From the directors' Report it appeared that the balance in favour of the company, on the current account to the 31st of December last, was 31,949t. The amount due for interest on the quarter shares was 2,9121, 10s, to the 1st of February inst.; and the directors recommend that a dividend be declared of 21.9s. 6d. per 501. share, and of 11. 4s. 9d. per 251. share (less income-tax); being at the rate of 9/. 18s. per cent. per annum, payable on or after the 25th of February.

On the motion of the CHAIRMAN, the Report was adopted, and the dividend declared as recommended.

### LEEDS AND BRADFORD.

Feb. 18 .- Half-yearly Meeting .- Mr. WADDINGHAM in the chair.

Mr. S. GOTLIFF, the secretary, read the statement of the capital account to the 31st of December 1847. Receipts, 1,105,587l. 9s. 6d.: expenditure, 1,093,402l. 18s. 6d.; balance at bankers, 12,184l. 9s. 6d. The line being under a lease to the Midland, there was no separate statement of the cost or profit of working.

The financial statement was ordered to be printed, and it was resolved that a dividend of 11.5s. per share (less the income-tax) should be payable on the 29th Mr. Rand was re-elected director, and Mr. T. W. George was again chosen auditor.

Some conversation ensued with regard to the time

when the line will be opened from Skipton to Colne, as from the date of that occurrence the Midland Company have guaranteed the payment of 10 per cent. per annum to the shareholders.

Mr. TITLEY said that the whole of the capital had been called up, and he inquired when the opening

would take place.

The CHAIRMAN said that the directors had expected the line to be opened in the course of the present spring; but as a portion of it had been undertaken in connexion with the East Lancashire, the directors had been unable to accelerate its completion as they otherwise would have done. It was the intention of the East Lancashire to open their portion of the line from Burnley to Blackburn and Manchester by the 1st of June, and from Burnley to Colne by the 1st of August. There had been no unnecessary delay, and his own impression was, that the line would be open throughout in the course of the year; but he could not answer for other people.

Mr. Rand thought it would be completed in the

Course of the next summer or autumn.

Mr. Goodman, a director of the East Lancashire thought there was little doubt that the works would be completed in the course of the year. He had seen no backwardness in his brother directors, and he would do his best to accelerate the completion of the

A resolution was passed authorizing the directors to take such steps with regard to bills before Parliament as they might deem advisable.

#### BIRMINGHAM AND OXFORD.

Feb. 19 .- Half-yearly Meeting, Birmingham .- Mr. MUNTZ in the chair.

The CHAIRMAN said that since the decision of the Lord Chancellor, proposals for an amicable arrange-ment of all differences had been submitted by the dissentient shareholders. He hoped for a speedy termination of all their disagreements-a termination which would benefit every one concerned. Pending the negotiations he should decline entering into any statement of affairs, but would content himself with the announcement that a ballot had been taken that day at the Board, and that the six gentlemen to retire had been determined upon. [The six named were those elected by the dissentient shareholders in March last.] He moved that the meeting at once proceed to the election of gentlemen to supply the vacancy.

Mr. Mozley admitted that the course to be adopted at the meeting to-day was different in some respects from the ordinary mode, and that, in fact, the meeting would be somewhat of a formal character; but this departure had been agreed upon, and was, in fact, essential, in their position. He cursorily observed on what had fallen from Mr. Russell in his speech at the Great Western meeting, as from that it might be thought they were the parties who, by their proceedings, raised obstacles in the way of bring-ing these differences to a termination. He pledged himself, however, that they had been advised the best mode of proceeding was by demurrer, because it was the most likely to lead to a speedy result. They had not obtained what they sought for, but a decision had been given, and he and those with whom he acted had taken the best course under the circumstances. They had made an offer to the Great Western in a good and bond fide spirit, and with an intention of bringing the matter to a final and speedy settlement. Contests were disadvantageous to railway property generally: they afforded the means by which others might step in and interfere with the rights of railway proprietors. He never had sought for a mere triumph, but the principle for which he contended in the first instance he now adhered to, and maintained the same determination to carry it out in all its integrity. As an amendment to the Chairman's motion Mr. Mozley then moved the following:-

'That the consideration of the election of directors to "That the consideration of the election of airectors to supply the place of those who go out by rotation, be adourned:" and this meeting, have heard read a letter from Mr. Dobie to Messrs. Hunt, dated Feb. 15, which stated that since the Chancellor's decision he, Mr. Dobie, had communicated with his clients in town who had fruitlessly sought the Chancellor's opinion on the merits of their case, during the progenitors on the denurser. These gentlemental the Chancellor's opinion on the merits of their case, during the proceedings on the demurrer. These gentlemen still believed their objections to the original agreement well founded, but from a dread of a long and expensive Chancery litigation, which would defer the completion of the undertaking, they propose amicable arrangements with the Great Western, to stay all law proceedings, excepting only the pending suit for specific performance, in which a decree shall be passed by consent, providing, "1. For the transfer of the Birmingham and Oxford undertaking to the Great Western, who shall retain the conduct and completion of it. 2. That the Great Western forthwith give to such shareholders in the Birmingham and Oxford as shall have paid 2. That the Great Western forthwith give to such share-holders in the Birmingham and Oxford as shall have paid up the full amount of 20%. a share, a debenture or security to the amount of 30%. 5s. upon each share of 20%, such secu-rity to fall due and be paid off with interest at the periods and rates set forth in the agreement of the 12th of November 1846. 3. That the Birmingham and Oxford, at a general meeting to be forthwith called under Lord Wharncliffe's order, shall approve, by the necessary majority, of such of the bills now before Parliament in reference to this line as the Great Western may require. 4. That both parties shall concur in all such further measures as may be necessary, or as the Court shall direct, for the purpose of fully and fairly carrying into effect this arrangement." The letter concluded by declaring that the writer's clients will, under all circumstances, reserve to themselves the right at all times of reverting to and acting on their still decided view of the alleged agreement, if either the present suggestion (made as it is without prejudice to their position or interests in any respect) be not adopted by the Great Western, or if the latter shall fall to perform their part of the arrangement.—"And this meeting, approving of such letter, and adopting the offer therein contained, the chairman do communicate the same and this resolution to the Great Western, with a request for a definitive reply on or before the 3rd of March request for a definitive reply on or before the 3rd of March next; and that this meeting be adjourned till the 4th day of March next, at 2 30 p.m., at Dee's Royal Hotel, at Bir-mingham."

Mr. Jones, of Liverpool, seconded the amendment. Mr. C. RUSSELL, chairman of the Great Western, wished it to be distinctly understood that he should not utter anything in a hostile spirit. With reference to what he had said at the Great Western meeting, although he said that the proceedings taken by the dissentient shareholders were of a character to cause delay in the final settlement, he had also said he had no doubt the advice of counsel had been taken, and Mr. Mozley and his friends were not seeking any undue or illegal advantage. He appeared at that meeting in the character only of a director in the company; and as chairman of the Great Western it was his duty to be careful not to commit that proprietary to anything by his observations. With reference to the letter from Mr. Dobie, it was proper he should explain that it was received at the station at Paddington on Tuesday the 15th, and forwarded to him the same night—at 12 noon on Wednesday he That was the day prior to the halfyearly meeting of the Great Western; and from circumstances at that meeting, it had been impossible for him to attend to the contents of the letter since -in fact, there had not been a Board meeting; but the matter was of such importance, and involved questions which it was so desirable should be speedily settled, that it would be immediately taken into consideration. With the object of Mr. Mozley's amendment he had no fault to find; but it was impossible for him to concur in it altogether, because it pledged those who did so to a particular thing; at the same time he begged to assure the meeting that he should proceed to the consideration of the proposals submitted by Mr. Mozlev's friends with the most anxious desire and purpose to arrive at a satisfactory result. The company he represented desired peace.

Lord HATHERTON could not support the amend-ment, for the reason assigned by the last speaker; but his lordship said that he was equally anxious as Mr. Mozley that the dispute should be put an end to.

Mr. MATTHEWS, chairman of the Dudley, said the battle had been fairly fought and fairly won: having done this, no man was more anxious for peace than himself: at the same time, he could not commit himself to the amendment by supporting it in the lan-guage in which it was couched.

The amendment was carried, and the meeting was

adjourned to the 4th of March.

For the first time since the meeting on the 4th of October 1846, there was a vote of thanks moved to the chairman. This was done by Mr. Mozler, who eulogized Mr. Muntz for his uniform courtesy. The better by railways than they ever expected to be; and that if railway directors were to go on consider-ing and yielding to the public much longer, the public would soon have no railway proprietors on whom to turn.

The shareholders met pro forma at their adjourned special meeting, and adjourned again as above deter-

BIRMINGHAM, WOLVERHAMPTON AND DUDLEY. Feb. 19.—Half-yearly Meeting, Birmingham.—Mr. W. MATTHEWS in the chair.

The Report stated that since the ordinary meeting in August last the directors had retarded rather than hastened the progress of the works. They had been influenced by two important considerations-first, by the uncertainty of the issue of the disputes relating to the Birmingham and Oxford line; and, secondly, by the general condition of monetary affairs, which rendered it desirable that the resources should be so husbanded as not to press on the shareholders. There were, however, reasonable grounds to expect a satisfactory termination of the disputes. As to the second point, the improvement in the pecuniary condition and prospects of the country admitted of much greater freedom in regard to expenditure, so that no obstacle would prevent the prosecution of the works. The directors had applied for powers under the late ex-

tension Act. Five of the directors retire, (Messrs Muntz, Lewis, Dimmack, Crane and Simmonds,) and they are eligible for re-election. The statement of expenditure, 61,2111.16s.11d.; balance, 30,6821.6s.

The CHAIRMAN congratulated the shareholders on their position and prospects; the arrangement to lease the line to the Great Western was a good one; and that proprietary had, under all circumstances, stuck fast by them. With respect to the progress of the works, he had only to remark that they were prepared to have them completed in the time prescribed. But as at the town of Bilston they connected themselves with the Oxford, Worcester and Wolverhampton, and at Birmingham with the Birmingham and Oxford Junction, until those lines were completed theirs would be comparatively useless. There was every prospect of a speedy and amicable settlement of the disputes between the Great Western and the Birmingham and Oxford, and then their important mineral and manufacturing district would be better provided with railway accommodation than any other district. He moved the adoption of the Report.

Mr. Stephens inquired when the securities or debentures of the Great Western to the shareholders

would be issued?

Mr. G. WHATELEY, the company's solicitor, said that the form of the proposed securities was now under the consideration of counsel, and that they would be issued as soon as completed.

The Report was adopted, and the retiring directors

and auditors re-elected.

BOSTON, STAMFORD AND BIRMINGHAM.

1 'Feb. 21. — Half-yearly Meeting, London. — Mr.
MACAULAY in the chair.

The Secretary read the Report, which stated that the unexampled monetary depression induced the directors to suspend all active operations in the progress of the works. The line had been staked and set out, and the engineer had prepared the working plans. The directors have therefore had no occasion to make any further call, and have endeavoured to reduce the current expenditure. They now proposed to reduce the number of directors to the lowest point allowed by the Act, namely nine. At the meetings held the 22nd of December 1846, and in February 1847, the sums of 1,000l. and 200l. were voted to the directors and managing director for their services. It was now proposed to ask a vote of 800l. only for this department, in place of 1,200l. The sum of 20l. each was also voted to the auditors. The directors recommended that this amount be reduced 10*l*. each. Other retrenchments had also been made. The statement of accounts showed the receipts at 60,624*l*. 12*s*. 2*d*.; expenditure, 41,623*l*. 10*s*. 4*d*.; balance in hand, 19,001*l*. 1*s*. 10*d*.

The CHAIRMAN, in moving the adoption of the The CHAIRMAN, in moving the adoption of the Report, recapitulated its leading features, and observed that there was one point to which he, as the organ of the directors, felt it necessary to advert, namely, as to the period at which the guarantee of 6 per cent. by the Great Northern would become payable. By their agreement the payment of 6 per cent. was absolutely to commence from the 1st of July 1848; but the agreement was coupled with a provise that one-half the capital of this company should be paid-up and expended before the guarantee. hould be paid-up and expended before the guarantee of 6 per cent. given by the Great Northern should commence; and the Act of Parliament required this expenditure first to be made. Again, the Act of the late short session rendered it still more impossible, as it made it imperative upon the directors not to make contracts for their works, and therefore they had not called up the capital nor expended half in the works. The guarantee would probably become payable early in the spring of 1849—six or more months later than had been anticipated.

In answer to questions, the CHAIRMAN said that all payments made in anticipation of calls would continue to bear 5 per cent. interest, and that no further call would be made for the next six months.

The Report was unanimously adopted, as were also series of resolutions, embodying recommendations.

SHREWSBURY AND BIRMINGHAM.

Feb. 24.—Half-yearly Meeting, Birmingham.—Mr. G. B. THORNEYCROFT in the chair.

The Report stated that,-

The Report stated that,—
Since the last half-yearly meeting, the directors had
mainly attended to the purchase of the land; and they could
report that, excepting a few properties not at present
wanted, the whole quantity required from Wolverhampton
to Wellington had been bought, without having had recourse
to a jury, except in one case, when the amount offered by
the company was awarded. The directors hoped to press
forward the works to completion within twelve months.
They had made the call of 1l. per share after due consideration of the late commercial disasters and at the same time
of the necessity of not sacrificing their property by postponing the opening beyond the time when other railways

Digitized by GOOGIC

in the district would be completed. They had carried out the provisions of the company's Act, and in future they would withhold interest on all previously paid-up capital while calls were in arrear. This probably would obviate the necessity of proceedings which the directors have been compelled in some instances to adopt, in order to obtain the payment of arrears. The sum required during the present year, so that the line should be opened throughten the property and the property of part ways. We about 45(1994) the payment of arrears. The sum required during the present year, so that the line should be opened throughtout early in the spring of next year, was about 450,0000, exclusive of any additional call by the Birmingham, Wolverhampton and Stour Valley. The directors had made another call of 1l. per share, payable on the 1st of Maynext, which, with the call due last month, and the arrears on former calls, would produce about 250,000k, when their borrowing powers would come into operation. The directors proposed to borrow the remaining sum required on debentures, and will specially summon the proprietors, in order to obtain the requisite authority. After the special meeting on the 28th ult., the assents to the Madeley branch were officially declared at 20,388; dissents, 2,393; assents to the low level station and fork lipe at Wolverhampton, 31,078; dissents, 1,701. Finally, the shareholders (class A) were informed that they would continue to receive from the Stour Valley 4 per cent. on the amount contributed by this company, until some portion is opened, and hereafter two-thirds of the London and North-Western dividend for the time being.

The statement of accounts showed the receipts on the "A" and "B" shares at 430,5781. 10s. 9d.; expen-

the "A" and "B" shares at 430,5781. 10s. 9d.; expenditure (inclusive of 66,601l. 16s. 11d. in land; works, Valley, 121,000*l.*), 411,236*l.* 17s. 7d.;—balance in hand, 19,341*l.* 13s. 2d. For constructing the line between Shrewsbury and Wellington this company and the Shropshire Union have each contributed 62,500l.; expended in land and conveyancing, 59,627l. 6s. 9d., and a balance remains in hand of 2,812l.

The CHAIRMAN reviewed their general position and prospects. The directors had shaped their course so that they should draw upon their line all the traffic for Shropshire and North Wales from the two great lines running up to them from Birmingham; and he expressed a hope that they would be enabled to open their line from Wellington to Shrewsbury early next spring. Many of the calls in arrear had been paid up since Christmas, and out of the last call, which amounted to 104,000l., there had been paid 72,548l. Notices of the purpose of the directors to declare the shares forfeited had been sent to all those who had not paid up the first call on the class "A" shares. Of the value of the line the directors became more and more sensible every day. The traffic would exceed their most sanguine expectations; and no efforts would be wanting on the part of the directors to get the line completed as early as possible if the share-holders would furnish them with the sinews of war.

In reply to questions as to the balance in the hands of the bankers, Mr. Knox, the secretary, said that this was generally kept as small as possible, but that during the latter part of last year the company had

received 6 per cent. for their money.

In answer to Mr. R. Scott, the chairman of the Stour Valley, it was stated that the bridge over the Severn at Shrewsbury was constructed at the joint cost of four companies—this, the Shropshire Union, the Shrewsbury and Hereford, and the Shrewsbury and Chester; and, with reference to the facilities for working the line on the broad gauge, if required, Mr. Brunel had given it as his opinion that, with their bridges and viaducts, he could go all the way through to Wales: and that the tunnel had been constructed the extra width at an additional cost of

The CHAIRMAN agreed as to the necessity of lessening the cost of working by extending their line; and expressed a hope that when their line was completed throughout, some plan would be hit upon to effect this, either by working in conjunction with the Shrewsbury and Chester, or adopting some other system.

The resolution for the adoption of the Report was

unanimously agreed to.

The meeting was made special, and the draft of a bill submitted to authorize an alteration of the line of the Oxford, Worcester and Wolverhampton, and for other purposes, under which bill it is proposed to authorize the Shrewsbury and Birmingham to contribute towards the formation of a station at Wolver-hampton, as therein described; and also for the purpose of confirming the forfeiture of certain shares declared forfeited by the directors, and of directing their sale.

Some discussion took place with reference to the roposal for the company contributing to the station. proposal for the company contributing to vite using it.

It was stated that in the event of their not using it, provision had been made by which they would receive 6 per cent. on the capital so laid out; and in the event of the line being sold to the London and North-Western, who would use the low level station, the Oxford, Worcester and Wolverhampton was to take their share in the station out of this company's hands at a fair valuation.

Resolutions in support of the above object were | passed unanimously.

#### SHREWSBURY AND CHESTER.

Feb. 22 .- Half yearly Meeting, Chester .- Mr. W. O GORE, M.P., in the chair.

The Report stated that the works on the parts unfinished had been well carried on, while the traffic on the portion already opened had steadily increased. The opening of the line to Shrewsbury, and of the branch to Oswestry, was expected to take place early in the present autumn. A large increase of traffic was anticipated on the opening of the line throughout. Calls had been made to the amount of 577,000l., on which there was an arrear due on the 31st of December of 39,774l. This arrear was now reduced to The company have borrowed 249,800l. would be necessary to obtain before the 1st of August, besides the calls, the sum of 80,000*l*. The gross revenue from traffic during the half-year amounted to 14,510*l*. 0s. 11*d*.; and after all necessary deductions there remained a balance sufficient for a dividend of 10s. on the original 20l. shares of the North Wales Mineral, on which 16l. had been paid; and of 5s. on the original 10l. shares, on which 8l. had been paid. The directors recommended a dividend accordingly to that extent, payable on and after the 25th inst.

The CHAIRMAN, in moving the adoption of the Report, alluded to the advantages likely to result from the wharf at Saltney, in connexion with the Irish trade. They had no connexion with any other company, and trusted to their own resources.

Mr. Fowler wished to know whether the line could

be completed without further calls. It was explained that the company had yet power to borrow 132,000l., and the line might be completed for 80,000l. If the money, however, could not be borrowed, calls must

Mr. Fowler and Mr. Geddes said that in case of shares being declared forfeited, the directors should begin with those most in arrear.

The CHAIRMAN did not anticipate that any shares would have to be forfeited, the amount of arrears being now little more than 20,000l.

The Report was adopted, and the Board authorized to carry out its recommendations.

SHREWSBURY AND HEREFORD.

Feb. 22.—Half yearly Meeting, Chester.—Mr. W. O. Gore, M.P., in the chair.

The Report stated that application had been made for an extension of time, which had been granted.
They recommended the discontinuance for the They recommended the discontinuance for the present of the allowance of interest on calls paid. The question of taking legal proceedings against defaulters was under the consideration of the Board. The operations were confined to the works at the Shrewsbury station, including the bridge over the Severn, and the portion of the line adjoining thereto. The receipts to the 31st of December last were 55,175l.; expenditure, 38,499l.; balance, 16,676l.

The Report was adopted.

OLDHAM ALLIANCE. Feb. 24.-Half-yearly Meeting, Oldham .- Mr. E.

A. WRIGHT in the chair.

The Report stated that it was necessary still further to postpone the prosecution of the works, and that it was designed to ask for an extension of time. The directors had loaned on mortgage to the Lancashire and Yorkshire, at 5 per cent., the sum of 30,000l., repayable at short notice any time after the 20th of December next. They had also relinquished for the first year the sum placed at their disposal by the shareholders. The statement of accounts showed the receipts at 45,710l. 2s. 10d.; disbursements, 13,866l. 5s. 3½d.; balance, 31,844l. 5s. 6½d. The CHAIRMAN, in moving the adoption of the Re-

port, said the suspension of the works was entirely

owing to commercial distress.

Mr. Broadbent inquired if the suspension was made after consultation of the shareholders by calling

a general meeting !
The CHAIRMAN said it was not. The public feeling had been so strongly manifested against calls, that at present it had been thought unnecessary to convene a meeting.

The Report was adopted.

EAST LINCOLNSHIRE.

Feb. 23 .- Half yearly Meeting, London .- Mr. H. PACKE in the chair.

The Report stated that the directors confidently anticipated that no further check would occur to their expectations than the postponement until the lst of September of the opening of the whole line. The disappointment had been occasioned solely by the inability of one of the contractors to complete the contract from Louth to Boston. The portion of

the line between Louth and Great Grimsby, about 14 miles, would be delivered over on the 1st of March to the Great Northern, who had provided the working stock requisite to open it for public traffic. The Manchester, Sheffield and Lincolnshire proposed to open their line from Great Grimsby to New Holland at the same time, thus forming a communication from Louth to Hull. The statement of accounts to the 31st of December showed the receipts at 308,4321.; expenditure, 327,2911.; balance against the company,

The CHAIRMAN, on moving the adoption of the Report, congratulated the proprietors on the prosperous state of their undertaking. The first portion would be open for traffic next Wednesday, and the remaining portion throughout in September, when the guaranteed dividend of 6 per cent. per annum would commence.

In the course of conversation it was thought advisable to call up the whole amount on the shares and hand it over with the line to the Great Northern, as the 600,000*l*, upon which the 6 per cent, was guaran-teed, leaving to that company the completion of the

Resolutions were passed adopting the Report, confirming the forfeiture of thirty-nine shares, reducing the number of directors from eleven to ten, re-electing the retiring directors, and electing Mr. Ranshaw (of Louth) an auditor.

The meeting was made special, and the bill for a deviation was approved.

#### PORTBURY PIER, &c.

Feb. 117 .- Half-yearly Meeting, Bristol .- Mr. C. L. WALKER in the chair.

Mr. WARD read the Report, which set forth that the directors stated that they were debarred by the recent Act from commencing their works at present. The liabilities were 8,800%; to meet this there was due on the first call 2,557l. 10s.; and in the banker's hands 2,8801. 9, 3d. It was proposed therefore to make a call of 2l. per share, payable on the 10th of August, and to enforce the amount due on the first

Mr. Ramsey put several questions in reference to the accounts, and also suggested that it would be better for the company to wind up its affairs.

The Report was adopted, with the exception of

the paragraph enforcing the first call.

#### TARR VALE

Feb. 17 .- Half yearly Meeting, Bristol .- Mr. W. Coffin in the chair.

The SECRETARY read the Report, which stated that the gross revenue derived from the Aberdare line had amounted to 3,232l. 19s. 3d., or nearly double the income of the first half-year, and though as yet insufficient to pay itself, still it should be remarked that the traffic of the Aberdare line had generally increased that of the Taff Vale. The directors were gratified in stating that the traffic of the half-year had exceeded that of any previous halfyear, and they recommend that a dividend of 4l. on each old share should be declared, with a proportionate per centage beyond 5 per cent. payable to the quarter and 10t. shares. This dividend amounted to exactly 8 per cent, on the amount paid up. The directors further recommend that the sum of 750t. should be carried to the credit of the depreciation fund for the present, and a like sum for the previous half-year. The work of opening the Ysnicory tunnel having been completed, the double line from Cardiff to the Navigation-house had been perfected, and was used for the increasing trade of the company.

The Report was adopted, and the usual resolutions

Mr. HILL inquired why the expenses of the Ely branch were not included in the general account?

The CHAIRMAN replied that the accounts in relation to that branch were being made up.

#### EAST INDIAN.

Feb. 19 .- First Annual Meeting, London .- Mr. D. B. COLVIN in the chair.

The Report detailed the final steps taken by the

Board. The directors called in the scrip receipts, in order to register and exchange them for share certificates, and at the present time there are in this country 94,476 shares, and in India 11,044 shares registered, making a total of 105,529 shares, and 19,301 shares have also been registered for proprietors in the Great Western of Bengal, but the pecuniary arrangements are in abeyance. The directors appointed Mr. Adams and Mr. Beeston to act conjointly with Mr. Stephenson, as the representative of the Board in India; and these gentlemen, accompanied by an assistant secretary and a complete staff of engineers, proceeded to Calcutta on the 20th of September. Their proceedings were strictly limited to measures absolutely necessary. A considerable portion of the first deposit of 5c, per share still remains unexpended. In order to provide for the deposit of 100,0007, required by the East India Company, a call was made in August last o The directors called in the scrip receipts, in order to regis-

Digitized by GOGIE

20s. a share, which was not responded to so as to enable the directors to make the deposit by the 21st of October, the time fixed, and the time is now extended to the 31st of The directors have taken care by a judicious March next. The directors have taken care by a judicious investment of the funds, to be in a position to secure to the proprietors who paid up the call a sum equal to 5 per cent. interest, the rate, as guaranteed, to be paid by the East India Company. The directors now report, that to this date the sum of 31,370l. 16s. 9d. has been paid on account date the sum of 31,370. 16: 9t. has been paid on account of the said call in this country, and that 7,529. has been paid in India to the 23rd of December last, making the total assets, including the balance of the first deposit, 53,0961, 12r, 1d. They propose to forfeit all shares on which the call is not paid by the 10th of March next. Those scrip receipts which have not been registered, the directors scrip receipts which have not been registered, the directors feel imperatively should be declared forfeited. There is a bill before Parliament, for reducing the 50% shares to 30% each, and the directors are in a position to pay 5 per cent. Interest on all the calls paid up with money derived from the investment of the company's funds, and which they recommend to be paid up to the 31st of March, when the guarantee of the East India Company will take effect, on payment to them of the deposit of 100,000%. With reference to the completion of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the East India Company will take of the contract with the contract will take of the contract will take of th payment to them of the deposit of 100,0000. With reference to the completion of the contract with the East India Company, the directors think the terms offered susceptible of amelioration; but the Board ought to be in a position to make the deposit of 100,0000. on the 31st of March next, and hope to be able to effect this by the prompt payment of the call in arrear. The shares in India have been well the call in arrear. The shares in India have been well registered and paid upon, and the staff is busily employed in re-surveying certain portions of the line out of Calentta, By the retirement of Sir G. Larpent, Major-General Caulfeld, Messry, R. G. Barclay and W. Scott, the joint Board was reduced to seventeen. These vacancies have been filled by the election of Messrs. H. A. Angllonby, M.P., J. D. Magens, F. Carleton and R. W. Crawford. The directors believe as much as ever in the vast importance of this scheme. achemo.

The statement of accounts showed the receipts at 55,621*l*. 18s.; expenditure, 12,403*l*. 7s. 8d.; balance in hand, 43,218*l*. 10s. 4d.

The Report was received with applause.
The CHAIRMAN, in reply to a remark from Mr.
HITCHENS, said that the discrepancy in the financial statement arose from the fact that unwards of 10,000/. had been paid since the accounts were closed on the 20th of January. He stated in reply to Mr. Flood that no actual negotiation had taken place with the shareholders as to the shares that might be forfeited; but many gentlemen would join the undertaking as original holders in preference to purchasing shares in the market; why, he could not say. He saw no reasonable ground for doubting that the required capital would be forthcoming; that there was no intention of making a call, as the directors hoped, by the sale of forfeited shares, to attain the object in view; but this, however, depended, in a great measure, on the proprietary themselves; that the amount paid in advance of calls, on which 5 per cent. was allowed, was about 15,000l., and was in the nature of a loan; and that as regarded the distribution of forfeited shares a preference should be given to the proprietors.

Resolutions were passed adopting the Report. authorizing the directors to pay interest at the rate of 5 per cent. on all calls paid up until the 31st of March, re-electing the retiring directors and auditors, and authorizing the forfeiture of shares and the pro-secution of the bill now before Parliament.

#### DEMERARA

Feb.18.—Special Meeting, London.—Mr. M'CHLERY in the chair.

The Report stated that,

In October last the liabilities exceeded the assets by 26,000%. In October last the liabilities exceeded the assets by 26,000t. Two calls had been made of 2t. 10s. each. The first which should have produced 25,000t., yielded but 17.862t., and the second realized only 2.725t. leaving a deficiency of 22,412t., and debts and liabilities, urgently pressing, of 46,705t. The progress of the works was satisfactory, and nearly the whole of the matriviel for the line to the village of Victoria had been provided. Had the calls been paid, the first section, to the village of Plaisance, about 5 miles, would have been opened. The terminus at George-town was nearly completed, and the engineer thought that when the line shall be opened to Buxton (10 miles from the former place) the receipts would much help the completion. They did shall be opened to Buxton (10 miles from the former place) the receipts would much help the completion. They did not intend at present to proceed with the line further than Victoria. The expenditure and liabilities were 99,3821, additional outlay to complete the line as far as Victoria, 30,000l. The directors had stopped all extra expenditure. They had lately applied to the Government for a loan of 50,000l, in order to meet their acceptances, but the small portion of the capital yet paid up precluded the loan. The Colonial Minister had recommended the Colonial Legislature to guarantee a dividend to the company of 7 per cent; and to guarantee a dividend to the company of 7 per cent.; and the directors had met the liabilities due up to the present time, which they could no longer continue. Many acceptances, if not immediately met, would be encumbered with 25 per cent., and other charges; they therefore determined to enforce the payment of calls.

Resolutions were passed adopting the Report, and authorizing the directors to enforce payment of calls.

Feb. 15 .- First General Meeting, London .- Mr. W. TINDAL in the chair. The Report was read-

This meeting has been convened in accordance with the deed of settlement, and the 7 & 8 Vict. c. 110, by whose provisions it is enacted, that an ordinary general meeting of the shareholders in joint stock companies registered under the said Act must be held in the months of January and July in every year, or within twenty days from the expira-tion of the said months respectively. Your directors on this occasion have only to report that since the last meeting the occasion have only to report that since the last meeting the company has become completely registered; and that, with a view to obtain from the local Legislature of Ceylon an acquiescence in the terms upon which (as agreed with and sanctioned by her Majesty's Secretary of State for the Colonies), your directors would have been prepared to recommend the prosecution of the scheme, the draft of a local ordinance, embodying the said terms, has been prepared and forwarded to Ceylon, for the purpose of being laid before his Excellency the Governor and the local Legislature, for approval or otherwise. Your directors hope to receive the decision of the Ceylon Government by the next mail, and have now to recommend that this meeting, which mail, and have now to recommend that this meeting, which has been convened solely on account of the provisions of the Joint Stock Companies' Act already referred to, be adjourned until specially summoned for the purpose of considering the communications which may arrive from the local Government. When the nature of the decision in question shall have become known, your directors will convene a meeting, and will be prepared to offer such suggestions for your adoption as may be deemed expedient.

After it was adopted,

The CHAIRMAN moved that the meeting be adjourned to the 10th of April, by which time the directors hoped to receive the promised letters from Ceylon, as through them only could they offer any

suggestions to the proprietors.

The motion was carried and the meeting adjourned.

#### BARRADOES GENERAL.

Feb. 15.-Adjourned Meeting, London.-Sir R. SCHOMBURGK in the chair.

The legality of the meeting was at first questioned, as it had not been advertised.

The directors maintained that it was unnecessary to advertise an adjourned meeting; and in the present instance the directors could not have done so, having received an injunction from the shareholders at the last meeting not to incur any additional expense. The legal adviser expressing himself also in favour of its legality, the meeting received a Report from a sub-committee appointed to investigate the affairs.

The Report stated that the committee had gone through the books, and had found the balance remaining in their favour to be 669l. 0s. 6d., subject to payment of claims amounting to about 300l. They were of opinion that the resources had been expended with much less regard to economy than was desirable, and particularly instanced the large sum of 2,5211. 15s. 3d., paid for the expenses of the two members of the Board who went out as a deputation to Barbadoes. The committee found also that the Board had received as remuneration for attendance and travelling expenses, 926L 4s. 8d. They regretted that the general depression of railway property, and other circumstances had conspired to place the company in its present position. They recommended the di-minution of the London Board, and the dissolution of the Board in Barbadoes; and that a Board of management should be appointed by the present meeting, of only five directors; no future call should be made on the shareholders without the concurrence of a majority at a special meeting; that the present meeting should require a pledge from the directors to that effect; and that all after proceedings should be conducted with strict economy. They also recommended the directors to open any negotiations for disposing of their Act, plans, sections, surveys, &c., and to submit

any offer received.

Mr. G. Smith, one of the sub-committee which had prepared the report, moved that it be received and entered on the minutes. While lamenting the circumstances which had arisen, he could not impute any dishonourable conduct to the directors. What had principally to complain of was the apathy which had been shown in the locality of the undertaking. It surprised him that the planters who complained of want of success did not take it up.

Mr. MURRAY seconded the resolution, avowing his opinion at the same time that the expenditure could by no means be considered as excessive.

The Report was adopted unanimously.

The Report of the directors, and the accounts, standing over from last meeting, (see ante, p. 16), were then read.

On the motion of their adoption a discussion arose respecting expenditure. Ultimately, the motion was carried without dissent, and the recommendations contained in the report, that the London Board of management should be reduced to five, and the Board in Barbadoes abolished, were formally adopted.

After some conversation, it was arranged that the London Board should consist of six members, viz. Sir R. Schomburgk, Messrs Rutton, Ivill, Connell, G. Smith and Haywood. Some objections were made by the directors to giving the required pledge respecting calls, but were eventually withdrawn, and a pledge given in due form.

[For further Reports of Meetings, see p. 153.]

IRON TRADE.—Glasgow, Feb. 18.—The Scotch market for pig iron has rather improved this week, there having been little pig iron offered for sale; and if holders keep firm, a slight further advance is anticipated. Quotations are 50s. 6d. for mixed numbers, and 51s. 6d. for No. 1, cash.—Birmingham, Feb. 19.—Large numbers of the mill-men have returned to their work, but the great difficulty is with the puddlers, always the most obstinate, for the reason that, receiving the highest rate of wages, they are generally in funds for a few weeks' holiday. On their course much depends, because, unless they procure the iron, there is little work for the mill-men to perform. On the Worcestershire side, says the Daily News correspondent, however—in the neighbourhood of Stourbridge especially-it is satisfactory to be enabled to announce that they have yielded during the week, and have returned to work at reduced wages. The very large works of Mr. J. Foster were again put in gear on Tuesday. The following day the Messrs. Wheeley put eleven furnaces again in blast; and in the neighbourhood of Brierleyhill many of the most extensive works and manufactories are once more in motion.

[Secretaries of companies are requested to forward notices of Moetings, and closing of Contracts, as early as possible.]

NOTES AND EXPLANATIONS

NOTES AND EXPLANATIONS.

(1) The Government gives 32,000,000f, and the land, and receives half the profits, after 10 per cent.

(2) The Government guarantees 3 per cent, interest, and 1 p. cent. Sinking Fund. The loan of 10,000,000f, was negotiated at about 4 per cent, per annum.

(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent, per annum. The dividend is declared after deduction of 1 per cent, from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

of 40% each, bearing interest at 4 per cent., created August 1845, reimbursable by lot, at 50% each, in the course of 73 years.

(4) The Government lends 10,000,000f, and 4,000,000f, additional for the flower them the 10,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Ruon, at 3 per cent. per ann. The interest to commence 3 years after the line is opened. Loan of 10,000,000 or 10,000 to 700, each created December 1845, hearing interest of 50% per annum, reimbursable by lot, at 1,250% each, in seventy-eight years—8,000 were issued in Dec. 1845, and 2,000 in Oct. 1846.

(5) Loan of 12,500,000f, in Bonds of 1,250f, bearing intere o 50f, per annum, to be paid off in a period of 50 years.

(6) Loan of 2,502,500, in Bonds of 1,100f, at 34 per cent., to be paid off with a premium of 150f, per Bond. The Government loads off with a premium of 150f, per Bond. The Government loads 12,500,000 for which the Company pays, from 1857, 4 per cent, interest per annum, and 1 per cent. Sinking Fund, but only when the shareholders have received 416 per slare.

(7) Loan of 8,500,000 fin Bonds of 1,250f, bearing interest of 50f, per annum, to be paid of in a period of 50 years of 50f, for the Government lends 5,500,000f, at 4 per cent, interest.

* For account, Feb. 24. § For account, April 13. † Ex Div.

London Stock Exchange, Feb. 25.—During the past week the share-market has been affected by the political excitement in France, but without much business. The accounts which arrived at the close of the market have produced great excitement and much depression. Consols, which are marked 88 at the close, were done as low as 86‡ after the usual hours of business. All the French shares are lower.

Liverpool, Feb. 24.—Prices are not so good as they were at the early part of the week. The transactions have been very limited.

Sudlow, Brothers. Suplow, Brothers.

Manchester, Feb. 24. - We have had but little business doing in our share-market this week, and prices generally are rather lower.

SAM. GRINDROD.

York, Feb. 24.—All the North lines of railway are quoted lower, and there is a general disinclination to do business in the share-market. But for the Con-tinental disturbances the market would be firm in GRAYSTON & EARLE.

Hull, Feb. 24.—The results of the meetings of the leading railway companies are such as to justify the fullest confidence in the financial position of these great undertakings. At more than one of them the insinuation that dividend had been paid out of capital was distinctly repelled, and we have no doubt that fairer and clearer statements were never exhibited. The market for shares does not improve; in fact, we never recollect a time when transactions were so limited. This—always bearing in mind the chief reason, the calls—is partly referable to the unsettled state of foreign politics, which creates an indisposition to enter into new arrangements.

FLINT & TOOTAL.

Newcastle-upon-Tyne, Feb. 24 .- Our share-market has been flat throughout the week, and very little business has been transacted. Prices however have continued firm. Newcastle and Carlisles have been done to-day at 101½; North British at 26½; ditto, thirds, 1¾; North Staffordshire, 10½.

Glasgow, Feb. 23 .- There is very little alteration perceptible in the tone of this market,—the chief features being an absence of speculation and a continued steady but moderate demand for investment. The prices of Ayrshire and Edinburgh and Glasgow stock have both fallen this week in anticipation of reduced dividends. We add to-day's latest business:

-Caledonian, new, 60s. 6d. dis.; Clydesdale Junc-—Caledonian, new, 60s. oz. cus.; Cryacsuare vanction, 61½; Dundee and Perth, quarters, 18s. 6d. pm.; Glasgow, Kilmarnock and Ayr, 94½; do. halves, No. 1, 3½ dis.; do. do. No. 2, 3½ dis.; North British, thirds, ½ dis.; Scottish Central, 29½; Slamannan, 15; Stirling and Dunfermline, 98s. dis.

Buchanan, Aitken & Co.

From the continued disturbances in the French capital the latest prices of shares have not arrived. It appears the people have taken possession of all the railways round Paris, and taken up the rails, so as to prevent the arrival of troops. There has been a frightful loss of life, and in many instances the troops have refused to act against the people. The passengers from Boulogne to Paris were obliged to return from Neufchâtel to Boulogne, as the railway is stopped. The Royal Family have left the Tuileries. The King has abdicated his throne, and is, we understand, arrived in London.

The GREAT LUXEMBOURG have requested the repayment of their caution money to double the amount they will expend in the works. A bill to that effect was submitted a short time ago to the central section of the Chamber of Representatives. The Report of the section states that the bill was approved of by a might fine to two with the propries that the bill majority of five to two, with the proviso that the bill, if passed into law, shall not be applicable to the expenses contracted before the conclusion of the proposed new arrangement.

# Railway Chronicle.

LONDON, SATURDAY, FEBRUARY 26.

The prospects of the BLACKWALL give satisfactory promise. After declaring a dividend of 3s. per share, clear of income-tax, the Report states that satisfactory arrangements had been agreed upon with the Eastern Counties, and East and West India Docks and Birmingham Junction Companies, for the use of the line.

The Norrolk directors, in their half-yearly Report, present a dividend at the rate of 5 per cent. per annum. Considerable dissatisfaction was expressed at the expenses incurred for the Lowestoft harbour, which was regarded by some of the shareholders as a positive "incumbrance;" Mr. Peto, however, offered himself to lease the undertaking at 4 per cent.

The Report presented at the half-yearly meeting of the Shrewsbury and Chester declared, after all deductions, a dividend of 10s. on the original 201. shares of the North Wales Mineral, and 5s. on the 101. shares. The line to Shrewsbury is expected to be opened in the autumn.

The LEEDS AND BRADFORD declare a dividend of 11.5s. per share, less the income-tax. The line is to be opened in the course of the present year, if the East Lancashire are prepared with their portion.

The proprietors of the HULL AND SELBY met to pass their half-yearly Report, recommending dividends of 2l. 9s. 6d. per 50l. share, and 1l. 4s. 9d. per 25l. share, being at the rate of 91. 18s. per cent.

The proposal of amicable arrangements with the Great Western was accorded at the halfyearly meeting of the BIRMINGHAM AND Ox-FORD. An amendment postponing the proposed election of part of the Board was carried, and the meeting adjourned to the 4th of March.

The Report was adopted at the half-yearly meeting of the TAFF VALE, and the shareholders are to receive a dividend of 4 percent. on each old share, with a proportionate per-centage beyond 5 per cent. on the quarter and 101. shares.

The WEST CORNWALL directors obtained the reception of their Report at the half-yearly meeting, but a committee of inquiry was at the same time appointed.

The dissolution of the NORTH WALES, recommended in the directors' Report, still meets with opposition from three shareholders, who are to

Digitized by GOOGIC

be persuaded, if possible, to withdraw their dis- | both of which the welcome report of an undisent.

At the half-yearly meeting of the DUNDALK AND ENNISKILLEN the Report was passed, but a special meeting is to be held to sanction an inquiry into the affairs of the company.

At the first meeting of the EAST INDIAN the Report was received, and assent was given for the bill before Parliament, to reduce the 50l. shares to 30l. each.

The directors of the DEMERARA at a special meeting received the sanction of the shareholders to enforce payment of calls.

. The following companies have held their half-yearly meetings, and have passed their Re-

ports and accounts :-Birmingham, Wolverhampton and Dudley. Blackburn, Bolton, Clitheroe and West Yorkshire. Boston, Stamford and Birmingham. Bristol and South Wales Junction. Buckinghamshire. Cork and Waterford
Direct London and Portsmouth. East Lincolnshire. East and West India Docks. Great Northern. Llynvi Valley. Lowestoft. Oldham Alliance. Portbury Pier, &c. Reading, Guildford and Reigate. Royston and Hitchin. Shrewsbury and Birmingham. Shrewsbury and Hereford. Sligo and Shannon. Southampton and Dorchester. South Wales. South Yorkshire, Doncaster and Goole. Tenby, Saundersfoot and South Wales.

Windsor, Staines and South-Western.

Shareholders in the Midland, Yorkshire, and North-Eastern group of lines have reason to think themselves fortunate, when they compare their position with that of any of the concerns whose affairs we have commented upon elsewhere. The meeting of the MIDLANDS on the 19th must have been in every way satisfactory: the dividend is kept up, without straining, to the level of February 1847; no calls are to be made for the next six months; and the chairman, amongst other explanations well suited to impart confidence, reported that the economy of the management is occupying the closest attention, as also that the company have now adopted the wise arrangement of carrying on their own account, which we have so often recommended. The causes of the favourable state of this company's affairs may be noted with advantage by all concerned in railways; and of these, the firmness of the chairman in refusing to let the rates on the lines under his control be cut down to an unprofitable level, has no doubt been one of the most efficient. On the occasion of the Midland meetings, Mr. Hudson is accustomed to comment on such topics of general interest as are the most prominent for the time being; and in this instance he exposed with success the malicious inconsistency of the attacks lately made by the Times, and other enemies of the system, on the balance-sheets of railway companies-pointing out how such assailants first accuse them of robbing the public, and when, by concessions to it, the rate of income falls off, attempt to damage them by the charge of robbing themselves; and cry out for a levy of Government auditors to be quartered on the victims of this curious injustice. We must refer to the report for other parts of the chairman's address well worth reading-our notice here must necessarily be a brief one. In these times, indeed, the best praise that can be given to a railway meeting is like that of a good matron-qui ne se fait pas parler d'elle.

The same remark will apply to the business of the York and North Midland and the

minished dividend was laid before the proprietors; and an exposition given of the prospects of future years, the hopeful character of which has a guarantee in the fulfilment of Mr. Hudson's promises up to this time. We cannot close this notice without pointing out, for the instruction of all concerned, that it is proved, by the results in this group of railways, how much of the returns of railway business depends upon the way in which it is conducted-how directly the difference between a wise and a less wise policy makes itself known in the maintenance or fall of dividends. The depression in the midland and northern counties has surely been as great as elsewhere-in some of their districts more serious, perhaps, than in any other quarter; and yet how much more encouraging are the railway results in that region! This contrast cannot fail to be observed: we trust it will not only excite attention, but promote the credit of some useful truths. Mr. Hudson presents the example of one chairman, at least, who has given the policy of the Railway Chronicle, in the maintenance of high fares, a full trial, and our readers can now judge for themselves of the merits of that policy.

The BIRMINGHAM AND OXFORD have again met to adjourn : but this time with something like the prospect of an adjustment. An amendment was moved by Mr. Mozley, and voted by the majority, in order to give the Great Western time for consideration of a proposal sent in by the solicitor to the shareholders (see Report), containing the outline of a peace with that company, on the basis of the agreement which it has been so urgent in demanding to have completed. From certain indications on the part of Mr. Russell, both at the Great Western meeting and at this, it may be questioned whether his party are now very eager or ready to fulfil their part of the contract; as preparations seem to be making already for new cavils on the terms of a most pacific offer. The issue must become clearer at the adjourned meeting on the 4th prox. The shareholders, while thus holding out the olive branch, have at the same time distinctly asserted their adherence to the principle on which they have hitherto acted; their present move being in the nature of a great concession, for the sake of ending litigation and strife. It remains to be seen how far the opposite party are disposed to realize their professions of being guided by a similar desire. These must soon be brought to a positive test, at all events.

In the meanwhile, we shall merely say that should the end of this curious business turn out to be the transfer of this line to the Great Western, after all that has been done, few will now be disposed to regard the event as a grievous one to the London and North-Western Company. It will be relieved from one of those provisional bargains, the terms of which were better for the seller than for the purchaser, and the ratification of which, in times like the present, must be felt more burdensome than beneficial. The Great Western, indeed, have shown no signs, since the late change of scene, of being very eager to take up theirs, although its conditions were not so liberal as the rival company offered.

We are glad to perceive hints of an intention on the part of the railway interest to take up, at length, the injustice of the present mode of RATING, as an object of united resistance. The expediency of trying to gain some relief from this oppression, we have often pointed out; and it will be at once a sign of returning sanity in of the York AND NORTH MIDLAND and the the several members of the body, and a promise alone; and the Edinburgh and Glasgow to be York, Newcastle and Berwick meetings—in of great practical good to follow from this halved. Thus the amicable arrangement which the several members of the body, and a promise

change, should they now come forward jointly to get this practical grievance redressed, instead of wasting their strength, as heretofore, in pulling each other to pieces. The same cause which makes remonstrance desirable, will also be sure to render the resistance of those who profit by the wrong complained of as obstinate as possible. Nothing short of a strong, unanimous effort, by the whole suffering body, will have much chance of success against the interest which the landowners have in keeping up this tax, and thereby throwing upon the railways burdens they ought themselves to bear. We hope that we may soon have to announce that measures to this end are in progress.

The Most Noble the MARQUIS OF BREADAL-BANE, CHAIRMAN of the SCOTTISH CENTRAL, has chosen to place himself in a singular attitude of hostility to his Board of brother directors and also to the recorded votes and wishes of the shareholders. Our readers may remember the very advantageous agreement made with the Caledonian and North-Western Companies to lease the line at seven per cent., a revenue not only liberal in those times, but now to be regarded, if not as extravagantly high, yet at least as much as in the most favourable circumstances it can be worth for many a year to come, and certainly much more than it is likely soon to earn. This agreement was signed, sealed and delivered between the parties-it was submitted, on appeal by the noble Marquis, to the highest tribunal in Scotland, who pronounced it legal and binding on the parties, and it has been confirmed at the late meeting of the North-Western, even although represented by influential shareholders to be disadvantageous and impolitic. One party to the agreement has thus fulfilled its obligations honourably and fully-let us see how the other party, viz., the most noble Marquis and his minority, propose to fulfil theirs.

The Edinburgh and Glasgow Company, proprietors of a rival line, in the heyday of their prosperity, made to the Marquis seducing offers to repudiate the said agreement, and suggested that he should make another more profitable (perhaps not more valid?) agreement with the Edinburgh and Glasgow. His lordship lent a willing ear to the tempter, and agreed to repudiate for himself, and to obtain if possible the repudiation of his co-shareholders of the former agreement. Immediately the ingenious lawyers of his lordship were set to pick holes in this agreement; and in this laudable and honourable enterprize the highest court of his country have pronounced that his lordship has signally failed. His lordship and his friends have tried to break their solemn agreement, and have not succeeded.

At the last meeting of the shareholders, his lordship had to declare his defeat, and did his best to cover it; he wished to continue the litigation and repudiation, but his shareholders would not follow him, and on the other hand they recommended him peaceably and honestly to set about conciliating both parties, and arranging some safer via media in which all interests might be united.

Meanwhile the usual effects of lax morality, even among companies, have displayed themselves. The Edinburgh and Glasgow have now become "poor but honest." They no longer tender the bribe of a higher lease to the Marquis -they no longer ask him to traffic in repudiation—they go to the legal leasing party, whose agreement the law courts have confirmed, and arrange terms of honest peace with them-they agree to divide the traffic, all the Edinburgh proper being for the Edinburgh line; all the North and South proper for the Caledonian

Digitized by GOGIC

the Marquis had failed to make, the parties themselves have arranged, and thus the company have obtained peaceably a good profitable and secure investment of seren per cent.,—to say nothing of the surplus profits to be divided,—a thing in these times not at all to be despised.

Thus everybody has been put right, except the Marquis and his select band of followers. He is placed every way in the wrong. In this extremity, like a spoiled child, he complains of being thwarted and vexed; he does not think it right that "the original projector of the line' should not be allowed to do as he pleases with his own: and what does his lordship choose? why this, that, as he cannot get everything his own way, he will have nothing at all! He sagely recommends his proprietors to repudiate all leases, however profitable, and maintain their glorious "independence." We can easily fancy such a course to be gratifying to the feelings of a noble and independent marquis and railway projector; we are more at a loss to see how it is to put money into the pockets of poor shareholders; and we counsel those who don't see their way very clearly to more than seven per cent. to send their proxies for next meeting to the directors, not to the noble Marquis, to prefer their honest gains to his "pride and poverty."

The EASTERN COUNTIES ACCOUNTS are circulated prior to the meeting, and show a largely increasing traffic, the amount of which, in cattle and goods, exceeds 100,000l. There is a clear surplus for dividend, after paying interest to the Northern and Eastern, of 111,577l., a result on which in these bad times the shareholders may be congratulated.

Our readers will see in a subsequent column letters from Shareholders of the MADRID AND VALENCIA, which deserve their attention.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,518 miles of railway, was 148,553l., thus accounted for: — 68,079l. for the conveyance of passengers only, 43,698l. for the carriage of goods, and a remainder of 36,776l. for passengers and goods together, not respectively apportioned; being an increase of 26,288l. over the corresponding week of last year, when the mileage was 2,711. The average earnings per mile last week were 42l., whilst in 1847 they were 45l.

# MINUTE OF THE RAILWAY BOARD ON THE TAW VALE GAUGE.

The RAILWAY COMMISSIONERS seem to have been aware that some explanation was needed of the grounds of their strange decision in the TAW VALE gauge case; as they presented a report last week to the Commons, professing to contain the reasons on which it is founded. so doing they have proved the wisdom of the veteran's advice to a young beginner, "Decide as you think best, but never give reasons." The positions taken in the Report are so extraordinary, and open to such direct refutation, that it must be felt by all who read it with impartial eyes to render the sentence even more unaccountable than before; -so questionable, indeed, that its appearance may give the parties affected by it a better hope of getting the order reversed than they could have had but for the utterance of this egregious document. We have not space to dissect its assumptions and so-called arguments; it must suffice us to say that we have rarely seen, even in the past productions of State railway officers, a paper, professing to contain reasons, laying itself more open than this does to be utterly demolished. The following are some of the points that characterize the Report. The Com-

missioners refuse to consider the main question of gauge at all:—at the same time that they expressly take it for granted throughout that a break of gauge is the great evil which the supporters of the national system have all along shown it to be. They put aside all that has been said by certain opponents on the score of pledges to lay down the broad gauge, alleged to have been given in 1846: they treat the dimension of the Exeter and Crediton as a matter of no consequence at all; assuming that the company, having lately changed its gauge, will be compelled, when the Taw Vale gauge is fixed, to change it again! They dwell with solemn surprise on the London and South-Western's share-dealings in the Exeter and Crediton and Taw Vale; and say nothing of the fact that precisely the same kind of proceedings were undertaken by the Bristol and Exeter in the same field, though, as it happened, with less success. After dwelling on this point, without however saving whether it is to form a full reason for deciding, or merely a half or quarter reason, they proceed to declare that the main ground of the determination is the convenience to be gained by adopting one or the other gauge; and this they decide in favour of the broad. The question, it will be seen, is thus narrowed to a very small compass; and the matter on which the issue is now joined may be easily brought to the test of demonstration. The weakness of the arguments in the Report, and the time and manner of the preceding order, will not tend to allay any suspicions that may have arisen as to the operation on the sentence of causes that could not be officially referred to. The Commissioners, by stating such grounds as they could declare openly, have exposed their decision to be overthrown, if those grounds can be shown to be untenable; and this, we apprehend, the parties concerned will be able to do.

### Carrespandence.

#### MADRID AND VALENCIA.

I am one of the unfortunate shareholders who deposited his scrip shares with the committee appointed to take legal proceedings against the directors, for recovery of the deposits originally paid by the shareholders, under the assurance given by the chairman of that committee, Mr. D. W. Harvey, and also by the deputy-chairman, Mr. Bigg, that the expense should not exceed 1s. per share. I have since been applied to for a further deposit of 2s. per share to carry on this lawsuit; this being more than I considered the return of the original deposit would warrant me in expending, I declined dipping any further into my pocket, and accordingly sent my 1s. per share and demanded the restoration of my scrip; the 1s. was at once received, but not so readily was the scrip returned, for I had to send a score times to the City Police-office before I could recover my scrip. Can you tell me if it be true that a screw got loose on the tyre of their driving-wheel, and thus stopped their advance until June? I hope for their credit's sake the committee will not require a still further subscription of 2s. per share.

Camberwell, Feb. 21.

Having seen a report, emanating from the directors, in explanation of the cause of the trial of Paterson v. Chadwick being postponed, and being one of the unfortunates who were induced to subscribe 1s. per share for conducting the prosecution, I cannot avoid expressing my indignation at the manner in which the committee would seem to have trifled with the interests of the shareholders and have practised upon their credulity. I doubt not many will wish their second subscription of 2s. back into their pockets, and will hesitate before they subscribe another 2s. to pay for the attendance of witnesses from Madrid. I congratulate myself that I did not allow them to seduce me into subscribing the second time. G. P.

#### Gassip.

The Government Inspector has received notice that the EAST LINCOLNSHIRE, from its junction with the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE near Grimsby, and the fork of the latter line which branches to New Holland and to Great Grimsby are now ready for opening. The opening is to take place on the 1st prox., and we think Mr. Fowler, the engineer of both companies, deserves credit for his punctuality.—Whilst on this subject we may notice that the whole of the 101. Preference shares guaranteed 6 per centage advertised as having been taken

are advertised as having been taken.

The statement made by Mr. Hudson at the Midland and York meetings of the extraordinary EXPRESS FROM LONDON TO EDINBURGH AND GLASGOW will be read with interest:—This special express, which was arranged by Messrs. W. H. Smith & Son, newsvenders, Strand, left London at 5 35 a.m. with the newspapers of the day, containing Lord John Russell's financial statement and the debates in Parliament of the preceding evening, and reached Glasgow at 3 57 p.m., completing the journey of 4723 miles in the incredibly short space of 10h. 22m. The detentions amounted to fifty minutes, including eight minutes occupied in passing from Gateshead to the Newcastle station, and seven minutes in passing from Tweedmouth to the station at Berwick, thus reducing the actual railway travelling to 9h. 32m., being at the rate of 50 miles an hour! Not the least amusing circumstance connected with this express is that it arrived in Edinburgh an hour and a half, and in Glasgow two hours, before the mails which left London the preceding evening. The regularity with which the entire proceeding was carried out was extremely creditable to the managers and superintendents of the respective lines, and proves the great efficiency of their working staff. The total number of miles run by Messrs. Smith's expresses on that day was 6854.

The floating of the CONWAY TURE to its destined position has not yet taken place. The Chester Courant declares that it could not be attempted during the present spring tides. The ground under the pontoons not being sufficiently levelled, no effort to accomplish the experiment was made. The officers of the Great Britain and about forty sailors from the Sailors Home at Liverpool are employed on the necessary preparations

necessary preparations.

In answer to more than one correspondent who inquires why on the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE the WORKING EXPENSES are so high, it may be stated that owing to the present position of the line it can accommodate merely a local traffic, whilst it has to maintain a staff and fixed expenses, together with a locomotive power, all of which could as easily work 100 miles as the present 46.

The Times gives the following summary of the

The Times gives the following summary of the results of seven appeals to the verdicts of juries in Lincolnshire. The total amount claimed by the seven landowners was 27,290L, the sum offered by the Great Northern was 12,076L, and the amount awarded by the verdicts of the juries was 11,850L, being 220L less than the sums offered by the company, and not amounting to 45 per cent. upon the sums claimed.

A New Locomotive called 'Lablache,' in honour

A NEW LOCOMOTIVE called 'Lablache, in nonour of the great buffo, and constructed by Messrs. Wilson, of Lecds, has lately been performing some very REMARKABLE FEATS OF POWER on the Midland. We have been assured, on excellent engineering authority, that it has been running between Rugby and Leicester with three carriages at an average speed of 75 miles per hour. The same engine has taken a load of 400 tons at an average speed of 30 miles per hour, which is even a still more remarkable feat. It runs upon only four wheels, each of 7 ft. diameter; and its motion is described as being remarkably easy and smooth. The wheels are 16 ft. apart, and were at first hung on India rubber springs. It was built as an experiment, and its success has been so signal that the Midland have not only been tempted to purchase it, but to order others of a like character. If the Railway Board possessed a little more practical experience of facts like these they would, perhaps, be rather more cautious in their patronage of broadgauge extensions. Great speed being the only recommendation of broad-gauge eccentricity.

In reference to the complaint of a shareholder in the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE, which we inserted last week (p. 129), we have undestood that it has transpired that the gentleman whom it was proposed to substitute for Mr. Randal as a director is not duly qualified: consequently the election is null and Mr. Randal retains his seat. We fear this fact substantiates the rumour that the opposition was the movement of a clique who had little or no stake in the company.

The Marquis of Breadalbane gives a qualified support to the anti-sabbatarians of the Scottish Cen-

Digitized by Google

TRAL. In his letter to Dr. Candlish, on the subject | locomotive traction. They had received from their of Sunday trains, he says, "I think that traffic and work on railways on the Sabbath should be strictly confined to what the Act requires; there may be cases of mercy and necessity, in which some exceptions must be made; but these, I think, may be specially provided for."

The last rumour in the Perth Courier as to the arrangement between the EDINBURGH AND GLASGOW and the Caledonian runs as follows :- All the traffic to and from England to pass along the Caledonian line; the Edinburgh portion, along the Edinburgh and Glasgow line, from its junction with the Central; and the Glasgow portion, indifferently along either of the two lines, as opportunity may suit, but the profit to be equally divided, however the goods may be forwarded. On the above basis the Edinburgh and Glasgow company agree not to oppose the bill before Parliament for lessing the Central line to the Cale-donian at a guaranteed dividend of 7 per cent., dividing surplus profits. Every exertion will now be made to have the entire Central line opened at as early a period as practicable with efficiency; and the general station buildings here, which were discon-tinued in the early part of winter, will be resumed without delay.

According to the Railway Record the Great Western have their hands full of law, as there is just now another action against them by the assignees of Parker, the carrier, to recover 6,000l. for overcharges—the list of which fills folio volumes two feet in thickness, and the list alone costs 1,300l. Pickford's case with the South-Eastern, goes over till April.

A porter, named Barker, at the Cambridge station of the EASTERN COUNTIES, according to a local paper, is said to have become possessed of 30,000l., rescued

from the jaws of the Court of Chancery.

The plan of a junction line between the Dundee and Perth and Dundee and Arbroath, by arched viaducts across the leading streets and thoroughfares of Dundee, has given rise to much excitement. The harbour trustees first took the field, and were followed by the town council and other bodies. A public meeting has since ordained that petitions be presented to Parliament, and remonstrances to the companies themselves, against the proposed measure.

#### Reports of Meetings. [Continued from p. 147.]

LONDON AND BLACKWALL

Feb. 22 .- Half-yearly Meeting, London .- Mr. J. N. DANIELL in the chair.

The Report was read (see Official Papers).
The CHAIRMAN said the directors wished to have presented a more satisfactory Report, but they could not control the amount of dividend, which was less than at the corresponding period of last year. He thought that the first item of diminution, viz., that of passenger traffic on their station line, was to be ascribed to the commercial pressure. As the passenger traffic at the stations was a business traffic. there was very little doubt that it was thence that the diminution of the passenger traffic had arisen. As to the amount paid for coals, the expenditure under this head had been greater during the summer months, because the period of working was longer than the winter period; but he must observe that as compared with the corresponding six months of last year, the quantity consumed had not been greater, and that the increase of expense had been caused by the augmented charge for freight. Commercial men knew that the taking up vessels for the corn trade had increased the charge for coal freights. The directors had always stated that so long as the rope traction existed, so long as the line was isolated from other lines, and had only the river traffic as an adjunct to it, they could never hold forth any expectation of a diminution of expenditure consistent with the safe and proper working of the line. Having never hesitated to state to the proprietors what they (the directors) considered the great cause of expen-diture, and the great drawback to its future prosperity—and with which cause the directors had nothing to do—he thought they would give the directors credit when they brought before them what they deemed their prospective advantages. He here specifically alluded to the opening of the extension line. The real cause why the line had not been opened was to be found in the non-completion of their bridges. They had three very large bridges objected to by different parties; the construction of one of them was referred to the Railway Board, and a considerable time elapsed before the matter was settled. The directors had strongly urged the rapid

engineer and managers very careful estimates of the cost, and there was reason to believe the saving that would be effected by it would nearly equal the winter dividend, if not approach in amount the summer dividend. This saving, added to the Bow traffic, even supposing the company were not to be enriched by any traffic from beyond Bow, promised an immediate improvement of their receipts. But the proprietors must add to this the advantages from the agreement with the Eastern Counties. The Eastern Counties directors were quite prepared to take advantage of the Fenchurch-street terminus, and they had well considered the due arrangements. They would afford the means and give every facility for bringing, by all their trains, what they termed their "residen-tial" stations to the Blackwall line, and they would provide in precisely the same manner for the accommodation of the through traffic. Nothing could be more favourable to the Blackwall than these terms. At the same time the Eastern Counties Board well esteemed such an arrangement, they seeing, he presumed, the impracticability of having any terminus in the City, unless they made use of the one in Fenchurch-street. The meeting would bear in mind that when he spoke of the Eastern Counties bringing their traffic over the Blackwall, they were not to suppose that the latter company would thereby be put to any expense. The Eastern Counties would work everything by their own carriages, and would, of course, receive a certain amount for so doing, but the Blackwall would not in consequence have to make any further outlay. He then alluded to the East and West India Docks and Birmingham Junction line. The directors had communicated with the Board of the other company as to the mode of the junction of the two lines. The companies' plans for effecting this junction differed. The Blackwall directors thought the plan proposed by their engineer, Mr. Locke, was the better one, but beggars were not to be choosers, and as the East and West India Docks Junction were to carry the junction out at their own expense, it was not for them (the Blackwall directors) to dictate how it should be accomplished. The Blackwall would also derive great advantages from the construction of the East and West India Docks and Birmingham Junction. It was originally intended that the goods traffic to and from the London and North-Western line, vid the East and West India Docks, should be carried across the Blackwall. Their purpose now was to carry passenger traffic upon it also, and the Blackwall would, of course, by their junction with the line, participate in the benefit to be derived from both these tenures of receipt. He then ward the address the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the s those sources of receipt. He then moved the adoption of the Report.

Mr. HAIGH seconded the motion.

Mr. G. Smith thought the Blackwall would eventually prove to be one of the most productive lines in the kingdom. Many years must elapse before another terminus could be established in London, and it was a matter of doubt if another City terminus would ever be constructed. The great convenience of the Fenchurch street terminus would cause it to be extensively used by passengers travelling over the Eastern Counties and Great Northern, as well as by the persons residing in the districts through which it was intended to carry the East and West India Docks and Birmingham Junction line.

The CHAIRMAN said they had not made any bargain for the sale or lease of the line, and it was not likely that they would do so when their shares were at 5l., with an expectation that they would, ere long, be at double the amount.

Mr. Cash thought that he had never heard so tisfactory a Report as that now presented to the

shareholders.
The Report was carried unanimously.

The dividend, as recommended, was formally

The meeting confirmed the appointment of Mr. J. Wilson as auditor, and re-elected the directors

The meeting was made special to consider the draft of a bill for effecting a junction with the East and West India Docks and Birmingham, and enabling them to use the latter line and the Eastern Counties. The bill was sanctioned by the proprietors.

#### GREAT NORTHERN.

Feb. 24.—Half yearly Meeting, London.—Mr. E. B. DENISON in the chair.

The CHAIRMAN, after declaring that the directors had shared in the late monetary difficulties, commented on the satisfactory way in which the calls had been met. An allegation had been made that the line between London and Peterborough had been completion of these works that the company might bring the vast amount of Bow traffic over their line. In addition to the Bow traffic would be the saving of expenditure consequent upon the introduction of the He then alluded to the progress of works, as detailed in the Report, which he called on the Secretary to read. It stated that-

The unfavourable change in the money-market had in-The unfavourable change in the money-market had induced the directors to re-consider the several contracts, and arrange for a slower progress of the works. They accordingly concentrated their efforts upon the loop line from Peterborough into Yorkshire, so as to open it, and bring the capital expended into productive operation; whilst the works between London and Peterborough should proceed on those portions only which could not be postponed without great ultimate loss. One hundred miles would thus be at work, connecting Lincolnshire and the eastern counties with the manufacturing districts of Yorkshire. Of this 100 at work, connecting Lincolnshire and the eastern counties with the manufacturing districts of Yorkshire. Of this 100 miles, 76 would be opened in September next. The East Lincolnshire line, about 48 miles in length, under the contract sanctioned by the Act of last session, became the property of the Great Northern, and it would be opened this summer, being a continuous route between London and Hull, 40 miles shorter than any existing line. Upwards of 130 miles would be at work at the close of the present year, and arrangements would be made at Peterborough to forward the traffic to and from London through the Eastern Counties and the London and North-Western lines, until the Great Northern main line to London was completed. The contracts sanctioned by the two first half-yearly meetings, under which heavy liabilities were incurred before the monetary pressure took place, rendered unavoidable the calls. The company, however, would soon be able to exercise their borrowing powers; and it was proposed to submonetary pressure took place, rendered unavoidable the calls. The company, however, would soon be able to exercise their borrowing powers; and it was proposed to submit a resolution empowering the directors to borrow any sum not exceeding 1,686,000. The Report recommended that the number of directors be reduced from twenty-two to twenty, and that the allowance made to them of 3,000% be reduced to 2,500% per annum.

The statement of accounts showed the receipts at 2.080,882.; expenditure, 1,837,8461. 9s. 5d.; including 78,665l. 2s. 7d. for law, parliamentary and engineering expenses;—balance in cash and securities, 243,035l. 10s. 7d. Since the making up of accounts 87,588l. 9s. 1d. had been paid for various items on the 4th of

January 1848.

The CHAIRMAN moved the adoption of the Report.

Mr. Wootton complained of the enormous amount of the charges comprised under the head of law, parliamentary and engineering expenses, and suggested that as regarded the law costs they ought to have been submitted, before paid, to the taxation of the public authority.

Mr. Ald. COPELAND, M.P., remarked that the several items comprising the total ought to be furnished in detail to the proprietors. From experience as a director of an important line now in the course of construction, he was confident that a great reduction in the law costs might have been effected.

Mr. Graves moved that a committee be appointed to investigate the law and other charges.

Mr. HUGHES seconded the amendment.

The CHAIRMAN assured the shareholders that the law costs and the other charges had undergone strict examination. It was due, however, to the solicitor (Mr. Baxter) that he should state that that gentleman had expressed his readiness to submit his bill of costs to the ordeal of taxation by the public officer; but the directors had contented themselves with their own examination, on a comparison with other bills charged upon the Eastern Counties, the Great Western, the London and North-Western, and the Manchester and Leeds Companies; and on that examination they found that the charges of their solicitor were below the minimum average of the costs so charged to other companies. If taxation had been resorted to, unless one-sixth of the bill of costs had been struck off, the company would have been saddled with the expense of taxation, which would have amounted to from 6,000l. to 8,000l.

After a lengthened discussion the amendment was withdrawn and the Report was adopted with only five dissentients.

Mr. Baxter declared his readiness for the future to submit all his costs to taxation before they were

Resolutions were passed for carrying out the recommendations in the Report; and, on the motion of the Earl WALDEGRAVE, the retiring directors were reelected.

The meeting was made special, to approve of the continued prosecution of the bills mentioned in the Report.

In proposing the continued prosecution of the bill to amend the Acts relating to the Great Northern, and to make certain deviations in such railway in Lincolushire, Nottinghamshire and Yorkshire, and to enlarge the Lincoln and Boston stations, it was stated that applications had been made to the directors that each shareholder should have the option of dividing his 25l. share into two 12l. 10s. shares, distinguished as A, or guaranteed, and B, or deferred shares, the A to be guaranteed by the holder of the B 6 per cent. per annum, and the B to take the chance of all further

dividend or privilege.

The bill, with permission to insert the clause for the division of the 25l. shares, was approved of. The other bills were also sanctioned.

BUCKINGHAMSHIRE.

Feb. 19 .- Half-yearly Meeting, London .- Sir H. VERNEY in the chair.

The Report stated, that

The Report stated, that
In the former Report the proprietors were informed that
the works of the lines authorized by the Acts of 1846 were
in active progress, so that the line might be opened by the
spring of 1849, and that contracts for the supply of rails and
chairs had been concluded. On the difficulties in the moneymarket, the directors curtailed the expenditure within the
nontractors for works and rails. This course became more
obvious from the impracticability of applying the powers of
borrowing. Arrangements were made by which the intended
period for opening the line has been postponed from the
spring to the autumn of 1849, and the delivery of rails and
chairs has been spread over a correspondingly longer period.
The prosecution of all the works which have been let may
thus be resumed in the approaching spring, as also tose on
the Banbury extension line from Brackley to Banbury. The
London and North-Western having been authorized under
the Act to substitute their security for that of this company London and North-Western having been authorized under the Act to substitute their security for that of this company for raising the amount this company is allowed to borrow, and having agreed thereto, the loans will therefore be raised on the most reasonable terms under the best railway security. The time for making the remaining calls must be mainly determined by the terms upon which the money is tendered on loan. The arrears on the amount called up to the 31st of December last are 21,5761, or about 5 per cent. on the amount called up to that date.

on the amount called up to that date.

The statement of accounts showed the receipts at 394,194l. including 15,000l. from the London and

North-Western on account of extension shares; expenditure, 366,095l.; balance, 28,099l.

The Chairman regretted they were obliged to make calls so frequently, but it was their business to make the line, and when it was made the London and North-Western would lease it from them. The amount he had embarked in the undertaking he thought

wisely invested.

Mr. Harding, the secretary, in reply to questions, stated that the call due on the 24th of January was in course of payment: he could not state the exact amount remaining unpaid, but during the first week three-fourths of the amount of the call was paid, and he hoped that the whole was now paid up. He understood that a memorial had been presented by the holders of 12,000 shares to the London and North-Western, expressing their desire that the terms of the agreement referring to the 4 per cent. and half profits might be converted into a fixed dividend of 5½ per cent. per annum; but the London and North-Western had declined to accede to their request.

Resolutions were passed adopting the Report and re-electing the retiring directors and auditors.

READING, GUILDFORD AND REIGATE Feb. 22.—Half-yearly Meeting, London.—Mr. D. SALOMONS in the chair.

The Report congratulated the shareholders on the agreement they had entered into, and that the balance at their disposal had been sufficient for continuing the construction of the works, without the necessity of making another call. The calls that had been made were discharged with great punctuality. The amalgamation with the South-Eastern had now estabhished the project on a firm foundation. The works between Reading, where the junction is formed with the Great Western, and Farnborough, where the junction is to be made with the South-Eastern and Dorking, were progressing satisfactorily. Tenders for constructing the intermediate portion would be hortly received. The statement of accounts showed the receipts at 238,917l. 2s. 9d.; expenditure, 91,53ll. 16s.; balance, 147,385l. 6s. 9d., of which 138,830l. 8s. 3d. was invested in Government securities, leaving a balance of cash of 8,554l. 18s. 6d.

In reply to questions, the CHAIRMAN said that the interest payable on the calls paid up in advance, which now constituted an item of 1,600l., was at the rate of 5 per cent., which he was almost inclined to believe was too liberal an interest; but it should be remembered that it was at first proposed to allow 53 per cent. on all calls paid up, and this was a proposition adopted instead.

After a short discussion, the Report was adopted. Messrs. Salomons, Macgregor, Gerard and Pritchard were re-elected directors.

LOWESTOFT.

Feb. 22.—Half-yearly Meeting, Lowestoft.—Sir T. Gooch, Bart. M.P., in the chair.

The SECRETARY read the Report, which stated that the receipts of the line during the past half-year had been 2,535l. 2s. 11d.; expenditure, 1,625l. 8s. 6d.; balance, 709l. 14s. 5d. To this was added the harbour account, now under construction by the Lowestoft. The works had, it appeared, been leased by the Norfolk, and that company would grant, on the 2nd of March next, a dividend of 4 per cent. The statement of accounts showed the receipts at 248,0721. 2s. 11d.;

expenditure, 262,7381. 2s.

The directors had borrowed sums of money, for agreed to.

which they will have to pay 16,000l. a year interest; and towards meeting this it was proposed to raise 6 per cent. stock.

Much dissatisfaction was here expressed, because many gentlemen had invested capital in the undertaking on the promise that they were to have 41 per cent., with a share of the surplus profits, while the Report mentioned no more than 4 per cent., without

a word about the surplus profits.

Mr. Seltser strongly protested against the adoption of the Report, and moved—

That the company have no legal power to create 6 per cent. stock in the manner proposed, inasmuch as by so doing it will materially interfere with the vested rights of the original proprietors, by depriving them of the half surplus profits, and that the creation of the said stock is a most unjust attempt to effect by indirect measures that which cannot be accomplished by a straightforward and honourable course of proceeding.

Mr. Colley seconded the amendment, but the directors, on the recommendation of their legal adviser, refused to entertain it.

The Report was adopted by a majority of three.

Mr. Colley moved the following resolution:—

That the original proprietors being entitled to a division of profits (after deducting the working expenses and paying the 4 per cent. interest on the capital of 120,000%, and the interest on the 40,000%, horrowed), the Norfolk may be held liable for the payment thereof.

The resolution having been seconded, Mr. Par-kins, the directors' solicitor, advised them not to receive it, and it therefore was not received.

Mr. E. C. Morgan then moved-

Mr. E. C. MORGAN then moved—
That the directors be requested to demand from the Norfolk the half-year's interest due in September last and March next, and put it to the credit of the Lowestoft shareholders.

This resolution was also declined by the directors After some further discussion, Sir J. Gooch and Capt. Tindal, the retiring directors, were re-elected.

SOUTHAMPTON AND DORCHESTER. Feb. 24 .- Half-yearly Meeting, London .-

MILLs in the chair.

The Report stated that the directors had long been prepared for an amalgamation with the London and South-Western, the virtual proprietors of the line; and that the bill for that purpose would be submitted to the shareholders on the 14th of next month. The statement of accounts showed the receipts, including a balance of 439% remaining on the 2nd of August last, at 29,219% 10s. 3d.; expenditure, 28,900% 16s. 7d.; balance, 318l. 13s. 8d.

The Report was adopted, and the retiring directors, Messrs. Simpson, Maddison, Capt. Breton and Sir J. Guest, were re-elected.

DIRECT LONDON AND PORTSMOUTH.
Feb. 25.—Half-yearly Meeting, London.—Mr. W.
A. WILKINSON in the chair.

The Report stated that from the pressure of the times the directors had not made any call on the proprietors, and they had abstained from any active prosecution of the undertaking which might entail much outlay. No contract on the line having yet been entered into, the company are precluded (by the terms of a recent Act), from entering into any such contract before the 20th of December next. The powers of the company, however, have been preserved intact, and proceedings are in course of being taken (under the Act before referred to) for obtaining an extension of time. Though no definite arrangement has been made with the London and Brighton, a bill is now being promoted in Parliament for facilitating arrangements between the two companies, and for enabling the Brighton to hold shares; this bill would be submitted to the present meeting. The statement of accounts showed the receipts at 110,355t.  $2s.\ 11d.$ ; expenditure,  $78,050l.\ 12s.$ ; balance, 32,304l.10s. 11d.

The CHAIRMAN declared his conviction that their position was encouraging and that there was every probability of their ultimate success. The directors had hitherto refrained from making any calls, having 30,000l. in hand, and not requiring at present any further sum; but the recent depression in the money market having made many persons anxious to get rid of their liabilities, the directors had considered that a call of 30s. per share should be made, payable on the 1st of June next. This course would prevent the sale of shares by parties who had not taken their share of the expenses. He proposed the adoption of the Report.

Mr. Collett seconded it, observing that he was perfectly satisfied with the reasons given for making the call.

The Report was adopted.

The meeting was then made special, in order that the bill for the arrangement with the Brighton might be submitted.

provisions of the bill were immediately

EAST AND WEST INDIA DOCKS AND BIRMINGHAM JUNCTION.

Feb. 21 .- Half-yearly Meeting, London .- Mr. J. Scott in the chair.

The Secretary read the Report, which stated that the pressure in the money-market had induced the directors to refrain from entering into any new contracts, and even to suspend in some measure the works commenced, in order to avoid any unnecessary call. The directors had only contracted to pay for such property as was absolutely necessary. The contractors were now proceeding at such a limited rate as was consistent with the engagements entered into with the road trustees and other parties. There had been by these arrangements sufficient funds to meet the current outlay; but the directors considered that 143.817. 14s. 11d.; balance, 33,126l. 13s. 2d.

The CHAIRMAN, in answer to various proprietors,

stated that they agreed to purchase land only when it was absolutely necessary to the contractor; that no further negotiation could take place with the London and North-Western till half the capital was paid up; and that the junction with the Blackwall Extension would no doubt bring a large addition to the goods and passenger traffic of this railway when completed. The amount of interest they received was 1,468*l.*, and the amount they paid to the share-holders 2,892*l*. The contract was for 2½ miles, from the Bow-road to Victoria Park.

The Report was adopted.

WINDSOR, STAINES AND SOUTH-WESTERN. Feb. 22.—Half-yearly Meeting, London.—Mr. H. C.

LACY in the chair.

The directors' Report stated that great progress had been made in the construction of the works, and that the main line from Richmond to the Windsor terminus was expected to be opened in the early part of July next. In accordance with the provisions of the Acts of Incorporation, the London and South-Western had nominated nine gentlemen to be direc-Western had nominated nine gentiemen to be directors, viz., Messrs. W. J. Chaplin, M.P., J. Lewis, Count Eyre, G. Henderson, H. C. Lacy, M.P. and W. Reed, the Hon. F. Scott, M.P., T. Smith, R. E. A. Townsend and M. Uzielli. The statement of accounts showed the receipts at 145,197l. 13s. 7d.; expenditure, 128,554l. 16s. 8d.; balance, 16,642l. 16s. 11d.

The Report was adopted.

The meeting was then made special, and a draft of the extension bill to Slough, introduced into Parliament, was approved of.

WEST CORNWALL.

Feb. 22 .- Half-yearly Meeting, London .- Capt. Moorson in the chair.

The Report announced the confidence of the directors in the undertaking. The proceedings against Mr. F. Mowatt, M.P. were still pending. This circumstance had created delay and rendered another call of 2l. per share necessary. The first call of 2l. per share was paid on 10,210 shares, leaving 5,275 shares in arrear, which the directors will proceed to recover. The second call of 2l. per share due on the 1st inst. had already been responded to by the proprietors of 2,675 shares. The directors had not, with their limited means, entered into contracts for the execution of any portion of the works, and had applied to the Commissioners for an extension of time. Mr. Brunel estimates a revenue of 8 per cent. on the cost of the line from Hayle to They advert with satisfaction to the increasing traffic on that portion which lately formed the Hayle line, the traffic upon which in 1846 was 11,783*l.*, and in 1847 was 14,045*l.*, while the expen-diture in 1847 had been reduced. The capital account to the 31st of December last showed the receipts at 180,522l. 12s. 6d.; expenditure, 178,962l. 12s. 4d.; balance, 1,560l. 0s. 2d. The revenue account showed the receipts at 15,936l. 2s. 3d.; expenditure, 14,899l. 5s. 11d.; balance, 1,036l. 16s. 4d.

The CHARMAN said that as to the advantages of

The CHAIRMAN said, that as to the advantages of the line from Hayle to Penzance, there was, besides its rich mineral products, a population of 160,000, who might be strictly called locomotive; so that, independently of connecting the line with London. there was a large local traffic. There was one line in the neighbourhood which was paying from 10 to 12 per cent. from the carriage of ore alone. He moved the adoption of the Report.

Mr. GURNEY said, that to pay the 3,2001. per annum, being 4 per cent. on the 80,000l. for the purchase of the Hayle line, they had a surplus produce of 1,063l. If they went on much longer he expected that it would be reduced to 600%.

Digitized by GOOGLE

The CHAIRMAN denied the assumption, and stated that the directors had not been able at present to go into the traffic of the Hayle line. As to entering into new contracts, he assured the meeting that the directors would not do so until at least 3,000l., in addition to the 10,000 or 12,000 shares considered good, were taken up at par, and then they would wish for the special opinion of the shareholders. Mr. Gurney adverted to the necessity of a com-

mittee of inquiry. He knew that it was only from a want of confidence in the management that several influential friends had not joined the undertaking. He moved a resolution that a committee be appointed

Mr. GEORGE seconded the motion.

The CHAIRMAN did not object to the motion, but suggested that the Report should be first received. the matter of which could still be inquired into by the committee.

This being agreed to, the Report and accounts were received, and a committee, composed of Messrs. Grout, Wills, Moxon, Pearse, Ching and Harrison, was appointed.

The meeting was adjourned till the 5th of April.

SOUTH WALES.

Feb. 23 .- Half-yearly Meeting, London .- Mr. C. RUSSELL in the chair.

The Report stated that the call made in July last had furnished the means of meeting all liabilities without suspending the works in progress, or materially retarding the completion of the line. Under Under the late extension Act the directors had sought powers for extending the period for the construction of the line. Application had been made to Parliament this session for power to raise the rate of interest on calls paid up from 4 to 5 per cent. Messrs. W. Mathews, A. F. Paull, R. Saunders and Lord Villiers, M.P., retired from the direction and offered themselves for re-election. The statement of accounts showed the receipts at 882.402l. 3s. 3d.; expenditure, 694,932l. 16s. 7d.; balance, 187,469l. 6s. 8d

The CHAIRMAN, after alluding to the satisfactory manner in which they had met the late monetary difficulties, observed that as the pressure had passed away the period had arrived when it was desirable on all accounts to actively press forward the works With this view the directors proposed to make a call of 5*l*. per share in April next, which would bring into operation their borrowing powers. After that call he hoped the proprietors would be relieved from further calls. A small portion of the line could be

opened on this side of Swansea in the present year.

In answer to questions, the Chairman said that it was Mr. Brunel's opinion that the works would be completed within the estimate, and that very little extension of time would be required for the comple-

tion of the line.

The Rev. W. Spencer detailed, at some length, the particulars of a circular lately published as to the character and interests of their company. He also animadverted on the folly of Government inter-ference, as proposed by Lord Monteagle's bill.

The CHAIRMAN detailed the various inaccuracies in the pamphlet alluded to, and agreed with the preceding speaker as to the objectionable and intrusive character of Government interference, which had invariably tended to the loss of the different companies. With regard to the payment of the rent, it did not begin from the completion of the line; but as fast as any portions were opened they were worked, and the profits of working them were paid to the South Wales, after the interest was provided for. With respect to Lord Monteagle's proposition for a Government inspection, although it might seem an invidious thing for directors to object to an audit of their accounts, he thought it would be most objectionable in practice and on principle. With respect to the place for the western terminus, that was a subject of the deepest importance. Fishguard had been originally fixed on, but St. David's and Abermaur having been suggested as better places, Capt. Claxton was desired, under the direction of Mr. Brunel, to make experiments as to which would afford the quickest transit to Ireland, and their opinions were that the latter place was the best steam-packet harbour, and afforded the best communication to Ireland They had not finally decided, however, and would not do so till they had thoroughly considered the question. With regard to that portion of the line which went to Milford, there was no intention of abandoning it; but common sense dictated that they should first pay attention to the main line from Gloucester to Fishguard and Abermaur, whichever was finally fixed on as the terminus.

The Report was adopted, and the retiring directors re-elected.

TENBY, SAUNDERSFOOT AND SOUTH WALES. Feb. 24.—Half yearly Meeting, London.—Mr. W. CHADWICK in the chair.

The SECRETARY read the Report :

The directors regret that from the late pressure in the The directors regret that from the late pressure in the money-market, the South Wales line has not proceeded rapidly; in consequence of which, your directors availed themselves of the Extension Act. Mr. Hay, the engineer, has surveyed the line, to reduce the cost of construction, and improve the gradients; and from his Report, the capital now subscribed for will be amply sufficient. The Pembrokeshire Iron and Coal Company are successfully opening up the resources of their iron and coal mines, and they intend exercise. Best formers during the anniverse erecting blast furnaces during the ensuing summer. As soon as the furnaces get into work, sufficient income will be probably derived from tolls and harbour dues to balance to banny derived from tons and marboar due to banner to be interest now paid for their purchase. Messrs. J. Lawrie, J. P. Andrew, and W. T. Longbourne, retire from the direction but are eligible for re-election. Mr. L. Pocock, one of tion but are eligible for re-election. Mr. L. Poccok, one of the auditors retires, and also offers himself for re-election. The statement of accounts showed the receipts at

30,425l. 8s. 8d.; expenditure, 27,491l. 3s. 5d.; balance, 2,9341. 5s. 3d.

The CHAIRMAN said that unfortunately their line depended upon the completion of the South Wales, which, being delayed, rendered it unnecessary for them to proceed immediately with their line. A fresh survey had been made, from which it appeared that the railway would be constructed at much less than the estimate.

The Report was adopted, the retiring directors and auditor re-elected.

LLYNVI VALLEY.

Feb. 24.—Half-yearly Meeting, London.—Dr. Bow RING in the chair.

The Report stated that-

The Report stated that—

Effect had been given to the Act for incorporating the Duffryn, Llynvi and Porth Cawl with this undertaking, and that it now only remained to complete the arrangement by authorizing the directors to issue the new shares for the additional stock of \$50,000\$. (created in lieu of the share capital of an equal amount in the old company) to the respective proprietors. Four directors of the Duffryn, Llynvi and Porth Cawl had taken their seats at the Board. The receipts from the traffic over the line, and from the harbour, from the 1st of August to the 31st of December last, a period of five months, were 4,1304. 0x. 7d.; the charge on which, inclusive of interest on mortgages, amounted to 2,2954. 15x. 5d., balance, 1,8346. 5x. 2d.; out of which the directors recommended a dividend on the share capital, viz., 75,0000, and the rate of 5 per cent, per annum, being 1,573. 11x. 10d., and that the remainder, 2606. 13x. 4d., be carried to the credit of the present half-year's account as a reserve. Nothing important had been done towards the construction of thing important had been done towards the construction of new works, in consequence of the great depression and scarcity of money. Although these difficulties had diminishscarcity of money. Although these difficulties had diminished, yet the directors would confine their operations during the present year to such works only as were indispensable. When the arrangements between the Duffryn, Llynvi and Porth Cawl and the Llynvi Valley were settled, it appeared that a payment of 3,0002 by the latter company (made in August last) would not only enable the former to discharge all their liabilities, but would leave a surplus for division amongst their proprietors; it was therefore necessary to state that the non-recovery of certain arrears of calls due in respect of the Duffryn Company's 25t. shares (viz., 2,812.), and also of another amount due for tonnages, &c. (viz. 1,132.) had placed the account of that company in a different position from that anticipated. The payments now in advance and present liabilities amounted to 2,953t., the directors were therefore under the hecessity of carrying into effect the clause in the agreement which provides that directors were therefore under the hecessity of carrying into effect the clause in the agreement which provides that any surplus arising out of the debts and liabilities above the stipulated sum shall be retained out of the accruing interest and dividends of the new shares; they, however, desired to state that they were using every exertion for the recovery of the sums due, and that when they had accomplished that object the balance would be rateably divided amongst the proprietors entitled to the same.

The capital account showed the receipts at 109,345l.; expenditure, 107,032l. 9s. 10d.; balance 2,312l.

The meeting was made special. The resolution for creating the new stock having been passed and the corporate seal of the amalgamated company affixed to the register, the meeting resolved itself again into the ordinary one, when resolutions confirming the Report and authorizing the dividend were passed.

In reply to a question from a Proprietor, The CHAIRMAN said the proprietors in the Duffryn and Porth Cawl would not be entitled to their dividend until the liabilities referred to in the Report were discharged.

Resolutions limiting the Board to fifteen directors. and re-electing the outgoing directors and auditors, were then carried.

NORTH WALES.

Feb. 22.—Half-yearly Meeting, London.—Mr. W. CHADWICK in the chair.

The Report stated that since the last meeting in October the funds had been invested at interest, and the bill for the dissolution, sanctioned by the shareholders, had been introduced into Parliament. statement of accounts showed the receipts at 45,597l. 0s. 11d.; payments and liabilities, 22,193l. 18s. 4d.; balance, 23,403l. 2s. 7d.

The Chairman said the solicitor's bi whic had

The CHAIRMAN said the solicitor's bi whic had been under taxation, was reduced 7571. 10s. 11d., leaving an amount now due to them of 1,0861. 8s. 6d. There were six shareholders who refused to sign in favour of a dissolution, and they only held 105 shares. The total number of shares was 12,000, and they had the consents of 10,000. Protests were read from the dissentient shareholders, some of whom threatened to enter proceedings in Chancery against the direc-tors if they persisted in carrying out a bill for dissolution.

Mr. Bulls said he understood that the Vice-President of the Board of Trade had brought a bill into Parliament for the purpose of simplifying the winding up of companies in which the majority of the shareholders were in favour of a dissolution, and he wished to know whether they could not take advantage of that bill, instead of going to Parliament for a separate Act?

The CHAIRMAN had good grounds for believing that it was intended only to apply to joint-stock companies not being railway companies; for when he had an interview with the Chancellor of the Exchequer, some time ago, he told him that the Government had no intention whatever to bring in a new bill applicable to the dissolution of railway companies.

The meeting was made special, and the draft of the bill in Parliament having been read, it was unani-

mously approved of.

A resolution was passed appointing three shareholders to wait upon those who dissented, with opposition.

BOLTON, BLACKBURN, CLITHEROE AND WEST YORKSHIRE,

Feb. 24.—Half-yearly Meeting, Blackburn.—Mr. W. H. Hornby in the chair.

The Report stated that-

The Report stated that—
At the last general meeting a resolution was passed authorizing the issuing of certain unappropriated shares as preference stock, to be allotted proratta to holders of old shares, but in consequence of a requisition, and the monetary presure, the directors did not deem it advisable to issue such new preference stock. The directors have therefore made calls on other stocks in order to keep pace with the expenditure on the line between Blackburn and Bolton, the expenditure on the line between Blackburn and Bolton, the opening of which was considered to be of the utmost importance. In making such calls, however, the directors have endeavoured so far as possible to extend them alternately over all the different kinds of shares. On the 31st of December the arrears unpaid amounted to 74 per cent. on the capital, but since that date further sums have been received reducing the arrears to 6 per cent. The line, for a length of five miles from Blackburn, was opened in the month of August last; up to December, a period of less than five months, no fewer than 98,174 persons were conveyed on this line. The fares hitherto charged for passengers have been extremely low, but after deducting all expenses a sum of 1,000. has been cleared. Of the entire line between Blackburn and Bolton, more than nine-tenths is already completed and the remainder is in such a state of forwardness that the direc-tors confidently anticipate its opening before Midsummer. The directors have obtained powers under the extension Act as far as respects the portions not already contracted for, and for which no notices have given to landowners, namely, from Chatburn to the junction with the North-Western at Long Preston, and also the Thornton branch, which communicates with the Leeds and Bradford.

The CHAIRMAN invited the shareholders to put

any questions, or make any remarks.

Mr. W. Fowler, of Liverpool, originated a long discussion in connexion with the payment of interest, which had been stopped agreeably to a resolution passed at the last general meeting. He had been in arrear on the 31st of December last, but had since paid up, and he moved that his interest be not stopped.

The motion was not seconded.

Mr. Fowler then demanded his interest as a right, on the ground that the last call had been illegal, his notice having been dated fourteen instead of twenty-

one days previous to the pay day.

The CHAIRMAN explained that the public notice in the newspapers had been ample, whereon the matter

dropped. The Rev. R. HORNBY and other speakers upheld the necessity of stringently enforcing the stoppage of

interest of which the hon. proprietor complained A discussion followed on the proposal to abandon

the Clitheroe section. The CHAIRMAN said it was the intention of the directors to hasten as much as possible the opening of the whole line, and to proceed steadily, though not rapidly, with the works to the north of Blackburn, the abandonment of which would cause a loss of not less than 150,000l. The relative calls on the old and new stock was left, with respect to amount and time,

with the directors. The CHAIRMAN, in answer to Mr. PARNELL, stated that the unappropriated shares which the directors were empowered at the last general meeting to issue would not for the present be issued, and that the directors did not contemplate any additional call on stock No. 1 in order to finish the line through to

Mr. Bradford asked for an explanation as to the

withdrawal of the late deputy-chairman, Mr. Ashworth, whose selling out had excited distrust among the proprietors and injured the value and character

of their stock.

The CHAIRMAN read an extract from a letter from Mr. Ashworth, stating that he had withdrawn on account of personal reasons; and for further explanations, in answer to specific inquiries, he said that Mr. Ashworth had retired immediately after the purchase of his land by the company: he had claimed 6,492/., the directors had offered 3,600l., and the award had been 4,100l. Mr. Ashworth had telegraphed his broker on the following day to sell his shares (40 in number).

Resolutions were passed adopting the Report, and authorizing the forfeiture of 285 shares (the numbers of which were enumerated) in stock No. 1, late Blackburn. Darwen and Bolton, and 16 shares (the numbers of which were also enumerated) in stock B or pre-

SOUTH YORKSHIRE, DONCASTER AND GOOLE. Feb. 25 .- Half-yearly Meeting, London .- Earl FITZWILLIAM in the chair.

Mr. J. C. HANSFIELD, the secretary, read the Re-

port, which stated that-

Since the passing of the Act on the 23rd of July last year, your directors have called in the outstanding accounts, registered the shares, and consolidated the stock. They have also, by careful inquiry into the future expenditure, and also, by careful inquiry into the future expenditure, and into the funds for this company on its amalgamation with the River Dun Company, so arranged for paying interest on calls, and on monies paid in advance of calls, as to render the shares most valuable investment. At the special meeting on the 20th ult., the proposal for the immediate commencement of a portion of the line was carried by a large majority. No time has been lost by the engineer. The land and working plans have all been prepared, the works have been commenced and will be proceeded with rapidly. The line from Swinton to Doncaster will most probably be opened for traffic early next year. By the financial statement a balance remains of 43,613. 1s. 4d. in cash and Exchequer Bills. A large amount has been offered in advance chequer Bills. A large amount has been offered in advance of calls on the terms of the circular of the 14th of January, and this amount will be considerably increased before the and this amount will be considerably increased before the time proposed for making the first call; and as the company is enabled to give 7 per cent. per annum upon monies paid in advance of calls there will be little difficulty in obtaining the full amount. The total expenditure of 70,5231. 19t. 5tl. extends over a period of upwards of two years and a half, during which time the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was a period of the company was engaged in two very severe parliamentary conflicts; the first of which occurred immediately after the agreement for amalgamating the South Yorkshire Coal and the Goole and Doncaster, thereby rendering it compulsory to proceed with both bills, and involving a double expenditure in law, engi-neering, and other charges. During that session lifteen schemes both bills, and involving a double expenditure in law, engineering, and other charges. During that session fifteen schemes were projected in direct competition with your undertaking. A sum of 47,250% has been appropriated as deposit on 18,000 shares, in the Sheffield, Rotherham, Barnsley, Wakefield, Huddersfield and Goole. This arrangement was sanctioned at a general meeting, held in August 1846, and power was sought in the last session, for the complete transfer of that portion of the Sheffield, Rotherham, Barnsley, Wakefield, Huddersfield and Goole, the capital for the construction of which is represented by these 18,000 shares. This power was granted, but during the last session, its operation was postponed until the expenditure by each company of half its subscribed capital. For the present, and until the sale can be completed, these shares must be distributed in their present shape, to the proprietors, in due proportions, in accordance with the covenant of the shareholders, as contained in the subscribers' agreement. The Report then notices the value of this last acquisition. Half of the Board of that company are nominated by your directors, and the management of your portion of their scheme is confided solely to those gentlemen. The amount of revenue under the contract with the River Dun Company, to the end of the last year is 14,517% of 11d., which sum will, however, not be payable until the amalgamation by half the eapital being paid up and expended. Out of this revenue your directors propose to declare a dividend, at the retay of 5 over cent are a number from the nessing of tion by half the capital being paid up and expended. Out of this revenue your directors propose to declare a dividend, at the rate of 5 per cent. per annum, from the passing of the Act, for the half-year ending the 22nd of January, amounting in the aggregate to 2,812l. 10z., for which interest warrants will be forthwith issued, payable one month after the amalgamation. Your directors, as stated in their last circular, will hereafter be enabled, out of the surplus and accruing revenue, to pay a dividend of 6 per cent. per annum, until the opening of the line. The extension of the South Yorkshire line to Penistone was struck out by the committee on the bill, and the Sheffield and Lincolnshire passed through the House of Commons a bill for constructing a line from Barnsley to Penistone, which bill is again passed through the House of Commons a bill for construc-ting a line from Barnisley to Penistone, which bill is again introduced in the present session, with the intention of pressing it through the House of Lords. It appeared ne-cessary to your directors, for the protection of your inter-est, that the extension of your own line to Penistone should be re-deposited in an altered shape, and a bill will be sub-nitted for your approbation. All your directors retire from office. Resolutions will be submitted to you, before the business of the meeting be concluded, relative to the ap-pointment of directors, auditors, &c.

The statement of accounts showed the receipts at 181 387, 0, 904; expenditure, 70, 529, 190, 504; de-

161,3874. Oz. 9d.; expenditure, 70,5234. 19s. 5d.; deposit upon 18,000 shares in Sheffield, Rotherham, Barnsley, Wakefield, Huddersfield and Goole, 47,2504.; balance in hand, in cash and Exchequer bills, 43,613/.

1s. 4d.

The CHAIRMAN moved the adoption of the Report.

A lengthy conversation arose with reference to the law and parliamentary expenses.

The CHAIRMAN reminded the meeting that these expenses covered a parliamentary contest of long duration, and he assured the meeting that the directors, with the utmost regard to economy, had adopted those charges. He would, however, say that if his advice offered in another place, (the House of Lords) had been followed, the parliamentary costs in all projects of this description would have been got rid of, or at least diminished.

The Report was unanimously adopted, and resolutions, authorizing the directors to carry out the recommendations they had made, were proposed.

On the resolution that the number of directors be reduced to twelve, being put from the chair,-

Mr. England objected not to the reduction of the number, but the constitution of that body. Upon it there were coal-owners, who might, as directors, fix a scale of tolls, to suit their own views and objects.

The CHAIRMAN with great warmth said that after such an insinuation as that just thrown out he would not remain in the chair.—The noble Earl quitted his seat, and was about to leave the room when the universal calls for his remaining, detained the noble Lord. In the interim and amidst much confusion. Mr. B. Denison was called to the chair, and that gentleman by a short address not only restored the harmony of the meeting, but induced Lord Fitzwilliam to resume the chair; on doing so the noble Earl said that he had joined the company not as a mere railway speculator, but as one deeply interested in the for-mation of the line. He never had and never would join any railway project as a mere speculator. He believed this line would not merely advance his interests as a coal-owner, but would prove to be a national benefit.

Mr. ENGLAND said, that he was not aware that the noble Earl was a coal-owner in the district through which the line would traverse. In the observations he had made he had not intended to cast any imputation either upon the noble chairman, or any other member of the Board.

The resolutions were then agreed to, and twelve of the original directors (of whom Lord FITZWILLIAM was named as the head) were re-elected.

The remaining resolutions were agreed to.

The meeting was made special, and it was resolved that the directors should proceed if they so thought fit, to promote in the present session of Parliament a bill for the extension of the South Yorkshire, &c. line to Penistone.

ROYSTON AND HITCHIN. Feb. 21. - Half-yearly Meeting, London. - Lord DACKE in the chair.

The Report congratulated the proprietors on the good understanding with the Great Northern, arising out of the agreement by which a lease in perpetuity, at an annual rent, equal to 6 per cent. on 200,000l, the share capital proposed to be called up, would be executed on the 16th of July 1849. In the meantime interest would continue to be paid. The directors had prudently not called up capital for the purpose of pressing on the works. The agreements for the purchase of the land were entered into upon fair terms, and possession could be given to the contractor as soon as required. Application had been made to Parliament to sanction the extension of the line to Cambridge, with branches, in relation to which they had entered into arrangements with the Great Northern, similar to those agreed upon in reference to the extension bill of last session. By this arrangement the present surplus capital, amounting to 66,666.13s. 4d., would be applied towards the new works: and, in the event of success, those holders of shares who, in December last, intimated their willingness to take up the new capital on the terms then proposed would have the option to take their quota of the additional new capital which would be required. statement of accounts showed the receipts at 44,0481. 15s.; disbursements 38,685l. 5s. 11d.; balance in hand 5,363l. 9s. 1d.

