened to Laira takes the following course:—From the high land of Dartmoor, in the centre of South Devon, to the seaside, the country is traversed with ridges of hills, which gradually diminish as they approach the water's edge. Between these hills are several deep vales which originate the rivers Erme, Teign, Dart, Plym, &c. To cut through the high land and cross these vales with a railroad is a formidable work for any engineer: all present in the train on Friday appeared to be perfectly satisfied with the great talent and ingenuity displayed by Mr. Brunel in overcoming the natural difficulties of the undertaking. Shortly after leaving Totnes, the road enters the Marley tunnel, about 800 yards in length, cut through the grounds of Lady Carew. It then trends towards the north, and at Brent is within half a mile of Dartmoor. Between Brent and Glase is the station of Wrangerton, selected for the convenient approach of the projected branch from Kingsbridge. By curved viaducts more than 100 ft. high, and formed of heavy balks of timber laid across massive moorstone piers, the road crosses the valleys of Glase, Ivybridge, Blatchford and Slade. From these portions of the line, looking down the vales towards the sea, the country presents a most delightful appearance, and all sense of the supposed danger on the viaduct is lost in admiration of the

picturesque scenery. After passing Lybridge the villages of Colebrook and Underwood are approached. and thence the road falls into the lower lands of Saltram, the seat of the Earl of Morley. Crossing the upper stream of the Laira, the line approaches the western coast, and then skirting the land, it winds through the waters of the Laira, and passes under the embankment which protects the turnpike-road from the encroachments of the sea; it then debouches into the new station constructed in front of the Laira cottages.

WATERFORD AND LIMERICK.—The portion of this line from Limerick to Tipperary, a distance of 25 miles, was opened for public traffic on the 8th inst.

#### Accidente.

NEWMARKET. - May 12. - The 3 30 p.m. train NEWMARKET. — May 12. — The 3 30 p.m. train left Newmarket at its customary time for London, and proceeded on its journey to Dullingham, which is the first station, 4 miles from Newmarket, the whole of which distance the line is on an inclined plane up-hill. At Dullingham the train was stopped, and the engine, with a van, which is a brake carriage, was detached, and turned into a siding for the purpose of fetching an addition to the train, consisting of two or three luggage trucks, going to town, leaving the train on the main line, nearly at the top of the hill. The train, however, when detached from the engine and van. made a retrograde movement, whether impelled by its own weight downwards is not known, but it continued its progress, its speed in-creasing as it descended the hill, until it dashed into the Newmarket terminus, from which it had started. to the no small consternation of the passengers, who were most of them thrown violently from their seats. On examination, four persons only were found to have sustained any injury, in the shape of trifling cuts and bruises.

#### Parliamentary Proceedings.

COMMONS.

May 12.—Great Northern.—Mr. STUART moved, "that it be an instruction to the committee on the Great Northern (Isle of Axholme Extension) bill, to hear the company of proprietors of the Stainforth and Keadley Canal Navigation on the matter of their petition against the said bill, which was presented upon the lst day of this instant May."—Sir W. HEATH-COTE opposed the motion. The house divided: for the motion, 11; against it, 69; majority 58.

May 17

May 17.—Audit of Accounts Bill.—Sir F. T. Baring moved the second reading of this bill from the other house. By it a minority of shareholders might compel the directors to have their accounts audited by an impartial party, appointed by the Government, and unconnected in any way with the company. There were details respecting the number of shareholders who must sign the requisition to the Government, and as to the general mode of proceeding; but its entire object was to secure a fair statement of accounts for shareholders requiring them. He could hardly have expected any opposition. There were, however, hon. members who strongly objected to it. If their objections affected matters of detail they could urge them in committee; but if they applied to the principle he was bound to say that he saw no distinction between railway companies and other corporate bodies. He had no doubt that eventually the principle must be adopted. If it were not acted on to-day, he thought it would not add to the credit of the house if they rejected a measure of so simple a character, after the other house had shown themselves so ready to adopt it. Of this, too, he was sure, that if they did not adopt this measure now, they would have a more stringent one passed hereafter. — Mr. BANKES intimated his intention, unless his views were wholly altered by what might subsequently be said in debate, of moving that the bill be read a second time that day six months. The measure was allowed to be but an instalment of the severe restriction which the interests of the public required to be placed upon the railway system; let the right hon. baronet, then, abandon his incomplete measure, and at once bring forward the proposition which he might consider fully adequate to the necessity of the case, and not injure the interest of the public by this piecemeal legislation.—Mr. LABOU-CHERE said the measure had received the almost unanimous sanction of the other branch of the Legislature, nor had a word against its provisions been raised there on the part of that railway interest which always showed itself so vigilant whenever its interests were really endangered, or supposed to be endangered. He would here also vindicate Railway Commission from the charge of drawing salaries without performing duties. He could assure the house, from his short experience of the depart-

ment, that the labours of the officers of the Board were neither few nor slight, nor exempt from severe responsibility. It was only spurious and mischievous economy to throw upon ministers of the Crown the charge of conducting the business of the country without giving them adequate assistance in the shape of competent officers. He had always regarded railway companies as participating in the character of public companies in quite as full a degree as they bore a private character, and he had therefore always considered it desirable that there should be more Government interference in their case than would be proper or justifiable in reference to companies of a The railway companies wholly private character. had certainly upon the whole conducted their affairs with much energy and ability; but in many cases they had manifested a tendency to an arbitrariness of conduct as regarded the public which certainly Parliament could never have designed to sanction. They had, in fact, seemed to regard themselves as "chartered libertines," who might commit all sorts of escapades without being held liable to any supervision or check. Among other things, it was tolerably certain that the present principle of railway audit was wholly inadequate to the protection of that large proportion of the public as shareholders in the various lines. True, these parties might, from time to time, inspect the books, but they had no means of comparing these with the vouchers. He, without pledging himself to the details, should cordially support its second reading.—Mr. HENLEY did not conceive that either the right hon. introducer of the measure or the Government were peculiarly in a position to impugn the accounts of the railway companies; the right hon. baronet, during his management of the Exchequer, had been more remarkable for deficient revenues than for anything else, and the present Government had done nothing to reflect the odium of comparison upon the right hon. baronet in this respect. This measure entitled itself in no way to the approbation of the house or of the country. Its ruling principle was not a really public audit of railway companies, but the disturbance of existing accounts by any section of shareholders who. from morbid curiosity, or from a desire to job, might get up an agitation against the body of directors. was no public ground for the adoption of this measure.—Mr. AGLIONBY supported the measure as wholesome for the public and beneficial for the railways themselves. The publicity which it would create of railway accounts—a publicity which no honest man or set of men could object to—would, in itself, raise the character of all legitimate undertakings in the eyes of the public. It was a matter of essential importance to the community to know, from time to time, the actual condition of the railways, upon the undoubted testimony, not of one of the persons interested in the concern, but of a wholly impartial investigator.—Mr. Muntz regarded this measure as only another example of the mania of the present Government for meddling with everybody else's business and not minding its own.-The house divided—For the second reading, 38; against it, 100; majority, 62.—Repeal of the Railway Act.—Mr. Bankes gave notice to submit a motion, on the 6th of June, for the repeal of this Act.

[ For Committees on Bills, see p. 358.]

IRON TRADE.—Glasgow, May 13.—In the early part of the week a good deal of business was done in pig iron at 43s. to 45s. For the last few days there has been rather less inquiry. Holders ask 44s. 6d. for mixed numbers, cash, as there is little iron offering. Buyers, however, will not pay above 44s. The market closes very quietly. In the early part of the fortnight, says the Birmingham Gazette, a considerable movement took place. It became known that the Shropshire houses had been induced to submit to abatements in consequence of the rates at which contracts for rails had been taken, added to the very low prices of Welsh and Scotch iron generally. It also reported that the monthly circular of Lord Ward's agent notified a similar decline. The aspect of political affairs on the Continent appeared to be daily growing more gloomy, and the accounts from our Colonial and American connexions were anything but cheering. Under these circumstances it became evident that the position hitherto assumed here was become untenable. Pressing engagements also, in many instances, required to be provided for, and a disposition to sell was thus induced, particularly among pig holders, amounting to almost a panic, of which many of the manufacturers dependent upon purchases availed themselves to recruit their exhausted supplies of metal. Considerable quantities of Staffordshire pigs were sold during the week, and, we are sorry to say, some at unwarrantably low rates; one sale was mentioned at 55s. per ton. Manufactured iron also was negotiated to some

Digitized by GOOGIC

extent at a decline, and abatements to a greater or less per-centage, to avoid countermands, have been conceded upon progressing contracts.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

#### Money Market.

#### PRICES OF BRITISH STOCKS.

Sat. Mon. Tues. Wed. Thurs. Frl. 

* For account, June 9. t Ex Div.

London Stock Exchange, May 19 .- All descriptions of railway securities have improved during the past week; the buyers have been numerous, and the prices well maintained. The market, at its close is not, however, quite so firm, the news from the Continent being deemed of an unfavourable nature.

Liverpool, May 18.—The market retains its improved tone; during the present week there has been some fluctuation in prices, caused by the news from Paris. Prices close firm to-day.

Suplow, Brothers.

Manchester, May 18.—We have had some fluctuation in our share-market during the week, but there is a general tendency to improvement.

SAM. GRINDROD. York, May 18.—The market has much fluctuated in prices during the week, and now shows an improvement. At the lower quotations there are several buyers in the market.

GRAYSTON & EARLE. Hull, May 18 .- It seems almost impossible for the share-market to maintain any improved feeling, and in the present state of things, were it not for the fair weather, prices would be almost entirely ruled by political events and their action on consols. Prices are lower generally than when we wrote last week.

Ambergates remain firm, owing to the judicious intention of abandoning about two-thirds of the scheme.

—Since the above, the telegraphic dispatch brings a better market from London, both for consols and FLINT & TOOTAL.

Glasgow, May 18.—The market for the last eight days has been in an excited and feverish state, easily days has been in an excited and feverish state, easily influenced by every rumour. This has been taken advantage of in several instances, and the fluctuations have been very great, especially in some of the more speculative stocks. The business done has been large. We add to-day's last prices, at which the market closed with a tendency to improve :—Bdinburgh and the completion and official inspection of the line

LONDON, SATURDAY, MAY 20.

The directors of the NEWCASTLE AND CAR-LISLE are empowered to treat with either the CALEDONIAN Or the YORK AND NEWCASTLE respecting a lease of their line. The result of their transactions is to be reported to a meeting on the 31st.

The amalgamation bill of the MONKLAND, KIRKINTILLOCH, BALLOCHNEY AND SLAMAN-NAN, now before Parliament, was unanimously

between Kilkenny and Thomastown. Board declare their unaltered conviction of the good prospects of their project. Of the 11,000l. due on the last call, the solicitor thought the directors would receive 9.000l. at least.

The COMMITTEES of the House of Commons have begun their duties on the MERITS OF BILLS. Up to the present time the following have had their preambles declared proved:

Bristol and Exeter (Castle Cary Branch, &c.). Chester and Holyhead (Steamboat Company). Exeter, Yeovil and Dorchester.

Londonderry and Enniskillen (Amendment and Deviations)

London, Brighton and South Coast (Steamboats to Dieppe).

London and South-Western (Purchase of Steamboats); (Direct Portsmouth, &c.).
North and South Western Junction.

Oxford, Worcester and Wolverhampton. Edinburgh and Northern (Branches to Boscobie, &c.).

And of those bills unopposed :

Great Western (Extension from Hungerford, &c.). Manchester, Sheffield and Lincolnshire. Manchester, South Junction and Altrincham Oxford, Worcester and Wolverhampton, Nos. 1, 2. South Yorkshire, Doncaster and Goole. Waterford, Wexford, Wicklow and Dublin. Vale of Neath.

Not proved:

Edinburgh and Glasgow (Power to raise 300,000%, &c.). South Wales

From our official returns it appears that the amount of traffic for the last week, on 3,671 miles of railway, was 196,953l., thus accounted for:—103,356l. for the conveyance of passengers only, 48,358l. for the carriage of goods, and a remainder of 45,239l. for passengers and goods together, not respectively apportioned; being an increase of 30,306l. over the corresponding week of last year, when the mileage was 2,845. The average earnings per mile last week were 53l., whilst in 1847 they

STATE ASSISTANCE TO RAILWAY WORKS.

The practical effect on many branches of industry, and on the state of the labouring class, of the check given to railway works by the pressure of the times, is beginning to be generally understood in most parts of the kingdom. The doctrines of those "public teachers" who proposed the entire stoppage of expenditure in this way as a cure for our difficulties, have been pretty well tested by the consequences that have followed the great reduction which has taken place by the mere operation of financial causes. It is now seen that the business, after all, had two sides; and that the outlay of money which went to pay the navigator or to buy the produce of the artisan, supplied the materials of their support, which must be provided for in other ways, when that supply is withheld. The ratepayers, on whom the burden falls of keeping those workmen whom the stoppage of railway works has thrown out of employment, are little disposed to admit that they are gainers by the change; and would be glad enough to be relieved from the charge by the revival of those operations. Nor has it been found that the relief of the money-market by the narrowed demands of the railways has turned to the advantage of the mercantile class, which the competition in that market last year was said to have so much injured. There is now plenty of money to be had; but it does not run very readily into commerce, although its price on the Exchange can no longer explain the difficulty. It is now pretty evident that some other causes lay at the bottom of the great commercial failures; and what they have been, no one who looks at the balance-sheets of the houses that gave way in 1847 can be much at a loss to de-The railways, at all events, did not produce them, however their demands may have tended, as they probably did tend, to hasten the consummation that must have taken place sooner or later, of a state of things altogether unsound and insecure.

Meanwhile, the consequences of the calamities of last year, having fallen alike on the sound and the unsound, capital has been withdrawn as well from the support of an overdrawn system of trading, as from the investment in works which promised, in the end, a certain, if not a very brilliant return, while employing, during their progress, the labour and manufactures of the country. The railway proprietor has felt the necessity of pausing in a course which profited the nation at the expense both of his immediate convenience and of his future gains; and those who cried fie upon him! for having spent so much money in this process, are now discovering that by that expenditure he was, in fact, paying a voluntary poor-rate of no trifling amount; which, on his ceasing to pay it, has had to be levied on the nation at large. Accordingly, those who could not perceive the real character of railway works, while they were in fuller operation, are coming to a very practical knowledge of their tendency, now that the partial stoppage has thrown on other shoulders the support of the poor who were maintained upon and by them. And it is natural enough that many should desire to see them revive, were it to no other end than that of providing present work for the labourers whom a process-which we were lately advised to carry twice as far as it has actually gonehas converted into pensioners on the parish funds.

The railway companies, however, are not likely to make any considerable effort in this direction. They have not failed to learn something from the results of what has been in progress for the last year or two. It would be rather too much to expect that they should go only be hoped for after the results of decided this pertinacious gentleman, many of the few

on, from merely patriotic impulses, straining every nerve to raise means for the further advance in a direction which is not likely for the present, or for some time to come, to be a profitable one. They have been sufficiently abused for their past steps in a career that may now be seen to be far more useful to the country than likely to improve the condition of their earlier investments. It would not be fair, we say, to expect that they should continue a process more profitable to the State than to themselves, even had the State hitherto recognized the value of this assistance, and been disposed to view its promoters with just, if not with favourable eyes. But to go on making sacrifices, the result of which to the country the ruling body has not learned to appreciate—the continuance of which, indeed, is apt, on the contrary, to be made the occasion of perverse attempts by the ruling body to impoverish those who make them-to proceed any further in this course, would be a species of infatuation that is not likely, we trust, to prevail amongst the owners of the large capital now invested in railway works. It has already gone far enough in past years; and the proprietors have felt, in the pressure of unwelcome calls, and in the sinking scale of dividends-to say nothing of the universal fall in the market value of their stock-the necessity of a more prudent regard to their own interests hereafter.

There is no doubt that a considerable impulse might be given to the revival of railway works -so far, at least, as regards the prompt completion of those which have already been undertaken-were the State to come forward with assistance in the way of loans. A desire that this aid should be afforded-for the urgent reasons above mentioned—has become general enough; and in North Britain especially it has been expressed in formal resolutions and memorials to the Government. We have reported on some of these applications that have already been presented at head quarters; and although the answer to such as have been made was no better than a point-blank refusal, the idea of trying to impress Ministers with the expediency of granting aid of some kind, is still entertained in many quarters, and appears with more or less emphasis in various organs of provincial opinion. It is no very welcome task to throw cold water on such efforts, inasmuch as we believe that their object would be feasible by an Administration wisely conducted, and that its effect would be beneficial to all concerned. But it can be of no use whatever to lose time in desiring what might be done, when there is not the least apparent likelihood of getting it effected. From the Ministry no such assistance would be looked for by those who have paid attention to their opinions and acts in all ways connected with railway enterprize,-even were the general state of the Exchequer such as to render an advance of money convenient. But not only is the rule of conduct at head quarters quite unfavourable to any treatment of railway business but such as may punish those who are concerned in it-not only are railway works looked upon as things to be checked rather than encouraged -but, even did wiser and fairer views prevail there, the means of giving them effect in the manner we are speaking of must be wanting, so long as the finances are conducted on the present system. It will not be in the power of the State to open its hand to aid useful enterprizes, until it has first made some progress in cutting off useless expenditure; and as not even the intention has yet been shown in that quarter of taking a single effectual step in so necessary a course, it would be idle to look to it for an assistance which could

measures of a wise economy and of a thorough reform of the present do-nothing system, should have first been felt in a general improvement of the national resources. That some such measures, that some such reforms will have to be attempted, either by those who are now in power, or by those who, if they do not undertake them in real earnest, will most surely take the power from them, we are well persuaded. But this change cannot be accomplished at once, nor without many efforts: resisted, as it is sure to be, by the numbers whom the established system favours; and it would be preposterous to believe that it can arrive in time to produce any effect whatever on the particular case we are discussing-so far as it is influenced by the present crisis of 1848.

That this and other practical interests would be served by a wiser management of the national revenues is, however, a conviction that it will be well not to lose sight of :- inasmuch as it may strengthen those other tendencies that are gradually converging to a point at which their union must produce a decisive effect on the system which disregards not this only but many other pressing claims of the public

necessity.

THE RAILWAY BOARD PROTECTED BY

A BORE. The presence of Mr. Urquhart in Parliament seems likely to act as an extinguisher on no small amount of the business of the House. Not only does he contrive to impede the Ministers' progress in their own measures, whenever he can find an opportunity of stopping them, to ask questions, or to submit motions that sane persons must regard as infinitely ridiculous,but he takes care to sit, like a second Sindbad. on the shoulders of the independent members on "open days,"-and, by filling the paper with his notices, renders it impossible for them to bring on any business of their own, except at the cost of first hearing one of his diatribes on foreign policy. This penalty seems to be so intolerably grievous to the whole body of members, that they resolve to escape from it, at whatever price; - and accordingly the House is cleared by the approach of one of the Urquhart motions, - the effect of which is usually to throw over all the orders of the day which happen to follow his. In this way Mr. Bankes's motion on the expense of the Railway Board fell through on last Tuesday week,-the House having been counted out before arriving at it. on the opening of one of the Urquhart explosions. The same process took place at a later stage on last Tuesday also-for which day Mr. Bankes had a renewed notice on the paper, on the subject of the Railway Commission. On that occasion, Mr. Urquhart got his delivery performed by the assistance of Mr. Hume; but after it was over, the House was so weary that members would not stay for any more business; and thus the remaining motions were put off. Mr. Bankes has since renewed his notice for the 6th of June.

Ministers, we know, have in general but little sympathy with the efforts of members not in office; and they are not likely to offer the least hindrance to a proceeding which relieves them-as in the case now in question-of a censure on any branch of their official system. But one would think that the House at large must grow tired of a state of things that adjourns the consideration of practical matters which many members will feel to deserve attention, merely because of the unbearable tedium of reaching them through Mr. Urquhart's longwinded rhapsodies on Foreign-office errors and Lord Palmerston's treachery. It seems possible that unless something effectual be done to stop

spare evenings yet remaining may be wasted, as heretofore, in consequence of the determination of the House to get rid, at all hazards, of an intolerable bore. But there is something so absurd in the idea of a single member being suffered to reduce all the rest of the body to this extremity—to enforce the penalty of hearing him as the only condition on which other business shall be transacted—that we cannot readily believe this sorry alternative will be patiently submitted to much longer.

For the present, Ministers are no doubt chuckling at the effect of the Urquhart infliction, in ridding them for a time of Mr. Bankes's inquiry, as the fox is said to keep off pursuers by fumigating them. But the pursuit, they may be assured, will not be stopped, until the abuse it follows is fairly hunted down; for it is evident that the country at large is now aware of the mere waste of the money paid to keep up the Railway Board, and will not, in its present temper and condition, be satisfied until this official job, at least, is put an end to, in one way or another.

We are glad to see, meanwhile, that the Commons have thrown out, on the second reading, Lord Monteagle's Audit Bill, in spite of Mr. Labouchere's threats of what Government would do if it were not suffered to pass. That Minister took occasion, at the same time, to talk very big on the subject of the Railway Commission. But we trust that the good sense of the House will take its own proper course on that matter, as it has done on this, without regarding the evident determination of the Government to cling to every job and error that it is not absolutely forced to abandon.

#### THE BRIGHTON STEAMBOAT PROJECT.

Referring to what we said last month,-on the remarks by the INVESTIGATION COMMIT-TER in the LONDON, BRIGHTON AND SOUTH COAST, as to the ownership of steamboats by the railway company,—we have now to observe that the question is to be decided at a special meeting on Friday next; when the proprietors will be asked to approve of a clause in the bill now before Parliament, authorizing the appropriation of 75,000l. for that purpose. The directors, in anticipation of this meeting, have addressed a special circular on the subject to the shareholders, strongly urging them to support the proposal; and have also applied to each of them, individually, for proxies to be used in carrying it. Where so much pains have been taken to obtain a majority on one side of this question, it may not be amiss to point out, with a view to the proper settlement of the business, some considerations that are entitled to be heard on the other.

We have already noticed the objections that may justly be raised to the manner in which it is now proposed to change the bearing of this steamboat arrangement. It was brought forward in 1845, and again in the year following, as one which would be kept distinct from the railway concern,-it being expressly stated by the directors in their Report on the subject, " that the company's funds cannot be so applied." Any sanction, therefore, given by the com-pany at that time can only be understood as extending to this specific condition of a separate establishment, for which the railway funds were not to become liable. It was proposed to the shareholders only on these terms; and no approval by them of the plan, as then laid before them, can establish any claim on the part of the directors, to an indemnity from the railway purse now, for what may have been done in excess of the authority of votes or encouragements merely given by the proprietors on a plain understanding that the railway purse was not to

be drawn upon in this matter. proper to notice, because we perceive that much stress is laid by some members of the Board on the shareholders' assent to the first proceedings on the subject, on the strength of which, it is averred, the company ought now to take the responsibility of what the directors may, in consequence, have done. This cannot be allowed as a consistent argument. The directors were authorized by the proprietors' approval to do their best to make an arrangement of the kind they had approved of-not to enter into engagements that would have to be redeemed by a measure to which no such sanction had been given, and which, on the contrary, the terms of the original plan gave them every reason to suppose would not be thought of. If, therefore, the Board have since gone further than the company's approbation warranted, it is clear that from thence no just claims can be drawn for a release from any consequences of what has been done in a way not included in that approbation.

This plea, therefore, we think, ought not to have any influence on the decision. pany may fairly determine the question on its present merits, as a matter of future profit or loss. And in this point of view, it may be seen that the objections to the proposal just at present are not only of one class—those, namely, which declare the inexpediency, as a general principle, of any railway company undertaking a business foreign to its special purpose, which independent parties will not take up, because they cannot make it sufficiently profitable. This principle we have discussed on former occasions; and after all we have seen and heard in the way of argument, in favour of departing from it, we see no reason to alter our conclusions. Nor until it is proved that two deficits added together can make a surplus, shall we be apt to believe that it can be a profitable thing for a concern in want of more traffic, to enter upon a new business that will not pay independent promoters, in the hope of procuring it. It is perfectly clear, that if it will pay by itself, such other parties will certainly take it up; and the only ground on which a railway company can be forced to enter into it, is therefore one which would to our mind be a very strong one for avoiding the risk. This topic, however, we have examined before now. and it is not needful to re-open it on the present occasion, for the reasons following :-

A favourable opinion on the general principle of such risks would not conclude the decision just now in the case of the Brighton Railway. Admitting the expediency of becoming steamboat owners under conditions apt for this process, it may still be urged that such conditions are far from being apparent in the instance in question. The time for such an operation would still have to be considered; and one less inviting than the present can hardly be imagined. The concern, whose funds are to be drawn upon for this extra, is not just now in a state fit to bear any fresh pressure: -the object for which it is proposed is not just now at all so secure as to make the incurring for its sake of a certain expense very advisable. Were France in a perfectly settled condition, and the Brighton Company in a prosperous one, it might still be expedient to wait for the completion of the Dieppe Railway before any steamboats were purchased in the hope of rivalling the passage to those ports which already have railway lines to Paris. But really, in the present condition, not of France only but of the whole Continent, to invest any money in a business which must cease on the instant, if peaceful relations are interrupted, would seem to be an extremely rash transaction,

even for a company with the amplest means in hand for the entire completion of its own undertakings on terra firma. In this point of view only, it may well be objected that the proposal is premature, and at this time inexpediency whatever might be the opinion of its expediency under more advantageous circumstances.

The directors, at the close of their circular. insist with particular emphasis on the fact that "the proposed measure has been approved of by the Board of Trade and sanctioned by the Select Committee on Railway Bills." The stress they lav on this shows rather a desire to strengthen no very strong case, than much judgment in selecting arguments in its favour. It by no means follows that what those bodies approve of is likely therefore to conduce to the benefit of the company: on the contrary, from the tenor of all public acts on this subject, the prima facie conclusion would be that what such parties join in allowing cannot be for their advantage at all. And on looking more nearly into the matter, it will be seen that it is not the profit of the railway owner, but the obtaining at his expense of new conveniences for the public, that has procured this concert of approval from the bodies in question :-- a circumstance so obvious, indeed, that we are surprised at the directors' want of judgment in taking credit for the measure from so questionable a source. The objects that must be important to the proprietors at all times — that must be especially important to them in the actual state of the concern—happen to be the very opposite of those which alone could induce either the Board of Trade or the Select Committee to approve of the measure. And that this is the case would be sufficiently shown—could any doubt otherwise exist of the sole motives of those bodies-by the clause in the Select Committee's Report, respecting these arrangements. The directors, as advocates for the measure, would have done well to keep that feature of the business in the background, instead of bringing it prominently forward :- it is so far from recommending their advice, that it would of itself have been sufficient to give it a doubtful appearance in the eyes of all who know anything of the nature and purpose of approbation in such quarters,—even had not the Select Committee's Report explained them in the present instance beyond the possibility of a mistake.

PROGRESS OF AMALGAMATION—CALEDONIAN,
NORTH BRITISH, ETC.

Whatever may be thought of the nature and symptoms of the railway mania, one result has clearly arisen from it, viz., the absorption of new and weak railway projects into the power and possession of the old-established railways. This result is the very opposite of the principle which actuated the railway mania...then, all was opposition and competition; now, the monopoly (if it be such) of the old companies is more firmly established than ever; for if competition is to arise at all, it is to be effected by encouraging one old company against another. The prevailing feature amongst the old companies is that of amalgamation; but this has been somewhat partially carried out. The London and North-Western itself is the greatest case of amalgamation, looking at the importance of the interests united by this process. It is observable that the railways on that (the west) side of England and Scotland are following up the system of amalgamation; while on the east side all is separation, if not disunion. The London and North-Western and Lancaster and Carlisle will probably be united; at all events, some connexion already exists between them, as they have taken a joint lease of the Scottish Central. The Caledonian has been particularly active in the business of appro-It has gained possession of most of the priation. lines in the neighbourhood of Dundee. It is reported to be in treaty for the Newcastle and Carlisle and the Scottish Midland, thus carrying its conquests

Digitized by GOOGIC

up to the Aberdeen Railway. Is that railway. also. when opened, or before being opened, to be purchased by the Caledonian? Meanwhile, as before observed, on the east side nothing is done. There is no apparent harmony, at least, no unity of action or purpose. The Edinburgh and Glasgow, Edinburgh and Northern. North British, York and Newcastle, Midland, Eastern Counties, &c. &c., are all separate concerns, without any combination of action and interests. They have done nothing in concert that I am aware of, for the purpose of establishing a complete unity of interest in the great object of extending communications from the metropolis to Scotland. They may have decided for the best in declining to attempt they may be too lukewarm in allowing this to be anticipated by others. I do not pretend to solve these mysteries of railway management_I can only point out the different tactics pursued by these rivals for traffic from North to South. Which will prove the most advantageous in the end remains to be

London, May 16.

LONDON, BRIGHTON AND SOUTH COAST.

To the Shareholders.

The directors having thought proper to circulate a statement amongst the shareholders, with the view of inducing them to sanction the proposed subscription of 75,000L towards the Brighton and Continental Steam-packet Company, contrary to the recommendation of the late committee of inquiry, I deem it my duty, as chairman of that committee, briefly to draw your attention to the real state of the In 1846, the directors having resolved to establish a steam-packet company, invited all the railway proprietors to subscribe for shares, which a very large majority of them declined doing. Notwithstanding this, the directors, on their own responsibility, persevered in the scheme. It is feared that a considerable loss has already been sustained, and the directors, by their present course of proceeding, are at least laving themselves open to the suspicion of wishing to transfer the principal part of that loss to those very proprietors who originally refused their sanction to this undertaking. But, independently of this, the question is, whether it be the interest of the railway shareholders to take upon themselves the loss and gain of the steamboat company. It is clear that the latter, in the opinion of its own proprietors, is, and will be, a losing concern; for, if not, why are they so anxiously straining every nerve to obtain the proposed subscription? But, say the directors, the steamboat communication with France "is of vital importance to the well-being of the ruilway." This I have no hesitation in denying, and more especially when it is borne in mind that the General Steam Navigation Company have occupied the station between Shoreham and Dieppe for a period of about twenty years, and are now willing to provide boats of a superior description, so as to work the traffic from the new station in an efficient manner. The directors also tell you that the committee of inquiry "cannot have had the same opportunity of considering the question in all its bearings as the directors, whose attention has been devoted to it for On the contrary, there was no question more fully discussed in the committee than this affair of the steamboats, especially by the dissentient members, who spared no pains to convince us, as they have since endeavoured in their printed statement to persuade you, of the policy of adopting their views, and, I trust, with no better success. What, then, will be the result, should the directors unfortunately carry their point? Why, simply this: the experiment will be tried for two or three years, and then, when the losing game becomes too palpable to be played any longer, the whole scheme will be given up, the boats sold, and probably the whole 75,0000, or more, expended and lost. In conclusion, I willingly leave it to your own good sense to decide between the recommendation of the directors and that of the committee, the former being almost all proprietors in the steam-packet company, and the latter, with the exception, perhaps, of one of the dissentient members, having no interest in it. It is for you to determine which is the better course to adopt; and since the directors have issued proxy papers, in order to strengthen themselves at the special general meeting to be held on the 26th inst.,

I carnestly invite such of you as can to attend that meeting, and those who cannot attend to send to me, or give to some friend, their proxies. I wish particularly to impress upon the smaller shareholders the value of their assistance (many of whom are not aware that they have three votes for each of their first ten shares), and I am satisfied that, if they will but unite their forces, we shall succeed in preventing the directors launching out into another of those extravagancies for which we are now so deeply suffering, and which is no less at variance with the line of policy recommended in the report of the committee than with the prosperity and security of your property.

JAMES WHISHAW.
33, Devonshire-street, Portland-place, May 17.

MANCHESTER, BUXTON, MATLOCK AND MIDLAND.

Many of your readers are doubtless interested in the above undertaking, and may be gratified to hear of that which would in all probability tend to rescue their property from its present depreciated condition—80 per cent. discount. A credible authority states to me that the Duke of Rutland no longer opposes the bill now in the House of Commons, for the deviation and branches;—and the first portion of the line is expected to be opened for the next spring traffic. The holders of shares should therefore hold hard.

#### Gossip.

Elsewhere we have printed an interesting paper on the subject of FERRIES, which is well worth perusal. The ferry across the HUMBER, belonging to the MANCHESTER, SHEFFIELD AND LINCOLNSHIER, and Mr. John Fowler's ingenious and simple means of improving it are the specialty of the paper. The concluding remarks on Government enterprize are sensible and true.

The GREAT SOUTHERN AND WESTERN OF IRELAND, not being able to agree with the Post-office on the terms for the conveyance of mails, went to arbitration on the point. The arbitrators eventually referred to the umpire, Mr. Martley. Mr. Martley's decision was given last week; we hear it substantially bears out the award of one of the arbitrators, Mr. Wyndham Harding, in giving the company actually three times the sum offered by the Post-office. The consequence must be a difference of many thousands a year to the company. The short-sighted parsimony of the Government (says our correspondent) in offering so atterly inadequate a sum to the railway company as it appears they did, is highly censurable. Surely railway enterprize in Ireland should not be discouraged by attempts on the part of the Post-office to drive bargains even more extortionable than those which landowners are accused of aiming at, though without the excuse which landowners have of their rights being compulsorile indewners have of their rights being compulsorile indewners have of their rights

The recent fine weather (says the Worcestershire Chronicle) seems to have infused new spirit into masters and men, and the vast works constructing on all hands are progressing as fast as the most eager shareholder could wish. On several points, even the Oxford, Worcester and Wolverhampton is proceeding with commendable diligence; the Birmingham, Wolverhampton and Dudley is making rapid strides in the neighbourhood of Bilston; the South Staffordshire, particularly beween Walsall and Alrewas (the point at which it joins the Birmingham and Derby line) is progressing satisfactorily; the Stour Valley is by no means behind its compeers, especially at its northern extremity, where it runs into the London and North-Western; and its continuation (so to speak), the Shrewsbury and Birmingham, is perhaps going on faster than any of those previously named.

The invitations of FREE PASSES offered some time ago by the directors of the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE to the shareholders, to examine for themselves the works at GRINSBY DOCKS, &c., were numerously sought after, even though the weather in April was cheerless enough; and to these practical examinations and the improved knowledge of the general features of the line, may be attributed the better estimation in which this large property is held. We have heard that the great extent of the docks, the coffer-dam of which now incloses a circuit of two miles, made a corresponding and unexpected impression on many of the visitors. These docks will admit the largest class of steamers, and will not be inferior in size to the West India Docks in the Thames. Now that the fine weather has set in we would suggest that the directors should repeat their invitations.

A MEETING OF THE BAR took place in the Old Hall,

Lincoln's-inn, on the 13th, to discuss certain rules adopted by those gentlemen who practise at the partiamentary bar respecting the payment of fees. The meeting agreed it was not competent for a barrister to refuse a brief solely on the ground of fees previously incurred to another member of the bar remaining unpaid. As a corollary to this, the Railway Record asserts that Messrs. Austin and Talbot, and other eminent counsel, have given up all connexion with the Great Western's applications to Parliament. The rumour is, that the leading parliamentary counsel passed a resolution not to accept, during this session, any briefs from parties in arrear for fees; and that the resolution having been communicated to the Great Western Board, who, under this head, owe (or, at least, owed at the time) some 30,000%, the briefs transmitted to these high legal authorities were recalled.

The BRIGHTON TRADESMEN met last week to adopt measures in reference to the regulations of the London, Brighton and South Coast, by which the accommodation of the public is so much lessened. Resolutions were passed, expressive of a strong feeling which seems to exist in Brighton against the directory; and a committee of commercial men in the town (some of whom are also proprietors) was appointed, to remonstrate and confer with the directors, and to watch their proceedings. Truly, the present gentlemen forming the Board have a nice time of it with their friends and shareholders!

The receipts for passenger traffic on the Hull and Grimsby portion (16 miles) of the Manchester, Sheffield and Lincolnshire, for the week ending

May 13, was 2611. 14s. 6d.

In the EDINBURGH TOWN COUNCIL last week, Mr. Bell, the city clerk, reported that the Lord Provost, who had been empowered by the Town Council, and Mr. Learmonth on behalf of the NORTH BRITISH, had concluded an arrangement on the long disputed case of the Trinity College Church, on the following terms:—The company to come under an obligation to pay the, sum of 15,000% for a church in the meantime, with 800% for the old site, and 500% for servitude, and also all the expenses, Mr. Rhind, architect, to be requested to make an estimate and plan of the new buildings, and should the same exceed the sum of 16,000%, the difference to be made up by the company; but if under that sum the difference to be returned. No site has as yet been appointed.

The reprisals hinted at some time back of seizing the French shipping, in return for the State appro-priation in France of the English shareholders' railway property there, is thus commented on by the Times: - The above view is one that would doubtless find sympathy amongst a large majority of the un-fortunate parties who are now threatened with loss from their reliance upon French honour; and it is therefore necessary to point out that, although not a word can be said to lessen the indelible stain which France would inflict upon her reputation by the contemplated act, the case is not one which will admit of the parallel made use of by our correspondent. Although the English public constitute a large pro-portion of the shareholders of these undertakings, he confiscation is not visited upon them exclusively, but is also levelled at the native capitalists who have been unfortunate enough to be equally credulous with the foreigner as to the good faith of their nation. The act therefore is not one of specific hostility against the English, such as would alone justify Government interference, or which could be regarded as analogous to the seizure of their merchant ships. Persons who embark their money in foreign ships. Fersons who embara their money in accountries are considered to be exposed to every description of legislation which may be adopted in those countries, however unjust, supposing applies to the general population, native and foreign, and is not partially directed against themselves. The case of the Spanish bondholder is one of a far more direct kind than that of the French shareholder, yet even here a resort to force has never yet met with approval, the consideration being always present that if you once establish the precedent of taking up these claims, the inducement to the exercise of caution on the part of lenders will be greatly removed. The only hostilities, therefore, to be adopted should be found in the force of public opinion, which should not only prevent a dishonoured State from ever again being trusted in the markets of the world, but should also exclude the representatives of such State from every other than mere formal intercourse at the British Court.

The SPIRIT OF THE TIMES is pretty evident in the following paragraph:—A workman employed on the Northern of France Railroad, when stating the result of an interview he had had with one of the Ministers, said, that the Minister had delivered a "very pretty speech," but as he promised them nothing, he had himself called on him to con-

Digitized by GOOGLE

clude, and had replied, that the workmen of the Northern Railroad were determined that their demand (an increase of salary of If. per day) should be granted, and that the Garde Nationale Mobile stationed near the railroad should be removed. Minister having said that they had only been ordered there for the safety of the property, the workman replied they were not wanted. "Indeed," said he to the club, "have we not taken good care to protect the railroad? which we hope some day to see our own property.

In compliance with a request lately expressed to us from several subscribers, we beg to append the names of those members who divided on the AUDIT OF ACCOUNTS bill.

Order for second reading read; motion made, and question proposed, "That the bill be now read a second time." Amendment proposed, to leave out the word "now," and at the end of the question to add the words "upon this day six months." Question put, "That the word his day six months." Question put, now' stand part of the question." The 'now' stand part or the q---ayes, 38; noes, 100. The house divided :

#### Reports of Meetings.

Mure, Col.

NEWCASTLE AND CARLISLE.

May 16. — Adjourned Meeting, Newcastle-upon-Tyne, to consider "offers by the Caledonian and the York, Newcastle and Berwick, for leasing the line. Mr. M. PLUMMER in the chair.

The proposition of the Caledonian was to guarantee the present dividend (6 per cent.) in perpetuity with benefits of all profits beyond that sum to 8 per cent., or to guarantee 6 per cent. for three years and 7 per cent. afterwards; the York and Newcastle proposition was 6 per cent. for three years and 7 per cent. in perpetuity.

CHAIRMAN suggested the propriety of the respective offers being left in the hands of the directors, who at some future meeting would submit a resolution to the shareholders on the subject.

Aftersome conversation, a resolution was proposed by Mr. J. Shield, and seconded by Mr. J. Hall, to the following effect:—"That it is expedient to dispose of the Newcastle and Carlisle on proper terms, and that the directors be authorized to treat for that purpose, and to enter into a contract subject to the approval of the shareholders at an adjourned meeting to be held on Wednesday, the 31st inst."

The resolution being agreed to unanimously, the meeting was adjourned accordingly.

The meeting was very numerously attended by the shareholders, and a good deal of excitement has pre-vailed amongst those interested in the line. The

shares of the Newcastle and Carlisle have advanced from 81. to 121. per share since the project of disposing of it became mooted.

MONKLAND AND KIRKINTILLOCH, BALLOCHNEY AND SLAMANNAN.

May 16 .- Special Meetings, Glasgow, to consider the draft of a bill before Parliament to amalgamate the Monkland and Kirkintilloch, Ballochney and Slamannan.—Mr. FINDLAY, of Castle Toward, in the

After the advertisement of the Monkland and Kirkintilloch had been read, Mr. J. MITCHELL went over the terms of the bill.

A resolution for its approval was moved by the CHAIRMAN, seconded by Mr. B. GRAHAM, and carried unanimously.

A similar resolution, approving of the amalgamation on the part of the Ballochney, was next moved by the CHAIRMAN, seconded by Dr. CLARK, and carried.

A resolution to the same effect for the Slamannan was proposed by Prof. RAMSAY, seconded by Mr. Brown, and agreed to.

WATERFORD AND KILKENNY.

May 17.—Half-yearly Meeting, London.—Mr. P. BUTLER, M.P., in the chair.
The Report stated that, since the last meeting, the

works between Kilkenny and Thomastown have been completed, with a view to opening the line between those places, notwithstanding the intimation given by them to the meeting in November last, of the inexpediency of doing so until the line from Carlow should have been completed up to a junction with the Waterford and Kilkenny line. The directors regret exceedingly having been driven to a contrary course of action; but although at that time the Irish South-Eastern authorities spoke positively of having their line completed at the present period of the year, very trifling works have as yet been undertaken south-west of Bagenalstown. Under these circumstances the proprietary will perceive that the directors had no alternative but to open, as it would have been highly inexpedient to leave this finished portion of the line unopened for an indefinite period. hope, by the strictest attention to economy, that they will be enabled to overcome the adverse circumstances of the case by working even this short dis-tance to a profit. The directors have now the satisfaction of announcing to the meeting that the several stations being finished, and the works in other respects completed, the railway between Kilkenny and Thomastown was inspected by the officer appointed by the Commissioners, on the 6th inst., and finally opened to the public on the 11th inst., in the presence of a majority of the Board, who, having been eye-witnesses of the different works, testify as to the efficient nature in which they have very generally been put out of hand by the contractors, Messrs. Hammond & Murray. The statement of accounts showed the total receipts at 221,180l. 11s. 8d., balance

at the banker's 1,962l. 7s. 5d. The CHAIRMAN congratulated the shareholders on the withdrawal of opposition to their branch and deviation lines. He maintained still the same high opinion of the undertaking as he did at first, and concluded by moving the adoption of the Report.

After some observations from Mr. MARSH, as to several items of expenditure, the Report was passed unanimously.

Capt. Moorsom stated that the sum already expended for the works on the 11 miles between Kilkenny and Thomastown was really only 144,000l., and that about 150,000l. would make the remaining works on 19 miles on to Waterford, together nearly 300,000l., which left still a margin of 33,000l. for stations and other contingencies, making, as he before estimated, 330,000l. for the completion of the line to Waterford.

The Solicitor, in answer to a shareholder, said that there was 11,000l. due on the last call of 2l. a share, of which they calculated they would receive 9,000% at least.

The meeting was then made special. The deviation bill was read and agreed to, and certain shares were agreed to be forfeited.

#### COMMITTEES ON OPPOSED BILLS. COMMONS.

GROUP 2.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE (Humber Ferries Improvement at Hull and New Holland). -Promoters' Case. - May 15. - Mr. Serj. Wrangham said the chief object of the measure, as illustrated by the elaborate models in committee, was the improvement on the Hull side of the Humber of the ferry from Hull to New Holland, so as to ameliorate the | present, if a passenger wanted to proceed by the

communication and the transit, and render it more convenient for the traffic of the railway. This route was, in fact, the great highway from the important town of Hull, a considerable portion of East York-shire north of Hull, and the counties immediately to the south of Hull, into the Midland and Eastern Counties, connecting them, one and all, with the great mart, London. He then proceeded to describe the geographical position of the territory embraced in the Manchester, Sheffield and Lincolnshire system of lines. At present there existed one great drawback to the acknowledged completeness of this important system, in consequence of the inconvenient character of the existing ferries, and which it was the object of the present measure to abate, so as to enable steamers to cross the river immediately the arrival of the trains, and so that the punctuality of the railway might be maintained with as much precision as on dry land. Considerable improvements for these purposes, by means of swift steamers and a long pier at New Holland, had already been effected by the company, at an expenditure of some thousands. The learned counsel then proceeded to explain the pier it was proposed to erect on the Hull side, and the spirit of hostility and opposition in which they had been met by the members of the Hull corpora-The present landing-pier of the corporation tion. was altogether inadequate for the purposes intended, as would be proved to the committee in evidence, and the railway company had consequently turned their attention towards furnishing the convenience required. Hull was, in fact, the great terminus of their line. New Holland was no terminus at all, any more than Holyhead was the terminus of the great Chester line. It was originally intended to carry the proposed pier out a distance of 1,000 ft., but its extent to the outer edge of the floating caisson was little more than 540 ft. Then, in order to interfere as little as possible with the navigation of the river and the scour of the channel, a tubular bridge, of 200 ft., resting on the caisson, was thrown out, which would rise and fall with the water. Damage, if any, that might be done to the navigation of the river would only be very small, compared with the great public advantage that would be conferred by the improvement in the railway transit.

Evidence.—May 15, 16.—C. Bailey, master of Hull

steam-packets, deposed that he had traded on the Humber for fourteen years. Could not get to the Hull landing-pier from want of water, and had known his vessels run aground. For eight days out of a fortnight they could not land there. Witness here produced his "log" of observations referring to the different occasions on which he could not land. It was dangerous .- Mr. J. S. Thomson, merchant and commission agent at Hull. It would be of great advantage to Hull to have a landing place where vessels could land passengers at all states of the tide. The present landing-place was not at all satisfactory, and railways were now becoming so much in vogue, that a landing-place on each side would be an advantage to the public. If there were an improved landing-place the passage would be shorter by some 22 minutes. The requirements of the railway and the trade of Hull demanded these improvements.—Capt. Laws, manager of the Great Northern, and a director of the East Lincolnshire, was called. East Lincoln trains were now working in common with those of the Manchester, Sheffield and Lincolnshire, to and from the New Holland ferry. In the returns of arrival of trains at Louth, 30 miles from New Holland,-the part of the line open since March,-nearly every late arrival had been owing to the detention of the packet on the Hull side, either her grounding, or being obliged to embark the passengers in a boat; with the fogs and smoke, to which Hull is peculiarly liable, it is dark in winter at 4 30 p.m. and 7 30 a.m., consequently several of the trains must be embarked or landed in the dark, not only with great inconvenience and delay, but with considerable He landed in the evening of last September, with Mr. Cubitt, at the dock pier, because there was not water at the new jetty. There were two other steamers aground within them, and they had to get the luggage, &c. of not less than thirty passengers. over these steamers, and lug it up 30 ft. of wet slippery steps, to the no small danger of the passengers and luggage; and one of the female passengers was as near falling from the slipperiness of the steps into the water as possible, had she not been caught by a sailor. Unless the railway had an exclusive landing at Hull as well as New Holland, at least half the advantage of the railway would be done away with, or if other than their own vessels were permitted to use their jetty, they would often find that instead of landing on a dry, convenient and covered platform, they would be obliged to scramble over one or two dirty vessels with their luggage. Indeed, at

Digitized by GOOGLE

steamer, he never knew at what pier to find her; and if near the time of starting, expecting to find her at the corporation pier he went there, and was just time enough to see her starting from the dock pier. The objection raised to the proposed floating jetty was utterly absurd; much more reasonably might the old trade of the Thames complain of similar jetties at Gravesend, Greenhithe, Woolwich, Greenwich and other places, both above and below the bridges, where at least 100 vessels to 1 pass and repass in a river not one third so wide as the Humber as could ever be expected to pass this jetty; but for a very short time near high water could any vessel pass within the pro-posed jetty during daylight, and at dark her lights would be much more likely to guard them from running aground than to obstruct their navigation; any one who could not take his vessel clear of this jetty was not fit to be trusted with her. There were no fewer than three parties, all jealous of one another, namely, the Burgh Corporation, the Dock Corporation and the Trinity Board; and whatever one proposed the other two opposed; and if a fourth party came in, they all joined in opposing it. Some of the oppo-nents of the present bill invited the railway interest with which Capt. Laws was then acting, to join them in opposing the dock company. That was the corporation of the burgh, at the head of which was Mr. Ald. Thompson, and in conjunction with his party they got up a plan for a south and independent dock on nearly the site of the jetty, and a variety of opinions existed as to whether that or the site on which the new docks building existed was the more preferable; and the dock company were coerced into making more dock room; and, although it was admitted, so far as a mere dock was concerned, that the south was the most convenient, the total inadequacy of necessary land for wharfs between low water and the railway was an objection. Nothing could be more unreasonable than the local interest of Hull opposing the jetty, which would be not only the means of superinducing another and an important stream of commerce into the port, but tend very much to prevent what they had going to Grimsby; but, odd enough, they successfully opposed the railway from Leeds on exactly the same plea, that it would interfere with the river craft and trade of the port, and consequently the railway was stopped at Selby, and Hull for many years deprived of a railway from the West Riding and the manufacturing districts. After that advantage had been demonstrated between Liverpool and Manchester, on the adage, he supposed, of better late than never, the very same influential party who proposed and carried by a large majority, at a public meeting, a resolution to oppose the Leeds and Hull, and stop it at Selby, afterwards was the chairman and active promoter of the scheme to carry it on from Selby to Hull, and he imagined that Mr. Ald. Thompson, who was an anti-east-dock man in 1843, and was now, in was an anti-eact-dock man in 1935, and was now, in 1848, a member of the east dock Board, would, ere long, be quite convinced that the improved New Holland ferries were intimately connected with the prosperity and improvement of Hull. There were not fewer than 600 daily passengers embarking and disembarking at the railway pier at New Holland, to and from Hull, although there were at present only about 80 miles of railway opened. In five months more a continuous line from thence to London will be in active operation, and in nine months a further equal distance-indeed, putting the New Holland ferry in railway communication with every part of the kingdom. Other witnesses deposed that the amount of capital proposed to be raised for the new pier at Hull was 57,000l. There had been several previous attempts, but all were unsuccessful, from their not being carried into deep water. The works would be executed in twelve months, and the money be raised by new shares. It appeared that the Post-office in Hull closes at 5 30 p.m., and that if an arrangement were made whereby the steamer could regularly depart from Hull across the water and be in communication with the railway to the southern side, there would be a great extension of time for preparing the mails, which would also go considerably quicker. Merchants and wharfingers in Hull gave it as their opinion that the present means of communication on the Hull side of the water were not such as the trade of Hull required. The proposed improvement would greatly facilitate the transmission of goods going to Nottingham and the principal towns, and the projection of the pier would not interfere with the tide, or the 10,000 craft going out of the Humber.—May 17.—Mr. J. Fowler, the company's engineer, was of opinion that the proposed pier would not obstruct the navigation in any way to the extent which it went. It was not likely, as alleged by the corporation of Hull, to cause a silting up, or to deprive small craft and boats of their usual landing place. The pier, inclusive of the caissons, would project 1,010 ft. into the river. It

was of such a construction as not to produce a ten-dency to silt up. It might have the effect of making the current slightly sharper, but it would not have a tendency to change it. It was not likely to obstruct more comprehensive measures of improvement. They wish to do as little injury as possible. The construction of the pier would be like that at New construction of the pier would be and the previous Holland. Mr. Fowler corroborated the previous avidence as to the difficulty of landing. Had not evidence as to the difficulty of landing. Had not only seen the landing-place crowded with people, but had seen vessels waiting to get them out, and could not manage it.—Mr. Rendel, C.E. was of opicould not manage it.—Mr. Rendel, U.S. was or opinion, from the familiar knowledge he possessed of other ports throughout the country, that the kind of accommodation at present provided for landing passengers at low-water at Hull was very bad. It was very inferior to what the steamboat traffic rendered necessary. He thought also that looking to the increase of railways and the importance of connecting Hull with the railway system on the Lincolnshire side, it was absolutely necessary the steam-packet accommodation should be increased, and the ferry accommodation improved. If the landing-pier were inadequate now it would be more so on the opening of the line to New Holland. Had always maintained that if ever the Lincolnshire district should be connected by railways with Hull, it was absolutely neces sary that the ferry accommodation at Hull should be much better than at present. It was to be greatly regretted that all parties could not agree to carry out some plan which would prove highly advantageous to all interests connected with the port. Was of opinion that a pier might be constructed on a plan that would leave the current along the shore so little disturbed as to be practically harmless. It would be a great inconvenience if on the opening of the railway the inhabitants of Hull had no better landing-place than that which at present existed. Thought that the plans proposed by Mr. Fowler were well considered and judicious; that his object had been to place the pier as conveniently for traffic as it could be, having reference to a reasonable amount of convenience to vessels going in and coming out of the docks; and that he had selected a fair site. Believed that, if the Lincolnshire line were carried out to its full extent. those who were now opposing the measure would, within two years, be recommending a better steam-packet accommodation. The Humber might be called the most silting-up river in the world; but the world was very wide; and to make a reference, he believed there was a great silting up in the Ganges. The carrying the pier beyond the line of deviation would be doing injury, but only pro tanto.—Mr. Cubitt, C.E. followed with corroborative evidence.

Opponents' Case.—May 17, 18.—Mr. D. Hill stated the chief points on which the mayor, aldermen and corporation of Hull rested their opposition to so much of the bill as relates to the pier and proposed works at Hull, contending that they would be in-jurious to the navigation, have a tendency to alter the currents, change the channel and increase the silting. The site selected was not the best, and the land proposed to be taken the only proper site left for additional dock room at Hull. The proposed pier, moreover, would project beyond the line of deviation fixed by the Admiralty.

Evidence.—May 18, 19.—Local and other witnesses

BIRMINGHAM AND OXFORD JUNCTION.—The sitting was adjourned till the 22nd, to enable the committee to consider the Report of the Commissioners on the subject of the gauges.

CONDONDERRY AND COLERAINE .- Promoters' Case. -May 16 .-- Counsel declared that the object of the bill was to enable the company to make several deviations in their line, and to amend their existing

Decision .- Adjourned.

LONDONDERRY AND ENNISKILLEN. — Promoters' Case. — May 19. — Counsel declared that the bill sought the relinquishment of part of the line be-tween Omagh and Enniskillen and certain deviations. Decision .- May 19 .- Preamble proved.

#### GROUP 12.

EDINBURGH AND NORTHERN .- Promoters' Case .-May 15 .- Counsel explained that the object of this bill was to authorize the construction of branches to Boscobie, Keltyhead and Glencraig.

Decision .- May 16 .- Preamble proved.

GLASGOW, AIRDRIE AND MONKLANDS .- Promoters' Case.—Evidence.—May 18.—Local and other witnesses in support.

GLASGOW AND MONKLAND (Branch across the Clyde).—Opponents' Case.—May 19.—Mr. Austin, on behalf of the Corporation of Glasgow, took an objection to the subscription contracts in this case, to the effect that the promoters, instead of paying the deposits in money, had given the banker of the Queen's Remembrancer a bill for the amount (18.000l.), but the Committee overruled it.

#### GROUP 14.

BRISTOL AND EXETER (Taunton and Castle Cary Branch).—Opponents Case.—May 15, 16.—Counsel attacked the validity and legality of the subscription contracts and the general object of the scheme.

Decision .- May 19 .- The committee declared that the subscription contracts were defective, but inasmuch as those contracts had passed the ordeal of the Standing Orders' Committee, they did not think it expedient to visit the consequences of the defect upon the company, and therefore they resolved to pass the preamble.

#### Law Intelligence.

May 12 .- In the LORD CHANCELLOR'S COURT, in re Holden v. the North-Western, this was a motion to discharge an injunction of the Vice-Chancellor, by which the defendants were restrained from continuing the formation of a line in Leamington, on the ground that they had diverged from the parliamen-tary plan, to the injury of the Crown Hotel, of which the plaintiff is mortgagee in possession. By the ori-ginal plan the line was to approach within 95 ft. 6 in. of the hotel, but by the divergence it now comes within 85 ft.—The Lord Chancellor said that as the case presented itself at that moment, it would be better to allow it to stand over, and give the plaintiff an opportunity of answering the last affidavit. The company might go on with their works, if they thought fit to risk the consequence of having the question of the injunction decided against them.

In the same Court, in re Smith v. the Great Northern, this was a motion of appeal from an order of the Vice-Chancellor, continuing an injunction, by which the defendants were restrained from taking possession of a part of a manufactory for bone-crushing, situate at Gainsborough, in Lincolnshire, unless they took the whole of it .- His Lordship stopped the argument by observing that he thought company were bound to take all the land contained in their original notice, and that they must comply with the provisions of the 92nd section of the Act by paying in the purchase-money for the whole of the land, and buildings erected on it, before he could express any opinion on the question of their being compelled to take the whole factory.

DUCK DECOY .- May 12 .- In the BAIL COURT, in re the Queen v. the Eastern Counties, Mr. Watson applied for a rule calling upon the directors to

Digitized by

show cause why a writ of mandamus should not issue commanding them to take the necessary steps for empaueling a jury to assess the amount of con-pensation to a gentleman named Eagle, for injury to his wild duck decoy in consequence of the defendants line passing close to it, which had the effect of frightening the wild ducks from the spot. Mr. Eagle had caused the usual notice to be served on the defendants of his claim, which amounted to 6001. but to which they had not paid any attention. duck decoys were particularly mentioned in the Act.

—His Lordship granted a rule to show cause.

ILLEGAL SALE OF SHARES. - May 15. -COURT OF COMMON PLEAS, in re Sawyer v. Langford, the action was in trover, brought to recover certain scrip shares in the South Yorkshire, Doncaster and Goole, deposited with the defendant as a security, and which he had sold. The plaintiff proved the contract under which the shares were deposited with the defendant and a demand and refusal to have them returned to him made to the defendant on the 24th of August. The plaintiff also proved by the sharebroker's books that on the 3rd of August the shares were selling at 30s., on the 28th of August at 17s. 6d., and on the 5th of February last at 1l. 12s. 6d., another call then having been paid. The defen-dant was not a sworn broker, and, although accord-ing to the custom of brokers a broker had a right to sell to reimburse himself, he could not do so until he had given a reasonable notice. The plaintiff denied that he had received this reasonable notice, and contended that the defendant had only a lien on the shares, and had no power to sell them. For the defendant, it was shown that the account was closed on the 25th of August, and that the market was a falling market; and a letter dated the 25th day of August was put in to show that notice that the defendant intended to sell the shares was given to the plaintiff on that day; there was, however, much question whether the letter was posted on that day or the day afterwards.—The Lord Chief Justice said, there was no fact in the case. The defendant was not a sworn broker, and under the 7 Geo. 2. c. 8. the contract was illegal, as a gambling transaction. The defendant had received these shares as a security for differences on a sale of consols. The jury were directed to find a verdict for the plaintiff for the highest amount for which it was proved the shares could have been sold, namely for 81l. 12s. The jury found accordingly, and as to the point of reasonable notice having been given to the plaintiff of the intended sale, they gave their verdict for the defendant.—Upon which the Lord Chief Justice gave the defendant leave to enter a verdict for the defendant, or a nonsuit, if the Court in banco should be of opinion that this was a legal transaction under the Act.

May 13 .- At the MARYLEBONE POLICE COURT, Abbott and his female confederate, Williams, have been committed for the various robberies at the London stations, on which they were remanded on the 4th.

#### GREAT WESTERN FATAL ACCIDENT.

May 13.—An inquest was summoned at Swin2on respecting the death of Mr. A. A. Lea, one of the passengers severely wounded on the 10th inst. The identity of the deceased having been proved, the several witnesses examined at the inquest at Shriven ham were successively called. Their testimony dif-fered in no material point from that before given.— Mr. Michael Lane, resident engineer, deposed to having accompanied Capt. Simmons to Shrivenham, to make an experiment as to how much time would be occupied in placing the horse box and trucks in the position they occupied on the line when the accident occurred. From that experiment they found that to move the horse-box and cattle-truck to the positions in which they were placed, and to bring the loaded truck on to the turntable, occupied five men nearly seven minutes. On the occasion of the accident four men only were employed, while in making the experiment they had five men, so that a greater time might be reasonably supposed to have been occupied. The policeman on duty, Pargetter, was stationed about 400 ft. from the siding where the horse-box and cattle-truck entered upon the line, and he could not, as witness believed, have helped seeing the obstruction had he looked in the proper direction Capt. Simmons, while the experiment was being tried, had gone to the signal-post where the policeman stood, and his opinion was, that unless the man had shut his eyes, or looked in another direction from that in which his eyes ought to have been fixed, it would have been utterly impossible for him to have missed seeing the horse-box on the line, and not only that, but a great way further down the line.-The Coroner here further adjourned the inquiry until the 17th.—May 17.—The adjourned inquiry was re-

The policeman Pargetter, who had been sumed. placed in custody at the close of the previous sitting, was produced by the superintendent. The coroner was about to read over the evidence of the several witnesses, when Mr. Hooper objected-if the depositions quoted were to be used against his client Pargetter, he should demand that the witnesses be re-examined vivá voce. The judges had decided this point and he should insist on his right to hear the evidence taken.-The coroner appeared embarrassed by Mr. Hooper's application; but the jury protested that they would not sit to hear the same evidence from the lips of witnesses called a second time. The evidence of the first witness, Stephen Carter, was therefore read at length by the clerk, after which the coroner asked Mr. Hooper if he would like to ask the witness any questions. Mr. Hooper declared himself quite unable to catch the points of the evidence owing to the hurried manner in which it had been read over He should not ask any questions, but enter his protest against the whole proceedings. The jury agreed to the verdict, viz.: "Manslaughter against James Maybury, William Willoughby, and George Pargetter," who it will be seen was not included in Pargetter," who it will be seen was not include the verdict returned by the Shrivenham jury.

May 13.—At the inquest on the bodies of Mahony and Wiltshire, whose remains had not been previously identified, after evidence similar to that we have already given, the Coroner, having asked Mr. Clarke whether he considered the signals at the Shrivenham station were placed in the best positions, Mr. Clarke replied that two years ago, when the express trains were first laid on, Mr. Gooch, the locomotive superintendent, and himself devoted some days to making an accurate survey, with a view to discover whether the signals were correctly placed. The signals at Shrivenham were on that occasion altered to the positions in which they now stood, and, as the jury had already heard from Roscoe, the engine-driver, they could be seen distinctly at the distance of a mile and a half.—One of the jury thought the duty upon the policeman of attending to both signal-posts as well as the gates at the level crossing over the line, was too much for any one man, and recommended a second policeman. When the line was first opened second policeman. When the line was first opened two men were employed, and he had heard that when one was removed the other had left the service, because he was always in fear of some accident occur ring .- Mr. Clarke said a beat of 12 yards was all the was required to take to perform his duty properly. There was still a second policeman at the Shrivenham station, who shared the duty with Pargetter—the one taking the signals by day and the other by night .- The coroner and jury adjourned to the station to view the signals. The usual point for the policeman when signalling an up-train was shown to be at the cross gates, and a short distance above the station, and at this spot was the signal-post for the down line. The up-signal was about 50 yards from the down, and nearer to the station, on the A careful inspection proved that the opposite side. policeman might, by walking twelve paces, or there-about, command a full view of anything approaching, even when a down-train was stopping at the station .- On the return of the jury, the Foreman said the accident had clearly been caused by the joint acts of the policeman Pargetter and the porter May-bury. The policeman's was an act of omission, and the porter's one of commission. The omission of the policeman might not have caused the accident, while that of the porter was sure to have caused it.—The jury said they were strongly of opinion that another policeman should be employed at the station.—The foreman said however he might agree with his brother jurors, he was very anxious these remarks should not go before the public as being intended to convey a censure upon the company; but if Mr. Clarke gathered from them that it required more than one policeman to perform the duty properly, he was sure that gentleman would admit it was only an act of justice to Pargetter to make the allusion they had done.—Mr. Clarke promised that the matter should be fully considered.—The jury returned a verdict of "Manslaughter" against the two porters Maybury and Willoughby, as in the other case

EASTERN UNION .- Mr. Saunders, the secretary of the company, has addressed the following letter to shareholders :-

The accounts of the Eastern Union, and Inswich and Pury St. Edmunds, and Hadleigh, to the Sist of December last, the period of their amalgamation, with a statement of the netual financial position of the smalgamated com-panies, which are in course of preparation to be laid before the general meeting, to be held on the 2nd of June, (in compliance with the request of many shareholders, this day has been substituted for the 26th of May, on which day the meeting was intended to be held), and printed copies of which will previously be transmitted to each proprietor, enable the directors to state that the resources, consisting of the amount of capital not yet paid up, and the sums authorized

to be raised on debentures, will considerably exceed the amount required to discharge all existing liabilities, and to open the lines to Norwich and to Harwich, with temporary stations, affording ample accommodation for the efficient working of the lines. But the whole of these resources cannot be realized, probably, in a less period than three years, the present not being a favourable opportunity for the issue of the unappropriated shares, or the extensive application of the borrowing powers of any railway company; and the amount of calls coming due during the present and part of the next year, and which have been fixed at such distant periods, in compliance with the wishes of the shareholders. will, to a considerable extent, be required for the liquidation of various obligations incurred on account of the construction of the line to Bury in anticipation of those calls, and of land and works on the line to Norwich. As, however, it is essential that the line to Norwich should be opened with more certainty in regard to pation of those calls, and of land and works on the line to Norwich. As, however, it is essential that the line to Norwich should be opened with more certainty in regard to time, and that the capital of the company already expended should thereby be rendered at an early period productive and remunerative, the directors beg most earnestly and anxiously to press upon your attention the vital importance of the general co-operation of the shareholders in the plan proposed in the accompanying resolutions, for raising the comparatively small amount required to ensure the order proposed in the accompanying resolutions, for raising the comparatively small amount required to ensure the early and complete success of the undertaking, and thereby at once to place the company in the prosperous and independent position, indispensable either to a profitable return on the capital embarked, or to satisfactory arrangements, should such be desirable, with any other company. If the money now stated to be required for this purpose be brought forward by the sharcholders, your engineer undertakes that the line to Long Stratton, within 10 miles of Norwich, shall be open for traffic in the course of this year, and to Norwich next Midsummer. The whole question resolves itself into whether you will make an effort, even, perhaps, at considerable inconvenience, to lend to your-selves, at good interest, and on unquestionable security, your respective moderate proportions of the amount required for these vitally important objects, and thus at once raise and establish the value of your undertaking and of your stock, or whether you will suffer the capital you have expended to lie dormant, until the payment of calls, of your stock, or whether you will suner the capital you have expended to lie dormant, until the payment of calls, spread over the years 1840 and 1849, and an improved state of the money-market may admit of your raising from the public, through your borrowing powers, the means of completing your lines. The directors feel satisfied that the shareholders will concur with them in the expediency of

THE RAILWAY BOARD .- A correspondent who affirms the entire dismemberment of the Railway Board after the recess calls our attention to the following very temperate remarks of the Daily News for the necessity of such a step: remarks to the truth of which we entirely agree:—Their reports have been disregarded, and were not entitled to regard. The bill introduced for an extension of their powers raised a general outcry of alarm from the interest threat-ened by it, and had to be withdrawn in disgrace—a fate that its needlessly vexatious provisions, and utter want of any practical merit to redeem them, richly deserved. The disputes and indiscretions of the railway world have gone on as eagerly as ever during the reign of the new system, and in some instances have been aggravated by it. The commissioners have done nothing to adjust the only difficulty which ought really to have been settled by a Government. On the gauge question they have done little, and what they have done is mere mischief. Their late decision on the Taw Valley gauge, under special circumstances that should have commanded the very opposite course, has done all that they could to increase existing discrepancies, and to exclude the West of England from the national system. Even in matters of mere detail, their inefficiency has been shown in a manner almost ludicrous. When an inquiry was thought necessary last year on iron railway bridges, instead of themselves undertaking the task, they had to ask Parliament to appoint, at a new cost, a special com-mission for this purpose, which, if a Railway Board could have been of any use whatever, it lay especially within its province to have fulfilled. There can be no doubt, therefore, that the "full information" which Mr. Labouchere has promised is shortly to be laid before the house, will show that we are paying 17,000l. a-year to this body for nothing of the least profit to the State, for merely harassing and damaging an interest that has done the State good service. It will be seen that the Board has been of no relief to Parliament, of no authority in promoting order, has settled no single question, has not been able to undertake any important office, has not gained-in short, composed as it has been, did not deserve to gain—the public confidence. The annual cost has been so much sheer waste to the country; and at a time when it is important to cut off all the profitless waste we can find in State departments, it will surely be expedient to abolish one, the cost of which we now find to be a total loss to the country.

NOTICE IS HERE, BY GIVEN, that an EXTRAORDINARY GENERAL MEETING Call the Sharcholders in this Company will be held at Hertz's Rowans, Rue de la Vietoire, Paris, on Wednesday, the 31st of May in 4, at 3 o'clock in the Afternoon, to consider the project of the French Government for the exportant of the Railway Companies, and the conditions offered by the Sharcholders in the event of the expr. viriation being voted by the legislature.

On this securion every Shareholder will be "will be deducted at the Offices of the Company, No. 5, Rue des Trois F. Tees, Paris, and eards of admission detained up to 12 o'clock at Noo." on the

and eards of admission obtained up to 12 o'clock at Acco. The day of meeting.

Shareholders who cannot attend in person are earnestly equested to send their Proxies to the Company's Offices, 2, Capelourt, London, on or before Menday the 28th of May, or direct to the Ollice in Paris, so as to arrive on the morning of the day of the Meeting. Forms of Proxy may be obtained on application at the Offices of the Company in Paris and London, and of Messra. Barned & Co., Bankers, Interpool.

By order of the Directors, CHARLES PONS, Secretary.

2, Capel-court, London, May 22, 1818.

PORT OF GREAT GRIMSBY.

### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

## Safen von Great Grimsbn.

### Sketches of Dem Railways.

LINES OF 1845. EDINBURGH AND NORTHERN. [Concluded from p. 348.]

Having given the substance of the notice or sketch which we had prepared, we shall now give a few extracts from Mr. Tullis's interesting Guide referred to last week :-

"The first public conveyance known in Fife was a two-horse diligence, which in 1805 ran with much deliberation and leisure between Newport and Pettycur, by Kennoway, a journey which occupied generally a whole day. In 1810 Mr. M'Nab, of the Hotel, Cupar, first established a four-horse coach, and set about improving the ferries, by showing that the Forth could be crossed at all times of the tide, and in every state of the wind. * In the year 1820 steamboats were first placed on the Forth and Tay ferries. Only a few years previously, the gallant Admiral Sir Philip Durham, who had been in the East India Company's Naval Service, declared, at a meeting of the county of Fife, when the subject of crossing the ferry by steam was discussed, that he had viewed the matter with a seaman's eye, and could tell them that a steamboat could never live on the Forth. The late Mr. Bruce, of Grangemuir, was of the same opinion. In the same way. Dr. Dionysius Lardner declared, on his reputation and knowledge as a man of science, that a steamer could never cross the Atlantic, and yet soon after found it agreeable to himself to cross the Atlantic by steam, in the face of his own declaration of the impracticability of the feat. Scott, also, after declaring that to talk about lighting the city of Edinburgh from a gas reservoir was downright nonsense, lived to acknowledge that he had delivered a judgment beyond the province of his knowledge. * * Within about a mile of Kinghorn the railway enters a tunnel of 240 yards in length, the longest on the whole line. This tunnel is cut under the Witch Hill, as it is called, this being the spot where all the witches in the Kinghorn district were executed. Here, on the 26th of March 1644, Katharine Wallenge was burned for witchcraft. She had been tried and convicted at Edinburgh. On emerging from below the Witch Hill, the traveller sees the pier of Pettycur (to which there is a short branch line from the railway) and the town of Kinghorn.