The Report was adopted, and the retiring auditor (Mr. Pryme) re-elected.

The meeting was then made special. Mr. DRAKE explained the object of the bill to extend the Royston and Hitchin line to Cambridge, with two branches, one to connect them with the Eastern Counties, and the other to join the Great Northern line. The provisions of the bill were precisely similar to those of the bill which was rejected by the House of Commons last session, viz., to enable them to apply their surplus capital to the formation of the extension, and to give them the option of taking up the new capital, if required. The bill also provided for power to make a deviation of the line (as at present authorized) at Hitchin, in order to form a more convenient junction with the Great Northern line than they could do at present.

The draft of the bill having been unanimously ap-

roved,
Mr. WILSHERE (the deputy chairman) did not think it right to allow the meeting to separate without informing the shareholders that the competing line of the Eastern Counties had been thrown out in the House of Commons, on Standing Orders.

CORK AND WATERFORD.

Feb. 25. — Half-yearly Meeting, London. — Mr. T. Wyse in the chair.

The Report stated that the call of 10s, per share was suspended, and in the present depressed state of railway property the directors felt unwilling to renew it. Application had been made to Parliament for an extension of time for carrying out the works. The directors determined to resign one half of the sum voted for their services for 1848, and they took steps to reduce the office expenses to the lowest The receipts amounted to 75,549l. expenditure, 63,084l. 10s. 2d.; balance, 12,465l.

Mr. MAITLAND objected to the salary of the secre-

tary, amounting to 600l. a year.

The CHAIRMAN said that the secretary had a great deal to do when he was appointed, and it was not then considered too large. It was necessary that notice should be given before the salary could be reduced and such notice had been given.

Messrs. MAITLAND and MANSFIELD thought that

the company should be dissolved.

Dr. Bowring, M.P., said that there were portions of the line which might prove of great value to other parties, and as they had diminished their expenses he did not think they ought to throw away their Act as worthless; besides they had no power to dissolve, and it would entail a considerable expense to make application to Parliament for an Act for that pur-

Mr. MANSFIELD said it would not cost more than 400l., if unopposed, and he still remained of opinion that the views of the shareholders should be ascertained.

The Report was adopted.

SLIGO AND SHANNON.

Feb. 22 .- Half-yearly Meeting, London .- Capt. GORE, M.P. in the chair.

The Report stated that the directors, in conse-

quence of the general depression, and the distress in Ireland,—many of the shareholders being gentlemen connected with that country, and therefore more or less affected by that distress,—had refrained from prosecuting the works, or taking any steps which would render calls necessary. The working plans, however, of both the line and canal were prepared the line itself was staked out, and such arrangements had been made with the landed proprietors through whose grounds it passed (one half of whom had con-sented to be paid in shares) as would enable them to proceed the moment improved circumstances should ender such a course advisable. The line would pass through a rich iron district, from which they could obtain all their iron, and by opening up the mineral profitable traffic would be realized. The directors had obtained two years' extension of time, under the Act of the present session. Since the last meeting the Board had so reduced the current expenses that, including secretary's and other salaries, office expenses, &c., they did not amount to more than 2001. a year. There were, however, some outstanding lia-bilities, to meet which it might be necessary to make a call. The statement of accounts showed the receipts a tal. The statement of accounts showed the receipts at 5,139l. 2s. 8d., which is nearly all expended, saving a balance of about 70l.

The CHAIRMAN repeated the statements contained in the Report, and in answer to a question, said that it was only the very small proprietors of land, and such as held in trust, who refused to be paid in shares; but all were highly favourable to the line, and ready to give up possession on fair terms.

DUNDALK AND ENNISKILLEN.

Feb. 16 .- Half-yearly Meeting, Dublin .- The Earl

of RODEN in the chair.

The Report stated that the directors had delayed the calls, from the state of the monetary affairs of ment of accounts showed the receipts at 130,198*l*. 14s. 9d.: expenditure, 115,473*l*. 0s. 10d.; balance, 14,725*l*. 13s. 11d.

The CHAIRMAN said economy was only the duty of the directors, who would, however, keep faith in their contracts. They had been obliged to press for calls due. By the Act passed last year, extending the time for the purchase of land, they had a sanction

for postponing further works for the present.
On Mr. Filgate moving the adoption of the Report, there was a long discussion as to their actual

Digitized by GOGLE

position and liabilities. The Report was, however, adopted. A special meeting is to be called on the 14th of March to consider the prospects and present condition of affairs and the charges against the directors.

#### NORFOLK.

Feb. 25. - Half-yearly Meeting. - Mr. A. DUFF,

M.P., in the chair.
Mr. Till, the secretary, read the Report, which stated that-

The accounts show a gross receipt of 58,658l, 2s. 2d. on account of the revenue for the half-year ending 31st of December last, a result which evinces a steady increase in the income of the company, especially on goods, which, compared with the corresponding period of last year, exhibit an increase of upwards of 60 per cent. The directors anticipate a still further increase in this branch of their revenue, from the opening of the Syston and Peterborough. The passenger traffic also shows an increase of nearly 30 per cent. on the corresponding half-year, although in the latter from the opening of the Syston and Peterborough. The passenger traffic also shows an increase of nearly 30 per cent, on the corresponding half-year, although in the latter the number of trains have been reduced. The expenditure for the half-year is 29,833l. 4s. 7d. The nett revenue is 28,824l. 17s. 7d., which is charged with the half-yearly interest on the mortgage debt, amounting to 5,395l. leaving a balance available for a dividend of 23,519l. 17s. 7d.; and the directors recommend that a dividend at the rate of 5 per cent, per annum be declared for the half-year, which will leave a surplus of 946l. The directors have as much as possible reduced the working expenses: the proprietors must bear in mind that the expenses are unavoidably large on a line where nearly half the traffic consists in goods; and although the directors are satisfied that the general staff of the company connot be diminished without impairing its efficiency, and that it would be impolitic to make any general reduction in the salaries of the officers and men, they hope to make further and considerable reductions as changes take place. The mileage cost of expenditure may be still further reduced by extending the basis of management, and with this view they have opened a negotiation with the Newmarket and Chesterford for undertaking the working of their line when open to Thetford, and to this ment, and with this view they have opened a negotiation with the Newmarket and Chesterford for undertaking the working of their line when open to Thetford, and to this agreement your attention will be called at the present meeting. The effect of this would be, that instead of keeping up an establishment for working a line of 81 miles in extent, the mileage would be extended to 116 miles, and worked at a very trifling additional charge. The directors are in hopes that if this principle is approved of by their proprietors, they may be able to induce other companies, closely connected with the Norfolk, to join them in carrying out the plan. The works on the Dereham and Fakenlam line have been suspended during the last four months, in consequence of the monetary difficulties. The directors, however, loope to be able to resume these works shortly, and to complete the line as far as Fakenlam, 12 miles from Dereham, in the autumn of the present year. They do not propose to undertake the construction of the line between Wells and Fakenlam at present, and they have obtained the sanction of the Commissioners under the recent extension Act. From the detailed statement of the expenditure including the Dereham line, the proprietors, will observe that they amount, exclusive of the Fakenham line, to the sundiminishing the outlay for the carrying-stock, for enginehouses, depots, sidings and cottages, which are the principal items of the surplus expenditure. They feel confident that the traffic could not have been developed without this expenditure, and that the revenue will ultimately repay the cost of these extra works. Another large and unexpected item of expenditure has arisen from the desire of other companies to interfere with the district legitimately belonging to the Norfolk. The directors regret that Parliament should have done so much to encourage this competition, the effects of which are now so severely felt in every branch companies to interfere with the district legitimately belonging to the Norfolk. The directors regret that Parliament should have done so much to encourage this competition, the effects of which are now so severely felt in every branch of the railway interest, and which is alike prejudicial to the public, as it is destructive of a fair renumeration to the capital embarked in railway undertakings. The agreement between your directors and the directors of the Eastern Union and Ipswich and Bury, referred to in the last Report, has been rejected by the proprietors of the latter company, and it has been notified by the directors that the agreement must be considered cancelled. The directors, however, believe that they will be consulting the best interests of the proprietors in endeavouring to promote a friendly feeling with these companies, and thus, by the prevention of competition, and all unnecessary expenses, lead to the full developement of the traffic of the country. The works of the Yarmouth extension, for which an Act was obtained last session, are proceeding rapidly; and your directors hope that the bridge across the Bure, a work of considerable magnitude, and which connects the line with the Yarmouth quay, will be completed within three months. All the works on the Reedham, Diss and Halesworth branches are suspended for the present by the operation of the Act of Parliament passed in December last. The directors have annexed the account of expenditure and outlay of the Lovestoft. &c. to the printed extension of the the Act of Parliament passed in December last. The directors have annexed the account of expenditure and outlay of the Lowestoft. &c. to the printed statements of the accounts of the Norfolk. It will be seen by these accounts, that after paying the Norfolk he sum of 1,214, 13s. for the locomotive power and carrying stock on this line, it has yielded a nett income of 8091, 14s. 5d.; which they think is a favourable result. The advantage from this branch is best shown by the fact that out of 17,000 tons of minerals and goods which have passed over it during the half-year, upwards of 3,000 tons have been sent to Dercham, 6,000 tons to Norwich, 1,600 tons to Brandon and Attleborough, and 1,100 tons to London; thus materially benefiting the Norfolk line throughbut its extent. Since the last meeting the directors have elected Mr. S. M. Petto, M.P., into the vacant seat in the directors. Three directors, Messrs. R. W. Kendard, H. Bolingbroke and S. Anderson, go out of office by

sary to re-appoint the auditors.

The capital account of the Norfolk showed the receipts at 1,473,6794. 12s. 1d.; expenditure (including the works on the Wells and Dereham line), 1,582,430l. 10s.; — balance against the company, 108,750l. 17s. 11d. Extensions, 1847: receipts, 184,673l.; expenditure, 41,719l. 13s. 4d.;—balance, 142,953l. 6s. 8d. The revenue account showed the receipts at 58,658l. 2s. 2d. expenditure, 20,832l. receipts at 58,658l. 2s. 2d.; expenditure, 29,833l. 4s. 7d.;—balance, 28,824l. 17s. 7d. The statement of accounts of the Lowestoft showed the receipts at or accounts of the Lowestort showed the receipts at 248,0724. 2s. 11d.; expenditure, 262,7384. 2s.;—balance against the company, 14,6654. 19s. 1d. Harbour account: receipts, 9,7224. 4s. 2d.; expenditure, 3,6874. 11s. 5d.;—balance in hand, 6,0344. 12s. 9d. The revenue account showed the receipts at 2,6354. 2s. 11d.; expenditure, 1,825l. 8s. 6d.;—balance of nett revenue, 809l. 14s. 5d.

Subsequently, a Report was read from Mr. BIDDER, being an historico-engineering account of the proceedings from the commencement, and representing that the capital account for construction of the entire 82 miles would amount to about 1,750,000l.

The CHAIRMAN, in moving the adoption of the Report, observed that it entered so fully into the company's 'affairs, as to altogether supersede any recapitulation on his part. Whilst he regretted that the working expenses amounted to 50 per cent. of the receipts, he must say that the directors had endea-voured by all means in their power to effect judicious reductions, but they had found it a difficult matter. For instance, the utmost reduction of the salaries of their officers and servants would not have amounted to more than one-eighth of their present dividend. Such a step, too, might be looked upon as questionable policy, when it was remembered that their officers and servants were extremely zealous and efficient, and it was a matter of great congratulation to the directors that their line was well worked.

Capt. TYNDAL seconded the adoption of the Re-

Major Court moved an amendment, which was ultimately lost sight of, on the ground that the accounts had not the signatures of the auditors, and likewise on the ground that the accounts, when interest on loans was paid, only showed a sum of 20,0791. as available for dividend, instead of 23,5191. The auditors' names were not appended to the Report in consequence of the balance-sheet not corresponding in some of its financial forms with its more copious counterparts in the ledger, which it was found impossible to give at full length.

Mr. C. SMITH complained of the increased mileage, amounting to 38 per cent., and of the increased out lay over the original estimate, amounting to 250,000l. and urged that the Norfolk had no incumbrances in the shape of short and unproductive lines, undeveloped branches and bad gradients to render its

working expenses immoderate.

Mr. P. Stead expressed himself strongly opinion that the Lowestoft limb of their undertaking would entail a heavy expenditure, without the pro-bability of a corresponding profit, and concluded by moving that the Report, so far as the dividend was concerned, be confirmed; but that a committee of six shareholders be appointed to investigate the affairs, with an accountant if required, and that the

meeting be adjourned for a month.

Mr. YETTS seconded this, and commented on what he considered the excessive expenditure on the Lowestoft line and harbour. He deprecated the large expenditure that had been incurred in promoting bills

for new schemes.

Mr. Bidder, the company's engineer, replied on the part of himself and directors, contending that the prospects of profit to be derived from Lowestoft harbour were highly encouraging. Yarmouth, though it had been a harbour for the railways of the district, had proved itself to be very unaccommodating. If Lowestoft continued at its present rate of increase, its harbour dues in the next year would amount to 6,000l. With reference to any excess of expenditure over the original estimate, it must be borne in mind that they had been obliged to double the Norwich and Brandon, Norwich and Yarmouth and other

rotation. These gentlemen are re-eligible. It will be also | ration the price of coke in Norfolk, no trains could be worked at a lower mileage. We have carried 335,000 passengers during the last half-year, and they have travelled over an average of 21 miles each, and we have received 2s. a passenger, which is an unusually

> Mr. Cash questioned whether already they were not charging too low rates, and whether facilities were afforded them on the Eastern Counties line.

> Mr. BIDDER thought it would be objectionable to make any rash alteration in the fares. It might tend injuriously to check a rapidly increasing traffic. The question, as to whether they received the facilities over the Eastern Counties, would in all probability come before another tribunal.

> Mr. T. OLD thought the directors ought to absolve themselves altogether from the Lowestoft harbour. Mr. Bidder, as a scientific man, might be very sanguine about it, in the same way that Mr. Brunel had been hopeful about the Thames Tunnel. Like the latter, Lowestoft must be a work of art, and but little inferior to it in his opinion, as a work of profit. It would go far to swamp the railway, and with a sinking dividend and a deteriorated property they could not do better than throw it overboard.

> Mr. LAURENCE was convinced that, notwithstanding the excessive expenditure, they had an excellent line and one that would not be excelled in its traffic by any other. It was now of no use to lament over 80,000l. gone in parliamentary expenses, their cardinal object being how to make the line most productive for the future. He would suggest that with the view to a more improved system in the management, new directors should be appointed in lieu of those who retired.

> Mr. NEWBERRY, a director, defended the policy of the Board in promoting Lowestoft as a port in connexion with the railway, notwithstanding the jealousy that existed with reference to its bearings as a rival to Yarmouth. So far from swamping the railway, it would secure traffic to it, and the success of the port of Grimsby in rivalry with Hull, and in connex-ion with the Sheffield and Lincolnshire, was a prece-

> Mr. Rose said there was a feeling generally abroad in the railway world, against the capital accounts of companies being indefinitely continued open. In his own opinion the continued keeping open of capital accounts was the canker of the affairs of railway proprietors.

> The CHAIRMAN said that if it was the wish of the proprietors, the directors would willingly accede to the request that new blood should be infused into the

Board, which consisted of twelve directors.

Mr. Cash was of this opinion, and hoped that the Board would take care that there should be no further excessive expenditure.

Mr. BIDDER said that with regard to the engineering of the harbour he had taken the opinion of Mr. G. and Mr. R. Stephenson, who had a large stake in the undertaking.

Mr. Peto, M.P., said that, although not now engaged in the capacity of contractor to the Norfolk, he would state, that on no one contract which he had executed had any excess arisen. The contract for the Norwich and Yarmouth was executed within the time. That from Brandon to Norwich was executed without one iota in the form of an extra, the only addition arising from the detour round by Thetford, which was forced on them in Parliament. Lowestoft harbour was not executed by his firm; but had it been, he was satisfied that it could not have been accomplished for a less expenditure. For a work of such magnitude the prices were remarkably low, and the extra expense had arisen from the waterways that were forced on them by the Admiralty. The most unfounded apprehensions existed as to the value of the Lowestoft harbour and line. The expenditure (and he would guarantee it), when the harbour was completed, could not exceed 320,000l. He was willing himself to take a lease of it for seven years at 4 or 5 per cent. This was a practical offer; it would prove his impression of the undertaking, and would say more for the opinion he entertained of it, than the most protracted speech.

After some discussion, Mr. Stead withdrew his amendment, and the Report was carried, it being understood that new members should be introduced into the directory, in the room of those who retire; the appointments to be in the hands of the directors.

The meeting was then made special; and after some unimportant discussion, a resolution was agreed to, confirming an agreement with the Newmarket and Chesterford; the Chairman stating its chief object to be that of bringing about a better system of co-operation for the working of the traffic amongst the railways of the district.

BRISTOL AND SOUTH WALES JUNCTION. Feb. 25.—Half-yearly Meeting, Bristol.—Mr. J.

GIBBS in the chair.

The SECRETARY read the Report, which stated that the directors had not proceeded with any of the works, or the purchase of land, nor had they incurred any expenses, and they had relinquished the compen-sation allowed to themselves. It had been their intention to apply to Parliament for an extension of time, but they had obtained what they wanted under the late Extension Act. The directors hoped that when the present gloom caused by the late depression had passed away the works would be resumed. They regretted to be compelled to forfeit shares to the number of 1,852, but they had no doubt that they would be paid upon. The statement of accounts showed that a balance of 9,587*l*. 3s. 1d. remained.

The CHAIRMAN, in proposing the adoption of the Report, said it was a very short one; but the pro-prietors could not have expected a longer one, because the directors adhered to their pledge to prevent further expense. The statement of accounts was the best proof they could offer that the pledge had been kept. He assured the proprietors that the directors had considered how long this state of things would continue; and that they were desirous of procuring further time. That application had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnecessary by the Extension had been rendered unnec tension Act; but though the scheme was not to be proceeded with for the present, he trusted that so important an undertaking would not be abandoned. The line would be one of great importance to the citizens of Bristol, and therefore he hoped it would be followed up. He was sorry that the directors had felt called upon to forfeit so large a number of the shares, but it was imperatively necessary to do so, and they were prepared to take the responsibility of that act upon themselves. He believed that some of those shares had been sold; but they would all be paid up when they should be declared forfeited. Fifteen of those shares belonged to himself, and he believed the other directors held some also. He had now only to add that they had deemed it necessary to reduce the number of directors to nine.

In answer to Messrs. Rumsry, Castle, Burchell and others, the CHAIRMAN stated that the Act obliged the company to have two auditors, and there-fore their services could not be dispensed with. It was stated at the last meeting that the directors had determined to relinquish their salaries. He did not think that such a step was wise, because when gentlemen gave up their time to the management of the affairs of a company they ought to be remumerated. The consideration of the question as to whether the line should be a single or a double one might be entertained on a future occasion; but the company were compelled to construct the line on the broad gauge, besides which the line would form a junction with the Great Western, and therefore it ought to be made upon the broad gauge.

Mr. Lang said he conceived it would be invidious to name publicly those whose shares had been for-feited, but any information in respect to them could be had at the office.

The CHAIRMAN, in answer to Mr. Rumser, said that the directors would enforce the calls when the necessity to do so should arrive.

Mr. Rumser said his name was registered for ten shares which did not belong to him, and therefore he thought he ought not to be asked to pay upon them any more than the chairman for the fifteen shares he held.

The CHAIRMAN said he intended to pay upon those shares.

Mr. Castle said he was ready to admit that he was in arrears; but he would pay so soon as he saw that the directors had paid.

The CHAIRMAN said he, and he believed all the directors, had paid up the first call of 1l., and as soon as the act of forfeiture should be completed the whole would be paid up; but he did think the proposition was rather hard upon the directors, who, it would be remembered, had been rendering their services gratuitously. Indeed, he might say that so soon as that meeting was over the whole would be paid up

The Report was then unanimously agreed to. Mr. Rumsey said, he did not at all approve of the directors rendering their services gratuitously, and he

would vote for their being paid some remuneration.

The Chairman said that the directors had the power to take a certain sum as remuneration, but they had voluntarily relinquished it. Of the first instalment, 2,300 had been paid upon, and 1,400 on the

The out-going directors were then unanimously re-clected.

#### Brogress of Works.

DUNDEE AND PERTH .- The formal documents relative to the lease of this line to the Caledonian were signed and sealed last week by the directors on both sides. The lease is for twenty years, at the guaranteed

dividend of 8 per cent.

LANCASHIRE LINES.—During the last few days, says the Leeds Mercury, a renewal of the suspended opera-tions on the junction line, which connects the Man-chester and Birmingham with the Liverpool and Manchester, has infused much satisfaction among the numerous workmen, who had to brave a hard winter with little if any employment. This early resumption may be no doubt traced to the ample supply of funds which the London and North-Western are understood to possess; and it is gratifying to learn that the Manchester and Altrincham line will also be prosecuted with vigour for the whole distance. Operations on this line have been suspended for a considerable period. The Manchester and Altrincham line, as it is called, will form part of the Manchester, Cheshire and Birkenhead, so that we shall, before long, have three direct lines between Manchester and Liverpool, viz., the present one; the Manchester, Bolton, Bury, Wigan and Liverpool; and the Birkenhead, Cheshire and Manchester. The old line must therefore soon surrender a part of the large earnings which it has amassed during the last eighteen years.

LANCASHIRE AND YORKSHIRE (Burnley Branch) —The works are again resumed, and considerable progress is reported. The Kitson Wood tunnel, near Todmorden, especially, has progressed rapidly since the contractors received orders to proceed, and at present as many hands are employed as can find room. The works are proceeding both day and night, says the Munchester Courier, and on some occasions on

LONDON AND SOUTH-WESTERN.-Feb. 14.-The new branch to Chertsey was opened for general traffic. The line is only 3½ miles in length, and diverges from the main line about a quarter of a mile on the Southampton side of the Weybridge station.

#### Accidents.

GREAT WESTERN.-Feb. 24.-As the up express train was running at full speed over the high embankment at Chippenham, a tire of one of the wheels of a second-class carriage was thrown off, and penetrated the bottom of the carriage and compartments. For-tunately the carriage did not contain any passengers.

LONDON AND NORTH-WESTERN (Birmingham and Derby.)—Feb. 11.—The train from Derby at 8 a.m., carrying between 30 and 40 passengers, had proceeded at its usual speed till within about 100 yards of the Tamworth station, when a signal was made to stop. The engine-driver saw through the heavy fog a train at the station on the same line. Immediately he shut off the steam, reversed the engine, and applied the brake, but the passenger train dashed into the luggage vans before it, of which the other train was composed, dismembering the last van, on which was the guard's brake, throwing five or six others off the line. The guard of the passenger train was thrown from his seat to another carriage, and thence precipitated to the ground. He was slightly injured about his head. Mr. Banks, of Keswick, was thrown forward on his face, and slightly hurt. Dr. Palmer, of Tamworth, was immediately sent for to the station, and paid the wounded every attention. At length the rails were cleared, and after a delay of about three hours the train proceeded onward to Birmingham. As soon as possible after the accident had occurred information of it was telegraphed to Birmingham and to other places along the line, and a pilot engine was despatched to take the train onward. The train was drawn by two engines when it left Derby, one entirely a new one, which was being conveyed to Hampton; it has

sustained great damage.

London and South-Western.—Feb. 15.—At the adjourned inquest on the death of Markland, the engine-driver killed on the 14th ult. (see Rail. Chron. p. 54, &c.), the coroner, after reading and explaining the rules of the company, thus summed up:-The facts as against Jones and Fleming were these: On an embankment, with a perfectly straight view of nearly three miles, while the red lights of a passenger train were distinctly visible, with an additional hand signal 600 or 800 yards nearer to them, when it was a duty clearly incumbent upon them to keep a sharp look out, they had allowed the train under their guidance to run into a passenger train, and thus cause the death of the unfortunate deceased, Markland. What answer they could make to the charge he was at a loss to conceive. Their professional adviser had suggested none, nor did he see how he could have done so. It was very probable they had

not seen the danger signals, but if they had attended to their duty they must have done so. Again, if they were guilty, with what offence were they charge-Why, clearly that of manslaughter. had been no evidence to the contrary, nor could he hardly conceive that the jury could return any other verdict. It was not, however, for him to dictate to the jury.—The foreman, after some deliberation, announced that himself and brother jurors had unanimously agreed to a verdict of "Manslaughter against William Jones and Lewis Fleming."—Feb. 19.—The body of a Mr. Oakley, of Southampton, was found on the line near the Nine Elms station by a Richmond down train. It was surmised that, being in embarrassed circumstances, he had committed suicide by placing himself before the previous Southampton up

EXPERIMENTS ON CAST-IRON. - Some experiments made at the Crane Foundry on the relative strength of cast-iron, chilled and unchilled, showed that the process of chilling gave a superior strength of 17 per cent. The following experiment was tried on four bars, cast in the form of a double-faced railway rail, 14 in. deep, 3 in. wide at top and bottom, and 4 in. in the centre—the length of each bar was 18 in., and the centre—the length of tach oal was cast in green 15 in, between the supports. No. 1 was cast in green sand; No. 2 in dry sand; No. 3 cast in a chill; and No. 4 in a chill, and afterwards annealed. No. 1 No. 4 in a chill, and afterwards annealed. No. 1 weighed 32-5 oz., bore 1,232 lb., and deflected 130 in. No. 2 weighed 30-5 oz., bore 1,008 lb., and deflected 114 in. No. 3 weighed 34-75 oz., bore 784 lb., and deflected 053 in.; and No. 4 weighed 34-5 oz., bore 2,520 lb., and deflected 148 in. The advantages in favour of cast-iron, treated as No. 4, is evidently little less than 100 per cent. over No. 1, and 300 per cent. over No. 3.

# LONDON, OXFORD and CHELTENHAM RAILWAY COMPANY. RETURN OF BALANCE OF DEPOSITS.

RETURN OF BALANCE OF DEPOSITS.

TO SCRIPHOLDERS.—Scripholders in the above-named Company are requested to send in their scrip on or before the 10th proxime, in order that it may be examined, and that the Ralance of Deposits, after deducting expenses, may be returned to them.

The scrip must be addressed to the Secretary, at this office, and their scrip in the scrip must be addressed to the Secretary, at this office, For the sake of security, parties are reminended to send their scrip in resistered letters, writing across each certificate. "sent in for resistantion," with date and address, and informing the Secretary of the numbers of the scrip so sent by a separate post-letter. Receipt of the Scrip will be acknowledged, and the warrants for repayment of the Deposits on Scrip received on or before the 11th, will be issued after the 18th proxime.

By order of the Committee of Management.

HENRY THOMAS HOPE, Chairman.

WYNDHAM HARDING, Secretary.

### SCOTTISH CENTRAL RAILWAY.

To the Shareholders of the Scottish Central Railway Company.
Edinburgh, Feb. 21, 1848.

Edinburgh, Feb. 21, 1848.
Gentlemen,—A correspondence which lately took place between the Marquess of Breadalbane, Chairman of the Scottish Central Railway Company, and Mr. Robert Ker, the secretary, relative to certain documents required by the Commissioners of Railways, has been circulated among the shareholders by Mr. Laurence Davidson, W.S., by the desire shareholders by Mr. Laurence Davidson, W.S., by the desire of his Lordship. The granting of these documents by our Board—his Lordship states in a letter to Mr. Davidson—has produced "a very decided difference of opinion between him and the Directors of the Scottish Central Railway," and in consequence has induced his Lordship to take the very unusual step of appealing from the Directors to the Shareholders, and of publishing not only his correspondence with the officers of the Company, but also the private minutes of the Board. of the Board.

As independent Shareholders, having a deep interest in As independent Shareholders, having a deep interest in the success of the undertaking, we feel ourselves imperatively called upon to state our clear and decided opinion that our Directors acted wisely and prudently in giving the documents required; and it appears to us that the reasons assigned by the Directors in their minute of the 5th of February, for granting the documents in question, are strengthened and continued by the following considerations:

14 If the documents had not been granted by the Directors in the property of the documents had not been granted by the Directors in the strength of the documents had not been granted by the Directors in the strength of the documents had not been granted by the Directors in the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of the strength of th

1st. If the documents had not been granted by the Directors, the bill must have been irretrievably lost, the powers thereby sought to be conferred on the parties could never have been exercised, however beneficial they might be to the Scottish Central, or however anxious they might afterwards be to obtain them. If the Directors had prejudged the question, and taken upon themselves the responsibility of placing a barrier against the Shareholders agreeing to leave placing a barrier against the Shareholders agreeing to lease the line to the Southern Companies, what excuse could they have made to their constituents? or what security had they that the Southern Companies would concur in a similar bill at a future period? This view of the matter is strengthened by the consideration, that the bill which has been introduced is of a premissive character merely. The leading enactment declares, "That it shall be lawful to the Scottish Central Railway Company to grant a lease of their undertaking to the Caledonian Railway Company, the Lancaster and Carlisle Railway Company, and the London and North-Western Railway Company, and that it shall be lawful for the said three last-named Companies to accept of such lease."

2nd. After the decision which was given by the Supreme Court on the 3rd of December, which was deliberately acquiesced in by the Shareholders, at their meeting on the

quiesced in by the Shareholders, at their meeting on the 21st of January last, it appears to us that the Directors were not only under a moral but they were under a legal obligation to grant the documents in question. On this point, your Chairman in the published correspondence observes, "I say nothing of the reference which is made in the minutes to the opinions expressed by the Judges on the occasion of the late judement, because these do not bear at all upon the present question. I may remark, however, that the view taken of these judicial proceedings appears to me most exaggerated and erroneous."

In expressing this opinion, we think his Lordship has not

In expressing this opinion, we think his Lordship has not duly considered either the effect of the judgment itself or the reasons upon which it rests as these were promulgated from the Bench.

from the Bench.

In form, the decision of the Court merely interdicted the Scottish Central Railway Company from entering into any agreement with the Edinburgh and Glasgow Railway Company, but the ground of the judgment rested exclusively on the expressed opinion of the Court as to the validity of the agreement previously entered into with the Southern Companies. In pronouncing Judgment, it was stated from the Chair by the Lord Justice-General—The question at issue "leads us to the inquiry as to the validity of the agreement; and upon this we have had an elaborate discussion; and first, as to the agreement itself. I look upon this to be the leading feature of the case, that it is in fact the heads of an agreement of a contract that is to be finally arranged. an agreement of a contract that is to be finally arranged between these parties for a lease of long duration and division of profits, and to insure payment at the rate of 7 per cent. upon the capital of the Scottish Central Railway, commencing at the opening of the main line, and that the lines are to be worked together in time to come. Now to give fair play to this agreement, we must look at that which rides over the whole of it, viz.: that the agreement is to obtain the sanction of Parliament. To obtain the sanction of Par-liament is obviously the leading feature in the agreement.

liament is obviously the leading feature in the agreement. If that be the case, the next question is whether that is an illegal or incompetent proceeding in the Companies before us. I cannot see that there is anything illegal or incompetent in the parties agreeing to apply to Parliament to sunction that agreement." The other Judges stated that they entirely concurred in his Lordship's "clearly expressed opinion, that the transaction was logal."

From these observations it is plain that their Lordships held that the Scottish Central Railway Company had come under a clear legal obligation, to this extent, at least—viz. to concur with the Southern Companies in an application to Parliament to enable them to lease the line, and their refusal to do so was characterized by their Lordships in terms which could not be misunderstood. How, then, can our Chairman, in the face of these observations, and many others not less strong which fell from the Bench, say that his co-Directors had "done what they could to pledge the Company to support the bill by robuntarily, and in the absence of any constraint, furnishing, under the corporate seal, sence of any constraint, furnishing, under the corporate seal, the documentary evidence necessary for its support." It is true that these documents were not furnished under a warrue that these documents were not infinished under a war-rant from the Court, but it is not less true that, after the legal decision which was pronounced, and unanimously ac-quiesced in by the shareholders at their meeting held on the 21st of January, their refusal to furnish them would have subjected the Company in damages, and the Directors

to legal personal responsibility.

3rd, Circumstances have occurred since these documents were furnished by our Directors, which show the wisdom and prudence with which they acted.

It is well known that within these few days the Edinburgh and Glasgow and Caledonian Railway Companies have arranged their differences, and agreed to terms as the basis of an agreement, which certain parties belonging to both Companies are now engaged in arranging measures for finally Companies are now engaged in arranging measures for finally carrying into effect.

carrying into effect.

These arrangements, taken in connexion with the result of the recent judicial proceedings, place the interests of the Scottish Central Shareholders now in a very different position; from that in which they stood when the vote referred to by the noble Marquess was passed at the Meeting of Shareholders held on the 20th of July last. The object of the parties who were mainly instrumental in carrying that vote was to bring about an alliance on more advantageous terms with the Edinburgh and Glasgow Company, and not to retain the Central as a separate and independent line, which seems to be the nolicy recommended by the and not to retain the Central as a separate and independent line, which seems to be the policy recommended by the noble Marquess. But the recent arrangements above referred to—independently of the legal obstacles which previously existed—appear to its to preclude the possibility of any such alliance being now formed. It is perfectly clear, therefore, that even if the Shareholders were to succeed in breaking through the contract with the Southern Companies—a result which we cannot anticipate—no other alliance remains open to them; and it is plainly far more for their advantage to abide by the agreement with the Southern Companies, and the guarantee thereby secured, than to run the risk and responsibility of attempting to work the line as an independent undertaking. We consider seven per cent, and half profits guaranteed now much better than a speculation on the chance of our getting better terms at the speculation on the chance of our getting better terms at the speculation on the cannet of our getting better terms at the distance of years. Scarcely a single railway in Great Britain pays more than seven per cent, at this moment. Many have local advantages superior to ours, which are not paying so much from their own resources; and we have no reason to expect a success beyond what the experience of other lines

e observe a circular has just been issued by Mr. David son requesting the Shareholders to forward their proxies to him to be used in supporting the policy of the noble Mar-quess—which as we understand it, is to throw every obstacle quess—which, as we understand it, is to throw every obstacle in the way of carrying out the agreement with the Southern Companies, with the view of working the Central as an independent line. In this policy his Lordship is opposed by all the other Directors, and we believe it to be detrimental to the best interests of the Company. For these reasons we respectfully but earnestly recommend you immediately to forward your proxies to the Secretary of the Company, to be used as your Directors may determine to be used as your Directors may determine.
We remain, Gentlemen,

Your most obedient Servants нисн врисе, J. M. ROBERTSON, Ro. SMITH, N. MAXWELL, JOHN PATERSON. GEO. MOIR, J. ANSTRUTHER, T. MACKENZIE, DAVID RITCHIE,

To the Shareholders of the Scottish Central Railway.

To the Shareholders of the Scottish Central Railway.

Edinburgh, 1reb. 23, 1848.

Gentlemen,—"Coming events," it is said, "cast their shadows before them." but extraordinary and unprecedented as was Lord Breadalbane's course in publishing his circular of the 14th curt. no one I am sure could have predicated from that "shadow" the extraordinary "coming event" in the shape of a Chairman not only differing from everyone of his Board, and publishing the private minutes, but actually taking the field in person to canvass their constituents against them—a line of action the rashness of which I feel quite at liberty to say is only equalled by its folly, and that is a lenient term; because if the Sharcholders were so blind as to be misled by it, the ruinous consequences to as to be misled by it, the ruinous consequences the Company would be such as to earn for it a much harsher

His Lordship's opinion is either that the Scottish Central should have no guarantee, but remain an independent line depending on its own resources, or that some party should come forward and give a higher guarantee than 7 per cent. and half profits; and having assumed this position, neither reason nor change of circumstances can beat him out of it. He rings the changes upon the opinion of two eminent counsel, that the agreement with the Caledonian Company Is not legal; but is it consistent with reason to cling to that opinion when a contrary opinion was given by four equally eminent counsel, and when that opinion has been supported by the decision and strongly expressed opinions of all the Judges-four in number-before whom the case was tried. —and all of them, when delivering their opinions, repro-bating the proceedings which Lord Breadalbane so obsti-nately adheres to, and adheres to in face of your own unanimously expressed resolution at your last meeting, that the decision of the Judges should be acquiesced in, and that no appeal should be taken from it.

that no appear should be taken from it.

The point for your consideration, then, lies in a nutshell, being simply this,—Do you prefer a guarantee, confirmed by Act of Parliament, of 7 per cent, and half profits, or do you rather incline to remain independent and trust to you own earnings?

This is your real position, for the Southern and Caledo-This is your rear position, for the Southern and Calcul-nian Companies will not give one farthing more than what they have already offered, and which all those whose cupidity is not blindly excited by the Noble Lord's unsup-ported assumptions will, clooking to the dividends of much more important lines), at once acknowledge to be handsome and liberal.

idea of getting more from another Company is absurd The idea of getting more from another Company is assure and Utopian,—that other Company, to which he always alludes, having already been refused the sanction of Parliament to an amalgamation with them. His Lordship talks of the special authority given to himself to endeavour to adjust the questions in dispute with these different Companies, in a manner satisfactory to all parties; but he might if he chose, have informed you, that these "great companies"

are endeavouring, and I trust successfully, to settle the points in dispute between them without the aid (?) of the Noble Marquess.

Lord Breadalbane ought to know that, as a matter of course, the rule of every Board is, that the minority must give way to the majority, else no kind of business could go on, and the interests of the Company would be sacrificed. Putting aside, however, his Lordship's contempt for all rule and precedent, does it never occur to him that, differing as he does from such men as compose his Board, it is passible that he may be wrong, and that absolute wisdom may not be peculiar to himself? Towards his Board, however, he has assumed the character of Jupiter Tonans, and issued his ukase—" sie volo, sie jubeo, stel pro ratione voluntas."—Marcus diril! And having failed to induce Scottish gentlemen to sacrifice the interests committed to them by yielding their convictions at his mandate, he now unfurls his banner inscribed with the clan motto, and calls to our Shareholders—"Follow me!" I much doubt, however, if he will find the gentlemen of England more pliable than his own countrymen, or ready to sacrifice their interests without a more solid guarantee than his opinions or wishes.

In conclusion, Gentlemen, unless you are prepared to see our stock at a heavy discount, let me urge upon you the necessity for such a demonstration of opinion as may for ever stop such proceedings as the present; and for this purpose allow me to entreat that not one of you may stand aloof and remain neutral on an occasion when your interests are so deeply concerned.

I have the honour to remain, Gentlemen,

Your most obedient Servant,
WM. MACDONALD

# TO THE SHAREHOLDERS OF THE MADRID AND VALENCIA RAILWAY COMPANY.

GENTLEMEN.—In consequence of erroneous reports having been circulated as to the postponement of the trial of the cause of Patterson v. Chadwick, which your Directors consider detrimental to the interests of the company generally, they lose no time in laying before you a few facts which will exhibit the causes which led to it.

In November last the solicitor of the defendant, upon affidavit made by him, that he should be compelled to examine witnesses from Madrid, obtained from the Lord Chief Luttie are affect expecially a qualitative the trial of the

examine witnesses from Madrid, obtained from the Lord Chief Justice an order especially appointing the trial of the cause for a day in the present sittings. On the 26th of November last the solicitors of the plaintiff addressed a letter to the solicitor of the defendant, and referring to the affidavit above mentioned, suggested "it is

referring to the affidavit above mentioned, sugrested "it is more than probable we might agree upon admissions and thus save to both parties the expense and delay consequent upon bringing witnesses from Madrid."

On the 31st of December last the solicitors of the defendant forwarded by letter to the solicitors of the plaintiff the character of evidence, to establish which it would be necessary to bring witnesses from Madrid, which included the evidence of the laws of Spain as to the constitution and formation of companies and which so for as relater mation of compania anonima, and which so far as relates to that portion of the evidence was in the following words:—"6th. That part of the Spanish Code of Laws which regulates the constitution and formation of compania

On the 4th of January last the solicitors of the plaintiff On the 4th of January last the solicitors of the plaintiff wrote as follows to the defendants' solicitor:—" We have considered the subject of your favour of the 31st ult., and think we shall have no difficulty in coming to admissions of most, if not all, the matters to which you particularly advert, so as to save you the expense of adducing evidence of them. At present we do not anticipate the rejection of any part, but as the admissions must be put into a definite shape, we think it better that our junior counsel on both sides should meet and settle them. sides should meet and settle them.

sides should meet and settle them.

The junior counsel met, and certain admissions were agreed upon. On the 17th inst. a question was raised (and it was the only one) as to the laws of Spain, which was extracted from the code printed and published at Madrid. The defendants' solicitor undertook to convince the plaintiffs' solicitor of its authenticity. The admissions therefore were considered as extled with that exception.

Subsequently the plaintiffs' solicitor stated "he required to have the available and total in Smith before he could

to have the published code tested in Spain before he could

As it was important that the defendant should prove the Spanish law governing this description of companies, he could not safely proceed to trial in the absence of this

admission, and hence the present postponement.

The only remarks your Directors have to make on these proceedings and consequent delay is to solicit your attention

to the following facts:—

1. It was the plaintiffs' attornies who, on the 26th of November last, suggested agreeing upon admissions to save

expenses, &c.

2. It was the plaintiffs' attornies who, on the 17th of February (the day previous to that set apart for the trial of the action), objected to admit the code of the law of Spain, as printed and published at Madrid, unless tested in Spain.

Had he expressed the same decision in his letter of the

Had he expressed the same decision in his letter of the 4th of January, ample time would have remained for this investigation or production of witnesses, and the action could and would have been tried on the 18th inst.

Although they regret the heavy expenses which will be thereby incurred, the Directors will guard against the repetition of a postponement of the trial, and be prepared with conclusive evidence in June next. Experience has proved the hopelessness of procuring admissions from the plaintiffs? solicitors necessary for the defence, and as the directors are confidently assured of a successful result, they have no alternative but to secure the personal attendance of witnesses from Madrid.

By order of the Board.
By order of the Board.
F. K. FOWELL, Secretary.

# RENFREWSHIRE, SCOTLAND. VALUABLE MINERALS on the ESTATE of CASTLESEMPLE TO BE LET.

This Estate, which is situated in the parishes of Lochwinnoch and Kilbarchan, and county of Renfrew, extends over a surface of upwards of José Acres, and the Minerals consist of COAL, LIME-STONE, IRONSTONE and COPPER ORE.

COAL.—The Coal, so far as has hither to been proved, is found to be of good quality. The field is supposed to stretch along the line of the Ayrshire Railway, and to train round in a semicircular form by the village of Lochwinnoch, near the parish church, at the western extremity of the lake. From the vicinity of so many extensive ironworks and manufactories, as well as from the local wants of the district, and the immediate vicinity of so many extensive produced the district, and the immediate vicinity of the populous village of Lochwinnoch, coal is in great request.

LIMESTONE.—The carboniferous Limestone has been found on various points of the property, and is supposed to be of good quality nucleasily workable. As usual, it is found under the coal beds. It is in good demand in the district.

HRONSTONE.—The Ironstones are both of the Clayband and Blackband species, but sufficient trials have not been made to ascertian their value. It is probable, however, from the strata being in the immediate neighbourhood of the well-known Ayrshire Blackband Ironstone, and tying in the same direction, that they may turn out on farther trials to be valuable.

uny turn out on farther trials to be valuable.

COPPER ORES.—These are supposed to be of excellent quality. Some works have already been commenced in the neighbourhood, and it is understood that the veins of Copper which have been found in the adjoining property of Kaim are continued into the Castlesemple estate, where the lands of High Barnaigh (part of the Castlesemple estate) adjoin to Kaim. The greater part of the Ore which has been hitherto found is understood to show from 50 to 6 per cent. of copper.

The Castlesemple estates are situated about 15 miles west from Glasgow, and 8 from Paisley, and surround the town of Lochwinnoch, where here is a Station of the Ayrahire Railway. ## SOUTH-EASTERN RAILWAY.

At the TWENTY-THIRD HALF-YEARLY GENERAL MEETING of the Proprietors of the South-Eastern Railway Company, held in pursuance of the Act of Incorporation, at the Bridge House Hotel, on Thursday, the 2nd day of

JAMES MACGREGOR, Esq., Chairman, in the Chair,-

The Advertisement convening the Meeting was read, and the following Resolutions were unanimously passed:—

1. That the Common Seal of the Company be affixed to the register of Proprietors. (The Seal wasaffixed accordingly in the presence of the Meeting.)

2. That the Report of the Directors and Statement of Accounts, as now read to this Meeting, be received and adopted, and that the same be printed and circulated amongst the Proprietors.

3. That a Dividend (less Income-tax) of 21s. per share on the shares paid up, and 13s. 5d. per share on the shares created on the 19th day of March 1844, and of 10s. 8d. per share on the shares created on the 7th day of November 1844, be now declared, and be made payable on the 22nd inst. 4. That the Directors be authorized to carry into effect

4. That the Directors be authorized to carry into effect by all such acts as they shall think proper the arrangements entered into by them with the London, Brighton and South Coast Railway Company, with regard to the tolls payable in respect of the Greenwich and Croydon lines and the Bricklayers' Arms branch, and the accommodation of the Brighton Company's goods traffic at the Bricklayers' Arms terminus, and the remission by this Company of their claim on the Brighton Company in respect of the third line on the Greenwich Railway. Greenwich Railway.

5. Resolved,—That the sum of 8,269% for 1d., being the amount of a claim on a proprietor, remitted to him by resolution of the proprietors, at their general meeting of the 25th of November 1841, with interest to the 21st of september 1847, the day of payment, be placed to the account of profit and loss.

6. Resolved,—That the Directors be authorized to deal as they see fit with proprietors who have failed to pay their

as they see fit with proprietors who have failed to pay their calls on any of the shares of this Company.

7. That John Charles Jack, Esq., who has been elected a Director of this Company by the other Directors, to fill a vacancy in the direction, on the resignation of Capt. Tyndale be continued a Director of this Company.

8. That Daniel Warren, Esq., who has been elected a Director of this Company by the other Directors, to fill a vacancy in the direction, on the resignation of William Henri Thomas, Esq., be continued a Director of this Company. Company.

9. That James Macgregor, Esq. be re-elected a Director

of this Company.

10. That Robert Browne, Esq. be re-elected a Director of this Company.

11. That William Gordon Thomson, Esq. be re-elected a

11. That William Gordon Thomson, P.Sq. be to decree a Director of this Company.

JAMES MACGREGOR, Chairman.

12. That the best thanks of this Meeting be given to the Chairman and Directors for their continued zeal and exertion in managing the affairs of this Company.

G. S. HERBERT, Secretary.

#### SATURDAY, MARCH 4.

#### RAILWAYS IN THE REVOLUTION.

Although our special department lies at some distance from the range of ordinary political movements, it is apt to be reached by them in various directions on occasions of unusual agitation and sudden change. The grave events of the last ten days have not passed over without deeply touching many points of interest to the railway body. The precipitate fall in the value of all kinds of stock which has taken place since we last wrote, was a natural consequence of the shock which the stupendous convulsion in France could not fail to produce in all neighbouring countries. The unexpected birth, progress and completion of an entire French revolution within a space of five days, might well create on all hands a pause of wonder, and strike down the spirits of men, in doubtful expectation of the issue of so tremendous an overthrow of established things. The panic thus created in all those departments of mercantile and monied business which draw their support from confidence in the stability of the future, has been felt to the utmost in the railway sharemarket; and, coming upon it in a state of chronic weakness, did not produce a greater depression, or a more universal check to every kind of business, than might have been expected under the circumstances. The extremity of the first alarm may now be said to have a little subsided; but its effects may be felt for some time to come; and the revival of hope or the increase of despondency—as far as either depends on outward circumstances-hangs in the meanwhile on the uncertain balance of public events; the ultimate issue of which few will be courageous enough to predict at this early stage of a movement the vibration of which must be felt in every corner of Europeat a moment, too, in which there is scarcely a single one of the Continental kingdoms that is not itself already pregnant with the matter of internal agitations.

The effect of what has just happened in France on the value of investments in French railways, must long continue here, even after the excitement of the moment shall have passed away-as we sincerely trust it soon may, on the establishment of order and of something like a prospect of settled government in that king-dom. The mischief inflicted by mobs on the Rouen and Northern lines—the destructive and hostile dispositions which broke out amongst the lower class, directed against harmless monuments of foreign skill and foreign contributions-will not soon be forgotten. It is not that any one can imagine that the devastating or jealous spirit of the populace which caused the havoc actuates any but the lowest class: but repeated experience has shown the momentary power of that class to be greater on occasions of sudden excitement, and also to be more apt to be suddenly excited, in France than in most other countries. The effects of their turbulence are no doubt deplored by all the better part of the French people; but the mischief unfortunately remains, in spite of their regret.

It is grievous to hear of the destruction of some of the finest works between Paris and Havre, during the tumultuous movements that broke out on the first news of the amazing events in the capital. The extent of the damage we trust may be found less than it was at first reported to be. In any case, however, it is a deplorable circumstance that useful works should be exposed to this kind of Vandalism, on the occurrence of startling political circumstances. Some incidents have been related with respect to the destruction of the Rouen viaduct, which we

newspaper reports, in a time of panic, which is always prone to exaggerate, if not to invent. There remains enough to grieve and discourage bystanders without the presence of traits revolting to humanity, which we hope may be contradicted hereafter.

On the Northern line, the mischief appears to have been less serious to the permanent works; as the communication was already restored, in some degree, between Paris and Neufchâtel as early as on February 29th. The most serious act of the mob in that quarter would appear to have been the setting on fire of a valuable merchandise train in one of the stations which was attacked-Pontoise. Whether along the Northern route the excitement may not be more continuous than in the Seine valley, and whether it may not spread over the frontier to the Belgian railways, are questions we have not confidence enough to answer at this early moment. It would seem, however, to be premature to regard the disturbances in the northwestern region as already quite laid to rest.

At Tours, the newspapers tell us, the directors have been forced to discharge the English mechanics from the railway workshops and establishments in that city,—a fact which, if true, is not of the best augury for the progress of French improvement in any way. Our skilful artisans can far better dispense with employment in France than the French establishments can spare their workmanship; and the feeling that excludes them is of the lowest kind of ignorance.

The tendencies in the labouring class to which we have been adverting are, so far, the least hopeful phenomena of a revolution which, in other respects, has up to this point been characterized by many signs of a change for the better in the French public of 1848 as compared with that of We heartily desire that in the future course of this amazing transaction the elements of order and right will still more and more prevail over the worse impulses of the worst part of the populace; and that, as a consequence of their re-establishment, we may have to report the return of security and activity to a class of works that, more than most others, are endangered by violence and wrong.

## Official Papers.

[See Table of Contents for reference to several Meetings.] EASTERN COUNTIES

Directors' Report to the Half-yearly Meeting, Feb. 26. The Directors beg to announce a dividend of is. per share of 20t. each of the consolidated stock of the company, for the half-year ending the 4th of January last. This diminution of dividend is owing to the amount of consolidated stock upon which it is now payable exceeding by a large sum that of the previous half-year, and also in consequence of the interest upon extension stock, No. 2, hitherto charged to capital, in accordance with the resolutions under which it was created, being now altogether charged to revenue. The increase on the gross receipts from traffic over the six months ending the 4th of January, has been—
From passengers ... £42,851 3 10 The Directors beg to announce a dividend of 8s, per share

£69,566 15 10

The Directors have, since the last meeting of the shareholders of the company, anxiously directed their attention to the subject of the working expenses, and they have now the satisfaction to state that a very considerable reduction has been effected upon the mileage run during the past half-year. This reduction has not been effected at the expense of efficiency in working, or of the security of the public, and as a proof it may be stated that 2.471,381 passengers have been safely and punctually conveyed along the lines of the

as a proof it may be stated that 2,471,331 passengers have been safely and punctually conveyed along the lines of the company during the year 1847.

The usual half-yearly Reports of the resident engineer and of the locomotive superintendent are of a highly satis-factory character, both in reference to the state of the per-

manent way and of the engines and plant of the company.

Circumstances have occurred to delay the opening of the
March and St. Iyes, and the Maldon, Witham and Braintree lines at the periods mentioned in the last half-yearly Report; but the former has been used for goods traffic since the 1st of the present month, and will be ready for the reception of passengers on the lst of March; the latter will be completed for both goods and passenger traffic in the early part of May next. The Directors have received intimation from the do not like to detail, on the doubtful authority of directors of the Newmarket that it will be opened in March,

and they beg to announce that a satisfactory arrangement has been entered into between the two companies for workhas been entered into between the two companies for working the traffic. They are also informed that the portion of the Syston and Peterborough line between Stamford and Melton will be finished next month. This will complete the link between the Midlands and Eastern Counties lines.
In consequence of the recent commercial pressure, the

Directors have not taken any steps for the construction of the Cambridge and Bedford and the Wisbeach and Spalding lines, for which Acts were obtained last session; and, in accordance with the provisions of the recent Act of Parliament, the contracts for these lines will not be let without the previous sanction of the shareholders.

It became, in the opinion of the Directors, necessary, during the money pressure in November last, either to forfeit absolutely the York Extension shares which were in default for not paying calls beyond 10s. and 2s. per share, or to give the holders one further chance (of saving the or to give the holders one further chance (of saving the investments they had made, while they contributed additional monies to the funds of the company. Accordingly, an advertisement was issued on the 5th of November last allowing those holders who had paid 10z, per share to pay 22, per share more on or before the 10th of December, and those who had paid 22, per share to pay 32, per share more on or before the same date, when their existing certificates would be cancelled, and scrip certificates for Eastern Counties guaranteed stock, bearing 5 per cent, interest in perpetuity, would be issued for the 21, 10z, and for the 51, respectively paid. The total amount received under this measure from defaulters does not exceed 31,0482, and in respect of that sum and former payments scrip has been issued in accordance with the advertisement. The result of the measure, independently of the above receipts, has been to place in the company's hands the power of issuing or selling, with the sanction of the proprietors, a stock of about 490,0002, in amount, either as York Extension shares or as a perpetual 5 per cent, stock. Resolutions will be or as a perpetual 5 per cent, stock, Resolutions will be submitted to the meeting for the purpose of obtaining the instruction and sanction of the proprietors to any measure which the Directors may find it expedient to adopt with respect to this stock.

The following Directors retire at this meeting:—Messra. Waddington, Butler and Wells. All of these gentlemen are

eligible for re-election.

#### SOUTH-EASTERN.

Interest to Northern and Eastern

Directors' Report to the Half-yearly Meeting, March 2.

The accounts of the South-Eastern for the half-year end-The accounts of the South-Eastern for the half-year ending on the 31st of January 1848, show that the receipts of the company have amounted, during that period, to 251,6151.

14s. 6d.; that the working expenses have been 70,7354.

2s. 11d.; the rent of the Greenwich and of the Whistable, 30,7121. 10s.; the rates, Government duty and toll of the Croydon, 32,3721. 11s. 2d.; making the expenditure on revenue account, 123,2804. 4s. 1d. The balance carried to the account of profit and loss is 127,7951. 10s. 5d., and that account shows an amount at the disposal of the proprietors of 106,5621. 10s. 5d. of 106,862l, 10s. 5d.

The comparative statement of passenger traffic on the South-Eastern for the half-years ending on the 31st of Jan. 1847 and 31st of Jan. 1848, shows the following satisfactory

1848 130,917 1847 112,419 Increase 18,498	247,670	381,708		151,133 17 3 144,000 12 7
increase in.498	91.690		104,761	£7,133 4 8

similar statement of the traffic on the Greenwich branch exhibits the following comparison:-

			2nd Class.		Total.	£. i	t, d,
					1,284,870	28,752	
1847 .		193,871	478,229	563,383	1,235,483	27,714	16 5
Incres	-	9.785	12.758	26.844	49.387	£1 037	19 7

The merchandise department has yielded 45,200l. 4s. ld. during the last half-year against 39,147l. 16s. 8d. in the corresponding half-year of 1847, showing an increase of 5,852l. 7s. 5d.

The coke works at Whitstable are in use, and, with those

at Folkstone, make all the coke required for the service of

The locomotive department is in an efficient state, and the service of the line is performed with punctuality, much promoted by the good condition of the permanent way.

promoted by the good condition of the permanent way.

The Directors, after great consideration, determined not to give notice for proceeding with the bills promoted by this company in the last session of Parliament,—a decision which in these extraordinary times will, they are convinced, have the approbation of the proprietors.

The accounts accompanying this Report show that 533,9634.
33. 34. has been paid during the last half-year on construction account—a large sum in a time of such pressure as that which has been experienced; and, in addition, mortgages and loan notes to the amount of 144,8004. have been paid off, reducing to that extent the mortgage debt of the company. The Directors have not felt justified in urging on the works at a great speed, being only too sensible of the severity of calls.

When the contest in Parliament for the Kentish lines

When the contest in Parliament for the Kentish lines terminated in July 1846, the first step taken by the Directors was to assemble for the purpose of considering the financial position of the company; and, to enable them to accomposition of the company; and to enable them to accomplish their object, they passed a resolution requesting all parties to send in their accounts forthwith. Having now received the accounts, the Directors have to acquaint the proprietors that they have felt it their duty in some instances to resist what they thought extravagant demands tion the company, and they have taken measures accor-

tion the company, and they have taken measures accordingly.

The Directors have to announce to the proprietors the result of their negotiations with the directors of the Brighton, which have terminated in an agreement which will, they trust and believe, be advantageous to both the companies, and which relieves both companies of toll, terminates a claim of the South-Eastern on the Brighton for 25,000L towards the construction of the third line on the Greenwich and arranges for providing annula examination for

towards the construction of the third line on the Greenwich, and arranges for providing ample accommodation for the Brighton goods traffic at the Bricklayers Arms terminus. The service between Folkstone and Boulogne continues to be performed by the splendid steam ships of the South-Eastern and Continental Steam Navigation Company. The following table exhibits a comparison of the traffic between

Folkstone and Boulogne during the last half-year and that ending on the 31st of January 1847:—

Passengers conveyed from August 1 to Jan. 31. 1847. 1848. Increase. To Boulogne .... 11,907 .. 13,104 From Boulogne.. 11,727 .. 12,518 .. 23,684 .. 25,622 .. 1,988

The proprietors are already aware of the exertions that have been made by the proprietors of the Boulogne and Amiens to accelerate the works that required to be executed Amiens to accelerate the works that required to be executed to open that line. They have been assured by a deputation of directors, who came over to conclude arrangements for the booking through of passengers, parcels and goods from London to Paris, and rice versa, that it can be opened throughout from Paris to Boulogne on the 15th inst., and everything had been prepared accordingly.

Everything confirms the opinion the Directors have ever entertained of the importance of the South-Eastern, as well as their confidence in the advantages that the provinctors

as their confidence in the advantages that the proprietors

will eventually derive.

The Directors whose term in office now expires are Messrs.

J. Macgregor, R. Browne and W. G. Thomson, who are eligible for re-election.

#### Engineer's Report to the Directors.

Engineer's Report to the Directors.

I have the honour to make the following Report to you on the state of the progress of the works of the South-Eastern. The progress during the last half-year has been necessarily slow from financial causes, which have rendered it imperative to limit expenditure as far as possible to those works which govern the time of completion; but, with reference to the delay which has occurred, I have no hesitation in stating that it has hitherto been beneficial to the company in a greater degree than injurious, by permitting an extended length of time to the consideration of the various constructions and their adaptation to the material various constructions and their adaptation to the material

company in a greater degree than injurious, by permitting an extended length of time to the consideration of the various constructions and their adaptation to the material of the county.

North Kent.—The widening of the Greenwich between the Croydon Junction and the London station is complete, or very nearly so, and the permanent way is laid. The widening of the substructure of the London station, which commences above the Union Workhouse, is also far advanced, and may be completed in two months when the remaining land is obtained. As great outlay will be necessary by the Brighton in consequence of the agreed division of the station, I have so designed the substructure that it may be adapted either to a divided station or to an extended joint station, should such arrangement be ultimately agreed upon. Below the Croydon Junction, to the Surrey Canal, the foundations are all in and the piers carried to springing level, and some of the arches turned. In contract No. 3, extending from the Surrey Canal to Erith, there is completed the extension of 400 yards of the Greenwich viaduct from the Surrey Canal. In the Blackheath tunnel, which measures the time of opening to Woolwich, very satisfactory progress has been made. The material is indurated dry sand, which has permitted a considerable reduction to be made in the cost of the tunnel, by an alteration in the figure to adapt it to the strains to which it is found by experience to be subjected in this material. In the portion of the line between the Greenwich Railway and Blackheath, and for the Bricklayers' Arms Junction, the land is being obtained for immediately commencing: when this work is completed to the Blackheath station a great traffic will no doubt be obtained. In contract No. 2, extending from Erith to Gravesend, the tunnel at Greenhithe, which is the only one, is complete. There are also executed, of earthwork, about 800,000 cubic yards; of brickwork, about 20,000 cubic yards; and a proportionate amount of other work.

**Tunbridge Wells and Hastims.**—The

from Ashford to Rye, the portion to Appledore, a distance of B miles, where the only excavations occur (the remainder being on the surface), is complete, and the ballasting in progress; the remainder of the line (74 miles) to the town of Rye, may be completed in three months. The shafts and heading of the St. Leonard's and Hastings tunnel have advanced slowly since my last report, in consequence of a stated interference with the supply of the town of St. Leonard's with water; and I have nothing further to add, except that the additional experience enables me to confirm my report as to the saving of cost that will be affected. firm my report as to the saving of cost that will be effected in this part.

Permanent Way and Works.—I have the satisfaction to report that the state of the permanent way and works executed is very satisfactory.
Engineers' Office, Feb. 24.

# LANCASHIRE AND YORKSHIRE.

Directors' Report to the Half-yearly Meeting, March 1.

The effect of the recent commercial difficulties on the gross receipts of the united company for the past year has gross receipts of the united company or the pairs year has shown itself more in arresting the progressive extension of traffic than in any important diminution of income; and if due allowance be made for the serious reduction of fares in 1846, and the unexampled stagnation of trade throughout the period to which the present Report refers, it is a subject of congratulation that the receipts have been so well maintained. The gross income of the company on the united lines for the half-year amounts to 273,220. On the same mileage for the corresponding half-year of 1846, to 260.6671.

For the purpose of comparison with former Reports, the usual details of traffic on the Manchester and Leeds line (proper) are here given, to complete the statement for the

either by the result of the first few years, or by the ultimate balance of receipts on the lines per se, but that the doubted effect of such arrangements in promoting but that the unsecuring traffic over other parts of the united lines, formed an element in the question, and an inducement to such unions. From the first, therefore, it was expected that even under favourable circumstances, a deficiency between even under favourable circumstances, a deficiency between the nett receipts of the lines in question and the early payments to the proprietors of those lines would occur, and the commercial depression of 1847 has not tended to lessen the amount. The deficiencies are as follow:—Under the Preston and Wyre agreement, which took date from the lat of January 1847, 6,524. Under the North Union agreement, which took date from the lat of May 1846, an average deficiency per annum, 5,667l. Under the Bolton agreement, which took date from 1st of January 1845, an average apparent deficiency per annum, 16,847l. But in this latter case, the claim to dividend granted to the Bolton projectors by this company was given, as stated at the time, not only as an equivalent for the expected income to be derived from their railway and canal, but also in consideration of a valuable property consisting of land in Salford, held at rived from their railway and canal, but also in consideration of a valuable property consisting of land in Salford, held at a small chief rent hitherto paid out of revenue. This land was, at one period of the negotiation, proposed to be excluded, and a corresponding reduction offered by the Bolton in the terms of amalgamation. Had the arrangement been carried out in that form, the deficiency now reported under the agreement with the Bolton, would have been proportionately less, but the land would have remained the private property of the shareholders in that company. Your Directors, however, determined to include the land, holding it applicable to make good the temporary deficiencies incidental to such arrangements. In pursuance of those views, they now rearrangements. In pursuance of those views, they now re-commend that the nett value of that land be carried to capital account, and that the amount arising therefrom be debited with the several deficiencies above mentioned, and devited with the several denciencies above meintoned, sind that the surplus of such nett value, amounting to 48,6984, be brought forward as a reserve, to meet any similar defi-ciency arising upon those lines until their receipts shall be adequate to meet their liabilities.

In addition to this property in land, this company became entitled, by its agreements with the Bolton and North Union, to a considerable amount then invested and held by those companies in shares, which have been since that time sold at various periods, and the proceeds invested in other shares, chiefly in lines now associated with this company. Although the value of this stock has no doubt suffered a Although the value of this stock has no doubt surfered a great depreciation, in common with almost every similar stock in this country, yet the influence exercised by the company in right of those shares was, in the opinion of your Directors, of considerable service in promoting its general interests. Moreover, as this stock is still held by the company, it will, pro tanto, extinguish all claims to dividends arising thereupon, until the circumstances of the company and the value of the stock in the market shall make it expedient to consider the question of its re-issue.

With regard to the future income of the lines in the Bolton and Preston district, your Directors have reason to expect that the North Union account will improve, as the opening of the Caledonian must materially increase the expect that the North Union account will improve, as the opening of the Caledonian must materially increase the Northern traffic by the Western lines. The same expectation is entertained of the Preston and Wyre. Had the progressive increase of receipts on that railway between 1843 and 1846 continued through 1847 and 1848, there would have been little or no deficiency at the end of the latter year. The opening up of the Furness and the Lake districts, by the completion of the Whitehaven and Furness, will shortly add to the traffic—the Irish trade is steadily increasing—the shipment of coals from the Wigan district commenced—and a direct railway connexion between the populous towns of Yorkshire and Lytham, Blackpool and Fleetwood nearly completed. With regard to the future income of the Bolton, a large increase may be expected within a few months, by the opening of the Blackburn, Darwen and Bolton, the Liverpool and Burry, and the Caledonian lines; and it can scarcely be doubted that these, together with a better state of trade, will at an early period extinguish the deficiency. extinguish the deficiency.

The balance of nett revenue applicable to dividend and interest, on the Manchester and Leeds line (proper), for the half-year ending the 31st of December last, will be 118,1154. 15s. 8d., and your Directors recommend a dividend at the tax, which will leave a surplus balance of 13,2791. 13s. 2d. to be carried forward. With a view to render the accounts have appended a statement (No. 5) showing how the amount payable for dividends is derived, and from which it will be seen that the present revenue of the concern is charged with and now pays 2 per cent. upon 1,649,506*l.*, not yet brought into profitable operation.

As many erroneous statements respecting the amounts of mortgage loans, guarantees and obligations of railway companies have been made, and gained more or less credence under the depressing circumstances of the last nine months, your Directors think it right to record, for your informayour Directors think it right to record, for your information, the following facts with regard to this company:—The total guarantees are limited to the Preston and Wyre and North Union lines, held jointly with the London and North-Western; the Hull and Selby line, held jointly with the York and North Midland, but from which this company is released, during their option, by agreement with the latter; and the northern portion of the Barnsley and Wakefield line, 10 miles long, guaranteed when made 5 per cent. These constitute all the guarantees of the united company, and may be considered as equivalent to a fixed payment of about 5 per cent. upon 56 miles of railway, 46 miles of which are in operation, and the average cost of which 86 miles may be taken at about 27,0000, per mile. The total which are in operation, and the average cost of which so miles may be taken at about 27,000?, per mile. The total capital expended by the united company up to the 31st of December, excluding the North Union and Preston and Wyre lines, is 7,597,617L, raised as follows:—By calls paid, 5,180,767L; by mortgage loans, 1,763,921L; by bond, 609,812L; by loans in anticipation of calls, 71,770L. The outstanding debts of the company, including all liabilities,

are, as nearly as can be estimated, 260,000l. The arrears of calls amount to 350,000

cans amount to 350,0000.
During the last six months your Directors have restricted their expenditure wherever practicable, but they consider it their duty now to press forward their more advanced works to completion, and at the earliest period to bring the capital already expended, but at present dormant, into use. The most important line in this position is the Liverpool and Bury line, for the completion of which by the 1st of July next arrangements are now made, and from which date it is proposed that dividends shall accrue to the pro-

In consequence also of the contemplated opening of the main line of the Wakefield, Pontefract and Goole, the pro-prietors in that line will become entitled to receive divi-dends from the 1st of July next, and by the opening of the dends from the list of July next, and by the opening of the Askern Branch, the Heywood Extension to Bury, and the Cleckheaton Valley line, previously to Midsummer next, dividends will become payable from the same period on about one half the amount paid up on the West Riding Union Stock, and Manchester and Leeds Extension Stock, being the proportions which will then be brought into pro-

being the proportions which will then be brought into pro-fittable operation.

With regard to works not yet commenced, or on which little is expended, your Directors will deal with them ac-cording to their importance and the means at their disposal. The length of railway under actual construction is 127 miles, of which there will be opened by July next 51 miles, and by December next 51 miles, at an estimated cost of 3,000,000. Of this amount there has been raised and expended 2,000,000. Leaving to be raised within the next twelva 2,000,000l., leaving to be raised within the next twelve months, 1,000,000l.

With respect to calls, your Directors must be guided in some measure by the amount of loans which may be ten-dered. The latter have sensibly increased since the lst of January last, and they may reasonably expect, in the im-proved state of the money-market, an important supply om that source.
It may be remarked, that whatever part of the above sum

It may be remarked, that whatever part of the above sum shall be raised by calls, it will be divided over a very numerous body of shareholders, as the Manchester and Leeds fifth and extension shares, the Liverpool and Burry, the Wakefield, Pontefract and Goole 256, stock, all contribute more or less towards the expenditure. At the same time your Directors have to state that in consequence of the repayment of loans borrowed in anticipation of the calls on the older shares of the company, it has become necessary to make a call of 52, per share upon the Manchester and Leeds 501, shares, which will fall due in April next. On the same date a call of 52, per share will be made upon the Liverpool a call of 5%. per share will be made upon the Liverpool and Bury 50t, shares.
Your Directors have now adverted to the chief subjects of

Your Directors have now adverted to the chief subjects of interest connected with the undertaking.

In concluding their Report they take occasion to say that no recent event has affected the ultimate position or prospects of the company. They believe that no large company stands less exposed to vital competition. Extending, as the company's lines will shortly do, from sea to sea, and connecting with each other, and with their nearest sea-ports, thirty of the most populous manufacturing and commercial towns in England—as enumerated in the Report of the 9th of September 1846—your Directors feel strengthened in the conviction of the productiveness and security of the sources conviction of the productiveness and security of the sources from which the more important branches of their income are to be derived.

are to be derived.

They rely with confidence on the progressive extension of trade, and the accompanying increase of population and manufactures. They consider that the result of the severe test to which the sources of the company's income have been subjected during the last two years by the parliamentary reduction in fares, the opening of rival lines, and the unaxympled state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the state of trade configuration for the severe test to be supported to the severe test to be supported to the severe test to be supported to the severe test to be supported to the severe test to the severe test to be supported to the severe test to be supported to the severe test to be supported to the severe test to be supported to the severe test to be supported to the severe test to be supported to the severe test the severe test to be supported to the severe test the severe test to be supported to the severe test to be supported to the severe test the severe test to be supported to the severe test to be supported to the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test the severe test exampled state of trade, confirms the fact of a steady accession of traffic throughout the whole period, nearly equal to the effect of all these causes of reduction combined, and solo traine throughout the whole period, nearly educal value the effect of all these causes of reduction combined, and leads inevitably to the conclusion that in an ordinary state of trade that steady growth of tradic will show itself in larger receipts, as it did after a similar period of depression in 1843, when, on the revival of trade in 1844, the company's receipts exceeded those of the previous year, for some time, by upwards of 1,200%. per week, and for the year 1845 showed an increase over 1843, without any additional mileage, of 93,000%.

Your Directors propose to take authority for the exercise of the company's borrowing powers to the extent of 316,600%, under the Manchester and Leeds Act, 1846—the Liverpool and Bury Act, 1846—and the Wakefield, Pontefract and Goole branches Act, 1846.

Your Directors have to announce the retirement, by rotation, at this period, of the following members of their body, viz., Messrs, H. Houldworth, J. Hatton, R. Gill, J. Hegan, G. Pollard, E. Akroyd, W. Rand, W. Firth and C. H. Jones, and that these gentlemen offer themselves for re-election.

election

They have also to announce the election, subject to your confirmation, of Mr. J. Radcliffe, of Rochdale, as the representative director of the Oldham Alliance, under their agreement with this company.

#### BIRMINGHAM, WOLVERHAMPTON AND DUDLEY. Engineer's Report for the Meeting, Feb. 19 (p. 145).

Contract No. 1 .- The land and buildings, with a few exceptions, between Water-street and Vysc-street, have been purchased; but I have not yet given instructions to Mr.

purchased; but I have not yet given instructions to an Pauling, the contractor, to commence the works. Contract No. 2.—The contractors (Messrs. Hoof & Hill) are proceeding slowly with the works on this portion of the line. Now, however, that possession of the land has been the manufacture and the proceeding slowly with the works on the land has been the manufacture and the proceeding slowly and the land has been the manufacture and the land has been the manufacture and the land has been the manufacture and the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the land has been the

obtained where the greatest quantity of earthwork is to be done, they are prepared to carry on the work rapidly when they receive instructions to that effect.

Contract No. 3.—Considerable difficulty and delay were experienced in agreeing for the land at Hill Top, where the principal work of the contract has to be executed. As arrangements are now completed, the contractors

(Messrs. Frost & Bate) will proceed rapidly with the tunnel, as well as with the works through the town of Bilston, where a great portion of the property has been purchased.

J. R. MACLEAN

#### EAST ANGLIAN.

Engineer's Report for the Meeting, Feb. 16 (p. 120).

Bo short a time has elapsed since I last reported to you the state and progress of the works upon your lines, that I have little now to add, especially as the few months which have since passed have been those most unfavourable for out-door operations. The whole of the lines which are open for public traffic are in a very perfect state of repair, and the works through the Fens, upon the Ely line, have stood through the winter without the slightest appearance of failure. The branch to Wisbeach was opened on the lst of February. The piers for the permanent bridges over the Fallure. In Dranch to Wisbeach was opened on the 1st of February. The piers for the permanent bridges over the river Ouse and the Middle Level drain, on that line, are carried up considerably above low-water mark, and all dif-ficulty in their construction is consequently overcome. The short line for connecting the Wisbeach station with the Eastern Counties line to March, St. Ives and Peterborough, Eastern Counties line to March, St. Ives and Peterborough, will very soon be completed, affording a communication with the Ely and Huntingdon line at St. Ives, and with the line of the London and North-Western at Peterborough. The works upon the third contract on the Dereham line (the only part of your lines under contract not completed) are omy part or your mes under contract not completed are progressing, and that line may be opened throughout early in the summer. Increased accommodation for the goods and cattle traffic at the several stations, and proper wharface and conveniences for landing seaborne goods at the harbour at Lynn, are absolutely necessary. When these works are completed, and a sufficient addition made to the carrying stock of the company, a very large and remunerative traffic, as yet wholly untouched, will be brought upon your railways.

J. S. Valenting.

#### NORTHERN COUNTIES UNION.

Engineer's Report for the Meeting, Feb. 17 (p. 135). Since your last half-yearly meeting I have, in compliance with your instructions, re-surveyed the line from Barnard Castle to Tebay, and the necessary plans, sections, estimates, &c. for this deviation were deposited in November and December last, in compliance with the Standing Orders. By December last, in compliance with the Standing Orders. By this deviation I estimate there will be a saving in the expenditure, when the line is executed, of no less a sum than 320,0000. On the line from Burnard Castle to Tebay, as sanctioned by Parliament, there were four tunnels of an aggregate length of 5,900 yards, which have all been avoided—there being only one on the proposed deviation, of a length of 500 yards. This has been accomplished without materially increasing the total length of the line to be made or the quantity of earthwork. The amount of masonry and brickwork has been considerably diminished. The gradients on the south-west side of the Stanemore summit, which on the parliamentary line were the worst, have been, I consider, improved. On the Wath contract the works are proceeding improved. On the Wath contract the works are proceeding satisfactorily, and those now done by the contractors are executed in a good, substantial and workmanlike manner. I have made arrangements with the contractors for curtailing as much as possible the expenditure upon the works ing as much as possible the expenditure upon the works during the winter, as you instructed me to do at your meeting on the 23rd of December last. As the spring advances we shall be prepared to continue satisfactorily the future progress of the works. About one-sixth of the total quantity of earthwork, a bridge, several culverts, and about 4½ miles of fencing, have been completed. I have much satisfaction in being able to add that I shall be enabled to complete this portion of the line within the parliamentary estimate, and it can be opened at any time within a very short period. The line on the Leyburn, Auckland and Tebay contracts has been staked out, and the plans, sections and drawings for these different contracts I have prepared, and could proceed with them so soon as you may think it expedient to give me further instructions.

11. IL FULTON.

28. Great Queen-street, Westminster, Feb. 10. 8, Great Queen-street, Westminster, Feb. 10.

#### EAST LANCASHIRE.

Engineer's Report for the Meeting, Jan. 31 (p. 93).

As the division of the line into sections was explained in the last Report, it is not necessary to repeat the detail on this occasion. We will at once proceed to describe the pre-

the last Report, it is not necessary to repeat the detail on this occasion. We will at once proceed to describe the present state of the works on each contract.

Accompton Contract.—The tunnel at Blackburn, with the exception of about 20 yards in length, is now arched throughout. The viaduct over the Aspden Valley is three-fourths finished. The Accrington viaduct (of which some of the arches have to be re-constructed is also three-fourths completed. Of the excavations, only 100,000 cubic yards, the original quantity; but 60,000 cubic yards of this is from the Rishton Moor cutting, and being from one point, will require some exertion on the part of the contractor to complete. Above one-half of the 8 miles of permanent way on this contract has been laid, and increased effort is now making to expedite this portion of the work.

making to expedite this portion of the work.

Burnley Voltract—At the Burnley viaduct considerable progress has been made since the last Report. At that time the land had only been recently obtained, and nothing had been done beyond setting the foundation courses of some of the piers; at present all the piers, with one exception, are the piers; at present all the piers, with one exception, are up to the springing, four arches are turned, and eight sets of centres, out of fifteen arches, are fixed. At the Coine viaduct only two arches now remain to be built. Of the total quantity of 762,000 cubic yards to excavate on this contract, nearly 600,000 cubic yards have been removed. The Marsden cutting was named in the last Report as an important point on this district, and there still remain 80,000 cubic yards to be removed from it. Increased effort is necessary on the part of the contractor as to this portion of his work. This contract is nearly 10 miles in length, and one-fourth of the permanent way has been laid.

Hastinoden District.—The Helmshore viaduct is now nearly finished, and the rest of the masonry on this part of the line is in a satisfactory state of forwardness. The arching of the tunnel is completed, with the exception of a few yards. Out of the Summit cutting at Carter-place, originally about 350,000 cubic yards, only 100,000 cubic yards now remain to excavate. This district is 8 miles in extent, and 2 miles of permanent way are now completed.

Bacup Branch.—The tunnels on this branch have not been pushed forward; but that portion of the line from the Rawtenstall station to Waterfoot, adjacent to the tunnel, is now so near completion, that it may torobably be opened Hastingden District .- The Helmshore viaduct is now

is now so near completion, that it may probably be opened

is now so near completion, that it may probably be opened for traffic within a few weeks.

Ormskirk Contract.—The whole of this section of the work, in all 25½ miles, is let in one contract. The total quantity of earthwork was originally 1,652,000 cubic yards, of which 730,000 cubic yards have now been executed. There are in all sixty-two bridges, twenty-three of which are completed and twenty-four in progress. Only 2 miles of permanent way have yet been laid on this contract.

The instructions of the directors to limit the expenditure have necessarily retarded operations, especially upon the Ormskirk contract, and will continue to do so so long

the Ormskirk contract, and will continue to do so so long the Ornskirk contract, and will continue to do so so long as those orders remain in force; still, the essentially heavy points have been, as far as it was possible, attended to; and it yet appears possible, if such shall be considered expedient, to have the whole line finished by the autumn of this year; and even with a limited expenditure, some portions of it may be opened within the next summer.

London, Jan. 20.

#### Accidents.

CALEDONIAN.-Feb. 25.-From a slip of part of the embankment near Ecclefechan, the engine of the evening London mail train ran off the line drag-ging the train after it. The carriage nearest to the engine ignited. Two passengers (Mr. Reid, of Glasgow, commercial traveller, and Mr. Warwick, of Oxfordshire, who subsequently died after amputa-tion) had their legs broken. The engine-driver and fireman were scalded and bruised. The guard, who was thrown off his carriage, died from the injuries received.

LONDON AND BRIGHTON .- Feb. 24 .- The top of the deep cutting just to the northward of Hayward's Heath tunnel fell in, covering the line to the extent of 100 yards in length, and covered the up line to the depth of several feet. The driver of the goods train from Brighton at 5 a.m. first discovered it, and stopped his train in time. Messengers were despatched both ways to stop the coming trains. The passengers of the first up and the express up trains alighted, and walked over the slip, and got into the 7 a.m. down train, which returned and conveyed them to their destination: and in like manner the down passengers walked over to the up train, which returned and took them to Brighton. The rubbish was cleared away so as to enable the 10 a.m. down train to pass, and the up trains were passed over to that line on approaching Hayward's Heath tunnel.

#### Lam Intelligence.

Feb. 26. - In the Vice-Chancellor's Court, in re Povell v. Thomas, his Honour disposed of the application for an injunction to restrain the de-fendant from ejecting the plaintiff from the glebe lands of Llantwit Vairde, in Glamorganshire, over which the plaintiff had constructed a line connecting his coal mines with the Taff Vale line. He granted the injunction on the terms of the plaintiff submitting to judgment against him in the ejectment and pay court to cover all claim from ing 2001. into defendant for the right of way.

Directors' Purchase.—Feb. 26.—In the Court

OF QUEEN'S BENCH, in re Jones and another v. Blunt and another, a rule had been granted calling upon the defendants to show cause why the nonsuit which had been entered should not be set aside, and a new trial had. The action was brought to recover the sum of 2,000l.; and it was alleged in the declaration, that in consideration that the plaintiffs, projectors of the Birmingham, Oxford, Reading, and Brighton Direct, would give up the said project and its maps, &c. to the defendants, and would permit the said defendants to be the managing directors, the defendants promised to pay the plaintiffs the said sum of 2,000*l*. Evidence showed that the defendants had become managing directors and were acting in that capacity when the arrangement was made: so that the plaintiffs had no project to give The opinion of the Court therefore was, that the learned judge was right in nonsuiting the plaintiffs, and that the rule for setting aside the nonsuit must be discharged .- Rule discharged.

Feb. 23 .- In the Court of Exchequer, in re Middleton v. Berisford, this action was brought against the defendant as chairman of the Leeds and Carlisle, to recover back deposits of 2l. 12s. 6d. a share upon 100 shares in that scheme. The action proceeded upon the ground that fraudulent repre-

sentations had been made by the board of directors A verdict was returned for the defendant.

Feb. 22.-In the BANKRUPTCY COURT, Tring, Reading, and Basingstoke, at the adjourned dividend meeting, the claim of Mr. Green, the secretary, was disallowed, on the ground that he was a shareholder and partner. A similar objection was taken to the claim of Mr. Everill, for 4,400% costs of his firm of Hill & Everill, the late solicitors. It was replied that Mr. Hill's shares formed no part of the partnership assets, and that Mr. Everill ought not to be damnified by the private act of Mr. Hill. The meeting was adjourned to the 30th of March, without deciding the question.

Feb. 22.-In the Court of Aldermen, Mr. T. Field, stockbroker, of the firm of Field, Son & Bayley, stockbrokers, appeared to answer the petition of Mr. H. F. Nelson, charging him with having acted of Mr. H. P. Reson, charging miles for the prevention of fraud, in the purchase and sale of some Wexford, Waterford and Valentia shares. The Recorder informed the parties that Mr. Field, jun., had committed an infraction of the law in not having registered in his books the names of the purchaser and seller, and that if he required to be heard on the question, whether his bond should be put in force against him, the Court would appoint an early day for hearing him. Tuesday, March 7th, was appointed for the decision.

### Parliamentary Proceedings.

COMMONS.

Returns.—The following returns have been ordered on the motion of Mr. H. Brown (Tewkesbury):— Of the companies who have made application to the Commissioners, under the 1st section of the Act 11 Vict. c. 3, for an extension of the periods limited by their Acts for the purchase of lands or the completion of works, specifying in each case the period for which such extension is desired, and the works or lands to which it is proposed to apply, including the length of the line and the estimated cost of the works, and also stating whether such application has or has not been entertained by the Commissioners.' the companies who have deposited at the office of the Commissioners, in compliance with the 10th section of the same Act, a certificate that the consent of the shareholders has been duly obtained, authorizing the company to proceed with the construction of works which had not been commenced before the 27th day of November 1847, and for which no contracts had been made previously to that day, specifying in each case the nature of the works for the execution of which such consent has been given."—"Of the companies who have been authorized, by an order of the Commissioners, under the 8th section of the same Act, to proceed with the construction of works not commenced, as aforesaid, specifying the nature of such works."—"And, of any railway works the execution of which, though authorized by Parliament, must, under the 8th section of the same Act, be postponed for the period of twelve months from the passing of the said Act, the consent of the shareholders not having been duly given, nor any order authorizing the execution of the same having been made by the Commissioners of Railways, specifying in each case the name of the company authorized to construct such works, and the nature of such works, including the length of the line and the estimated cost, and also stating whether in any case such consent of shareholders has been applied for and refused."

PROCEEDINGS BEFORE THE EXAMINERS. Passed Standing Order.

Caledonian, Lancaster and Carlisle and London and North-Western (Lease to Scottish Central) Caledonian (Purchase or lease of Wishaw and Coltness).

#### Reports of Meetings.

CALEDONIAN.

Feb. 25.—Half-yearly Meeting, Edinburgh.—Mr. J. Hope Johnstone, of Annandale, in the chair. The CHAIRMAN congratulated the shareholders on the opening of the line throughout. Much had been done, and there still remained a good deal to be accomplished. They had not yet got accommodation for their goods traffic; they wanted station accom-modation in a variety of places; and they were still deficient in the amount of working plant. Temporary accommodation would be erected, so as to enable them to proceed with the development of the goods traffic; and they intended to arrange as to engines, so as to duly meet the demands as they were made upon them. With regard to the works now in progress, and which were not part of the main line, they were some of them most essential to their prosperity. The Clydesdale junction opened not only a

Digitized by GOGIE

communication with the southern banks of the Clyde, but it also linked immediately and directly the east of Scotland and the whole of the towns lying within the districts of Greenock, Renfrew and Ayr, while it would afford great facility of transit for passengers to Edinburgh, as well as for the conveyance of passengers and goods from the English manufacturing districts. The lines along which they passed immediately approaching Glasgow were exceedingly crowded with mineral traffic. It would be a great relief to the mineral traffic if a considerable portion of the coal traffic—all, for instance, that was intended for shipping—were conveyed on the Clydesdale branch. There was another work in which they were engaged which was very important, namely, the extension of the Garnkirk to the town of Glasgow. At present it terminated outside of the town altogether, at a considerable inclination, and very inconvenient for passengers. By what was proposed, however, they would be conveyed into the midst of the city of Glasgow, where they would have abundance of station accommodation. Some works on the opposite bank of the river must be proceeded with, so as to obtain a passenger station some little distance from the river Clyde. At present they did not intend to incur the expense of carrying their line down to the bank of the river. They would have a temporary station at the point of junction between this line and the Barrhead line. It would not, perhaps, be so commodious as they could wish, but still sufficient to answer their purpose in the meantime. It would also be necessary to complete the junction with the Greenock. It was in progress, and by the time the Clydesdale junction was opened it would be finished. The enumeration of these works, and the necessity which existed for carrying them on, brought him to the point of raising additional funds. They would ask the shareholders to sanction their borrow ing powers in the Acts of 1846, enabling them to borrow a sum of 180,000*l*. Some of these works also were those to which the new shares were applicable; and in justice to the other shareholders it was but fair that the new shares should be brought in to bear part of the expenses. They proposed to ask for a call of 51. on these shares, to be payable, one half on the 31st of March, and the other half on the 1st of July. They were just now making every effort to develope the goods traffic. As yet they had not attempted to carry anything but passengers, but by attempted to carry anything out passaged the lat of March they expected to carry goods. So far as they had gone they had great reason to be encouraged with their success. The receipts were more than they expected in the circumstances, and they were daily increasing, so that he had no doubt by the next time they assembled he would he able to give an encouraging account of the traffic.

The Report was then read. After alluding to the

The Report was then read. After alluding to the opening of the portion between Carlisle and Beattock in September, and the remainder to Edinburgh and Glasgow on the 15th inst., it stated that—

The Castlecary branch (ten miles in length) is the only portion of the original trunk line which remains to be finished. This important connexion with the north of Scotland will be ready for opening by the 1st of May; but the works are in a sufficient state of progress to admit of its being opened simultaneously with the Scotlish Central, if the opening of the whole of that line should be accomplished at an earlier period. The Clydesdale Junction portion, acquired by the company under the Caledonian and Clydesdale Amalgamation Act of 1846, had been retarded from the wetness of the season. The directors were also proceeding with the excusion of the Garnkirk entrance into Glasgow, and with the formation of the necessary connexions with the Greenock and Ayrshire and with the Garnkirk entrance into Glasgow, and with the formation of the works now in progress to a conclusion, with the same vigour with which the main line has been executed. In alluding to the receipts and expenditure during the past half-year, the directors regretted that a considerable degree of backwardness had been shown in responding to the calls, whereby an excess of the expenditure over the receipts had been occasioned, for which the directors had been obliged to provide. To meet the increasing demands from the expenditure already incurred and in progress, the directors proposed to make a further call on the half or 250, shares. The amount already called up on this stock was 30. 13s. The directors announce a further call of 5a, to be paid in equal instalments, on the 31st March and 1st July next: and they had likewise given notice of their intention to exercise the powers of borrowing money conferred by the Acts passed in 1946.

The statement of accounts to the 31st of December showed the receipts at 3,305,622*l.*; expenditure, 3,594,471*l.*; balance against the company, 288,849*l.* 

The revenue for the half-year on the Glasgow, Garnkirk and Coatbridge amounted to 15,921/., and the expenses to 12,937/., including interest, duties and taxes, 4,418*l*.; leaving a balance of 2,984*l*.

The CHAIRMAN moved the adoption of the Report, which was seconded and agreed to.

In answer to a question, the Chairman stated that the average traffic carried on the line, including the Wishaw and Garnkirk lines, was 3,000L a week.

The amount on the Caledonian proper was about 2,000l. a week.

Sir A. Agnew moved a resolution that no work be done on the Caledonian on the Lord's day, which was seconded.

On the votes being taken, there appeared for the motion 438 shares, and against it, 7,686.

The meeting was made special.

Four bills were approved for enabling the Scottish Central to lease their undertaking to the Caledonian and other companies; to authorize the purchase of the Wishaw and Coltness; to improve the Glasgow and Coatbridge, the Clydesdale junction, and the Wishaw and Coltness, and to make branches, and to extend the Caledonian across the Clyde.

The directors were authorized to borrow 180,200l.

SCOTTISH MIDLAND.

Feb. 25.—Half-yearly Meeting, Perth.—Col. DAL-GAIRNS in the chair.

The Report stated that considerable additional expense had been incurred from laying a double line, in accordance with the desire of Parliament, but the other outlay upon the line would not much exceed the estimate that had been formed. Bills for the deviation to Dunkeld and the branch to Laurence-kirk were before Parliament, and arrangements were making with the Edinburgh and Northern for their traffic to the North, especially the carriage of coal, which was expected to be large. The balance-sheet to the 31st of January last showed that at that period there was a balance due to the company's bankers of upwards of 36,000*l*.; but since then there has been received on account of arrear of calls 29,000*l*., and 5,000*l*. in advance of calls, thereby causing a corresponding diminution of the balance due to the

The Report was adopted.

On the motion of Dr. F. Thompson, the retiring directors (Lord Wharncliffe, Mr. C. G. Sidney, Mr. P. W. Ogilvie, and Col. Dalgairns) were re-elegated.

The CHAIRMAN said that the directors had received a number of memorials against Sabbath travelling, but that they had come to no resolution.

DUNDEE AND PERTH.

Feb. 28.—Half-yearly Meeting, Dundee.—Mr. P. M. THREIPLAND in the chair.

The Report mentioned the various delays in constructing the bridge across the Tay at Perth, the application to Parliament for its sanction to the lease of the Arbroath line, and the measures taken relative to the construction of their portion of the proposed junction line through Dundee, and gives the usual half-yearly financial statement. The total revenue of the Dundee and Perth and Dundee and Newtyle lines amounted to 12,646. 4s., out of which the directors recommended a dividend at the rate of 8 per cent. per annum, leaving 3,212l. to be paid over for working purposes.

The Report was adopted.

A memorial from the inhabitants of Dundee against the proposed junction line was adjourned for consideration.

SLAMANNAN.

Feb. 26.—Special Meeting, Glasgow.—Mr. T. HILL in the chair.

The following resolutions were unanimously adopted:--

That previous to being allowed to present to the House of Commons a bill for amalgamating this company with the Ballochney and Monkland and Kirkintilloch, it is necessary that one half of the authorized capital of the company be raised and paid up, which is at present deficient by the sum of 7,020. 2. That it has hence become expedient to raise the sum of 7,050. by the creation of additional capital in terms of the provisions of the Act 9 & 10 Vict, c. 151, in respect of the outlays incurred in widening the gauge of the line, and in finishing the Jaw-Craig branch. 3. That such sum can, in the state of the money-market, be raised only by guaranteeing a certain per centage, which would be moderately fixed at 5 per cent. per annum. 4. That for the purposes above set forth, the company do now create 7,050°, or 14150°, shares of additional capital, in terms of the powers conferred on them by the said Act, guaranteed to yield a dividend of 5 per cent. per annum from the date of advance, payable half-yearly, in lieu and in full of all benefit or emolument belonging or which may belong to the other shareholders of the company. 5. That it be remitted to the directors, and that they be authorized to dispose of the said stock and shares, and to issue certificates of proprietary to the parties subscribing, and paying the price thereof on the terms aforesaid.

LANCASHIRE AND YORKSHIRE.

March 1.—Half-yearly Meeting, Munchester.—Mr. H. Houldsworth in the chair.

The Report was read (see Official Papers).

The CHAIRMAN said the late monetary difficulties had created unfavourable feelings towards railway undertakings. Their Report had been minute in its details, so as to remove any such feelings towards

their own project. Their traffic, he was glad to say, was increasing, quite independent of accidental circumstances. They had 124 miles open, and had received during the past year 518,000l., being a mileage of 4,000l. a year. The additions they were making to their original line had been so frequently sanctioned by the shareholders that the directors' responsibility (which had been much commented on elsewhere) was much lightened in reference to those undertakings. He instanced the enormous increase of traffic on the Manchester and Leeds as a warrant for the soundness of their own calculations of future traffic. Thus, there was an increase in the traffic of the canals since the establishment of the line, which was evidence of a continual increase of canal traffic quite independent of the existence or competition of the railway; whilst at the same time the increase of the traffic on this line, between the years 1844 and 1845, was no less than 37 per cent. The income on 1845, was no less than 37 per cent. the parent line now averaged 5,600l. per mile per annum, and if anything like the same increase of traffic should continue, the revenue of this line would not be equalled by that of any other line of railway in the kingdom. He then adverted to the Pontefract and Goole, from which, as they would see by a reference to the map, there was a branch to Askern and another to Methley. The expectations of its future profit were based upon the trade now centering at the port of Goole, Wakefield, and the West Riding of Yorkshire,—manufacturing as well as corn-producing districts. These would again be brought in connexion with Lincolnshire by the proposed junction with the Great Northern; and, indeed, with the metropolis itself. They would also be brought into immediate connexion with Leeds. If the proposed line could be constructed at an average cost of 24,000l. a mile, the directors did right to anticipate that the returns could not fail to add to the profits of the parent line. He was also convinced that their Liverpool and Bury line, passing through or embracing the populous towns of Rochdale, Heywood, Bolton, Wigan and Liverpool, would pay a good interest per se, and moreover contribute greatly to the general fund. The Cleckheaton line, would be constructed at 30,000l. a mile. It was a valuable line from Cleckheaton to Low Moor, and he believed there was no more promising line in the West Riding. The Burnley branch by opening up the beautiful valley of the Ribble, and the rich manufacturing interests in the vicinity of that district bordering on the East Lancashire, must be most valuable. Of the 102 miles which remained to be opened, there was not one mile which would not add to the traffic of the main line. After adverting to the Manchester and Southport, and to the Huddersfield and Leeds lines, the chairman remarked that the latter line might be regarded as a competing line, just as the Liverpool and Bury line might be described as competing with the main line; but he (the chairman) could not credit that any like competition was in contemplation. Large companies knew their own business too well to encourage such a spirit. The most cordial interchange of friendly feeling existed between this company and the London and North-Western; and although the Huddersfield and Leeds line might be considered as a competing line, its traffic was local, nor could it be regarded as interfering with the through traffic of this company's lines. Much had been said out of doors about the company's guarantees, but their Report would set that matter at rest. The only guarantees were to the Preston and Wyre, the North Union, and the Barnsley; and these amounted to no more than a 5 per cent. guarantee over 56 miles. As to the purchase of the Manchester and Bolton, it was the opinion of the directors that the full value was given for this line. He thought the arrangement with the North Union would repay the proprietors when all the lines were opened; but with reference to the Preston and Wyre, he was perfectly free to admit that the proprietors must sustain a loss for some years. Nevertheless, there had been a progressive increase in the truffic from the time this company took it, and that increase still kept on, so that nothing was required but that this company should wait until the development of traffic from the opening up of the lines to Cumber-land, and the gradual improvement of the Irish and Scotch trade. As to the land purchased of the Bolton proprietors, the opinion of the directors was, that it would have been perfectly competent for them to have sold the land and divided the produce amongst the existing shareholders, but they had not done so, and the arrangement stated in the Report had been entered into. The amount of capital called up was 581,000l. There was one million paid up in advance of calls, and one million borrowed. As many evil rumours had been circulated, he must state that there was no other company which had a less amount of loans in proportion to their capital than the Man-

chester and Leeds; for although their debts were originally 1,763,9211., it was to be remembered that they converted 137,700l. in fifth shares, for which amount, of course, the holders of those fifth shares were responsible, so that only 386,189l. was the actual amount for which the company was really responsible, and which amount was not represented by any specific stock. It had also been rumoured that this company had issued mortgage bonds at a discount. To this he gave the most decided contradiction. To this he gave the most decided contradiction. They had, moreover, never paid more than 5 per cent. interest on any loan; and although they had borrowed upwards of 640,000*l*., the total amount of commission paid did not exceed 200*l*. Since he had always had the honour of being chairman he had always examined the balance-sheet, and thoroughly satisfied his mind of the making up of the revenue and capital ccount. He looked upon their accounts as precisely the same as the accounts of any other firm, with this difference only—that the party who formed the partnership were, in ordinary business, fixed and settled, whereas in a railway, interests were continually fluctuating. Many charges, it was said, which ought to have been made on the revenue had been put to the capital account. In answer, he simply desired to call their attention to the fact that the auditors were two of the largest shareholders, and that if such a proceeding had taken place, it would have been the interest of those gentlemen to have sold out; but he was glad to say that they still remained amongst the largest shareholders. Although the directors had restricted the expenditure to as low a point as possible, it was clear that this company could not afford, at this season of the year, to lie idle, or to permit their capital to remain unprofitable; and he trusted that though the times were somewhat depressed, the shareholders would lend a ready hand to the prosecution of their works, and thus prevent not only a national loss, but a loss to the shareholders, in allowing so much capital to remain unremunerative.

Mr. MATHER seconded the resolution.

The CHAIRMAN, in answer to questions, stated that the amount put down for working stock, namely, 655,000l., was for plant and stock equal to 200 miles of railway, which the company were about to open, and not for the 124 miles of which their present railway consisted.

In answer to further questions, it was stated that no negotiations were now pending between this company and the London and North-Western, although several interviews had taken place between

the members of their respective Boards.

In the course of a long discussion, on a variety of topics, in which Mr. DAVIS and Mr. KERRISON found great fault with the directors, and the former gen-tleman particularly censured Mr. Hawkshaw, the engineer,—
Mr. KERRISON moved, as an amendment, the ap-

pointment of a committee to investigate the affairs, which, however, was afterwards withdrawn.

After some further discussion, in reference to the arrangement with the Bolton proprietors, the Report was put and carried.

A series of resolutions, declaring the dividend as set forth in the Report, authorizing the exercise of the borrowing powers of the company, to the amount of 316,300%, and for the re-election of the retiring directors, were also unanimously passed.

The CHAIRMAN, in returning thanks for a vote of thanks, announced his intention of retiring from the chairmanship of the Manchester and Leeds, although he should continue to devote his attention to their affairs as a member of the Board.

HUDDERSFIELD AND MANCHESTER CANAL Feb. 25 .- Half-yearly Meeting, Huddersfield .- Mr.

W. ALDAM in the chair. The Report stated that since August the rate of expenditure had been considerably reduced. The execution of the easier works had been deferred. The payment for works, land, compensation and stock, amounted to 166,4151. during the half-year. The calls had been well responded to; the arrears on calls to the 31st of December amounted to 34,927l.; but as 19,254l. of this amount was due on the 7th of December, the arrears on previous calls were only 15,673l. and at the same date the payments in anticipation of calls amounted to 11,322t. The directors will forfeit all shares upon which arrears are due on calls made up to the 2nd of February 1847 inclusive. The amount of loans to the present time was 137,6954. The revenue from the portion of line opened for traffic in August, between Huddersfield and Heaton Lodge Junction, a distance of 23 miles, was satisfactory; 121,861 passengers had been carried, and the merchandise carried during December was 1,749 tons. The gross receipts amounted

The purchase money for Sir J. Ramsden's Canal had been paid, and it was now in good working order. It was in the hands of the company since the 22nd of July, and arrangements have been made in working the canals, by which it was estimated that a saving of 6001. per annum would be effected.

The CHAIRMAN congratulated the proprietors on the traffic. The entire line would doubtless be opened in the spring of next year. He adverted to the lawyers' charges of 52,406l., which they had incurred in consequence of the number of bills they had occasion to apply for in Parliament.

In the course of conversation it was stated, that 46,000l. had been paid for Sir John Ramsden's Canal. They had reduced the tolls from 1s. 6d. to 6d. per ton from Cooperbridge to Hudderstield, and it was doubted whether it was a wise course to do so.