As a specimen of the pleasant style in which the book is written, and in which the author treats, perhaps somewhat irreverently, the traditional lore of his native county, we give the following:-

"Eastward from Dysart lie the Red Rocks, the place of execution in the days of witch burning. In a cave, hereabouts, the famous St. Serf held a theological controversy with the devil. The two combatants conducted the discussion in the searching form of question and answer, and both of them strained every effort to put the most confoundedly ticklish questions imaginable to each other. Specimens of the queries will be found in Andrew Wyntoun's Chronicle. In the end, the devil was obliged to give it up, and to admit, honourably, that St. Serf had clearly the advantage of him. * * To the eastward of Western Challes and the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the service of the myss Castle stand the ruins of the ancient castle of the Wemysses, a marked object from the Frith. It is popularly called Macduff's Castle, and said to have been a residence of the celebrated Thane of Fife, who was 'not of woman born.' But all the old castles in Fife are popularly associated with the name of Macduff, and there is scarcely a cave in the country in Macduff, and there is scarcely a cave in the country in which he is not said to have hid himself from the wrath of Macbeth. Nay, the ancient town of Earlsferry is said to be so called from the Earl having from thence been ferried away from the pursuit of the tyrant. * * The prospect pursuit of the tyrant. * * The prospect from the top of Tarvit Hill commands a variety of scenes intimately connected with the history of Scotland, which is scarcely, we believe, to be matched in the whole country. Here the army of the Queen Regent, under the command of the Duke of Chatchherault and Mons. D'Oysel, was stationed on the 13th June 1559, while the forces of the Lords of the Congregation lay below on Cupar Muir, the c hoice of their position being such as, according to judges in these matters, indicated a great knowledge of military science. The meeting ended in a treaty. Looking to the west the splendid remains of Falkland Palace are seen at the foot of the Lomond Hills. Scotstarvit Tower is immediately beside us. On the north is the Mount, the residence of Sir David Lind-

now the School-hill of Cupar, where Sir David's plays were acted. To the east is St. Andrews, with its venerable towers and ruins, reminding us that this was the cradle of Christianity in Scotland, and this also the cradle of the Protestant Reformation. memories of Wardlaw and Beaton, of Patrick Hamilton, George Wishart, John Knox, and Buchanan, are all crowded together on this spot. To the south are the fine ruins of Craighall, the residence of Sir T. Hope, Lord Advocate to King Charles I.; and farther east is Pitscottie, anciently the residence of Robert Lindsay, of Pitscottie, the historian. South from Scotstarvit is the castle of Struthers, now in ruins—an ancient residence of the Earls of Craufurd, and now the property of the Earl of Glasgow. Sib-bald describes it as being, in his time, "a large old bald describes it as being in stiller, and vast in-closures, and planting." From Hilltarvit is also seen the house in which the greatest of Scottish painters, Sir David Wilkie, was born. Below this is the village of Pitlessie, the scene of Sir David's picture of 'The Fair,' the original of which is now in the possession of Mr. Kinnear of Kinloch. * * The railway carries the traveller close by the church of Dairsie, and the fine ruins of the ancient castle. In this castle a Scottish Parliament was held in the year 1335. About four or five miles east from the Dairsie station, and half-way between that and St. Andrews, is Magus Moor, the scene of the murder of Archbishop Sharpe, on the 3rd of May 1679. * * The prospect up the Tay is gorgeous beyond description; and, from the Fife side, the view of Dundee, with the rising hills behind it, is exceedingly lovely—justicial in the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the sta tifying its ancient title, amongst those who visited it from the Highlands, of 'the city of beauty'—a title which a nearer and more intimate acquaintance with it would lead one to believe had been bestowed on it in irony. On the rocks along the Fife side, there have recently been erected a number of neat villas this quarter being much resorted to in summer as a place for bathing lodgings."

From these extracts it will be seen that the Edinburgh and Northern Railway traverses a district rich in landscape scenery; and sacred by its ancient royal and classical grandeur. Our readers may perhaps be aware, that the Tay is one of the most beautiful rivers in Scotland. It is related, that the soldiers of the Roman legion on coming in sight of the Tay, near to Perth, were so struck with the grandeur of its appearance, and the strong resemblance it bore to their own Tiber (as it then was, not what it now is), that they clapped their hands and shouted "the Tiber, the Tiber." We would take the liberty of advising our English travelling and pleasure-seeking friends to pay l'ifeshire a visit; and from our own personal knowledge, as well as from the information afforded by Mr. Tullis, we promise them a treat of no ordinary kind.

NEW HOLLAND STATION, BELONGING TO THE MANCHESTER, SHEFFIELD AND LIN-COLNSHIRE.

The plan on the next page represents, perhaps, the most complex station which is to be met with at the present time in railway works. This station is part of the system of ferries for crossing the river with the greatest facility; for it must be obvious that New Holland-a place with little more than a name—cannot be viewed as any terminus at all. Hull, the capital of this district, both for Yorkshire and Lincolnshire, is the natural terminus; and so the committee of the House of Commons have this week very properly decided, by assenting to the erection of a pier on the Hull side of the Humber.

The Humber at the New Holland ferry is about 2 miles in width, both sides of the river shelving very gradually over muddy banks into the deep water, and thus rendering the landing when the water is low, tedious, inconvenient and costly. On the Hull side of the river there is not a single pier which enables a passenger to land upon it at low-water. He must go from the vessel into a boat, exposed to all weathers, a nuisance which is not tolerated at any other landing-place of equal traffic. But on the Lin-

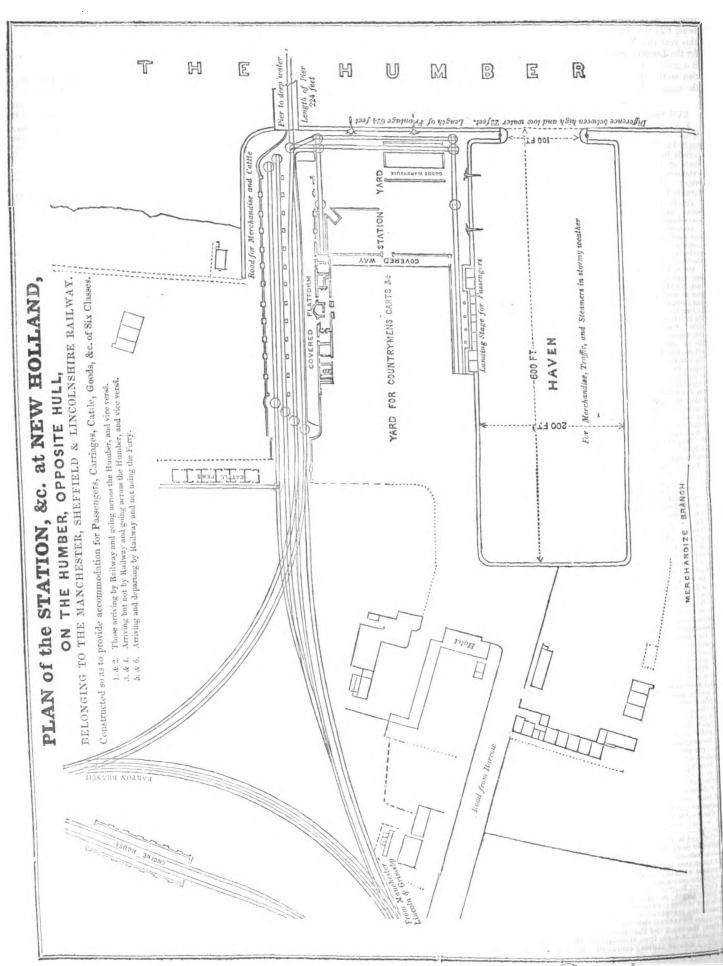

pier just as long as public convenience demands that it should be, and made an integral part of the most ample and varied station accommodation. The company wish to give the public the benefit of a similar pier on the Hull side of the river, and the question of their being permitted to do so has just been settled by the Admiralty and the House of Commons. It was obvious that the public would not recognize the sense of submitting to a treatment on the north side of the Humber different from and less convenient than that which they experience on the south side. The nature of the extensive works on the south side we will now proceed briefly to describe. As we have remarked, there is, perhaps, no station in the whole kingdom which has to provide accommodation of so multifarious a character. It has to serve an ordinary inland traffic, as well as a large coasting traffic; passengers, of all classes, carriages, merchandise; a large agricultural population which bring their produce to the Hull markets; besides a considerable amount of shipping business, to be carried on close to the station. All this kind of traffic is of six sorts, applying first to those who arrive by railway and cross the Humber; secondly, to the reverse of this class; thirdly, to those not arriving by railway, but wishing to cross the Humber; fourthly, to the reverse; fifthly and sixthly, to those who arrive and depart by the railway and do not use the ferry. A little study of the plan will show how ingeniously the engineer, Mr. John Fowler, has contrived a means of doing all this, and an actual examination of the works will prove how well Mr. Court has given effect to Mr. Fowler's plans. The buildings at the station are of brick with stone facings, purposelike looking buildings, with sufficient architectural ornament to keep clear of actual baldness, but not enough to raise the impression that anything but business has been thought of. The roofings are spacious, lightsome and rather elegant. The trains arriving and departing in connexion with the ferry proceed to the extremity of a pier, which extends 20 chains, or about 1,500 ft. into the river, so that passengers will be able to descend into the steamer entirely under shelter. The pier is of timber, 30 ft. in width, 20 ft. of which will serve for an excellent promenade, and in summer time will doubtless be an attraction to the Hull people, who are badly off for suburban promenades. Steps are placed at various parts of the pier, to be used according to the state of the tide. The pier is an admirable specimen of carpentry, on an enormous scale.

It may interest our geological readers to know the character of the strata pierced at various distances. The statistics are as follows:

At 1 chain from th				At 20 chai	ns.	
shore. ft. in	n :	<b>f</b> +	in.		ft.	in.

Some improved steamers have already been placed at this station; and others, we hear, of a novel and superior sort are in preparation.

Returning to the station, we find it efficiently provided with buildings for engines, carriages, and a gas-house for lighting the premises and the approaches in all directions, both by sea and land. Closely adjacent, and forming part of the works, is the haven for the coasting-vessels, which occupies about 3 acres of space. The say, where a monument has been erected to the late | colnshire side the company has constructed a | length is 600 ft., the width 200 ft. and the en-

trance 100 ft.—the total length of the frontage being 624 ft. In the course of the autumn of this year this New Holland station will be used for the London traffic to Hull, Beverley, &c. It is a great public necessity that the accommodation on the Hull side of the river should be on the same scale and equal in comfort.

#### EXTENSION OF TIME FOR RAILWAY WORKS.

A return has just been made to an order of the House of Commons of the companies who have applied to the Commissioners for an extension of the periods limited by their Acts for the purchase of iands or the completion of works. The period of extension is invariably two years, except otherwise stated. The abstract which we here append was furnished by the Morning Post:-

Alford Valley—For purchase of lands and completion of works; length, 15 miles 77 chains; estimated cost, 100,000L entertained.

Ashburton, Newton and South Devon-For construction and purchase of lands; length, 10 miles 40 chains; estimated cost. 130,000/.—entertained. The estimate is that authorized by the Act, but it has since, on a re-survey of the line, been reduced.

Airdrie and Bathgate Junction—For purchase of land and branch line; length, 19 miles 65 chains; estimated cost, 215,344.—not entertained. The Edinburgh and Glasgow obtained powers by the Act incorporating the Airdrie and Bathgate Junction to acquire the line of the latter, or and Bathgate Junction to acquire the line of the latter, or to form the same; and shortly after the passing of the Act, the Edinburgh gave notice of their intention to acquire the right to form the line. Relying upon this notice, the Airdrie delayed taking any powers to exercise the powers of the Act, but were compelled to resort to a court of law to enforce the Act against the Edinburgh. In the meantime, the time allowed for the purchase of land being about to expire, the Airdrie applied to the Commissioners for an extension of time, to which they received an answer "that, unless the two companies consent to join in the application, the Commissioners could not entertain it." The Airdrie, feeling the hardship of the case, obtained the opinion of counsel, and appealed to the Commissioners to reconsider the case, but unsuccessfully. Application was made to the Edinburgh to concur, but without success.

Ambergate, Nottingham, Boston and Eastern Junction—For completion of various portions of the line and purchase

r completion of various portions of the line and purchase of lands; length, 65 miles; estimated cost. 1.435.2771.entertained.

Ayrshire, Bridge of Weir, and Glasgow, Paisley, Kilmarnock and Ayr (jointly)—For purchase of lands and the completion of the Ayrshire and Bridge of Weir, and branches therefrom, authorized by the Kilmarnock, Paisley and Ayr Amendment and Branches Act of 1847; works not yet commenced; length, 6 miles 40 chains; estimated cost, 145,000.
—entertained.

Bridgewater and Taunton Canal and Stolford and Harbour

Bridgewater and Taunton Canal and Stofford and Harbour — For purchase of land and completion of works; length, 9 miles 40 chains; estimated cost, 390,000.—entertained. Bolton, Blackburn, Clitheroe and West Yorkshire—For purchase of lands and completion of works north and east of Chatburn; length, 18 miles 60 chains; estimated cost, 380 (MMX -entertained.

Bristol and South Wales Junction-For construction and purchase of lands; length, 14 miles 73 chains; estimated

cost, 250,000.—entertained.

Belfast and County Down—For completion from Comber to Downpatrick; for branch to Bangor, and for part of the Donaghadee branch lying between Newtown Ardes and

Birkenhead, Lancashire and Cheshire Junction—For purchase of lands and completion of works; length, 32 miles 4 chains; estimated cost (including plant), 975,0001. entertained.

Bristol and Exeter-For purchase of lands and complotion of works authorized by the Bristol and Exeter Branch and Amendment Act of 1845 (except with respect to the Clevedon and Tiverton branches—the former of which is opened, and the latter will shortly be so); length, 20 miles 40 chains; estimated capital, 255,000.—entertained. Also, for purchase of lands and completion of works from Yeovil branch to or towards the town of Crewkerne; length, 6 miles: estimated cost, 70,000/, -entertained

Birmingham and Oxford Junction—For purchase of lands and completion of works; length, 44 miles 60 chains; estimated cost, 1,900,000.—entertained.

mated cost, 1,300,000.—entertained.
Birmingham, Wolverhampton and Dudley—For completion of works and purchase of lands; length, 12 miles; estimated cost, 700,000.—entertained.
Caledonian and Dumbartonshire Junction—For purchase

Catedonian and Dumpartonshire Junction—For purchase of lands and completion of works; length, 26 miles; estimated cost, 434,053l—entertained.

Chard—For compulsory purchase of land and completion of works; length, 13 miles 40 chains; estimated cost, 210,000l.—entertained.

Cork and Waterford—For construction of works and completion of line, landth, 60 miles; estimated cost, 15m unit.

pletion of line; length, 96 miles; estimated cost, 1,500,0004.

Cheltenham and Oxford-For completion of works and purchase of land; length, 37 miles 74 chains; estimated cost of the centre line, 1,000,000,—entertained.

Cork and Bandon—For completion of works and purchase

Cork and Bandon—For completion of works and purchase of land; length, 20 miles; estimated cost (exclusive of land, rails and station), 133,000%—entertained. One year being allowed for the purchase of lands on the extension, and two years for the completion of the works.

Cork. Blackrock and Passage—For purchase of lands and completion of works from Horsehead to Monkstown Baths; bouth 1 miles 30 declarate the content of the works.

length, I mile 30 chains; estimated cost, 39,000%.-enter-

Cornwall-For purchase of land and construction : length. 84 miles 40 chains; estimated cost, 1,600,0007.

Caledonian-For purchase of land for additional works, Caledonian—For purchase of land for additional works, sidings and station accommodation, under the Caledonian and Clydesdale Junction Acts of 1845; estimated cost on the Caledonian line, 30,000k, on the Clydesdale Junction, 10,000k—entertained. Also for purchase of land and completion of works under the following Acts: Caledonian (Glasgow Terminia and Branches), ditto (Motherwell Branch Extension), ditto (Lesmahagow Branches Direct), ditto, (Branches to Wilsontown, &c.), ditto (Dumfriesshire and Cumberland Branches) (length, 89 miles 9 chains; estimated cost, 1,845,000k—entertained.

Cameron's Coalbrook Steam Coal and Swansea and Loughor—For completion of works and purchase of lands; length, 5 miles; estimated cost, 24,0001.—entertained.

Coventry, Nuneaton, Birmingham and Leicesterextension of powers; length, 14 miles 40 chains; estimated cost, 135,000.—entertained.

cost, 135,000.—entertained.

Deeside—For purchase of lands and construction; length,
29 miles 13 chains; estimated cost, 220,000?.—entertained.

Dundalk and Enniskillen—For purchase of land and completion of works between Castle Blayney and Clones, and from the Point to the Windmill-road (none of the land being purchased); length, 20 miles 40 chains; estimated cost, 222,4182.—entertained.

Direct London and Portsmouth—For purchase of land and

ompletion of works; length, 60 miles 70 chains; estimated cost, 1,454,000.—entertained.

Dunblanc, Doune and Callander—For purchase of land and completion of works; length, 10 miles 40 chains; estimated cost, 80,000.—entertained.

Delabole and Rock—For purchase of land and construc-tion of works; length, 16 miles 59 chains; estimated cost, 14,449.—entertained. This line is chiefly intended for the carriage of slate and manure, and is nearly a surface line. Locomotives cannot be used upon it without the consent of the Board of Trade.

Dublin, Belfast and Coleraine Junction—For purchase of land and completion of works; length, 88 miles 40 chains; estimated cost, 642,4001.—entertained.

Dublin, Dundrum and Rathfarnham-For purchase of land and completion of works; length, 5 miles 61 chains; estimated cost, 88,1584,—entertained.

Derbyshire, Staffordshire and Worcestershire Junction— or purchase of lands and completion of main line and For purchase of branch; length, 19 miles 331 chains; estimated cost, 400,000/. ntertained

Dublin and Drogheds—For purchase of lands and completion of works on branch line from Navan to Kells; length,

9 miles 60 chains; estimated cost, 103,000.—entertained.
East Lothian Central—For purchase of land and completion of works; length, 12 miles; estimated cost, 139,979.—

tion of works; length, 12 mines, communes contentioned.

Fast of Fife—For purchase of lands and completion of works; length, 18 miles 40 chains; estimated cost, 240,000. entertained

Edinburgh and Northern-For purchase of land and completion of works of low water piers at Broughty Castle, and on the opposite shore of the river at Ferry Port-on-Craig; estimated cost, 40,000/ -entertained.

East Lancashire—For the Back-lane, Crawshaw Booth and Bacup branches, and the Preston extension; length, 8 miles

64 chains; estimated cost, 241,380%,—entertained.
East Anglian—For the purchase of lands under the Elyand Huntingdon Act of 1845, in the parishes of St. Mary, Huntingdon and Brampton; length, 60 chains; estimated cost 18 cost, 12,1442.—entertained.

Furness—For purchase of land; length, 4 miles; esti-

mated cost, 70,000/.—entertained.
Great North of Scotland (Eastern Extension)—For purchase of land and completion of line; length, 47 miles 45

chains; estimated cost, 400,000L—entertained. Great North of Scotland and Aberdeen (jointly)—For purchase of land and completion of line and branches: length, 137 miles 60 chains; estimated cost, 1,500,000%-

Glasgow, Strathaven and Lesmahagow Direct—For purchase of lands and completion of works; length, 15 miles 20 chains; estimated cost, 330,0007.—entertained.

Glasgow, Kilmarnock and Ardrossan—For purchase of lands and completion of works, with the exception of part of the Irvine branch, the Preston branch and the Bog branch;

length, 33 miles; estimated cost, 610,000%.—entertained.
Great Southern and Western (I.)—For completion of works; length, 41 miles 60 chains; estimated cost, 565,000% entertained.

Glasgow, Airdrie and Monklands Junctionof lands and completion of line; length, 14 miles; estimated cost, 400,000/.-entertained.

lasgow, Paisley, Kilmarnock and Ayr-For purchase of lands and completion of works of Cumnock extension, Glasgow and Belfast Union, and line and branches authorized by the Company's Branches and Amendment Acts; length, miles; estimated cost (parliamentary estimate), 4,000/.—entertained.

23.664,000%—entertained.
Glasgow, Dumfries and Carlisle—For purchase of lands and completion of line and branches; length, 118 miles 60 chains; estimated cost, 1,969,0007.—entertained.

Great Western and Uxbridge—Length, 2 miles 60 chains;

Gloucester and Dean Forest—For purchase of lands and completion of railway and docks; length, 10 miles 20 chains, estimated cost, 254,000.—entertained.

General Terminus and Glasgow Harbour—For purchase

of land and completion of works; length, 1 mile 63 chains; estimated cost, 43,6382.—entertained.

Great Western—For purchase of lands and completion of

works of the Oxford and Rugby line, West London line, and other works; length, 87 miles 2 chains; estimated cost, 1,260,000l.—entertained.

Huddersfield and Manchester—For Delph and Oldham branches; length, 16 miles 95 chains; estimated cost, 697.0001.—entertained.

Irish South-Eastern—For purchase of lands and construc-tion of line from Carlow to Wexford, and Kilkenny to Clonmel; length, 79 miles 40 chains; estimated cost, 700,000%. entertained.

Inswich and Bury St. Edmunds-For construction of line Woodbridge; length, 9 miles 20 chains; estimated cost, 200,000/,-entertained.

Killarney Junction—For purchase of land and completion works; length, 23 miles 78 chains; estimated cost, 209.159/.-entertained.

Kilkenny and Great Southern and Western (I.)-For com-

Kiskenny and Great Southern and Western (I.)—For completion of works and purchase of lands; length, 26 miles; estimated cost, 225,000/.—entertained.

Liverpool, Manchester, and Newcastle-upon-Tyne Junction—For purchase of lands and completion of works from the Colne extension of the Leeds and Bradford at Elstack Aylgarth; length, 23 miles 35 chains; estimated cost, 784.2507. — entertained.

/ou.2016.—entertained. Limerick, Ennis and Killaloe Junction—For purchase of land and completion of works; length, 37 miles; estimated cost 921 000/ -entertained.

London, Brighton and South Coast—For enlarging the London Bridge terminus; estimated cost, from 250,000k to 300.000%.-entertained.

London and South-Western—For completion of works on the Guildford Extension and Portsmouth and Fareham; length, 7 miles 23 chains; estimated cost, 300,000l.—half a year for purchase of lands and two years for completion of works: ditto for London Bridge extension; length, 1 mile 19 chains; estimated cost, 500,000l.—one year for purchase of lands and two years for completion of works—entertained.

London and North-Western and Great Western (jointly) For improvement and extension of the West Lond length, 2 miles: estimated cost, 60,0001,-entertained.

nengtn, z mnes; estimated cost, 60,000.—entertained.
London and North-Western—For purchase of lands and
completion of works at the Victoria Tunnel, Liverpool,
Rugby and Stamford branch, Rugby and Leamington
branch, Coventry and Nuncaton, and Northampton and
Banbury: length, 82 miles; estimated cost, 1,950,000.—
entertained. entertained.

Lancashire and Yorkshire—For nurchasing of lands and Lancashire and Torkshire—For purensing of lands and completion of works of various branches obtained by the Lancashire and Yorkshire, the Manchester and Leeds, the Wakefield, Pontefract and Goole, the Huddershield and Sheffield Junction, and the West Riding Union; total length, 99 miles 17 chains; estimated cost, 2,348,2584. entertained.

Malton and Driffield Junction-Postponement of branch from Great Driffield to Frodingham Bridge; length, 5 miles 41 chains; estimated cost, 35,000l.—entertained.

Manchester, Sheffield and Lincolnshire—For purchase of

land and completion of works of various branches and exland and completion of works of various branches and extensions; length, 96 miles 15½ chains; estimated cost, 1,980,000%.—entertained.

Midland Great Western (L)—For branch and deviation; length, 41 miles 16 chains; estimated cost (reduced from original estimate), 420,569%.—entertained.

Monmouth and Hereford—For completion of works and purchase of land; length, 36 miles 20 chains; estimated cost 551 (100%)—entertained.

cost, 550,000l.—entertained.

Monmouthshire Canal (for Newport and Pontypool)—
For purchase of land and completion of works from Crinda Pill to Newport Dock, from Crane-street to Abersychan, and branch from Abersychan to Cwmffrwdore; length, 4 miles 40 chains; estimated cost, 60,213.—entertained.

Mallow and Fermoy-Length, 17 miles; estimated cost, 186,986/.-entertained.

Mountmellick Junction-For purchase of land and completion of works; length, 3 miles 40 chains; estimated cost, 25.0001.—entertained.

Morayshire—For purchase of land and completion of works; length, 11 miles 60 chains; estimated cost, 75,000l. entertained.

-entertained. Manchester and Southport-For purchase of lands and completion of portions and branches; length, 42 miles 16 chains; estimated cost, 702,500.—entertained. Norfolk-For purchase of land and construction of Dereham, Wells and Blakeney branch; length, 14 miles; estimated and 100 000 and particular length, 14 miles; estimated and 100 000 and particular length, 100 000 and particular length, 14 miles; estimated and 100 000 and particular length, 14 miles; estimated and 100 000 and particular length, 14 miles; estimated and 100 000 and particular length, 100 000 and particular length, 14 miles; estimated and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and lands and land

mated cost, 180,000/.-entertained.

Newport, Abergavenny and Hereford—For main line, branchos and extension to Taff Vale; length, 10 miles

of ancies and extension to fair vale; fencil, to miles 60 chains; estimated cost, 133,0002,—entertained.

Newry and Enniskillen—For purchase of land and construction of works; length, 65 miles; estimated cost, 00.000%.—entertained.
Oxford, Worcester and Wolverhampton—For purchase of

land and construction of works; length, 111 miles 20 chains; estimated cost, 1,309,8421.—entertained.

South Devon—For construction of extension line to Tor-

quay and Brixham branch; length, 9 miles, estimated cost,

240,000%—entertained.
South Wales—For completion of works and purchase of land; length, 213 miles; estimated cost, 300,000%—enter-

Swansea and Amman Junction—For purchase of land and completion of works; length, 6 miles 60 chains; estimated cost, 40,000/.—entertained.

South-Eastern—Not entertained.

Shrewsbury and Birmingham—For purchase of land and construction of works for part of branch from Oakengate to Coalbrookdale; length, 3 miles; estimated cost, 105,000. entertained.

Tenby, Saundersfoot and South Wales-For the purchase of land and completion of line; length, 10 miles; estimated

or land and completion of the property of the cost, 140,000%,—entertained.

Taw Vale and Dock—For construction of works and purchase of land; length, 44 miles; estimated cost, 691,000%. entertained.

Vale-For completing Rhondda extension branches; length, 14 miles 40 chains; estimated cost, 174,4514.

entertained. Vale of Neath—For completion of works and purchase of land: length, 32 miles 70 chains; estimated cost, 595,000l. entertained.

Wharfedale-For completion of works and purchase of land; length, 22 miles 15 chains; estimated cost, 420,6

-entertained.

Wilts, Somerset and Weymouth—For purchase of lands and completion of works; length, 140 miles; estimated

works; length, 31 miles 6½ chains, estimated cost, 5,00,000.

—entertained.
Waterford, Wexford, Wicklow and Dublin—For the purchase of lands and completion; length, 137 miles; estimated cost, 1,500,000%, exclusive of 500,000%, cost from Emiscorthy

to Waterford, postponed)—entertained.
Wycombe—Length, 9 miles 60 chains; estimated cost,
150,000?.—entertained.

150,000.—entertained. Wishaw and Coltness—For purchase of land and completion of works of Murdieston branch; length, 4 miles 76 chains; estimated cost, 75,600/.—entertained.

The total length of line, the working of which is postponed, amounts to 3,650 miles 33 chains; estimated cost, 59,209,8581.

#### Progress of Works.

CORNWALL .- The experiment with the iron cylinder at Saltash is said to have fully answered the sanguine expectations of the superintendent engineer. We lately noticed (see ante, p. 317), that a cylinder made of boiler plate was some time since moored in the centre of the river, the object being to ascertain whether, by its sinking in the mud, it would not prove water-tight, and thus answer the purpose of an ordinary coffer-dam, to construct which, in so great a ordinary coffer-dain, to construct which, in so greated either of water, would be impracticable. This experimental cylinder is 6 ft. in diameter, and 85 ft. in length. When moored in its proper position it sunk at once 10 ft. into the mud, the depth of the water at high tide being about 70 ft. On the 16th inst the water, says the Sun, within the cylinder was lowered 36 ft. under high water mark, and at the end of sixteen hours it had only risen again to the extent of 51 in. On the 19th the water was further lowered be drawn out, when, by excavating the mud, the full nature of the foundation will be discovered. The rise in the 54 in. within the tube is fully accounted for by the heavy rain which fell on the 17th, and a slight leakage in the joints of the boiler plates.

EAST ANGLIAN.—The works of the Lynn and Dercham are rapidly progressing, being nearly finished between Dercham and Sporle. The stations at Sporle, Dunham and Fransham, and also the four gate lodges have been completed, with the exception gate lodges have been completed, with the exception of some exterior fittings. Beyond Sporle operations are going on night and day. The heaviest work, says the Bary Herald, is the cutting through Dunham Hill, and it is expected that this cutting will be finished in about a month. In three weeks or a month the rails will be laid down and ballasted up to Sagraine, where the paragraphy is her head had for about 1, mile. Further on, towards Derchain, the works are of a lighter description, and they are completed, with the exception of laying down the rails and ballasting, up to the turnpike-road bridge. This bridge is in process of construction, and will be

a large and substantial structure, of a very ornamental design. Beyond this bridge the cuttings are slight to Dereham. Ballasting work is going on to the junction with the line to Wymondham. All the way the line runs through very picturesque and highly cultivated land. The stations are built of flint and white bricks, and the gate lodges of blue stone pebbles, from ornamental designs. The line from Lynn to Dereham will probably be completed

and opened by the latter end of August.
GLASGOW, AVR AND NITHEDALE.—The works are advancing rapidly to completion. In the parishes of Dornock, Annan, Cummertrees, Ruthwell, Mousewald and Dumfries numerous bridges have been crected. The bridge at Annan is a occurrent ture. We see nothing, says the Dumfries Courier ture. The bridge at Annan is a beautiful structo prevent the directors inviting the Government officer to pronounce the open sesame "All's right," and afterwards treating their friends to a jaunt to Carlisle, some time towards the end of July.

ATTISE, some time towards the end of July. Scottish Central (Castlecary to Perth).—May 22. The line was opened to the public. An unbroken means of communication is thus afforded. Edinburgh and Glasgow and the various intermediate stations, and Stirling, Bridge of Allan, Dumblane, Auchterarder and Perth on the other side. The completion of the short link between Motherwell and Castlecary, belonging to the Caledonian, will perfect the communication to the South, and this we hope to see opened early during the present summer. Scottish Railway Gazette, after noticing the preli-minary trip by the directors and friends on the 13th, describes the course of the line from Castlecary Junction. At the Greenhill station the Edinburgh and Glasgow unites with the Central, and here several houses, offices, sheds, &c., are in course of erection. The line runs through a short cutting, crosses the canal to the pretty village of Larbert, with its picturesque church and grounds. country soon opens up, and a magnificent view of the Ochils and the valley of the Forth bursts upon the sight. The whole way on to Stirling continues to present a varying aspect of the most romantic kind. On the present occasion the ancient town of Stirling was alive with excitement, and as we entered the station preparations were in progress for the return train to Perth. The station, with the various offices, will be found well worthy of inspection; the arrangements, having been made under the immediate superintendence of Mr. Milner, are excellent, and we think one feature in the accommodation to passengers disposed to make a short stay in the town might be generally adopted with advantage. The arrangement we allude to is the appropriation of a room, properly fitted up, for the safe custody of luggage left by parties in the charge of an officer for a short interval. Thus a great deal of inconvenience and anxiety is saved to passengers. Such matters may appear trivial, but we consider this accommodation one of very great importance indeed, and a clear proof of the liberality and intelligence displayed in the company's general arrangements. All the preliminaries being arranged, the train, consisting of fourteen carriages, with two engines in front, driven by the able resident engineer, Mr. Tasker, driven by the able resident engineer, St. Land, left Stirling, the weather being somewhat lowering, though it soon cleared up. The first important though it soon cleared up. The first important work on the line is the splendid viaduct across the Forth, a few hundred yards below the old bridges of Stirling. The scenery in this part of the route—with Stirling Castle to the west, and the Ochils bounding the beautiful and romantic valley -is of the most interesting and attractive character, partaking of the abrupt grandeur of the Highlands as well as the rich and smiling verdancy of the Lowhands. Passing Airthrey Castle on the cast, we arrive at the first station—the pleasant and fashionable watering-place, the Bridge of Allan, now in all its summer gaiety. Here the line rises on a steep incline, from 1 in 100 to 1 in 70, and the cuttings are exceedingly heavy. This was one of the most expensive and difficult portions of the work. After passing the Allan Water the line proceeds through a tunnel some 300 or 400 yards in length, which completely screens the park of Mr. Stirling, of Kippendavie, one of the most strenuous promoters of the undertaking. The line pursues a northerly direction to Dunblane, where is still seen, in an admirable state of preservation, the old cathedral—an object, even in its ruins, of the geatest beauty and interest. The works are distinguished by some very heavy cuttings, and in one part the stream has been diverted into a new channel. Another tunnel occurs as the line enters the valley of Strathallan. Here the course of the line runs between the Grampians on the west and the Ochils on the east, and trends away towards Perth in a northeasterly direction. The next station is at the village of Blackford, in the midst of a bleak country, where we have no doubt there is ample scope for agricul-

tural improvements. A few miles further on we pass the town of Auchterarder, seen on the heights to the west, and a place of some extent. At this part there occurs one of the most stupendous works,—a lofty viaduct over the deep and wild ravine at Kincardine, which may now be witnessed in all its sublimity. It is by far the most striking scene upon the line, abounding as it does in natural features of great beauty. After passing the village of Dunning, to the beauty. After passing the village of Dunning, to the east, the line enters the valley of Strathearn, and becomes, as it were, entangled among the perplexing meanderings of the river, crossing and re-crossing it repeatedly. The next stations are Fortiviot and Forgandeny, a short way north of which is distinctly visible from the line the noble seat of Lord Kinnoul, with the richly-wooded heights around it. As the line approaches the mouth of the tunnel through Moncreiff Hill, the Edinburgh and Northern line is seen converging to the same aorta, which, in fact, forms the only practicable route of railway communication between the South and North of Scotlandthe law of nature having thus, as it were, rendered Perth the central point of the northern system. The tunnel itself is perhaps the most stupendous work of the kind, as it runs for upwards of a mile through the hardest whinstone. On issuing from the tunnel into Perth, the view of the river, of the links and the surrounding heights, transcends all powers of description, and must ever render the fair city a point of irresistible attraction to the resident as well as to the tourist. We were gratified (says the writer) to find the whole of the line in a very advanced state. None of the stations are built; but the temporary accommodation is good and substantial. We of course except the station at Stirling, which is completely finished, and affords a most satisfactory example of what the others will be. The journey was effected, with a fair average speed, in about an hour and a quarter, and the rails afforded smooth and agreeable travelling, with no more than the oscillation incident to the best lines at the earliest stage. Censoriousness itself would be at a loss to find fault with the works in this respect; the carriages, besides, are tastefully fitted up, and are exceedingly comfortable. We heard but one opinion expressed of the completeness and efficiency of the arrangements. As a work of engineering genius and labour, it is enough to say that the line is worthy of the great reputation of Messrs. Locke and Errington.

YORKSHIRE LINES.—The contractors on the East Lancashire and Bolton, Blackburn, Clitheroe and West Yorkshire, stimulated by the directors of the respective companies, are prosecuting the works with The portion of the former, says the great vigour. The portion of the former, says the Manchester Examiner, between Blackburn and Accrington, is expected to be opened in about a month, when a large increase of traffic will doubtless accrue to the company, from the density of the population of the district which will thus be directly connected by railway with Blackburn, Preston, the watering places, Liverpool, &c. The East Lancashire line, from Accrington to Rawtenstall, will be opened in a few weeks after the opening to Accrington. The link will be complete by this line between Manchester, Bury, Haslingden, Accrington, Church, Blackburn and Preston, and the distance from all the more remote of these places much diminished to Buruley, Clitheroe, Whalley, Padiham, &c. The works on the Bolton, Blackburn, Clitheroe and West Yorkshire, between Bolton and Blackburn, are in such a state of forwardness as to leave little doubt of the line being opened in June, when the valuable accommodation this direct line will open to the public will be largely taken advantage of. The amount of traffic between Blackburn and Darwen has exceeded the most sanguine expectations; the completion of the remaining portion, fulfilling, to a great extent, the ultimate important design of the company, will result, we trust,

no less favourably.

#### Accidents.

CALEDONIAN. - May 23 .- The down train which should leave Carlisle at 6 20 p.m. had been delayed on its way from London to Carlisle, and did not reach the latter place until upwards of half an hour after the time set down for it. The train, consisting of an engine and two carriages, then left Carlisle at 73 p.m. and proceeded at a rapid rate in order to make up lost time. Having reached Covenshaw Bog, near Carnwath (about 26 miles from Edinburgh), the coupling chain which attaches the tender to the train gave way, when the engine, liberated from the burden, out off the rails and after invariance about a burden got off the rails, and, after running about a hundred yards on the soft ground, penetrated the most othe depth of about 16 feet. The engine driver, stoker, and guard were all killed. The train was overturned; but rope of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the but none of the passengers were hurt, except one lady and a gentleman. The lady had her hand and

Digitized by GOGIE

face bruised, but not seriously. The train was due at Edinburgh at nine o'clock on Tuesday night, but at hinburgh at hine o clock on the salay night, but did not arrive till two o'clock on the following morning. An investigation is now being made.

PERTH.—May 18.—A fire took place in a wright's shed, in the north-eastern extremity of the general

terminus, which in a short time was reduced to char-coal. The extent of the premises was about 70 or 80 ft. in length, and 12 ft. in breadth. Benches, wood and tools were all destroyed. One man estimated his

loss of tools at 151., and others more or less.

South Devon.—May 6.—An alarm was given that
the station at Colebrook was on fire. The County and West of England engines were immediately sent off, and the former, under the direction of Mr. Carkect, the agent, arrived on the spot in 20 min. from Plymouth, followed by the West of England The fire was extinguished by the officers and other persons connected with the station. The fire original nated, it is presumed, from the ignition of some passed, and which were conveyed by the 1130 a.m. up train, which had just passed, and which were conveyed by the draft of wind under the rafters of the station, the work not being completed. The injury is but very trifling.

#### Parliamentary Proceedings.

COMMONS.

May 23 .- Chester and Holyhead (Power to Pur chase, de.)—On the order of the day for the further consideration of the report, Mr. Grogan objected, on the ground that the object was to give power to on the ground that the object was to give power to the company to become steam-packet proprietors; and moved that the report be further considered that day six months.—Mr. Hume seconded the amendment.—Sir R. Peel, as chairman of the group to which this bill belonged, explained that the General Railway Committee, the Board of Trade and the Commissioners of Railways all concurred in opinion with the committee that this was a case that the inwith the committee that this was a case that the in-terests of the public required should be made an exception to the general rule. Holyhead could not be considered the terminus of a line whose object was to complete the communication with Dublin; it was not therefore out of their province to provide for the communication between Holyhead and Dublin, proper precautions being taken for the security of the public as to fares, &c.—Mr. Brown supported the amendment, and Mr. LABOUCHERE spoke in favour of the original motion.—Mr. Bernal insisted on the importance of laying down general rules for the guidance of convictions of the publication of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the guidance of the gu committees on railway bills, and strictly adhering to them. He here objected that the committee had not stated the grounds on which they had recommended the departure from the rule against permitting railway companies to become proprietors of steam ships.

Sir W. HEATHCOTE observed that the committee had referred generally to the grounds on which they had referred generally to the grounds on which they had reported and which were already in the hands of members. He was prepared to vote for the original motion.—The house divided—For the original motion, 166; for the amendment, 46; majority, 120.—Report agreed to.—Grea' Western (Extension of the Barks and Hands from Hungerford to Westhury, with a Branch to Decirs).—On the question that the report be considered, Mr. Bernal said that there was an important omission, to which he felt it his duty to call attention. The general railway committee recomstanting. attention. The general railway committee recom-mended that committees on railway bills should give increased attention to the money clauses, and refuse the power of raising money unless its general application were stated in the bill. Such was not done in this case.—Mr. Cabbell recommended that the consideration of the report be postponed.—Mr. LABOU-CHERE said that it was no fault of the committee that was desirable to rectify it, he should move that the bills be re-committed, with an instruction to the committee to state in the bill the general purposes to which the money sought to be raised was intended to be applied. After a convergence in which Mr. Hyp. be applied.—After a conversation, in which Mr. Hub-son declared that such a course would be attended with the greatest inconvenience to railway companies, -The CHANCELLOR OF THE EXCHEQUER said that the report of the select committee on railways, on which the motion of his right hon, friend (Mr. Labouchere) was founded, had been unanimously adopted; and the hon member for Sunderland (Mr. Hudson) had himself been a member of that committee.—The motion was eventually put in this form: that the bill be re-committed, in order to introduce a clause setting forth the general purposes for which the money authorized to be raised by the bill was to be applied. Mr. Cabbell moved to add to the motion, by way of amendment, "that the memorial presented by the inhabitants of Devizes to the Lords of the Treasury thracollants of Devizes to the Lords of the Treasury be referred to the committee on the bill, to report thereon to the house."—Lord VILLIERS opposed the amendment, on the ground that the memorial had

been already disposed of at the close of the last session.—The amendment was then withdrawn, and the original motion put and agreed to.—London, Brighton and South Coast (London Bridge and New Cross Stations, &c.).—Mr. C. P. GRENFELL moved the adoption of the amendments made by the committee.

—Capt. PECHELL availed himself of the opportunity of stating, on behalf of the inhabitants of Brighton, their grievances from the directors, who now sought for additional powers. During the last six months the directors had deprived the poorer classes of the accommodation of third-class carriages—they had wholly closed many of the stations—they had removed the goods station from London Bridge to New Cross, Deptford-they had raised the rates of carriage, and had also deprived the poorer classes of the benefit of day-tickets. These proceedings had given so much dissatisfaction, that at a public meeting just held in Brighton the inhabitants had passed resolutions which were tantamount to calling upon the house to reject this bill. He neither had the power nor the desire to reject the measure, but he hoped the house would give such an expression of opinion on the occasion as would induce the company to do away with the above-mentioned grievances.—Mr. C. P. KENFELL was understood to defend the conduct of the directors, who had been harassed by the most un-reasonable demands made upon them by the public. The removal of the goods station to New Cross had arisen from the insufficiency of room at London Bridge to transact the business; but this bill, when passed, would enable the company to remedy that inconvenience.-The amendments were then agreed to. and the bill ordered to be engrossed.—Attendance on Railray Committees.—Sir W. Heathcote moved that the hon, member for the county of Dublin (Mr. J. H. Hamilton) might be allowed to attend on the Dublin Improvement Bill committee, on which he had been appointed, without signing the declaration required in such cases, the hon member being absent, and it being possible that the committee might meet on the 24th.—Agreed to.

May 25 .- Joint-Stock Companies Bill. - This bill having been read a third time, the ATTORNEY-GE-NERAL moved a clause, empowering the Lord Chan-cellor to appoint District Commissioners of the Court Bankruptcy, or judges of county or local courts having jurisdiction in civil matters, to be masters extraordinary for the purposes of this Act; which was agreed to.-Mr. HEADLAN moved the following

That after an order absolute shall have been made execution shall not issue against any contributories of the company at the suit of any creditor, in respect of any debt due from the company, unless, on motion to the Court of Chancery, leave to that effect be given; and that upon such motion it shall be lawful for the Court of Chancery either to permit execution immediately to be issued, or to suspend the same for such period and upon such terms as the said Court shall, in its discretion, think fit, regard being had both to the proceedings pending under this Act, and to the conduct of the shareholder against whom execution is sought to be enforced in obeying the same.

—Mr. M. Gibson regretted that it was not in his power to agree to the proposal of the hon, and learned That after an order absolute shall have been made execu-

power to agree to the proposal of the hon, and learned member, on the ground that this bill had nothing to do with creditors, but its simple object was to exable shareholders to settle their differences between each other by themselves. Creditors took no benefit from the bill, and he could not consent to place them under the difficulties which this clause would create. Mr. TURNER opposed the clause as being totally at variance with every principle of the bill.—Mr. AGLIONBY supported the clause, which had received the sanction and support of many competent authorities in the country, who had communicated with him on the subject of this measure.—The Solicitois-General opposed the clause on the grounds stated by the right hon, gentleman (Mr. M. Gibson) who had introduced the bill.—The house divided—For the clause, 9; against it, 94; majority against the clause, 85.—Mr. WYLD then moved the following clause: "That all associations or companies formed for working mines or minerals shall be liable to the operation of this The clause was added by way of rider to the bill, which was then passed.

## Law Entelligenze.

May 19.—At the CENTRAL CRIMINAL COURT, C Abbott and Ann Williams were convicted on charges of stealing luggage from the different railway stations twelve menths imprisonment and hard labour, and

twelve meritis imprisonment and hard labour, and the male prisoner to fourteen years transportation.

May 20.—At the Gullemall Poince Coult, Mr. Brand, secretary to the (moonshine) Madras and Arcot, was charged with stealing and pawning some articles of wearing apparel, left in his charge, the property of Mr. Marriner, the secretary of the North Whies.—Sir P. Laurie gave his opinion that the charge of stealing could not be sustained, as Mr. Marriner, had entrusted his property to Mr. Mr. Marriner had entrusted his property to Mr. Brand's care, and he sent the charge of pawning to be dealt with in the district where it occurred.

LONDON AND SOUTH-WESTERN.—May 19.—At the WANDSWORTH POLICE COURT, G. Bailey and F. Sturge, two fashionably-dressed men, were charged with attempting to rob a lady on the platform on the arrival of the Southampton train, in the pre-vious afternoon. As the lady got out of one of the carriages Bailey walked before and Sturge behind her to the luggage van, where she stopped. Sturge then put his hand in her pocket twice, and he was in the act of pulling out a purse, when a policeman in uniform came up, and he let it drop into the pocket again. The prisoners were taken into custody.—Mr. Beadon said he should discharge Bailey, the evidence not being conclusive against him; Sturge he should deal with as a suspected person, frequenting a place of public resort with a felonious intent, and commit him for three months, with hard labour.—Sturge gave notice of appeal, and of application for bail.

IRON TRADE.—Glasgow, May 19.—The rise in the funds has brought about higher rates. The stock of pig iron was never so low; and when confidence is re-stored to a certain extent on the Continent prices will doubtless improve. To-day there were few sellers at 41s. 6d. per ton, cash.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

* For account, June 9.

London Stock Exchange, May 26.—The operations in the share-market have been of a limited character throughout the week, no circumstance of moment having occurred to give business an impulse.

Liverpool, May 25 .- Although prices have, within the last two days, kept tolerably steady, there has been no activity in the market. Yesterday prices gave way a little, and there is no improvement to-day, prices remaining at yesterday's quotations. Suplow, Brothers.

Manchester, May 25.—We have again experienced and entertainty, may 20.—We have again experienced as they were hast week; but there evidently is an clasticity in the share-market which would tell if foreign politics were favourable. Sam. Grindrod.

York, May 25.—The market is neglected, and we have few transactions to record. We observe there is a scarcity of stock in the market.

GRAYSTON & EARLE. Hull, May 25 .- We have to record another week

of depression in the share-market, with an almost entire absence of business. Political events have exercised their usual influence, and there is rarely now anything stirring in this class of exciting causes FLINT & TOOTAL.

Newcastle upon Tyne, May 25.—There has been little business doing in our share-market this week. Newcastle and Carlisles have commanded buyers at 14 prem. up to this afternoon, when they declined to W. Fordyce. 125, and left off sellers.

Glasgow, May 25.—The demand this week for heavy railway shares has been more limited, and prices are a shade lower; transactions have been chiefly confined to the lighter speculative stocks, and these also generally rule lower than last week. We add to-day's last sales:—Clydesdale Junction, 60; Dumfries and Carlisle, 6\frac{1}{2}; Ayr, 3\frac{1}{2}; ditto, halves, No. 1, 7 dis.; ditto, No. 2, 7 dis.; Great Northern, 9\frac{1}{2}! sanctioned other official arrangements.

dis.; North British thirds, 2 dis.; ditto, quarters,  $5\frac{1}{8}$ ; York and Newcastle preference,  $1\frac{1}{8}$ .

Buchanan, Aitken & Co.

[ FOY FOR TABLE OF CONTENTS see front page.]

LONDON, SATURDAY, MAY 27.

The special meeting of the London, Brighton AND SOUTH COAST shareholders on the steamboat question took place yesterday, but came to no result, the declaration of the votes being adjourned till the next day. The meeting was very decided in the expression of disapprobation at the proposals of the directors.

The directors of the West Cornwall have presented their Report on the statements of the committee of investigation. They defend the Hayle purchase, and declare the intended forfeiture of the shares of parties unable to pay their calls. The question of compelling Mr. Mowatt by law, after the failure in the Chancery Court, to take up his shares, is not yet decided.

The latest announced adjournment of the BIRMINGHAM AND OXFORD proprietors is fixed for the 30th.

The principal recommendation of the committee of investigation of the Ambergate, Not-TINGHAM AND BOSTON AND EASTERN JUNCTION relates to the calls necessary for the completion of the works. The Report advises a call of 10s. per share in July, with the enforcement of payment of arrears of 12s. 6d. on the last call, and a second call of 10s., prior to the next halfyearly meeting.

At the special meeting of the LANCASTER AND PRESTON JUNCTION, after some discussion, the usual dividend of 15s. 2d. on the whole shares, 10s. 1d. on the three-quarter shares, and 4s. on the quarter shares, was declared.

The shareholders of the AIRDRIE AND BATH-GATE JUNCTION at a special meeting reduced the number of their directors to seven, and

The Report presented to and adopted by the half-yearly meeting of the Belfast and Bally-MENA gave favourable accounts of the traffic already on the line. The chairman announced, that besides calling up the whole share capital of 50l., the company would have to borrow to their full limit before the works could be said to be completed.

Despite the excitement of the races, the Com-MITTEES OF THE COMMONS during the week have declared the preambles of the following bills proved:

Exeter, Yeovil and Dorchester.

Glasgow and Monkland (Branch across the Clyde). Leeds and Thirsk (Melmorby and Northallerton branch).

Leeds Central Station.

Londonderry and Coleraine (Deviation to Newtown). Manchester, Sheffield and Lincolnshire (Humber Ferries). Midland (Ripley branch, &c.). Scottish Midland Junction (Lanarkshire branch).

And of those bills unopposed:

Aberdeen. Arbroath and Forfar.

East Anglian. Waterford and Kilkenny (Amendment).

It is worth while to notice a list which we give to-day of the APPLICATIONS MADE FOR TIME to complete the works of the various lines. The general period is two years; and all the applications, amounting to 104, excepting two, appear to have been favourably entertained by the Commissioners. Shareholders will therefore be relieved from this heavy drain till they are better able to afford it.

To us it appears most strange that in the great crisis of an organic change, the Legislature of the great FRENCH NATION should find nothing more important to occupy them than the consideration of the best means to give an apparent legal sanction to a GIGANTIC ACT OF ROBBERY. We are glad to see that the companies have not been apathetic spectators of these deliberations. The shareholders of the

Digitized by **GOO** 

railway companies of the ORLEANS and the CEN-TRAL met on Wednesday, to deliberate on the project of law relative to the assumption of those lines by the State. The former voted an energetic protest against the measure, which was immediately forwarded to the National Assembly. In the second meeting the plan of the Minister of Finance was stigmatised as an attempt against property, an open violation of the contracts and laws on which that property rests, and declared unjustifiable even in the point of view of the interest of the labourers. since the works are terminated, except on one point, near the Allier, which is to be completed by the State itself. Delegates were named to protest and defend the interest of the shareholders before the National Assembly. According to the returns submitted to the meeting, only one-twentieth of the shareholders possess upwards of 200 shares; the tenth more than 100; the three-fourths possess less than 40; the two-thirds less than 20; and the six-tenths less than 10. Such is the property (observes the Journal des Débats) which it is intended to take by force from private individuals, and to transfer, under the plea of urgency, to the hands of the Government, "because it tends to establish an aristocracy, and that it is not possible to maintain it under a democratic Government." We are also glad to observe that in the commission the plan is not unopposed. The Financial Committee of the National Assembly met on Wednesday to examine the project of law relative to the redemption of the railways by the State. Several members contended that, as respected the companies, which had fulfilled all their obligations, there was a flagrant violation of a contract, and that those unable to hold their engagements might be expropriated, but on condition that the works executed should be reimbursed and the shareholders compensated. Others objected that the State was not in a condition to complete the lines. The 7th article provides that the expenses of the redemption should be borne by the floating debt, which no longer exists. The project, independently of the overwhelming burthens which it would entail on the finances of the country, would, in the opinion of several Commissioners, destroy all spirit of association, annihilate private credit, and keep off all foreign capital. These considerations were favourably received by the majority of the committee. They were entered into at length by several members, particularly by MM. Duvergier de Hauranne, St.-Beuve, Demarcay and Berryer. The latter added that, if the State was anxious to afford labour to the operatives, there were works amounting to 300,000,000 to be executed. On Thursday the three last-named and MM. de RUMILLY and BINEAU were appointed a subcommittee, charged with the preparation of a Report on that important question.

From our official returns it appears that the amount of traffic for the last week, on 3,710 miles of railway, was 192,238l., thus accounted for:—98,175l. for the conveyance of passengers only, 50,532l. for the carriage of goods, and a remainder of 43,531l. for passengers and goods together, not respectively apportioned; being an increase of 24,569l. over the corresponding week of last year, when the mileage was 2,862. The average earnings per mile last week were 52l., whilst in 1847 they were 59l.

THE WAR OF THE GAUGES.

The battle of the gauges is being fought, it would appear, with great fury in three places at one time. In the Committee of the House of Commons, on the Windsor group of lines, we hear the SOUTH-WESTERN and the GREAT

WESTERN opening the campaign of the session—a parliamentary campaign which will soon embrace all the groups lying between the territories of these belligerents, and which will probably embrace the whole session.

Out of doors, the Morning Herald has been doing battle for the broad gauge, in the publication of what have been termed "spurious reports" of certain proceedings and debates of the Institution of Civil Engineers. The Institution, on the other hand, as we believe, disowns these reports, and indeed any reports of its proceedings but those furnished officially by the Secretary, and which we publish usually for the information of our readers. These "spurious reports," as they have been called, are said to be inaccurate, and much feeling has been excited by their publication, inasmuch as they are "disavowed" by broad-gauge representatives as well as by the Institution. Nevertheless, these reports seem to show that even in the Institution of Civil Engineers, sacred as it is to the practical investigation of applied science, the vexata quæstio of gauge has somehow found admission; and that battle has been done there, virtually if not avowedly, by all the professional champions of either side; and for three long nights debates have been held, in which speeches have been made, more or less tinged with the spirit of this controversy, by Messrs. BRUNEL and GOOCH, STEPHENSON and LOCKE, BIDDER and HARDING and SCOTT RUSSELL It is true that the gauge question itself is nominally excluded from the debate, but nevertheless, we gather from the remarks of the Herald, that the controversy is virtually a controversy of gauge. In the absence of more official information, which by the laws of the Institution we are prevented from publishing, (and the Institution as a professional club must be conceded the right of doing what it pleases with its own,) we may take for granted that the Herald represents, if not precisely, yet with tolerable accuracy, the nature of the controversy that has raged in that sanctum of the profession. Our comments will therefore be understood to apply only to such statements as have appeared in the Morning Herald, which although the Institution does not authenticate, yet the broadgauge party may be assumed to wish to be believed as the legitimate result of the debate.

According, then, to the Morning Herald of the 22nd of April, an "interesting and important paper was read by Mr. Daniel Gooch, the locomotive superintendent, of the Great Western Railway, 'On the Resistances to Railway Trains at Different Velocities.'" A short notice of that paper, officially sent to the Railway Chronicle, was also printed in our columns (ante, p. 281). And although the paper in the Morning Herald may not be authentic or quite accurate, we may perhaps assume that it pretty well represents the spirit of the paper of Mr. Gooch, which it purports to be.

Plunging deep into the gauge controversy at once, Mr. Gooch (according to the *Herald*) proceeds to state the question he has taken up as follows:—

In laying before the Institution a series of forty-three experiments on the resistances to railway trains, it is necessary, I think, in the first place, to offer a few observations on the experiments that have been previously made and the present state of our information on this subject; and in doing so it will be sufficient if I commence the inquiry by a few remarks on the paper read by Mr. Harding, before the Institution of Civil Engineers in 1846, in which he has given a very complete and useful history of the progress of the investigation up to that period, but has, as it appears to me, fallen into some errors in the conclusions he has drawn from these experiments. Mr. Harding states, "That the object of his paper was, from the large collection of experiments which had been made, to present, in the simplest form, those results which appeared to afford a cor-

rect means of measuring the resistances of passenger trains of different weights, running at different velocities on a railway in good repair, with no fortuitous circumstances tending materially to affect the resistances, as it is there only that we may hope to obtain a series of facts from which we may be enabled to determine experimentally the law of the resistances.

Mr. Harding having explained the principles upon which he has made the inquiry, proceeds to give the details of the experiments so selected, and, in conjunction with Mr. Scott Russell, to deduce therefrom a formula stated to be applicable for calculating the resistance to passenger trains weighing from 20 to 111 tons, and for velocities varying from 30 to 60 miles per hour; and in concluding his paper he gives a table, showing how closely the calculations by this formula agree with the results obtained from actual experiments. He has also arranged these selected experiments in the form of a diagram, into which he has introduced a red line, stating it to be laid down according to the law of resistance contended for by Messrs. Brunel, Samuda and D. Gooch. I will not occupy the time of the Institution on this point further than to state that I for one never contended for, nor made, this red-line law; and that Mr. Harding is therefore labouring under some mistake; and I beg to refer to the letter I wrote to the Institution, dated the 9th of June 1846, in explanation of the part I had in the red line. In a diagram (accompanying this) of the experiments I have made this red line is also inserted.

It appears from these extracts, that the paper is virtually the continuation of a gauge controversy begun by Mr. Harding's paper;-that the gravamen of a certain charge against Mr. Harding is, that he inferred from the experiments he had collected that the resistances experienced by trains moving at high velocities was greater than Mr. Brunel, Mr. Samuda and Mr. Gooch had said it was: - and that the inference of Mr. Harding, that broad-gauge trains would follow the same law of resistance at high velocities as at low, was not warranted by facts, appears to be the allegation of which it is the object of Mr. Gooch's paper and his experiments to prove the truth. It is a pity that the experiments were not made and reported without reference to the gauge controversy; but as they have been adduced with this view, it is necessary to notice them somewhat in detail.

The following is (still from the *Herald*) Mr. Gooch's description of his experiments, which seem to have been made with great care and precision:—

I have thought it necessary to go thus fully into the various methods of making experiments on the resistance to railway trains, and more particularly those referred to in Mr. Harding's paper, for the purpose of showing that there appear sufficient grounds for doubting the perfect accuracy of Mr. Harding's formula (even as applied to his own experiments), and that a necessity still existed for further experiment and investigation on a subject so well deserving the serious attention of railway engineers. A correct knowledge of the laws which govern the resistance to railway trains is requisite to determine the best form and proportion of carriages, and other railway stock, for working the high speeds now required by the public, with the greatest economy and regularity. With a view of assisting in this inquiry, as far as the broad-gauge lines are concerned, as far as the broad-gauge lines are concerned, as dynamometer carriage was made at Swindon, containing the following important advantages: - All the results required are registered upon a large scale, opposite each other, on the same roll of paper. results that are thus obtained are brought together in the manner shown in the details of the experiments accompanying this paper, and are, first, the tractive power exerted. This is shown by a slightlyundulating line, each undulation corresponding with a revolution of the driving wheel. The cause of these regular undulations appears to be the slight variation in the power of the engine arising from the angle of the rods causing a little more power to be admitted on one side of the piston than the other, and this happens to both cranks on the same side of the centre. I found no difficulty, however, in producing a straight traction line by the use of a pair of small close-ended cylinders, with loose fitting pistons attached to the dynamometer spring, and filled with oil. These cylinders have the effect of averaging any rapid or sudden impulses, such as the unequal

Digitized by GOOGLE

pulling of the engine upon the spring, from the oil not being able to pass the piston quick enough to allow of the variation of power in each impulse being registered. But not seeing any disadvantages in the undulating traction line, I considered it better, in making these experiments, not to use the oil cylinders, so that I might avoid any doubts or questions being raised as to the effect they might have upon being raised as to the effect they might have upon the accuracy of the experiments. I have, however, on several occasions tried the effect of the oil cylinders, by suddenly driving out the key holding the piston, and found the straight line changed into one undulating equally above and below it. The tractionspring used was 7 ft. 6 in. long, consisting of five plates, carefully tapered, and kept at a distance of half an inch apart in the middle, and the distance pieces at the ends were made to act as rollers. The whole was very carefully fitted, and made to work free from friction. A pencil is carried from this spring to a table above, upon which a roll of paper is moved by a measuring wheel upon the rail, and which measures and registers upon the paper every 1-16th of a mile travelled over. In connexion with these distances a time-piece is used to register the time every 1-5th of a second.

We now come to the results of these experiments which are given in a table which we extract from the Morning Herald, but which it is but fair to say, is believed not to exist in the original paper of Mr. Gooch, and presumed to have been made by the editor for the information of his readers. This, however, we shall still assume to represent tolerably well the view which the broad-gauge party wish to be taken of these experiments by the public:-

It is now proper to state that this is said to be an unfair statement of the results of the experiments. But that if properly examined and discussed, the following table will more nearly represent the evidence which these experiments afford on the question as to whether any material difference exists between the resistance to narrow-gauge trains, and the resistance to broadgauge trains. The following table has been question. A train has been made to run down

communicated to us by an advocate of the nar- | tical deductions to be made from Mr. Gooch's row gauge as more truly representing the prac- | experiments:-

Table of Results of Mr. Gooch's Experiments, as deduced by the Advocates of the Narrow Gauge.

Speed in Miles per Hour.	Entire weight of Train.	Resistances as by Indicator.	Formula.	Remarks.		
	Tons.		D. per Ton			
19.4	151.6	11.8	12.95	Slight side wind, rails dry, velocity increased 1.6 m. per hour.		
19-8	151.0	10.65	13.00	Moderate side wind, rails dry, velocity increased 1.1 m. per hour.		
19-8	101.0	13.8	13.28	Slight side wind, rails clean, velocity increased 1.1 m. per hour.		
21·1	151.0	10.4	13.57	Moderate side wind, rails dry.		
214	99.0	17:4	14-01	Moderate wind, rails dry.		
32.2	110.0	15.53*	18.46	Calm. (Waggons.)		
32-9	151-0	14.85*	18:37	Calm. (Waggons.)		
42.3	100.0	19-3	23.4	Slight wind, clean rails, wind 8lb. per square foot.		
456	150.0	21.9	23-8	Slight wind, bright rails, wind 9lb. par square foot - Traction varied from 2075 to 887 during experiment.		
56.8	130-0	22-91*	29.6	Calm and fine, rails dry, wind 11 lb. per sq. ft., vel. inc. 1.4 m. per hour.		
58.0	101-0	31.3	31.7	Calm, rails dirty and wet, velocity increased 1.4 m. per hour.		
59.4	146.0	29.93*	30.4	Rails clean, strong wind (12 lb. per square foot), vel. inc. 1 6 m. per hour.		
61.3	1500	23.51*	31.2	Fine and perfectly calm, rails dry.		
		Acc	elerated Ve	locities, or Experiments made in a strong wind.		
40.1	101-0	30-9	22.4	Calm, rails dirty, velocity increased 7.8 m. per hour.		
44.1	152.0	25.5	23.05	Strong wind, ralls clean, velocity increased 35 m. per hour.		
480	130-0	28:66*	25.4	Calm, rails dry, velocity increased 3.7 m. per hour.		
56·6	149.0	31.0	28.9	Very strong wind, rails clean.		
59.2	100 0	326	32.4	Moderate side wind, rails dry, velocity increased 3.2 m. per hour.		
59-2	100-0	374	32.4	Strong side wind; gauge, however, only showing 13lb. per square foot; whereas 12 3lb. per square foot is called a moderate wind. f Expt. 10. Velocity increased 32 m. per hour.		

No indicator card was obtained in the cases so marked. The indicator resistance was consequently derived from adding to the dynamometer resistance the resistance of the aggine and tender, as derived from the nearest indicator experiment.

A Comparison of the Circumstances attending Mr. Gooch's Experiments with those of the Experiments advanced by Mr. Harding.

1. Mr. Gooch's results obtained by the dynamometer, express the resistance of that part of the train lying behind the engine and tender only. The resistance from the frontage and concussion of the engine and tender (50 tons weight) are thus omitted.

2. Mr. Gooch's experiments are in trains nominally of 50, 80 and 100 tons, but really (including the engine and tender) of 100, 130 and 150 tons.

3. Mr. Gooch's experiments were made with a se lected train of carriages on a selected portion of a perfectly straight line in the highest possible order. The observations being only made at every 1-16th of a mile, over one particular mile of line in this con-

4. Mr. Gooch's results include several cases of

retarded velocity.
5. Mr. Gooch appends to his tables of experiments various columns intended to show a greatly increased resistance on the narrow gauge as compared with the broad gauge. This comparison is based on the results of the formula applied by Mr. Harding (expressing the whole resistance, and moreover miscal-culated in excess by Mr. Gooch in every case) with the dynamometer experiments, expressing the resistance of the hind part of the train only, and is therefore altogether fallacious. To avoid this objection Mr. Gooch has added columns purporting to show resistances "by experiment," but really containing figures, made up partly from experiment and partly from assumption, which are altogether inadmissible.

It seems, therefore, that the experiments on the broad gauge do not show that the resulting resistance to propulsion of engine and train is materially less per ton than had been predicted by the formula used by Mr. Harding. On the contrary, it seems that the formula is much nearer the truth than the previous estimates of Mr. Brunel, Mr. Samuda and Mr. Gooch. Besides, it would seem that the circumstances under which the broad-gauge trials were made are peculiar, having been made with a special engine, a selected train and a selected mile of railway; while the narrow-gauge experiments took place chiefly on passenger trains of ordinary carriages in common working, along ordinary lines, in all the accidents of condition incident in practical use.

There has, however, it appears been a more recent, and it would seem from the Herald a much more decisive, experiment on the gauge  Mr. Harding's results express in every case the resistance of the whole train, including the engine and tender, when one was attached to the train, and the front carriage when this was not the case.

2. The experiments advanced by Mr. Harding were on trains of from 19 to 64 tons total weight; and he especially states (p. 40) that his results must be regarded as true between these limits only.

3. The experiments advanced by Mr. Harding were made over many consecutive miles of various rail-ways by different persons, the trains and roads being in only ordinarily good repair, and the circumstances resembling as nearly as possible the most favourable which occur in practice, and not being exceptional circumstances, as Mr. Gooch's are.

4. The experiments advanced by Mr. Harding present uniform velocities only.

5. As a matter of curiosity it may be well to compare the indicator experiments obtained by Mr. Gooch, which, if they can be depended upon, express the whole resistance, with the formula applied by Mr. Harding, which, however, in order to institute the comparison, must be stretched from 64 tons to 150 tons. The following are the results in the cases of uniform, or very slightly accelerated velocities obtained by Mr. Gooch.

It will be seen that the uniform velocities agree ery fairly with the formula (even when stretched to tons), while the accelerated velocities show a much higher resistance than the formula gives. Mr. Gooch's own experiments, it will be seen, are sufficient to disprove his estimate (given to the Gauge Commissioners), that the resistance to an ordinary passenger train of 60 miles per hour is 18 lb. per ton; and Mr. Brunel's and Mr. Saunders's estimate that the resistance to a 40 ton train, at 60 miles per hour, is less than 17 lb. per ton.

the Wootton Bassett incline, of 1 in 100, at a speed of 50 to 55 miles an hour: and this is claimed as a great victory for the broad gauge! Now, really we cannot see what this single experiment has to do with the matter. If you propel a heavy train over the top of an inclined plane of 1 in 100, at 50 to 53 miles an hour, and measure its speed, as was done here, over tensixteenths of a mile, it is very unlikely indeed that any retardation will be sensible in such a distance, whatever the gauge, in a well conditioned train. It would require a much extended and often repeated and extremely varied series of such experiments to settle such a point as this by an experimentum crucis, and no single short trial such as reported can lay claim to the decision one way or other of so important and difficult a point.

As the matter now stands, therefore, it does not appear that the broad-gauge party have succeeded in establishing that their trains

Digitized by GOOGIC

should be exempted from the law proved to hold in reference to other railway trains. It is to be hoped that a series of experiments may be instituted on a sufficiently extensive scale, and in a sufficient variety of circumstances to establish the simple facts of this interesting engineering question-"How much power must be provided to draw a given railway train over a given railway in the given ordinary circumstances of railway traffic or in any exceptional circumstances that may be named?" Unhappily Mr. Gooch's experiments do not yet afford the complete solution of this question, which is equally vital to engineers, to directors and to shareholders of railways, where locomotive power constitutes an important part of the working expenses, and thus forms an element also of the dividend. The scientific question should, however, be kept clear from mixed considerations of this description; but the very importance of its practical results should lead railway companies and their engineers to undertake by all the means in their power the speedy solution of the question.

# THE COMMISSIONERS' REPORT ON THE GAUGES.

This Report has not yet been published, as it is considered a breach of the privileges of the House of Lords to anticipate the proceedings of the upper house by publication elsewhere. A copy has, however, been allowed to be seen at the office of the Board of Trade, from which the substance of it has transpired.

Our readers remember that Lord Redesdale moved that the Commissioners do specially report as to whether and what deviations from the Guage Act should be permitted—whether in short, the Act of Parliament settling the guage question should be considered the law of the land, or should, on the recommendation of the Railway Board, be disregarded? A strange enough question it will be admitted, for the upper house, which had itself passed the law, to put to such a body as the Railway Commissioners. However, Lord Redesdale moved, and the question was referred; and the commission now decide that the mixed gauge should have a fair trial under their inspection, and that if the mixture answer pretty well in practice, then the broad gauge should go to Birmingham.

Meantime it seems to us that the North-Western Company and other narrow-gauge interests in the North have been asleep; while the broad gauge have, with their wonted energy and unity of purpose, stolen a march on the aristocrats of the narrow gauge, who it appears to us are continually fighting their narrow-gauge question in the narrowest field, with the narrowest views, and therefore in the least successful manner. Certainly if good fighting made a cause good, the Great Western would bear the palm away from the North-Western beyond all controversy. The Great Western have got the Report they wanted.

## Carresvandence.

#### RAILWAYS OF FRANCE.

Paris, May 20.

There is but one feeling here amongst the mercantile classes upon the proposition of the Minister on this subject that of disgust and dissatisfaction. The great patronage, however, which they offer will induce the Government eventually to seize or purchase every railway in France. It is therefore a question whether shareholders should not direct their energy rather to an equitable sale of their property than to an opposition to it altogether. With respect to those companies whose capital is not all called up, it is clearly their interest to effect a sale, and at once, for who will pay future calls? who will further expose himself to the uncertainty, or rather the certainty, of being robbed? Look at the

calls lately made upon the Central and the Paris and Lyon (called since February). It is proposed to pay back these calls, at a loss of about 42 per cent. to the shareholders. The National Assembly is not indisposed to do justice, and I believe the Government is not unwilling that a little pressure should be used to induce them to do that which is fair ;—they want a little force, but the shareholders here and in London must enable their friends in the Assembly to assure the Government that they are disposed to surrender their property at a fair and just valuation, such as may be expected from the honour of the Grande Nation. A CONSTANT READER.

#### [From a Times correspondent.]

Nothing can contrast more strongly than the views and conduct of the Governments of Belgium and of France respectively, with respect to the railways. Belgium has discovered that her system of railways could be worked more efficiently at least, if not more economically also, by private enterprize, than by the State. She gave every encouragement for the investment of foreign capital in the extension of her great lines of intercommunication, and she conceded not only the construction but the working of all the lines recently granted to companies, most probably as preparatory to the ultimate leasing to private enterprize of the lines already made and worked by the State. Now, when the combined effects of a year of famine, commercial distress, and political revolutions have crippled the resources of railway companies, and rendered them incapable of fulfilling their engagements with the State, the Belgian Government comes forward with pecuniary assistance to some, and an ample extension of time for all to complete their works. The requisite projets de loi for this purpose have already passed the Chamber of Representatives. But what do we see in France? The interim Government, like their immediate predecessors of the 24th of February, waging an insane war against capital, coolly proposing to treat as waste paper the most solemn engagements entered into between the State and the railway companies with the sanction of the Legislature. The project of the Finance Minister for the expropriation of the railway companies is simply an act of spoliation, under the guise of a payment in 5 per cent. stock at about double the present market value. The case of the English shareholders in these French railways is particularly hard. They treated, not with a dynasty or Minister, but with the French nation, and in full reliance upon the national honour and good faith, they freely contributed their money and the benefit of their experience for the internal improvement of France. It would be but an act of simple justice and good faith, if the Republic must have "France for the French," to give honest John Bull his money back, not in a depreciated value, but an equal amount in sovereigns to what he paid.

#### Gassip.

The testimony of a public dinner, so worthily earned and so long announced, to Mr. R. Stephenson's genius and successful exertions in planning, and ultimately erecting, that masterpiece of engineering skill, the tubular bridge over the river Conway, took place at Conway on the 16th. The Hon. E. M. Lloyd Mostyn, M.P. presided. When returning thanks, after his health had been drunk, Mr. Stephenson said, six or seven years ago he con-ceived the idea of a tubular iron bridge; but when he first broached the plan he was met on all sides by glances and expressions of distrust. He was not, however daunted; but, conscious that the plan of a tube made of cast-iron plates was perfectly practicable, he proceeded to a series of experiments to test and develope the scheme, and the result was seen under the walls of their ancient and venerable castle.

There is a full-length portrait of MR. GEORGE STEPHENSON on view now in the rooms of the Messrs. Graves, printsellers, in Pall Mall. It is a faithful and intelligent likeness, thoroughly English, natural and unaffected in the attitude. The drawing and colouring are both pleasing. The locality of the picture is Chat Moss. The portrait is to be engraved, and we hope the engraver will succeed in his work as well as the painter has done, for Mr. Lucas here undoubtedly sustains his reputation as one of our

best portrait painters.

All the travellers by the Epsom trains speak well not been issued.

of the preparations made for their conveyance by the London and Brighton officials. The thousands who went were transmitted to the course as comfortably as on ordinary occasions. In three quarters of an houreach passenger made his appearance at Epsom, free from dust and fatigue. The arrangements at the London terminus—a most inconvenient station at all times—were under the entire controll of Mr.

Pulford, and were well conducted throughout the day.

At a meeting in Edinburgh of the committee lately appointed for adjusting the terms of the memorial to be presented to Government respecting the advocated aid to railway companies, the memo-rial stated that the companies who have subscribed it, namely, the Aberdeen, Edinburgh and Northern, the Bathgate, the Ayrshire, the Dumfries and Carlisle, have in the aggregate expended in the construction of their several lines and branches, 5,460,290*l.*; the proportion of which on works yet unfinished, and yielding no return, is 2,472,268l.; productive balance, 2,988,022l. By this there is a loss to the companies of more than 100,000l. per annum, so long as these works remain unfinished.
The calls unpaid which the companies are authorized to make amount to 2,393,3851., and the sum they ask from Government in the way of loan is 1,000,000k. The security offered amounts to nearly three millions in finished, and about two millions and a half in unfinished lines. On the other hand they undertake to employ from 25,000 to 30,000 workmen and labourers during the next twelve months.

In the midst of the circumstances of the late fatal accident on the GREAT WESTERN, a Mr. Graham, of Russell-place, Fitzroy-square, has come forward to publicly bear testimony, in a letter to the Morning Herald, to the unceasing kindness and activity of every person connected with the company towards the sufferers and their friends, regardless of all expense. "Expresses have been sent to give information, and the relatives of some of the sufferers have been brought from great distances, every cost being borne by the company. Any person making known a wish to visit a sufferer, has been immediately furnished with a free pass to and fro. I would also do justice to the driver of the engine; he modestly said on the inquest, that our safety was mainly owing to an eightwheeled engine. I believe that we owe our lives to the skill and presence of mind of the driver, who slackened the speed of the train as gradually as if he had been entering a station; had he lost his presence of mind, and stopped the train too suddenly, the result might have been worse than the first occurrence, fearful as that was.

According to the Bristol Mercury, several public meetings have lately been held at Barnstaple, Bideford, &c., to petition Parliament for the extension of railways, on the narrow gauge, into North and West

We observe that Sir R. Schomburgk has publicly advertised his resignation of the chairmanship of the

BARBADOES.

The Sussex Express mentions a locomotive of a novel kind, and one likely to be very useful for occasional purposes. On the Lewes line, a velocipede is propelled by paddles and worked by the porters of the establishment. The object of this portable locomotive is to enable the officers to pass along the rail without the expense and incumbrance of a steam engine. The speed attained by this means was from 15 to 20 miles an hour. The velocipede is simply constructed, consisting of four light iron wheels, to which cranks and paddles are attached.

The petition to Parliament in favour of a loan to complete the ABERDEEN has received about 7,000

signatures.

The contract, says the Ayr Observer, some time ago entered into between the directors of the Glasgow and Ayr, with which the Glasgow and Belfast is now amalgamated, for erecting a bridge across the water of Ayr, is immediately to be put in execution. The Ayr and Dalmellington joins the line a few miles out of Ayr, and in two or three years the Glasgow and Belfust will be completed as far as the junction of these two lines. The Dalmellington iron-works are nearly finished, and a large amount of traffic is anticipated.
Mr. M'Gregor, the head clerk of the North British,

met with an accident in his anxiety to warn two persons about to cross the line whilst a train was in motion. His leg was cut by the foot-board of one of the carriages, but fortunately not so as to injure any of the arteries.

The half-yearly meeting of the KILLARNEY JUNC-TION Company was advertised for the 15th, but a sufficient number of shareholders not having assembled to constitute a legal meeting, no business was transacted. The Report of the directors, the statement of accounts, and the engineer's Report have

Digitized by GOOGIC

In the FRENCH NATIONAL ASSEMBLY, on the demand of the decree d'urgence by M. Duclerc, now Finance Minister, tending to authorize the State to take up the railways, it was urged that the English-aye, the English-were threatening to interrupt the communications on the Northern. It was the ultra M. Trelat, Minister of Public Works, said that. He did not say what English (rightly observes the correspondent of the Morning Herald), - whether the English expelled from the factories, to the rain of those factories-or the English who had money in the savings banks—or what other class of robbed and confiscated English. The Assembly murmured and showed dissatisfaction, for there are plenty of honest good men in that Assembly. At the sitting on Wednesday, in that Assembly. At the sitting on Wednesday, M. Léon Faucher deposited a proposition for an extraordinary credit of ten millions of francs for executing the EARTHWORKS of the PARIS AND STRAS-BURG, ORLEANS AND BORDEAUX, the CENTRAL, and CHARTRES AND RENNES railways, and that the operatives now employed in the National atéliers should be engaged on those works. A condition is added, that those who refuse to proceed to the several de partments, not being natives of Paris, will forthwith have passports to leave the capital. On Thursday M. Martin moved, that the operatives employed in the Paris, Lyon and Marseilles work-houses be occupied in constructing the line to the Mediterranean. The proposition was referred to the Finance Committee. -We are glad to hear that the operatives of the NORTHERN, who had struck for increased wages, have returned to their work.

We observe that a meeting of the shareholders in the BOULOGNE AND AMIENS is to be held at the London Tavern on Wednesday next, to declare their opinion in reference to the proposed scheme of confiscation The Bordeaux and Cette also have a memorial lying for signature at their office in St. Mildred'scourt, praying for the return of the caution-money deposited;—and the shareholders in the ORLEANS AND BORDEAUX are to meet in Paris on the 31st inst.; and all who have not the opportunity of being present should forthwith send their proxies to the directors, which will be in time if received there on the morning of the meeting. A notice to the effect will be found in our advertising columns. The Tours AND NANTES Company have also called a meeting of their shareholders in Paris for the 2nd of June, to consider what measures shall be adopted. Proxies should be sent by all who cannot attend to

support the directors.

The Belgian advices, says the correspondent of the Times, declare, with respect to the projects of law introduced by the Belgian Government proposing sanction to a temporary delay in the completion of some of the lines in course of construction, that the chief ones relate to the Louvain à la Sambre, the Liege and Namur, and the Mons and Manage Companies. According to the terms of the concession of the 21st of May 1845 the Louvain and Sambre line was to have been completed and opened for traffic on the 28th of May 1848. By the terms of the new law a delay will be granted:—1st, until the end of May 1851, for the principal trunk,—that is to say, for the section from Louvain to Gemblaux by Wavre from Gemblaux to Charleroi, and from Gemblaux to Namur; also for the branch from Ransart to Chatelineau. 2nd. Until the end of the year 1852, for the branches from Louvain to Diest, and from Jemappe to the Charleroi line. The date fixed for the completion of the works on the Namur and Liege and the Mons and Manage line was the 21st of May 1847. Many circumstances, it is said, in addition to the financial crisis, have opposed obstacles to the accom-plishment of this condition. The new project proposes a further concession of time for these two lines, to the 28th of July 1850. Another project of law analogous to those already described, has been presented in connexion with the Entre Sambre and Meuse. The time allowed for the execution of this undertaking would expire on the 27th of March 1849; and for the branches from Florennes to the Meuse, and from Oret to the Sambre, on the 27th of March The new law proposes further concessions :-1st, to the 31st of December 1851, for the completion of the Entre Sambre and Meuse, and its branches; and 2nd, to the 31st of December 1853, for the completion of the accessary branches of this undertaking, viz., those diverging from Florennes to the Meuse, and from Oret to the Sambre.

#### Reports of Meetings.

LONDON, BRIGHTON AND SOUTH COAST. May 26 .- Special Meeting .- Mr. J. M. Parsons in

The CHAIRMAN in opening the proceedings said the company's bill before the committee had undergone very material modification. The directors had sum. Great discouragement had arisen, owing to the

withdrawn the clauses for raising the capital for the London Bridge extension, thereby reducing the amount to 75,000l. They had also withdrawn that portion relating to an extension of time. He would consequently, confine his observations to that which remained relating to the steamboat question. It had gone before the steamboat group, of which Sir Robert Peel was chairman, having previously been approved of by the Board of Trade, and sanctioned by a select committee of the present session, presided over by the Chancellor of the Exchequer. been approved of, with certain qualifying clauses, in Sir R. Peel's committee, with other bills of a similar character, thus admitting into the railway system a new principle, and one that must eventually be of great advantage. In other companies the adoption of this principle had fortunately met with the conof the subscribers, though in their own company with strenuous opposition, which, of course, tended very much to the embarrassment of the direc-The bill now stood for a third reading that evening, and he trusted that it would receive the sanction of a majority of the shareholders. He characterized the attacks in the public papers as unfair upon the part of those who sought by anonymous weapons the part of the steamboat knowledges well on the proprietors. When the directors projected the steamboat communication with the coast of France in 1845, there were, as had been intimated in the circular to the shareholders, but few who did not urge them to proceed vigorously with the measure, and there had scarcely been a general meeting since that period at which the pro-prietors had not sanctioned such proceedings by their The directors, therefore, were not prepared for the Report of the committee of investigation upon the point, and those gentlemen could not have had the same opportunity of considering the question in all its bearings as the directors whose attention had been devoted to it for years and who were impressed with the conviction of its being of vital importance to the well-being of the railway. The reasons which rendered a steam communication with the Continent in connexion with this company highly desirable were-1. That there was a large traffic between Brighton and Dieppe. 2. That to obtain this Continental traffic, fast and efficient steamboats are essential, the cost of which cannot exceed 75,000l. 3 That all efforts have failed to induce the General Steam Navigation Company or other parties to supply steamboats capable of performing the voyage in one tide; and that such efforts are never likely to succeed, inasinuch as it is the interest and policy of any independent steamboat company to convey the traffic from London by the river, in opposition to the railways. 4. That the South-Eastern and South-Western have found it necessary, for the same reasons, to establish steamboats on their routes. 5. That this company has incurred an expenditure of 100,000t. and upwards upon the branch to and works at Newhaven, mainly for the purpose of acquiring Continental traffic. 6. That a continuous line from Dieppe, by Rouen, the nearest route from the French coast to Paris, is on the point of completion. 7. That by this route the journey to Paris is shorter, will be accomplished in less time and at a cheaper cost than by any other-(which was tabularly expressed). The directors, moreover, had obtained the approval of the Commissioners of Customs for using a portion of the Newhaven wharf, for landing and delivering ordinary goods under sufferance warrant, and the consent of the Lords of the Admiralty was expected for the establishment of that wharf as a legal quay. In addition to all this, there was to be no personal responsibility, as the boats would be simply an addition to the working stock; and the proprietors would bear in mind how small a proportion the sum required to obtain this Continental traffic bore to the entire capital, and how insignificant when compared with the expected results. During the few months they had been established, they had carried 5,000 passengers, though they had had no railways completed on the other side, and with other boats plying on the station. They had in vain attempted to induce the General Steam Navigation Company to promote and improve the intercommunication, but had nothing but delusive promises. These were not ex parte statements, for he had made them on committee before Sir R. Peel, before opposing counsel, and with the whole steam force in battle array. without their attempting to contradict one single statement. He, the chairman, was a shareholder in all the other steamboat lines, and should continue to support the directors. It was not dealing justly with the directors at one period to urge them to go forward, and at another to withdraw. Their boats were adand at another to withdraw. Their boats were admitted to be the best in the Channel. They had cost 50,000l., and he only asked for 75,000l., and under

troubled and unsatisfactory condition of the Continent. If, when France was in a state of tranquillity, the proprietors agreed to subscribe for these boats, it was neither fair nor consistent to vary their line of conduct, now that the political horizon had become ruffled, and thus lose the opportunity of adding largely to their traffic. Let them look around at what the South-Western, South-Eastern and Chester and Holyhead Companies were doing, with the probability before them of seeing the day when even these steamboats may pay per se, and he had it on the best nautical authority, that in order to pass the bar harbours in one tide, it was indispensable that in making the sea passage they should, instead of depending on the slow-coach character of existing steamers, have boats of a class and character like those constructed by the Brighton.

In reply to Mr. Ald. WILSON The CHAIRMAN said that all the expense of the steamboats had been charged to a separate fund, but there had been a sum lent by the Brighton prior to the issue of the injunction to restrain the company from making a further advance. This was no more than the practice of other companies to make advances out of their corporate funds. The Brighton shares had been exceedingly well paid up.

Mr. Whishaw rose to move an amendment that all the words in the preamble and clauses of the bill relating to steamboats be expunged. The committee of investigation had deliberated on this steamboat question, and he as one of its body saw no reason to change the opinion he entertained on the subject. He objected on the general principle of uniting steamboats with railways. They had no informa-tion to convince them that such an alliance would be either profitable or judicious. The directors had put forward a statement asserting that they thought it of vital importance to the interests of the railway, while he on the other hand contended that it was only another of those extravagant systems by which this and other companies were reducing dividends and deteriorating their property. were reducing their heir property. Whatever might be the opinions of certain gentlemen in the Commons, and at the Board of Trade, the principle which he, Mr. W., opposed on the present occasion was at variance with the principles upon which railway companies were con-ceded, and the alliance of them foreign to the purposes for which they were intended. He deprecated the canvass the directors had made for proxies, and denied in positive terms the assertion contained in the directors' circular-that the shareholders had originally urged the directors to proceed vigorously with the measure. The directors went on to state that there was a large traffic between this country and the Continent. No doubt of it, but were they the only company in the field for that traffic? there not two other companies competing for it under more favourable circumstances? and there was no analogy whatever between their case and this. South-Eastern had a splendid fleet of steamers, and a sea route that might be got over in two hours. It was the same with the South-Western, though perhaps not to the same extent. He had received, since he had published his own letter, a perfect litter of communications on the subject, protesting in the strongest manner against the appropriation of funds to steamboat purposes, and to the practice of canvassing for proxies. With regard to the committee of the House of Commons he did not think that it was entitled from them, as railway proprietors, to any great respect, and among the members of the committee were Mr. Hudson, Mr. Glyn and Mr. Chaplin, connected respectively with the Chester and Holyhead, the Eastern Counties, and the South-Western: so that the parliamentary committee, it might fairly be supposed, was not altogether free from that partiality which the question had a right to expect at their hands. It was altogether an anomaly that the directors should endeayour to ally them with a company of whose position and liabilities they literally knew nothing, and he thought Mr. Parsons laboured under a mistake in saying that the sum advanced was only 12,000l. He understood it to be 20,000l. The hon, proprietor concluded amid applause.

The CHAIRMAN explained that it had been paid off

before the report of the committee.

Mr. Ald. Wilson, in seconding the amendment, said, he looked at the matter merely as a steamboat question, and he would never have entered into the Brighton had he dreamed that he was to be drawn into such speculations. The steam-packet company was registered as a separate company, but the directors told them that it was part and parcel of the rail-way. This he denied. There was a large traffic no doubt upon the Continent, but was it to come on to the Newhaven line? They must stop the wasteful

expenditure. The directors said that fast boats were sential. This must be the case if they were to make the distance in five hours, and defy wind and wave. Would any one going to the Continent go over to Newhaven in preference to Folkstone, where packets could sail over in spite of wind and weather? He had lately visited Newhaven and found the water at the bar was only four feet at spring tides. The fact of the South-Western having these steamers was no reason why the Brighton should have them, but rather a reason why they should not have them. There was an immense hotel built at Newhaven, at an expense of 14,000*l*. It was unfurnished, and yet there were two great cracks down the side. Of 2,000ft. of river wall, one-fourth had fallen in. There were eighteen or twenty jetties, sufficient for landing upon, whereas, one at a cost of 80l. would be sufficient. Moreover, there was a malaria all round the hotel, and sixty workmen were laid up last year. There were two hotels already. Proprietors would remember that all the railways were to be confiscated, and the boats were of no use while the country was yet untranquillized. No doubt the Customs would grant a wharf if they could only show there was a trade, but there had been a falling off in the number of ships that had visited the port. It might be said there would be a large coal trade; but if they had that trade on the Newhaven line, they would lose the tolls over the Shorcham. There could be no objection to subscribe the 75,000l. at 4 per cent., but the bill sought power to allow the directors to expend it without any security. If this was done he contended that it would merely be lending money to the directors, lawyers and engineers, who had been dragged into the speculation, and who were arrayed against the proprietors today to relieve them from their responsibility. Give the 75,000l., and in a few years' time, after being called on for more, if the speculation proved a failure they would be told the "proprietors sanctioned it."

Mr. Flood at some length supported the amend-

ment. The proposal was only another throw of the parliamentary dice, and the fact of the chairman having refrained from entering into detail almost went to show that there was a want of that material which usually went to make out a case. If there was to be such an immense traffic, why not let the Brighton and Continental Steam Packet Company keep it to themselves?

Mr. H. Davis followed, with an intimation that a petition was lying for signature at his office, to be presented to the House of Lords, against the proposed measure.

Mr. W. A. WILKINSON defended the proposal of the directors, and denied that it partook of the character of a pecuniary speculation upon their parts. or that it was one of those undertakings that was nonessential to their system. He was of opinion that, if persevered in, it would be a profitable speculation, and endeavoured, amid manifestations of impatience, to prove, by a string of statistics, that though it might possibly be a present loss it would not be so eventually.

After some observations from Messrs. STERRY,

Power, Wilson, Mills, and others,
Mr. Machin proceeded to contradict the statements
of Mr. Ald. Wilson with reference to Newhaven. He had been there yesterday and found no malaria, and last summer they had carried as many passengers at 16s. each as the opposing company had at 10s.

The Chairman replied: With regard to the proxies, the cost had been paid by the directors, and not by the

The General Steam Navigation Company company. The General Steam Navigation Company had stated that the service of these boats was a loss, and yet they employed counsel in committee to protect them in possession of a loss. The pussage across from Newhaven was only 41 instead of 5 or 6 hours.

The amendment and original motion were then put to a show of hands, when there appeared for the

former a large majority.

A poll was then demanded. The result will be made known this day (Saturday) at noon.

#### WEST CORNWALL

May 25 .- Adjourned Meeting, London .- Capt. Moorson in the chair.

The SECRETARY read the comment of the directors on the Report of the committee of inquiry. reference to the statement of the committee, the directors, under the head of original capital, observe that the original capital of 100,000l., therein referred to, was raised in 9,000 shares of 201. each, for the purpose of constructing a single line of railway on the narrow gauge, from Truro to Redruth, and a similar line of railway from Hayle to Penzance, and did not include any sum for the alteration or amendment of the then existing Hayle, nor in this scheme were there any branches contemplated. The 9,000 shares were allotted, and, without a single exception,

were all paid upon, none being reserved. The number of shares actually allotted to the members of the provisional committee, a body consisting of thirty-three persons, was 3,350; and the directors observe that, notwithstanding the high premium referred to in the Report, many of the members of such committee who compose the present direction, have not only retained their original allotments, but have added consider-ably to their interest. With respect to the Hayle ably to their interest. With respect to the Hayle purchase, the directors declared its increase in value since the purchase, and that the working expenses had been reduced. With respect to the accounts, they stated that the amount specified in the Report as paid on the allotment of shares to the 29th of March 1848 was correct, namely, 64,617l. 10s. Since then, however, a further sum of 4.536l, has been received on account of overdue calls, making a total to the present date of 69,153l. 10s. The liabilities referred to in the Report have been reduced by the payment of 1,660% to Mr. Chanter, being the balance due to him under the award made to him in October last; of 1,3421. 12s. to the Phoenix Company, in further reduction of the mortgage debt and interest due to that corporation: of 500l. to the engineer; of 4,000l. to the solicitors, being the balance due to them upon their bill of costs, as delivered for session 1845-6; and of 1,352l. 13s. 6d. for interest to proprietors: the liabilities therefore, including the balance due to the Phoenix Company, have been reduced from 24,732l. 6s. 6d. to about 17,000l. In reference to the future probable capital and estimates the directors consider that 13.060 shares (irrespective of those belonging to Mr. Mowatt) are held by responsible persons, which exceed by 655 the number mentioned in the Report, thus reducing the shares to be forfeited from 3,480 to 2,875; with this exception, the figures and calculations of the committee of inquiry appear to be correct. The directors would observe that the stock upon the Hayle, the property of Mr. Chanter, has been purchased by the company, out of the amount placed by the committee under the item preliminary expenses. The directors are happy to find that the opinion of the committee as to the anticipated income to be derived from the undertaking coincides with that which they had been led to form, and which they have every reason to believe will be realized. The directors allow the office expenses to have been heavy, but for some time past they had practised a rigid economy in every department. The necessary steps have been taken to forfeit, at the earliest period, the shares of all parties who, after strict inquiry, the directors are satisfied are unable to pay the overdue calls; a list of their names will be laid before the shareholders at the next half-yearly general meeting. The directors are also prepared to give their consideration to any plan that may be proosed for placing the interests of the general shareholders, in reference to the shares representing the capital of the Hayle, on a footing more approaching to equality.

Mr. CARNSEW thought their state was most unsatisfactory. He did not think that those proprietors who had paid up their calls should be asked to pay 2l. now, when there were 3,000 shares the calls on which had been unpaid. He thought the circumstances attending the purchase of the Hayle most discreditable. They should spend a little more money in applying to Parliament for a dissolution.

In reply to Mr. FLIGHT, the CHAIRMAN stated that there were 2,500 shares in arrear, held by six individuals. Proceedings were then going on against those who were solvent.

A lengthened discussion then took place in reference to the legal proceedings against Mr. Mowatt for the calls on the 4,700 shares which stood in his

Several Proprietors considered the step ill-advised. Mr. SQUANCE said that though Mr. Mowatt had succeeded in the Court of Chancery, they had been advised to proceed against him in a court of law. The question therefore with regard to him was not decided.

Mr. Gurney was sorry to hear that further proceedings were contemplated. He considered that enough of the money of the shareholders had been spent.

After some remarks from Mr. PEARCE, the Report of the committee of inquiry was received and adopted.

The statement of the directors was also received. The CHAIRMAN then called the attention of the meeting to the business of the day, which was the election of directors, in the place of the six retiring.

Mr. LAWRIE, a director, handed in the following list for election, namely:—Capt. Moorsom, Messrs. Alton, Ching, Wills, Pearce and Proctor.

Mr. EMERY seconded the nomination.

Mr. SLIGHT nominated the following gentlemen as

Barker, which, having been seconded, upon a show of hands there appeared for Mr. Slight's list 13, and in favour of Mr. Lawrie's list 27

A poll was then demanded, but the result was not declared.

BIRMINGHAM AND OXFORD JUNCTION.

May 23 .- Adjourned Meeting, London .- Mr. PEY-Ton in the chair.—A resolution was passed adjourning the meeting to May 26, at 11 a.m.

May 26.—By a renewal of the former resolution, the meeting was further adjourned to the 30th inst., at 11 a.m.

AMBERGATE, NOTTINGHAM AND BOSTON AND EASTERN JUNCTION.

May 19.-- Special Meeting, Nottingham. - Mr. W. F. N. NORTON in the chair.

The Report of the committee of investigation appointed on the 25th of February, stated that the whole line comprises 90 miles-4 miles, between Nottingham and Bulwell, are now under construction, at the joint expense of this company and the Midland, and the line between Nottingham and Grantham (20 miles) is in course of execution by this company. These comprise the whole of the present contracts. The company engages to purchase the Nottingham Canal and the Grantham Canal at the price of 232,500l. The capital authorized to be raised is 1,932,000l.; the shares registered, however, only represent a capital of 1,769,3204.; making, with the sum of 643,666/. by loan, a total capital of 2,412,986/. The estimates of the engineer include 10 per cent. for contingencies in the quantities and prices of the works; but in order to provide against other contingencies not capable of being forescen, the committee have added 73,000l. For the whole line, the revised estimates amount to 1,805,000l. The committee have estimated the cost of the land for the whole line at 320,000l., exceeding the original estimate by about 100,000l. The sums already expended for general purposes, and in payment of interest upon capital, and the additional sums estimated to be required, amount to 210,000l. They estimate the cost of rolling stock, plant, buildings, and machinery for repairing and maintaining the stock, at 265,000/. mittee thus assume the entire cost at 26,00,000/. To this the canal purchase will add 232,500/. As regards the revenue, the probable result of constructing only the line between Nottingham and Grantham will be the line between Nottingham and Grantham will be as follows, with all preliminary, parliamentary and general expenses:—Nottingham to Grantham, 20 miles, cost 504.472l., nett revenue, after deducting 40 per cent. for working expenses, 42,780l., yielding on the cost 7½ per cent. The company will be proprietors, jointly with the Midland, of the line from Nottingham to Bulwell, this company's proportion of which is estimated at 34,500l. Thus a total capital of 600,000l. would appear sufficient for the lines now in progress between Nottingham and Bulwell and Nottingham and Grantham, of which 250,000l. had Nottingham and Grantham, of which 250,000l. had been provided on the 6th of April last. The amount so stated will not cover the purchase-money for the canals; but there will be no difficulty in procuring (under the powers of the Act) the necessary sum for this purpose without burthening the shares. These canals have been and continue to be highly productive, and they are now in excellent repair; and in no case does it appear to the committee that this purchase will entail any loss upon the shareholders. Your committee deem it proper to add that circumstances in relation to the works in the neighbourhood of Grantham may permit of an arrangement by which a diminution in the capital required would be accomplished. As regards the present condition of affairs, the contracts entered into for land, materials for permanent way and works, in relation to the lines now constructing, show a total of 407,659l.; and the sum expended up to the 6th of April last is 231,515l. The cash available for engagements amounted at the same date to 19,1711; and the arrears of the last call of 12s. 6d. per share, when fully paid up, will produce an addition of 25,145l. to that sum. These arrears had been reduced to 22,48ll. 5s. on the 5th of May. The ordinary expenses have been in course of gradual reduction for some time; and the directors are making arrangements, consistently with the limitation of the works, for reducing still further the staff of officers and the current expenditure. The committee recommend that the undertaking be now confined to the construction of the line between Nottingham and Grantham and the joint line to Bulwell. For this purpose the sum of 7l. 10s. per share (of which 3l. 5s. is called up) will be amply sufficient; this liability not to be exceeded, excepting by the sanction of threefifths of all the proprietors, to be signified in writing, upon a statement of any circumstances authorizing a departure from this course. The committee recommend to the directors the propriety of making a call an amendment, namely:—Messrs. Pearce, Harrison, of 10s. per share only in June next, the prompt pay-

Digitized by GOGIE

ment whereof, as well as the arrears of the last call of 12s. 6d., is strongly urged upon the proprietors These calls being responded to will permit of the necessary progress of the works, with the addition of one other call of 10s. per share only, prior to the half-yearly meeting in February 1849.

The CHAIRMAN, in recommending the adoption of

the Report, stated that with respect to arrears, in the event of shares becoming forfeited, there were responsible parties who would take them up, without

the company suffering any loss.

The motion having been seconded,
Mr. BIRLEY, of Leicester, deprecated unnecessary expenditure, by continually appointing committees for inquiry into particular matters, and by increasing the directory to take in discontented shareholders.

The Report was then carried unanimously. Mr. Nicholson urged the rapid completion of the undertaking, and to effect that object recommended the more wealthy to pay calls in advance, to encourage which the directory would allow an extra per-centage (5 per cent. instead of 41) upon capital

so paid up prematurely.
On the motion of Mr. WILKINSON, seconded by Mr. KAHRS, the unanimous thanks of the company were accorded to the committee for their successful labours

in pursuing the late inquiry.

A conversation subsequently ensued concerning an alliance with another company, which, however, led to no result.

LANCASTER AND PRESTON JUNCTION. May 17.— Special Meeting, Lancaster.— Mr. J. Bushell in the chair.

Mr. KYNASTON moved that the dividend be 15s. 7d. per share on the whole shares, 9s. 4d. on the threequarter shares, and 4s. 1d. on the quarter shares.

This motion, not being seconded, fell to the ground.

Mr. Moss moved that the dividend be declared after the usual rate, viz., 15s. 2d. on the whole share, 10s. 1d. on the three-quarter shares, and 4s. on the quarter shares, which was seconded and carried by a large majority.

Mr. KYNASTON declared his intention to propose an alteration in the rate of dividend at the meeting in June, on the ground that the dividend agreed to for the three-quarter shares was too high.

Mr. KAY remarked that on the formation of the company 5,000 whole shares were created, and afterwards 5,000 three-quarter shares; the latter were divided pro raid amongst all the shareholders, according to the number of whole shares they possessed. The dividend arising from the three-quarter shares was then placed on the same basis as the dividend on the whole shares. Since then several of the old proprietors had sold their three-quarter shares, and therefore the adoption of Mr. Kynaston's motion would be tantamount to a breach of faith with those purchasing them from the original holders under the impression of their being always entitled to the same dividend.

AIRDRIE AND BATHGATE JUNCTION.

May 17 .- Special Meeting, Glasgow .- Mr. J. L. Ewing in the chair.

Resolutions were proposed—1. For the purpose of reducing the number of directors to seven, and determining the order of rotation in which such reduced number shall go out of office, and what number shall be a quorum; and 2, for the purpose of fixing the remuneration to be paid to the directors and secretary. The first was carried.

The CHAIRMAN repeated the protest which Mr. Rankin tendered at the last general meeting.

With regard to the second branch of the business, it was agreed to vote a certain allowance to the directors, and the secretary's claim was referred either to the Dean of Faculty or Mr. Hugh Moncrieff, at the option of the late secretary.

BELFAST AND BALLYMENA. May 22.—Half yearly Meeting, Beljast.—The Hon. G. Handcock in the chair.

The Report stated that the line was opened throughout on the 11th ult. for passenger traffic, and that the receipts during the few weeks it had been in operation promised favourably. The natural re-sources of the line, however, could not be ascertained until both passenger and goods traffic had been some time in operation. To facilitate the union of these, the directors had instructed the engineer to urge forward the completion of the goods stations. In accordance with the wishes of the proprietary, they had secured the services of Mr. T. H. Higgin, to whom was confided the entire management. The engineer reported that the works were well executed and that the arrangement for carrying the goods traffic would be completed in a few weeks. The statement of accounts showed the receipts at 315,1451., sums in anticipation of future calls, 2,0581. 2s.;

amount of loans at 6 per cent., 94,670l.; balance of amount or mans at oper cent., 94,6702.; balance of interest on bank account and calls, 2,4741. 11s. 9d.; transfer fees, 381. 15s.; making a total of 414,3861. 8s. 9d. Expenditure, 319,8191. 3s. 10d.; and for the half-year ending the 30th of April 1848, 83,7531. 17s. 5d., making a total of 403,5731. 1s. 3d. Balance in hand, 10,8131. 7s. 6d.

The CHAIRMAN stated that, besides calling up the entire 501., the company would have to borrow to the utmost limit to which they were entitled by law before the works could be regarded as altogether completed.

The Report was unanimously adopted.

GREAT WESTERN .- May 19 .- An inquest was held at Shrivenham on Capt. Blair, R.N., who died from injuries received in the accident on the 10th inst.—
The jury confirmed their former finding viz., "Manslaughter against James Maybury and William Willoughby, leaving the policeman Pargetter, as far Willoughby, leaving the policeman Pargetter, as lar as they were concerned, to be dealt with by his employers.—May 22.—Another inquest was held at Swindon, on the body of one of the sufferers by the accident on the 10th. The coroner, after seven hours investigation, terminated the inquiry, when the jury returned the following verdict:—"We find that Maunsell Mecham died on Monday, the 22nd of May, from erysipelas, brought on by imprudently exposing himself to cold on the gallery of the Swindon station, being at the time in a delicate state of health from injuries previously received at Shrivenham."

CALEDONIAN.—According to general report, the plant of the newly opened line is in good order, and the arrangements at the different stations seem to be complete. For the benefit of excursionists, the North British Daily Mail gives the following particulars:-From the Abington station there is a coach three times a week to Sanquhar, which passes through the villages of Leadhills and Wanlockhead. There is also a coach daily from Elvanfoot to Thornhill, giving accommodation to the inhabitants in that populous accommodation to the inhabitants in that populous district, including the parishes of Morton, Closeburn, Penpont, Durrisdeer, Glencairn and Tynron. To tourists visiting the Vale of Nith, either of the above routes will prove interesting. The former passes through Leadhills, the birth-place of Allan Ramsay, author of the 'Gentle Shepherd,' &c. The house in which he was born's pointed out to the curious in which he was born is pointed out to the curious in such matters. The village has an excellent inn for the accommodation of travellers wishing to inspect the mines, ascend the lofty Lowthers, visit Enterkine Pass, or the not less celebrated, although less romantic, Glendyne. The lead mines have not been wrought so extensively of late as they would have been, had the guardians of the Earl of Hopetoun given the lessees, the Scots Mining Company, more encouragement, instead of embarrassing them with unnecessary lawsuits. Not many years ago this mining village was one of the most prosperous in Scotland. The village of Wanlockhead has acquired celebrity, from the Duke of Buccleuch, the lord of the manor, having refused a site to the adherents of the Free Church in refused a site to the adherents of the Free Orders in that locality. The other route is somewhat better known, being the old road from Edinburgh to Dumfries, and therefore requires no recommendation. The fishing in the Clyde, Darr and Petrail, and other tributary streams, is already attracting anglers from Edinburgh and Glasgow. By taking an early train to Abington or Elvanfoot, they can have a long day's sport, and return with a late train in the evening. The chief attraction, however, on the line is Beattock, with its commodious inn. This is the station where passengers leave for Moffat, so celebrated for its Although yet early in the season, we are inrequire to be known to be appreciated; and there is not grander scenery in Scotland than in the neighbourhood of the village. At this point the vale of Annan opens up to the traveller going south a striking contrast to the upper portion of the vale of Clyde. The former is all fertility, arising from the excellent system of cultivation adopted; while the latter is merely wild and comparatively barren sheep-walks. Sheep, for a number of years, have been a remarkably profitable product; but should the reverse ever be the case we may expect to see a considerable por-tion of the extensive district of Crawford Muir under crop. In Annandale the crops everywhere are strong and healthy. A great breadth of potatoes has been planted—in consequence, we presume, of the easy access afforded by this railway to the Edinburgh, Glasgow, as well as Manchester, Liverpool and Lon-

THE FRENCH RAILWAYS .- On the 16th the Minister of Finance at last presented to the National Assembly the long-expected project relative to the assumption of the railways by the State. The proposed price of purchase is to be the average quotation during the

six months preceding the revolution of February, and the holders will receive in payment 5 per cent. stock, also at the average price during the same period, viz., from the 24th of August 1847 to the 24th of February 1848. The Minister attempts with much circumlocution to justify the measure, and contends that it does not imply a spoliation. The following are the

1. The resumption by the State of the railways conceded to financial committees previous to the 24th of February 1848, is declared a measure of public utility. 2. The Minister to financial committees previous to the 24th of February 1848, is declared a measure of public utility. 2. The Minister of Finance is authorized to execute the measure, on allowing the compensation stipulated in the third article. 3. The resumption of the different railways shall take place on the following terms:—First Category—The Paris and St. Germain, the two Versailles roads, Strasburg to Basle, Paris to Orleans and Corbeil, Paris to Rouen, Rouen to Havre, Montereau to Troyes, Paris to the frontier of Beigium with the branches, Orleans to Bordeaux, the Centre line, Avignon to Marseilles, Amiens to Boulogne, Paris to Lyons, Paris to Strasburg, and Tours to Nantes. The value of those different lines shall be fixed, according to the average price of their respective shares on the Paris Bourse during the six months that preceded the revolution of the 24th of February (from the 24th of August 1847 to the 24th of February 1848). In exchange for the shares the holders shall receive coupons of Rentes 5 per cent., price for price, according to the average price of the Paris Bourse during the six months above mentioned.—Scond Category—The Andrezieux and Roanne road, Lyon to St. Etienne, Grand Combe to Alais and Beaucaire, Abscon and Anzin to Denain and Somain, Montpellier to Cette, Mulhouse to Thann, Bordeaux to La Teste, Dieppe and Rouen. For this second category, the Minister of Finance is authorized to treat with each company separately. The treaties shall, however, be submitted to the sanction of the National Assembly. Minister of Finance is authorized to treat with each company separately. The treaties shall, however, be submitted to the sanction of the National Assembly. 4. The companies with which the Minister of Finance should think proper to enter into a negotiation may, in a general assembly of the shareholders, assembled for the purpose, accept by a majority of votes the conditions proposed by the Minister of Finance, and thus contract for the universality of their shareholders. 5. A sum of Rentes equal to the estimated value of the railway's redeemed shall be inscribed on the Grand Book of the Public Debt. 6. The State, assuming the place of the companies, shall reimburse their obligations and loans on the terms stipulated with the lenders. 7. The expenses necessary for the execution by the State of the railways which were to be executed by the companies in virtue of anterior laws, shall be provisionally defrayed by the floating debt. 8. The Minister of Finance and the Minister of Public Works are charged with the execution of the present decree.

THE VALUE OF FRENCH RAILWAY SHARES.—In the money article of the Times appeared the followthe money article of the Times appeared the following table, showing the average prices in our market of the principal shares included in the proposed decree for direct absorption by the Government, and also of the French 5 per cents, during the six months specified by the Minister. Our readers will be enabled to form some idea of the immediate operation of the measure although of course the actual calof the measure, although, of course, the actual cal-culations will be based upon the averages of the Paris, and not the London prices :--

	each 201.	Price during six months pre- ceding Feb. 24.		rage.	Pre- sent price.
	share.	Highst.	Lowest.		
Boulogne and Amiens	20	15}	123	143	G ₃
Orleans and Bordeaux		6	3°	41	13
Paris and Orleans	20	48	44	46	221
Paris and Rouen	20	37	33	35	154
Paris and Strasburg	8	5	27	37	2
Rouen and Havre	20	231	16	193	7 <u>ł</u>
Strasburg and Basle	14	6	6	6	
Tours and Nantes	8	43	2	33	14
5 per cent, Rentes		118	1131	115	69}

The above shows that while the fall in railway shares has been generally about 60 or 70 per cent., the fall in Rentes has been limited to 46½ per cent. The proposed arrangement would therefore seem to put the proprietors of the various lines in a better position by substituting in place of their present security one that bears a higher value in the market. But (continues the writer) it must be remembered that the fall in railway shares has been occasioned almost solely by the incapacity or unwillingness of the Government to afford the same degree of protection to private property as was enjoyed under the Monarchy, and also by their avowed intention to take advantage of this wrong by using it as a pretext for confiscation on their own terms. It is some satisfaction to observe that the Minister considered it necessary to apologize for the act by an attempted denial of its being one of spoliation, but although his arguments may convince the Assembly, they will make, it is to be apprehended, little impression upon Europe at large, or on the future students of the history of France.

PORT OF GREAT GRIMSBY.

### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS

I'he Dues for Vessels entering the Docks at Great Grimsby mare been reduced to 10d. per register tonunge.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The Tallway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the

PORT DE GREAT GRIMSBY.

A VIS AUX NÉGOCIANTS, AUX AR-MATEURS ET AUX CAPITAINES DES NAVIRES ETRANGERS.

Les droits de tonnage sur les Navires qui entrent les bassins à Great Grimsby, ont été reduit à 10 sols Anglais par tonneau de registre.

On compte que les nouveaux bassins seront prêts à recevoir es vaisseaux vers la fin de l'année 1849.

Ces bassins offriront des avantages bien decidés sur la plu-part des autres ports de Mer de l'Angleterre en étant acces-sibles à toute heure, excepté pendant une couple d'heures à la marée base, en tems de maline.

Le Havre présente un mairie en tout tems. Les communica-tions par l'entremise des Chemins de Fer de MANCHES-TER, de SHEFFIELD, et des Lignes du comté de LINCOLN, seront ouvertes avec tous les districts manufacturiers et avec toutes les parties de la Grande Bretagne.

## AMIENS AND BOULOGNE RAILWAY.

At a MEETING of the Shareholders held at the London Tavern this 31st day of May 1848,—

CHARLES LAFFITTE, Esq., in the Chair,-

It was resolved unanimously.—

1st. That the Directors be authorized to protest against the proposed absorption of this Railway by the French Government.

2nd. That the protest which has been presented to the Committee of the National Assembly, and read to the Proprietors this day, be printed, and a copy sent to each Member of the National Assembly of France, together with the previously passed resolution of general protest.

CHARLES LAFFITTE, Chairman.

3rd. That the best thanks of this Meeting be given to the Chairman for his conduct in the chair this day.

## LANCASHIRE AND YORKSHIRE RAILWAY.

As a SPECIAL GENERAL MEETING of the Proprietors of the Lancashire and Yorkshire Railway, held, under the Act of Incorporation, at the Palatine Hotel, in Manchester, on Wednesday, the 31st day of May 1848, at 12 o'clock at Noon.

HENRY HOULDSWORTH, Esq. in the Chair,-It was moved by the CHAIRMAN, seconded by JOSEPH

It was moved by the CHAIRMAN, seconded by JOSEPH HEGAN, E2q.,—
1st. That the several sums of 120,000L, 140,000L, 56,000L, 140,00L, 575,000L and 150,000L. (which the Company are authorized to raise under the powers of "The Manchester, Bolton and Bury Canal and Railway Act, No. 2, 1846,"
"The Manchester, Bolton and Bury, and Manchester alceds Canal and Railways Act, 1846," and of the several Acts passed in the last Session of Parliament, enabling them in this behalf), making together the sum of 1,055,000L, be raised by the creation of 105,500 shares of 10L each, to be called "Guaranteed 6 per Cent. Shares," which shall be entitled to a fixed dividend of 6 per cent. per annum, in perpetuity, in preference to the dividends payable on the existing shares of the Company; but without participation in any surplus dividends, or any future issues of shares, or stock, or any other profit or benefit.

2nd. That the said 10L Shares shall be paid up by the

and That the said 104. Shares shall be paid up by the following Instalments, vis.

22. 10s. per share on the 30th day of June 1848; 21. 10s. per share on the 25th day of September 1848; 21. 10s. per share on the 21st day of December 1848;

21, 10s, per share on the 25th day of March 1849.

24. 10s. per share on the 25th day of March 1849.

3rd. That every Proprietor of existing shares, who shall be registered as such on the 5th day of June 1848, shall be entitled to one of the said new shares, in respect of every 100t. (nominal value) of the shares them standing in his name, (rejecting any fraction under 50t, but allowing one 10t. share in respect of any fraction amounting to 50t, or upwards,) provided he pays the first Instalment of 2t. 10s. per share on or before the 30th day of June 1848 and each of the subsequent Instalments within one calendar month after the date of its becoming due.

4th That the Directors be authorized to disnose of the

4th. That the Directors be authorized to dispose of the new shares in respect of which the first or any subsequent Instalment shall not be paid, as provided for in the last resolution, at such times, upon such terms, and in such manner as they shall think fit, for the benefit of the Com-

pany.

5th. That subject as after-mentioned, the said new shares shall be entitled to dividends, at the rate aforesaid, upon the several Instalments, from the respective days hereinbefore fixed for payment thereof, such dividends to become the property portions on the 30th of June and 31st of the company of the state of the said the first payment to become are recogning due, and the first payment to become the property of the said of the said the said that the said said on the day when due, the holder of such that of the said share of the said share and the said shares of the said shares to the said shares of the said shares, not dividend all a spect of the Instalments for the time being one or on any other of his said shares.

7th. That every holder of such new shares who shall pay any of the Instalments thereon in advance shall be allowed a discount on the amount so paid at the rate of 6 per cent.

8th. That the Directors be authorized to take such steps oth. That the Directors of authorised to take such steps and make such regulations as they may deem necessary in reference to such new shares, the obtaining payment of the several instalments, and to the issue of Certificates, when paid, and otherwise relating thereto.

AMENDMENT.

Moved by Mr. John Fielden, seconded by Mr. Thomas Fielden,—
That this Meeting be adjourned for two months, in order that ample time may be given to all absent Proprietors to consider the question.
The appendment was put by the Chairman and possitived.

The amendment was put by the Chairman, and negatived

The amendment was put by the Chairman, and negatived by a large majority.

The original motion was subsequently put and carried, with five dissentients. Poll demanded by Mr. John Fielden; and Messrs. E. D. Falkner and John L. Kennedy having been unanimously appointed scrutineers, the Meeting was adjourned until three o'clock p.m., to allow time for a record and scrutiny of the votes tendered.

At a SPECIAL GENERAL MEETING of the Proprietors held by Adjournment as above, May 31st, 1648,

HENRY HOULDSWORTH, Esq., in the Chair. The Chairman announced the result of the Poll, as certified by the Scrutineers, as follows:—
For the original motion...... 1,096 votes.

Against it ..... 54

Majority in favour of the original motion 1,041 ,,

The Chairman then declared the original motion carried. The Chairman having vacated the chair, the best thanks of the Meeting were, on the motion of J. R. Kay, Esq., voted to him for his able and satisfactory conduct in the

The thanks of the Meeting were also voted to Mesara E. D. Faulkner and John L. Kennedy, the Scrutineers, for their efficient services on this occasion.

T an EXTRAORDINARY MEETING of A T an EXTRAORDINAKY MELLING OF A the Company of the LONDON, BRIGHTON AND SOUTH COAST RAILWAY, held at the London Tavern, Bishopsgatestreet, on Friday, the 26th of May 1848, and, by Adjournment, on Saturday, the 37th of May 1848.

JOHN MEESON PARSONS, Esq., in the Chair,-

Resolved.—That the Draft of the application to Parliament, now submitted to the Meeting of the Proprietors, intituled "An Act for making an Alteration in the New Toros Station; for enabling the London, Brighton and South Coast Kailway Company to subscribe to the maintenance of Steamboats; and for amening and enlarging the powers and provisions of the several Acts relating to such Company,"—be approved of.

Recolved —That the Draft of the Bill now submitted to the

remaing to such company, — De approved of.

Resolved,—That the Draft of the Bill now submitted to the Meeting of the Proprietors, initialed "A Bill to amend and enjarge the powers of the Acts relating to the Direct Loudon and Portsmouth Railway Company; and to enable such Company to effect certain arrangements with the London, Brighton and South Coast Railway Company,"—be approved of.

Also, at an EXTRAORDINARY MEETING of the said Company, held immediately after the foregoing Meeting, at the said Tavern.
Resolved unanimously.—
That for the purpose of converting a portion of the Mortgage Debt of the Company into capital, the sum of 461,853, shall be raised by the creation of 92,571 shares, of 5d, each, which shares shall entitle the holder to a perpetual minimum dividend of 6 per cent, per annum, payable hall-pearly, in preference to the dividends payable on the ordinary stock and ordinary shares of the Company; and when a dividend exceeding 8 per cent, in any one year shall be payable on such stock and shares, the said new shares shall be entitled to participate ratesbly and proportionately in such higher rate of dividends.

That the said new shares shall entitle the holders to all the

That the said new shares shall entitle the holders to all the rights of ordinary shareholders, except in the participation of dividends when less than 6 per cent, per annum.

That such shares shall be offered to the Proprietors who shall be registered in the books of the Company on this present 27th day of May, in the proportion of one share for every 50% ordinary stock or share.

That a copy of these Resolutions shall be sent forthwith to each Proprietor; and if any Proprietor shall fail to accept the shares offered to him on or before the lat day of July next, he shall forfeit his right thereto.

That a deposit of 2l. shall be paid upon each such share on or before the 5th of July next, whereupon the party shall be registered in the books of the Company.

in the books of the Coupany.

That the future Calls upon the said new shares shall be paid up as follows, that is to say—

11. per Share on the 8 h day of August 1848;

12. per Share on the 8th day of September 1848; and

13. per Share on the 8th day of December 1848.

That the Calls paid on the said new shares shall carry interest at 6 per cent, per annum from the respective times of payment.

But in case of the non-payment of the whole or any part of the Call, upon any of the days appointed for payment thereof, then the holder shall forfeit all interest or dividends due, or to become due, up to the time when such Call shall be paid; and he shall be chargeable with interest at 5 per cent. per annum on the Call so in arrear, up to the time of payment thereof.

That any shares which shall not be accepted by the Proprietors, all be disposed of in such manner and upon such terms as the irectors may think proper.

Directors may think proper.

That all parties paying up their shares in full or in part, in anticipation of Calla, on or before the 8th day of July next, shall be allowed a rebate or discount on the Calla, at the rate of 6 per cent per annum, on signifying their intention so to do, to the Secretary, on or before the ist of July next.

Percentage of the property of the Secretary of the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Secretary, on the Se

Resolved unanimously.—That the thanks of the Company be ven to the Chairman of the Meeting, and to the Directors for heir services.

T. J. BUCKTON, Secretary. given to the C their services.

W. Mulready, R. A.
R. Kedgrave, A.B. A.
H. J. Townsend.
bir R. Westmacott, E

The Art-Manufactures will be of all kinds, and executed in metals, pottery, glass, wood, papier maché, and other materials.

Those now ready are A Bride's Inkstand, in Parian, with Tazza. Designed by John Bell, price It. 13s. and upwards. Also in Bronze, equal in make to the old Florentine, with papier maché tray, 8s. w. and upwards: in Silver, 39 Guineas.

Kissing Children, surmounting a Paper Weight, in Parian, 9a.; in Bronse; and also a Loving Cup.

Boy and Dolphin as a Seal or Paper-knife Handle, with gut flax-blade, 2t on and upwards.

A Beer-Jug, in Parian: emblematical of the Gathering, Storing and Employment of the Hop. Designed by H.J. Townsend, price 13s.; or with extra Figures, 3ss.

*** The Gold Medal of the Society of Arts was awarded to Messra Minton & Co., the Manufacturers, for the Union of Superior Art and Manufacture which this Jug displays.

The Infant Neptune. Designed and modelled by H. J. Townsend, 37a in Parian; also in Silver, and Silver Gilt, 25 Guineas and upwards. A Water Jug, in Glass. Designed by R. Redgrave, A.R.A., at various prices; also Goblets to match, price 10a each. The Vase on a smaller scale will be executed in Porcelain.

The "Bitten Tongue"—a Mustard Pot, in Porcelain and Parian. Modelled by John Bell, price 94. The figure will also be applied to a Silver and Plated Metal Mustard-pot.

A Pair of carved Wooden Brackets, by Taylor, Williams and Jordan, price 54. 54.

Dorothea, a Statuette, in Parian. Modelled by John Bell, price 22, 24.: also in Bronze.

"Purity," or Una and the Lion, a Statuette.
Designed and Modelled by John Bell; a companion to Daneoker's
Ariadne, or "Voluptuousness," price 3t. 3s.

The Lyon would not leave her desolate,
But with her went along, as a strong gard

Of her chaste person.

-- Spenser's Faerie Qurene, booke I. canto III.

A Bust of the Duke of Wellington as at Waterloo. Modelled by S. Joseph, price 14, 11a, 6d.

The Milk Jug which received the Prize awarded by the Society of Arts in 1846 Designed by Felix Summerly; exe-cuted in Porcelain and Glass: also in Silver by Messra, Hunt & Roskill, 166, New Bond-street.

Pish Carvers, by John Bell, in Silver, 11 Guineas, made by Joseph Rodgers & Sons.

Wine Tray, which fixes the Decanters. Designed by Redgrave, and made by Jennens & Bettridge.

R. Redgrave, and made by Jennens & Bettridge.

The articles are sold by J. Cundall, 12. Old Bond-street; by P. & D. Colnachi, 13. Pall Mail East; Barry & Son, Egyptian Hall, Piccadilly; G. Bell, 188, Fleet-street; J. Mortlock, 390, Oxford-street; J. Phillips, 228 and 289, Oxford-street; J. Tennand, 149, Strand; J. Green, late Brumby's, 19, 83, James's-street; and Jennens & Bettridge, 3, Halkin-street West; and all Dealers.

SATURDAY, JUNE 3.

## Mechanical Improbements.

HARLOW & YOUNGS PATENT ATMOSPHERIC RAILWAY.

This is a plan chiefly distinguished from its forerunners by a sliding metallic valve, which is to slip aside into a groove as the traction-bar passes through the slit. The following is the description of it, given by Mr. Sowerby, in a pamphlet just published by Mr. Weale:—

It is made entirely of metal, and acts upon the same principle as the slide valve of a steam-engine, combined with a disc or joint made on the principle of a common stop-cock. The upper side of the longitucommon stop-cock. The upper side of the longitu-dinal tube on which the valve has to rest must be planed quite smooth, and the valve is also to be planed smooth on the under side, so that, when it is placed on the top of the tube, the two surfaces will be so true that no air can pass between. The discs must also be turned to fit the valve at the joints. Then, as the piston-rod passes along the tube, the valve is pressed open gently by the connecting bar, which connects the piston with the carriage, and, as soon as it has passed, the valve is again closed by the action of the spring. The longitudinal valve is easily moved to one side, because the vacuum will be destroyed by the piston-head being placed a little before the connecting bar. The continued horizontal movement of the valve on the planed surface of the tube will cause the whole to fit more closely, and the more it is worked the better will be its action, and the more free it will be from leakage. The same may be said of the discs or joints. The valves and springs are kept in their proper position, and free from dirt, by means of a cover, screwed down on to the tube, which also prevents any liability in the valve and springs getting deranged. The higher the vacuum inside the tube. the more closely the valve will fit, owing to the pressure of the external atmosphere. Thus it will be readily seen, that the whole is not only very simple in its construction, but it is also mathematically and philosophically correct and true; whereas, when leather and such other substances are used, the valve has literally to be cut or torn up to allow the piston to pass, and by continued wear and tear the valve is soon rendered useless and must be restored. object in having the recesses in the longitudinal valve, is to lighten it and decrease the surface which requires to be planed. Additionally, many other improvements would be introduced in the construction of the engines and pumps, and arrangements for working-differing from those on atmospheric lines already in operation-would be made, together with such alterations as would be suggested in the course of forming a line of railway expressly intended for the atmospheric mode of traction. In conclusion, it is not pretended that the atmospheric system will entirely supersede the locomotive, any more than the latter has superseded canals, common roads, and such other means of communication as were in existence prior to the establishment of railways; but, in the vast field which is still open for railway enterprize in all parts of the world, it is reasonable to suppose that the atmospheric mode of traction will doubtless before long be brought into operation on a magnificent scale, not only for traversing extensive countries but also for forming a railway communication with districts where a locomotive line would either be quite impossible, or otherwise constructed at such a stupendous outlay of capital, as would be ruinous to all who embarked in such undertakings. It is pre-sumed that existing railway companies might even find it to their advantage to have an atmospheric line laid down by the side of their locomotive line, for greater dispatch, and similar in its nature and use to the electric telegraph. Further information may be obtained by applying to Benj. Young, Esq., Grange-road, Bermondsey; or Mr. W. Sowerby, Civil Engi-neer and Surveyor, 52, Parliament-street, Westmin-ster. A working model has been for some time in operation, and may be seen on application as above.

The following are the advantages which the inventors state, with many of which our readers know we do not agree. We must, however, give them the full benefit of their own statement.

The great difference between the atmospheric and the locomotive systems is, that in the one the motive power is stationary, but in the other the power is attached to the load to be drawn, and the additional weight of the engine and tender is frequently greater than the weight of the train. It is therefore neces sary, by the locomotive system, to increase the power

balance of power only goes to move the train; but by the atmospheric system no greater power is required beyond what is necessary for moving the train. increase of weight on the locomotive system, and the consequent increase of power, cause also an increased expenditure in every respect. First, as regards the cost of construction :- By the atmospheric system a single line of rails, if properly conducted, can be made to act as efficiently and answer the same purposes as a double locomotive line, consequently much less land is required. Steep gradients can be easily ascended, for a locomotive engine to ascend is quite impossible—partly on account of the immense weight of the machine itself, and partly because the wheels lose their bite upon the rails, and slip. The atmospheric principle might be applied even to the drawing of carriages obliquely along a ledge, up the face of a precipice. The general surface of the country could therefore be more closely followed, and the cost of cutting and embanking would be greatly reduced. The atmospheric principle is well adapted for passing round sharp curves; consequently, where a line is proposed to run along the valley of a river, the course of the stream could be followed without much difficulty, and with advantage as regards the cost of making the line. The weight and jar, or rather concussions, of the locomotive engine and train in passing through cuttings and long embankments, render it necessary to make the side slopes very flat, for which an increased width of land is required, and a greater amount of earthwork. This would be rendered unnecessary on an atmospheric line. The immense spoil-banks, which are so frequent and so unsightly on locomotive lines, and the land taken for that purpose, would also be saved by the atmospheric system. bridges, tunnels, viaducts, and every other description of work which augments the first cost of construction on a locomotive line, would require to be of less size and strength, and would be erected at a much less outlay of capital, if expressly intended to be worked as an atmospheric line. There would also be an entire absence of outlay in the erection of vast workshops, engine-sheds, watering stations, &c., by adopting the atmospheric system, all which are indis pensable and form the chief burdens of expense on a locomotive line. The cost of the permanent way would also be greatly reduced by adopting the atmospheric system, as the rails, chairs, sleepers and fit-tings would not require to be so heavy or so strong as on a line having ponderous locomotives. The cost of stationary engines to work an atmospheric line is considerably less per mile than a stock of locomotive engines—the only additional expense being the lon-gitudinal tube. On the locomotive system it is necessary that there should be a great accumulation of passengers and merchandise before a train of any kind can be dispatched; consequently an immense extent of station and warehouse accommodation is usually required. A great outlay of capital is therefore incurred in the first instance, and as the traffic increases the buildings must be enlarged, increased and altered indefinitely; but by the atmospheric system light trains would be frequently dispatched, and an increase of the number of carriages and trucks is all that would be wanted. Great economy would also be introduced in the construction of the carriages, waggons and trucks used on an atmospheric line: they would be less complicated, lighter, much improved and more perfect than such as are at present in use on locomotive lines. The cost of superintending the works during the course of construction on an atmospheric line would also be reduced, on account of their being less difficult and extensive.

Much time would also be saved in the final completion of the whole, and in bringing the line into opera-tion. Secondly, the working expenses:—The principal expense on a locomotive line of railway is the cost of power and repairs. The locomotive engine is usually worn out in six or eight years, and the cost of repairs for wear and tear, together with the depreciation, is always ruinously heavy; but stationary engines, for working a line on the atmospheric principle, will last for an indefinite number of years, and the cost of repairing them is a comparative trifle. The repairing of locomotive engines involves the purchase of tools, shops, machinery and working utensils, also the keeping up of an immense establishment The cost of repairing carriages, waggons, trucks, &c. would also be reduced by the atmospheric system, as they would be liable to fewer accidents and less rough usage and derangement. Then there is the maintenance of way, at all times a heavy item, on account of the great wear and tear of the huge locomotive engine with its tender and train, which likewise causes a subsidence of the rails, &c. : this, on an atmospheric line, would be very small and insignificant. One of the leading features in favour of the atmospheric system is, that as the traffic increases the average sufficiently, first to move its own weight, and the cost per train decreases; but on locomotive lines any

increase of traffic causes a very large increase of expenditure as well. And, lastly, greater accommodation and safety would be secured to the public by the adoption of the atmospheric system. the adoption of the atmospheric system. Frequent light trains would be dispatched just as the passen-gers arrived, and travellers would be enabled to obtain a train at any station with as little delay as a cab or an omnibus can be met with in the streets of London. The great confusion at stations which now prevails on locomotive lines during the arrival and departure of the trains, because of the accumulation of passengers, would be avoided; the losing of any train would then be of less importance than at present; and there would be greater certainty of the arrival and departure of each train. Merchandise would also be dispatched as soon as it arrived, instead of, as at present, being kept days waiting until some locomo-tive engine had returned from the other end of the line to haul the waggons and trucks on which the On a goods were deposited to their destination. locomotive line, where the traffic chiefly flows in one direction, there is a great loss of time and waste of power in the locomotives having to haul the empty waggons back; but the power on an atmospheric line is always readily available. It would at all times be to the interest of an atmospheric railway company to carry as many passengers as possible at low fares, because the increased traffic would reduce the average cost per train. The comfort as well as convenience of travellers would also be very much increased by the adoption of the atmospheric system, which is entirely free from dust, smell and noise, and the terribly uneasy jolting and rocking, all of which are a source of great annoyance on railways at present. The atmospheric system is also free from danger to passengers by collisions, land slips, breaking of axles, wheels or rails; and accident to the engine whilst running off the line is almost impossible. A very high rate of velocity is also obtainable with safety by the atmospheric mode of traction, and that, too, at a diminished cost as compared with the locomotive.

#### Official Bapers.

REPORTS OF THE ADMIRALTY (under 9 & 10 Vict. c. 106), relative to applications for Rajlway Bills.

Caledonian (Branch across the Clyde).—The Lords Commissioners of the Admiralty having in three successive sessions prevented the Caledonian bill from proceeding, by the interposition of the prerogative of the Crown, feel it necesinterposition of the prerogative of the Crown, feel it necessary to explain to Parliament the reasons that have induced them to reconsider this decision, and to waive, to a considerable extent, the objections which they have hitherto entertained to the proposed crossing of the river Clyde. Circumstances have materially changed. The provost and authorities of Glasgow are represented to be favourable to the establishment of a railway terminus in a central part of the town; the Clyde and the bridge trustees have withdrawn their opposition by letter, and submitted to the lords a copy of an agreement with the railway company, by which the interests of their respective trusts are provided for; and the company itself has proposed to substitute a single pier in the centre of the river for the seven arches originally contemplated, and to commence the bridge at such a height, and at such a distance from the water side, as not to interfere with the continuous line of quays which the lords expect hereafter to see constructed. (Reference is here made to the present position of the Glasgow, Paisley and Ayrshire, in consequence of their lordships' previous decision.) The lords feel themselves bound not to withdraw their dissent to the Caledonian bill during the present session, unless the committee, under the peculiar circumstances of the coses, should consider itself at liberty to suggest an equitable arrangement between these two companies, whose interests, both in crossing the Clyde and in obtaining the sagerting of sary to explain to Parliament the reasons that have induced arrangement between these two companies, whose interests, both in crossing the Clyde and in obtaining the sanction of Parliament to a terminus in Glasgow, are identical, and should thus prevent the waste of money next year by both in useless litigation. If this arrangement be effected, the lords will give their assent to the crossing of the Clyde at lords will give their assent to the crossing of the Clyde at the point suggested by the united companies, upon the following conditions: 1. That the railway bridge shall be so constructed as to cross the river Clyde with only one pier, and without obstructing the traffic on the streets or quays on either bank; the whole of the plans being submitted to the Admiralty, and not carried out without its written sanction. 2. That a sum of 10,000t., in lieu of 3,000t. be paid to the Clyde trustees, and be expended by them, under the superintendence of the Admiralty, which sum is to be the superintendence of the Admiralty, which sum is to be applied exclusively to the deepening and improving of those parts of the river Clyde more immediately connected with this portion of the harbour of Glasgow. The lords leave it to the committee to decide whether, if the Cal-donian bill were deferred for the present year, there might be a reasonable probability of inducing all parties to unite in constructing the railway bridge upon the present site of Stockwell bridge, removing that bridge and weir, which by universal constant are as prejudicial to the inversement of the Universal consent are so prejudicial to the improvement of the Clyde, and replacing it by a bridge that would suffice both for the railway and the road traffic. Their lordships have been very generally assured that this arrangement would, unquestionably, be that most conducive to the public interest. In this case a fresh arrangement between the railway companies and the local trusts must be effected, upon terms which it would not be difficult to agree upon if the proposed plan were adopted.

#### BAILWAYS AND AGRICULTURE IN LINCOLNSHIRE.

A series of interesting letters on the influence of railways on agriculture are now in course of publication in the Agricultural Gazette. The writer looks at his subject with precision and knowledge, taking a county-Lincolnshire-for illustration, which is hardly, as yet, affected by the great civilizing agent of the age. In a short time this county will be amply supplied by railways, branches belonging to the Midland, or the Great Northern, or the trunk line of the Manchester, Sheffield and Lincolnshire; and as we are sure that shareholders in those properties will be glad to see in these papers a sober prospect of the advent of a steady and increasing traffic, we propose to reprint them in our own columns. As the agricultural mind wants enlightenment as to the uses of railways, we suggest that this series might be reprinted for distribution at the coming agricultural meeting at York.

The effect of railways upon agriculture is a most interesting question. For many years the prejudices of the rural population prevented them, and even now prevent them to a certain extent, from making full use of the powers placed within their reach. It is true that in every estimate of traffic for a new railway agricultural produce figures very prominently. Not only are large calculations of convenience and profit based on such obvious sources as the conveyance of sheep, oxen, swine, wheat, barley, oats, potatoes and hay, but we hear a good deal of lime, chalk, gypsum and town manures, although in the great majority of cases nothing more is heard of these fertilizing ingredients after the bill has received the royal assent. Even the conveyance of cattle and crops has not been developed to anything like its possible extent. For this comparative neglect there are many reasons; amongst others, passenger traffic exceeds in importance the original expectations of railway projectors. At the great terminal stations arrangements have not usually been sufficient for the full accommodation of rural produce. While railway companies were not their own carriers, they objected to take charge of miscellaneous freights. Cattle-pens were not provided in sufficient numbers, and there were difficulties about warehouse room. Railways terminating in Manchester, where the consumption of flour is enormous, were compelled to refuse traffic for want of room to store it pending applications for leave to purchase additional station warehouses—on what scale may be conceived from the fact that the Manchester and Leeds, which have always paid great attention to local traffic, have had eleven acres of flour sacks, packed in double rows, in their ware-houses at one time. The roadside stations were not at first adapted for the use of local agricultural traffic. It was not until the advent of Mr. Hudson to the Eastern Counties direction that any attempt was made by station arrangements, in sheds and corn warehouses, to take the contents of farmers' carts off the road. The charges for conveying stock short distances are generally prohibitive as regards villages or towns within 10 miles of each other. But the greatest obstacle to the ample use of railways has been the want of plan and co-operation among the agriculturists themselves. A siding for the convenience of a rural parish, by which the contents of trucks of manures and draining tiles might be got on the land, is a rare arrangement. The Manchester and Leeds, under Capt. Laws's management, used to convey loaded carts or trucks to market as other lines do private carriages; but I am not aware of such an arrangement having been carried out on any other line. The Great Western intersects a fine agricultural district—perhaps, as far as natural fertility is concerned, the finest in the kingdom; but you see no agricultural conveyance along the line except on a large scale—no carts on trucks, no single cow and calf carried 10 miles to market, instead of being driven, and driving Hodge mad, while wasting a long The whole business of that line is done on a wholesale, not on a retail principle. Now, it is the retail principle that would most benefit the farmers of England. They have need of every assistance, and this assistance they may obtain if they will com-bine to obtain it. Within less than twelve months British-grown grain will have to encounter the com-petition of the whole world. There can be no doubt that the effect of this competition will be to reduce the average price of grain, and in proportion to reduce the profits of our farmers. The only compensation for diminished price must be found in increased produce and diminished cost of production. A long and friendly acquaintance with farmers in all our principal counties has convinced me that although it is very easy for amateur dilettanti economists to prescribe science, Liebig, chemistry, draining, subsoiling, | perform too many operations at once, too liable to | ported the following sensible speech of Mr. Grainger,

ploughing, &c., as infallible remedies for the pocket | be deranged, and consequently too expensive for disease produced by wheat at 36s. a quarter, it is quite impossible by any off-hand process to turn oldfashioned farmers into chemists and natural philosophers, even if they had sufficient capital and confidence to carry theory into practice. I should be very sorry to see that worthy, hospitable race reduced to ruin, and I think their real friends will do well to propound some plain, practical scheme for assisting them, instead of the cold comfort of scientific generalities. It is a curious fact that in England and Wales (I leave Ireland out of the question as a thoroughly impracticable country), we have specimens of the very worst as well as of the very best farming. We have afforded breeding stock, seed, treatises, models and Scotch bailiffs to the whole world, and have yet specimens of cultivation that would disgrace a French peasant or a Baden bauer. In some districts, especially those where a light soil gives no choice between large farms, much manure and numerous stock, or no cultiva-tion at all—as, for instance, on the eastern coast good farming is the rule. But in other counties the example of able, eminent and enthusiastic agricul-turists has scarcely extended beyond the bounds of their own domains. Devonshire has the benefit of the precepts and example of very distinguished agriculturists among resident noblemen and gentle-men; yet, in both the north and south of that country, you may see estates divided into farms on the hodge podge, no principle, that gives the tenant a field or two in every quarter of the parish, each field surrounded by banks and hedges, six or seven yards in breadth, and full of trees—capital harbourers of vermin, game, and absorbers of light, air and fertility-undrained, with scarcely a gate that will open and shut properly; the fold-yards half stocked, the manures wasted, the young stock kept low in condition, the land impoverished by a succession of exhausting crops, foul with weeds, long lines of straggling, ragged horses, under the conduct of a boy, dragging clumsy ploughs, and every other farm implement of the rudest kind. The Earl of Devon took great pains to improve the style of agriculture in the neighbourhood of his Powderham estates, circulated tracts and encouraged farmers' debating societies. In the Exeter papers his followers were heartily abused for abandoning the copse-like hedgerows of their ancestors, and lending their ears to innovators on the ancient rule of thumb. But it is not necessary to travel so far as Devon; in Bucks, close to the metropolis, there is plenty of stiff clay land farmed most wretchedly within sight of examples of the most successful scientific cultivation; and landlords there treat with indifference, and farmers with horror, propositions for introducing the deep-draining and sub-soil ploughing on lands which, now drowned and soured by winter's rains, would, by those processes, be doubled and tripled in fertility. In Suffolk the use of lime is thoroughly understood; but little fields, averaging six acres, with enormous hedges, lose more in copse shade than they gain in It is now more than seventy years since the scientific-farming Lord Leicester, then Mr. Coke, changed East Norfolk from a desert into a succession of garden-like farms, tripling and quadrupling his income, and making the fortune of his tenants; and nearly the same period since the Northumberland moorlands were quadrupled and quintupled in rental by the enterprise of the Messrs. Culley; and yet our agricultural reformers still find great difficulties in inducing the farmers of certain districts to commence on the very A B C of improvement. It is true that the experiments and precepts of some much-talked of improvers are so extravagant, that cautious, sober-minded men may stand excused if they doubt the merits of a system promulgated by such prophets. For instance, as an experimental farm, no doubt the Tiptree estate has rendered essential service to the cause of scientific agriculture; but we may be permitted to doubt whether on so small a scale as 200 acres, the steamengine, the extensive buildings, and all the expensive implements provided by Mr. Mechi, have left a profit, unless in the sale of the razors of the ingenious proprietor. As to the reverend gentleman of Dorsetshire, who has concluded a series of startling lectures on stock feeding by proposing to fatten pigs with a pound of bacon in addition to greens daily, such propositions may be very amusing after a certain quantity of port wine at an agricultural dinner, but there can be no doubt that they are calculated to bring the science of agriculture into contempt, and to strengthen the prejudices of the rule-of-thumb school. Some of our best farmers are of opinion that the ingenuity of our agricultural implement makers has been carrying them too far; that they have been producing machines too complicated, in attempts to

general use; and that we shall have to improve in the direction of simplicity. It is a curious fact that after a variety of very complicated machines for cutting chaff and for slicing turnips had been elicited by the prizes offered by the Royal Agricultural Society, two instruments were produced, which were at once admitted to combine the most useful qualities, which had been in use in obscure localities for between twenty and thirty years. With respect to railways, certainly the invention which, next to turnip culture, has conferred the greatest benefit on the interest, there is a great difficulty in ascertaining the value of that benefit in any particular locality. There are no records of our home trade, and no statistics of our agriculture on which it would be possible to found calculations. For instance, we know that on the eastern coast, the straw-yards (where that manure is made which is one of the main principles of successful cultivation) are filled by lean cattle imported from Devonshire, Herefordshire, Yorkshire, Scotland, and even Ireland. These beasts formerly travelled at the rate of ten miles a day along the roads, under the care of drivers. They are now despatched by rail, in as many hours as days by the road system, one man doing the duty of five, without dogs. A case was recorded in the local papers a few months since, in which 400 beasts, within twenty-four hours, found their way from Carlisle to Norwich-from the moors of Cumberland to the turnip farms of Norfolk, without the loss of a beast or a pound of flesh. we remember that these same beasts, fattened, would be conveved to Smithfield market with equal case. safety and celerity—the gain in meat, not lost in carrion, to the country, and in profits to grazier, farmer, butcher and consumer, may be taken as a sample of many hundred unchronicled transactions of the same kind every year.