Resolutions were passed adopting the Report, reelecting the directors and auditors.

SHEFFIELD, ROTHERHAM, BARNSLEY, WAKE-FIELD, HUDDERSFIELD AND GOOLE.

Feb. 29 .- Half-yearly Meeting, Wakefield .- Mr. E. B. BEAUMONT in the chair.

Mr. HANDFIELD, the secretary, read the Report. No great progress had been made in the works during the half-year, attention having been turned entirely to the heavier portions of the work, so that when circumstances should permit the whole of the works should be proceeded with at the same time. The Report detailed the precise condition of the works on the several contracts, and stated that it was the intention of the directors to make a call of 2l. 10s. on the guaranteed stock.

The CHAIRMAN, in moving the adoption of the Report, said it did not call for any remarks. order to keep faith with the contractors it would be necessary during the year to make two calls of 21.10s.
The Report was adopted.

In answer to a question, the CHAIRMAN stated that of the last call only 1,690 shareholders, holding shares to the amount of 14,000*l*., had not paid their calls.

Messrs. G. Wentworth, G. Chambers and E. Few were re-elected directors. Messrs. S. Roberts, jun., and W. Carr were elected directors in place of Earl Fitzwilliam and Mr. F. T. W. V. Wentworth, who had resigned. Messrs. J. Mintern and H. M. Greaves. were also elected directors, in place of Capt. W. B. Martin, deceased, and Mr. J. Prakenridge.

On the motion of Mr. BAXTER, of Doncaster, it was also resolved that Messrs. E. Denison, R. Dynond, W. G. Thompson, and W. Newman, originally nominated directors by the Manchester and Leeds, which had ceased to hold shares, be continued directors.

Mr. G. THOMPSON explained that although the Lancashire and Yorkshire did not now hold the shares which they had once undertaken, the gua-rantee which that company gave was not affected.

The remuneration of the directors was fixed at

1,400l. per annum.

BIRMINGHAM, WOLVERHAMPTON AND STOUR VALLEY.

Feb. 29 .- Half yearly Meeting, Eirmingham .- Mr. F. LEDSAM in the chair.

The Report stated, that although tenders for the construction of the works of the Smethwick deviation line and branch to Dudley had been advertised for in September last, the directors had reconsidered their financial position, and arranged for a slower progress of the works, under the impression that, by delaying the letting until the spring, the contracts might be made more advantageously. The contractors, therefore, received back their tenders, with an instruction that they would have an opportunity of tendering at a future time. The directors were justified in their course, as the contract for this part of the line had been let on the previous day within the engineer's estimate. Satisfactory progress had been made with the heavy cuttings and viaducts. The last call of 2l. 14s. had not been expended, in consequence of the delay in the works : one half, therefore, of the whole capital had not been expended—a condition required by the Act before the lease to the London and North-Western could be granted; therefore the terms of arrangement approved at the meeting of this proprietary in February remain over for confirmation until the next meeting. The directors proposed to declare a number of shares forfeited, on which the first call had not been paid; and, anticipating an improved state of the money-market, have resolved upon proceeding with the works with renewed vigour. They have made a fourth call of 11. 10s. per share, payable on the 24th of April next, and will take the necessary steps to obtain the payment of arrears. The statement of accounts shows the receipts at 460,918l. 7s. 2d.; disbursements, including 217,3671. 17s. for land, rails and chairs, 50,2651. 2s. 5d., works, 62,8901. 2s. 9d.; left to 2,757l. The working expenses for a short line and chairs, 50,265l. 2s. 5d., works, 62,890l. 2s. 9d.; left are heavy. There are thirty-four trains daily, a balance in the hands of the bankers of 34,663l. 8s. 8d.

The Report was adopted. Mr. A. Peyton, the retiring director, was re-elected, and 440 shares declared forfeited, and ordered to be disposed of as the directors might think fit.

MANCHESTER AND SOUTHPORT.

Feb. 28.-Half-yearly Meeting, Manchester .- Mr. H. HOULDSWORTH in the chair.

The Report stated that from the recent monetary pressure the directors had suspended the general works, but were forming a length of three miles, passing through Wigan, and joining the Liverpool and Bury to the east of the town; and the junction they thought would be completed so as to be opened simultaneously with the Liverpool and Bury. Of 10,000 shares allotted to local parties, 8,115 had been taken up. The accounts showed the receipts at 112,062*l*.; expenditure, 60,609*l*.; balance, 51,453*l*.

On the motion of the CHAIRMAN, the Report and accounts were passed.

A resolution was also passed, empowering the directors to sell the 1,885 shares not taken up by landowners as they best might.

FLEETWOOD, PRESTON AND WEST RIDING JUNCTION.

Feb. 28 .- Half-yearly Meeting, Preston .- Mr. T. B. Addison in the chair.

The Report stated that although the company had not escaped the late depression over all railway pro-perty, yet the original merits of the undertaking remained unaltered. A contract for completing the line from the Maudland station in Preston to the Longridge, had been satisfactorily arranged. Progress had been made in that part of the work, and the Longridge line was being put into a state for working with locomotive engines. The Burnley and Colliery branches bill had been re-introduced into Parliament, and, having passed the Standing Orders as a renewed bill from last session, could meet no further obstacle in the House of Commons, but must be carried, as a matter of course, to the Lords, whose assent, the directors trusted, would be obtained. This bill, by putting the line into communication with the great manufacturing districts of Yorkshire and the large coal-fields of Burnley, would at once establish its capacity and facilities for traffic. The statement of accounts showed the receipts at 86,0361. 8s. 4d.; expenditure, 71,162l. 3s. 1d.; balance, 14,874l. 5s. 3d. The Report was adopted, and the retiring directors

The meeting was then made special, for the purpose of considering a draft of the bill before Parliament, the provisions of which were approved of.

LEEDS AND THIRSK.

Feb. 26 .- Half-gearly Meeting, Leeds .- Mr. H. C. MARSHALL in the chair.

The Report stated that-

The Report stated that—
The portion from Thirsk to Ripon, now open for goods traffic, will shortly be ready for passenger traffic, the directors having found it necessary to delay the opening for the latter purpose until a cutting to the north of the temporary station at Ripon, forming part of the Ripon contract, shall have been completed. The Ripon, Midhand and Pannall contracts are also very advanced, and the progress made with the heavier works has been so considerable, that it is confidently expressed they will be faithed by July part. made with the heavier works has been so considerable, that it is confidently expected they will be finished by July next, and thus about 27 miles down to the north bank of the river Wharfe will then be ready for opening. The works connected with the tunnel at Bramhope are advancing steadily. The difficulties, in consequence of the great flow steadily. The difficulties, in consequence of the great flow of water into the shafts, have been overcome, and the buildof water into the shafts, have been overcome, and the building of the tunnel is proceeding rapidly. The Leeds contract is also carried forward with a view of being completed by the opening of the Bramhope tunnel. Meanwhile the heavier works at the south end are kept steadily in procress, and are in a condition to be forwarded when convenient. The directors have concentrated their energies upon the completion of the line to the north of the river Wharfe, by completion of the mote to the norm of the river whate, by which it may be made productive at the earliest possible period. The prosecution of these works has necessarily involved a large monthly expenditure, to meet which the directors have continued to make regular calls upon both classes of shares up to the present time; and have not considered themselves justified in ordering more than a partial enterprise of the rocks desired themselves in the rocks and the results of the rocks desired themselves in the rocks and the results of the rocks desired themselves in the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks and the rocks are the rocks and the rocks and the rocks are the rocks and the rocks are the rocks and the rocks are the rocks and the rocks are the rocks and the rocks are the rocks and the rocks are the rocks and the rocks are the rocks and the rocks are the rocks are the rocks are the rocks and the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the rocks are the ro auspension of the works during the past winter.

The statement of accounts showed the receipts at 1,130,318*l*. 18s.; expenditure, 1,069,314*l*. 9s. 4d.; balance in hand, 61,004*l*. 8s. 8d.

The CHAIRMAN, in moving the adoption of the Report, stated that the directors had appointed Mr. N. Cash to be the managing director.

In answer to questions, the CHAIRMAN said that the amount of shares forfeited was 31,000L out of 712,000%, but that many of those had been re-allotted to the previous holders, the forfeitures having been made in consequence of the failure of transferrees to pay up the calls. The present number of shareholders

Mr. Gott seconded the adoption of the Report, which was agreed to.

Another resolution, moved by the CHAIRMAN, em-

powering the directors to take the necessary steps to protect their interests before Parliament, or otherwise, seconded by Mr. H. B. BENYON, was adopted.

A resolution, declaring the forfeiture of 160 ori-ginal shares and 50 extensions, was also adopted; but it was stated that several of them would be re-allotted.

AMBERGATE, NOTTINGHAM AND BOSTON, AND EASTERN JUNCTION.
Feb. 25.—Half-yearly Meeting, Nottingham.—Mr.
W. F. N. Norron in the chair.
The Report stated that the directors had concen-

trated their efforts towards the completion of the line from Nottingham to Grantham, which they hoped to open in the spring of 1849. They were anxious to open in the spring of 1849. They were anxious to execute this portion, which, when completed (a distance of 23 miles), would effect a junction with the Midland line at Colwick, near Nottingham, and with the main line of the Great Northern at Grant-ham. The sum of 13,000*l*. had been paid to the Midland towards the construction of the Bulwell line west of Nottingham; but as this company would not be in a situation to work it at present, the directors were in treaty with the Midland for an equitable arrangement in respect of the capital advanced. The directors had obtained power under the late Act for an extension of two years for the purchase of land and completion of the works. The statement of accounts showed the receipts at 222,879l. 13s. 6d.,

of accounts showed the receipts at 222,0150. 200. can, expenditure. 208,531l. 4s. 4d.; balance in hand, 14,384l. 9s. 2d.

The CHAIRMAN, in moving the adoption of the Report, said the slowness of their proceedings had been caused by the most careful economy. Whenever it might be deemed necessary to proceed more rapidly further calls would be made, but not till

In answer to questions, the SECRETARY said that the deposit of 2l. 12s. 6d. on 88,436 original shares had been paid up. The total number allotted was had been paid up. 95,000; and of the 88,436, 40,000 had paid the call of 12s. 6d. due on the 12th inst.

The VICE-CHAIRMAN stated that the calls upon 19,000 shares held by persons in London had been paid up, and the total number of shareholders in London was only 25,000.

Mr. BRIGGS moved that a committee be appointed to consist of five of the directors and five shareholders, holding not less than 100 shares each, to investigate their present condition and future prospects.

The CHAIRMAN would offer no opposition to the motion, but did not feel disposed to support it.

Mr. Briggs had full confidence in the directors, but thought them somewhat deficient in the details of their scheme.

The Report was unanimously adopted, and the motion for the appointment of a committee of investigation carried by a large majority.

WEAR VALLEY.

Feb. 28 .- Half-yearly Meeting, Darlington .- Mr. H. STOBART in the chair.

The Report declared that the whole of the arrange ments under the company's Amalgamation Act of last session were completed, and the certificate of the Commissioners granted; that the lease of the amalgamated lines to the Stockton and Darlington had been sealed; and that the works were fast approaching towards completion, and the line daily becoming more consolidated. [The lines amalgamated are—1. The original Wear Valley; 2. The Wear and Derwent; 3. The Weardale Extension; 4. The Bishop Auckland and Weardale; and 5. The Shildon Tunnel, leased for 999 years to the Stockton and Darlington, at a rent equal to 6 per cent. per annum.]

The Report was adopted.

Mr. PEASE anticipated much advantage from the amalgamation. 32,000 tons of coal had passed along the line during the month.

Messrs. H. Pease and J. C. Hopkins, retiring directors, and Mr. I. Wilson, retiring auditor, were re-

The following dividends were declared for the half-year ending March 31, viz.—On the 25l. shares, paid in full on the 1st of October 1847, 1l. 10s. per share; on the 50l. shares, with the calls duly paid, 11. 5s. 8d.; on the 25i. shares, paid in full on the 1st of October last, 15s.; on the 25i. shares, with 6i. 5s. paid up, 5s. 23d.

MIDDLESBOROUGH AND REDCAR.

Feb. 26 .- Half-yearly Meeting, Darlington .- Mr J. C. HOPKINS in the chair.

The Report stated that in pursuance of the instructions of the proprietors, the directors had taken the necessary steps for leasing the line to the Stockton and Darlington for 999 years, at 6 per cent. per annum, and that the document was sealed. The first directors proposed that a dividend of 1l. 10s. per | share should be paid on the 18th of April, subject to income-tax. The traffic on the line continued to improve.

The Report was adopted, and the retiring directors and auditor were re-elected.

#### BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNCTION.

Feb. 26.—Half-yearly Meeting, Birkenhead.—Ald. . BANCROFT in the chair

The Report stated, that

The Report stated, that—
On comparing the present half-year with the corresponding period of 1846, while the passenger traffic had only suffered to the extent of 1½ per cent. the goods traffic had increased upwards of 100 per cent., and the parcel traffic had increased upwards of 50 per cent. The further developement of traffic might be certainly calculated upon on the opening of the Holyhead, the extension of the Shrewsbury and Chester to Shrewsbury, the gradual revival of confidence in the country at large, and the expected resumption, at an early period, of the public undertakings at Birkenhead, By a re-arrangement of the working staff, the directors had effected a saving, in salaries, to the extent of 1,2004, per annum, and by issuing the new 27k. 10s. and 22k, shares through the general office, instead of adopting the plan pursued by the late Chester and Birkenhead in the issue of their 20% shares, a further saving had been effected of 2,100k, making a total saving of 3,300k, to the shareholders within the first twelve months after the passing of the Amalganantion Act. Owing awing of 3,300%. to the shareholders within the first twelve months after the passing of the Amalgamation Act. Owing to the severe pecuniarry pressure of the last three months of 1847, the directors thought it advisable, in October last, to suspend the active prosecution of the works on the main line from Chester to Warrington. They have called up so much only of the 31l. shares as will enable them to exercise the powers with which they are invested under their several Acts of Parliament. If all calls are paid up these powers can be exercised when 18t. 10s. per 31l. share, or 7t. 15s. in addition to the amount already called, has been paid. The amount so raised will suffice to open for traffic that portion between Chester and Warrington in the autumn of 1849, and shortly afterwards the portion between Warrington and Altrincham. The directors recommended that interest at the rate of 5 per cent. per annum, from the 1st of July to the 31st of December last, on the 27t. 10s. and 22t. shares, and at the rate of 4 per cent. per annum on the amount paid on the 31l. shares, be payable on and after the 1st day of March.

The statement of accounts to the 31st of December last showed the receipts at 1,103,566l. 12s. 7d.; expenditure 997,2831. 6s. 7d.; balance, 106,2831. 6s.
The Chairman moved the adoption of the Report,

which was seconded by Mr. Sowler.

After some conversation, in the course of which it

appeared that 50,000l. had been loaned to the Birkenhead Dock Company,—
Mr. THORNTON said 50,000l, of the 106,283l, balance

had not been satisfactorily accounted for. He asked what items were included in the remaining 56,000l.?

The CHAIRMAN read them in extenso. One was a

The CHAIRMAN read them in extenso. One was a sum of 19,218t., due by the Birkenhead (Township) Commissioners, for a piece of land purchased by them of the company. The next large item was a debt due from Mr. T. Gilbertson, of 19,762l. for a large plot of land sold to him. 2,000l. deposit had been paid; the land had been improved, and it was expected that no loss would occur from that source. 2,000l. of that owing by the Birkenhead Commissioners was on their bonds, and, consequently, in a worse position than the other part.

The CHAIRMAN said, in answer to the Rev. Mr. The CHAIRMAN Said, in about 10 Maple, that 20,000L of the balance of 106,283L was in cash. He also stated the amounts unpaid upon the several calls which had been made. The total amount called up was 222,1801.; the amount paid, 165.4371

Mr. HOSTAGE moved that the part of the Report referring to the dividend should be adopted; and that the remaining part, with the statement of accounts, should be referred to a committee of shareholders.

After considerable discussion, a motion, proposed by Mr. CATTERALL, and seconded by Mr. TREVOR, was passed, that the Report should be referred back to the directors, with a request, on the part of the shareholders, that they would call a meeting as soon as they were in a position to do so, to report on the general position of affairs, and of the accounts espe-

cially.

The Rev. Mr. Birley called upon those directors concerned in the loans to the Dock Company, &c., to

resign their trust.

Mr. J. LAIRD should await the result of the inquiry about to be instituted first.

The meeting was adjourned to the 8th of April. The adjourned meeting is also to be made special, to consider the proposition for throwing open to the shareholders the book in which the number of shares held by each proprietor is entered.

#### FURNESS.

Feb. 29 .- Half-yearly Meeting, London .- Mr. B. CURRRY in the chair.

The Report recommended a dividend at the rate of payment would be due on the 31st of March, and the | 2 per cent. per annum upon the original capital, and | 7,776l, which remain to be adjusted.

upon that portion of the additional and extension capital which has been paid up. The line from Kirkby to Broughton was inspected on the 23rd inst., Rirkby to Broughton was inspected on the 23rd inst, and the directors were giving every attention to secure the development of its expected traffic. The arrangements entered into during the past half-year will give an impetus to the traffic, and prove beneficial to the interests of the company. The capital account to Feb. 12 showed the receipts at 208,721l. 0s. 1d.; expenditure, 207,979l. 17s. 6d.; balance, 741l. 2s. 7d. The revenue account showed receipts at 5,839l. 4s. 5d.; expenditure, 4,355l. 19s. 1d.; balance, 1483l. 5d. 1,483l. 5s. 4d.

The Report was adopted, and the number of directors reduced to four.

The meeting was made special, to consider the drafts of two bills before Parliament, the provisions of which were duly sanctioned.

WHITEHAVEN AND FURNESS JUNCTION. Feb. 26.—Half yearly Meeting, London.—Lord LONSDALE in the chair.

The Report stated that

The Report stated that—
The funds had enabled the directors to continue carrying on the contracts announced at last meeting as in hand. No new contracts had been entered into, the Directors being unwilling to resort, during the recent monetary pressure, to the frequent calls which would have been necessary. The arrears of calls unpaid will render it necessary that 13t. should be called before the company can exercise its borrowing powers; these arrears, however, have been, and con-tinue to be, daily reduced. The directors have attempted the lessening the outlay necessary to complete the line; they have been enabled in several instances to curtail the current have been enabled in several instances to curtail the current working expenditure; but the most important saving (about 35,000d.) which they hoped to effect is under a bill in the present session for authorizing a deviation at the crossing of the Duddon estuary. At the Whitehaven end the company have further carried out the views which they the company have further carried out the views which they last half-year reported they had in contemplation for altering the mode of junction with the Maryport line. This measure, which is also included in the bill, will continue without any probable increase of expense a very advantageous connexion with the harbour of Whitehaven, and also a continuous line for the through traffic to the north of Whitehaven, by uniting with an extension of the Whitehaven and Maryport, projected by that company to meet the harbour branch above referred to. To complete the line from Whitehaven to St. Bees (a distance of 5 miles) 7,000£, will be required. From St. Bees to Ravenglass a further expenditure of 47,950£, will be necessary, and within the present year it is estimated that this portion of the line may be completed.

The statement of accounts showed the receipts at

may be completed.

The statement of accounts showed the receipts at 118,900l. 12s. 8d.; expenditure, 117,023l. 8s. 9d.; balance, 1,877l. 3s. 11d.

The CHAIRMAN, in moving the adoption of the Report, expressed his conviction that the line would be completed within the estimates.

A Shareholder complained of the slow progress made, and of the large amount of arrears, 33,000%.

The Solicitor stated that proceedings had been already taken against certain parties, by which the arrears had been considerably reduced. On the third call, 3,000l. out of 12,000l. had been recovered without taking proceedings, and 7,000%. more was promised in the course of next month. Since the cash account was made up, 6,864l. had been recovered on

the different calls.

Mr. Duncuff, M.P., thought the amount of 300% for direction for the half-year was excessive, consider-

ing the amount of capital.

The Charman suggested that it should be given up altogether, or at least cease until the line was open. This was understood to be assented to by the directors.

The Report was adopted, and a resolution passed. requesting the directors to enforce the payment of arrears. At the close of the meeting 120 shares were declared forfeited.

#### WHARFEDALE.

March 1 .- Half-yearly Meeting, Skipton .- Mr. M. WILSON, jun., in the chair.

The Report stated that the monetary pressure had induced the directors to delay the formation of the line. The line for the first nine miles had been set out. Application had been made to the Commissioners for an extension of time. The conviction of the directors that the undertaking will prove a pro-fitable investment continues unabated. They look forward to obtain a considerable share of the traffic between North Lancashire and the West Riding of Yorkshire. The directors have endeavoured, as far as possible, to limit the expenses. They assure the proprietors that all practicable economy will continue to be exercised in their future proceedings; and they trust that the delay in the construction of the line will in the end prove a great saving to the company by enabling them to construct it at a cheaper rate.

The statement of accounts showed the receipts at 64,263l.; expenditure, 37,036l.; balance, 27,227l. There are outstanding claims against the company of

Digitized by GOOGLE

Resolutions were passed adopting the Report, fixing the seal to the register and authorizing the directors to discontinue the payment of interest on deposits until active operations for the formation of the line can be commenced.

#### MARYPORT AND CARLISLE.

March 1.—Half-yearly Meeting, Maryport.—Mr. F. L. B. DYKES in the chair.

The Report stated that the revenue account of the past half-year satisfactorily exhibited the progressive increase of the passenger traffic, which the further opening of railways into Scotland would no doubt

considerably augment. There had also been a small increase on the goods traffic. The directors, however, have at present their attention closely fixed on inducing a greater weight of goods and materials over the whole length of the line. The disposable balance from revenue will afford a similar dividend to last half-year—of 15s. on each 50l. share, and 1s. 6d. on each quarter share, payable on the 10th inst. The want of direct communication with the harbour at Maryport had been a vexatious hindrance to the cultivation of heavy traffic, and it was in contempla-tion to carry a line down on the east side to the south side of the harbour, so that the railway waggons may receive goods as they are removed from the vessels, and so abolish the porterage and cartage. Her Majesty's mails were now conveyed by two trains each way per day, Sundays excepted. Preliminaries had been settled with the Lancaster and Carlisle and Caledonian. for the occupation by this company of the joint station at Carlisle; but the directors had not yet been able to effect any amalgamation arrangement with the Newcastle and Carlisle.

The capital account showed the receipts at 419,0314. ; expenditure, 440,851l. 10s. 8d.; balance, 21,819l. 11s. 9d. against the company. The revenue account showed the receipts at 17,110l. 3s. 1d.; expenditure, 14,737l. 12s. 8d.; balance, 2,372l. 10s. 5d. The Report was adopted.

NORTH STAFFORDSHIRE

Feb. 29 .- Special Meeting, London .- Mr. RICARDO M.P., in the chair.

The draft of a bill for making a branch from the Churnet Valley line, at Rocester, to Ashbourne, in the county of Derby, was submitted. The length of the line was about 7 miles, and the estimated cost, including expenses of every kind, 90,000l., or 13,000l.

Mr. Sharpe moved that the draft of the bill be

approved of.
Mr. R. B. Brown moved as an amendment that the proposed branch be not proceeded with till times of well secured prosperity should warrant the company.
Mr. R. H. HEYWOOD seconded the amendment.

Mr. R. H. HEYWOOD seconded the amendment.

The CHAIRMAN stated the grounds for making this line. In the first place, no extension of capital was required. Lines of a similar description, such as the Northampton and Peterborough, had turned out to be very successful. That line had returned a profit of 8 per cent., although the population was only 196 to the square mile, and the cost of constructing the line was 14,000*l*. per mile: whereas the population on the proposed line was 740 to the square mile, and the cost of construction only 13,000t. per mile. directors had carefully gone over the capabilities of the district, and they believed that the line would realise a gross profit of 11,534l., and deducting 3,843l. for working expenses, a nett profit of 7,691. That would give a profit of 8 per cent. on the branch itself, irrespective of the traffic it would bring to the main line beyond Rocester.

Mr. HEYWOOD said, that the observations of the chairman had not removed his impression. The capabilities of the main line should be first developed. Mr. Ald. Copeland, M.P., said that Mr. Duncombe,

whose opposition as a landlord was likely to be the most considerable, was himself the chairman of a company which proposed to run a line through this district, so that his opposition in the present case came with very bad grace.

The CHAIRMAN said, they had been offered a guarantee of 5 per cent. on the line, but the directors did not think that it would be advisable to accept that offer, when they believed it would return 8 per cent.

The amendment was lost, a large majority voting against it. The original motion was carried, the dissentient members stating that after the expression of opinion on the part of the meeting they did not think it would be wise to go to a ballot.

#### SHROPSHIRE UNION

Feb. 29.—Half yearly Meeting, Shrewsbury.—Mr. J. P. WESTHEAD, M.P., in the chair.
The CHAIRMAN adverted to the loss the company

had sustained by the death of Earl Powis, their late

president, but congratulated the shareholders on having obtained the co-operation of his son, the present Earl Powis, who had consented to occupy his father's place

The Report stated that the works were progressing satisfactorily. The line from Wellington to Stafford was in course of active formation. The result of the company to the 30th of June last, a period of eleven months, exhibited a profit of 7,751l. 7s. 2d. The total receipts, including canal payments and profits, amounted to 581,067l. 17s. 7d.; the balance in hand to 294.590l. 5s. 10d.

The CHAIRMAN moved the adoption of the Report, which was seconded by Mr. TOOTAL, and carried unanimously.

The retiring directors, Messrs. J. P. Westhead, G. Holyoake and J. Williams, were re-elected.

The meeting was then made special, to consider a draft of the bill before Parliament, which was approved of.

A vote of thanks to the chairman closed the proceedings.

OXFORD, WORCESTER AND WOLVERHAMPTON.

Feb. 25 .- Half-yearly Meeting, Worcester .- Mr. F.

RUFFORD, M.P., in the chair.

The CHAIRMAN spoke of the great financial crisis which had specially affected railway companies. This would account for the last call of 7t. 10s. in October, two-thirds of which had been paid up. Reduction had been made in the number of their workmen, but great progress had been made with their works. ortion of the line from Stoke Prior to Abbott's Wood was so forward that it could be completed in three months. They were at present negotiating with the Midland respecting it.

The SECRETARY read the Report, which stated the difficulty experienced in attempting an exercise of their powers to raise loans on debentures, rendering it necessary to make calls on the shareholders to the

extent of 12l. 10s. per share. The calls made did not produce more than sufficient to defray the ex-penses incurred. Two bills have been introduced in the present session, by which powers are sought for raising additional capital to the extent of 750,000l. by the issue of new shares, and the further sum of 250,000l. by loans, on the usual conditions, if required. By the second bill powers are sought to be obtained for deviating a portion of the line near Wolverhampton, and for forming a station there jointly with the Shrewsbury and Birmingham and the Birmingham, Wolverhampton and Dudley. The statement of accounts showed the receipts at 983,252l. 1s.7d.; expenditure, 697,526l. 18s. 5d.; balances in the hands of bankers and cash amounting to 15.725l. 13s. 2d. The statement of income and expenditure, from the 1st of May to the 31st of December 1847, in respect of the Stratford and Moreton, shows a deficit of 1421. 15s. 4d.; receipts from tonnage, 2.088l. 7s. 2d.; other resources raised the income to 2,279l. 0s. 11d. expenditure for repairs of roads, rent, salaries, &c., was 7301. 2s. 11d., to which had to be added eight months fixed rent at 2,360l. per annum (1,573l.6s.8d.) and 1181. 6s. 8d. for rent for the Shipston branch, making a total expenditure of 2,4211. 16s. 3d. The accounts of the Stourbridge extension canal show a

The Report was carried, after which resolutions were passed, authorizing the payment of interest on the half-year at 4 per cent.; confirming the directors proceedings with reference to the two new bills, and the forfeiture of shares; and re-electing the retiring auditor and directors, Mr. Muntz and Messrs. Yapp and Thorneycroft.

balance of profits of the half-year amounting to 1,448l.

CHELTENHAM AND OXFORD.

Feb. 26 .- Half-yearly Meeting, Cheltenham .- The Hon. R. DUTTON in the chair.

The Report stated that from the severe monetary pressure the directors abstained from all considerable expenditure. The same passive course would at present be maintained. The directors had applied for an extension of time. They had not made up their accounts fully, but stated that up to the present time they had paid, on various accounts of solicitors, engineers, &c., 27,476l. 14s. 5d., and that other similar claims to the amount of 10,555l. 11s. 5d. remained unsettled. They have also made payments for the purchase of the Cheltenham General Hospital, and in connexion with lands required for the purposes of the line, to the amount of 6,9191. 0s. 10d. They were under contracts entered into pending the progress of the bill, for the purchase of other properties on the

Mr. Beman inquired whether any arrangement had been entered into touching the remuneration for the shareholders in lieu of interest on the calls?

The SECRETARY replied that the subject had been taken into consideration, and a correspondence had taken place between the directors and the secretary of the Great Western, but no fixed plan had as yet been decided upon.

The Report was adopted.

GLOUCESTER AND DEAN FOREST.

Feb. 28.—Half-yearly Meeting, Gloucester.—Mr. S. BAKER in the chair.

The Report stated that—
The directors having found that the calls due on the 28th of The directors having found that the calls due on the 28th of September 1847 were not properly paid, they had suspended operations. They watched the operations of other companies with whose lines the Dean Forest will form a junction, and they have now the satisfaction of knowing that their mode of proceeding has been beneficial; the payment of calls has corresponded with the abatement of monerary pressure, and only a moderate amount remains unpaid. The directors will pursue the same cautious policy without losing sight of the completion of the works in good time to open concurrently with the South Wales. The directors suggest to the proprietors to reduce the remunerations, viz.: open concurrently with the South Wales. The directors suggest to the proprietors to reduce the remunerations, viz.: that for the years terminating the 25th of March 1849, the directors shall receive 250i. instead of 450i.; the secretary, 150i. instead of 250i., and they will endeavour to carry out the same system of economy in all items of expenses. Power had been given to the directors to sell and transfer to the South Wales the extension line from the Grange to Hayloe. The position of the respective companies necessarily involved considerable accounts between them, which have been adjusted, and when finally settled the transfer will be made to the South Wales. The directors have agreed for the greater portion of the land required. for the greater portion of the land required.

The statement of accounts showed the receipts at

62,476l. 15s.; expenditure, 55,655l. 5s. 1d.; balance,

6,821*l.* 9s. 11d.

The CHAIRMAN referred to the various points in the Report. In consequence of the scarcity of money, the directors had thought it most expedient to restrict their expenditure as much as possible, and they had, therefore, recommended a reduction for the next year in their own salaries and that of the secretary. He had no doubt that, when the works were completed, the line would be a most remunerative one.

After some conversation, the Report was adopted,

and the reduction of the directors' and secretary's

salaries was passed.

CORNWALL.

Feb. 23 .- Half-yearly Meeting, Truro .- Mr. W. M. TWEEDY in the chair.

The Report stated that the works had been restrained by the pressure of the money-market. The whole of the land, however, between the town of Truro and the Ladock road, extending over a space of about 5 miles, and some portions between the latter place and St. Austell, have been contracted for. The works were proceeding satisfactorily. The directors had obtained an extension of time. They had also submitted to the respective Boards of the associated companies a proposal for increasing their interests in this undertaking, which proposal having been ac-ceded to, a bill had been accordingly introduced into Parliament to effect this. The draft would be submitted to the meeting. The statement of accounts showed the receipts at 192,306/. 15s.; expenditure, 140,677/. 15s. 8d.; balance, 51,628/. 19s. 4d.

The CHAIRMAN said, statements had been made, that to the rash and premature manner in which companies forced on their calls and undertook their works the distress of the country was in a great degree attributable. That companies did proceed faster than circumstances have subsequently shown they were justified in doing perhaps no one will dispute; but unforeseen circumstances had occurred. The failure in the potato crop was a circumstance not within the prescience of any directors or company. The deficient harvest also that accom-panied it was not the act of man. These are circumstances that have pressed upon us; and so far from railway works and the application of capital having been injurious as a great principle, I believe (said the Chairman) they are calculated to be among the greatest sources of future prosperity. We have still funds in hand to enable us to go on in the cautious course we have pursued, until the times shall warrant our making an appeal to them for further capital, to enable us to prosecute our works with more spirit.

The Report was adopted.

Mr. Brunel gave some information respecting the state of the works.

The meeting was made special, to consider the draft of a bill to enable the Great Western, the Bristol and Exeter and the South Devon companies to increase their subscriptions towards the undertaking. The provisions of the bill were agreed to.

LONDONDERRY AND ENNISKILLEN. Feb. 28.—Half yearly Meeting, London.—Mr. J. S. FRITH in the chair.

Mr. HEMMING, the secretary, read the Report, which stated that

Digitized by GOOGIC

Little time had been afforded for any material change in the circumstances of the company. The directors have carried out the resolutions of the last general and special meetings; the amended bill is now before l'arliament. It seeks for powers to limit the line, for the present, to Omagh, and to reduce the capital from 500,000 to 340,000 lt is proposed to forfeit 3.200 shares in the hands of insolvent parties, and which, in addition to those previously forfeited, will make up the number required. On these shares about 15,000 l, will have been received, and on this amount no dividends will at any time be payable. In place of the 6,800 shares of 50 l, each remaining, and on which 25 l, has been called up, it is proposed to divide each 50 l, share into two shares of 20 l, each, on which 12 l. 10 l, will have been paid, and two shares of 5 l, each, on which future calls will first be made, and which will be made preference shares, at the discretion of a general meeting. Mr. Leishman, the contractor, has commenced an action for the amount of his claim; but at the same time evinces every disposition to meet the directors fairly. The claims of the Irish Society for land and of Sir J. M'Neill for engineering, have both been amicably settled, and for sums considerably less than estimated in the supposed liabilities. Legal proceedings have been commenced against some defaulting shareholders for arrears of calls; some are still pending, and some have Little time had been afforded for any material change in for arreary of calls; some are still pending, and some have resulted in arrangements being made, by which the arreary will be gradually but eventually liquidated. Since the accounts the additional sum of 2,004.5s. has been received

upon calls.

The receipts on capital account have been 145.898/. 11s. 9d.; expenditure, 145.134l. 9s. 6d.; balance, 764l. 2s. 3d. On revenue accounts, the receipts have been 3,137l. 11s. 4d.; expenditure, 2,751l. 17s. 7d.; balance, 385l. 13s. 9d.

The Report was adopted, and 1,850 shares declared forfeited, being part of the 3,200 referred to in the Report.

LONDONDERRY AND COLERAINE. Feb. 29 .- Half-yearly Meeting, London .- Mr. J.

G. FRITH in the chair.
The Report stated at great length that The preport stated at great length that—
The present arrear of calls amounted to 64,000.; of this it was computed that the sum of 50,000. would be paid, leaving 80,000. to be provided for the completion of the middle inclosure in two years. When the three inclosures shall have been completed the number of acres belonging to the company will be 10,200, being 2,000 acres less than ori-ginally designed, the difference being caused by the Ad-miralty having required the line of embankment to be set ginally designed, the difference being caused by the Admiralty having required the line of embankment to be aet back landwise, within the line chosen. But taking the diminished number of acres as by the present plan, at the value of 500, per acre, being 20 per cent. under the lowest estimate put before the parliamentary committee, they will produce \$10,0002, enough, in all reasonable probability, to pny for the reclamation, and also to provide the capital necessary for construction. The directors then submitted three plans for consideration:—1, To stop, and keep the present works from falling into decay; 2, to proceed at a speed such as will serve to complete the middle inclosure in two years; 3, to find the means necessary to complete it in a shorter time. The first of these plans would plainly be disastrous, and could only be justified by insolvency; the second promises a safe termination to the first and most important part, but protracted much beyond the time anticipated or necessary for its completion; the third seems to the directors the best way of forwarding the interests of the company under the present circumstances. The difficulty of finding the sum within the time required might be met by seeking part of it in arrear of calls, and the remainder either in a loan under the borrowing powers of the company, or by an issue of preference shares, these shares to be of two distinct series, which may be held or sold independent of each other. No further call to be made upon the 201, share until the full amount of the preference share has been paid up: the amount of interest to be allowed on the latter to be fixed at the discretion of a general meeting. By this means, without any increase of the original capital, greatly inin the amount of interest to be anowed on the inter to be fixed at the discretion of a general meeting. By this means, without any increase of the original capital, greatly increased facilities would be afforded in raising the necessary funds. Since the accounts were made up, the additional sum of 2,220*h*, had been received upon calls.

The statement of accounts to the 31st of January

last showed the receipts at 213,560l. 18s. 3d.; expenditure, 211,827l. 19s. 1d.; balance, 1,732l. 19s. 2d.

The CHAIRMAN, in moving the adoption of the Report, regretted the delay which had taken place through the contractors; but he was happy to say that the works would in future be carried on more regulariv.

Mr. Butts complained of the bad and unworkmanlike state of many of the works at the time he went to Ireland, and of the ill-treatment of the workmen by the contractor, Mr. Hemming. They had spent 200,000*l*, and he did not see that they had anything so perfected as to be security for a loan of 1,000l.; indeed, they needed a further outlay of 150,000l. to

make available what they had spent already.

Several other Proprietors spoke on the subject of the contract.

The Report, however, was adopted.

DUBLIN AND BELFAST JUNCTION, Feb. 23.-Half yearly Meeting, Dublin .- Mr. J. BARLOW in the chair.

The Report fully set forth the condition and prospects of the company. Complaints have been made of the system of management. The directors had refrained as long as they possibly could from making

With a view of not pressing upon the shareholders during the monetary crisis, they confined the works to the Navan branch, and that portion of the trunk line from Drogheda to Dundalk. When the pressure on the money-market passed away they could resume the works between Dundalk and Portadown. They had also allowed the intended bridge over the river Boyne to remain in abeyance; and with a view of introducing all the economy advisable, they recom-mended reducing the board of directors from sixteen to eleven, and the salaries of the directors from 1,300 to 900l. The Navan branch and the Dundalk portion of the main line would probably be ready for traffic in August next, and every necessary measure was in progress for commencing business at that time. Not more than one-half of the last call, made in January, had been paid up, and large arrears of pre-ceding calls were still due. The directors had, how-ever, adopted legal proceedings against all known to be in a position to pay, and these proceedings had been attended with success. The statement of accounts showed the total receipts at 352,6194. 8s. 1d.; expenditure, 308,745t. 19s.;—balance, 43,873t. 19s. 1d.
The Report was adopted unanimously.

A Proprietor complained that the Report had not been circulated amongst the shareholders prior to the meeting.

Mr. Spackman appeared at the meeting as the representative of 4,000 English shareholders. He admitted he had no right to vote, not having been a full month a registered proprietor. He condemned the policy pursued in various departments. instance, he condemned the expenditure of 150,000L in the Navan branch, which could not by possibility be of any advantage to the Belfast Junction, yet this company had agreed to make it, and then rent it to the Drogheda at 4 per cent. on the cost price. This was an unpardonable blunder. Then as to the proposed bridge over the Boyne: he could not conceive there was anything in the position of the Drogheda to warrant them in expending 100,000l. or more in making such a junction. He condemned the policy of making large calls while arrears were allowed to accumulate, and urged a variety of other objections.

The Right Hon. E. Lucas replied at some length, and after a protracted debate the Engineer's Report

The meeting was made special, and, in accordance with the recommendation, the number of directors was reduced from sixteen to eleven, and their remuneration from 1,300l. to 900l. a year.

The sum of 201. was voted as compensation to the auditor.

auditor.

The following directors were returned:—The Earl of Charlemont, Messrs. J. Barlow, G. A. Hamilton, M.P., T. Wilson, J. Barton, W. D. Latouche, J. Hawkins, G. Fetherstone, S. Law, H. Hutton and G. Hoyte.

BELFAST AND COUNTY DOWN.

Feb. 25. - Half-yearly Meeting, Belfast .- Mr. ALLEN in the chair.

The Report stated that the directors had principally applied themselves to obtain possession of the lands for the line to Holywood, Comber and Newtownards. They had amicably settled the largest proportion of claims for compensation. The conproportion of claims for compensation. The contractor limited his exertions to the Holywood branch, in which considerable progress has been made. No exertions will be wanting to procure payment of as large an amount of the arrears as possible; but the directors fear that a considerable sum will not be paid in consequence of the misfortunes which have paid in consequence of the mistortunes which have befallen several shareholders. Notwithstanding the limiting of the works, the directors were obliged to make a call of 4l. 10s. per share on the 3rd of February, payable in three instalments of 1l. 10s. each. The directors will pursue the strictest economy in carrying out the works. They have made application to the Commissioners for an extension of time. The statement of accounts showed the receipts at 58,150l.; expenditure, 51.223l.; balance, 6,927l.

The Chairman moved the adoption of the Report,

which was agreed to.

It was stated that all the carriages for the line had been finished and were ready for delivery; but the directors had requested the contractors to hold them as long as possible in their own hands, because they were to be paid for on delivery.

WATERFORD, WEXFORD, WICKLOW AND DUBLIN. Feb. 26 .- Half-yearly Meeting, London .- The Earl of Courtown in the chair.

The Report stated that the directors had directed their main efforts to the formation of the line between the Dublin and Kingstown and the port of Wicklow, the agreement for the lease of the Dublin and Kings town line coming into operation on the completion of hat portion. A supplementary agreement had been | EAST LANCASHIRE.—Stations, March 13.

made between the two companies,—a bill to sanction which, and to enable the South Wales to subscribe 250,000l. towards the undertaking, was now before Parliament. The directors had obtained an extension of time under the recent Act for completing the line, and had made a call of 14. per share, payable on the 31st of March next. The statement of accounts showed the receipts at 124,7914. 16s.; expenditure, 70,4064.7s. balance in hand, 54,385l. 9s.

Mr. Cash noticed that the call of 10s. per share, which should have produced 37,500l., had only brought 11,8321. He considered the present office expenses. too high.

Capt. Warrington opposed the reception of the Report; and stated his intention of presenting a me-morial to the Railway Commissioners against it.

The Report was however adopted, and the retiring auditor re-elected.

The meeting was then made special, to consider the bill for altering the gauge of the Dublin and Kingstown from 4 ft. 6 in. to 5 ft. 3 in.; to authorize the South Wales to subscribe to the undertaking; and to enable them to appoint permanently three directors at the Board.

After some opposition from Capt. WARRINGTON and Mr. Cash, the directors were authorized to proceed with the bill.

WISHAW AND COLTNESS.

Feb. 24. - Annual Meeting, Glasgow. - Mr. A.

GLASGOW in the chair.

The directors' Report stated that a bill had been introduced into Parliament to sanction the agreement with the Caledonian.

The CHAIRMAN proposed that the Report should be circulated amongst the shareholders, and that the meeting should adjourn for a fortnight for its consideration. The receipts had been handed over to the Caledonian, who had paid the dividend.

The suggestion was agreed to.

THAMES HAVEN DOCK, &c.

Feb. 29.-Half-yearly Meeting, London .- Mr. W. CHADWICK in the chair.

The Report stated that, having ascertained that the Eastern Counties had resolved to urge forward their application for the Ilford, Tilbury and Southend branch in the House of Lords during the present session, and feeling assured that the locality and the character of the traffic would not maintain two dis-tinct lines, the directors authorized their counsel to entertain the terms made by Mr. Bidder on behalf of the Eastern Counties, by which the directors pledged themselves to withhold all further opposition to the said branch, and to run their traffic over the same, on terms of mutual advantage to both companies. The directors have thus abstained from making any call upon the shareholders, and limited their opera-tions to that portion of the line between Stanford-le-Hope (where the Ilford and Southend branch would have crossed) and the side of the dock, and to completing their engineering arrangements for constructing the dock and pier. They have now to report that the llford, Tilbury and Southend branch of the Eastern Counties has been thrown out for noncompliance with Standing Orders; and although this will render void the terms of arrangement before referred to, at the same time they congratulate the shareholders upon this result, as it will put them into possession of that district. The statement of accounts showed the receipts at 22,093l. 15s. 4d.; disbursements, 9,353l. 14s. 11 d.; balance, 12,740l. 0s. 43d.

The Report was adopted.

After some conversation, the directors retiring vere re-elected.

[For further Reports of Meetings, see p. 178.]

IRON TRADE.—Glasgow, Feb. 26.—The market for pig iron, which showed great firmness in the beginning of the week, has given way a little, in consequence of the news from France. Yesterday mixed numbers were sold at 50s. cash; to-day 3-5 No. 1, and 2-5 No. 3, are freely offered at 50s., without finding buyers. 500 tons No. 1 were sold at 51s. 6d.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

* For account, April 13. + Ex Div.

London Stock Exchange, March 3.—The excitement naturally attendant on the state of affairs in France has caused the share market to continue during the past week in a most unsteady condit on. The settlement of Monday, and the failures connected there with, produced a terrible fall in most shares; a partial with, produced a terrible fall in most snares; a partial re-action has ensued, but the market does not close by any means firm. The following are the latest prices for foreign lines:—Boulogue and Amiens, 8½; Great Northern of France, 4½; Orleans, Tours and Bordeaux, 2½; Paris and Lyon, 2; Paris and Rouen, 23; Rouen and Havre, 11; Sambre and Meuse, 6½.

Liverpool, March 2.—During the week the fluctua-

tions in our market have been very great. Prices have in some degree recovered from the extreme depression which existed a few days back, and there is much less disposition to force sales.

Suplow, Brothers. Manchester, March 2.—Our share-market h s been much depressed during the week, and p i es of sha s generally are much lower. Yesterday and to-day buyers seem more willing to operate. SAM. GRINDROD.

seem more willing to operate.

Birmingham, March 2.—This market, like others, has been greatly operated upon by the extraordinary events in France during the last ten days. Shares in the most favoured of our local lines have touched quota-tions never before dreamed of, and, under any circumstances that could have occurred, without sufficient cause for their so doing, but especially in the actual state of things as they have taken place. To-day the market has been firmer, and there are unmistakeable symptoms that prices will in a few days have resumed symptoms that prices will in a few days have resumed something like a proper position. North Staffords were called at the close of the business at 6s. 3d.; Shrewsbury and Birmingham, A, at 3½ dis.; and South Staffords at 2½ dis. W. BANKS.

York, March 2.— The news from France has caused a very serious depression of all descriptions of railway shares; and although a re-action to a certain

extent took place in this market yesterday prices have rather given way to-day, and our local stocks may generally be quoted a shade lower.

GRAYSTON & EARLE. Hull, March 2.—During the past week the decline observed in our last has continued with unabated violence. This morning, however, owing to the im-

proved accounts from Paris, and the statement made by Lord John Russell in the House, to the effect that the Ministry did not contemplate any interference with the French Government, a decided improvement was observable. For North British, North Staffords, Newcastle and Berwick, new, and East Anglian, preference, there was a general disposition to buy.

FLINT & TOOTAL. Glasgow, March 1.- This market has participated to a great extent in the excitement caused by recent events in Paris, and a very great depression has ensued. The more peaceable tenor of to-day's advices has occasioned a pause, and buyers, who for the last few days were holding off, have shown greater disposition to deal; on the other hand the "bears" acting cautiously, and bona har holders re-assured, have censed to press sales. The consequence is a considerable rise in prices from the lowest point of yesterday, and the market closes firm. Athough the flucday, and the market closes firm. Athough the fluctuations have been violent, the business done during the week has been limited. To-day's latest transactions are:—Caledonian, new,  $4\frac{1}{6}$  dis.; Edinburgh and Glasgow, 80; Dumfries and Carlisle, 6l. 16s. 6d. Ayr,  $85\frac{5}{4}$ ; ditto, halves, No. 1,  $4\frac{1}{4}$  dis.; ditto, No. 2,  $3\frac{5}{6}$ ; Glasgow and Greenock,  $15\frac{5}{4}$ ; North British, thirds, 14s. dis.

BUCHANAN, AITKEN & Co.

The Paris Bourse having been closed since our last The Paris Bourse having been closed since our last report in consequence of the revolution, we can only state that the settlement for the end of February is postponed to the end of this month. We quote the prices for the settlement fixed by the Syndicate for the chief lines: — Orleans, 1,150f.; Rouen, 840f. 25c.; Northern, 520f. 50c.; Lyon, 370f.; Havre, 403f. 75c.; Vierzon, 486f. 25c.; Bordeaux, 460f.; Boulogne, 340f. We hear that the persons employed on the Northern are henceforth to share the profits, as payment for are henceforth to share the profits, as payment for their services instead of salaries and wages !

# Railway Chronicle.

LONDON, SATURDAY, MARCH 4.

The South-Eastern meeting presents an illustration of the excellence of the system of higher and remunerative fares over the lower scale, which it was found impossible to maintain. The South-Eastern are able to pay 21s. on the paid-up shares, being some 6 per cent. on the amount paid up. Had the low fare system been continued, as formerly tried, there would have been no dividend at all. We congratulate the directors and shareholders on the spirit of unanimity which pervades their present proceedings: they are applying for no new schemes, they have made peace with their neighbours the London and Brighton, and they profess amicable co-operation with the Boulogne and Amiens directors. All this looks well; and we hope this new spirit of conciliation and amity will permanently displace that uncompromising hostility which has so long prevented the shareholders from reaping all the benefits of well-cultivated traffic. We also call the attention of our readers to the remarks of Mr. Mac-GREGOR on the evils resulting from the erroneous policy of Government in regard to railway property.

When, last week, we praised the prudence of Mr. Hudson in carrying out the policy which the Railway Chronicle has always recommended, but which railway Boards have not always followed,-of keeping the fares at such a point as shall afford the shareholders a fair remunerative dividend for the risk of their capital in railway enterprise,-we did not expect to be misunderstood to advocate the principle of high fares at any cost. On the contrary, our statement has always been that all the fares-even the highest which the railways of the country have been used to charge-have never been either high or exorbitant; but such have in very few instances yielded a fair return to the shareholders. We have demanded for the shareholders of railways that fares should not be reduced to the ruinously low standard which has recently been adopted by some of the great railways, in which it is now plainly shown that undue reduction of

The higher scale of moderate shareholder. fares which Mr. Hudson has preserved is more in consonance with our views, as dividing the benefit of railways more equitably between the shareholder and the traveller, than that scale of low fares which has taken all the profit from the proprietor to confer a comparatively trifling benefit on the passenger.

At the Eastern Counties Meeting Mr. Hupson announced an increase of traffic on the half-year amounting to 70,000l.; but the dividend is only 8s., owing to the consolidation and extension of the stock receiving dividend. The chairman gave a flattering account of the property of the company; and Mr. WADDINGTON explained how the directors had arranged the affairs of the company in the late financial crisis, by advancing their own private funds. After a proper number of pertinent questions, the shareholders seem to have subsided into a moderate sort of satisfaction, that their affairs are on the whole in a fair position for future improvement.

Mr. HOULDSWORTH made his last speech as chairman of the LANCASHIRE AND YORKSHIRE, and exculpated the directors from many of the imputations which, in the recent adverse times, had been cast upon the property and the board of direction. At present, the debt was less in proportion to capital than that of most other railways, and their traffic was 5,600%. a week on the parent line. Their numerous branches were well calculated to bring traffic on the line, and he had no doubt of their increasing prosperity.

The opening of the CALEDONIAN, as anticipated, has proved a source of great congratulation to the shareholders at the half-yearly meeting. The amount on the Caledonian line proper was already about 2,000%. a week. Further calls of 51. on the half-shares are to be made, and the borrowing powers are to be exercised to provide for the completion of the station accommodation.

The Scottish Central Meeting has voted against its chairman, the MARQUIS OF BREADAL-BANE, and in favour of the board of directors, on the questions agitated between them; the Report of the Board having been carried. We observe that the somewhat petulant and not very well-timed observations of the chairman against the engineer were indignantly repelled; and we trust the noble chairman has learned that it is considered better for the interests of share-holders, and more to their satisfaction, to have a quiet man of business for a chairman, rather than a nobleman, of whatever lineage, who seems to make the accomplishment of his will and the vindication of his way a primary object, and the interests of the shareholders only secondary. Scotland is to keep up its character for consistency by not running trains or doing work of any kind on Sunday. We are glad that liberty of conscience in this matter is to be respected; and we trust English shareholders will not interfere with a practice, which the education of the Scotch leads them to regard as an act of religion.

The NORTHERN AND EASTERN notify the payment of their usual guaranteed dividends of 5 and 6 per cent.— The BIRKENHEAD, LANCASHIRE AND CHESHIRE JUNCTION adopted the part relating to the dividends (of 5 per cent. on the 27l. 10s. and 22l. shares, and 4 per cent. on the 31l. shares), but otherwise referred the Report back to the directors. A special meeting is to be called to examine the prospects and condition of the company.—The WISHAW AND COLTNESS defer fares has seriously sacrificed the interests of the the consideration of their Report.—The WEAR

VALLEY pay their stipulated dividends on the amalgamated stock. — The MIDDLESBOROUGH AND REDCAR (leased to the Stockton and Darlington at 6 per cent.) receive their first payment on the 31st of March .- The FURNESS declare 2 per cent, on the original and extension capital paid; and the DUNDEE AND PERTH, out of the total revenue of the Dundee and Perth and Dundee and Newtyle lines, afford a dividend at the rate of 8 per cent.

The companies of the second-class, which have held their half-yearly meetings, (some partly at work,) and have received their Reports and accounts, are as follows :-

Ambergate, Nottingham and Boston and Eastern Junction, (with the appointment of a committee of investigation).

Belfast and County Down. Birmingham, Wolverhampton and Stour Valley. Brighton and Chichester.

Cheltenham and Oxford.

Cornwall.

Dublin and Belfast Junction.

East Lothian Central, (with an amendment as to the registration of the scrip.)
Fleetwood, Preston and West Riding Junction.

Gloucester and Dean Forest. Huddersfield and Manchester Canal.

Leeds and Thirsk.
Londonderry and Coleraine.

Londonderry and Enniskillen.

Manchester and Southport.

Maryport and Carlisle.

Newmarket, (who, after all, will enter into an agreement with the Eastern Counties.)

North Staffordshire.

Oxford, Worcester and Wolverhampton. Scottish Midland.

Shropshire Union.

Sheffield, Rotherham, Barnsley, Wakefield, &c. South Devon, (who believe as fully as ever in the At

mospheric system). Thames Haven Dock.

Waterford, Wexford, Wicklow and Dublin, (who are about to alter their gauge to the 5 ft. 3 in. scale.)

Wharfedale.

Whitehaven and Furness Junction.

Wilts, Somerset and Weymouth.

The great financial motions in our Legislature would have been all-engrossing, but for the greater events in the neighbouring country, that have almost dwarfed their importance for the moment. Still they are very important; not only on account of what has been actually averted, but also because the consequences of this transaction will not end with the withdrawal of an unpopular impost. The means which have been refused in one way must in some other way be provided: and this necessity may tend to promote various economic measures that have long been wanted, and that it is pretty certain nothing but necessity will compel any administration to take. We hear already hints in various quarters of inquiries into sundry jobs, and doubts as to the expediency of keeping up not a few sinecure bodies: -of questions concerning the value of certain offices, the usefulness of which is far less evident than their cost. Amongst others, we hear people asking: "What reason is there for keeping up a Board of Railway Commissioners, to produce a series of ineffectual blunders, and to do mischief whenever they are able to do anything? Is this spectacle worth exhibiting to the country at an annual cost of 17,000/.?" These are questions to be heartily echoed and warmly commended to all who desire to see the affairs of the State managed like the private concerns of any prudent and honest man,-namely, by making losses good rather by cutting off needless expenses than by dipping into the vital resources of the Exchequer. Now of all useless expenses there can be none less useful than the costly Railway Commission has proved itself to be: and it is to be hoped that it will not escape the

finding ways and means of keeping the machine going without increasing the strain upon its main springs.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,518 miles of railway, was 148,323l., thus accounted for: -- 68,325l. for the conveyance of passengers only, 42,829l. for the carriage of goods, and a remainder of 37,169l. for passengers and goods together, not respectively apportioned; being an increase of 23,911l. over the corresponding week of last year, when the mileage was 2,711. The average earnings per mile last week were 42/., whilst in 1847 they were 45l.

#### UNIFORM PARCEL RATES.

We printed lately (p. 108) the letter of a correspondent ("A.K.") on UNIFORM PARCEL RATES; in which the writer, who has been obliging enough to undertake the office of "judging between us and 'H.C.,'" is pleased to say that, as regards the capacities of "railways and a united management" to accomplish the object of "H. C.'s" suggestions, the "experience of the latter gentleman appears to him to be the most perfect;" and, judging thus, on the ground of his own "pretension to knowledge of the parcel traffic in particular," proceeds to declare that the system recommended "could easily be effected, if the managers of the lines leading out of London were to resolve on establishing the principle." On the nature and value of any grounds for "A. K.'s" authority or verdict in this matter, which do not appear in the comments he has favoured us with, it is not necessary to offer an opinion; but as far as they are expressly unfolded in his letter, we shall remark that their weight might have been greater if, in deciding against our views of the practical hindrances to the adoption of "H. C.'s" principle, -the utility of which, when it can be duly applied, we do not question,—he had given any sign of comprehending the gist of our argument, and if he had not, moreover, altogether passed over one of the main difficulties pointed out by us.—confining his remarks and assertions to one part of the working arrangements only. In what manner cross-country parcels, brought to the railways by coach, or to be forwarded from railway stations in that way, could be brought into harmony with a uniform system of low charges, there is nothing in "A. K.'s" letter to inform us. And without making any arrogant claims on the ground of "experience," we shall take leave to repeat an opinion, demonstrable from the terms of the original proposal itself, that a system, professedly relying for its success on uniformity and popular extension, so long as it is exposed, at every point of its operation, to discrepancies from sundry causes, cannot be very easily brought into play on the principle on which we are justly told it must depend. The difference in this respect between the trial of low parcel rates, in the present incomplete state of railway communication, and that of an universal postage rate, from the operation of which no part of the kingdom is excluded, we must continue to regard as utterly fatal to the analogy drawn from any success that may have attended Mr. Hill's experiment; and the new illustration proffered by "A. K." from the introduction of "uniform time," is too plainly inapposite to call for any discussion whatever. We shall add, that as far as railway traffic merely is concerned, the mere recommendation of a "parcel clearing-house' cannot exactly be admitted to fulfil the requisites of a "working scheme";—that were the establishment founded, the practical arrangement and distribution of the parcel earnings would only have arrived thereby at the first and

divide them, for parcels coming and going over all lines, short as well as long, so as to satisfy all concerned with their fractional share of the charge on a reduced scale. We have already said that we do not assert the impossibility of framing a practical scheme of this kind; although, from want of "experience," perhaps, we have not yet been able to discover any such ourselves;—and whenever a working programme can be devised, we shall be prepared to give it an unbiassed consideration, with the best judgment we can command. The mere setting up of a new clearing-house, however, presents nothing of the least value as a solution of what must be the chief working difficulties of the plan; towards the establishment of which, as a general system, without exceptions that must destroy the character essential, as we think, to its success, we cannot perceive that any considerable practical furtherance is afforded by the suggestions of "A. K." If his "experience in the management of railways" enables him to give us more light on the subject, we shall be glad to have the benefit of it; so far, we cannot see that he has thrown any new illumination whatever on "H. C.'s" ingenious proposals.

We subjoin the following note, received from the latter; and shall probably make a few remarks next week as to the practical bearing of the instance adduced upon the present discussion-the grounds of which, we take leave to add, must be sought in a rational and quiet view of all the circumstances of the case; which no "sneers," whether of the public or of any other party, we apprehend, can effectually alter.

"I suppose Mr. Hudson must now be pretty well convinced that the Postage Act of last session was NOT intended by shrewd Mr. Hill to remain a dead letter, as parcels of books or print-ed matter of one pound and upwards may now be sent everywhere at the rate of 6d. per pound through the Post-office. The public will be able to send a Quarterly Review, or Blackwood's Magazine, for example, from Exeter to Edinburgh, for 6d., if it weigh under a pound. The Bristol and Exeter Railway will convey it to Bristol, Mr. Hudson's Birmingham and Bristol to Birmingham, the London and North-Western to Liverpool or Preston, and thence it will go by the Caledonian to Edinburgh. The public will rejoice, and thank Mr. Rowland Hill deservedly, and sneer at the railway interest, which pretended that it could not do the same thing, and did nothing. In two years it will be a godsend for a railway to have a small parcel to carry.

#### MANCHESTER, SHEFFIELD AND LINCOLN-SHIRE AND EAST LINCOLNSHIRE.

On Tuesday, Feb. 29, and Wednesday, March 1, two important links in Lincolnshire were officially and publicly opened. On Tuesday morning, a party of the directors of the Manchester, Sheffield and Lincolnshire, who are also proprietors of the ferry between Hull and New Holland, crossed from Hull in one of the new swift steamers they have lately purchased from a Gravesend company. The passage was effected in a quarter of an hour. At New Holland we first touch upon the works. A pier 1,500 ft. in length extends into the water, and will not only enable passengers to embark and disembark at all times of the tide. but form a continuation of the station and platform. It will be covered, and lighted with gas, and the rails of the New Holland line will be continued to the extremity, so that passengers to and from Hull will have to make but a step between the pier and the steam-boats. A dock of three acres bounded by another pier, also provided with double lines of rails, is in a forinquiry of those who have to take counsel in easiest stage—the main question being how to ward state, for the exclusive accommodation of

Digitized by GOOGIC

merchandise and cattle. The directors and their friends, after examining the station, proceeded to the Yarborough Arms to breakfast. This inn and a small ferry-house were until lately the only buildings to be seen at New Holland, where, for miles round, the country stretches out in all the flat luxuriance of a Flemish landscape. At 10 a.m. the party took their places in a train of five carriages, for Grimsby, a distance of 16 miles. In this distance there are five intermediate stations. About six miles from New Holland we reached the spot where a junction will be formed with the line from Gainsborough and Sheffield, through Glanford Brig. Passing into the Brocklesby domains, which the line intersects for nearly eight miles, we came to Ulleby, where the New Holland branch, on which we had been travelling, joins the main line by forming one side of a triangle. From New Holland until we reached Grimsby the route lies through a country presenting no remarkable engineering difficulties, no heavy embankments or deep cuttings; the chief works being bridges and culverts for the accommodation of the many drains intersected. We arrived at Grimsby about 10 45 a.m., and were met on the platform by the Mayor and Corporation of that ancient borough, and a party of directors of the East Lincolnshire. Grimsby station is intended to be used jointly by the two companies, and is so situated that it may easily be extended at either extremity. After some delay, at about 2 p.m., we proceeded to Louth, on the line of the East Lincolnshire. The distance from Grimsby to Louth is 14 miles, of nearly the most direct and level line in England. The substantial but economical manner in which it has been executed reflects the greatest credit on the engineer. After a short stay at Louth we returned through Grimsby to the dinner.

It must be observed that the East Lincolnshire line has been leased to the Great Northern. So far these two railways only afford local accommodation for the traffic passing between Hull, New Holland, Grimsby and the town of Louth; but in the autumn it is expected that the Great Northern will have opened a complete communication from Louth through Boston to Peterborough. When this communication is opened, passengers, by the aid of the London and North-Western and the Eastern Counties, will be able to travel direct from Hull to the metropolis, saving nearly 40 miles in distance and about 10s. in money; while colonial produce for the use of Lincolnshire may be transported from the London Docks direct without any transfer until it reaches the last station of the Lincolnshire lines.

These lines, so far as Lincolnshire is concerned, may all be said to commence at Great Grimsby,-which is one of the most ancient ports in the kingdom, endowed with a corporation dating its charter from Edward III., and under the merciful dispensation of the Reform Bill still retaining the right of returning one member to Parliament; but for the rest, a miserable collection of mean brick houses and ill-paved streets. But Great Grimsby owed its early importance to its great natural advantages as a port at the mouth of the Humber, sheltered by the opposite shore of Spurn Point as if by a breakwater. It is in fact the best, almost the only, harbour of refuge after leaving the Thames on the eastern coast. Even now, under the shelter of this breakwater, 600 vessels may often be seen at anchor, safe from the storms of the German Ocean. Grimsby decayed for want of means of inland communication. Although convenient for the reception of ships from the Baltic there was no market for produce. Railways will amend this. In addition to the lines

already described as open, the main lines of the Manchester will, with the assistance of a main line, intersect all the principal towns in North Lincolnshire, and uniting with the parent line the Manchester and Sheffield, at Sheffield, afford a direct communication with Manchester, Liverpool and Birkenhead, as well as the woollen districts of Yorkshire and the coal and manufacturing districts of Derbyshire; in fact, by filling up a gap, it will place Lincolnshire within the general net of English and Scotch railways. But the company have not stopped

OF

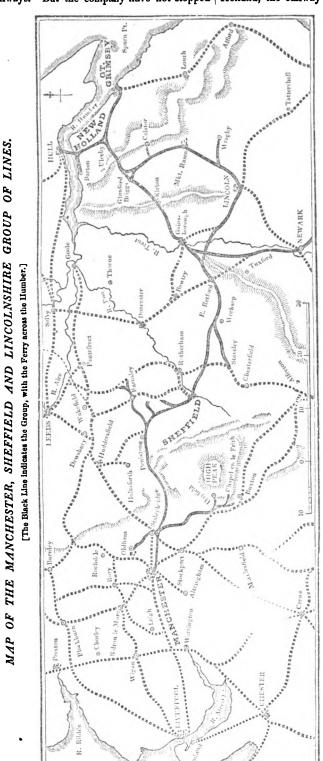

GROUP

SHEFFIELD

there. They have purchased at a moderate price the old dock of Grimsby, a long canal running up the town, with a water capacity of about 17 acres; and they have commenced the construction of a new dock from plans by Mr. Rendel. One fact will give an idea of what Grimsby may expect to become. Five years ago the Customs receipts were 2001. less than the expenses; in 1847 the clear profit over the expenses were 70,000l.!

THE DOCKS.—At Great Grimsby, as at New Holland, the railway and the water communi-

> cation has been brought within one harmonious plan. At the station a branch from the Manchester, Sheffield and Lincolnshire makes its way at the back of the town to the water's edge, on an embankment, averaging 2ft. in height, -passing, in its progress, through Corporation lands, for which the company has had to pay 17,000l., a worderful accession to the Corporation. At the water 'sedge the railway will divide to the right and left, one side being for the convenience of passengers, and the other for the goods traffic. We were conducted over these works by Mr. Adam Smith, the resident engineer, who is carrying out Mr. Rendel's views with remarkable intelligence and energy. The first object on nearing the intended docks is a vast sheet of piled-up mas-sive Yorkshire stones, all ready hewn and marked, each fit to take its appointed place in the works; and a proportionate mountain of timber. The site of the docks is all but inclosed by a coffer-dam, marking out a space of 32 acres of water. Three hundred men, with the aid of a steamengine, are busy piledriving, hammering, excavating and embanking. On the eastbanking. ern side, - a quay, 2,500 ft. in length and 200 ft. wide, forms one barrier, which will be extended other 600 ft. into a pier, for the convenience of steamers at low water. The boundary quay, on the western side, will be 550 ft. in breadth, and is reserved for warehouses, between which and the docks three lines of railway will be laid. Entrance to these docks will be by an open given tidal basin of fifteen

Digitized by Google

acres, through two locks, the one, 67 ft. wide, and 330 ft. from gate to gate (that is to say, large enough to admit the largest warsteamer), and the other 47 ft. wide, and 220 ft. from gate to gate. This dock will contain 700 vessels, with the tidal basin and the old dock 1,200 vessels may find accommodation in the port; graving docks for the repair and construction of vessels form part of Mr. Rendel's plan. The water will be excluded in a few months; within two years it is expected that the whole works will be completed. When we consider the rapidly increasing trade of Hull with the Baltic, the limited accommodation that that port can afford, and the fact that Great Grimsby is the only seaport of North Lincolnshire, it is impossible to doubt that these railways and these docks will very shortly attract a very important amount of trade.

THE DINNER.-At New Holland an excellent dinner was provided at the Yarborough Arms. The directors of the East Lincolnshire, from economical motives it is said, preferred accepting the exclusive hospitality of a neighbouring clergyman. Among the company were Mr. J. Chapman, of Manchester, who took the chair in the absence of the Earl of Yarborough; Dr. Bartolomé, of Sheffield, vice chairman Directors of the Manchester, Sheffield and Lincoln-Directors of the Manchester, Shemeid and Lincolnshire; the Hon. A. I. Melville, of Lincoln, banker; Messrs. J. and S. Sidebottom, of Mottram, near Glossop; Mr. Williams, of Brockelsby; the Mayor of Grimsby; the Town Clerk; Mr. Hind and Mr. Gainsford, of Sheffield, solicitors to the company; Col. Humfrey, of Sheffield, secretary; Mr. Meadows, of Manchester, secretary and general superintendent; Mr. L. Carlossophicos, in which the Mr. McMeddel of Mr. J. Fowler, engineer-in-chief; Mr. Hadfield, of Sheffield, architect; Mr. A. Smith, resident engineer of the Grimsby Docks; Mr. J. Potter, resident engineer of the Great Grimsby line; Mr. S. Court, resident engineer of the New Holland Works; Mr. H. Fowler, engineer of the East Lincolnshire; and Mr. S. Sidney, of London. A number of excellent speeches were delivered, of which it will only be possible to select the leading points.

Dr. BARTOLOME in giving "Success to the Man-chester, Sheffield and Lincolnshire Railways and Grimsby Docks," said that the advantage of the undertaking must be felt, not merely from the eastern and western boundaries of the Island—not merely national and local. They must look far beyond the national and local. They must look har ocyone the ocean. On the other side the wide ditch its effects would be seen. There was already a railway between Gluckstadt, the most eastern port of the Elbe, and nearest its mouth, to Altona and to Hamburgh. From Hamburgh the line was intended to be extended to Lubeck, which would open a short communication between Great Britain and Russia. He had heard that it was the intention of the King of Denmark to make Gluckstadt a free port, and inquiries had been made from across the ocean, from those anxious for increased communication, as to the progress of the Grimsby Docks. It would be well to aid these friends. He congratulated his fellow shareholders on having survived ridicule, emerged from neglect, and made a step toward a brilliant success.

The Hon A. L. MELVILLE in returning thanks for his health observed: In regard to Great Grimsby the position in which it stands is this;—up to the present time water communication has been the great system. We have been trying how far we could convey our persons and property by water. Hull being an old-established port, and moreover 20 miles further up the river, obtained the preference to Grimsby. We then thought if we could carry the water communication a little further and get to Grimsby. We then thought if we could carry the water communication a little further and get to Goole, it would carry your conveyance and get your goods so much nearer Leeds and the other towns. where they wanted to be, and we ourselves should have so much less distance to travel by land. Now quite a new feature has come over the face of things. We are now satisfied that land is the right mode of conveyance, and we must try to have as little water conveyance as possible. Now, gentlemen, with sin-gular sagacity have you on this side the stream come to Grimsby, for the place stands on the very extre-mity of the land, on the borders of the ocean, at the nearest proximity to the Baltic of any spot that could be selected adapted for a port. And having fixed upon that point you have many concurrent advan-tages. You go to a place which is not made, and, gentlemen, you get land at a price far below that at which elsewhere you could secure it. Had a port of great importance already existed there you would have found it impracticable to have obtained the land which you require for your docks excepting at an

enormous outlay. I therefore view it as an object, and a very great object, that you should have such facility us you have of making your purchases of land here before the value rises, as I anticipate it will do. The port of Grimsby has other advantages. It has often been my lot to sail in the fastest steamer that leaves the Humber, and repeatedly have I been twoand-a-half to three hours in getting from Grimsby to Hull-in the Martello, the fastest vessel that leaves the port of Hull, as is admitted on all hands. Now it has occurred to me that if there is this saving of three hours, and if Grimsby enjoys a position on the right side of the Humber, then, in communication from Hamburgh to the Humber, our letters or persons would be three hours on their way to London before they would have arrived at Hull. It seems to me that this is an advantage which it is impossible to overlook-which the merchants and the Government of this country cannot allow to pass unnoticed and unimproved. I see it in my own business already, that the merchants of Hull are coming to Grimsby and taking yards there. It is not in one solitary instance that I had a Hull merchant telling me that he sends his wares to Lincoln, Nottingham. Derby and Birmingham, and that if he can only carry his produce up your projected railway to him it will be a considerable saving, and it will be a considerable advantage also. He says that in Birmingham he can barely compete with the Liverpool and Bristol merchants, but give him your railway and he fears none

Mr. FINDEISON, a German merchant, said that he was last year at Gluckstadt, and saw the port and railway. The rails come up to the water's edge, but railway. The rails come up to the water's edge, but it is a small port and small harbour; the town is smaller than Grimsby; and it can never become a great port because its harbour is so small. But it is a very easy thing to come up from that place to Hamburgh by the rail or the river. He had now been in Manchester about eighteen years, and every autumn had shown to him that Hull was always too small for the trade that was going on there. He had only a small business compared with some, but he had often received letters telling him to send no more goods for they could not be shipped; the sheds at Hull were small compared with the trade, and the docks too small, and they had been very little enlarged compared with what was required. As proof, the first year that he came to Manchester the export was 17 to 18 million pounds of twist, in 1846 it was 163 millions. Last year it was not so good as had been hoped, but still it was enormous. Therefore if Grimsby could afford such accommodation as was required it would be sure to get its share. He only feared it would be many years before the docks were finished. ("We will finish them.")

Mr. Fowler: It will not be many years. Two

years will be the utmost.

Col. Humfrey said, much as the railway now opened would benefit Lincolnshire and Yorkshire, and prove a great thoroughfare from the Humber to Manchester, still during the next two years there was no place that would be more benefited than the town of Hull. He had heard men in Lincolnshire say that they did much business with Hull, but they wanted better means of access to it. Now this railway would enable them to visit Hull in the morning, to transact their business and return with their goods in good time the same day. It would also enable the Hull merchants with like celerity to visit their customers and return. This benefit would be immediately felt, but still greater would it be found on the opening of the line throughout, by which 60 miles would be saved between Hull and London. For the advantage of Hull swift steamers had just been put on the New Holland ferry making the passage against wind and tide in 14 to 15 minutes. When the line to Lincoln was opened, which would be in July next, the Hull merchants would be in Lincoln by the time they now get to Normanton, or are shunting backwards and forwards at the Junction, and they would take the Lincoln route to Nottingham, Derby, Birmingham, Gloucester, &c. to rivalry ought to exist between Hull and Grimsby. He believed there was plenty of trade for both, and would propose "The Town and Trade of Hull." Mr. Wood said the merchants of Hull were fully

sensible of the advantages which the railways in Lincolnshire would open up to them. He entirely reciprocated the sentiments of Col. Humfrey, and could assure the directors of the railway that he had within the last few days received the personal assurance of some of the leading men of the town-holding rank as its municipal governors, that there was the strongest desire possible to give to the ferry steamers of this company the best possible landing place that could be provided within the limits prescribed by the Admiralty.

claims which the appearance of the works at Grimsby had assumed in the last eight months, and referred to the cost of the Manchester and Sheffield line, 43,000l. per mile; the Manchester and Liverpool, 60,000l. to 65,000l.; the Lancashire and Yorkshire upwards of 60,000l.; the Manchester and Bolton, 73,000l.; and said the Lincolnshire railways reduce the average of the Manchester, Sheffield and Lincolnshire lines to 25,000l. per mile; therefore, with one-third of the amount of gross traffic of some of those lines, the Manchester, Sheffield and Lincolnshire entire group would pay 8 or 9 per cent. He was quite satisfied that could be done

Mr. Fowler, in his reply, said 31 years had clapsed since, upon mature consideration, he resolved upon making New Holland the point at which the Humber should be crossed for Hull, and every circumstance had confirmed him in the soundness of that decision. The value of that point was shown by the competing schemes that had been since brought out. In support of one of them, Mr. Hudson said there was traffic or one of them, Mr. Hudson said there was traine sufficient for two parallel lines from Hull to Lincoln. Mr. Fowler paid a high compliment to the skill and diligence of Messrs. Potter and Court. Mr. BLAKE proposed the "Health of the Solicitors." Mr. HIND, in a very neat speech, responded.

The "Health of Messrs. Smith, Ellison & Co." was

The Hon. A. L. MELVILLE, in responding, spoke from his own knowledge of the great flour trade of Lincoln. It used to take three weeks, it now takes three or four days to get that flour to Manchester. The railway will take it in a night. He advised the company to provide plenty of warehouse room.

A director replied that this was being done.

Mr. Gainsford, in a very chaste speech, gave "the
Press," coupling therewith the name of Mr. Sidney, as the author of several valuable railway treatises. and that gentleman in an address which elicited the

admiration of all, responded to the toast.

The "Health of Messrs. Weightman & Hadfield,"

the architects, was given. Mr. HADFIELD replied.

The Vice-President, in terms which showed the high appreciation in which the services of the general secretary were held, gave the "Health of Mr. Meadows," to which that gentleman made an appropriate reply, and the meeting, which had been an extremely pleasant and well-conducted one, and was remarkable for unflagging interest, then broke up, the visitors from Grimsby being conveyed home by a special train, and those who had come from Hull being conveyed across the Humber in one of the company's swift steamers.

#### Correspondence.

HEAVY ENGINES AND HEAVIER RAILS.

I observe that at the late half-yearly meeting of the London and North-Western, that the chairman intimated the determination of the directors to make an annual reserve of 10,000L, towards a fund for meeting the expense of laying down rails, of much heavier section, so as to replace the present ones, which are rapidly becoming destroyed, owing to the increase of the traffic as also owing to the employment of much heavier and more powerful engines. This announcement appears to me to deserve the most serious attention of every shareholder in the land; as it has reference to some questions, which although at first sight come more within the province of the engineers of the line, in respect to mechanical considerations, yet so intimately connected is this subject with the interest of the shareholders, as touching dividends, that I doubt not, if the subject has not come home to them already, it soon will in a most serious and substantial form. As regards the policy of establishing such a reserve fund as the one in question, few can doubt the directors deserve the best thanks of the shareholders for so prudent a determination. But what I desire to remark is, that the causes of this determination to establish a reserve fund for relaying the line with heavier rails. should be made the subject of most careful investigation, so as to ascertain whether the causes of the rapid deterioration of the rails is not within our power to remove. I cannot imagine a subject of higher importance to the interests of all concerned with railways than the one I allude to; and I think that ere long the investigation will be made. I well remember when the Manchester and Liverpool was opened, we had engines of some 8 or 9 tons, running on rails 36 lb. to the yard, the width of Mr. COATES in proposing the "Health of Mr. J. the top of the rail being 2 inches. These rails Fowler, the engineer," noticed the extraordinary stood the weight of these engines very well for

Digitized by GOGIC

several years, but when the weight of the engines was increased to 12 and 13 tons, the destruction of the rails became rapid, and the whole line was relayed with rails varying from 64 to 75 lb. per yard; but owing to the further increase in the weight of the engines, these rails have had to be increased in weight as they in their turn were overpowered. What has taken place on the Liverpool and Manchester, and now to so serious an extent on the London and North-Western, is only but too true a description of what is at this moment going on on every railway in England. Engines of such vast weight are now employed in dragging monster trains, that the rails on which they run are crushed and laminated in the most serious manner; and what makes the matter worse is, that the evil does not stop with the rails alone, inasmuch as when the rails of a line get into this state, not only is the motion and vibration felt by the passengers most disturbing, but also the very occasion of such jerks resulting from rails in bad order produces still further destruction to every wheel. axle, spring and waggon that run over them,-and thus, by cause and effect becoming each other alternately, the evil increases in a sort of accelerating ratio. I know as a fact that iron has now become, as it were, too soft a material to withstand the enormous weight of the engines now in use; the tires of the engine wheels become rapidly crushed into a sort of hollow where they bear on the rails. No doubt this might be so far prevented by the employment of steel or charcoal iron, as has been done with the best effect both in respect to the tires as well as the rails. But it appears to me that we do wrong in attending only to the cure of these serious evils, and not looking as we ought to the cause, with a view to its removal. It appears to me that the whole mischief arises from an attempt to concentrate in one enormous locomotive engine the tractive power which, under a wiser system, we ought to divide between two or three locomotives. When we bear in mind that the weight of a locomotive increases in a much more rapid ratio than its tractive power, we shall find that to gain one advantage we lose another, of much more dividend-producing value. According to our present state of knowledge on this most important subject, it would be presumption in the extreme for any one to state with confidence the exact £. s. d. importance and value of the two systems, namely; light engines with light trains, or mouster engines with monster trains. The damage and destruction of railway plant, rails, permanent way in all details, engines and locomotive plant-waggons and carriages-resulting from their passage over a line in bad order, is a question so large and extensive as would require the most careful investigation of a committee of the most able men weeks or months to come to a correct conclusion on; but I am confident, from the results of a pretty wide survey of the subject, that if the result of such investigations were brought out in plain £. s. d. terms, such would be the awakening up to the importance of this subject, as regards dividends, that railways would find in this subject a much more legitimate occasion for their attention than the miserable squabbles they have of late been squandering their attention and means upon. Although a practical man and having professionally occasion to be in close contact with the subject I refer to, yet I would not wish to speak with undue confidence on this matter; except to say that I know of none more urgently important as relating in the most serious degree to the reduction of the working expenses of our lines. I trust that the London and North-Western, who have had the good sense to provide against the evil results of the heavy engine system, will go a step further and see if they cannot remove the cause of the mischief-the evils of which are almost beyond calculation.

A PRACTICAL ENGINEER.

#### Gassip.

The following statements are the latest that have appeared as to the PRESENT CONDITION of the PARIS LINES since the attack by the insurgents:-The Orleans entirely escaped damage. It is now well watched by pupils of the Polytechnic School and of St. Cyr, the whole way, and is quite free and open for passengers. The incendiaries at Pontoise were happily stayed in their devastation. They had seized ar tuck, and were going along the line, when they

were surrounded and captured after a hard combat. The communication, says a Paris correspondent of the Times, between Boulogne and the capital is again The first train that arrived at the station at St. Denis since Wednesday passed the enceinte continué at 10 o'clock in the morning of Tuesday last. It left Amiens at 3 30 a.m. A director came down to superintend the proceedings. It travelled at the slowest rate in order not to arrive at the portion of the line that had been most injured till daybreak. The line had been laid down very successfully; but it will be long before the numerous stations that have been wholly destroyed can be restored. At Beaumont the marks of devastation began to be visible. Some detachments of the regiments of the line were drawn up here, under terrific rain. The railway authorities, quite taken by surprise, could offer little or no resistance to the mob, which ravaged all the way down to this point; it was composed of the lowest ruffians of the city. At Isle Adam and at Anvers nothing is left of the stations but ashes and charred beams. At Pontoise the destruction appears still more extensive; a whole train of carriages that stood in front of the platform is there still, in the shape of skeletons, the iron-work of the wheels and bodies alone remaining. From this point to St. Denis every house, hut, waggon, carriage, and shed on the line has been burnt or torn down. The stone bridges that cross the line within the city itself, have had their parapets levelled, and immense masses of stone heaped together block up one line completely. Fortunately, the magnificent station at Paris has escaped. The mob destroyed nothing that was not connected with the railway; the cottages and cabarets along the line have not been touched. A waggon of coke standing within sight of the Paris station was still burning when the train passed. The regular service of the trains will of course be renewed. As if to show how lamentably selfish these excesses have been, report says that at a part of the road on which some devastations had been committed, the up and down trains had to go on the same line of rails; and on this line a train from Brussels ran into one from Paris. Three persons were killed, and twenty were injured, two so severely that they had to undergo amputation on the spot.

The attack on the ROUEN railway seems to have originated from jealousy of the English workmen rather than from a political cause. At nine o'clock in the evening, of the 24th ult., the mob set fire to the railway bridge, constructed of wood, over the Seine. Although it poured with rain a vast crowd assembled on the quays to witness the conflagration, which from much of the bridge being built of deal, occasionally burst forth like a volcano. The firemen and the National Guard were quickly on the spot, endeavouring to extinguish it. At half-past eleven another bridge, that of Grammont, together with a lodge and the St. Sever station, burst forth in flames. The vast warehouse and engine-houses attached to the station were also entered and damaged by the mob. Soon after the station in the Rue Verte was attacked. At intervals the words "Down with the English!" were uttered by some of the rioters, and there was a manifest disposition to destroy every portion of the railway works which English workmen had any hand in constructing. In the course of Friday morning, thanks to the well-directed, steady and untiring exertions of the National Guard and of the pompiers, the fire was extinguished. The provisional mayor and municipal council threaten punishment for the recurrence of any such malpractices, and exhort the citizens to assist their proclama As regards the removal of the rails in Paris on the 28th, it was notified that the Provisional Government had just appointed two Commissaries General to concert measures with the directors of the railroads at Paris for the protection of the materiel and the line.

The works of the HARDELOT TUNNEL, near Boulogne, are nearly finished. The whole line from Boulogne to Paris will be complete on the 15th inst.

The Caledonian furnishes for their 130 miles opened the following traffic return for the week ending the 26th of February:—Passengers, cattle, merchandise and minerals, 2,596l. 19s. 3d. The weekly returns will next week be incorporated in our usual traffic table.

The line of the Scottish Central from Stirling to Greenhall, where it joins the Edinburgh and Glasgow, was formally opened by directors on the 22nd ult. On the following morning, two of the directors, Mr. Bruce, of Kennet, and Mr. W. Oliphant, of Condie, with Mr. Falshaw and Mr. Tasker, took a trip to the junction to meet Capt. Wynn, the Government Inspector, and brought him down the line; and he

close attention of the various classes of the working railway staff of the country. The relaying the rails in the KILSBY TUNNEL has just been completed, the old stone blocks have been entirely removed, and both lines (amounting in the whole to three miles) have been relaid with new wooden sleepers. Although for twelve hours out of the twenty-four during the operation the whole length of the tunnel has been worked as a single way, yet through the due arrangements, aided by Heighton's telegraph, not one train out of the immense traffic of the LONDON AND NORTH-WESTERN has been delayed in anv wav

The BUCKINGHAMSHIRE directors sent up a strong deputation to Mr. Strutt on Wednesday. The object of the deputation was to present the memorial on the part of the local interests of the Buckinghamshire, and the county of Buckingham, against the proposed alteration of the Birmingham and Oxford from a single gauge to a double gauge railway.

It was ordered by the House of Commons last week that no railway bill be read the first time unless it be presented not later than three clear days after the committee shall have reported thereon to the house.

Mr. Bidder, in his late Report to the NORFOLK,

estimated the working expenses of the Norfolk at 60,000l.; gross revenue, 150,000l., leaving 90,000l., which gives 51 per cent. on the share capital.

The entire line, so valuable for the transport of the western agricultural produce, between Belfast and Armagh, was to be opened for traffic on the 1st inst.

Meetings of the shareholders of the GREAT WESTERN AND UXBRIDGE and GREAT WESTERN AND WYCOMBE were advertised to take place on the 28th ult., but there not being a sufficient number of proprietors present no business was done.

At the half-yearly meeting of HALLETTE'S ATMO-SPHERIC, at Winchester-house, reporters were not admitted, on the ground that nothing would take

place worth reporting.

A correspondent has called our attention to a new description of CARRIAGE RUG, made from a wool named mosaic, and fitted to the new carriages of the Caledonian. It has an appearance somewhat resembling very thick and compact velvet plush, or very thick and dense chenille; differing, however, in this, that it can be made of any required density or closeness, and of any length of pile, from the sixteenth of an inch to an inch, or upwards. It can also be made either plain or figured with the most beautiful devices.

It is a non-conductor of heat.

Mr. W. Thomas, the publisher, in his application for his certificate at the Bankruptcy Court, attributed his difficulties to having made himself liable for the advertisements of a number of the bubble railway schemes of 1846, for which he had never been reimbursed. The Commissioner said it was highly desirable that no credit whatever should be given to companies for advertisements, for it might be safely concluded that when they asked for credit they were neither more nor less than bubbles.

The damage done, during the late revolution in Paris, to the St. GERMAIN line is estimated at 4,000,000f. (160,0007.)

Accounts from Madrid of the 24th ult. state that the Minister of Public Works presented to the Congress on that day a project of law relative to railways.

At a meeting of the CASSEL AND LIPPSTADT at Berlin, on the 16th inst., several persons clamoured for the total dissolution, and numerous others demanded that if the works should be continued the province of Westphalia should guarantee a certain rate of interest for the shares. The meeting broke up without coming to any resolution.

#### Reports of Meetings.

[Continued from p. 171.]

SOUTH-EASTERN.

March 2 .- Half-yearly Meeting, London .- Mr. J. MACGREGOR in the chair

The Secretary, Mr. HERBERT, read the Report (see Official Papers).

The CHAIRMAN, in moving the adoption of the Report, commented on the late embarrassments which the commerce of the country had experienced, and especially those which had visited the railway interests. During the halcyon days of the money-market, parliamentary and other engagements for the construction of great railway works had been easily commenced—engagements, the fulfilment of which a variety of unforeseen difficulties, combined with the impossible provisions of the Bank Charter Act, annihilated. The present Government had been notoriously adverse to railway corporations. Their measures not only discredited, but maimed railway enterprise. expressed himself perfectly satisfied with the works. When Parliament had sanctioned the expenditure of Fresh instances occur daily of the efficient and

Digitized by GOGLE

have protected the interest they had created until the works were completed, and until it was proved that the country could provide the additional capital proposed to be expended in lines competing with those already sanctioned, and that such capital, if provided and spent, would be likely to meet with a profitable return. A Board of Railway Commissioners had been appointed, but to what end? Have they extended a protecting hand to an embarrassed interest? Have they facilitated communication with the Government, or advised measures of relief? No. gentlemen, their duties seem confined to petty warfare with by-laws and fares for fractions of miles. Have they suggested measures for the protection of railway property from unfair and unjust parochial assessment? This was a subject that should have attracted their attention; but all we have seen of them leaves no impression that they regard our peculiar property as worthy of protection. They stand by and see capital uselessly spent without attempting a remedy. We say therefore, gentlemen, help yourselves. When railway questions come to be discussed in the House of Commons, exert your immediate and just influence with your representatives to induce them to shield you from oppression, and to prevent your capital being wasted by carrying out the fancies of professional theorists. You will find our expenses increased by the re-opening of the Gravesend and Rochester branch, which occasions an outlay that would work no small portion of the North Kent traffic, and you will find the rates and taxes are considerably more than for the corresponding half of last year; but we have determined to do our utmost to resist these extravagant demands. We believe, as we have stated in the Report, that the agreement with the Brighton will be beneficial to both companies, and that the terms are fair and equitable. Complaints have been made to us by many proprietors of the hardships with which the clause in South-Eastern Amendment bill, 2 Vict. c. 42, s. 19, preventing the payment of interest on all registered shares while a call on any shares in the name of the same proprietor remains unpaid, presses upon them, and also upon those who have suffered the forfeiture of their No. 4 shares. Those shares are not forfeited by the act of the directors, but by the resolution of the proprietors, when they were created. A resolution on this subject will presently be submitted. The receipts, we think, under the circumstances, satisfactory; the disposable balance is 106,862l. 10s. 5d., which will enable you to declare a dividend of 21s. per share on the paid-up shares, 13s. 5d. per share on the No. 1 shares, 10s. 8d. per share on the No. 2 shares, and will leave a balance of 6,8291. 3s. 9d. at the credit of profit and loss. Chairman then moved that the Report of the directors and statement of accounts be adopted.

Mr. PRITCHARD seconded the motion.

Mr. KEAT said he wished to call attention to a few of the items in the statement of expenditure. He alluded in particular to the charges for police, wages and clothing (3,699L); the wages to guards and por-ters, and salaries to station clerks (9,992L); and, among the general charges, to the salaries of the secretary and clerks (943L);—all of which he considered extravagant.

The CHAIRMAN assured the hon. proprietor that the items of which he complained were by no means excessive, but on the contrary were charged upon principles of the utmost economy; in particular he instanced the case of the secretary, for whose onerous and valuable services only 400l. a year was paid, while in other companies 1,000l. was no uncommon salary. The services of the superintendent were secured also upon very low terms; indeed, the only high salary paid was that of the engineer, who was well worth the amount which he received. There was one item which the shareholder had not alluded to,—the expense of the direction. He had worked for the company for years, and had never received a farthing for his services; nor, indeed, had any of the expenses which he had incurred been made good to him. did not mean to assert that there was no room for economy in their expenditure. By the coke works at Whitstable, alluded to in the Report, a considerable saving had been effected. During the few months that those works had been open, the directors had been paying only about 22s. per ton for coke instead of 38s., which they had sometimes been obliged to pay before. They were giving their attention to several points where they thought a saving might be made, and would be happy to receive any suggestions.

In reply to an observation with regard to the sum of 2201. charged in the accounts for loss on light gold, the CHAIRMAN observed that the matter was one beyond the control of the directors.

After some other inquiries of an unimportant nature, the Report was adopted unanimously; and a resolution in favour of the dividend also carried.

The agreement entered into with the Brighton and South Coast as to the tolls payable in respect of the Greenwich and Croydon lines and the Bricklayers' Arms branch, and the accommodation of the Brighton Company's goods traffic at the Bricklayers' Arms terminus, and the remission by this company of their claim on the Brighton in respect of the third line on the Greenwich, was approved.

The CHAIRMAN said the next resolution he had to move was rather peculiar. He did not know the gentleman at all of whom he was about to speak, and he might therefore be allowed to express the highest opinion of his conduct. In 1841 the company had a claim upon a proprietor, which, from circumstances, he was unable to pay, and it was remitted by a vote of the shareholders. He had recently paid it, and, as the capital account to which it related had been long since closed, he should move that the amount be carried to the revenue account. which would make their available balance in hand about 15,000l. He therefore begged to move-

"That the sum of 8,2094. 6s. Id., being the amount of a claim on a proprietor, remitted to him by resolution of the proprietors, at their general meeting of the 25th of November 1841, with interest to the 21st of September 1847 the day of payment, be placed to the account of profit and

Mr. PRITCHARD seconded the resolution, which was

carried unanimously.

The CHAIRMAN then called attention to the fact, that many shareholders were placed in a peculiar position by the non-payment of calls on a portion of their shares, which thus became forfeited. Under the Act of Parliament those parties could not receive interest on any of their shares, there being arrears on some, and which often occurred in the following manner:-A person sold a portion of his shares, but the purchaser never coming in for registration, the vendor was deprived of interest on those he retained. To remedy this anomaly, the Chairman moved a resolution to enable the directors to deal with the proprietors of forfeited shares in such manner as they should see fit.

Some conversation took place, in which one or two shareholders stated that they had allowed their shares to be forfeited, from not knowing when the calls fell due, and the CHAIRMAN having stated that he believed such arrangements might be entered into that not one share would be forfeited, the resolution was car-

The retiring directors were then re-elected, and Messrs. Jack and Warrens were elected to the Board, in the room of Capt. Tyndall and Mr. W. H. Thomas,

Mr. J. Wilson begged to move a vote of thanks to the chairman and directors. He hoped that at the next meeting the proprietors would vote them some more solid testimonial, as it was the only Board he had ever heard of, except where the directors could not make any return to the shareholders, whose services were not paid for.

Col. NORCLIFF seconded the motion. He had formerly subscribed to a testimonial to Mr. Glyn, as chairman of the London and Birmingham, and it would give him great pleasure to subscribe to a hand-some testimonial of their respect to their worthy chairman, Mr. Macgregor.

The motion was then carried, with three rounds of The CHAIRMAN begged to return thanks for the honour. It was a satisfaction to them that, while

they had promoted the interest of the company, they had been able to do something to serve their queen and country. He wondered that no person had asked anything relative to their bridge of boats, so to call it, between Folkstone and Boulogne, and the accommodation which, under present circumstances, they were able to afford to those desirous of coming to England. Not only was courier after courier continually running over their line with expresses, but they had six splendid vessels at work, so that they were able to keep up a communication between Folkstone and Boulogne every two hours. He hoped that when he next met them, he might be enabled, from brighter circumstances, to be enabled to enter more at large upon the subject of their Continental communication; and, in conclusion, he would propose to them a name which would elicit an equally

man's head was turning upon other affairs than merely their own profits, he would ask them to give nine times nine cheers for our lady the Queen. The CHAIRMAN then led the cheers, which were heartily responded to.

sincere and more prolonged cheer, for now that every

#### EASTERN COUNTIES.

Feb 26. -Half-yearly Meeting, London .- Mr. G. HUDSON, M.P. in the chair.

Mr. Roner, the secretary, read the Report (see Official Papers).

The CHAIRMAN, in moving the adoption of the Report, said, although the directors declared a diminished dividend, they did so with a balance of 12,000l. The traffic had been most satisfactory: no less than 12,000l. per week. The working expenses were heavy, but it must be remembered that coke on their own line costs 26s. per ton, whilst in the North 13s. per ton was the price usually paid. The opening of the Syston and Peterborough, probably in March, would materially lessen that expenditure. The Midland would be brought into connexion with them. The March and St. Ives will also be opened in March, and the Maldon, Witham and Braintree in May. Progress is being made with the Great Northern, of which a great part will be opened in September, and preparation was being made for its coming into the Peterborough station. Thus when the Stratford works are completed and these new sources of income opened, the increase in the expenditure will no longer be in proportion to the increase of income. The traffic of the last half-year must be most satisfactory (continued the hon. gent.), there being an increase of 70,000l. on the corresponding six months of the past year; and, if we look back to 1846, it will be seen that the expenditure has not increased in proportion to those receipts. Gentlemen are fully aware that the length open in 1846, 1847 and 1848 has not varied to any extent, and I have gone into a calculation to show the increase per mile in the receipts. While our income per mile in 1846 was only 1,300l., last half-year it reached 1,764l., being an increase of nearly 500l. per week. will convince any person how difficult it is, in the early infancy of railways, to form any opinion of what will be their developed traffic. Great expense must be incurred before the advantages of the lines are fully appreciated by the public; but, when they once are understood, the traffic goes on surely and constantly increasing. We have done our best to promote your interests, and I hope we have secured your confidence; but if you think any other gentlemen can serve you better, I for one am perfectly ready to retire. I admit that I am disappointed in the amount of dividend; and I hope and trust we shall ere long be able to present a different statement. First, we had to contend with an inefficient working locomotive power. That has been remedied, and nobody can now complain of the working. We have now to reduce our expenditure. With reference to the course we pursued relative to the shares on which 10s. and 2l. had been respectively paid, I believe it is known to you all that this company has been in some difficulties with respect to their financial affairs. The calls were not satisfactorily paid. As the shares were unregistered, we did not know in whose hands they were, and it was necessary for us to take some decided steps to place our finances in a position to promptly meet our engagements. We accordingly took the course announced in the advertisement of the 5th of November, of offering a 5 per cent. guaranteed interest for the money that should be paid on those shares, and I think, after every reflection, that the course we pursued was the best. It did not produce us much money, but it put us in the position of getting hold of the property on which we had no chance of having the calls paid. The total amount we then raised is under 50,000l., and I hope you will not, therefore, object to confirming our arrangement. There was no necessity to summon you, and by agitating at that moment our affairs, explain abroad our position. There was another reason. We had agreed to raise a large sum ourselves from our private resources—for you know the position in which our cheque was placed one day on 'Change, and it was necessary to provide against the recurrence of such an event. Should you not approve of the arrangement, I have no doubt that we might, without much difficulty, be enabled to cancel it. We have nothing to keep back. By the operation to which I alluded we only raised 31,000L, but we got rid of a dead weight upon us, and we are now perfectly ready to pay you your dividend on the 16th of next month. We have now the small debt of 700,000l. only—not being, like some neighbouring companies, encumbered with mortgages to the amount of 6,000,000l. or 8,000,000%, and, if the arrears of calls were paid up, they would pretty well suffice to pay off that debt. You will therefore see that, in comparison to our capital, we have not at all a large amount of borrowed money. I hope that we have seen the worst, and that we may now look forward to brighter and better days. I beg to move that the Report now read be adopted, and that the dividend be payable on the 16th of March.

Mr. Waddington, vice-chairman, seconded the motion.

Dr. RYLAND considered the Report and speech of the chairman very satisfactory; but he had anti-

Digitized by GOGIE

cipated that the dividend at this time would have reached 6 or 7 per cent

The CHAIRMAN might explain that their dividend was reduced by the resolution of the House of Commons, which forced them to pay the interest on the "A" and "B" shares, out of revenue instead of out of capital. They were compelled, in order to keep their engagement with the holders of those shares, to pay the interest out of revenue, before the lines for which they were created were brought into opera-tion. In fact, if they had not to pay dividends on 50,000 extra shares, they would have been enabled to

pay a much larger dividend.

Dr. RYLAND was perfectly satisfied with the result. Considering the cloud that had been hanging over monetary affairs, he was surprised the dividend was so much. He complimented Mr. Waddington and the officers for their good management of the working of the line; but he hoped that they would not proceed with too many branch lines, which only impoverished the main line, and that the items for law and parliamentary expenses would be reduced in future. He wished to call attention to one case relative to law charges. Their Act of Parliament said that every train should stop before passing Ware. One train passed, and eventually the legal expenses must have cost the company 100l. He regretted the raising of the fares between Cambridge and London, as it had caused the establishment of a coach, which had been pretty successful, though it did not pay, and must therefore injure the company.
The CHAIRMAN: Our fares are only 23d. per mile.

Mr. Waddington observed, that the directors had felt bound to take the best opinion on the clause of the Act referred to; but the whole cost to the company, instead of being 100l. was under 10l.

Mr. HELPS suggested that there should be a fixed day for the payment of dividends, and if all the principal companies could be brought into an arrangement for paying the dividend on the same day, it would tend greatly to the convenience of holders, and give a solidity and certainty to railway property. He regretted that he could not agree with the observations of the hon, chairman, with regard to the York extension. He did not see what right the directors had to guarantee 5 per cent. without the consent of the shareholders on any stock. The measure had only produced 31,000*l.*, and he could not see what other good it had done.

The CHAIRMAN explained that they had obtained 400,000l. worth of shares (on which they had received deposits amounting to 18,000l.) and which would

hereafter, if required, be at their disposal.

Mr. Helps maintained, that if they had the right to forfeit those shares under that arrangement, they had an equal right to forfeit them without it, and that therefore the argument of the hon. chairman would not hold water at all. He must object on principle to the directors entering into such engage-ments without sanction. He should not propose any amendment on the resolution being brought before them for the ratification of the agreement, but would rest satisfied if the chairman would pledge himself that such a course should not be pursued for the future.

Mr. GILBERTSON also disapproved of the arrange ment, because those who paid up at the proper time only took 4 per cent., while those who had held back had an advantage given them to receive a guaranteed 5 per cent. He objected to the large parliamentary and law expenses, and hoped that they would in future receive the Report early enough to enable them to examine into the accounts, as otherwise he feared they would have to leave them to the operation of Lord Monteagle's bill.