#### Brogress of Works.

EAST LANCASHIRE.—May 27.—Two of the directors (Mr. T. Wrigley and Mr. Kay), with Mr. Harking, the manager, and Mr. Perring, the engineer, made an experimental trip with their new engine, 'Goliah,' manufactured by Mr. Fairbairn, of Manchester, over a portion of new line about to be opened in a week or two. The first portion of the new line they traversed was one of nine miles long, from Blackburn to Bentley Wood. They had attached to the engine ten carriages, containing about 400 visitors from Blackburn Church and Accrington, and, after receiving an accession of passengers at Bentley Wood, they ascended the inclined plane from Accrington to the summit of the line at Haslingden. The incline is 1 in 40. The engine effected the ascent with ease, and the directors and engineer were of opinion, from this experiment, that this portion could be as efficiently worked for general traffic as any other. The train returned to Blackburn without any mishap.

FIFE LINES.—Operations are now being carried on very rapidly. On the Stirling and Dunfermline line, a little west of the town, there are employed a group of fifty hands, and about a mile further on a group of about seventy others. Smaller groups are at work at different portions of the line. The principal viaduct, over the Comrie-Dean, of eight arches, from the basis of the column to the top of the centre arches, will be

75 ft. in height.

GREAT NORTHERN (Askern branch) .- June 1 .-This branch was opened. The permanent bridge over the Tilts-drain is an excellent piece of workmanship, there being no less than ninety two piles driven Upwards of 113 horses, during the last two weeks, have been employed every day in drawing materials and ballast on the line north of Doncaster. The permanent rails are laid as far as Bentley Approach, and they could have been completed as far as the Dun Drainage Embankment had it been necessary. There will be four trains a day on the new line, which, until the opening of the remaining por-tion to Doncaster, will be worked by the Lancashire and Yorkshire. The line from Stockbridge to Doncaster is to be completed by the 21st of August next. On the south side of Doncaster the line is progressing favourably. With regard to the Lincolnshire deviation of the Great Northern, nothing at present is decided, but it is intended to complete the main line between Doncaster and Retford, via Bawtry, by the time that the Sheffield and Lincolnshire (from Gainsborough to Sheffield, via Retford,) is ready. This is expected to be about November next. By this means a communication will be opened from Doncaster into Lincolnshire, and in a short time afterwards to London, viá Peterborough.

LEEDS, DEWSBURY AND MANCHESTER (the Morley Tunnel).-On the occasion of "keying-in" the last Mercury restone of the Morley tunnel, the Leeds

the chief engineer, to those assembled:-We have just had the satisfaction of witnessing the placing of the closing key-stone of the last length of arching of this the Morley tunnel. To every one connected with this railway, whether as director, shareholder or engineer, this cannot fail to prove a very interesting step in the progress of a very important part of the work of this undertaking. A few months ago I had the satisfaction of performing a similar ceremony on the arch of 105 ft. over the river Aire. Since that time the viaduct over the Leeds and Liverpool Canal, that over the Calder and Hebble Canal, that over the river Calder, as well as those at Dewsbury, Batley and Churwell, have been completed in a satisfactory manner. These are certainly works requiring great practical knowledge on the part of the contractors and others connected with the executive department; but it is well known to those conversant with such matters, that that skill did not extend much beyond a knowledge of masonry. But the successful management of the operations of a tunnel of great length, such as this, involves a much greater range of practical knowledge than the erection of a viaduct. To conduct these to a satisfactory conclusion the contractor must not only be a practical mason, but a thorough trained miner. To insure the proper work-ing of the engines and other machinery by which the mines are drained and the material from the tunnel raised, the contractor should be well skilled in mechanics. It appears to me that this company have fortunately found in Mr. Shaw (the managing partner of the firm of Messrs. Shaw, Nowell & Attersley) that knowledge in tunnelling operations which has brought this tunnel to its present advanced state of completion. Mr. Shaw, as some of you may be aware, passed apprentice in tunnelling operations on the Leeds tunnel of the Leeds and Selby, and on the Kilsby tunnel on the London and Birmingham, his fellow craft in Chevat, near Wakefield; and so soon as he has completed this, the Morley tunnel, and three or four more he has now under contract, I think we may, with one voice, grant him a diploma as a master tunneller all over the world. While I notice the valuable services of Mr. Shaw, I must not pass un noticed the good service of Mr. Renton, our resident engineer, and his staff of assistants, nor Mr. Shaw's assistants, who have, from first to last, shown a most praiseworthy attention in the proper execution of the works. There is also another body of gentlemen of whom honourable mention must be made on this occasion. I refer to the directors. These gentlemen have throughout bestowed much attention on the works on the line, and on the tunnel in particular. Nothing was so much calculated to cheer them at their meeting as to be informed of our rapid and satisfactory progress; and what is more, they never on any occasion lent a deaf ear to any suggestions made by me either for adding to the stability or acceleration of the works. The secretary too (Mr. Bott) has also most cordially co-operated with all connected with the operative department, in forwarding the work and in providing what is of great importance at all times, and still more so in these times-I mean the "sinews of war." It may be interesting to some gentlemen now present to know a few particulars respecting the tunnel. It is in length 3,370 yards, or nearly two miles; the extreme breadth is 26 ft., and the height 26 ft. The tunnel is nearly level throughout, the fall being only what was required for its proper drainage. For executing the work twenty-three working shafts were employed, besides four permanent shafts. At one time workmen were employed at forty-eight different places. Eleven powerful steam-engines were employed, fifteen double horse gins, 330 horses, and about 2,000 workmen. The Act was obtained in July 1845, but little was done in that year or 1846. It is only about twenty months since the works came into the hands of the present contractors, and the greater part of these works have been executed during the last eighteen months. The line will be opened within three years of the passing of the Act. In a work of this magnitude casualties cannot be avoided; but I feel great satisfaction in being able to state that they have by no means been numerous, which is very creditable to those in the The works have immediate charge of the works. been completed too in less time than any tunnel of the same length with which I am acquainted. I have already said that this tunnel will be opened within three years of the passing of the Act—the Manchester and Leeds Summit tunnel about five years. The Manchester and Sheffield tunnel is longer than this, but is only for a single line of rails, and was about eight years in being executed. The Box tunnel, on the Great Western, was about seven years in hand; and the Claycross tunnel, on the Midland, upwards of four years; but that tunnel is not more than half the length of this tunnel. I must also congratulate the parties residing upon the spot, who have superin-

tended the work, on their excellent conduct. Grainger concluded by proposing three cheers for Mr. John Gott and the other directors, and three for Mr. Shaw, of the firm of Nowell, Shaw & Attersleygentlemen, he said, who had been engaged in some of the most difficult tunnelling that had ever been undertaken in England. Three cheers were also given to Mr. Bott. Mr. Wilkie, of the East Lothian Central, also proposed three cheers for the ladies, all of which were heartily responded to by those present. Champagne was then served out most liberally, and the christening of the work being finished, the company returned to Leeds by the train. A dinner was provided by the contractors at the White Horse, Boarlane, where the party adjourned, and spent the remainder of the evening.

LEEDS AND THIRSK (Church Fenton Extension).—

Numbers of workmen are at present employed near Harrogate, and strenuous exertions are being made to get it completed. It is reported that the Church Fenton line will be opened throughout in July next.

#### Accidents.

EDINBURGH AND GLASGOW.—May 26.—As the 8 a.m. train was leaving the Falkirk station, one of the porters, while stepping off the footboard of one of the carriages, after the train was in motion, missed his footing, and, falling on the rail, was killed on the spot. No blame is to be attached to any party.

#### Parliamentary Proceedings.

COMMONS

May 26 .- Caledonian (Navigation of the Clyde). Mr. Hume wished to know how it had happened that the veto which the Board of Admiralty had for three consecutive years put upon the proposition of the Caledonian for carrying a railway bridge over the Clyde had this year been withdrawn.—Mr. WARD said the interposition took place with the concurrence of the authorities of Glasgow and the trustees of the Clyde. The Board of Admiralty would have taken the same course with respect to the bill, which had again been introduced this session, if they had not been waited upon by a deputation representing the Glasgow authorities and the Clyde trustees, and headed by the Earl of Eglintoun and one of the members for Glas-This deputation stated that the Clyde trustees and the bridge trustees had settled their differences with the company, and were now as anxious as the promoters of the bill themselves that the veto should be withdrawn. The Board of Admiralty had there fore only to consider whether the bridge could be erected without injury to the sort of harbour between Stockwell Bridge and Glasgow Bridge. This locality was not a harbour, strictly speaking, for no masted vessels could pass Glasgow Bridge; it was rather a place of refuge for small craft. The deputation produced a plan of the bridge, which was to be built on one pier in the middle of the river, so as to obviate interference with shipping, and in the plan provision was made for a spacious and convenient quay.
Accordingly, the Admiralty felt that it would be a harsh proceeding, and an undue stretch of the prerogative of the Crown if they were to continue the veto. No sooner, however, had the Admiralty come to that determination, than they received an intimation that the deputation that had waited upon them constituted only a minority of the bodies which they professed to represent, and that they had not been invested with authority to enter into any engagement in their behalf. He therefore wrote to the parties to inform them that all the circumstances would be brought under the consideration of the committee on the bill. The Admiralty supposed that the persons who appeared before them, headed by the Earl of Eglintoun, and accompanied by the hon. member for Glasgow, were the parties whom they represented themselves to be; but, having discovered the error into which they had been led, the veto would be enforced for another year.—The Earl of Lincoln felt quite satisfied that the Admiralty had done their duty, and that no blame could attach to them for what had happened; at the same time he hoped, in the event of the Board having been imposed upon, that the Admiralty would take care that the parties opposing the bill were not damnified, if, in order to save the funds intrusted to them, they abstained from applying to Parliament this year.—Mr. B. COCHRANE thought, before any statement had been made by the Secretary of the Admiralty, some notice should have been given that it was about to be brought forward, for it amounted to a charge against the parties con-nected with this railway. He considered the obser-vations of the noble lord (Lord Lincoln) were misplaced.—Mr. WARD was not aware that he had expressed himself in terms that could be considered

strong. He had not the slightest idea of throwing blame on the course which the parties had pursued It was necessary that he should state matters in the clearest possible manner.—After a few words from Mr. Macgregor, Mr. Hume said that he had had placed in his hands a letter from the chairman of the Clyde trust, stating that if any party had made use of the name of that trust, it was without the sanction of the trustees. That trust was against any sanction of the trustees. That trust was against any application being made to the Admiralty for the construction of a bridge over the Clyde.—After an observation from Mr. A. HASTIE, Mr. AGLIONBY asked the Secretary of the Admiralty whether hewas not quite aware that this dispute between the parties would come before the committee on the bill. If all parties were satisfied to make that desirable now which was not desirable before, it might be right that the Admiralty should take off the veto; but, when it was found that the local authorities were not content to have the veto taken off, he would ask the Secretary of the Admiralty whether it would not be better for him to take the whole thing into his own hands, and inquire whether circumstances had oc-curred to make that desirable now which was not desirable three successive years before.—Mr. WARD observed that the duty of the Board of Admiralty was simply to look to the interests of navigation; when those were sufficiently provided for, all other rights come under the cognizance of the committee of that house. He could not see any necessity for inquiry. The circumstance which had changed was that, instead of having a bridge built upon arches, it was proposed to build a bridge with a single pier in the centre of the river.—Here the matter dropped.

May 29.—London, Brighton and South Coast

(London Bridge and New Cross Stations Bill) .order of the day having been moved for the third reading, Sir DE LACY EVANS moved as an amendment to omit such clauses, or parts of clauses, and so much of the preamble as related to the employment of the money of the company for the purposes of steam-packet navigation.—The question having been put, Mr. GREENE objected to the amendment on a point of order. He apprehended that the Standing Orders of the house prevented the amendment. The Standing Order No. 163 provided that such amendment made on the third reading being moved should be printed in extenso. - The SPEAKER said that the hon, and gallant member could not move his amendment, according to the rules of the house.—Such an amendment should have been printed and submitted to the consideration of the chairman of the Committees of Ways and Means before the house should entertain it.—Sir De Lacy Evans said that, under these circumstances, he should withdraw his amendment, and move that the third reading be postponed till the 1st of June.—Capt. PECHELL had hoped at 4 p.m. to have been enabled to state that the grievances of the shareholders had been removed; but it appeared that a deputation from Brighton having come up to town that afternoon, they were coolly told at the terminus that they could not see the directors till to-morrow, at 1 p.m. The hon. member complained of the withdrawal of two third-class trains, and of daily tickets, by which the humbler classes were unjustly treated.—Sir R. Peel appeared as chairman of the committee before whom the question was argued, so far as concerned the establishment of steamboats, through the capital of the company. There were four railways on the whole which sought to have powers to establish steamboats. The one was a small company, that of the Furness; then there was a communication sought for between Dublin and Holyhead; then there was this application on behalf of the London, Brighton and South Coast to establish a steamboat communication between Shoreham, Brighton, Newhaven and the opposite coast of France; and lastly, there was the application of the London and South-Western. The question to which attention had been called was, whether the capital of the company ought to be embarked in carrying out a scheme of steam navigation. The single question for the house to determine was, whether it was for the public interests that the London and Brighton should be permitted to do that which they had no power at present to do, namely, to appropriate a part of the capital of the company to establish steamboat com-munication between the South coast and the opposite coast of France. There was no prejudice in favour of the proposition; generally speaking the personal feeling of the committee was adverse to it. The committee were called upon to determine the question, whether it was for the public interest that a steamboat communication should be opened. The steamboat companies, apparently, did not carry out the communication as between Newhaven and Brighton and Dieppe, and it was adverse to the wishes of the directors, in the first instance, to establish a steamboat communication. The company, on the

contrary, were most anxious that it should be established by some individuals, or that some steamboat company should undertake the communication. It was stated in the committee that time after time application had been made to the General Steamboat Company, and that remonstrances had been made to them. It appeared there were only two old wooden boats; and the railway company determined, without strict regard to law, to establish a steam communication by four boats instead of two. It was proposed, by means of these boats, to keep up a constant communication with the opposite coast, and to run them as long during the year as was consistent with safety.
The passage made by the old boats was usually eight hours; the new boats, the committee were assured, would do it in four hours and a half. No evidence was adduced against the proposition by any steamboat company; and, under all the circumstances, the committee thought it better to find that this claim should be granted.—After some discussion, Sir DE LACY EVANS withdrew his amendment, and the bill was read a third time and passed.

May 31.—Instructions to Committees on Bills Re-committed.— On the motion of Mr. Bernal, the following resolution was agreed to:—"That it be an instruction to the several committees to whom the re-committed railway bills stand referred that they introduce into such bills clauses and amendments setting forth the general purposes to which it is proposed that the money authorized to be raised should be applied, and also to clearly define the mode in which it is proposed to raise the same.

## COMMITTEES ON OPPOSED BILLS.

COMMONS.

GROUP 3.

NORTH STAFFORDSHIRE (Deviation to Wellington). -Evidence.-May 26, 29.-Local and other witnesses in support.

Decision .- May 30 .- Preamble proved, on payment of 6,000l. to an opposing landholder for passing through his park.

— (Ashbourne branch, and approach at Congleton station).—Decision.—May 30.—Preamble proved.

Manchester, Buxton, Matlock and Midlands Junction. — Promoters' Case. — May 31. — Counsel heard in support.

Evidence. - June 2 .- Witnesses in favour.

GROUP 4.

GREAT WESTERN (Additional powers for purchase of Birmingham and Oxford Junction) .- Promoters Case.—May 29.—Counsel opened argument.

Evidence.—May 30.—Engineering and other wit-

nesses as to expediency of laying down mixed gauges.

BIRMINGHAM AND OXFORD (Deviation from Leamington to Warwick) .- Proceedings deferred.

ROYSTON AND HITCHIN (Extension to Cambridge). -Opponents' Case. -June 2. -Counsel opened opposi-tion on part of the Eastern Counties.

GROUP 5.

NEWPORT AND PONTYPOOL.—Promoters' Case.—May 29.—Counsel heard in support. Proceedings adjourned, and resumed on the 31st.

Evidence.-June 1 .- Witnesses in support.

GROUP 6.

GREAT WESTERN (Slough to Windsor) .- Promoters' Case. - Evidence. - May 26, 29. - Local and engineering witnesses in continuation.

Opponents' Case .- May 30 .- Counsel appeared on behalf of Eton College.

Decision.—June 2.—Preamble proved.

WINDSOR, STAINES AND SOUTH-WESTERN (Amendment). - Decision. - June 2. - Preamble proved.

GROUP 7.

ROYSTON AND HITCHIN (Extension to Cambridge, &c.) .- Promoters' Case .- May 30 .- Counsel declared the objects of the bill.

Evidence.-May 31, June 1.-Local and other witnesses in favour.

GROUP 8.

LONDON AND SOUTH-WESTERN (Purchase of Taw Vale, Exeter and Crediton and Bodmin and Wadebridge arrangements, &c.).-Promoters' Case.—May 26, 27.—Counsel declared the objects of the negotiations.

Evidence.-May 30, 31, June 2.-Local and other witnesses in support.

GROUP 9.

NEWRY AND ENNISKILLEN (Amendment of Acts, &c.) .- Decision .- May 29 .- Preamble proved.

GROUP 10

DUNDER AND PERTH (Dundee Junction) .- Oppoments' Case .- Evidence .- May 29 .- Local and other

GROUP 13.

CALEDONIAN (Purchase or Lease of Wishaw and Coltness). — Promoters' Case. — May 30. — Counsel

opened arguments in support.

Decision.—May 31.—Preamble proved.

June 1.—Bill withdrawn, in consequence of the proposal of certain running clauses.
WISHAW AND COLTNESS (Deviations and Branches).

Decision.—June 2.—Preamble proved.

GROUP 14.

PAISLEY, BARRHEAD AND HURLET.—Promoters' Case.—Evidence.—May 26, 29.—Local and other witnesses in favour.

Decision.—May 30.—Preamble proved, with the following resolution—"The committee are of opinion that there was a bond fide intention in this case to complete the works, and that the means are sufficient for the purpose; but it was proved to the committee that several of the subscribers to the contract-deed have signed other contract-deeds in the years 1845, 1846 and 1847 to enormous amounts beyond their means of payment, and that the evidence showed a recklessness which implies the act of signing the subscription contract-deed was merely formal, and binding only in respect to the payment of expenses in the event of the application to Parliament being un-successful."

MIDLAND (Gloucester and Stonehouse Junction) Decision .- May 30 .- Preamble proved.

The following bills were re-committed, to insert clauses having reference to the capital :- Leeds and Thirsk (Harrogate and Pately branch); Bristol and Exeter (Branch from Bleadon to Wells, Glastonbury and Street): London and Blackwall (Improvement and branches to St. Katharine's and London Docks) Great Northern (Isle of Axholme Extension); Bristol and Exeter (Taunton and Castle Cary branch); Strathtay and Breadalbane (Extension). Oxford, Worcester and Wolverhampton (Deviations, and Shrewsbury and Birmingham and Birmingham, Wolverhampton and Dudley arrangements).

COMMITTEE OF SELECTION .- Sir W. Heathcote reported from the committee of selection, that under the powers granted to them by the Standing Order No. 76, they had added to the group No. 7 the Great Western of Bengal.

## Reports of Meetings.

AMIENS AND BOULOGNE.

May 26.--Special Meeting, Paris .- M. C. LAFFITTE in the chair.

The meeting unanimously expressed themselves strongly against the Government measure.

The CHAIRMAN then read a powerful memorial in favour of the Boulogne, which it was intended to present to the National Assembly. The shareholders expressed their full approbation.

A considerable portion of the capital being now held by the English shareholders, who would hold a meeting respecting this matter, it would be necessary to hear their opinion on the subject before any mea-

sures were definitively adopted.

It was then decided that a committee of two should be nominated to aid the Board before the committee of the Assembly, or in discussing with the Minister of Finance more equitable conditions. MM. Goldsmid and Bureaud Riofrey were appointed for the purpose, and the proceedings terminated.

May 30 .- Special Meeting, London .- Mr. J. MAC-GREGOR in the chair.

The committee of inquiry reported that the directors, having refused to put the propositions of the committee on the order of the day at the meeting held at Paris on the 30th of October last, the only question which could be entertained was that respectng the accounts, which was negatived on a division. After the general meeting, the committee obtained the best legal advice, and eminent French counsel undertook to consider the whole case of the proprietors. The opinion in possession of the committee warrants the views entertained by the proprietors of the liability of the directors. M. Glaudaz's opinion was received by the committee in January, and a

further case was then placed in the hands of a mem-ber of the English bar, whose confirmatory opinion the committee did not receive until the middle of February. The revolution took place, the most serious commercial events have followed, and the proprietors have to learn from the directors in what degree their interests are affected. The committee do not now consider it incumbent upon them to take any further steps as representatives of their co-proprietors, to whom they now tender the resignation of their office; but they still desire to give their best assistance to any measures protective of the interests of the company. They abstain from offering any opinion on the measure proposed by the French Government, not being in possession of information from the directors sufficient to enable them to appreciate the value of the characteristic transfer. ciate the value of the shareholders' property; and they wait with anxiety the communications the proprietors are entitled to from the direction.

The CHAIRMAN observed that the Report sufficiently explained the views of him and his colleagues respecting their present position. The opinions of the counsel, English and French, who had been consulted, were very elaborate, and they confirmed the soundness of the judgment upon which the shareholders had resolved to nominate the committee of inquiry; but as their circumstances were of a prospective rather than a retrospective nature, it would be well if the meeting took into consideration what was to be done in the present state of affairs, without just now referring to past grievances. The real question at issue was the proposed absorption of their property by the French Government, at an arbitrary and depreciated valuation. He was prepared to say, that if the French Government would give an ade-quate value for the line, he should not object to part quate value for the line, he should not object to part with his shares. His opinion was that the directors at Paris were opposed to the French Government on this head. The English shareholders, however, he did not think were opposed to them. They relied on the justice and honour of that Government, who would never do wrong to those by whose money such important public works had been completed. As what transpired at the present meeting would have an important effect on the meeting that was to be held the next day, he was desirous that the opinions of those present as to the course advisable to pursue, should be expressed. He was desired by his col-leagues to state that they had no indisposition to accept fair terms of purchase from the French Government, and recollecting what M. Lamartine had said to him in conversation some time sincenamely, that the company would have no reason to regret their position—he was strongly of opinion that the French Government meant to deal equitably by them. He was happy to say that since the last meeting the line to Neufchâtel and that to Boulogne had been opened for traffic, showing that some benefit resulted from the observations made at that On the whole the shareholders had no ground for alarm if the French Government only acted with common honesty and fairness. It was entirely indifferent to them whether the whole of the railways in France were absorbed by the Government, provided the shareholders were fairly remunerated for their

Mr. Rogers said that he should oppose any offer or attempt on the part of the French Government to take the line on other terms than those of paying 20l. for every share representing 20l. of outlay.

Mr. MACGREGOR said that the 201. shares ought to be worth more than that amount now the railway was working. There ought to be a restraint put by the shareholders upon the directors, rendering them incapable of accepting any terms from the French Government which were not equitable. If it was desired the South Eastern would provide the means of conveyance by rail and steamboat for all those shareholders who might wish to attend the next meeting of the company, to be held in Paris.

Mr. ROYLE expressed himself in very strong terms against any attempt on the part of the French Government to possess itself of the property of the Boulogne and Amiens, unless upon the fairest and

most equitable terms.

The Chairman said that all present were unanimous on the topics which had occupied the attention of the meeting. He relied on the assurance given by M. Lamartine, that justice would be done to the company. They must recollect that the proposal for absorbing the line was made by the Finance Minister, and had not been sanctioned by the Assembly; and he believed, with the last speaker, that the General Assembly, composed, as it was, of the property and intelligence of France, would never agree to cate the capital of those who had endowed France with some of her noblest public works.

The Report, after some further remarks, was then agreed to.

Digitized by GOOGLE

May 31 .- Special Meeting, London .- M. C. LAF-FITTE in the chair.

The CHAIRMAN stated that they had met to consider the subject of the proposed absorption of railways

by the French Government.

The protest agreed to at a meeting of French share holders, and laid before the committee of the National Assembly by a deputation of the French directors, was read. It went into the nature of the contract, and the right the company had to see it fulfilled by the Government, they (the shareholders) having performed all the stipulations of the cahier des charges. The Report continued-

We admit that our working, and particularly of the whole line, is far too recent for our revenue to be appreciated with any degree of certainty; but, for the same reason that the indemnity cannot be regulated by the revenue which now exists, does it follow that the probable revenue is also beyond the pale of all estimation. It would be sufficient for us to remind you of the calculations made by the agents of the Government, and of the discussions which preceded the vote of our law of concession, to prove that, in appealing for the construction of the Amiens and Boulome to private capital, the State has, if not guaranteed, at least promised, a suitable remuneration. And whatever may be the risks and chances of these great undertakings, can the State with any justice offer to the shareholders who have paid up 37,500,000f., usefully employed, the reimbursement of their capital in a stock now considerably depreciated in value, e admit that our working, and particularly of the whole 37,500,000f., usefully employed, the reimbursement of their capital in a stock now considerably depreciated in value, and so essentially variable, that a few days back it represented only 11,632,500f.; and which in some days again, by the very effect of the pressure proposed, ought necessarily to experience another and more marked depreciation? In default of the basis of indemnity prescribed by the cahier des charges, or of an evaluation of the probable revenue of the line based on the incontestible data of railway working, how has the indemnity which is to be imposed on us been fixed? On the average quotation of the shares during the six months which immediately preceded the Revolution of February! Thus is it in consequence of a situation produced by causes political, financial and industrial, but essentially transitory in their nature. It is because speculation, pushed to excess, has succumbed under the weight of its engagements. It is because the public treasury has extended beyond all just bounds the engagements of its debts—because the State has been obliged to contract a loan engagements. It is because the public treasury has extended beyond all just bounds the engagements of its debts —because the State has been obliged to contract a loan—because the crisis of food has weighed heavily on all the great establishments of credit in France and England that the Minister of Finance offers us, in place of 37,500,000f.

1,163,250f. of 5 per cent. Rentes, which, if sold at 70f., would produce us 16,183,500f.—constituting a loss to us, in cash, of 21,314,500f. The plan of the Minister, as far as it relates to the Boulogne line, amounts to this—that from August 1847 to February 1848, as the average price of the shares was 360f., if the shareholders had sold them, and purchased 5 per cent. Rentes at 116f., and kept it, they would have at present what he proposes to them. There is certainly but little propriety in basing a measure, so contrary to the text and the spirit of the contract passed between the Amiens and Boulogne Company and the State, on a series of hypotheses. The fact which serves as the basis of these hypotheses, namely, the Bourse quotations of the shares, is not by any means the true expression of the value of the rallway. The 5 per cents, which at their highest point had reached 126f., were at 116f. The Boulogne shares, which had been at 700f., were at 360f. The influence of the incertitudes which are attendant on a railway in construction is such that the lines, while their situation was sure to raise to a high degree of prosperity, were below par before their completion. Orleans remained long at 425f., and Rouen at 450f. Let us, in a word, sum up the bill in what it concerns us. To charge a company to construct a railway, to promise the possession of it for ninety-nine years, and then by main force to take back possession of it before the company could derive any advantage from its expenses usefully laid out, and not to reimburse but four tenths of the capital—is that derive any advantage from its expenses usefully laid out, and not to reimburse but four tenths of the capital—is that what can be called a just indemnity? From the motives which have just been enumerated, the bill to authorize the State to take possession of the railways cannot be applied to the Amiens and Boulogne without a manifest violation of the contract passed between the State and that company; of which the latter has hitherto fulfilled, in what concerns it, all the obligation.

The CHAIRMAN alluded to the interview with the

committee of the National Assembly, of which M. Berryer was president, in which he hoped he had made some impression, for it was now even doubted if the proposed bill would pass the Assembly. In case it should pass, the National Assembly was all-powerful, and it would be their duty to use every means for getting a fair and equitable price for their property. He alluded to the circumstance of the line being the only one in France completed without Government assistance. The directors had also strenuously opposed the retrograding spirit shown in the dismissal of English workmen. To return again the dismissal of English workmen. To return again to the proposition of the State absorption:—The resolutions come to by the French shareholders he thought would meet the approbation of the present meeting, which, as they saw, were first to protest against the Government measure, and next to endeayour, in case of its passing, to get the best price they possibly could.

A Shareholder asked what was the estimate of the traffic at present.

The CHAIRMAN said the line was only opened throughout on the 17th of April, so that it was hardly possible to estimate anything.

It was agreed that the protest made to the directors

before the committee on the bill should be printed, and a copy of it sent to each member of the National Assembly

A Proprietor hoped this did not empower the directors to make terms.

The CHAIRMAN said the directors had no power to make terms without the consent of all the shareholders. The resolution was merely for protesting against the absorption of the railways by the Government.

After some discussion, during which the CHAIRMAN said the meetings after the opening of the line were bound to be held half-yearly in Paris, the resolution was passed unanimously.

#### NORTHERN OF FRANCE.

May 24.—Special Meeting, Paris.—Baron I. DE ROTHSCHILD in the chair. The attendance was unusually numerous.

The Report was read by M. E. PEREIRE. It discusses the new bill introduced into the National Assembly, for taking possession of the various lines, with reference to its effect on the shareholders of the Northern. The Government bill stipulates that the shares of the Northern, estimated at the average of the price at which they were quoted at the Paris Bourse, during the six months which preceded the Revolution of February, shall be exchanged for coupons of 5 per cent. rente, at the average price during the same half-year. The application of this basis gives an average price of 540f. 62c. per share. and if the 250f. not yet paid up be excluded would represent at that quotation a nominal sum to be paid back of 290f. 62c., which, when converted into rente, at the average price of 116f., would produce 12f. 53c. of rente per share. That sum of rente, calculated at the present price, would represent a capital of 173f. per share. But in presence of a new and extensive emission of 5 per cent. rente, would that quotation be kept up! Whatever may be the opinion formed on the subject, and looking at the great pro-bability that the rente ought from the nature of the operation rather to decline than to rise, it must be admitted that the indemnity offered scarcely represents the present quotation of the shares. can the price of some sales effected in most exceptional circumstances be taken as the exact measure of the value of our undertaking? The 12f. 53c. of rente offered would furnish for the 400,000 shares of which our capital is composed a sum total of 5,012,000f. of rente. To appreciate the utter insufficiency of this indemnity, all that is necessary is to refer to the results of the working of the line for According to the accounts, the total receipts of that year amounted to 15,693,138f. (the receipts of the line from Creil to Compiegne are down for only the insignificant sum of 25,702f.), and the nett receipts to 8,468,501f. These receipts only apply to the principal line, and are for a first year's working, a year of trial and experiment, a year of great scarcity and commercial and financial crises. At the moment when the revolution of February broke out, the year 1848 permitted us to show results still more favourable, as we were able to obtain from the 1st of January to the 22nd of February receipts amounting to 2,399,778f. 56c., whereas during the corresponding period of 1847 we had received 1,595,551f. responding period of 1847 we had received 1,595.551f. 25c.; increase in fifty-three days 804,227f. 31c., representing an augmentation of 50 per cent. Thus, by applying this increase of 50 per cent. to the nett produce of 8,468,101f. realized last year, we should have obtained this year a nett produce of 12,702,151f. 84c.; and that in supposing that the proportion of the expenses should remain the same, when the receipts should have risen 50 per cent, an hypothesis quite inadmissible, since the general expenses, the cost of superintendence, &c., are nearly stationary, whilst the expenses specially connected with transport can alone be affected by the increase of the circulation. This nett revenue of 11,761,970f. 70c. arising from the principal line, only corresponds with the expense of that portion, the interest of the 57 millions which we owe the State being taken out of the gross receipts. You have seen, gentlemen, in the last report, that by means of an outlay of 5 or 6 millions we should be able in two months to open the branch lines of Calais and Dunkirk. But it is incontestible that the direct produce of these two lines, which are 142 kilometres (nearly 90 English miles) in length, will represent largely the interest and sinking fund of the capital employed in their construction, and that in addition their working ought to procure a new increase of receipts to the principal line. Making an abstract of this increase, it follows from these facts that if the bases presented by the Minister of Finance should be adopted in what concerns us, the State would obtain a revenue of 12,700,000f., susceptible of augmentation, in return for an annual and invariable rente of 5,012,000f.

The Report shows that by the conditions of the concession the State cannot take the line, until the line has been worked fifteen years, and even then, only on certain terms, clearly specified; in place of that course, the State offers rente at 116f., which a month back was as low as 50f., and at present is only 69f. The Report discusses the question of the indemnity, and declares that it would not be enough to pay the full value of the line as it at present stands, but ample allowance ought to be made for the increase which was invariably found to take place in railway receipts after a certain number of years' working. It then examines the objection brought forward in the bill, that "the existence of great financial com-panies is incompatible with a republican rigime;" it shows that in the republic of the United States the lines are all in the hands of companies; adding, that in Russia, the most absolute country in Europe, they are all held by the State. The Report then argues, ably enough, that the State, in taking the lines, commits an act of spoliation, and next, that it makes a grave attack on private credit. With respect to the 18 millions due to the State by the company, the Board of directors had written to the Minister of Finance, on the 4th of May, to state that the events of the revolution having prevented the share-holders from paying up their calls, the case must be considered one of force majeure, as provided for in the statutes. The Board at the same time, however, offered to pay the money in negotiable bonds, at one year's date, which would have as guarantee the 105 millions already laid out on the line. No answer had millions already laid out on the line. No answer had been received to that offer, the presentation of the new bill having taken place. The document concludes by declaring that the Board wishes to be guided in all things by the meeting.

The Report was received throughout with loud acclamations. A long conversation followed on the various points involved in the provisions of the new

bill. All the shareholders were most energetic in

expressing their disapprobation.

The results of the discussion were these:

1. The Report was adopted unanimously, ordered to be immediately printed, and sent to all the members of the National Assembly, with a view to put them in possession of the real opinion of the shareholders. 2. The Board of directors, to whom a vote of thanks and perfect confidence was passed, were requested to wait in person on the bureaux or committees of the Assembly to whom the bill was referred, and state the objections to it, as well as to defend referred, and state the objections to it, as well as to defend in every way the interests of the company. 3. To the Board was adjoined the committee of accounts appointed at the previous general meeting, and a new committee of three shareholders, composed of MM. Orfila, De Bellevue and De Verteillac, in order to give greater weight to the representations of the Board. 4. The great object of these gentlemen, it was decided, ought to be to do all in their power to oppose the repurchase of the line, and if they failed in that object to and even to obtain more soutishle power to oppose the repurchase of the line, and it displained in that object, to endeavour to obtain more equitable terms than the Minister of Finance had offered.

M. PEREIRE stated that, with respect to the shares

on which the fourth call of 75f. had been paid up, there was every reason to suppose that, in case the bill was voted by the National Assembly, special conditions would be allowed for these shares.

[ For further Reports of Meetings, see p. 388.]

IRON TRADE. - Glasgow, May 26. - The pig-iron market has been quiet for the past week; the demand market has been quiet for the past week; the aemand is limited, and principally from the trade. Prices, however, have kept very firm, at 44s. 6d. per ton, cash. The North British Railway Journal reports that the East of Scotland Malleable Iron Company is shortly to commence operations. This is perhaps a favourable time for a start, seeing they can buy their resistance and but are the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of the services of their pig iron on such advantageous terms. - Birmingham, May 27.— The trade, according to the correspondent of the Daily News, is looking scarcely so well as when last reported—the unsatisfactory state of affairs throughout Germany and the North-West of Europe contributing in a great measure to produce this derangement, which it is to be feared will end in a reduction of the price of the commodity before quarter day arrives. At present, however, no reduction whatever has been submitted to by the great houses, although needy and small makers have as usual been compelled to accept lower rates for

TOURS AND NATES.—11. due June 6.

WATERFORD AND LIMERICK .- 21. 10s. due May 20.

TRANSFER BOOKS CLOSED. CORE, BLACKBOCK AND PASSAGE .- Till June 5.

#### TO CORRESPONDENTS.

A FRIENDLY SUBSCRIBER should have satisfied himself of his own accuracy before accusing us of blunders. The infor-

mation is supplied to us from the companies themselves, and therefore is not likely to be incorrect.

A correspondent asks—"What are the reasons preventing a final dividend in the Great Leeds and London Direct?"

A NEW Subscribba.—The Greenwich is leased for 999 years to the South-Eastern, at a rent commencing at 36,0004.

in 1845, and increasing annually 1,000%. till it amounts to 45,000%. The last half-yearly dividend was 3s. 6d. a share, clear of income-tax, on the old shares.

A. M. should unquestionably write to the secretary him-self, and state his grievance.

E. J .- The accounts included a period of thirty-two days. due June 21.

Oxford, Workster and Wolverhampton.—51, due June 10.

Received: A Clergyman.—M. N.—P. T., Sheffield.—C.H.,

Glasgow.—One of the Committee, France.

* For account, June 9.

London Stock Exchange, June 2. - The business during the past week has been of a very limited character. The fluctuations have been small and unimportant, and the transactions have presented no peculiar feature. The Lancashire and Yorkshire new 6 per cent. shares have been dealt in to-day at g to g pm.

Liverpool, June 1.-Our market continues in a very inactive state, and prices have consequently suffered a trifling decline.

Sublow, Brothers. suffered a trifling decline. Sublow, Brothers.

Manchester, June 1.—Only a very moderate amount

of business has been transacted in our share-market this week, and prices generally are lower.

SAM. GRINDROD. Birmingham, June 1 .- Scarcely any business has been done in this market during the week, there being apparently not the slightest disposition to speculate in shares at present. North Staffords were done at 25 dis. W. BANKS.

York, June 1 .- The business on this Exchange has been very limited during the past week, and the state of the West Riding has assisted in further depressing the market.

GRAYSTON & EARLE.

pressing the market. Grayston & Earle.

Hull, June 1.—The share-market is still neglected. Small amounts of stock continue to be taken by those who have money to spare (not a very numerous class) for investment, and to average former purchases, but speculative buying operations there are none that deserve the name.

FLINT & TOOTAL.

Newcastle-upon-Tyne, June 1.—There has been neither life nor animation in our market this week, and the symptoms of depression continue. New-castle and Carlisles were done yesterday afternoon at castle and Carlisles were uone joste. 112 pm., but are held to-day for fuller prices.

W. FORDYCE.

Glasgow, June 1.-Prices have not been sustained.

# Railway Chronicle.

LONDON, SATURDAY, JUNE 3.

The steamboat question was decided by the proprietors of the London, Brighton and South Coast in favour of the directors. The other resolutions, respecting arrangements with the Direct London and Portsmouth, and for converting part of the mortgage debt into capital, &c., were agreed to without dissent.

The Eastern Union held its first amalgamated meeting yesterday, when the Report of the directors, with the exception of so much of it as was considered to imply a concurrence in the leasing of the Stour Valley line, was unanimously adopted. During the discussion, the gratifying fact was announced that the traffic, although the line was not open to Norwich, had already exceeded the parliamentary estimates.

The shareholders of the BIRMINGHAM, WOL-VERHAMPTON AND DUDLEY have sanctioned the bill before Parliament, for the erection and management of the station conjointly with the Great Western and the Oxford, Worcester and Wolverhampton.

The shareholders of the BIRMINGHAM AND Oxford have again twice patiently adjourned during the week.

The full amount authorized under their Act (1,055,000l.) is to be borrowed by the Lan-CASHIRE AND YORKSHIRE. The shareholders (with the exception of Messrs. Fielden) assented to the directors' proposals without opposition.

The resolution asking powers of loan for 288,000l., in order to complete their works, was and the market closes with an appearance of a further decline. The business done has been limited. To-day's latest transactions are:—Caledonian, 32; Blackburn and Burnley would be opened in the returned to them for the works of the canal

course of next month, that from Blackburn to Colne in August, and that from Preston to Liverpool in November.

The shareholders of the WHITEHAVEN AND FURNESS have specially approved of the two bills in the present session, for a deviation to Foxfield and for the forfeiture of certain shares in arrear.

At the half-yearly meeting of the DERBY-SHIRE, STAFFORDSHIRE AND WORCESTERSHIRE JUNCTION the Report was adopted. It announced the gradual liquidation of the liabilities of the company, and the extension of time afforded by the Commissioners.

The shareholders of the NEWCASTLE AND CARLISLE have accepted the offer of Mr. Hudson for the perpetual lease of the line, at 6 per cent. for three years, and 7 per cent. in perpetuity.

The Scottish Midland Junction bills for various branches introduced into Parliament during the present session were specially agreed to by the proprietors without opposition.

The affairs of the Belgian Eastern Junc-TION present an unpleasant picture. There is a halt about the restitution of the cautionmoney (seemingly, to us, very illiberal in those who insist on a fulfilment of conditions rendered for a time impossible by late events); and all that was effected at the special meeting of the proprietors was to place matters entirely in the hands of the directors, who recommend, if arrangements can be effected with the State, 8 loan of the caution-money to the Namur and Liége, until a clearer horizon prevails in commercial and monetary matters.

At the annual meeting of the proprietors of the GREAT LUXEMBOURG the Report gave satisfactory accounts of the progress of works, although the directors, from unforeseen causes, had not been thoroughly supported by the proprietors. A negotiation is now before the Bel-

Digitized by GOOGLE

between Liége and Laroche. No further call is to be made during the present year.

In the Commons the preambles of the following bills have been declared proved during the

Caledonian (Purchase, &c. of Wishaw and Coltness). Dundee and Arbroath (Dundee Junction). Dundee and Perth (Lease of Dundee and Arbroath,

Dundee and Reith (Mondsor).

&c.).

Great Western (Slough to Windsor).

Midland (Gloucester and Stonehouse Junction).

Newry and Enniskillen (Amendment of Acts, &c.).

North Staffordshire (Wellington Deviation), (Ashbourne Branch and Approach at Congleton Station).

Paisley, Barrhead and Hurlet.

Windsor, Staines and South-Western (Amendment).

Wishaw and Coltness (Deviations and Branches).

The STATE ABSORPTION OF RAILWAYS IN FRANCE would prove no easy matter, were we to judge from the opposition shown by the phalanx of proprietors of the various companies who have during the last few days specially protested against the measure. The companies represented were,-

Amiens and Boulogne (both in London and Paris). Central of France.

Northern of France. Orleans and Bordeaux.

Paris and Lyon (at their annual meeting, where satisfactory accounts of the progress of works were presented).

Paris and Orleans. Paris and Rouen. Paris and Strasburg.

From our official returns it appears that the amount of traffic for the last week, on 3,785 miles of railway, was 189,778L, thus accounted for: -96,911L for the conveyance of passengers only, 48,083%. for the carriage of goods, and a remainder of 44,784l. for passengers and goods together, not respectively apportioned; being an increase of 8,7811. over the corresponding week of last year, when the mileage was 2,862. The average earnings per mile were 50%, whilst in 1847 they were 63%.

RESULT OF THE VOTING ON THE BRIGHTON STEAMBOAT PROPOSAL.

The result of the special meeting on the Brighton steamboat affair is decisive as to the opinion of that portion of the company which takes an active interest in its proceedings. Of the proprietors who cared enough for the business to attend personally, there were 167 against the proposal to 64 in its favour. The proxies which had been procured by the Directors from parties residing at a distance, or not inclined to attend, determined the vote in its favour. It is probable that this latter section of the company will become by degrees aware of the truths that are already apparent to the majority of active proprietors. Indeed, the state of the company's finance arrangements at this moment, and the measures thereby rendered necessary, will help them to a practical understanding of the merits of any scheme for fresh expenditure beyond the limits of the concern itself. On the heel of this steamboat resolution comes another for raising 461,855l., by preference shares, to bear 6 per cent. interest. Why is this process needed? Because in no other way can the money be obtained at present on better terms, to meet demands that cannot be postponed. This is no very auspicious state of things for a new outlay for purposes that may at least be deemed of questionable advantage, merely because the Directors have personally engaged themselves in a manner which was not authorized by the company.

The power taken in the Act is, however, only to be exerted subject to the ar proval of a future meeting. It is therefore still within the proprietors' province to consider the question; and it they are wise, they will do so before it is settled beyond recall.

The emission of preference shares, which is now becoming a general resource in extremity, marks a new stage in the processes of railway financing-a step which carries the concerns affected by it not a little further beyond the region of safe and healthy progress. necessities which must have suggested its adoption afford a manifest confirmation of what we have often formerly, but always vainly, tried to make apparent to directors and proprietors :- a confirmation that many shareholders, we apprehend, would now be glad enough to have been spared by taking our advice. The practical effect of raising money in this way is to tax the income of the other stock, in order to tempt reluctant parties into advancing the funds now pressingly required, to meet the emergencies of past indiscretions. These funds are not now to be got from the general public at 5 per cent., or the guarantee of 6 would not of course be needed: and, therefore, as the loan cannot be obtained voluntarily, a process amounting to a kind of quasi compulsion has to be resorted to. This is not very much to the advantage of those even who may take the new stock,-as they cannot, at the same time, easily sell the old, the dividend on which is so far encroached upon by the income secured to the new. It is a serious damage to those who cannot afford to advance anything further—a double injury, indeed, to them—seeing that they must be sufferers while they continue to hold, unless the dividend should exceed 6 per cent .- and that the stock, should they wish to give up their holding, is made less saleable by the very creation of these preference shares, which must first be provided for at the expense of the others. Altogether, we say, whether we view the purposes for which the money is thus raised or the method of raising it, it must be seen that the operation is at once a symptom of the declining state of railway affairs, and a specimen of the kind of policy that had caused them to decline, and that will, if pursued, bring them still lower hereafter.

ADVERSE DECISION IN THE COMMONS ON THE GAUGE QUESTION.

The case for the opposition to the broad gauge (or say the double gauge) having been allowed to dwindle down to the injury which might be conjectured to result to the inhabitants of Buckinghamshire, by the interposition of the double gauge in the hands of a broad-gauge interest between Fenny Compton and Birmingham, it was on Thursday decided by the Committee of the Commons "that the double gauge should be laid from Fenny Compton to Wolverhampton, the mode of laying to be such as the Railway Commissioners may approve," and protective clauses being offered for the Buckinghamshire interests. By this decision the settlement of the gauge question, to attain which a commission was appointed in 1845 and legislation took place in 1846, is sent to the wind. The country have to thank the railway department of Government for this. It is they who modified the Gauge Commissioners' recommendations by their minutes of the 6th of June, 1846, until they became absurd. It is they who modified their own Report of June 6, 1846, still further in the resolutions which both Houses adopted on the 17th and 18th of June, 1846. It is they who brought in the Gauge Act at the end of 1846, and drew the second clause so as to cut the throat of the preamble. It is they, through Mr. Milner Gibson (then in his capacity of Vice President of the Board of Trade, the protecting deity of the railway interests), who prevented the Gauge Act from being amended at the time by assuring the house that it was

through Lord Clarendon, who said the Act was merely to carry out the resolutions of the house -which, by the bye, turns out to be neither more nor less than contrary to fact, if the broadgauge party are to be believed, who say that he promised a deputation of their body to insert words in the second clause which should leave the Birmingham gauge question open to committees, and so defeat the resolutions. It is, finally, they who in 1848 repudiate the Gauge Act, show how it never could have worked, and recommend that which amounts to the general extension of the double gauge, with the solitary proviso that one of their officers should have the working of a double-guage railway under his inspection for a certain time before the double gauge is more extensively adopted; which, of course, the committee interpret into a sanction of the double gauge if laid down in accordance with the views of the railway department.

A more weak, tricky, shifting, faithless course of conduct it is impossible to imagine than that pursued by the Government railway department in reference to this question of national gauge; the object of getting a line under this pretext into their own hands to work not probably having been wanting throughout as a lure leading them to abandon any definite course

of conduct on the subject.

In the treatment of this question they have been false to their trust as counsel for the public. The case for the public has been left in the hands of the London and North-Western Company; who have, perhaps not unnaturally, not thought it their business to argue it for the public, but have narrowed the issue to the special points raised before each committee, and have thus been beaten throughout-as we think.

Thus between the two, the public interests go to the wall, and diversity of gauge is being allowed to take root in the most pernicious form which it could adopt, namely, the double-gauge system, under which, while you do not cure the break of gauge, but merely divide it between the ends of the double-gauge line (thus making two breaks instead of one), you pay 15,000% or 20,000% more per mile for a far less safe and useful railway than one on the single gauge.

## Gossin.

The passing of the preamble of the Manchester, SHEFFIELD AND LINCOLNSHIRE Bill, for the ERECTION OF A PIER on the Hull side of the Humber, is not a of A fier on the finn side of the municer, is not a subject of local interest merely, but one which illustrates that large question, never to be forgotten in the discussion of railway politics, of the incidental benefits which are solely due to railways. Up to the present time, since the Humber has ebbed and flowed, the public have been content with a miserably incommodious and incomplete means of landing on the shore. Piers have been crected at different times and of different quantities of usefulness, but they have all been imperfect. There is no pier which a large vessel can touch at low water, and thus all sorts of inconveniences have to be sustained twice every twenty-four hours. The existing piers are all in some way or another structures belonging either to the Hull corporation, or the Dock Company. And neither of the corporate minds has ever been competent to the conception of a pier which should really fulfil its purpose. Never have they been able to carry a pier further than lowwater mark. It was a thing impossible and unparalleled. We are not sure even that the amount of official intelligence at the Admiralty would, mero motu, have ventured on an experiment so unusual. It was also an idea greatly beyond the dock mind at Hull. But these several functionaries have hitherto been the only guardians of the public interests on the Hull side of the Humber, and the public might have waited long for that accommodation for which it ought now to be grateful to the unaided enterprize of the railway. This Humber ferry is another case of great public at the time by assuring the house that it was expressly framed to prevent the double gauge is benefit proceeding wholly from a railway, but which is but a small incident in its general features. Col. from extending itself to Birmingham; and Sibthorp and other foolish people may cavil in theory

at the accumulation of powers conferred on railways, but the passenger and the farmer with his beeves and corn going to Hull, are practically sensible of the great benefit which they experience from the exist-ence of such powers. It would be impossible for Col. Sibthorp to prove that any abuse whatever of such powers can be more intolerable than the old jog-trot state of things. At last Mr. Fowler will have taught the corporation how to construct a useful pier at Hull.

The fourth anniversary of the consecration of the Church of St. George the Martyr, erected at Wolverton by the liberality of the LONDON AND NORTH WESTERN, was celebrated on the 28th ult. A special train took down the directors and principal officers of the company. The labours of the clergyman (Mr. Weight) have already been productive of much benefit, and his zeal and the kindness of the company are reported to be appreciated by the interesting a large whose heads to be appreciated by the interesting a large whose heads are the company and his to be appreciated by the interesting colony under his charge.

Capt. Coddington (we are pleased to notice) has returned to his duties as secretary of the CALEDONIAN, from which his late illness had temporarily withdrawn

The conversatione of the President of the Civil Engineers was most fully attended, on the 29th ult. All the principal engineers in London were present.

Mr. Russell, the ex-member for Reading, and chairman of the Great Western, is announced as a Con-servative candidate for Cheltenham.

We observe in the parliamentary notice, Mr. F. French has given notice of his intention to move, on the 6th inst., for leave to bring in a bill to secure to Ireland a complete system of railway communica-

The Scottish Memorial finally determined upon to the Lords Commissioners of Her Majesty's Treasury includes the Aberdeen, the Scottish Central, the Edinburgh and Northern, the Edinburgh and Bathgate, the Stirling and Dunfermline, the Glasgow, Paisley, Kilmarnock and Ayr, and the Glasgow, Dumfries and Carlisle Companies, (the two last-named being thereafter amalgamated under the name and title of the Glasgow and South-Western). The memorialists state that they have already expended, in the construction of their several lines and branches, the sum of 6,605,100l. sterling, of which 3,617,078l. are not yielding any return, in consequence of some of these lines not yet being completed. They respectfully crave an advance in Exchequer bills, or a loan in any other manner, to the amount of 1,000,000l., at a moderate rate of interest, on the security of their works and revenue and on the future calls to be made on their several proprietaries: the interest on such loan to enjoy a preference to all dividends of the companies profits payable to the shareholders. The amount thus advanced would be expended in payment of wages for manual labour in a manner not only remunerative to the railway, but with the greatest benefit to the country at large.

The public traffic on that important trunk line the Scottish Central commenced on Monday the 22nd ult. It was at one time doubted whether the new portion from Perth to Stirling could be legally opened as announced, the proper authority from the Railway Board not having reached Perth till Sunday night. The first public train, however, was completcly crowded, says the Scottish Railway Gazette, and made a most successful trip. The whole arrangements gave satisfaction. Some of the best workmen, selected from those who were turned out of France, have been engaged. Six trains have been running daily during the week between Perth and Edinburgh and Glasgow, the average time occupied in the journey to the metropolis being about 3 h. 15 m.-Glasgow of course three-quarters of an hour less. The traffic is reported as favourable.

A three-arched bridge on the BUCKINGHAMSHIRE, A three-arched bridge on the BUCKINGHAMSHIRE, across Bath-lane, Buckingham, has fallen in with a tremendous crash to a complete ruin. The abutments, says the Globe, only remain, the rest having become a heap of ruins. A rumbling noise was at some distance heard like thunder, which was immediately followed by a dense cloud of dust, and on this clearing off the wreck of that which had been considered a received the standard mechanical distinction. Fortunately, no bodily injury was sustained. This was providential, as the workmen had been passing and re-passing with loaded tip-waggons during the previous part of the day. When the workmen returned from dinner it was observed that the bridge had sunk

is unanimous in its opinion that it should be REJECTED. No other result could be anticipated from men who possessed a particle of public honesty or just policy.

No more striking evidence of the real state of affairs in France is to be found than from the documents presented by the Minister of Finance to the National Assembly. These show a decrease in the receipts during the first four months of the present year compared with the corresponding period of 1847 of 33,330,000f., of which 16,310,000f. are for January, February and March, and 17,023,000f. for April. The floating debt of the Treasury, from the 24th of February to the 24th of May of the present year, as compared as above, shows a diminution of 77,212,700f. The amount to the 22nd of May shows a balance of 68,630,648f. cash and bills. Of the cash 10,549,766f. belong to the Treasury, and 18,552,948f. to the Bank of France. The amount received of the extraordinary tax of 45 per cent. up to the 10th of May, was only 34,558,974f. out of the total estimate of that impost which stands at 191,259,489f. The total debt of the savings banks on the 24th of May was 328,789,000f., of which 70,296,000f. was for Paris, and 258,484,000f. for the departments, including the interest capitalized on the 1st of May. On the 24th of February the total amount was 352,036,000f. diminution in the three months of showing a 27,414,000f.

The adjourned meeting of the CEYLON was held on the 31st ult., at the offices, Broad-street-buildings, Mr. Tindall in the chair. The only business done was, however, a further adjournment.

### Reports of Meetings. [Continued from p. 383.]

LONDON, BRIGHTON AND SOUTH COAST. May 27.—Adjourned Meeting, London.—Mr. J. M. ARSONS in the chair.

The result of the ballot, with reference to the sum of 75,000l. being voted for steamboats, was announced. The scrutineers had not finished their work until 10 o'clock on the preceding night, when they found the numbers to be—Against the amendment, and in favour of the motion, 1,073 shareholders, of whom 64 were present, and 1,009 voted by proxy. The stock represented personally was 239,702L, and by proxy, 1,433,967L, making a total of 1,673,669L, giving 43,232 votes, of which 4,148 were personally represented, and 39,084 by proxy. Against the motion, and in favour of the amendment, there were—Shareholders present, 167, by proxy, 60, making 227. The amount of stock represented on that side was 303,282L present, and by proxy, 117,167L, making a total of 420,449L. Votes present, 7,189, by proxy, 2,772, total, 9,961;—thus giving a majority for the original motion of 846 persons, 1,253,220L stock, and 33,271 votes.

The Chairman stated that Mr. Flood, one of the 10 o'clock on the preceding night, when they found the

The CHAIRMAN stated that Mr. Flood, one of the scrutineers, who had been obliged to leave before the whole of the votes had been taken, had written a protest on the subject, or rather an explanation of the circumstances under which he had affixed his name to the Report. He did not object to the numerical computation, but on a legal question arising out of it, which question the company's solicitor had assured them could only be solved by the chairman of the House of Lords. He (the chairman) had therefore declared the result of the ballot,

as he was officially bound to do.

Several shareholders imputed unfairness in the manner in which the directors had obtained proxies. The discussion, however, led to no result, and the meeting proceeded with the remainder of the business, namely, to consider 'A bill to amend and enlarge the powers of the Acts relating to the Direct London and Portsmouth; and to enable such company to effect certain arrangements with the London, Brighton and South Coast.

The Solicitor read the draft, which empowered the Brighton to take an interest in the Direct Portsmouth to an amount not exceeding 300,000l., and to enter into arrangements for working that line.

In reply to Mr. DAVIS, who asked how much the Brighton had already paid on the Direct Portsmouth shares, the CHAIRMAN stated that they had paid 31. 15s. per share deposit on about 23,0001.

In the course of some conversation, the CHAIRMAN stated that the directors had the authority of the shareholders for effecting an arrangement with the Brighton, and he read several resolutions to that effect, passed in 1846.

Mr. Whishaw, the chairman of the committee of

investigation, expressed the approbation of that com-

about a foot over one of the piers, and the precaution was taken to place a man to watch and prevent persons from passing under it. The cause was the sinking of the foundation of one of the piers.

We learn from the Journal des Débats that the subcommittee of the National Assembly, appointed to examine the projected expropriation of the railways,

be at variance with their interests, and concluded by

moving an amendment negativing the resolution.

Mr. Davis seconded the amendment, and condemned the general mode of management pursued by the committee, which led to a vindication of their conduct by the CHAIRMAN.

Ultimately, Mr. MILLS withdrew his amendment.

The motion approving of the bill was then put, when a conversation took place as to how far the opposers of the bill, by allowing it to pass, would disqualify themselves from taking any ulterior steps in opposing it in the House of Lords, or elsewhere.

The CHAIRMAN stated that unless the resolution was passed without opposition a ballot would be necessary, in which case the result could not be doubted. If they passed the resolution, he pledged himself, on the part of the directors, not to take advantage of the circumstance in the House of Lords.
The opposition was accordingly withdrawn, and

the motion carried without dissent.

The meeting was then made special, to consider certain resolutions for raising the capital.

The CHAIRMAN explained that the step was rendered necessary in order to meet a large amount of mortgage bonds. The directors had not been able to bring the subject before the shareholders at an earlier period owing to the sitting of the committee. The course proposed was being pursued by the Eastern Counties and the Lancashire and Yorkshire, and he hoped would be here agreed to.

The Solicitor, in answer to a question, stated that the company was authorized to raise the capital in the manner proposed under certain clauses in the

Railway Companies Consolidation Act.

Mr. Power deprecated the practice of creating new

Several proprietors concurred in this view of the case, and stated that preferential shares operated prejudicially, by bringing into them a number of persons who had not the same interest in the undertakings as the original shareholders.

After some conversation the following resolutions were agreed to without dissent:—

takings as the original shareholders.

After some conversation the following resolutions were agreed to without dissent:—

That for the purpose of converting a portion of the mortage debt of the company into capital, the sum of 461,853/, shall be raised, by the creation of 92.371 shares, of 54 each, which shares shall entitle the holder to a perpetual minimum dividend of 6 per cent. per annum, payable half-yearly, in preference to the dividends payable on the ordinary stock and ordinary shares of the company; and when a dividend exceeding 6 per cent. in any one year shall be apayable on such stock and shares, the said new shares shall be entitled to participate rateably and proportionately in such higher rate of dividends. That the said new shares shall be intitle the holders to all the rights of ordinary shareholders, except in the participation of dividends when less than 6 per cent. per annum. That such shares shall be offered to the proprietors who shall be registered in the books of the company on the present 26th day of May, in the proportion of one share for every 504 ordinary stock or share. That a copy of these resolutions shall be sent forthwith to each proprietor, and if any proprietor shall fail to accept the shares offered to him on or before the 1st day of July next, he shall forfeit his right thereto. That a deposit of 24, shall be paid upon each such share on or before the 1st of July next, he shall forfeit his right thereto. That a deposit of 10, shall be shall new shares shall be paid up as follows, that is to say, 11, per share on the 8th day of September 1848; and 12, per share on the 8th day of December 1848; and 14, per share on the 8th day of December 1848; and 14, per share on the 8th day of December 1848; and 14, per share on the 8th day of December 1848; and 14, per share on the 8th day of December 1848; and 14, per share on the 8th day of Payment. But in case of the non-payment of the whole or any part of the call upon the said new shares shall carry interest at 6 per cent. per annum,

The CHAIRMAN then made a few observations expressive of his confidence in the sound and prosperous condition of their property, and congratulated them on the amount of traffic, and the excellent arrangements which had been made on the Derby day for the prevention of accidents and the convenience of the public.

EASTERN UNION AND IPSWICH AND BURY.

June 2.—First Meeting of the amalganated Com-pany, London.—Mr. J. C. Cobbold, M. P., in the chair. Mr. Saunders read the Report, which gave a con-cise general view of the actual position and prospects of the undertaking, and stated that-

The Eastern Laion Acts authorize the continuation of the main line from Haughley to Norwich (33 miles, including the branch to the Yarmouth line), now in course of construction . a portion of it to Finningham on the road to Diss, 6 miles beyond Stowmarket, will be opened for traffic

Digitized by GOOGIC

early in June. The line to Long Stratton, 10 miles from Norwich, may, if the funds are now brought forward, be without difficulty opened in the course of this year: and to Norwich by Midaummer 1849. The branch to Harwich (Il miles) has been contracted for, part of the materials are already on the ground, and the line will immediately be under construction. The cost of the whole of these lines when completed, including plant and permanent stations, and all the extra expense entailed by parliamentary contests, will not exceed 22,000t, per mile. The traffic has been found to exceed considerably the estimate; and justifies the conclusion that the line when opened to Norwich will, with a greatly reduced per-centage of working expenses, yield a satisfactory return upon the capital. The capital of the amalgamated company amounts to 2,145,666t; of which the share capital is 1,610,000t.; amount authorized to be raised on debentures, 536,666t.; of which the share capital is 1,610,000t.; amount remaining to be paid on calls and borrowed on debentures, together with other available assets, makes up the sum of 889,080t. applicable to the liquidation of outstanding claims for works executed before the calls have become due, and for the opening of the lines to Norwich and Harwich. Some delay must however necessarily take place in the realization of the whole of this capital. The periods for the payment of the remaining calls have, to meet the convenience of the sharelolders, been spread over 1848 and 1849; and the present is not a favourable opportunity for the issue of unappropriated shares, or for the extensive application of the borrowing powers of railway companies. A considerable proportion, moreover, of the amount coming due on calls in the current year, will be absorbed in the liquidation of these outstanding claims; and it being most essential that the line to Norwich should be opened with the least possible delay, and that the capital already expended should thereby be rendered at an early period productive and remun the first instance been constructed for a double line), and to extend the station accommodation as the traffic becomes developed. The peculiar circumstances of the times have checked the influx of money, and have retarded all railway operations; but the directors have reason to be satisfied that the Eastern Union, when opened to Norwich (without adverting to the great additional traffic which may hereafter be expected from the Midland and North-Western counties, over 40 miles of the existing line to the port of Harwich, will more than realize the most favourable anticipations of its promoters; and that all that is now wanting to insure the certain and complete success of the undertaking is the assistance and co-operation of the sharcholders in furnishing the comparatively moderate amount of money requisite assistance and co-operation of the shareholders in turnishing the comparatively moderate amount of money requisite to open the line to Norwich, instead of depending upon the necessarily, in these times, slow operation of the gradual realization of the whole of the capital. After alluding to the lease of the Stour Valley line, the report stuted that, among the various reductions the directors have made in orders a limit the aventiture of the company to the lawset. order to limit the expenditure of the company to the lowest possible scale, consistent with the safe and efficient working of the line, and the due administration of the company's affairs, they have resolved not to propose any allowance to themselves until after the line shall have been opened to Norwich.

The statement of accounts showed the receipts to Dec. 31, 1847, at 1,262,121l. 0s. 11d.; expenditure, 1,244,486l. 10s. 6d.; balance, 17,634l. 10s. 5d.

The report of the engineer, next read, stated that

the permanent way and works on 51 miles of the main line and branches, and which were now open for traffic, were in a satisfactory condition. The permanent way would in future be maintained at a less annual average cost per mile than was the case on most other lines. All the company's stock was in good working condition, and no very large additional outlay would be incurred on that account, when they opened the line to Norwich. All the goods stations, wharfs and depots, were ready, and the passenger stations and platforms, with the exception of those at Stowmarket, were finished. The works on the Hadleigh branch were completed and in good order. There were now employed on the Norwich line 500 workmen, and it would be necessary to increase the number forthwith.

The CHAIRMAN alluded to the pecuniary pressure of the times, which had operated disadvantageously to their obtaining the money they required, and from fully realizing those promises held out to them from time to time. The Board had come to the resolution of submitting to the consideration of the share-holders the expediency, either of postponing the payment of the interest authorized by the Act to be made up out of capital for 1848 until after the opening of the line to Norwich, taking credit for the same and for interest thereon, or, at their option, of having it placed to the credit of the payment of calls, thereby avoiding the necessity of raising during the

current year the large sum of 40,000l. for the payment of interest, and leaving the whole of the re-sources of the company applicable to the discharge of its obligations to the completion of the line and to the placing it at the earliest possible period in a position to make out of its earnings a legitimate return upon the capital embarked. This, however, in no way applied to the interest on the guaranteed 6 per cent. stock, which, together with the interest on the debenture debt, was already more than provided for by the profits from the working portion now open. Out of the 100,000% which they had proposed to raise, parties had already come forward with 30,000l. The traffic had already exceeded the Parliamentary estimate. It had been 50,229l. for the whole year, or something under 1,000l. a week, and for the half-year to September the traffic had been 30,000l. So that when their line was more developed and extended to Norwich they might calculate on a considerably greater excess. It was erroneous to suppose that the union of the Eastern Counties and There was no feeling of rivalry existing between them, and the impression of the directors was, that eastern district of lines.

Mr. LECHMERE was of opinion that the raising of the proposed sum would be beneficial to the company. wished to know whether any alliance was in contemplation with any other company.

The CHAIRMAN replied with no other, unless with

the Stour Valley.

Mr. FIELD then proceeded at considerable length to canvass the accounts, complained of their complexity, and attributed the low price at which the company's 300,000l. 6 per cent. stock now stood in the market not so much to the financial embarrassments of the times as to the confusion of the com-pany's accounts. They ought to be more explicit, and he hoped that before the next meeting was called to confirm them that fuller details would be given.

A long and desultory discussion then ensued, in which Col. Barlow, Messrs. Muskett, Philbruck, Ollary and others took part, relative to the proposed lease by the Eastern Union of the Stour Valley, at a guaranteed interest of 5 per cent.

Ultimately it was resolved that the Report should be received and adopted, with the exception of that portion of it which was considered to imply the concurrence of the meeting in the proposed lease of the Stour Valley.

The CHAIRMAN said the question would have to come before another meeting, and intimated that in the opinion of the Board the agreement for the lease of the Stour Valley was binding on the proprietors.

A resolution was then passed, reducing the number A resolution was then passed, reducing the number of directors from 20 to 18. They were as follows:—Messrs. G. Alexander, W. Beresford, M.P., S. Bignold, G. Pratt Barlow, F. Pratt Barlow, J. Cobbold, J. C. Cobbold, M.P., E. S. Cayley, M.P., W. Crake, J. Footman, J. Grayston, W. Warwick Hawkins, J. G. Hart, G. Josselyn, E. Willett, J. Wright, W. S. Wilson, R. Williamson Williamson.

A long discussion of no moment arose on the appointment of auditors, when an amendment for the appointment of Messrs. Head and Field to fill that office at 40l. per annum was carried.

Mr. FIELD suggested that instead of borrowing the directors should issue preferential shares.

Col. Barlow, deputy-chairman, said the object of borrowing was to have enough money on hand to enable them to open the line quickly. This 100,000l. would enable them to do so to Harwich and place their property on a safe and prosperous footing.

A resolution declaring it expedient to postpone the interest was carried, and Mr. Saunders was appointed the secretary, at 500l. per annum.

The Chairman, in acknowledging a vote of thanks,

said that out of the calls lately in arrear, very few now were unpaid, and even supposing all the shares in arrear were to be forfeited, the total loss to the company would not exceed 10,000%.

## LANCASHIRE AND YORKSHIRE.

May 31 .- Special Meeting, Manchester .- Mr. H. HOULDSWORTH in the chair.