A Shareholder was disappointed to find that after they had raised their fares and got an increased income they were to receive a reduced dividend; but he was not astonished at it when he looked at the expenses. The law charges were 35,000*l*., being nearly one-third as much as was to be divided amongst the shareholders as dividend. Then again, there was a sum of 100,000l. for stations, being nearly equal to the amount applicable to dividend. They did not require sumptuous and ornamental stations, but only such as would protect the public from wind and weather. Though they professed to pay only 5 per cent. upon their loans, it would be found that by the expense of bond stamps, &c. they paid nearly 6 per cent. The branches did not pay them, and the North Woolwich branch in particular would not pay for its cost; and yet they were now going to Parliament for leave to construct three new branches. If they went on as they were now going on, they would perhaps get a dividend of  $2\frac{1}{2}$  per cent., or, indeed, no dividend at all. He moved a resolution that this meeting views with grave concern the introduction of new branch bills.

bring on that motion was at the special meeting, when the subject of branch bills will come under consideration.

Mr. WADDINGTON said the shareholders should ecollect that in every case their sanction had been obtained before the expenses were incurred by the bills being prosecuted in Parliament. The various branches had been forced upon them; and what would have been their position if the Great Northern had been allowed to get branches to sap the traffic of their line, whilst the directors stood by doing nothing? Some gentlemen had complained of the mode in which they had recently raised money; but what was their position as compared with neighbouring companies, who had given  $6\frac{1}{2}$  and 7 per cent. guarantees? They (the directors) had lent their own money to carry on affairs when the bankers refused to honour their cheques, and had, by the arrangements they had made, been enabled, at the expense of raising 40,000l. stock bearing a perpetual 5 per cent. interest, to place the company on a foundation second to none in the kingdom. With regard to the observations of Mr. Gilbertson, that the Eastern Counties had brought down the interference of Parliament, the interference of Parliament had never been provoked by them, and they had not gone for a reduction of the fares; but, looking at the heavy expenses forced upon them, they had always endeavoured to maintain remunerative rates. The goods traffic was proceeding most satisfactorily, for whilst in the corresponding six months of last year it only produced 2,624. per week, it now produced 4,571., and this result would not have been produced if the directors had not paid unceasingly unremitting attention. An hon, gentleman had com-plained of 100,000*l*. being spent in stations. Now, although they had obtained power to increase the Shoreditch station, when they found the money pressure they did not expend one shilling more than that due from previous engagements. If the hon. proprietor knew the difficulty of developing a traffic with insufficient station room, and how often it had led to irregularities, he (Mr. Waddington) thought that he would not object to that item. The reductions in the cost per mile of working expenses had been considerable, and they had been already told they might expect a further reduction upon the opening of the Syston and Peterborough line. As to par-liamentary expenses, he might observe that the chairman always rigidly reduced every bill before it was paid, and instructions had been given to their solicitors and engineers that all their charges must be on the most liberal scale for the interests of the share-

Mr. Serg. GAZELEE found that the traffic had not increased 80,000l. or 90,000l. in the half-year, as promised in a previous speech of the hon. chairman. He might be told that a large amount of capital had been brought into the receipt of dividend this half-year, but in his speech the hon. chairman had made an allowance for that circumstance, and had said that they would have 40,000?. or 50,000?. extra revenue. Why had the chairman, in making his comparison on the traffic of this half-year, gone so far hack as 1846 without telling them the number of back as 1846, without telling them the number of miles which were then open? He trusted things would mend, and that, too, soon. He perfectly agreed with Mr. Helps that it would be desirable to have a fixed day for the payment of dividends, and that even 31,000l. ought not to be guaranteed interest without the consent of the shareholders. Reference had been made to neighbouring companies guaran-teeing a higher per centage, but it must be recol-lected that when the South-Western had guaranteed 7 per cent. they had authority from their share-holders. He hoped that they would not again hear

of such large parliamentary expenses.

The CHAIRMAN could not see any objection to the payment of the dividend on a certain day, or to any arrangement by which all the companies could be brought to meet the views of the Stock Exchange in the matter. The learned gentleman seemed to forget that the parliamentary expenses did not go into the pockets of his friend on the left (Mr. Duncan), but that there were certain gentlemen of his own profession who took a very large proportion. Those expenses, as compared with any other company—the Great Northern for instance—were reasonable. But there was nothing so sickening-nothing which grieved the directors so much-as the payment of parliamentary expenses. Then the House of Commons received a large share of those expenses as fees. So it was, but he (the chairman) could not help it. He knew that he did not get any portion of it, and that the only advantage he had derived from his position at the Board was some 70l. a year, for which he had frequently to travel all night, or send to his colleagues to meet him at York to consult upon busi-The hon, gentleman had properly said that

to have stated the additional number of miles open during the time to which he was referring. He would now tell them: it was only about 10 miles. The hon, gentleman had complained that the returns The non, gentleman had complained that the returns had not come up to what he (the chairman) had anticipated. True, they had not; but he had only spoken to the best of his belief, and was there one amongst them who could have anticipated the disastrous times of October. Had they not paralysed all trade, and defied all calculation? If he had failed, it was only to the extent of about 8,000l. or 10,000l. on the half trans and considering the times the same transfer. the half-year, and considering the times they had gone through, he thought that no very great departure from the fact. But observations of the kind made that day would have this effect, namely, to make him cautious for the future in giving opinions as to anticipated traffic. He had considered it his duty to give them all the information he was in possession of; and with respect to the insinuations regarding directors making use of information officially derived, he felt bound to state that he had the same interest now in the company which he had twelve months since, neither more nor less, and he believed his brother directors generally did the same, although he saw nothing in the position of a director which ought to prevent him selling his shares, if he were not otherwise prepared to meet his engagements. The learned Sergeant had said they were in difficul-He (the chairman) assured him it was not so. He felt as free as air, and he believed the company was as free as air too. He had heard the expression that the branch lines were ruining them. But was it so in 1845? He declared in that room, in the October of that year, that he believed the whole world was going mad, and as sure as the spirit for branches then existed, so sure would a re-action take place, and large fortunes be lost. But if it had been so, how stood the case with regard to their own line? Why, whereas at that period they received on an average an income of 1,300*l*. per mile, they now receive 1,760l., so that the branch lines had not particularly impoverished them. But their great misfortune was, that in consequence of their engagements, and the resolutions of the House of Commons, they were compelled to bring a large capital into the receipt of dividend before it was made productive to the revenue. With respect to the guaranteed engagements they had entered into for interest on less than 50,000%, had the shareholders no feeling for the position in which the directors were placed when their cheque for a miserable 2,000l. was refused payment by their bankers! If some discretion were not placed in their hands, it would be impossible to carry on affairs; and as well might they blame Lord John Russell for writing his letter to the Bank of England—in doing which everybody agreed he did right—though in contravention of the law, as blame the directors for breaking it in a less degree. However, they considered they had acted on an equitable principle in giving shareholders, who, from pressure of the times, had not been able to pay their calls, another chance; and he was satisfied that in doing so they had adopted a wise and prudent course. If the shareholders did not think fit to confirm that arrangement, they (the directors) must go and tell the holders of those shares so, and leave them to their remedy of bringing actions against the directors, and if they were ruined they would have the consciousness of knowing that they had done their best

for the interests of the shareholders Mr. PACKER asked whether the dividend would be paid out of revenue?

The CHAIRMAN replied-Certainly.

The Report was adopted, the retiring officers reelected, and the arrangement entered into under the advertisement of the 5th of November confirmed.

Mr. Box asked whether the dividend would be paid clear of income-tax?

The CHAIRMAN could not pledge the company to pay the income tax, as at present they were unaware what the amount would be, ls. or 7d. in the pound, though he certainly hoped it would not be the former.

Mr. Box complained of the accounts not being published sufficiently in detail, and moved the appointment of three auditors to act for the next six months.

Three or four gentlemen simultaneously rose to second the motion.

The CHAIRMAN had no objection to the appointment of auditors, but worded as the resolution then was, if carried, the directors could not continue to hold office. If, however, the hon gentleman would withdraw his motion, the subject should have their best consideration, and at their next meeting they would submit a resolution for the appointment of two or three of the principal shareholders to act as auditors. In the meantime, however, every share-The CHAIRMAN suggested that the proper time to | in making his comparisons he (the chairman) ought | holder was at liberty to inspect the books.

Digitized by GOOGIC

Mr. Box insisted upon putting his motion to the vote, which was accordingly done, when it was negatived by at least 30 to 1.

Mr. Waddington said before the meeting separated there was one observation to which he had omitted to reply. An hon. proprietor had said that the North Woolwich branch did not pay its expenses. Wherever the hon. proprietor had derived his information, he was much misinformed, the fact being that the mileage was greater upon that branch than upon any other portion of the line.

The meeting separated, the CHAIRMAN having explained that in consequence of the three bills having been thrown out on Standing Orders, the special meeting advertised for that day was rendered unnecessary.

#### NORTHERN AND EASTERN.

March 2 .- Half-yearly Meeting, London .- Mr. PATERSON in the chair.

Mr. Brown, the secretary, read the Report, which stated that in accordance with the agreement with the Eastern Counties, the dividend on the respective shares for the half-year ending the 31st of December shares for the half-year ending the 31st of December last will be as follows, viz.:—on shares guaranteed 5 per cent. per annum, 50l. paid, 1l. 5s. each; 23l. paid, 9s. 3\forall d. each; on shares guaranteed 6 per cent. per annum, 50l. paid, 1l. 10s. each; 23l. paid, 14s. 7d. each, less property-tax in each case. The dividend on the quarter shares, payable on the 31st of May next, will be a the average representation of 6 are cent. will be at the present guaranteed rate of 6 per cent. per annum, or 7s. 6d. per quarter share, also less property-tax. On the last creation of 6,156 shares there remained 339 undistributed, and now at the disposal of the proprietors. The receipts for the half-year ending 31st December were 82,822l. 2s. 1d.; expenditure, 50,920l. 15s. 4d.; balance, 31,901l. 6s. 9d.

The Report was adopted.

The CHAIRMAN then moved a resolution to the fol-

The CHAIRMAN then moved a resolution to the following effect:—

That the directors be authorized to sell the 339 undistributed shares, and such fractional parts as have not been paid upon, together with the Eastern Counties stock and York Extension stock attached thereto, and to apply the proceeds in part payment of the debentures falling on the 11th of September next, and to report the result of such sale to a future meeting.

The resolution was carried.

A Proprietor suggested that the directors should watch the dividends of the Eastern Counties half-year by half-year, because, though that company declared only a dividend of ll. in the year, it was a matter of consequence to the Northern and Eastern whether it was divided into two half-yearly dividends of 10s. each, or into dividends of 8s. and 12s.; as in the latter case the Northern and Eastern would come in for any contingencies.

The CHAIRMAN replied that the fact was so; and they had watched the dividends of the Eastern Counties.

#### NEWMARKET.

Feb. 28.—Half-yearly Meeting, London.—Lord J.

MANNERS in the chair.

The Report stated that the line from Chesterford to Newmarket is now opened for goods traffic, and without doubt will be ready for passengers during the ensuing month. The directors have renewed their negotiations with the Eastern Counties, but without effect. Overtures leading to a conditional agreement with the Norfolk have been entered upon, of which

with the Norfolk have been entered upon, of which the following are the heads:—

1. That the whole of the Norfolk Company's traffic, to which the Newmarket Company's line from Thetford will afford the shorter route, shall be guaranteed by the Norfolk to the Newmarket for their line. 2. That the Norfolk and the Newmarket shall be bound not to enter into any arrangement with any other company without mutual consent. 3. That upon the completion of the line to Thetford the whole traffic be conducted under a joint management, and, so far as practicable, with one staff of officers, workshops, plant, &c. 4. That a committee of three members of each Board be appointed for carrying out this agreement, and any dispute arising to be referred to Mr. R. Stephenson. The line to Thetford has been set out, and the whole cost will not exceed 375,000l. The directors have refrained from submitting a resolution according a preferential dividend to the Thetford extension shares, as originally proposed. The statement of accounts showed the receipts at 321,679l. 16s. 11d.; expenditure, 312,902l. 10s. 9d.; balance, 8,777l. 6s. 2d.

The CHAIRMAN stated that the directors had gone over the line on Saturday, and they had now no doubt

over the line on Saturday, and they had now no doubt of its being opened for passengers in the course of next month. Within the last forty-eight hours the directors had heard that the Eastern Counties were prepared to make an offer for the line, and therefore the provisional agreement with the Norfolk would not be considered, but a special meeting would be convened to take the two propositions into considera-tion at one time. He moved the adoption of the

Mr. MORTIMER explained that the Eastern Counties had agreed to take the Newmarket at its cost price, giving them in exchange Eastern Counties stock, pound for pound, for the amount expended. The Report was adopted, with the exception of

that part relating to the agreement with the Norfolk, and the retiring directors re-elected.

#### BRIGHTON AND CHICHESTER.

Feb. 28. — Half-yearly Meeting, London. — Mr. CORDY in the chair.

The statement of accounts showed that 354,9531. 13s. 6d. had been expended up to the 31st of Decem-

ber last upon the Portsmouth extension.

They were adopted, and Messrs. Grenfell, Parsons and Cooper were re-elected to the direction.

#### BRISTOL AND EXETER.

March 2 .- Half-yearly Meeting, Bristol .- Mr. T. W. BULLER in the chair.

The Report was read. It declared the present position and revenue of the company.

The amount of rent and share of toll stated by the Great Western to be due to this company for the half-year ended on the 13th of December 1847, is as follows, viz. :—Half-year's fixed rent, from June 14 to December 13, 1847, 35,978l. western to be due to this company for the liarl-year ended on the 13th of December 1847, is as follows, viz.—Half-year's fixed rent, from June 14 to December 13, 1847, 35.9781. 10s.; tollage on 361,832 passengers, conveyed 11,059,229 miles, at \(\frac{1}{2}\) d. per mile, \(1.1.520\). 0s. 7d.; tollage on 360s. 88,222 tons, conveyed 2,572,180 miles, at \(\frac{1}{2}\) d. per mile, \(2.579\). 7s. 1d.;—total 50,1771. 17s. 8d. The increase over the corresponding half of the preceding year is 4941. 15s. 5d., arising from 416,501 additional miles on passengers and 58,480 on goods. The clear disposable balance of the revenue account is 28.0533. 9s. 2d., which allows of the continuance of the dividend of 4½ per cent. per annum on 73d. per whole share paid up, with a surplus of 2,750l. 19s. 2d. The directors recommend a dividend of 1l. 13s. 9d. per 100l. share, free of income-tax, ffor the half-year ending Dec. 31, payable in the month of April. The interest on third shares and on anticipated calls to be remitted at the same time. Mr. J. H. Wanklyn having resigned, Lord Courtenay have been elected chairman in his stead. The four directors who now retire by rotation are Messrs. W. Watson, W. Browne, J. Stone, and Lord Courtenay, Lord Courtenay, Lord Courten, and Lord Courteny. Lord Courteny and Mr. T. Seccombe, one of the auditors, offer themselves for re-election. The Tiverton branch will be ready for public traffic in the course of the present month. The Commissioners, in conformity with the provisions of the Taw Vale Extension Act of Incorporation, have determined that that line shall be constructed on the broad gauge. This decision necessarily affects the short line from Barnstaple to Fremington Pill, the proposed branches to Bideford and Southmolton, and more especially the Exeter and Credition. The Exeter and Credition, though agreed to be leased to this company, and accordingly laid down on the broad gauge, ready to open for public traffic in the early part of 1847, though in immediate communication with 250 miles gauge lines, and nearly 100 miles distant from any available narrow-gauge railway, has very recently been changed from the broad gauge to the narrow. The two bills for the Taunton and Castle Cary, and the Bleadon, Wells, Glaston-bury and Street branches, which were suspended from the last session of Parliament, are reintroduced, and have passed bury and Street branches, which were suspended from the last session of Parliament, are reintroduced, and have passed the Standing Orders. Application has been made to the Commissioners for an addition of two years to the period allowed by the Acts of Parliament for constructing the Yeovil and Crewkerne branches. On the 11th of February, the directors submitted their views of the course to be pursued at the termination of the lease of the Bristol and Exeter line on the 1st of May 1849. They have given to this subject their most careful consideration, and while they felt it to be their duty, in accordance with the wishes expressed by some of the proprietors, to endeavour to obtain the option of an alternative, in a temporary extension of the engagement with the Great Western, they could not in justice to the permanent interests of the proprietors recommend that the terms proposed be accepted. By the tabular statement received from the lesses, of the gross earnings upon the Bristol and Exeter line, it appears that the amounts paid to this company for rent and toil, since the opening to Exeter in 1844, average about 50 per cent. of the total receipts. A continuation of that statement has since been received, which shows that they are 108,3094, 15. 1d. for the half-year ending on the 31st December 1847. The increase in the last half of the year 1846 is 36,379, or more than 11 per cent. per cent.

The CHAIRMAN congratulated the shareholders on the increase during the last year in the earnings of their line. When they recollected the late difficulties of this country it must be satisfactory to them all to find that their receipts had been steadily and progressively increasing, and that their traffic was improving; thus affording indubitable evidence of the soundness of their undertaking. After referring to various points of the Report and to the circumstances connected with the contest between the Bristol and Exeter and the South-Western and Great Western, the chairman affirmed that the time had arrived when the directors could, with much confidence, recommend to the proprietors the working of their own line as an independent company, and that some resolution should be expressed on the subject. Seeing that at the last meeting, although the feeling of the great body of proprietors was strongly in favour of working the line, there were yet some in the room who entertained different views, the directors were most anxious to know what terms could be obtained

from the Great Western. They had had several friendly conferences, but finding that nothing could be obtained from them but a lease for two years longer, with an equitable provision for the branches. they did not hesitate to recommend the shareholders they did not hesitate to recommend the shareholders to work their own line. And when they saw the character of that line and the amount of its earnings, which, according to a calculation a friend had put into his hand, was only 1 per cent. on the gross outlay under what had been earned by the Great Western itself—when they saw, too, the increased traffic which must come from the opening of the branches to Tiverton and to Torquay, he thought they might look forward to a satisfactory result There was another point on which the shareholders might naturally feel anxious—he meant the creation of new stock. The directors, although adverse to the might naturally feel anxious—he meant the creation of new stock. The directors, although adverse to the suspension of the issue of the shares, had determined not to do so without again calling the shareholders together. They hoped meanwhile to go on without the issue of the whole of the shares; they hoped to get money on debentures. Yet, even in that case, there could be no question that the money would be considered to the could be no provided. required to meet the loan notes, as well as to provide the plant of the company's line; still the share-holders might rest satisfied that if it should be found necessary to make a call, that call would not be made at a very early period, and when made it should be as the adoption of the Report and accounts.

Mr. Tarr seconded the motion, which, after a long discussion as to the returns of the line if worked

in independent line, was carried unanimously.

Resolutions for the re-election of the directors, declaring the dividend in conformity with the Report for the re-election of the retiring auditor, and other formal matters, and a special resolution authorizing the directors to take all necessary measures for works ing the Bristol and Exeter as an independent lines were carried unanimously.

#### SOUTH DEVON.

Feb. 29 .- Half-yearly Meeting, Plymouth .- Mr. T. GILL in the chair.

Mr. W. CARR, the secretary, read the Report.

The capital account showed the following receipts and payments:—

Receipts.

Payments.

To June 30, 1847 ... £1,345,399 13 11 £1,339,860 6 5 7 Color. 31, 1847 ... 281,414 17 2 269,210 1 3 4 Relance 269,210 **1** 17,714 **3** 

afforded unquestionable data upon which to estimate the advantages of that system, and shall have confirmed the advantages of which your directors continue to entertain of its practical efficiency. In the interim the line from Totnes to Plymouth will be worked by locomotive power. The directors determine, as previously aunounced, to adhere to a strictly defensive course during the present session. The revenue accounts for the half-year show the following results, as compared with those of previous corresponding periods :-

From May 29 to June 30, 1846, upon 15 miles,-

From May 29 to June 30, 1846, upon 15 miles,—
Receipts, 2,544.; payments, 1,2448.; blance, 1,266l.
Half-year ending Dec. 31, 1846, upon 15 miles,—
Receipts, 13,1667.; payments, 8,5761.; balance, 4,236l.
Half-year ending June 30, 1847, upon 204 miles,—
Receipts, 14,459l.; payments, 9,353l.; balance, 5,106l.
Half-year ending June 31, 1847, upon 23 miles 7 chains,—
Receipts, 23,743l.; payments, 18,240l.; balance, 5,503l.
Your directors believe that these accounts, regarded merely as an indication of the early traffic upon the first portion of your line, afford ample encouragement to the hope of its favourable development when the railway shall have been completed. Messrs Rundle and St. Aubyn retire from the direction by rotation, and are recommended by your directors for re-election. You are requested also to appoint publicars for the year. auditors for the year.

The CHAIRMAN remarked upon the state of the company and its prospects. The calamities of the Digitized by

country had produced an effect upon railways generally, but he was happy to say that in respect to traffic their line had not suffered at all, though the execution of the works had been retarded on the branch line to Torquay, and the portion of the line between Totnes and Plymouth. The calls made had been most cheerfully responded to. If the weather were to be favourable, he believed the line would be opened to Laira very shortly, and that to Torquay soon enough to secure the summer traffic. No expense had been incurred on the atmospheric system below Totnes. The atmospheric had proved so successful that the locomotive had been entirely withdrawn from the line between Newton and Exeter. the retreat of the monetary pressure the directors would prosecute the works with all possible energy. He then analysed the traffic returns, showing that there had been a steady increase of traffic on the line. The income from passenger traffic on the whole line at the present ratio would be at least 100,000l., and when to this was added from 20,000l. to 30,000l. more, their passenger traffic on the whole line would be about 130,000*l*. When the goods traffic was properly developed, as it would be in the course of about three years, this would produce at least 300,000l. a year more. There was thus no reason whatever for the apprehensions which some persons indulged in, and which had been produced by very unjust attempts to depreciate the property of the company. Their prospect was good, and fully entitled them to look forward to their line making as good a return as almost any line in the country.

Mr. J. ELLIS (of the Midland) was glad that the atmospheric system was out of leading-strings, but this had not been long, only since Thursday last, on which day all the trains from Newton to Exeter were worked atmospherically. It was, after all, but an experiment, and it would not be satisfactorily tested until it had been tried on to Totnes. It was between Newton and Totnes that the heavy ground lay, and until it had been shown at what speed the atmospheric power could accomplish that, and how much it could take, and at what cost, it would still remain an un-settled experiment. When would the atmospheric settled experiment. When wou working be extended to Totnes?

Mr. BRUNEL, the engineer, thought it probably might take place in about three or four months.

Mr. Ellis asked for a repetition of the pledge given by the directors at the last half-yearly meeting, not to expend a single farthing on the atmospheric system below Totnes, until it had been fairly tested to

The CHAIRMAN said with the exception of the engines at Rattery and Hemerdon, nothing should be expended on the atmospheric system below Totnes until the matter had been brought before the shareholders, either at the next half-yearly meeting or at a meeting convened for the purpose.

Mr. T. WOOLLCOMBE, a director, thought the directors should give some reasons for stating in their present Report that they continued to hold the same favourable opinion of the atmospheric system which had originally induced them to take the responsibility of recommending its adoption.

In reply to a question, the CHAIRMAN said the directors proposed to increase the fares to the same rates as those charged by the Great Western.

Mr. W. Prance said, whilst he felt there was an increasing confidence in the capabilities of the atmospheric system as to speed and power, there was a growing feeling that it would not answer in point of cost. Could the directors say what was the cost of working on the portion of the line opened?

The CHAIRMAN said both atmospherically and locomotively the working was found to be very expensive, but this was the case with all partial workings. It would be impossible for him to give anything like an estimate of the working cost.

In reply to Mr. W. H. HOOPER, jun., Mr. SAMUDA said exactly the same composition was used in stop-ping the valve in summer as in winter.

In reply to questions by Mr. T. STEVENS and Mr.

Mr. BRUNEL considered the bridges and viaducts on the line between Plymouth and Totnes were quite strong enough for working the line by locomotive. He altered the parapets of the viaducts some months since, when he found that it was likely that the line would be worked by heavy locomotive engines.

The CHAIRMAN thought it probable that with favourable weather for the prosecution of the works, the line would be opened to Laira in six weeks or two

Messrs. J. Rundle and E. St. Aubyn, were re-elected directors; and Mr. W. H. Evens and N. Lockyer were re-elected auditors.

WILTS, SOMERSET AND WEYMOUTH Feb. 29.—Half yearly Meeting, Bath.—Sir J. W. AWDRY in the chair.

The Report stated that the directors had not used the authority given them by the proprietors at the last general meeting to obtain loans. A call was therefore made in order that the progress of the works might be uninterrupted. On the reduction of the rate of interest by the Bank of England, the directors thought it right to invite tenders for loans secured on the company's mortgage bonds. They did not believe that material aid could be derived from this resource, and therefore it was incumbent upon the shareholders to be prepared for another call in April next. They have obtained power, under the Extension Act, to postpone for two years the purchase of land and the completion of the works. the northern portion of the line the works are making progress as fast as circumstances will permit, and that part between Thingley and Westbury, and between Trowbridge and Bradford, will be opened in the course of the summer. Upon the southern por-tion an uninterrupted advance is being made with the tunnels and other heavy works. The statement expenditure, 705,715l. 13s. 8d.; balance in hand, 29,894l. 6s. 4d.

The CHAIRMAN, in moving the adoption of the Report, observed that the total receipts were stated at 735,000l. odd, and as loans on debenture could only be obtained on receipt of half their capital, namely 750,000%, he had the pleasure of informing the meeting that subsequently to December their receipts had been raised to that amount, so that they were now in a position, when the state of the market should warrant, to borrow by those means. The directors had felt it their imperative though painful duty to call for further payments during the pressure of the last half-year. The directors had the means of going on with the works to the extent of opening the first portion of the line to Westbury, but after that they would be still obliged to make another call. Great pecuniary advantages would result from the coal trade if they could get to Radstock, but at present they had not the means of accomplishing that object.

Capt. Scobell, R.N., seconded the adoption of the Report.

In answer to a question, the CHAIRMAN said the shares announced as forfeited at the last meeting had not yet been offered for sale.

The Rev. W. Spencer asked whether, since additional expense would be incurred by the delay in the completion of the works, the Great Western guaranteed 4 per cent. on every 50%, share taken up, what-ever the ultimate cost of this line, or only upon the

capital first raised?
The CHAIRMAN replied that the guaranty of the Great Western extended to the whole expenses.

Mr. Holloway, of Midsomer Norton, urged the desirability of proceeding with the line to Radstock,

and moved a resolution accordingly.

The resolution, however, was withdrawn, after some discussion, in the course of which it was shown that the directors were fully impressed with the importance of establishing a communication with the Radstock district, and that the only obstacle was want of means,

The Report was then carried unanimously

After some further discussion upon points of no public interest, the retiring directors and auditor were re-appointed.

#### EAST LOTHIAN CENTRAL.

Feb. 29.—Half-yearly Meeting, Edinburgh.—Mr. Dops in the chair.

The Report stated that their position remained much the same as at the date of the previous meeting. The directors still postponed the execution of the works, and had successfully applied to the Com-missioners for an extension of time. They considered it important to consult counsel relative to their powers to call in scrip in registration; and, under that advice, a notice was issued, calling upon the holders of scrip to send in their certificates for the purpose of being registered, on or before the 25th of February, under certification of the forfeiture of such scrip as might not be transmitted accordingly. Four directors retired on the 30th of December last, and the remaining directors requested the instructions of the meeting as to supplying the vacancies.

Mr. DREW observed it was stated in the Report that the scrip not sent in for registration would be forfeited; but in the advertisement to the shareholders it was merely stated that such scrip would be registered in the names of the original allottees.

After some discussion, the Report was amended so as to obviate Mr. Drew's objection, and it was then adopted.

Mr. Davidson said the next business was the election of four gentlemen to fill the vacancies in the direction.

Mr. DREW, seconded by Mr. ORB, moved that four

directors be appointed.

Mr. More moved as an amendment, "That, in the circumstances of the company, this meeting resolve not to fill up the vacancies in the direction, as, in their opinion, six directors seem to be quite enough to manage the affairs of the company.

The vote having been taken, the amendment was carried by a considerable majority, Mr. Drew dissenting.

#### SCOTTISH CENTRAL.

Feb. 29 .- Half-yearly Meeting, Perth .- The Marquis of BREADALBANE in the chair.

The CHAIRMAN reported his share in the correspondence with the chairmen of the Edinburgh and Glasgow and Caledonian; and his difference with his brother directors as to a certain return furnished to the Commissioners. He defended his opinion by regarding the Scottish Central as having independent interests of its own. He denied the imputation of dictating to the shareholders. The parliamentary investi-gation, on the opposition of the Caledonian to the lease of the Scottish Central to the Edinburgh and Glasgow, convinced him of the independence of their position. The shareholders were to recollect—first, that the Central, by communicating with the Edinburgh and Glasgow and the Caledonian will have the traffic of Glasgow and the Catedonian win have the traine of the East, the West and the South; secondly, that by communicating with the Scottish Midland and the Dundee and Perth, it will have the traffic of the North; and thirdly, that the interjacent country, possessing within itself an excellent local traffic, been so occupied by the Scottish Central as ts exclude the possibility of the formation of any other trunk line which can connect the North with the South, without the intervention of a ferry. The chairman, at great length, entered into the history of the agree ment, and its revocation as previously given at the preceding meetings. He then alluded to the return claimed by the Caledonian for the Commissioners, with a view to obtain an Act for carrying out the old agreement. He considered the resolution repealing that agreement binding, and by that he had abided and should abide. He impugned the late settlement between the Caledonian and the Edinburgh and Glasgow as to the lease of the Scottish Central, whose interests had been taken no notice of. He disclaimed any unfair or personal interest in pressing his opinion, and in conclusion said, now that the Caledonian bill will get into Parliament, my object has been that the shareholders, who confessedly have the right at once to decide upon it, and the legitimate interest in its correct decision, should come to its decision fully informed and quite untramelled.

The Report was read. It stated that—
The directors were disappointed at not being able to announce the opening of the portion between Stirling and the Junction with the Edinburgh and Glasgow. It would be opened on the 1st inst. The probable completion of the line will not much exceed the stipulated contract. The great station at Perth and several of the roadside stations have been postponed, partly fromiwant of funds. This want has also stopped the construction of the branch lines. An extension of time is to be applied for. The terms for working the Scottish Midland Junction have been settled at rates fixed by arbitration. In virtue of the working agreement with that line, the Central is bound to provide proper engines, carriages, &c. for the traffic of the Midland, the cost of which adds considerably to the expenditure of the Central, and has to be met by a present draft on its finances. The directors regret that the noble chairman has differed from the Board on the subject of the minute of the 5th of The Report was read. It stated thatfrom the Board on the subject of the minute of the 5th of February; and hope the shareholders will, by re-electing the retiring directors, approve of the general conduct of the

The statement of accounts showed the receipts at 1,096,117l. 5s. 7d.; expenditure, 991,331l. 12s. 1d.; balance, 104,785l. 13s. 6d.

The Chairman noticed the delay in the works.

Mr. Errington stated the works had been most strenuously urged forward. The works of the tunnel

through Moncrief hill had been specially carried on. Mr. Smith asked the cause of delay on the branch between Stirling and Castlecary.

Mr. BRUCK said that litigious law proceedings had

delayed them.

Mr. Errington said imputations had been thrown out that a portion had been held back purposely, and it was believed that instructions had been given to that effect; now the Board, from beginning to end, had urged on the fulfilment of the contract. Nobodv could regret more than he did that the line had not been constructed at the original estimate, but that was for a reason that neither directors, contractors nor engineers had any control over. Notwithstanding remonstrances from all the principal engineers, the Legislature passed a clause in the Railway Companies Consolidation Act, enforcing an entirely different construction of bridges, wider and flatter in the arch, which had cost more than twice the original sum estimated. Not one farthing had been paid beyond the actual increase imposed on them by that Act. He believed that were their contract accounts compared with those of other lines, they would have no reason to complain. The cost of the works was from 13,000l. to 14,000l. a mile.

Mr. Colournoun, of Clathie, inquired why the Alloa branch was to get the preference, and was to be constructed before the Crieff branch, seeing the latter was the first of the two projected.

Mr. BRUCE, of Kennet, said that the Alloa would be a much better paying branch than the Crieff branch, while by opening four miles they could come into possession of nine miles of traffic. The Alloa

branch would be proceeded with as soon as 40,000l. could be raised: he (Mr. B.) had already raised as debentures 25,000l. for that purpose.

Mr. Bruce commented on the chairman's statement and the correspondence as to the return. That document bore his signature as chairman, and had gone up to the Commissioners; the bill had since received the sanction of Standing Orders. The bill was entirely brought in by the agents of the Caledonian and Southern Companies—the solicitors of the Scottish Central did not appear, nor did they (the directors) take any part in the promotion of that bill. The bill however, could not proceed without a certain official document. The granting of that document did not involve any expression of opinion on the bill while the withholding of it would have effectually prevented the shareholders from ever giving any opinion on it at all. Negotiations were going on between the Caledonian and Edinburgh and Glasgow, and if their differences had been so settled, their (the Edinburgh and Glasgow Company's) opposition to the bill would have been withdrawn, and the shareholders of the Central would never have had it in their power to state whether they agreed to the bill or not, and after all they might have been left as an independent company, without any guarantee at all. The differences between the competing companies were so nigh settlement as now to be limited to the traffic of the half of 15 miles, regarding what should be considered as west or south traffic; but he believed, if they were not settled very soon, more money would be spent in competing for the Scottish Central than the amount involved in their differences at present.

Mr. R. ROBERTSON, a director, moved the approval

of the Report. He defended the policy of the directors, reviewed the circumstances in regard to the guarantees of the competing lines, and commented on the opinions of the Judges of the Court of Session.

Mr. SMITH asked whether the present bill of the Caledonian was a bill enforcing the agreement which it was said they had already made with the Caledonian, or whether it was merely to enable them to make

another agreement irrespective of the former one?

Mr. ROBERTSON said the bill was a permissive one, to which they were asked to assent, and contained no clause whatever relative to the original agreement.

Mr. J. Craufurd attended the meeting on behalf of a large body of shareholders, who approved of the views of the chairman. The real practical question before them was, what was the position of the shareholders in regard to the granting that certificate to the southern companies. There was a great diversity of opinion in the company as to the validity of the agreement with the Caledonian. He was quite prepared to maintain that that question had not been decided by the finding of the Court of Session. The agreement was null and void, both as regarded the obligation to lease and the obligation to go to Parliament. That agreement had not been considered since the meeting of 20th of July, and had never been touched by any subsequent resolution. The directors were entitled to refuse that application for the certificate, the giving of which enabled one of the competing companies to proceed with their bill.

Mr. Smith would support the motion for the re-election of the directors, but he begged to be distinctly understood that he did not wish to say anything with respect to the legality of the agreement. If this had been a bill enforcing the existing agreement, he should have disapproved of the directors' policy, but as the bill was in reality a permissive bill by which, after it passed, they were at liberty to approve or disapprove of the lease, he thought they should agree to

the re-election of the directors.

After some discussion by Mr. BRUCE, of Kennet, Col. M'DONALD, Mr. ORR EWING and Mr. R. ROBERT

The CHAIRMAN said he was extremely sorry that the nature of the bill had not been stated in the correspondence. He thought that the bill was to bind them to the old agreement as obligatory upon them. But even these permissive bills it was necessary to look into before expressing any opinion.

Mr. Robertson's motion was then approved of, fter which resolutions were moved and agreed to that the thanks of the company be given to the directors; that the Board be reduced to twelve, the original number, instead of fifteen, four of the retiring directors being re-appointed, namely, Messrs. Bruce Oliphant, Murray, and Stirling; that the sum of 500l. be continued as the remuneration of the directors for the ensuing year, and that James Morrison be re-appointed auditor.

Mr. CAMPBELL of Monzie's motion prohibiting the running of trains on Sunday was subsequently carried.

#### SHREWSBURY AND BIRMINGHAM RAILWAY COMPANY.

THIRD CALL of 1t. making 8t. called up on Class A, and 2t. on Class B. Shares.

and J. on Class B. Shares.

NOTICE IS HEREBY GIVEN, that in pursuance of a Resolution of the Board of Directors, the Proprietors of Class A and Class B Shares in the Shrewsbury and Birmincham Railway Company are requested to pay a CALL of B. per Share on their respective Shares, on or before the last day of May next, to any of the under-mentioned Bankers:—

der-mentioned Bankers:—

London—London Joint-Stock Bank.

The Commercial Bank.

London and Westminster Bank.

London and Westminster Bank.

Manchester—The Union Bank of Manchester.

Manchester—The Union Bank of Manchester.

Who are instructed to charge interest at the rate of 5 per cent. per annum on all payments made after the said 1st of May next, and to allow the same rate of interest on all Calls prepaid.

WM. ORMSBY GORE, Chairman, Transfers of Shares cannot be recistered until the Call has been paid.

GEO. KNOX, Secretary.

London, Feb. 24, 1848.

# LONDON, OXFORD and CHELTENHAM RAILWAY COMPANY.

RAILWAY COMPANY.

RETURN OF BALANCE OF DEPOSITS.

TO SCRIPHOLDERS.—Scripholders in the above-named Company are requested to send in their scrip on or before the 11th proximo, in order that it may be examined, and that the Islance of Deposits, after deducting expenses, may be returned to them. The scrip must be addressed to the Secretary, at this office, accompanied by a letter of the annexed form.

For the sake of security, parties are recommended to send their scrip in registered letters, writing across each certificate, "sent in for registration," with date and address, and informing the Secretary of the numbers of the scrip no sent by a separate post-letter. Receipt of the Scrip will be acknowledged, and the warrants for remayment of the Deposits on Scrip received on or before the 11th will be issued after the 18th proximo.

By order of the Committee of Management,
HENRY THOMAS HOPE, Chairman.

WYNDHAM HARDING, Secretary.

Feb. 21, 1849.

#### FORM OF LETTER TO ACCOMPANY SCRIP.

To the Committee of Management of the London, Oxford and Cheltenham Railway Company.

I hereby request that the balance of deposit money—viz., 11, 5a, per Share—due to me, after deducting expenses, may be repaid to me in explange for Scrip for 20th. Shares accompanying this letter, viz.:—

		Denoting numbers.	
Scrip for one share	From	То	

I hereby authorize you to cancel this Scrip: and I request that the warrant for the repayment of the deposit may be addressed to me as below.

Name in full ..... 

#### SOUTH DEVON RAILWAY.

At the EIGHTH HALF-YEARLY ORDINARY MEET-At the Entire HALF-TEAMY MEDIAN BELLENG of Shareholders of the South Devon Railway Company, held in conformity with the Act of Incorporation, pursuant to Advertisement, at the Royal Hotel, Plymouth, on Tuesday, the 29th of February 1848, at Noon,-

THOMAS GILL, Esq., Chairman, in the Chair,-The following Resolutions were proposed from the Chair,

and carried unanimously,-

- 1. That the Common Seal of the Company be affixed to the Register of Shareholders now on the table.
- 2. That the Report of the Directors and the Accounts now laid before the Meeting be received and adopted, and that a printed copy of the same be sent to each Shareholder.
- 3. That the following Gentlemen, who have retired from the Direction by rotation, be re-elected Directors of this Company

John Rundle, Esq. and Edward St. Aubyn, Esq.

Proposed by J. READ, Esq., duly seconded and carried unanimously,— That W. H. Evens, Esq. and N. Lockyer, Esq. be appointed

uditors of the Company for the ensuing year Moved by C. G. MILLMAN, Esq., duly seconded and carried

by acclamation,—
That the thanks of the Meeting be given to the Chairman and Directors, for their able management of the affairs of the Company. THOMAS GILL, Chairman. the Company.

## BRISTOL & EXETER RAILWAY.

At the HALF-YEARLY GENERAL MEETING of this Company, held at the White Lion Hotel, in the city of Bristol, on Thursday, the 2nd of March 1848,—

JAMES WENTWORTH BULLEB, Esq., in the chair,-

JAMES WENTWORTH BULLER, E.Sq., in the chair,—

It was unanimously resolved,—

1. That the Corporate Seal of this Company be affixed to the registers of Shares and Third Shares, now produced.

2. That the Report of the Directors, now read, be received and adopted, and that they be requested to send a copy to every registered proprietor.

3. That Lord Courtenay, Mr. William Watson, Mr. William Browne, and Mr. John Stone, be re-elected Directors of this Company. Company.

4. That Mr. Thomas Seccombe be re-elected an Auditor

4. That Mr. Thomas Seccombe be re-elected an Auditor of this Company.

5. That a dividend of 1l. 13s. 9d. per 100l. share, free of Income-tax, be declared for the half-year ending on the 31st of December last, payable to the proprietors who stood registered at the closing of the Transfer Books on the 21st of Echrono.

of February.

6. That the Directors be and they are empowered to 6. That the Directors be and they are empowered to raise or re-borrow such sum or sums of money on mortgage or otherwise, in lieu of loans paid off, or from time to time to be hereafter paid off by this Company, and to issue new debentures or other securities for the sums so raised or re-borrowed, and subject to such terms and conditions as

re-norrowed, and subject to such the rank and conditions as the Directors may determine.

7. That this Meeting fully approve and adopt the recommendation of the Directors to prepare the necessary plant for working the line independently, at the expiration of the

8. That the best thanks of the Meeting be given to the Directors for their able and efficient management of the affairs of this Company.

JAMES W. BULLER, Chairman.

The chairman having quitted the chair, it was resolved by

9. That the best thanks of this Meeting be given to James Wentworth Buller, Esq., for his able and judicious conduct in the chair.

# LONDON AND SOUTH-WESTERN

To NDON AND SOUTH-WESTERN RAILWAY.

To the Sharcholders.

Two years ago, I attended a General Meeting at Nine Elms, and then told my brother sharcholders and our Directors that all our efforts to obtain the Act for the Cornwall and Devon Central Railway would prove unavailing. I was sure of it from a knowledge of facts, which I then tried to bring before you; but I was not believed. I need scarcely remind you that the errors in your deposited plans, with some of which I was acquainted, caused the rejection of our Bill, on the first day that it was brought before the Standing Orders Committee. Yesterday I attended the Meeting at Nine Elms, but it was not easy to give expression there to facts which it is important for you to know.

I therefore take this means of informing you, that the I therefore take this means of informing you, that the mileage receipts of the railway, as well as our dividends, are diminished by the extension of our line. I am in possession of an official document, by which I find that, in 1845, we had 92½ miles of railway in operation, bringing in a gross weekly return of about 632, per mile. In 1846, the line was extended to 105 miles, and returned about 532, per mile was extended to 105 miles, and returned about 532, per mile was weekly the reduction of 107 me mile new weekly. mile per week. This reduction of 100, per mile per week may be accounted for by the circumstance of the fares being reduced; but, in 1847, we have 188 miles open, with a return of only 33t, per mile per week, being 15t, per mile less than the former year!

With these figures before us we need not be at a loss to

account for a diminution in the dividend. If such be the result of our extensions, the less we have of them the better, except for accommodating the public.

except for accommodating the public.

It is probable that some who voted yesterday for extensions westward are hardly aware that we have already spent more than a quarter of a million sterling in this fruitless game. And not only so, but that the ground which it is proposed to occupy was pronounced by the late Thomas Telford to be the most difficult district for road onstruction of any he had examined in the whole course of

#### NOTICE to FOREIGN MERCHANTS PORT OF GREAT GRIMSBY.

NOTICE to FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d, per resister tonnace.

It is expected that the New Docks will be ready to receive vessels about the end of 1819. These Docks will present the great advantage ever most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLN-SHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

# CHESTER AND HOLYHEAD

NOTICE IS HEREBY GIVEN, that the HALF-YEARLY ORDINARY MEETING of the Shareholders in the Chester and Holyhead Railway Company will be held at the Offices of the said Company, 61, Mourgate-street, Jondon, on Wednesday, the 8th day of March next, at 1 o'clock in the Aftermoon precisely.

And NOTICE IS HEREBY GIVEN, that at such Meeting I will be preposed to confirm a Declaration or Declarations of the Forfeiture of certain Shares, and to direct the Sale or other disposal thereof.

posal thereof.

And NOTICE IS HEREBY FURTHER GIVEN, that the said Meeting is specially convened for the purpose of considering the Draft of a Bill proposed to be introduced into Parliament in the present Session, initialed "A Bill to enable the Chester and Holyhead Railway Company to purchase, hire and use Steamboats, and for other purposes."

The Transfer Books will be closed from the 26th day of February with a four the Meetings.

until after the Meeting. By order, GEORGE KING, Socretary.

61. Moorgate-street, Jan. 31, 1848.

#### SUMMERLY's

#### ART-MANUFACTURES.

Art-Manufactures aim to produce in each article superior utility, which is not to be sacrificed to ornament: to select pure forms: to decorate cach article with appropriate details relating to its use, and to obtain these details as directly as possible from Nature. These principles are by no means put forward as forming an universal rule; but it is thought they may be adhered to advantaceously in most Articles of Use, and may possibly contain the germs of a style which England of the 19th century may call its cown. Several of our best Artists have already expressed their willingness to assist in this object, among them may be named—

ingness to assist in this object, among them may be named—
John Bell, Sculptor,
C. W. Cope, R.A.
T. Creswick, A.R.A.
W. Dyce, R.A.
J. R. Herbert, R.A.
J. C. Horsley,
The Art-Manufactures will be of all kinds, and executed in
metals, pottery, glass, wood, papier maché, and other materials.

Those now ready are—
A Bride's Inkstand, in Parian, with Tazza.
Designed by John Bell, price 14. 13c. and upwards. Also in Brouze,
equal in make to the old Florentine, with papier maché tray,
61. os. and upwards: in Silver, 35 Guineas.

Kissing Children, surmounting a Paper Weight, in Parian, 92; in Bronze; and also a Loving Cup.

Boy and Dolphin as a Scal or Paper-knife Handle, with gilt flax-blade, 26, 5s, and upwards.

A Beer-Jug, in Parian: emblematical of 'the Gatherine, Storing and Employment of the Hop. Designed by H. J. Townsend, price he: or with extra Figures, 39.

*** The told Medal of the Seciety of Arts was awarded to Messrs. Minton & Co., the Manufacturers, for the Union of Superior Art and Manufacture which this Jug displays.

The Infant Neptune. Designed and modelled by H. J. Townsend, 3.8 in Parian; also in Silver, and Silver Gilt, 25 Guineas and upwards.

Interest at the rate of 5 per cont, rer annum will be charged
on all Calls remaining uppaid on the said 38th of March, and the
Shares will be further subject to loss of Dividend consequent upon
non-payment, as per Extract below.

By order.

By order.

Second Extract London.

61, Moorgate-street, London, March 4, 1848.

Extract from the Tenns or Issue above referred to:—
The first Dividend will be calculated from the 1st of April, 1848, upon all shares paid up in full at that date. As regards those that may not then be paid up in full the bividend will be calculated from the next succeeding period of three months from the 1st of April upon which the same shall be paid up with Interest; that is to say:—
If paid between the 1st of April and the 3oth of June, the Dividend will be calculated from the succeeding 1st of July. If paid between the 1st of July and the 3oth of September, from the succeeding 1st of October, and so on; but this arrangement shall not preclude the Directors from putting in force at their discretion the powers of the Act with respect to forfeiture.

IN PREPARATION.

THE SEA and THE RAILWAY: their new Relations set forth in a JAUNT along the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE RAILWAY to GRIMS. BY DOCKS, by FELIX SUMMERLY. With Woodents by C.W. Cope, RA. D. Cox, Jun., T. Crewick, A.R.A., and R. Redgrave, A.R.A.

London: Longman, Brown, Green and Longmans.

#### Directors.

## James Stuart, Esq. Chairman.

Hananel De Castro, Esq. Deputy Chairman.

Ramuel Anderson, Esq. Esq. Hamilton Blair Avarne, Esq. E. Lennox Boyd, Esq. Resident, Charles Downes, Esq. Charles Graham, Esq. John Ritchie, Esq. John Ritchie, Esq. F. II. Thomson, Esq.

This Company, established by Act of Parliament, affords the most perfect security in a large paid-up Capital, and the great success which has attended it since its commencement, in 1834, ITS ANNUAL INCOME BEING UPWARDS OF 12,000.5—In 1841 the Company added a bonus of 2 per cent, per annum on the sum insured to all Policies of the Participating Class from the time they were effected.—The bonus added to Policies from March 1834 to the 31st December 1840 is a follows:—

Tom Martin 1001 p	o the old December 10.		
Bum Assured.	Time Assured.	Sum added to Policy.	
£5,000	6 years 10 Months.	£6×3 6 8	
5,000	6 years	600 0 0	
5,000	4 years	400 0 0	
E 000	0 11	000 0 0	

5,000 2 years
The premiums, nevertheless, are on the most moderate scale, and only one-half need be paid for the first five years where the insurance is for life. No Entrance Money or Charge except the Policy stamp. Every information will be afforded on application to the Rendent Director, No. 8, Waterloop-lace, Pall Mall.

SATURDAY, MARCH 11.

WEIGHT OF ENGINES IN REFERENCE TO WORKING EXPENSES.

A "PRACTICAL ENGINEER" called attention in our columns last week to a subject of great practical importance. His remarks on the tendency to increase the weight of the locomotive, and on the wear and tear of the rails under the heavy machines which are run over them at a greater average speed than was ever known be-fore, are deserving of the serious consideration of all directing Boards. They have a wide bearing on the financial prospects of railway concerns; in which, under present circumstances, all questions connected with profit claim a foremost place. In any condition of the system, indeed, it must be proper to take care that what may be called its natural limits should not be transgressed in a vain attempt to satisfy the endless cravings of the public. And it is easy to prove that there are just reasons for marking one of these limits in a right proportion between the machinery used, and the power of the material on which it is used to bear it, without more than ordinary wear and tear. It may also be noted, that where the right measure is exceeded in one direction, the means of keeping up this proportion on the other side cannot always be extended ad infinitum. It is not merely that to go on adding weight to the rail is an extremely expensive process: putting the cost out of the question, there is a size beyond which the rolling of wrought-iron bars cannot well be carried; and although new machinery may possibly be devised to perform some increased tasks of this kind, even that would of itself add a serious item to the difficulty of procuring such rails in large quantities, as well as to the price, already sufficiently enhanced by the mere weight of metal required. That such a limit must be in a great measure decisive of the maximum speed on railways, was long since pointed out by judicious engineers, when the disputes on the gauge question were at their height. The pecuniary state of railways was then flourishing enough, to all appearance; and the effect of wear and tear on profits would hardly have been thought a vital consideration: the evil insisted upon at the time was another, liable to be produced by the same cause, the importance of which can at no time be overlooked-the danger, namely, from rails getting out of order, and the impossibility of keeping them even, under the hourly shocks of heavier engines and at greater speeds than the material can well be made to bear. This consideration still subsists, of course, in all its weight; but the reasons for moderation which it ought to suggest are now reinforced by others, the probable urgency of which was little foreseen at the time when the safety objection was first brought forward. In this matter a question of working economy is directly and closely involved; and no one can now deny that in the actual condition of working railways, the introduction of economy, wherever it can be rationally applied, is the first duty of all who direct their proceedings. They have been, for some time past, laying out extensive works, and assuming great liabilities, the practical result of which, as far as the proprietors are concerned. cannot be mistaken any longer. The expense incurred upon them will not be compensated by the expected rate of profit; the price paid for completing the system, by those who have supplied the means of extending it, has been a decline in the rate of profit on its earlier portions. The gain to the public from this growth of railway communications has been and will be very great; to those who have made them they

events, will be, a drain upon the profits of the parent enterprize.

Such being the present condition of the business, there are strong grounds for insisting upon a decisive control in this particular matter, above most others. The chief stimulus to obtain greater power, is not from within the railway interest: it is, in a great degree, the wish to court public approbation that has been adding to the weight of engines, in order to get speed with greater certainty under all circumstances. On some railways, indeed, it has also been promoted by a spirit of competition; and, like every other measure, dictated by this spirit only, that we have seen tried since railways were first called into existence, it has utterly failed of its object; the decision of the questions at issue has been taken without any visible regard whatever to this item; and the only clear result of the efforts made is found in additions to the charge for locomotive power, whether thrown on capital or deducted from revenue, and in a state of the permanent way, which is not only expensive for the current time, but prophetic of heavier expenditure hereafter. But whether arising from one or the other cause, the excess is alike objectionable; and seeing all that has been done for the public, and all that has been suffered from the State, by the railway interest, it is high time that a resolute hand should be laid on the item of working charges, with a view to some compensation. The Directors, on the one hand, are bound to redeem the consequences of their policy during the last three years, by striving now to make what has been done as little of a loss to the shareholders as possible—to arrest, in short, as far as may be, the further decline of dividends. This, it is quite clear, can be done in no other way so well as by a strict and prudent reduction of the cost of working; and the sooner this is fully understood and authoritatively enforced, the better it will be for all whose property is concerned in the question. Hitherto directing bodies, with scarcely an exception, have proceeded on a totally different principle. They saw receipts constantly increasing; and were too ready to spend money on all hands, wherever a show of improvement or a new advantage to the public could be thought of, trusting that revenue would still go on, keeping pace with expense. This process, it is evident, must be discontinued altogether, if the property invested in railway works is to be preserved. With rates cut down to the lowest figure, and capitals swelled to a treble heightwith new lines traversing the country in all directions, trade looking sickly in every department, and parish rates mounting upwards by 5 per cent. at a step,—it must now be mere folly to rely on growing revenue covering a growing expenditure. If something cannot be done, and done effectually, to bring the charges into some better proportion with receipts, it will be found that the railway interest will have to pay pretty dearly for the "spirited policy" of its Directors. They must therefore, we apprehend, be justly anxious now to lighten burdens and cultivate profits; since what they have lately been doing is now proved not only to have added to the former, but to have seriously impaired the latter.

assuming great liabilities, the practical result of which, as far as the proprietors are concerned, cannot be mistaken any longer. The expense incurred upon them will not be compensated by the expected rate of profit; the price paid for completing the system, by those who have supplied the means of extending it, has been a decline in the rate of profit on its earlier portions. The gain to the public from this growth of railway communications has been and will be very great; to those who have made them they have been, and for a long time to come, at all

for good or for evil, on the question of profits. This question being now, we repeat, of all others the most important to the railway interest, it will be our duty to keep attention steadily directed to all things by which the process of working can either be made more lucrative, or may become unduly expensive. The moving power is the living element of the system -the permanent way is its material basis: the relations that connect both are at once interesting as mechanical problems, and influential in the highest degree upon the financial outcome of the enterprize. Whatever, therefore, can wisely be advanced in the way of precaution or of improvement in this department, must, at all periods, deserve the most earnest attention ;-at a period of decline it is the first point to which all practical measures for restoring or preserving the system must be imperatively directed.

#### Proceedings of Societies.

Institution of Civil Engineers .- Feb. 1 .- Second Meeting.—Mr. J. FIELD, President, in the chair.—In taking the chair for the first time since his election, the president addressed the members at considerable length, dwelling chiefly on the intimate connexion between the civil and the mechanical engineers, their dependence upon each other, and the importance of maintaining that union between the two branches of the profession that had ever been one of the main objects of the Institution. He showed that originally engineering was confined to the constructive or mechanical branches—raising heavy weights, building nuils, draining mines, and all the primitive wants of mankind. By degrees, as civilization extended, the exigencies of the world became greater, luxuries were required that could only be supplied by greater exercise of talents and skill, manufactories were multiplied, manual labour could no longer suffice, the steam-engine was generally employed, and the consequence of this increase of production was that the roads required to be amended, rivers and canals to be cut for conveying this abundance of merchandise and passengers, whilst docks and harbours required ex-tending for the reception of the shipping for the increasing export trade. These wants called into being another class of men, who with great mechanical skill combined more than ordinary theoretical knowledge and business habits to enable them to combine and use the powers of all other classes. These men were termed "civil engineers," in contradistinction to military engineers, whose education and experience fitted them solely for the art of war; and by these men Great Britain had been placed first in the list of the civilizers of mankind. As the first president elected from among the mechanical engineers, he dilated at length upon the immense strides made within the last century in the production of the me-chanic arts and public works, under the combined efforts of the two classes alluded to. He then entered more minutely upon the subject of steam navigation, to which he had principally devoted his personal attention, and gave most interesting details of the subject. He concluded, in apology for occupying so much of their time, by saying that he must be permitted to feel more than ordinary pride in being elected the president, when he looked around him and saw that the association of six young engineers, who in 1818 met occasionally to chat over mechanical subjects, had expanded in the course of twentynine years into a society consisting of upwards of 000 members, and comprising within it almost all the engineers of eminence in Great Britain. The address was vehemently applauded, and the president was requested to allow it to be printed in the minutes

of proceedings.

The discussion was then renewed upon Mr. Ransome's paper 'On the Manufacture of Artificial Stone,' the Rev. Dean of Westminster, Sir H. De la Beche, Mr. J. Phillips, Dr. Garrod, Mr. Barry, and other visitors, taking part in it with the principal members of the Institution. The remarks turned chiefly upon the chemical and physical properties of the material and the cost of its production in the moulded form as compared with that of carved stone. In its chemical properties it was shown to be at least equal in purity to the production of nature; for, on the statements of the emiment chemists who had subjected it to severe tests, it was proved to be totally insoluble in boiling water, however long immersed; and also to be capable of resisting the action of mineral acids. In this respect it differed from glass, which always yielded aportion of its alkali to the action of water. It was further stated that it had perfectly resisted the action

er stated that it had perfectly resisted the Digitized by

of frost, vases filled with water having been repeatedly frozen without their sustaining any injury. opinion of the meeting appeared to be unanimous as to the useful chemical properties of the artificial stone. Satisfactory statements were adduced as to its strength and other physical properties, and some very interesting remarks were made on the subject, comparing the substance produced artificially with certain sandstones found in this country, which, by the action of compression and heat, had attained a degree of hardness equal to quarry: the experiments of Hall and Watt, on the production of artificial stones, were also alluded to as bearing on the question. Experiments made on the strength of the artificial stone proved it to be superior to those natural stones with which it had been tested, viz., Caen, Bath York or Portland stone. Numerous specimens were exhibited to the meeting, showing its universal applicability to constructive and decorative purposes; fractured pieces were shown of every variety of texture, from the porous sandstone to the most compact granite. The price of the material was stated to be such as to render it available for all useful and ornamental purposes.

The monthly ballot then took place, when the following gentlemen were duly elected: Messrs. M. Scott, P. M. Crane, T. Cundy, G. Harrison and C. H. Wild,

as associates.

Feb. 8 .- General Meeting .- Mr. J. FIELD, Presi dent, in the chair.—The paper read was 'An Account of the recent Improvements in the Drainage and Sewage of Bristol,' by Mr. J. Green, M. Inst. C.E. appeared that for many years past great reformation had been requisite in the sewage of several parts of the city of Bristol, and more especially in the localities adjacent to the course of the river Froome, whose channel had become a large cesspool, spreading minsma and disease all around. This river formerly emptied itself into the river Avon, in the city; and then all that was brought down by the stream was carried away by the tide, but when, to form the floating harbour, the old course of the Avon was dammed across by lock-gates, and a new cut was made for the ordinary run of the stream, and no provision was made for carrying off the contents of the sewers emptying themselves into the Froome, a nuisance of the most serious character was created, and the bed of the river became permanently affect ed. Mr. Mylne some years since constructed a lateral culvert from the embouchure of the Froome, debouch ing in the new cut—this did partial good; but still the general state of the river remained unimproved; and in deference to the universal demand for sanitary and in deference to the universal definition for saintary reform, the authorities of Bristol employed Mr. Green to devise and execute plans for the improvement of the sewage of the part of the city most demanding it. He laid out comprehensive plans, but the estimate of their cost exceeded the funds at the disposal of the council. So he modified them, and the result had proved most successful. The proceedings were to bring the channel of the river into a uniform width by building side walls with gutters in the upper slopes, conveying the sewage into the stream, oblite rating the shoals, and clearing up the bed, thus bring ing it to a uniform inclination; removing the obstruc-tions caused by the pier of the Castle Mill-street bridge; lowering the height and extending the length of the river at the Castle moat, with new flood-gates, &c.; deepening the bed of the upper part of the stream, and thus making convenient arrangements for regularly cleaning out and flushing the channel, and passing off the products through Mylne's culvert into the new cut, whence it was conveyed away by the tide. The Dock Company's culvert was also cleansed and repaired at the same time, and brought again into operation. Many difficulties attended these operations, but they were skilfully combated and the result has been most complete success, and it is to be hoped that the further amelioration of which the general sewage of the city is susceptible may be extended under the control of Mr. Green, who has so ably conducted them upon a modified scale. For as the actual expenditure was not more than 4,537l., as stated in the paper, and such beneficial effects have been obtained, there can be no reason why any proper measures of sanitary reform should not be carried into effect. In the discussion which ensued. testimony was given of the satisfactory nature of the improvements made by Mr. Green at Bristol. conversation then turned upon the employment of the contents of the sewers for agricultural purposes. The system proposed by the various companies were detailed and canvassed. The lands which had been rendered fertile by the application of liquid manure, near Edinburgh and near Mansfield, were quoted as examples of the efficacy of the system; but, on the other hand, it was shown that these were not fair

be borne, and that, in general, if the distribution of the contents of the sewers were to be made by pipes and pumping, the returns would never repay outlay.

The question of the action of the various deodorizing fluids was treated of, but, as the time of breaking up the meeting arrived in the middle of the discus-

sion, it was adjourned to Feb. 15.

Feb. 15.—Mr. J. Field, President, in the chair.—
The discussion upon Mr. Green's 'Account of the Sewage of Bristol,' was renewed and continued throughout the evening, to the exclusion of all other business. The main object of the paper appeared, unfortunately, to be lost sight of by the speakers, in their anxiety to bring forward or to defend the posi-tions assumed by various companies, which had been formed at different periods for using the products of the sewers for agricultural purposes; but which in the former part of the discussion had been somewhat impugned upon commercial grounds. The statements made at this meeting were only repetitions of what has been repeatedly printed in reports, and in evidence before the sanitary commissions, and the whole even ing may have been said to have been wasted, in spite of the attempts of some of the members to bring the discussion to the real question of the best modes of laying out a system of sewage for large towns, the forms of the sewers, based upon the laws governing the conveyance of fluids, which it had been stated in some of the blue books were not understood by civil engineers, but which it was shown by some of the speakers to be a statement not consonant with facts; for that if the selected rather than the collected evidence given before the Health of Towns Commission were analysed, it would be seen that the exploded dogmas of the older writers on hydraulics had been received and adopted, rather than the formulæ of modern writers, or the actual practice of civil engineers of eminence, whose experience on such subjects was necessarily great. It was true that hither-to, in consequence of the absorbing topic of railways, eminent engineers had not devoted themselves to the subject of sewage to the extent they might have done but when the time arrived for their doing so advantageously, or the exercise of their skill was demanded by the Government or by private enterprise, they would be found quite prepared to devote themselves to the work. The subject was declared to be closed for this occasion.

Feb. 22.—Mr. J. FIELD, President, in the chair.—A paper was read by Mr. Mitchell, of Belfast, 'On Submarine Foundations; particularly the Screw-pile and Moorings. The author restricted himself almost entirely to the description of the works executed by him with the screw-pile, as that had been chiefly em ployed for supporting structures on loose sand, or mud banks wholly or partially covered by the sea, where it had been previously considered very hazardous, if not impracticable, to erect any permanent edifice; and in his narrative he scrupulously avoided all comparison with other modes of proceeding, even when they had the same object. The origin of the screwpile was the screw-mooring, which was designed for the purpose of obtaining for an especial purpose a greater holding power than was possessed by cither the ordinary pile or any of the usual mooring anchors or blocks, of however large dimensions. It was proved by experiment that if a screw with a broad spiral flange were fixed upon a spindle, and forcibly propelled by rotary motion to a certain depth into the ground, an enormous force would be required to ex-tract it by direct tension, and that the power employed must be sufficient to drag up a mass of the form of the frustrum of a cone reversed—the base being at the surface of the ground, and the section of the apex being equal to the diameter of the screw. The extent of the resisting mass must of course depend upon the natural tenacity of the soil. Even on this reasoning it must be evident that a vertical force was calculated upon; but, practically, that seldom or never occurred the angle of tension and the curve of the buoy cable again gave the moorings greater power. This was found to be correct in practice, and the application of these moorings became very extensive. An arrangement was made with the port of Newcastle-upon Tyne, by which for the sum of 2,5001., the right of fixing the moorings in the Tyne was given, and Mr. Brookes, the engineer, showed that last year, whilst in the neighbouring port damage was done to the shipping to the extent of nearly 30,000*l.*, no injury was sustained in the Tyne, entirely owing to the sound holding of Mitchell's Screw-pile Moorings. It naturally occurred to Mr. Mitchell that the same means of resistance to downward pressure might be used, and he proposed to apply it, for the foundations of light-houses, beacons and other structures, which for maritime purposes it might be desirable to place upon examples, as the locality was peculiar; the cost of the establishing was much larger than could usually sidered impracticable to place any permanent edifices.

In the year 1838, a plan for a structure of this nature for a lighthouse on the Maplin Sand, at the mouth of the Thames, was laid before the corporation of the Trinity House, supported by the opinion of James Walker, Esq., their engineer. The nine iron piles 5 in. in diameter, with screws 4 ft. in diameter, were accordingly driven 22 ft. deep into the mud, and with proper precaution they were allowed to stand for two years before any edifice was placed upon them. The lighthouse was subsequently con-structed, and, as was testified by Mr. Walker, had stood perfectly until the present time. Pending this pro-bation it was determined to erect a lighthouse to point out the entrance to the harbour of Fleetwood on Wyre, and under the advice of Capt. Denham, R.N., the screw-piles were adopted. The spot fixed on was the point of a bank of loose sand, about two miles from the shore; seven iron piles with screws of 3 ft. diameter were forced about 16 ft. into the bank, and upon them timber supports 48 ft. in vertical height were fixed to carry the house and lantern. This structure was completed in six months. and was perfectly successful, never having required any repairs to the present time. A similar lighthouse was erected near Belfast, and since then several others with a great number of beacons have been fixed in situations heretofore deemed impracticable. A project was started by the Earl of Courtown, in the year 1847, for adding to the length of the pier at the harbour of Courtown, on the coast of Wexford; which had proved an entire failure from the channel between the solid pier being continually choked up with sand. Iron piles with screws of 2 ft. diameter, to be driven from 11 ft. to 15 ft. into the sand and blue clay, were decided to be used in order to form an open jetty, through which the sand could be washed by the current—and the platform could be used for loading and discharging the shipping. The surf was so heavy on the coast that the usual barges or floating rafts could not be used for putting the piles down; ingenious plan was designed by Messrs. Mitchell for projecting a stage forward from the solid part, rigging a large grooved wheel upon the top of passing an endless rope band around it and around a pulley fixed 150 ft. back—and then by a number of men hauling upon the band, a rotary motion was communicated to the pile, which screwed it down very fast. By these means one bay of the pier, 17 ft. long, was finished daily, even in very rough weather. The entire length of the jetty was 260 ft., its breadth 18 ft., with a cross head 54 ft. long, with landing stages at each end and two lines of railway throughout. The entire cost of this extension was 4,150*l.*, or about 47*l*. 10s. per current lineal yard, an extremely small sum compared with the cost of stone piers; but even that was more than the expense would be now, as the system of work is better understood and materials are now cheaper. Ample testimony was borne by engineers of eminence, and men whose maritime ex perience gave weight to their opinion, on the superi-ority of Mitchell's Screw-piles and Moorings over every other system for holding buoys, or for supporting beacons and lighthouses; and their use was suggested for the foundation of bridges, viaducts and numerous railway and other works, as well as a multiplicity of applications which had not hitherto been thought of. The discussion was adjourned.

Feb. 29.—Mr. J. FIELD in the chair.—The proceedings were commenced by reading communications relative to Mitchell's Screw Piles and Moorings from several engineers and naval officers, who were preseveral engineers and naval otheers, who were prevented by absence from giving their personal testimony in favour of what they termed "this most useful invention." Mr. W. A. Brooks gave an account of the method of laying down the moorings at Newcastle-on-Tyne, under his directions. A heavy chain formed of 3½ inch round iron in links of 3 feet long each, was stretched along the bed of the river, in the direction of the current. To this chain, beneath each tier, was attached a 21 inch studded mooring chain, fixed to the head of a screw mooring; another screw being also placed beneath each tier and driven down between 10 ft. and 20 ft. into the clay, and some-times full a foot into the shale rock. The screws were 4 ft. in diameter and were placed in depths varying from 15 ft. to 24 ft. at low water spring They were screwed down to the depth of 15 ft. in an hour and a half, and sometimes 21 ft. in two hours. Each mooring screw was intended to have borne the strain of four heavy ships; but during the last winter, the port was so crowded that more than double the proper number of vessels were moored upon each, and yet there were no signs of weakness; and whilst nearly 30,000l. of damage was done at Sunderland, during a heavy storm, no casualtics occurred at Newcastle, which Mr. Brooks stated was entirely owing to the sound holding of the screw moorings. He argued therefore that the small sum of 2,500l. paid by the Harbour Commission of New-

Digitized by GOGSIC

castle for the right to put down these moorings was a very wise expenditure. Mr. T. Smith, Pilot Master of the port of Shields, corroborated Mr. Brooks's state-Capt. Washington, R.N., had in the course of his surveying duties, seen the screw moorings in almost every position and had heard them universally eulogized as being the best and safest moorings hitherto known. He strongly recommended their eulogized as being the best and sarest moorings hitherto known. He strongly recommended their employment. He had also examined carefully the screw pile lighthouses, and had every reason to be satisfied with them, as affording a means of placing lighthouses and beacons where they were before impracticable, and enabling floating lights to be generally superseded by fixed lights, which latter he proved from documentary evidence to be one-third less annual cost than the former—and certainly more useful to sailors. For in spite of all certainly more useful to sailors. For in spite of all the care, attention and even lavish expenditure of the Trinity Board, to moor the lightships securely, they did go adrift just at the time they were most required. He therefore advocated fixed lights in every situation where a foundation could be obtained; and he believed with the screw pile there were scarcely any situations where this could not be accomplished. Messrs. Walker, Cubitt, Rennie, Murray, Moorsom, Mitchell, Scott Russell and others took part in the succeeding discussion, adducing instances of the efficiency of the moorings and the piles, and of their applicability to numerous engineering works, for which they expressed their intention of employing them. It was stated that the high price hitherto charged for the right of using them, had somewhat retarded their general introduction; but it was explained that Mr. Mitchell had feared to entrust to others the fixing of them, lest a failure might ensue before his system was perfected, which however he now thought it was. Now, however, as the right of granting licences for their use was transferred to men of business who had purchased it, there was no doubt of their being brought within the reach of every application.

The paper read was entitled 'Remarks on the The paper read was entitled 'Remarks on the Formation of the Entrances to Docks, situated upon a Tide-way,' by Mr. J. B. Redman. After illustrating the subject by the example of the position and direction of all the principal dock entrances on the borders of the Thames in the port of London, showing that the variation in the opinions and practice of environment had been removed. of engineers had been very great, it detailed the ordinary methods of docking and undocking ships, and the precautions to be taken in constructing entrances which should be best adapted for facilitating these operations; and although it was difficult to lay down any positive rules upon the subject, as the engineer must in almost every case be guided by local circumstances, in all ordinary cases the following general rules were recommended. For graving docks, an angle of about 45 degrees, pointing up the stream; for wet docks, an angle of about 60 degrees, in the same direction; and a right angle with the stream for building ships. These, it was believed, would be generally found the most available. The discussion was adjourned.

March 7.-Mr. J. FIELD, President, in the chair —The discussion upon Mr. Redman's paper, 'On Dock Entrances,' occupied the entire evening. The speakers examined the merits and defects of the several dock entrances in the Thames and in other situations, and the general result appeared to be situations, and the general result appeared to be, that although the engineer must be guided by local circumstances, yet that in situations where the river was sufficiently wide, and the position of the land permitted an acute angle, pointing up the stream was the best for docking vessels with the flood; that the reverse would be best for undocking ships. In ordinary widths of rivers, therefore, the end would be attained by forming a bay sufficiently deep to render the water still in front of the dock, the wing wall being so much splayed as virtually to give the directions up and down the stream as circumstances required. The peculiar positions of the docks at Ipswich, by Mr. Palmer, the alterations of the Duke's Dock at Liverpool, by Mr. Cubitt, and other cases, were sustained in support of the arguments of the speakers, who all united in praising the industry and talent of Mr. Redman in bringing forward the subject in the complete manner he had done.

Mr. Chubb, St. Paul's Churchyard, exhibited an iron box for the transmission of money, bullion, &c. on railways. A wrought-iron box, lined throughout with hard steel plates, is locked down at the terminus to a strong iron plate in the guard's carriage. The key of this lock, and also the key by which access can alone be obtained to the interior, is kept at the principal terminus by the officer who has charge of the cash. Each station-master is provided with a key which opens a small lid at the top; when he has money to send, he unlocks the lid, places his bag of money or parcel in an open drum underneath, moves a handle which turns the drum, and the cash is dropped inside. Before he is able to take out his key, he must move the drum back and see that the money is gone. It will be observed that he cannot leave the lid unlocked. When the box arrives at the terminus it is unlocked from the frame, taken into the office and placed on a similar frame there. The cash-keeper only can with his key then get access to the money.

At the monthly ballot, the following gentlemen were elected:—W. Baker, J. England, S. Clegg, jun., J. Elliott and H. Fowler, as members; E. Adams, E. Hughes, G. W. Harris, S. W. Leach, A. Drysdale, R. Rawlinson, F. Ransome and G. H. Saunders, as associates.

Engineers' Report for the Meeting, Feb. 25 (p. 166).

Engineers' Report for the Meeting, Feb. 25 (p. 166). In the last half-yearly Report we stated that the line from Carlisle to Beattock was ready for the examination of the Government Inspector. This portion of the line was opened to the public on the 10th of September last, and the traffic has since been carried forward with regularity, and without any accident whatever. The remainder of the main line was opened to the public on the 15th inst., which is earlier than was originally contemplated. 113 miles of new railway have been constructed, and 21 miles of the Wishaw and Coltness and Garnkirk Railways have been re-laid, and the gauge altered, making in all 134 miles of railway which are now in actual operation. This comprises a direct unbroken communication from Carlisle to Glasgow and to Edinburgh. The masonry of the bridges and culverts, and the slopes of the excavations and embankments, have stood the test of a the excavations and embankments, have stood the test of a severe winter without damage, and the road is in an efficient working state. There is no work of any importance remain-ing to be executed, except about 10,000 cubic yards of rock to be removed at the Beattock summit. This work will be speedily completed with favourable weather. The finishing of the slopes and road approaches will be best performed as the summer advances. In some few instances the parapets the summer advances. In some few instances the parapets of the bridges have been delayed by the frost. This work will now be immediately resumed. The joint station at Carlisle has been used for the traffic since September last. The station-houses at Rockliffe, Gretna, Kirkpatrick, Ecclefechan, Lockerbie and Beattock, have been for some time fechan, Lockerble and Beattock, have been for some time used by the public, and so far as the accommodation for passengers is concerned, are complete. The works of the stations on the line north of Beattock, together with those at the Edinburgh station, have been suspended during the winter, and temporary accommodation has been provided for the passenger traffic. It is now, however, desirable to proceed with the permanent stations, and in order to accommodate the merchandise and mineral traffic, it is necessary to construct warehouses and to law down sidings a various to construct warehouses, and to lay down sidings at various points; and until this work is performed, it is evident the resources of the district cannot be developed, or any approximation to an extent of traffic can be ascertained.

Castlecary Branch.—The works upon this branch are far advanced; and the only point of real importance remaining to be completed is the bridge under the Edinburgh and to be completed is the bridge under the Edinburgh and Glasgow which is required to connect the Caledonian with the Scottish Central. The construction of this branch has been hitherto retarded by law proceedings on the part of the Edinburgh and Glasgow. The contractor is now at liberty to proceed, and no time will be lost in its completion. Clysicsdale Junction.—Upon this line the excavations have not been pressed forward during the winter, as the material for the embankments is not of a favourable description to the removed in a wet season. It was also considered described

be removed in a wet season. It was also considered desirable be removed in a wet season. It was also considered desirable to substitute an open cutting at one point in place of a tunnel, as at first contemplated. As no satisfactory arrangement could be made with the occupiers of the land, it has been necessary to apply to Parliament this session for powers to execute the work. A considerable increase of expenditure beyond that to which the contractor has been lately limited will be required to prosecute these works with vigour in the spring. The masonry of the ordinary road and occupation bridges is well advanced. The piers of the viaduct over the river Coller are rised to the arringing level. occupation bridges is well advanced. The piers of the via-duct over the river Calder are raised to the springing level, the centres are erected, and the masonry of the arches commenced. More then one-half of the permanent way is

Garnkirk Extension to the Glasgow Station at Buchananstreet.—The driftways for the tunnel have been for some time driven throughout, and about one-fourth of the tunnel has been opened out the full size, and the arch completed. has been opened out the full size, and the arch completed. The open cutting from the station to the crossing of the Edinburgh and Glasgow is well forward, but has been suspended until an award could be obtained under the arbitration clause of the Edinburgh and Glasgow and the Forth and Clyde Canal Company.

Working Stock.—Thirty-five engines have been delivered on the line, and eighty carriages, which are sufficient for the present traffic. Arrangements are made for an increased number to meet the summer traffic.

J. LOCKE.

J. ERRINGTON.

### SCOTTISH CENTRAL

Engineers' Report for the Meeting, Feb. 29 (p. 182).

The works of the Central line have been carried forward during the winter with great energy, and have therefore not been retarded by the unusually severe season to the extent which might have been anticipated. The original quantity of excavation had been reduced from 3,500,000 cubic yards to 500,000 at the date of last Report, and this amount has now been diminished to about 50,000, which has to be re-

moved from different points, as described in the following general Report on each district:—

general Report on each district:—
District of Larbert.—The excavations, masonry and permanent way in this district have been finished for some time; but the connexion with the Edinburgh and Glasgow was retarded by the severe frost, during which the points and crossings could not be laid in, nor the sidings completed. This work, however, has recently been satisfactorily executed.

cuted.

Stirling.—The work of all descriptions upon this district, in continuation of the Larbert district up to Stirling, was finished some time since, and is now, together with the Larbert district, about to be opened to the public. Beyond Stirling there still remain about 18,000 cubic yards to be

Stirling there still remain about 18,000 cubic yards to be placed in embankment, and half-a-mile of permanent way to be laid. The masonry is entirely finished, with the exception of the parapets of the turnpike-road bridge at Stirling.

Dunblane.—Very considerable progress has been made within the last half-year on this district; for out of 160,000 cubic yards remaining to excavate at the last statement, there now only remain 15,000 cubic yards, which is chiefly upon the slopes. All the river and public road bridges are completed, with the exception of the parapets; one occupation bridge remains to be built. The short tunnels are finished except the faces, which are well forward. There still remain 2½ miles of permanent way to be laid.

Auchterarder.—10,000 cubic yards of earthwork remain

still remain 24 miles of permanent way to be laid.

Auchterarder.—10,400 cubic yards of earthwork remain

still to be removed from the slopes, but the excavations required for the railway itself are completed. The vinduct at
Kincardine is finished, with the exception of the parapets.

The bridge over the Allan, at Blackford, is also nearly complete; one occupation bridge, recently ordered, has still to

be built, and about 3 miles of permanent way remain to be

laid.

Perth.—There was so much delay, from the second appli-cation to l'arliament, in the works north of the tunnel, that 110,000 cubic yards remained to excavate last half-year—of Perthe 110,000 cubic yards remained to excavate last half-year—of this quantity only 11,000 yards now remain to be removed. The tunnel through Moncrieffe Hill is now excavated to the full size throughout; the arching, where necessary, is nearly completed; and the permanent rails for both lines have been laid. The entrances have still to be built, but will numediately be commenced, now that the excavations admit of this work being performed. The masonry of the ordinary bridges is finished, with the exception of an occupation bridge and three bridges adjacent to the station at Perth. There remain about 23 miles of the permanent rails to be There remain about 23 miles of the permanent rails to be

Upon considering the above details, you will observe that, while the amount of earthwork is reduced to an inconsiderable quantity, and the progress of the tunnel has been highly satisfactory for so great a work, there still remains a considerable portion of the permanent way to be completed; and this is a description of work so entirely dependent upon favourable weather, that it is not possible to fix with any certainty the time of completion. It does not, however, seem probable that any contingency of weather can extend the time of opening beyond the month of May.

Stations.—The Perth station, together with the rondside stations, have been suspended during the winter at your desire, in order to confine our expenditure to the essential works of the main line; but as directions have been given Upon considering the above details, you will observe that,

works of the main line; but as directions have been given for these works to be resumed, no effort will be spared to have a sufficient portion complete for the opening of the line. The Stirling station is already prepared for the pas-

Working Stock.—A sufficient proportion of engines, carriages and waggons have been already delivered for working the passenger traffic between Stirling and the Edinburgh and Glasgow, and a farther supply may now be considered as secured sufficient for the traffic on the general opening of the line.

J. LOCKE.
J. E. ERRINGTON. Edinburgh, Feb. 26.

#### SCOTTISH MIDLAND.

Engineers' Report for the Meeting, Feb. 25 (p. 167).

The work now remaining to be completed is not considerable The following are the principal points which are still unfinished: In the district between Perth and the Tay the total quantity of earthwork to be executed, including road approaches, does not exceed 70,000 cubic yards, and there is not more than 20,000 cubic yards to be removed from any one point. The masonry of the ordinary road and occupation bridges is nearly complete. The bridge over the Shochie is up to the springing level, and at the Ordie the arches are turned. The permanent way on this district still requires about 25,000 cubic yards of ballast to complete it. The progress of the bridge over the Tay during the half-year has been rapid, notwithstanding the floods. Both the abutments and two of the piers are built up to the springing level, and the other two piers are above the cutwater. The timber framing for the arches is also in a forward state. In the district from the Tay to Forfar the works are comparatively light; and the heaviest work now remaining to be performed is the Den-head embankment, for which about 20,000 cubic yards are necessary. The other works do not require, in all, more than 50 000 cubic yards to be removed, but this is distributed in small prefitors over the middle in the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of th distributed in small portions over the whole district, and can easily be completed by the required time. There are seven of the ordinary road and occupation bridges to complete; but these bridges are in various stages of forwardness plete; but these bridges are in various stages of forwardness, and with open weather may be finished within the prescribed time. The permanent way requires 35,000 cubic yards of ballast to complete, and the rails are not yet laid for nearly one-half the whole length of railway. In consequence of the severe weather and continued frost during the winter, the progress of the works has been somewhat retarued, manager of the works has been somewhat retarued, manager of the permanent rails. Increased exertion is now requisite, and will be made, in order to secure the opening of the Midland at the same time as the Scottish J. Locke.

J. E. Errington.

#### LANCASHIRE AND YORKSHIRE

Engineer's Report for the Meeting, March 1 (p. 167).

The following is the state of progress of the various new lines of railway in connexion with the company:—

Ashton Branch.—Since my last Report very little has been done towards widening out this branch for two lines of way, except the removal of such earthwork from the sides as was wanted to widen the embankment at Miles Platting.

Mumps Extension of the Oldham Branch.—This line was opened for passengers on the 1st of November last. Accommodation for goods traffic will be provided in a few weeks; the other works are completed, with the exception of the retaining walls at the Werneth station, and trimming and

retaining walls at the Werneth station, and trimming and solling the slopes between the tunnels.

Extension of the Heywood Branch to Bury.—With the exception of 6,000 yards in the large cutting east of the Roach, the whole of the earthwork is completed between Heywood and the site of the station at Bury. All the masonry, except two small bridges, is completed, and not more than a mile of permanent way remains to be laid; so that this branch, together with the small connecting link at Blue Pits, may be opened in April next. The station at Bury (not yet commenced) will have to be of a temporary kind.

Buryley, Buryley, Lipon this line four-fifths of the earth.

Burnley Branch.—Upon this line four-fifths of the earthwork and three-fourths of the masonry of the bridges and tunnels are completed, and the line may be opened about August next.

tunnels are completed, and the line may be opened about August next.

Arduck Branch.—Scarcely any progress has been made with the earthwork on this line since my last Report. The wrought-iron tubular girders for passing the Medlock and the Ashton Canal are on the ground, and nearly all the piers of the Ardwick viaduct are built, up to the springing of the arches, and eight of the arches are turned.

Wakenedd, Pontefract and Gooke—The works and stations upon the main line of this railway—that is, between Wakefield and Goole—are sufficiently advanced to meet this part of the line to be opened in the course of a month. The Askern branch will be ready for opening about a month later; but the delay that has arisen on the northern end of the Methley branch, will render it difficult to complete that branch in less than nine months from the present time, even if the work be immediately proceeded with.

Liverpool and Burg.—The works on this line, with the exception of those at Wigan, and the borough gaol in Liverpool, are far advanced towards completion. Both the tunnels are nearly finished, and the viaducts at Darcy Lever and over the canal at Bolton are in a forward state. By vigorously proceeding as soon as the weather is favourable, it is possible that the works, both at Wigan and Liverpool, might be so far advanced as to admit of the line being opened through to the borough gaol in Liverpool (with temporary station accommodation at that place) by July next.

Hudderstield and Sheffield.—Three-fourths of the earthwork on the line is removed, and the Penistone, Denby Dale and Lockwood viaducts are far advanced towards completion. The following is the state of progress with the tunnels:—

Whole Length. Length completed.

Wellhouse tunnel. .... 440 yards.

Wellhouse tunnel Cumberworth ditto . Thurstonland ditto Robin Hood ditto	890 1,640 220	ards ,, ,,	418 590 820	yards.
Paddock ditto	200	**		**
	3,390 y	ards	1,843	yards.

The Paddock viaduct is not yet commenced, as the arbitrator's award, without which possession of the land cannot be obtained, is not yet sent in. About one-half of the per-manent way is laid, and about six small bridges yet remain to be completed.

Holmfirth Branch.—The bridges and earthwork on the first mile of this branch are in a forward state, but little has been done on the remainder.

West Riding Union—Cleckheaton Contract.—Out of 500,000

West Riding Union—Cleckhadon Contract.—Out of 500,000 cubic yards of earthwork on this contract, 325,000 yards have been removed; at least two-thirds of the masonry and about one-third of the tunnel, which is only 65 yards long, are completed, and a portion of the permanent way is laid.

Mirfield Contract.—One-half of the earthwork and two-thirds of the masonry are completed on this branch, and a portion of the permanent way is laid. Both this and the Cleckheaton contract are in such a state of forwardness as to admit of their being opened for traffic before Midsummer, thereby extending the railway communication of this com-

to admit of their being opened for traffic before Midsummer, thereby extending the railway communication of this company to Low Moor, which is within three miles of Bradford. Bradford Contract.— Upwards of 40,000 cubic yards of earthwork have been removed on this contract, and nearly all the shafts (of which there are eight) of the Bowling tunnel are sunk, and 300 yards of the driftways driven.

Halface Contract.—About 260,000 yards, or one-fourth of the whole of the earthwork on this contract, have been removed. Three out of the four tunnels are commenced, most of the shafts are sunk, and some of the driftways driven.

moved. Three out of the four tunnels are commenced, most of the shafts are sunk, and some of the driftways driven; several of the bridges are built, and some of the other masonry begun and partly executed.

Manchester and Southport.—The only part of this line in progress is about three miles at Wikan, which is in substitution of about an equal length of the Liverpool and Bury, by which a better station will be secured in the town of Wikan, and a saving of expenditure effected.

Oltham Alliance.—The works on this line are not yet commenced.

Manchester. Feb. 21.

#### GREAT WESTERN.

Engineer's Report for the Meeting, Feb. 17 (p. 131).

Engineer's Report for the Meeting, Feb. 17 (p. 131). During the last six months the progress made in the several works under construction by this company, or in which this company is clearly interested, has not been considerable. Motives of prudence have led to a systematic reduction of expenditure in some cases, and accidental causes have led to a suspension of work in others. The Berks and Innts to Hungerford, however, which was already far advanced, has been completed and opened for traffic, and wants only the arrangement of the merchandise stations to be in full operation. These will be completed as quickly as the wants of the public can be ascertained, at the several stations, and the proper localities determined upon. The principal works upon the Basingstoke branch are also completed, and the construction of the permanent way has been set in the town of line are not yet J. HAWKSHAW.

\end{arrangement support works upon the Basingstoke branch are also completed, and the construction of the permanent way has been commenced, so that this line may be opened in the spring. The arrangements for the station at Basingstoke, and the junction or communication with the South-Western at the place, are not yet made; but immediate steps are about to be taken to settle these points. Upon the Oxford and Rugby the works have been entirely suspended. In my last half-yearly Report, arrangements were stated to be in progress for taking the works entirely out of the hands of the original contractor, with the view of proceeding more vigorously this spring. Notwithstanding some difficulties and considerable delays, these arrangements were effected. The whole of the work executed has been measured up, valued, and paid for, and the contractor released from his

contract. New contracts have been entered into; and now, with the whole of the best season of the year before us, the works are being resumed with every prospect of their proceeding rapidly. These observations refer particularly to that portion of the line extending from Oxford to Banbury, and thence to the junction with the Birmingham and Oxford. Several portions of this line are in a forward state; and I am in communication with the Inspector General, as to the mode in which the additional rails are to be laid, and expect his final report in a few days. We shall then immediately commence our preparations for the permanent way, which have been delayed only for that report. Upon the Monmouth and Hereford no work has been done. Upon the Wilts, Somerset and Weymouth—from motives of prudence before referred to—the works have been proceeded with at a more moderate pace than usual, but without actually stopping any, and allowing of the greatest activity at those points only were the works were heaviest. Notwithstanding these delays, the line will be ready for opening to Westbury, near Frome, and Warminster—to Trowbridge and Bradford, by the summer. Upon the South Wales the same general causes have operated to create some delay; but upon the whole the progress has not been so much retarded as might have been expected, considering the reduction which for a time occurred in the expenditure on works. The whole is now proceeding, if not as rapidly as it might, at least steadily, and so as to forward in about an equal degree the different parts of the line between Gloucester and Swansea, and Carmarthen. The Oxford, Worcester and Wolverhampton and the Birmingham and Oxford, Junction are also now proceeding in a manner which, under the circumstances, may be considered satisfactory—though in both instances some delays more or less serious have occurred. I trust that during the present summer the principal part of all these works will be completed. L. K. Brunel.

18, Duke-street, Westminster, Feb. 14.

#### SOUTH WALES.

Engineer's Report for the Meeting, Feb. 23 (p. 155).

It is almost unnecessary that I should mention that during It is almost unnecessary that I should mention that during the last half-year circumstances have combined materially to retard the general progress of the works. In order to prevent so large a demand for money as would necessarily have resulted from the vigorous prosecution of the works under the arrangements made early in the last year, it has prevent so large a demand for money as would necessarily have resulted from the vigorous prosecution of the works under the arrangements made early in the last year, it has been my duty, not merely to avoid pressing the contractors to proceed at the rates required by the contracts with those works actually commenced, but to postpone the commencement of others. Every endeavour has been made to effect the object in view, namely, the reduction of expenditure, with the least possible derangement of the equal and proportionate advance of the different portions; but in a line of such extent, embracing so many works of such very various character, this has been possible only to a very limited extent; and some parts will therefore unavoidably be much more in arrear than others, or some will be completed before they can be rendered available. Generally speaking, however, those works upon which there might be supposed to be most chance of contingencies or unforeseen difficulties have been proceeded with; and sufficiently so to render their completion certain, and to remove any doubts. Of the Swansea tunnel about one-third has been completed, and although the progress has been slow, the rate may be much increased, and no new difficulties or expenses can be now anticipated. The heavy works between Neath and Swansea are also in a forward state. The Newport tunnel and adjoining works, which may be considered desirable, and tho swansea in the following spring. East of Chepstow and Cardiff are in a state to allow of being completed, and of the Gloucester and Dean Forest; under present arrangements it is probable that the works may be completed in the course of the summer of 1849. Beyond Swansea, to Llanelly, the works are in such a state that they might be completed at the same time as those from Cardiff to Swansea. Beyond Llanelly, but more particularly beyond Carmarthen, more delay has resulted from the causes before referred to. The works are, however, in progress to a short distance beyond the junction with the Haverfordwe west branch.

18, Duke-street, Westminster, Feb. 22. L K. BRUNEL.

#### Brogress of Works.

CHESTER AND HOLYHEAD. - March 6. - The tubular bridge over the Conway Straits was floated to its posibridge over the conway straits was noated to its posi-tion between the abutments. The tube, which is 400 ft. clear span by 15 ft. broad, and 20 ft. arch at abutments, and 25 ft. at centre, was supported by two sets of pontoons, each composed of three compart-ments, each having a valve in the bottom for admitting the water, and pumps for clearing it out. The tube, which at first was resting on part of the platform on which it was built, was raised 8 in. by pumping the water out of the pontoons, which had been nig the water out of the pontoons, which had been placed under it. At about 11 (the tide still on the flow) the whole fabric, says the Liverpool Mercury, was got under weigh, and slowly drawn down by means of hawsers attached to various convenient places, and worked by capstans, until it arrived within a few feet of its proper position at the north side, and in its right position at the south, or Conway side, when we inter to the rentense of the side trucking when, owing to the pontoons on that side touching the bottom, it could be got no further, and the tide receding, the tube was left unsupported on two temporary stone-beds, built inside the abutments. With

this single, and indeed trivial exception, the whole operation was performed in a most satisfactory manner, and the tube will doubtless be in its place in the course of the week. A great number of professional gentlemen were there to witness the fixing of the bridge. The train left for Chester at 1 30 p.m.

#### Acciliontd.

EDINBURGH AND GLASGOW .- Feb. 28. - Another landslip took place at the northern end of the viaduct partial detention of some of the early trains.

Lancashire and Yorkshire.—March 7.—Seven

out of thirteen brick arches, part of a viaduct erecting on the north-eastern side of Manchester, to connect the lines with the London and North-Western line at Ardwick, gave way. Eight of the thirteen arches had been erected before the commencement of the winter, and had stood till now, with the centres in them; the centres, however, being required for a continuous portion of the viaduct, of which the abutments had been run up, a number of men had been set to build in the spandrills at the top, between the arches, and to throw on the ballast for the purpose of consolidating the work. They had proceeded with this work, and had taken out the centres from six arches, commencing at a heavy stone abutment (intended for a bridge over Ashton old road), and running eastwards towards Ardwick. They then, about 10 a.m., removed the centres from the seventh or central arch, and had not completed doing so more than a few moments before the arch spring up-wards from the centre and fell. The whole of the six arches northward, from which the centres had been taken, also fell immediately afterwards, leaving only the stone abutment of the intended bridge over the road standing, and the six arches at the other end, from under which the centres had not been taken. The contractors are Messrs. Noell, Heming-way & Co., and the loss to them, supposing them to be responsible for the whole, will be about 1,0000.

The whole of the workmen at the time were standing on the other arches, from which the centerings had not been removed. They all escaped. The strength of the masonry was within half a brick of that usually

adopted for arches of the same kind.

London and North-Western.—March 2.—There is an iron bridge to let Government boats pass through at Weedon, for the service of the barracks and miliat weedon, for the service of the barracks and military prison. This bridge was open and the proper signal given, but owing to the inattention of the guard no notice was taken of the signal, and the engine fell into the middle of the boat, which instantly sank. No lives were lost.—March 7.—The mail from London, due at Manchester a little before 5 a.m., did not arrive till nearly 8, and then only the letter bags and passengers were brought forward, by another train. An obstruction of the line near Basford sta-tion, 4 miles south of Crewe, was caused by a luggage train from Liverpool, bearing some immense iron girders for a bridge, having broken down there before the mail train came down, and these girders falling crossways upon the line, blocked up both pair of rails so effectually, that all the trains coming in either direction had to halt and exchange passengers.

At the station in Manchester, our correspondent was told that no injury to life or limb resulted.

NORTH UNION.—Feb. 29.—About 10 p.m. an embankment between the Euxton and Coppul stations, about 8 miles from Preston, gave way. Before 11 o'clock one end of the wooden bridge had sunk considerably, and the embankment adjoining suddenly fell in to the depth of about 20 ft., carrying with it both lines.

### Law Entelligence.

COURT, in re the Lancaster and Cartisle, Mr. Rolt appeared in support of a petition praying that the costs of a mortgage upon lands taken by the company might be paid to them. The purchase money had been paid into court in the usual way, and, when had been paid into court in the usual way, and, when paid out, a mortgage was paid off on other parts of the lands not taken by the company, which were to be settled to the same uses. The 157th clause of the Companies' Clauses Consolidation Act provided that the costs incident to the payment out of court and investment in other lands should be paid by the company .- It was contended that the costs now asked for were extra and unusual, and the company were not bound to pay them. — The Vice-Chancellor thought that as the petitioners had themselves asked that the mortgagees might be made parties, the company were not bound to pay the costs; the order to be made as of a former day.—March 4.—In the same Court, ex parte the South-Western, a petition

on the purchase of a house in Lambeth. The company had paid into court a sum of 2351. as the value of the interest of Mrs. Stevens, a lessee of the house, to obtain interim possession. They afterwards settled with Mrs. Stevens by arbitration. Mrs. Stevens now insisted upon costs out of the 2351 which the company wanted to have repaid without any deduction; the question turned on the 80th and 85th sections of the Lands Clauses Consolidation Act .- His Honour referred it to the Master to ascertain and tax such costs, if any, as were still due to Mrs. Stevens.

MORTGAGE.—March 4.— In the same Court, ex parte Franklyn's Estate in re the Great Northern, a petition was preferred by a landowner whose property had been taken by the company. The purchase-money, 4,000*l*., was paid into court. The petitioner had since applied to the Court to have the money laid out upon mortgage under the same Act which authorized temporary investments on real security; but the Act contains no detailed provisions for this. A particular mortgage had been proposed, and a reference was directed to the Master, to inquire whether that security was eligible, and if so, he was to approve of some person to be a mortgagee, and of a proper conveyance. The Master reported against the eligibility of a mortgage security, and the present petition was an appeal from the Court, on the ground that he ought to have specifi-cally directed his attention to the security offered, and not have reported generally that a mortgage security was not an eligible investment.—His Honour felt he ought to decline dissenting from the Master's The costs of the petitioner of the original decision. petition and of the references must be paid to him, and each party must pay his own costs of the present application.

March 3.—In the same Court, in re Rigby v. the Great Western, his Honour stated the manner in which he considered the case settled by the Master, for the opinion of a court of law (as to the legal rights of the lessee of the refreshment-rooms at the Swindon station), should be modified, so as to carry out the views of the Lord Chancellor, as expressed when the case was before him upon appeal.

March 1.—In the BANKRUPTCY COURT, in re Burton v. the London and North-Western, the assignees sought to sanction certain resolutions for the settling a dispute between them and the London and North-Western. The bankrupt had taken the contracts with the company to the amount of 200,000L, and by not completing the works had forfeited not only all the work done, but the plant, material, &c., on the line. It had been agreed to refer the matter to arbitration as to the value of the work done, and that the plant, &c., should be purchased by the company, and no legal proceedings be taken on either side. Creditors legal proceedings be taken on either side. Creditors to the amount of 9,000l. had assented to this, but as that was not one-third, it was necessary to obtain his Honour's sanction .- His Honour sanctioned the resolutions, and the order was accordingly drawn up. The bankrupt subsequently passed his last examination.

March 2 .- On the WESTERN CIRCUIT, in re Turner v. Mears, the action was for false imprisonment. The plaintiff, with two friends, had broken the by laws of the London and South Western. One of the party, whilst riding in one of the trains on the 11th of September last, had fired a gun out of the carriage in which the plaintiff was riding. A lamp and window were also broken. The defendant was the window were also broken. The defendant was the superintendent of the Gosport branch, and had arrested the plaintiff and his friend and put them in the station-house. The plaintiff denied that he had in any way infringed the by-laws.—The jury returned a verdict for the plaintiff—damages one

March 7.—At the Greenwich Police Court, a man named Rowe, lately a repairer of carriages on the South-Eastern line, was fully committed, with accomplices, for robbing the company of monies forwarded for the wages of the men at the Ramsgate terminus.

The COURT OF ALDERMEN have decided not to put the bond of Mr. Field, jun., stockbroker, in force, respecting some allegations made against him in the sale of shares in the Wexford, Waterford and Valentia (see ante, p. 166).

IRON TRADE .- Glasgow, March 3 .- The late Continental disturbances are reported to have had an influence on the pig-iron trade; and as the value of Consols are a criterion for regulating general prices, and seeing that a reduction in them has taken place, almost instantaneously, of 10 per cent., it is not a matter of wonder that pig-iron has suffered a corresponding depression. Throughout the week prices have declined from 50s. to 47s. 6d. per ton for mixed was presented on a question as to the costs to be paid Nos. Improvements in prices may be shortly ex-

pected .- The Birmingham Gazette reports the district iron trade as being dull. Orders are meagre, and the recent events in France have helped to continue the prevalent slackness of work .--- Dowlais Iron-Works, Bristol, March 7.—The despondency from the anti-cipated non-renewal of the lease of the iron-works, collieries and mines, by the Marquis of Bute, to Sir J. Guest and the Dowlais Company, by which 30,000 persons, including the men employed on them, their wives and families, would have been thrown out of employment, was in great measure removed by a letter received by Mr. Hutchins, managing partner, containing instructions for the suspension of the removal of the plant, &c., and directing the managers to proceed with the works as usual until the 12th of May, stating, it is understood, that if the lease be not renewed by that time, an agreement had been entered into for the allowance of a reasonable time for the removal of all the fixtures, &c., according to the stipulations.

[Secretaries of companies are requested to forward notices of Meet-ings, and closing of Contracts, as early as possible.]

MEETINGS.

TRANSFER BOOKS CLOSED.

EDINBURGH AND GLASGOW.—From March 14 till 28.

EDINBURGH AND NORTHERN —Till March 15.

TO CORRESPONDENTS.

TO CORRESPONDENTS.

"JOB'S" letter we decline to print; because the view which the writer at length plainly discloses is one that, if true, would altogether destroy the ground on which alone this or any other railway journal can be conceived necessary. His object is to prove that the establishment of railways, by the investment, in hopos of a secure return, of private capital, is merely delusive; and that, however well they are managed, they must infallibly ruin, sooner or later, all who have anything to do with them.

extension 25/. shares; and 2/. 10s. on Grimsby Dock shares, This may be a view acceptable to the Times, or to any of the interests that may happen to covet the destruction of railway capital; but it is not one, of course, that we can lend our columns to promulgate, because we are persuaded that it is false, and that the effect, if not the motive, of circulating such an error must be mischievous. We believe that railways, properly managed, will be found as secure investments as any that are extant:—the Railway Chronicle was started on the faith of this conviction, and it has always devoted its attention to promote good management to this end. We cannot enter into discussion with "Job" on the principle that no management whatever can prevent railprinciple that no management whatever can prevent rail-way enterprise from proving itself to have been a mistake from the beginning;—if he thinks he can establish it, it is clear that he ought to seek some other vehicle for his de-monstration than a railway journal.

W. A. should write to the secretaries of the respective companies for the information he requires.

A. B. C. D.—Mr. Biggs, the publisher, of Parliament-street, will furnish what you require.

A. B. C. D.—Mr. Isiggs, the publisher, of Parliament-street, will furnish what you require.

M. H., London.—An inquiry is now being instituted. The Commissioners merely confused matters by their interference.

M. B.—We believe it was Professor Barlow who made the objection.

RECEIVED: E. D. C.-M. B., Lancaster. *** Our publisher has been enabled to make up another complete set from the commencement in 1844.

MONTULY RETURN OF GRIMSBY DOCK DURS .- For February MONTHLY RETURN OF GRINSBY 1702 DVES.—FOR FEBRUARY 1848, 2021. 9s. 8d.; for the corresponding month in 1847, 1304. 13s. 6d.; in 1846, 1394. 6s. 8d.; in 1845, 1374. 3s. 8d.; in 1844, 1274. 17s.;—increase over 1847, 714. 16s. 2d.—Custom-house Recenue.—For February 1848, 2,4634. 7s. 7d.; for the corresponding month in 1844, 3104. 17s. 6d.

NOTES AND EXPLANATIONS

(1) The Government gires 32,000,000 and the land, and receives half the profits, after 10 per cent.
(2) The Government guarantees 3 per cent, interest, and 1 p. cent.
Sinking Fund. The loan of 10,000,000 as negotiated at about

Sinking Fund. The loan of 10,000,000, was negociated as about 4 percent, per annum.

(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent, per annum. The dividends declared after deduction of 1 per cent, from the profits for Sinking Fund. Loan of 6,000,000 or or 6,000 bonds

of 40% each, hearing interest at 4 per cent, created August 1845, reimbursable by lot, at 50% each, in the course of 73 years.

(4) The Government lends 10,000,000f, the town of Havre 1,000,000f. The Government lends 10,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent, per ann. The interest to commence 3 years after the line is opened, Loan of 10,000,000,000 of 10,000 to 30 (1,000, or 40% each, created December 1845, bearing interest of 50f, per annum, reimbursable by lot, at 1,250%, each, in seventy-eight years—5,000 were issued in Dec. 1843, and 2,000 in Oct. 1846.

(5) Loan of 12,500,000f, in Bonds of 1,250f., bearing interest of 50f, per annum, to be paid off in a period of 50 years.

501, per annum, to be paid off in a period of 50 years.

(6) Lean of 2.502,5004 in Bonds of 1,100f, at 43, per cent., to be paid off with a premium of 150f, per Bond. The Government lends 12,000,000f, for which the Company pays, from 1877, 4 per cent. interest per annum, and 1 per cent. Sinking Fund, but only when the shareholders have received 15f, per share.

(7) Loan of 6,400,000f, in Bonds of 1,250f, bearing interest of 50f, per annum to be paid off in a period of 50 years.

(8) The Government lends 5,000,600f, at 4 per cent. interest.

* For account, April 13. t Ex Div.

London Stock Exchange, March 10 .- In the agitated state of politics it cannot be expected that much business would be transacted in railway shares. Prices have, however, been tolerably maintained, and in some cases there has been a fair demand for investment.

Liverpool, March 9.- There is no very material change in our market since last week. Prices generally have a downward tendency, and the demand continues extremely limited; speculation is altogether

gone.

Manchester, March 9.—We have had another flat
week in our share-market; little business doing, and
prices still getting lower.
To-day the market is SAM. GRINDROD. gloomy.

York. March 9 .- Little alteration is observable in the market, and in the present state of monetary excitement little business can be expected. York, Newcastle and Berwick and Great Northern we notice a few transactions.

GRAYSTON & EARLE. Hull, March 9 .- The events of the past week have given a severe blow to confidence, and parties with capital at command hesitate to part with it until some turn is given to affairs, one way or the other. North British stock has receded, in consequence of the dividend for the current half-year being at the rate of 5 per cent. per annum instead of 6 per cent., which was a short time since confidently expected. There will be a surplus of about 2,700l. as a kind of rest or reserve. FLINT & TOOTAL.

Newcastle-upon-Tyne, March 9 .- Our share-market has been exceedingly dull throughout the week, and in the present state of political matters on the Continent, it would be futile to anticipate much improve-The North British directors have submitted their half-yearly Report, in which they recommend a dividend of 5 per cent. per annum to be declared. Some disappointment has been experienced in this neighbourhood, as at least 6 per cent. was currently expected.

W. FORDYCE. expected.

Glasgow, March 8 .- The business done here this week has been less than usual, in consequence of the disturbed state of the city, the accounts of which sent to London have been much exaggerated. There is still a fair demand for stock, apparently for investment, which seems likely to increase, unless some unforeseen circumstances occur. The following are to-day's latest transactions:— Caledonian, new, 43 dis.; Dundee and Perth, quarters, 15s. pm.; Ayr, 86; ditto, halves, No. 1, 41 dis.; Great Northern, 71 dis.; North British, thirds, 17s. dis.; ditto, new quarters, 4s. 6d. dis. BUCHANAN, AITKEN & Co.

Bourse de Paris .- The re-opening of the Bourse on the 7th enables us to renew our table of prices—giving the last three days of this week. We have retained the quotations of the several shares for two days prior to the revolution, that a comparison might be made. It will be seen that the Orleans have fallen 230f., the Northern more than 166f.: the last prices are now given in our table in English figures.

The Provisional Government have bestirred themselves to remedy the disasters lately perpetrated on the PARIS LINES. Galignani reports that M. Helie, the Government delegate for the maintenance of the order and free circulation of the Northern, along the line from Paris to Lille, has reported that he has pacified the people and re-established the regular service at every point within his province, and has organized an armed force at each station. He says:—
"About 100 bandits who had set fire to several stations are in the hands of justice, and strict orders have been given for the arrest of the others." Among the stations destroyed are those of St. Denis, Pontoise, and Ile-Adam, but the National Guard of the lastnamed place had seized most of the incendiaries.

M. Helie greatly praises the authorities of Amiens for having protected him from attempts at personal violence made against himself and four students of the schools by some of the inhabitants. At Lille the National Guard had defeated every attack upon order and property, so that no disturbance or damage had been committed. At Roubaix and at Turcoing, on the Belgian frontier, he found the manufacturers disposed to insure the welfare of their workmen by keeping up the ordinary activity in their manufac-tories. The following is the exact state of the in-juries committed on the different lines:—

St. Germain .- Pont d'Asnieres, burnt; stations of Asnieres, Nanterre, Ruolland Chatou, burnt; bridge on the Nanterre-road, damaged; first bridge of Chatou, damaged; atmospheric machines, injured.

Rouen.-Bridges of Bezons and Rouen, burnt: station at Sotteville, burnt.

Northern .- All the stations from St. Denis to Ile-Adam, burnt; some stations beyond Amiens, and the bridge over the Escaut, at Valenciennes, burnt.

the racaut, at valenciennes, purnt.

# Railway Chronicle.

LONDON, SATURDAY, MARCH 11.

The CHESTER AND HOLYHEAD received their Report announcing that the Conway tube had been safely floated to its destination, and that the line for the entire distance to Holyhead, saving the passage of the Menai Straits, might be ready by the lat of May. The directors were authorized to subscribe to the Steam-boat Company.

The GREAT NORTH OF ENGLAND, CLARENCE AND HARTLEPOOL and the HARTLEPOOL DOCK companies have authorized the leasing of their concerns to the York, Newcastle and Berwick.

The BIRMINGHAM AND OXFORD again adjourned to receive an answer from the Great Western as to the late friendly negotiation. Any amicable arrangements are reported to be as distant as ever.

The GLASGOW, PAISLEY, KILMARNOCK AND AYR declare a reduced dividend of 6 per cent. The capital account has been increased by the paying up of the 40l. shares. There is good promise in the announced increase of the mineral traffic. The directors have availed themselves of the Extension Act to defer some of their branch lines.

Although the Report was adopted at the halfyearly meeting of the DUBLIN AND DROGHEDA, the dissentient shareholders insisted on the appointment of a committee of inquiry into the accounts and the present and future condition of the company.

The half-yearly meetings have now come to a close. The following (not being working companies) adopted their Reports and accounts: Colchester and Stour Valley (who look forward to an amalgamation with the Eastern Union, &c.) East and West Yorkshire (who fear some demur on

the part of the Leeds and Thirsk as to the ratification of their agreement).

Newry and Enniskillen. North-Western.

Waterford and Limerick (with a committee of investigation). West London.

We congratulate the Civil Engineers of England on the great triumph of their science and skill just achieved in the ELEVATION OF THE CONWAY TUBE into its place. It is another "impossibility" accomplished; and it is accomplished, not by rash rule of thumb, guessing at truth, but by the certain and perfect method of cautious scientific induction, from painstaking experiment; by laborious calculation, sagacious invention and high moral and intellectual courage. None who have not had work equally arduous to accomplish can conceive the great strain on the mental powers of the engineer which such an operation involves. But we can all appreciate the skill by which an operation, which has been pronounced by some military and non-military authorities to be an impossibility, was accomplished with precision and certainty. This great mass of 1,300 tons weight, and 400 ft. long, was raised, floated and set in its place in two hours!!! When the unwieldy nature of the mass is considered, when the terrible peril is contemplated which would have followed any failure in the process-when it is considered that a few minutes before and after high water, were all that were allowed to carry it, raise it and set it in safety; the whole profession must feel that a great victory has been achieved.

We are glad to add that this is a case in which the kindliest and, so to speak, most catholic spirit has been manifested by the whole

profession. We beg to assure Mr. Stephenson that there is no member of it, of any eminence, who has not felt deeply interested and sensitively anxious for his success. We are happy to add, that some eminent members of the profession, not always coinciding with Mr. Stephenson's professional opinion and interest, have on this occasion sunk all feeling of difference, and joined to encourage him by their assurances of sympathy; among whom we may mention Mr. Brunel, who was with him on the tube at the moment of greatest peril, and had the satisfaction to see it landed in its place: Mr. Bidder, Mr. Foster, Mr. Claxton and Mr. George Stephenson were also present. We congratulate them all heartily on this new triumph of British science and skill.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,527 miles of railway, was 147,223l., thus accounted for:—66,000l. for the conveyance of passengers only, 44,218l. for the carriage of goods, and a remainder of 37,005l. for passengers and goods together, not respectively apportioned; being an increase of 10,663l. over the corresponding week of last year, when the mileage was 2,711. The average earnings per mile last week were 42l., whilst in 1847 they were 50l.

# GENERAL MEETINGS IN A GENERAL VIEW.

The proceedings at the HALF-YEARLY GENERAL MEETINGS, now pretty nearly concluded, have had certain features in common which may be regarded as showing a promise of improvement in some important points, where a change of policy can hardly fail to be advantageous. Directors, this year, have said little of the necessity of so-called "protective" measures of the competing class; and seem on the whole to have become impressed with the necessity of seeking protection by husbanding the means of the proprietors, endeavouring to be at peace with their neighbours, and studying internal economy. At two of the great meetings last week, we were glad to see the evidences of a change that is coming over the system. The South-Eastern Board had, for the first time for some years, to present a Report of a pacific character; and, partly in consequence of the cessation of its warfare, to announce that the bills prepared for Parliament this year would not be prosecuted. The business of internal improvement may be expected to proceed with good effect, now that the limits of the company's undertakings are in some degree settled, and the management can devote its attention to a more profitable task than that of quarrelling with a rival concern. We trust there are fair grounds for hoping that from this point may be dated a material advance in the profitable working of the lines belonging to both companies.

At the Eastern Counties meeting, Mr. Hudson had not so gratifying a statement to produce as he is accustomed to present to the shareholders in the Midland and Northern districts. But in this case, too, the prospects for the future may be regarded as better than the present appearance of affairs. There are two great elements of a change for the better in this concern-a large and growing traffic, and a Board pledged by the chairman to study economy in every department of the service. That this pledge will be thoroughly redeemed we are satisfied, from the experience of what Mr. Hudson has done in the same way in the concerns to which his attention was earlier directed; and we may look to see the condition of the Eastern Counties gradually rising above its present level, by the influence of principles

that have been proved sound and effective in other quarters.

In stating the general impression produced by a survey of the half-yearly meetings, we cannot omit two principal features that have been more or less prominent in all. The proprietors have taken a more decisive part than heretofore in the proceedings; and the effect of their breaking silence has been to elicit from the directors not a few assurances, the best guarantee of which will be the continuance of the former in temperately asserting their right to regard as a principal object the profits of investments they have been advised by the former to make. Directors, as well as shareholders, have been unanimous in expressing their strong disapprobation of the spirit in which Government, and especially the party now in office, have dealt with the railway interest; and this united feeling, in a body representing so large an amount of capital, and containing in it representatives of nearly all classes in the kingdom, will render further injustice on the part of the State authorities less easy than in times while the railway interest, smaller than it now is, was also divided in appearance, if not in reality, on this subject.

The aspect of its affairs, at the moment, is not, indeed, of the most encouraging character. But we perceive some hopeful signs of a change for the better, many of which nothing but adversity, perhaps, would have brought to light; and if the hard lesson be now wisely read, and remembered hereafter in more flourishing seasons, the trial may turn out to have been, on the whole,

advantageous to the system.

#### POST-OFFICE AND RAILWAY PARCELS.

We promised last week to say a few words on the recent Post-office arrangement, permitting single volumes to be sent by the mails at a uniform charge of 6d. for whatever distance. This arrangement is referred to by our correspondent "H. C." as one that might be as well adopted by railway companies;—and we may presume that he cites it in support of his views, already published, in favour of a uniform parcel rate; since he intimates that the railway interest will be deservedly reproached if it does not follow in this in-stance the example set by Mr. Hill. Now it is not necessary here to go again into any general argument on the reasons for or against the plan suggested by "H. C." This we have already stated, as it appears to us, with sufficient clearness, in a notice of his essays on the subject ;+ and so far we have seen nothing advanced since that makes it needful to revise the conclusion to which we then arrived. We shall confine ourselves, therefore, at present, to the particular instance to which "H. C." calls our attention: -in order to ascertain its practical bearing on the matter in question.

The first inquiry here is, of course, what does the business now undertaken by the Post-office really signify ?--- the next, how is the Post-office enabled to perform it? Having answered these questions, we shall be better able to see whether railway companies are equally able to do the same thing; and how far the doing of it, as far as they may be able, would be likely to

profit them.

Mr. Hill allows a book to be sent for 6d. wherever a letter can now be sent for 1d.; and it is certainly possible, in virtue of this allow-ance, to send, as "H. C." states, a Quarterly from Exeter to Edinburgh by the post at that trifling charge. This way of describing the privilege may at the first glance be impressive enough. But the practical inquiry will follow, how many Quarterlys are likely to be sent

† See Rail. Chron., No. 192, p. 27, and No. 195, p. 67.

from Exeter to Edinburgh, or, indeed, by any | less distant or circuitous route? What will be the probable amount, in short, of such a traffic as this? Is it likely to furnish a business sufficient of itself to pay its expenses? or is it merely a supplementary occasional kind of service, which may be performed without difficulty by a machinery already completely organized for more extensive uses, but for which alone it would not be worth anybody's while to get up a machinery capable of performing it? It is obvious that the Post-office can offer this convenience because there is already a post for letters, by which it may be given with little or no extra trouble; the despatches, the deliveries are there already; and the only burden added to the machine by this new duty is simply the carrying about of so much additional weight. It is equally obvious that the circumstance of the Post-office being able to do this, in virtue of its extant arrangements for letters, in no way proves that it could be done with profit or convenience by a party destitute of such systematic and extensive means as the Post-office has at command; that the inquiry, whether such a business could be usefully undertaken on its own basis wholly-which is the question for the railway interest-remains just as it was before this instance occurred; that it must be decided, now as then, upon grounds with which the Post-office system has scarcely anything in common. That a mail-bag, which already must go with letters, may easily contain a book or two as well; that a postman, who must go his daily rounds with letters, can also, without much extra trouble, deliver such a book now and then,-is quite intelligible. But to infer from thence that the railway companies could just as well do the same thing, would only be a rational conclusion were they possessed of a machinery, like that of the Post-office system, already paid for by other business, and therefore capable of adding this to it, without incurring any new charge or trouble. This is not their condition, not even in the districts already traversed by their lines; and to many of the districts to which the Post office may be asked to send books, and without serving which also the railways could not hope to compete with it, there is no railway despatch whatever. There may thus be very good reasons why the Postoffice can add this to other duties: but it must be seen that such reasons do not apply to the case of a railway parcel traffic, which has nothing of the kind to lean upon. No railway company can afford to deliver sixpenny parcels, brought from Edinburgh to Exeter, from house to house, at the first moment after the arrival of the mail; nor, indeed, could the Post-office either, had it not also its letters to deliver at the same time. And it may be added that, even by the post, the business is not likely to be a very heavy one; that it will, from its very nature, be most apt to be called into play in favour of occasional despatches to outlying places; and that consequently it will be exactly of that kind of rare scattered traffic, which of itself is the least remunerative. The instance, therefore, it may be seen, leaves the general question just as it was; -a case less apposite, indeed, to the circumstances of railway parcel traffic could hardly have been selected.

There is another point in "H. C.'s" note that must not be passed over. He dwells with emphasis on the fact that his specimen parcel from Exeter to Edinburgh travels first over one railway and then over another, and so forth, until it reaches its destination; and he asks, "why cannot the railway companies get the same business, seeing that they carry these very parcels, in another way, for Her Majesty?" For this reason;—namely, because the Legisla-

where it has not sown; because the State has taken leave to make use of railways, which have cost it nothing, on terms that afford no adequate advantage to the parties at whose cost the railways were made. This it is that enables the Post-office to do many things which the railway owner could ill afford; it is, at all events, the sole condition which enables it to carry its sixpenny parcels over railways on terms that the railways themselves would get no profit by charging. And while the Postoffice retains this power, the idea of competing with it for any business it chooses to undertake, that can be transacted with the ordinary Postoffice machinery, is utterly puerile. It is easy enough to state the fact that parcels are carried by railway companies for the Post-office; and, having stated this, to "sneer" at them for not carrying the same parcels on their own account. But it will not be so easy to show how they could get this kind of carriage, while they are rivalled on their own lines by the State, which dictates its own terms for the use of the railway, and extends its liberalities to the public at the expense of the proprietors. It does not follow that the business on the Post office terms would pay them, could they get rid of the mail service altogether. But it is, at all events, quite clear that they cannot hope to get the business, even had they machinery for performing it as readily as the Post-office, so long as the latter has the use of railways given to it, at its own times, for a consideration scarcely more than nominal. This, we well know, is hard enough; but it will not be amended by taking the consequences lower down; the root of the misfortune lies in the terms of a compulsory service, and if this cannot be eradicated, it is of no use to be pecking at its branches. The evil, if evil it be, could only be removed by altering the practical conditions that have made it possible, -conditions that will prevail against all attempts to meet it by setting up a rivalry on terms which those conditions render utterly unequal.

The question, therefore, we apprehend, will be seen to remain entirely unaffected by the instance we have now been considering, if the actual facts of the case on both sides are distinctly viewed. And as the trial or rejection of any system as a working scheme must be decided by the weight of matters of fact, we have thought it proper to point out in some detail their relation to "H. C.'s" theory in the case which he has chosen to illustrate it.

# UNIFORM GAUGE AND NATIONAL DEFENCE.

We understand that, from an investigation which has recently been made by some of the military authorities, in regard to the relative length of railways on different gauges, it is found that out of 3,400 miles of railway now opened, 300 miles only are upon the broad or exceptional gauge of 7 ft., being one-eleventh of the whole length of railways opened; while the remaining 3,100 miles, being ten-elevenths of the whole, are on the national gauge of 4 ft. 8½ in.

When the Gauge Commissioners reported, in 1846, in favour of bringing all the lines in the country to one uniform gauge, viz., the national gauge of 4 ft. 8½ in., the proportion of miles of railway on the broad gauge to those on the national gauge were as one to seven; they are now, it appears, as one to ten—60 miles of 7 ft. gauge railway only having been opened since that period, while 1,200 miles of railway have been opened on the national gauge. These facts point to the conclusion that both the importance and the relative facility of attaining the much-wished-for uniformity of gauge are greater now than when the Commissioners re-

ture has given the Post-office powers to reap where it has not sown; because the State has taken leave to make use of railways, which have cost it nothing, on terms that afford no adequate advantage to the parties at whose cost the railways were made. This it is that enables the Post-office to do many things which the railway owner could ill afford; it is, at all events, the sole condition which enables it to arm.

# IMPEDIMENTS TO TRANSFER—SUSPENSION OF DIVIDENDS.

You have attempted from time to time to check the abuses of power in the management of the railway system, whether manifested by the Government or by directors and proprietors among themselves. There is one matter, however, seriously affecting the value of railway property, which, I think, has not attracted your attention, and is deserving of prompt and decided notice-I mean the regulation affecting the transfer of shares on which calls have been made but are not yet due. The Shrewsbury and Birmingham directors, under date of 24th of February, make a call payable on the 1st of May, and announce that "transfers of shares cannot be registered until the call has been paid." The Caledonian directors, under date of 28th of February, make a call payable in two instalments, on the 31st of March and on the 1st of July, and announce that "no transfer of shares lodged at this office after this date (Feb. 28) will be registered until the whole call be paid." Now, sir, we have heard that necessity knows no law, and men in difficulties will catch at every expedient to get rid of them, but I cannot conceive a greater injustice to a bond fide holder in these lines, than thus to tie up his property for two or three months, and destroy for the time its most valuable attribute-exchangeability, under the plea that a call has been made upon it. True, it has been made, but it is not due, and why a seller should not transfer this liability as well as that for future calls, when he disposes of his shares, I cannot conceive. In the older railway Acts, it was very properly provided, that no transfer should be allowed without the payment of all calls then due; but it is monstrous that a board of directors should announce a call two, three or four months before it becomes due, and then exact its payment instanter on such shares as may be sold in the interim. If their Acts of Parliament are so worded. that the call, if " made," must be first paid, they ought to restrict the notice to the shortest possible time (fourteen or twenty-one days), so that all shares should come equally under its operation. I see another mischievous idea is entertained by the Edinburgh and Glasgow directors, of withholding the dividend for the last half-year, in order to provide a reserve to pay 7 per cent. for the future. What shall we have next? or are railway directors bent on destroying all confidence in the property which they manage? Are sharcholders, as such, immortal? and will it be a compensation to me or my heirs for not receiving my last half-year's dividend, that Mr. A. B., who may buy my shares within the next six months. shall hereafter receive a better dividend from my loss? Surely this is a question of individual right and justice, and such as no majority of proprietors ought to have the right to determine. The earnings of each half-year strictly belong (after due allowance for the permanent maintenance of the property) to the proprietors, all and individually, who then hold the stock, and to deprive any one of them of his share is a gross injustice, and one form of that abominable system of "repudiation" which Englishmen detest. Why should not the future take care of itself as the present has done? If the funds of the company are low, let the necessary amount be raised by equal assessment on the capital, but it is destructive of all confidence and hope, when the investor finds that he cannot depend on the periodical returns from his investment, and is thus perhaps deprived of the means of fulfilling his own obligations. A.R.D. Bristol, March 6, 1848.

#### RAILWAY EXPENDITURE.

In the various inquiries made by shareholders at the recent half-yearly meetings, one item of expenditure appears to have been overlooked, viz.,

Digitized by GOOGLE

the amount paid to the bankers for commission and interest. As this is a large item in some companies, I wish to call the attention of railway proprietors to the actual amount which they are and have been paying for what is called "banking accommodation." Birmingham, March 9.

#### CALLS ON FRENCH LINES.

Amidst the crash of property within the last fortnight, the French shares are conspicuous for the extent of their depreciation. Doubtless this much depends on their being foreign stock; but there is another cause which acts most injuriously upon them. I mean the calls, which are pressed as if nothing had occurred—as if France were just as it was a month ago. On the Central and Northern they are due; on the Lyon one is at hand. The effect is that our property is exceedingly depressed, and that we are forced, in the depth of the depression, either to sell our shares, or to add to our loss by paying the calls, or to run the risk of forfeiture with a great portion of the capital paid up. And why? Because the directions choose that the calls shall be settled when everything in France is unsettled. How much more wise and just would it be to wait till confidence was in some degree restored! If the directions persist in the present course, our property is likely to melt away to nought, possibly to the satisfaction of Frenchmen, who gain by our loss, but certainly anything but to the satisfaction of those in our country who imprudently embarked in foreign undertakings.

#### HINTS TO MR. WRIGHT, CARRIAGE-BUILDER, LON DON, ON FRENCH BAILWAY CARRIAGES.

Dear Mr. Wright,-I have often enjoyed the luxury of riding in your well-built, smoothly hung, carefully finished carriages. They do you great credit, they fetch you a long price, and they doubtless repay the proprietors well for employing a crack builder. You have no greater admirer than the writer of this letter. I have often ridden in your first-class carriages on the London and North-Western express trains. They are admirable specimens of your art. They present in the limited range of the narrow gauge much of the luxury of the broad. As one who has often derived benefit from your knowledge and experience in building carriages, permit me in return to give you the benefit of some of my knowledge and experience in using them. First, the ventilating flaps above the door are generally so stiff that one cannot without risk of breaking one's nails open them; second, the windows in wet weather get so stiff that only a strong arm can raise or lower them. As I am sure you feel the value of such information, I give you another fact, forced upon my notice. The express first-class carriages from Amiens to Boulogne beat yours hollow. I assure you the interior of these is beyond all comparison superior to yours. The fineness of the cloth, the beauty of its colour, the soft elastic springiness of the stuffing is out of all measure superior to yours. I may add that the lace is good, the form and arrangement of the cushions all that could be desired, the glass superior, and in several respects they are more substantial and more elegant in interior fitting. The roof, for example, is formed of solid ornamental wood, instead of mere painted canvas, as in yours. I dare say you will reply that the writer of this is no carriage builder, or he would not make such a remark; and that English carriage-building is every way superior to French. To this imputation I will submit; but I will also beg you will admit that the passenger is the best judge of his personal comfort; and therefore, as a passenger and a judge, I beg to repeat that the first-class carriages on the line between Boulogne and Paris, with which I have travelled in the express trains, and limiting myself strictly to what I have seen, are inside more elegant, more comfortable, and better specimens of work than even Mr. Wright's first-class express carriages on the North-Western. With the expression of a hope that you will not think it impossible that a Frenchman may build a carriage with a more comfortable interior than our crack English builder, and a wish to show that an English passenger is candid enough to confess it, and sincere enough to urge it in the quarter likely to be most useful, I beg you will believe me a sincere admirer but candid friend of English railways and AN ENGLISHMAN.

#### டுஏத்தம்.

An apt illustration of TUMBLING BETWEEN TWO STOOLS is afforded by the unfortunate position of the BIRMINGHAM AND OXFORD shareholders. The Great Western halts at fulfilling its bargain now, although the dissentient shareholders offered the most unqualified assent to the agreement of November 1846. We hinted that such would be the case a fortnight ago. Other parties relying on Great Western promises may also, perhaps, find out that they are somewhat like pie-crusts.

At the dinner given on the OPENING of the LIN-COLNSHIRE portions of the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE, Mr. Sidney, the well-known author of various railway pamphlets, made some remarks so judicious on several points that we think them deserving a special repetition in our columns. He said: - " As a stranger, he was much struck by the admirable manner in which this line was planned, so as to afford accommodation to the greatest producing county in the country. Lincolnshire not being naturally productive, had been made so by the application of skill and capital, which introduced fer-tilizing manures, of which the great cost was that of carriage. Having by this means produced the finest corn and the fattest cattle, the agriculturists of Lincolnshire found their profits curtailed by the cost of conveyance to the consuming districts. wants, in both these respects, would be met by this railway. The last few days had suggested another important aspect of this undertaking. Events had transpired which might possibly involve the world in flames. If by any unhappy circumstance so great a calamity should arise, railways communicating with the coast would form a very important part of our national defences. We should then find, that besides our obligations to a brave army and navy, we owed much of our means of protection from calamities that fell beavily upon our forefathers to skilful railway engineers. There was this remarkable fact about this undertaking, that the Lincolnshire lines had been grafted on an old line, which had not been particularly successful, and they had united things which Parliament, in its new, and, he thought, unreasonable jealousy, was now unwilling to entrust to the same hands. Their scheme embraced railways, canals, docks and ferries, no one of which could be thoroughly successful unless united with the others. This comprehensiveness was an admirable feature of their scheme. They were indebted to three remarkable circumstances for what must be their great eventual success. If their lines were well planned, they had the good fortune to enlist the assistance and sympathies of a nobleman who gave them not only all the influence that rank bestowed, but the benefit of that intimate knowledge of the country which only the enthusiasm of a fox-hunter obtained and those means of fairly representing their just claims which only a legislator had. They had also the assistance of directors who had earned their experience in the hot and toilsome struggles of commercial life. And they had been so fortunate as to engage in their service an engineer who had not made it part of his system to build expensive viaducts and make difficult works, that he might be talked of, but whose aim in planning a railway was to make it most profitable. Many were apt to forget that railways were commercial undertakings, and that the object was to construct them solidly and cheaply, so as to afford the desired accommodation. He believed and hoped that this railway having been so wisely planned and carried out, the directors would not fall into the error of some managers, and by a flashy style and luxurious accommodation for the few, show that they lost sight of the fact that they could not lavish undue expense upon a small number without taking from others or injuring the profits of the share-holders. It had been his duty to observe the manner in which most railways had been executed and conducted, and he had come to the conclusion that no railway could be well conducted that was not profitable, or in which attention was paid to the first-class passengers while coal, lime and merchandise were despised. The man who wanted to travel ten miles was not to be despised to afford superior accommodation to him who wanted to travel 100 miles. This railway had the great advantage that their local directors were many of them commercial men, and that their chairman was a nobleman who had proved himself by deeds, and not words, a practical philanthropist. It was gratifying to see that the first railway accommodation afforded to this county had been rendered in a thoroughly efficient manner, and that there were advantages here not found in other and more distant agricultural counties."

The summary of traffic for five weeks, ending the 4th of March, on the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE is as follows: - Passengers, parcels

and goods, 10,096l. 8s. 6d.; corresponding period in 1847, 8,504l. 14s.; increase, 1,591l. 14s. 6d.

The hostility of some of the inhabitants of Canter-

bury and its vicinity to the South-Eastern appears undiminished. They have resolved to petition the Commissioners as to the augmentation of fares and curtailment of trains. Sir J. Tylden advised a recom-mencement of the North Kent scheme,—rather a bold proposal in these days of depression.

The continuance of the HEAVY RAINS for the last three weeks has affected several of the country lines. On the Southampton and Dorchester a portion of an embankment, composed principally of sand and loose gravel, between Poole and Wimborne was swept away. A few hours' labour entirely restored it. On the Great Western all the meadows along the banks of the Thames, as well as places adjacent to the Kennet, have been and are covered with water to a considerable depth, and many bridges and roads are completely swamped. At Reading, the station is surrounded by a vast sheet of water, which can be seen for many miles by the side of the Thames, and creates considerable uneasiness from coming up closely to the town; and the approach of the floods all along both embankments of the line, especially in the lower parts, has also caused serious apprehension. The Thames has been considerably swollen every day; the floods consequently have rapidly increased. In addition to the heavy damage to property from these floods the farmer's work will be much delayed.

According to a census recently taken by the Great Western, Swindon New Town contains 2,859 inhabitants. Of these 1,792 reside on the property of the company, and 694 are under twelve years of agc. The increase on the preceding year is 521.

Mr. Burton, the well-known builder and contractor. passed his last examination at the Bankruptoy Court on the 7th. Upwards of 11,000l. will remain after

the estate paying 20s. in the pound.

The failure of the enterprizing firm of Gouin & Co., bankers, delayed the opening of the Bourse until the 7th inst. The resignation of M. Godechaux, the finance minister, was determined partly by this circumstance, and partly by the remission of the news-paper stamp duty. The cause of their suspension of payments was the refusal of the Bank of France to

accommodate them with advances beyond the amount of 6,000,000f. to 7,000,000f. (240,000l. or 280,000l.), although they offered to deposit unquestionable "firstclass paper to the amount of 25,000,000f. (a million sterling.)" M. Gouin has resigned the chairmanship of the Paris and Lyon.

The NORTHERN OF FRANCE have, as we stated last

week—adopting the communist principles so popular in France—determined on making all individuals of every rank and class in its employment, from the president of the company and the engineer-in-chief, to the humblest station-man, stoker, and plate-layer, virtual partners in the enterprize, and participators in its profits, after allowing interest on the capital: we can hardly think this will be recognized by the

shareholders at large. GREAT NORTHERN OF FRANCE. - The Gazette de France states that a collision between two trains had taken place. There were forty-eight persons wounded; twenty-two National Guards of l'Isle Adam, eighteen of Jouy le Comte, and eight of Vilmondois. One of the latter, a sergeaut, has had his foot amputated at the hospital of Pontoise. An inspector at the station of La Chapelle likewise suffered an amputation of the An engineer died in the night. tionnel, in reference to this paragraph, adds, "We have not heard of any accident on the Northern later than that which occurred immediately subsequent to the revolution of February, and we trust that these

The directors of the PARIS AND ROUEN and ROUEN AND HAVRE have ordered that their third-class carriages shall henceforward be covered at the top. Those in course of construction will be completed in accordance with the new regulation, and will be put on the lines as soon as completed.

melancholy details refer to that accident.

The portion of the CASHEL which subsided into the bog it is found impossible to replace. One of the workmen has been lost in the morass. The contractor is asserted to have lost several thousand pounds by this portion, and the piles which are being sunk in order to carry the line across are found to come up again at a long distance from the place where they were sunk.

## Reports of Meetings.

CHESTER AND HOLYHEAD. March 8. — Half-yearly Meeting, London. — Capt Moorson, R.N. in the chair.

The CHAIRMAN apologised for the absence of the chairman, deputy-chairman and the resident engineer.

Digitized by GOGIC

The Report was read by Mr. King, the secretary.

The present meeting had been delayed beyond the usual period, in the expectation that the directors would be enabled to announce that the line had been partially opened for traffic; but though this result had not been attained, the directors could state that the Conway tube, to which this delay is referable, was, on the 6th inst., safely floated between the piers, upon which it has to be raised; so that between the piers, upon which it has to be raised; so that all that now remains to be done is of a purely ordinary mechanical character. They are assured that within a month, at the utmost, from this time, the tube will be completely fixed in its place, and the trains enabled to pass through it. The bridge has been subjected to a test greatly through it. The bridge has been subjected to a test, greatly exceeding any that it can ever be put to in its ordinary use. The tube, after having been suspended upon temporary piers, 400 ft. apart, was loaded with a weight of 300 tons, when the result was in every way satisfactory, and realised the expectations that had been formed of it. With the load of 300 tons the deflection was only 3 inches, or an inch to each 100 tons; and from that deflection it completely recovered itself upon the weight being removed, after having remained therein for three days. The requisite arrangements for opening the line had recently been attended to; these were now completed, and an efficient staff provided. By the last of May the line through Anglesca might also be made ready for traffic, so as to furnish railway com-In see were now completed, and an emement stail provided by the 1st of May the line through Anzlesca might also be made ready for traffic, so as to furnish railway communication for the entire distance to Holyhead, with the exception of the passage across the Menai Straits; and the directors have so apprised the Postmaster-General, and will undertake that this extension shall be completed by that time, provided the company are allowed an adequate remuneration. They have further offered to undertake the whole of the mail service between Chester and Holyhead, by covering the gap in the line with proper horse conveyances, pending the junction between the two sides of the Straits, provided the contract entered into by the Treasury with the company be at once acted upon. They are as yet without a definite reply to either of these propositions, the communications received only extending to a signification of the intention to put on the mails to Bangor, when the line shall be opened thus far. The extension at Holyhead to the intended New Refuge Harbour, the directors will not proceed with at present, or until the works of the new harline shall be opened it us far. The extension at Holyhead to the intended New Refuge Harbour, the directors will not proceed with at present, or until the works of the new harbour have made further progress. With respect to the progress made by Her Majesty's Government with the works of the old and new harbour at Holyhead, the temporary accommodation making in the old harbour is sufficiently advanced to enable the Government new packets to use it; nearly all the land required for the new harbour has been acquired, and a contract for a portion of the works has been entered into, and the railways for conveying the stone from the quarries to the great breakwaters and packet pier are in course of execution. In accordance with the resolution come to at last meeting, application has again been made to Parliament for the necessary powers to connect the steamboat company with that of the railway, so far as is necessary to complete the communication between Holyhead and Dublin. The directors refer to the peculiar circumstances under which the bill was withdrawn last session, after the unanimous report of the Committee on the bill,—"That in the present case it is essential for the interests of the public, that the powers sought should be conferred." The evidence laid before the committee referred to, and upon which this resolution was founded, has since been published for the House of Commons, and the directors feel the greatest considered that their renewed annication will be which this resolution was founded, has since been published for the House of Commons, and the directors feel the greatest confidence that their renewed application will be successful. With this protection and security to the public and the company, they are satisfied that the traffic of the line will realize the fullest expectations formed of it. The expenditure during the six months ended the 31st of December was 635,0652, being at the rate of 105,3542 per month, and for the eight months to the 29th of February, 806,3624, being at the rate of 109,3584 per month. The time and attention of the engineer, Mr. R. Stephenson, had been so unremittingly devoted to the floating and raising of the Conway tube, that he was unable to furnish his usual Report. Report.

The statement of accounts, from the formation of the company to the 29th of February last, showed the receipts at 2,790,067l. 17s. 10d.; expenditure, 2,751,792l. 13s. 6d.; balance, 38,275l. 4s. 4d.

The CHAIRMAN begged to move the adoption of the Report.

Mr. SMITH seconded the motion.

Mr. LETCHWORTH could not understand why they were not furnished with an Engineer's report. It seemed to him that having nearly completed his great work, of fixing the tubular bridge across the Conway, the engineer might have sat down for an hour and half, to draw out a Report. Capt. Moorsom, their resident director, perhaps would be able to give them some information; and the directors must not think it a matter of surprise, if, after an interval of three years and a half since the commencement of operations, with their shares at 20l. discount, the proprietors were somewhat dissatisfied. He must certainly give the directors every commendation for the clear manner in which the accounts were made out; and he hoped, when they were in a position to bring a profit and loss account before the proprietors, it would be made out equally clear, so that there might be no mystery. He found a large increase in the amount of arrears. At the last half-yearly meeting they were congratulated that the arrears only amounted to 17,900l., while they now amounted to 74,0001.; and that the item was not larger, was perhaps owing to the fortunate circumstance that the London and North-Western held so large a proportion

of their capital. The number of the 5½ preference shares ought to be 42,000, but they had only issued 29,775. A few weeks ago those shares were at a small premium, and on asking if any of them could be had, the clerk informed him that there were none -they were all disposed of. Now, either there must be a mistake in the accounts, or the clerk must have misinformed him. He was happy to observe that their loans were not large-not much exceeding half a million—which was small in comparison to their capital. He was glad to see that the item for transfer fees only amounted to 14l. for the last half-year, as it showed how little the shares had changed hands, and that the depression of their property was only to be attributed to the procrastination in the completion of the works, and the indefinite kind of dread which people had relative to their not being able to fix the tubular bridge; but now that that question was set-tled, he trusted their shares would improve in value. He should be extremely glad when the items of resident director and establishment, 5,062l., secretary and general office establishment, 5,778L, and directors and auditors, 6,300L, could be carried from the capital account, they already amounting to upwards of 16,000l.—a large sum, he thought, before any portion of the line was completed, and going to swell the amount on which they must hereafter pay dividends. He should be glad to see an end put to the payment of interest out of capital, that having, up to the present time, absorbed upwards of 100,000l. He wanted to know whether the construction of the Britannia Bridge over the Menai Straits rested on the same basis as that over the Conway, and whether, having solved the problem in the one case, any doubt or cloud hung over its solution in the other! Had the Government commenced the works at Holyhead Harbour, and to what extent had they proceeded !and would the capital subscribed for be sufficient to complete the whole of the line?

The CHAIRMAN said that the tubular bridge across the Menai Straits was of the same construction as that across the Conway. He could state that there would be no practical difficulty in constructing the bridge over the Menai, except that the four tubes of which it was to consist, two on each side, were to be 60 ft. longer than the two used to cross the Conway. The construction would be the same, and the mode of raising the same, but of course more time would be required for executing the four tubes across the Menai than was required for the two which were to cross the Conway. As to the question why they had not yet got a Report from Mr. Stephenson, Mr. Stephenson had been for nearly a month with his mind exclusively devoted to the fixing of the Conway Bridge, and he had been so harassed as not to be able to write a Report. At the moment of his great triumph, when the tube was floated to its proper position, he put his arm through his (the chairman's), and, asking him to make an excuse to the share holders for the absence of his Report, said, "Now I shall go to bed." He (the chairman) was sure that any gentleman who had felt any peculiar anxiety as to the result of any undertaking, could enter into Mr. Stephenson's feelings. It was true that in their Report of August last the directors said-"Your directors conclude by stating their confident expectation that the line may be opened throughout, with the exception of the Britannia Bridge (across the Menai Straits), in February next, and the bridge itself in the early part of the ensuing summer. that they had been disappointed—had been mistaken. Mr. Stephenson, in his Report, stated—"Mr. Evans, the contractor, still expects to complete the tube by the middle of September. I do not, however, imagine this will be possible, but, contingent on a sufficient supply of iron, I have no doubt it may be ready for the passage of trains in the month of November next." Those accustomed to the management of Those accustomed to the management of large undertakings in operation, would not be surprised out as expected. They had had to depend upon half-a-dozen sources for their supply of iron; and it was necessary that all should be of the quality required, that it should be supplied in sufficient quantities, and that the time in which it was to be supplied should be exactly kept up. But in none of these particulars were they fortunate. Full three months were lost in consequence of their not getting together a sufficient quantity of iron. The hon, proprietor had referred to the amount of the arrears; he (the chairman) believed they were not so large as he thought, and that, in fact, they did not exceed 30,000l.

The SECRETARY stated that the hon, proprietor had referred to the accounts as audited to the 31st of December. Since then about 40,000/. had been paid, as would be seen by reference to the accounts made up to the 29th of February.

10,000; and at the time to which the hon. proprietor alluded they must have been out of the hands of the directors, having been put into the hands of other parties for disposal, and the secretary informed him he was not aware of any application.

Mr. LETCHWORTH did not intend to impute blame to any one. It was not the secretary who gave him the answer, but a clerk in the office.

The CHAIRMAN continued: With regard to the proceedings of the Government respecting the Holy-head Harbour, the Report stated that in the old harbour a contract for a portion of the works had been entered into, and that the railways for conveying the stone from the quarries to the Breakwater and Packet Pier were in course of execution. The inner harbour was nearly finished, so as to give the requisite accommodation to vessels coming to Holyhead. Great expenditure was imputed to the manage-ment and direction. If there was any particular item to be reduced, it was competent for any hon. proprietor to make a suggestion on the subject; but, in looking to the amount of the expenses, they must also look to the time (nearly four years) which they had run over. With respect to their capital being sufficient to complete the line, as far as any estimate could be depended upon, he believed it would be amply sufficient.

Mr. TAYLOR inferred that there were to be two

Mr. TAYLOR inferred that there were to be two tubes across the Conway. He wished to know whether only one tube was floated, or whether the second had been also floated, and, if not, would it be forthwith floated to its place. The directors Report said the line from Holyhead to Anglesea might be opened by the lst of May, but it did not give them any information as to what state that portion of the line was in, nor, indeed, did it of the line from Bangor to Conway and he (Mr. Taylor) did not Bangor to Conway, and he (Mr. Taylor) did not believe that they would even see the line opened in twelve months. There was great reason to complain of the expenses of the management, which, to the best of his belief, were not sanctioned. All that was sanctioned was 1,500l. a year to the directors, and 100l. to the auditors. What was to be included under the term engineering, as he found no less than 8,000l. charged to that account for the last half-year? and also, what will directors do with regard to paying further interest on calls? At the last half-yearly meeting, it was understood that the interest would probably cease in October; but as another half-year would be due next month, and the line was not opened, he wished to know whether it was proposed continue its payment.

The CHAIRMAN begged to refer to the minutes of the first general meeting after the passing of their Act of Incorporation, held on the 30th of August 1844, where, contingent on arrangements being entered into with the Government, the directors were authorized to appoint a resident director, with a salary of 1,000*l*. a year. The engineering expenses included all salaries of the parties employed under the engineer, together with travelling and incidental expenses. As to the payment of interest, he believed that there could be no question that until the whole of the line was opened, the proprietors were entitled to the receipts of interest on their calls. Only one tube of the Conway Bridge had been floated to its place; but as the line would in the first instance be opened only a short distance beyond the bridge, that would be sufficient until the other could be got ready. The corresponding bridge over the Menai Straits would consist of four large tubes, 460 ft. in length, and four smaller ones, which would lie between the piers, and give further strength to the structure. Those tubes were in progress, but, after his experience of their contingencies, he would not pledge himself as to when they would be ready. Nothing should be left undone to forward their completion, and every exertion should in future be made, as he honestly be-lieved every exertion had been heretofore made, to complete the line at the earliest possible period. Their shares he believed were not more depreciated than any other similar property. On the whole, considering the circumstances of the times, he thought the calls were remarkably well paid up. respect to the works on the line to Bangor, there could be no question that they would be completed by the time the tubular bridge was ready. The line to Conway was completed, with the exception of one bridge and the adjusting the line, which could be done in a few days. At Penn-maen-Maur the viaduct was nearly completed, and would be ready within were so far advanced that they could be made perfectly ready for use within a week. With respect to the Anglesea line, he believed it had been completed for some time within two miles of Holyhead, and that it could be opened at the same time as the The Chairman continued: The preference shares were all placed out with the exception of about arrangements could be entered into for efficient

Digitized by GOGIC

steam or other communication between the two portions.

A Shareholder wished to know what was the nature of the engagements entered into with the London and North-Western relative to the carrying on the Chester and Holyhead line, and for what period the arrangements were to exist?

The CHAIRMAN said that the arrangement with the London and North-Western was, that they should be paid so much per mile, the weights, &c. of the trains being stipulated. The arrangement was for five years, but was determinable, at the option of that company, at the end of three years. He believed the arrangement to be a good one, and he had been told by some of the principal officers of the London and North-Western that it was a bad one for them.

Mr. TAYLOR wished to know how many directors the London and North-Western had on the Chester and Holyhead Board.

The CHAIRMAN: Nine. They found half the capital and exonerated half the directors.

The Report was then adopted; sixty-one shares (on which only the original deposit had been paid) forfeited, and the retiring auditors re-elected.

The meeting was then made special, when the draft of a bill for authorizing the company to subscribe for the purchase, hire, or use of steam-boats, and to raise an additional capital of 250,000l. for the purpose, was approved.

COLCHESTER AND STOUR VALLEY.

Feb. 29 .- Half-yearly Meeting, Colchester .- Mr. T. L. EWEN in the chair.

Mr. PHILBRICK read the Report, which stated that in consequence of the monetary depression, the directors, consulting the convenience of the share-holders as far as they could consistently with the engagements of the company, have endeavoured to lighten the calls. Operations have therefore been carried on under a somewhat limited expenditure. The works upon the line between Marks Tey and Sudbury have, however, materially progressed. directors feel assured that this partial delay will not operate prejudicially as regards the final completion of the entire line. They contemplate making only two calls in the course of the present year, viz., one of 31. per share in the month of June, and another of 21. in October, which they confidently believe will 22. In October, which they connected selected with the to Sudbury early in November next. They have studiously endeavoured to ensure the utmost economy, and in furtherance of their designs in this respect, have determined that the sum allowed to them by way of salary, and which at the last meeting was fixed at 700*l*. per annum, should be reduced to 400*l*. A resolution will be submitted to that effect. The confirmation of the agreement for leasing the line, under the powers of the Act of last session, would probably have been now submitted for approval, had it not been for the postponement of the amalgamation of the Eastern Union and Ipswich and Bury St. Edmunds. This event the directors believe to be likely soon to take place, and they will keep the matter under their consideration, with a view to perfect the arrangements made for that purpose at the earliest practicable period. The statement of accounts showed the receipts at 87,696l. 17s. 5d.; expenditure, 79,286l. 19s. 4d.; balance in hand, 8,409l. 18s. 1d.

The Report was adopted, the retiring directors re-elected, and the allowance to the directors reduced to 400*l*. per annum.

The special meeting announced in the advertise ment, for application for an extension of time for making the proposed lines to Lavenham, Bury, &c., was stated by the CHAIRMAN to be unnecessary.

#### NORTH-WESTERN.

Feb. 29. - Half-yearly Meeting, Skipton .- Mr.

BIRKBECK in the chair.

The Report stated that the works on the main line between Skipton and Clapham had been steadily advancing, so that the progress of the works should be limited, and the amount of future calls reduced. Arrangements were entered into with the contractors for the Settle, Clapham and Ingleton contracts in regard to time, by which the liabilities for the next twelve months have been materially reduced. Only one call of 25s. per share will be necessary during the present half-year. The directors propose to make application for an extension of time, which, if granted, will, at the present rate of progress, enable them to complete the whole of the works conveniently within that time. When the borrowing powers come into operation the directors hope they will be enabled to afford considerable relief to the shareholders in reference to the payment of future calls. Their confidence in the ultimate success of the un-

dertaking remained unchanged. The statement of accounts showed the receipts at 303,337l.; expenditure, 289,866l.; balance, 13,470l.

The Report, on the motion of the CHAIRMAN, was nassed.

Messrs. Dawson, Robinson and Littledale were re-elected directors, and Mr. Alcock was re-elected anditor.

BIRMINGHAM AND OXFORD JUNCTION.

March 4.—Adjourned Half-yearly Meeting, Birmingham.—Mr. W. MATHEWS in the chair.

The CHAIRMAN, after apologizing for the absence of Mr. Muntz, stated the fact of the adjournment of the meeting to allow time for the consideration of certain propositions submitted by Mr. Dobie, the solicitor to the dissentient shareholders, to the directors of the Great Western. If the terms of the adjournment had been carried out, they would then have been able to come to some decision upon the subject. No communication had yet been received from the Great Western, although he (the chairman) had reason to believe that negotiations were in progress. He called upon Mr. Mozley, who moved the adjournment of the former meeting, to make any statement.

Mr. Mozery said it was perfectly well understood that the motion of adjournment with which he should again conclude should be unaccompanied by any remarks, and he hoped all other gentlemen would abstain from making any. He confidently trusted that at the next meeting, that day week, he should be able to state that all differences between the dissentient shareholders and the Great Western had ceased, and that such mutual explanations on that day would be made as would be satisfactory to all parties. He (Mr. Mozley) did not charge the present delay on anybody; he himself had been engaged five days with the hope of bringing matters to a satisfactory conclusion, and if that had not yet been accomplished, it was not his fault. He concluded by moving a further adjournment until that day week.

Mr. Jones, of Liverpool, seconded the motion. The meeting was further adjourned until the 11th inst., to be held at Dee's Hotel. Birmingham, at

The special meeting appointed for this day was also adjourned until the lith inst.

EAST AND WEST YORKSHIRE JUNCTION. Feb. 28.—Half-yearly Meeting, Knaresborough. Mr. J. DENT in the chair.

The Report stated that the condition of the moneymarket had prevented the directors from making the due and intended progress in the works. Owing to the impossibility of procuring money on loan, as anticipated, frequent calls had to be made, which were promptly responded to by the shareholders. The portion between York and Haypark-lane would be ready for opening in about three months, and the portion at the Knaresborough end would be ready for the reciprocal opening and working with the Leeds and Thirsk. Satisfactory arrangements for this had been adjusted by Mr. Grainger, the engineer to both companies. The directors continue their unabated confidence in their ultimate success. The statement

diture, 171,150l.; balance due to the bankers, 16,680l. The Report was adopted, and the retiring directors were re-elected. The arrears due amounted to 7,000l., and if a little time were given, the greater part would be paid. 524 shares originally reserved for the landowners were yet unappropriated.

of accounts showed the receipts at 154,4701.; expen-

The meeting was then made special. The bill for the amalgamation of this company with the Leeds and Thirsk was approved. By the agreement, the latter company would have to pay the former 6 per cent. in perpetuity, but it was thought that the Standing Orders would prevent the Leeds and Thirsk from carrying out the agreement until their main line was opened throughout to Hartlepool, which was expected to be in about a year and a half; and that unless the bill for leasing the line was passed this session, there would be some demur on the part of the Leeds and Thirsk.

The CHAIRMAN said it was evident that the Leeds and Thirsk would shelter themselves under the prohibitory resolutions of the House of Commons, and it showed the policy of the step he had recommended some time ago, viz., to have amalgamated with the York and North Midland, whereby they would at this moment have been receiving 51 per cent. for their capital, without further risk or trouble. However, as the matter stood, he thought it better that the proprietors should give the directors further powers to make the best arrangements they could.

A motion to that effect was carried unanimously.

HARTLEPOOL DOCK, &c.

Feb. 24.—Special Meeting, Hartlepool.—A bill for leasing the works, &c., to the York, Newcastle and Berwick was passed.

GREAT NORTH OF ENGLAND, CLARENCE AND HARTLEPOOL

March 2 .- Special Meeting, Durham .- A bill was approved for enabling this company and the Hartleyork, Newcastle and Berwick.

WEST LONDON.

March 9. - Half-yearly Meeting, London .- Mr. GROUNDS in the chair.

The Report stated that the railway had continued in the same unproductive condition in which it was at the last meeting, no steps having been taken by the lessees (the North-Western and Great Western) to bring it more fully into operation. The works for the extension line to the Thames had not been com-menced, and the North-Western had assigned as the reason why they did not "effectually" work the line that the extension to the Thames was not made. The delay in the execution of the works had been occasioned by the state of the money-market, and it was hoped that when the pressure had been mitigated the lessees would commence operations. They had, however, given notice of their intention to apply, under the late Extension Act, for two years. A small sum had been expended in permanent repairs of the Kensington Canal. The traffic on the canal showed a trifling but steady increase. The statement of accounts showed the receipts at 276,868l. 1s. 8d.; expenditure, 273,320l. 6s. 8dd.; balance, 3.547l. 14s. 11dd.

The CHAIRMAN regretted that the Report was not

more satisfactory, but he could assure the meeting that the directors had done everything in their power to urge the North-Western and Great Western to proceed with the works. The derangement of the whole monetary system of the empire had been felt by these great companies, and the delay, as stated in

the Report, was solely attributable to this.

Mr. White said that the Report was most unsatisfactory, and moved that its adoption be postponed for a week, till the shareholders at Manchester, who were most deeply concerned, had an opportunity of

seeing it.

Mr. HANLEY seconded the motion.

Mr. Righy censured the North-Western and Great Western for taking advantage of the recent Act to suspend the works for two years, to the serious loss of the shareholders. He would suggest that a strong remonstrance should be sent to the Commissioners, requesting of them, under the circumstances, not to grant the extension. In the next place he would suggest that legal proceedings should be taken to compel the lessees to perform their covenant.

Mr. CUBITT said that the North-Western could not touch the works till the 25th of December, and it would be perfectly impossible for them to complete the line within the time specified in the Act. He believed they had acted in perfect good faith all along. No person or company could be accountable for the panic in the money-market.

The amendment was withdrawn, and the Report and accounts adopted.

A resolution was then passed empowering the directors to take steps to obtain compensation from

GLASGOW, PAISLEY, KILMARNOCK AND AYR. March 2 .- Half-yearly Meeting, Glasgow .- Mr. J. M'CALL in the chair.

The Report stated that,—
From the stagnation in trade and manufactures, there had been during the half-year the large decrease of 46,665 in nad been during the hair-year the large decrease of 45,505 in the number of passengers, and in the receipts, 3,520, 3s. 1d. The revenue from goods and minerals on the main line showed, however, an increase of 8,052. 1os. 3d. Part of the augmentation arose from a source whence the directors anticipated little profit, as the lease of the Troon will not vield any adequate return until the large traffic, which may be expected from the Cumnock Extension and its tributary branches, is brought upon that line, and which is entitled to pass over it free of any other charge for its use than those leviable by this company. With diminished profits and an increased amount of capital, in consequence of the 40t shares being now paid up, the directors are reluctantly compelled to recommend a reduction in the rate of dividend for the last half-year. They trust that this diminution is only temporecommend a reduction in the rate of dividend for the last half-year. They trust that this diminution is only temporary, and that a return of commercial prosperity will prove that the resources of this line are abundant, and far from being developed. The Hoard are of opinion, therefore, that a dividend at the rate of 6 per cent. per amount should be declared, payable on the 3oth of March current, under deduction of Income-tax: and they have accordingly appropriated for this purpose the sum of 51,5161, 13c, 6d. In conformity with the previous notice, and in justice to the shareholders who have punctually paid their calls, no dividend warrant will be issued to any proprietor in arrear of calls prior to the 31st of January last. In consequence of calls prior to the 31st of January last. In consequence of the advanced state of the works on the Cumnock Exten-

 $COO_0$ Digitized by

sion and its tributary lines, with a large amount of capital wholly unproductive, the directors have whost improductive, the directors have considered it to a their duty to use every exertion to secure their completion about the period originally contemplated. This result will now be obtained, although the expenditure has been heavy. The engineer states that the Cumnock Extension from The engineer states that the Cumnock Extension from the latter point to Muirkirk, with its mineral feeders—and the line from the Cumnock Extension to Galston—may all be ready for opening about the end of May next. The works on the extension beyond Auchinleck to Cumnock are heavy, and the Board have allowed the contractor additional time for their execution. They have also extended the period for finishing the contract between Galston and Newmilns, with the view of lessening the immediate expenditure of the company. Some delay has taken place in finishing the Irvine and Bushie line, in consequence of one of the contractors not fulfilling the terms of his engagefinishing the Irvine and Bushie line, in consequence of one of the contractors not fulfilling the terms of his engagement; but measures have been adopted to secure its competion in a few weeks. The Board have made an arrangement with the promoters of the Ayrshire and Galloway by which this company have acquired the greater portion of the shares of that undertaking on favourable terms. The arrangements recently made with the Glasgow, Dumfries and Carlisle, for a consolidation of the management and a complete union of interests, have produced the desired results. With the view of preventing, as far as practicable, all unnecessary expenditure in parliamentary contests, the directors have lost no opportunity of endeavouring to effect amicable arrangements with competing interests. They have been successful to some extent in attaining this object. But they regret that they have failed in obtaining a post-ponement of the question of the best mode of crossing the Clyde. The directors trust, however, that the Admiralty will take such steps as shall allow time for maturing a general plan affording equal facilities and advantages to all parties without the possibility of interfering with the navigation of that river. The suspended bill for the Paisley, Harrhend and Hurlet has again been introduced. The directors have availed themselves (for revisal of their tion of that river. The suspended bill for the Paisley, Barrhead and Hurlet has again been introduced. The directors have availed themselves (for revisal of their branches) of the late Extension Act.

The depreciation and contingent fund of the Glasgow, Paisley and Ayr showed debtor, 1,2331. 5s.; creditor, 5,7571. 19s.; balance against the company, creditor, 5,751. 19s.; balance against the company, 4,5241. 14s. The capital account shows receipts, 2,116,715l. 18s. 4d.; expenditure (including expenditure on joint line and purchase of stock in Glasgow, Dumfries and Carlisle, &c.), 2,097,320l. 10s. 9d.; balance, 19,395l. 7s. 7d. The revenue account shows, receipts from traffic (including one half of joint line receipts), 66,5551. 0s. 11d.; expenditure, 35,712l. 19s. 5d.; balance, 30,842l. 1s. 6d.

19s. 5d.; balance, 30,842. 1s. 6d.
The traffic account of the Glasgow and Paisley
Joint line (referred to in the Glasgow and Ayr accounts), shows, receipts, 8,304t. 17s. 8d.; expenditure,
1,798t. 12s. 2d.; balance divisible between the two
companies, 6,506t. 5s. 6d.; the capital account shows the receipts and expenditure at 329,1671. 2s. 11d.

The CHAIRMAN, in moving the adoption of the Report, gave a satisfactory account of the state of the company's affairs, notwithstanding that they had been compelled from the pressure of the times to reduce the dividend to 6 per cent. Various branches now in progress would be completed before next meeting, and greatly add to the resources of the com-

The Report and its recommendations were cordially agreed to.

#### BERWICK AND KELSO.

Feb. 28 .- Adjourned General Meeting, Edinburgh to receive the Report of the committee appointed at the last general meeting, and to dispose of the recommendation made by them relative to a division of the funds of the company. At the hour of meeting, however, only two persons having attended, neither the Report nor the recommendation was submitted.

#### DUBLIN AND DROGHEDA

March 4 .- Half-yearly Meeting, Dublin .- Mr. G. HOYTE in the chair.

The SECRETARY read the Report, which stated that a comparison of the receipts of the last six months with the corresponding period of last year shows that, whereas in 1846 the receipts from passengers were 16,591*l.* 18s. 1d., and goods 3,582*l.* 6s., in 1847 they were, from passengers 17,355*l.* 14s. 7d., and goods 4,1871. 10s. 5d. The traffic on the line and the finances have necessarily suffered during the last year from the monetary pressure. The number of passengers conveyed is 261,131—the smallest number hitherto carried on the line in any corresponding half-year. The raising of the passenger fares from their extremely low rate, however, prevented a similar falling off in the receipts. The contract with the General Post-office for the conveyance of her Majesty's mails expired in September last, and the amount of remuneration is referred to arbitration, under the 1 & 2 Vict., c. 98. The amount hitherto received, viz., 1,600l. per annum, is considered a very insufficient remuneration, and the directors confidently expect a considerable increase. The costs of repairing the engines and carriages, and of maintaining the permanent way have all been heavy. In these

future, but the working expenses must continue to be large when compared with the present gross receipts. A very slight addition to the staff would be sufficient were the traffic on the line double, as the directors anticipate will be the case on the opening of the tributaries, and therefore a very large proportion of the additional receipts will then go to increase their nett profit. The works on the Navan branch are progressing in a satisfactory manner, and a portion of the line will very soon be ready for laying the permanent way. Sir John Macneill has stated in his Report to the Dublin and Belfast Junction that the line will be ready for work in August next. The cost of this branch, 17 miles in length, would be only 150,000l., and the company could work it with their present stock of engines and carriages with a trifling addition to their staff. The directors expect therefore that it will prove a source of profit. They have not thought it advisable to commence the extension to Kells in the present state of the money-market, but they have applied to the Commissioners for an extension of time. The directors declare that they have no power to contribute to the construction of the viaduct over the Boyne on the Dublin and Belfast Junction, nor would they recommend the proprietors to do so. The nett profit of the revenue for the last half-year was 6,677L, but the directors do not think it prudent to divide the profits for this half-year, being firmly persuaded that the ultimate prosperity of the company will thereby be secured on a firm and permanent basis. The working stock and permanent way are in good condition. The capital account to the 31st of December showed the receipts at 761.288/.: expenditure, 754,529l.; balance, 6,759l. The revenue account for the half-year showed the receipts at 30,813l.; expenditure, 24,135l., including 5,211l. for interest; balance, 6,677l.

After some discussion relative to affixing the seal to the register, on the ground that the capital was not fully accounted for,

The CHAIRMAN moved the adoption of the Report.

Mr. Evans, on seconding it, said that the average cost of the English lines was 36,000l. per mile, while their line had been formed for less than 22,000l. per mile. Therefore, contrasted with other railways, they had no reason to fear anything. He thought the directors should reduce their working expenses by 3,000l. or 4,000l. a year, and he should therefore propose that a committee of sharcholders be appointed to confer with the directors to investigate the accounts and to determine upon the future management.

Mr. G. MACARTNEY adverted to the bad management displayed in increasing the fares of the thirdclass passengers, while their discomforts were increased. The directors had not fairly regulated the amount of fares between the various stations, as compared with their respective distances from each other. He compared their working expenses with those on the Ulster, in order to show that the expenditure of the former might, by a more careful management be greatly reduced. He proposed as an amendment that a committee of five shareholders be appointed to inspect the accounts, and report the result of their investigation.

After some discussion, the amendment was put from the chair, when there appeared to be a large majority in favour of it. The directors demanded a ballot, but although the majority of the shareholders present voted for the amendment, it was defeated by a majority of 1,207 to 378, in consequence of a large number of proxies.

The original motion for the adoption of the Report was then declared to be carried.

Mr. Evans moved that a committee of eight gentlemen be appointed to confer with the directors upon the present position and future prospects of the concern, with a view to place it in a more prosperous condition.

This proposition was strongly opposed.

After a long discussion, the motion was withdrawn, on condition that another opportunity be given of bringing it forward at the adjourned meeting.

### NEWRY AND ENNISKILLEN.

Feb. 29.-Half yearly Meeting, Newry .- Lord NEWRY in the chair.

The Report stated that by the amended Act of last session it had been provided that after the sum of 201. per share of the capital shall have been called up no further call shall be made, except with the approbation of three-fifths of the shareholders. It was the opinion of an eminent engineer that it was was the opinion of an eminent engineer that impossible to construct the line from Newry to Armagh for anything like 201. per share. The directors had originated an amicable arrangement with the Dublin and Belfast Junction, for the execution by the two companies, or by this company alone, items the directors anticipate a reduction for the of the Belfast Junction between Gorah and Porta-

down. The latter have declined to enter into any arrangement for this object, though the directors entertain a confident hope that the interests of the shareholders in both companies would inevitably lead to an arrangement between the two companies. The directors have brought forward in the present session a bill for the purpose. It is intended to empower this company and the Dublin and Belfast Junction to enter into mutual agreements for the construction of a line from Gorah Wood to Portadown, and also between this company and the Ulster Company for the use of their line between Portadown and Armagh; and likewise between this company and the Newry, Warrenpoint and Rosstre-Company, as to the formation and use of their respective lines. The directors have received the most encouraging promises of support from the two latter companies in making all such arrangements. Application has been made to the Commissioners for an extension of time. The statement of accounts showed the receipts at 93,4911.; expenditure, 75,9131.; balance, 17,577l.

After some discussion of no public interest the Report was adopted, and the amended bill now before Parliament was approved of.

#### WATERFORD AND LIMERICK.

March 2.—Half-yearly Meeting, Waterford.—Mr. J. Geary in the chair.

The CHAIRMAN said that he understood that the Exchequer Loan Commissioners had received orders to economize as much as possible, for the purpose of raising funds for the assistance of Irish lines; and the first on the list to receive that assistance was the Waterford and Limerick. Within the last six months upwards of 20,000l. of arrears had been recovered and they had reason to hope that the whole would be

shortly liquidated.

The Report was read. From the non-payment of calls the works could not be finished by the time specified. A double line was laid to Tipperary, and the works had thus been increased, both in extent and expense, by the erection of bridges where level crossings were originally intended. The works were considerably retarded by heavy rains, but the line will soon be opened for traffic. The statement of accounts showed the receipts at 427,341l.; expenditure, 415,924l.; balance, 12,417l.

After some conversation, the Report was adopted; four directors were elected in the room of those retiring, and a committee was appointed to meet the directors and investigate all matters connected with the economical management of the company, and to submit the result to a special meeting on the 19th of April next. Until such Report be received the directors were requested not to enter into any new contract or make any further call.

EDINBURGH AND GLASGOW .- Feb. 28 .- Meeting of directors and shareholders, Manchester .- Mr. P. Blackburn in the chair .- Mr. Openshaw gave a historical sketch of the company. He proposed that for the pre-sent half-year no dividend should be paid. The actual earnings of the line would enable them to pay 61 per cent., but there were reasons why the course he had proposed should be adopted. In the first place, if they paid a dividend, they would soon have to make a call for the outlay on new bridges, &c. During the last half-year parties had been allowed to pay up in advance, at the rate of 6 per cent. interest. course, if no dividend was declared, that would have to be returned. All parties who had not paid up their calls on half-shares should have the power of doing so up to the 1st of May. The dividend for the next half year would be 7 per cent. certain. The proposed arrangement would enable them to carry forward a reserve fund of about 64,000l., and to guarantee, in future, the payment of 7 per cent., if not in perpetuity, at least for a term of years.—Several shareholders expressed their approval of Mr. Openshaw's proposition.-The Chairman stated that the Board were divided in their opinion respecting it. For his own part, he was in favour of some such course being adopted. The Board, however, desired to leave the matter entirely in the hands of the shareholders. The matter would not be decided by the result of this meeting. It was only for them to recommend a course for the adoption of a general meeting .- A show of hands was taken, which was almost entirely in favour of recommending the non-payment of a dividend, there being only two dissentients.

#### PORT DE GREAT GRIMSBY.

## A VIS AUX NÉGOCIANTS, AUX AR-A MATEURS ET AUX CAPITAINES DES NAVIRES ÉTRANGERS.

Les droits de tennage sur les Navires qui entrent les bassins à Great Grimsby, ont été reduit à 10 sols Anglais par tonneau de registre.

On compte que les nouveaux bassins seront prêts à recevoir les vaisseaux vers la fin de l'annec 1849.

Ces bassins offrirent des avantages bien decidés sur la plupart des autros ports de Mcr de l'Ancheterre en étant accessibles à toute heure, excepté pendant une couple d'heures a la marée basse, en tems de malme.

Le Hayre présente un abri en tout tems. Les communi-cati us par l'entremise des Chemnis de Fer de MAN-CHESTER, de SHEFFIELD, et des bines du conté de LINCOLX, seront ouvertes avec tous les distrits manufacturiers et avec toutes les parties de la Grande Bretagne.

#### PORT OF GREAT GRIMSBY. NOTICE to FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 16d, per resister tonnace.

It is expected that the New Docks will be ready to receive vessels about the end of 18th. These Docks will present the great advantace over most other Endsis Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refine in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIFE times will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

#### NORTH BRITISH RAILWAY.

At the HALF-YEARLY MEETING of the North British Railway Company, held in Gibb's Royal Hotel, Edinburgh, on the 9th of March 1848

JOHN LEARMONTH, Esq., of Dean, in the Chair,-It was resolved .-

On the motion of Mr. Wilson,-

On the motion of Mr. Wilson,—
That the Directors be instructed to take steps for enforcing payment of the Calls and Interest in arrear on the Third Shares by action at law, if not piad up within eight days from this date.

On the motion of Mr. LEARMONTH. 1. That the Report by the Directors read to the Meeting

1. That the Report by the Directors read to the Meeting be adopted and approved.

2. That a Dividend of 12s. 6d. upon each Share of 2sl. Original and Consolidated Dalkeith Stocks, and of 2s. 6d. upon each Share of 5l. Dalkeith Branch Stock (not consolidated), be now declared payable on Wednesday the 29th inst. to the Shareholders whose names stood on the Register that the flexibility of Exhauster that the flexibility of the shareholders whose names are when the Register at the 24th of February last, being the date when the Books were closed.

3. That Messrs. Alexander Thomson, John Cockburn and

Eagle Henderson be re-elected Directors of the Company, in terms of the Act of Parliament incorporating the Com-

pany.
4. That Mr. Henry George Watson be re-elected Auditor of the Company.

A Motion, by Mr. BLACKADDER,-That there should be no traffic on the line on the Sabbath-day, and calling for returns of the number of men employed on that day, &c., was negatived in favour of an amendment by the CHAIRMAN of the previous question.
(Signed) JOHN LEARMONTH, Chairman.

Thereafter, on the motion of Mr. JOSEPH L'AMERT, of London, the thanks of the Meeting were given to Mr. Learmonth, for his conduct in the Chair.
(Signed) CHAS. F. DAVIDSON, Secretary.

Immediately after the conclusion of the business of the General Meeting, a SPECIAL MEETING of the Company was held, when the Drafts of two Bills, for-

1st, Extending the Edinburgh Station and other purposes; and

2nd, For raising additional Capital for certain purposes, were read and approved.

(Signed) JOHN LEARMONTH, Chairman.

SATURDAY, MARCH 18.

#### BIRMINGHAM AND OXFORD AGAIN.

From what came out at the meeting of the Birmingham and Oxford on Saturday last, it may be seen that there was something prophetic in our conjectures, now a few weeks old, as to the degree of earnestness and eagerness likely to be shown by the Great Western on the completion of the agreement being put within their reach. There has been profession enough of willingness to act upon it,-but as its adoption has been clogged with a proposal which it is plain the shareholders cannot ratify, one may fairly entertain some doubt as to the sincerity of what is professed. Nevertheless, it must be remarked that, while the demand now advanced by the Great Western agents is something quite in excess of the agreement they made so much of insisting upon, -and while, also, it is one that the Birmingham and Oxford Company, composed as it is, may justly refuse to have engrafted on the settlement offered,-there is in the circumstances preceding the present offer a practical ground on which the former might justly rest the claim for additional security, could they do so with any kind of consistency. And the clear view of this matter of fair refusal on one hand, and of accountable desire on the other, will of itself show the mistake of attempting to force into an alliance two parties which have between them elements of repulsion and distrust that must render any cordial fusion of interests impracticable.

From the papers read at the meeting, it will be seen that the Birmingham and Oxford, having formally proposed to submit to the agreement, and to accept any settlement of its terms that might be fixed by proper legal representatives from each side, called upon the Great Western to perform their liability under it: by issuing, namely, to those who had paid up their 201., coupons for 301. 5s., which the treaty declared should be handed over as soon as the calls to that amount had been perfected. the Great Western refuse to do, until the Amalgamation Bill shall have become law :except on a written assurance being given by such of the Birmingham and Oxford shareholders as the Great Western shall name, that they will not, either as shareholders in that concern, or in any other capacity, in any way oppose or hinder the passing of the bill in question. To this condition the Birmingham and Oxford object, firstly, that it is not enjoined by the agreement, and that no right exists in the Great Western to load it with new conditions, or to refuse to perform at once its express obligations in the matter of the coupons: and next, that the engagement demanded is one they have no power to enforce; since the company can pledge itself as a whole, and adhere to that pledge; but that to impose conditions intended to bind in all other respects and relations every individual who may be a shareholder in the company, is a demand quite beyond precedent, wholly impracticable, and, even if practicable, unreasonable. That, inasmuch as the personal acts of the shareholders, in so far as they may be members of other concerns, are free, it would be impossible to ensure the adherence of all to any such pledge, even if the majority were willing to take it; while, if one or two only refused, it would give the Great Western a pretext for declining to fulfil a part of the agreement most important to the shareholders at the present moment,—a pretext which some think the former will now be glad to take advantage of.

On the other hand, the Great Western urge, with some appearance of equity, however little

agreement, that, knowing what is now known of the composition of the company, no guarantee short of what they ask for could give any security for the end of the treaty being practically attained after the coupons should have been given, when the proprietors, having their price in hand, would be out of the reach of accident. The constituency, it is said, contains numbers who are also directors or shareholders of other undertakings, known to be hostile to the objects of the Great Western; and unless these are prevented from acting altogether, the engagement merely given by the company, as such, not to attack the bill, is worth nothing. That, consequently, there is a just practical ground for delaying the issue of the coupons, until this matter is put out of danger; so that the Great Western may be assured of getting what they have agreed to purchase at a given price, and avoid the risk of paying for a possession which, after payment made, will be apt to escape out of their hands.

There can be no question that, practically, there is weight in this reasoning: as little can it be denied that the words of agreement give no right whatever to make any new conditions upon it. We come here to a point of the ethics of negotiation, which, even if we give up the literal cogency of written engagements, will not, we apprehend, be found, on a consideration of all the circumstances, to justify the Great Western in now insisting on this as an equitable construction. There are two ways of dealing in such cases. One is, to adhere to the very letter of a treaty; another is, to admit on both sides a fair allowance for any new facts not contemplated in its provisions, Now, it is clear, that whichever course be adopted, it ought to be kept consistent to the end;-that it is not just for either party to change at its convenience from the strict to the looser method of practice. This is what the Great Western seein to be now doing. While they were in danger of losing the agreement, they have been loudly insisting on the sanctity of its literal provisions; and denying altogether that an entire change in the constitution of the body which would be concerned in carrying them out, had anything whatever to do with the exact ratification of all that it enjoined. Now that the other side comes forward, offering to fulfil the agreement to the letter, the Great Western suddenly become aware of the iniquity of this strict method of dealing, irrespectively of the real alteration of the case, and now claim to depart from the letter of the treaty, on the strength of circumstances which materially affect its bearing upon their interests. This is what in plain language is termed "playing fast and loose." If any circumstances not specified in the wording of the treaty are justly entitled to have any weight, then the circumstances which induced the Birmingham and Oxford Company to object to it, were of all that can be imagined the most weighty. If the Great Western, in the full knowledge of these circumstances, were then justified in driving over them to claim the strict execution of the agreement, the Birmingham and Oxford are justified in demanding that the former should now adhere to the literal conditions, on the fulfilment of which they insisted while it suited them to shut their eyes to the virtual changes of its bearing, and which they now claim to modify on the ground of those very changes, when it suits them to discover their importance.

This, it is clear, would be alike unjustifiable, whether the strict or the liberal way of interpreting agreements be approved of. It can only be maintained on a principle under which

which seems peculiarly indecent when taken up by parties who have scarcely yet recovered their breath from crying out for the strictest execution of a treaty which was virtually annulled, -and that, too, by the very acts of its makers of their own party,-if ever treaty was. What is good for one side is good for both; and we apprehend means may be found to teach the Great Western this maxim, which it seems that nothing but compulsion will induce them to practice.

The special meeting was adjourned, and the other also, after re-electing the directors of the shareholders' party, to the 23rd inst. Resolutions were passed, ordering means to be taken for the insertion of protective clauses in the bills promoted by the Great Western, that may affect the Birmingham and Oxford; as also for the dismissal of Mr. Whateley from the office of solicitor to the company; Messrs. Colmore & Beale succeed him at Birmingham.

#### Proceedings of Bocieties.

INSTITUTION OF CIVIL ENGINEERS.—March 14.— General Meeting.—Mr. J. FIELD, President, in the chair.—The paper read was 'An account of the effect of the storm of the 6th of December 1847, on four sea walls of different forms, on the coast near Edinburgh, as illustrating the principles of the construction of sea defences, by W. J. M. Rankine. The principal example given was the sea wall of the Leith branch of the Edinburgh and Dalkeith, finished in the year 1837, built by the author from Mr. Walker's designs. Just after it was completed, a violent storm occurred, which injured almost ever violent storm occurred, which injured almost every similar work within its range, but produced no ill effect upon that structure. On the 6th of December 1847 a still more violent storm occurred, which did 1847 a still more violent storm occurred, which did great damage all around, but the railway wall still escaped without injury. The total length of the wall was about 750 yards; its height was 13½ ft. above the beach at the highest point, diminishing to about 6 ft. at the ends. The height of the top was 4 ft. above equinoctial spring tide level. Its least thickness was 5 ft., and its greatest 10 ft.; the back was vertical, but the face had an inclination at the lower part of 5 in. in the foot, gradually becoming curved as it rose upwards, until at the top it overhung slightly. The foundation course was composed of large flat stones, laid horizontally 4 ft. below the surface of the beach, upon a stratum of fine sand and gravel, the beach, upon a stratum of fine sand and gravel, firm when dry, but moveable when wet. The face was of hammer-dressed ashlar, about 2ft. thick; the back of rubble, 18 in. thick. The interior was filled with concrete. The coping was composed of stones each weighing about half a ton, connected by means of cast-iron dowels. The stone used was Craiylieth sandstone. The face joints were laid in cement for a depth of 4 in. The foundation was protected by a pitching of trap boulders, laid on the natural level of the beach. They were partially disturbed by the storm referred to, and the author ascribed this to their weight being insufficient to resist the vertical their weight being insufficient to resist the vertical oscillation of the waves. The second example was a vertical sea wall near Trinity, the foundation of vertical sea wall near Trinity, the foundation of which was protected by a dry stone bulwark sloping at angles of from 30 deg. to 40 deg. The wall was uninjured by the storm, but the pitching was breached at several points. The third example was another wall near Trinity, of a hyperbolic section. The lower part had a slope built dry up to a little below high-water mark. At this point there was a sharp curve, and the upper part was nearly vertical, and laid in mortar. The waves extracted the stones of the curved portion, and the upper part, being underthe curved portion, and the upper part, being under-mined, was destroyed to a great extent. The last example was the bulwark of the Granton line, the lower part of which sloped at about 20 deg. upper portion was curved, and was covered by a heavy projecting string course and parapet. It was neary projecting string course and parapet. It was built dry, and the stones of the lower part weighed not less than half a ton each. This bulwark suffered damage to a slight extent in its upper portion. These examples were stated to confirm the following principle. ciples:-That the principal action of the waves in front of a sea wall was a vertical oscillation, produced by the combination of the direct and the reflected waves: that a sloping bulwark gave rise to a sloping oscillation, tending to overturn any portion which projected above the line of slope; that where the strength of a sea wall depended on the pressure of the superincumbent masonry, and the adhesion of mortar and cement, the position of greatest stability they may be borne out by the terms of the no agreement whatever can be binding, and on the weight of the individual stones, the position was vertical; and that when the strength depended

of greatest stability was a very flat slope.-In the discussion which ensued instances were adduced of the duration of vertical walls under the attacks of heavy seas, and, on the other hand, of their destruc tion when flat slopes had effectually resisted the waves; and it was agreed that in this, as in all other waves; all twee agreed the interpretation of the cases of engineering, no empirical rules should be laid down, but that the skill of the engineer should be exerted to adopt such forms of construction as were best adapted to the locality and the circum-

CHESTER AND HOLYHEAD -CONWAY BRIDGE.-The following details of the achievement of raising the tubular bridge at Conway, although they will probably appear in Mr. R. Stephenson's next Report to the directors, deserve immediate notice, from their highly interesting character:—"In sight of a large concourse of people, covering the whole space of the concourse of people, covering the whole space of the suspension-bridge, the towns and walls of the noble old castle, and the fields in the background of the spot on which it was built, the wonderful effort of science, the tube-bridge, was floated at 11 a.m., on the 6th inst., and moved from the piles and stays on which it was constructed, and fairly brought into the tide-way of the Conway, while its flood-tide was running at the rate of at least two miles per hour. It appeared to float with the greatest ease, and not immersing the six pontoons on which it rested (three at either end) to within at least 3 ft. of their decks. The precautions taken by Capt. Claxton, R.N., to whose sole direction the transporting of this enormous mass was committed, were admirably contrived to keep the machine suspended over the fixed piers, to await, as it were, the decision of the engineer whether the perilous step of launching into the deep (for deep indeed is the river, 12 fathoms at low water) should be proceeded with, or whether the valves should be lifted, and the tube dropped, as it were, again in place, upon its piers—many circum-stances appearing to bear upon that determination; the strength of the current; the height to which the tide promised by its comparative rising; and the stength of the wind. At about 11 a.m., however, the tide appeared to slacken, and the resolution was formed, for all at once the chains and ropes were hove upon, and in 10 minutes it had passed that, the first Rubicon—gradually but steadily it approached the site intended for it. Mr. Stephenson and Mr. Brunel accompanied Capt. Claxton, who, with his trumpet in hand, directed the proceedings. He used two figures, of large dimensions, No. 1 and 2: when the red side was shown of the former number, a capstan fixed on the road from Conway to the tube works was hove upon; when the white side was shown the heaving stopped, and a similar operation with No. 2 governed the operations of a powerful capstan (lent by the Admiralty), fixed on the railway on the Chesr side, with its rope made fast to the inside of the tube, on that end. In the pontoons three enormous masses of timber, 95 ft. long by 25 ft. wide, and 8 ft. deep, bound together by powerful crabs worked by 44 men, hove upon the chains, which had previously been tightened up by a large crab, at which a dozen or more men strained with their utmost efforts at either end on shore, one end of each chain being fixed at the piers of the suspension-bridge, while the other ends were fast to the aforesaid crabs, on the opposite side of the river: on these chains the pontoons appeared to traverse. The western, or Conway end was pointed first, but did not come quite home afterwards. The eastern, or Chester end, was dropped. in after, or while the ebb was making; but before it reached by about a dozen feet the exact berth it took the mason work, and no effort could disengage it. Nevertheless, it was over its bed sufficiently to be landed and bedded up with timber previously pre-pared from a lower bed, which had been provided in case the tide should fall before the upper bed could be reached. The most extraordinary efforts were made with screws and tackles, no less than four of which latter were at one time applied, besides the Chester side crab, manned by 60 people, while the tide was falling, to overcome the obstacle; but they appeared to be ineffectual, and Capt. Claxton was heard to give orders for bedding up, which was speedily accomplished. The barges were then sunk a little, and the noble fabric rested very near the hydraulic presses which are to be used in raising it. Cheers were then given for the Conway Bridge, for Mr. Stephenson and Capt. Claxton, and heartily responded to by the masses lining the suspensionresponded to by the masses liming the suspension-bridge and the castle walls. Three steamers were in attendance below the bridge, two full of company, and a great number of boats plied with their freight on the river. A band of music, playing enlivening airs, followed by a dense crowd, marched from one end to the other on the top of the tube, which was but lightly thinned before sunset. The way in which, in attendance below the bridge, two full of company, and a great number of boats plied with their freight on the river. A band of music, playing enlivening

a tide-way never really still, this enormous structure was placed upon its bed, reflects the greatest credit on all concerned, down to the lowest labourers. All seemed to be actuated by the liveliest desire for success. Eighty men were in each set of pontoons—one set commanded by Capt. Dunce, R.N., an assistant of Mr. Brunel, and the other set by Lieut. Blatchley, R.N., the crews under them performing the principal work, being sailors from the Home, of Liverpool. In the tube, attending the hawsers, were the officers and some of the crew of the Great Britain, the late prisoners in Dundrum Bay. On the top, on the Conway side, Mr. Fairbairn, of Manchester, had the direction; and on the Chester side, Lieut. Glenny, The great difficulty to be overcome was -the small space to play in-for on the Conway side it wants 9 inches, by actual admeasurement of being home, or in place; while on the Chester side, it is fairly jambed against the masonry so that in fact there were barely 9 inches free in 400 ft. No sooner had the tide fallen sufficiently than the obstacle to the exact fixing in position became apparent to all. The inner pontoon was butting at its end against and partly upon a rock. Tt took the ground which had been blasted away from the solid rock in consequence of having got a little twisted previously to starting, we were assured, full 4 ft. The Menai tubes are progressing, under the superintendence of Mr. E. Clark, assistant to Mr. Stephenson, who most unfortunately lost the great toe of his right foot one day last week. The second Conway The Manchester Guardian state tube is in progress. that it was not until the 11th that the tube was again floated by the pontoons, and was finally placed with its two ends resting upon the shelves of masonry constructed to receive it, prior to its being raised to the elevation at which it is intended to be ultimately placed, and which will be about 15 ft. or 16 ft. above the level of the shelves on which it now rests. The lifting of this enormous mass of iron, which weighs about 1,300 tons, is intended to be effected by two hydraulic presses, with 18-inch rams, and pumps 3 of an inch diameter. These pumps are to be worked by steamengines, which will give a pressure equal to 3 tons on the circular inch, or a total lifting power for each press of 972 tons, which, of course, will be amply sufficient for the purpose. Each press has a lift of sufficient for the purpose. Each press has a lift of 6 ft.; and, as the ends of the tube rise, the masonry which is intended to support them will be carried up from the shelves on which they now rest.

#### Official Bapers.

REPORTS OF THE ADMIRALTY (under 9 & 10 Vict. c. 106), relative to applications for Railway Bills.

Manchester, Sheffield and Lincolnshire (Humber Ferries, &c.).—The object of this bill is to make a landing place at Hull for the accommodation of the traffic across the river Humber, in commession with the Manchester, Sheffield and Humber, in connexion with the Manchester, Sheffield and Lincolnshire. The works proposed, and the provisions of the bill, which affect the jurisdiction of the Admiralty, are, 1st, the erection of a pier at Kingston-upon Hull; 2nd, the enlargement of the works at New Holland; 3rd, the regulation of the pilotage of the port of Great Grimsby. Although the pilotage of the Humber, generally speaking, is admirably conducted by the Trinity Board at Hull, it appears in evidence, that owing to the increase of traffic at the port of Great Grimsby, great inconvenience has recently been fell ably conducted by the Trinity Board at Hull, it appears in evidence, that owing to the increase of traffic at the port of Great Grimsby, great inconvenience has recently been felt from the want of pilots at that place, and that five vessels had to go to sea last year without pilots; their lordships therefore are of opinion that the provisions of the bill, which seek to remedy this evil, by authorizing the appointment of Pilotage Commissioners at the port of Great Grimsby, are unobjectionable. At New Holland, on the Lincolnshire or south bank of the Humber, nearly opposite Kingston-upon-Hull, an open pier on timber piles projecting 1,330 feet into the river from high-water mark, having been sanctioned by the Act of 9 & 10 Vict. c. 101. (1846), is now nearly complete, and its other end will reach into a depth of 8 feet at low-water, or 30 feet at high-water of ordinary spring tides. No extension of this pier is proposed by the present bill, but powers are taken in sect. 4 to make additional piers, wharves and also a basin in and adjoining to New Holland creek; as these latter works will not offer any obstruction to navigation, they have their lordships' assent. At Kingston-upon-Hull it is proposed to construct an open pier on timber piles, projecting 1.010 feet into the river Humber from the line of high-water, and about 730 feet beyond the line of low-water, spring tides, exclusive of floating stages or caissons, which will extend about 40 feet beyond, making a total length of 1.050 feet. The pier is to leave the vester at a pint 349 vards west of the principal of moating stages or caissons, which while xtend about 40 feet beyond, making a total length of 1,050 feet. The pier is to leave the shore at a point 342 yards west of the principal entrance to the Hull dock basin. [The Lords of the Admiralty express regret that the Standing Orders do not require sections to be deposited of works proposed to be made on the bed of ariver, such as the above.] Notwithstanding the the need of a river, such as the above. I Notwithstanding the Humber is more subject to silting than any other river in the United Kingdom, and that silt is the great evil from which the harbour now suffers, their lordships regret to observe that it is in evidence that the Hull Dock Company take out

are fully alive to the necessity and importance of a low-water pler at Hull, in order to maintain uninterrupted steam communication; but they are of opinion that this desirable object may be obtained by a shorter pier, and by dredging a channel up to it, without sacrificing the more important a channel up to it, without sacrificing the more important interests of navigation. It appears in evidence given before the surveying officer that no less than 17,874 vessels cleared inwards and outwards at the port of Hull during the past year, a great part of which entered and sailed from the dock basin, distant only 342 yards east of the proposed jetty. It should be borne in mind, also, that it is highly desirable for the interests of all parties in Hull, as well as in order to secure the proper scour of the river, that a defined line of foreshore should be laid down, up to which all works should be advanced, and beyond which none should be permitted to project. Their lordships, therefore, cannot either sanction that the proposed pier, or any other work, works should be advanced, and beyond which none should be permitted to project. Their lordships, therefore, cannot either sanction that the proposed pier, or any other work, should project into the stream beyond a line starting from the south-west corner of the present west pier of the dock basin at Hull, and drawn westward to the bend in the shore at high-water mark, spring tides, on the south edge of the Hull and Selby embankment at Dairy Coats brickfield. With this condition their lordships assent to the bill.

Waterford and Kilkenny Acts Amendment.—The Lords of the Admiralty assent to the bill, which authorizes the crossing of a small branch of the river Suir, near Waterford, on the understanding that the plans and acctions of the intended bridge are to be submitted to their lordships for

approval.

LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION.

The committee appointed at the half-yearly meeting on the 8th ult. (see ante, p. 102), to inquire into the affairs, have just issued their Report. They state that the directors afforded them every facility, and the chairman and two of the directors were examined by them. The Report is divided into four sections :-

1. The Accounts.—The accounts generally were well kept, but it appeared, on investigating the expenditure of the past half-year, that the legal and parliamentary charges were excessive, and the general expenditure greater than circumstances warranted. Up to the 30th of June 1847, 56,0004., part of the capital, was invested in Three per Cent. Consols, and a further sum of 23,6371. Ics. in consol scrip. In July the directors sold the consol scrip, and with other monies, making together 25,0004., lent it to the Lancashire and Yorkshire, at 5 per cent. interest, without security, on terms of short notice of repayment. The explanation offered for this transaction is, that at the time it was entered into, the directors were under the impression that the works would be proceeded with, and that it would be desirable to have funds available on short notice; but after it was determined, in October, to suspend the works, application was made for a mortgage, and on the 4th of February last, subsequent to the movement on the part of the sharcholders, the Lancashire and Yorkshire executed a bond for securing to this company 15,0000, with 5 per cent. interest, leaving 10,000, on sale, 6,000, of which has since been repaid. The entire transaction of lending money to a company on call 1. The Accounts.-The accounts generally were well kept, entire transaction of lending money to a company on call appeared to the committee exceedingly irregular, and they could not refrain from recording their disapprobation. The office expenses are at present—secretary, 450l.; clerks, 180l.; 140/.; and contingencies, 300/.; making 1,070/. per annum.

office expenses are at present—secretary, 450%; clerks, 1806; rent, 140%; and contingencies, 300%; making 1,070% per annum.

2. Contracts Entered into with other companies: first, a contract dated the 5th of May 1846, with the Lancashire, and Yorkshire, whereby this company agreed to make a connecting link between the Lancashire and Yorkshire and the East Lancashire line at Burnley; the agreement also containing some stipulations relative to sending traffic along the line.

2. A contract of the same date with the Yorkshire and Lancashire, the East Lancashire and the Clitheroe, stipulating that all the traffic to and from Liverpool should on certain terms pass along the East Lancashire line.

3. A contract dated the 20th of May 1846, with the East Lancashire, stipulating that the Burnley link should be made at the joint expense of the two companies. This company applied last session for power to construct the link, and were opposed by the East Lancashire, which the parliamentary expenses were much increased. The bill was, however, obtained with a clause introduced by the East Lancashire, empowering them to find half the capital; but the committee are informed that that company have allowed their powers to expire, and therefore the whole expense of making the link, estimated at 40,000%, will fall on this company. The length is 5 furlougs 55 yards, and it is about 12 miles distant from the terminus of the main line. It appeared extraordinary that the company should undertake to make so isolated a link, and so far distant from the main line; but it was explained that the Lancashire and Yorkshire insisted upon the promoters of the Lancashire and North Yorkshire agreeing to do it as the price of their support.

4. On the 25th of February 1848, the directors of this company entered into an agreement with Mr. G. Hudson, M.P., on behalf of the York, Newcastle and Berwick, by which it was agreed that, on the completion of such portions of the line of this company and of the Northern Counties Union line, as lie between a

Digitized by GOGIC

the rent to be reduced from the 1st of January, 1853, to 5 per cent. until it is so completed. The agreement also provides for the traffic of various places being brought over the line of the York, Newcastle and Berwick, and that the line between Newton-le-Willows and wick, and that the line between Newton-le-Willows and Cowton shall be suspended or abandoned, and not constructed without the previous consent of the York, Newcastle and Berwick. The committee say that the agreement has not been submitted to the Board, or anctioned by the shareholders, and they are without the means of forming an opinion as to the amount of attention bestowed, or as to whether the agreement was good for the shareholders, or the best that could be obtained; but they find that it was not until the end of January that the directors seriously considered the question of entering into negotiations with Mr. Hudson; but they believe that in entering into the negotiation the directors have evinced (though late) some activity in forwarding the interests of the shareholders, and the committee have felt it their duty to recommend the directors to exercise caution in entering into further directors to exercise extreme caution in entering into further

the committee have selt is their duty to recommend the directors to exercise extreme caution in entering into further contracts.

3. Contract with Engineer.—In August 1847 a contract was entered into with Mr. Hawkshaw to provide for all the duties of the engineering department at 4001, per mile (the line being 54 miles) and to receive in 1847 3,0001, 1848 4,0001, 1849 5,0001., 1850 5,0001., 1851 4,0001, and the balance on the completion of the works—parliamentary business or alterations not be included in the contract. On the directors determining to suspend the works, a further contract was entered into, by which it was agreed that the year in which the works should be re-commenced should count as the second year—a reasonable allowance being made to Mr. Hawkshaw for any extra expenses and labour entailed by the suspension. During the last half-year Mr. Hawkshaw was paid 3,0001. under the contract, and 3501 for his charges and expenses in reference to the Act for the Burnley link. Contracts have been entered into for land, by which the company, on taking possession of the land, become liable to the payment of 77,7341 11s. 2d., but 22,8701. has reference to that portion of the line now proposed to be abandoned. Further, land to the value of 14,973. has been applied for, or notice given that it will be required, but no binding contracts exist. Notices to treat for land, involving a sum of 1,9671, were given in October last, when the suspension of the line was in contemplation without the sanction of the directors, or at least any record without the sanction of the directors, or at least any record being made on the books of the company; and the com-mittee considering such a course extremely irregular, recommend that in future matters of such importance shall

not be so loosely conducted.

4. Prospects.—The committee are of opinion, from the A. Propects.—The committee are of opinion, from the evidence brought before them, that, adopting the Bedale branch of the York, Newcastle and Berwick, the line may be executed at the cost of 1,000,0004., including the money already expended, or for about a total cost of 144 per share, of 111. Its. per share to be called up, and that there is reason to calculate that the traffic will yield a fair remuneration,—Mr. Cope, who prepared the traffic tables, estimating it at 5 or 6 per cent. without including coal or coke, from which a large traffic is now estimated. The direction consists of eight members, three of whom are directors of the Lancashire and Yorkshire, and a fourth was lately a salaried officer of the same company. The committee feel that in consequence of jars between directors, and other causes, that there must have been mismanagement, and that much alteration should be made in the executive. Though they are of opinion that it is desirable to cultivate the most friendly feeling with the Lancashire and Yorkshire, the most friendly feeling with the Lancashire and York-hire, they think that the mode in which the shares of that company (7,000) might be made to operate on the election of directors in this company injurious to the interests of the company; and the committee, to obviate this, recommend that the Lancashire and Yorkshire should have always the privi-lege of electing one of the directors of this company, but should not interfere with the election of the other directors, and that not interfere with the election of the other directors, and that either some of the directors should retire and others supply their places, or an addition be made to the number; though the latter alternative appears objectionable, as, probably, it wou'd increase the expenses of the company. Under all the circumstances, they recommend that those shareholders who, "dissatisfied with the management, and discouraged by the prospects of the company," had introduced a dissolution bill into Parliament, should withdraw it, in the hope that there may be such an improvement of the times and in the management as to render it inexpedient. Taking a the management as to render it inexpedient. Taking a review of all the circumstances connected with the company, they are of opinion that the majority of the directors should they are of opinion that the majority of the directors should be beyond the influence of any of the companies whose cooperation is required; that the Board should direct its energies towards concluding efficient and practical arrangements with terminal lines, and that until such thorough change is made in the Board, and such satisfactory arrangements are made with other companies, it is essential for the interests of the shareholders that all expenditure and liability should be avoided, and all progress in the line suspended.

#### SOUTH DEVON.

Engineer's Report for the Meeting, Feb. 29 (p. 181).

the consequence is, that we are not only working the engines nearly double the time that is required, but the boilers being insufficient for such a supply of steam, the fires are obliged to be forced, and the consumption of fuel is irregular onliged to be toreed, and the consumption of the libering and excessive. There is every prospect of the evil being speedily removed; and as the working of the atmospheric will then become the subject of actual experiment, and its value be practically tested, I shall refrain from offering at present any further observations upon it. The engine-house at the summit at Dainton, between Newton and Totnes, is at the summit at Dainton, between Newton and Totnes, is completed; preparations are making for erecting the engines, and the pipes are being laid upon the line. As regards the works upon the line, I am happy to say that my Report may be very brief. Upon the portion opened to the public, between Exeter and Totnes, everything has stood remarkably well, and the fears entertained by some of inconvenience likely to arise from the action of the sea have not been realized. Between Totnes and Laira Green, where the temporary Plymouth station is being exceeded, the works may be realized. Hetween Totnes and Laira Green, where the temporary Plymouth station is being erected, the works may be said to be completed; and as soon as the permanent way and the stations are ready, the line may be opened to the public. But for the unfavourable and generally very wet weather which we have had for the last two months, this might probably have been now effected; but although somewhat delayed by the weather, a few weeks must now suffice. The Torquay branch is also within a few weeks of completion to the proposed station, at the point of junction with the Rivishem actavision; and the permanent way may completion to the proposed station, at the point of junction with the Brixham extension; and the permanent way may be laid and the line opened in two or three months from the present time. Between Laira Green and the Plymouth station the works have proceeded slowly, but the tunnel at Mutley has been nearly completed, about 40 yards only remaining unfinished; and the other intermediate works could now be easily completed before the station could be built.

18, Duke-street, Westminster, Feb. 26. I. K. BRUEL.

#### CORNWALL

Engineer's Report for the Meeting, Feb. 23 (p. 170).

Our object, since the last half-yearly meeting, has been to endeavour to advance those works which might occupy the longest period in their construction, and which would advance most that part of the line which might, under certain circumstances, be made available before the completion of the whole; and to do this in the most economical manor the whole; and to do this in the most economical man-ner, and within a certain limited expenditure. With these objects in view, it has been considered desirable to com-mence the works between Truro and St. Austell inclusively, mence the works between Truro and St. Austell inclusively, so arranging the terms of the contracts as to insure more particularly the progress of the tunnels and viaducts upon this portion of the line, and, in fact, to keep entirely under the control of the directors the rate of progress, and consequently the rate of expenditure. The tunnels, and some of the earthwork, particularly the cuttings adjacent to the tunnels, have been commenced. The shafts have been sunk, and the works of the tunnel itself commenced at the several fears, when the works are of tunnels. several faces; about 50 yards run of tunnelling are exca-vated; and the works are in progress at 12 different faces. This state of progress is sufficient to enable us at any time to proceed rapidly should the opportunity arise; but, in the meantime, it is most important, as affording full oppor-tunity of ascertaining the extent of difficulty to be encounthe meantime, it is most important, as affording full opportunity of ascertaining the extent of difficulty to be encountered in these works, about which there is always more or less doubt and uncertainty, until the full-sized excavation of a tunnel is actually commenced at several points in its entire length. I am happy to say that the result of the experience thus obtained is satisfactory. The quantity of water seems likely to be moderate, and principally at points whence it can be drained, and the materials to be excavated are not such as to cause any unusual difficulties. As regards the viaducts no masonry has been actually commenced, but stone has been prepared for some of them, and is being brought upon the ground. At Saltash the preliminary works for the purpose of more accurately determining the nature of the bottom of the river and the thickness of the deposits above the rock upon which the piers will be founded, and thus determining the exact position of the piers, are still proceeding, and I expect, in a few weeks, to have sunk a cylinder of sufficient size to enable us to examine the bed of the river. Upon the rest of the line I am availing myself of the delay to examine minutely every detail, and introduce every modification which can in the slightest degree diminish the amount of work, and consequently the cost of construction.