The CHAIRMAN explained the reasons which had induced the directors to submit the resolutions to raise 1,055,000l. (the full amount authorized to be borrowed under the several Acts), by the creation of new preference 10t. shares, bearing a guaranteed interest in perpetuity of 6 per cent. per annum, to be divided rateably amongst those shareholders of the company who shall be registered on the 5th of June 1848 at the rate of one share for every 1002. of the nominal amount of shares held by them. If it was raised they would be enabled to complete about 100

miles, upon which upwards of 2,000,000l, had already been expended, and they would also be able to pay off their bonded debt as it became due. Was the sanction refused they would be obliged to suspend all their works, and have also to make additional calls upon the shareholders to raise above 300,000l., to meet expenses already incurred with regard to the other works. Their present circumstances rendered it indispensably necessary that the money should be raised; and the suspicion with which railway securities were generally regarded at the present time rendered it also necessary that a good inducement should be held out to capitalists to invest their money in this stock. He believed there was no better security in the country for investment than the one now offered for this 1,055,000l. The company had expended up to the present time 8,000,000l. of capital, and as loans of half a million would, at the end of this year, be the whole extra debt secured upon the value of their property (the bonded debt being otherwise secured), there could be no better security than the company's stock held out for this additional investment. He proposed a series of resolutions, to the effect that scrip should be issued for the new preference 10l. shares, upon payment of the first instalment of 2l. 10s. per share on the 30th of June, and that the other instalments should be pay-able in September and December 1848, and March 1849; register tickets of the shares to be issued to each holder of the shares, upon payment of the last deposit, and each deposit to be paid within one month of the day fixed for receiving it.

Mr. EGAN seconded the resolutions.

Mr. J. FIELDEN objected to this amount being so raised, as it was unfair that one party should receive a guaranteed interest of 6 per cent., while others who had purchased their 100l. shares at the rate of 225l., had only received, at present, at the rate of about 31 per cent interest per annum. He also denied the power of the meeting to pass the resolutions. He moved as an amendment that the meeting should be adjourned for two months, in order that proper notice should be given to all the shareholders.

Mr. Gill, a director, and Mr. Marshall, both

amongst the largest of the original shareholders, gave

the proposition their earnest support.

A Shareholder asked whether it would not be possible for a person, after getting scrip upon payment of the first 2l. 10s., to withhold all further payments until after the last payment was que in annual the and, under those circumstances, what would the directors do, as they would not be able to get the transfer in time to meet their engagements. It was until after the last payment was due in March next, quite clear they had no power to forfeit any of such shares on account of non-payment of the remaining

deposits, while they were only represented by scrip.
The CHAIRMAN, having advised with the company's solicitor, said there were difficulties about the matter, but other companies had found no obstacle in getting in the money in a similar manner. Parties subscribed for the shares under certain prescribed conditions, but if those conditions were not complied with, the directors could refuse to register such shares, and the parties would be liable to be sued for non-fulfilment of the agreement. While the shares were represented by scrip, they certainly could not be forfeited by reason of non-payment of the two intermediate deposits.

A discussion ensued, during which it was stated that no part of the calls of which notice had been given would be available for progressing with the works, and that it would be next to impossible, without resorting to very harsh measures, to get in any extra calls in sufficient time.

Mr. FIELDEN persisted in his proposed amendment, -which, having been seconded by Mr. T. FIELDEN, was put to the meeting, when only three hands were held up for it.

The CHAIRMAN submitted the original motion, when a great number of hands were held up for it. Against it there were only five.

Mr. J. FIELDEN then demanded a scrutiny of votes of those present, which was ultimately agreed to.

## EAST LANCASHIRE.

May 29.--Special Meeting, Bury .- Mr. J. GRUNDY in the chair.

The CHAIRMAN said the most business-like was would be to read the resolution to be submitted, which was to the effect that the company shall raise the remainder of a sum of money under various of their borrowing Acts, amounting to 288,000l., in shares of 6l. 5s., to be called preference quarter shares; that these shares shall be entitled to a minimum dividend of 6 per cent., so long as the dividend on other shares does not exceed that amount, and afterwards that they shall receive a dividend, pro rata, with the other shares; that these new shares shall be offered to the proprietors, in the proportion of one new share for

Digitized by GOOGIC

501. nominal capital held by them in the company; that a deposit of 2l. 5s. shall be payable on such shares on an early day—say, the 30th of June next; and 2l. more on the 1st of September, with a final call of 2l. on the 1st of November; that the shareholders shall have the option of prepaying the second and third calls, and receive interest from the time of prepayment; that shareholders failing to pay the first instalment by the day named shall forfeit their right to such shares, as also those in arrear of other calls, the directors to have the option of disposing of them in such other way as they may deem advisable. The Chairman declared that the object of this resolution was to enable the directors to move more rapidly forward with their works, and more especially that portion between Preston and Ormskirk, and the latter town and Liverpool, so that traffic might not be diverted from them by the competing lines in the course of construction. To those who thought that the guarantee of 6 per cent. would depreciate the dividend on the other shares, he might say that, even supposing the line to pay only 5 per cent. on the general capital, this depreciation could only amount to a per cent. On the other hand, it was to be recollected that by this means the line would be completed by the lst of November next, instead of the lst of March following, which would make a difference the other way of 1 per cent., or a gain of four times the amount, by bringing the capital into a condition to earn money much earlier. And this was presum-ing that the line did not get more traffic by thus being made a through line; if there should be a gene-ral increase of traffic as the result of that course, then the advantage of a present sacrifice for future gain would be all the greater. The payment of calls on the guaranteed stock was not to be in lieu of calls on the other stock, but to enable the company to raise capital faster.

In answer to a question, the CHAIRMAN explained, that if the lines were to be hastened forward, these shares were necessary, supposing even the share-holders could not keep them and they got into other hands, inasmuch as parties would not lend money

at 5 per cent.

Mr. KAY seconded the motion, and it was agreed

to unanimously, after some discussion.

The CHAIRMAN also stated that the line from Accrington to Blackburn and Burnley would probably be opened in the course of next month; and from Blackburn to Colne in the course of August; and from Preston to Liverpool in November next.

## WHITEHAVEN AND FURNESS.

May 31.-Special Meeting, London.-The Earl of LONSDALE in the chair.

The CHAIRMAN stated that they had met for the purpose of approving of an Act now in Parliament for a deviation in the line, and extending it from Silecroft to Foxfield, and to the harbour of Whitehaven, where it will join the Whitehaven and Maryport; also to confirm the forfeiture of certain shares in arrear. The reason why the company went for that deviation was that it would be a decided saving of expense in the completion of the line, which was a great object with them at present. By the proposed deviation there would be a saving of 30,000% on the required outlay, as well as increased economy in the maintenance of the line when made. They would also obtain power to make a branch to Whitehaven Harbour, by which the company would incur very little additional expense, and the construction of which would not render it necessary for them to abandon the proposed junction with their Maryport line, when the future prospects should justify them in completing that junction.

Mr. Roy, the solicitor, then read the substance of the proposed bill. The estimated capital for the deviation line is 50,150*l*., and for the branch to the Slipyard, at Whitehaven, 33,700*l*.; but no capital is authorized to be raised under the bill, the existing resources of the company being sufficient for these purposes. The powers of compulsory purchase of land are limited to five years, and the period for completion of the works to seven years, from the

passing of the Act.

A resolution, approving the bill, and authorizing the prosecution of the same before Parliament, was then, on the motion of Mr. DE VITRE, passed unani-

mously.

The meeting then proceeded to the other business of the day, namely, the forfeiture of certain shares. These amounted in all to 1,971, and a resolution, confirming the forfeiture of the shares, and authorizing the directors to sell or otherwise dispose of the same, was, on the motion of Mr. L. Levy, carried unanimously.

During a conversation, the SECRETARY announced that the total deficiency in the payments on the first, second, third and fourth calls in this company

amounted to 60,000l. To meet this deficiency, as well as to provide for the further prosecution of the works, without pressing too heavily on those proprietors who have regularly paid up, various suggestions were made, amongst which the issue of preference shares, at an increased rate of interest, seemed to meet with the approval of the majority of the propri-etors present. The matter was, however, referred to the consideration of the directors.

DERBYSHIRE, STAFFORDSHIRE AND WORCESTER-SHIRE JUNCTION.

June 1.—Half-yearly Meeting, London.—Mr. B. J.

Allston in the chair.

The CHAIRMAN said that before the seal was attached to the register he had a short statement to From what had occurred at the general meeting in December last the directors had caused a rigorous investigation to be made into the state of the register, and had ordered a new and revised copy. It was now perfectly correct; but a difficulty had arisen with respect to the names of four gentlemen who had been on the former direction, viz., Messrs. Johnson, H. Johnson, his son, W. King, and the Baron de Dopff. The names of those gentlemen had been included in the list, but it did not appear that they ever held any scrip shares. There appeared therefore to be great doubt as to the present register being a correct one, so long as their names remained.

The SECRETARY read a report, wherein he had come to the conclusion that the names of the gentle-

men in question should be omitted from the register.

A conversation ensued, Mr. Harris and several gentlemen concurring in that opinion, while others thought that they would, by so doing, be dealing too leniently with the four gentlemen in absolving them from their liability, rather than compelling them to pay. It appeared that Mr. Johnson had signed the pay. It appeared that Mr. Johnson had signed the deed for 500 shares, but it was explained that he (Mr. Johnson) and the other gentlemen, with the concurrence of the remainder of the Board, had signed to that extent in order to make up the requisite amount of subscriptions to enable them to go to Parliament, and not with a view of taking up the whole amount themselves; the shares therefore became the property of the company.

Eventually it was agreed that the blanks left in the register for their names should not be filled up, and that they should be excluded from the list of share-

The seal having then been affixed to the register, the SECRETARY result he Report. The directors stated that they were exerting their utmost efforts to liquidebts. An amount of 6,599l. 18s. 9d. had been paid out by the present Board, which left other debts and claims to be liquidated when the call should be paid. The call of 1l. per share, made in July last, was paid on 3,431 shares, leaving 8,025 unpaid upon. The legal difficulty which interfered with the covery of that amount had been removed by the recent valid call, on which only 215t. had been paid. The directors had made arrangements to take proceedings against the defaulters, and steps had also been taken to recover the three cheques for 420%. each, which had been made out for themselves by Messrs. D. Johnson, King and Spiers. A bill in Chancery had been filed against Mr. Johnson and another gentleman on account of one of those cheques, but they would take no measures with regard to the others until the result of the present suit could be known. The Commissioners had granted an extension of time to two years for the completion of the line, and five years for the compulsory purchase of land. The Report concluded by stating that the directors had made every arrangement in their power to effect an economical administration of the affairs of the company.

In answer to a proprietor, the SECRETARY stated that Mr. Bainbrigge, the solicitor, had received 11,000*l.*, and his claim altogether amounted to 23,000*l.*, but it was confidently expected that the company would not be compelled to make any additional payment.

After some further conversation, the Report was adopted, and resolutions passed approving of the course pursued by the directors, and empowering them to take whatever measures they might deem necessary to obtain the return of the cheques drawn by the directors for their remuneration, and also to obtain the payment of the arrears of calls.

BIRMINGHAM, WOLVERHAMPTON AND DUDLEY. May 27.-Special Meeting, Birmingham .- Mr. W.

MATHEWS in the chair.

Mr. Whateley, the solicitor, read the draft of the bill before Parliament. The crection and management of the station is to be intrusted to a committee, consisting of three directors, appointed by each of the three companies; the Oxford, Worcester and Wolverhampton are to be authorized to raise an addi-

tional capital of 100,000l., of which sum 10,000l. is to be expended upon the proposed station, and the other two companies are to contribute 10,000l. towards carrying out the objects of the present bill.

The CHAIRMAN, after stating that the provisions of

the bill had been duly considered by the Great Western (who would have, according to their agreement, to provide the necessary funds), moved that the bill be sanctioned.

The motion, being seconded, was carried unani-

BIRMINGHAM AND OXFORD JUNCTION.

May 30 .- Adjourned Meeting, London .- Mr. P. H. MUNTZ in the chair.

On the motion of Mr. J. W. Beale, seconded by Mr. S. Beale, the meeting was further adjourned to June 2, at 4 p.m.

June 2.— On the motion of Mr. Colmors, the

meeting was again adjourned.

NEWCASTLE AND CARLISLE.

May 31 .- Adjourned Meeting, Newcastle .- Mr. M. LUMMER in the chair.

The CHAIRMAN briefly announced that as the directors had received no further offers than had been previously made, they had resolved to agree to Mr. Hudson's terms.

Mr. Johnson then moved the following resolution: "That this company accept the offer of Mr. Hud-son for the perpetual lease of the Newcastle and Carlisle at 6 per cent. for three years, and 7 per cent. in perpetuity, and that the directors be authorized to arrange the details and carry out this resolution."

Mr. J. Cookson, having seconded the motion, Dr. Cowan opposed it, on the ground that the line was worth more than had been offered, and moved as n amendment that the company should not accept

Mr. Hudson's terms. The amendment, however, failing to obtain a seconder, the original motion was carried by a large majority. The Caledonian had previously withdrawn their offer.

SCOTTISH MIDLAND JUNCTION. May 26.—Special Meeting, Perth.—Mr. P. WED-DERBURN in the chair.

Drafts of the following bills which have been introduced into Parliament in the present session were submitted to the meeting, viz., to make branches to Birnam, and to the Dunkeld branch, and also to abandon part of the original line of the said Dunkeld branch, to make a branch from near the royal burgh of Forfar to or near the town of Laurencekirk, in the county of Kincardine, and to

The Chairman, without any remarks, moved that the said bills be approved of, which was seconded by Mr. B. C. Rattray, of Craighall, and unanimously

BELGIAN EASTERN JUNCTION.
May 31.—Meeting of Shareholders, London.—Sir

F. SMITH in the chair.

The Report of the committee stated that at the period of their appointment in September last, the caution-money of 30,000l. stood invested in the 24 per cent. Belgian stock, and a further sum of 21,877l. 1s. 1d., the balance of a second 30,000l., remained to the credit of the company, in the hands of their banker, M. Messel, of Brussels, yielding 3 per cent. interest. This latter sum, like the former, had been placed in Belgium, in pursuance of the provisions of the cahier des charges. Unfortunately, the result of the meeting was no sooner known in Brussels than M. Vifquain (an engineer who claimed under an alleged contract the right of executing the works) caused an attachment to be laid both upon the caution-money and upon the balance at M. Messel's. Immediate proceedings were opened in the Court of Première Instance at Brussels, and, although they terminated in a judgment entirely favourable to the company, M. Vifquain has since given notice of appeal, so that the money is not yet released from the attachment. The committee, however, anticipating at the outset a favourable result to the con-test, memorialized the Minister of Public Works, praying, that in consideration of the present state of commercial distress, and utter hopelessness of raising funds for carrying out their enterprize, they might be released from their undertaking, without forfeiting the caution-money. The deputation, which had proceeded to Brussels to deliver the memorial, had several interviews with the Minister. The Minister asserted the claim of his Government to the caution-

Digitized by GOGIC

money as already forfeited. He informed the deputation that, in order to any change in the destination of the money, an application to the Chambers was indispensable, and that, as the company had resolved to abandon the undertaking, they had, in his opinion, no claim to the indulgence. The deputation then addressed him a letter, in which they urged him either to restore two-thirds of the caution-money, on the company engaging to sacrifice the remaining third, or to permit them to dispose of their undertaking to some other company. No answer was ever received. The committee, however, shortly afterwards nut themselves in communication with the Namur and Liege, respecting some arrangement for the employment of the caution-money on that line. Two plans suggested themselves by which that object might be accomplished with advantage. One was to realize the funds in which the cautionmoney was invested, and lay it out in the purchase of Namur and Liege shares, at a price to be agreed upon, and the other was to lend the money to that company at 10 per cent. interest (which they were ready to give), for a period of five years. But both plans required the sanction of the Belgian Government, which was positively refused. The Minister. however, procured an Act to be passed by the Belgian Legislature, authorizing the loan of the stock in which the caution-money is invested to the Namur and Liege virtually for two years, as a means of enabling that company to borrow a sum of money for the purpose of executing the part between Mons and Manage, which is still unfinished, leaving the two companies to arrange between themselves the remuneration to be paid to this company for the deposit of the stock, but requiring the restoration of the stock itself to the Government, as caution-money at the expiration of the two years, and the reserva-tion to the Government of one moiety of the dividends accrued upon it during the interval. scheme virtually gives two years extended time to the company, during which the monetary crisis may pass away, and the Belgian funds rise to their ordi nary value, the caution-money being productive in the meantime. The committee therefore have negotiated with the Namur and Liege, and the latter are willing to pay 10 per cent. per annum on the amount to be raised, viz., 5 per cent. by half-yearly instalments, and the remaining 5 on repayment of the principal. The Namur and Liege will also pledge the whole of their effects as a security for the return of the stock, so that no diminution of the capital need be apprehended as the result of the transaction. though at its close the caution-money will still remain subject to the conditions of the cahier des charges, and be liable to forfeiture if not applied to its original purposes. The directors add a supplemental statement, recommending the adoption of the proposal of the Belgian minister, as affording the best chance of saving the caution money, the position of which, as well as of the money in the hands of M. Messel, coupled with the depreciation of the Belgian funds since the meeting of the 11th of September last, render it impossible now to carry out the views of directors to the extent suggested in their report to that meeting. The directors are sorry to inform the shareholders that since their last Report, M. Messel, the banker, has suspended his payments, and has applied to the Belgian Government for what is termed a "sursis," which, if granted, will give him twelve months' time to liquidate his engagements. The directors, however, had previously obtained from him a freehold security, which, they are informed, is amply sufficient to cover their demand. They have reduced the establishment and expenses to the lowest practical point. The business of the office is now

Conducted by the secretary alone.

After the Report, the CHAIRMAN stated that the shareholders had only two courses before them-namely, either to abandon the caution money altogether, or else to adopt the proposition for lending it to the Namur and Liege, for two years, at the ex-piration of which time perhaps some means would be found for carrying out the original project.

The meeting was adjourned in order to give the shareholders time for considering the question whether they would exchange their bankers' receipts for certificates of shares, which course alone would entitle them to meet as a constituted company, and carry out the proposal for lending the caution money, or whether they would consent to abandon not only the caution money, but also to risk the further sum of 21,8771. now deposited in the hands of M. Messel, which it was stated might be endangered in the event of the shareholders refusing to adopt the suggestion recommended to them by their directors. It was understood that another meeting would be summoned in a short time, as the day fixed for the déchéance of the company is near at hand, being the 18th of July. GREAT LUXEMBOURG.

May 17. - Annual Meeting, Brussels. - Sir W. MAGNAY, Bart., in the chair.

The Report stated, that on the 21st of March an Act passed the Chambers, for delivering up the sum invested in the Belgian funds as caution-money to the full amount of the expenditure upon the earthworks, works of art, and purchases of land, thereby saving the funds of the shareholders and superseding an equal amount of calls. Many shareholders delayed responding to the call of 11. per share due in January last until the official announcement of the royal assent to this Act. Meanwhile, owing to political events, the undertaking, in common with others, encountered a serious check. The position of the directors became one of considerable difficulty, placed as they were between the fears of their constituents in England and the claims of the Belgian Government. The latter, for the preservation of public order, urged the continued employment of a large number of men. The directors, whilst avoiding all new contracts and liabilities, retained upon the line upwards of 1,500 workmen; at the same time they declined to give any pledge for the continuance of the expenditure consequent thereon longer than the end of June. The works upon the canal have progressed. The Belgian Government have decided upon the improvement of the navigation through Liege, and for that purpose 250,000% has already been voted. This work will, it is expected, increase the value of the Luxembourg canal, by admitting vessels of large tonnage from Antwerp to pass directly into the Luxembourg canal, and discharge at Chenée. The directors are in active negotiation for the release of that portion of the caution-money, amounting to 80,000*l.*, retained by the Government, and applicable to future operations in the Luxembourg country, and they anticipate there is every prospect of a favour-able result. After the 28th of June all shares then in arrear will be forfeited. The directors announced that no further calls will be made during the present year.-The accounts to the 31st of December 1847 showed that 643,427t. had been expended, leaving a disposable balance, in cash and caution-money, of

The CHAIRMAN stated that a negotiation of great importance was pending with the Government in respect of the two millions of caution-money now in their hands as security for the execution of from Namur to Arlon. The question before the Government is, whether, in consideration of the difficulties of the present crisis, these two millions may be applied to the early sections of the canal between Liege and Laroche. The advantages from between Liege and Laroche. The advantages from this negotiation cannot be thoroughly appreciated until the negotiation itself is concluded. From the debate in the Chamber of Representatives, on the 15th inst., it is expected that the early dissolution of the Chambers will prevent any decision being come to this session; but the directors anticipate that a final settlement of the point may be expected at the commencement of the next session. In respect of the forfeiture of those shares on which the calls have not been duly paid up, the Board have announced an extension of further time up to the 28th of June. This resolution was passed; but it was determined that, after that date, the Board will consider itself to declare an absolute and irrevocable forfeiture. In the present crisis, it was satisfactory to the meeting to learn that there will be no fresh call in the present year; and that interest at the rate of 5 per cent. on calls properly paid up to the present time will be paid as usual for the current half-year. A committee, which has inspected the line, has re-ported satisfactorily of the excellent execution of the vorks, and of the economy which has controlled them. They have also expressed their confident expectation that (in accordance with the declarations of the company's engineers), the most expensive part being in course of construction, the total cost, judging from the contracts entered into up to the present time, will be under the original estimates. The directors were congratulated on their prudence and foresight in not having entered into any contracts on the part of the company for rails, carriages and

Resolutions were passed adopting the Report, and expressing a determination on the part of the shareholders to support the directors by every means in their power.

locomotives.

CENTRAL OF FRANCE.

May 23 .- Special Meeting, Paris .- M. BARTHO-LOMY in the chair.

The shareholders unanimously expressed their disapprobation of the Government scheme for the purchase of the railways. A committee, consisting of six members, was appointed, and instructed to protest by all the means in their power against the project | by the State.

presented to the National Assembly for the purchase the railways, and to remonstrate against its illegality and injustice.

PARIS AND ORLEANS.

May 23.—Special Meeting, Paris.—M. BARTHO-LOMY in the chair.

A committee was appointed to present the unanimous protest of the shareholders against the project for purchasing the railway by the State, and to oppose it by all the means in their power.

PARIS AND LYON.

May 25 .- Annual Meeting, Paris .- M. STOURM,

the president, in the chair. M. JULLIEN, engineer in chief, read his Report of the state of the works up to April 15, 1848. The earthworks, works of art, &c. on the part between Paris and Tonnerre (125 English miles in length) would have been finished this summer, had not political events stopped the payment of the calls. Little

need be done in this section, except between Paris and Charenton. From Tonnerre to Dijon everything had been prepared to begin the works, but the directors considered it prudent to suspend all further operations except in the tunnel of Blaisy, which was urged on without interruption. From Dijon to Chalons, the line (which in this section had been executed by the State) was delivered up to the company on December 1, and the works would have been now in course of execution, had not the revolution taken place. Between Chalons and Lyon nothing had been commenced. The expenses incurred for the works up to April 15, 1848, were 72,071,055f. (2,906,840L), The expenses incurred for the works from which 8,000,000f. paid to the treasury for the works on the part of the line between Dijon and Chalons was to be deducted. There is still wanting for the section 35,400,000f. Should the State restore the balance of the caution money, 9,000,000l, there still would remain 26,400,000l. (1,056,000l.) to be provided during the present year. The whole of the sums received up to Dec. 31 amounted to 102,248,241f. (4,089,939l.); the outlay was 68,358,008f. (2,734,320l.); which left a balance of 33,890,232f. (1,355,609f.) Out of that amount 17,620,625f. had been deposited in Rente and securities as caution money with the Government; 7,662,957f. was lodged in cash at the bank of France, and 8,168,178t. 47c. was in Rentes. Preparations had been made for urging on the works with great activity, so as to open the part from Dijon to Chalons in July, and that from Paris to Tonnerre in September. The revolution changed everything. The payment of the calls was then stopped, and, on the other hand, the Minister of Finance declared that if the works were arrested, the State would substitute itself d'urgence for the company, recommending the Board, as the best course it could pursue, to sell the Rentes which the company possessed at whatever price could be got for them. In the end the company was obliged to sell whatever Rentes it could dispose of, and had thereby lost not less than 8,487,349f. (339,493l.) Rigid economy had been introduced into every department of the service, and the sums coming due to the directors for their attendance at Board meetings had been suspended. The

measure : Yes, gentlemen, we loudly declare that there will be an Yes, gentiemen, we loudly declare that there will be an iniquity in taking as the valuation of our enterprize the market price of the shares at any period, and particularly during the first state of financial criss which proceeded the revolution of February. Supposing that this rule can be justly applied to those lines whose revenues are known, and whose calls were completely paid up, we aftern that it is inapplicable to the lines in course of construction, for which considerable calls remain to be paid up, and the shares of which must consequently more particularly feel the general depreciation resulting from the financial crisis. The mere mention of the sum to be given us as a compensation for the 250f. we have paid, 6f. of 5 per cent. Rente is sufficient to point out the spoliatory character of this pretended indemnity.

6f. of Rente! that is to say, according to the present rate, about 33,000,000f. for the repurchase of a real expense of 100 millions, when we deliver to the State—the works from Dijon to Chalons, for which we have paid 91,000,000f. of real incontestable values which will be reduced to a sort of tiers consolide. Certainly the National Assembly will

Report thus stigmatizes the proposed Government

not sanction such a spoliation.

A conversation ensued on the general affairs, and on the best mode of proceeding with respect to the bill before the National Assembly. The Board determined that the former committee should now be formally appointed to examine the accounts just pre-sented. The following gentlemen were accordingly named for the purpose: MM. Dupray, Porrequet, Plé, Grillon, Malgaigne, Picard and Lanuset. The accounts were then adopted conditionally, subject to the nomination just mentioned. The above committee would also co-operate with the Board in taking such steps before the National Assembly as should scem best for the general interests, particularly by opposing in every proper way the taking possession of the line

Digitized by GOOGLE

PARIS AND STRASBURG. Special Meeting, Paris.

COUNT DE

May 26. SECUR in the chair.

The Secretary read the Report, pointing out the peculiarly favourable position of the line, and the injustice to the shareholders were the conditions laid down in the Government bill insisted on. The Report treated the question of the rackat in all its bearings, and was received with loud applause.

The meeting ordered it to be printed and sent to

each shareholder.

A committee to aid the board of directors in their representations and proceedings with the committee of the Assembly was appointed, consisting of MM. Konigswater, Cuzon, Porrequet, Pujol and Sibert.

The shareholders present, one and all, declared their deep disapprobation of the Government bill.

DERBY, UTTOXETER AND STAFFORD .-- June 2. real Meeting, London, to receive the second instalment of the balance remaining, consequent upon winding up the affairs.—Mr. Nash in the chair.—The Report stated that the position of affairs at the

last meeting was as follows :-

The Report stated that the position of affairs at the last meeting was as follows:—

Mr. Henry's action had been referred to arbitration, the award in which was not made until November 17, 1847, when only 1866, was given to the plaintiff instead of 5,1356. The costs, which were to be paid by the company, were taxed on the 8th of April last, and reduced from 1,6457. Its. 6d. to 957. 12s. 4d. It was not possible to get them taxed earlier, the plaintiff having brought thirty-one actions against different members of the committee. Mr. Higgins's action was stopped by his bankruptcy, and his assignces could neither be compelled to continue nor abandon their claim until barred by the Statute of Limitations. The committee consented to pay the assignces 7500, instead of 2,00000, the amount of their demand, to stay proceedings, each party paying their own costs. The remaining claim of Mr. Richardson for 1202, 19s. 4d. was settled for 806, 19s. 4d. Including Mr. Wyld's claim for 1,1504, actions had been brought against the company for 10,1836, 11s. 4d., which the committee had defeated, and settled for 1,1444, 19s. 4d. They would have saved the larger portion of that sum (the 7500, paid to Mr. Higgins's assignces) had they possessed the power of forcing them to trial. One other action had since been brought against the company for 1333. 11s. by Mr. Wood, a leveller employed by Mr. Higgins. The committee offered him 300, to compromise, but he required 100d., which the committee had refused to pay. The solicitor's bill was taxed directly it could be got randy, and the day after the taxing was completed the committee met to wind up the affairs of the company. By the last balance-sheet, 27,5000, was reserved for the first instalment of 14, 12s. 6d, for the first instalment thereon still unpaid. By the present balance-sheet, 27,5000, was reserved for the first hustalment of 14, 12s. 6d, for the first instalment of 6,7714. 4s. was available for the further instalment of leaving 65 shares, and 105.1.22. 6d. for the first instalment thereon still unpaid. By the present balance-sheet, the sum of 6,7711.4z. was available for the further instalment of 8z., which the committee would have been ready to pay, but for the circumstance that, since the above report was prepared and the meeting called, Mr Henry had made a claim upon Messrs. Gray and Illidge, for the costs of the survey. The committee were advised that they could not part with the funds, as it was possible that they might be liable to Messrs. Gray and Illidge, should Mr. Henry recover anything against them. This they did not apprehend, but they felt they were bound, having the interest of the shareholders in view, to wait the result. holders in view, to wait the result.

A long discussion ensued, in the course of which Mr. Cohen complained in strong terms of the charges of the solicitor, to which that gentleman replied in a similar tone. It appeared from the balance-sheet that the amount paid to the solicitor from the 21st of July 1846 to the 23rd of May 1848 was 1,496/. 16s. 11d. The liabilities of the company amounted to 4991. 3s. 6d. After deducting the sum of 6,771l., which was proposed to be divided, from the balance in hand, the sum remaining would be 99l. 15s. 8d.—After a few words from the Chairman, who hoped that the meeting would absolve the directors from any mismanagement or inattention to the interests of the shareholders, a committee was appointed to inquire into the nature of Mr. Henry's claim, and how far the company was liable, and report accordingly .- The meeting then adjourned until the result of the inquiry

could be made known.

## Law Intelligence.

Costs, &c .- May 29 .- In the LORD CHANCELLOR'S COURT, ex parte the Great Northern in re Langham, it appeared that in this case the company sought to recover back money and exchequer bills bought on their account, in consequence of their requiring lands near Hornsey for the purpose of their line, of which due notice had been given to the holders of the land. The parties resisting the application were a class of holders of land seeking costs, incidental to the expenses of taking the land, and in a former suit in the lice-Chancellor's Court for an injunction against the company, all of whom had received notice that portions of their land would be required to carry out the line. - The Lord Chancellor declared that in respect to the valuation and the conveyance of the land, the Act had explicitly provided that the reasonable costs should be defrayed at the expense of the promoters of the line. But with respect to the suit

in Chancery, that could not be said to be brought | said no. under the Act; those costs ought not to have b included in the order of the Vice-Chancellor. His lordship therefore made his order that the company should have a return of the money and the Exche-

quer bills put to its account.

May 27. -In the Vice-Chancellor's Court, in re Mott v. the London and Blackwall, this case was again mentioned, with reference to the form of the action which the plaintiff was to be at liberty to bring for the purpose of trying the question whether the defendants had been justified in building on the site of Arnold-road, adjoining Arnold-terrace in the Bow-road, having regard to the agreement under which Arnold-terrace had been built by the plaintiff.—His Honour directed that the motion should stand over. with liberty to the plaintiff to bring such action as he might be advised, and in such action the defendants to admit the tender of the lease and their refusal to execute it, and the stopping up of Arnold His opinion was, that unless the plaintiff could show he had sustained that kind of damage which would be an injury at law, he was not entitled to the injunction, and could not sustain the suit.

Two Solicitors. — Derbyshire, Staffordshire and Worcestershire Junction.—May 29.—In the same Court, in re M'Gregor v. Bainbrigge, the object was to obtain an account of costs due to the parties, who had acted jointly as solicitors. The question was, whether there had been any agreement, actual or implied, entitling the plaintiff to insist upon a right to an equal division of the amount of professional earnings. The plaintiff, with a Mr. Owens, had, in 1845, been solicitor to the Kidderminster and Hereford, which, in August 1846, was amalgamated with the Derbyshire, Staffordshire and Worcestershire Junction, of which the defendant was the soli-citor. The bill had been ultimately thrown out in the House of Lords.-His Honour said, the amalgamated company had sanctioned the employment of the two solicitors, who were to send in one bill. The question in the present suit was, what were their rights inter se? He must direct issues to try whether upon the amalgamation of the two companies, or at any other time, it had been agreed between the plaintiff and the defendant, with the sanction of the directors of the amalgamated company, that the business of the company should be carried on by them jointly, as partners. And if the jury should find that there was such an agreement, whether it was agreed that the gains and profits thence arising should be divided in equal shares. Liberty would be given to the jury to state the proportions in which the profits

were to be divided; and the bill would be retained.

LUGGAGE, &c. — May 18.—In the BLOOMSBURY COUNTY COURT, in re Hardy v. Brown and another, the plaintiff, living in Cumberland-terrace, Regent's Park, sought compensation for a trespass and assault by the defendants, Brown and Evans, porters of the London and North-Western. Mr. Hardy, on the 29th of March, left Northampton by the train which arrived in London at 3 45 p.m. The first thing he did on his arrival was to hire a cab, and he then went to the luggage van to secure his portmanteau, his father's servant, who had come to meet him, being with him at the time. He required his luggage, and was asked where he came from, and replied from Northampton, at the same time pointing out the van in which he had placed it. He pointed the Northampton, at the same time pointing out the van in which he had placed it. He pointed the trunk out and claimed it, referring the porter to the servant as to his knowledge of the trunk being his (Mr. Hardy's) property. Mr. Hardy then returned to the cab, expecting the porter would bring the trunk; the servant, however, came, and said the porter would not give it up. The plaintiff then went back, and, as the porter refused to deliver up the trunk, Mr. Hardy took hold of it. The instant he did so Evans struck him very violently with his elbow. so Evans struck him very violently with his elbow and he fell against the van, the other defendant Brown, wrenching the portmanteau out of his hand This was the assault complained of. The trunk being This was the assault complained of. The trunk being forcibly taken from him, Mr. Hardy went in search of some of the superior officers. The porters called Inspector Daulby, who refused to take Mr. Hardy into custody, but directed them to give him up the trunk. This was done. Mr. Hardy afterwards called upon Capt. Huish, the manager, to report the conduct of these two new when to his survivia Capt. conduct of these two men, when, to his surprise, Capt Huish justified their conduct in every particular. Mr. Hardy said he would be satisfied if an apology were made, and a letter was sent by his solicitors, Carpenter & Ward, demanding one, but it was unsuccessful; and even now Mr. Hardy would be satisfied if an apology was given. Mr. Hardy, on cross examination, said "The trunk had on a brass plate, with initials upon it, but I did not give any description of it to the porters, because, in the hurry and confusion, I forgot all about it. Brown asked me if there was any mark upon the portmanteau, and I

He then said he could not deliver it to because there was a name upon it. me, I said, do you mean to detain my property? Brown replied that, by the rules of the company, it was more than he dared to deliver up property without it was properly described, and until I properly described what was upon it he could not give it up. Neither of the porters asked me my name."—After a justificatory address by counsel for the defendants, as servants of the company, the Judge said that the question was, whether the plain-tiff could maintain an action of trespass against Evans and Brown; and his present impression was that he could not. The portmanteau was in the van under the care of the two defendants, who told him (the plaintiff) that it was contrary to the regulations of the company to deliver it up to him without he described it. This he refused to do, although there were initials upon it, and attempted to seize the property; but no evidence had been given to show that the porters used more violence in preventing him taking it (which he believed the plaintiff was not justified in doing) than was necessary. His judgment must be in favour of the defendants; but, as Mr. Parry wished to refer him to some cases upon the question, and the other side might do the same, he would defer giving judgment until a future day.— Mr. Clarkson said his Honour had given a very strong expression that his judgment would be for the defendants, and he was requested to say, on behalf of the company, that, as they defended solely on public grounds, he was not to apply for costs.

PROTECTION IN A NEW FORM, TO WHICH MR. COBDEN WILL NOT OBJECT .- Our peers are all interested in the maintenance of the landed interest; they most of them tremble for the results of the competition to which our farmers are about to be exposed; and they will have the good sense to see, that, besides all other local and national arguments, it is most important to bring good and cheap conveyance as nearly as possible home to the doors of every farmer. The peers cannot get back protection, but they take off a tax from the farmers of the West. But, while we remember the farmers, we must not forget the miners. They too, at least the copper miners, have just received a heavy blow, their last rag of protection has been taken from them. A good railway would be the best compensation. Economy is the order of the day; without it, the greatest go to the dogs, and cotton-spinners buy their estates. The value of land depends on the cost of getting the produce to market. Compare the working of the national gauge in the agricultural districts bordering the Norfolk and Eastern Counties lines, in the mining districts of the North, and Mr. Brunel's gauge in Devonshire, Somersetshire and Gloucestershire, and you will soon see that the one is an admirable commercial machine, capable of performing all work, from the business of a higgler's cart to moving the cargo of a fleet; the other, a costly luxury for express passengers, quite above the business of waiting on burly farmers, greasy butchers and grimy miners. The broad gauge exists by sufferance, only in deference to the wishes of its shareholders. If the West of England is to flourish and progress, it must be united with the national railway system. Whenever parties are willing to do this work, it is the duty of the Government and the Legislature to aid them. The Great Western party have no right to complain of the nuisance of a break of gauge which they themselves have created. If they had conformed to uniformity, the district would have been their own, from Bristol to Land's End, without a rival. They cannot claim the benefit of a compromise. The Gauge Act made none, nor did the gauge resolutions; they merely formed a treaty on the principle of "hold what you have." But the Great Western have broken through even the thin barriers of the Gauge Act, and now it can claim no shield against rivalry. The very existence of the Cornish miners is at stake. If the decision of the Railway Commissioners on the Taw Vale be upheld, that line will remain a mere barricade against the progress of commerce and civilization. On this bill of 33 miles, the question is to be decided whether the finest districts in the West shall for ever remain cursed by a cumbrous, isolating system, in which many pay a daily tax to feed the luxuries of the impatient few; in which every peasant, and every pound of meat, and every ton of coals and ore, pays for the dear, exclusive express .- An Appeal on behalf of the Farmers, &c. of Devon, &c.

JAMES MEADOWS, Secretary. May 29, 1848. N.B. CALL LETTERS will be duly Posted to the Address of the Shareholder, in proper time to enable him to pay the amount.

#### LANCASHIRE AND BAILWAY. YORKSHIRE

The Directors of the Lancashire and Yorkshire Railway Company having passed Resolutions making CALLS on the Proprietors of the 100. Shares of 45, per Share, and on the 23. Shares of 42, per Share (Manchester and Leeds Stock proper), held by them respectively, such Calls to be paid on the 18th of June 1843, the Proprietors of such Shares are hereby requested to pay the said Calls on the day appointed to one of the under-mentioned Bankers; and in default thereof they will be charged with interest at the rate of 5 per cent. per annum from the above date until the said Calls be actually paid:—

Manufacture—Messrs Cauliffes, Procker & Co.

ully paid:—
Manchester—Messrs. Cunliffes, Brookes & Co.
London—Messrs. Leyland & Bullins.
Liverpool—Messrs. Leyland & Bullins.
Leeds—Messrs. Wm. Williams, Brown & Co.
Wakefeld—Messrs. Leatham, Tew & Co.
Bradford—Messrs. II. A. & W. M. Harris & Co.
By Order.

JOHN SPEIR HERON, Secretary.

N.B. No Proprietor is entitled to transfer his Shares until the said Calls be paid.

Manchester, May 19, 1848.

## SLIGO AND SHANNON RAILWAY COMPANY.

CALL OF '£2 PER SHARE.

CALL OF 129 PER SHARE.

NOTICE IS HEREBY GIVEN, that the Board of Directors of this Company have, in accordance with the provisions of the Act of Parliament, passed a Resolution calling on the several Proprietors of Shares in this Company to pay, on or before the 12th of July next, a CALL of 32 upon each and every Share held by them respectively.

Call Circulars will be forwarded to the Proprietors, who are requested to pay the said Call to the account of this Company, with the

London Joint-Stock Bank; or the

Provincial Bank of Ireland, and its Branches.

W. R. ORMSBY GORE Chairman.

W. R. ORMSBY GORE, Chairman, By order, A. GOLE, Secretary.

Winchester House, London, June 1, 1848.

## GREAT SOUTHERN AND WESTERN RAILWAY (IRELAND).

RAILWAY (IRELAND).

ELEVENTH CALL—£2 10e. PER SHARE, making £48 10e. called up on each Share.

NOTICE IS HEREBY GIVEN, that in pursuance of a Resolution passed by the Board of Directors, the Proprietors of Shares in the Consolidated Capital of this Company are hereby required to PAY a CALL of 22 10e, per Share, on or before Monday, the 10th day of July next, to any of the under-mentioned Bankers.

According to the provisions of the Company's Acts of Incorporation, interest at the rate of 4 per cent, per annuum appearance of the company in the provisions of the Company's Acts of Incorporation, interest at the rate of 4 per cent, per annuum appearance of the company in the provisions of the Company's Acts of Incorporation, interest at the rate of 5 per cent, per annuum, will be charged thereon; and "no interest a per cent, per annuum, will be charged thereon; and "no interest shall accure to the Proprietor of any Share upon which any Call shall be in arrear in respect of such Share, or any other Share to be holden by the same Proprietor, during the period while such Call shall remain unpaid."

By order of the Board,

WILLIAM TAYLOB, Secretary.

WILLIAM TAYLOR, Secretary.

3. College-green, Dublin, June 8, 1848.

Bank of Ireland, Dublin.
Messrs. Glyn & Co., Lombard-street, London.
Manchester and Salford Bank, Manchester.
Bank of Liverpool.
Borough Bank, Liverpool.

All Shareholders wishing to pay money in anticipation of Calls will be allowed interest on the same, at the rate of 5 per cent.

The above Call had, previously to the 15th of March last, been advertised as payable on the 16th of June, but was subsequently postponed to the 16th of July next.

WILLIAM TAYLOR, Secretary.

## GREAT LUXEMBOURG COMPANY. FORFEITURE OF SHARES.

PORFEITURE OF SHARES.

NOTICE IS HEREBY GIVEN, that all shares on which the Call of Il, per Share, due the 26th of January last, shall remain unpaid after the 28th inst., will become absolutely FORFITED.

For the convenience of parties paying the Call, the interest to the 38th of June, being 6e. 6d, per Share, will be deducted from the required payment, on presentation of the Certificates at the Offices of the Company in Brussels or L-wild Board.

By order of the Board.

1. Boyal Exchange-huildings.

1, Royal Exchange-buildings, London, June 8, 1848.

# DEMERARA RAILWAY COMPANY.

DEMERARA RAILWAY COMPANY.

CALL of £3 10s. per Share, making £12 10s. per

Share, called up.

NOTICE 18 HEREBY GIVEN, that the Directors of the above Company have this day made a CALL of £4, 10s. per Share on each and every Share in this undertaking, which the Proprietors are hereby required to pay on or before the 30th day of the present month of June, to Messrs. Prescott, Grott & Co., 62, Threadneedle-street. MICHAEL M'CHLERY, Chairman.

12, Old Jewry Chambers, London,
June 7, 1888.

Norr.—Interest at 41-11 llowed.

June 7, 1848.

Norr.—Interest at the rate of 5 per cent, per annum will be allowed on paid-up Calls from the date of payment, and interest at the same rate will be charged on all Calls in arrear; and no interest shall accure to the Proprietor of any Share upon which any Call shall be in arrear, in respect of such Share, or any Share to be holden by the same Proprietor during the period for which such Call shall remain unpaid.

PORT OF GREAT GRIESET.

## NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby linve been reduced to 10d. per register tonnige.

It is expected that the New Docks will be ready to receive casels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accossible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete all the manufacturing districts, and to all parts of the United Kingdom.

## EASTERN UNION RAILWAY COMPANY.

At a GENERAL MEETING of the Shareholders, held at Radley's Hotel, Bridge-street, Blackfriars, London, on Friday, the 2nd day of June 1848,—

JOHN CHEVALLIER COBBOLD, Esq. M.P. in the chair,-

The Advertisement convening the Meeting and the Report laving been read, the following Resolutions were passed:—

That the Corporate Seal of the Company be affixed to the Register of Shareholders now produced.—The Seal was accordingly affixed thereto in the presence of the Meeting.

That the Report be received and entered on the Minutes Ann and adopted, with the exception of such portion as may be considered to imply the concurrence of this Meeting in the Leasing of the Stour Valley Line.

That the number of the Directors of this Company be and the same is hereby reduced to the number of eighteen.

the same is hereby reduced to the number of eighteen.

That George Alexander, Esq.; William Beresford, Esq., M.P.; Samuel Bignold, Esq.; George Pratt Barlow, Esq.; Frederick Pratt Barlow, Esq.; John Cobbold, Esq., Edward Stillingfleet Cayley, Esq., M.P.; William Crake, Esq.; John Footman, Esq.; Esq., M.P.; William Crake, Esq.; John Footman, Esq.; John George Hart, Esq.; George Josselyn, Esq.; Edward Willett, Esq.; John Wright, Esq.; William Stitt Wilson, Esq.; Sohert Williamson, Esq.; be and they are hereby elected Directors of this Company.

That Josephiah Head and John Field, jun. Esors, he and

That Jeremiah Head and John Field, jun., Esqrs. be and they are hereby elected Auditors of this Company.

That the remuneration of the Auditors be 401. per annum. That the remuneration of the Secretary be 5001. per

annum.

That the Directors of this Company be, and they are hereby authorized, to borrow on mortgage or bond, or partly on mortgage and partly on bond, and at such rate of interest not exceeding the rate of 6 per cent. per annum, as they may think fit, any sum or sums of money not exceeding in amount, together with any other sums of money which may be now due or owing from this Company, either on mortgage or bond, one-third part of the capital of this Company.

Company.

That it is expedient to postpone the payment of the interest authorized by the Company's Act to be made up out of capital for the year 1848, until after the opening of the line to Norwich, giving credit for the same, and for interest thereon, in the meantime in the Company's books; or, at the Shareholders' option, placing it to the credit of alls: thereby avoiding the necessity of arent year, the large sum necessary iterest, and leaving the whole of the many applicable to the discharge of its letion of the line, and to the placing

it at the earliest possible period in a position to make out of its earnings a legitimate return upon the capital embarked.

JOHN CHEVALLIER COBBOLD, Chairman

That the thanks of the Shareholders be presented to the Chairman, for his impartial and courteous conduct in the chair.

By order,

JAMES F. SAUNDERS, Secretary.

DARLEY'S SCIENTIFIC LIBRARY for the Use of Schools, Private Students, Artists and Mechanics.

Mechanics.

It is the purpose of this Work to furnish a Series of Elementary Treatis s on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, those little works will be found particularly suited. The principles of the various sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

1. A System of Ponular Geometry, containing

are reduced not only to their simplest but to their shortest form.

1. A System of Popular Geometry; containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in Its leading Truths and general Principles. By George Darley, A.B. Fifth Edition mow ready). 4-6.0. cloth.

2. Companion to the Popular Geometry; in which the Elements of Abstract Science are familiarized, illustrated and rendered practically useful to the various purposes of Life, with numerous Cuts. Second Edition. 4-6.0. cloth.

numerous cuta. Second Enton. 3, 62, cott.

3. A System of Popular Algebra, with a Section on Propositions and Progressions. Third Edition. 4, 6d.

4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Second Edition. 34, 6d. cloth. Taylor & Walton, Booksellers and Publishers to University College, 38, Upper Gower-street. SATURDAY, JUNE 10.

WHOSE IS THE MERIT OF INVENTION OF THE CONWAY AND MENAI TUBULAR BRIDGES?

To the Editor of the Railway Chronicle.

Sir,-As your journal is a recognized organ of communication for matters relating to the construction of railway works, and for important scientific inventions connected with them, I have to beg you will do me the favour of admitting a few remarks tending to settle an important point in the history of the practical application of science to engineering construction.

The Conway and Britannia bridges are probably the most surprising achievements of modern engineering skill. Unquestioned suc-cess has just crowned the work; what everybody doubted and some ridiculed is now un fait accompli-the impossibility of yesterday is the commonplace of to-day; and I am sorry to see, from a correspondence that has just taken place in the public papers, that rival claimants to the invention are already in the field. The British Association, Mr. Eaton Hodgkinson, Mr. William Fairbairn, have each their claims advocated by special partizans, who claim for each more than they would probably claim for themselves. A large party, on the other hand, believe Mr. Robert Stephenson to have the original and exclusive merit both of the intellectual invention and of the practical execution of the work. Between these partizans it appears not unlikely that the dispute may wax so warm that the truth will evaporate in the heat of the discussion.

I am therefore most anxious, by a simple statement of what I believe to be a sound view of the case, to prevent any further angry or one-sided discussion of it. I think I may presume to say that I am acquainted with and honoured by the friendship, in an equal degree, of all the parties most immediately concerned; and I can trust myself to say that I feel equally anxious that perfect justice should be done to their several claims. have had the privilege, since the very commencement, of knowing privately the state of the progress of this great undertaking; and I have also the advantage of being perfectly disconnected from all of them by any ties other than those of personal friendship.

The following is what I believe to be a simple statement of the truth upon this subject.

At an early period in the history of the Holyhead Railway, Mr. Robert Stephenson, the engineer, found himself placed in the great difficulty of having to cross the Menai Straits; and being interdicted from interfering with the navigation by the use of an ordinary arch descending sufficiently low to carry so great a span in the usual form of a bridge, he was obliged to resort to some new expedient of railway resource. A suspension bridge, like that already erected by Telford, was the obvious expedient-an expedient, however, which the experience of the dangerous vibrations of that bridge must necessarily have led a wise engineer immediately to reject. The undulations of a suspension bridge are fatal to its value in railway service; and something as flat as a suspension bridge-as high and level below, but as rigid and inflexible as to be proof against the storms of the arm of the sea and the concussions of a railway train and locomotive engines, remained to be invented. This difficult problem Mr. Stephenson was the first to solve. found that to make the platform of such a bridge sufficiently strong, its parapets on both sides must be formed of a rigid material, and of such a depth as to rise high above the top of a loco-

strengthened at the top, and tied together by what would form, as it were, a roof to the roadway: thus then the roadway and the roof formed the bottom and top of a long tunnel, of which the parapets, raised to a great height, had become the sides. Thus was the first idea of the bridge evolved. The Conway Bridge, as now executed, is precisely such a tube, and the conception and its evolution are exclusively Mr. Stephenson's.

It is quite plain that if Mr. Stephenson had stopped at this point, and handed it entirely over to a third party, with instructions to pre-pare the requisite detailed plans and drawings, and erect the bridge, he would still have been recognized as the original inventor, and would have been considered responsible, both to the public and the railway company, for the failure of the scheme, if it had failed. But he did not thus abandon his invention to the execution of his assistants. This was not a case in which the thing could have a trial, so as in case of failure to be improved upon. The public safety, and the sacrifice of large sums of money, rendered it imperative that in an undertaking seemingly all but impossible, and pretty generally declared to be impracticable, success should be rendered certain beforehand.

The idea having been obtained, the mode of proceeding to render the structure secure and success certain was as follows :- The best shape of tube remained to be determined, the best mode of constructing the details decided, and the requisite quantity and arrangement of materials ascertained, so as to get the greatest strength with the least weight and cost. These were cardinal points which it was necessary to determine with practical certainty, before proceeding with a plan which had the aspect of an impossibility, and which defective arrangements would easily have rendered really impossible.

Here it was that Mr. Stephenson began to desire assistance, and it is instructive to watch the manner in which he obtained it. On consulting the scientific authorities on the strength of materials, he found that the experiments made by Mr. Fairbairn and Mr. Hodgkinson, chiefly at the instance of the British Association, and, to some extent, at his expense, were the best authority to which he could then refer for information on the strength of iron. Mr. Fairbairn had built iron ships, and had made experiments on different modes of rivetting; he was well acquainted with the process of uniting plates of iron in large masses. For an assistant in the execution of such work Mr. FAIRBAIRN was excellently fitted. Mr. Fairbairn was, probably the fittest man who could have been found, both to conduct the preparatory experiments, and to superintend the execution of the Certain preliminary experiments on model tubes were accordingly ordered by Mr. Stephenson, and Mr. Fairbairn was charged with their conduct, with a view of determining chiefly the best form and arrangement of materials for obtaining tubes of greatest strength.

Thus, then, Mr. Stephenson had wisely determined to try the tube in little before trying it in large, and he obtained from his railway company authority to employ whom he pleased to make these preliminary trials at the company's cost. But it was not enough to make experiments merely, and here another auxiliary was called in.

Mr. EATON HODGKINSON is a mathematician of considerable distinction, now president of the Philosophical Institution of Manchester. He was well known as having investigated the subject of the strength of cast iron experimentally, along with Mr. Fairbairn, and to have written valuable motive engine. He next found that for lateral reports for the British Association. He was and more wise. He seems to have said—"I

strength it was necessary that they should be | still more distinguished for having determined the laws which govern the strength of materials in various forms, and his rules for the form and strength of cast-iron beams are a standard of practice on that subject. His scientific acquirements Mr. Stephenson also laid under contribution in the following manner.

It is not enough, in a great undertaking of this kind to make experiments in little, and then blindly, or by a rule of three proposition, to make a large apparatus, of similar dimensions but greater size, and then to expect a precisely proportional result. Models in little do not give identical results with the structures they represent. It is necessary, before even a very large model can be useful, to determine the law which connects the increase of size with the change of strength. This requires to be done in a complex case, first by a series of accurately devised experiments on a great variety of scale, and then by the elimination of the law which governs the variations of strength and dimensions. This law was successfully eliminated and given in an elegant and simple form by Mr. Hodgkinson. It appears therefore that the following three incidents were preliminary to the construction of the bridge :-

1. Mr. Stephenson struck out and deliberately adopted the idea of constructing across the Menai Straits a tubular bridge, of wrought iron, to carry the railway trains along the inside.

2. That he directed Mr. Fairbairn to conduct a series of experiments, tending to determine the best form and arrangement of materials for giving greatest strength and lightness to a wrought-iron tube of large dimensions.

3. That he requested Mr. Hodgkinson to

conduct a series of experimental investigations, which he did, separately from Mr. Fairbairn's series, and designed mainly to elicit the law which connects the strength with the different dimensions of the tube.

Now it is quite plain there is here no room for interference of claims as to merit, when fairly considered. It is most unwise for Mr. Fairbairn's friends to claim for him any whit of the merit of invention in the tubular bridgenor will he himself, I am persuaded, ever do so -on the contrary, I believe he would be the first man to feel an honest indignation at any such attempt. Mr. Fairbairn has the great merit, as a practical maker of structures of iron, and an experienced maker of experiments of strength of materials, of having acted as an assistant under the direction of Mr. Stephenson; and I have often heard Mr. Stephenson speak of his services as very valuable and useful. Mr. Fairbairn, I have no doubt, considers it one of the fortunate events of his life to have been called in to assist in this respectable capacity, in carrying out in practice one of the most brilliant inventions of our age. Mr. Hodgkinson, on the other hand, feels the just pride of having been called in by so eminent a man as Mr. Stephenson, to determine for him the mathematical law which should lead him, with greatest certainty and precision, to ascertain the precise dimensions that would give adequate strength with greatest economy.

It would be too much, however, to suppose that Mr. Stephenson's invention ended with the bare idea. Mr. Stephenson is himself no mean geometer, and is familiar with scientific inquiry to a degree not very common even in a scientific profession. He could have made the experiments himself—he could have deduced a law from them himself. A man avaricious of fame might have done this. He might have chosen that no man should have a share, how slight soever, in the matter but his own pupils and salaried assistants. But he was more liberal

have enough merit, and I will give everybody else as much as they can earn, and assist them in earning it." He chose not to do all the details himself-it is not usual for engineers in chief to do the details of their work; nevertheless, Mr. Stephenson did, jointly with Mr. Fairbairn and Mr. Hodgkinson, contrive and consult upon all the experiments that were made. He directed even these, and was cognizant of everything which was done; and nothing was done till it first had his sanction.

Mr. Stephenson then liberally, honestly and wisely employed the best men. It is to Mr. Fairbairn and to Mr. Hodgkinson's great honour that Mr. Stephenson considered them the best men, and that he has found them worthy of the opinion he formed. This I am confident is precisely what themselves feel in the matter.

But I shall now put the question I have frequently heard put: What has the British Association to do in this matter? It has thus much, and no more or less. The British Association chiefly, if not entirely, has been the means of making known favourably to the public the names and labours in this department of science of Mr. Fairbairn and Mr. Hodgkinson. That section of the Association in which I have long had the honour to hold an active station, did at a very early period request these gentlemen to carry out a long series of investigations on the strength of materials, which were much wanted for the use of practical engineers. The funds of the Association were placed at their service for the inquiry-they used them admirably; and these experiments, as published in the Reports, are the best practical authority of the present day on that subject. The British Association has had the merit, therefore, of training, if I may so say, for Mr. Stephenson two of the assistants whom he has found most valuable in achieving his Herculean task, and without whom it is fair to say that he could neither so easily nor so quickly or so well have accomplished his task. And although it would be wrong to say that it would have been impossible to make it without them, it is quite plain that he would have done it less easily, less certainly, and less expeditiously, without them, and ergo, without the British Association, which had in a great measure given them that training which fitted them so admirably for this use. It is another striking example of the great practical use to which, at some time or other, scientific investigations, even of the most recondite nature, may come ultimately to be applied. The construction of the tube is only the application and extension of the laws of strength formerly developed in part by the transactions of the British Association.

In conclusion, permit me to say, that it has always been considered the mark of true greatness of mind to select the most able men for counsellors and assistants. Genius is the touchstone of talent; and it will rather add to the reputation of Mr. Stephenson, than detract from it, that he not only conceived and matured in his own mind a grand and original conception, but that he followed up the conception by bringing together all the best means, intellectual and physical, for insuring the highest degree of certainty and success for its execution. He employed the best mathematical authorities for the law of construction—the best mechanical constructor for the details of the tube-an eminent architect for the decoration-a most judicious resident engineer for its execution and elevation. Mr. CLARKE—and the best contractors he could find for the actual putting together of the tubes. It is to their everlasting honour to have been selected for such a service, and it will be their highest pride to have proved that they hence of means for overcoming difficulties and anomalies conversazione. The previous meetings have hitherto

demand the confidence reposed in them. It is as they were developed by the experiments,matter of triumph to our profession as civil engineers that we possess as a member of our society the inventor who conceived and the engineer who executed so great and original a work; and it may well be matter of pride to the British Association that in this, as in some other cases, they have prepared the instruments and ascertained the laws of nature, by availing themselves of which the practical men of England might overcome those great difficulties which Nature, our kind mother, and Necessity, our stern teacher, had, for wise ends, thrown in their way.

As a personal friend of Mr. Stephenson, Mr. Fairbairn and Mr. Hodgkinson, as an officer of the section of the British Association to which they all belong, as a member of the Institution of Civil Engineers, to which this subject has a most intimate relation, I have felt bound to make this contribution to the history of those great monuments of engineering genius and scientific knowledge and practical skill; I have done it at once, to the best of my ability, for the interests of our profession, for the promotion of harmony, and for the establishment of truth.

J. SCOTT RUSSELL.

[The following letter in defence of Mr. Fairbairn is a part the correspondence alluded to in the foregoing com nication.]

I have read the speech of Mr. R. Stephenson, at the recent dinner at Conway, with much regret, as the statements which it contains are not only in many respects incorrect, but the degree of credit which he gives to some of those who have aided him in the great undertaking, is far from being compatible with the services they have rendered. From my intimate connexion with Mr. Fairbairn,—from accidental circumstances which threw in my way the means of tracing the earliest history of the design, and from the great and constant interest I have felt in the gradual development of the idea since it was first conceived,—I am enabled to supply some important particulars. Mr. Stephenson's remarks imply that he was not indebted for any assistance to Mr. Fairbairn until "after the Act was obtained, and it became necessary to construct the works." The Act received the royal assent on the 30th of June 1845. Mr. Stephenson gave the evidence before the committee of the House of Commons, to which he alludes, on the 5th of May. The day on which Mr. Fairbairn was first consulted was the 14th of the previous April. On the following day, Mr. Fairbairn having sketched out his own notion of what the structure should be, and what experiments should be made, received Mr. Stephenson's permission to expend 5001., or more, in experimental researches. They were immediately commenced, and were reported from time to time to Mr. Stephenson. These preliminary experiments were completed soon after the Act was obtained, and Mr. Hodgkinson was called in by Mr. Fairbairn, in the month of August, to render his mathematical assistance in deducing correct formulæ of calculation. Subsequent and still larger experiments were then instituted, and in the month of May following (1846), Mr. Fairbairn was appointed by the directors of the railway " to superintend the construction and erection of the Conway and Britannia bridges, in conjunction with Mr. Stephenson," with full and ample powers to carry on his duties in an independent manner. A comparison of the foregoing facts and dates will show the inaccuracy of some of the statements in Mr. Stephenson's speech. Since reading the report of the dinner, I have, by the kind permission of Mr. Fairbairn, looked through the whole of the correspondence which has taken place upon the bridge. A more beautiful series of letters on a scientific subject, showing the workings of Mr. Fairbairn's mind, and the gradual development of the whole scheme, cannot be conceived. Every thought, every step, by which the mighty undertaking was matured, is there exhibited. The almost immediate appreciation of the peculiar advantages and disadvantages of the properties of the material they had to deal with,—the suggestion

relative proportions of the various parts,-the mode of rivetting, in which a most important improvement was introduced,-the manner of floating, and the mode of raising,-are all there, spontaneously suggested and matured by Mr. Fairbairn. Mr. Stephenson's letters consist of little more than approvals of the various and numerous suggestions which were transmitted to him in rapid succession. It is to be regretted that Mr. Stephenson should dim the glory which undoubtedly belongs to him, by acknowledging the services of others in a manner unworthy of their assistance. The original conception,-the confidence with which he relied on the sagacious suggestions and experience of those he had consulted, and the courage to execute the work, confer upon him the highest honour; and it is no detraction from his merit, that not having the experience of others in the particular walk of science to which the construction of the bridge belonged, nor the time to devote himself to the elucidation of all the important points involved, he had the manliness and candour to recommend to the directors the appointment of a gentleman whom he considered capable of supplying these deficiencies. I should be sorry to attribute to Mr. Stephenson any intention to detract from the merits of others, or any desire to place them unfairly before the public; his character stands too high, and his reputation is too fairly earned, to allow me to believe that this has arisen from anything but inadvertence. It is, however, impossible not to feel that the relative position of himself and Mr. Fairbairn would, judging from his speech, be misinterpreted by the world. I cannot better illustrate their relation in the construction of the tubular bridges, than by describing it as that of a surgeon calling in a physician, or that of an attorney seeking the legal opinion and advice of a barrister. The effect of Mr. Stephenson's speech is to lower the physician to the standing of the surgeon's assistant, and to bring down the learned counsel to the rank of an attorney's clerk. In making these observations, my object has been to secure tribute to those to whom tribute is due, without encroaching on the rights of others. The successful accomplishment of the great design of the tubular bridge, is probably the boldest achievement of modern science, and the most beautiful exhibition of the combination of theoretical calculation with practical ingenuity. It will be referred to in succeeding ages as one of the wonders of this great mechanical period, and copied in every variety of form in the future constructions of the engineer. The glory of such a work is too great to be unfairly divided. JOHN F. BATEMAN. Manchester, May 24.

## Railway Literature.

An Abstract of the Special Acts authorizing the Construction of Railways, 10 & 11 Vict.; with Introduction and Index.

Mr. Bigg, of Parliament-street, has issued his usual abstract of the Special Railway Acts of 1847. The summary of the objects of the Acts is thus set forth in the introduction :-

"The Special Railway Acts passed in 1847 are 196 in number, and, so far as they admit of classification, may be arranged as follows:-19 Acts authorize the may be arranged as follows:—19 Acts authorize the incorporation of companies, with power to construct lines of railway; of this number 11 Acts relate to companies which are so connected with companies previously incorporated, that the lines authorized by their Acts may be considered more as extensions of existing railways than as new lines; the companies incorporated by the remaining 8 Acts may be considered. incorporated by the remaining 8 Acts may be considered as independent of existing companies, and the lines authorized by their Acts as new railways. 99 Acts authorize the construction of branches or extensions of existing railways by companies previously incorporated; and 78 Acts are for the raising of additional capital, the amalgamation of companies, or otherwise amending the provisions of former Acts, without authorizing the construction of any new railway or branch.

## Proceedings of Bocieties.

INSTITUTION OF CIVIL ENGINEERS .- May 30 .-President's Conversazione.—Mr. FIELD, the President, as we briefly announced last week, held his annual

Digitized by **GOO** 

been held at the residences of the presidents, but the numbers of the members increased so much that no ordinary house could receive them, with the guests invited to meet them; in arranging, therefore, the recent alteration in the house of the Institution, special provision was made for these meetings, and we must give our unqualified approbation of Mr. T. H. Wyatt's design for those arrangements and of the man-ner in which they were applied, for when the extensive suite of apartments was lighted up and decorated with works of art and mechanical models, and the staircases and corridors lined with choice plants, the coup d'œil was charming; the refreshment rooms are extensive, and the cheer was on the most liberal scale, as might have been expected from the wellknown kindness and hospitality of the President,who was well supported in the reception of his guests by the Vice-Presidents and Council, and Mr. Manby, the secretary, upon whom devolved the duties of the selection of the models and works of art, and all the arrangements of the evening. From so extensive a collection our limits will only permit our noticing a few of the principal objects—and even those cursorily. Upon the walls were the three fine portraits, by Lucas, of Mr. George Stephenson, Mr. Robert Stephenson, M.P., and Mr. Bidder; they were contributed by Messrs. Graves, for whom they are about to be engraved. Messrs. Colnaghi's collection of the copies of the Correggio frescoes, by Toschi, occupied a very deservedly prominent position; and the drawings by Nash, Lance, Scanlan, Taylor and the drawings by Nash, Lance, Scanlan, Taylor and others, with portfolios of sketches by Oliver, Hildebrand, Digby, Wyatt and others excited general attention. A Trophy, carved in beech, by Taylor, Williams & Jordan's mechanical process of carving, was seen to great advantage. The Electric Telegraph Company—Mr. Bain, Mr. Brett and Mr. Reid—contributed instruments exhibiting their various systems of telegraphic computational placetric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectric alectri omtributed instruments exhibiting their various systems of telegraphic communication, electric clocks and electric printing. Mr. Rand's fly press, for raising at one blow the collapsible tubes or capsules now so generally used for containing artists' colour, Sc. was incessantly worked throughout the evening. Mr. Whitworth's beautiful machine for knitting the factory of Mesra. Kansome & Mr. Fowler's respect to the factory of Mesra. Kansome & Mr. Fowler's removed throughout the factory of Mesra. Kansome & Mr. Fowler's exhaust floating landing stage, with its long approach over the mud banks, all to be supported upon Mitchell's excellent true, the Humber Ferry. Mr. Brunch search and the Humber Ferry. Mr. Brunch for the Manchester, Sheffield and Lincolnshire Railway. Messrs. Taylor, Williams & Jordan's model of their machine for carving by machinery ornamental bijects, figures or groups, such as we have previously moticed. This machine, by means of a tracer which addicate and elaborate work with great is excellent true, the stem of the machine for carving by machinery ornamental bijects, figures or groups, such as we have previously moticed. This machine, by means of a tracer which and serve-propellers as Mess uch as large collection of models of paddles-wheels and serve-propellers. Mess Clarke & Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospheric pile-driving machine, and Mr. Varley's atmospher systems of telegraphic communication, electric clocks

even when partially torn by accident. The expedition in search of Sir John Franklin has been furnished with boats of this description, in order that they may be easily transported across the ice, and may bear injuries which would destroy a wooden boat. Life buoys, swimming belts, &c. were with the boat, as also a model showing the system of trans-forming an ordinary wherry into a life-boat by the use of this material, as in the case of the wherry recently built for his Royal Highness the Prince of Wales. The Gutta Percha Company sent an excellent selec-tion of their products from the rough material throughout all its stages of manufacture to the finished articles. Mr. Chubb's safety chest and locks and keys; Mr. De la Fon's ingenious locks and bolts; Mr. Deprie's improved dry gas-meter; the new Aneroid barometers; Mr. Shepherd's models of self-acting gates, with numerous other models and specimens, all interesting, and inviting longer examination, but which space will not allow us to notice, so completely occupied the attention of the members and visitors, that it was not until an early hour in the morning that all had departed, after partaking of the presi-dent's hospitable reception. The same reason prevents the enumeration of the names of the visitors, for among upwards of a thousand guests it was too diffi-cult a task to ascertain who was there. We can only say that we have seldom seen more unanimity in the determination to be happy and make others so, and we trust that having so prosperously commenced the conversazioni at the house of the Institution, they may continue to be held there, and may be of great benefit not only to this useful Institution but to others, in inducing them to follow so good an example.

## LONDONDERRY AND COLERAINE.

Report of the Deputation appointed to inspect the Works

embankment, which forms the western side of the middle enclosure. This bank has proceeded to its extreme length into the Lough, and been turned for about half a mile to meet the Roe bank, being fully protected as far as made; and a portion of it has been carried to its highest point. Having had our attention specially directed to the principle of construction and sufficiency of this embankment, we made careful examination and inquiry upon this point, and are decidadly of only into the it is amply sufficient to resist made careful examination and inquiry upon tins point, and are decidedly of opinion that it is amply sufficient to resist the highest and roughest tides. In this view we are borne out by the opinion of Mr. Hassard, the engineer, Mr. Marshall, and persons in the locality acquainted with the action of the tides in Lough Foyle. Indeed, looking at the massive character of this embankment, contrasted with the comthe highest and roughest times. In this view we are some out by the opinion of Mr. Hasarad, the engineer, Mr. Marshall, and persons in the locality acquainted with the action of the tides in Lough Foyle. Indeed, looking at the massive character of this embankment, contrasted with the comparatively feeble barrier forming the sufficient enclosure of the present reclaimed land, it may be a question whether a saving in expense might not have been safely accomplished by the formation of an embankment of smaller dimensions. Adjacent to the Longfield Embankment, 1,650 acres of land have been reclaimed; and this enclosure, although made some time subsequent to that of Mr. Robertson, and as yet very imperfectly drained, gives confirmatory proof of the value of the land. From Longfield we went over the works upon the western division. These are prosecuted to the extent of three quarters of a mile, but have been for some time suspended, and we think judiciously so, as we consider the central enclosure the grand point towards which the funds and energies of the company should be directed. The portions of these works completed are however of service in turning the current from the centre enclosure, and have also been found to improve the navigation of the Foyle. Hetween the western reclamation and the city of Londonderry, we find that considerable progress has been made with the railway; and from the present position of that part of the undertaking, the line to Newtonn-Limavady ceuld be opened speedily and without any very great outlay. Did the funds of the company permit of this portion of the line being completed, we should consider it desirable to have it opened as early as possible; but under existing circumstances, we consider even this object should be secondary to the completion of the central reclamation. Having thus described our progress over the works, we beg to state our opinions upon the special questions submitted for our consideration. I. We are thoroughly satisfied that the plan of the prosense more than suf

As arranged by the meeting of March 21, I met the deputation upon the works, on the inspection alluded to in the above Report, and I have much pleasure in finding that their views so perfectly accord with my own.

J. G. Frith, Chairman.

## BELFAST AND BALLYMENA

Engineer's Report for the Meeting, May 22 (p. 376).