Feb. 22.

#### OXFORD, WORCESTER AND WOLVERHAMPTON. Engineer's Report for the Meeting, Feb. 25 (p. 170).

Since my last half-yearly Report it has become necessary to effect even greater reductions in the general progress of the works than was then contemplated, and I cannot therethe works than was then contemplated, and I cannot therefore now report so near an advance towards completion of some portions as I had then hoped to have been able to do. Every endeavour has been made to regulate the progress of the different parts as far as possible according to the periods at which it had been desired to bring them into useful operation. But this exact apportionment of the company's means has not been everywhere possible, and consequently much delay has been unavoidable even on the parts which it had been proposed to complete before the rest. Upon that portion of the line between Stoke and Abbott's Wood, which had been more advanced for reasons frequently referred to, the works are all but completed, the line is ballasted and ready to receive the permanent way, though Engineer's Report for the Meeting, Feb. 29 (p. 181). Since the last half-yearly meeting the atmospheric apparatus has been completed and brought into active operation—at first, with a limited number of trains between Exeter, and Teignmouth—subsequently, to Newton—and latterly, with all the trains between the latter place and Exeter, a distance of rather more than 20 miles. Notwithstanding numerous difficulties, I think we are in a fair way of shortly overcoming the mechanical defects, and bringing the whole apparatus into regular and efficient practical working; and as soon as we can obtain good and efficient telegraphic communication between the engine-houses, and thus insure proper regularity in the working of the engines, we shall be enabled to test the economy of working. At present this is impossible, owing to the want of the telegraph compelling us to keep the engines almost constantly at work, for which the boiler power was not intended and is insufficient; and

but these have been overcome and their fullest extent ascertained, the tunnel having been opened out at several points, and the water being entirely drained off by a lower heading. There is no reason to anticipate any further difficulties and the water being entirely drained off by a lower neading. There is no reason to anticipate any further difficulties in this work. The clay cuttings south of Mickleton have given some trouble, but the difficulty is not one of great magnitude. At the Oxford end delays have still been experienced in obtaining possession of land. To the north of Droitwich and Stoke all the principal works are well advanced. The vinducts are in progress, and the Dudley tunnel is nearly completed. This last is the work about which most doubts had existed as to the difficulties that might have to be surmounted: it is highly satisfactory, therefore, to me to have to report its near completion, and at a cost not materially exceeding that originally expected and provided for. The completion of the line north of Dudley depends rather upon the purchase of land than upon the works, as these, although involving many details, are nowhere heavy. At Wolverhampton itself, parliamentary powers are sought for some improvements in the station, and the works must, of course, wait until these powers are obtained.

18. Duke-street, Westminster, Feb. 24.

#### Brogress of Works.

ABERDEEN. - The Montrose Review notices the increasing success of the line, the receipts far exceeding expectation. Encouraged by this support, the directors have added another to the trains daily betwixt Montrose and Brechin. In the carriage of light goods and parcels this line affords advantages to merchants, which they certainly were not prepared

BELFAST AND BALLYMENA.—There is now probability that the line, says the Banner of Ulster, will be opened for public traffic in time for the Carrickfergus assizes. The Government officer, Capt. R. M. Laffan, of the Royal Engineers, with several of the directors, made a careful inspection of the entire line. The Government officer has not yet, of course, been able to make any official report, but there can be little doubt that when he does it will be a very favourable one

GREAT SOUTHERN AND WESTERN .- The Great Southern and Western is making rapid progress towards completion. Numbers of additional men, according to the Cork Constitution, have been set to work in the vicinity of the city during the past week. In addition to the men employed at the tunnel in Spring-lane, at which they are working assiduously night and day, a numerous gang are busily engaged on Dublin-hill in laying out the intended line. A number of men are forthwith to be set to work on Mr. Beare's ground, to commence boring the tunnel at the southern side, which will be worked on until it meets the northern shaft at Spring-lane. So desirous were the company to go to work and give employment at this trying season, that, with the assistance of the sheriff, possession vi et armis has been taken of the lands of Mr. Beare. When the Holyhead line and the Great Southern and Western

are completed, the communication between London and Cork will not exceed eighteen hours.

NORTH STAFFORDSHIRE.—March 8.—An official trip took place on the Norton Bridge branch from Stafford to the potteries. Six powerful new engines started from the Stafford station, on the London and North-Western line, and reached Stone soon after 3 p.m., where they were joined by a party of gentlemen and shareholders, who partook of luncheon; the whole party then proceeded to Stoke-upon-Trent, the engines covered with numerous banners bearing appropriate inscriptions. The engine which led the van had the word 'Dragon' boldly emblazoned on its boiler. The name of this engine originated, says the Staffordshire Mercury, in a suggestion by Mr. C. J. Mason, on the occasion of the cutting of the first sod. Mr. Mason observed that within the memory of some of the oldest inhabitants, the materials and manufactured goods of the district were conveyed on the backs of pack-horses, and that the most cele-brated animal employed in that business—one who "bore the bell" for the greatest number of years was known far and wide by the name of "Dragon." He thought therefore as the potteries had progressed from pack-horses to canals, and were then about to exchange the creeping boat for the flying steamer, that the directors would do well to distinguish their first locomotive by the same name. The engine-shed not being yet completed, the locomotives were temporarily housed in the goods station. They are all of the very best construction and workmanship, and are built on Stephenson's patent principle. Two of them are from the celebrated works of Sharp, Brothers & Co., of Manchester, two were built by Potts & Jones, of Newton-on-the-Willows, and the remaining two by Hick, of Bolton. Hick, of Bolton. Some of the principal engineers and contractors afterwards dined together at the Wheatsheaf Inn, and a number of the workmen were also regaled. The construction of the stations is in a forward state, and the extensive engine-shed

is also progressing rapidly towards completion. The portion of the line from Norton Bridge to Stoke will probably be delivered by the contractor into the hands of the company about the 25th inst.

Scottish Midland Junction.—The works are in a

very forward state from Perth, to where the line crosses the Tay, there being only about 70,000 cubic yards of cutting to accomplish. The bridge over the Tay, says the *Dundee Courier*, notwithstanding the delays occasioned by the heavy floods in the river, is in a very forward state. Betwixt the Tay and Forfar the works are of a much lighter description, and there are not above 20,000 cubic yards to remove, and even that is spread over the whole distance. From the backward state of the weather, considerable delay has taken place in the laying of the permanent rails, nearly one half of them being yet to lay. But the directors confidently anticipate to be able to open their line at the same time with the Scottish Central.

South Devon .- March 9 .- The turnpike-road at Laira, carried over this line, is so far completed as to admit the public traffic to go over it, and has been opened for that purpose. It is a heavy piece of work, and reflects credit on the contractors, Messrs. Carpenter and Chesterfield. The Plymouth Herald reports the regular and perfect daily operations of the atmospheric. An incident occurred on the 9th, says that journal, worthy of notice. From the immense quantities of fish sent from Totnes by the 6 20 a.m. train, a considerable delay occurred in ascending the Dainton incline—a portion of the line worked at present by locomotive power, and in consequence it was determined to cross the train with the 750 down train at Starcross. The valve dividing the Turf (engine station) side of Starcross from the Dawlish side being opened, the Starcross engine exhausted the entire length, six miles, without the least difficulty, and brought the up and down trains into Starcross within two minutes of the same time. The efficient working of the telegraph, which is now being arranged in the various engine-houses, will enable this arrangement of crossing trains to be carried out at any intermediate station where it is required. Preparations are making at the various stations on the line for the opening to Plymouth.

#### Accidents.

CALEDONIAN .- March 7 .- A guard, named Jackson, in charge of the train from Edinburgh to Glasgow, whilst crossing from carriage to carriage to shut a door which had flown open, came in contact with

a bridge, and was thrown down. Some carriages passed over him and killed him.

EAST AND WEST YORKSHIRE.—The stone bridge over the river Nidd, near Knaresborough, says the Daily News, which was well nigh completed, fell in on Saturday last, not a single arch being left standing. It is not expected that the occurrence will delay the final opening of the line, as the bridge may be re-stored before the tunnel at Knaresborough is com-

LONDON AND SOUTH-WESTERN.—March 12.—Near Basingstoke, a guard of the goods train was improperly riding with the engineer and stoker, when the chain which connects the engine with the tender broke. The guard was thrown off and killed. The The train ran over him, and mutilated his body in a shocking manner.

NORTH BRITISH.—March 8.—A night watchman. at Reston, was caught in the wheel of one of the carriages of a goods train, and was run over. H legs were amputated, but he died from exhaustion.

#### Law Intelligence.

COMPENSATION .- March 11 .- In the LORD CHAN-CELLOR'S COURT, in re Hawley v. the North Stafford-shire, this was an appeal from the Vice-Chancellor. The plaintiffs are the proprietors of the Mossfield collieries and of storehouses at Longton. The collieries are connected directly with their wharf. and the company propose to intersect the communication, by running the line over the road to the colliery. The question of compensation was referred to arbitrators, and they, after evidence, called in an umpire. Further evidence was taken, and on the 5th of November an adjournment took place, and on the next meeting one of the arbitrators absented himself. The company's solicitor refused, in the absence of that person, to go further into the case, but the umpire proceeded to make his award.—The but the unipire proceeded to make his award.—The Vice-Chancellor was of opinion, without imputing any dishonest motives, that the award given under such circumstances could not stand, and he decreed accordingly.—Mr. J. Russell and Mr. Malins on the other side.—The Lord Chancellor thought the order of the Vice-Chancellor, setting aside the award, was

proper. His lordship therefore affirmed the order of the Court below, and dismissed the appeal. DIRECTORS.—March 11.—In the same Court, in re Cridland v. Lord De Mauley, this was a motion to Cridland v. Lord De Mauley, this was a motion to reverse an order of the Vice-Chancellor overruling a demurrer (see Rail. Chron., 1847, p. 680). The plaintiff paid for shares in a railway speculation which failed, and filed the bill for an account against which failed, and filed the bill for an account against the defendants, members of the committee. They demurred for want of equity and for misjoinder of plaintiff.—The Lord Chancellor, without further hearing counsel, was of opinion that the demurrer failed on both grounds, and he affirmed the order

COSTS. — March 16. — In the VICE-CHANCELLOR'S COURT, in rethe London and North-Western, the company had taken certain land at Husband Bosworth, in Leicestershire, and had paid the purchase-money into court, under their Act. The land taken belonged to a tenant for life, who had conveyed his interest, subject to two annuities, to a trustee. A petition was presented by the trustee and one of the annuitants that the money might be paid out of court, and invested in Government securities. The second annuitant had been served with the petition, and had appeared, and now asked for his costs.—The Vice-Chancellor considered that the company was bound to pay the costs of the second annuitant, as his interest was prior to that of the tenant for life.

SHARES.—March 11.—On the Northern Circuit, in re Simpson v. Rand, in the year 1844 Mr. Rand, a manufacturer, was the owner of a number of shares in the Leeds and Bradford, and on the 5th of November he instructed the plaintiff, a sharebroker, to sell ber he instructed the plaintiff, a snareoroker, to seil. him fifty shares at as near 18*l*. premium as he could. On the following day the plaintiff executed the order, selling the fifty shares in two lots, one of twenty and the other thirty. The twenty shares were sold at 17*l*. 17*s*. 6*d*., and the thirty at 18*l*. 2*s*. 6*d*. premium, with all "the advantages," that was, with some new shares to which the awners of the original some new shares, to which the owners of the original stock were entitled in respect of a projected extension to Colne. Correspondence followed, and on the 7th of January Mr. Simpson stated that he had been desired by the purchasers of these shares to apply for the extensions. Eventually Mr. Rand replied that as the purchaser of the twenty shares seemed disposed never to register them, having allowed a quarter of a year to elapse since the sale, he was determined no longer to be kept in suspense, and should feel himself perfectly at liberty with respect to the Colne extensions. Mr. Rand therefore did not hand over these new shares to the purchaser of the twenty old ones, and Mr. Simpson having been compelled to fulfil the contract, he now brought this action against Mr. Rand, to compel him to complete his engagement.—Verdict for the plaintiff, damages

On the Home Circuit, the case Grissell v. the South-Eastern was referred to arbitration.

### Parliamentary Proceedings.

LORDS.

March 14.—Audit of Account Bill.—Lord Mont-EAGLE moved the order of the day for the house going into committee on this bill. After some conversation, in which several noble lords took part, the bill went through committee with some amendments.

COMMONS. March 13.—Dee Bridge.—Mr. B. OSBORNE inquired respecting the safety of the Dee bridge, on the Chester and Holyhead line. On the very day when this subject was last mentioned, he found that one of the girders was cracked by a workman driving a pin with a 4lb. hammer. The knowledge of this had occa-sioned much consternation amongst the district inhabitants. He understood also that of the twelve original girders three had broken. He had also been informed that though the usual practice was to shut off the steam when a train was passing over the bridge, last week a train passed over with the steam on, the consequence of which was that the passengers experienced a frightful oscillation. At the recent meeting no notice was taken of these matters, and it meeting no indice was taken of these matters, and it was strongly suspected in the neighbourhood that the bridge was unsound. Had the right hon, gentleman received any report as to the actual state of the bridge, and also was he aware that the third girder had cracked since he (Mr. Osborne) had asked a question on the subject?—Mr. STRUTT regretted that the hop gentleman had not given himself. that the hon gentleman had not given him notice, that he might be able to give the fullest possible answer to his question. He had on a former occaanswer to his question. He had on a former occasion stated that the bridge had been temporarily strengthened, and that on a subsequent inspection it had been reported to the Board that it was in a state consistent with the public safety. As a matter of caution, however, it was recommended that trains,

when passing over it, should slacken their steam. The Commissioners had heard the fact mentioned by the hon, gentleman of one of the girders being cracked, and lost no time in communicating with the engineer upon the subject, from whose report it appeared that there was no danger whatever to be apprehended, but that the girder would be replaced

a new one. March 14.—Report from Committee.—Mr. Strutt brought up the Report. No necessity existed for any general measure for the purpose of interfering with bills in the course of their progress through Parliament. The committee would, however, first see that the Standing Orders should be complied with; next, they should examine into the bond fide character of the subscription contract. Hitherto the examiners had inquired into the sufficiency of the subscription contract, but they had not inquired into the sufficiency of the subscribers, the result of which was that the names of men of straw often found their way into the contract. The committee had therefore resolved that it should be the duty of the committee on the bill to inquire, not only into the bond fide nature of the contract, but also into the sufficiency of the subscribers. A question might be raised that they were not carrying out to the full extent the privileges given last session to suspended bills, inasmuch as the resolutions were intended to apply to suspended as well as to new bills. But as the parties to suspended bills would be obliged by the Standing Orders to prove that the contract of last session was still binding on the parties, or else to put in a new contract, and prove it in the regular way, he did not see that they suffered any hardship beyond a little delay. He concluded by moving the following resolutions:

1. That the amount of capital proposed to be raised by the railway bills of the present session is not so great as to render it expedient that any general measure should be adopted for interfering with the progress of such bills in their ordinary course beyond a careful and strict investigation by the committee on the points hereafter specified.

2. That the attention of the committee to whom the various railway bills shall be referred be specially called to the necessity of strictly enforcing with regard to such bills the Standing Orders which were adopted by the House of Commons, in the last session of Parliament, on the recommendation of the committee on railway bills, viz., with respect to the new bills of this session, the Standing Orders Nos. 124, 125, 126, 127, 128, 129, 130; and with respect to suspended bills, the two Standing Orders which follow the above orders, and that in each case (whether the bill be a new or a suspended bill) they make a special inquiry into the bonda fide character of the subscription contract, and the sufficiency of the subscribers thereto, and report their opinion to the house.

3. That the following orders relative to railway bills.

the sufficiency of the subscribers thereto, and report their opinion to the house.

3. That the following orders relative to railway bills, suspended in the session of 1847, be rescinded, namely, the order immediately preceding the Standing Order No. 131. The order which follows the Standing Order No. 159. The order which follows the Standing Order No. 163. That in case the Report of any railway bill which was suspended in the session of 1847, shall have been agreed to in this session, the committee on the bill shall examine whether the bill be in every respect the same as such former bill at the last stage of the proceedings thereon, and in such case no evidence shall be received by such committee, except with reference to the bond fide character of the subscription contract, and the sufficiency of the subscription contract.

4. That seven clear days shall in all cases intervene between the report of a railway bill and the further consideration of such report; and that on the further consideration of such report; the chairman of ways and means shall acquaint the house whether the bill contains the necessary provisions for carrying into effect the Standing Orders specified in the second resolution.

Lord H. Vane wished to know how the investigation into the home filds nature of the contract and the

Lord H. Vane wished to know how the investiga-tion into the bond fide nature of the contract and the sufficiency of the subscribers was to be prosecuted? Were they to rely on the allegations of opponents, or was the investigation to take place equally when no opposition was offered to a bill —Mr. STRUTT said it might be that objections would present themselves on the face of the instrument, so as to enable the committee to form their own opinion; but of course they must to a considerable degree trust to the scrutiny of opposing parties.—The resolutions were then agreed to.

#### Reports of Meetings.

SOUTH-WESTERN.

March 14.—Special Meeting, Nine Elms.—Mr. W. J. Chaplin, M.P. in the chair. The meeting had to consider the drafts of nine bills now pending in Parliament, for the following purposes:-

Digitized by GOGLE

extension therefrom to join the Great Western at Slough: the Acts relating to the Exeter and Exmouth; make a railway from Salisbury to Yeovil, with branches to Shaftesbury and Wincanton, and to join the Exeter. Yeovil and Dorchester and Wilts, Somerset and Weymouth near and Dorchester and Wilts, Somerset and Weymouth near Yeovil, and to purchase or lease the said Exeter, Yeovil and Dorchester; for making a railway from Exeter to Yeovil, with branches and extensions therefrom, to be called the Exeter, Yeovil and Dorchester; to enable the Taw Vale and Dock to lease their undertaking to the London and South-Western; to make a railway from the Queen-street-road, Exeter, to join the Exeter and Crediton at Cowley Bridge, near Exeter; for authorizing the sale or lease of the Exeter near Exeter; for authorizing the sale or lease of the Exeter and Crediton and the Bodmin and Wadebridge, and the carrying into effect of certain arrangements between the said company and the Taw Vale and Dock.

Mr. Hoyes asked whether there was any clause in the bills about to be submitted to them to secure the directors possessing other property in the company

besides guaranteed stock ?

The CHAIRMAN replied that it was imperative for a director to hold shares in the original capital.

Mr. BIRCHAM, the solicitor, then read a short abstract of the different bills, the first four of which were unanimously agreed to, and the last five with two dissentients, Mr. Hoves shortly reiterating the objections he made at the general meeting to the Western extension.

In reply to questions, the CHAIRMAN stated that it was not intended to proceed with the extension to London Bridge until the effect of the opening to Waterloo Bridge had been ascertained. There would be no call upon the new capital to be created under the proposed bills prior to July 1849.

vote of thanks to the Chairman was proposed by Mr. Hoyes, and seconded by Mr. Puncher

SOUTHAMPTON AND DORCHESTER.
March 14.—Special Meeting, Nine Elms.—Lord DE MAULEY in the chair.

The draft of the bill to authorize the amalgamation of the Southampton and Dorchester with the London and South-Western was approved.

NORTH BRITISH.

March 10.—Half-yearly Meeting, Edinburgh.—Mr. J. LEARMONTH in the chair.

The SECRETARY read the Report, which stated that Notwithstanding the great depression of trade during the half-year, the traffic has gone on progressively increasing. But for the sum of 1,484, required to make up the preceding half-years dividend, the revenue would have yielded a dividend at the rate of 6 per cent, per annum; and even ing mair-years dividend, the revenue would have yielded a dividend at the rate of 6 per cent, per annum; and even after making that deduction a dividend at the rate of 52 per cent. could be paid. The directors, being satisfied that the prudent course is to set apart a sum as reserved fund to prudent course is to set apart a sum as reserved fund to meet contingencies and extraordinary charges for the re-newal of rails, sleepers and other plant, have resolved to recommend that the dividend be at the former rate of 12s. 6d. per share of 23d., and 2s. 6d. per share of M. in both cases free of income-tax. This will leave a reserved fund of 2,73H. The working and other expenses for the half-year are still heavy, from the following causes: —1. The maintenance of the line, formerly borne by the contractors, now falls on the revenue. 2. The expense of the short trains to Musselburgh, &c., is larger in proportion than on the main line. 3. From the prison, police, poor and other rates, which the directors are seeking to get reduced. An arrangement has been concluded with the Edinburgh and Glasgow for the working of the joint station in Edinburgh and confor the working of the joint station in Edinburgh, and confor the working of the joint station in Edinburgh, and considerable yearly saving to each company will accrue from this. Arrangements have been made for an interchange of traffic with the Edinburgh and Glasgow, the Edinburgh and Northern, the York. Newcastle and Berwick, and other companies on the east coast of England. But with the Caledonian the directors regret to say that they have as yet been unable to come to any definite agreement. They will, however, avoid the adoption of a system of reckless competition. When the bridges across the Tweed and the Tyne are completed, they anticipate a continuance of the traffic tition. When the bridges across the Iweed and the Tyne are completed, they anticipate a continuance of the traffic in its present channel. The traffic has been progressively increasing since the last meeting. This has been especially the case with the goods, grain and mineral traffic. It promises to increase still more, particularly as regards the through trade with England, and the coke trade between through trade with England, and the coke trade between Newcastle, Edinburgh and Glasgow, which has already commenced on a considerable seale. This and the near approach of the opening of a portion of the Hawick branch, has caused the directors to add largely to their stock of waggons and other plant; and they will still be obliged to increase that plant. The works on the lines opened are in a satisfactory state. The principal operations on the main line since last meeting have been the completion of the stations, and throwing back a portion of the line near Berwick from off the sea banks, as recommended by the Commission reoff the sea-banks, as recommended by the Commissioners. These works will be very soon completed. The directors These works will be very soon completed. The directors had found it necessary, from the severe pressure for money in the country generally, to suspend a large portion of the works going on upon the Hawick and other branches. This will delay the opening of these. The works, however, are progressing at all the heavier parts, and the directors will not fail to press them all forward whenever they can obtain not fail to press them all forward whenever they can obtain the means of doing so. In the mean time they have taken measures for opening about 20 miles of the Hawick branch early in May, which will secure the whole of the traffic of the Galashiels and Royburdshire district, and enable the the Galashiels and Roxburghshire districts, and enable the directors, they trust, to make an arrangement, at the next half-yearly meeting, by which an addition may be made to the interest of 4 per cent now payable on the half shares, and to pay a limited amount of dividend on the third shares. Additional calls on the stock have been refrained from: and the directors have, to carry on the works, pledged their own personal credit to a very large extent The obligations which they have thus come under are now The obligations which they have thus come under are now becoming due; and as there are no legitimate means of meeting them except by calls on the stock, they will be obliged to insist on the immediate payment of all arrears now due on calls already made, and to call up the balance of 15s, per share still due on the quarter shares, and of 6l. 6s. 8d. due on the third shares, with as little delay as possible. They will also require to ask authority to borrow on mortgage the sum of 80,000 d., which by the Act 10 & 11 Vict. c. 136, they are entitled to raise in that way.

The revenue account to the 31st of January last showed that 63,789l. 8s. 9d. had been received, and 36,357l. 13s. 7d. expended; leaving a free balance of 27,431l. 15s. 2d. The capital account showed the receipts at 2,975,603l. 15s. 3d., including 342,387l. 4s. 5d. from bankers and others; expenditure, 2.800,747L 13s. 6d., the arrears of calls being 99,965L 5s.; in hand, due by bankers, 49,737L 8s. 1d.; sum on bond by Halbeath directors, 25,153l. 8s. 8d. Since the balance was struck, about 30,000l. had been paid on arrears of calls, and above 63,000l. expended on ac-

Count of works, &c.
The Chairman, in moving the adoption of the Report, alluded to its principal contents. The increase of traffic was gratifying under the late general depression. He detailed the various items of increase in the goods traffic, which had exceeded that of the previous half-year by 8,451 tons. The total increase of income on the goods traffic was 6,886l. 17s. 3d. In the passenger traffic an increase of 35,943 persons was to be observed; increase on the income, 10,7951. 10s. 4d. He commented on the safe policy in declaring the present dividend, and assured the share-holders that the suspension of the works arose only from the late monetary difficulties of the country. The works would all be finished in the spring of 1849. The expenses of the branches could not be separated. The Hawick line would prove their best traffic line. He noticed the various arrangements of the directors, and hoped that no injurious competition would arise between the Caledonian and themselves. The trains were safe, and he was proud to say their speed in the late expresses had never been matched. had only been made at the last juncture, and he hoped would be well answered now. The contract near St. Boswell's, on the Hawick branch, had been interrupted, but it had been renewed, and would soon be completed. He moved the adoption of the Report.

Mr. E. Henderson seconded the motion Mr. Ainslie thought the Report should be placed in the hands of the shareholders at least ten days

before the half-yearly meeting.

In answer to questions, the CHAIRMAN stated that the Tranent branch was cut through the post road, because the present station was thought to be more advantageously placed; that the company was not involved in many law pleas; that they found it safer to go before a jury than to refer their cases to arbiters; that the directors hoped the shareholders would not submit to be trampled upon merely for the sake of saving a few pounds in law expenses; that the provisions of an Act of Parliament gave landowners the right to appeal to an arbiter instead of a jury court; that the branch to North Berwick was expected to be a paying branch; that therefore the directors could not consent to wind up that branch line; that the arrears of calls on it were very considerable, but they were coming in every day; and that the amount of arrears stated in the Report did not refer exclusively to the North Berwick branch; that the 30,000l. mentioned at the end of the Report as having been received subsequent to the striking of the balance, falls to be deducted from the arrears of calls, amounting to 99,765/. 5s.; that the arrears of calls upon the main line were 1251, upon the Hawick line, or the half shares, 6,290*l.*, upon the quarter shares, 35,552*l.*, and upon the third shares, 26,000*l.*; and that the directors were paying between 5 and 6

per cent, as interest upon the borrowed capital.

On the motion of Mr. Wilson, the directors were instructed to proceed at law against all holders of third shares who shall not have paid up their arrears before the following Thursday.

The CHAIRMAN remarked that such instructions were most acceptable to the directors, who would carry them into immediate effect.

On the motion of the CHAIRMAN, the three retiring directors, and Mr. Watson, auditor, were re-elected. The CHAIRMAN then declared the dividend.

After a discussion on the Sunday trains question, in which Sir A. Agnew, Mr. Blackadder, Mr. Buchan. of Killoe, Mr. ATTOUN, advocate, Prof. Dick, and others took part, a vote was taken, when the motion for the stoppage of Sunday trains, and the production of various returns connected with the Sunday traffic, was lost by 58 votes to 40, and by 665 shares to 414.

Mr. BLACKADDER renewed his notice for next meeting, and congratulated his friends upon their increasing minority.

The meeting was made special, when the following bills were approved of :-1. For obtaining additional station ground in Edinburgh, and improved connexions with Leith and Dalkeith. 2. To raise addi-

tional capital for certain purposes.

The meeting agreed to a recommendation by the directors, that stock to be created by the second bill before mentioned be issued proportionally to such of the holders of scrip for the Carlisle extension shares as shall claim it within a time to be fixed by the directors after the Act shall have passed; that the shares shall be issued as quarter shares; and that holders of the scrip who shall so claim them shall be entitled to receive credit for the deposit of 12s. 6d. per share, which they have already paid on the Carlisle extension shares.

GLASGOW, PAISLEY AND GREENOCK. March 9.—Half-yearly Meeting, Greenock.— J. TASKER in the chair. -Mr.

The Report stated that the receipts for the halfyear amounted to 33,983*l.*; expenditure, 15,424*l.*; disposable balance, 18,559*l.* The directors, after providing for the dividend on the preference shares at the rate of 6 per cent. per annum, and all other contingencies, recommended a dividend of 10s. per share on the 25t. shares, and 5s. per share on the 12t. 10s. shares, being at the rate of 4 per cent. per annum, to be paid on the 23rd inst. They congrutulated the shareholders on the improvement in the through traffic. No arrangements could yet be affirmed with the Caledonian, as the entire line to Glasgow was not completed. The directors had made a call of 2l. 10s. per share on the preference shares, making in all 5l. 10s. per share called up on those shares. They have entered into an amicable arrangement with the trustees of the harbour of Port Glasgow, by which they have agreed to form a branch to that harbour. This renders the bill for that purpose, suspended from the last session, unnecessary, and it has consequently been withdrawn. No opposition was expected to their bill for a short branch to join the Glasgow and Ayr line, west of Paisley. The capital account to the 31st of January showed the receipts at 798,7891.; expenditure, 845,5441.; balance against the company, 46,7551.

The CHAIRMAN said, on contrasting the number of

passengers carried during the last three years, he found that there was an increase in 1845 over 1844 of 12.3 per cent.; in 1846 over 1845 of 7.2 per cent.; and in 1847 over 1846 of 7.3 per cent. The last was after deducting the extra numbers carried during

the Queen's visit.

The Report was adopted, the dividend approved. and the retiring directors were re-elected.

Mr. R. Ewing having taken the chair, the sum of 4001. was voted to Mr. Tasker, the deputy chairman of the company, for the unwearied and undivided attention he had paid to the interests of the company. Mr. TASKER then resumed the chair, and thanked

the meeting

A committee, consisting of Capt. H. Stewart, Messrs. C. Saltmarshe, W. Whitmore and J. Locke, was appointed to watch over the interests of the company, as the time was approaching when the agreement between the Caledonian and this company was to be carried into effect. They were empowered to adopt such measures as they may deem advisable.

WISHAW AND COLTNESS. March 9 .- Adjourned Annual Meeting, Glasgow .-

Mr. A. Glasgow in the chair.

The Report stated that the income for the past year showed the continuance of an increasing traffic, although some hindrance arose from the widening of the gauge to suit that of the Caledonian and other adjoining lines, whereby the principal part of the trade was stopped for about eight weeks. The portion of the revenue not required for the current expenses was laid out for additions to stock account, instead of keeping it locked up in the bank till the half-yearly dividends became due, under a feeling that in the recent pressure for money it would have been inexpedient to keep these sums unemployed, seeing the money would be refunded when the dividends became pavable, in the terms of the agreement with the Caledonian, as has accordingly been done; besides, as the Caledonian were laying out large sums upon the permanent works of the line directly from their own funds, the directors felt less difficulty in adopting that course. The directors were inclined to continue this temporary application of the funds for the present. A bill for sanctioning the sale of the line to the Caledonian was now before Parliament. The directors anticipate a great increase of traffic upon the line from the gradual progress of the local traffic, and from the opening of the Caledonian.

After a short conversation, the Report was adopted and the retiring directors were re-elected.

[For further Reports of Meetings, see p. 213.] Digitized by GOOSIC

IRON TRADE.—Glasgow, March 11.—Owing to the late Scottish riots, the market for pig iron has been in a very unsettled state, and prices have declined. Quotations are 45s. for mixed numbers, and 46s. for No. 1, cash. The exports for last month, as per Mr. Gilbert's circular, quoted in the North British Railway Journal, show a large increase over the same month in last year. Comparative exports of pig iron in February 1847 and 1848:—

1847. 9,537 tons. 5,499 Total ...... 26.030 15.036 tons.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

* For account, April 13.

London Stock Exchange, March 17.—Public events continue to influence the share-market; but on the whole prices have been well maintained.

Liverpool, March 16 .- Our market remains with out any improvement in prices; and the amount of business transacted continues very limited.

Sublow, Brothers.

Manchester, March 16 .- The business in our share market this week has been very limited; and prices, almost without exception, are receding. Appearances and anticipations are anything but cheering. SAM. GRINDROD

York, March 16 .- The market is still dull, and no business is reported, except in North British, Leeds and Thirsk, Great Northern, and a few others at a large discount. GRAYSTON & EARLE.

Hull, March 16.—Shares continue to decline, and Hull, March 16.—Shares continue to decline, and all the profits lately have been made by the bears who are the chief buyers from day to day, to close their previous operations. In North British stock, especially, much money has been made in this way. Darwens were sold off the Exchange yesterday as low as 11g dis., but they do not offer at this price now.

FLINT & TOOTAL.

Glasgow, March 15 .- The market this week has been in an extremely depressed state, a great reduction in price being required to effect sales. Until we have a prospect of a more settled state of affairs generally, we fear no permanent improvement in the

share-market can be expected. To-day's latest business was as follows:—Dundee and Northern Junction, 15s. 6d. dis.; Dunblane, Doune and Callander, 39s. 6d. dis.; Ayr, 82; ditto, 5 per cent. guaranteed, 106s.; ditto, halves, No. 1, 5 dis.; ditto, ditto, No. 2, 5 dis.; Manchester and Southampton, 40s. 3d. dis.; North British, 21 ex div.; ditto, thirds, 28s. 6d. dis.; ditto, new quarters, scrip, 8s. dis.; York and Newcastle, preference, par.

BUCHANAN, AITERN & Co.

The complete bouleversement of public affairs in Paris has now prevented our getting even the weekly returns of traffic on all the lines except the Boulogne, which shows a large increase on the preceding weeks. But a comparison of the receipts for the month of February on the Orleans the Rouen and the Bordeaux with those of the corresponding period of previous years, shows that a substantial hold had been taken of he business—were it not for the interruption arising from the change of government and the consequent panic. When those serious obstacles are removed we hope to see a renewed energy in such gradually in-creasing development of what will more than any other thing restore the country to a healthy state. The following are the results of traffic for February in three successive years on the three lines named:

	1847.	1846.	1845.
Orleans	33,300%	26,432l.	20,7721.
Rouen	22.1847.	23,2321.	21,8121.
Bordeaux	11,8807.	9,664.	

FRENCH FUNDS.—The Times gives the following interesting summary of the course of the French funds during the changes and convulsions of the last half century:—In January 1797, the price of the Five per Cent. Rentes opened at 8f. 5c.; in December, the same year, they fell to 6f. 16c. In 1800, the highest price was 44f., and the lowest 17f. 38c. In 1804, the year of the establishment of the empire, the price rallied, and touched 59f. 75c. In 1812, the period of the great wars, the Five per Cents. were quoted at 83f. 30c. for the highest price, and at 76f. 50c. for the lowest. In the year 1814 the lowest price was 45f., and the highest (in the month of August) 80f. In 1815 they reached 81f. 65c., and subsequently fell, on the 1st of December, to 52f. 30c. In 1816 they rose to 64f, 40c., and then again fell to 54f. 30c.

During the following thirty years of peace the highest price was 126f. 30c., quoted on the 4th of March 1844; and the lowest price was 55f. 5c., quoted on the 2nd of January 1817. On the 22nd of February in the present year the Five per Cents. closed at 116f. 75c.; on the 7th inst. they opened at 97f. 50c., and shut 75c.; on the 7th inst. they opened at 97f. 50c., and shut at 89f. This price is in advance of the quotation for the 2nd of April 1831, since on that day Five per Cent. Rentes declined to 74f. 80c. The creation of the Three per Cent. Rentes took place on the 6th of May 1825. Between that date and the close of 1847 the highest price was 86f. 65c., attained on the 22nd of July 1840, just previous to the receipt of the news on the Bourse of the treaty signed on the 15th of that month between England, Austria, Prussia and Russia. for regulating the affairs of the East. and Russia, for regulating the affairs of the East, and from participation in which France was excluded. The lowest price of the Three per Cents. occurred on the 2nd of April 1831, nine months after the revolution of July, when they were quoted at 46f. On the 7th of the present month they descended nearly to the same point, bargains having been done at 47f.

# Railway Chronicle.

LONDON, SATURDAY, MARCH 18.

The South Staffordshire proprietors passed the Report and accounts at their half-yearly meeting. The Birmingham branch has been opened for traffic. A further call of 1l. 10s. has been made payable on the 31st, five months having elapsed since the last demand on the shareholders.

The EDINBURGH AND NORTHERN have adopted their Report, presented at the half-yearly meeting. The promise of traffic is very satisfactory. The sum already realized on the Granton and Burntisland ferry would yield a dividend of 5 per cent.

The North British directors, in their Report to the half-yearly meeting, prudently declare a dividend at the former rate of 5 per cent. The general traffic is satisfactorily increasing. About 20 miles of the Hawick branch (from which much is anticipated) will be opened

After providing for the preference shares at the rate of 6 per cent. per annum, the GLAS-GOW, PAISLEY AND GREENOCK directors declare a dividend at the rate of 4 per cent. on the remaining shares. No definite arrangement has yet been made with the Caledonian. The shareholders voted 400l. to Mr. Tasker, the deputy-chairman, for his services.

The Report presented to the WISHAW AND COLTNESS shareholders affirms that the traffic is steadily increasing. A bill for the sale of the line to the Caledonian is now before Parliament.

The DUNDALK AND ENNISKILLEN after electing directors again adjourned till the 1st of May. A committee of inquiry was appointed to report to the adjourned meeting.

The Louvain a LA Sambre are to proceed with the works. After much discussion the Report was adopted at the half-yearly meeting, and a further call of 2l. was authorized, payable by instalments in May, June and August.

Special meetings of the following companies to sanction their bills before Parliament have been held during the week :-

Aberdare (leased to the Taff Vale.)

South-Western.

Southampton and Dorchester (leased to South-Western.) Taff Vale.

The SELECT COMMITTEE ON RAILWAY BILLS have presented their FIRST REPORT, from which it will be seen that what we predicted in December last, as to the probable issue of the inquiry, has been fully substantiated by the They avoid, indeed, expressing an opinion as to whether, in any case, a restrictive interference might or might not be necessary; but declare that "the amount of capital proposed to be raised by the railway bills of the present session is not so great as to render it expedient" to impose a check in the present instance; -a declaration that practically rebukes the whole design of the Chancellor of the Exchequer in getting the committee appointed, -leaving the question of principle exactly as it was before. The Commons are always afraid of laying down general positions; and they have shown the usual reserve on the present occasion.

The Committee, however, seem to think that as they were charged to do something restrictive with the bills of this session, and as they find what it was meant they should do to be quite inexpedient, they must not separate without recommending a restraint of another kind.

And in order to this they have fallen upon the idea of sifting the subscription deeds, not only alternative of paying calls on new shares, or ment to be a legal tender. What we contend is

of new bills, but of those also which had already gone through the usual examination in the Commons last year.

The character of this proceeding will depend on the way in which it may be acted upon. It may be no more than a fair inquiry into the substantial character of the measures in question. If this be all, it can scarcely have any other effect than simply to cause a little delay, and some extra trouble-there being no bills likely to come before Parliament, in times like these, the promoters of which are not sure of their funds. It may be turned, by a captious mode of examination, into a very mischievous abuse of questions of form; and it will be desirable for all concerned to do what they can to prevent it from being thus abused by the Railway Board, whether at the influence of private suggestions, or of that general disposition to vex and embarrass the railway interest, which the Commissioners take care to display on all occasions. No one can fairly object to have the real sufficiency of the applicants for any bill ascertained. But if this is to be made a pretext for throwing out on frivolous grounds parties of whose bona fide sufficiency there cannot be an instant doubt in the mind of any honest inquirer especially if this kind of shabby trick is to be played at the expense of applicants of ample means, who have already gone through the usual trial, to the satisfaction of the last Parliament-a very gross as well as a very absurd act of injustice will be committed. The railway interest will of course be on the alert to protest against any such insidious method of doing in an underhand way what the Chancellor of the Exchequer's Committee have told him they cannot allow him to do openly.

The SHARE-MARKET continues in a state of weakness and depression such as has scarcely been known since the value of railway stock as a marketable security first began to be quoted in commercial papers. It is not merely with the lines that are not yet opened for traffic that purchasers seem reluctant to concern themselves; the shares of long-established companies, which used to command the foremost place among investments, are now scarcely less neglected; and the bond fide transactions, as we learn from all quarters, are confined to the timid operations of a few buyers of small parcels here and there. Of this discouraging aspect of affairs, some external causes are obvious enough, but they are not the only ones.

The preference of railway stock as an investment-of that class of funds, especially, which gave the system its firmest support-must in any case have been affected by the discovery, which the late half-yearly meetings have published, of the practical effect, on the income of most of the great companies, of the measures on which their capital has been spreading itself during the last three years. This, as we have already pointed out, does not merely act as a discouragement to the cautious purchaser for investment, by suggesting a fear lest the dividends, on the faith of which he might be inclined to buy, may shortly give way to a point that will make his purchase a bad bargain; although this has happened to an extent which cannot fail to be long remembered by those prudent owners of limited means, to whose contributions the railway system has heretofore owed a full half of its capital. The impression that no limit can be seen to the extent of a company's engagements, would act as an impediment to many of this class; even were there no apprehension of the general rate of profit sinking on the capital when enlarged. Many are not prepared to increase their venture ad infinitum; and object to be placed between the seeing the per-centage of return from their old ones diminished to supply the income on the former. And this, which affects the convenience of the investment to the immediate buyer, is likely to be still more unacceptable to those who might wish to put by their savings in this way as a provision for their heirs. The operation of these causes, which have hitherto been too little thought of, must in any case, we say, have begun to make itself felt on railway values in a way that would have suggested a review of the principles of railway policy at no distant period.

At the present crisis, their immediate effect may be, as it were, hidden by the operation of others more public, vehement, and sudden, that have nothing to do with any internal changes of the system itself, but have come upon it with blow after blow from without, shaking for the time not only this, but every other species of security, and subduing confidence in all quarters. A more unlucky conjuncture could hardly have been imagined; and the panic thus created is so natural, that, however we may lament, we cannot wonder at the depreciation of railway property that has taken place under the pressure of outward misfortune on a body less strong than heretofore within.

We say it is anything but surprising that a certain amount of alarm should make itself felt: the point to which it has prevailed may, however, be regarded as an extreme one, in no small degree attributable rather to mere fright, which never reasons, than to rational grounds of apprehension. At the present moment, while there is an abundance of spare money in the country, and the inducements to lay it out in other ways are not very inviting, the better kinds of railway stock can be purchased so as to pay rather above than under 6 per cent., on a calculation of the late reduced scale of dividends;and this, too, at a time when money can be borrowed on debentures at 5. If this be not the result of fears which the recent startling events have not yet allowed to subside, it must be regarded as the evidence of a distrust of railway securities such as has never been known until now, and likely to be far too serious in its practical consequences to be safely disregarded.

It is our opinion that the latter has something to do with the present state of things; not, perhaps, as a principal cause of the low condition of prices at the moment, but certainly as tending to retard their revival, by discouraging those who, but for the doubts they have begun to entertain, would have rushed in to take advantage of the fall produced by the disturbance in public affairs. We trust, therefore, that the governors of the railway body will not lose sight of this element in their view of the present and in their plans for the future; nor regard what they now see as merely the consequences of outward shocks, which nothing can be done by them to relieve. They can do much to recover the interest from the depressing action of causes that lie nearer home, and that are not altogether temporary; and it is to be hoped that they will address themselves to this task in good earnest, and not satisfy themselves with believing that all will become right again as soon as the political and mercantile crisis has passed away. Much may fairly be expected from such a change, whenever it shall occur; but not so much as to take anything from the importance of studying remedies independent of anything from without.

The suspension of SPECIE PAYMENTS BY THE BANK OF FRANCE is a lesson to legislators, which may be contemplated with instruction even on this side of the Channel. The notes of the Bank of France are now declared by Govern-

that on the first day of the new regime this step should have been taken. This last act of the Finance Minister should have been his first. It was the only mode left of placing debtor and creditor after the revolution on the same footing as before. General bankruptcy was the only other solution of the question left. The lesson it teaches is that in a great and unforceen financial crisis, the declaration of "Government bank notes a legal tender," is the most expedient, simple, and just mode of equitably distributing the general and great and instant depreciation of all commercial property except the metals. Our own country was saved by it in the old revolution; France has nearly been lost commercially by the want of it in the present.

Let us see how it would have worked if adopted on the first day after the revolution. On that day the cash value of all kinds of commercial property became at once worth in specie two-thirds or half of its former value. That is, the relative value of gold and silver instantly rose unduly to one-half or double its exchangeable value. As a matter of course every banker's assets ceased to balance his liabilities; or, in other words, the banker or his customer was ruined. Let us suppose however that Government bank notes had been made on that day a legal tender, these notes would immediately have suffered the same depreciation with all other securities, and all French debtors and creditors would have stood at once on a fair footing. Gold and silver would have risen in value, and everything else relatively remained the same. The tax-payer, the contractor for Government loans, the Government annuitant, the banker, his customer, the debtor and his creditor, the railway shareholder and the railway passenger-all but the foreign creditorwould have been placed on an equitable footing: as it is, the foreign creditor is placed in a still more difficult position than that of receiving depreciated notes, viz. that of receiving nothing at all.

It is true, it may be said, that this is equivalent to national bankruptcy! But it has the advantage of being an organized systematic act of adjusting at once all the affairs of that bankruptcy equitably—so that every Frenchman shall bear an equal share of the cost of the revolution. All property in France, save specie, was reduced in value from 30 to 50 per cent. by the revolution; to proclaim it so at once was the sole course for equity and honesty. As it is, the honest have suffered, and become bankrupt, while the selfish and prompt creditor has doubled the value of his property. Every honest debtor has been fleeced to enrich his prompter creditor.

Another lesson this event teaches is the cost of a revolution. A similar revolution, if possible in our country, would simply cost every man the deterioration of his property 30 or 50 or more per cent. That is the cost of a revolution. The French people were taught this lesson before, but their rulers have been slow to profit by it. In future it may be well for all holders of property, in all countries, to recollect that the cost of a revolution is from 30 to 50 per cent., and that the instant proclamation of a paper currency is the fair and effectual mode of working out the fiat of law of national bankruptcy.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,668 miles of railway, was 160,036l., thus accounted for: - 73,540/, for the conveyance of passengers only, 44,176l. for the carriage of goods, and a remainder of 42,320/. for passengers and goods together, not respectively apportioned; being an increase of 22,164l. over the corresponding week of last year, when the mile-

age was 2,711. The average earnings per mile last week were 44l., whilst in 1847 they were 50l.

#### Correspondence.

#### GLASGOW AND GREENOCK.

In reading the Report which—as a shareholder-I have just received of the half-yearly meeting of this company, I observe that a sum of 4001, has been presented to the deputy-chairman, Mr. James Tasker, for his attention to the affairs of the company. This grant is no doubt a very proper one, although somewhat unusual, and is an addition to a handsome salary for two or three years paid to that gentleman for acting as general manager. Be that, however, as it may, it is not my wish to say one word in disparagement of Mr. Tasker's claims; I simply wish to know why the directors, in presenting their last Report, as the trustees of an independent property, have ungenerously passed over the claims of their oldest and most meritorious officer,-I mean Mr. John Anderson, their very able chief accountant, and acting secretary since June 1844. Mr. Anderson was the first official of the original promoters as well as of the incorporated company. He has devoted to them ten or twelve of the best years of his life, during which he has organized and conducted with admirable order and method the whole in-door machinery of the establishment,-a system which has been copied by several railway companies, and yet the directors think it right to pass over this hard-worked, and, doubtless, not overpaid officer, to bestow upon one of their own number the only reward and testimonial of approbation. To my brother shareholders, who all know Mr. Anderson's worth, and who have every one received from him the same courteous and gentlemanly reception that I have invariably met with in transacting business,-I appeal through the medium of the Railway Chronicle against such omission; and I carnestly trust that they will not see their faithful servant go unrewarded. Let the directors look to the honourable conduct of the Greenwich Board in similar circumstances. To Mr. Anderson I owe an apology for taking this liberty with his name, and however much it may offend his modest and retiring disposition, I cannot refrain from what I consider a fair and legitimate criticism on the conduct of the Greenock directors.

A SHAREHOLDER. March 11.

#### THE FRENCH RAILWAY HAVOC.

A great deal of virtuous indignation has been vented against the French people on the destruction of some railway stations around Paris; and the enemies of the republic have designedly fastened the odium on the republican spirit of the French nation. I have it, however, from a gentleman who has just returned from an interview with the Provisional Government, that these proceedings had no vestige of national or republican character about them, but were solely the work of the bargemen and other envious rivals of the railways, who took advantage of a public commotion to wreak their spleen on their successful competitors. The lifting of the rails for short distances was a precaution against the introduction of hostile troops by the fugitive King; and as for turning away the English navvies-(although a wicked and contemptible movement)how often do we see, on our own lines, the English turning away the Irish navvies? FAIRPLAY.

#### Gossip.

The accounts from Paris as to the public credit continue everywhere to create alarm and uncertainty. Even the wealthiest houses are unable to realize their securities; and to add to the fall of some of the highest banking firms, rumour has been busy with her evil whisperings as to the stability of the others. The National has attempted to show that embarrass-ments have only reached the parties over speculative in matters unconnected with their business (railroads, for example); but this view is absurdly limited. The withdrawal of deposits from the savings-banks, M. Ledru Rollin's threatening circular, and the suspicion and insecurity hanging over every commercial interest, from apprehensions of misunderstanding between the ardent and moderate republicans, have all worked their part in fostering the present lamentable disorder. The Bank of France, however, is vigorously

affording its succour on all sides. Its discounts are affording its succour on all sides. Its discounts are reported to have amounted, in the last fortnight, to 100,000,000f. A Council of Finance is to be instituted by the Provisional Government. Besides Laffitte's house, Messrs. Baudin & Co., bankers, in the Place Vendome; MM. Etienne & Thion de la Chaume, and Ganneron, of the Rue Grange Batellière, are announced to have stopped payment. Time alone appears to be wanted to pay in full all their creditors. By the latest intelligence, the Bank is reported to have been authorized to suspend its payments in specie. In the midst, however, of all the alarm from the monetary struggles, a subscription is said to have been opened, in order to raise a capital of 20,000,000f... divided into shares of 1,000f. each, in order to reestablish the bank of MM. Gouin & Co.

We sincerely regret to state that the banking-house of MM. Laffitte, Blount & Co. has suspended its payments. In a circular explanatory of the causes of suspension, they observe, "The state of our affairs presents, in other respects, nothing that need alarm The realization of our resources is but transionly interrupted, and we require but a delay to fulfil all our engagements. The meeting of our creditors will shortly take place at our social seat, 48 bis, Rue Basse du Rempart; they will have to consider the measures we intend to propose for accomplishing our

prompt and complete liberation."

The Provisional Government have announced the singular formation of a subscription loan to the amount of 100,000,000/., remaining to be issued out of the amount of the loan decreed by the law of the 8th of August 1847. It is to be called the National Loan. The subscriptions remain open for one month from the promulgation of the present decree. The subscribers are to receive rentes of 5 per cent. either nominative or to bearer, which shall be inscribed in the great ledger of the State, with dividends from March 22, 1848. The decree affixing the loan determines that, even should the 5 per Cent. rentes be above par within the month from the promulgation of this decree, stock receipts for the National Loan shall be delivered at par. In conformity with the provisions of the single article of the above quoted law of the 8th of August 1847, the dotation to the sinking fund shall, from the close of the subscriptions, be increased by a sum equal to the hundredth part of the nominal rentes which may be negotiated in virtue of this decree.

The following NOTICE has been issued BY THE POST-OFFICE, which seems resolved to turn RAILWAYS to the best possible account for its own purposes. It will not be long before this system must necessarily extend, and all IMPORTANT STATIONS become RECKIV-ING HOUSES. We hope the railways are sufficiently alive to the real value of the service, and will consider their shareholders accordingly:—"On and after Monday, the 6th of March, letters and newspapers will be received at the railway station, Euston-square, to be despatched by the night and day mail trains to all towns, the correspondence of which is conveyed by the London and North-Western, or by the lines branching from it. A list of these towns may be seen at the station. A fee of 6d., in addition to the postage, is charged upon every letter, and a fee of 6d. on every newspaper; this fee, as well as the postage, must in all cases be paid in stamps. A bag for the receipt of these letters is suspended at the station every day (except Sunday), from 7 30 a.m. to 9 50 a.m., for the daily mail; and from 7 30 p.m. to 8 35 p.m., for the night mail."

Our readers will observe an advertisement respecting the GRIMSBY DOCKS, in which the directors of the Manchester, Sheffield and Lincolnshine offer passes to their shareholders to inspect the works. This principle of inviting the shareholders to become familiarized with the value and aim of their property is deserving of imitation.

The LLYNVI VALLEY directors, according to the Railway Gazette, have not stopped the interest on money actually paid, though a call may be in arrear. They have charged interest on the time the calls have been in arrear, and have allowed interest on money paid, furnishing an account to the subscribers for the balance. This is the proper mode of proceeding with those shareholders who, if in arrear, are only so owing to temporary difficulties.

The Times forcibly illustrates the unwillingness of any of the speakers in the income tax debate to suggest a return to the old state of things, in the following terms:—"If anybody does attempt to redeem the intrinsic vanity of the discussion by the proposal of a retrograde movement, he does so in much the same sheepish half-whisper that a bedridden old gentleman would suggest a repentance from railroads, and a return to stage-coaches." This from the home of "Cato," and the other fierce assailants of our railway system! Digitized by GOGLE

The traffic receipts on the Hull and Grimsby portion (16 miles) of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE, lately opened, are supplied separately from those of the main line, and were, for the weck ending March 11, 1551. 6s. 4d.

The Cumnock extension of the Glasgowand Carlisle, from Kilmarnock as far as Auchinleck, will be ready

for opening in June.

The certificate holders in the MIDLAND AND THIRSK JUNCTION are to receive a third and final instalment of 6s. 4d. per share on the 4th of April next.

At the adjourned meeting of the DUBLIN AND DROGHEDA on the 3rd, the appointment of a committee of eight shareholders to investigate the accounts, was confirmed. They are to make their report, with such recommendations as they may deem necessary, to an adjourned meeting on the 30th inst. The number of the Board was reduced to seventeen, and the four retiring directors were re-elected.

The late Hamburgh congress of directors decided to adopt a uniform tariff of charges for passengers and goods, at considerably reduced prices. Measures are to be taken, so that all waggons carrying goods should, without reference to the company to which it belonged, pursue its journey on all the lines to its destination. This convention will be carried into effect from the 1st of May next, by the directors of twenty-two lines. At a meeting of directors at Minden similar resolutions were come to. On the line between Cologne and Berlin, the journey will be performed, for goods, in twenty-four hours, and the charge will be 1 thaler 10 gr., or 5f. per quintal. This decision will be carried into effect on a great line traversing six different States, including Hanover, which does not belong to the German Customs Union. The line from Paris to Cologne, which only traverses three States, and has been completely finished for three years, takes five or six

days to carry goods from end to end.

Opportunely enough at this season of the year, Mr. Punch furnishes the following extract from the 'Report of the Hum and Diddlesex' (his own favourite line):—"The Chairman would now refer to their finance statement. (Hear!) He felt bound to say it would be found most satisfactory. 7,000!. had been mortgaged on annuities at par, and their debentures were wholly independent of their stock of engines (Cheers). The permanent way was now in trust for the increased debits on the gradients. in trust for the increased debits on the gradients. (Hear / hear /) From this it was clear that there was 4,000l. balance per contra on the new half shares. (A voice: 'What's the receipts') The Chairman could not be expected to go into such details. They had lately opened six miles of the 'Navrey and Stoker Extension Branch,' which he had no doubt would pay well when a town had arisen at each end, and truffic was induced between them. (A voice 'What's the expenditure?) The Chairman begged not to be interrupted. The Meeting would observe one little item of 56,000l. for law expenses. They had triumphed over their opponents. True, they had incurred some trifling expense—but were they, he asked, to be insulted by the Grand Gumption? 'No !') or by any other line ? ('No, no !' and cheers.) Then as to the dividend-(Hear, hear, hear /)-the secretary had recommended a nett dividend of 10 per cent. (Hear!) on the deficit, and this, after paying the surplus and directors' salaries (which, he was glad to say, had been raised 500l. each per annum), left the 4 per cent. incidental expenses as money in hand, which would render it necessary for the shareholders at once to pay up the late 20% calls. (Sensation. A voice: 'What is the dividend to be?') The Chairman put it to the meeting whether the gentleman's question had not already been distinctly answered, and after some confusion he vacated the chair, and the meeting separated."-[We believe this to be an authentic account, although there were no accounts. Mr. Punch certainly knows more about the line and its hangers on than we do.]

#### Reports of Meetings.

[Continued from p. 207.]

BIRMINGHAM AND OXFORD JUNCTION.

March 11.—Adjourned Half-yearly Meeting, Birmingham.—Mr. W. MATHEWS in the chair.

The business of electing directors was proceeded with. Mesers Mozley, A. Peyton, S. Beale, Bigg and Cobb were elected. Mr. Paget succeeded Mr. T. B. Wanklyn.

The CHAIRMAN read the correspondence between the solicitors of the dissentient shareholders and the Great Western. For Mr. Dobie's first letter, containing his proposal to the Great Western, see ants, p. 146. The following is the additional correspondence:—

10, Whitehall, Feb. 23, 1848.—Dear Sir,—We are requested to inform you, in reply to your letter of the 15th

inst., that the Great Western directors consider, and are so advised by their counsel, that the judgments of the Vice-Chancellor and Lord Chancellor are conclusive as to the principle that the agreement of the 12th of November will be sustained on the hearing of the cause, and that full opportunity will be given for such parliamentary powers as will be necessary to render it complete in all its provisions; or that full compensation will be decreed for any disadvantage, damages or expenses in which the Great Western may be found to have become involved by the acts and proceedings of the dissentient shareholders since the agreement was entered into. We are, however, directed to state that the Great Western are, nevertheless, ready to enter into any reasonable and fair conditions for securing an end to all disputes, provided it be clearly understood, as indeed they infer from the propositions contained in your letter, that they are to have the full and entire performance of every stipulation and object contained in the agreement, and that no further impediment be offered to carrying it out. If this principle is the admitted basis of a negotiation, we are willing at once to enter into it, and to bring it to an immediate conclusion. We should not require any terms which, in our judgment, would be a concession to us. We should ask merely for that which we believe we are entitled to under the agreement; and there are some points on which we think we might successfully insist under the agreement, which we are ready to concede. But as to the details of the terms, and the mode in which effect is to be given to them, we are quite willing to leave it in the hands of one of our counsel, to meet and arrange with any counsel you may nominate, all the terms and conditions upon which such a binding and conclusive arrangement may be entered into.—

we are quite willing to leave it in the lands of one of our counsel, to meet and arrange with any counsel you may nominate, all the terms and conditions upon which such a binding and conclusive arrangement may be entered into.—W. O. and W. Huxr.—A. Doble, Eaq.

Lancaster-place, Feb. 28.—Dear Sirs.—I beg to acknowledge the receipt of your letter of the 23rd inst., which I have communicated to my clients in the country. I abstain from making any observation on the first paragraph of your letter; but with reference to the second, I am instructed to state, that the propositions contained in my letter of the 15th (subsequently approved and adopted at the half-yearly meeting of the company) were made in good faith. My clients still abide by them, and are prepared fully and fairly to carry them out, provided the Great Western fulfil their part of the contract. I am further instructed to state, that with the view of considering and deciding on the best mode of giving effect to these propositions, my clients are perfectly willing that Sir F. Kelly, on their part, shall meet any counsel whom you may appoint on the part of the Great Western. As it will be necessary to report the result to the adjourned meeting of the Birmingham and Oxford on Saturday next, I beg to say that I am ready at any moment to concur with you in the needful measures for the incetting of counsel.—A. Done.—Messrs. W. O. and W. Hunt.

10, Whitchall. March 1.—Dear Sir.—I have arranged that Mr. Rolt, on behalf of the Great Western, will meet Sir F.

10. Whitehall. March 1.—Dear Sir.—I have arranged that Mr. Rolt, on behalf of the Great Western, will meet Sir F. Kelly as your counsel; but I must mention, to prevent any future misconception, that they must not be restricted to the mere consideration of the propositions contained in your letter to me of the 13th ult., but must embrace the whole subject of our recent correspondence, and especially those points which were referred to in the second paragraph of my answer to your letter. With this understanding between us, it only remains to fix the time most convenient to our respective counsel for their conference. I was engaged on a trial at Reading when your letter of the 28th ult. was received here, and I have not lost a moment, since my return to London, in making this arrangement for the meeting of our counsel.—W. O. Huxt.—A. Poble, Esq.

Lancaster-place, Strand, March 8.—Dear Sirs,—I find today, with regret, that the meetings between our respective

Lancaster-place, Strand, March 8.—Dear Sirs.—I find today, with regret, that the meetings between our respective counsel have been attended with no result, although Sir F. Kelly, on our behalf, has, in the course of them, all along offered the fullest and most unqualified assent to the agreement of November 1846. I am to abstain from any remark upon this fact, as it is not for me to explain why your clients, having always heretofore contended for, and having recently filed their bill for the avowed purpose of obtaining specific performance of that agreement, now turn round and decline to accept performance of it without new conditions, and conditions which they cannot but have known to be impracticable, and therefore (if for no other reasons) wholly inadmissible on our part. My present purpose is, in accordance with the instructions of my clients, to repeat that, for the reasons and under the circumstances stated in my letter to you of the 15th ult, they are still ready, and they hereby again offer, fully and completely to carry out the agreement under the direction of the Court of Chancery, if you please) as mentioned in that latter. And as, adverting to the agreement, I find that coupons or securities for 30%, 5x, per share are, under it, now due to those shareholders who have paid up 20%, per share, and will be due to the others as soon as they have paid a like sum, I am instructed to require that those securities be at once prepared and delivered according to the terms of the agreement. If you desire me to prepare the securities, I will do so upon hearing from you. Your clients have only to say, upon delivery of the securities, when completed, what they request from mine, in accordance with the agreement, and whatever that be it shall be done, and promptly. I have only further to request an immediate communication from you in reply to this letter, in order that I may lay the whole matter fully before my clients at their meeting next Saturday.—A. Dobis.—Mesers. W. O. and W. Hunt.

10. Whitchall, March 10, 1848.—Dear Sir.—We are much surprised at your communication of the 8th inst. We learn from Mr. Rolt that no intination has been received by him that Sir P. Kelly had either relinquished the negotiation which was considered to be pending between them, or that it had terminated, and been taken out of his hands, although we are left to infer from your letter that such has been the case. We can only suppose from its contents that it must have been written at a time when, owing to some peculiar circumstance, you were very imperfectly informed of all that had recently passed between our respective council; upon which conjecture we feel it due to you, as well as

to our clients, to correct some otherwise unaccountable mis takes into which you appear to have fallen. Your most prominent, and, indeed, prevailing misconception seems to be, in representing that "although Sir F. Kelly had, in the course of his meetings with Mr. Rolt, all along offered the fullest and unqualitied assent to the agreement of November 1846, our clients, after having contended for and filed a bill 1846, our clients, after having contended for and filed a bill to enforce the specific performance of it, now turn round and decline to accept performance of it without new conditions, which," you say, "they must have known to be impracticable, and therefore wholly inadmissible." We feel bound to give at once not only unqualified contradiction to such statement, but as distinctly to assert, that it is solely the withdrawal by your clients of a condition suggested by your own counsel, and adopted by the Great Western, which has led to the deet of any anisoble expression. It is has led to the defeat of any amicable arrangement. It is no doubt true, that at a preliminary meeting between coun-sel, it was understood by both that full effect was to be given to the agreement of November 1846, and to this view of the case we have always adhered throughout the negotiation, and do still adhere. We consider, and believe it was so urged by our counsel, that the bills before Parliament referred to in your letter of the 18th of February, should be obtained before any coupons were delivered. On the other hand, it was urged on your beliaff, that they should be delivered on the passing of a resolution by the Birmingham and Oxford approving of the bills; and in the course of that conference it was suggested by your counsel, that in that event it would be reasonable, in his opinion, that a pledge should be given in writing by your clients, the present shareholders of the Birmingham and Oxford individually, that no steps should be taken by them to oppose the bills or defeat the arrangement. That preliminary meeting terto the agreement of November 1846, and to this view of the or defeat the arrangement. That preliminary meeting terminated with the understanding that the counsel should see their respective clients, and communicate the result of it, their respective clients, and communicate the result of it, and we are not aware that any other material point was discussed at that meeting. A consultation was thereupon held by us on the same evening, to decide what course ought to be adopted by our clients. It was the opinion of our counsel, that an Act, binding all parties to the terms and objects of the agreement, and conferring ample powers to carry it out in the fullest extent, ought to pass before any coupons or engagements should be given; but so frank and decisive had been the assurance of Sir F. Kelly of the bond fide intention of all your clients, to unite in giving assistance rather than opposition to the bills, that the Great Western were advised, and afterwards consented, to relax their strict rights, and be satisfied with the written declaration in the character of a binding assurance upon the honour of the individual shareholders to be selected by them, as suggested by your own counsel. We apprehend also that after this preliminary meeting you must have seen Sir F. Kelly, and ascertained what had taken place. At the next meeting of our respective counsel, which was held on Sir F. Kelly, and accertained what had taken place. At the next meeting of our respective counsel, which was held on the following day, the result of their conference was reduced into writing in the shape of "Heads of arrangement to be proposed to the respective parties," which included, in a separate article, the proviso, as to "the shareholders of the Birmingham and Oxford pledging themselves, in writing personally to abstain from any act directly or indirectly which should tend to defeat or frustrate the spirit or intention of the arrangement." In this proviso the name of Mr. Glyn had been proposed to be accepted, with the understanding that he, however, should be equally bound to abstain from personal interference except as to any to abstain from personal interference except as to any merely ministerial act in his capacity of chairman of the London and North-Western; but upon reconsideration our London and North-Western; but upon reconsideration our counsel objected to the introduction of any exception into that proviso, and the matter was left open with respect to it. We assume that you must have seen what was reduced into writing upon that occasion. Our clients were then requested to consider and determine the whole subject as comprised in those documents, for which purpose they held a special meeting, and, at the request of Mr. Rolt, they entertained the question which had been raised by Sir F. Kelly, as to a qualified exception from the document proposed to be signed by other shareholders, whom the Great Western might think proper to select for the purpose of giving that honourable pledge. With some reluctance our clients yielded to that concession, as regarded Mr. Glyn, in order to facilitate what were understood to be the objects and honourable intentions of all parties in the proposed arrangement, and that decision was made known to our and honourable intentions of all parties in the proposed arrangement, and that decision was made known to our counsel for the purpose of being communicated by him to Sir F. Kelly. On the evening of that day, however, for the first time, and to our astonishment, Mr. Rolt was apprised by Sir F. Kelly that the offer to give any such letter of pledge must not include any parties who are directors or officers of other railway companies; but his communication, as we understand, left it to be assumed that the coupons were still to be immediately delivered. advised that upon the terms of the agreement itself, and more especially when we connect with it the conduct of the more especially when we connect with it the conduct of the parties opposing it, your clients have not entitled themselves to the coupons they now demand; and the result of the negotiation has autistied us that if the Great Western were to yield to that demand, they would have nothing to expect in return but the most determined attempts to defeat the agreement on the part of those who would then have received the full benefit of it. Mr. Rolt consequently acquainted Sir F. Kelly that our clients declined to deliver any coupons until the bills shall have received the royal assent. unless they shall have the written piedes which had any coupons until the bills shall have received the royal assent, unless they shall have the written pledge which had been proposed as the security against opposition to them. To this communication no reply has been given, except your letter of the 8th inst. If this narrative be correct, and we have no doubt that it is so, we must leave it to others to determine how far your assertion is well-founded, that "our clients now turn read and reflects to refer the received. determine how far your assertion is well-founded, that "our clients now turn round and refuse to perform the agreement without new conditions, which they must have known to be impracticable." It cannot be forgotten that the conduct and proceedings of your own clients, who became the purchasers of shares after November 1846, for the purpose, if possible, of defeating the agreement of that date, stopped the progress of a bill before Parliament, in the last session,

Digitized by GOOGIC

for some of the powers stipulated to be sought for. The experience of the past, therefore, has shown that some provision must be made to prevent our clients becoming exposed to the same personal means and influence being again employed to oppose the bills; after the individuals who have been acting in the interest of the London and North-Western shall have procured the coupons or securities they are so anxious to obtain as a pecuniary advantage to themselves, and for which they seem now to offer to give merely the nominal assent of a resolution of the Birmingham and Oxford. In conclusion, we must remind you that the pre-sent register of the shareholders and of the proxies given by them discloses the fact that among your clients "suggesting an amicable settlement of all differences" are to be found the names of the chairman, deputy-chairman and twenty-nine directors of the London and North-Western, with a numerous list of their relations, besides all their solicitors, engineers and several agents and clerks of the company, in addition to many of their leading shareholders. Of the railway companies connected with them, or under their influence, we find also many directors and officers associated in the same object, commanding, by their respective positions, the influence, if not the capital, of those bodies. These are incentrovertible facts; and our clients cannot, with a knowledge of them, fail to draw, as it seems to us, with a knowledge of them, fail to draw, as it seems to us, a very natural inference from all that has been adverted to, that they would most improperly have compromised the interests of their proprietors if they had acceded to the demand of your clients, leaving them unfettered as to future opposition, and certainly that they would not have secured to the Great Western even the advantage of a peaceful issue from the contentions which have been instigated against them throughout by your clients.—W. O. and W. HUNT.—A. Dobie, Esq. Mr. Mozley wished to know whether the chairman

was in possession of the heads of an agreement drawn up by the counsel named in the correspondence ?

The CHAIRMAN said he had only private notes, but no official memoranda.

Mr. Mozley hoped that the shareholders would be put in possession of all the documents.

Lord HATHERTON concurred in this.

The CHAIRMAN saw no objection to this; he had

read all the documents in his possession.

Mr. Doble stated that after the first consultation Mr. DOBIE stated that after the first consultation Sir F. Kelly submitted nine propositions as the basis of the proposed negotiation. Forms of coupons were to be prepared for the payment of the principal and interest by the Great Western to the shareholders of the Birmingham and Oxford Junction, according to the terms of the agreement of the 12th of November 18th, when the highest dead into Parliament to 1846; bills were to be introduced into Parliament to carry out the objects of that agreement; a resolution was to be carried by the shareholders of the Birmingham and Oxford, sanctioning their bills, and pledging themselves to abandon all opposition; and the coupons were to be exchanged for copies of such resolution. Other deeds were submitted, in conformity with the propositions submitted in his (Mr. Dobie's) first letter. Sir F. Kelly also handed in a paper entitled "a secret article," by which, as one condition of the coupons being given for the payment of 30l. 5s., that a certain number of shareholders (it was mentioned to the number of 800 or 900) whose names were to be selected by the Great Western, should sign a circular, pledging themselves in no way to use their influence in opposition to the proposed bills for introducing the broad gauge into the Midland Counties, or otherwise to interfere with the bills to be brought before Parliament by the Great Western Mr. Glyn (the chairman of the London and North-Western) it was understood was to be allowed to act ministerially in signing documents on behalf of the North-Western, but individually he was to be debarred from exercising any personal influence against the Great Western bills. On receiving this against the Great Western bills. On receiving this "secret article," he (Mr. Dobie) informed Sir F. "secret article," he (Mr. Dobie) informed Sir F. Kelly that he did not object to the chief heads of the agreement,—that was, the heads stated between No. 1 and No. 9,—but that with respect to the "secret article," he could not hold himself responsible for what individuals might think or do. He appeared as solicitor for a company, and he could not ask individual shareholders to enter into an engagement with a corporate body. The "secret article" was returned to Sir F. Kelly, between whom and Mr. Rolt a correspondence afterwards took place, containing a declaration on the part of Mr. Rolt that, although he wished for an amicable settlement, he was afraid all efforts would fail, unless the Great Western had the signatures of the shareholders of the Birmingham and Oxford Junction, withdrawing all opposition to their bills, and sanctioning the introduction of the Mr. Dobie said, after this playing fast and loose, it was evident that the Great Western did not mean to give the coupons, unless they obtained the broad gauge; in fact, should they fail in obtaining the broad gauge, they would contend that the agreement was not binding.

Mr. G. TURNER asked for the agreement of the

12th of November 1846 to be read. He understood

now, however, that it was not to be paid unless the | letter be addressed to the Great Western by Mr. Dobie, on

Great Western got the broad gauge.

Mr. A. Peyton wished to ask the chairman whether he considered that the issue of the coupons was according to the agreement contingent upon the Great Western obtaining the broad gauge.

The CHAIRMAN observed there were three descriptions of shareholders. First, the great majority of the original shareholders, who, with himself, agreed in the sale to the Great Western; secondly, part of the original shareholders, who, like Mr. Mozley, opposed the sale; and thirdly, another class not original, the shareholders who purchased their shares after the sale. Now he, as an original share-holder, thought the shareholders had no right to their coupons until the terms of the agreement were faithfully acted upon. They had nothing to do with the London and North-Western as a company, but they had to do with the shareholders of that company as members of the Birmingham and Oxford Junction. Amongst the terms of that agreement was a clause introduced into their Act for extending the broad gauge to their line, and they were bound to see this extended as far as they could before they were entitled to their coupons

Mr. C. Shaw (a director who has hitherto acted with the Great Western party) said there never was any such condition. The shareholders are entitled to the coupons without reference to any such contingency. The question had been frequently raised at the Board, and no such condition was ever contended for

Mr. Mozley was still anxious, notwithstanding what had occurred, for some amicable arrangement. The plain question was, whether this arrangement was to be contingent upon the heads to which reference had been made, or upon the terms of the "secret article." No man could answer for the signature and disposition of every shareholder in the Birmingham and Oxford, and they were bound to have the agreement completed upon the terms and in its original spirit. He would appeal to the Board. and ask them whether the security promised to the shareholders was originally offered contingent upon the attainment of the broad gauge, when they knew that its introduction into these districts was specially interdicted by an Act of Parliament? The deed of agreement of which they (the shareholders) required the fulfilment was not a one-sided agreement, but bore the signatures of the directors of the Great Western. It stipulated that the shareholders, so soon as they should have paid up their full amount of 201. per share, should be entitled to a coupon of 301. 5s. Did the Great Western mean to adhere to that agreement? It was absurd to suppose that the extension of the broad gauge was a condition upon which those securities were to be given, and he challenged the Great Western to find in any of the bills they had recently filed in Chancery the mention of any such condition. They knew the extension of the broad gauge was dependent upon the will of the Legislature. However, it now appeared, notwith-standing all the assistance which the shareholders might give to the Great Western, if they failed in obtaining the broad gauge-if the Legislature refused to sanction its extension-they (the shareholders) were to be refused their coupons. How could the directors enter into any agreement by which one party was to be bound hand and foot, and the other left to break it at any moment they pleased?

Mr. Shaw assured Mr. Mozley that the Great Western never for a moment contended that the delivery of the coupons depended upon the obtain-

ment of the broad gauge.

Mr. Mozley need not add more to Mr. Shaw's sertion. Their counsel had, however, done so. He (Mr. Mozley) had been content to consider himself beaten. He had fought the battle fairly, and he had hoped that there had been a termination of his labours. He had resolved to do all in his power to bring about an amicable settlement. When he saw, however, the "secret article," he said they would have nothing to do with it, and that it ought to be put behind the fire. How could they obtain the signatures of 600 or 700 persons selected by the Great Western? They had no power over such persons, and the refusal of two orthree to sign might put an end to an agreement made upon such terms. He concluded by moving the following resolution:-

That the letter addressed by Mr. Dobie, on behalf of this That the letter addressed by Mr. Doble, on behalf of this company to Messrs. Hunt, on behalf of the Great Western, dated the 4th inst., be and the same is hereby approved and adopted by this company; and the letter of Messrs. Hunt, dated the 10th inst., having been read, it is further resolved, that the Great Western be forthwith formally called upon to deliver to the shareholders of this company who that when the shareholders had paid up their full 20l. per share, they were entitled to a coupon of 30l. 6s. from the Great Western. It would appear to the shareholders of this company who have paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to them under the paid their calls the securities now due to the paid their calls the securities now due to the paid the paid the paid their calls the securities now due to the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the paid the pa

letter be addressed to the Great Western by Mr. Pobie, on behalf of this company, requiring their compliance with such demand within one week from this date, and further giving notice to the Great Western that, failing such com-pliance, such steps will be forthwith taken for the protec-tion of the interests of this company under the agreement as counsel shall advise; and this meeting doth hereby authorize and order such steps to be taken accordingly by Mr. Dobie, on account of this company. Mr. Dobie, on account of this company

Mr. PEYTON seconded the resolution.

During a long discussion, the CHAIRMAN expressed his belief that the Great Western would give to every shareholder a coupon for 30l. 5s. per share who was prepared to give them a declaration to the effect that he would do all in his power to further the carrying out the provisions of the agreement.

Mr. Mozley said that if all the shareholders would come forward, and of their own free will give the guarantee required, he had no objection, and would at once give his; but supposing three or four stuck out, or the shares became possessed by other parties, what was to be done? The Great Western well knew that this was impossible, and had availed themselves of this speculation to get rid of the agreement.

Mr. SAUNDERS, the secretary of the Great Western. explained in detail the heads of agreement which had been drawn up by Sir F. Kelly and Mr. Rolt. The terms of the separate article had arisen, not with their counsel, but with Sir F. Kelly; and on their part Mr. Rolt had been instructed that if a condition were given that the broad gauge would not be opposed, and that assistance would be afforded to out the terms of the agreement, the coupons would be given at once. Mr. Mozley and his friends stipulated that all the officers and directors of other companies were to be exempt from signing the agreement required by the Great Western; here, consequently, the arrangement broke off.

Mr. Mozley called upon the Great Western directors to say whether they had any purpose to carry out the agreement of November 1846; and whether, under it, they considered themselves legally entitled to a document of the character they now proposed as

a condition of paving the coupon.

Mr. Russell, the chairman of the Great Western. said that a plain and specific answer to Mr. Mozley's question was given in the letter addressed to Mr. Dobie by their solicitors. It was their fixed purpose and intention to carry out the agreement; but as to its extent, they must be guided by their own counsel. There were various nice distinctions to be considered. and the moment they were satisfactorily adjusted they would not keep back the coupons a moment. He did not believe that any court of law or the Legislature itself would expect a great company to pay away a million and a half of money until the full conditions of the agreement had been complied with. We will never (he said) surrender our arms, and leave our opponents in possession of theirs: neither will we enter into any delusive truce, so long as your various descriptions of shareholders, in the character of Buckinghamshire, London and North-Western, Midland, and others, remain in the field against us, to prevent the full carrying out of an agreement which you, as Birmingham and Oxford proprietors, have entered into.

The adjourned special meeting then took place, to consider bills for deviation lines from Leamington to Warwick; a loop line through the town of Birming-ham; and to confer additional powers on the Great Western with reference to the agreement of November 12, 1846.

Mr. Mozley should not make any observations, but content himself with moving the following reso-

That the said bills be opposed in the name and on the That the said bills be opposed in the name and on the behalf of this company, for the purpose only of procuring the insertion of such clauses therein respectively as counsel may advise for giving full and immediate effect to the agreement of the 12th of November 1846, and that the seal now produced be affixed to the common seal to such petition or petitions as counsel shall advise for the purpose aforagail. aforesaid.

Mr. Jones seconded the resolution.

The CHAIRMAN said, as advised, he could not put the resolution to the meeting.

After mutual recriminations, the CHAIRMAN still refusing to put the motion, Mr. Mozley did so, and it was carried by a large majority.

Mr. Mozley next moved-

That the present attorneys and solicitors be no longer employed as such, and that all business of this company, at law, in equity, in Parliament, or otherwise, be henceforth conducted by Mr. A. Doble, of London, and M. says, Colmore and College of Disministration of the attorney and collisions of conducted by Mr. A. Doble, of London, and Messrs, Colmore & Beale, of Birmingham, as the attorneys and solicitors of this company, and that the directors be and they are hereby instructed to act in conformity with this resolution; and that the scal now produced be affixed as the common seal to this resolution.

The motion having been carried, this meeting was adjourned to the 23rd inst,, to be held at the Adelphi, Liverpool, at 2 p.m.
Digitized by GOOSIC

The business of the half-yearly meeting having been resumed, the first resolution of Mr. Mozley, with regard to the correspondence between Mr. Dobie and the Messrs. Hunt, and the proceedings against the Great Western, was carried.

The CHAIRMAN read the Report. It was very brief. The attention of the shareholders was directed to the recent decision of the Lord Chancellor, and they were advised to abstain from further opposition to the course taken by the directors. The statement of accounts showed a balance in hand of 132,1354.2s.6d. On the motion for the adoption of the Report,

Mr. Mozley (on the ground that the accounts had not undergone an examination) moved that the meeting be further adjourned until Thursday, the 23rd inst., at the Adelphi Hotel, Liverpool.

This was carried.

#### SOUTH STAFFORDSHIRE.

March 13 .- Half yearly Meeting, Walsall .- Mr. C. S. FORSTER in the chair.

The Report was read by Mr. H. BARNETT, the secretary. It congratulated the shareholders that secretary. It congratulated the shareholders that—
Notwithstanding the pressure of pecuniary and commercial
distress, operations for the last six months had been in
active progress throughout that part of the line which could
be most beneficially worked in connexion with other lines.
The Birmingham branch had been opened for passenger and
parcel traffic since the last half-yearly meeting, in conformity with the intention then announced, and is now at
work in conjunction with that portion of the London and
North-Western which is necessary to give complete communication between the towns of Birmingham and Walsall. To
secure the efficient working of the line, the completion of North-Western which is necessary to give complete communication between the towns of Birmingham and Walsall. To secure the efficient working of the line, (the completion of which, from the Midland to the London and North-Western, may be expected about the close of the present year,) the directors have thought it expedient to order the requisite working stock to be ready for delivery in due time, before the opening of the line. Although large sums have been expended in land, works and permanent materials, 42, per share only had, until very recently, been called up. As the spring advances the monthly payments for the above purposes will be nearly double their former amount. The directors have therefore found it necessary to make a further call of 12. 10s. per share on the capital, payable on the 31st inst. A period of upwards of five months has, however, intervened between this and the last preceding call. A considerable proportion of the capital likely to be required for completion of the undertaking having thus been made payable, the directors have deemed it expedient to exercise the power given to them by the Act of incorporation; and have therefore directed interest at the rate of 4 per cent. to be paid from the 31st inst, on each share upon which 52. 10s. shall have been paid up, subject to the usual stipulation (which is also made peremptory by the Act) that no interest shall be paid to any proprietor who is in arrear of any call during the period such call shall remain unpaid. At the first half-yearly meeting of the amalgamated company (of which this day is the anniversary), the directors had occasion to refer to their progress as being probably less advanced than other companies, whose proceedings had not been impeded at their outset by like arrangements consequent on the amalgamation; but they believe they may now confidently refer to their position as being considerably in advance of almost any similar undertaking in this district which was sanctioned by the Legislature during the same session.

The Engineer's Report stated that the line between Walsall and the London and North-Western had been worked by that company during the last four months, and was in good repair. The statement of accounts showed the receipts up to the 31st of January 1848 at 717l. 14s. 2d. The other works on the line were proceeding satisfactorily.

sanctioned by the Legislature during the same session.

The general statement of accounts showed the receipts at 146,308l. 8s. 8d.; balance in hand, 40,453l. 15s. 7d.

The CHAIRMAN said the Report spoke fully of the company's affairs, and any explanation required would be given.

A Proprietor inquired what was the amount of the

Arrophetor inquired what was the amount of the arrears on the first and also on the second calls?

Mr. Barnett, secretary: On the first about 4,0000, and on the second between 30,0000. and 35,0000.

The Chairman explained that of the latter a great

ortion was due from other companies, and as good interest was paid, it was considered a good investment. They were therefore not particularly anxious about the money, which could be had at any time. In fact, as matters were, the companies to which he referred stood in the character of bankers

A Proprietor: So that the third call, now announced, is not in consequence of the deficiencies of

previous calls?

The CHAIRMAN: No; the money is required in consequence of the heavy works which will now be in rapid progress for the completion of the line. The Report of the directors and the statement of

accounts were then adopted.

TAFF VALE.

March 14.—Special Meeting, Bristol, to consider the draft of a bill now before Parliament, to enable the draft of a bill now before Parliament, to enable its improvement. The steamers placed upon it had the company to take a lease of the Aberdare, with

its branches and works, upon terms therein specified. Mr. W. Coffin in the chair.

Mr. KENWAY, the secretary, read the draft.

A resolution approving of it was unanimously nassed.

#### ABERDARE.

March 14 .- Special Meeting, Bristol .- Mr. C. BAILEY in the chair.

A resolution to lease the line to the Taff Vale was carried unanimously.

#### EDINBURGH AND NORTHERN.

March 15.—Half-yearly Meeting, Edinburgh.—Mr. J. Balfour, of Balbirnie, in the chair.
The Report stated that—

The amalgamation of the Edinburgh and Northern with the The amaigamation of the Edinburgh and Northern with the Edinburgh, Leith and Granton had been completed by the issue of the certificate of the Commissioners. Shortly after the last half-yearly meeting 30 miles of the main line had been opened for truffic, and it was expected that the re-maining portions to the Perth tunnel on the one hand, and been opened for truffic, and it was expected that the remaining portions to the Perth tunnel on the one hand, and to the Tay Ferry on the other, might have been completed at the beginning of the present year; but from commercial embarrasments, the directors could not have done otherwise than they have done. Their present position, however, enabled them confidently to hold out the prospect of the main line being opened throughout to Perth and Dundee in May next. The permanent works of Broughty and Ferry-Port-on-Craig have been contracted for by experienced parties, and by May the necessary accommodation for passenger traffic would be ready. At Granton Pier additional accommodation had been provided, and the rection of hydraulic cranes at that pier and at Burntisland had been contracted for, by which loaded trucks might be deposited in the vessels plying the ferry. Two steam vessels had been placed upon the passage, making the passage in about twenty minutes; the shareholders will, doubtless, contirm the expenditure recommended on this branch. The works on the Dunfermline extension line had been allowed to progress slowly during the winter, but the first eight miles had been laid with a single line, by which access to the Lochgelly coal fields had been obtained, and coal sidings are being haid down at various points to connect the coal pits with the line. The works on the short branch to Kirkaldy Harbour have made considerable progress, but the directors recommended the postponement of the branches to St. Andrews and the harbour of Newburgh. Several important stations have been completed, and on the part of the line not yet opened temporary erections are being provided. To increase the accommendation at the the branches to St. Andrew's and the harbour of Newburgh. Several important stations have been completed, and on the part of the line not yet opened temporary erections are being provided. To increase the accommodation at the Edinburgh station, a purchase was some time ago concluded of the whole of Mr. Trotter's property on the south side of Prince's street, at the price of 310,000l. The directors had also concluded the purchase, for 14,250l., of some property at the west side of the pier at Burntisland, which has a considerable frontage to the harbour, and includes a very commodious graving dock. The receipts for traffic on the portion of the line opened on the 26th of September to the 31st of January last, exclusive of the goods traffic, and for the traffic on the Burntisland and Granton Ferry, amounted to 109,932, being equal to 57th weekly, or 30,000l, per annum; while the number of passencers carried during the same period amounted to 189,735, or at the rate or 529,038 a year. The receipts had already reached within 24½ per cent. of the parliamentary estimate, notwithstanding the non-completion of the line and other disadvantages, while the number of passengers had exceeded that estimate by nearly 20 per cent. The increase anticipated was not less than 45 per cent, while the sum already realized for the Granton and Burntisland ferry would yield a dividend on the purchase money of upwards of 5 per cent.

Col. Graham gave notice of a motion for the next

Col. GRAHAM gave notice of a motion for the next half-yearly meeting, to the effect, that should any proposition by any shareholder have been decided by a vote of the shareholders at a general meeting, the same subject shall not be re-considered at any meet-

ing except at a special meeting.

The CHAIRMAN, having stated that this was the first meeting of the shareholders under the Act of amalgamation with the Edinburgh, Leith and Granton, said that it was the anxious wish of the Edinburgh and Northern that the deed of submission with the other company should be carried on with as little expense as possible, and also that all protracted pro-ceedings should be avoided. The directors had come to the decision of obtaining the opinion of counsel as to the case, for their future guidance. entered into the details of the expenditure with more than ordinary minuteness, and though in some points it had certainly been great, the directors could not admit that in any degree it would have been advisable to limit it, nor could they lay their hands upon any portion of it which could have been properly made less. The directors wished they could have been enabled to state that the line would be opened to Perth and Newport at an earlier day; and with reference to the Strathearn portion, though they had failed in urging the contractor to proceed more vigorously with it, they were enabled to state that it would be opened for traffic by the 1st of June. The purchase of the Granton Ferry was very satisfactory with regard to the revenue which accrued from the ferry, and the means they were about to adopt for

passage with great speed. The Chairman substantiated the statement of the Report respecting the late purchase of property in Edinburgh. The directors had felt themselves compelled, from a sense of the importance of the interests connected with the subject. to purchase shares in the Stirling and Dunfermline. The directors had every reason to be well satisfied with their traffic, as far as it had already gone, conducted as it had been under the greatest possible disadvantage; and he had no doubt that on the completion of the line it would be very much increased. The directors had appointed Capt. Field to be superintendent of the ferries, and would separate to a greater extent the duties of secretary and manager of the line, and for that purpose they had provided the secretary with a qualified assistant. The directors regretted being obliged to make calls in times of pressure, but it must be borne in mind that it was essential that the works in course of construction should be carried on. The Chairman then moved the approval of the Report.

In answer to various questions, the CHAIRMAN stated, that no audit had yet been made of the accounts of the Edinburgh and Granton, on the part of the Edinburgh and Northern. The object of taking the opinion of counsel on the matter of the deed of submission was, that they might be guided in their future proceedings-but the directors would probably be prepared at the special meeting in April to submit a statement as to the course they intended to pursue. The directors had purchased 4,000 shares in the Stirling and Dunfermline line, and the last call had not been paid.

Mr. M. CRICHTON then entered into a lengthened review of the proceedings, and was followed by Mr. Robertson, advocate, who replied to the previous statements. Mr. Monro, S.S.C., having spoken in favour of the amalgamation with the Edinburgh and Granton.

Mr. E. Ellice, jun., M.P., seconded the adoption of the Report.

Mr. A. Brown proposed the substitution of certain gentlemen as directors to the list proposed by the Board, which that learned gentleman subsequently withdrew; and Messrs. Smith and Kinnear respectively dissented from that portion of the Report which had reference to the purchase of the shares in the Stirling and Dunfermline.

The resolution proposed by the CHAIRMAN was unanimously adopted.

On the motion of Mr. BLACKADDER, as to the Sunday trains, being read, Mr. J. ATTOUN moved as a preliminary motion.—

That the question of Sunday trains having been discussed at great length at the last meeting, it was perfectly evident that its renewal at every meeting must have a tendency to excite unseemly strife, and depreciate the value of the property, besides wasting the time of the meeting. 2. That a meeting of shareholders was not a fit occasion for a polemical controversy, while those shareholders who were discatished with the running of Sabbath trains had it in their power to dispose of their shares and withdraw. 3. That it was the opinion of the meeting that the vote should at once be taken upon the subject, and that all those anxious to display their oratorical powers should be informed beforehand that by doing so they would be acting contrary to the opinion of the meeting.

Mr. MINTERSECONDED the motion That the question of Sunday trains having been discussed

Mr. M'INTYRE seconded the motion.

The CHAIRMAN suggested that if the gentlemen who had proposed the motion relative to Sabbath traffic would make their observations as brief as possible, it would be more consistent with the wish of the meeting.

Mr.Christie, of Durie, then submitted 112 memo-

rials against traffic on the Sabbath-day.

Mr. S. Skirving asked if he would state what number of the memorials did not emanate from the Free Church Secession.

Mr. CHRISTIE proceeded to state, that the question was a religious one. He went on to show, at some length, that the running of trains was an in-fringement of the moral law.

Prof. Dick moved that there should be a full discussion, and for that object, that an adjournment should take place, which was seconded by Mr. Hope, of Fentonbarns.

The CHAIRMAN said he should move the previous question.

The other motions were accordingly withdrawn, and the motion of Mr. Christic was put against the amendment of the chairman, and the vote was taken. when there appeared—for the motion, 82; for the amendment, 512; majority, 430. The proxies were also examined, when 130 were found to be in favour of the motion, 1,830 for the amendment.

Mr. BLACKADDER then renewed the notice of motion for the next half-yearly meeting.

DUNDALK AND ENNISKILLEN.

March 14 .- Extraordinary Meeting, Dublin .- The Earl of RODEN in the chair.

The CHAIRMAN stated that the directors themselves advocated the appointment of a committee to inquire and report on the prospects of the company. The committee will report to another extraordinary meeting on the 1st of May. In conclusion, his lordship moved—"That the following persons be appointed directors in the room of those who go out of office, subject to re-election :- The Earl of Roden, of office, subject to re-election:—The Earl of Roden, the right hon. E. Lucas, Messrs. E. Golding, T. Hutton, W. Kilpatrick, J. Townley and T. Hough. Mr. Dunnor moved as an amendment that the directors should not be appointed until the committee

to be appointed at the special meeting had made

their Report.

Mr. BANKHEAD seconded the amendment; and after some discussion, the original motion was carried by a majority of 192 to 112.

Mr. COLONB then moved that Messrs. Murray Giennon, Herrick, Cuming and Archer be appointed the committee.

Mr. Dunlop moved as an amendment that Messrs Callaghan, Mathews and French be substituted for

Messrs. Herrick, Cuming and Archer.

Mr. Muirland moved the addition of Mr. Dunlop to the committee, which was seconded by Mr.

PORTER.

After a long discussion, the amendments were declared negatived, and a scrutiny being demanded, the meeting adjourned to the following day, when Mr. DUNLOP brought forward a series of suggestions for the guidance of the committee.

#### LOUVAIN A LA SAMBRE.

March 16.—Special Meeting, London.—Mr. J. BARNES in the chair.

The Report stated that

Apart from the want of immediate and adequate pecuniary means to proceed with the works and other engagements, the directors conscientiously affirmed now, as formerly, their conviction that the line would, if brought into operatheir conviction that the line would. If brought into opera-tion, be certain of yielding a good return. The only differ-ence between the state of this and most other Belgian companies is that which arises from the fact of the com-paratively small amount of capital which in the former case has been called for, and the consequent small advance made in its works. With the advice of a committee of share-holders, appointed to inspect the works, the directors limited in every mossible way the actual management of their a flairs in every possible way the actual management of their affairs to their own personal surveillance, and Mr. Sherman went to their own personal surveillance, and Mr. Sherman went over to Belgium to make the practicable changes. Notice was given to the English engineering staff that, from and after the following Christmas, such changes would be made as would discontinue their services. The entire of the works at or near Louvain were stopped, and every effort was made to bring the contractor to terms as regards the finishing of the section from Louvain to Gastuche. At the period when they were entitled to claim the return from the Belgian Government of the third fifth of the caution money, the State officers then demurred to its being allowed, on the ground of the works not having been being allowed, on the ground of the works not having been executed as by law required. The directors' advocate then requested the Minister of Public Works to appoint fitting requested the Minister of Public Works to appoint fitting persons to make a more minute inspection of all the works done by the contractor Detiege, and the result of this was the following order:—"It appearing by the Report of M. de William, inspector of Ponts et Chaussées, dated the 17th of November, that sundry works on the Louvain and Gasof November, that sundry works on the Louvain and Gas-tuche section of the Louvain à la Sambre, are not ex cuted according to the rules of the Act—that bad materials have been used—that the execution of the works has not been properly superintended by the officers—and, finally, that in many respects the orders of the ministerial arrites have not been carried out, I am, therefore, under the necessity of ordering as follows, in virtue of art. 20 of the masonry work existing at present, as regarding both the foundations and elevation of the viaducts now in course of exection between the picquets 230 and 232 and between the foundations and elevation of the yiaducts now in course of erection between the picquets 220 and 232, and between the picquets 372 and 172; also that you take to pieces the timber-frame upon which the foundations of the masonry of the viaduct now constructing at picquet 372 are built, the timber-frame of which is laid down about 45 centim, lower than the level agreed upon by the State engineers and those of the company. That you demolish the aqueduct erected of the company. That you demolish the aqueduct erected at picquet 361. That you propose a new project in licu of that now existing, which will not accomplish the object for which it was intended, taking the requisite steps to insure a free course for the waters for which the said aqueduct was destined to form a passage across the railway. Necessity exists for your establishing a complete superintendence of the works; and I further think it will be prudent to put at once a stop to the masonry works, owing to the lateness of the season, and the probability of frost. Should it however be considered necessary to go on with certain works indis-pensable to the prosecution of the earthworks I beg to be informed of the same." From the above decision there is informed of the same." From the above decision there is no appeal. The directors accordingly have acted upon it; but, from the circumstance of the change just then taking place, or about to take place, in the administration of their ngineering staff, great difficulties were thrown in their way. The directors are anxious to carry out to its full extent the final recommendation of the committee of shareextent the mar recommendation of the committee or snare-holders, viz., that their exertions should be confined to the completing and opening for traffic the south-western section, that being the portion which, from local causes, offers the certainty of an immediate profit. The course

of the line for its entire length has been approved, with of the line for its entire length has been approved, with the exception of the portion between Wavre and Gembloux, which, from the negotiations pending with regard to a partial fusion of this company with that of the Great Luxembourg, and from other causes, is not yet definitively settled. The whole of the land on the Louvain and Gastuche section, about 10 miles, is paid for with slight exceptions (not exceeding in value 1,000%), the earthworks are proceeding; and two-thirds of the cuttings (twelve in number), together 900.000 cubic metres, are completed. On the Charleroi and Rensart section, 5 miles in length, three fourths of the land are paid for. Of six cuttings three are completed and a fourth nearly so, amounting to 525,000 cubic metres; and of twenty masonry works eight are completed, and two in course of construction. The entire of pleted, and two in course of construction. The entire of the works at Louvain, including the connecting line from the Government railway to this railway, 2½ miles in length, is suspended, and all the materials, &c., deposited in the company's stores at Louvain. The company has also pur-chased and paid for rails, land and other works, 58,40%; balance in the company's hands, (including caution-money in the hands of the Belgian Government), 46,1221. 5s.

The total receipts had been 220,0931. 8s. 11d. expenditure, 193,547l. 7s. 5d.; debts owing, 19,576l. 3s. 6d.

On the motion for the adoption of the Report

Mr. Sheppard moved that all proceedings should be suspended, and immediate measures taken to release every available asset, and to obtain the return of the caution-money

The CHAIRMAN said that such a resolution could only be passed at a meeting held at Brussels, and would be illegal in London. The Government had already returned four fifths of the caution-money.

Mr. Daniells said that the company were still indebted to the Belgian Government for part of the concession-money; the amount would fall due some time in next month, and if it was not paid then the whole of the property would be sequestrated.

Mr. Sherman, one of the directors, denied this fact. The cost of the concession amounted to 72,000l.,

of which 30,000l. was agreed to be paid at the com mencement, 22,000l, more when the line was opened for traffic, and the remaining 20,000l. when the line paid an average of 5 per cent. for three years; therefore, the first instalment being paid, he conceived that the Government could have no claim.

Mr. Daniells contended that the line, as originally contracted for, having been changed, and that without the consent of the seller of the concession, the Government had a claim.

The CHAIRMAN stated, in answer to a question, that, supposing measures were taken to dissolve the company, he doubted if there would be anything to return to the proprietors.

This led to the withdrawal of the amendment and

the adoption of the Report.

The CHAIRMAN mentioned, in the course of a discussion, that 44,000/. would be required to finish that section of the line between Charleroi and Rensart, towards which, however, about 3,000l. had been already paid.

Mr. Margetson proposed a call to cover that

amount.

Mr. WILKINSON doubted whether any call would be responded to in the present unsettled state of A Proprietor considered that any call would be

ruinous; he recommended that the question should be left in the hands of the directors.

After a protracted discussion, it was resolved that the first instalment of 11. per share on the last call should be made payable on the 1st of May next, instead of the 20th of March, and that the remainder should be paid in instalments of 10s, per share respectively on the 1st of June and the 1st of August.