In my Report to the shareholders, at the half-yearly meeting in November last, I stated that they might with confidence rely that the line would be ready for opening early in the then ensuing year; and I have now the satisfaction of stating that the whole of the line and its branches faction of stating that the whole of the line and its branches were opened for passenger traffic on the 11th of last month. Although I had anticipated that we should have been able to have opened a month or two sconer, yet I hope that the extremely unfavourable season for carrying on work, which we have experienced during the past winter, will be a sufficient excuse for the trifling delay which has occurred; nor do I indeed think that the interests of the railway have at all suffered thereby, as it has been the means of enabling the Board to open the line in a more complete and satisfactory manner. At all events, I trust the proprietors, generally, must be satisfed with the almost unprecedented vigour and expedition with which the works on this line cabout 39 miles, with its branches) have been carried on; and I think it must be satisfactory to them to see that the opening has been effected within so short a period—as very little more than two years have expired since the date of the contract, and less than that time since the works may

be said to have been actively commenced. I have also much be said to have been actively commenced. I make also much pleasure in stating that the works have been well executed, and that everything is now in good working order. The arrangements necessary for carrying on goods traffic are now being rapidly proceeded with, and will be completed in the course of a very few weeks.

Charles Lanyon. Belfast, May 15.

BAILWAYS AND AGRICULTURE IN LINCOLNSHIRE.

[Continued from p. 380.]

The time of the Royal Agricultural Society would be usefully employed in investigating the subject of railway communication as applied to agriculture, with of making this great locomotive power more generally useful. collection of actual transactions, and calculations based on those transactions, effected by the influence of railways, either beneficially or adversely. I say adversely, because, in many instances, the high farming districts, while enjoying the benefit, have also suffered from railways. In Norfolk, for instance, they save in sending meat to market, but they complain that the lean stock which formerly came to them every year is now interrupted on the roadsrailways enabling the best beasts to be culled from the herd, and sent by twos and threes all over the kingdom, whereas formerly the droves were pushed steadily on to the accustomed market in Norfolk. At Aylsham, in that county, I noticed the other day a number of very fine black and white foreign beasts (Dutchmen), thirty out of sixty in one feeding yard : they looked well and handled well, but the farmer told me they fattened so slowly they would never pay him. I asked why he bought them. "Because I could not make up my number without. The cattle that used to come to us are now sent on to the neighbourhood of Liverpool and other great towns." quite certain that within a very large circle a railway has the power of attracting traffic from old-accus tomed road channels—of sending it by a circuitous because a swifter route—and of draining trade and manufactures from all districts beyond the reach of railway accommodation. The traffic from Exeter and the West formerly flowed—a broad fertilizing tide—in a direct route through Salisbury and the intermediate towns. The Great Western, although a great way round, has, by a superior means of conveyance, ruined the towns lying on the direct route, and drawn the traffic towards it from all sides. The extraordinary unanimity with which the local interests supported the South-Western's schemes for penetrating the districts traversed by the old coach road, shows the injury which they considered a far-off railway had inflicted on them. From these counties large quantities of fat stock, both sheep and cattle, are forwarded to the London markets, and large quantities of half-fat stock to the light turnip lands of the eastern coast. While farmers along the line of the Great Western are within a calculable distance of markets, those along the south-western coast seem removed by days and nights from their former customers. The case of the forest district of Notting-hamshire and of North Lincolnshire is of the same class. These districts had a profitable trade with the clothing population of Yorkshire and the town of Manchester, until the easy conveyance between Manchester, Sheffield, York, Hull and other large towns diverted their best customers to markets within railway reach. Worksop and Retford are not of so much consequence of themselves as the centre of a circle of high farming. These towns and their dependencies found themselves ruined by slow poison; the mult trade, the flour trade departed; the farmers roundall dependent on their returns upon importations of bones, guano, rape seed, oilcake and other tillagesfound themselves placed out of the pale of equal competition. There was evidence before the committee on the Manchester, Sheffield and Lincolnshire Railways that Worksop and East Retford had both lost a very considerable trade in barley for malting and in flour, which they had supplied to Manchester and other manufacturing towns before the Midland Railways had raised up competitors, and given the forest districts of Nottinghamshire the "go-by," in the expressive phrase of one of the witnesses. Now, this evidence of loss sustained for want of railway communication, is more precise than any we can gather as to the advantages gained by it. We know vaguely that great advantages have been gained, but to what pecuniary value we have yet to ascertain. Mr. Smith, of Deanston,-whose authority on agricultural ecoon periodic authority on agricultural economy deservedly stands so high,—has suggested that a railway might confer important advantages on agricultural operations, in evidence before a committee of the House of Commons in 1846, of which the following is a condensed statement. "I have drawn out a table to illustrate the agricultural improvement which is the result of the cheapness and facility of transport produced by railways which have been in

existence some years. One table is based on a sixcourse shift, because although some land suits best to be cultivated upon one shift and some upon another, the six-course shift is the most suitable for the medium land of England and Scotland. I have supmedium land of England and Scotland. I have sup-posed the farm to be in the highest cultivation, thoroughly improved, and to be both arable and pasture. The quantities of green and dairy produce, cattle, and everything that can be exported from the farm, are counted at 148 tons. The imports, consist-ing of store cattle to be fed, lime, guano, &c., at 197 tons; and supposed this weight to be transported on an average 15 miles, which is a very low estimate. Thus we have for imports and exports a gross quantity of 346 tons 14 cwt. Taking the expenses of transport by railway at 1d. per ton per mile, and taking the number of persons who will travel to market and in various ways at 1d. per mile, the whole amount of charge of carriage, for imports and exports, is 40l. 8s. 9d. By the old mode of conveyance the expense would have been, assuming 6d. per ton per mile for goods, which is as low as you can carry by the old mode, 142l. 16s. 3d. I have had a good deal to do with carting, both for agricultural and manufacturing produce, and I have found that I could never get it done under 6d. a ton. Therefore, upon such a farm there would be an annual saving of 102l. 7s. 6d.; taking that at twenty years' purchase, would give 2,047l. 10s. The rental of such a farm would be 400l. a year without a railway, with a railway it would be worth 10s. an acre more, or 500l. a year. example of the effects of railways in raising the value of land, Mr. Smith referred to the Edinburgh and Glasgow, which "passes through a considerable district of very inferior, very ill-cultivated land. Since the introduction of the railway, and the facilities given for bringing tiles and lime, a great extent of that inferior land has been cultivated, and raised in annual value from 5s. to 30s. or 40s. an acre. respect to stock, "the rate hitherto charged for the conveyance of stock is nearly the same per mile as the expense of driving, especially in fat stock; but there is a loss in the case of fat bullocks, on a drive of from 60 to 70 miles, of at least 5 per cent. on the value of the beast—equal to the whole expense of driving."
Without a railway it is impossible to transport cattle with any advantage any greater distance than from 50 to 70 miles without very great deterioration; but railways afford the means of transporting those cattle 300 or 400 miles, and in carcases 700 miles. expense of transporting either beef or mutton in the carcase does not amount to more than one-third of a penny for 500 miles; so that meat may be as cheap in London as in Inverness. Another advantage from this easy and cheap mode of transit is, that the little country butchers always find among the lot they pur-chase for their customers a few too good for the consumption of the district, and if enabled to send these superior joints to a richer community at a cheaper rate, they can sell the medium and inferior joints cheaper to their customers in the country." Railways may be made useful for the purpose of mixing soils:
—"In those cases where the earths could be easily obtained, sea sand in Ireland is carried 30 miles up the country in little carts, and is found to pay the farmer for carriage when applied to clayey and mossy soils; and in many instances, where there are moors and waste lands, it would be worth the while of the proprietor to construct a tramway from a railway passing through the district to the moor or waste land. The difficulty of availing yourself of the benefit of railways is, that the soil must be re-filled, in most cases, into common carts and carted to a considerable distance. Altering the earths would be a permanent improvement of the soil. A great deal of mossy soil, if you lay even half an inch of sand, or more especially of alluvial soil, will render that ground produc-tive for many years." It would be an interesting inquiry as to how far these powers have been unde available. For instance, for the conveyance of lime. In the Exmoor country, "a hill farmer mounts his horse at daybreak, and driving six others before him with panniers, travels 18 miles to the sea-coast, and brings back in the evening nine bushels of lime-barely enough to dress a quarter of an acre!"

## Progress of Works.

BOLTON AND BLACKBURN.—The first train from Blackburn to Bolton was run on the 31st ult., when a numerous party of gentlemen from Blackburn, including Messrs. W. H. Hornby, chairman, E. Shorrock, vice-chairman, the directors and other officials of the line, took an experimental trip. The train, which consisted of four carriages, left Blackburn about 12 15 p.m., and arrived at Bolton at 1 p.m., having traversed the distance in 45 or 46 nin. The arrival at the Croal viaduct was the signal for a burst of cheering by an assemblage of persons who had

congregated to witness the train. *At the station the passengers alighted, and were joined by Archdeacon Rushton and other gentlemen. After the party had taken lunch the train returned to Blackburn, where it arrived in 293 min.

BRACKLEY AND BANBURY.—The first sod in the formation of this line was turned on the 29th ult. at Farthinghoe. This line is a portion of the Bucking-

CHESTER AND HOLYHEAD (the Menai Bridge).following are the exact proportions of this wonderful structure:—Entire length, when completed, about one-third of a mile, extending across nearly the same altitude as the present suspension-bridge, namely, 120 ft. above high-water mark. The iron plates for the tubes, or tunnel, are nearly 10,000 tons in weight. They will be precisely similar in construction to the one over the Conway; the thickness of the metal, of course, being greater, and the rivets proportionately stronger. The whole length of proportionately stronger. The whole length of tubing required is 2,800 ft., the same being 30 ft. in height, and 15 ft. in breadth. The spaces to be spanned by these tubes are four. The first, beginning at the Carnarvon side, is 250 ft., for which two tubes are required, 258 ft. in length, weighing each from are required, 258 it. in length, weighing each from 600 to 700 tons. The second space is 450 ft., extending from the first of the great stone piers to the centre one, on the Britannia Rock. This requires two tubes, 460 ft. each, weighing 1,300 tons. The third space is of the same dimensions, with a similar length of tubing, 460 ft. each being necessary; and the fourth span, extending from the third pier to the masonry which forms the head of the great embankment on the Anglesea shore, is 250 ft., requiring two tubes 258 feet long. The great difficulty the engineer will have to contend against will be the floating of the tubes through the rapid currents of the Straits (between six and seven miles an hour) to the piers. The completion of the bridge will perhaps occupy two years. The remaining por-tion of the line, through Anglesca to Holyhead, will shortly be opened, fast coaches being put on the road by the company, to convey the passengers, &c., between Bangor to a temporary station on the Anglesea side, near the Menai Bridge, a distance not exceeding three miles. From this point the line runs several miles with the old coach road, and turns in a south-by-south-west course, following the tract of the coast, though some distance from it, crossing in its route, about eight miles from the Menai Straits, the Maldreath March Valley, on both sides of which there is some very heavy work. A tunnel of 550 yards, through slate rock and clay, eventually conveys the rail into the island of Holyhead and its harbour.

CHURNET VALLEY .- Great progress is made with the works on the line between Uttoxeter and Burton-on-Trent. The excavations and embankments ton on Trent. The excavations and embankments are, in a great measure, completed; the greatest portion remaining to be done is at Stretton Hill, near Burton-on-Trent. The permanent rails, says the Derby Mercury, on a great part of the line near Tutbury, Scropton, &c., are already laid and ready for use. Engines will immediately be put on the line to expedite the works, and it is understood that the part between Uttoxeter and Burton-on-Trent will be opened during the present summer, in connexion with the line from Uttoxeter to the Potteries.

EAST LINCOLNSHIRE.—The line is now completed between Louth and Alford, so far as to be ready for official inspection, but no day has yet been named for

the public opening.

EDINBURGH AND HAWICK (Kelso branch).—The contractors are prosecuting this undertaking with rather more spirit. The cuttings have been resumed at Wallace's Nick, where a number of men are at present employed, and on other parts of the line the works are advancing apace. The bridge across the works are advancing apace. The bridge across the Teviot at Roxburgh Boats has made considerable progress, and promises to be a neat and substantial structure. Preparations, says the Kelso Mail, are about to be made for laying the permanent rails, a considerable quantity of which have already arrived; and, from the activity which prevails, this important branch will be ready much sooner than anticipated.
GLASGOW AND BELFAST.—The contract, says the

Ayr Observer, some time ago entered into between the directors of the Glasgow and Ayr, with which the Glasgow and Belfast is now amalgamated, and Mr. T. Sym, builder, Ayr, for erecting a bridge across Mr. T. Sym, builder, Ayr, for erecting a bridge across the water of Ayr, near the Mill Dam, is immediately to be put in execution. The amount of the contract is between 5,000*l*. and 6,000*l*. two years being allowed to complete the erection. The bridge will span the river at a point on the south side, between the Poor's House and the dye works of Mr. Templeton, and on the north side it will intrude upon the south-west corner of Adjutant Calvert's property of Content House, and totally demolish Ladybank House and

Digitized by GOGIC

grounds. The Ayr and Dalmellington joins this line a few miles out of Ayr, and we may calculate, in two or three years, that, as the Dalmellington line is now commenced, the Glasgow and Belfast line will be completed as far as the junction of these two lines, so that the traffic from Dalmellington and neighbourhood will be in full operation by the end of this period. The Dalmellington Iron Works are nearly finished, and a very great traffic may be expected from that company.

GREAT NORTHERN.—June 5.— The first portion was opened. It comprises about four miles, extending from Stockbridge to Reedholme Wood, a mile from Askern, where it is joined by the Askern branch of the Wakefield, Pontefract and Goole, opened on the same day. During the forenoon several of the directors of the Lancashire and Yorkshire (of which the Wakefield and Goole line is a branch) arrived by trains at Pontefract, where they were met by a large party. Having spent a short time at Pontefract, an immense train started for Doncaster. On arriving at the Knottingley station it proceeded on the new line to Askern, celebrated for its sulphurous springs. A little beyond this is the terminus; and here commences the completed portion of the Great Northern. Upwards of 200 persons were conveyed to Doncaster, where a party of gentlemen dined. A special train was despatched in the evening for Pontefract.

LEEDS AND THIRSE.—The portion from Ripon to Thirsk was opened for the conveyance of passengers as well as goods on the lat inst.; Capt. Laffan, one of the Government Inspectors, having viewed it on the 26th of May, and certified as to its effective condition. It is expected that during the autumn a portion of the line between Harrogate and Castley, near Harewood will also be opened to the public.

near Harewood, will also be opened to the public.

WATERFORD, WEXFORD, WICKLOW AND DUBLIN.—
The paragraph stating that sixty or seventy men had been discharged from the works at Bray Head on the previous Saturday is incorrect. The regular number of hands has not been diminished. There were some additional hands temporarily engaged to do a piece of work that required to be completed as speedily as possible, and, when the job was finished, they were not continued, because there were as many men employed (about 300) as the nature of the works would permit. Both at Killiney and at Bray Head the works are proceeding satisfactorily. Some of the best masonry ever executed, says the Irish Railway Gazette, may be seen at Killiney.

WILTS, SOMERSET AND WEYMOUTH.—In the neighbourhood of Dorchester an addition of 500 hands is reported to have been ordered. The surveyors of the line have been on a visit of inspection in the present week, and have given directions for the vigorous prosecution of the works at several points.

## Accidents.

SOUTH DEVON.—A porter, named Wreford, had his foot crushed in the machinery of the engine-house at Exeter.——On the 3rd inst. a man was run over by the 10 p.m. express train, near Newton. The duty of the deceased was to attend to the sealing composition of a portion of the atmospheric tube, but he does not seem to have been so engaged at the time of the accident.

South Wales (Newport) .- May 31. - The new bridge which crosses the Usk, built of wood, and being about 400 yards long, was completely destroyed by fire, even to the water's edge. At 6 p.m. the workmen engaged in completing the central arch. At 6 p.m. the which was on an immense pile, consisting of several tons weight of timber and iron bolts, were busy at work, driving in the bolts, when one man used a bolt which had been heated to an extraordinary degree. This immediately ignited the adjoining timber, which, being highly kyanized, or "pickled," was as ignitible as gunpowder. The man had a bucket of water at hand, as was always usual, but it was useless, for the flames leaped along on each side from the centre to each end of the bridge, and the whole extent was instantly in a terrible blaze. The men with difficulty escaped with their lives. A team of trains was passing at the time, and the horses, put to their utmost gallop, were obliged to dash through the flames to escape. The whole town rushed to the great stone bridge adjacent, and hundreds of navvies, carpenters, masons, labourers, tradesmen and gentlemen were quickly on the spot, but it was of no avail. The town fire-engines were brought, but acted with no effect on the awful flames bursting from the surface of the piles, the rails, the arches, and, in fact, wherever the fire could lay hold of wood to burn. The timber work was so enormous that it took a considerable time to burn any portion wholly away, while the patent composition used to preserve the wood lent assistance to the flames, which rose up with blue and black smoke, filling all the heavens. At about 9 p.m. the

ponderous work of the central arch gave way with a terrible crash, and soon after this, portion after portion fell, until, with the exception of here and there a solitary black and charred fragment, with some portion on the banks, the whole of this magnificent work was totally destroyed. The river was black with burning wood, and the banks became strewed with enormous pieces of half-burnt wood, like the coast after a wreck. The engine from the barracks did great execution, worked by two companies of soldiers, under the command of officers, and the town engines did all they could, but it was a physical impossibility to save even a fragment; we might as well suppose a portion of a barrel of gunpowder could be found after the ignition of the barrel. The bridge was almost completed when this unfortunate calamity occurred. It had been built of kyanized timber, by the eminent contractors, Messrs. Rennie, Logan & Co., and cost upwards of 20,000% in the erection. The bridges will for the future, probably, be built of stone. The work will be delayed two years in consequence.

## Lam Intelligence.

COSTS ON PURCHASE MONEY .- June 2 .- In the VICE - CHANCELLOR'S COURT, ex parte the Rector of Bredicot, a portion of land, forming part of the glebe of Bredicot, had been taken for the purposes of the Birmingham and Gloucester, and the purchase money, amounting to 200*l*., was paid by the company. Other land had been found in the neighbourhood for reinvestment of the money, which would cost, with the expenses, 1791. 10s. The rector of Bredicot now sought that the aforesaid sum might be invested in the new purchase, and that the remaining sum of 201. 10s. might be paid to the rector in liquidation of extra costs, alleged by affidavit to have been incurred beyond those allowed by the Act of Parliament. A similar order had been made in a previous case.— The Vice-Chancellor said, all he could do was to order the dividends to be paid to the rector for the time being.—Mr. Green suggested that this would have the effect of preventing the small sum left after the purchase from ever being taken out of court.— The Vice-Chancellor said there were, no doubt, a great number of similar cases, and it might be very desirable that a short Act should be passed, enabling the Court to exercise some authority respecting these very small sums of money unapplied.

DIVIDENDS, &c.—In the same Court, in re Tomlin-

DIVIDENDS, &c.—In the same Court, in re Toulinson v. the North Staffordshire, Mr. Malins appeared in support of a petition. It was asked if the company were bound to build an embankment or a viaduct across a certain portion of land belonging to the rector of the parish. A compromise had now been effected, to the effect that the company should pay into court the sum of 16,000l., and should also pay the costs of the suit, the plaintiff to be at liberty to build a viaduct at his own expense, if he thought proper to do so.—Mr. Messiter, on behalf of the company, raised a question upon the terms of the order, whether the dividends could be paid to the rector for the time being.—The Vice-Chancellor said he had lately made several orders directing dividends to be paid to the rector for the time being to be verified by affidavit, but he understood that an objection had been raised in the Register's Office to the adoption of this form. He thought it would be better, therefore, to direct the dividends to be paid to the rector until further order.

TOMMY SHOPS .- RAILWAY CONTRACTORS AND SUB-CONTRACTORS.—An important decision was pronounced in the COURT OF EXCHEQUER on the 29th ult., by the Lord Chief Baron, in a case of which the following are the facts:—S. Aykroyd was a contractor with the Oxford, Worcester and Wolverhampton, and had engaged one Bugbird and others, as sub-contractors, to make bricks and to do other work for him. The sub-contractors were in the habit of paying their men partly in cash and partly by means of tickets for goods signed by them, and which goods were to be supplied by T. Grimbly, who kept a grocer's shop in the neighbourhood. Of these tickets 3,000 had been presented to Mr. Grimbly, and goods supplied. On the 17th of September the defendant Aykroyd was served with 228 summonses from the Worcestershire County Court, at the suit of Grimbly, in respect of the above-mentioned goods, supplied to as many workmen. The aggregate of the sums claimed amounted to 303l. 19s., one being for 5l., and many for sums less than 20s. Mr. Aykroyd denied his liability to these demands, alleging that he never gave the orders, or authorized any person to give them; or that if he did give them he was not primarily liable, but only as on a guarantee. In this case a prohibition to the Judge of the County Court of Woroestershire was moved for, a rule nisi granted, and cause shown in Hilary term, the question being

whether, on the assumption that Aykroyd was in debted, the County Court had jurisdiction. After reviewing the argument, the Chief Baron now decided that the County Court had no jurisdiction, and a prohibition count to go.

a prohibition ought to go.

June 3.—In the same Court, in the well-known case of Chilton v. the London and Croydon, a rule to rescind an order to the Master to review his taxation of the plaintiff's costs was refused. The feeling of the Court was certainly that the matter was for the discretion of the Master. The case would therefore go back to the Master, coupled with the expression of these views on these points, and he would no doubt exercise his discretion anew with reference thereto.

May 30 .- In the BAIL COURT, in re the Queen v. the Justices of Warwick, Mr. Mellor applied for a mandamus directed to two of the justices of Warwick, commanding them to take proper steps to ascertain the amount of compensation which ought to be paid to Mr. J. Reynolds, for certain property near Rugby. The land in question had been crossed by a line, which had been called the Trent Valley, but which had now become amalgamated with the London and North-Western. The justices had heard the claim of Mr. Revnolds under the Act for making the Trent Valley, and had awarded him 25% as compensation.

Mr. Reynolds had called upon the London and
North-Western to pay this sum, but they refused to
do so, alleging that they were not the parties who
had taken the property. A summons had therefore been taken out against the London and North-Western, and it was then contended before the justices that the company must be considered as trespassers, as they had not given any notice of their intention to take the land. In this view of the case the justices had concurred, and the complainant was therefore compelled to come to this Court for a mandamus.-Rule granted.

INSPECTION OF BOOKS OF ACCOUNT.—June 1.—In the same Court, in re the Queen v. the Waterford, Wexford and Dublin, Mr. Pashley applied for a rule calling upon the directors to show cause why a writ of mandamus should not issue, commanding them to permit the inspection of the books of account and balance-sheet of the company to the agent of one of the shareholders.—Mr. Justice Wightman, in granting the application, intimated that if the rule should ultimately be discharged it would be with costs. He was of opinion that the right of inspection was in the shareholders only, and did not extend to agents.—Mr. Pashley said that the agent was also a shareholder, and had so informed the officer of the company to whom he made the application.—Rule granted.

FREMEN OF LINCOLN.—June 5.—In the same

Court, in re the Queen v. the Great Northern, Mr. Whitehurst moved for a rule to show cause why a mandamus should not issue to the company, commanding them to take the necessary steps for assessing the value of land taken by them, belonging to the corporation of Lincoln. The company were authorized by their Act to take the land in question—about 28 acres. There were old freemen of the city of Lincoln who had a right of pasturage over this land. In pursuance of the notice, the corporation and freemen sent in their claim to compensation, and then the company gave the usual notice that they should grant their warrant to the sheriff to assess the compensation. In the meantime they had power to take possession of the land, having it valued ex parte and paying the amount into Chancery. The company accordingly had the land valued and paid the valuation into Chancery, and they ennow desirous of doing anything more. They issued their warrant to the sheriff, and stated that they required a special jury. The sheriff gave the parties notice to strike the special jury; all parties attended for the purpose, and the agent for the corporation informed them, as the names were called over, who were freemen, and, with the exception of nine, all those who were freemen were rejected, and it was supposed that those nine were favourable to the interests of the company. The list was made out and signed. After that, however, the company complained of the nine freemen being left on the list; the agent of the corporation said there should be no difficulty about that, and he would strike them out at once. The company then objected that the rest of the jury were burgesses and part of the corporation, and they then countermanded their warrant and refused to take any other steps, and suggested an arbitration, but they now refused to adopt any steps whatever. The application therefore now was, why the company should not issue a fresh warrant. There had been a request and refusal.—Rule granted.

We defer noticing the cases, Barker v. the North Staffordshire and Walker v. the Eastern Counties, and one or two others of minor importance, as the decision in either case is postponed.

Digitized by Google

There is a report current, says the Nottingham Journal, that in consequence of the recent proceedings in Chancery connected with the eastern loop line of the GREAT NORTHERN at Gainsborough, it is probable that this part will be made the terminus of that branch of the Great Northern, instead of running forward to join the western or main branch at Bawtry; and that the line of the Sheffield and Lincolnshire now in course of construction between Retford and a point course of construction between kectord and a point on the loop line near the Saxelby, (between Lincoln and Gainsborough,) will be employed as the connecting link between the eastern and western lines of the Great Northern. In the event of this arrangement being made, there will be only one station at Gainsborough, and only one railway bridge over the river Trent, which will effect no inconsiderable amount of saving in cost.

IRON TRADE.—Glasgow, June 2.—The market for pig iron continues firm, with a fair business doing. Prices quoted are 44s. 6d. per ton cash.

* For account, July 14. † Ex Div.

London Stock Exchange, June 9.—The same inactivity and absence of business which have characterized the last two or three weeks have been apparent during the past, and the operations have been unimportant. There is no amount of stock pressing on the market, which justifies a hope of improvement should commerce and business revive.

Liverpool, June 8.—The market has been in a very inactive state throughout the week, and prices depressed. To-day there is more firmness, and prices a shade better.

SubLow, Brothers.

a shade better.

Manchester, June 8.—We have had another flat week in shares, and there appears to be but little expectation of any immediate improvement.

Hull, June 8.—Shares are dull and declining, the destroys as a means of raising capital in the absence of borrowing facilities. If the Government would only offer to assist railways by loans, it would inspire confidence in these undertakings, induce private capitalists to lend their money, and thus afford employment to thousands willing to work, but who now swell Chartist meetings, because they are starving and neglected.

ing and neglected.

Glasgow, June 8.—Since our last report, we have had very little fluctuations in prices, which have ruled rather lower than previously, and business has been confined to a few stocks. To-day there is more inquiry and a firmer tone in the market generally. The latest transactions are as follows:—Airdrie and Bathgate, 42s. 6d. pm.; Dumfries and Carlisle, 6g; Ayr, halves, No. 1, 6g dis.; ditto, No. 2, 7g dis.; Manchester and Southampton, 1g dis.; North British thirds, 41s. dis.; Paisley, Barrhead and Hurlet, 22s. 6d. dis.; Scottish Grand Junction, 42s. dis. Buchanan, Aitken & Co.

THE

# Railway Chronicle.

LONDON, SATURDAY, JUNE 10.

The settlement of disputes between the WAVENEY VALLEY AND GREAT YARMOUTH and the Norfolk was postponed at the special meeting till after the decision in two actions, brought by individual shareholders in the former company against the directors of the latter, respecting the guaranteed stock. The directors are to be left to oppose, at an expense not exceeding 100*l*., the bill of the Norfolk in the House of Lords, for an extension of time.

The bills for leasing the line, &c. to the South-Western were specially approved of by the Taw Vale proprietors. A clause is to be introduced, reversing the absurd decision of the Commissioners as to the alteration of the gauge. No better instance of the inutility—nay, obstructiveness—of this Board of Commissioners is furnished than in the history of the Taw Vale given by the chairman at the special meeting.

At the special meeting of the EXETER AND CREDITON the bill authorizing the sale or lease of the line to the London and South-Western was approved of.

The shareholders of the LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION have agreed to increase the number of directors from eight to sixteen, and to invest them with the power of conducting the proposed dissolution bill. The statement of accounts was adopted at the half-yearly meeting, and the reception of the Report was further postponed till the 6th of July.

The statements at the half-yearly meeting of the Cork, Blackrock and Passage were altogether more cheering than at the last assembly of proprietors. The calls had been more readily responded to; there was enough money in hand to keep the contractor of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the contractors of the cont

till the autumn, and no further call is to be made till November. The Report and statement of accounts were adopted.

Dire in its results has the whole Revolution especially been to the Paris and Rouen. The mob on one side burning and destroying stations, bridges and plant, which the shareholders have had to replace; the Government, on the other hand, anxiously proposing to confiscate the whole property. At the special meeting, however, the shareholders vigorously supported the protest of the directors against this latter proposal.

The directors of the Paris and Rouen and the Rouen and Havre summoned special meetings of their London proprietors, to vote the resolutions adopted in France, condemnatory of the Government absorption.

The Report presented to the special meeting of the Orleans and Bordeaux energetically opposed the State purchase; and the share-holders, after voting its adoption, agreed to a committee of co-operation with the directors.

At the special meeting of the Tours and Nantes the Report disclaiming the State absorption was unanimously adopted. The call of 25f. per share is suspended until the question of the purchase has been decided.

The proprietors of the Belgian Eastern Junction have specially authorized their directors to treat with the Namur and Liége for the loan of the caution-money, which would have been forfeited by the 17th of July. The company is to be constituted by the issue of scrip certificates, so as to enable them to legalize their intended proceedings.

In the Commons the preambles of the following bills have been declared proved during the week:

Birmingham and Oxford Junction.
Caledonian (Branches with Clydesdale Junction and
Wishaw and Coltness).

more readily responded to; there was enough money in hand to keep the contractor at work Great Western (Additional powers).

Liverpool, Manchester and Newcastle-upon-Tyne Junction (Dissolution).

Monkland and Kirkintilloch, Ballochney and Slamannan (Amalgamation, &c.).

Newport and Pontypool (Act Amendment).
Whitehaven and Furness Junction (Deviation from Silecroft to Foxfield).

York, Newcastle and Berwick (Leasing, &c.).

Not proved:
London and North-Western (Deviations, &c.).

The contradictory statements which have reached us this week from Paris relative to the vexed question of the expropriation of the French railways, leave us still in doubt as to the ultimate result. While the committee of Finance decided against the Ministerial plan, that of the Public Works was in its favour, but proposed an amendment as to the mode of re-purchase, the precise terms of which were not fixed, but would probably be determined at the next sitting. It remains to be seen what the Assembly will say to the scheme;we are induced to hope that a just conclusion will be come to,—that is, to leave those in full work to the management of the constituted authorities, for the benefit of those who have embarked their money in these enterprizes, and to apply the measure only to those lines now in course of construction which cannot be completed by the companies, repaying to the shareholders the amount advanced, or, in case of dispute, leaving the decision to the verdict of a jury. The strong feeling of antipathy against the English workmen by their French fellow labourers would perhaps induce the English shareholders to prefer an equitable sale of their interests, since the working out of the undertakings must be left wholly to the French. The hopelessness of completing them by the contributions of the shareholders, under the present circumstances, would render this plan the most desirable means of getting out of The bill, it is said, is to be the difficulty. brought before the Assembly on Monday, and its fate will probably be sealed before our next publication.

From our official returns it appears that the amount of traffic for the last week, on 3,785 miles of railway, was 195,855l., thus accounted for:—102,230l. for the conveyance of passengers only, 48,178l. for the carriage of goods, and a remainder of 45,447l. for passengers and goods together, not respectively apportioned; being an increase of 1,162l.• over the corresponding week of last year, when the mileage was 2,862. The average earnings per mile were 52l., whilst in 1847 they were 68l.

## FAINT HEART NEVER WINS THE DAY.

THE present state of the GAUGE QUESTION fully bears out the Cassandra-like prophecies of the Railway Chronicle in 1847. "Battle of Fenny Compton" we foretold in the plainest terms that, unless the narrow-gauge party would abandon lawyers' shifty tricks and take hold of the broad principle of national uniformity, they must inevitably be beaten. But the good easy souls were only too happy to believe in any figment that would save them from taking trouble. So, after believing that the Gauge Commissioners' Report would stand of itself against all the assaults of the Great Western, after resigning themselves to the mutilations of the Board of Trade resolutions, they ended for one Session, by being perfectly content with the Gauge Act. When it was discovered that, while the Gauge Act secured in perpetuity a good slice of territory to the broad gauge, a splendid flaw enabled that universally

condemned anti-commercial gauge to force itself wherever hard fighting could make way, and the narrow-gauge party were soothed by the idea that a legal manœuvre would keep the enemy at bay at Fenny Compton. They re-fused to go to the Ministers and the Parliament, either to amend the flaw or to re-open the whole question by re-considering the evidence. They preferred trying the fortune of a few little tricks. The tricks failed, and the Gauge Act, which, under legal advice, they allowed to pass with all its errors unquestioned in 1847, has now, in 1848, received at the hands of the Railway Commissioners a new and entirely false interpretation. Capt. Simmons recommends that, regardless of expense, the double gauge shall go everywhere,—and the narrow-gauge party have not a word to say! They were silent under legal advice when they might have spoken out and resisted the drawing of the Gauge Act. The policy pursued by the opposition before the Birmingham and Oxford Committee was characterized by the same consistent timidity. The case for the extension of the broad gauge rested on the feasibility of the double gauge-even the Commissioners hesitated to approve it at once. All engineers, except Mr. Brunel, are opposed to it; and to have had the evidence of the most eminent among them pitted against Mr. Brunel would have been most useful. The evidence is prepared, but at the last moment the Fabius of the narrow-gauge party loses heart, and gives in, putting off the contest until the bill reaches the Lords, and leaving the hollow evidence in favour of the double gauge to make its way with the public in the mean time.

Finally—to quote from an energetic opponent of the broad-gauge system—"Audacity, vigour and brilliant sham-extravagance in construction and in working, exclusion of poor passengers and low-priced goods, in favour of luxuries and rich men,—in a word, the broad-gauge system—must make its way, and subdue economy in making and working, the cheap rates and fares of the narrow gauge, depending as that national system does on timid, weak, vacillating, special pleading, attorney-minded champions."

The South-Western business is done with vigour and courage, and it will not be the fault of the South-Western if the western lands do not get the inestimable benefit of the comprehensive national gauge.

## THE HARDSHIPS OF SHAREHOLDING.

Strong as the tone of the following communication appears, we feel bound to insert it, as it is one of many we have lately received affirmatory of the same grievances.

Bearing in mind the lessons of economy you were the first to inculcate as the unflinching supporter of the best interests of the shareholder, I hope you will continue your salutary admonitions. At present new works proceed, and call succeeds call, regardless of the suffering shareholder. I believe, in the old lines, the directors have organized themselves into committees-parliamentary, constructive and managing—each with its numerous and expensive staff of officials; and it would appear each feels bound to keep all in full employment; else why is Parliament, even in 1848, besieged for new branches. with shares at such a discount?-for I cannot yet believe in the more questionable reasons given by some for the ever unclosed capital account. other public works, the canal was made, the capital account closed, and the shareholder reaped the dividend, much or little; but with railways the unfortunate shareholder receives 501. with one hand and has to pay 2001, with the other; and yet when he has paid thousands in a year, the value of his capital is not increased, nor his dividend neither, for the inevitable result of extravagant outlay is a reduced pro rata dividend. In the panic of 1847, a great railway authority jeered Sir C. Wood in Par-

liament, stating?that he could borrow to any amount, whilst the Chancellor of the Exchequer's bills were unmarketable. How is it now?

Thus whilst consols have fallen 5 per cent., Midland shares have gone down 24 per cent., Great Western 46 per cent., and London and North-Western 58 per cent. Whence this result, but from diminished confidence? The lawyer and the engineer spend thousands, the directors seek for loans, but the wary money-lender dare not trust such reckless spendthrifts. They then make calls, and drive their shareholders also into the borrowing market; but the capitalist who refused the director, will he lend to the shareholder r and both like other necessitous beggars are dismissed. If directors would stop outlay, close capital account, dismiss the whole parliamentary and constructive establishments, and well and truly manage the lines they have got, the evil, great as it is, would in time be removed, the shareholder's family would derive some comfort from the annual profits, and thus when all were not borrowers even a railway shareholder might have money to lend. A SUFFERER.

## THE BRIGHTON MEETINGS.

I trust you will allow an old and constant reader to make a few observations on the subject of the meetings of the proprietors of the Brighton on the 26th and 27th ult., and on your own remarks on the steamboat question, which formed the chief ground of controversy at those meetings. I must begin by stating, that though I am one of those shareholders who declined to take an interest in the steam-packet company, when the shares were originally offered to the proprietors of shares in the Brighton, I never questioned the policy of the directors in seeking to have the control or management, in some sort, of the steam communication to be maintained between Newhaven and Dieppe. I know well how difficult it is to get an independent company to supply a link in a chain in a traffic of that nature, and how much may be gained in working it satisfactorily to the public and with advantage to the entire chain when the whole can be placed under one systematic and harmonious management; I therefore always felt that the directors were right in desiring to get free from the doubtful and shilly-shally arrangements of the General Steam Navigation Company; and that the sooner they secured the formation of a steam-packet company in conjunction with, and controlled by themselves, the better it would be for the interests of the railway. At that time no legal powers had been sought to expend any portion of the funds of the railway in such an object, and the directors had no other course than to endeavour to raise the necessary funds for a sufficient fleet of steamboats by the formation of a separate company closely affiliated with the railway. Having failed in doing so by that means, it surely was right that they should not forego an object which they were convinced was so important to the interests of the railway, especially as they had completed the branch to Newhaven, the utility and value of which depended so much upon its attainment. They therefore, in the early part of last year, convened the shareholders, and submitted to them a proposition to allow an application for power to subscribe 100,000l. towards the steampacket company, to form part of one of the bills then about to be brought into Parliament; which was assented to at a meeting held on the 7th of April last year, and the bill was promoted accordingly. That bill was not obtained in the last session of Parliament, and it is now upon the renewal of the application to proceed with it in a somewhat modified form, that all the present discussions have arisen. Now, I must own, that darkened as the state of our affairs has been by the state of the Continent since February last, and by the general condition of railway property and of monetary affairs in our own country, it may be unfortunate that our railway was ever encumbered with a branch to Newhaven, or the question of a Continental traffic at all. But surely that cannot justify our accusing our directors of so much prodigality, on account of the zeal they showed to secure that traffic when it was really worth culti-

Digitized by GOGIC

^{*} The corresponding week of last year was Whitsun week, and therefore does not give a just comparison.

vating; much less does it, to my mind, justify our proposing to repudiate obligations under which they have come, prior to the period when these darkening clouds began to affect us; I for one will be no party to such a course. I prefer bearing my share of the burden; and all I can say is, that if no other result accrues to me from such a course, I shall have the satisfaction of having acted according to my ideas of the duty of an Englishman and an honest man. in not repudiating engagements which I verily believe were contracted with no other views or objects than to promote the interests of the railway. If I could believe that it were otherwise, and that the course was clear for me to throw the responsibility of this measure of subscribing to the steamboats upon the directors themselves, I must say, that, unlike my brother shareholders who recommended that course to the meeting, I should have had no alternative but to submit a motion of want of confidence, as the only consistent course I could have pursued. I will not attempt to follow the various speakers at the meeting on Friday week. Ald. Wilson took the lead in this instance, as on a former occasion, in bringing charges against the directors, which, if not better substantiated than those he advanced on the 14th of February_(since so completely disproved by the Report of the committee of investigation)-are not worthy of notice. Mr. Flood talked of "gambling" and of "throwing the parliamentary dice," in a tone and manner very unlike a person used to calm and With such speakers and their sober discussion. arguments I should not wish to have anything to do. I propose therefore briefly to notice a single remark of Mr. Whishaw's in his letter of 17th May, in your paper (ante, p. 357), who—though I deem him to be both prejudiced and mistaken—I regard as having conducted his case with more courtesy and propriety, and thus leave the matter to your own consideration and that of your readers. Mr. Whishaw says in that letter, "The General Steam Navigation Company have occupied the station between Shoreham and Dieppe for a period of about twenty years, and are now willing to provide boats of a superior descrip-tion, so as to work the traffic from the new station in an efficient manner." Now, Mr. Whishaw does not tell us when the General Steam Navigation Company began to manifest this disposition. Had it been shown a couple of years since, I am persuaded there would have been no separate company thought of by the railway company. To me it is pretty clear that we owe it to the course the directors have pursued that this change has "come o'er the spirit of their dream"; and, in point of fact, it is mainly the circumstance of this railway, and other railways, securing the power of establishing steamboats themselves, that we shall secure a check to the selfish arrangements of some of the existing steam-packet companies, and a stimulus to any improvement and activity on their part to work a railway traffic to advantage. This statement, however, does not tally with some of the remarks made at the meeting, as to the route being one that will not be readily chosen by the public; for unless it be a favourite route why should the General Steam Navigation Company propose to do now what they have never done before, i. e. "provide boats of a superior description to work the traffic in an efficient manner"? The truth is, though the sea voyage is longer than by Folkstone, the railway journey on both sides of the Channel is so much shorter, that a great saving of money makes the route by Newhaven desirable; for every one knows that the mass of Continental travellers prefer a route where economy is paramount.

A BRIGHTON SHAREHOLDER.

## Gassip.

At the Lancashire and Yorkshire meeting (ante, p. 389) on the 31st ult., the result of the poll demanded by Mr. Fielden, and certified by the scrutineers,

ed by Mr. Fielden, and certified by the scrutineers, was as follows: — For the original motion, 1,095; against it, 54; majority for original motion, 1,041.

A deputation from the Scottish lines, consisting of Mr. Anstruther, chairman of the Stirling and Dunfermline; Capt. Stewart, of Binny, chairman of the Edinburgh and Bathgate; Hon. Col. Cathcart and Mr. J. Miller, two of the directors of the Glasgow, Kilmarwack, and Arms the consequence of the Chasgow, Kilmarnock and Ayr; the same for the Dumfries and Carlisle; Mr. R. Bruce, of Kennet, deputy-chairman of the Scottish Central; Mr. T. Grainger, representing the Edinburgh and Northern; and Messrs.

Forbes and Deans, solicitors, had an interview on the 6th with the Chancellor of the Exchequer.—Mr. J. Mackworth Powell had also an interview with Earl Granville during the week at the office of the Board of Trade, to explain his invention for obviating the difficulties of the break of gauge, and also the carriage of goods from one station to another without any unpacking or repacking.

We are glad to bear witness on any occasion to the

recognition by Government of the increasing advantages of railway communication. It is reported that on the completion of the main lines a general post-office for the North of Scotland will be opened at Perth. It will not interfere with the local office at Perth, but will assist, or perhaps altogether relieve, the general office in Edinburgh of its distributory functions

It is not long since the Hull Corporation and Dock interests deplored the waste of so much good capital in the construction of GRIMSBY DOCKS, which they prophesied would be but a millstone around the neck of the luckless Manchester, Sheffield and Lincolnshire. As the docks are now advancing towards practical reality, these antagonist interests are becoming sensible of their real value. The Hull merchants begin to quote the present low dock dues at Grimsby against the high ones at Hull, and to claim a reduction of the latter. Despised Grimsby is to be a model for Hull! But the torpid Hull folks will not hear of progress. "It is all very well," they say, "for the dock dues to be low at Grimsby, because the docks are or will be such a source of pros-perity to the railway!" So that even before the docks are made, public opinion at the port most interested has actually shifted completely round. there is reason in the conviction, for the Hull mer-chants are beginning to remove their business to Great

In answer to two correspondents we insert the par-ticulars of the WAKEFIELD, PONTEFRACT AND GOOLE. (opened last March) as published about that time in the Manchester Courier. The line is one of those schemes which originated in the desire of the inhabitants of the district to be no longer isolated and shut out from neighbourhood with the places where their produce could be consumed. It was projected at a public meeting, held in Pontefract at the latter end of 1844, and the necessary surveys, &c. were made; but the head of the Midlands, the London and York and the Direct Northern Companies respectively de-clined to have anything to do with it. Capt. Laws, however took it up on behalf of the Manchester and Leeds Company, agreeing that one half the capital should be subscribed; and the promoters, aided in that manner, brought their bill into Parliament in the session of 1845. The contest was one of the most desperate of that ever-to-be-remembered period, Mr. Hudson especially, on behalf of the York and North Midland, giving it the full benefit of his most determined opposition. In spite, however, of all that was said and done, the bill became law by the close of July, the competing scheme put forth by the York and North Midland, called the Brayton and Goole line, being lost. Mr. Leeman, of York, was the solicitor, and to his most energetic conduct guided by licitor, and to his most energetic conduct, guided by the great experience of Capt. Laws and the gentle-men connected with him on behalf of the Manchester and Leeds, brought to bear, the success of the contest is attributable. At an early period after the victory the works were let to Mr. Joseph Thornton, the contractor, of Kettlethorpe-hall, near Wakefield, who, having been born on the spot, and in humble circumstances, appears to have been animated in seeking the contract by the generous desire to confer a benefit upon the place of his birth.

After the late inspection of the new GRIMSBY DOCK works by the directors of the Manchester, Sheffield and Lincolnshire, with Mr. Rendel, their engineer, it was determined to close the coffer-dam at once, and take the requisite steps for carrying on other portions of works requiring to be done. The works will now advance with great rapidity.

The amount of passengers and goods traffic on the lately opened portion of the Scottish Central was, for the week ending May 27, 660l. and for the week ending June 3, 642l.

At the LLANELLY meeting, called for the 5th, no reporters were allowed to be present.

A FIRE happened to some FLOUR-MILLS at BATH, immediately adjoining the station. Alarm was given in the city that the terminus was on fire. By the combined exertions of the firemen and the railway staff the flames were got under after considerable damage.
The Edinburgh Mail narrates that the workmen

engaged in excavating the site of Trinity College Church, Low Calton, for the extension of the NORTH BRITISH terminus, having been directed to search the sacristy of the church, situate on the north of the

transept, in conformity with a warrant from the Woods and Forests, directed to Mr. Mathewson, lately came upon an open coffin, deposited precisely in the spot indicated as the grave of the foundress, and supposed to contain her remains. The coffin displayed no external ornament by means of which it could be distinguished; and all around it, to the depth of 12 ft. from the surface where it was found, the excavators met with innumerable bones and skulls of human subjects. We should mention (says the writer) that in the course of previous operations on the church the floor had apparently been raised 3 ft. above its original A number of officials, including Mr. Kerr, of her Majesty's Office of Works, who directed the progress of the operations, attended in the church to vitness the examination of the skeleton by Prof. Goodsir. Goodsir. The coffin contained the skeleton of a woman, nearly entire, with the exception of the hands and feet. The spine appeared to be considerhands and feet. The spine appeared to be considerably distorted. The remains, after being examined, were again deposited in their coffin, and that enclosed in a leaden one, newly prepared for the occasion, which was strung with tape and sealed up. The whole, with sundry parcels of bones and dust, was then removed in a wooden box, by means of a hearse, to the Queen's Treasurer's Remembrancer's Office, in Parliament-square, where the supposed royal remains await interment in Holyrood. Mary of Gueldres was the consort of James II., and the arms of Gueldres were sculptured in one of the buttresses near the spot where her supposed remains were dis-interred. The officers of Exchequer are watching the excavations, for the purpose of claiming any treasure trove that may be thrown up.

The Irish Railway Gazette explans the purport of the paragraph in our last relative to the award made by the umpire to the GREAT SOUTHERN AND WESTERN for the carriage of her Majesty's mails. They imagined that the 22,000l. was for the entire line, from Dublin to Cork, whereas that sum only covers the extent of line now open. The award is a mileage rate of 5s. per mile for night mails, and 2s. 6d. per mile for day mails; so that, as the additional portions of the line are opened, the gross sum will be increased

in proportion to the increased mileage.

There has been a turn-out of the mechanicians and workmen on almost all the lines around Paris, with the exception of the Rouen line. The mechanicians on the different lines had entered into a combination to force the directors to expel all the English me-chanicians and engine-drivers from France, two of whom had been retained by the Boulogne directors. On the Northern and Orleans lines the directors had complied with the demand. The Rouen directors have firmly resisted, and the consequence is, that on the other lines the employes threatened to refuse to work until the Rouen directors shall have complied with these demands. The trains on the Versailles and St. Germain were stopped, but those on the Rouen line are going as usual. A large quantity of troops and National Guards were stationed at the Rouen terminus, and detachments were sent along the line to the points most liable to attack. The Orleans and Northern lines continue to work as usual. The Boulogne Company, in order that the service of the railway might not be stopped, have engaged a number of Englishmen who had been dismissed from the service of the Northern.

The shareholders of the UPPER SILESIAN complain of the delay in the payment of the promised dividend for the year 1847.

At a recent general meeting at Presburg of the shareholders of the CENTRAL HUNGARIAN line, it was stated that the Hungarian Government had agreed to advance the sum of four millions of florins (convention money) toward the expenses of completing the line. A committee was appointed to draw up a Report respecting the conditions of the repayment of the advance in question.

## Reports of Meetings.

WAVENEY VALLEY AND GREAT YARMOUTII.

June 8.—Adjourned Special Meeting, London.—Mr. E. Cooper (in the absence of Mr. Wilshere) in the chair.

The CHAIRMAN stated that the shareholders would recollect that at the last meeting it was stated that ome communication had been received from the Norfolk, which there had not been time to consider. Some communication had since taken place between the solicitors, which, he regretted to state, had not

been satisfactory.

Mr. WILKINSON would briefly refer to their past An agreement was entered into with the Norfolk by the original Waveney Valley pro-prietors, under date of the 21st of October 1846, by which it was arranged that the Waveney Valley

Digitized by GOOGIC

proprietors should, on the payment of 30s., receive scrip, marked with 40s. as paid, for stock in the Norfolk, to bear a guaranteed interest of 5 per cent., such stock not to participate in any advantages of the line beyond the 5 per cent., but to be guaranteed by Act of Parliament. When the bill was brought into Parliament, it contained a clause authorizing the guarantee, but as it passed through Parliament in consequence of resolutions come to by the two Houses of the Legislature relative to the payment of interest on calls, the clause was struck out, and the bill passed without it. The Waveney Valley directors immedi-ately felt that the Norfolk were not in a position to carry out their agreement relative to giving them a guaranteed stock—as they could only give them stock guaranteed by a vote of a general meeting of proprie-tors which could at any time be rescinded or altered by the vote of another general meeting, and would not therefore be that perfect security which they had agreed to receive. In addition to the guaranteed stock, it was arranged that on the passing of the bill the Norfolk should give to the Waveney Valley proprietors a further bonus of 5s. per share. The bill received the royal assent in June 1847, but the Norfolk had never yet paid them their bonus of 5s. a share. They had, however, after repeated applications, offered to give debentures for it at six months' date, but even these had never been obtained. Finding that they could not get their guaranteed shares or the 5s. bonus, the Waveney Valley proprietors had held a meeting, at which it was resolved to demand the payment from the Norfolk of the 2l. per share on the scrip and the 5s. bonus. In the meantime an arrangement had been come to between the Norfolk and the Eastern Counties, and on the morning of the last meeting he (Mr. Wilkinson) received a letter stating that the Norfolk were prepared to make an offer to the Waveney Valley proprietors, and the meeting was accordingly adjourned. Since then negotiations had been going on between the solicitors, which resulted in an offer to pay the 5s. bonus, but with regard to the 2l., it was stated that a proposition must be made by them (the Waveney Valley proprietors), but in-structions were given to him (Mr. Wilkinson) that the Norfolk would not bind themselves to return more than 10s. per share in addition to the 5s. bonus Such a proposition, of course, could not be acceded to, and the result was that two of the largest proprictors in the Waveney Valley (Messrs. Croft and Margetson) had commenced actions against the Nor-Sessions in the course of July, and if they were successful, as they were advised, they would be in a position to obtain back their 21. per share, in addition to the 5s. bonus.

In answer to questions, Mr. WILKINSON further stated that they claimed interest on the money also but he did not know whether they should get that but it was clear they must recover the 30s. per share He had they had paid, if not the 2l. and interest. hoped, when the union took place with the Eastern Counties, that the Norfolk directors might have been led to make the Waveney Valley proprietors an offer of at least returning them their 30s. per share, but all or at least returning them their 30s, per share, but all attempts to get a fair offer from them had proved abortive, they (the Waveney Valley proprietors) were left to seek their rights by law.

Mr. PALMER said he was in possession of a letter from the secretary of the Norfolk, dated in July last, stating that the agreement could not be carried out, but that the share would be not a few the share would be not as the share with the share would be not as the share would be not as the share would be not as the share would be not as the share would be not as the share would be not as the share would be not as the share would be not as the share would be not as the share when the share would be not as the share when the share would be not as the share when the share would be not as the share when the share well as the share when the share well as the share when the share well as the share when the share well as the share when the share well as the share when the share well as the share when the share well as the share when the share well as the share when the share when the share well as the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when the share when t

but that the shares would be paid off. He did not consider that the conduct of the Norfolk had been honest towards them, and he would never consent to

taking back the 30s. per share only.

Mr. Back authenticated the facts detailed by Mr. Wilkinson. Though the Norfolk had received 30,000l. of the Waveney Valley proprietors' money, 30,000l. of the Waveney valley propries yet they had never reserved any portion of it to repay the 5,000l., according to agreement. That money was to have been paid on the passing of the bill. directors then put off the payment until the 4th of October, but up to this date it had never been paid. course of proceeding could not be at all defended, as their money ought to have been reserved for the purpose for which it was subscribed, instead of which he supposed it had been lost in that sink of the company—the Lowestoft harbour. As regarded the two actions which had been brought against the Norfolk, they were advised by an eminent counsel that there could be no doubt of their 30s. per share being recovered, and that most probably they would recover their 40s. He considered that they had nothing to do with the Eastern Counties, though, if they had taken the Norfolk line with all its liabilities, of course they would have the money to pay; but they must hold the Norfolk directors to the fulfilment of the agreement entered into with the Waveney Valley proprietors.

Mr. HARVEY asked in what position those share-

holders were who had not exchanged their scrip in the Waveney Valley for that of the Norfolk

The CHAIRMAN said that those shareholders were to receive the 5s. bonus, agreed to be paid on the passing of the Act, and a further sum from the funds which were in hand at the time of the arrangement, amounting altogether to about 10s. per share. money was vested in 2,300 shares, which it had been necessary to purchase, in order to make up the number they had to hand over to the Norfolk, under their agreement. If they were successful in recovering the money they claimed, those shareholders who had not exchanged their scrip would, of course, participate in the benefits beyond the 30s. paid by those who had

exchanged.

Mr. Wilkinson said that from the letter referred to by Mr. Palmer it was clear that the company acknowledged their rights as now contended for last July, and, in answer to questions, also explained that, according to the Act of the Norfolk, the line from Reedham to Diss and Beccles to Halesworth, was bound to be commenced within twelve months from the passing of the Act, which would expire on the 25th of June 1848. Nothing had yet been done, and that circumstance would strengthen the case of the Waveney Valley proprietors, if the bill was allowed to expire; but the Norfolk had a bill now before Parliament, which had already passed the House of Commons, for extending the time of the commencement of the line till the 1st of August 1849. He believed that companies generally cared more for parliamentary opposition than for law proceedings, and, if it was deemed desirable, that company could petition the House of Lords in opposition to the bill, and, probably, effectually.

After some further conversation, relative to the expenses of parliamentary opposition and their general position, the directors were to be left at liberty to oppose the bill, if they saw fit, at an expense not exceeding 100L, and that the meeting should be adjourned to await the issue of the two actions already brought against the Norfolk, which, it was intimated, would not be the last brought, even if they should, unfortunately for the shareholders, prove unsuccessful.

LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION.

June 8 .- Adjourned Special Meeting, London. Mr. W. FFRANCE in the chair.

The CHAIRMAN explained that, in consequence of a number of meetings which the directors had had with the dissentient shareholders and the committee appointed at the last meeting, a simple dissolution bill had been arranged; and in order to carry it out, it had been resolved to increase the number of directors from eight to sixteen.

Resolutions were passed, increasing the direction to the number stated; transferring the power vested in the committee appointed on the 4th of May to conduct the dissolution bill through Parliament; and approving of the bill (the heads of which were read

to the meeting). Mr. PARSON called attention to the fact that the only person now opposing the bill had not availed himself of his privilege as a shareholder of attending the meeting, and thus disturbing the general una

On the declaration that the directors were working without pay, and that the utmost endeavours would be used to economize the funds, the meeting was adjourned until the 6th of July, on the suggestion of Mr. Parson, lest there should be any material alteration made in the bill, requiring further consideration.

The special meeting having been accordingly declared at an end.

The Adjourned Half-yearly Meeting was held, when the CHAIRMAN withdrew the Report presented by the directors on the 8th of February last.

The statement of accounts showed the receipts to the 31st of December 1847 at 181,506l. 0s. 7d.; exthe 31st of December 1847 at 181,5061. 0s. 7d.; expenditure, 101,4661. 7s. 5d.; balance in banker's hands, 815l. 16s. 3d.; 3 per cent. consols., 56,000l.; loan on account, amount advanced on interest, 24,556l. 10s. 2d.; scrip account, 10l. 8s.; petty cashier's balance, 35l. 0s. 3d.; total, 81,417l. 14s. 8d. This statement of accounts was adopted, and the meeting also adjourned to the 6th of July. meeting also adjourned to the 6th of July.

TAW VALE AND DOCK.

June 5 .- Special Meeting, London .- Mr. E. COOPER n the chair.

The CHAIRMAN explained that the meeting was convened under what is called Lord Wharncliffe's order, to approve of two bills. The first was a bill for leasing the railway and dock to the South-West-ern, which had been before the proprietors several times. The other was a bill of the South-Western,

authorizing the sale or lease of the Exeter and Creditton and the Bodmin and Wadebridge, and for carrying into effect certain arrangements between the same and the Taw Vale. The latter company takes a lease of the Exeter and Crediton line on the gua-rantee of the South-Western; the Exeter and Crediton to receive a dividend of 5 per cent. on their capital under any circumstances, the first 1 per cent. profit beyond 5 per cent., and half the profit beyond that, deducting from the gross receipts one-third for working expenses. With regard to their proceedings in Parliament, they were strongly opposed by the Bristol and Exeter, who seemed determined that nobody else should have the line. On the contrary, the South-Western were rendering the company most efficient aid and acting with the greatest cordiality. He felt satisfied that the completion of the arrangements would be exceedingly advantageous. They had the general concurrence of all the landowners on the line, and if they approved of this bill, there was every prospect of their going on satisfactorily. The only question of difficulty was that of the gauge: and they would, on going before the committee, have a clause authorizing them to set aside the decision of the Railway Commissioners to alter the gauge. In two of their Acts there were clauses providing that the line should be laid down on the national gauge, but in a third Act it was provided that it should be subject to the decision of the Railway Commissioners, and therefore they must have a clause to set that at rest. The Board applied to the Commissioners to be allowed to produce evidence before them on the merits of the question, but the Commissioners would not listen to them. The gentlemen in the country and the landowners on the line asked to be heard, but he regretted to say the Commissioners would not but he regretted to say the Commissioners had a hear them. It was singular that ten days before the decision of the Commissioners was come to it was well known to other parties. The company had no choice but to use every effort before the committee on the bill to set aside the Commissioners' decision. The SECRETARY read the heads of the two bills.

It was stated that the object of the Bristol and Exeter was to "burke" the Taw Vale line, and to carry their branch to Tiverton, and make the South Molton branch, so as to prevent 30 miles of the Taw

Vale line from being constructed.

Resolutions were then passed unanimously approving of the two bills, subject to such modifications as Parliament may deem expedient.

EXETER AND CREDITON.

June 5 .- Special Meeting, London .- Mr. E. COOPER

in the chair.

Mr. J. WILKINSON went through the heads of a bill for authorizing the sale or lease to the London and South-Western of the Exeter and Crediton and the Bodmin and Wadebridge, and the carrying into effect of certain arrangements between the same company and the Taw Vale and Dock.

The CHAIRMAN moved a resolution approving of

the bill, which was seconded, and carried by a majority of 14 against 6.

Mr. J. B. BADHAM, secretary of the Bristol and Exeter, demanded a poll, with the view of recording a small number of votes against the bill, the great majority being in favour of it.

GRAVESEND AND ROCHESTER.

June 7 .- Special Meeting, London .- Mr. G. MOXON in the chair.

This was merely a pro forma meeting under the Act, to receive the Report of the directors as to the progress of the settlement of the company's affairs.

CORK, BLACKROCK AND PASSAGE. May 30.—Half-yearly Meeting, Cork.—Dr. Lyons in the chair.

The Report congratulated the proprietors on their favourable position, and stated that those share-holders who had visited the line had expressed their unqualified approbation at the rapid advance in the works. The balance in hand would enable them to keep the contractor at full work until the autumn. The directors had ordered the traffic along the course of the line to be again taken during the early part of the year, and the result justified their most sanguine expectations. The statement of accounts to the 29th of April showed the receipts at 37,111l.; expenditure, 26,188l.; balance, 10,923l.

The CHAIRMAN, on moving the adoption of the Report, said, that since the meeting in last November the improvement in their position far exceeded his expectations; that in spite of the depressions of the times, and the difficulty of obtaining money, they had received during six months ending the 29th of April, 11,142l., which, with 3,364l. received since, made 14,507l.; out of which they had paid for land, 7,9921.; and for works, 6,2851.; together, 14,2771.;

Digitized by **GOO** 

while they had already received from the shareholders 40,016% they were sure of getting 1,000% per month during the summer, and after further payments for works and land amounting to 1,600%, they would have up to the present time a balance in hand of 12,700l. With regard to the arrears, although the last call was for 15,000l, the arrears since the last meeting had not increased. The directors had spared no one, having established a rule that those who owed two calls should be proceeded against. There was no doubt the line would be completed in the course of a year or fifteen months. The directors were invariably the first to pay up their calls, and there was not one of them who owed a shilling to the company. During the last half-year, some of the English shareholders, who heretofore were the most punctual to pay up, had become defaulters for the last two calls, owing to a dread of revolution in the country, which he could assure them was wholly improbable.

In answer to questions, the Chairman and others stated that 11.000%, was the amount of unpaid calls: that they would get 9,000.4 of it, with 5 per cent. interest, while the defaulters forfeited 4 per cent., which together would make a loss to the latter of 9 That the salaries and office expenses were per cent.

about 500%. per annum.

The CHAIRMAN said it was not the intention of the directors to make another call before November, and in case the defaulters paid up in the interim it would not be made so soon. He hoped by that time that five-sixths of the line between Cork and Passage would be completed.

The Report was received and adopted.

PARIS AND ROUEN AND ROUEN AND HAVRE. June 9.—Special Meeting, London.—Sir J. East-HOPE, Bart., in the chair.

The CHAIRMAN said, that M. Laffitte had been unable to come to England, but that his partner Mr. Blount, who was also a director, would give an out-line of the course pursued, and of the sentiments of the directors as to the late measures contemplated by

the French Government.

Mr. REED, the secretary, then read the Report, which commenced by detailing the attention of the directors to the interests of the property, and declared that the total receipts, from Jan. 1 to Feb. 23, presented an augmentation of 111,556f. 55c. over the corresponding period of last year. The damage effected by incendiaries and others during the late revolution, limited though it was, and capable of repairs, has not the less thrown on the shareholders an indirect and heavy loss. Thus, the junction with the Havre was interrupted by the destruction of one of the arches of the bridge at Rouen. The far more serious damage done to the bridge at Bezons for there four arches had been set fire to, and two of them entirely destroyed—produced a new break in the line; and, lastly, the entire destruction of the bridge at Asnières on the St. Germain, menaced your circulation with a far more protracted interruption. Our first act, before these events, was to offer to the Provisional Government to transport gratuitously the articles of food necessary for Paris. Our first care, after we heard of them, was to claim its protection against acts of devastation, and to demand pecuniary assistance for the damage done to our line. The intervention of the public force was accorded us; but we could not obtain any pecuniary aid. However, on the 1st of March the service was resumed from Maisons to Rouen; and the transport from Paris to Maisons, and the passage through Rouen, were effected by means of omnibuses. This first partial working lasted from the 1st of March to the 15th of April, the period at which the passage over the bridge at Bezons, and through Rouen, having been re-established, we were enabled to bring our starting-point nearer, fixing it at Colombes, where the line runs in on the St. Germain. The construction of the bridge at Asnières will be ter-minated in a week, and then the whole distance between Paris and Havre may be travelled over without interruption. You can easily imagine what must have been the results of this partial working. In the first period, from March 1 to April 15, the average of the receipts was 9,333f. 65c. per day; and in the second period, from April 16 to May 15, it was 19,221f. The period of the receipts was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 15, it was 12,334f. 7c. per day, which gives a mean receipt of 10,535f. 2c. per day. In the corresponding period of last year, the receipt had risen to 25,317f. 61c. per day. And now what were our resources to provide for the repairs of our line and to keep up the working and the expenses? The Government had refused to give us any assistance; about two millions of the bonds of our two loans were paralysed in our hands; all our disposable funds had been employed in payment of the greatest part of the dividends of the shares and of the bonds. We thus found ourselves under the necessity of suspending all payments which and stock and in the development of the traffic in the turmoil of a Republican tempest.

had not for object the repairs of our line and the wants of the current working. We immediately submitted a statement of this situation to the third parties concerned, fortunately few in number, who held our engagements to order, and we asked them for a delay of a year. This proposition had been favourably received, and we were on the point of addressing propositions of arrangement to the persons who held dividend warrants for shares and bonds, when the Government plan to take possession of the railways came, two months back, and paralyzed our last remaining means of credit, and arrested every negotiation with our creditors. The Report then details the steps taken by the Government to make known its intention on the project of the State absorption. It was evident that the Minister of Finance rejected the basis of revenue, and gave, in the three modes of repurchase pointed out by him, the preference to the settlement of the value of the shares according to the average price of the Bourse, from the 23rd of August to the 23rd of February last, payable in 5 per cent. rente, at the average price of the same period. The Report then continues to discuss the injustice of the redemption under any circumstances: and asks naïvely enough,-Is our financial state of affairs so desperate that the property and the working of the Rouen should be handed over to the State, in exchange for a rente of 39f. 9c., when the nett produce of the shares amounted last year to 51f. 25c., and when the company has before it the resources of a concession of 99 years! It remarks,—We have carefully sought for, in the exposé des motifs, the advantages which the State promised to the public, and we have not found a single one that was not, or could not be, realized by companies. In order to increase the responsibility of the companies, their adversaries have exaggerated their power. It is now said that the authority which governs them may, at its will, develope or destroy any branch of industry or com-During the five years that the Rouen has been at work, has such a complaint ever been made against your company by any branch of commerce or industry, except by those engaged in the carrying trade? And as regards them, will the State do better or otherwise for them than did the Rouen Company? Finally, after appealing to the reduced tariffs of the line, and denying the ability of the State to better supply the wants of the public, it concludes:—Your concession was not wrested or tricked from the State; it was freely granted at a period when men of the most reformist opinions refused to the Government the construction and the working of the railways, on account of suspicion and incapa-You undertook the Rouen line in default of the State, and when ill-calculated attempts appeared to render associations for great works of public utility impossible. This, certainly, is not a reason why it should be now sought to dispossess you of a property legally acquired, at a price less than its value. Our first care was to demand a hearing before the Committee of the National Assembly. We pointed out to it the considerations which we have just laid before you. We hope that you will approve of this defence of your interests, and that

you will add fresh force to it by your adhesion.

The CHAIRMAN said that this Report had been adopted by the proprietors in Paris. Its acceptance had been combined with a determination to concur to the very letter in every opinion it enunciated. order to assimilate the proceedings here and at Paris. he submitted a resolution strongly urging upon the directors to oppose by every possible means the plan of taking possession of the railways which has been threatened by the Provisional Government of France -a plan subversive of the rights of property, adapted to destroy all confidence in the solemn engagements of Governments, alike subversive of sound policy and the acknowledged rights of public faith.

Mr. BLOUNT, having been associated with the events adverted to in the Report, said they would remember that a law had been presented to the Chambers, authorizing the Government to purchase the railways. sent to the committees respectively of Public Works and Finances, and the latter on the first examination of the bill decided against the principle. mittee, however, nominated a sub-committee, and it was composed of M. Berryer as president, and four or five other members known to be much adverse to the This committee was instructed to hear the companies one after another and to report thereon to a general committee. He, Mr. Blount, with M. Thi-baudeau, the secretary, appeared on behalf of the Paris and Rouen and Rouen and Havre, and M. Berryer, the president, informed them that they must confine themselves to the examination of their position before the 23rd of February last in relation to the State. They informed the president that the money they had expended on the road in material

amounted to 65,000,000f., of which 86,000,000f. had been raised by shares, 14,000,000f., by Government loan, and 11,000,000f. by private company. The whole of this sum had been realized, with the exception of 2,000,000f., which still remained in hand, and at the moment the revolution broke out their finanthe moment the revolution broke out their cial position could not have been better. Their debts amounted to 4,000,000f., of which they had a right to borrow 2,000,000f., and their traffic was aways summent to meet the excess. Incy then spoke of the revenue, which from the first day of opening had always been increasing. Last year they had given the shareholders 51f., and they had every reason, previous to the 28rd of February, to believe that on the two months of January and February the comparative increase in the receipts would have been 125,000f. They then dwelt upon the devastating effect of the revolution. For four days their traffic had been entirely stopped, and the receipts upon the different sections had fallen in the ratio of 9 to 25. Their stations and buildings had been burnt down, and their level crossings destroyed to the extent of 20,000l. They told the minister that they had paid up every sous of interest, and that instead of their being debtors to the Government, they considered the Government were debtors to them, on the principle of the law of France and of nations that, where property was destroyed indemnity hould be given for the damage. They further told them that since February the sum of 160,000f. had become due to the Government for interest; that, in July they would have to pay 560,000f. as a first instalment on the repayment of the Government loan, and that they did not think the Government had any right whatever to put forward the non-execution of a single contract by the Rouen Company as a reason for confiscating the line. Nothing, they protested, was more iniquitous than the appropriation price offered by the minister, on a quotation of six months in the market. When asked what they considered a fair indemnity, they answered, any measure would be an injustice which cancelled the clause that authorized the State not to make a purchase before 1860. M. Berryer contended that the Government had a right to expropriate the railway, and that they might fairly send to a jury for an and that they hight larry send to a jury for an appreciation of what that clause was considered to be worth. They had received 2,000,000f. last year as against a revenue of 4,000,000f. this year; and the Government would be putting into their pockets 16,000,000f. or 50 per cent. They represented to the committee the reprobation with which the project of appropriation was received in England, and characterized it as not only infamous but subversive of all the principles of commercial honesty. The bill was to come on yesterday for final decision. The directors had done all in their power to protect the property of the proprietors, and their officers had met with insult in the fulfilment of their duty.

Mr. TITE supported the resolution, and characterized the proposed measures of the French Government as a distinct step of spoliation and of national and individual wrong, inflicted upon every English merchant and tradesman who had invested his funds in French undertakings. There was no exigency whatever that demanded it, and he trusted the bill would be tabooed.

Mr. LOCKE, M.P., said that when the Paris and Rouen was first opened nine years ago, he exerted himself greatly in forming a locomotive establishment, and in improving the then low state of manufacturing industry in France. Then the French could not manufacture their own locomotives; nor, indeed, could the Paris and Rouen have been worked at all, had it not been that he induced a number of English workmen to go over and establish them-selves there as engine-makers and drivers. The result had been that they had worked the Paris and Orleans at a cost of 95 centimes per kilometre instead of at 170 centimes per kilometre, and the only return they were receiving now was the expulsion of these very British engine-drivers who had been of such emineut service in the developement of their manufacturing

Mr. L. HEYWORTH cordially supported the resolution, and concurred in the sentiments of the Report. The majority against the measure in the financial committee augured well for the rejection of the bill; and he hoped that there were men of sufficiently noble principle in France to vote for its total rejection, for should it pass, it was his opinion that the spoliation would only terminate in the ruin of France herself.

Mr. BLOUNT, in reply to a proprietor, then alluded at some length to the political prospects of France, and her probable future, characterizing the present Provisional Government as a ship without a rudder,

The resolution was subsequently put to the vote and carried unanimously.

Mr. HEYWORTH suggested that a copy should be sent to each member of the National Assembly.

## PARIS AND ROUEN.

May 30 .- Special Meeting, Paris .- M. DE L'ESPEE in the chair.

M. THIBAUDEAU read the Report.

During the early part of the present year the traffic was gradually recovering from the depressed state into which the late commercial crisis had thrown it. as the rethe late commercial crists and thrown it, as the receipts from January 1 to February 23 presented an augmentation of 111,556f. 55c. over the corresponding period of the previous year. The damage done to the line at the revolution had caused a depression of the receipts from 25,317. 61c. per day to 9,333. 65c. but this latter sum increased to 12,334f. 7c. when the bridge of Bezons and the passage through Rouen had been repaired. The temporary bridge at Asnières, for the service of the line, would be completed in a fortnight, and then the transport from Paris to Havre would again be resumed without interruption. The Board had applied to the Government for pecuniary assistance to repair the damage in question, but had not received the smallest sum, so that they were obliged to do all from their own resources. In consequence of the drain thus made on them, they had applied to the holders of their bonds for a year's delay, and had nearly concluded the arrangement when the Government bill authorizing the State to take possession of the various lines threw everything into perturbation. The Report then discusses at great length this measure, and shows in how disastrous a manner it would affect the interests of the company. It asks whether it is equitable for the Minister to offer 2,808,000f. of rente for a line which, after paying all expenses, interests of loans, sinking fund, &c., gives a clear revenue of 4,271,915f.; or, in other words, a rent of 39f. 9c. per share, when the produce is not less than 61f. 25c. per share, and this, be it recollected, with a lease of ninety-two years to The Report then disposes of the question in all its bearings, with arguments to prove that it ought never to take place.

M. THIBAUDEAU gave a vivd voce account of what passed the preceding day before the committee of the National Assembly, when he and Mr. Blount ap-peared before it to defend the interests of the com-

pany.

A Shareholder then proposed that a committee should be appointed to act with the Board, as had

been done in other companies.

This was at once negatived, the meeting declaring that the directors had evinced such prudence and energy that it was unnecessary to add to them any extraneous assistance.

## ORLEANS AND BORDEAUX.

May 31.—Special Meeting, Paris.—The Duc DE MOUCHY in the chair.

M. BENAT, one of the managing directors, read a Report respecting the decree emanating from the Provisional Government, and formally submitted to the National Assembly by the Minister of Finance. The directors had protested in the most formal and energetic manner against the proposed flagrant violation, without any necessity shown, of existing contracts between the companies and the State—thus destroying confidence in the stability and inviolability of all property whatsoever, and leading directly to communism and universal spoliation. The Report communism and universal spoliation. The Report then argued the legal and other considerations in opposition to the ministerial measure, and exposed the hollowness of some and the absurdity of others of the reasons. Among these may be named the assertion that great financial companies are essentially "aristocratic" in their nature and composition, and utterly incompatible with republican institu-tions: that the power and influence of the companies may create a dangerous rivalry to that of the State, and in certain conjunctures impede or embarrass the public service. The former was contradicted by the experience of the United States of America, and the latter is equally unfounded in fact. On the contrary, the companies were essentially "democratic" in their nature and composition. The great mass of the shareholders were small capitalists, annuitants or tradesmen; they elected their own directors, and called upon them periodically to give an account of their stewardship. The possible impediment to the public service was simply ridiculous, for it was well known that the very laws by which the companies exist subject them to the most complete control by the State and its functionaries, even to the most minute details of their internal administration or their relations with the public. The plea of the necessity of providing employment for the labouring population out of work, had no better foundation than the others.

Several of the lines, and this amongst the number, were already the property of the State, and the companies simply the lessees. The State was bound to buy the land for the site of the railway and to construct the earthwork, the bridges and stations. Let the State, then, give increased activity to the works by doubling or tripling the number of its workmen. There were on this railway alone, on upwards of 200 miles between Tours and Bordeaux, the means of additional employment for from 50,000 to 100,000 men at the disposal of the Government. The Report then explained the plan proposed for the purchase of the shares, and its consequences, reduced to figures. It was to take as a basis, not as was generally supposed, the average price of shares and 5 per cent. stock during the six months preceding the revo-lution of the 24th of February, but the mean between the highest and the lowest quotation for each during that period. To say nothing of the injustice of selecting a period of universal distress and embarrassment. during which shares of all sorts were unduly depressed in their market value as compared with the public funds, it was manifestly unjust to apply any such principle for estimating the value of a railway yielding a revenue. The application of the proposed measure to the shares of this company would be as follows:—The mean price of the shares (150f. paid) was 115f., and the mean price of 5 per cent. stock, The price of the latter this day is barely 70f. Upon this basis each share of 150f. would be entitled to a rente in the 5 per cents. of 4f. 95c., not quite 5f. This annuity would represent the following sums in capital (in lieu of 150f. paid), at several rates of the probable market value of the 5 per cent. stock :-

Five per Cents. at par, a capital of ... 99f. 0c.
70 (present price) ... 69f. 20c.
65 ,... 64f. 30c. ,, 60

And with the proposed creation of between 20,000,00f. and 30,000,000f. additional stock for the railways alone, it was not too much to suppose that the market price would fall to 60, or even lower. It was therefore 69f. which the shareholder would get, at the price of this day, for the 150f. he had paid on each of his shares; and it might be only 59f., or perhaps even less, according to the complexion of political events, which no one could foresee. But the injus-tice would appear still more glaring if the value of the share be considered with reference to the amount actually paid up plus the reserve applied in easement of the capital, and also with reference to the revenue yielded by each share since the partial opening of the The 150f. have thus increased to 162f. 10c The 81 per cent. first year's revenue gives a value of 309f. The six months of the second year, ending the 31st of December, as a basis for the whole year, 511f. 50c. These would be respectively the real value of the 150f. share estimated upon each of these bases, and supposing the right or the necessity for expropriation to exist. The Report concluded by showing that the whole question was now before the shareholders, and the directors were prepared to carry out their wishes, whatever they might be.

An animated debate ensued, in which the meeting declared their entire approval of the course pursued by the directors, and their determination to resist by every means the passing of the project. question was put to the vote only one hand was held up against it. A committee of three shareholders was then named to co-operate with an equal number of the directors in the opposition to the project.

## TOURS AND NANTES.

June 2 .- Special Meeting, Paris .- M. LANCASTEL in the chair.

The Report stated that the sums paid by the share holders amounted to 16,000,000f. (640,000l.), or 200f. per share, but the project of law for the purchase of the line would only allow them 3,619,640f. (144,775l.), or 45f. per share, while the actual sum expended by the company amounted to 14,872,983f. (594,919l.), or 185f. 80c. per share. Under these circumstances, they could not comprehend how the National Assembly could possibly sanction the purchase of the line by the State for a sum amounting to but one-fourth of its value. If the shareholders were compelled to give up the line for the price offered, they would thus be deprived of 11,072,563f. (442,902*l*.) of their property, for which they would receive no return. They felt satisfied that the National Assembly would not authorize such an act of spoliation.

Resolutions were passed adopting the Report, suspending the payment of the call of 25f. per share until the question with regard to the purchase was decided, and appointing a committee of five shareholders, with instructions either to oppose the project for purchasing the line, or to endeavour to obtain more reasonable conditions from the Government.

BELGIAN EASTERN JUNCTION. June 7 .- Adjourned Meeting, London. SMITH in the chair.

The proprietors met to decide as to the further consideration of the Report (see ante, p. 390). By the terms of the cahier des charges one-half of the works should be finished by the 17th of July next; and it was therefore in the power of the Minister of Public Works to declare the concession void, and to runne works to declare the concession void, and to forfeit the caution money; therefore anything like a deferred period for the forfeiture of the caution money must be looked upon as a boon. The directors felt it their duty to proceed to constitute the company by the issue of scrip certificates, as without that they could do no act that was legal, or even effect a dissolution. This line would undoubtedly be constructed sooner or later, as there were two com-panies to which its construction would be of vital importance. They were not in a position now to reject or accept, but they would be so by their next meeting on the 5th of July.

A Proprietor asked how much money had been ex-

pended since last September.

The Secretary said that for office expenses the amount was 377l. 12s. 9d., and about 2,000l. of liabilities had been discharged.

Mr. HEAD asked how much they had in the hands of their banker at Brussels.

The CHAIRMAN said about 21,000l., but that was not available, for the banker had got what is called a sursis, which gave him twelve months to liquidate his engagement, although the company had ample security for the repayment. At the end of a period of about fifteen months they might realize the amount, which was out at 4 per cent. interest. If the caution money were now sold, the 30,000l. would only realize about 18,000l.

Mr. HOPKINSON asked if the Namur and Liege had

settled the terms of the agreement.

The CHAIRMAN said the stock was proposed to be transferred to that company to enable them to borrow money on these coupons, the interest being 10 per cent. per annum.

A Proprietor was anxious to see a division of the

3,000l. in England and the 21,000l. in Belgium, leav-

ing the 30,000t. caution money to chance.

The Chairman said the directors were willing to pay back the money in hand and dissolve, but they could only take steps for that purpose in a legal manner. The receipts must be exchanged for certificates; neither could they dissolve except by the vote of three-fifths of the shareholders, without rendering the directors personally liable.

Mr. Head asked if they could not appropriate the

caution money to making a portion of the line.

The CHAIRMAN said that if such an arrangement

could be come to it would be very advantageous, as they might dispose of it afterwards.

After a long and friendly discussion as to the posi-

tion of the company, the recommendation of the directors to the shareholders, to exchange their receipts for certificates, was approved by the meeting, so as to constitute the shareholders by the next meeting, on the 5th of July, when any resolutions can be come to in a legal way.

## Parliamentary Proceedings.

COMMONS.

June 6.--Leeds and Thirsk (branch from Melmerby to Northallerton and Junction with York and New-castle) Bill.—On the motion that the Report be further considered, Mr. HUDSON moved as an amendment that the Report be further considered that day six months, on the ground that the bill contained provisions in direct violation of the Standing Orders provisions in direct violation of the Standing Orders of the house.—A protracted discussion ensued, in which the bill was supported by Messrs. W. BECKETT, DRUMMOND (Surrey), BROTHERTON, HUME, COBDEN, Sir R. INGLIS and Mr. SIMEON, and opposed by Messrs. BARNARD, LABOUCHERE, Sir J. GRAHAM, Mr. ELLICE, jun., Lord D. HALLYBURTON and Mr. ELLICE.—The house divided—For the bill, 70; for the amendment, 31; majority for the bill, 39.—The Report was then agreed to.—London and South-Report was then agreed to.—London and South-Western Acts Amendment Bill.—On the motion for the further consideration of the Report on this bill, Mr. BERNAL observed that the bill was one for a double purpose, to raise additional capital for works, and also to maintain a line of packets between Southampton and Havre. It was proposed to raise a capital of 100,000%. for the latter purpose, to which the Railway Commissioners objected, and suggested that an alteration should be made in the preamble. Another objection was the power given to the company by clause 40 of setting off at law against any action for goods, the sums due on calls. Either that was the law or not; if not, the law ought to be made the same for all companies.—After a conversation, in

Digitized by GOOGIC

which Mr. BECKETT and Mr. CHAPLIN joined, the further consideration of the Report was postponed till Friday.—Scottish Midland Junction (Amendment and Branch to Lawrencekirk) .- On the motion for the further consideration of the Report on this bill, Capt. FORDYCE opposed the bill, on the ground that the parliamentary contract had only been signed by the directors, and that the bona ride nature of the undertaking had not been established. He moved six months.—Mr. Wortley said the directors had signed the contract on the part of the general body of the proprietors amongst whom the shares were held, and it had already received the sanction of the committee and of the house. The committee had also expressed themselves satisfied as to the bona fides of the undertaking.-Mr. E. ELLICE, after reprobating the loose practice which had crept in with regard to the execution of parliamentary contracts, and pointing out the evils thence arising, observed that in this case they were provided against by a clause requiring the distribution of the shares amongst the proprietors. He should therefore not oppose the bill after the explanation of the right hon. gentleman opposite.—Mr. E. ELLICE, jun., opposed the bill, and said if ever there was an instance in which the house ought to insist on its own Standing Orders with regard to subscription contracts, this was the case. regard to subscription contracts, this was the case. There was certainly a clause requiring the shares to be distributed pro rata, but the shareholders were not obliged to take them up.—Mr. H. DRUMMOND supported the bill.—Mr. F. MAULE thought the contract-deed sufficient, and said the line authorized by this bill would be the best line to Aberdeen.—Mr. C. BRUCK opposed the bill.—The house then divided— For the further consideration of the Report, 50; against it, 29; majority, 21.—The Report was then received, and the bill was ordered to be engrossed.— Caledonian (Bridge over the Clyde) .- Mr. F. MACKEN-ZIE referred to a conversation which occurred some days ago respecting the withdrawal of the Admiralty veto to the carrying of a bridge over the Clyde, at Glasgow. Upon that occasion the hon. gentleman, the Secretary for the Admiralty, was reported to have said that the veto which the Admiralty had interposed for three consecutive years had in the first instance been withdrawn, and that the Board of Admiralty naturally supposed that the Earl of Eglintoun and the other parties who waited on the Board for that purpose were the parties whom they represented themselves to be, but that, having discovered this to be not the case, the veto would be interposed for another year. He must do the hon. gentleman the justice to say that he had given the Earl of Eglintoun, in private, a satisfactory explanation, but he (Mr. F. Mackenzie) thought that the explanation should be made as publicly as the original statement. He therefore wished to ask the hon. gentleman, pursuant to notice, whether he still thought that Lord Eglintoun had misrepresented the object for which he had waited on the Board of Admiralty.—Mr. WARD had, of course, no objection to repeat publicly ward had, or course, no objection to repeat publicly what he had already stated in private. He thought he might say that the Report which had been referred to was singularly inaccurate. There were many questions put and answered, and the result was thrown together in the Report. The facts were simply these:—that Lord Eglintoun, with the hon. member for Glasgow, and two or three other mem-bers of the house, obtained an interview with the Board of Admiralty, not as having any connexion with the Caledonian, but as being connected with Ayrshire and some other counties through which the hine passed. They came as a separate and distinct party from the Caledonian, but they had hardly left the room when the Caledonian deputation was ushered into it, and, the subject being the same, and the conversation unbroken, he (Mr. Ward) naturally concluded that the two deputations were one. All that he wished to say, and meant to say, with respect to the Earl of Eglintoun and his friends, was, that a deputation composed of such persons gave such an air of good faith and responsibility to its statements that it was impossible for the Board of Admiralty to suppose that any misrepresentations could have been made. He need not say that he disclaimed having the slightest idea of imputing to the noble earl any intention of misleading the Admiralty in the matter.

Railway Commission.—Mr. BANKES deferred his motion for the repeal of the Railway Commission Act till the 4th of July.

June 7 .- Great Northern (Isle of Axholme). bill having been read a third time, Lord GALWAY moved to add a clause, by way of rider, to the effect of making it compulsory on the company to complete the main line between Gainsborough and Bawtry within the period allowed by the Act for the completion of the extension line.—The clause was opposed by Messrs. Christopher, G. Berkeley, Pusey and urged that the house should support the decision of

GREENE, and supported by Capt. DUNCOMBE.—The house divided—For the clause, 12; against it, 50; majority against the clause, 38.—The clause was con-

sequently lost, and the bill passed.

June 8.—Sir J. Graham said, in reference to this bill, a printed statement had yesterday at the door of the -nay, almost within the house itself-been circulated and placed in the hands of members, containing against Mr. Milnes and the Rev. Mr. Neville, purchaser of an estate formerly belonging to the late Lord Spencer) grave allegations of corruption and misconduct. It was imputed to Mr. Milnes and Mr. Neville, that for the corrupt purpose of obtain-ing further compensation for their lands they had got up an opposition to the bill in question, but which they did not afterwards proceed with, and not con-tent with taking a review of their conduct, the statement went on to allege that on a former occasion the bill had been rejected by a majority of 178 to 34; and that this had been effected by the union of those two gentlemen with the London and York; and that by these means a packed majority had been obtained. Now, this was a great abuse, and a breach of privi-lege. Still, however, he did not wish to take any step in the matter further than to solemnly deny, on the part of Mr. Milnes, that he had been actuated by any such motive as that attributed to him.-Mr. M MILNES begged to substantiate this statement. His father had taken no part whatever in the opposition, and he himself had absented himself from the house on the division referred to. He felt that something ought to be done to put a stop to the circulation, ap parently under the sanction of the house, of such anonymous libels. — Mr. Christopher said, that though he had charge of the bill in question, he had not referred at all to the documents complained of, to the publication of which, he begged to say, he had not been a party.—Sir R. H. INGLIS thought, in justice to parliamentary agents, that the house ought to be informed whose were the names of the agents subscribed to this document.—Lord GALWAY said it was probable that the solicitors to the bill thought no more of the matter than the agents.-Mr. BRIGHT rose to order. The agents only acted on the instruc-tions they received, and why, therefore, should their names be given up? The defence which the right hon. baronet (Sir J. Graham) had made of the gen-tleman attacked ought to satisfy the house and the country.—Mr. Greene concurred in what had fallen from the hon. member for Manchester.—Mr. Hume reminded the right hon. gentleman in the chair, that some time since it was a question as to how far agents practising before the house should be subject to any recommendation or licence.—Mr. W. PATTEN said that the system of distributing papers in the house was carried on by other persons than parliamentary agents. -Lord GALWAY disclaimed, on the part of the Rev. Mr. Neville, the conduct imputed to that gentleman by the document now before the house, and which was without any printer's name.—Sir J. Graham said it was an anonymous publication, against which the gentlemen aggrieved could not take any proceedings out of the house; and what made it still more offensive was, that the charges were made in the name of a great company.—The SPEAKER said it was quite true, as stated by the hon. member for Montrose, that certain regulations with regard to parliamentary agents had been laid down by the noble lord who had preceded him (the Speaker) in his present position and these regulations were to perfect the property of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second state of the second present position, and those regulations went to permit the Speaker to remove from his roll any party guilty of misconduct. Now if the house could adopt a rule that no statements should be circulated unless signed by some parliamentary agent, the matter would be under its own control, and these anonymous publications of gross misstatements would be put an end to.—The conversation then dropped.

—Paisley, Barrhead and Hurlet.—On the motion for further consideration, Mr. F. MACKENZIE took objection to the parliamentary contract, more than half being signed for by four of the directors. He moved that the report should be further considered that day six months.—Mr. Hume said he had com-plained last session of the irregular way in which the funds of this concern were subscribed. The bill had been, in consequence, suspended. One of the parties subscribing the contract had subscribed, in this and other concerns, for 612,000*l*., and others for still larger sums.—Mr. BOUVERIE said the bill had not been suspended for the reason stated, but on account of the existence of some agreement with a canal company, contrary to public policy. The committee year had reported that there was a bond ride intention to complete the line, and that the under-taking had been regularly promoted.—Mr. Bankes, as one of the committee of last year, said that the

the committee of this session. To do otherwise, after the late decision on the Scottish Midland, would be gross inconsistency.—After a few words from Messrs. OSWALD, HENLEY, ELLIOT and H. DRUMMOND, the house divided—For the consideration of the report, 66; against it, 35; majority, 31.—Mr. Bernal drew attention to clause 46 of the bill, which empowered another company to hold shares in this company, and which appeared to him to contravene a former report.—After a few words in explanation from Mr. Bouverne, the Report was received, and the bill was ordered to be engrossed.

## COMMITTEES ON OPPOSED BILLS.

PORT OF GREAT GRIMSBY.

## NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d, per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

On compte que les nouveaux bassins seront prêts à recevoir es vaisseaux vers la fin de l'année 1849.

les vaisseaux vers la fin de l'année 1849.

Ces bassin offriront des avantages bien decidés sur la plupart des autres ports de Mer de l'Angleterre en étant accessibles à toute heure, excepté pendant une couple d'heures à la marée basse, en tems de maline.

Le Havre présente un abri en tout tems. Les communications par l'entremise des Chemins de Fer de MANCHESTER, de SHEFFIELD, et des Lignes du comté de LINCOLN, seront ouvertes avec tous les districts manufacturiers et avec toutes les parties de la Grande Bretagne.

## SCOTTISH MIDLAND JUNCTION SHREWSBURY & BIRMINGHAM RAILWAY.

PROCEEDINGS of a SPECIAL MEETING of the Shareholders of the Scottish Midland Junction Railway Company held in the Town Hall of Perth, on Tuesday, the 6th day of June 1848, pursuant to Advertisement,—

P. W. OGILVY, Esq., one of the Directors, was called to the Chair.

The Secretary read the Advertisement calling the Meeting.

The Minute of the proposed Agreement between the Cale-donian Railway Company and the Scottish Midland Junc-tion Railway Company, of which a copy was transmitted to each Shareholder, was read and considered by the Meeting.

Whereupon it was moved by Sir John Richardson, Bart. of Pitfour,-

of Pittour,—
That the Meeting do specially approve of the Agreement entered into by the Directors of this Company with the Caledonian Railway Company, by which the latter Company undertake to purchase, or lease in perpetuity, the Scottish Midland Junction Railway, at a fixed guarantee of 6 per cent.; and ratify and confirm such Agreement ac-

which motion was seconded by James M. Honey, Esq.; and, after consideration, was unanimously agreed to by the Shareholders and Proxies of Shareholders present.

It was moved by James Dick Miller, Esq., and seconded by David Craigie, Esq.,—
That it be remitted to the Directors, with full powers to

That it be remitted to the Directors, with full powers to apply to Parliament, in conjunction with the Directors of the Caledonian Railway Company, for such Act or Acts as may be necessary, and generally to carry out all measures which may be required for carrying the Agreement into Which motion was submitted to the Meeting; and, after

consideration, was unanimously agreed to by the Share-holders and Proxies of Shareholders present.

It was moved by JAMES M. HONEY, Esq.,-

That in the meantime, preparatory to an application to Parliament, the Directors be empowered to enter into an Agreement with the Caledonian Railway Company, embodying the terms, together with the modes of payment and management usual in such cases; it being understood that the full amount of 6 per cent. on a capital of 600,0004, shall be substantially secured to the Scottish Midland Junction Railway Company, and that the line shall be fairly worked as a through line to the North; and if at any time any dis-pute shall arise as to the fairness of such working, the same

shall be determined by Joseph Locke, Esq., M.P.
Which motion was seconded by John Kerr, Esq., of Dundee,
and after being submitted to the Meeting and considered, was unanimously agreed to by the Shareholders and Proxies of Shareholders present.

It was thereafter moved by George Freeland Barbours,
Esq., and seconded by David Craigle, Esq.,—
That a clause be inserted in the Lease and Working
Agreement, providing that there shall be no traffic carried
on on the line of the railway and branches on the Lord's

Day.

To which James Condie, Esq. moved, as an amendment, That, without expressing any opinion on the question embodied in Mr. Barbour's motion, it is not expedient to entertain it at the present meeting.

Which on being seconded by Hugh Warson, Esq., was put to the Meeting, along with the metion, when the Share-holders present voted as follows, viz.:—

Names. Votes.

shall be sold, or otherwise disposed of, or merged in the

shall be sold, or otherwise disposed of, or merged in the capital stock of the Company, as the Directors may see fit.

The CHAIRMAN having moved—

3. That the Shrewsbury and Birmingham Railway Company do, and they are hereby authorized to, borrow on mortgage or bond such sum or sums of money as the Board mortgage or bond such sum or sums of money as the Board of Directors of the said Company determine, not exceeding in the whole the sum of 433,000. which, by the Shrewsbury and Birmingham Railway Act, 1846, is authorized to be borrowed, as soon as the sum of 650,000. being half the share capital authorized by the said Act to be raised) shall have been actually paid up:—

The following addition thereto was proposed and the resolution so amended was carried,—

And this Meeting further authorizes the Directors, in their discretion, to raise the whole or any part of the said sum of 433,000. by creating New Shares of the Lompany, of such amount, and to issue the same in such manner and at such times, as the said Directors shall think fit.

such times, as the said Directors shall think fit. R. H. CLIVE, Chairman.

It was further resolved, on the motion of J. M. Gutch, Esq.; seconded by Admiral Sir Charles Malcolm, K.C.B.,—
That the best thanks of this Meeting be awarded to the Hon. H. R. Clive, M.P., for his able and impartial conduct in the chair.

GEORGIE KNOX, Secretary.
London, 3. Moorgafe-street, June 15, 1848 in the chair. GEORGE KNOX London, 3, Moorgate-street, June 15, 1848.

## SATURDAY, JUNE 17.

MORE EXPERIMENTS ON THE GAUGES.

The Morning Herald continues to publish the experiments produced at the discussion in the Institution of Civil Engineers, along with its own comments and application of the same. We give them below, but with our decided dissent from the conclusions drawn and our protest against experiments made on so short a space and in so rough a manner being used as the basis from which to draw with safety any conclusions of a general kind. We are glad to hear that there is every likelihood of experiments on a large scale and of an indisputable character being made on the subject of the re-sistance of railway trains, which may settle all these questions in a manner worthy of the profession and of the great interests placed in their hands.

EXPERIMENTS DOWN INCLINED PLANES BY GRAVITY. "We return to the consideration of this interesting and important practical railway investigation. As we have previously stated, the question of the "resistances to railway trains at certain velocities" is not a mere scientific question, but one in which the convenience and accommodation of the public are very materially involved. The establishment of the truth of the formula, which makes the resistance, at 60 miles per hour, some 40lb. per ton, or 50 per cent. higher than we shall presently show it to be, would present a strong economical argument either against express travelling, or for the restriction of the accommodation of quick transit to first-class pas-

sengers at high fares.

In the observations made by us a few days since, in reference to the extraordinary differences of opinion existing on the subject between practical engineers, we noticed the singular fact that while a uniform velocity of not more than 36 miles per hour has ever velocity of not more than 36 miles per hour has ever been maintained with narrow-gauge trains, by the force of gravity, down an incline of 1 in 100, a uni-form velocity of upwards of 53 miles per hour had been maintained with broad-gauge trains by gravity down an equal incline. We then stated that we had ourselves gone down the Box tunnel incline (1 in 100) at a greater uniform velocity than 53 miles per hour. We have since made a series of experiments down the Wootton Bassett incline, stated to be 1 in 100, but some portion of which is 1 in 110 only; and down other inclines on the Bristol and Exeter Railway; and from the details given below, it will be seen that a much greater uniform velocity than 53 miles per hour, even under very unfavourable circumstances, can be obtained down 1 in 100, by gravity, and that consequently the foundation on which many railway engineers have rested the very pillar of their theory of high rates of resistance at high velocities, is utterly without substantiality,—that, indeed, it is a mere fallacy, which will hereafter be numbered among the

delusions and visions of practical men.

The whole of the following experiments were made with ordinary working trains, and the object was not to collect minute data from which any scientific results might be deduced, but simply to prove, exclusive of the results of experiments made by either broad or of the results of experiments made by either broad or narrow-gauge engineers, that what has long been considered an established fact in reference to the resistance of railway trains descending inclined planes by force of gravity, is a mere circumstance which, although applicable to narrow-gauge trains, is utterly inapplicable to broad-gauge trains. The diversities in the rates of speed shown in the workings given below arose, no doubt, from a great variety of causes. Nearly the whole of the portions of the line over which the experiments were made consisted of a series which the experiments were made consisted of a series of curves, and of cuttings and embankments. The carriages were of different weights, and may occasionally have been well or badly coupled. One day the weather was calm, the next it was unsettled; in some of the experiments there was a slight head wind, in others a moderate side wind from the right, or a moderate side wind from the left prevailed, and during three of the experiments there was a brisk side wind. The speed, too, at which the trains were running when the steam was shut off would, in relation to the weights of the carriages, as well as to the direction of the wind, enter into the causes of these diversities of speed. We shall, however, not hazard a single opinion on these matters, but confine our-selves to demonstrations that the formula of high resistances at high velocities is worthless in respect of the resistances due to broad-gauge trains descend-

ing inclined planes by their own gravity.

In the experiments made down the Wootton Bas-

sett incline with the dynamometer carriage, constructed under the directions of Mr. Brunel, the carriages were weighted to 10 tonseach. In no one of the experiments given below, which were made with the experiments given below, which were made with the ordinary passenger trains, did any of the carri-ages amount to this weight, that is, they were not full of passengers. The engines employed belong to an old class, and weigh, road-worthy, about 23 or 24 tons. It has been objected against the experiments made

down the Wootton Bassett incline with the dynamometer carriage, that the distance over which a uniform or increasing velocity was attained, viz., 10 or 11-16ths of a mile, is too short to produce a useful practical result. To meet this objection we took the rates of speed not only down the mile and one-eighth of the fall of 1 in 100, but down the next seven-eighths of a mile, which are on a fall of 1 in 660 only. The fall of 1 in 100 commences a few chains beyond the 85th mile-post, and terminates a few furlongs beyond the 86½ mile-post. Thence to the 86½ mile-post the fall in 666.

The first experiment was made with a train consisting of four passenger carriages, three horse-boxes and one luggage-van, weighing about 60 tons. The engine was the 'Orion.' The following is the working for the quarter mile immediately preceding the 85th mile-post, as well as from the 85th to the 86# mile-post. The rails were dry, and very little wind was stirring.

	Time	per Quarter	-mile

864		17		52-9
				1 01 10

It is here seen that the speed for upwards of half a mile down 1 in 660 is very little below the uniform velocity down nearly three-quarters of a mile of 1 in 100. We merely record the fact, leaving those who have more time at their command than we have our-

selves to explain or suggest the causes."

This first experiment proves precisely the reverse of the theory of the writer, in so far as it proves anything. At 85, near the com-mencement of the incline, a quarter of a mile is done in 15 seconds; at 864, near the foot of the incline, it takes 16½ seconds, being a velocity rapidly retarded, instead of uniform, which is precisely as might have been expected. The next experiment is so badly observed that nothing at all can be deduced from it.

The next trip was with a train of four passenger carriages and a horse-box, weighing about 41 or 42 tons, and was attached to the 'Mars' engine. The following is the working—rails dry and weather

865		18		50

This third experiment has at 85 a quarter of a mile done in 163 seconds; and at 861, the foot of the incline, it takes 174, being again a clear case of retardation instead of acceleration, or at least uniformity, as the writer would have it. In the fourth experiment we have again at 85 one quarter of a mile in 16½ seconds, and at the foot, at 861, one quarter of a mile in 171 seconds,—exactly proving the reverse of the writer's theory. The fifth is irregular, and shows nothing at all.

brand' engine. The train consisted of three passenger carriages and a luggage-van, weighing about 36 tons. The carriages were well filled with passengers. Below is the working:—

86₹		164	••••	54.5	
867		17		52.9	
/T31 ·				•	

The sixth experiment belongs again to the retarded series, and disproves the writer's theory; the speed at starting is 57 and at ending 54 miles an hour! The same may be said of the seventh, eighth and ninth. The rest are on the inclination of 1 in 120.

The seventh trip was with the 'Arab,' with a train consisting of three passenger carriages and a luggage-yan, weight about 38 or 40 tons—carriages well filled. In this trip we obtained the greatest uniform velocity -rails dry; weather calm :-

176	*****	21		41.9					
1761		21		42.4					

In this experiment the velocity down an incline, less by 20 ft. per mile than that down which the narrow-gauge trains have never yet maintained a uniform velocity of more than 36 miles per hour, increased from 36.3 to 42.4 or 6.1 miles per hour. And yet we have little doubt we shall still find practical men contrading for the high rate of resistances. tical men contending for the high rates of resistances which some of the narrow-gauge party pertinaciously assume to be due to all railway trains travelling at

high velocities.

The eleventh experiment was from the 1723 to the 1703—viz., 2 miles. The engine employed was the 'Saturn,' and the train consisted of five passenger carriages and a luggage-van, weighing about 56 or 57 tons. For about two-thirds of a mile the fall is 1 in 82; this is followed by a fall of about 6 chains of 1 in 90, and another fall of about 7 or 8 chains of 1 in 82. The rest of the distance is on a fall of 1 in 82. The rest of the distance is on a long of the train through 1 in 90. The average velocity of the train through the same of the train through the same of the train through the same of the train through the same of the train through the same of the train through the same of the train through the same of the train through the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of the same of t the White Ball Tunnel, 49 chains in length, and which immediately precedes the inclines over which we took the working of the train, was 42.5 miles per hour. It will be seen that this speed was increased to 50 miles an hour at the 1703 mile-post. The following are the workings of this trip:

Mile-posts.	i	Mile	es per Hour.	
1724		201		43.9
1721		201		44.5
172		20		45

In this experiment the steam was shut off at the 1723 mile post, which is in the White Ball Tunnel."

The reader who has read our comments, in which we show that the experiments exceeding 50 miles an hour all show rapid retardation, will be surprised at the following conclusion,that an uniform velocity of 60 miles an hour is maintained by broad-gauge carriages down 1 in 100-a conclusion directly in the face of the facts adduced.

"The results of these experiments satisfy us that, with broad-gauge passenger carriages, weighted to 10 tons each, a uniform velocity of at least 60 miles per hour can be obtained by gravity down a straight incline of 1 in 100, in calm weather; that is, 21 miles per hour faster than the velocity laid down in the

could get 60 miles per hour out of a locomotive. now get 75 miles per hour with heavy trains. His opinion that he could obtain a uniform velocity of from 50 to 55 miles per hour by gravity down 1 in 100, was treated with scarcely less courtesy. These practically demonstrated and demonstrative affirmatives of things declared to be "impossible," should teach some of our extremely clever paper calculators and ingenious theorizers the insecurity—for their own fame—of laying down "general" rules upon incomplete or one-sided data. They are too positive and too clever—genius is modest, and usually doubts in these matters.

The experiments were taken with one of Charles Frodsham's beautifully accurate split seconds hand watches, the construction of which we explained in a previous article."

### THE INVENTOR OF THE TUBULAR BRIDGES.

We are glad to find that the views on this subject which we stated last week are entirely confirmed by the following letter, in reply to one which had appeared in the Manchester Guardian from Mr. Bateman, and which we inserted in our last :-

Sir,-My attention having been drawn to a letter from Mr. Bateman, in your paper of last Saturday, on the subject of the tubular bridges at Conway and the Menai Straits, of which the merit is, without scruple, arrogated to Mr. Fairbairn, I beg to annex an extract from a letter to me from the latter gentleman, dated the 27th of October 1846:

"I am much obliged by your letter of yesterday, and especially that part of it which relates to the original idea of the bridge. I am sure it was yours in every respect; but there is nothing new, or likely to turn out valuable, but there immediately start up a hundred claimants. We are all subject to this mental encroachment; but in your case everything is now clear. At all events, you may rest assured of my best efforts in supporting the claim to which you are so justly entitled."

This extract shows sufficiently Mr. Fairbairn's feeling at the time when his letter was written, which was subsequent to the passing of the Act; and I will only add to it, that I have never attempted in any way to detract from the merits of any party connected with the work, but have always freely acknowledged the valuable assistance which has been afforded to me during its progress by Mr. Fairbairn, Mr. Hodgkinson, and Mr. Clark; but that Mr. Fairbairn devised, or had charge of the entire construction, is simply a mis-statement of facts. He, in common with the other two gentlemen named, aided me by his advice, and I acted upon it, or otherwise, as I thought proper. The company looked to me as alone responsible; and in my discretion every other party who has been concerned in the progress of ROBT. STEPHENSON.

these bridges was engaged. Ros:
24, Great George-street, Westminster,
May 31.

## Railway Literature.

Irish Wants and Practical Remedies. By H. Brown, Esq. M.P.

Mr. Humphrey Brown, the member for Tewkesbury, has not forgotten his connexion with the railway interest. He has here presented an inquiry into and an argument for the special reasons which exist for affording Government aid to Irish lines. We fear that our present Ministers are so fond merely of negotiations, as Mr. Disraeli told them, of "letting the night unravel what the day begins," that neither the Scottish nor Irish applicants will obtain any very comprehensive realization of their wishes.

Mr. Brown, in his introduction, thus presents himself :-

"At the request of several Irish members of the Legislature, the author has been induced to submit to the public the reasons by which he has been guided in supporting a Government system of railway relief for Ireland. A practical acquaintance with railway administration in England, and with the resources of railway traffic in Ireland, and the possession of unpublished information on this latter head, form his excuse, if such be needed at this crisis, for

inquiry:-first, what capital will be required for a system of railways, and how far it is obtainable from Ireland; and second, what immediate and permanent effect railways are calculated to produce in that country.'

In declaring the reproductiveness of the investment of railway capital, he says :-

"Above sixty millions of passengers were carried in 1847, with very small loss of life or accident. (Half-year ending the 31st of December 1847, 31,734,607 passengers, eight killed.) At least twenty millions of tons of goods and materials were moved by railways, of which not less than ten millions of tons were coals. Of live stock, half a million of cattle must have been conveyed; two millions of sheep and half a million of pigs. An immense economy in the conveyance of this mass of human beings, and of live conveyance of this mass of human beings, and of live and dead produce, must have been effected; and vast results must have accrued from a system of locomotion, which allows of the speedy removal of men and goods to those places were they can be most usefully employed. We must, however, look at this extraordinary organization of modern times in another point of view. By a return mode on the let of May 1847. of view. By a return made on the 1st of May 1847, there were then permanently employed on the railways 47,218 persons. These must now be 50,000. There were employed at the same date in the construction of railways 256,509 persons, making the total employed on lines of railway, and in construction, 303,727. Of these, the number of artificers, labourers and miners was 270,335, besides other descriptions of persons employed in rough labour. This number of 303,727 is exclusive of colliers, men employed in iron works, engine and coach factories, brick-makers, and very many other trades connected with railway employment. These men, too, are mostly heads of families, having others dependent upon them for subsistence. If the whole number of persons employed be taken as 400,000, and these be multiplied by five, it will give 2,000,000 of persons, multiplied by five, it will give 2,000,000 of persons, or a number equivalent to a quarter of the population of Ireland, obtaining railway employment in England. Railways are therefore capable of giving profitable and productive employment on a large scale; they have been proved to be so in England, Scotland and partially in Ireland; why, then, should they not be largely applied to Ireland?"

There are some very striking results of railway communication, which the writer has con-

way communication, which the writer has conducted, in support of his case, and to which we shall take another opportunity of reverting. Meanwhile, let us hope that this advocacy may

meet with attention if not success.

## Official Papers.

EASTERN UNION

The following is the Engineer's Report, read to the

EASTERN UNION.

The following is the Engineer's Report, read to the meeting June 1, of which we gave merely a brief abstract (ante, p. 388):—

I have the pleasure of reporting that the permanent way and works upon the 51 miles of main line and branches which you have now open for public traffic are in a very satisfactory condition. The severe trial which the comparatively new works have been subject to during the past winter, has produced neither injury nor failure beyond what are inseparable from all undertakings of the kind; and henceforward the upholding of the permanent way and works will be effected at less than the average annual cost per mile upon most other lines. It is also most satisfactory for me to be able to report that no casualty of the slightest kind has occurred either to the public using your line or to the property of the company since the opening for public traffic in June 1846, which is in the highest degree creditable to the zeal and watchfulness of the company's servants. The engines, carriages, waggons and other working stock of the company continue in a very efficient state. It has been considered necessary, in order to keep them so, that a small repairing establishment should be thus early formed at your principal station, with convenient sheds, shops and smithies, supplied with efficient tools and machinery. Repairs to the company's carrying stock will now be effected with facility, under the direction of the company's superintendent, at a minimum cost. An ample carrying stock having been provided for working your present lines, no large additional outlay will have to be incurred under this important head of expenditure when you open your line to Norwich. The goods warehouses, wharfs, depots and sidings are, with a few trifling exceptions, completed, and are sufficiently extensive to accommodate a large increase of traffic. The passenger stations, platforms, sheds and approaches are, with the exception of Stowmarket, also finished. At several of the stations some additional expenditur formula.

We perfectly well recollect that Mr. Brunel was laughed at when he stated, some years ago, that he laughed at when he stated, some years ago, that he laughed at when he stated, some years ago, that he laughed at when he stated down in the form his excuse, if such be needed at this crisis, for the discussion of the measures advisate the dant circumstances is perhaps necessary. With the view of giving ample accommodation to the various lines proposed to be constructed to Bury from Thetford, Sudbury, Newmarket and Ely, and to prevent the construction of another

Digitized by GOGIC

station proposed by the rival companies, as also in fulfil-ment of an assurance from this company when seeking the sanction of the town to the extension of their line, the presanction of the town to the extension of their line, the present station was constructed; and it will not be found ultimately larger than the traffic will require. The Eastern Union, in addition to the line from Colchester to Ipswich, comprises extra works in branch lines, wharfs, sidings, warehouses and sheds, rendered necessary by the requirements of the traffic, all of which are in excellent condition. The Ipswich and Bury, irrespective of the Norwich line, comprises various extra works, branches, and an extension over the Thetford road at Bury to the present station; also wharfs, warehouses, approaches, roads, sidings and other conveniences for an extended traffic; and in passing the bill through Parliament various additional works and deviations were forced upon the company by landowners, whereby the over the Inettord road at Bury to the present station; also wharfs, warehouses, approaches, roads, sidings and other conveniences for an extended traffic; and in passing the bill through Parliament various additional works and deviations were forced upon the company by landowners, whereby the expense of construction was increased; several public road bridges have been substituted for level crossings, by which the annual working expenses have been reduced. Notwithstanding all these additions to the expenditure, it appears that when the whole of the company's lines are completed, the cost per mile will be under 22,0007., including stations and carrying stock. The works upon the Hadleigh line, including passenger stations, goods warehouses, depots, sidings, &c., are completed, and in good order. It will, I hope, be satisfactory to the shareholders to be informed that no claims whatever for extra works, on account of the construction of any portion of the company's line, remain unsettled. The early completion of the Norwich line being all-important to the prosperity of the company, I beg to lay its present position before you, for the general information of the shareholders, premising that the cost of works, materials and land promises to be quite within the parliamentary estimate. From the junction with the Bury line at Haughley, nearly to the fourth mile at the Diss-road, Finningham, the carthwork, containing nearly 200,000 cubic yards of excavation, is just completed; four bridges and several culverts are built, and the permanent road laid throughout. The ballasting and adjusting the road for traffic is being proceeded with; and this part of the line, which will produce an additional six miles of beneficial traffic to the Stowmarket station, may, in a few days, be opened for keneral use. The earthwork is very heavy on the fourth to lifth mile at Finningham, and through non-possession of land is not very far advanced. It is now, however, in vigorous progress, but from its position will, I fear, require nearly the cupy about five months. The works generally are light on the twelfth and twenty-first mile at Long Stratton; of the bridges and culverts some few are built, others partially completed, and some not commenced. The earthworks are about half-completed. It will take about six months to complete this portion of the line. The earthworks and masonry are very heavy but well advanced on the twenty-first to twenty-fourth and a half mile at Flordon; nearly 100,000 cubic yards of earthwork have been removed to embankment. The viaduct over the river Tese, two public road bridges, with several large culverts and occupation crossings, are completed, and a portion of line laid and ballasted. These works are in progress, and will require about ten months to complete. The earthworks and works in masonry on the twenty-fourth and a half to the twenty-eighth and a half mile at Dunston, are of considerable extent, and nearly half finished. It will take from eight to ten months to complete them. The length on the twenty-eighth and a half to the thirty-first mile at Norwich comprises the heaviest portion of the line, and was the first commenced, the digging the first sod being celebrated on the lill at 29 miles. The carthwork and masonry which has been executed is very considerable; about 100,000 cubic yards have been removed into embankment; the river Yare viaduct is half built; Marks Ilal public road bridge, and various other works, are, some entirely completed, and the remainder in progress, and will require nearly twelve months to complete them. There are now employed upon the Norwich line about 500 workmen and 40 horses, which live line is to be opened at the periods you propose.

## CORK, BLACKROCK AND PASSAGE.

Engineer's Report for the Meeting, May 30 (p. 405).

will be done in a few days. The next two embankments, occupying a length of 850 yards, are also nearly completed, requiring only 3,600 cubic yards of earth from side cutting occupying a length of 850 yards, are also nearly completed, requiring only 3,600 cubic yards of earth from side cutting to bring them to the proper height. A quantity of ballast is also provided on this portion of the line. The cutting through the limestone rock at Dundanion Castle is excavated to the proper level as far as the Blackrock-road; and since possession of Mr. Smith's land was obtained, further progress to a considerable extent has been made, and there are now 150 men and 20 horses in the cutting. 22,000 cubic yards of rock and 3,200 of earth have been already removed, and have been carried to the embankment across the Blackrock Slob, which is formed to the extent of 550 yards, but not to the full height. The stone bridge across the Rock cutting, for the avenue to Dundanion Castle, is completed, with the exception of the coping to the parapet. The skew bridge to carry the Blackrock-road over the line is rapidly progressing; the abutments are completed and the centering fixed; and some of the arch-sheeting laid, as fifty masons are nt work on it. I expect it will be completed in a fortnight or three weeks. The cutting in the south side of Blackrock, near Douglas Channel, in Spencer's ground, is progressing very rapidly; 100 men and 12 horses are employed upon it—the stuff is carried out on rails to the tiphead by waggons: and as 50 of these are at constant work, the progress making is very considerable—35,000 cubic yards of earth being already removed and carried to the embankment across the Douglas Slob, and within 100 ft. of the viaduct over the channel. This viaduct is of timber, and is now nearly complete; the bearing piles, cross heads and girders are laid, and nothing remains to be done but the planking and hand-rail. Considerable progress has been made in the earth cutting between the old and new roads to Passage—80 men and 40 horses are now employed on it. unde in the earth cutting between the old and new roads to Passage—80 men and 40 horses are now employed on it 4,500 cubie yards of earth have been removed and carried into the embankment along the Passage-road; there are also 150 men employed in side cutting for this embankment. The contractor has provided a larke quantity of plank, including rails and waggons, for this portion of the work, which will be proceeded with rapidly during the summer months; about 1,200 tons of pitching have been provided and laid down ready to be put in place as soon as the embankments are ready. The contractor is now in possession of all the land required for his work with the exception of halfa mile, so that the progress will be very considerable during the next six months, and I hope in a very forward state of completion.

J. MacNELL.

## Progress of Works.

BELFAST AND BALLYMENA .- The erections and other arrangements necessary for conducting the goods traffic are being proceeded with and will be completed in the course of a couple of weeks. A goods train commenced running on the 1st inst. From the quantities of merchandise which are carried, and from the quantities that are offered but cannot be carried in consequence of the company not being in a position to convey them, the amount of revenue which will arise from this department is likely to come up to the expectations entertained. The traffic which will be concentrated at Ballymena, says the Banner of Ulster, from that neighbourhood and the Banner of Ulster, from that neighbourhood and the more northern localities of Antrim—from Coleraine, Ballymoney and their dependencies, from the north and north-east districts of Derry—together with what will be collected at the Randalstown branch from other portions of the latter county, including Castledawson, Maghera, Dungiven, Magherafelt, Moneymore and Kilrea, will, we expect, place this railway projects. The line will have a more than proportionate passenger traffic, from the circumstance that it affords a desirable means of trips for purposes of health or amusement. purposes of health or amusement.

purposes of health or amusement.

Bolton, Blackburn and West Yorkshire.—A Government Inspector, Capt. Wynne, R.E., having inspected this line and reported the works as satisfactory, one line of rails has been opened to the publishing the control of the publishing the control of the control of the publishing the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control On the 12th, says the Manchester Guardian, at 9 45 a.m., an engine and four carriages arrived from Blackburn with passengers, and on reaching Brad-shawgate-bridge, where the line passes under the street, the train by some means got off the rails and caused considerable alarm to the passengers, but for-tunately no damage was sustained. The engine was stopped immediately and the train restored to its proper position, and the passengers went forward without any loss of time.—Mr. J. Yeo, head guard, met with a serious accident at the Blackburn station, in being caught between the buffers of two carriages while they were being hooked together. He had several ribs broken and was considerably bruised.

BRISTOL AND EXETER (Tiverton branch) .- June Engineer's Report for the Meeting, May 30 (p. 405).

I beg to send you the following Report on the present state of the works. I am happy in being able to report to you that the works are in a very satisfactory state. Since the contractor has been put in possession of the land, he has used every exertion to push them on with vigour. The embankment in the City Park has been formed for a length of 1,123 yards, at an average height of 11 ft.; upwards of 60,000 cubic yards of earth have been put into this embankment from side cutting; a large quantity of excellent stone for pitching and ballasting has been procured and laid up in heaps ready to cart along the line as soon as it is prepared to receive it; all that is now required to complete this embankment is to level off and trim the slopes, which 12.—This branch was formally opened for public traffic. The 10 a.m. train from Exeter took the di-

EASTERN UNION.—June 8.—The portion of the Norwich line, extending from the junction at Haugh-ley to the intended station of the Finningham-road, a distance of about three miles, was traversed for the first time by a locomotive engine and train, which carried the roof and other materials for the station carried the roof and other materials for the station now building. This length, says the Bury Herald, will very shortly be opened for general traffic, and the station being a little distance from several populous villages, it is thought this short line will give much accommodation. The works are satisfactorily progressing throughout the whole line. There are now about 500 men employed, chiefly on the heavier parts of the line, and, with the continuance of fine weather, it is honed the company will be able to onen weather, it is hoped the company will be able to open the line to Long Stratton in the course of the present

LIVERPOOL AND BURY .- The whole of this line is now presenting a busy appearance. According to the Liverpool Standard, the directors will probably have their "opening day" early in September. The principal part of the work to be executed is in Wigan and the neighbourhood. Piles are placed under the rails of the North Union, under which the line passes.

NORTH BRITISH (Hawick Branch) .- This branch, which is presently open as far as Fushie Bridge, will be extended the length of Galashiels about the beginning of July. The North British Mail asserts that it will be decidedly the favourite tourist line, as the abbeys of Teviotdale are by it opened up to the metropolis and those visiting Edinburgh from the west and north. Abbotsford and Selkirk are also within

South-Eastern (Gravesend branch).—A tunnel under the road, from New Cross to Deptford, is now excavated, and a passage to join the Greenwich branch is making with the soil from the cuttings. Considerable difficulty, says the Sun, seems to occur in working the line through the hill on the Amersham property, south of the main road. The land-springs flow at the depth of 17ft. or 18ft., faster than the engineers had expected, consequently the working of the cutting is delayed. It is necessary to pump away the water to prevent the inundation of the tunnel and low parts of the line. The spectators who are not geologists or engineers consider the great quantity of water on the soil of this high ground a remarkable occurrence, because the adjoining land north of the road is low enough to drain the upper parts. It no doubt had that effect to a certain extent, as the fields in the valley have long produced the finest vegetables brought to the London markets. This arduous work

will, it is said, occupy at least two years.

South-Western.—Although the scarcity of money put a stop, in a great degree, to the works on many put a stop, in a great degree, to the works on many lines for some months past, those on the South-Western were continued with a very slight decrease. The branch from Basingstoke to Overton, Whitchurch and Andover to Salisbury has still many men employed, and the works are progressing fast towards completion. A great many fresh hands are to be set on next Monday on the intended extension to Voryil through Wilton. Gillipsham Shahaman to Yeovil, through Wilton, Gillingham, Sherbourne, &c. The Farnham branch (9 miles) is nearly completed; the tunnel under St. Catherine's-hill, Guildford, one mile in length, has nearly all the brick-work finished, and the line is expected to be open very soon; its extension to Alton (10 miles) is pro-gressing rapidly. The branch to Godalming, four gressing rapidly. The branch to Godalming, four miles from Guildford, is expected to be ready for traffic in a few months. The expense of forming this branch will, it is supposed, be the cheapest anywhere on the South-Western line, it being computed that under 10,000?. per mile will suffice for the same. The Waterloo Bridge extension will, it is understood, be opened for traffic on the 1st of July.

## Accidents.

CALEDONIAN.-June 10. -As a luggage train was coming through the arch at the St. Rollox terminus, the foremost truck came against one of the cabs crossing the road at the time, for the purpose of waiting the arrival of the train from Carlisle, and smashed it in pieces. The horse getting free, ran off along the line, but was pursued and soon overtaken. Luckily there was no one in the cab; but the driver was thrown under the carriages and seriously hurt.

LONDON AND NORTH-WESTERN (Crewc) .- June 11 The 9th foot were en route by a train from London soon after 6 a.m. which reached Crewe about 7 p.m.; it had stood there about half an hour, and the officers had partaken of refreshments and reseated themselves in the carriages, when a train was seen approaching them from behind, and the engineer attempted to get the brakes reversed and to move forward, but before he could remove his train out of the way the luggage train ran into them, breaking and upsetting a horse-box, a luggage-van and several

Digitized by GOGIC

carriages, and seriously but not dangerously hurting many of the passengers. The officers were in the last carriage, and but for the luggage-van and horse-box being behind them would probably have been killed. With the exception of the officer in command (Major Thomas) they were all more or less hurt with contusions about the head, face or legs, and most of them have been confined to bed in consequence of pain arising either from wounds or in consequence of the shock. Two valuable horses were killed in the horse-box, and another had a narrow escape. The whole number of officers and soldiers injured is said to have been about sixty; but many of these, on arriving at Manchester, had so far recovered as to be able to take care of themselves. It is not apprehended that any of the cases will be fatal.

apprehended that any of the cases will be fatal.

MIDLAND GREAT WESTERN.—June 8.—The first train up (consisting of four carriages, all well filled with passengers) from the hill of Down had reached Maynooth at the usual time. There is a lie-bye at the station, and on this there was a down luggage train waiting until the up train passed on. The man who had charge of the points, says the *Irish Raiheay* (azette, by some unexplained mistake, turned the point of the line towards the rail on which the luggage train was placed, and the up train ran into the luggage train. There were some passengers hurt, seven or eight persons rather severely. The buffers of the engine were split in pieces, and some of the carriages partially broken. The pointsman was taken into custody and brought to the station at the Broadstone. He is liable to be prosecuted under the Act of Parliament for negligence. He admits having turned on the point through mistake.

Southampton and Dorchester.—June 3.—The 5 45 a.m. train for London, on approaching a place called St. Leonard's Bridge, between Wimborne and Ringwood, went with accelerated speed, according to usual practice, in order to obtain velocity to ascend an inclination. At St. Leonard's Bridge there is a siding, and after any waggon has left or entered a self-acting lever clears the main line. Owing to the rain the lever became rusty, or from some other cause it did not clear the main line after something had passed it. The consequence was that the train above mentioned ran into the siding for about 100 yards, against three waggons, laden with fir poles. Fortunately the waggons gave way, or the consequences would have been most serious; as it was, the waggons were knocked to atoms, the buffer-planks of the engine was destroyed, the engine-driver was wounded (it is feared fatally), and the fireman was injured. The passengers escaped unhurt. The train was delayed three or four hours.

## Lam Intelligence.

June 10.—In the Lord Chancellor's Court, in re Holden v. the North-Western, this was a motion to discharge an order of injunction from the Vice-Chancellor, restraining the company from completing that portion of their branch line to Leamington which runs in the vicinity of the Crown Hotel. The allegation to sustain the injunction was that the company were carrying the line nearer to the Crown Hotel by upwards of ten yards than they were authorized to do under the deposited parliamentary plan.—The Lord Chancellor said that when the motion was before him on a former occasion he entertained an opinion that the evidence on the point in dispute was conclusive against the plaintiff, but on its being stated at the bar that there had not been sufficient time to answer some affidavits of the defendants he gave time for that purpose. That alleged defect had now been remedied, but his Lordship was compelled to say that the affidavits did not remove his first impression. He would look into them more attentively at the carliest opportunity, and if he found anything to affect his present opinion he would call for a reply. Subject to this consideration, the injunction is dissolved.

June 10.—In the Vice-Chancellon's Court, exparte the Eastern Counties, counsel preferred a petition, presented under the following circumstances:—Certain land had been taken for the purposes of the line from a Mr. Brown, of Norfolk, and the sum of 1,000%. had been paid into court by way of deposit, under the Lands Clauses Act. An agreement was subsequently come to, by which Mr. Brown consented to sell his land to the company for 280%. The convexance was executed and the money paid. The object of this petition was, that the deposit of 1,000% might be ordered to be paid back to the railway company. The vendor had not been served with the petition, but there was an affidavit made by the solicitor to the company that the purchase had been completed, and that the proper cost directed by the Act had been paid.—The Vice-Chancellor said, under

these circumstances, he would make the order asked for without service upon the vendor.

Costs.—On the same day, in the same Court, in re Langham v. the Great Northern, Mr. Bacon, for the plaintiffs, moved that further proceedings might be stayed on the defendants' paying all the costs. The suit was instituted to restrain the defendants from dealing with the plaintiffs' land otherwise than according to the provisions of the Lands Clauses Consolidation Act; but after the commencement of the proceedings the plaintiffs were satisfied with what the company had done, and the only remaining question was as to the payment of the costs.—The Vice-Chancellor said he had known cases go so far as to stay proceedings at the instance of a plaintiff without making the plaintiff pay costs, but he knew none where the plaintiff had received costs under such circumstances. In the case referred to before Sir LShadwell there was an agreement between the parties as to the costs. The defendants were entitled to put in an answer which they might read on the question of costs. The motion must be refused, reserving the costs of it.

THE LAWYER AT FAULT .- June 13 .- In the same Court, in re Hopkins v. the Great Northern, this was a motion for an injunction to restrain the company from continuing to construct their line, near Boston The land had originally belonged to a Mr. Joice: the company had served a notice that they would require a portion, amounting to 2 acres and 3 perches. Mr. Joice then contracted to sell the land to the plaintiff, Mr. Hopkins (who was acting as his attorney), for 1,800t. The company had offered 1,500t. for the land; but this sum being refused, the company pro-The company had offered 1,500l. for the ceeded to assess the value by jury, under the Lands Clauses Act. The sum required by the plaintiff for the land was 5,000l., but the jury assessed it at 1,500l. only. The plaintiff refused to complete the sale, on the ground that the company were not enti-tled under their Act to take the land. The plaintiff had virtually acquiesced in the sale of the land, and could not raise any objection now to the finding of the jury. The plaintiff was solicitor to Mr. Joice, when the negotiations were first entered into, and when the negotiations were first entered into, and had actually advised his client not to receive the sum offered by the company.—The Vice-Chancellor considered that Mr. Hopkins had been acquainted with the transaction from the first, and no bill had been filed until the 23rd of May. His Honour had no objection to Mr. Hopkins having tried to make what advantage he could of the land, but he did think that preceditive should have been filed before that proceedings should have been taken long before The plaintiff must have been well aware that the company intended to proceed on the footing of all the former negotiations, but he allowed them to go on without any objection, until they had assessed the value of the land by a jury. He considered that the plaintiff had so conducted himself as to deprive himself of any right to prevent the company from pro-ceeding. He should therefore refuse the motion for an injunction, with costs.

COMPENSATION .- In the same Court, in re Walker v. the Eastern Counties, in September 1846 the plaintiff was served by the defendants with the usual notice under their Act, that certain houses in Wheeler-street and Phoenix-street, Spitalfields, of which he was the owner, would be required, and he was requested in the notice to furnish the particulars of his claim. In October 1846 the plaintiff sent in his claim to the defendants. This, however, had not been assented to by the defendants, who had, moreover, neglected to take any of the steps prescribed by the Act for obtaining an assessment of the price They had lately, however, entered into possession of one of the houses. The bill was filed, stating that service of notice upon the plaintiff was tantamount to a contract to purchase the premises, and praying that they might be decreed specifically to perform the contract, either by paying the plaintiff the amount of his claim, or by procuring a jury to be summoned for the purpose of assessing the price.— His Honour observed that in this case, the contract being once established, the parties were enabled to determine the price by the terms of their Act. The proper course, accordingly, would be, to order that the defendants do, within twenty-one days from the date of the order, issue a warrant to the sheriff to summon a jury to ascertain the amount of compensation to be paid by them to the plaintiff.—Further directions and costs reserved.

June 9.—In the Court of Queen's Bench, in re the Queen v. the Caledonian, Mr. Greig said, he appeared on the part of the Mayor and Corporation of Carlisle, to move for a rule to show cause why a mandamus should not issue directed to the Caledonian, commanding them to complete their works in and near Irish Gate Brow, in the vicinity of Carlisle, according to the directions given in their statute, &c. The affidavits stated that the corpora-

tion of Carlisle were bound to repair the road in question, which was much frequented, and led from the Old Irish Gate, at Carlisle, towards Wigton and other places; and that the corporation had given their assent to the bill on the faith that the road in question would be constructed according to the plans and sections. That, however, had not been done, and the road, which was bad and dangerous before, had been rendered much worse by the alteration which it had undergone; and, notwithstanding the remonstrances of the corporation, the company had refused to complete the road in the manner in which they were bound to do; the corporation had therefore been obliged to come to this Court for a mandamus.—The Court granted a rule nisi.

LIABILITY FOR GOODS LOST .- June 8 .- In the COURT OF EXCHEQUER, in re Machin v. the South-Western, this was an action against the defendants, as common carriers, to recover the value of a bale of silk, lost while in their custody. The question had been, whether the silk was stolen by one Johnson, he being then a servant of the defendants, in which event they would be liable; and the jury having found at the trial that that person did steal the silk left the question of law to be decided by the court, whether he was a servant of the defendants within the provise of the Carriers' Act at that time. The silk, on its arrival at Nine Elms, was handed over by the defendants to Johnson for delivery, he being engaged and paid by Chaplin & Horne, by whom the delivery in London of the goods carried by the defen-dants was contracted for. The company, however, appeared on the delivery tickets as the carriers, and Johnson's name was printed as one of their porters, and all complaints were to be sent to the clerk of the company. It was contended for the plaintiff that the defendants were liable for the felonious acts of Johnson, as their servant. On the part of the defendants it was submitted, that Johnson was not their servant within the meaning of the Act, and that Chaplin & Horne were the parties liable for his misconduct .-The Chief Baron was of opinion that Johnson was the servant of the defendants, and a verdict passed for the plaintiff, subject to a motion to enter a verdict for the defendants. A rule nisi having been subsequently obtained, counsel now showed cause, arguing that the delivery ticket stopped the defendants from denying that Johnson was their servant; and secondly, that though they might resort to that defence, they were yet liable for the felonious acts of that man, as their duty as carriers was to carry the silk safely to the end of the journey as they had undertaken to do, and if they contracted with any one to do a portion of that duty the servants of that person were their servants for this purpose.—Counsel person were their servants for this purpose.—Counsel for the defence claimed the right to explain the delivery ticket, as at the trial, by other and direct testimony, that Johnson was hired and paid by Chaplin & Horne; and such being the case, the company was not liable for him as their servant within the Act, which contemplated cases only in which the relation of master and servant existed, and not where that of agent was interposed. Here the company had no control over Johnson, and he could not be said to be a servant in their employ .-Chief Baron and the rest of the Court were of opinion that the rule ought to be discharged. Setting aside the narrow question of estoppel, they thought that Johnson was clearly the servant of the defendants, who, being common carriers for hire, had accepted the plaintiff's goods to carry to his house for hire. The line stopped at Nine Elms, and the defendants employed Chaplin & Horne to do the rest of their duty for them. Chaplin & Horne were thus their servants, and the servants of those persons were the servants of the company within the Act. It was not necessary that he should be paid or hired by the company. It was enough that, indirectly, they employed him to do a part of the work they had underaken themselves, and they were accordingly answerable to the plaintiff for his felonious acts.—Rule discharged.

SURVEYING, &c.—June 13.—In the same Court, in re Julian v. Joll, the action was brought for work done for the plaintiff in 1845, in surveying the projected lines of the Canterbury and Herne Bay and the Great Kent Atmospheric; and subsequently for other miscellaneous work. The total amount was for 54l. 8s., but a sum of 22l. 10s. was credited as paid on account to the plaintiff, and 15l. was paid into court, leaving a balance of 16l. 18s., now claimed. The plaintiff had been long on very friendly terms with, and a frequent visitor at the house of the defendant, and often breakfasted, dined and supped there. A set-off was now made by the defendant of 16l. 10s., on account of these entertainments. Several witnesses, principally fellow labourers with the plaintiff in the defendant's service, proved the work done; that it was well done; that the plaintiff was a person

Digitized by Google

of ability in his profession; and that the sum of a guinea a day and 15s. for expenses, paid during the railway surveys, was "ridiculously low," considering the great demand for surveyors during the mania, the common remuneration being from five to ten guineas a day, and sometimes more. The jury returned a verdict for the plaintiff for the amount claimed.

GUARANTEED SHAREHOLDER .- June 14 .- In the same Court, in re Mowatt v. Thompson, the plaintiff sought to recover from the defendant the sum of 1,500l., the residue of the sum paid by him as a deposit on certain shares in the Dover and Deal, it being alleged by the plaintiff that he had been induced solely to take the said shares and to pay the deposit thereon by an undertaking on the part of the board of direction, given to him by Mr. Hook, the secretary, that if the bill should be lost the whole of the deposits should be returned to him. An arrangement had been entered into with the South-Eastern, by which the projected company was to be guaran teed against all the costs if the bill was not obtained. The bill was lost, and, the South-Eastern having failed in their promise, the directors were not in situation to refund more than 1l. per share, which sum was accordingly paid to the plaintiff. At the trial before the Chief Baron, the Judge was of opinion that there was no evidence to show that the defendant was bound by the contract of Mr. Hook. and a verdict passed for the defendant. Subsequently a rule to enter a verdict for the plaintiff was obtained, and argued by Mr. Martin and Mr. Willes on the part of the plaintiff, and Mr. James and Mr. Jones on the part of the defendant, when time was taken to consider. -Mr. Baron Alderson delivered judgment.—The rule in its present shape ought to be discharged, for it did not appear that authority had been given to Mr. Hook to enter into such a contract after the defendant had become a member of the Board. It might have been before, and then it would not bind him, but, if after, he would be liable under the terms of the deed. There was no evidence at that time to fix the defendant with this contract, but, as it was possible that the plaintiff might supply this deficiency on a future occasion, he was at liberty to convert the verdict for the defendant into a nonsuit.—Judgment accordingly.

## Barliamentary Proceedings.

LORDS.

June 15 .- Railways .- Lord Monteagle wished to call the attention of the Noble Earl at the head of the Admiralty to two or three private bills on the table of the house. They had already been read a second time without exciting any observation whatever. All these bills involved a great principle. They were bills for the establishment of railways; and they also involved the important principle of enabling the proprietors to become shipping proprietors at the ports and harbours at which their railways ended. Thus—in addition to the monopoly which a railway always created—these persons were to be allowed to apply the profits which they derived from their railways to purchase shipping and steamboats, and to carry on trade. It was a Standing Order that their lordships should not give their sanction to such bills without stating the grounds for such sanction. He hoped that their lordships would carefully investigate the whole subject connected with these bills. The Noble Lord was also understood to ask whether the Government intended to transfer the Post-office communication between Dublin and Holyhead from the Admiralty to the Chester and Holyhead .- The Earl of AUCKLAND did not think that it would be beneficial to transfer the superintendence of the Post-office service from the Admiralty to any other With regard to the particular bills referred to by his noble friend, he would only say that he was not acquainted with their details. He could only say that the whole subject ought to be approached with care.—The Earl of GRANVILLE said that the Commissioners, in a report which they had made to the House of Commons, had called the attention of Parliament to the necessity of considering this subject. All these four bills contained clauses giving the shareholders the power of investing a certain amount of capital in the purchase of steam-vessels. The committee of the House of Commons had reported in favour of these bills, and as he had moved that that report be communicated to their lordships, in a few days he expected it would be on the table.—The Earl of Roden thought it would be extremely inconvenient if the superintendence of the Post-office communication were taken away from the Admiralty. He could himself bear testimony to the care with which the Admiralty provided the best means of communication between this country and Ireland.—Railway Board.—Lord REDESDALE rose, in pursuance of notice, to put a question in reference to

the duties which the Railway Commissioners were expected to perform, and their position in relation to the Government. This question was one of great importance, when they considered the variety of matters connected with railways which were constantly coming under consideration. When his noble friend (Lord Monteagle) put a question to-night in reference to certain railway bills which were before the house, the noble earl, one of the Commissioners (Lord Granville), to whom all these matters were referred, hardly seemed to be acquainted with the subject. In the first place, he must observe that there was now a Board entrusted with the superintendence of railways, the existence of which was hardly recog nised by those parties who were most interested in such matters. In 1844, when it became evident to all that in the ensuing session of Parliament there would be an immense number of railway bills brought before Parliament, it was thought expedient that the Board of Trade should be required to investigate the different schemes, and to report to Parliament. The noble earl (Earl Dalhousie), then the President of the Board of Trade, gave up his attention during the vacation to this important subject, and the reports which were issued under his superintendence, as to the different proposed lines, did him and his assistants the highest credit. It was then conceived that the Government would give its support to the report which emanated from its own Board. He (Lord Redesdale) believed if that support had been given no disapprobation would have been expressed. But no sooner were questions mooted by rival parties, than it was seen that the Government would give no support to the Board of Trade. In fact it was seen that a report of the House of Commons was to have more weight than a report of the Board of Trade. So sensible were the house of this, that in considering the dangers likely to arise from a mixture of the gauges, an address was moved to consider the subject of the gauges. That Commission made a report. The Government then became aware of the importance of that question, and it was taken up as a Government It was then thought that, as the railway interest had become so important, and as the business of the Board of Trade had been increased considerably, it would be well to appoint Railway Commissioners and a railway department. A Kailway Board was consequently formed, and Commissioners appointed. The duty of the Board was clearly defined in the Act—they were to report upon all railway affairs—but if the Board was not to receive governmental support it would naturally feel reluctant to issue reports, afterwards to be upset by the decision of a committee of the house of Parliament. In the course of the present session various important questions had arisen in which the Railway Board ought to have taken decided steps. The gauge question, for instance, was surely a subject on which the Government and Government officers ought to have reported to Parliament, as the bill was a public bill, and the settlement a public settlement of great national importance. There were also other subjects of deep public interest, amongst which he might rank the amalgamation of companies. These were matters of such vital importance, that, if Parliament decided on the institution of a Railway Board, such Board ought to take a leading part in them. How different was the position of this Board to the other public departments! Take, for instance, the Woods and Forests. Suppose the Chief Commissioner of Woods and Forests were to report to the house that certain alterations ought to be made, and certain recommendations carried out, and that the Board did not receive the support of the Government to which it belonged in carrying out its views—of what public utility would be such a Board? He asserted that the present position of the Railway Board, and the manner in which it was regarded by the country, clearly showed that it received very little support from the public and from Parliament, because it had done little towards the settlement of the important questions confided to it. He believed that the construction of the had been decided upon after much careful deliberation, and at the time of its appointment it was thought that a more stringent system for the regulation of railway affairs throughout the country was of lines had been sanctioned to promote private interest than to further public service; and it was thought that all matters taken up by the Board would have the support of the Government and of the public. Those expectations were not, however, realized, for no effort had been made to give the Board power and efficiency: neither had it ever rethose powers of control over railways which might be considered likely to redound to the public advantage. He should like to know whether the Board had really powers of control over the railways

throughout the country, and whether the Government were prepared to support it; for its operation would be utterly useless, and its position an exceedingly unfair one, if the recommendations in its Reports were not to be carried out. The present state of things was not creditable to the Government or to the parliamentary Board. Holding this opinion, he thought it his duty to put the question, of which he had given notice, to the noble marquis, and he honed that a clear and explicit answer might be given, in order that the public might know the relation in which the Railway Board stood, the duties which they were expected to perform, and the amount of support which was to be given to them.—The Mar-quis of Lansdowne replied, that although there had been an alteration in the constitution of the Board, which had suppressed (upon a principle of economy) its chief officer and the salary annexed to the office, the Board itself continued to exist in precisely the same relation to the Government as it had done before. Although the noble lord opposite did not appear disposed to think the duties of the Board important in the eyes of the public, he (the Marquis of Lansdowne) assured him that they were of very great public utility. The noble lord might not be aware of the numerous, various and important functions which the Board discharged. Those functions embraced the deciding upon the proper period for the opening of new lines of railway—inquiries into the causes of accidents—which unfortunately, too frequently occurred, and which called for constant and vigilant inspection—the regulation of cheap trains the miscellaneous powers relating to levels and crossings-disputes between companies-references under Orders, and reports on colonial railways. Standing Within the last twelve months no less than 780 miles of new railway had been inspected by the Board, and in the course of the present year a still greater number would have to be inspected and reported upon. Within the same period, inquiries have been made into 330 cases of accidents, and in twenty-two instances, special reports had been made, and valuable suggestions, emanating from engineers acting under the authority of the Commissioners, had been conveyed to the railway companies, who in most instances (he could not say in all) had promptly availed themselves of them. The Commissioners had also introduced no less than eighty stringent clauses into various Acts of Parliament relating to fifty different subjects. said thus much, he could not understand how it could be said, with justice, that the Railway Board had not discharged most important duties. The noble lord had also asked the amount of the authority which the Board possessed. In answer to that portion of the question he would state, that it was manifest to all persons who had observed the legislation which had taken place on this subject, that much moral weight attached to the opinions and decisions of the Board. All that Parliament could do was to attach weight to opinions and representations coming from that quarter, and to avail itself of those opinions where they saw no ground to act in a contrary manner. The noble lord had also asked whether the Government were prepared to give the Railway Board still greater powers. To that portion of the question he was not prepared to give the noble lord an answer. He believed that some jealousy would exist if it was considered that the entire weight of Government influence would be thrown into the recommendations of the Board. There was at present a certain amount of governmental interference in all the transactions of the railway department, for the Pre-sident and Vice-President of the Board of Trade were constituted Commissioners. Superadded to this there was the efficient assistance of the most competent public officers that could be procured. He had every reason to believe that the services of the Board would continue to be conducted in that vigilant and highly useful manner which had characterized them during the last twelve months.—After a few words from Lord Redesdale in explanation, Earl Granville observed that scarcely one of the reports of the Commissioners had ever been adopted by Parliament, as Parliament had generally overthrown them. He was of opinion that the Railway Board might be made more useful, but even supposing that no further powers were to be conferred upon it, he would be slow to say that it was a useless institution.-Lord REDESDALE expressed his opinion that the gauge question was one in which the Commissioners ought to have taken a most prominent part, as it was a great public question, which should have been met in a public manner. He hoped, therefore, that it would not be treated as a matter of private speculation, but as a matter of public importance. COMMONS

June 15.—Dundee and Perth (lease of Dundee and Arbroath).—Mr. Duncan having moved the further consideration of the report, Mr. Bernal objected to

Digitized by Google

the provisions of the bill, as being in contravention of the third Report of the Select Committee, as it of the third Report of the Select Committee, as it gave the company an undefined power of leasing lines not named.—Mr. DUNCAN consented to postpone the bill. — Whitehaven Junction (Extension, Alteration and Branches).—On the motion for the further consideration of the report on this bill, Mr. BERNAL pointed out that the bill contained leasing powers which contravened the Standing Order No. 126.— WILL CONTAINED the Standing Order No. 120.—
Mr. HILDYARD defended the bill, contending that the order in question did not at all apply, as the Select Committee had given special permission for the introduction of the leasing clauses.—The report was then received, and the bill ordered to be engrossed.