#### Miscellanea.

CONVEYANCE OF CATTLE BY RAILWAY .- We have repeatedly called the attention of our readers to the exertions which, during the last few months, have been made by the great southern railways to secure cattle from this district to the eastern the traffic in counties of England, and have stated from time to time the success with which their efforts have been crowned. We confess that, although at the outset we entertained confident expectations that the dealers would soon discover the great advantages of the rail over the road, we did not think they would fall so soon into the new system as they have done. Before the opening of the rail from Carlisle southward, droves of cattle were from twenty-two to twenty-four days upon the road between Dumfries and Norwich. which, as most of our readers are aware, is the principal weekly market for Scotch cattle in the eastern counties. For the last two or three years the trade has been subject to heavy losses by the cattle taking the murrain upon the road. Out of a drove of 400 head, we have known one-third to be infected, and left be-

hind at the different stages, and which, before they could recover, were greatly depreciated in value. It is a fact that, before the opening of the railway from Carlisle, the trade was conducted in a very irregular manner, inasmuch as the market at Norwich one week would be literally glutted with stock, and the next but thinly supplied. The trade therefore became quite a speculative one, and prices were governed by the supply. A dealer, too, required to lie out of his capital a considerable period, say five or six weeks from the time of purchasing to that of selling, which prevented men with limited means from entering the trade; and it has consequently fallen into the hands of a few with large capital. But in the course of six or seven months what a change has been produced, or seven months what a change has fraught with the most important advantages, not calle to the dealers, but to the whole district! The old highway of yesterday, with its toll-gates and its stages, its annoyances and inconveniencies, must now give place to the iron-girt road of to-day, with all its attendant improvements, affording a cheap, easy, and rapid communication with the most distant parts the country, breaking through old laws and customs, knitting together town with town and country with country in close bonds of friendly intercourse, and extending civilization and improvement through the length and breadth of the land. Perhaps there is no other traffic which, as the railway system is extended, will derive greater advantages from its adoption than that upon which we are now writing. To confine ourselves to the trade between this district and the eastern counties, we may remark that the journey from Dumfries to Norwich, which by the road, as before stated, occupied from twenty-two to twenty-four days, is now performed in so many hours. The cattle are loaded from the railway trucks at Carlisle, and not removed until they arrive at Norwich, a distance by rail of some 370 miles. Let us for a moment consider the advantages the dealers derive from sending by rail in place of travelling by the road. A dealer in Dum-friesshire receives notice on Monday from his salesman in Norwich of the state of the previous Saturday market. If it is such as to warrant him in supposing that the following market may be one in which he can sell his cattle to advantage, a drove is immediately sent to Carlisle for conveyance by railway; they are despatched on Wednesday, say at 9 a.m., and about the same hour on Thursday they are at Norwich. They have two days and nights to rest after the journey; on the Saturday they are driven to the market and sold; and on Monday the dealer receives a cheque from his salesman for the amount. Thus it will be seen that in November 1847, five journeys can be made to Norwich for one made in the same month in 1846; and the same trade can be conducted with about one-fifth of the capital. The result of all this must be to the advantage of the dealers, for, by a little combination and management they will be able to regulate the supply more to the demand, and conduct their trade upon a surer basis. It has given us great pleasure to observe the energy and liberality which have characterized the southern companies in cultivating the cattle traffic from this district; and we can assure them that, if they continue to pursue the same course, they will secure a trade, the extent of which cannot be foreseen, and the importance of which cannot be overrated. It is not the trade in lean cattle alone we look to. This district is one of the richest of all Scotland; and thousands of cattle and sheep are fattened annually and sent to New-castle, Glasgow, Liverpool, &c. To the last-named place immense numbers are sent by steamers, and thence by rail to Manchester and the whole of the manufacturing districts. There is no doubt that the company will see the importance of this traffic. have no hesitation in believing that, since keep has become so scarce in the South, in the course of another month we shall have fat cattle and sheep leaving this for the London markets. We are sure that the London and North-Western will see the policy of cultivating a friendly feeling with the principal graziers and dealers here, and that no illiberal act will interrupt the onward progress of this branch of their traffic, which promises to be beneficial alike We cannot close to the public and to the company. these remarks without paying our tribute of praise to the great perseverance and energy of Mr. Ormandy, the cattle traffic manager, to whose liberal and undeviating attention the dealers are justly indebted and the company owe their present success in this district .- Dumfries Herald.

THIRD CALL of S. per Share, making 30t. called.

NOTICE IS HEREBY GIVEN, that pursuant to a Resolution of the Board of Directors, passed this day. Shareholders in this company are required to pay a ThIRD CALL of S. per share, by Two Instalments of 2t 10s. each; the First of such Instalments to be paid on or before Monday, the 17th day of April next, and the Second, on or before Wednesday, the 31st day of May next, to Messrs. (19)r. Hallifax, Mills & Co., Lombard-street, the Company's lankers.

Interest at the rate of 5 per cent. per annum will be charged on all Calls remaining unpaid at the dates above mentioned; and no interest will accrue to a Proprietor on his previous payments during the period such Calls are in arrear.

By order of the Board of Directors,
HARRY CHUBB, Secretary.

12, Old Broad-street, London,
March 16, 1848.

# EAST AND WEST INDIA DO

The Directors of this Company are prepared to receive TEN-DERS for the Execution of the WORKS on that part of the line which extends from Dalston-lane, in the parish of Hackney, to King's road, in the parish of St. Paneras, being a distance of about 8 miles.

King's road, in the parish of St. Fanctise, being a surface of the Company's offices, no.12, Old Broad-street, London; and scaled Tenders, according to a form, must be delivered to the Secretary, at the Offices, on or before 3 octock, on Thursday, the 37th day of April next, when the Directors will meet to open the same.

The Directors do not bind themselves to accept the lowest Tender.

By order.

HARBY CHUBB, Secretary.

London, 12, Old Broad-street, March 22, 1848.

SOUTH-EASTERN RAILWAY

COMPANY.

London Terminus, March 23, 1848.

NOTICE IS HEREBY GIVEN, that the Directors have this day made a CALL of the SIXTII INSTALMENT of IL 5s. per Share, on the Shares created under the Resolutions of the General and Special General Meeting of the Proprietors in this undertaking, held on the 11th day of September 1845, and that such Call is made payable on the 17th day of April next, and may be paid at either of the under-mentioned Bankers, viz.:—

Messrs, Williams Beagon & C. 20. Bigchin-lane Lendon.

N 420. The SHAKESPEARE CLOCK, designed and modelled by J. Bell, and made in Parian by Minton & Co. The works will be furnished by Vulliamy of Pall Mall.

The Dial is placed between two figures representing Tragedy and Comedy, as typical of Time passing between Joy and Grief.

"Joy absent, grief is present for that time."—Ric. 2.

The legends being taken from Shakespeare, a statuette of the bard has been thought to be appropriate for surmounting the composition. The likeness is founded upon the Poet's bust at Stratford, which the designer thinks bears internal evidence (stated at length in the Atheneum, 1845, p. 685) of having been executed from a cast taken after death. A full-length Statue of the same figure was exhibited by the Sculptor in Westminster Hall. The Dial by Drayton's patent silvering process.

hibited by the Sculptor in Westminster Hall. The Dial by Drayton's patent silvering process.

422. "Fish, Flesh, Fowl, and Game." ornamenting inlaid Jasper KNIFE HANDLES; signed by R. Redgrave, A.R.A.; the handles made by Minton & Co.; fitted by Joseph Rodgers & Co. Summerly's Art-Manufactures; exhibited by Deane.

423. "Purity, or Una and the Lion," a STATUETTE in Parian; designed and modelled John Bell as a companion to Dauecker's Ariadne; made by Minton & Co. for Summerly's Art-anufactures; exhibited by William Mortlock.

571, 572, 573, 574, 575. The Bird, Flower, and Fruit BRACKETS, in Wood, designed by Delor, and carved by machinery by Taylor, Williams & Jordan, for Summerly's Art-Manufactures, The "Twin TRUSSES" or BRACKETS, designed by J. Bell, Sculptor, for mmerly's Art-Manufactures, carved and exhibited by Taylor, Williams & Jordan.

mmerly's Art-Manufactures, carved and exhibited by Taylor, Williams & Jordan.

N "Loyalty," the first of a series of PAPER HANGINGS. The present subject is tended to decorate an Entrance Hall, and is the centre of three subjects which relate the incident; cothers being the Conspirators at the door, and the Queen protecting the Kings. After the Fresch hibited in Westminster Hall, by R. Redgrave, A.R.A.; made by W. B. Simpson, for Summerly's t-Manufactures; exhibited by W. B. Simpson.

"Unattended even by a body guard, and confiding in the love of his subjects, James the First of Scotland was residing within the walls of the Carthusian monastery at Scone, which he had founded and endowed. Graham of Strathcam seized the occasion, and brought down party at night to the neighbourhood. Scoonded by traitors within, he gained possession of the gates and interior passages. The king's first intimation was from his cupbearer, William Stratow, who, on leaving the chamber in which the King and Queen were at supper, found the passage crowded with armed men, who answered his cry of alarm by striking him dead. The noise reached the King's chamber, a rush of the assassins ensued, and Catherine Douglas, one of the Queen and King's chamber, a rush of the assassins ensued, and Catherine Douglas, one of the Queen and Ledon of honour, springing forward to bott the door of the outer apartment, found the bar and been clandestinely removed; with resolute self-devotion, she supplied the place with her nack darm.

*** All the above may be had of the respective Exhibitors.

SATURDAY, MARCH 25.

#### UNSEASONABLE FOPPERIES IN COACH-FITTINGS.

We have one or two-not hints, but-plain remarks to offer on the subject of "An Englishman's hints to Mr. Wright, the railway coachbuilder," which were printed in a late number (p. 197). The estimate of his mechanical criticism on the stiffness of window-frames and ventilating-flaps, we are not concerned to take out of the hands of Mr. Wright, or of other superintendents of the business of making carriages. We shall pass them by, with the observation that a rattling sash or slide is one of the least agreeable companions possible on a railway trip; and that if this nuisance is to be prevented, it can only be by making the fittings pretty tight at first, so that while the work is new they will be somewhat intractable. These, however, are petty details, on account of which alone we should not have thought it necessary to refer to "An Englishman's" letter.

Our business is to point out the entire mistake of what it is proper to keep in mind in railway carriage-building at the present time, on which the "Englishman's" advice is founded; to point to the advice itself as an instance of that species of expectations-on the part of those who pay nothing for making railway carriages, and who complain if asked to pay more than the lowest rates for riding in them,-which it is the duty of all concerned in railway management to resist altogether. The object they are bound to see attended to in the coach-building department, is the construction of substantial work and the provision of all essential conveniences that can be reasonably demanded, with the most economic materials, and in the plainest and cheapest manner possible—the rule for the choice of all the stuff and of all the fittings being that they shall be the most durable and the least expensive that can be had for the money; not that they shall be the most luxurious and finical that money can procure. "The fineness of the cloth, the beauty of the colour, the soft, elastic springiness of the stuffing," it is not the business of any honest management to study, for the sake of pampering the luxurious tastes of travellers, who dislike to pay even the charges adequate to the plainest accommodation. Before the latter begin to institute frivolous comparisons on matters of foolish extravagance-to inquire whether the "lace is as good," or the "glass superior"—and to complain of sitting under a roof of "mere painted canvass" instead of "solid ornamental wood," let them first consult their pockets as to the fares they are ready to pay; and if they are too saving of their own means to consent to anything beyond the lowest fares for their places, common decorum will suggest the impropriety of demanding that the railway owners' means should be thrown away in making the places needlessly luxurious. But if this decent reserve will not be practised by the public, it is, at all events, incumbent on those whom the public will neither spare nor compensate, to take good care that some better proportion shall be kept between the service and the payments. And of all times at which an idle proposal to waste money in decorating interiors and pampering passengers' fancies could have been started, the present is certainly the least suitable. There is not a railway that has lowered its rates, which has not done so at the expense of the proprietors' dividends: there is not one which keeps its rates up above the very lowest scale, that is not incessantly assailed with complaints of "extortion." Is

That any such should be heard under present circumstances—when it is seen how much reduced fares have had to do with the decline of dividends—is a proof of the want of consideration we have often adverted to in more prosperous times;—it shows at once the effect of making the coaches already too fine for the use to which they are put, and the necessity of studying something else, in those which are to be built hereafter, than the satisfaction of expectations that no expense or indulgence will ever satisfy.

We are not sorry to have had an immediate occasion given for touching on this third head of economy, in continuation of what was said recently on two others, to which it is desirable that attention should be paid. It is quite clear, as we then observed, that it is only by a strict revision of all expenditure, with a view to cut off whatever is needless or excessive, that the circumstances of the companies that have reduced their rates to the lowest point, can be effectually bettered. Now, after the locomotive power and way, the most important working item, perhaps, whether in first cost or in maintenance, is that of the coaching stock and services; and it is one in which, as regards the first class of carriages, a great saving may be made, without in the least impairing any comfort or convenience they are bound to afford. The quantity of money wasted over and above the necessary cost of durable construction and complete accommodation, in the showy finishing of a coach of this class, is larger than proprietors may generally know. We have seen as much as 10l. paid for emblazoning the panels of a single coach with shields and emblems by a herald painter; and the same rule of waste, merely to make the machine look handsomer than is necessary, has gone through all the details of fitting and trimming. The extreme of such a silly and unjustifiable waste of funds subscribed for useful employment, and not for show, we hope exists no longer; -some costly fripperies may have been given up of late years, and the general appearance of the new carriages on the outside is, on the whole, plainer that it used to be. But there is a good deal yet to be done; and that in a sense the very contrary of our correspondent's. And we trust it will be the rule of directors henceforward to see what they can save without giving up any essential, to study exclusively what is necessary and useful; and that they will feel that, when they have to come before the proprietors to announce reduced dividends, and to complain of the effects of reducing fares, it is no longer justifiable to attempt to please the public or to gratify dillettante fancies of their own, or the vanity of their head workmen, by paying for any mere prettinesses; or to do anything, in short, but to try how the business can be plainly served in an effectual manner, at the least expense possible. What is expended on interior decoration, "on form and arrangement of cushions, &c. &c., in anything, in fact, beyond what is necessary to give a reasonable allowance of comfort, is so much that might as well have been thrown into the next ditch; and the contributors, we apprehend, have now no spare money they can afford to see thus squandered. There will not come a single extra passenger for the sake of a costly painting on a coach panel, or because the roof is "formed of solid ornamental wood." If the springs are easy, the inside clean, roomy, duly lighted, well arranged and properly cushioned in an ordinary way, not only has the traveller all he can justly require, and more than he now quite pays for, but all has been done that will have

number of people in this country who are such fools that the less or more of anything beyond this can have the least effect in keeping them from travelling or tempting them to travel. All spent in excess merely serves to gratify finical tastes, for pleasing which a railway company will get neither thanks nor returns, which the founders of the system ought never to have made an attempt to pamper, but which its managers now, at all events, have no right to consult, at the expense of those who must pay for them. We see with what consideration and gratitude the interest has been rewarded for its costly extra attempts made to render the service not only as practically good, but as handsome and liberal as possible. It is now time to confine attention to the first-named essential; and to leave those whom such accommodation will not content to make railways and railway carriages on a plan they like better, at their own expense.

#### Broceedings of Societies.

INSTITUTION OF CIVIL ENGINEERS.—March 21.— General Meeting.—Mr. J. FIELD, President, in the chair.—The paper read was descriptive of 'A method of setting out Railway Junctions,' by Mr. A. Beanlands. The object of the paper was to supply a methodical rule for setting out that portion of a branch line of railway included between the rails of the main line. The author observed, that in all ordinary cases, the curve of the branch line could not be set out from the main line, which was supposed to be straight, by the ordinary methods of setting out railway curves, since the junction was required to make an offset of 4 in. to 5 in. on the length of the switch rail, which was much greater than the offset made from the tangent in the same length, by a curve of moderate radius, so that it was necessary to make the junction line start abruptly at a finite angle with the main He therefore considered the junction curve to be determined by its passing through three given points, namely, the two extremities of the switch rail and the furthest point of crossing; and from these data he showed how the radius and centre of the circular arc might be found, as well as the positions and angles of the various crossings. To render the method more easy of application, the author gave a table calculated from the principles and formulae laid down in the paper assuming an ordinary form of the switch, and a series of valves of the lead, a distance of the furthest crossing extending to the greatest limit likely to occur in practice. In the course of the discussion which ensued upon this method, as compared to the ordinary system of setting out junctions by a comparatively empirical rule, well understood and practised by the plate layers on railways, Mr. Wild's switch was alluded to and exhibited. In this switch all notching and inequality in the bearing surfaces, the fixed rails, were shown to be avoided by the ends of the tongues being ground under such surfaces, instead of being notched into them; the tongues being consequently at their points, and for some distance beyond them, lower than the fixed rails, exercised, where they were weakest, merely a lateral action against the wheels without bearing any of the weight of the passing trains. Several engineers who had employed these switches extensively expressed themselves relative to them in very commendatory terms, and stated that they were not only manufactured in a very superior manner, but that their action was very perfect, and that they tended greatly to the prevention of accidents in railway travelling.

public, it is, at all events, incumbent on those whom the public will neither spare nor compensate, to take good care that some better proportion shall be kept between the service and the payments. And of all times at which an idle proposal to waste money in decorating the least suitable. There is not a railway that has lowered its rates, which has not done so at the expense of the proprietors' dividends: there is not one which keeps its rates up above the very lowest scale, that is not incessantly assailed with complaints of "extortion." Is this a moment in which to listen with indulgence to new demands for mere fripperies?

necessary to give a reasonable allowance of comfort, is so much that might as well have been thrown into the next ditch; and the contributors, we apprehend, have now no spare money they can afford to see thus squandered. There will not come a single extra passenger for the sake of a costly painting on a coach panel, or because the roof is "formed of solid ornamental wood." If the springs are easy, the inside clean, roomy, duly lighted, well arranged and properly cushioned in an ordinary way, not only has the traveller all he very lowest scale, that is not incessantly assailed with complaints of "extortion." Is this a moment in which to listen with indulgence to new demands for mere fripperies?

ceedings :- Mr. Buchanan said he did not profess to communicate anything new or original, but would be happy if he could only draw from the stores of information which had of late years been accumulating on this subject, under the hands of very eminent scientific and practical men, such leading facts and maxims as might prove a sure guide for practice. The various strains might all be reduced to two kinds, according as the material is either distended or compressed by any force or pressure. From these two all others arise, and either consist or are com-pounded of them. The tensile strain is the simplest pounded of them. The tensile strain is the simplest of all, depending neither on the peculiar form of the materials, nor even on the length, but only on a single element, namely, the section of fracture. This peculiarity of the tensile force was explained and illustrated. In regard to cast iron, the result of the extensive and interesting experiments of Messrs. Hodgkinson and Fairbairn was given, and it was found from the mean of sixteen different trials of English, Welsh, and Scotch iron, both hot and cold blast, that this material will sustain about 7½ tons per square inch before breaking, the weakest speci-men being 6, and the strongest 93. The limit of fracture, however, can never be approached with safety, not even within a long distance, seeing that this material is liable to unseen imperfections, and, above all, to snap in a moment without distending itself or giving any warning of danger. Malleable iron again, is much superior in tensile strength, and, by its remarkable ductility, inspires confidence in a still higher degree; bears no less, at an average, by various experiments of Telford and Brown, than 27 tons—the weakest 24, and the strongest 29 tons : but before the half of this load is applied, it begins to stretch, and continues stretching up to the limit of fracture. It is therefore not only three times fracture. stronger than cast iron, but may be safely loaded with five times the breaking weight, or about eight or nine tons. In regard to the strength of compression, this depends also, as long as the length is limited, on the same element—the section of fracture; but when a long rod or slender pillar is loaded or compressed, it is liable to bend, not for want of strength, but for want of stability, the least flecture turning it off its centre, and breaking it off by lateral force, deranging entirely the simple law applicable to short lengths. In regard to cast iron, by far the most satisfactory experiments are those by Hodgkin-son and Fairbairn. The mean result gives very nearly 50 tons on the square inch—the weakest 364 tons, and the strongest 60 tons. It is thus six times stronger in compression than in distension, and hence it is peculiarly recommended for sustaining any superincumbent weight, as in the case of pillars and of bridges, provided the construction is such as to resolve the strain arising from the load into a longitudinal compression. This is often in our power by proper arrangements chiefly giving a sufficient height and curvature to the arch; but in cases where, for the want of headroom, the arch is unduly flattened or resolved into a straight beam or girder, the danger is that we bring the tensile force into play, and then the use of cast iron is objectionable, or at least requires extreme caution. No direct experiments requires extreme caution. No direct experiments have been made on malleable iron of short lengths, have been made on malicable iron of short lengths, but from some facts brought out by Mr. Hodgkinson, its strength appears much inferior to cast-iron, chiefly from ductility, whereby it gives way much sooner under a load. It will bear 27 tons, probably much more, without fracture; but with 12 tons it yields to the load, contracts longitudinally, and swells out laterally; and this is another very important fact for our guidance in the use of those different materials. In regard to stone, experiments have been materials. In regard to stone, experiments have been generally made on specimens rather too minute. Like cast iron, the crushing strength is superior to the tensile, and hence its adaptation for buildings particularly bridges. Craigleith stone will bear 24 tons on the inch, or upwards of 400 tons on the square foot; Aberdeen granite 600 tons. In regard to bricks, he had occasion to make experiments in relation to the great chimney of the Edinburgh Gas Works. It became matter of consideration whether the ordinary brick could withstand the pressure of so lofty a column. Trials were therefore made with a powerful hydraulic press, not on small specimens, but on the actual brick. The ordinary stock brick was found to bear 140 tons on the square foot, and the common fire-brick 157 tons; but the brick of which the chimney is constructed, consisting of a mixture of fire-clay and ironstone, bore, a single brick on its bed, no less than 140 tons, equal to 400 tons on the square foot. The effect of the transverse strain was then considered and illustrated by various experiments and models. The strain is a compound of the tensile and compressive strain, the one part of a beam loaded in the middle being compressed and the other distended, and the beam itself becoming a

lever, and acting often with enormous power against its own strength. Hence it became easy to calculate the strength, this being in every case proportional in the first instance to the area of the section of frac-ture, and this original element modified by the length and depth of the beam, diminishing in exact propor-tion to the-length, and increasing in proportion to the depth. The transverse strain acting with such severe advantage against our materials, various methods have been contrived for cluding its effects, and for these none is more remarkable than the principle of the arch, the effect of which was illustrated by experiments, and particularly the necessity in flat arches of having secure abutments to resist the horizontal thrust, and this was frequently accom-plished, where there is sufficient headroom, by uniting the extremities of the arch by strong mal leable iron rods, in the same manner as, in the case of the roof, the feet of the rafters are united and pre vented from spreading by the tie beams; and this is the principle, the securest of all, on which the great iron bridge at Newcastle, now in progress, is constructed, the object of which is to cross the river and valley of the Tyne, on the highest level of the railways on each side, so as to unite them in an uninterrupted line from London to Berwick, and unite the termini of the different railways, now separated three quarters of a mile or more, into one grand central sta-tion, a little to the west of the ancient castle. The distance between this station and the present terminus of the York and Newcastle is 3,457 ft., consisting chiefly of the space occupied by the bed of the river Tyne, and the steep bank on each side, well known to travellers in descending from Gateshead Fell on the south, and Dean-street on the north, both to be now superseded by the smooth and level surface of the railway, and by a turnpike-road running on the same bridge directly under the line of rails. The steep banks on each side are spanned by stone arches of a very substantial character, the river and low banks by size wat like arches of 1 of the rest and low banks by six metallic arches, all of the same dimensions and structure, resting on solid piers and lofty columns of masonry. In the bed of the river the piers are laid on very solid foundations of piles planking, with concrete, many of the piles 40 ft. in length, and driven to this depth through hard gravel and sand till they reach a bed of freestone rock. Nasmyth's celebrated pile-driver is in full operation here, and with wonderful effect, and has come most opportunely in aid of the work; driving night and day, at the rate of sixty or seventy strokes a minute, the pile heads being often set on fire by the rapidity and violence of the blows of the ram. Piers laid 2ft. below low-water mark, and raised about 100 ft. to the springing of the arches. The arches consist each of four main ribs of cast iron, each in five segments, bolted together, and forming one entire arch 125 ft. span, and rising 17 ft. 6 in. in the centre, and the level of the rails on the upper platform 108 ft. above the level of high-water mark of the Tyne. Depth of the level of high-water mark of the Tyne. Depth of the rib 3 ft. 9 in. at the springing, and 3 ft. 6 in. at the crown, with flanges 12 in. broad, external ribs 2 in. thickness of metal, internal ribs 3 in. Total sectional area at the crown 644 square inches, which would bear with safety a load of 5,000 or 6,000 tons, and would form, with proper abutments, a strong arch in itself; but for the fullest security, and to prevent the possibility of inconvenience of risk from deflection or possibility of inconvenience of risk from denection or vibration, or otherwise, each rib is united at the springing by strong malleable iron bars or ties, 7 in. broad and 1 in. deep, of the best scrap iron, and in all twenty-four in number. The railway is supported twenty-four in number. The railway is supported above the arch, and the roadway suspended from beneath, by hollow cast-iron pillars, 10 ft. apart, and each 14 in. square, through which are passed strong malleable iron circular bars, binding the whole into one stiff and solid mass. The sectional area of the horizontal bars is 168 square inches, which would sustain upwards of 4,000 tons without breaking, and 1,500 tons with perfect safety, but the whole weight of the bridge will not exceed 700 tons, leaving 800 tons of surplus strength. The railway which is at tons of surplus strength. The railway, which is at the summit level, runs on a level 4 ft. above the crown of the arched rib, and is supported in the middle by hollow cast-iron trough girders resting on the top of the pillars, 10 ft. apart, and united by longitudinal timbers laid with strong planking. The roadway runs nearly on a level with the malleableiron ties, leaving a space of about 20 ft. clear head-room. In the whole of the work the utmost pains have been bestowed on materials and workmanship, and in making everything complete, the surfaces, which abut together, being regularly planed or turned, as in machinery; and from all the arrangements the most successful results may be anticipated from this bridge. The cost of the iron-work and roadway, by the estimates, comes to 112,000%, and the contracts for the bridge and viaducts to something above 300,000l.

LINCOLNSHIRE AND ITS RAILWAYS.

We are glad to observe many signs that attention is being turned to the beneficial results which railways are likely to confer on agriculture. In the last number of the Monthly Railway Record the prospects of the Lincolnshire farmer are graphically set forth in an account of the system of lines promoted by the Manchester, Sheffield and Lincolnshire:

Lincolnskire and its Railways.—The first prosperity of this remarkable county (Lincoln) arose from the enterprize and energy of those who undertook to reclaim from sea and river inundation lands equal to the extent of an average county. The next advance was when the hills, or wolds, which grew nothing but heather, and bred nothing but rabbits, were, by turnip culture, brought to be the finest sheep-fatting land in the world. The third step in advance will be taken when the refuse of towns, and those more valuable manures that pay the cost of carriage across the sea, and those oily seeds that make cattle fat and waste land fertile, can be conveyed by steam-power, at one-hundredth part of the cost of road carriage, to the hundredth part of the cost of road carriage, so the farmer's door; and when the farmer can, guided by the prices of the preceding day at markets 200 miles distant, send off, with all the certainty of a posted letter, tons upon tons of live and dead produce, to where such commodities happen to be most urgently needed. And yet each of these changes has had, in its time, to encounter strenuous opposition from the same class of minds. In the reign of Queen Elizabeth a great morass extended from Lincoln to Cambeth a great morass extended from Lincoln to Cambridge, inhabited by fen-men, described by Camden as "a kind of people, according to the nature of the place where they dwell, who, walking high upon stilts, apply their minds to grazing, fishing or fowling." He adds—"The whole region in the winter, and sometimes most parts of the year, is overflowed by the rivers." When, soon after Camden wrote, efforts were made to drain these fen lands, a violent opposition arose, and innumerable prophecies were made both as to the injury which would arise to the valuable race of fen-men, from the want of their pools for wild-fowl, for pike, for eels, and such game, and of the barrenness of the land when reclaimed. Good sense was, on that occasion, in some degree, too much for nonsense, assisted, no doubt, by information as to the value of marsh land, imported by Dutch emigrants, with their Protestant principles, when they fled from Spanish tyranny in the Netherlands. Even in George the Third's reign fen land was worth little, although the body of stagnant water had been much reduced. In that reign a more comprehensive system was adopted; by the aid of embankments and windmills large tracts were dried. Amongst others, 350,000 acres near Lincoln, where corn and sheep rival, in their respective superiority, the tall flags and fat eels that once flourished there. The railways about to be described do not intersect the fen district, although they touch upon it; but more to the north lies what was another fen district, thus de-scribed by Mr. Philip Pusey, in his valuable Report on the agriculture of Lincolnshire:—

on the agriculture of Lincolnshire:—

"There is another lowland tract—it lies on the west of the western hills, partly in Yorkshire—the level of Hatfield Chase. When you ride across this vast plain, through endless corn-fields, with the distant uplands of Yorkshire and Lincolnshire for its opposite boundaries, you see a single hill, which, rearing itself midway from the dead flat between them, was formerly an island, and is still named the Isle of Axholme. A great part of this fertile plain was once sea; as it would now be again if the embankments were neglected, being mostly below high-water mark. In early times the island was a strong post. Thus it was occupied by a Lord Mowbray, under Edward II, but was taken by the men of Lincolnshire, who attacked it in boats. It was a refuge for some of the Barons after the battle of Cosham. In the time of Charles I. the waters were drawn off by a a retuge for some of the Barons after the battle of Cosnam, In the time of Charles I, the waters were drawn off by a colony of Dutchmen, under Vermuyden; but during the civil war the parliamentary committee of Lincolnshire, fearing an attack from the Yorkshire Royalists, cut the dyke, and again interposed the sea between the two hostile counties. This great level is now generally well drained by a system of canals, but the farmers of Axholme have not forgotten that their forefathers attended Doncaster market in boats."

But Lincolnshire is indebted for its extent of productive land not only to damming and draining, and windmills, which cheap rail-brought coal has superseded by steam-pumps, but to a variety of highly artificial processes, devised for laying fertile soil upon poor marsh land, described by Mr. Pusey. Again, these lowlands are bounded on either hand by two ranges of hills, the cliff and the wold, which stretch side by side from north to south. When Arthur Young visited these ranges in 1760, he found them almost all rabbit-warrens, rented at about 2s. an acre. Visiting them again in 1799, he reported an extraordinary improvement; and where, for thirty miles between Spilsby to beyond Caistor, it was all warren, he found, "by means of turnips and seeds, at least twenty sheep to one kept before." But still there

were vast tracks of waste; for instance, speaking of were vast tracks of waste; for instance, speaking of the estate of the noble chairman of the Lincolnshire Railways, he says—"Near Brocklesby there are large tracts of excellent land under gorse; and at Caburn and Swallow I passed through the same for miles. It is a beautiful plant to the fox-hunter. Lord Yar-borough keeps a pack of hounds: if he has a fall, I hope it will be into a furze-bush. He is too good to be hurt much; but a decent pricking might be beneficial to the country." Quoting this passage, Mr. Pusey remarks,—"I must say, when Mr. Handley pointed out to me this estate in 1842—its fine farm-buildings, on which 150,000% have been expended, surrounded by lofty ricks-its 30,000 acres of good turnip land, divided by clipped hedges of thorn, where Mr. Young saw miles of gorse and thousands of rabbits-I thought I had made a discovery of a domain equal, in the spirit, magnitude and rapidity of its improvement, to the well-known estate of Mr. Pusey goes on to describe the manner Holkham in which, by an outlay chiefly in the items of chalk and bones, at an expense of about 81. an acre, these lands were raised from an annual value of 5s. an acre to five times that amount.

With one more extract from Mr. Pusey's description of this interesting county, we will proceed to trace the course of the lines by which it is proposed to supply the conveyance which, it is clear, must be so earnestly required by those Lincolnshire farmers :-

earnestly required by those Lincolnshire farmers:—

"On a Sunday morning in November we passed Sleaford, on our road to Lincoln, and soon entered on a high but level marsh, presenting a cultivated exuberance such as I had never seen before. Farm succeeded farm, each appearing to be cultivated by the owner for example, not, as was really the case, for profit. And so, for miles, we passed on through fields of turnips, without a blank or weed, on which thousands of long-woolled sheep were feeding in netted folds; and so large and regular were the turnips in the narrow rows, that the lower halves which remained in the ground when the upper part had been consumed, seemed to pave these sheepfolds. Every stubble-field was clean and bright—all the hedges kept low and neatly trimmed—every farm-house well built, with spacious courts, and surrounded the land did not forget to return in August what it had received from the fold in December, since the number of these farms that might always be seen at one view, proved that ceived from the fold in December, since the number of these farms that might always be seen as one view, proved that the size of the farms would not account for the extent of the rick-yards. Yet this land, so loaded with roots and corn, showed no signs of natural fertility. On the contrary, it is a fawn-coloured aand, about 6 in. deep, lying on a thirsty, walling stone. As we journeyed on, Mr. Handley pointed out to me, by the side of the rood, a column 70 ft. high. It was a land lighthouse, built no longer since than the middle of the last century, as a nightly guide for travellers over the dreary waste which still claims the name of Lincoln Heath, but is now converted into a pattern of farming. This Dunstan Fillar, lighted no longer time back for so singular a but is now converted into a pattern of farming. This Dun-stan Fillar, lighted no longer time back for so singular a purpose, did appear to me a striking witness of the spirit of industry which, in our own days, has reared the thriving homesteads around it, and spread a mantle of teeming vege-tation to its very base. And it was certainly surprising to discover at once the finest farming I had ever seen and the only land lighthouse ever raised. Now that the pillar has ceased to cheer the wayfarer. it may serve as a beacon to ceased to cheer the wayfarer, it may serve as a beacon to encourage other landowners in converting their dreary moors into similar scenes of thriving industry.

Such being the country, and such the manner of men whom those who devised the scheme embraced under the Manchester, Sheffield and Lincolnshire Railways proposed to accommodate, the Manchester, Ashton-under-Lyne and Sheffield was taken as the main trunk from which extensions into Lincolnshire were to be made. The bill for this line was obtained in May 1837, but it was not opened to Sheffield until the 22nd of December 1845. At Sheffield it unites with the Sheffield and Lincolnshire (bill obtained August 1846), which passes through Beighton, Worksop and East Retford. At Retford the main line proceeds through Gainsborough and Brigg to a ter-minus at the Great Grimsby Docks; while a branch, by aid of the loop line of the Great Northern at Saxelby, opens a communication to Lincoln, and from Lincoln, through Market Rasen, to the New Holland Ferries opposite Hull-thus placing Lincolnshire in communication with all the great railway systems in the kingdom—and proceeds through Gainsborough, to unite with the Great Grimsby Junction and the

The Humber Ferries have been purchased by the amalgamated companies, and are in process of being improved, at a cost of 100,000l., so as to permit an easy conveyance for goods and passengers to and from Hull at all times of the tide; as have also been the Great Grimsby Docks, on which upwards of 500,000l. is being expended. These docks, when completed, will admit the largest steamers, at all times of the tide-a matter which the Admiralty considered of so much importance, that they induced the Woods and Forests to present 96 acres of Crown land to the company, on condition that special accommodation was provided for war steamers. Great Grimsby possesses the advantage of being in direct line from Hamburgh, protected on the opposite shore

of the Humber by Spurn Point-a natural breakwater-in such a manner as to afford a perfect harbour of refuge-the only one on the eastern coast after leaving the Thames. It offers an immense advantage, by saving 20 miles of rather difficult river navigation. In the darkest nights, it will be possible not only to run into Grimsby port, but to get into Grimsby docks. The difficulties of river navigation night are well known. On the importance of the Baltic trade now carried on with Hull it is unneces sary to dwell-it is a commerce which is daily and hourly increasing in quality and value. The dock accommodation of Hull is limited and restricted to certain periods of the tide. The railway conveyance from that port, as regards the counties to the south, is circuitous, and to Notts and Lincoln almost useless; and yet these are the counties which, from the high system of farming pursued, most require those valuable manures and oily feeds which, brought from Germany into Hull, figure for upwards of a million sterling among the imports,—as, for instance, bones, oil-cake, rape-seed and guano. For timber-of which the same counties in their farm buildings, and Lincoln in embankments, consume a great quantity—Grimsby is a very convenient port. In order to lose Grimsby is a very convenient port. no advantage, the dock dues on shipping have been reduced to an almost nominal rate—10d. per ton;

the dues on goods in proportion.

This, then, is one of the termini from which there are legitimate expectations that a considerable import and export trade for the benefit of the railway will be derived. Tracing our course back, we find every important town and district on the direct road to the manufacturing districts intersected in such a manner that the clothing districts of Yorkshire, the hardware town of Sheffield, Manchester and its surrounding cotton villages, and Liverpool and the Mersey, in effect form the many-branched termini for Lincoln-shire produce. So that, whether the farmers of Lin-colnshire are desirous of drawing supplies of any kind from the manufacturing districts, or of sending produce to those largely-consuming districts, they will have, by these railways, their means of choice multiplied a hundred-fold, and be enabled to go as far in twenty-four hours as previously in as many days. Thus will great national and important local objects be combined—the Humber and the Mersey brought within six hours' distance—the richest agri cultural county united by an iron-road to the richest manufacturing counties. And thus an object has been effected which, as we proved in our introductory description, was vital to the continued prosperity of a district which owes its wondrous fertility entirely to the artificial means adopted by a most enterprising and energetic race of men. Railways will tenfold increase the facilities for transporting lime and clay, street-sweepings, woollen rags, artificial manures, and bones and guano; and, while they do this, will enable the farmer to reap in extended markets ample profits for his enterprize. In ten years' time shall expect a Report on agricultural progress in Lincolnshire as remarkable as that of Mr. Pusey

#### Official Bavers.

GREAT NORTHERN.

Engineer's Report for the Meeting, Feb. 24 (p. 153) In obedience to your resolution of the 1st inst., I now beg to lay before you a Report on the state and progress of the works of the Great Northern. The works now in course works of the Great Northern. The works now in course of execution are divided into two contracts, viz., that of Mr. Brassey, which extends from the 1st mile to the 74th mile, near Peterborough; and that of Messra Peto & Betts, which extends from the last-named point, vid Boston and Lincoln, to the 154th mile, at Gainsborough, and which also embraces a length of about 5 miles from Doncaster, northward to the junction of the Askerne branch of the Wakefield, Pontefract and Goole line. In Mr. Brassey's contract the works have been proceeding between the London end and Hitchin, and between Huntingdon and the Fen country, a few miles south of Peterborough, which portlons include all the heaviest works, leaving the more favourable districts, between Hitchin and Huntingdon (a favourable districts, between Hitchin and Huntingdor distance of 25 miles) entirely untouched at present. usuance or zo mics) entirely untouched at present. The earthwork has made considerable progress in nearly all the principal cuttings, viz., at the Caledonian-road, Stroudgreen, Hornsey-wood-green, Bounds-green, Colney-hatch, Blackhorse-lane, Hadley-wood, Enfield, South Mimms, Potters'-bar, Hatfield, Digswell, Welwyn, Hitchin, Huntingdon, and from thence northward almost continuously for about 9 miles. The tunnals on this contrast are says tingdon, and from thence northward almost continuously for about 9 miles. The tunnels on this contract are seven in number, viz., at Tottenham, Barnet, Enfield South and North, South Mimms, Digwell and Welwyn; their aggregate length is 4,624 yards. In all these (except the two short Enfield tunnels) the shafts are all sunk, the headings all driven and large quantities of bricks, timber and other materials prepared. The brickwork of the bridges and culverts throughout the contract has proceeded only so fast as not to impede the progress of the earthwork. The principal works of this kind in hand are, the bridges at Holloway-road, Hornsey-lane, Seven Sisters-road, Stroud Greenroad, the viaducts at Harringhay and at Hornsey, bridges for New River at Wood-green, Blackhorse-lane, East for New River at Wood-green, Blackhorse-lane, East

Barnet-lane, and a viaduct at Robbery Wood-lane, near Welwyn, besides several parish roads and occupation bridges. All of these works are in a forward state, and of many of them the brickwork is completed. A considerable number of culverts have also been executed throughout the many of them the brickwork is completed. A considerable number of culverts have also been executed throughout the contract. This contract is not in so forward a state as I had hoped in commencing it. This, however, results from the expenditure having been kept for many months down to a limited rate. In all other respects it is in a perfectly satisfactory condition. On Messrs. Peto & Betts' contract, between Peterborough and Gainsborough, the works are in a very forward state. Those at present in hand commence at the point where the loop diverges from the main line, about 3 miles north of Peterborough, from this point to Spalding, a distance of 13 miles, the earthwork is completed, with the exception of about three-quarters of a mile; the bridges are all finished, excepting one over and two under the line. Considerable progress has been made with the ballasting and laying of the way on this part of the line, about 8 miles having now been ballasted, and the way laid throughout that distance for a single line, and a part for two lines. The former of these operations may be considered the key to the time of completion. All the arrangements of the works are therefore made with reference to it, and every exertion made to have at all times, a considerable length of line formed and completed a-head of the advancing ballast. Between Spalding and Boston the works are but little advanced. They are, however, very light, consisting chiefly of forming a low bank from side cutting, and will be ready by the time the ballasting can arrive at them. At Boston, arrangements have for a long time been pending with the Commissioners of the Black Sluice drainage, respecting our bridges over their works, in consequence of which considerable delay has occurred; there has therefore been little progress yet made at this point. The principal been little progress yet made at this point. The principal work, however, which is of considerable importance, viz., work, however, which is of considerable importance, viz., the timber bridge which carries the railway over the river Witham, close to the grand sluice, has made great progress, and, with the exception of the girders and flooring, is on the point of completion. From this point onward to Lincoln the works of all kinds are in a very advanced state of progress. The earthwork is formed complete for about 26 miles; the bridges are all in a very forward state, some of them, viz., at the grand sluice, Boston, Horsley Deeps, and Longwood, being of considerable magnitude. The ballasting and laying of the way on this part of the line have also considerably advanced, about 13 miles being bullasted, and about 12½ miles of rails laid,—the greater part being complete for two lines of way. Between Lincoln and Gainsborough the earthwork of the line is complete as far as about 124 miles of rails laid,—the greater part being complete for two lines of way. Between Lincoln and Gainsborough the earthwork of the line is complete as far as Saxelby, about 6 miles; and from that point onwards to Gainsborough, about 10 more, the cuttings, with the exception of two unimportant ones, have all had a considerable impression made on them, and are about half completed; the largest of them all (which occurs at Warren House Wood, near Gainsborough) is considerably more than half executed. Some progress has been made with the bridges on this portion of the line, fifteen of them being in hand, all of which are well advanced, and the permanent way is laid and ballasted for about 3 miles. On the whole, the works of this contract now in course of execution, as above described, from near Peterborough to Gainsborough, are in such a state, that, with your permission and sanction of the such a state, that, with your permission and sanction of the necessary expenditure, the whole distance (76 miles) might be completed and opened in September next. The works from Doncaster to the junction of the Askerne branch, a distance of 5 miles, are actively proceeding in the immediate neighbourhood of Doncaster, though as yet for the first 9 miles no great progress he been made, on the other diate neighbourhood of Doncaster, though as yet for the first 2 miles no great progress has been made; on the other 3 miles the earthwork may be considered as completed. Deliveries of rails, chairs and sleepers are proceeding here, and at all points of delivery throughout the loop line, to a large extent. The works on that portion of the line which connects Gainsborough with Doncaster are altogether in abeyance, as depending on the decision of Parliament with respect to the proposed deviation of the line between those points; they are, however, by no means heavy or difficult of execution; nor do I see any reason why they may not be completed by the time the bridge over the Trent at Gainsborough can be ready. I trust the above statement will be considered satisfactory.

#### EAST LINCOLNSHIRE.

Engineer's Report for the Meeting, Feb. 23 (p. 146).

Engineer's Report for the Meeting, Feb. 23 (p. 146). I beg to lay before you, for the information of the shareholders, the following Report of the state of the works, and the progress that has been made since the last half-yearly meeting.

Contract No. 1, extending from Great Grimsby to Louth, a distance of 14 miles, is so far completed as to be ready for the survey of the Government officer, who has had the requisite notice previous to his inspection. The stations are so far advanced as to afford the accommodation required for passengers, and the whole is ready for the reception of traffic. The necessary stock is now upon the line, and all other arrangements made for opening on the last of March, in connexion with that part of the Manchester, Sheffield and Lincolnshire extending from Great Grimsby to New Holland—thus forming together a direct communication between Louth and Hull, when a passenger traffic of considerable importance may be expected immediately to come upon the railway. It was not deemed advisable to open this part of the line during the winter months, as was contemplated in my last Report; and under all the circumstances

part of the line during the winter months, as was contemplated in my last Report; and under all the circumstances I am satisfied the postponement was judicious.

Contract No. 2, from Louth to Boston.—This portion of your railway, I regret to say, is not in so forward a state as I was led to anticipate in my last Report. The contractors to whom the works were originally let have been unable to complete their contract, and it has been necessary to wind up the accounts for the work already done, and to release them from the contract into which they had entered. This

† See ante, p. 175, for a full account of the opening and a map of the group. Digitized by GOOGIC

has been done on satisfactory terms, but of course it has involved considerable loss of time. The completion of the works on this part of the railway has been let to Mesars. Peto & Betts, and the time specified for the fulfillment of the contract is the lat of September next. They have already brought a considerable quantity of materials to the ground, and some of the works have been re-commenced. The cuttings and embankments on this portion of the line are nearly all completed, and about eight miles of the permanent road is ballasted and laid. Some of the bridges are in a backward state, but they will be pushed forward rapidly, so as to prevent interruption to the ballasting and laying of the permanent way, which is the principal part of the work remaining to be done. I entertain little doubt, from the well-known character of the contractors for punctuality, and from the ample and business-like preparations they have made for the vigorous prosecution of the works, that the whole will be completed within the time named in the contract. Two of the principal stations are already mearly finished, and the others, as well as the gate lodges, will be completed in the early part of the ensuing summer.

#### NORTH-WESTERN.

#### Engineer's Report for the Meeting, Feb. 29 (p. 199).

In compliance with your request, I now beg to present you with my Report on the progress which has been made with the work during the past half-year. In the Garrarve and Long Preston contracts about 300,000 cubic yards of earth have been removed, ten bridges have been finished, and nine others are in the course of erection; the water plers of the Saw-mill Viaduct over the river Aire at Garrarve have been put in, and there is a considerable quantity of stone upon the ground; the iron bridge over the Leeds and Liverpool Canal will be finished in a few days; the Bell Busk Viaduct is in a forward state, all the piers and both abutments being above flood level, and there is a large quantity of stone ready dressed for setting. The greater part of the culverts are built, and the laying of the permanent road has been commenced. In the Settle and Clapham contracts 230,000 cubic yards of earth have been removed; the heavy cutting at Paley Green is being worked as rapidly as desirable, the earth from which is conveyed into the embankment in the valley of the Ribble by locomotive power. Sixteen bridges have been built, five others are far advanced, all the culverts completed, and three miles of single line of permanent way have been laid down. In the Ingleton contract about 100,000 cubic yards of earthwork have been excavated, three bridges completed, and several others are existed to the interviance of the Ingleton viaduct, for which there is a large quantity of stone ready got at the quarry, and about 20,000 cubic feet upon the ground. All the timber for the scaffolding has been prepared, and it is now in the course of erection. The timber viaduct across the river Lune is finished; and I have much satisfaction in being able to inform you that I have had it very severely tested within the last few days, and that my most sanguine expectations of its perfect stability have been more than realized.

J. WATSON.

## WATERFORD, WEXFORD, WICKLOW AND DUBLIN. Engineer's Report for the Meeting, Feb. 26 (p. 171).

According to the general plan of proceeding determined upon prior to the last half-yearly meeting, the works have been commenced with the view of completing the portion of the line between Dublin and Wicklow. Of these works, the heaviest and those likely to occupy most time are situated at Dalkey and at Bray Head. The line and the details of the construction have been most carefully revised, contracts have been entered into, and some considerable progress has been made, more particularly at Dalkey. At Kingstown itself the details of the mode of carrying the line through the property of the Commissioners of the Harbour, are required under the Act to be submitted to and approved by that body. The necessary steps have been taken to obtain this approval, and the works will then be commenced. Upon the completion of the works at these two points will depend the opening of the line from Kingstown to the town of Bray, which under favourable circumstances might be effected by the summer of 1849. The works of Bray Head will alone govern the period of completion between Bray and Wicklov. These works, consisting of the cutting or ahelf along and occasionally through the face of a precipitous rocky cliff, at a height of 100 ft. above the sea, and for a length of nearly three miles, cannot be pushed on rapidly except at great cost. At present we are endeavouring to proceed in the most economical manner consistent with a reasonable rate of progress, and hitherto the result has been satisfactory. By dividing the work into moderately small contracts, and making no sacrifice for the mere sake of expedition, I believe these works may nevertheless be finished in about two years, and at a moderate expense. The rest of the line to Wicklow is of cheap and easy construction. At the Wexford extremity of the line the survey has been revised, and the line set out so that the lands may be purchased and the works proceeded with whenever it shall be determined to do so.

1. K. Bruyel.

#### LONDONDERRY AND COLERAINE.

### Engineer's Report for the Meeting, Feb. 29 (p. 171).

I have to report on the several works connected with this undertaking, which I found in progress at various points when I undertook the charge of your operations, embracing very extensive reclamations of waste lands in Lough Foyle, as well as the construction of the railway, and think the following Report, in detail, best calculated to convey information as to the precise state of the works.

lowing Report, in detail, best calculated to convey information as to the precise state of the works.

Contract No. 1.—This contract embraces the construction of all the embankments necessary for the reclamation of the Slobs. These embankments have all been commenced. The

first is at the Black Braes, at the mouth of the river Foyle. This has been constructed for a distance of 1,6% lineal yards, and will eventually join the next embankment at Longfield. The next embankment is at Longfield, and has Longheid. The next embankment is at Longheid, and has been constructed for a distance of 1.784 lineal yards. This embankment has reached its greatest distance from the shore, and has been turned to meet the embankment in course of construction at the river Roe. The embankments in succession are those constructing at the river Roe on each in succession are those constructing at the river too on each side of the intended outlet for the river. The eastern bank has advanced 1.772 lineal yards, and the western 2.046 lineal yards from the shore. The last embankment is that at Magilligan, which is but of little importance at present. It has been constructed for a distance of 400 lineal yards, and is the total to meet the order to the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contemporary of the contempor intended to meet the embankment on the eastern side of the Roe river, and thus complete the entire reclamations now contemplated. It is a matter of great regret that these works were not let to parties more capable of conducting them. On my arrival here I advised that the contractors should concentrate all their energies upon the central division of reclamation, to be formed by the junction of the Longfield and Roe embankments, as that portion of the works could be completed in nearly the same space of time as either of the other two divisions, and would reclaim a very much larger and more valuable portion of the Slobs. Even upon this limited scale the progress of the works exhibited a degree of weakness and mismanagement on the part of the contractors, which occasioned my feeling it to be an imperative duty to make these representations, which terminated in the company taking possession of all the works on this con-tract. Since that period I have, as instructed, kept the same in repair, although I regret the embankments have suffered much from the winter gales, owing to the generally imper-fect and unfinished state in which the contractors left them -establishing, however, the fact that where the embankment was completed, its design was equal to resist most suc-cessfully the severest weather; and I have not any hesitation in saying that the result of this winter has perfectly esta-blished the competency of the design, and, where properly executed, the sufficiency of the work. The lamentable want of energy on the part of the contractors has left so much of this middle division to be constructed, that I cannot expect the same will be completed under two years from the time the construction of the embankment is effectively resumed; and I strongly advise that when these works are re-let, a premium or bonus be held out to the contractor to induce greater exertion and more expensive appliances to expedite the prosecution of the works. It will be borne in mind that the two other inclosures are capable of simultaneous construction with the middle one, but will be more cheaply executed after the central one is completed; and indeed it may be advisable, in a commercial point of view, to complete one first, and, by sale or mortgage of the land so reclaimed, raise sufficient means for the construction of the further recent that the construction of the further recent patients. premium or bonus be held out to the contractor to induce further reclamations and railway. I need scarcely trouble you with many observations on the other two contracts.

Contract No. 2.—The tunnels are useless until it is deter-

Contract No. 2.—The tunnels are useless until it is determined to complete the railway, and it is a matter of regret that the same were so early constructed, as the outlay has been and will remain for a time unproductive; but I presume it was expected the embankment would be finished by the time the tunnels were completed. These must be kept in repair; and on this subject I refer you to a former Report.

Contract No. 3.—This contract, with its extension to Longiticld, forms a portion of the railway comprising a length of 8 miles; and the company coald, without much additional expenditure, have 54 miles ready for use. This, however, would be unproductive until the line be extended to Derry Bridge and also to Newtown-Limavady. This contract is and has been for some time at a stand; if not resumed, it will be necessary, of course, to keep the river slopes of the embankment and works generally in repair, unless it be deemed advisable to compel the contractors to complete this contract, which I understand they are bound to do without further payment, until the same be required for the opening of the line to Newtown-Limavady. I should also mention that a very excellent engine-road has lately been constructed from the Roe Mouth to Benevenagh Mountain, and the Roe embankment could be resumed with much advantage; and sufficient preparations are ready for the speedy construction of the Longfield embankment, as soon as it is determined to re-let the works; and as the fine weather is fast approaching, and the length of days increasing, I am of opinion that no time should be lost as regards resuning the con-truction of those very important portions of the works. It may be satisfactory to you to be informed that I consider the value of the plant sufficient to pay the advance made to the contractors; but much of it is useless as regards these works, and I advise such parts of it to be sold. The remainder will be required by the next contractors. The railway, as originally designed, would be delayed until the completion of the central inclosure; but the line, as proposed to be altered, could without any great increase of expense be constructed and opened to Newtown-Limavady without waiting for the reclamation. In order to guide you as to the probable amount of expenditure required, if you determine to confine your operations to the central inclosure, it would require about 5.0000. per month, at the rate of progress requisite f

#### signeer's Office, Derry, 1 eb. 21.

## LONDONDERRY AND ENNISHILLEN. Engineer's Report for the Meeting, Feb. 28 (p. 170).

I have to report that the works between Derry and Strabane have been given up to the company by the contractor, Mr. I eishman, and have since been in uninterrupted use, and the trains have run with much regularity. The line has not been completed as I consider it should have been; and I trust that in settling with the contractor you will have regard to my special Report on this subject. I trust I may be excused for again re-certing to the suggestions I ventured to offer as to the extension of this line to the bridge at Derry, and the commercial advantages it offers. I feel satis-

fled this short extension would increase the receipts fully 1,0800, per annum, and that with great advantage to the public, whose accommodation would far exceed the extra charge. I venture again to remind you that great economy would result in the working of the line if coke ovens were erected at the Derry station, as, independently of being able to make the coke for a less sum than it costs when dependently of the property of the translipment reduces its available quantity, and the exposure deteriorates its quality. I cannot too strongly impress upon you the absolute necessity of extending the line to Omagh, or even to Newtown-Stewart. The exertions of your secretary when last here have fully confirmed my previous opinion as to the great utility and productiveness of the line, but the length is too short to be cheaply worked; besides which, it has to compete with the canal between Derry and Strabane, and it has been found practically that the distance still enables the carrier on the road to compete with the railway. The traffic has not been diverted, and I fear cannot be effectually so, until the line is extended beyond Strabane. When opened to Omagh I feel confident the line will be a good paying one, and such as will fully justify the shareholders in making an effort to attain so desirable an object. Until this be determined upon I do not recommend the erection of more permanent stations. The judicious arrangements of the present superintendent of traffic, conjointly with the locomotive department, have enabled me to conduct the necessary repairs of the line at a very small cost to the company, and without in the least degree impeding the traffic. I send with this as statement of the mileage performed by each engine, and the cost of its working during the last half-year. The result may appear to be high; but when the following circumstances are taken into consideration, viz., the large size of the engines—the high price of coke (which costs very nearly 20, per ton when delivered in the sheds)—being dependen

## Progress of Works.

BRISTOL AND EXETER (Tiverton branch).—Mr. J. W. Buller, accompanied by a party of directors and engineers, arrived from the Tiverton-road station over the new line. The works, says the *Exeter Gazette*, were investigated by the party, and the line is expected to be opened about the 1st of April.

GREAT NORTHERN.—The works on the line through Doncaster and neighbourhood still continue to progress rapidly and satisfactorily.

SOUTH YORKSHIRE.—A considerable number of hands is now employed on this line, and the blasting of the rock at Levitt Hag, for the deep cutting, commenced a few days since. The work on this portion is very heavy, and will probably occupy considerable time.

WATERFORD AND LIMERICK.—The state of the works as far as Tipperary, according to the Limerick Examiner, reflects credit on Mr. Osborne, the engineer. There were along the line over 700 men at work—their wages 1s. 6d. per day. The several wooden bridges are of beautiful design; the carriages constructed in Limerick are most commodious, and cannot be surpassed in any particular by any in use in the neighbouring countries. There is not a single article used on the lines that has not been made up by Limerick hands; and at no former period was employment more needed than during the time these works have been in operation. In England the second and third class carriages are generally very uncomfortable. Here, under the direction of Mr. Osborne, it is otherwise, for these are all covered in, spacious, and cushioned.

York, Newcastle and Berwick.—The works at Newcastle are being successfully carried out. The bridges across the streets, says the Durham Advertiser, are drawing fast to a completion, and the foundation of the great central station is being excavated. The piers of the high-level bridge have been got above the river, and the other parts of the work are progressing with great vigour.

#### Accidents.

CALEDONIAN.—March 17.—At the inquest upon the bodies of Mrs. Markwick and J. Rinder, in the late accident (see ante p. 166), the coroner and jury went down to view the spot.—D. Parke, foreman to Mr. Scott, stone-mason and builder, deposed to having assisted in the construction of the culvert, the bursting of which is supposed to have caused the catastrophe; and he, as well as several other witnesses accustomed to works of the kind, gave their opinion as to the superior construction of the drain, and the excellence of the particular stone of which it was built. The work was described as being sufficiently strong for all ordinary occasions; but the weather at the time of the accident was stated to have been unprecedentedly wet and tempestuous, insomuch that an accident was generally predicted, although it was not expected to occur at that part of the line. On the other hand, testimony was given which pointed

out certain defects which the witnesses considered to have existed in the structure of the culvert.—The jury returned a verdict of "Accidental Death," adding thereto a recommendation to the company to see that their servants were strict in the discharge of their duties.

#### Law Intelligence.

INJUNCTION.—In the VICE-CHANCELLOR'S COURT, in re the Great Northern v. the Manchester, Skeffield and Lincolnshire, the plaintiffs, as lessees, under their Act of the Witham navigation for 999 years, sought to restrain the defendants from proceeding with an embankment upon lands belonging to the Witham navigation. The affidavit with the bill set out that ineffectual negotiations had taken place last year respecting the purchase of the land, and that on the plaintiffs' solicitor being in Lincoln on the 16th of February last he discovered the trespass, which was in the course of commission. Notice was given of the plaintiffs' intention to file a bill and move for an injunction upon notice, but that since that time the defendants had increased their exertions to complete the embankment complained of.—The Vice-Chancellor granted an interim order restraining the defendants in the manner sought till the 24th, with leave to give notice of motion for the 23rd, for an injunction in the above and other respects.

March 17.—In the Rolls Court, in re Loat, &c. v. the London and South-Western, the plaintiffs, as trustees under the will of John Lyon, deceased, were owners of a leasehold estate, called "the Vine-street estate," in Lambeth, Surrey, for the residue of a term of ninety-nine years, under the Archbishop of Canterbury. The company served three several notices on the plaintiff, requiring the purchases of three different portions of these leasehold estates. The plaintiffs caused the estates to be valued, and claimed for the premises comprised in the first notice 15,100t., for those in the second notice 2,666t., and for those in the third notice 634t. The company did not accept those claims. Several proposals were made; but the parties not agreeing the bill was filed, praying for an injunction to restrain the company from pulling down the plaintiffs' houses or constructing their line. The cause was ordered to stand over, to give the parties an opportunity to make a compromise.

March 22.—On the Home Circuit, at Lewes, in re Newton v. the London, Brighton and South Coast, the plaintiff was nonsuited. In October the plaintiff had been arrested and detained by one of the company's officers for endeavouring to force his way into one of the carriages of a train in motion at Worthing station. The defendants justified the arrest and detention of the plaintiff, as he had broken their by-laws.—Mr. Justice Coleridge stopped the case. He said it appeared clear that the company had made a rule for the management of their line, which the plaintiff had attempted to break, and their servant was therefore justified in detaining him until he could be taken before the nearest magistrate, and this was all that was proved to have been done.

Two contractors and a quarrier were arraigned in the High Court of Justiciary, Edinburgh, for carelessness in blasting a portion of rock near Cove, on the ABERDEEN line. A piece of the rock had been projected into the house of a fisherman, whom it had wounded so that he died. The two contractors were awarded to enter each into a bond for 50L, and the quarrier for 20L, to appear when required to have a sentence of punishment pronounced against them.

#### Parliamentary Proceedings.

COMMONS.

March 17.—Bills.—Sir W. HEATHCOTE moved that the Standing Order No. 157, requiring the breviate of all private bills to be laid on the table eleven days before the second reading of such bills, be not enforced as to railway bills suspended in the session of 1847.—Agreed to.

March 20.—The Railway Commission.—Mr.

March 20. — The Railway Commission. — Mr. Bankes gave notice of his intention to move for a committee on the constitution of the Railway Commission, with a view to the reduction of the expenditure thereon.

March 21.—Exeter and Cowley Bridge Junction.—Mr. CHAPLIN moved the second reading, which he stated was intended to form part of a comprehensive scheme of communication from London to Exeter (by Salisbury), and thence to the North of Devon. This was a small and unimportant section, extending only to 13 mile. He understood, however, it was likely to be opposed; and all he asked was, that the house would allow it to go before a committee, in order that it might be fairly tried upon its merits.—Sir T. ACLAND opposed the bill, as likely to create litigation between the South-Western, by whom it was pro-

moted, and the Great Western, who, he contended, already occupied the field. The line besides would arready occupied the field. The fine besides would be on the narrow gauge, and would cause a break in a long line of broad-gauge communication. The bill was a total departure from the original intentions of the company, and had been promoted by a wholesale buying up of shares, so as to defeat the Legislature. He moved that the bill be read a second time that day six months.—Sir J. Duckworth supported the bill, contending that the house could not possibly be acquainted with the details or merits of the question, and therefore should adhere to the usual course of submitting the subject to a committee.-Sir J Buller supported the amendment, and declared that this was really a "battle of the gauges," and nothing else; and he protested against this question being perpetually re-opened, in the face of the direct deci sions of the Commissioners. If these contests were permitted to go on, the result practically would be, that by reason of the difference of the gauges, the district would be deprived of the advantages of ways altogether.—Mr. Buller hoped the bill would be referred to the committee.—Mr. Strutt thought that it ought hardly to be decided on the second reading. instead of being carefully considered before a committee. He recommended therefore that his hon. friends should withdraw their opposition to the committal of the bill.-Sir R. Inglis thought the real point at issue was, whether money raised for one purpose had not been applied to another. If the courts of law should hold that this was lawful, the bill was not required, and, if otherwise, it was hardly right.-On a division the numbers were-for the second reading, 108; against it, 56; majority for the second reading, 52.—Great Northern Amendment and Deviation.—Mr. A. Duncombe then moved that the second reading of this bill for deviations in Lincolnshire, Nottinghamshire and Yorkshire, and en-largement of Boston and Lincoln stations, be postponed till Thursday next.—Lord Galway begged to move that it be read a second time that day six months. The deviations were substantially the same as those rejected before a committee of the house last year. One of them, indeed, was yard for yard the same as the one that was thrown out last the other was only slightly altered. The public would not be benefited by these deviations, and he thought it most unjustifiable to bring forward these schemes again and again, and to bear down upon the private fortunes of individuals obliged to come forward year after year to oppose them.—Mr. Duncombe said that all he asked of the house was to postpone the second reading till Thursday, when he would be prepared, on the part of its promoters, to enter fully into the merits of the case, and meet the objections of the noble lord.—Sir E. COLEBROOKE, as one of the committee, said on the present occasion there had been no new fact or new circumstance brought forward to induce the house to send it to a committee again; and unless there were some new reasons to offer, he thought the house should be careful not to shake the decisions of their own committees.—Mr. S. WORTLEY said that the house had been entirely taken by surprise by the opposition. It was only within the last quarter of an hour that he had received the first inti-mation of it, and he had been assured by the promoters of the bill that they had been equally ignorant of any intention to dispute the second reading. In these circumstances he hoped the house would allow the second reading to be postponed till Thursday, in order to enable both parties to be fully heard. -Mr. A. J. B. Hope and Mr. C. Bruck respectively opposed the bill.—Mr. STRUTT thought that as some doubt and misapprehension prevailed with respect to the facts in this case, the ends of justice would be best promoted by a short delay, to enable the house to ascertain how the facts stood. — Lord Lincoln hoped that the house would not listen to this proposition; for what was the object of proposing a delay of two days, except to give the promoters time to exercise their influence upon members by an extensive canvas? He was originally one of the warm supporters of this peculiar line; he had given evidence in its favour, and had assisted to carry every means in his power. But now he thought that the company were exercising their powers for the oppression of private individuals, and it was the duty of the house to prevent this. There was no necessity for any adjournment; the house were as able as ever to decide upon the matter now. Last year the company introduced the two deviations in two separate bills-now they introduced them in one bill. One of the deviations was, inch for inch, the same as that rejected by the committee last year; the other had been slightly altered, to modify the strong opposition of the hon, member for Bassetlaw; yet none of the public objections to it had been removed. If the house, then, were now to reverse the decision of last year, and expose private parties to the heavy expense

of again opposing the bill, they would be guilty of a practical injustice.—After a few words in explanation from Mr. A. Duncombe, the house divided—for the second reading, 32; against it, 176; majority, 144. So that the bill will be lost.

WINDING-UP COMPANIES BILL .- The Times thus aptly remarks on this bill. It is introduced by Mr. Milner Gibson, and is made to apply to all joint-stock companies, without reference, either prospective or retrospective, to the period of their establishment, with the exception of railway companies, for which, more than for any other concerns, aid of this kind is needed. With regard to these, the Act is only to apply to such as may hereafter be formed, or to those amongst the existing ones who shall have become bankrupt "before the 1st of March 1848;" and, in the absence of explanation, it is impossible to conceive why facilities that appear desirable at one time should not, under like circumstances, be afforded at all times, or why the advantages conferred upon parties interested in an undertaking which came to an end on the 29th of February, should be denied to those who are interested in another which equally at that time had an existence, but which did not become bankrupt till the following day. It is argued, moreover, that the difficulties in the way of railway dissolutions, which this very bill is required to mitigate, have hitherto prevented the application of the process, except in a few cases; so that, even as far as it goes, its introduction can be of little practicable benefit, while it is certain to create very considerable disappointment.

NAMUR AND LIEGE.-In their last Report the directors thus advert to the general progress of the works up to January last:—No exertion has been spared by the engineers and contractors to take advantage of an unusually fine season. During the whole of this period, up to within the last few weeks, nearly 4,000 workmen have been daily employed by the contractors; and the directors, in frequent visits of inspection to the lines, have observed with satisfaction the advances from various points which have from time to time been made. The works from Namur to Huy are in a state of great forwardness, and, with the exception of the two short tunnels, but little masonry remains to be carried up in this section. The earthworks are nearly completed excepting in one cutting. Part of the line is ballasted and ready for the laying of the permanent way. Between Huy and Liege great progress has been made since the spring, and the heaviest engineering difficulties may be now said to be overcome. The quay-walls are one-half completed. The united length of the four tunnels on the whole line is only 1,088 yards, and they are all actively in hand. The bridge over the Meuse at Flémalle is finished up to the springing of all the arches, in which state it will be left for the winter. The same may be said of the two minor bridges over the Ourthe, whilst that over the Mehaigne river is entirely completed.

IRON TRADE.—Glasgow, March 17.— During the past week the rapid succession of events have all affected trade; and to-day the market for pig iron has been quite unsettled. A sale of a large parcel of No. 1, good brands, is reported at 40s., believed to be sold by a London house. In this state of matters we can give no certain quotation as to the price of to-day.

The Dowlais iron-works will continue in full force. The long pending dispute between the Marquis of Bute and the company, respecting the lease of the mineral commons from which the works are supplied, has been settled, and a renewal of negotiations has led to an amicable arrangement of all differences. The Dowlais and Merthyr depend almost entirely on the prosperity of the Dowlais iron-works, which give immediate employment to (including coal-miners and other out-workers) as many as 7,000 persons, and upon which, it has been ascertained, nearly 30,000 are dependent for their daily bread. Some arrangement has been come to between one or two of the leading coal-owners and their workpeople, who have been for some time past standing out. The example will be probably followed, and it is to be hoped that all the "strikers" will then return to their work.

Most of the works, says the Birmingham Gazette, where suspension did not arise from pecuniary embarrassments are now again in partial operation; but in several instances furnaces have been blown in, and the make of iron increased, under a premature expectation that railway and other orders would by this time be freely forthcoming. Such hopes have not been realized, and indeed they seem to have had no better foundation than predictions put forth by writers who trusted to the haleyon results of free-trade policy. The prevalent feeling of all parties seems to be a want of confidence, and desire to convert into cash, as if some convulsion were dreaded from the

Digitized by Google

great and increasing number of hands out of employ. The make of Staffordshire iron has been reduced nearly one-half—trading without capital has been diminished—production without prospect of consump-tion has been checked—the infatuation of making sales at a ruinous loss, for the mere sake of doing business, has been met by a lesson that will not soon be forgotten—and various additional erections at an outlay repeatedly deprecated by us are now abandoned. It is confidently stated that an importation of nearly 400 bars of railway iron has taken place by a vessel arrived from New York. This is one of several arrivals of the kind which have recently taken place from the United States.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MERTINGS.

London Stock Exchange, March 24.—The early part of the week was characterized by a drooping share-market and gloomy prospects, but towards the close, the money-market having improved, there was a condesirable demand for shares at improved prices. The following are the latest prices for foreign lines:—Boulogne and Amiens, 7; Dutch Rhenish, 3; Namur and Liege, 23; Northern of France, 34; Orleans, Tours and Bordeaux, 2; Paris and Lyon, 2; Paris and Rouen, 16; Rouen and Havre, 8½; Sambre and Meuse, 5; West Flanders, ¾.

Liverpool, March 23.—Up to yesterday, prices were very much depressed; there has been a reaction to day and the questions are all higher.

to-day, and the quotations are all higher.

Sublow, Brothers. Manchester, March 23.—Business in our sharemarket, during the last week, has been very limited. Passing political events puzzle share-dealers; and though investors see the advantage of purchasing at the present low prices, they apprehend they may be still lower. Some shares are rather higher to-day.

SAM. GRINDROD. Birmingham, March 23.—This market has fully participated in the panic which appears to have seized holders of railway property; during the week there has been very little disposition to do business, even at the present reduced prices; to-day there are symp-toms of a return of confidence; prices generally have risen, and stock has not been pushed on the market. North Staffords closed at 1½ dis.; Shrewsbury and Birmingham, A's, at 4 dis.; and Birmingham and Stour Valley at 3 dis.

W. Banks.

York, March 23.—After a week of extreme depres-

sion there is a slight revival to-day, and our local stocks have realized better prices.

GRAYSTON & EARLE. Hull, March 23 .- Our market has been gradually falling since our last, but to-day there are signs of improvement, owing to the slightly increased firmness in London.

FLINT & TOOTAL.

Glasgow, March 22.—Our report for the week is Glasgow, March 22.—Our report for the week is not more cheering; business is confined to few stocks, and prices are daily lower. For some of the smaller stocks buyers cannot be found at any price. The following are to-day's latest transactions:—Caledonian, new, 109s. dis.; Edinburgh and Glasgow, 73; Ayr, 812; North British, thirds, 34s. 6d. dis.

BUCHANAN, AITKEN & Co.

# Railway Chronicle.

LONDON, SATURDAY, MARCH 25.

A Report was presented by Mr. Dobie to the special meeting of the BIRMINGHAM AND Ox-FORD, commenting on an asserted breach of faith by the solicitor for the Great Western, in disclosing the communications between counsel in the late conference. The meeting was again adjourned, without any apparent result.

The Lancaster and Preston leave all their matters in the hands of the Board, as the canal company have filed a bill for the completion of the agreement for the lease.

The Londonderry and Enniskillen specially met to sanction the bill before Parliament for the abandonment of a portion of their line, the reduction of capital, and the general amendment of their Act.

At the special meeting of the LONDONDERRY AND COLERAINE, the bill authorizing a diversion of the line and the general amendment of their Act was approved of.

The GREAT SOUTHERN AND WESTERN OF IRELAND shareholders passed their Report and accounts. The aspects of the traffic are promising, even in these unpromising times, and the confidence of the directors in the value of their property was borne out by a letter from the five directors of the London and North-Western who have gone over the expenses and estimates of the entire line. The exorbitant demands of Irish landlords, though proverbially known, are noticed by the directors, who hope for parliamentary restriction. The forthcoming call in July, when paid, will entitle the company to Government assistance.

The GREAT WESTERN OF BENGAL has specially approved of the bill for the dissolution of the company and the conversion of shares into those of the East Indian.

The trial respecting the return of the deposit by a shareholder of the MADRID AND VALENCIA was reported at their special meeting to have been postponed. No formal dissolution is to be announced until after the result of the trial.

The accounts presented to the half-yearly

meeting of the SOUTH-EASTERN AND CONTI-NENTAL STEAM-PACKET COMPANY enable a dividend to be declared of 8s. per share. The service seems thoroughly adequate for the demands lately made upon it. The Report was adopted without comment.

We have just seen a document which is said to be in preparation for the shareholders of the LONDON, BRIGHTON AND SOUTH COAST, whose meeting takes place next week. Mr. CLARKE, their manager, has been silent till now on the subject of the accusations made against him at the last meeting, but has addressed to the chairman and directors the letter which we have just seen. This proceeding is not spontaneous on his part, having been called for by the Board, to the great majority of whom, we hear, it is quite satisfactory. The next meeting will show whether The next meeting will show whether it be equally so to the shareholders. Mr. WILKINSON will, we presume, feel called upon to reply in person to the following passages, which contain the pith and conclusion of the letter :

I believe the general allegations of your late di-I believe the general allegations of your late director, Mr. Wilkinson, would have been much fewer in number, as far as I am concerned, had I not used every effort I could to stop the extravagant and lavish expenditure going on under Mr. Samuda's control and direction. This friend of Mr. Wilkinson was patentee, engineer, supplier of atmospheric apparatus from his own works and examiner and apparent of his own own works, and examiner and approver of his own accounts, and had his foreman in the pay of the company at the rate of 500l. per annum. Mr. Wilkinson's attachment to the atmospheric principle and to Mr. Samuda rendered him very wroth whenever the attention of the Board was directed to those points, as they frequently were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the last the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the samuely were by the sa as they frequently were by me, when I called the attention of the directors to the current of expenditure connected therewith, which was ever going on. The expenditure of money on the atmospheric experiments was so large as seriously to affect the dividends of the company, at present and for ever, as interest is to be read on the complete that the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the contr paid on the capital thus sunk in perpetuity. allegation as to dissatisfied servants is untrue. I venture to say that a more cheerful, contented, well-conducted body of officials than those in the employ of this company, cannot be found on any railway in the kingdom. What discontent may exist in the minds of nearest who are no longer exist in the minds of persons who are no longer servants of the company is another matter; but allow me to say, if this be the ground of Mr. Wilkinson's suggestion, how does it arise? Mr. Wilkinson and his friends seemed most anxious, next to supporting the Atmospheric system, to keep up a large retinue of Atmospheric system, to keep up a large retinue of police, and other unnecessary servants, on the stations. The staff at the stations on the Croydon line was costing, in July 1846, after the rate per annum of 4,456l. 8s.; and in February 1848, it was costing at the rate of 2,259l. 12s.,—showing an excess, in 1846, of 2,196l. 16s. The business is equally well conducted the check greater much better established conducted, the check system much better established as regards the issue and collection of tickets and cash taken by the station clerks. After the amalgamation, the wages to the servants on all parts of the line were assimilated; the Croydon servants were reduced to the Brighton rates. If any dissatisfied servants re-main, it is some of the old Croydon ones; but the great reductions we have made have enabled us to retain only those most likely to be useful to the Company.

It is quite plain from this extract that the quarrel is a somewhat personal matter. must say, in behalf of Mr. Wilkinson, that Mr. Clarke's demolition of the Atmospheric Railway was somewhat peremptory, summary and ungracious. On Mr. Clarke's side, again, we may be permitted to add that he has come in for some share of the undeserved blame which usually attaches to economical reformers. He has certainly set about doing, in a very uncompromising manner, that for which he was induced to enter the service of the company. He has enacted a rigid economy in every department; and in these days of dull traffic and a declining revenue, a little economy, even if ungracious, is not inopportune or unnecessary. The fall of dividend is to be attributed mainly to the great length of coast line, the traffic of which is still little developed; and it will require all Mr. Clarke's economy and self-denying strictness of discipline to make ends meet in a manner satisfactory to the shareholders. In times like these, a thoroughgoing economist is a safer trustee of public property than men of easier and more liberal temperament. Mr. Clarke is well known to have powers of cultivating traffic and economizing management, which formerly were of great benefit to certain railway properties; and there is no line on which, at this moment, experience of general business and the practice of rigid economy are more essential to the wellbeing of the shareholders than the London, Brighton and South Coast Railway.

We are glad to find that the great slip on the line which took place some weeks ago, although it moved a large mass of ground, which still continues moving, is so managed as to cause no interruption to the traffic. The late wet weather has proved most trying to the works of all railways, on which slips of greater or less magnitude are prevalent.

Alas, for FRENCH RAILWAY PROPERTY! We, who have so often protested against foreign investment and in favour of our own railways, are sorry to see our fears earlier and more fully realized than we deemed possible. It is in con-templation to turn the disaster to the account of the State, by appropriating the shares to the Government, at such price as suits the republic, and giving the shareholders depreciated stock in republic funds in place of material bond fide property, which in the end must pay. In other words, now that the great risk and loss have been endured by the shareholder, he is to be denied the opportunity of ever repairing his loss. In our view French railway shares are worth much more now than French Government stock. One must be worth something, the other may be worth nothing.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,668 miles of railway, was 157,895/., thus accounted for: - 69,848/. for the conveyance of passengers only, 46,956l. for the carriage of goods, and a remainder of 41,0911. for passengers and goods together, not respectively apportioned; being an increase of 21,466l. over the corresponding week of last year, when the mileage was 2,711. The average earnings per mile last week were 43l., whilst in 1847 they were 50l.

#### LORD MONTEAGLE'S AUDIT BILL.

The AUDIT OF ACCOUNTS BILL passed through committee in the Lords on Tuesday last. The blanks having been filled up, and some alterations made in the original draft, we now see the measure in the shape in which it will be presented to the lower House. It is not likely, we trust, to be made law by the Commons in its present form, supposing that no objection is taken at the outset to the principle of the bill; past accounts, on which dividends have already less one, the wisest course would be to drop

which, indeed, as we observed on its first appearance, cannot be very alarming to the railway interest, so long as it leaves to proprietors the option of settling their affairs among themselves, in the way they have hitherto pursued, and are not likely to wish to abandon for any assistance to be gained from paid emissaries of the office in Whitehall.

This liberty of choice it will be the business of all concerned to secure; and for that reason it is probable that exceptions will be taken to the terms, as they now stand in the bill, on which a power may be obtained of calling in a Government auditor,—the qualification being fixed so low, as to enable a minority quite insignificant, in the case of a large company, to apply for State interference, which may be unwelcome to twenty out of every twenty-one proprietors. The clause on this head fixes the minimum at ten shareholders, possessing among them 10,000/. of the company's stock; and it will be seen that, in any extensive undertaking, such a number and such a holding only would be a fraction of the whole too absurdly small to justify any visitation of State accountants being inflicted, against the wishes of the majority, on its mere motion. It may not be very likely that even so small an opposition as this could be got together for such a purpose; but it is clearly necessary to prevent any, the least, risk of such a practical outrage on common sense as would be committed by allowing a minority of not more than one in 500, it may be, to bring down the needless annoyance of a Government in-quiry upon the reluctant 499. The proportion to which the privilege should be annexed ought, in plain justice, to vary according to the extent of the concern—a given per-centage of the total number of shareholders and of the capital held by them all, being required to authenticate an appeal to Whitehall, -instead of Lord Monteagle's uniform ten, which in all the chief companies would be an almost invisible minority.

An appeal from so small a body may be improbable; and will, to some slight degree, be checked by the clause requiring a deposit from the appellants of 2001., which is to bear the expense of the inquiry, unless it should be proved a necessary one; in which case the company must bear it. But that check will not be very effectual; inasmuch as the disposition of the Government auditor will be in every case to report in favour of the propriety of an inquiry, from which he derives pay, and a repetition of which, in other cases, he will be anxious to encourage. The sum named may be taken as the exponent of what each inquest is likely to cost, at all events; as means will doubtless be found to bring in a bill to the full amount permitted "for the just and necessary" expenses of the official examiner, wherever he appears.

The Commons-who are more practical men of business-will of course wish to have some points cleared up in the operation of this bill, which, as far as we can see, have not been thought of by the Peers, any more than by its Hibernian framer. What is to be done, for instance, while the inquiry is pending? and what is to be its effective result when it is over? The bill only says that the auditor shall draw up and present a Report; which is to be founded on a consideration not only of the balance of current profits, but also of the whole account of capital expenditure as bearing on them; and on the view of this whole, in all its minutest details, he is to declare what is the divisible income. This, it will be seen, is a pretty large inquiry; which, also, must, in the first place, be a long one, in any great concern: and, in the second place, can hardly fail to open transactions, referring to

been made and paid. Now, supposing a crochetty examiner, full of Times' fallacies and falsehoods on capital expenditure, to take in hand a balance-sheet in any of our great companies, and, having rummaged the accounts for construction and stock, as well as for working, to declare that, in his view of the principles on which all outlay for new stock, heavier rails, or additional station-room, ought to be charged, these items have been erroneously carried to capital account; and that, had they been brought against revenue, as he presumes they should, the dividends of past years would have been absorbed; that, consequently, there is now a charge against the proprietors due to capital for many such dividends,—What is to be the practical effect of such a Report as this?—the possibility of which being made, by some of the deputies of Whitehall, absurd though it may be, no one can prudently disbelieve, after what has been seen of the decisions of the heads of the Department on matters of equal moment. quite as much at variance as this would be with right reason and the obvious conditions of the business in hand. Or, supposing even that no such extreme dislocation of settled accounts were to take place; that the Report should confine itself to the single current half-year's balance-sheet, and merely bring out a result materially differing from the Directors'-what is to be done then to make such a Report as this effectual! Is it to be conclusive and compulsory, or only to be the ground of new monitions and Reports from the supreme Board - the divisible profit, meanwhile, remaining in suspense, while all the shareholders are waiting, open-mouthed, for the earnings of their property? On these points the bill throws no light whatever: it is needless to say they are rather material ones.

But, even were there no doubt as to the final action of the Report, it must be seen what a grievance the mere process of obtaining it will be apt to inflict on the proprietors, as the bill now stands. The pettiest minority is authorized to demand an audit at any general meeting, held for the presentation of accounts on the opened lines; these accounts being prepared with a view to the immediate distribution of the dividend, after the meeting. This must be stopped for an indefinite period, in all cases where ten persons can be found agreed to call for an inquiry. The inquiry, as we have seen, will last long: it will be the most prolonged, too, in those very cases where, the company being extensive, the amount of dividend thereby locked up will be the largest, while the minority, which Lord Monteagle would empower to suspend its payment, will at the same time bear the smallest proportion to the total number of those who may unanimously approve of the Directors' accounts, and wish for an immediate division of profits. That any money can be divided while such a process is going on, is of course out of the question.

From this it will be seen what practical inconveniences the bill, as it now stands, would be apt to create. The only protection against them would be the improbability of ten persons being found, in any concern, however extensive, to agree in the folly of making use of it. This, we say, is not very probable; but it would be a gross mistake to leave a chance of such an absurdity taking place.

The Daily News, we are glad to observe, has had the good sense to discover this fault in the bill, although without touching on some of the possible bearings above noticed; and suggests that, as the mischief cannot be easily guarded against, without altering the very nature of the bill, and as the bill itself is a very need-

1.

it altogether. That would, no doubt, be the most rational way of treating Lord Monteagle's officious trifling with a subject he does not understand, and with which he was the less called upon to meddle, from having, in his own office, afforded a notorious instance of the inefficacy of State accountants and comptrollers. We shall be heartily glad to see the Commons handle this last effort of his practical skill in the same way that former Parliaments were wont to deal with the plans of the whilome Mr. Spring Rice. But if this judicious course be beyond the courage of the present House, it may at least be enjoined on all members of it who have a regard for railway interests-or indeed for any practical interest whatever—to prevent the bill from being made law until the gross defects we have pointed out are in some way removed.

## MOTION TO INQUIRE INTO THE VALUE OF THE WHITEHALL BOARD.

A hint that we threw out a few weeks since would seem to have taken root in various quarters; and the expediency of continuing to lay out 17,000l. a year in perplexing railway affairs by a Board that has not done a single useful act, but many that are foolish and even injurious, is beginning, we see, to be seriously questioned, not by ourselves only. On Monday last, Mr. Bankes, in the Commons, gave notice of his intention, on the 8th of May, "to bring under the consideration of the House the constitution of the Railway Commission, with a view to the reduction of the public expenditure,"—and this announcement was greeted with cheering from all parts of the house. The move is decidedly a good one, and deserves to be well supported.

What the Board in Whitehall has been to the railway interest itself, all our readers must well know. The cause of its questionable operations lay, in some degree, in the prime error of ap-pointing any such body, with indefinite duties, before it was clearly shown how any duty whatever could be effectually performed by it, and before anything beyond vague generalities had been adduced as the motive for desiring its assistance. But whatever of error lay in the original idea, has been much aggravated by the worse mistake of converting the greater part, if not all the appointments, into mere objects of the ordinary routine of official patronage; of choosing, for a task requiring, from its very indefiniteness, both discretion and experience, perhaps the most unfit men that could well have been found. This we saw, from the first moment, must be sure to condemn itself by the very acts of the body so improperly composed; and the result has proved how just was our prediction.

Now that the country is in straits for money, that incomes, private and public, are falling off, and it is seen at the same time that nothing short of gentle compulsion will induce Ministers to act the part of prudent managers in such an emergency, by reducing expense to the level of income—it is evident that the inquiry into the economics of all State business must proceed from without; and also that it will be highly expedient to go over the whole of our administrative charges in a practical way; the result of which, as in the instance in question, although in none perhaps to so great a degree as in this instance, will certainly be to prove the possibility of effecting, to the infinite advantage of the nation, very important savings in its annual outlay. We say, however, that in no other instance is it likely that a department will be found, the whole cost of which may truly be declared to be so much mere waste-the whole operations of which might be suspended, not only without serious injury to the nation at large, or to any one of its interests, but to the great relief of all—to the mass of tax-payers, by ridding them of a charge that purchases nothing but the barren pleasure of seeing a valuable interest idly worried; to that interest, by putting an end to this unprofitable and unjustifiable exhibition. This we take to be an immediate practical good, that it is well worth the while of all who do not like taxes, and who are afraid of State bankruptcies, to take pains to secure; and we intend, therefore, to offer some more remarks in aid of Mr. Bankes's laudable move, before it is made in Parliament.

#### Correspondence.

#### LAND COMPENSATION FOR BAILWAYS.

The question of land compensation is assuming so serious a character, and the items for land are becoming so great, that some stand must be made, or they will become perfectly unbearable. My own experience in valuations for some three or four companies convinces me that the powers of the Lands' Clauses Consolidation Act are such as to be a grievous hardship, and to operate as a premium on extortion and exorbitancy. A remarkable instance of this is mentioned at the last meeting of the East Anglian. The land cost about 200,000L, and exceeded the estimate by 150,0001. The fact is sufficiently startling, but is clearly accounted for by Mr. Williams, the solicitor, who said the estimates for the land had been made out by two gentlemen, residents of Norfolk, both of whom had been long employed in valuing property required by public companies. They were eminently qualified to make out such an estimate, and the results of their calculations varied from each other by a few hundred pounds only. "The parliamentary estimate for the land on the main line of the Lynn and Ely was nearly 60,0001.; but the proprietors would see by the accounts that the sum already paid, including the deposits on account of land upon the line, was nearly 150,0001. He could attribute this great excess of expenditure over the estimate only to the operation of the Lands' Clauses Consolidation Act. He could say from experience that the operation of this Act had resulted in great oppression to public bodies desirous of purchasing land for public purposes. All those who were in the habit of reading public papers knew perfectly well that of late years juries had in most cases awarded to landowners for compensation less than companies offered to pay; but the effect of the Lands' Clauses Consolidation Act had been to prevent such an adjudication between public companies and landowners. The East Anglian had in vain endeavoured to get a landowner to carry his case before a jury. They invariably carried their cases to arbitration; an umpire was usually called in, and the upshot was, the landowners obtained one-half of the sum claimed by himself and the amount offered by the railway company. The landowner, of course, took especial care not to undervalue his own property; so that if he asked 20,000L for it and the company offered 2,000l., he got onehalf of the two sums added together. If the umpire gave his decision against the landowner, he was not again employed on the part of the landowners, and if he gave it against the company, the latter did not employ him a second time, so that after a few such decisions, the result usually arrived at was a division of the sum asked and the sum offered. The course invariably pursued by parties wishing to grind out of the company as much as possible is, to make an exorbitant demand; and when a jury notice is served to go to a reference; and some valuers like references so well, their expenses being generally paid by the company under the operation of the Act, that they will never settle a matter amicably." what should hinder the railway interest, when they are so fully represented in Parliament, getting the arbitration clauses repealed, so far as giving the election of references solely to the landowner. Perhaps nothing in the history of extortion, however, exceeds the recent Act giving compensation to landowners for railways not taking the land so soon as they otherwise might, and such compensation is ascertained by the Land Consolidation Act. We

injury and the not taking of it to be another. The reckless decisions of some umpires have made magistrates also very wild in their decisions for tenants. In one case with the East India Dock and Birmingham Junction a magistrate awarded 440l. and costs to a yearly tenant for 1 a. 1 r. 10 p. of land,—200l., however, of this was for sheds. Still these cases are monstrous outrages on both honesty and common sense, and a firm stand ought to be made against them.

M. M. M. Thirsk.

#### NORTH BRITISH.

In this month of March, in the year of grace 1848, to pay the calls upon railway shares is about as difficult, and at the same time as disagreeable a duty as can be performed. Under these circumstances, it behoves all those who are "set in authority over us" in the railway world, to consult the convenience, and study as much as possible the interests of those with whose capital they have been entrusted. My object in addressing you is to give publicity to the premature manner in which the directors of the North British have acted towards the holders of the third shares. It is now only a few days since the half-yearly Report of this company was published, wherein we are told that a call will be made upon the third shares with "as little delay as possible." Now, before the ink was dry with which this notification was made, we are requested to pay a call upon the new third shares, on or before the 27th of March current. How is it that this company can only give a notice of nine or ten days for payment of their calls, whilst other companies, make it an invariable rule to allow their shareholders a clear month to form their arrangements for payment? It is to be desired that this spirit of promptitude will not readily evaporate, but evince itself in the payment forthwith of the dividends now declared. dividend at the low rate of 5 per cent, is neither more nor less than a vote of censure on the management of this company. The Report for the bygone half-year states that "notwithstanding the great depression of trade during that period, the traffic has gone on progressively increasing." If I refer also to your columns, I find that the traffic has increased nearly at the rate of 50 per cent. Yet the former dividend of 5 per cent. is declared, and a Mr. Blackadder closes the business of the ordinary meeting by congratulating them on their having nearly obtained a majority on his motion, for the discontinuance of Sunday travelling. Such conduct tempts us to imagine that the directors are only striving for a minimum instead of a maximum dividend. I do not wish to assume a croaking, foreboding or even a menacing tone, in speaking of the future as well as the present prospects of the North British. But I am induced most heartily to sympathize with one of the shareholders, who declared that his mouth actually watered when he thought of their refusal to lease the line at 8 per cent., when they can only declare a dividend of 5 per cent.

#### Gossip.

Mr. Strutt announces his retirement from public life. The House of Commons have declared his disqualification to sit for Derby on the ground of bribery (unknown to the hon. member), through his agents. Why who will be the chief Railway Commissioner? Why not try Col. Sibthorp?

decisions, the result usually arrived at was a division of the sum asked and the sum offered. The course invariably pursued by parties wishing to grind out of the company as much as possible is, to make an exorbitant demand; and when a jury notice is served to go to a reference: and some valuers like references so well, their expenses being generally paid by the company under the operation of the Act, that they will never settle a matter amicably." Now what should hinder the railway interest, when they will never settle a matter amicably." Now what should hinder the railway interest, when the arbitration clauses repealed, so far as giving the election of references solely to the landowner. Perhaps nothing in the history of extortion, however, exceeds the recent Act giving compensation to landowners for railways not taking the land so soon as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might, and such compensation is as they otherwise might are the first out of the Marquis of Breadalbane; and Mr. R. Digitized by GOGIC

well known to the shareholders as one of their most zealous, indefatigable, and far-sighted directors, to whom, in fact, they owe a great deal of the practical efficiency of their most important operations.

The EDINBURGH AND GLASGOW have issued their half-yearly Report, to be presented to the meeting next Tuesday. It appears that there has been a falling off in the traffic as compared with the corresponding half-year of 1846-7, of 8,788t. The directors recommend, although the balance would give a dividend of 6 per cent., that no dividend be declared, in accordance with the recommendation of the meeting of shareholders lately held at Manchester, reported

by us at p. 200.

According to the Gazette, "the Queen has been pleased to appoint Lieut. Col. Ralph Carr Alderson, Royal Engineers, to be one of the Commissioners of Railways, in the room of Capt. Henry Rowland Brandreth, deceased." Why not Baron Alderson at once, whilst the Government were about the election?

Mr. J. NASH, of Gloucester, was on Thursday last elected secretary of the GLOUCESTER AND DEAR FOREST, in the room of Mr. J. G. Baker.

Archæology is indebted in no slight degree to the railway as a pioneer. Coins, fictile remnants, pavements and ruins of old buildings, are frequently lighted upon in its subterranean course. A few days ago, says the *Berwick Warder*, the well of the ancient castle of Berwick was accidentally dis-covered. Amid all the excavations and clearing away of the rubbish on the site where the NORTH BRITISH station now stands, some surprise was felt that no trace of the well was ever found; for an old tradition has it that during the last siege which the castle of Berwick withstood, all the valuable plate belonging to the castle was deposited in this well, as the only place of security from the rough hands of the invaders. Whether the tradition be true, will not now be a difficult matter to ascertain; for even if the well is sunk as far down as the bed of the river, it would cost these enterprising railway people but a very few days' labour to clear away every stone in it. The attempt is certainly worth making. A large block of stone, of several hundred weight, having been placed on the earth covering the mouth of the well, which is about 5 ft. diameter, caused the earth, a few inches thick, to sink downwards, and a depth of 15 ft. or 16 ft. can now be seen from the top. It is placed within 30 yards of the station, and about 12 ft. from the edge of the bank near to the proposed

line, over the new bridge.

The traffic receipts on the Hulland Grimsby portion (16 miles) of the MANCHESTER, SHEFFIELD AND LIN-COLNSHIRE, lately opened, are supplied separately from the main line, and were, for the week ending March

18, 1551, 8s, 8kd.

Amidst all the animosities and ill-feeling shown to the English employed on the various French lines, it is pleasing to find that Mr. E. MACKENZIE, the super-intendent of the works on the PARIS AND OBLEANS. has, on the opening of the line, been presented with a magnificent service of plate, of French manufac-ture, by the workmen and other persons under his

superintendence.

The Orleans have given notice that they are under the necessity to demand the renewal of their bonds due on the 17th, for six months. The interest of 5 per cent. will be paid in advance at the period of renewal. Not being able to realize at the present crisis their reserve in treasury bonds (four millions) of some surresters had been cathering. of some sums they had been authorized to borrow for the completion of certain additional works, the company say they must apply their daily receipts to the payment of daily expenses. The excess of these receipts and the gradual realization of the securities in hand will enable them to satisfy all their engagements, and they call on their creditors and share

holders to continue to assist them with their support.

The same company have been authorized to convert their third-class open carriages into close carriages, and to raise the fare 10 per cent.; thus we see that the Provisional Government have already turned their attention to our own speciality, and have issued a decree to regulate the superintendence or watching of the different railways. It is rumoured that the Government intend buying up the railways; but how it is to be done satisfactorily to the share-

holders remains to be shown.

In reference to this project of the Government taking the railroads into their hands, and paying for them by rentes, the Times well observes: "It is difficult to conjecture the hopes to which such a plan can have given rise. The only danger to parties holding investments in France at this moment, lies in the chances of national bankruptcy, or of a cancel-ment of all public obligations. In either case, the funds are sure to be the first to suffer, since the negative act of discontinuing to pay the dividends, at ence settles the whole matter; while, on the other

hand, the proprietors of a railway have an absolute and tangible property in their possession, which could only be wrested from them by a direct act of pillage. such as is hardly likely ever to be witnessed such as is hardly likely ever to be witnessed in any country, except during a scramble that would annihilate the individual possession of property in any shape." Deputations of directors, however, have waited on the Finance Minister on the Government proposition. If the rumours about are true, they may well want to get rid of their property, which, like all other property in France just now is becoming troublesome and unenviable. The employés on the Rouen are reported to have refused working more than fifteen days per month, to have asked for the selection of those to be employed under them, and for increased wages.

The following decree of the Minister of Public Works, of the 21st inst., is the prelude to the announced step of taking the lines into the hands of the Government. Art. 1. The royal commissions to railway companies are suppressed.—Art. 2. The surveillance of the commercial working of railways and the financial operations of companies shall be confided to agents, who shall take the title of inspecteurs de l'exploitation commerciale. The inspectors shall be of two classes, inspecteurs principaux and inspecteurs par-ticuliers. The remaining articles of the decree place the last-named officers subordinate to the first divide the railways of the republic into six arrondissementa

Letters from Paris mention the failure of Bourget & Co., discount bankers. It is also stated that the parties interested in the bank of Baudin & Co. have had a meeting, at which it has been agreed that their establishment shall liquidate, under the inspection of five commissioners, two to be named by the shareholders, and three by the creditors. No less than eight Havre houses had failed, and others were certain immediately to follow. Most of them have property and goods in their hands together with portfolios full of bills, all, however, incontrovertible in the present state of universal fear. Not a single banking-house is doing any business. Amongst the principal suspensions announced are, Quertier & Godefroy, Lamoisse P. Devot & Co., Widow Melun & Co., E. de Pierre, and Courant & Co.

The Belgian banks have been authorized to stop payments in specie for notes above 100 f. According to a correspondent of the Times, the Minister of Public Works has also addressed a circular to the various companies whose lines are in construction, calling upon them to employ the greatest possible number of hands; and those whose works are the furthest advanced, and whose interest therefore it is to continue their vigorous prosecution, have endeavoured to second as far as pos-sible his views. The Namur and Liége and Mons and Manage Companies, which are more forward than the rest, have applied to Government for a loan on the security of the works; and as the value of these lines is undoubted, they may possibly succeed. Our present Post-office authorities continue their

liberal career. By an order issued during the week, on and after the 28th inst the fee charged for the registration of letters will be reduced from ls. to 6d. which must be paid in money. The postage of registered letters must, in all cases, be paid in stamps. The public are earnestly recommended to register all letters containing inclosures of any value.

The total amount of duty paid on bricks—an article so largely consumed by railway contractors—in the several Excise collections in England for the year 1846, amounted to 625,507l. 4s. 8d., 591,817l. 2s. of which was collected in the country, and 33,6901.2s.8d. in London. The total amount of duty collected in 1847 amounted to 672,781*l.* 1s. 3d.; of this sum 637,898*l.* 10s. was collected in the country, and 34.882l. 11s. 3d. in London.

#### Reports of Meetings.

BIRMINGHAM AND OXFORD JUNCTION.

March 23 .- Adjourned Special Meeting, Liverpool. MRCH 20.—Majourned Special Meeting, Liverpool.

Mr. P. H. Muntz in the chair.

Mr. E. Mozley, in explanation of a letter received

at the last meeting from the Great Western, called upon Mr. Dobie for a Report, after his conference at Dover with Sir F. Kelly.

The Report stated-

The correspondence between the solicitors of the respective companies is already before the meeting. It has ter-minated, as it began, by an unreserved and distinct declara-tion that the Birmingham and Oxford are ready to faithfully perform the agreement of the 12th of November 1846. After this declaration, a meeting took place between the counsel of the two companies, in order to facilitate such performance; but no authority was conferred upon counsel to do more than to confer, and to propose to the respective companies the best mode for carrying out the agreement, and the Birmingham and Oxford have a just right to complain that the private communications between counsel, which

amounted to suggestions only, expressly without prejudice, and to be deemed sacredly confidential unless finally adopted, have been first misrepresented and then made public, in the letter of Messrs. Hunt, dated the 10th inst., as amounting to an engagement which the Birmingham and Oxford are now charged with liaving violated. Mr. Doble having communicated with Sir F. Kelly, in the first place, protests against the violation of honour and good faith on the part of the Great Western, in having at all disclosed the communications between counsel, those communications not having terminated in any agreement. The communications themselves are not faithfully reported. As to the first point, it is distinctly affirmed and cannot be denied by the Great Western, that the very basis and first condition of the conferences between counsel were, that all that should pass at such conferences should be strictly private and confidential, and that whatever should be stated on either side should be by way of proposal only, and not binding upon either party, unless ultimately agreed to; and accordingly the minute between counsel is introduced with these words: "Heads of arrangement to be proposed to the respective parties and without prejudice, if not adopted or carried into effect." It is positively denied that the Birmingham and Oxford, or counsel on their behalf, have entered into any engagement whatever for the writing of any letter, or the and Oxford, or counsel on their behalf, have entered into any engagement whatever for the writing of any letter, or the doing of any other act by the shareholders, over whom, as individuals, the company can have no control. It is indeed true, as Mr. Doble now learns, that in the course of the conferences Sir F. Kelly declared that he had no doubt Mr. Mozley, the most prominent of the opposers, would pledge himself personally, by letter, or otherwise, to do all in his power to effectuate the agreement. This led to the suggestion, on the one hand, that other shareholders might be induced to take the same step, and to the difficulty, on the other, of any one prominently connected with other companies becoming a party to a proceeding which ingist interfere with the discharge of other and independent duties imposed upon him, and hence resulted the proposal which interfere with the discharge of other and independent duties imposed upon him, and hence resulted the proposal which Sir F. Kelly undertook to submit in any form that might be thought fit to the Birmingham and Oxford, not as a part of the agreement, to which it obviously did not belong, but as a point to be considered by individual shareholders, who alone could carry it into effect. And this proposal, which, upon the plainest principles of honour and good faith, being expressly confidential and without projudice, ought never to have been disclosed, unless accepted; and which was immediately rejected by the Birmingham and Oxford, because they had no power to perform it, has been, by the Great immediately rejected by the Birmingham and Oxford, because they had no power to perform it, has been, by the Great Western, made public, and treated as an engagement, and part and parcel of the agreement of November 1846, and the Birmingham and Oxford are charged with having departed from it. From this plain and undeniable statement of facts the shareholders will perceive that the Birmingham and Oxford, having offered to carry the agreement into effect, have been and still are rendy to do all that the law and good faith require for that purpose. The Great Western, however, while professing the same intention, refuse to perform their part of the agreement, by delivering to the shareholders who have paid up the full amount of the calls on their shares the coupons to which it is admitted that, under the agreement they are entitled, upon the vain and hollow pretext that the Birmingham and Oxford reject a under the agreement they are entitled, upon the vain and hollow pretext that the Birmingham and Oxford reject a condition that no lawyer, and no man of common understanding, can pretend to be any part of the agreement, or that they are in any way bound, or that they have the power to perform. It therefore only remains for the shareholders to determine what course to adopt against the Great Western, who, having sought in a court of equity the specific performance of this agreement, now refuse to perform what they admit to be a condition which the agreement imposes upon them, until they can ascertain, by the result of an uncertain experiment before Parliament, whether it is to their interest to abide by the agreement or not.