Caledonian (Leasing of Scottish Central, &c.).-Decision.—June 10.—Preamble not proved.

CONVEYANCE OF SOIL, &c. UPON BOGS.—At the meeting of the Institution of Civil Engineers on the 9th ult., Mr. Clarendon (secretary) proceeded to ex-

hibit "A model of a carriage carrying its own rails, invented by Mr. Henry Wrigg, for the economical conveyance of soils upon bogs, and ordinary traffic on common roads." Mr. Wrigg stated that, as the subject of reclaiming the bogs of Ireland was attracting the or rectaining the bogs of freland was attracting the consideration of the public, this model laid before the members (which was the result of many years study) was introduced for the purpose of illustrating the facility which it would afford in forwarding this facility which it would anord in lorwarding consolect, by enabling fertilizing soils to be conveyed upon bog lands at 50 per cent. below any other mode hitherto practised, and that without in any way diminishing the demand for manual labour. Without diminishing the demand for manual labour. Without the assistance of the model it would be difficult to convey a clear idea of the nature of the invention. It may, however, be said to consist in making every carriage carry its own rails; but instead of the wheels (as in ordinary vehicles) moving on rails the conditions were reversed, the rails sliding upon wheels, which were supported on pedestals attached to an endless belt, revolving on drums, in such a manner as to present to the rails a continuous succession of bearing wheels—the rails being immovably fixed to the bottom of the carriage. The cases of these pedestals can be so arranged and extended, without any increase of friction, as to present an area to the surface of the bog, incapable of being forced into it

by any ordinary weight placed on the carriage, Space would not permit him to go into the details of its various properties. It would be sufficient to state that the condition of the surface on which the state that the condition of the surface on which the machine worked was no consideration, the friction not exceeding 16lb. per ton, being the same whether this surface be a perfect Macadamized road or one full of holes. In fact, the carriage could cross holes from three to five feet wide precisely with the same case as if they did not exist. In this manner bog drains and similar obstructions are proposed to be drains and similar obstructions are proposed to be

TRANSFER OF CAPITAL. -- In the case of the English railways, the transfer of capital, under the head of land alone, has been calculated by Mr. Hudson as 20 per cent., which would amount to 21,305,760l. on the 109,528,800*l.*, reducing the amount of cost to 88,223,040*l.*, and that subject to further reductions. The real operation in England is this: that a given number of persons have ceased to be the receivers or owners of the produce of 35,000 acres of land, but have become the receivers or owners of the produce of 21,305,760t. worth of railway or other stock.— Irish Wants and Practical Remedies.

#### Monen Market.

#### PRICES OF BRITISH STOCKS.

Sat. Mon. Tues. Wed. Thurs. Fri. 16s19p 16s19p 

* For account, July 14.

London Stock Exchange, June 16.—Another unimportant week has passed, and the business transacted has been of small extent. It is now hoped that the rate of discount being reduced by the Bank. and the little employment there is for money for commercial purposes, will induce capitalists to take the guaranteed shares and debentures of railway companies, and thus enable the directors to complete such portions of the lines, now in course of construction, as shall produce an immediate and beneficial return in traffic. Thus, while the original shareholders will be benefited by increased income, the holders of debentures and guarantees will have an enhanced security for their capital.

Liverpool, June 15 .- The market throughout the week has been in a most inanimate state, without much fluctuation in prices. There was a better feeling at the close of the market to-day; very little stock offering.

Suplow, Brothers.

stock offering.

York, Junc 15.—We cannot report any particular change in our market since we last wrote. Stock remains very scarce, and should the Continental and our home affairs become more settled there is every appearance of an improvement.

GRAYSTON & EARLE.

Hull, June 15 .- Old stocks have been more offered during the past week, although prices have not materially receded. The slight premium at which the new preference shares of the Lancashire and Yorkshire, the East Lancashire and the Brighton are marked, forms just sufficient inducement for the holders of old stock to accept them—some to keep for investment, and others to pass them into the market at the current rates. FLINT & TOOTAL.

Glasgow, June 15 .- Prices remain without much variation this week, and the market is without animation. The loss of the Scottish Central lease to the Caledonian has depressed the price of the former to par, at which several transactions have taken place. The following is to-day's latest business:—

Edinburgh and Bathgate, 63 dis.; Ayr, halves, No. 1, 6l. 19s. dis.; North British, thirds, 21 dis.; ditto, new quarters, 8s. dis.; Scottish Central, 25.

BUCHANAN, AITKEN & Co.

The directors of the MARSEILLES AND AVIGNON have given notice that, in consequence of not having been able to assemble the shareholders in sufficient numbers, and at the requisite time, to consult them on the project of law for the expropriation of the lines at present under discussion in the National Assembly, they have deemed it their duty to protest, Assembly, they have deemed it their duty to process, with the other companies, both against the principle of the measure, and against that part of it which refers particularly to them. The directors doubt not that the National Assembly, if against all opposition it admits the principle of expropriation, will render the application of it equitable, and that it will not render subordinate to a convention that which can be submitted regularly to the ratification of the general meeting of each company. The directors also state that, having no power to treat so grave a question, they limit themselves to the indispensable conservatorial acts, and to sustain, in the best possible way, the general interests, until the time the shareholders be united and consulted regularly.

The Council General of Ponts et Chaussées has been occupied with the question of the reconciliation of the Western line with those of Paris and Ver-SAILLES, and the amendment of the line of the left bank. The project admitted for the left bank a curve, having its point of departure at the Mairie of curve, having its point of departure at the Marne of Versailles, and terminating at the Pont de Gobert. Inspections recently made having pointed out certain inconveniences, the Council General has decided on the adoption of this curve. There is to be now a direct line, having on one side Viroflay, and on the other the Rue St. Martin, at Versailles, the point of departure of the Wastern line. There will be proveded departure of the Western line. There will be erected for the service of these two lines, thus united, a special terminus on the Rue Royale, or the Avenue sartory. The Chartres line being much advanced, and the works having received a new impulse, it is hoped the section from Versailles to Chartres will be one of the first opened; in this case the works of the new station at Versailles will be immediately undertaken which will afford now sources of employer. taken, which will afford new sources of employment to the workmen.

Iron Trade.—Glasgow, June 9.—The market for pig iron is flat. Sellers for the last few days have had to accept of lower prices, and to-day a sale was made of mixed numbers at 42s. 6d. per ton, cash.

#### MEETINGS

BIRMINGHAM AND OXFORD.—June 21. Birmingham, at 1. BIRMINGHAM, WOLVERHAMPTON AND DUDLEY.—June 21. Birmingham.

TO CORRESPONDENTS.

RECEIVED: A CONSTANT READER, -S. A. -S. F. R. -J. J. *** We have availed ourselves of a suggestion of a valued correspondent, which was to transfer the Notices of Meetings, Ac. to the back of the Share List, so as to leave that leaf independent of the leader matter, that it may be separated from the paper and filed for office reference, when that is desirable.

# Railway Chronicle.

LONDON, SATURDAY, JUNE 17.

The shareholders of the BIRKENHEAD AND CHESHIRE JUNCTION, at their special meeting, assented to the proposal of the directors to defer payment of the guarantee dividend on the Chester and Birkenhead old shares, and also the payment of interest on calls for one year, so as to provide for the prosecution of the works from Chester to Warrington.

At the special meeting of the Scottish Mid-LAND JUNCTION the Marquis of Breadalbane was represented as the only dissentient to the sanction of the lease of the line in perpetuity to the Caledonian. A proposal respecting the stopping of the Sunday traffic was rejected by a majority of more than three to one.

At the annual meeting of the DUNDEE AND Arbroath a dividend of 8 per cent. was declared. The number of the directors is to be reduced to ten. The returns of the past year show a considerable increase in the receipts.

The following companies have held their special meetings of the shareholders to sanction bills before the present Parliament:

Bodmin and Wadebridge (jointly leased to the South-

Leeds and Thirsk (alteration of levels and other

purposes). Oxford, Worcester and Wolverhampton (purposes of

borrowing and joint station at Wolverhampton). Shrewsbury and Birmingham (joint station at Wolverhampton and forfeiture of shares).

Lord REDESDALE has done worthy service to the public interests by his last attempt to fix the DUTIES of the RAILWAY COMMISSIONERS. We refer our readers to his letter to Lord Granville respecting railway communication between London and Birmingham, which we give at full length,-and to his inquiries on Thursday evening in the House of Lords, so pertinently put and so wholly unanswered. For ourselves, we need not here repeat our often-declared impression of the insufficiency of these officers, -- of the idle expenditure of the public money in their salaries, - of their busy useless interference with the generally well-organized arrangements of certain companies, whose interests, being identical with those of the public, needed no Government inspection. We are glad to hail such an active member of the Legislature as the champion of our views. record with satisfaction the efforts that the future chairman of committees is pursuing, to uproot a piece of absolute Whig jobbing, and indeed a flagrant indefensible increase of the public burthens. Let us hope that through these efforts in these days of retrenchment, necessitated by some of the hardest commercial trials through which this country has ever passed, this plague-spot in the public accounts will be removed with the present session. Let us add that, in our opinion, railways would be much better conducted without any State interference at all; but, if such interference is indispensable, let it emanate from authorities well acquainted with the interests and objects of the class whose public conduct they are to super-intend; in a word, let men who have been connected with railways, who have worked on railways, and who are consequently looked up

to by the railway authorities with respect, be the future members of the Railway Board, instead of the present Commissioners, whose only claim to office has been their aristocratic connexion and want of employment.

For the following just summary of the facts presented at the special meeting of the GREAT INDIAN PENINSULAR we are gladly indebted to the Times. The remarks thereon are not only just but present the exact features of the case as it is now laid before the public. The Report then presented shows in a strong light the narrow-mindedness and ignorance of the gentlemen who virtually govern our Indian posses-

sions :-It will be perceived (says the writer) that the continued efforts of our capitalists, anidst all the discouragements of the period, to confer the benefit of railway communication upon India are still met by the obstacles which Government vacillation has thrown in their way from the very commencement of their plans, and which are the more vexatious and disheartening because they are accompanied by an unquestioning recognition of the desirableness and certain success of the great end proposed. It will be in recollection how, when the tide of speculation was exausting itself in ruinous and useless schemes in England and on the Continent, the Indian companies were delayed in drawing it to a legitimate channel by the slow progress of their negotiations with the directors in Leadenhall-street—how, also, when these negotiations were completed and the public fervour was subsiding, a guarantee of 4 per cent. for fifteen years was offered by the Government just at the instant when it was too late, but when an offer of 5 per cent. would have answered—and, again, how 5 per cent. for twenty-five years was offered when the times had become still more unfavourable, and when the moment for its acceptance had passed by. The final result, likewise, is known, namely, the dissolution of all the companies with the exception of one, whose vitality, owing to the confidence and energy of its promoters, seemed almost inextinguishable. This was the line from Bombay to Callian, the meeting of whose shareholders took place on Tuesday last. It appears that these parties are still willing to prosecute the undertaking and are accordingly prepared to comply with the requirements of the India House, that a deposit of 30,000% shall be paid into its treasury on the 24th inst. Considering the professed sense of the Indian Government of the security and economy to be derived from railways in their political and military operations, the urgent enforcement by all the trading classes of this country of the necessity of promoting the cotton cultivation, so as to provide against the fearful contingency to our manufacturing population of any sudden failure in the American supply, and the admitted fact that it is by facility of transport only that this can be accomplished, together with the increased value to accrue to the India Company from the soil whence they derive their revenue (to say nothing of the duty of sending the spirit of enterprize and civilization amongst the teeming population whose destiny is in their hands), it might have been expected that this announcement would have been received by the authorities with unmixed satisfaction, and that having so narrowly escaped causing by their higgling policy the total abandonment of railway works in India, they would henceforth have aided their of this, however, there seems little prospect. No sooner were their terms accepted than a new difficulty was interposed, and the railway company were informed that unless they could within a month complete the registration of their shareholders, their money should be returned, and the concern, we presume, be regarded as extinguished. Upon this, a letter was addressed by the railway company to the India House, showing the impossibility of what was required of them, since, in addition to the ordinary difficulties of complying with such an unlooked-for and hasty demand, many of the shareholders are resident in Bombay. Whether this protest will meet with any consideration remains to be seen, and for that purpose the meeting of the company stands adjourned till Tuesday; but whatever may be the result, the public can hardly fail to perceive that if the great duty of the age towards India shall now be commenced even in the smallest degree, the credit of the hopeful enterprize—hopeful no less to the philanthropist than to the trader—will not fall in any very satisfactory measure to those who were primarily responsible to promote it by their every

The Whitsun holidays have somewhat interrupted the business before the Committees. We have only to record that the preamble of the Northern Counties Union has been declared proved; and that of the Caledonian (leasing of Scottish Central, &c.) not proved.

From our official returns it appears that the amount of traffic for the last week, on 3,791 miles of railway, was 185,320/., thus accounted for:—97,028/. for the conveyance of passengers only, 47,885l. for the carriage of goods, and a remainder of 40,407l, for passengers and goods together, not respectively apportioned; being an increase of 4,142/. over the corresponding week of last year, when the mile-age was 2,957. The average earnings per mile were 49/., whilst in 1847 they were 61/.

#### MINING AND AGRICULTURE AGAINST LOUNGERS AND SCENERY.

It is probable that before our next publication the committee of the Lower House will have decided upon the Taw Vale case. We trust they will have the wisdom and courage to disregard the absurd opinion of Capt. Simmons, the official judge of railway works, and will open to Devon and Cornwall the only communication that can be of any service to them. At a first glance this Taw Vale case may appear a mere personal and petty contest between two rival interests for the possession of 44 miles of territory. But it is something very different: it is a case of railway or no railway-of communication or no communication, for a district which, rich in mineral and other undeveloped wealth, must remain poor, unless the only interest which is willing, and which is interested in being willing, to make a railway, is permitted to make it. That interest is the SOUTH-WESTERN Narrow-Gauge Company.

The case stands thus :- there are two roads into Cornwall, one by the sea-coast, and one by a narrow track leading direct to Tavistock. Between the two, Dartmoor rises-an impassable barrier. The coast line is occupied by the SOUTH DEVOX; it accommodates a series of watering-places extremely well, and if it had not been an atmospheric line and a broad-gauge line, it would have paid extremely well, for the traffic in idle people is enormous. But the cost of cutting broad-gauge tunnels and making broad-gauge embankments, added to the cost of working the as yet unsuccessful atmospheric system, has rendered the South Devon a rather unprofitable concern. The South Devon, the Bristol and Exeter, and the Great Western are one interest-the broad-gauge interest. It can never be their policy to make another line to Plymouth or to Cornwall's extremity, to which they have another coast line. The TAW VALE line runs right across the other opening into Cornwall. That part of Devonshire lying round Tavistock is rich in mines. That part of Cornwall where the richest mines lie is the centre, a ridge often called Cornwall's backbone. All the minerals dug out of these two districts are sent into Wales to be smelted. The miners want as soon as possible, in as short a distance as possible, to get their ores down to the water's edge opposite the coast of Wales. The South Devon and Cornwall lines are on the wrong side of the Island. A line proceeding from the Taw Vale to Tavistock, thence to Plymouth and on through the centre of Cornwall, would be on the right side of the Island. The South-Western, who have twice carried an agricultural line to Exeter successfully to the House of Lords, will no doubt, succeed this session in giving Devonshire an agricultural and commercial line on the national gauge, in opposition to the luxurious, fashionable, express-passenger line on the broad gauge.

The South-Western are willing to work the Taw Vale in connexion with the Exeter and Crediton, and to carry from it extensions on the national narrow gauge to Plymouth, and on through the mining districts of Cornwall. Be it remarked, all the existing mining tramways of Devonshire and Cornwall are on the narrow gauge.

It is quite contrary to the interest of the broad-gauge party to make a line to compete with their South Devon for the traffic from Plymouth to Exeter. It would cost 12.000l. to convert the embankments, bridges, &c. of the Taw Vale into a broad-gauge line. Taw Vale have no such money to spare, -if they had, it would deprive the shareholders of all profits or hope of profits. If a broad-gauge line were made it would be the most unsuitable thing possible—a costly, cumbrous ma-chine—for the carriage of coal. But once in the hands of the Great Western party, and it would cease to be a working railway-it would be a barricade to prevent the agriculturists, miners, and landowners of South Devon from getting their produce to market by any railway.

Is it not disgraceful that while laws are passed and laws repealed in order to cheapen the price of bread, sugar, coffice, and the freight of these articles, every impediment should be thrown in the way of cheap railways? The cries of philanthropy are no better than cant until some pains are taken to enable the peasant to ride to market with his little produce of garden or farm. What with broad gauge and double gauge, forsooth, railways must soon take their place with tokay, champagne and truffles.

### WHAT IS THE RAILWAY BOARD?

The debate on the uses, abuses and absurdities of the present and past position of this Board and its relation to the Legislature and to the railways of the country (alluded to elsewhere), is highly curious. Three or four years after the establishment of this Board by Government, Lord Redesdale-a peer than whom we know none better versed in the practical business of the house, of the country, and especially of the railways-has to rise in his place, and demand of the Minister the meaning and object of the existence of a Railway Board—of a Board on which much public money has been expended, and for which great and undoubted benefits must be supposed to have been conferred in order to justify such an expense. From Lord Redesdale's statement it appears that the original intention of Government in appointing the Board was that it should bring the railways of the country entirely under the control of the Government; and further, it would seem as if they were to govern Parliament itself as well as the railways. stead of this, their decisions have been upset and contemned, their bills thrown out, and their opinions disregarded! It was necessary, therefore, to know whether the Board was to be paid for without doing work, or whether it should continue to exist, and in what capacity?

The answer to all this is simple—what the love of power and pension and patronage induced the Government to attempt, in trying to grasp the railways of the country, the commonsense of England and of her Parliament has seen fit utterly to reject as not only unnecessary but unwholesome. The Board have reported to Parliament, but Parliament rejected their reports and adopted the contrary. The Board brought in a Government bill, but Ministers found it their interest to abandon it. The Board now think fit to report on the gauge question and so choose to overturn their own former recommendation as embodied in the Gauge Act—so stultifying themselves. In the face of such things it was not an impertment

question to put to the Lord President in the House of Lords in reference to the Railway Board—What is it? and how is it to be?

From Lord Lansdowne's reply one would imagine that the Board had actually had the practical management of the railways in their hands for the last three years. "This important subject," said his Lordship, "of carrying on the railway business of the country." would fancy from this that without the Board the railways must stand still! His Lordship, however, sums up their duties briefly enough. They make reports, which need not be attended to; they make inspections of railways, that are to be opened, and which would be opened in just the same state if they were not inspected; and they make reports on accidents, which they did nothing to avert and can do nothing to remedy. They tell the Government what they should do, and the country what it should do, and both follow the contrary advice. They draw up a blue book annually, and they draw salaries quarterly. Such is the numeration of their duties and their enjoyments as made by the Lord President of the Council in the House of Lords! We wish the Board joy of their honours and the country of their salaries.

#### RIVAL SOUTH COAST LINES.

In easting an eye at the progress of the traffic on the BRIGHTON as compared with the SOUTH-EASTERN it seems that the former, though on a less amount of mileage, is now more productive than its neighbour, both for goods and passengers: for the latter are less in number but yield more money: the number of passengers in the former being, in the last week, 50,651, giving 7,380L, while those on the latter are 80,458, and produce only 6,8881. The increased speed on the Hastings line-an express train now going the whole distance from London in 24 hours, at the convenient hour of 4 o'clock, will no doubt still further increase the comparative advantage. If the ordinary trains on the Hastings branch were better timed, so as to obviate the stoppage of the up-train for half-an-hour at Hayward'sheath, as is now done, to wait the arrival of the Brighton up-train, it would prevent a good deal of unpleasant feeling in the unfortunate passengers who have to wait, to say nothing of the inconvenience of getting into the carriages at the siding away from the platform when they resume their places.which it seems is the present practice. Even in fine weather this is far from pleasant. It would be better, we think, to take the whole train on from Lewes direct to Brighton than to work that portion with a second engine and keep the passengers waiting all the while at a dreary station. The attention of the directors being drawn to this may prevent the annoyance-at any rate passengers might have the option of going round by Brighton, if they preferred riding to stopping half an hour.

#### THE GAUGES.

A letter from Lord Redesdale to the Earl of Granville has been circulated amongst the House of Peers. It touches on the great national question of the gauges between London and Birmingham, and we accordingly present it in its complete form to our readers.

My Lord,—There are some points in Mr. Saunders's observations upon the letter which I addressed to you last year on the subject of railway communication between London and Birmingham, which appear to me to require some notice, and, as the question is one of great importance, I hope you will excuse me for again writing to you, the more so as he appears to have misled the Railway Board by his statements.

The Board now think fit to report on the gauge question and so choose to overturn their own former recommendation as embodied in the Gauge Act, by which a district was defined beyond which no broad gauge should be constructed, was suggested by the Great Western, he asks "Does his lordship really mean it to be inferred that this company ever suggested, or that Parliament decided,

that an intervening line between two broad-gauge railways, running into and connected with them, as the Birmingham and Oxford at Fenny Compton, and the Birmingham, Wolverhampton and Dudley at Priestfield, should be constructed on the narrow gauge?"

I never said that the Great Western suggested that the Birmingham and Oxford and the Birmingham, Wolverhampton and Dudley lines should be on the narrow gauge; but unquestionably I not only mean it to be inferred, but I unequivocally assert that the Great Western suggested that a district should be defined beyond which no broad gauge should be constructed; and, further, that Parliament did intend and did decide in the House of Commons (after debate, and by a division) that the Birmingham and Oxford and the Birmingham, Wolverhampton and Dudley lines should be constructed on the narrow gauge exclusively, and be held to belong to the abovementioned district. I proceed to give my proofs. On the third reading of the Gauge Bill in the House of Commons on the 12th of August 1846, Mr. Muntz moved a clause to enable the Birmingham and Oxford, and Birmingham, Wolverhampton and Dudley to lay down the broad gauge. Mr. M. Gibson, then Vice-President of the Board of Trade, who had then charge of the bill, resisted this amendment, and stated that "it appeared to him that Parliament would be proceeding in direct opposition to its resolution, and to the Report of the Gauge Commission if they were to allow the clause to be introduced." It was rejected by a majority of 46 to 15. Mr. Saunders must have been well aware of this fact, and yet he says that the Gauge Act will refute my statement as respects the part taken by Parliament. He omits all notice of the positive declaration of Parliament of its intentions in regard to these particular railways, and sets up the clause in the Act by which it is provided that railways to be constructed under provisions of any present or future Act containing any special enactment defining the gauge shall be exempted from its general provisions, as proving that Parliament did not intend to make it a final settlement on the principle of the resolutions on which it was founded. Now I assert positively that those words were inserted by Lord Clarendon, who brought in the bill, with the sole intention of removing a difficulty which it was suggested would arise if no qualification was given to the first clause whenever lines south of the Great Western, and short ones north of it, were, in accordance with the report of the Board of Trade, and the resolutions of both houses, allowed to be constructed on the broad gauge. I make this statement confi-dently and advisedly, because I asked Lord Clarendon what the purpose of introducing those words was, and talked the matter over with him and Mr. D. Bethune, who drew the bill and the amendments, all of which were made by the Government, and I regret that in your report you should have adopted Mr. Saunders's suggestion as the proper interpretation of the meaning of that clause, and the consequent intention of Parliament.

Mr. Saunders also endeavours to discredit the opinions I offered to your consideration by stating, first, that I have been an active opponent for the last three or four years of all their Oxfordshire lines; and, secondly, that my proposal is entirely at variance with my former views. Both these statements are incorrect. I opposed the Oxford, Worcester and Wolverhampton in 1845; but when that bill had passed the committee I withdrew all further opposition, and have since been constantly on friendly terms with that company. I did not oppose the Oxford and Birmingham or the Oxford and Cheltenham, which are the only lines which have been since then before Parliament, nor have I changed any opinion or stated anything contrary to what I advanced in 1845, though if I had I cannot see what reason there would be in charging that against me now as an offence, when the circumstances are altogether different, when the line which I was then opposing is half finished, and when the question is, not the best route to Worcester but to Birmingham.

By this attack he has endcavoured to create an impression unfavourable to my proposal in the minds of those who read his statement upon it, while he avoids all notice of the main principle on which my suggestions are based, viz., "That unless the powers of the Great Western are to be exercised over an exclusively broad-gauge line to Birmingham, they can never be fairly developed."

In offering some additional remarks on this point, I am led to notice your report, which I regret to find so unsatisfactory and inconclusive. Instead of deciding the matter referred to you, you resort to the wretched compromise of recommending the adoption of a mixed gauge, "if practicable," and advise that the question should stand over for further experience. All that you have done is to inquire into the pos-

sibility of working a mixed gauge and the best method of laying it down, and you let us know that Prof. Airy recommends the four-rail and Capt. Simmons the three-rail system, and that you are inclined to believe that it will be probably found practicable to have a line open to both broad and narrow-gauge traffic, which must, however, in all cases, be worked

in separate trains.

Upon this the important question arises (to which no answer is given, and apparently no inquiry directed), is it possible to work one line on a principle of competition, or even of equal occupation, between the two gauges on these terms? You state in your report, that "unless it can be ensured that the railway in question shall be fairly and impartially worked, the public will not receive the advantages they ought from a mixed-gauge line." The experi-ment which you suggest will be made by the opening of the Oxford and Rugby will be altogether nugatory on this point. There will be no competition between the gauges on that line, no rival occupation of it necessary. The question as affecting the matter now under consideration is, not whether a narrowgauge traffic can be carried on by one company together with the broad on a mixed line, but whether the traffic can be fairly and safely carried on by two companies on the different gauges. Such competition has always hitherto been condemned as unsafe on a line of only one gauge, and it must necessarily be much more so on a mixed line. You do not attempt to decide how this matter can be arranged. I believe that it is altogether impracticable, and that a little reflection and common sense will suffice to

The trains leaving London for Birmingham by the North-Western, and for Bristol by the Great Western, each day, start at the following hours:—

em, t	Birmingham.	Great Wester	m, to Bristo
	m.	h.	m.
6	15	6	0
6	45	7	15
7	15	7	45
9	O	9	50
10	0	10	15
11	0	11	30
12	30	12	0 .
5	0	1	0
5	30	2	0
8	45	4	45
		5	30
		R	55

It cannot be supposed that fewer trains will go to It cannot be supposed that fewer trains will go to Birmingham along the Great Western if a line is opened to the broad gauge, than to Bristol; and it is not likely that many fewer will go along the Buckinghamshire lines. It is clear, therefore, that during a great portion of the day trains for Birmingham will reach Banbury by the broad and narrow gauge lines so near together, that I defy any person to suggest a time-table by which every such train shall be forwarded separately with safety, even if all shall arrive punctually at Banbury; but as this is impossible, the danger and delay which must ensue from the attempt to afford accommodation to rival trains the attempt to afford accommodation to rival trains on one and the same line, must be of the most serious character, and competition can never be fairly or safely carried out under such impediments. Any mistake on the part of the servants employed, which may arise either from carelessness or uncertainty as may arise either from carelessness or uncertainty as to whether a broad or narrow gauge train is coming, will be attended with the most frightful consequences. Fatal accidents will occur, and the competition will be pronounced dangerous, and either a compromise must be made by which the evil and inconvenience of a break of gauge at Banbury will be shared by the passengers on both gauges alternately, or the Great Western will attain what I believe to be unquestionably their object, and make the line from Banbury to Birmingham (so far as regards passengers, at all events) an exclusive broad-gauge line, and thus destroy indirectly, but most effectually, the right now prents) an exclusive broad-gauge line, and that destroy indirectly, but most effectually, the right now possessed by the Buckinghamshire lines of an uninterrupted narrow-gauge communication with Birmingham. Such a result would neither be just nor desirable, for I certainly agree in the following extract from your Report:—"These are strong reasons against the exclusive use of the broad gauge on the line between Fenny Compton and Birmingham; the injury which that arrangement would inflict on the traffic of Aylesbury and the surrounding district, and the complete change it would occasion in the con-ditions under which the Bucks line is being proceeded with, appear to the Commissioners to prohibit such a proposition being entertained."

Having stated that no inquiry appears to have

been made by your Board as to whether a joint and, in a great degree, a competing occupation by two companies of one mixed-gauge line can be fairly and safely carried out, you will, perhaps, ask what more could you do than wait for further experience. I have shown you that there is no experiment about to

be tried which will solve this point, but some light would have been thrown upon it if you had required answers from the Great Western Company, on whom the onus probandi properly rests, to the two follow-

ing questions:—

First. Can you devise a time-table whereby trains can run throughout the day in connexion with the Great Western and North-Western lines respectively to Banbury, and from thence on their several gauge along a mixed line to Birmingham, at their present rates of speed, and developing the traffic equally on both gauges, without the chance arising of frequent interruption and risk to passengers?
Second. Could you work your line from London to

Bristol with equal regularity, safety and despatch, if from Reading to Didcot there was a mixed gauge line, along which the South-Western might have the privilege of having their narrow-gauge traffic deve-

loped equally with your own?

If satisfactory replies can be given to these two questions in the affirmative, I shall then be prepared to admit that the Great Western have made out their case, and shall hope that the laying down of a mixed line between Reading and Oxford will be immediately insisted on by Parliament, particularly as such a line was promised by them in 1846, in order to induce a committee of the House of Lords to reject the Manchester and Southampton bill in that session.

But if the answers are not satisfactorily in the affirmative, my principle, that "the powers of the Great Western can never be fully developed except over an exclusively broad-gauge line to Birmingham," will be established, and no course can be advantawill be established, and no course can be advanta-geously adopted by Parliament but the one recom-mended by me, of allowing the broad gauge to be laid down on the Stratford line only. The objection stated in your Report to this plan is, that if the pri-vilege is to be granted at all, it ought to be given to the shortest route open to the Great Western. This would be entitled to consideration if the returns of the rates of speed on that line and on the North-Western had shown that a fair competition would not be created between the two companies, if the broad-gauge route was 133 instead of 129 miles, against the shorter line of 112 on the North-Western. Such,

however, is not the case. The respective rates are—
Miles per hour, including stoppages.
Great Western to Exeter... 45:53 52:84 Great Western to Exeter.... North-Western to Liverpool-

fastest .....

34.95

38.28

Being.... 10:63 miles per hour in favour of the Great Western, which, according to this return, would enable that company to perform the 133 miles to Birmingham along an to perform the 193 miles to binning and along an exclusively broad gauge line under three hours, while the North-Western require three hours and a quarter to get over their 112 miles. I am at a loss therefore to conceive why, when you had resolved that it is expedient to permit a broad gauge to Birmingham, you did not recommend that, in the first instance at all events, it should be laid down in connexion with the line by Stratford, on which no objection can be made to it, whereby the efficiency of that line for the pur-poses of Great Western competition might be tested during the time you desire should be allowed for further experience as to the working of the mixed-gauge system. The completion of this line ought to be insisted on under any circumstances, as affording an outlet for some of the Birmingham broad-gauge traffic, to the relief of the mixed-gauge line by Ban-I believe that it is the intention of the Great Western to abandon its construction altogether, if they can get permission to lay down a broad gauge Fenny Compton, as they feel that its existence would always be used as an argument against their being allowed hereafter the exclusive control of the line from Banbury to Birmingham, when the inconvenience of the double-gauge system, and the impossibility of their enjoying free competition with the North-Western over such a line, if worked in conjunction with that company, shall be fully developed.

The arrangements proposed by me for the transfer

of lines from the Great Western to the North-Western were suggested for the purpose of obtaining a better settlement of the gauge question than exists at present, in a manner which, I believe, would be attended with great advantage to both parties; but they are not necessarily parts of my scheme, and others may be adopted in their stead. I cannot, however, see any insuperable difficulties which some suppose would be found in carrying them out. The Great Western asks for a broad-gauge line to Birmingham; this privilege will be worth many thousands a year to that company, and Parliament has but to state the terms on which alone it will be granted to insure their acceptance. Park-place, June 1 REDESDALE.

Capt. Harness, R.E., to Lord Redesdale. My Lord,—I have been directed by the Commissioners of Railways to acknowledge the receipt of your letter to Lord Granville, of the 1st inst., on the

subject of their recent report to the House of Lords, respecting railway communication between London H. D. HARNESS, Capt. R.E. and Birmingham. Office of Commissioners of Railways,
Whitehall, June 5.

#### Correspondence.

#### COMMUNICATION WITH GUARDS.

The recent "desperate struggle in a railway carriage" induces me to ask why Mr. Walter's plan of the continuous platform with guard rails, constructed by an arrangement of the carriage steps, is not adopted. He says that the guards could with safety walk from one end of the train to the other with perfect ease and safety during the journey. The objection raised of the projection of the stations, could be obviated by the guard changing his position from the inner to the outer side of the train: the longitudinal steps to be lengthened to within a few inches of each other, and not to exceed 18 inches in

#### TREES ON EMBANKMENTS.

In a letter, which appears in the Railway Chronicle of the 13th ult. (taken from the Gardeners' Chronicle), planting railway embankments with larch is recommended as a profitable use of those wastes. In my opinion no timber trees of any description ought to be suffered to grow within such a distance of the line as, in the event of a high wind, would be liable to be blown down upon the rails. However vigilant persons in care of the lines might be in promptly removing anything that might accidentally fall upon the rails, a tree during a high wind might be blown across the line at the instant, or immediately before, a train was passing, and cause a frightful accident, which it would be impossible to avoid. The practice of planting trees of all sorts on railway slopes, even in deep cuttings, has for some years been adopted. At present no inconvenience may have happened from the practice, but I feel convinced that great danger will arise as the trees grow up to maturity, and awful consequences may ensue. I hope to see the practice totally abolished.

Derby, June 13. JOHN BROMLEY.

#### THE CALEDONIAN AMALGAMATIONS versus THE EDINBURGH AND NORTHERN, NORTH BRITISH, &c.

The Caledonian seems resolved to purchase the principal lines northward from Edinburgh and Glas-The Scottish Central has long since been obtained, and only waits the sanction of the Legislature to be a permanent acquisition of this company, in conjunction with the Lancaster and Carlisle and the London and North-Western. The Caledonian has now added to its purchases the Scottish Midland, the shareholders of that line having unanimously agreed to sell it to the former at 6 per cent. As the Scottish Midland is likely to obtain permission to extend its line to Laurencekirk, where it will join the Aberdeen above Montrose, and thus form the most direct route to Aberdeen from Glasgow, if not from Edinburgh, it is easy to see that the whole traffic of the North, if no steps are taken by its rivals, is likely to become the property of the Caledonian. Is this desirable? This is a question of some interest to the railways on the east side of Scotland. The present policy of those lines (if it can be so called) seems to be laissez-faire. The Edinburgh and Glasgow is, indeed, trying to defeat* the bill for the purchase of the Scottish Central by the Caledonian, but on what grounds, or with what prospect of success, I have no means of knowing. The best course would have been to have anticipated the purchase. This was not done, or even attempted, that I am aware of. In fact, the supineness of the lines on the east side of Scotland forms a remarkable contrast to the energetic "acquisitiveness" displayed by the Caledonian. It is still not too late for the lines on the cast side of England and Scotland to secure a competition for the traffic from the far North to the South. The Aberdeen is still, I believe, unpurchased, and considerably below zero in the market value of its shares. Cannot the Edinburgh

* This has been accomplished for the present since our correspondent's letter was written.—Ed. Rail. Chron.

Digitized by

and Northern, Edinburgh and Glasgow and North British, in conjunction with the York and North Midland, purchase this line, and make out of it the shortest, or at least the best and cheapest, route from Aberdeen to London? The subject is at least worth consideration; and with this view I venture, through you, to submit it to the parties interested. If the opportunity is lost, there will remain only the chance of a parliamentary opposition after the fact—as in the case of the opposition of the Edinburgh and Glasgow to the purchase by the Caledonian of the Scottish Central.

London, June 9.

#### Gossip.

The portraits of our engineers and other railway magnates are furnishing subjects of art to our painters, which are likely to possess more than the usual historical interest of portraits. The portrait of Mr. Brunel, a full-length figure, in the exhibition of this year, is a speaking likeness, not inferior to that of Mr. Locke, in a former year. Then there is a full-length of George Stephenson, on Chat Moss, which is really a work of high art, and which has just been completed for his son Robert. There is also a capital one of Mr. Bidder, in his best looks. We have also seen a portrait, just engraved, of the late chairman of the Brighton, Mr. Rowland Hill, by a young artist, Mr. Wivill, of whom we had formerly not heard, but who has been so happy in this case, both in expression and likeness, that we expect to hear more of him.

We have noticed elsewhere that the number of passengers on the South-Eastern lines last week was far greater than on the Brighton, the excess being nearly 30,000, whilst the returns were less. Perhaps this may be accounted for by the liberality of the former company in issuing day-tickets for half fares. The traffic might be still further promoted if Punch's advice to get up "excursions to Boulogne, free of expense," were adopted. According to our facetious friend, that place, we are sorry to learn, is now deserted. "The lodgings," says he, "are to be let; the hotels have scarcely a bed filled; the table d'hôtes are deserted, and the Custom-house officers, whose courtesy must be remembered by every traveller, have nothing to do but to search their own pockets; and the pursuit is not of the most pleasant, as, search as they will, they can find nothing in them! The town is as empty. There is not an Englishman in the place. This is very melancholy." Certainly: and, if true, the steamboats might be made instrumental in carrying a provisional restoration.

It is pleasant to record a circumstance so honourable to both parties as the following :- On the 8th, the clerks and porters (of the merchandise department only) of the Manchester and Birmingham Section of the London and North-Western presented to Mr. S. Salt, the manager thereof, a handsome candelabrum, bearing the following inscription:

"Presented to Samuel Salt, Esq., manager of the
merchandise department of the Manchester and Birmingham section, London and North-Western Railway, by the porters and clerks engaged under him, as a token of their esteem for his high integrity, great abilities and uniform kindness." The Liverpool The Liverpool Standard also notices the graceful manner in which the matter was arranged:—The clerks and porters assembled in the work-house, and so secretly had the whole affair been conducted, that scarcely any but the subscribers knew of the matter. Mr. T. Kay presided, and sent for Mr. Salt under pretence of urgent business, who, upon entering the room, was taken by great surprise and confusion at seeing all the servants together. After he had been conducted to a seat, Mr. Kay, in a very neat and appropriate address, presented the candelabrum, also a gold pen and seals. Mr. Salt returned thanks for this mark of their esteem.

A deputation from Plymouth have been urging on the directors of the SOUTH DEVON the necessity of providing a goods train from Tones. The directors promised attention to the suggestions, and that the goods traffic should be opened as soon as circumstances would admit.

The refreshment-rooms at Swindon, held from the Great Western for a term of 99 years, at an annual rent of 1d., have been sold by auction at Garraway's for 20,000%.

A rumour, of which the wish was father to the thought, has been current, to the effect that while Government refuses to grant a loan to the proprietors of unfinished railways in Scotland, the Chancellor of the Exchequer is disposed to recommend the Bank of England to advance the necessary funds, on approved securities, and remunerative terms. Under the present state of "Whig vacillation" we do not behave that, directly or indirectly, any Government loan will be sanctioned.

The Scottish Midland line is to be opened about the middle of July, and every effort is making to push forward the works to effect that object. At the meeting of the company on the 6th, the agreement to lease the line to the Caledonian was all but unanimously confirmed.

The bill for the lease of the Wishaw and Coliness

The bill for the lease of the WISHAW AND COLTNESS to the CALEDONIAN, as our readers will, doubtless, have observed, was withdrawn, on the resolution of the committee to insert running clauses in favour of the Monklands. The line will continue to be worked as hitherto, under an agreement with the Caledonian.

The amount of passengers and goods traffic on the Scottish Central for the week ending June 10, was 6861.

An inquiry was opened on the 9th, at Stafford, to assess the amount to be paid by the Shropshire Union, for the purchase of certain lands belonging to Sir T. F. F. Bonghey, Bart., of Agnalate Hall, Staffordshire. The quantity of land required was 28 acres. The claim made by Sir T. Bonghey was 10,000t. Witnesses gave estimates varying from 9,000t to 12,000t. The claim was justified on the ground that the land had been taken compulsorily, and on account of Sir T. Bonghey considering the railway had an injurious effect on his estate. The jury after an hour's consultation returned a verdict, land, 2,355t.; compensation, 2,655t.; total, 5,010t. This is less by 240t. than the company offered and by 4,990t. than claimed Sir T. Bonghey.

The history of the late proceedings respecting the State absorption scheme in France is as follows Committee on Public Works has at last decided that it would propose an amendment on the Government bill. The form of this amendment was discussed, when the Minister of Finance declared that he was in accord with the committee on the principal points, and particularly on that of having any difference as to price referred to a jury. Finally, the committee determined that its amendment should declare -1st, that all the railways are to be repurchased and are to become the property of the State; 2nd, certain modes of repurchase, by means of public securities, shall be proposed; 3rd, such companies as are to be repurchased are dissolved, and each shareholder is called on to accept or refuse individually the offers of the Government; 4th, such shareholders as refuse the offers made shall be bound to have themselves represented by a syndicate, and to abide by whatever decision may be given by a jury, in the whatever decision may be given by a jury, in the nomination of which they shall contribute in an equitable proportion. The Committee of Finance then received the representatives of the different companies. The companies not only opposed the project of the Government to dispossess them, but considered that they have legitimate grounds for demanding assistance from the State. The Lyons especially insisted on this. The financial project of M. Duclerc also came under general discussion, and was rather roughly handled, not having a single advocate. The railway project was denounced by all as a flagrant breach of public faith and violation of the rights of property. A sub-committee, consisting of MM. Thiers, Goudchaux, Billault, Lasteyrie, and Perrée, were appointed to report on it. Finally, the sub-committee of Public Works has proposed an amendment on the project, as follows :-

proposed an amendment on the project, as follows:

Art. I. Declares that the repurchase is of public utility.

Art. II. Authorizes the Minister of Finance to carry it into effect. Art. III. The repurchase shall be on the following conditions, viz.:—1st Class.—The railways of Paris to St. Germain, to Versailles (Right Bank), Versailles (Left Bank), Strasburg to Basle, Paris to Orleans and Corbeil, Romen, Romen and Havre, Paris to frontier of Belgium with branches to St. Quentin, Calais and Dunkirk, Orleans to Hordeaux, Orleans and the Central. The shareholders of these lines shall be paid after an average of the prices of the shares for twelve months before the Revolution of February, in stock, at the average price of the same twelve months.—2nd Class: The railways of Montereauto Troyes, Avigmon to Matseilles, Amiens to Boulogne, Paris to Strasburg, Paris to Lyons, Tours to Nantes. The shareholders of these lines shall be taken. The shareholders who shall not accept these tems shall be compelled to refer their claims to arbitration, the amount awarded being always payable in stock. The State to baye inmediate possession.

In other respects the project is adopted.

#### Reports of Meetings.

GREAT INDIAN PENINSULAR.

June 13.—Special Meeting, London.—Lord WHARN-CLIFFE in the chair.

The CHAIRMAN said that the long delay since their last meeting (March 1847) was attributable to the official negotiations which had occupied their directors. The policy of the directors had been not unnecessarily to compromise the company, while they had well looked after every circumstance which

might tend to its advantage. The directors had accordingly been for some time past in communication with the directors of the East India Company, and the proprietors had now to consider the terms offered to them. Every one present would feel that the railway which they had originally banded themselves together to promote was as much an object of importance at the present time as it ever had been. For his own part, he should much regret if anything had occurred to make them abandon its prosecution; and he sincerely trusted that, upon hearing the Report, they would find themselves in a position to proceed with the line.

Mr. WHITE, their solicitor, read the Report. stated that when the company met last (on the 16th of March 1847), the directors had a bill before Parliament for their incorporation, which they had hoped would have passed without opposition, but subsequently they were informed that the bill would be opposed by the East India Company and the Board of Control. The directors accordingly determined to withdraw it. Some negotiation ensued with the East India Company, which resulted in a letter being received from the directors of that body, under date of the 5th of October 1847, declaring that the Court was prepared to allow this company to proceed with a por-tion of the line, from Bombay to Callian, and for that purpose to grant the necessary land free of all charges, upon a lease for 99 years, terminable at the option of Government at the expiration of 25 or 50 years, upon its paying to the company the then market value of the railway, and to guarantee it, for a period of 25 years, at 5 per cent., upon a capital not exceeding 500,000l., upon consideration that 30,000l. should be paid into the treasury of the East India Company on or before the 5th of January 1848. Upon consideration, these terms not being considered advisable without modification, the Board addressed a letter to the East India Company, pointing out portions that were thought to be objectionable, and requiring that were thought to be objectionable, and requiring that the guarantee should, in the event of the first portion of the railway proving successful, be extended to the total capital of 3,000,000/. Under the date of the 24th ult. the East India directors state that the terms already offered are as liberal as they feel justified in conceding, but say that they will be prepared to recognize a claim for a preference on the part of the company in any future extension of the line, in the event of its engagements being satisfactorily fulfilled. The letter also requires the payment into the treasury of the East India Company of the 30,000%, prior to the 24th of June, and that the Company shall satisfy the Court that it is able, through its registered shareholders, to raise the necessary capital for carrying on the undertaking without delay, and in an efficient manner. In a letter, under date of the 6th inst., the directors of the railway company informed the East India Company that the proposed terms should be submitted to the shareholders at the meeting then assembled. It also stated that the directors entertained great hopes of being enabled to make the deposit of 30,000%. By the stipulated time, and that, subject to the ratification of the proprietors, they would proceed to do so, provided they should receive from the Court an assurance that the company should be allowed four months from the time of making the deposit, or until after the arrival of the mail leaving Bombay on the 15th of September, to procure an efficient register of shareholders; and that in the event of their not being able to do so, or the hon. Court and the railway company not being enabled to arrange to their satisfaction the terms of the contract within the time stipulated for completing the register, the Court should return the deposit of 30,000*l.*, with interest, at the rate of 5 per cent. per annum. After pointing out what is supposed will be the advantages accruing from this arrangement, if agreed to by the East India Company, the Report states that, in order to carry out the line from Bombay to Callian, it is proposed that the company shall consist of 120,000 shares of 50l. each, as at present, but only 5l. to be called up for this line, of which 10s. shall be paid as a deposit, on or before the 1st of August 1848, and 11. 10s. to be called on or before the 1st of August in each of the three years next ensuing—the share-holders who have paid 5s. deposit on their present shares to have it allowed in the first deposit of 10s. per share, payable in 1848. The statement of accounts shows the receipts at 22,1811. 7s.; expenditure, 20,1851. 12s. 1d.; balance in Bombay (unaccounted for at present) of 1,449l. 8s. 6d., in London of 546l. 6s. 5d.

Mr. Hamilton, deputy chairman, stated that when the Report was drawn up on the 9th inst., the directors were under the impression that their proposition to the East India Company would be favourably received; but, on Saturday last, a letter was received from Mr. Melville, the secretary, considerably altering the proposition. Mr. Melville's letter said that if the company would pay the stipulated deposit of

Digitized by GOOGIC

30,000l. into the East India Company's treasury within one calendar month from the 24th ult., the amount should be returned to the company at the expiration of a further calendar month, with interest at the rate of 5 per cent. per annum, unless it could be shown in the meantime that the railway company would be enabled to raise the necessary capital to carry on the works in an efficient manner, without delay, by means of their registered shareholders. He (Mr. Hamilton) had not been able to consult his colleagues upon the subject, but, after conferring with the solicitor, he had written to the secretary, remonstrating against the short time proposed to be allowed to the company for registration, especially as many of the proprietors were resident in Bombay, calling attention to the fact that already from 20,000%. to 25,000l. had been expended by the company, on the faith of the East India Company's despatch of May 1845, which he considered a sufficient guarantee that they intended to carry out their works in an efficient manner, and praying that the subject might be reconsidered, and further time granted for the registration. The shareholders would, of course, see that the Board were placed in some difficulty by the letter to which he had alluded, as to proposing a definite course of action, and it would be a matter for their consideration whether they should pass a resolution contingent upon the reply which should be received to his letter, or whether they should adjourn for a week to await its receipt.

After a short conversation, the Report was received, and the meeting adjourned for one week, in order that a reply might be received from the East India Company.

#### SHREWSBURY AND BIRMINGHAM.

June 15.—Special Meeting, London.—The Hon. R. CLIVE, M.P., in the absence of Mr. W. O. Gore, in

The Secretary read the draft of a bill, the object of which was to sanction this company to subscribe Wolverhampton, in conjunction with the Oxford, Worcester and Wolverhampton, and to empower the borrowing of 3,300% for the purposes of the Act.

The CHAIRMAN moved a resolution in affirmation

of the bill, which was carried unanimously.

Another resolution was then moved, to the effect that the forfeiture of 150 shares of Class A, and 850 shares of Class B, be confirmed, and the directors be authorized to dispose of the same.

In answer, the CHAIRMAN explained that the for feiture of shares was a mere matter of form, the shares in question being those upon which, the deposits having been paid, the allottees had sold and the purchasers had neglected to register, in order that they might be legally re-sold to the original holders.

he resolution having been carried, The CHAIRMAN said the next resolution he had to lay before them was one authorizing the directors to

borrow the sum of 433,000*l*. on mortgage.

A Shareholder asked whether the directors thought they could raise the money at 5 per cent. interest

or whether they had power to give a higher amount.

Mr. Knox, the secretary, said that he believed that if they borrowed money at a higher rate of interest than 5 per cent. it would be a violation of the usury laws, but the penalty would fall upon the lender.

Mr. FIELD begged to disagree with the secretary High legal opinion had been taken in the case of another company, and he was clearly of opinion that any amount might be given and received. In his opinion they would not, under present circumstances, be enabled to raise money on debentures at any price not even 6 or 7 per cent.; but as it was most desirable that the works should be completed, so as to render the money already expended productive, he suggested that there was another course open to them, namely, the creation of preference shares, bearing 7 or 8 per cent. interest, or such an interest as would be sure to bear a premium in the market. Hedid not believe that there was any other mode open to them of obtaining the money, as, judging from other companies, he did not believe it could be obtained on loan, and he felt assured that if calls were made they would not be responded to, as he understood at least 3l. or 4l. per share would be required to open any portion of the line. A memorial had been drawn up to the directors on the subject, which, if the shareholders pleased, he would read though at present it was only signed by the representatives of 2,000 or 3,000 shares. (The memorial was here read, and set forth that, seeing the desirability of opening the line next spring, it was necessary that funds should be raised without delay, and suggested that a preference stock of 208,000l. should be created, in shares of 81. each, one to be appropriated to every holder of four original shares, with such dividend as might appear advisable). Mr. FIELD having explained companies, and had had the effect not only of raising the required capital, but of drawing in the arrears, in order to obtain the advantages resulting from the new stock, moved an addition to the resolution to carry out his views.

After some discussion, Mr. THORNEYCROFT (a director) said that he considered their line one of the best securities in the country, and the directors certainly had never contemplated giving more than 5 per cent. for the money on debentures, and he believed it would be obtained at that rate. If they were not successful, he should be an advocate for making calls upon the shareholders rather than agree to the proposition of the hon, proprietor of creating preference shares in perpetuity.

In answer, the Secretary stated that the amount of arrears was 80,000%, and, judging from the way in which the last call was responded to, it would require calls of at least 4% to enable them to proceed with the works, only 65,000l. having been paid out of

104.000%

The CHAIRMAN said he was certainly disposed, if the money could not be otherwise raised, to fall in with the views of Mr. Field; and it having been explained that the power proposed to be given by Mr. Field's motion was only permissive to the directors to raise money on a preference stock in the event of other means failing, the resolution as amended was (after some further conversation, in which two or three gentlemen urged the making of calls) put to the meeting and carried by a majority of 19 to 17; thus affirming the principle of creating a preference stock, if necessary.

OXFORD, WORCESTER AND WOLVERHAMPTON. June 13.— Special Meeting, Worcester.— Mr. J. RUFFORD, M.P., in the chair.

Mr. Bedford, the solicitor, gave the meeting a sketch of the provisions of the two bills to be submitted. Bill No. 1 authorized the raising, by creation of new shares, "for the purpose of enabling the company to complete their railways," any sum not exceeding 750,000%. The new shares so authorized by this bill are to form part of the original capital, and when that original capital and one-half of the new capital is paid up, power is given to raise a further sum of 250,000l. on mortgage. Former mortgages are to have priority, and no interest is to be paid on the calls paid up. Bill No. 2 contains sixty-one clauses, and gives power to alter a portion of the line in Wolverhampton, and for the construction of the Wolverhampton terminus at the joint expense of this company and of the Shrewsbury and Birmingham and the Birmingham, Wolverhampton and Dudley. The new portion is to commence at Wolverhampton, and terminate, by a junction with the London and North-Western, at Bushbury. The station at Wolverhampton is to be made under the superintendence of a joint committee of three directors of the Oxford, Worcester and Wolverhampton, three of the Birmingham, Wolverhampton and Dudley, and three of the Shrewsbury and Birmingham; these three companies to use the station jointly. Power is then given to the three companies just named to raise by shares 10,000% each for the purposes of the Wolverhampton station, and the Oxford, Worcester and Wolverhampton to raise 90,000% additional; and all the three companies are authorized to borrow money on mortgage to the extent of one-third of the capital mentioned. This bill also directs that no interest is to be paid on the calls paid up on these shares.

The CHAIRMAN reminded the proprietors that they had at a previous meeting given the directors instructions to proceed to Parliament for the powers proposed to be taken in the two bills before them; and with reference to the provision (in bill No. 1), for converting the debts of the Stratford and Moreton into stock, he observed that this arrangement would in no manner interfere with the interests of the Oxford, Worcester and Wolverhampton. From the circumstance of other lines running into Wolverhampton, it would be undeniably desirable that they should effect a junction with them, and a satisfactory arrangement had been made with that view with the Birmingham, Wolverhampton and Dudley, and the Shrewsbury and Birmingham, which he trusted would be to their mutual advantage. They had therefore abandoned a small portion of the line running into Wolverhampton, and substituted another cours

A motion approving of the bills was carried without a dissentient voice.

BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNCTION.

June 10.—Special Meeting, Birkenhead.—A proposal of the directors to defer the payment of the guaranteed dividend on the Chester and Birkenhead old shares, and also the payment of interest on calls, I

that the plan had been eminently successful in other I for one year, in order that they might be enabled to prosecute the works from Chester to Warrington more rigorously, after considerable discussion was agreed to.

LEEDS AND THIRSK.

June 10. - Special Meeting, Leeds .- Mr. H. C. MARSHALL in the chair.

Mr. Eddison, the law clerk, read the notes of a bill for enabling the company to alter the levels of certain portions of the Leeds and Hartlepool and to alter the proposed junctions with the Stockton and Darlington, in Eagleschiffe, and for other purposes. By altering the levels in crossing the Stockton and Darlington, near Yarm, considerable expense would be saved in heavy cutting, and it would also enable the Stockton and Darlington to take off a portion of the traffic from a part of the line which runs in the neighbourhood of a turnpike road. The saving effected would be about 13,000/., or probably more.

It was resolved unanimously that the bill be aproved subject to such alterations as Parliament may think fit to impose.

The CHAIRMAN said that was the whole business to be brought before the meeting; but perhaps he might mention, before separating, that the Leeds Central Station bill had passed the Commons, as also had their bill for extensions to the north from Melmerby, and their bill for altering the Harrogate branch, and the extension of it to Pateley Bridge. They had not passed the House of Commons without opposition, but having gone up to the House of Lords they had reason to expect that they would be passed in due time.

In answer to questions the CHAIRMAN stated that the capital required for the extensions spoken of had been provided for by previous votes, and that the requisite provisions for the junction with the East and West Yorkshire were comprehended in the Pateley Bridge branch extension bill.

Mr. FROBISHER asked if it was probable that any additional capital would be required so as to call for the issue of guaranteed shares or preference stock.

The CHAIRMAN said he did not like to commit him-

self upon that point in the present state of the works, but he hoped that their present powers as to loans would, with the remaining calls, raise sufficient for the purpose. The company could raise 481,000%, and they had already borrowed 200,000%.

Mr. Cash, a director, said that they were endeavouring to place the company in a position to get its works completed. Already 10 miles had been opened from Thirsk to Ripon, and in five or six weeks from this time they had reason to hope that it would be opened from Ripon down to the Wharfe.

BODMIN AND WADEBRIDGE.
June 13.—Special Meeting, Nine Elms.—Col. Hen-DERSON in the chair.

The draft of a bill authorizing the sale or lease to the South-Western of the Exeter and Crediton and the Bodmin and Wadebridge, and the carrying into effect of certain arrangements between the said company and the Taw Vale and Dock Company, was unanimously passed.

SCOTTISH MIDLAND JUNCTION.

June 6.—Special Meeting, Perth, to consider an agreement entered into by the directors for a lease in perpetuity of the line to the Caledonian .- Mr. P. W. Ogilvie in the chair.

Mr. KER, the secretary, stated that out of the whole number of shares, amounting to 24,000 in all, proxies for 16,676 had been sent in favour of the agreement entered into by the directors, and only one, that of the Marquis of Breadalbane, against it; but if no motion was made disapproving of the arrangement, the proxy of the Marquis could not be used

Sir J. RICHARDSON, Bart., of Pitfour, proposed the first motion, approving of the lease to be entered into with the Caledonian, at 6 per cent. upon 600,000l.

Mr. J. Honey seconded the motion, which was unanimously agreed to.

Mr. J. Miller, jun. proposed the second motion, that power be given to the directors to apply to Parliament for an Act authorizing the lease, and to carry its provisions into effect.

Mr. D. CRAIGIE seconded the motion, which was

unanimously agreed to.

Mr. J. M. Honey moved that the directors have powers entrusted to them to enter into a preliminary arrangement with the Caledonian for working the line—the arrangement to be drawn up by the solicitors of the two companies; and in case of any difference, Mr. Swift, solicitor to the Lancaster and Carlisle, be appointed referee for the settlement.

Mr. G. F. Barbour, of Manchester, was of opinion that a clause should be introduced into the agreement

prohibiting all Sunday traffic.

Mr. J. CONDIE said the terms of agreement were left to their solicitors, and he thought it was incompetent for the shareholders to interfere.

Mr. Barbour thought that a shareholder had surely the right to throw out a suggestion of this mature, as this was the only stage of the business at which they could so interfere. He made such a suggestion because he believed there were many friends of the Sabbath among the shareholders. If it was opened on that day, the country would be inundated with large numbers of people, who would be brought down from England, and disturb the peace of the country. He would therefore put his motion as a recommendation that in forming the agreement a clause should be inserted prohibiting Sabbath traffic.

Mr. D. CRAIGIE seconded Mr. Barbour's motion. Mr. J. CONDIE moved as an amendment, that without expressing any opinion upon Mr. Barbour's motion, it was incompetent for the shareholders to

discuss such a question.

Mr. Watson, of Keillor, seconded the amendment. Upon the vote being taken, there voted—For Mr. Barbour's motion, 2 votes, representing 164 shares; for Mr. Condie's amendment, 9 votes, representing 310 shares; majority for the amendment, 7 votes, representing 146 shares.

#### DUNDEE AND ARBROATH.

June 7 .- Annual Meeting, Dundee. - Dean of

Guild CURR in the chair.

The Report was read and adopted. A dividend of 8 per cent. was ordered to be paid on the 4th of July. The number of directors was reduced from eleven to ten, and the former directors were unanimously reclected. An increase in the returns of the past year compared with the previous to the amount of 4,583. 18s. 3½d. had taken place, and the traffic returns since continued to show a corresponding increase.

#### MULHOUSE AND THANN.

June 8.—Annual Meeting, Paris.—M. LEMAR-DELAY in the chair.

The Report stated that the dividend declared was 17f, per share of 500f. (20l.); that twenty-one "obligations," of 1,000f. each, part of the debt of 400,000f. which was contracted in 1842, would be paid off in July. The proposition of the State for the purchase of the railway was alluded to, and it was suggested that a committee be appointed to negotiate with the Minister and obtain the due value of the undertaking. The revenue for the year 1847, after deducting the working expenses paid to the Strasburg and Basle for working the line, amounted to 100,327f. (4,012l.); other expenses, 11,962f.; nett profit, 88,365f. (3,534l.).

Resolutions were passed adopting the Report, approving of the dividend, and appointing a committee to negotiate with the Minister of Finance for the repurchase of the line at a fair price.

### RAILWAYS AND AGRICULTURE IN LINCOLNSHIRE.

[Continued from p. 398.]

Parliament has lately displayed great jealousy with regard to granting any powers beyond carrying powers to railway companies. Objections have successfully been urged to their becoming owners of docks, ferries, steamboats and other appliances for assisting or increasing traffic beyond the limits of railway termini. In the only instances in which railway companies have obtained such powers, the public have obtained better docks and steamboats than they would otherwise have enjoyed. The result of what certain ignorant M.P.'s, misled by sounds, have called a monopoly, has been superior accommodation for the public at a cheaper rate. I do not think there would be any difficulty in proving that the public would gain greatly, especially the agricultural public, by permitting every railway company terminating in a sea-port town to have not only access to, but the whole control and possession of, a dock and warehouses. A railway company of large capital would be able to disregard any profits on, say half a million, sunk in docks and warehouses, in con sideration of the large additional traffic which would be attracted by a liberal style of conducting business. In bones and other foreign tillages, with the excep-tion of guano, a considerable proportion of the price is composed of the cost of transfer and re-transfer. For instance, bones from north Germany are carted from the ship side to the warehouse, and from thence to a railway station. Every day our farmers, as they progress, in scientific farming, are more dependent on these importations of foreign tillages. In the hands of a railway company bones and many other matters would be inoved from the ship to the warehouse direct, and, not unfrequently, under an arrangement with the importer, from ships to trucks which, without halt, would convey the whole cargo direct to some inland depot, at a saving which may be calculated from the fact that the cost of carting a puncheon of rum from St. Katherine's exceeds the whole freight of rum from St. Katherine's exceeds the whole freight intended to end only on the other side, although, in from London to Rotterdam. A grocer, before the fact, the intention of the engineer architect were most

Committee on the Lincolnshire Railways, proved that it was cheaper to send a hogshead of sugar from the London Docks by sea, round to Gainsborough, and thence to Sheffield, than to cart it to the Camden Town station on the North-Western. It is, of course, on articles of low value that small savings in the cost of conveyance tell. In certain situations steam mills and abattoirs might advantageously form part of the scheme of railway stations, even if let off to tenants. Killing beasts, like burying human remains, within the limits of towns, will soon, it is to be hoped, be ren dered penal. The next step will be to make in each important town a railway beast market and slaughter house. These companies are corporations formed to our hand to secure orderly responsible management. But these and many other points can only be properly discussed after a systematic investigation of the bearing of easy communication on agricultural improvements. Certain is it that our railway powers will never afford full advantage to the public until our legislators look to practical results—not to the question of whether powers of building, boating, damming and docking are contrary to precedent, but whether they will produce good accommodation at a lower rate than previous arrangements. these views on railways and agriculture that I determined on visiting North Lincolnshire, where a small section of an important system of railway communication had just given the farmers of that county s taste of convenience long eagerly desired. I had heard a high character of the intelligence of the Lincolnshire farmers. I had read Arthur Young's two tours, his homely yet strikingly picturesque descrip tion of deserts, and deserts reclaimed, of fen land turned to pasture and to corn land, and of moor land turned to turnip gardens. I had read, too, Mr. Pusey's account of his travels over Arthur Young's footsteps, and his account of the splendid specimens of farming now to be found where Arthur Young found the gorse bushes in which he hoped the then Lord Yar-borough might fall " for the good of the county." I was anxious to see what railways could do for the greatest agricultural county in England, and what Lincolnshire could do for railways. I was curious to learn, too, whether that farming which Mr. Pusey pronounced first-rate of its kind had altered under the fiscal changes scarcely anticipated when he wrote five years ago. I had neither his practical nor his scientific knowledge of agriculture, but I had seen a good deal of farming, both in this country and on the Continent, and understood pretty well the capabilities of railway powers. It struck me that if a movement were to be made towards increasing the connexion between railways and agriculture it was very likely to begin among the best farmers. "Capital and land" are said, by an eminent authority, "to be not hitherto acquainted." If we have any money to spend, the turn of events abroad will induce us to spend it at home. It is not now necessary, as it was in Arthur Young's time, for the farmer to mount his horse and slowly make his way towards far counties in search of improvements. The railway turns the ancient result of years into If in any one part of the country improved means of dove-tailing railway powers with agricultural wants be compassed, the press and the agricultural societies must make them known-the railway will enable them to be seen at no great expenditure of time and money; and as we have not the impoverished lagging tenants of clay farms, but the quick intelligence of railway directors to deal with, public opinion will soon cause every practical improvement to be adopted. I will now proceed, like Sterne when he took his single captive to illustrate slavery, to make my notes on one county instead of a dozen. I reached Hull from London on a March morning, crossed the muddy Humber at New Holland Ferry, and found myself in Lincolnshire. As far as the eye could reach along the banks of the river, stretched large level inclosures of rich green meadow land intersected by frequent deep open drains, presenting a completely Flemish landscape. The cows were there, though not of Flemish colours, more reds, and scarcely any blacks. The pollard willows were wanting, and hedges, protected by double rails, at long intervals, relieved the monotony of the scene. This New Holland, two years ago almost a solitude, was formerly a famous resort for smugglers of Hollands and prime tobacco, of late known by a ferry to Hull, which with difficulty supported one coach and one poor alchouse. But steam, the great magician of the 19th century, had been at work, and raised monuments of its deeds on all sides. Hundreds of work-men were engaged in putting the finishing stroke to a pier, one of the water stations of the Manchester and Lincolnshire, which stretched for some 1,500 ft., like a long black snake, into the Humber, as though

modest. The earliest transit at this spot was by an open boat, running chock-a-block upon the beach. Then came a small wooden pier, greatly descending to low-water mark. Then a tub of a steamer, landing its passengers in boats at low water on the slippery pier; and now the railway was extending itself into the stream far enough for passengers on the Liucolnshire side to make but one step from the steam-coach to the steamboat at every state of the tide. A little lower down the stream, fast advancing, too, though not so far advanced, a dock of three acres was in progress, intended to be surrounded by sheds for goods and tens for cattle, about to be attracted to New Holland Ferry by the conveniences of transit. Hull is at present the real capital of this part of North Lincolnshire, taking from it a good deal of butcher's meat, and supplying groceries and other domestic requirements, young horses and lean cattle. The traffic has hitherto been comparatively triffing, carried on either by a round-about water carriage to Gainsborough, or by a daily tidal steamer from Grimsby. It will not pay any independent company to lay out capital on the improvement of the water carriage between a fertile desert, like New Holland, and even so great a town as Hull; but the railway company are making an excellent investment, by including among the station arrangements of this terminus good steamboats, i. e., water omnibuses, a pier, a dock, a set of cattle-sheds, accommodation for market carts, warehouses for tillages and grain. A cattle-market is talked of, which would afford dealers the choice, according as prices went, of going on to Hull to the Leeds district, to Sheffield, or Manchester, or to London, without once changing their conveyance. The New Holland terminus has been planned expressly for the accommodation of an agricultural population, and is, I believe, the first of its kind in completeness of details. All around I saw preparations for attracting, if not creating, traffic— for a new hotel; for coal-yards that should supply the district within carting distance; in fact, everywhere visible signs that a very few years would convert the late green solitude into a busy river port, as well as a holiday suburb for the hardworking towns-men of Hull. The land lies low, considerably below high-water mark, for some miles. The embankment communicating with the pier, about 20 ft. high, one of the highest on the line, is composed of a smooth, tenacious blue marl, excavated, at a depth of not more than 18 in. or 2ft. under a layer of black mould. from the fields adjoining the line of the railway. Wherever excavations had taken place surface-water rapidity as showed the difficulty of getting it off the land in so flat a district. The blue marl, or clay, as it is called here, is the material, to a due application of which Lincolnshire owes much of the fertility which has superseded barren moors. As is usual where possible, the clay embankments were finished off (the sleepers and rails having been laid) by a layer of chalk, followed by a layer of sandy gravel for ballast, brought by steam power along the line of rails from convenient pits. This process of constructing embankments with three separate kinds of material is also a process by which barren land may be rendered productive, inches of the various kinds of earth being used instead of feet. The advantage of finding chalk pits within a convenient distance is very great indeed to railway contractors, effecting, as it does, a saving in the cost of labour for repairs equal to a man a mile. Perhaps, as farmers in some districts find it worth while to employ a whole day in bringing, on horses' backs, a few hundred weight of lime for manure, it is clear that in those districts where neither marl, nor chalk, nor lime is found close at hand, railway power used, in the cheapest manner, might be employed to create a soilmarl acts as manure for twenty years, and chalk, and lime, sand and clay, in due situations and proportions, exceed in value bones and guano. Mr. Pusey describes a process employed by a Mr. Gossip, in Yorkshire, by which the warp of the ancient bed of a river, conveyed from very considerable distances, was laid upon a prepared and drained morass, so as to create a completely new and fertile surface, where previously nothing but the rankest weeds would grow, thus raising the land from an annual value of 1s. an acre to 30s., at one operation. In the North of England coals are conveyed at nine miles an hour for 3d. a mile per ton. It is some conveyance as cheap as this that must be employed, in order to make railways more useful to farmers.