Mr. Dobie subsequently stated that pursuant to the resolution he had written a letter to Mr. Hunt, calling upon the Great Western to return coupons for 30%. 5s. to the different shareholders who had paid up bet 1846. Acting upon further instructions, he had also given notice that failing compliance with the demand by Saturday, the 18th inst., such steps would be the saturday, the 18th inst., such steps would be the saturday with the saturday saturday. be taken as counsel might advise, stating at the same time that his clients were willing to fulfil the agree-ment, and do all such acts as the Court of Chancery may direct. On the 17th he received a letter, stating that the Great Western considered it a sufficient answer to the peremptory demand to tell him that as his clients had still a suit pending in Chancery, they could not acquiesce. After what had passed the Great Western would proceed regularly to enforce the agreement against those who had taken from them the benefit of it. In conclusion it stated the Great Western were still perfectly willing to perform the agreement according to its true construction. He further stated, that there might be no obstacle in the way of reconciling difficulties, he had on Saturday taken the suit off the file of the Court of Chancery, but on Monday afternoon he saw an order from the Great Western for leave to amend their bill, and with such amendments as would interfere with any amicable arrangement. By those amendments a totally different complexion was given to the agreement of December. He thought it was perfectly clear that the object of the Great Western was delay.

Mr. L. HEYWORTH, after stating that the Birmingham and Oxford would be of no use to the Great Western unless the broad gauge was put upon it, moved-

Digitized by GOOGIC

That this meeting authorizes the directors to aid the Great Western with all the powers of the Birmingham and Oxford, to gain parliamentary authority to lay the broad gauge upon the Birmingham and Oxford line.

Mr. MOZLEY said he should have had the greatest pleasure to have seconded the resolutions if it had

also called upon the Great Western to perform their part of the agreement. The resolution only proposed to do what those whom he represented had offered to do over and over again. The matter at issue was not as to the Birmingham and Oxford assisting the Great Western to obtain the broad gauge, but it was that the Great Western wished the Birmingham and Oxford to achieve this, and to bear the results of the speculation. The Great Western asked that the Birmingham and Oxford should go to Parliament and try the speculation of obtaining the broad gauge, and in case of failure should bear not only the disappointment but the loss.

The CHAIRMAN stated that as no notice had been taken of the motion made by Mr. Heyworth, it could not be given from the chair.

Mr. BEALE asked whether the contract for the delivery of the coupons was not to take effect till the broad gauge was carried out.

The CHAIRMAN stated that there was not, and could not be, any condition of that kind. At the same time he was bound to say that the company was bound to do its best to assist in carrying out the broad gauge.

Mr. Pim read a portion of the agreement, which required the coupons, without other conditions, to be delivered "so soon as 201. shall have been paid up.

The CHAIRMAN, as an individual, expressed his opinion that the obligation was most clear. When he saw the really small points of difference between the two companies, he still felt it would be possible to avoid the sad spectacle of the disputes and litigation going on.

Mr. Mozley then moved the adoption of a petition, which was read. The bill, it stated, of the Great Western now before Parliament did not contain clauses compelling them to fulfil their agreement, and it was for the Birmingham and Oxford to insist on such clauses being put into it.

This was put and carried unanimously. Other resolutions of the same nature were passed. Mr. C. Shaw, of Birmingham, believed there was no contingency whatever as to the agreement, and he was sorry that the chairman and secretary of the Great Western had not been sufficiently clear in their remarks at the last meeting.

On the motion of Mr. MOZLEY, the meeting was adjourned till the 1st of April, to be held at the Dee Hotel, Birmingham, as also the adjourned general meeting.

#### LANCASTER AND PRESTON JUNCTION.

March 23 .- Adjourned Special Meeting, Lancaster. -Mr. S. Bushell in the chair.

It was announced that the canal company had filed their bill in Chancery, insisting upon the ratification of the lease of the line. All further proceedings are to be left in the hands of the directors, and a special meeting will be held as the occasion for it arises.

#### LONDONDERRY AND ENNISKILLEN.

March 20 .- Special Meeting, London, to consider a bill now before Parliament, to authorize the abandonment of that portion between Omagh and Enniskillen; to reduce the capital; to extinguish the shares declared forfeited; to divide such reduced capital into shares of 201. and 51. each; to create preference shares; and generally to amend the Acts.-Mr. J. G. FRITH in the chair.

Mr. TYRRELL, the solicitor, read the marginal notes of the bill.

Sir R. FERGUSON saw one of the clauses of the bill conferred power upon the directors to proceed for calls on extinguished shares. That power, he thought, would give rise to great litigation, and had therefore better be omitted.

The Solicitor said the clause was only to enable them to recover calls due prior to the shares being forfeited. They had already obtained a judgment against a gentleman who had left the country for 8,000l. That person was well able to pay, and if they did not retain the power they would not be able to recover the amount on his return.

In answer to Mr. Spackman,-

Mr. TYRRELL said the object for extinguishing the shares, which had in fact been already declared forfeited, was to enable them to limit their capital for a smaller scheme than the original one. There were but two ways, either by reducing the number or the value of the shares. If they pursued the latter course they would not be able to meet their engagements, as many of the shares proposed to be extinguished were in the hands of insolvent parties, and he could plan proposed by the directors of proceeding with not see the advantage of having such as partners. If the line through the means of preference shares,

the shares were reduced from 50l. (which amount was found to act against their transfer from hand to hand) to 201. and 51. respectively, they would be enabled to exercise their borrowing powers, and extend the line to Omagh probably without any further call being made upon them.

Mr. Spackman contended that in the present position of railway enterprize in Ireland it would be little short of insanity to carry the line one inch beyond its present terminus; and read a letter from a Mr. Sporle, a shareholder, resident on the line, as evidence of the non-existence of traffic in the district sufficient

Mr. J. R. HALL supported the views of the direc-If the bill now submitted advocated an extension of their capital, or were designed in any way to increase their liabilities, he should oppose it; but, on the contrary, it would reduce their capital, and by such means enable them to bring their borrowing powers into operation. He regarded the creation of preference shares as a very judicious measure, and well calculated to relieve their difficulties.

Sir R. FERGUSON was quite satisfied that Mr. Spackman's estimate of the traffic was erroneous.

The CHAIRMAN further explained that the creation of preference shares would be left entirely in the hands of the shareholders themselves at some future meeting to be convened; and that a resolution of the Board had been passed, to the effect that the directors would not proceed a hundred yards further without the sanction of the shareholders

The resolution approving of the bill was then passed.

#### LONDONDERRY AND COLERAINE.

March 21 .- Special Meeting, London, to consider a bill now before Parliament, authorizing a diversion of the line, increasing the number and reducing the amount of the shares, authorizing the reissue of forfeited shares, and generally for amending the Acts.

Mr. J. G. FRITH in the chair.

Mr. Tyrrell read the draft of the bill. In answer to various questions, he stated that the object of the bill was to carry out a recommendation of Mr. R. Stephenson, for altering the line so as to con siderably reduce the expense of construction, and bring them into closer connexion with Newtown-Limarady, a place of considerable importance, in which not less than 10,000*l*. changed hands weekly on market days. The other object of the bill was to reduce the shares of 50l. each (being too large for easy transfer, and at the same time somewhat fettering their borrowing powers) into shares of a smaller amount, and to make some portion of those shares into preference shares, so as, in a great measure, to relieve the holders of the original shares from pressure from calls. A considerable portion of the land which had been reclaimed from the sea had certainly borne rather luxuriant crops of rye grass, and during the time when the potatoes were failing in almost every other district, some beautiful ones were raised on this land, without the slightest taint of disease. Mr. Dimsdale's claim to the land could not stand in equity. The land had originally belonged to the Irish Society, by whom it had been leased to Messrs. Dimsdale and Robertson; the latter gentleman had since died, and the land had been conveyed to this company, but Mr. Dimsdale had laid claim to some portion of reclaimed land, that gentleman always having been in litigation on the subject ever since he became in possession. He (Mr. Tyrrell) had no doubt that the Court of Chancery would decide in favour of the company by Saturday next, though a court of law had been compelled to decide in favour of Mr. Dimsdale, as trustee, although his real interest was vested in the company. In the original bill the time for reclaiming the lands was limited to July 1849, but an Act had since been obtained to extend the period of reclamation for eight years.

The Rev. Mr. CLARKE thought that, looking at their disappointments, it would be better at once to abandon the project, and lose the money already advanced.

Mr. WALEY must say that it would be injudicious to proceed with the undertaking without full inquiry. He had the fullest confidence in the honour and integrity of the directors, who, he must say, had been led into error by information given them by other parties, which had not been found to be correct. The Great Southern and Western shares, with 371. 10s. paid, and an increasing traffic, were selling at 15t. or 16t.; the shares of other companies, with 25t. or 271. paid, were not only to be had for nothing, but with a premium to take them. Under these circumstances he thought they ought to pause.

Mr. Cross had heard nothing to induce him to think that they ought to abandon the scheme; and, taking everything into consideration, he thought the

which would be called up before any further calls were made upon the original shares, the best.

It was stated that the reclamation of the land would ultimately repay the cost of making the line.

The CHAIRMAN thought it would not be desirable to abandon the undertaking. He believed a very small sum compared to what they had already expended would render it productive of good to the company. If the shareholders liked to appoint a committee to proceed to Ireland to examine the works, he should be happy to accompany them, and to assist them in arriving at a true estimate of the value of the undertaking.

Mr. TYRRELL also explained that, instead of binding themselves to any particular arrangement in dividing the shares, by the bill it was proposed to introduce clauses to enable them to arrange the division.

Mr. WALBY suggested that the directors, with one or two other shareholders, should proceed to Ireland.

as a committee of inquiry.

In reply to Mr. Cross, Mr. Tyrrell stated that there could be no doubt that in going before Parliament they would be prevented hereafter paying interest on calls out of capital.

The resolution was then carried unanimously

A desultory conversation ensued, relative to the suggestion of Mr. Waley, which resulted in its being understood that Messrs. Cross, Butts, and other proprietors would proceed with the directors to Ireland, to make the proposed inquiry.

GREAT SOUTHERN AND WESTERN (IRELAND). March 15 .- Half-yearly Meeting, Dublin .- Mr. G.

CARR in the chair.

The SECRETARY read the Report. It stated that the unwillingness of the Board to press on the share-holders for calls during the late panic had somewhat retarded the works. A further portion of 20½ miles to the town of Thurles has just been opened; and the next 20 miles to Tipperary, which will reach the junction with the branch railway to Limerick, is in that advanced state, that they confidently expect it will be ready for public service in May, which, with the Carlow branch, will complete 130 miles in opera-tion. The calls of 2l. 10s. already made, and the forthcoming one in July next will entitle the claim for Government assistance. The extension to Cork will be actively pushed on. The line to Mallow will probably be open in the autumn. The directors hoped for parliamentary interference to restrain the exorbitant demands of the landowners. They are satisfied with the aspects of their traffic, considering the state of the country, their own imperfect arrangements, and that their terminus at Ballybrophy is in an open field, 9 miles from a market town, 56 miles from Limerick, and 98 miles from Cork. can therefore only be assumed as a portion of the local trade of those districts through which the line passes; but on reaching the populous and important cities of Limerick and Cork a very considerable increase may be relied upon. Since the 1st of January, separate accounts of the expenses, maintenance and working of the line have been kept; and their superintendent, Mr. Miller, gives them a very confident assurance that when the locomotive arrangements are more complete, and the company enabled to make all their own coke, further economy will be practicable; and as the line extends in length, the expenses of management will, pro rata, diminish. The directors have not vet been able to bring their claims for the Post-office service to a settlement ; but they are now in course of arbitration, and they hope very shortly to get an award. The Report concludes with the assurances of the Board of their undiminished confidence in the resources and prospects of the line.

Appended to the Report is the following letter to the chairman :-

the chairman:—
Dear sir,—We have examined carefully the accounts which you sent us of the expenditure and estimates for the entire completion of the railway to Cork, with the station there, and the intermediate stations, and including all the plant and materials for working the line, the whole amounting to 3.245,0004, and so far as we are able to judge, the estimates for the incomplete works are on a very liberal and ample scale; and as all, except the stations, are under contract to responsible parties, they ought not to be exceeded. We are sorry, however, to observe that the cost of the land has very greatly exceeded the original estimates, which, with above 100,0004, paid back in interest to prothe land has very greatly exceeded the original estimates, which, with above 100,000*l*, paid back in interest to proprietors and on loans, swells the amount considerably. If, however, the line be set to work with all its stations and appointments complete, at a cost not exceeding 17,000*l*, per mile, it cannot fail, in our opinion, to form a safe and beneficial investment; and we are desirous that the fullest information should be given to our proprietors at the ensuing meeting, not only of the actual condition but the prospects of the concern. We quite approve at the same time of due caution in the latter, and that no expectations be raised which are not founded on our own experience or on that of analogous lines in this country. We therefore annex for your information-some calculations we have made on that of analogous lines in this country. We therefore annex for your information-some calculations we have made as the grounds of our confidence in a remunerative traffic,

founded mainly on our own working. By the returns of traffic since the opening to Ballybrophy and Carlow, a distance of 90 miles, it appears our earnings have been about 21\(^1\), per mile per week, and this under many unfavourable circumstances, such as the distressed state of the country, winter months, few trains, and no connexion with any post or large town; our present terminus at Ballybrophy being in the middle of a field, 9 miles from the nearest market town of Roscrea, 56 miles from Limerick and 98 miles from Cork! This, therefore, can only be taken as an indication of the traffic to be expected when the line is connected with the two latter large and populous cities, and the necessary arrangement made for extending the goods and cattle trade; as also of the coal, which is likely to form an important source of revenue at the Cork end. In our opinion, as well as that of other experienced judges, at least double the existing traffic may then be fairly anticipated (say 40\(^1\), per mile), with a probability of a steady and constant increase. If then we compare this with two English lines—the Lancaster and Carlisle and the Newcastle and Carlisle—which are most analogous, it will be seen that our confidence is not unfounded. The former is 70 miles long, has cost upwards of 18,000\(^1\), per mile (not including plant), and does not as yet enjoys a traffic of 20\(^1\), a mile; yet the shares bear a premium of \(^3\), per mile (not including plant), and does not as yet enjoys a traffic of 20\(^1\), a mile; yet the shares bear a premium of \(^3\), per share, from the belief that the traffic is not yet developed. But the Newcastle and Carlisle has now been at work for many years, and having cost about 18,500\(^1\), per mile, has a traffic of about 30\(^1\), per mile, out of which it pays a dividend of 6 per cent. per annum. That our revenue will reach 30\(^1\), per mile when we get to Limerick, in May next, we cannot permit ourselves to doubt; and, that accomplished, every further step towards Cork will bring an

J. B. BOOTHET, T. SMITH, C. SALTMARSHE, E. CROPPER, C. R. MOORSOM, Directors of the London and North-Western.

The estimates show that the present traffic yields  $3\frac{1}{4}$  per cent. on a cost of about  $17.000\ell$ . a mile; that the expected traffic on the opening of the line to Limerick will yield  $5\frac{1}{4}$  per cent., and on reaching Cork will finally amount to  $8\frac{1}{4}$  per cent. This would pay a dividend of  $9\frac{1}{4}$  per cent. on  $12,000\ell$ . in share capital, and 5 per cent. on  $5,000\ell$ . borrowed capital.

The statement of accounts showed the total receipts, including traffic revenue, at 2,373,655l. 11s. 8d.; expenditure, 2,339,539l. 3s. 8d.; balance, 34,116l. 8s.

The CHAIRMAN, in alluding to the Report and the letter attached to it, said he considered the calculation of 2!l. per mile as most inadequate of what ought to be carned in ordinary times. For ten successive years prior to 1846, the books of one of their most eminent carriers had shown a steady increase of traffic, whereas since then they had exhibited a deficiency of 40 per cent. He noticed the inconvenience of the present station at Ballybrophy. In fact, at present, so limited were the modes of conveyance, that in Limerick a gentleman wishing to come to Dublin was often obliged to engage his seat a week previously; consequently, until the line was perfectly opened, its value would not be known; for the only sources of traffic then in being were little better in amount than a bucket of water would be if thrown into the ocean. Under these circumstances, the Board looked upon the calculation made in the letter from England as extremely moderate. With regard to Tipperary and Cork, they were also very moderate. As to Cork, first of all they had the long through traffic, which was the best paying; and then they had the well populated district of Mallow, and all the country adjoining, by which means they would secure the local conveyance, together with a large trade in carrying coal from Cork, as there was no fuel in those localities—and as to its carriage they would have no difficulty, as their rails ran down to the harbour, so that vessels of 800 tons could discharge their cargoes direct into their trucks. Such being their prospects in Cork, when he found it calculated at 10 per cent. for working more than Limerick, he was of opinion that those gentlemen were far under what the shareholders might expect. He urged on the proprietary to support the Board at the present crisis. Their property was protected from aggression by its geographical features, and though the Board would welcome the access of branch lines projected by others, they themselves would keep their property to themselves. The competition in England had nearly ruined the most remunerative lines there.

In answer to Mr. Perry, respecting the sum to be received from Government on the mails, the Chairman said the sum would be about 30,000*l*.

Mr. Perry wished to know when the line connecting the Limerick and Waterford line would be completed.

The CHAIRMAN said that Mr. Dargan led them to believe it would be ready in May or June.

Mr. Perry said he also was anxious to learn if the Board were making arrangements with that company so as to work amicably when the connexion was formed.

The CHAIRMAN replied in the negative.

Mr. Perry stated that there was one matter he would notice, and that was the want of accommodation for travellers at Ballybrophy, and one or two other places on the line. He hoped that even at temporary stations, the Board would, for the future, see that proper accommodation was provided for the public.

The Report was then adopted.

Mr. R. Atkinson was appointed auditor in the room of Mr. J. F. Hardy, resigned.

#### GREAT WESTERN OF BENGAL.

March 20.—Special Meeting, London, to consider a bill now before Parliament to authorize dissolution, and conversion of shares into those of the East Indian.

—Mr. D. M'LEOD in the chair.

The CHAIRMAN stated that circumstances which had taken place since the meeting of this company in April last, had rendered it necessary to apply for the present bill. Many shareholders were unwilling to register in the East Indian, and the present bill had been so framed as to secure all the advantages of the amalgamation to those shareholders who wished to proceed, whilst it would release from future liabilities those who were unwilling to register their shares in the other company.

Mr. James, the solicitor, accordingly read the bill, which provides in the usual manner for the dissolution, the conversion of the shares, and for other matters of detail incidental to the circumstances of

Mr. H. Kennedy (a director), before the resolution was put, begged the meeting to bear in mind that the present bill had been rendered necessary, not from any fault of the directors, but from the errors of defective legislation. No provision was made for the dissolution, and they were forced to go to Parliament. Only half the shareholders had registered their shares in the East Indian, and such was the case with the shareholders in the latter company, and the amalgamation not being capable of being carried out, the present bill became a necessity, which they could not avoid. After a few further observations in reference to the prospects of the East Indian, the hon. gentleman concluded by expressing his hope that in what the directors had already done and were now doing they should meet with approbation.

Mr. Rudall expressed his disapproval of the arrangement, which made the dissentient or retiring shareholders in this (the Bengal) company liable for the expenses of the present bill.

Mr. Kennedy directed Mr. Rudall's attention to the fact that the dissentient shareholders themselves, by their refusal to register in the amalgamated company, had rendered the bill necessary.

A formal resolution, authorizing the prosecution of the bill, "subject to such amendment and alteration as the East Indian proprietors may require and Parliament may sanction," was then carried unanimously.

#### MADRID AND VALENCIA.

March 22.—Special Meeting, London, to receive an account from the committee as to the reason for the postponement of the action (brought by Mr. Paterson against the chairman, to recover his deposit), which stood for trial on the 18th of February last.—Mr. D. W. HARVEY in the chair.

The CHAIRMAN read the Report of the Committee, in which they stated that it was the plaintiff's attorney who, on the 26th of November, suggested agreeing to admissions to save expense. It was the plaintiff's attorney who, on the 17th of Pebruary (the day previous to the expected trial), objected to admit the code of laws of Spain, printed and published at Madrid, unless tested in Spain. Although they regretted the expense thereby incurred, they had full confidence in a successful result to the trial, for which they would be prepared with conclusive evidence by lune page.

dence by June next.

Mr. Wire declared that on the 26th of November (three days after the order was made for postponing the trial in order to give time to procure the attendance of witnesses from Spain), he wrote to the defendant's solicitors, suggesting certain admissions. On the 20th of December, being unable to get an answer, he took out a judge's summons for the defendant to show cause. The defendant's attorney attended on the 21st, and the matter was postponed at his request. On the 1st of January the defendant's solicitors forwarded to him the points on which the directors required admissions to be made. All the admissions

were agreed to, with the exception of that respecting the Spanish law as to the constitution and formation of companias anonimas. On this point he (Mr. Wire) had, in a letter written by him on the 4th of January to the defendant's solicitors, stated that the admission must be put in precise terms, or that some standard work on this section of the Spanish law must be pro-He had, in fact, been promised from the 23rd of November the Spanish code of laws referring to the question at issue; but it was not till between 10 and 11 o'clock on the night of the 17th of February, the day before that for which the trial of the cause was fixed, that it was shown to him, and then it was that he, quite ignorant of the Spanish language, was asked to admit it in evidence. He, however, agreed to admit the Spanish code if the defendant's solicitor would admit a report made by the Spanish directors, and published in Spain. This the defendant's solicitors declined to do, and he (Mr. Wire) therefore refused to admit the Spanish code in evidence. He attended the court on the following day quite prepared to go on with his case, when it was postponed in the way already stated. He left the hareholders to say whether he had not done all in his power to bring the cause on for trial.

Extracts were read from the printed Spanish Report alluded to, to show that no difficulty whatever exists in Spain as to the dissolution. A meeting of the Spanish shareholders had insisted on having their money returned, unless the English shareholders proceeded with the line, which is, of course, now entirely hopeless. The Spanish shareholders having expressed their determination to return their deposits and dissolve, one of the English directors implored them not to do so till after the trial of the cause Paterson v. Chadwick, because such a step would be a triumph to the refractory shareholders in England.

A Shareholder asked if it was true that Mr. Chadwick had lent 50,000*l*. to the South-Western, and also if the sum of 80,000*l*. had been taken out of the Bank of England.

The CHAIRMAN said as to the 50,000L he had no doubt, if it were invested in the South-Western, the shareholders could insist upon its being placed in safe custody in the Government funds. It was true also that 30,000L, the caution-money, had been taken out of the bank, and 20,000L of it invested in Spanish Bonds. What became of the other 10,000L he could not say. The plaintiffs pretended they knew nothing about the meeting at Madrid, although the report of it was well circulated in this country. Those very Jew shareholders in Madrid, who had paid upon their 7,190 shares, now clamoured like the English for the return of the deposits, and they had agreed to wind up affairs. He had no doubt that there were some of the directors anxious for negotiation, but at present they were just preparing for their trial in June.

In answer to a Shareholder, the CHAIRMAN said that the directors had raised 106,000L, and that they had invested 20,400L in Spanish stock, thus leaving 85,600L. In their last Report they stated that they had spent 4,000L; he would admit they had spent 10,000L, which would leave 75,600L, or a return of 28s. 6d. per share, without taking into account the interest of the money for two or three years.

After further discussion, a vote of thanks was passed to the chairman and committee.

The CHAIRMAN stated that a Spanish gentleman had just informed him that the directors in Madrid were now actually paying back the money to the shareholders. He hoped this would be a lesson for those in London to do speedy justice to the shareholders in this country.

SOUTH-EASTERN AND CONTINENTAL STEAM-PACKET COMPANY.

March 20.—Half-yearly Meeting, London.—Mr. J. MACGREGOR in the chair.

The CHAIRMAN read the Report. The accounts up to the 31st of January last show an amount of nett earnings for that period of 4,6711. 10s. 9d., which will enable a dividend to be declared of 8s. per share for the half year, and leave, after paying the incometax, a surplus of 921. 19s. 9d. for next half-year. Then followed a statement of the traffic from Folkstone and Boulogne, from the 22nd of November, when the Boulogne and Amiens opened to Neufchatel, within six miles of Boulogne, to the 20th of February 1848, as compared with the corresponding period of the preceding year. From this it appears that the total addition on the half-year ending on the 31st of January 1848 over that of 1847 was 1,998 passengers. The efficient manner in which the service between Folkstone and Boulogne has been performed has had the approbation of the highest authorities; and the directors feel much gratified in having received this intimation from the Lords of the

Admiralty. A double service between Folkstone and Admiratty. A double service between roisstone and Boulogne is performed each way daily; and, in addition to this, the company is prepared with extra boats to meet requirements for expresses, or any other emergency. The statement of accounts showed the receipts on capital account at 108,208*l*.; expenditure, 114,311*l*.; leaving a balance against the company, but there was retained in hand from the earnings a reserved fund of nearly 10,000*l*. to meet contingencies.

The CHAIRMAN trusted that the Report and the accounts would be deemed satisfactory. The line will probably open from Neufchâtel to Boulogne on the 30th inst. In consequence of recent events there is a of February, there was, notwithstanding the unfaof February, there was, notwithstanding the unia-vourable season of the year, an increase from 3,614 passengers in 1847, to 4,117 in 1848; and outwards, from 3,678 in 1847, to 4,325 in 1848—an increase of 503 and 647, or of a sixth in each case. Since the revolution in France—say from the 21st of February to the 19th inst.—the passengers from Folkstone to Boulogne have diminished only from 1,164 in 1847, to Boulogne have diminished only from 1,164 in 1847, to 1,023 in 1848; showing a decrease of only 141 passengers. The number of passengers coming from Boulogne to Folkstone during the same time, vix., from the 21st of February to the 19th of March, has been 2,490 in 1848, against 1,283 in 1847; showing an increase of 1,207. Under all circumstances it will be the study of the directors to protect the interests of the shareholders, and to give every facility to the public, who have proved, by the use they are making of it that this route will always be the great highway of it, that this route will always be the great highway to the Continent.

The Report was adopted, the dividend declared, the retiring directors were re-elected, and the Hon. J. Byng added to the directors, in the room of Capt. Tyndale, resigned; and Messrs. Hardy and Fother gill elected auditors.

In answer to questions of Mr. GILBERTSON,

The CHAIRMAN stated that eight boats were not boats had by their power shattered the original cast-Folkstone.

ants, &c., Newry.—Resolutions in support of the direct line to Armagh, and in condemnation of the present bill before Parliament, amending the company's Act, &c., were passed.

difference of opinion as to the amount of inter-course likely to be kept up between England and France; but the intercourse will doubtless increase, in consequence of the facility ensured to travellers by the opening from Paris to Boulogne, the punctual service of the South-Eastern to Folkstone and Dover, and the double daily service each way between Folkand the double daily service each way between roll-stone and Boulogne, performed by our splendid steam-ships. The Report showed that from the 22nd of November, when the Boulogne and Amiens opened to Neufchâtel, six miles from Boulogne, to the 20th

considered too much for their requirements, as, from various circumstances, some of them would at all times be liable to be laid up for repairs. All the iron framing of the engines, which had been replaced by wrought-iron framings in all but two boats, in which the change was at present being made. During the winter the directors had discontinued the running a boat to Ostend, as not being profitable, but it would resume running in the summer. Had the Boulogne and Amiens and Great Northern of France opened at the time promised, he had no doubt that the whole of the boats would have been required; and he might mention that, on Saturday last, their boats made three passages each day between Boulogne and

Mr. GILBERTSON expressed himself generally satisfied with the explanations.

NEWRY AND ENNISHILLEN .- Meeting of Inhabit-

## SOUTH-EASTERN AND CONTINENTAL STEAM-PACKET COMPANY.

At the FIFTH HALF-YEARLY GENERAL MEETING of the Proprietors of the South-Eastern and Continental Steam-Packet Company, held in pursuance of the Deed of Settlement, at the Bridge House Hotel, opposite the London Terminus, on Monday, the 20th day of March 1848,—

JAMES MACGREGOR, Esq., Chairman, in the Chair,-

The Advertisement convening the Meeting was read, and

the following Resolutions were unanimously passed:—

1. That the Common Seal of the Company be affixed to the Register of Proprietors. (The Seal was affixed accordingly, in the presence of the Meeting.)

2. That the Report of the Directors, as now read to this Meeting, be received and adopted, and that the same be printed and circulated amongst the Proprietors.

printed and circulated amongst the Proprietors.

3. That a Dividend of 8t. per Share be now declared, free of Income-tax, and made payable on the 31st inst.

4. That the Hon. James Byng, having been elected a Director, in the place of Capt. Charles William Thomas Tyndale, be continued a Director of this Company.

5. That Edward Harding, Esq. be elected an Auditor of this Company, in the place of James Walter, Esq., resigned.

6. That John Fothergill, Esq. be elected an Auditor of this Company, in the place of William Davies, Esq., resigned.

That John Brogden, Esq. be re-elected a Director of

this Company.
8. That William Gordon Thomson, Esq. be re-elected a

Director of this Company.

9. That Daniel Warren, Esq. be re-elected a Director of this Company.

JAMES MACGREGOR, Chairman.

10. That the best thanks of this Meeting be given to the Chairman and Directors, for their valuable services.

G. S. HERBERT, Secretary. South-Eastern and Continental Steam-Packet Office, London Terminus, March 20, 1848.

#### GREAT SOUTHERN AND RAILWAY (IRELAND). WESTERN

TENTH AND ELEVENTH CALLS.

TENTH AND ELEVENTH CALLS.

£3 102. PER SHARE each, making £43 102. called up on each Share.

NOTICE IS HEREBY GIVEN, that in pursuance of a Resolution passed by the Board of Directors, the Proprietors of Shares in the Consolidated Capital of this Company are hereby required to PAY a CALL of \$2\$ 102. per Share, on or before Monday, the 10th day of April next. and another Call of \$2\$ 102 per Share, on or before Saturday, the 10th day of July next, to any of the undermentioned Bankers.

According to the provisions of the Acts of Incorporation, interest at the rate of 4 per ceut. per annum, payable half-yearly, will be allowed on the amount of Deposits and Calls paid up until the Railway shall be completed; but should any Call remain unpaid after the day above named, interest, at the rate of 5 per cent. per annum, will be charged thereon; and "no interest shall accrue to the Proprietor of any Share upon which any Call shall be in arrear in respect of such Share, or any other Share to be holden by the same Proprietor, during the period while such Call shall remain unpaid."

WILLIAM TAYLOR, Secretary.

Shares will be further subject to loss of Dividend consequent upon non-payment, as per Extract below.

By order,

GEORGE KING, Secretary.

61, Moorgato-street, London, March 4, 1818.
Extract from the Terms of 1818 as above referred to:—

61, Moorgate-street, London, March 4, 1848.

Extract from the Trams or Issux above referred to:—

The first Dividend will be calculated from the 1st of April, 1848, upon all shares paid up in full at that date. As regards those that may not then be paid up in full the Dividend will be calculated from the next succeeding period of three mouths from the 1st of April upon which the same shall be paid up with Interest; that is to say.—

If paid between the 1st of April and the 30th of June, the Dividend will be calculated from the succeeding 1st of July. If paid between the 1st of July and the 30th of September, from the succeeding 1st of October, and so on; but this arrangement shall not preclude the Directors from putting in force at their discretion the powers of the Act with respect to forfeiture.

#### PORT OF GREAT GRIMSBY.

#### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

PORT OF GREAT GRIMSBY.

# NOTICE TO FOREIGN MERCHANTS

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive Yessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accossible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

Safen von Great Grimsbn.

## NEWCASTLE-UPON-TYNE AND CARLISLE RAILWAY.

DECLARATION OF DIVIDEND.

At the ANNUAL GENERAL MEETING of the Share-

At the ANNUAL GENERAL MEETING of the Shareholders held this day, it was resolved,—
That a dividend of 3', per Share on the Shares numbered from 1 to 8,138, and so in proportion for the Quarter Shares (for the half-year ending the 31st of December last) be paid on and after the 14th of April next.
And that Interest at 5 per cent, per annum be paid at the same time on the money advanced on the Shares numbered 8,139 and upwards, and on the Sixteenths, from the respective dates of payment to the 31st of December last.
The Scrip Shares must be sent to this Office to be recorded, for which purpose they will be retained seven days, and then returned, with the amount due.

#### POSTPONEMENT OF CALLS.

It was further resolved,—
For the accommodation of Shareholders who may desire For the accommodation of Shareholders win may destrict to postpone the payment of the Instalment due on the 21st of April next, on the last mentioned Shares, until the 21st day of June;—Shareholders, however, have the option of paying on the 21st inst., the allowance of Interest being regulated accordingly.

By order,

JOHN ADAMSON, Clerk to the Company.

Newcastle-upon-Tyne, March 28, 1848.

### EDINBURGH AND GLASGOW RAILWAY.

At the TWENTIETH HALF-YEARLY GENERAL MEETING of the Shareholders of the Edinburgh and Glasgow Railway Company, held, pursuant to the Act of Incorporation, in the Company's Head Office, Glasgow, on Tuesday, the 28th day of March 1848, at 1 o'clock, p.m.,—

PETER BLACKBURN, Esq. in the Chair,-

After the Advertisement calling the Meeting had been read, the Minutes of the last General and Special General Meetings of Shareholders confirmed, and the Seal of the Company affixed to the Registers of Proprietors, the Report of the Directors and Balance-sheet were read.

The following Resolutions were then moved, seconded and unanimously agreed to:—

1. Resolved,—That the Report of the Directors now read

Resolved,—That the Report of the Directors now read to the Meeting, with the relative Balance-sheet, and cast or scheme of Appropriation of the Profit, be, and the same are hereby approved of; and that it is inexpedient, in the circumstances, to declare a Dividend at this Meeting out of the Balance remaining for present division among the

2. That the Directors be, and they are hereby authorized to exercise the powers conferred on the Company by their Act, 9 & 10 Vict. c. 165, in so far as empowering them to borrow the sum of 50,000l. upon Debenture.

3. That the Directors be, and they are hereby authorized o take such steps as may seem to them most for the this Company, in respect to the Bill brought the thing the String and Dunfermline Railway Repeal the Lease of that Line to this

following Gentlemen, who have gone out of the din terms of the Act, be now re-elected ter Blackburn, Esq., Henry Dunlop, Esq., in, 1-sq., and John Orr Ewing, Esq.; and that wan, Esq. M.P. be elected in room of John Mait-(29), who declines to offer himself for re-election.

a vote of thanks be given to the Directors for the ner in which they have conducted the business of the company.

Sir Andrew Agnew renewed the notice of motion of which he had given notice at the last Half-Yearly Meeting, viz.,—"That no work be done on the Railway on the Lord's Day;" and "That this Company memorialize Her Majesty that the Post-Office Guard be relieved from carrying the Royal Mail on the Lord's Day."

And at a SPECIAL GENERAL MEETING of the shareholders of the Company held immediately after the Ordinary Half-Yearly Meeting,—

It was resolved unanimously,—That the Drafts or Copies of the Bills (see list in Directors' Report) now submitted to and considered by the Meeting, be, and the same are hereby severally approved of; and that a copy of this Resolution certified by the Secretary, and the Common Seal of the Company be now affixed to each such Bill, and that the Directors be authorized and instructed to take all necessary steps to get the same passed into a law during the present Session with such alterations, additions, or omissions, as they shall think expedient, or as shall be necessary to bring the two last-mentioned Bills into complete harmony with the agreements with their respective companies. PETER BLACKBURN, Chairman.

A vote of thanks was given to the Chairman for his con duct in the chair. H. GUTHRIE WRIGHT, Secretary.

SATURDAY, APRIL 1.

MR. BANKES'S MOTION ON THE EXPENSES OF THE RAILWAY BOARD.

The proceedings on Mr. BANKES's motion on Tuesday last, to reduce the expense of the RAILWAY COMMISSION, by transferring to the Board of Trade the powers given by the Act 9 & 10 Vict. c. 105, were both interesting and hopeful. It was admitted on all sides of the House that the constitution of the department created by that Act was faulty in the cardinal point on which we have insisted from the beginning; namely, that the Commission was established without any definite duties being assigned to it, and without adequate powers to execute any duty that could be important in regulating the railway system. It was admitted, moreover, with scarcely a dissentient voice, that nothing has been effected by it at all compensating the expense it has caused, and that a great reduction, if not the entire suppression, of this expense is desirable on the score of economy. By Sir James Graham the Commission was completely derided; - and Mr. Gladstone, after pointing out the radical defect in the principle of the Board, declared his opinion that all its necessary duties might without the least inconvenience be handed over to the Board of Trade. The ministerial tone of defence was feeble and temporizing — scarcely apologetic.
The fact was elicited that Mr. Strutt's resignation of the chief Commissionership had been accepted, and that it is not intended to fill up the vacancy. The Chancellor of the Exchequer said as much as confessed that the department had been unduly expensive, and that it would be necessary to render it less so; and neither he nor Mr. Labouchere ventured to oppose the motion more directly than by asking for time. The Board is to lay before Parliament, after Easter, an account of its stewardship; and the House was implored to decide nothing until this Report should have been received, and until it was seen what the general committee on public expenditure should have to say on the subject of this Commission-Ministers declaring, meanwhile, that they are prepared to cut down its establishment, if the committee should advise it.

From hence it may be seen that the department is virtually abandoned by its framers. It now requires nothing but determination on those to whom its establishment has been the instrument of useless annoyance, and in those who feel that in times like these no money can be afforded to keep up an office that is notoriously valueless, if not mischievous, to get it swept out of the way altogether. This consummation we have done our best to promote: we have now the gratification of seeing it within reach, as the subject is again to be brought forward next Tuesday; and we trust that no remissness or weakness will be shown in allowing that opportunity to escape of ridding both the railway interest and the country of the burden of an establishment, the creation of which in its present form, and with the misuse of patronage which has dictated its appointments, has been one of the most culpable errors of the party now in office.

On this subject, before last Tuesday's debate, we had received from a quarter likely to be well informed the following remarks, which it will be seen are in some measure confirmed by what has already taken place. We hope that the course of events may still further substantiate their tenor.

SYMPTOMS OF DISSOLUTION IN THE RAILWAY BOARD.

Rumours have been current respecting the fate of the Railway Board, the truth of which

in contact with it. It is whispered that Ministers are not disinclined to sacrifice to the growing demands of economy a department the failure of which they hear on all hands, and the construction of which, as settled soon after their assumption of office, is regarded as one of their least excusable proceedings. This error cannot be better redeemed than by letting the department be expunged altogether-a process for which the removal from the House of Commons of the chief Commissioner affords a plausible occasion; and it will be a proof of address in Ministers if they have the good sense to lay hold of it. The steps required to be taken will be very simple: the Board has been such a mere nullity since it was first established, that no blank need be made in any department of business by cancelling it altogether-a few lines of enactment ordering the statistics it used to collect to be transmitted to one division of the Board of Trade, and handing over to some other the powers to act in its place in those matters which may be specially referred to the Commission in any railway bills, would provide for all the business that clearing off the Commission would leave lying about; -and even this is not of such importance that it might not be so left for ever, without the least injury to any thing, person, or

The fulfilment of the intention that report ascribes to the Ministry, is sure to be popular in all quarters. The public will be put in good humour by an instance of economy; for the extinction of the expense must of course be the cardinal point of the business. The railway interest will be thankful for a relief from the nuisance of an interference, always busy and never right; helpless for good, constantly threatening some new assault on the security and health of the system-from a kind of government, in short, the very model, in every respect, of what a government ought not to be; at once weak and mischievous, disliked and despised; an influence which can excite in those subject to its control nothing but the constant disposition to rebel-nay, which renders a continual warring against it a necessary act of self-preservation. The sooner a mistake of this kind is got rid of the better. We are now reading lessons of daily experience that may warn all concerned of the fatal error of keeping up any abuse of power which common sense and fairness condemn.

#### Records of Railway Bractice.

BUSSE'S TERRESIN SLEEPERS.

Mr. Fred. Busse, of Leipsic, secretary of the Leipsic and Dresden Railway, has laid before the directors of English railways his new invention to construct sleepers for railways from a certain compound, cast around a wooden frame, which he calls terresin.

Mr. Busse disdains to take out a patent for his invention, hoping it will soon come into general use in England, in which case he is fully convinced that the Boards of directors and the engineers will by far prefer to deal with an invention which is laid before them with an open spirit of confidence in the well-known honour of English gentlemen, rather than to quarrel about licences. Mr. Busse therefore offers full scope to all Boards of directors and engineers in employing the said sleeper, trusting they will grant him or his assignees, Messrs. Johnson, Cammell & Co., Sheffield, 3d. for each

It is a well-known fact that wooden sleepers, either of pitch-pine or of oak, are the most convenient seats to lay rails upon. But, on the other hand, sleepers of wood do not last long, in spite of all expensive doctoring with salts,

after all, the vast consumption of wood is a drawback felt severely, especially in England where wood is scarce and its importation from other countries is considerable. It is therefore unquestionably a good plan to substitute instead of wood a material which is to be had in abundant quantities in England, and by manufacturing it into sleepers, only a small fraction of that wood is wanted which is now used, and furthermore, what is a prominent point of consideration, will be cheaper than wood: so at least says Mr. Busse; and the following is his description of his invention:-

My sleepers are manufactured by hand, just on a snot where they are wanted. These sleepers the spot where they are wanted. These sleepers have been tried on the Leipsic and Dresden and the Dresden and Silesia lines, and combine all the advantages which are reasonably to be expected from a good sleeper. They are easy to make, are cheap and solid, and promise a duration for a period of time not to be calculated; supposing only thirty years, it greatly exceeds that of wooden sleepers. have cast sleepers, according to my invention, 8 ft. long 14 in. broad at the base, at an outlay amounting to less than I Prussian dollar (3s.) the piece. The yet good pieces out of the old worn sleepers may advantageously be cut for frame top pieces. The principle of my invention is to inclose a frame of entirely dry, well-seasoned wood, air-tight, in a substance which is not affected by the influences of wet and air, it being the result of experience that under such circumstances the wood will not be destroyed at all, or at least will last by far longer. The method after which I build and compose the said sleepers is as follows:—I take two pieces of wood, dried to the highest degree by artificial heat in a stove. Immediately after drying, I dip those pieces in a builing compound of 10 lb. of brimstone and 100 lb. of coaltar, to which I add 80 lb. of very fine powder of caustic lime. This done, I scratch or take off with a knife the superfluous compound, leaving only a thin coating on the wood. The pieces of wood thus prepared are now brought anywhere along the line of the railway where coarse gravel is to be found. it may be taken out of the soil or from a river. The latter is to be preferred, containing less earthy matter. The gravel mixed with fine or coarse sand or small stones_the latter till to an inch diameter_ought to be dried or rather heated before used. The wooden frame is placed, the topside to the bottom, in a conical iron or wooden mould-the latter material is to be preferred—which is to be filled up with the compound which I call "terresin," and which is prepared as follows: I take an iron vessel, large enough to hold a quantity of terresin, sufficient to cast three sleepers; I melt 10 lb. of brimstone, add 75 lb. of stiff coal-tar, and mix it by stirring with 100 lb. of fine powder of well-dried fresh-burnt caustic lime, which is slaked in the air or with a little water. Where powdered chalk or plaster are cheaper, these materials may be used as well. The exact quantity of lime, chalk or plaster for a given quantity of brimstone and coal-tar is dependent upon the quality of the said materials, and the choice of the right proportion must be left to the best judgment of the manager. In case the tar should not be of good quality, a little resin and grease may be added. To this compound add, always stirring and turning the mass over a gentle fire, 10 to 12 cubic feet of that before-mentioned dried or heated gravel, and fill or rather ram the thick hot compound into the moulds in which the frames are placed. The moulds must before-hand be well coated with clay, and afterwards sifted over with fine ash, to prevent the compound adhering to the mould. Before the compound is cooled, it is advisable to pierce one or two holes through the top part of the sleepers, vertically to the bottom, with an iron bar. By these means the sleepers and rails may be levelled or balanced as accurately as possible, by pressing dry sand into the holes, which will leave the sleeper spreading under the bottom part. The sleeper being completely cooled, it is taken out by overturning the mould. The top pieces, where the rail or the chair is to be screwed (which is by far the better process) or nailed down, must be left free from the compound, and are only coated with the thin hot compound, without the would be very acceptable to all who have come | sublimate and other anti-corrosive ingredients; | gravel, which may be repeated after having fastened

the chair, to secure the top pieces against the influence of air and water.

By this contrivance we get a very cheap sleeper as hard as stone, and extremely heavy-400 lb. without losing the elasticity which is wanted to a certain degree, and allows, what is a matter of importance, that the rails or chairs are situated directly on wood. Here I feel obliged to remark that we have found it in Germany a good practice to support the sleepers only on the two extremities, leaving the gravel or sand loosely underneath the middle part, an experience undoubtedly made likewise in England. It is a matter of importance that any kind of wood may be employed, and that the construction of the frame and the size of the sleepers may be altered according to circumstances. The sleepers may be made much wider with a proportionate small increase of expense. The thin terresin, without gravel, can be used with great advantage to cover the surface of the wooden sleepers already laying, which after that preparation will last longer. In case of using the terresin for this purpose, I expect a commission of 11. for every 1,000 pieces thus covered, and if it is employed for covering roofs, bridges, viaducts, houses, pavements, floors, &c. 2d. for the square yard. For those different purposes it is advisable to add about 3 to 10 per cent. of animal grease, tallow, train-oil &c. For floors, pavements, &c. the same compound is used as for sleepers, without any grease.

Regarding the resistance against pressure, it is to be observed that sleepers on the Leipsic and Dresden Railway have undergone, without the least alteration, the pressure of the heariest trains, with 20 ton locomotives. Their firmness and compactness is beyond all doubt, and their cohesion so great, that it was only with great difficulty that a sleeper of this kind could be broken up with iron chisels and

I should be extremely pleased if Boards of directon and engineers would give the invention a fair chance, by trying 200 or 300 sleepers. I intend to send some sleepers to Messrs. Johnson, Cammell & Co. for general inspection. These specimens are to be exhibited at the Cyclops Steel Works, Sheffield, and at the office of the said house, 19, Great George street, Westminster, London.

#### Broceedings of Bocieties.

INSTITUTION OF CIVIL ENGINEERS .- March 28. General Meeting.—Mr. J. FIELD, President, in the chair.—The paper read was 'The Engineering of the Rhine and the Moselle,' by Mr. G. B. N. Jackson. This communication was written during a short visit This communication was written during a stort visit made to Holland for the purpose of inspecting personally the works with which the author had become familiar in the writings of Beaudemoulin, Vanden Bergh, Desfontaines, Hibbert, Krayenhoff, Ockhart, and Wiebeking. It commenced with tracing the geographical course of the Rhine from its source on the Badus, in the canton of the Grisons, to its numerous outfalls into the sea. It then treated at considerable length of the geological character of the country through which the river and its branches thus traversed. The ancient works, as far back as the time of the Romans, were then briefly described; and the general state of the bed of the river, with the comparative levels, the inclination and the velocity of the stream at the commencement of the modern works, were then laid down in a tabular form, as points of data; and then the capability of the Rhine for forming banks by warping, or depo-siting the matter held in suspension, was discussed. The remainder of the first part of the paper was occupied by descriptions of the modes of straightening the bed of the river, and of constructing the dams, weirs, division arms, spurs and shore works, and the method of blasting the rocks, which latter considerably impeded the course of the stream. Our limits will not permit us to follow the details of these works, which differ so essentially from any in our own country, but the whole proceedings appeared to be given with such precision that the paper, when it is published at length, with the copious details with which it was illustrated, will form a most interesting portion of the minutes of proceedings. The second part of the paper, containing an account of the engineering works on the Moselle, compiled chiefly from a paper by M. Vanden Bergh, the eminent engineer under whose direction the works had been executed, was reserved for reading at the meeting of Tuesday, the 4th of April.

#### Official Papers.

SHREWSBURY AND CHESTER.

Engineer's Report for the Meeting, Feb. 22 (p. 146). During the past half-year the works on the main line

During the past half-year the works on the main line from Ruabon to Shrewsbury have made steady progress, and the amount of money I was authorized to expend on the works has brought them to the following position.

Earthwork.—At the Shrewsbury end of the line the heaviest cutting is at Hencott, and there remains 43.875 cubic yards to be shifted of the 140,000 stated in my last Report. This will be completed within four months. At Stanwarding is the completed within four months. cubic yards to be shifted of the 140,000 stated in my last Report. This will be completed within four months. At Stanwardine, in the central portion of the line, there has to be shifted 21,668 cubic yards and 12,707 cubic yards only, it two separate cuttings, of the 90,000 cubic yards stated in my last Report. This will also be completed within four months from the present time. The whole of the earthwork from Stanwardine to Presqueene, near Chirk, will be completed in a month. Through Chirk parish and in Ruabon parish the heavist contlinent now require to he doe. The chief in a month. Through Chirk parish and in Ruabon parish the heaviest earthwork now remains to be done. The chief point is the cutting between the Dee Vladuct and Ruabon, and 102,462 cubic yards remain to be shifted of the 170,000 stated in my last Report. This cutting the contractor assures me he will be able to complete by the end of July.

Permanent Way.—Of the whole distance from Ruabon to Shrewsbury, in length 25½ miles, the forming of the line ready for permanent way has been completed for 10½ miles, the ballasting has been laid on 13 miles, and the rails are now permanently laid for 11½ miles of since line. Within

now permanently laid for 11½ miles of single line. Within five months the permanent way will be laid from the Dee Valley to Shrewsbury. It is proposed to open the portion of the railway from Gobowen to Oswestry, and from Gobowen to Shrewsbury, with a single line of way.

**Manonry and Bridges.**—There are twenty-nine bridges for the railway and subjected to the principle of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the p

turnetkes and public roads, of which thirteen are completed and nine in progress. There are fifteen bridges for other roads, of which thirteen are completed. The bridge over the roads, of which thirteen are completed. The bridge over the river Perry is completed, and also that over the Ellesmere and Chester Canal, at Heathhouse. The Chirk Viaduct has made corresponding progress: the total length of piers and abutments is 836 ft., and 594 ft. are now completed, leaving 272 ft. to be done. The two large timber arches, which it became necessary to substitute over the slopes of the valley at each end, are now ready for fixing. A great portion of the materials for the intermediate arches is prepared, and the viaduct can peakly be completed by the middle of July. this viaduct can easily be completed by the middle of July. The Dee Viaduct still remains the key to the opening of the line. The total length of piers and abutments is 1,390 ft., of which 1,245 ft. have been completed, and 145 ft. remain to be done. Of the nineteen arches (which are semicircular, and 60 ft. span), five are completed and three are in proand 60 ft. span), five are completed and three are in progress. I may say there is an amount of arching done equivalent to six arches out of the nineteen, leaving thirteen to be completed. The contractor has engaged to have the permanent way joined along the viaduct by the lat of August next. To do so will require a great effort to be made, and for this object no exertion shall be spared. On the branch from Gobowen to Oswestry the works are very light, and those will be pressed forward, so that the line may be opened to Oswestry and Shrewsbury at the same time. The works of the joint station at Shrewsbury are progressing, so as to be available for the traffic of this company on the completion of the line to Shrewsbury. The portion of the line opened is in excellent order, and the cost of maintenance of way has been very moderate for a newly opened line. Extensive is in excellent order, and the cost of maintenance of way has been very moderate for a newly opened line. Extensive accommodation for the goods traffic has been provided at the different stations. On the Minera branch, subsidiary branches for the accommodation of the ceal-works have been completed to the extent of three miles-about one mile additional is now in progress. These branches will give great accommedation to the coal-proprietors, and will soon cause an extension of the get of coal, which will act most favourably on your receipts, Chester, Jan. 31. H. ROBERTSON.

#### SHROPSHIKE UNION.

Engineers' Report for the Meeting, Feb. 29 (p. 170). The works between Shrewsbury and Wellington, under The works between Shrewsbury and Wellington, under the management of the joint committee of the Shrop-hire Union and Shrewsbury and Birmingham, have been pro-gressing steadily since our last Report. About one-fourth of the whole quantity of excavation is fluished, several bridges both under and over the railway are completed, and others are in progress. The bridge over the river Severn, at Preston Boats, near Shrewsbury, the heaviest piece of building on this contract, is commenced, and the stone-work of the river pier sufficiently advanced above the water level to insure this bridge being carried on without any further delay. From Wellington to Stafford (contracts Nos. 1 and 2) the contractors are actively employed on most parts turther delay. From Wellington to Stafford (contracts Nos. 1 and 2) the contractors are actively employed on most parts of the line, having now obtained possession of the whole of the land, with the exception or about one mile and a half-inearly every excavation and embankment is in progress, and about three miles of road ready for the permanent rails, which are being half down. The brickwork and masoury are proceeding favourably, nine bridges being completed and thirteen in progress; and we may here remark that the works on these two contracts are of an easy character, unattended with any difficulties, and the opening of the line from Sirewsbury to Stafford depends entirely upon the completion of the works between Shrewsbury and Wellington, where every exertion will be made during the ensuing spring and summer to expedite them. The station at Shrewsbury is progressing steadily, and with sufficient activity to be finished by the time required. The other stations along, the line will be contracted for during the summer. We refrain from naming the period of completion until our next Report, when the works will be in a more advanced state, and we shall be enabled to speak with greater confidence on this point, although we do not, at present, apprehend the opening of the line will be deferred much beyond the time originally contemplated.

Birmingham, Feb. 17.

W. Bakes.

#### Progress of Works.

NORTH STAFFORDSHIRE (Norton Bridge to Stoke). The line is to be opened on the 3rd inst. for goods traffic, and on the 17th for the cor veyance of passen-The various manufacturir g and pottery establishments look forward to the 'event as one affording them a desideratum long hop'ed for.

SOUTH DEVON.—It is ged erally rumoured that this line will be opened for traffic on the 1st of May. The Plymouth Herald states that the station at Laira is nearly ready, and on every part of the un-finished portion of the line the greatest possible exertions are being made to complete the works. The atmospheric 'system continues, according to the

same journal, to work well.

SOUTH-EASTERN (Folkstone) .- The bridge recently constructed ot a large outlay under the engineer, Mr. Bull, is about to assume a novel appearance. Several workmen, says the Canterbury Journal, during the past week have been engaged erecting stages, prior to the alteration of the principle. The ends of the bridge having dropped, so as to fail in acting upon the rollers provided for that purpose, it has been deemed expedient to suspend them by iron rods. so as to keep the sides and centre curved ribs in their respective places. When finished, the bridge may be aptly termed a swivel and suspension bridge.

South Wales .- The works upon this line, says the Bristol Mirror, in our immediate neighbourhood, as well as those of Cardiff, Swansea, &c., and towards Chepstow, are progressing very satisfactorily, every exhibiting extension and improvement.

Syston and Peterborough. - March 20. line was opened throughout for coal traffic. About 1 p.m., a train, consisting of two engines and thirtynine coal-laden trucks, arrived at the Stamford station; and on the following morning the best pit coals were offered at 14s. 6d. per ton; inferior descriptions in proportion. These coals, says the Lincolnshire Chronicle, which were brought from the Leicestershire pits, are by no means inferior in quality to those for which the inhabitants of Stamford have been paying 20s. per ton, so that the saving to some establishments will be immense.

WAKEFIELD, PONTEFRACT AND GOOLE.—Capt.

Laffan, the Government Inspector, accompanied by Messrs. Harris and Hawkshaw, engineers, and several officials of the company, went over the line on the 22nd ult. After a minute inspection of the whole of the works, he expressed himself highly pleased with their general appearance and stability.

#### Law Entelligence.

Costs .- In the Vice-Chancellor's Court, ex parte the Great Northern, Mr. Craig presented a petition for the payment of a certain sum of money out of court, paid in under the 85th section of the Lands' Clauses Act, until the price should be agreed upon. The land, which was situated at Hornsey, had been valued by the verdict of a jury, and the purchasemoney paid by the company .- Mr. Pole sought that certain costs should be first provided for. The company had taken possession of the land before the price had been agreed upon, or the verdict of a jury, and an injunction had been granted. The money having been paid by the company, this was an application for the repayment to the company of the money paid in, and before they could have it so paid back they were bound to pay the costs of the injunction, and of making out the title, &c., and his Honour had decided in the case of the South-Western that such a fund was liable to costs .- His Honour observed that his opinion was that the 80th section did include a case like the present, and the Court was bound to give effect to the words of that section. There must be a reference to the Master to tax the costs.

RESTRICTION OF WORKS .- March 29 .- In the same Court, in re Holden v. the North Staffordshire, his Honour sat specially to hear a motion for an injunction to restrain the company from making an arch over the High-street, Leanington, nearer to the Crown Hotel than the line delineated on the plan deposited with the clerk of the Crown. A prelimi-nary objection was made that the works had been in progress for two months, and that the plaintiff, being aware of what was doing, was now too late in his application for an injunction; but it was answered that the scaffolding had hitherto concealed the works from public view, and his Honour overruled the objection. It was finally arranged that the motion should not now be made, and that it should be renewed on the first day of sitting after the vacation. which will be on the 10th of April.

March 28 .- In the same Court, ex parte the Chester and Holyhead, in this case—a petition for the payment of the costs incurred in the taking of land for the

railway, the company a few days since, under the 122nd order of May, objected at the hearing to part of the petition.—His Honour deferred pronouncing an opinion.—This day, the Vice-Chancellor said that he thought the petition was about one-third longer than was necessary, and he should therefore direct the costs occasioned by such proportion to be paid to the company by the petitioners.

On the same day, in the same Court, in re the South-Eastern, the only question was, whether the company were bound to pay the costs of a second application that money deposited in court should be invested .- The Vice-Chancellor said in his opinion the company were bound in this case to pay the costs.

COLLISION.—March 29.—On the HOME CIRCUIT, W. Jones, engine-driver, and L. Fleming, stoker, in the service of the South-Western, were indicted for the manslaughter of D. Markland.— On the 14th of January, the deceased, an engine-driver, started with a train from Southampton at 6 p.m., and stopped the train for some slight temporary repairs to the engine, within a couple of miles of the Woking station. While the deceased was under the Woking station. his engine, it appeared that a luggage train, composed of thirty-one carriages and one engine and tender, upon which were the two defendants, came up, and ran into the passenger train, crushing the carriages together and driving the engine over the unfortunate deceased, who received such injury as to cause immediate death. It was shown that the stationary train had three red lamps at the rear, notifying that the prisoners should have stopped, but which they disregarded (see ante, p. 54 et seq.).—Mr. Justice Coleridge, in summing up, said that although no doubt the law required all persons having the charge and management of powers of this description should use the utmost care in that management, still, even if they should be of opinion that the persons having the charge of the passenger or stationary train had not done all that was required of them, if they were satisfied, from the evidence, that the defendants might have seen the lights at the rear of it, and that it was owing to their negligence and not keeping a proper look out that the collision and consequent fatal result happened, they would, under such circumstances, be still amenable to the charge of manslaughter.—The jury returned a verdict of "Not Guilty."

Alarch 21.—On the MIDLAND CIRCUIT, in re Bailey

v. Macaulay, the plaintiff, an advertising agent in London, sued the defendant, a surgeon at Leicester, a member of the committee of the Midland Union, for the sum of 9721. 8s. 6d., due for advertising and costs of action, brought by plaintiff against the provisional committee. The company was disthe provisional committee. The company was dissolved in the beginning of 1846, and a sum of 160l. was fixed to be paid by each member of the committee in discharge of liabilities. The plaintiff allowed himself to be made the means of compelling some defaulting members to pay by bringing actions In some of these suits he had paid the against them. costs. The defendant was one of a sub-committee charged with the conduct of those actions.-The learned Judge was of opinion that the defendant, by becoming a member of the sub-committee, might have pledged himself to secure the plaintiff against loss in bringing those actions.—The jury, however, found a verdict for the defendant.

LIABILITY OF CARRIERS .- March 23 .- On the NORTHERN CIRCUIT, in re Shaw v. the York and North Midland, the plaintiff is a horse dealer. On the 7th of September nine horses, valued at 175 guineas each. were brought to the station and placed in three horse-boxes. Mr. Shaw, however, pointed out to Oates, the platform superintendent, that one of the boxes was defective, and refused to allow the horse in the stall nearest to the defect to proceed in it. fruitless attempt was made to repair the stall. Mr. Shaw again protested, but Oates refused to order out another carriage, and the horses went away by the 10 a.m. train. On arriving at Normanton, Mr. Shaw's man went to see if the horses were safe, and on looking in he found that the fastening of the beam in the defective stall had given way, and one of the horses had thrown himself down and was hung up by the head dead. He communicated this fact to Mr. Shaw, who wished to have the dead horse out, but he was told that the train could not be delayed, and that if the horse must be taken out, the box in which he was must follow by the next train. The result was that he was not taken out, and all the horses went on to the place of their destination .- Witnesses for the company declared that Mr. Shaw made no complaint about any of the boxes. After the horses were put into the box, Mr. Shaw expressed himself perfectly satisfied that the horses had been all well got in.-The jury found a verdict for the plaintiff—damages

COMPENSATION .- March 25 .- ETON .- Before the

Rev. T. Carter and Major Bent.—This was a case in which Mr. J. Reffell, a tenant of Mr. T. P. Williams, M.P., was the claimant against the Windsor, Staines and South-Western, under the provisions of the Lands Clauses Consolidation Act.—Mr. Atwood, of Mortlake, surveyor, put in his valuation amounting to 88l. 15s., and stated that he had included in his estimate the crop now growing-two years' profit on the crop, and the injury done to the whole field by severance. Phinn animadverted strongly on the course adopted by the advisers of the claimant as being reprehensible. Every attempt had been made by them to put the company to expense and inconvenience. Acting on their advice the claimant had broken a verbal agreement, entered into with the company, and when the question was brought before the magistrates for deision an attempt had been made, by a technical objection, to interpose further delay, in order that the works of the company might be hindered. It was the desire, no less than the interest of the South-Western, to act with fairness and liberality towards all claimants, but they would not permit themselves to be wantonly pillaged. Never had more absurd evidence been given in any court than that with which Mr. Atwood had favoured them that day, in support of his preposterous claim. The claim originally amounted to 100%, but that sum was too much even for Mr. Atwood, who felt himself obliged to reduce it to 881. 15s. The learned counsel commented on Mr. Atwood's evidence, and his utter want of information on those points, by a knowlege of which alone a valuer was able to estimate correctly the amount of compensation to which a tenant was entitled at the hands of a company requiring possession of the land held by him before the expiration of his tenancy. He called Mr. Buckland, of Wraysbury, who stated he had been engaged in farming for upwards of twenty-five years, and that his residence was situate close to the claimant's property. He was employed by the company astheir local valuer, and as such had been requested by the company to settle with Mr. Reffell. His general instructions were to act liberally towards the tenants. He visited Mr. Reffell upon the subject of his compensation and requested him to name his surveyor .- Mr. Reffell declined doing so, stating that he was quite contented to leave the matter in his (witness's) hands—as, between Mr. Reffell and the company. In consideration of his not having put the company to any expense in the employment of a surveyor, he assessed the amount of compensation at 45t.—Mr. Reffell agreed to this sum—and witness reported it to Mr. Drake as settled. He was not aware of the claimant being dissatisfied with the sum fixed by witness until the money was sent to him, when he declined receiving it, assigning as a reason, that he could not take it as he had no authority from his landlord to give up possession. On the following evening the claimant's son came to witness's house and said his father would not take 45l. as he did not consider it sufficient. Witness gave the details of his estimate, which for one year amounted to 231. 7s. 6d.

—The magistrates after consultation awarded the sum of 33l. 9s. 6d. as the amount of compensation to be paid by the company to the claimant.—An offer was then made on the part of the company to add for the second year's interest, in accordance with the agreement previously made, which offer wasaccepted by the claimant's counsel.—Mr. Williams applied on the part of the claimant for the costs of the proceedings; which application was refused, the sum previously offered by the company being larger than that which the magistrates had awarded.

INSECURITY OF WORKS.—March 22.—In the High COURT OF JUSTICIARY, Edinburgh, Mr. H. H. M'Lure, C.E., Dumfries, late the resident engineer on the Dun-dec and Perth, Mr. G. Simmie, present inspector, and Mr. R. Baird, present superintendent of passenger traffic, were charged with culpable homicide, as also of careless and culpable neglect of duty. The indictment bore that the first-named individual had given orders as to the construction of a skew bridge, at Pilmore, parish of Longforgan, Perthshire, at curved part of the line, and had departed from the contract plan, which deviation had the effect of making the curvature at the point unequal. chairs of the rails were said to be at that point also insecurely fastened, only one of the two spikes penetrating the bearing beams, the other projecting merely through the planking. Mr. Simmle was charged for not having observed the insufficient state of the chairs and other works in connexion with the bridge, and Mr. Baird for authorizing the sending of an engine (one of Stephenson's patent) along the line, in charge of a train unsuited to the curvature at the point, and for giving directions for passing the curves at too rapid a speed. The immediate consequence of this was, that the engine of a train, which left Perth at 10 30 a.m. on the 22nd of July last, went off the line by the starting of a rail on Pilmore

Bridge, dragging several carriages after it, and went into an adjacent bean field, whereby Mr. J. Cargill, jun., of Hollingside, Durham, was killed; Mr. E. M'Glashan, bookseller, Edinburgh, had his leg broken, and several other passengers were seriously injured .-On the evidence in behalf of the first two parties being concluded, the Lord Advocate, after remarking that, considering the information which had been laid before him, he could not, consistently with the discharge of his duty, do otherwise than bring the gentlemen at the bar to trial, said he was glad to gentiemen at the par to trial, said he was glad to inform the jury that the evidence had completely exculpated Mr. Simmie (inspector) of any culpability. With respect to him therefore he withdrew the charge entirely. As to Mr. Baird (superintendent), he could not, after the strong evidence adduced in defence, and especially of the two last witnesses, come to the conclusion that he was criminally responsible for what had occurred, and therefore he With regard withdrew the charge against him also. withdrew the charge against him also. With regard to Mr. M'Lure (engineer), he thought the case was different, for it had been proved that, as resident engineer on the line, he had made an important deviation on the curve at Pilmore Bridge from the contract plan, without communicating or consulting with the chief engineer, Mr. Miller. However, looking to the whole case, he had resolved, but not without considerable hesitation, to withdraw the charge against Mr. M'Lure also.-The Lord Justice Clark, in commenting on the case, thought the trial of the utmost importance, as the result would be increased care in the formation of railways.

March 27 .- In the SHERIFF'S CRIMINAL COURT, Dumfries, H. Hart, railway agent for Messrs. Stephenson & Co., contractors, residing in Lockerby, was placed at the bar, accused of culpable neglect of duty, in so far as he had allowed a precipitous bank, to the denth of 16 ft.. on the Caledonian, at or near the farm-house of Broomhouses, in the parish of Dryfesdale, to remain unfenced; in consequence whereof, on the night of the 20th or morning of the 21st of June last, W. Armstrong and D. Stothert, when driving in a gig, were precipitated, along with the horse and a gig, dwn the said bank.—As the evidence was very contradictory on the main fact as to the fence, the charge was ultimately withdrawn.—The panel was

then dismissed from the bar.

#### Parliamentary Proceedings.

LORDS.

March 24.—Audit of Accounts.—On the motion of Lord Monteagle, the bill was read a third time and passed.

COMMONS.

March 24.-Bills.-On the motion of Mr. G. H. CAVENDISH, returns were ordered, stating the various railway bills to which objections have been taken, or opposition made by the officers of the duchy of Lancaster, during the sessions of 1845, 1846 and 1847; the nature of the objections made in each case, where it can be defined; stating at what stage of the bill such objections were first notified to the company; the nature of the claims made upon such companies and the amount of compensation required. Of the number of preliminary inquiries and surveys made in regard to such railways; stating the names of the officers employed in such surveys, &c., and how paid, whether by salary, or if not, how paid. And of the total expenses incurred in each case by such opposition, and how defrayed .- Fares .- Mr. BANKES gave notice of his intention to move, on an early day, a resolution for the purpose of securing a diminished rate of charges to the public upon all railways in the United Kingdom.—Chester and Holyhead (Power to Purchase, &c.).—Mr. FOSTER presented thirteen petitions against this bill; and on the motion (by Mr. GLYN) that it be read a second time, declared that it was promoted solely to constitute the proprietors a steamboat as well as a railway company—thus throwing a monopoly of traffic, by sea as well as by land, into their hands. He moved that the bill be read a their hands. He moved that the bill be read a second time that day six months.—Mr. GLYN defended the bill, stating, however, that if existing companies would undertake the service proposed, he would withdraw that part of it, as the opposition arose from a feeling on the part of existing steampacket companies that if the powers sought by this bill were conferred the charges between Holyhead and Ireland, &c., would necessarily be reduced. F. French thought they ought not to deviate from the decision of the Holyhead committee, who were of opinion that neither directly nor indirectly should such powers be given to any railway company.—After a few words from Mr. H. Berkeley, Sir W. Heathcote and Sir W. Verner, Mr. Gladstone said that although this bill proposed to allow a company to trade for other purposes than those for which they were incorporated, yet he did not think the house

 $\mathbf{U}$ 

ought to reject it without special examination. therefore suggested that it ought to be postponed till Monday.-Mr. GLYN acquiesced in this course, and the second reading of the bill was put off till Monday.

— Great Western (Branch from Windsor to Slough). -On the order of the day for reading this bill a second time, Mr. GLADSTONE hoped that a noble lord at the head of the Woods and Forests would interfere to effect a satisfactory adjustment of the differences between the rival companies. There certainly should not be three lines to Eton, yet one had already been agreed to, and another had passed the second reading. The present bill would affect materially the interests of the crown and the college, and some amicable arrangement was necessary to prevent the threatened and protracted contest, not only between the college and the company, but between the Great Western and the South-Western.—Lord Morpeth would endeavour to effect an adjustment of the dispute, but he despaired of succeeding. He thought that the Great Western, who had so long occupied that district, were fairly entitled to have this measure sent before a committee, particularly as the South-Western had been granted power to make a line to Windsor.—Mr. Chipps believed the Great Western would be ready to leave the question absolutely to the first Commissioner of Woods and Forests, or any other party selected by the Government.—Mr. CHAP-LIN, on the part of the South-Western, wished to state that thev were not less amicably disposed. Last session a bill had been suspended to allow the two companies to arrange matters; but notwithstanding the disposition of the noble lord, the negotiations failed.—Lord Lincoln hoped that, after the feeling expressed by the two hon, gentlemen who had just spoken, the noble lord would withdraw his repudiation of mediating between the two parties. The noble lord thought that if any company were to obtain an entrance into Windsor, it was the Great Western. There were circumstances which might render that a sine qud non; but if an entrance were allowed to the Great Western on the one side, the South Western would press for an entrance on the other, and money would be spent in useless litigation.

Lord Morpeth observed that so far from repudiatassistance for the arrangement of the differences.

The bill was then read a second time.

North British (No. 2, Junction with Leith Branch of the Edinburgh and Dalkeith, &c.).— On the order of the day for the second reading, Sir G. CLERK said it was precisely the same scheme as that rejected by the committee last year when opposed, at great expense, by Mr. Miller, whose property it would greatly cut up and damage. He hoped the house would inter-pose to prevent great companies bringing forward, session after session, bills already rejected, and would adhere to the principle adopted on Tuesday last by so large a majority. He moved that the bill be read a second time that day six months.—Mr. MACKENZIE supported the bill, which improved upon that proposed last year. All the then opposing parties, with the exception of Mr. Miller, were favourable to the present bill.—Mr. Cowan supported the second reading—Mr. Sotheron had been a member of the committee of last session to which the bill had been referred, and the committee had unanimously agreed that the line would not contribute to the public benefit. As his right hon. friend (Sir G. Clerk) had examined the plans deposited this year, and had found them to correspond with those presented last session, he should join him in voting against the second reading of the bill.—The house divided—for the second reading, 60; against it, 105; majority, 45. The bill is consequently lost.

March 27.—Chester and Holyhead (Power to Purchase, &c.).—Mr. GLYN moved that this bill be now read a second time.-Mr. GROGAN objected, on the ground that it empowered the company to establish steam-boats between Holyhead and Dublin, and thus gave them a monopoly in the transit of passengers. He moved as an amendment that the bill be read a second time that day six months.—Mr. F. FRENCH observed that the debate had been adjourned to give the Government an opportunity of stating their course. A committee, over which the Secretary of the Admiralty presided, had last year reported that the powers given under this bill were such as ought not to be conferred on a railway company .- Mr. LABOUCHERE said the question was whether the house, under any circumstances, would allow railway companies to become possessors of the steam navigation between two places; and if so, under what restrictions? He had been for some time in communication with the Ruilway Board; and every endeavour had been made to procure the best information. The question was also about to receive the consideration of the Select Committee on Railways. The best course seemed to be that the house should allow the bill to be read a it, 27; majority, 98.—Liverpool, Manchester and

second time. It could not be considered in committee till after Easter; and the question might be revived on the report. In the meantime the house would obtain, in the shape of a report, either from the railway committee or from the Railway Department, all the necessary information.—Sir R. INGLIS considered that the question whether a railway company should be allowed to have the exclusive communication by water as well as that by land between certain points was a question of principle, on which the house was as competent to decide now as at any other time. - Mr. FAGAN trusted the house would not adopt the recommendation of the President of the Board of Trade, but would reject it at once, because, if passed, it would establish a monopoly of steam communication between England and Ireland, and would destroy the Liverpool steamboat companies .-Sir W. HEATHCOATE supported the second reading .-Mr. Hudson was not connected with any company likely to be placed in a situation to require these powers; but he had paid some attention to the principle of this application, and he could see no reable objection to allowing railway companies to be steamboat companies also. The contract with the public was to give them a quicker and speedier conveyance to Dublin; and he asked whether it would not be better to allow the whole of the communication between Chester and Dublin to be in the hands of this company rather than to be shared with an independent company? The conveyance, he was sure, would be both quicker and cheaper than if it were divided. Besides, two bills involving similar powers had passed their second reading without objection only the other day, and why not this one also? It was said that the bill would establish a monopoly. A well-regulated monopoly was better than competition. The house had power to fix the charges of the company and prevent abuse in that respect. He trusted therefore the house would concur with the right hon. gentleman (the President of the Board of Trade) and allow the bill to be read a second time.—Sir De L. Evans hoped that the house would not refuse to advance the bill its present stage.-Mr. HUME was of opinion the house ought to be cautious before it granted such a monopoly. As the question was to go before the general committee as well as the Railway Board, it would be better to suspend the proceeding with the bill until full information by a report on the subject was laid before the house. He moved that the debate be now adjourned .- Mr. Forster seconded this proposition.—Sir C. Douglas opposed the adjournment, as being calculated to inflict a great hard-ship upon the promoters of the bill.—Mr. MACGREGOR supported the second reading. — Mr. LABOUCHERE repeated that he wished to be understood as at present offering no opinion upon the principle of the bill, but at the same time he admitted that if the powers sought were to be granted at all, this com-pany had every claim to have their case heard.— After a few words in explanation from Sir R. H. INGLIS, Mr. GLADSTONE expressed his surprise that two bills, conferring on other companies similar powers, should have passed a second reading without the special notice to the principle of the measure being asked by the railway department of the Government. Though he entertained the strongest prejudices against the privileges of this bill, still he thought fair grounds existed for its second reading .- Mr. Mangles expressed surprise at the opposition offered by Irish members to this bill, which would be a benefit to the Irish community generally-Lord RENDLE-SHAM supported the second reading .- Mr. HUME withdrew his amendment. - After a few words from Mr. GROGAN and Col. DUNNE, the motion for a second reading was agreed to .- Dundee and Perth (Tay Crossing).—On the motion for the second reading, Mr. H. H. DRUMMOND moved that it should be read a second time that day six months.—Mr. Duncan supported the bill, and stated that the works had the sanction of the Admiralty.—Mr. H. DRUMMOND opposed the second reading.—The house divided for the second reading, 89; against it, 57; majority, 32.

Edinburgh and Perth (with Branches).—On the motion for the second reading, Mr. ELLICE, jun., opposed it, observing that the scheme had already been three times rejected, and ought not to have again been introduced into the house. As no new circumstances had been urged, he hoped the house would sustain its decision.-Major BERESFORD said the bill had been lost last year in the committee by a majority of one. He complained of a statement put forward by the promoters of the bill as to his conduct on the committee, and said that the committee had been impressed with the belief that sufficient traffic had not been shown .- Mr. LOCKE denied that this was the same scheme as that previously rejected .- Major C. Bruce opposed the bill as a waste of money.—The

Newcastle Junction (Abandonment and Dissolution). -On the motion for the second reading, Mr. W. PATTEN opposed it on the ground that the majority of the shareholders were favourable to the line being proceeded with.-Mr. HUTT supported the bill, contending that a majority were in favour of the dissolution.—Mr. Elliot also supported the measure.—Mr. Bright said the bill came before the house under false pretences; its object was merely to transfer power from one set of directors to another, and there was no bond fide intention of abandoning the line.-Mr. Hupson believed that the bill was not promoted by the shareholders generally; he therefore thought the house ought not to assent to it.-Mr. FOSTER and Mr. AGLIONBY supported the second reading.—The house divided—for the second reading, 76; against it, 74; majority, 2. The bill was then read a second time.—North Staffordshire (Deviation at Wellington) .- On the motion for the second reading of this bill, Mr. HINDLEY moved that it be read that day six months, on the ground that it would do an injury to an individual, Sir H. Every, without conferring any public advantage. — Mr. Colville seconded the amendment.—Mr. RICARDO said that the line which was before the house was the very line proposed by Sir H. Every himself when he proposed one in opposition to the North Staffordshire. This was a question of money between the company and that gentle-man, who had asked 25,000*l*. for 20 acres of land, and which sum the company had refused to give. The house divided—for the second reading, 143; against it, 15; majority, 128. The bill was then read a second time.

March 28 .- Railway Commissioners .- Mr. BANKES, in moving "that in the opinion of this house the powers, rights and authority now vested by the Act 9 & 10 Vict. c. 105. in the Commissioners of Railways, may be so regulated as to secure their efficient execution at a greatly diminished rate of charge to the public," observed, that a commission of such an extent and charge had never been contemplated. A Board had sprung into existence consisting of no less than three Commissioners at high salaries, with a large staff of subordinate clerks, messengers and other contingents, the expense of which in the estimate for last year amounted to no less than 17,000l. Great as was the patronage and influence of this Board, they had no defined duties; for the bill appointing their powers, from its obnoxious and meddling character, had after much opposition been abandoned by the propounder himself. And yet the Board of Commissioners, with all their contingents of clerks and messengers, had nothing at all to do. They had signally failed in their offices. It had happened only within a few weeks, that two railway bills which had come before the house with the recommendation of the Railway Board had been negatived by large majorities. Was not such a Board, then, an injury rather than a benefit, in so far as it increased the expenses of a bill by an investigation which, when performed, appeared to carry no warrant of authority? At a time, therefore, when every possible reduction was called for that could be made without injury, he was enabled to point out this Board as a source from which a saving not altogether inconsiderable might be made. He thought the duties could be now per-formed by the Board of Trade. When railway mat-ters were first referred to the Board of Trade, the annual expense was 1,972l. That expense was afterwards increased to 3,302/., in consequence of certain new arrangements; but under the new arrangement the charge in the first year was 17,000l. It was true that the charge stood in the present estimates at only 12,0001.; but that sum by no means covered the whole amount of charge arising out of the Government control; for he had been surprised to find items in the navy estimates relating also to railways. A Board had been established for railway duties in connexion with the Admiralty, at an expense appearing in the navy estimates of 3,630*l*., which was to be added to 12,000l. avowedly for the Railway Board, and which appeared in the miscellaneous estimates. Nor, as he believed, was this all, for he had been given to understand that when they came to the Ordnance estimates something of the same kind would be found there also. The motion would be allowed to be opportune, inasmuch as they had now a vacancy at this Board, the chief Commissioner having ceased to hold a seat in the house. This was the fitting period to consider whether it was not advisable to re-invest the Board of Trade with all its former powers in relation to railway matters, and so do away with the necessity for the new commission. The president and vice-president were already in the house. They were gentlemen thoroughly competent to the superintendence of all railway subjects; and it was quite plain that just now they had very little to do. If this resolution was agreed to, he should give notice of a bill to repeal the 9 & 10 Vict. c. 105. The question, it appeared

Digitized by GOOGLE

to him, was especially one of economy, and it was for the house to consider if an opportunity was not now offered to them of effecting a judicious reduction in one portion of the expenditure.-The CHANCELLOR OF THE EXCHEQUER thought that the hon. member was mistaken as to the existence of any department of the Ordnance connected with the Railway Board. With regard to the statement of the hon. gentleman that some of the officials of the Admiralty were paid for services rendered only to the Railway Board, he would remind him that this was an arrangement in express obedience to the wishes of the house. defended the constitution of the Board, which had been well considered by the house. The hon, member was greatly mistaken in supposing that the expenses of the Board amounted to so much as 17,000l. per annum. (Mr. BANKES: 17,000l. the first year, 12,000l. this year.) That was the case: the expense stood on the estimates as 12,000l. a year. He was sorry that this motion should have come on when Mr. Strutt had ceased to be a member of the house. The business transacted by the Railway Board last year had been exactly twice the amount of the busi-Board of Trade in 1845; and this year, up to this time, the business done by the Railway Board was about one-third of the entire business brought before it in the whole twelve months of 1847. This statement would at once show to the house that the duties of the commission were considerably on the increase and, this being the case, it would hardly appear possible to reduce very considerably that establishment. After expressing his regret at the withdrawal of Mr. Strutt from public life, he said the Government proposed to appoint some member of the Board of Trade as an unpaid Commissioner, to direct the proceedings of the Board; and they would then be put in a posi-tion to judge whether or not it was advisable to name This subject, the house any successor to Mr. Strutt. was aware, would come under the consideration of the committee appointed to inquire into the miscellaneous expenditure. It would be far better for the house to wait until the Report of the committee was before them before taking such a step as that suggested by the hon. member for Dorsetshire, and the Government would readily acquiesce in any recommendation which might then be made .-HUDSON had no wish whatever to deprive the Government of their present supervision over railway matters—all he desired was, that their supervision should be more economically administered. The right hon. gentleman had spoken of the heavy duties of the Railway Commission. He (Mr. Hudson) would give the house an instance of their activity. The other day an accident happened to a train in which he was travelling. The wheel of one of the carriages broke; and there was, of course, great alarm. Some gentleman who was in the train wrote an anonymous letter to the *Times*, describing the occurrence, and stating that the accident was attributable to Mr. Hudson having detained the train at Derby. The fact was, that they had had to change the engine at Derby, and that he (Mr. Hudson) had nothing to do with the delay; but what was the consequence. The Board cut the letter out of the *Times*, sent it down to the secretary to the company, and begged to ask if the directors had any explanation to give ! Of course no explanation was given; the letter was anonymous, the statement, as might be supposed, was utterly untrue, and if it was the custom of the commission to take notice of such letters as these, it was not surprising that their business should be greatly on the increase. It was his opinion that if the duties of the office were not exceeded, one man of common sense could do all the work, and give more satisfaction, too, than at present resulted from the labours of the distinguished gentlemen who received 12,000l. a-year. When the superintendence was exercised by the Board of Trade it was better done and more efficiently exercised; and he could assign a very good reason. The Commissioners had not sufficient employment for their time, and he had found, when in business, that when there was little to do things were neglected, and when there was plenty of employment everything went right. He was satisfied that a very large saving might be made by the abolition of the Board ; the railway superintendence ought not to cost more than 3,000l. a-year. He did not blame the Government for the Act establishing the Board; it was experimental, and Parliament was at that time in an excited state, and determined to manage every person's business, and railways amongst the rest. Why not send the business to the Board of Trade at once? Why did not the right hon, gen-tleman admit that the experiment had been tried, and found useless; that the Government and Parliament had done wrong? He thought it most unwise to refer this matter to a committee. It was not that railway men found fault with the Board; they did

not think it injurious to them as railway people; but, looking at the organization of the Board, he was sure the hon, member for Montrose must see that the superintendence could be managed at considerably less expense, and he did not see why the Board should be continued one hour longer.—Mr. V. SMITH was of opinion that, under the Act, there was no efficient control over railway companies, whereas the object of the Act was to supply a more efficient control. He hoped that, although the Act of last session had not, as the hon. member stated, given the necessary powers, Parliament would be disposed to give greater power to the public over railway companies.

—Mr. GLADSTONE said, the question before the house was not whether they should compel a control over railway companies, it was not even whether there should be from time to time an extension of control: it was only as to the organ or instrument which was to perform those duties. Parliament, he thought, committed a great error in erecting a body such as the Railway Board to exercise a control before it had determined what that control should be. A railway department-a commission-was erected to exercise powers which did not exist. The bill was founded upon a supposition that new powers were to be created. Had they been created? The house de-clined to give the powers last session, and they were now in 1848. He did not understand why the Prenow in 1848. He did not understand why the President and Vice-President of the Board of Trade should not resume the whole superintendence. Was a commission the most constitutional organ? He thought not. He thought there should be individual responsibility, and with responsibility there would be obligation; and unless the President and Vice-President of the Board of Trade were overcharged with business, nothing but their modesty need prevent them taking this department. Were they over-charged with business? He was sure that, during the present session, the Colonial department—the under secretary for that department having until recently been excluded from the house-must feel under obligations to the President of the Board of Trade, and this, he thought, might go some way to show that the railway business might be transferred to the President and Vice-President of the Board of Trade without inconvenience. The Chancellor of the Exchequer had said that the quantity of business before the Board of Trade was double what it was in 1845: but he had adopted a most fallacious criterion. namely, the number of papers. The number of return papers might increase the business to be performed by clerks and subordinate officers, but not that which the Commissioners themselves might have to perform, still less would it have the effect of imposing upon them new and arduous functions. It really did not appear to him to be an affair of any very great difficulty to put the whole matter upon a satisfactory footing. By setting apart two or three rooms for the purpose, with a small staff of subordinate officers and clerks, the right hon, gentleman might do the whole of the work as well, and more efficiently, as President of the Board of Trade than acting in any other capacity, or under any other name.-Mr. HUME believed that on the whole it would be much better to invest the President and the Vice-President of the Board of Trade with the functions relating to railways. The hon, and learned member for Dorset had referred to the Harbour and Railway Board, which existed in connexion with the Admiralty. Now, he would say that the cost of that did not exceed 350l. That commission had been appointed for the better protection of the tidal harbours, amongst other things, for the purpose of preventing navigable rivers being crossed Their Report distinctly showed their services. Of the various matters which Messrs. Bethune and Vetch now undertook, a considerable portion had formerly been referred to the Admiralty. ference between the expense of the former offices and the present constituted the whole expense to which the country was put by the appointment of that Board, and he was prepared to show that there was not any department more productive of public good than that was.—Mr. F. T. Barino had heard it said that the Railway Board had been appointed in contemplation of their having more onerous duties than had actually devolved upon them. If nothing more than that were asserted, he should at once agree that the Board was too expensive for its duties; but yet it would seem as if some hon, members desired that the house should suddenly come to a resolution to grant them further powers. Although he congratu-lated the right hon, gentleman opposite as to his new views on the subject of economy, he differed from him with respect to the management of railways, for he thought that they would find it necessary by and by to give further powers to those whose duty it would be to control that department of the public works. It was a mistake to attempt to combine the superintendence of railways with the Board of Trade.

His impression was, that to do so would be to make two bad offices. It would be, in his opinion, much better to create a separate and substantive office. At present there was no great civil department whose duty it was to look after the manner in which public works were conducted. He confessed that he hought they had much better wait for a report upon the subject.—Sir J. Graham did not think that the present was the exact opportunity for considering whether a new Minister of Public Works should be appointed. At present there were four officers whose duty it was to exercise a supervision in the matter of railways, and one of those officers was to have a seat in Parliament. Till within a very few years the labours gone through by these gentlemen were directly performed by one member of that house. He could not avoid observing that the hon, member for Montrose took the trouble to inform the house that a new era of economy had arisen. Now, he would venture to affirm that it was nothing but the revival of an old era. At the present moment every one concurred in thinking there was the utmost need that the public expenditure should be restrained by a firm hand on the part of Parliament. He thought Mr. Hume's hobby as to the Surveyors of Tidal Harbours had the very vice complained of in the Railway Board. He reminded the house of the manner in which Lord Dalhousie and his right hon, friend near him, both as president and vice-president of the Board of Trade, transacted an almost overwhelming amount of business quite separate from the ordinary business of the Board of Trade, and could not for a moment doubt the practicability of their continuing to transact the business of the railways in immediate connexion with the Board of Trade. If he could understand, as the hon. member for Montrose seemed to understand, that it was the intention of the Government to put an end to this Railway Board, and in a short time to come forward with a system connecting the existing control of railways, such as it was, with the Board of Trade, and adding, subject to the will of Parliament, further powers of supervision over railways, then he should say that the present motion was superfluous. -Mr. LABOUCHERE felt strongly the great disadvantage of discussing the present question in the absence of Mr. Strutt. It had been said that the duties of the Railway Commission could not be expected to in-If such was the opinion of the house, they might decide that a separate commission for railway affairs was unnecessary and inexpedient. Consequently, his chief objection to the present motion was, that it prejudged the question. It was intended, as he had been informed by Mr. Strutt, to lay on the table of the house, immediately before or after Easter, a full and detailed report, giving an account of what the duties of the Railway Commission had been, which he (Mr. Labouchere) thought would be found more arduous and considerable than had been described, and also what was suggested as the future course of legislation with respect to the management of railways. The house would also, at a future period, be in possession of the Report of the committee on the miscellaneous estimates, and information, taken together, would better enable the house to consider the whole subject. Something had Trade not having been said about the Board of onerous duties to perform, and that it might easily undertake this additional business. He hoped he had exhibited no disposition to shrink from any labour; and if, on experience, it should be found that the Board of Trade could satisfactorily transact the business referred to, no one would more cheerfully acknowledge the circumstance than himself. If it should be the pleasure of the house to unite these duties with the Board of Trade, he thought he should be deceiving the house if he held out much prospect of considerable economy from such an arrangement. This business could not be satisfactorily discharged by any head of department, whether a President of the Railway Commission or the President of the Board of Trade, unless he had the assistance of men not only holding the highest professional, but the highest personal character, and occupying a consi-derable station in life. He conceived it would be much better and cheaper to the public to retain the services of such well known men as Sir E. Ryan, Capt. Harness, and the hon. gentleman lately at the head of the railway department, whose characters were above all suspicion. He thought it would be better not to express any opinion on the present motion, as the postponement of the question would enable the house to come to a better decision. He would not meet the motion by a direct negative, but should propose the previous question.—After a few words from Sir H. VERMEY, the house divided, when the numbers were—for Mr. Bankes's motion, 56; for the previous question, 75; majority in favour of the previous question, 19.

BILL WITHDRAWN.-Edinburgh and Northern and Stirling and Dunfermline (Queensferry and Inverkeithing branches).

A NEW LOCOMOTIVE ENGINE is nearly completed, under the superintendence of Mr. M'Connell, of the London and North-Western. It is expected to prove the most powerful narrow-gauge engine ever yet built. The engine is on the outside cylinder princi-ple, and the dimensions of the principal parts are ple, and the dimensions of the principal parts are stated to be as follows:—Distance between the centres of the cylinders, 7 ft. 6 in.; ditto between the driving wheel and the training wheel, 10 ft. 6 in.; height of the fire-box, 5 ft. 5 in.; length the same; breadth 5 ft. 9\{\cdot\} in.—slightly overhanging the rails. Distance between the leading and driving wheels, 6 ft. 8 in.; the extreme bearing between the angles being 17 ft. 2 in. The driving wheels are of 6 ft. diameter, the other wheels 3 ft. 10 in. The diameter of the boiler (outside) 4 ft. 3 in.: length of tubes, 12 ft. 7 in. of (outside) 4 ft. 3 in.; length of tubes, 12 ft. 7 in., of 2 in. inside diameter; number of tubes 190. The height of the top of the boiler to the level of the rails, we are assured, is 7 ft. 9 in. The cylinders are 18 in.

The old plan of locomotion by stationary power up the Edinburgh and Glasgow Incline has been resumed. The train being drawn by the iron rope, and the engine carried up at the same time, the pro-cess has the twofold advantage of preventing delay and personal annoyance to the passengers. The working arrangements have given very general satisfaction.

IRON TRADE .- Glasgow, March 24 .- The moneymarket improving somewhat holds out a hope that pig iron prices will advance; the demand is good, and the shipments continue a fair average. Quotations are 43s. 6d. for No. 1, 42s. 6d. for mixed numbers, and 42s. for No. 3, cash.

[Secretaries of companies are requested to forward notices of Meet-ings, and closing of Contracts, as early as possible.]
MEETINGS.

BIRKENHEAD, LANCASHIRB AND CHESHIRE JUNCTION .- April 8. Birkenhead.

BIRMINGHAM AND OXFORD.—April 1. Birmingham.
West Cornwall.—April 5. 35, Broad-street-buildings.

CONTRACTS.

BRISTOL AND EXETER.-Iron under carriages, iron goods and coal waggons, carriage and coke trucks, third-class carriage bodies, wooden timber trucks, horse-box bodies, and first and second class and composite carriage and lugand inst and second class and composite carrings and ray gage-van bodies, April 26. Ast and West India Docks and Birmingham Junction.-

Works, April 27.

#### DIVIDENDS.

BIRKENHEAD, LANCASHIRE AND CHESHIRE.—Interest at the rate of 5 per cent. per annum on the 27t. 10s. and 22t. shares, and at 4 per cent. on the 31t. shares.

BRISTOL AND EXERE.—It. 13s. 9d. per 10of. share, free of

income-tax.

DUNDER AND PERTH,—At the rate of 8 per cent. per annum. GLASGOW, PAISLEY AND GREENOCK.—At the ra

+ Ex Div. * For account, April 13.

London Stock Exchange, March 30.—The continued depression in money matters affects the share-marthe same there can be no doubt that the unreasonable depression of railway property is also attributable to an almost universal want of confidence in the published accounts of the various companies. This latter subject is becoming more and more canvassed, and is creating a strong feeling in favour of a revision of management. The following are the latest prices nanagement. The following are the latest prices for foreign lines:—Boulogne and Amiens, 5\frac{2}{3}; Namur and Liege, 2\frac{1}{3}; Northern of France, 2\frac{1}{3}; Paris and Lyon, 1\frac{1}{3}; Paris and Strasburg, 1; Sambre and Meuse, 4\frac{1}{3}; Tours and Nantes, \frac{1}{3}.

Liverpool, March 30.—Prices have kept firm, with an upward tendency, until yesterday (Wednesday), when the news from the Continent caused some reaction. To-day prices have again receded.

Sudlow, Brothers.

Suplow, Brothers. Manchester, March 30 .- Our share-market still wears a gloomy aspect; and the business of the past week has been but very moderate in extent.

SAM. GRINDROD. York, March 30.-Very little business is recorded in the market in the present state of monetary excitement. Every stock has to-day a downward tendency GRAYSTON & EARLE

Hull, March 30 .- Our market has continued withmul, March 30.—Our market has continued without animation. Yesterday and the day previous there
were, however, signs of improvement, which have
now vanished, in consequence of the warlike accounts
from the Continent.

FLINT & TOOTAL.

Newcastle-upon-Tyne, March 30.—There has been a

much better feeling in our market this week, and business has been done in most lines at an advance. To-day, however, there is an apparent inactivity, but prices are well supported. The Newcastle and Carlisles have been favourably affected by the Report which was adopted at the meeting on Tuesday, when a dividend of 3 per cent. for the half-year was W. FORDYCE.

Glasgow, March 30 .- We regret we cannot yet report any symptoms of improvement in this market: investors seem reluctant to act in the present un-settled state of affairs, and it is consequently difficult settled state of affairs, and it is consequently difficult to effect sales. The business doing is quite unimportant and the following are to-day's latest quotations:

—Stirlingshire Midland Junction, guaranteed, 10s. dis.; Dumfries and Carlisle, 6l. 3s.; Glasgow and Greenock, 15½; North British, thirds, 35s. dis.; ditto. new quarters, 8s. dis.; Paisley, Barrhead and Hurlet, 22s. 6d. dis.; York and Newcastle, pref., par.

# Railway Chronicle.

LONDON, SATURDAY, APRIL 1.

The Newport, Abergavenny and Here-FORD shareholders received their Report, which satisfactorily explains the present suspension of the works. Application has been made for an extension of time. The original 50l. shares have been reduced to 251. each.

The discussion at the special meeting to consider the Report of the committee of investigation of the affairs of the LIVERPOOL, MANCHESTER AND NEWCASTLE-UPON-TYNE JUNCTION terminated in a resolution to support the directors in the prosecution of the works, &c.; 28,900 proxies on the part of the dissentient shareholders being refused by the chairman.

At the annual meeting of the CLARENCE a dividend of 21. a share was declared. The Report showed a yearly increase of nett profits.

After various pros and cons the NEWMARKET are about to come to terms with the EASTERN Counties. It was proposed that the 201. shares of the former company, when paid up in full, should rank with the 201. shares of the EASTERN COUNTIES consolidated stock, and bear the same dividend. The final arrangements, however, are not yet settled.

The shareholders of the NEWCASTLE AND CARLISLE, after adopting their Report declaring a dividend of 6 per cent., unanimously voted the presentation of a testimonial from the funds of the company to their chairman, Mr. Plummer.

The Report and accounts were passed at the half-yearly meeting of the EDINBURGH AND GLASGOW, who (though capable of declaring a dividend, at the rate of 6 per cent.) have wisely made a reserve fund, for their parliamentary and other incidental expenses, or for the augmentation of a future dividend.

At the half-yearly meeting of the STIRLING AND DUNFERMLINE the Report declared that the directors had purchased back certain shares of their own line from the latter. This step, however, was only finally agreed to on the understanding that the directors should personally pay up all the calls due on the said shares. No satisfactory result as to a lease of this line to the Edinburgh and Glasgow is yet announced.

number of furnaces out of blast, was reported at the half-yearly meeting of the GLASGOW, KIL-MARNOCK AND ARDROSSAN as continuing to increase. An extension of time has been applied for, and only those operations absolutely necessary had been carried out.
The directors of the GENERAL TERMINUS AND

GLASGOW HARBOUR stated at the half-yearly meeting that the line would probably be opened in August.

The committee of examination of the Lon-DON, BRIGHTON AND SOUTH COAST shareholders have not justified reasonable expectation, in respect to either promptitude or discretion in the exercise of their functions. Instead of fulfilling the expectations with which they were appointed, by inquiring promptly into the present condition and future prospects of the property, they have employed their time in going backwards, and raking up all the old sores which have reduced the property to its present state. What these were we have often told, and it is a task utterly profitless now to inquire curiously into the where, when and how past evils were committed. The future alone is in our power; and unless the committee can show satisfactorily the true present condi-tion of the property, and its relations to the future, and propose plain practical measures for increasing its value, they will have done nothing. Who cares whether A, B and C proposed the purchase of the Chichester line, and W, X and Y opposed it? Who cares whether it was Mr. D or Mr. Z who proposed and laid down the atmospheric railway? What we do want to know is this,—is the property in a sound condition, or an unsound one? Can it be made to pay better than it does, or is it already economically managed and well worked? If the committee cannot tell us this, and how its value is to be improved, they have failed! and the result is "great cry, and little wool." have reason to believe that the committee have, up to this moment, been finding only "mares' nests": we hope they will now begin business in earnest, and produce something to compensate shareholders for the damage to property, and the discredit which their much talk has done. It is good that shareholders should look sharply after their directors, and inquire carefully into their management; it would be wise that they should show their own competence by expedition and intelligence; and it would be honest, if they find nothing to blame in the present direction and management, to say so candidly and at once. We thought the directors acted wisely in promptly acquiescing in the appointment of the committee; we hope the committee will show themselves worthy of the confidence reposed in them, by proving that they are as competent to their duties as the dinburgh and Glasgow is yet announced.

The traffic of the Abdrossan, in spite of the pointed to supervise, have been to theirs.

Digitized by GOOGIC

There is in the proceedings of the local court at Eton a curious case of one Reffell, a tenant of Peers Williams, Esq., which illustrates the extent to which railway undertakings are considered subjects of plunder by landlords and their tenants. In this case it is a yearly tenant who sues the Windson and Staines Company for COMPENSATION, amounting to some 881. 15s.; first, for a crop now growing; secondly, for another year's profit on that crop, and injury done to the whole by severance. This was stated on the evidence of a Mr. Atwood, whose cross-examination was not such as to add weight to his opinion. To extort this sum it seems every artifice of law had been used, technical objections interposed, on a claim of no less than 100/. originally made. The company originally valued the damage, found it under 45l., and offered the same to the present suitor, who verbally agreed to it. The magistrates, we are glad to say, did their duty; they awarded 33/. 9s. 6d. for the damage of the year's crop, the company added 10l. for the following year, and the magistrates refused expenses. In this case, therefore, a good example has been shown, which we trust will be useful. The case is given in our law proceedings, p. 237.

From our official returns it appears that the amount of traffic for the last week, on 3,658 miles of railway, was 159,800/., thus accounted for: - 73,033/. for the conveyance of passengers only, 46,433/, for the carriage of goods, and a remainder of 40,334l. for passengers and goods together, not respectively apportioned: being an increase of 19.024/, over the corresponding week of last year, when the mileage was 2,711. The average earnings per mile last week were 44/., whilst in 1847 they were 52/.

#### DEAD LOCK OF THE BIRMINGHAM AND OXFORD BUSINESS.

From what passed at the adjourned meeting of the BIRMINGHAM AND OXFORD, held at Liverpool, it will have been seen that the elements of difference we had previously pointed out are producing exactly the effect that was to be anticipated from their irreconcilcable nature. The result of the last move in this strange game has been to reverse the position of the two parties to the agreement—the shareholders' party being now the claimants for its execution, the Great Western being the repudiators. Under such circumstances as are present in this case, it is clear that the prospect of any arrangement being quietly settled between parties that have opposite interests, and that cannot trust each other, is not a clear one; and unless a superior power can be brought to bear on both, some kind of deus ex machina, introduced to unloose a knot too hard for any less potent hands, the whole undertaking seems likely enough to remain in hopeless confusion, which, if much longer protracted, will be tantamount to a total loss of all the money spent on this unlucky enterprize. It is now pretty evident that law can do nothing to make the combatants agree; that if they continue to resort to legal measures, it seems probable enough that the next change of scene might show the proprietors suing the Great Western for the refusal to perform their agreement; and that in a treaty so loosely guarded in its essentials, so long as any motive to evade it exists on either side, there will never be gaps wanting through which the legal shuttle can be passed from side to side, until the whole business is enveloped in a perfectly unmanageable tangle, while all the substance has been wasted away in the process. The only remedy to this evil must, we apprehend, be sought from Parliament, which has the power that is evidently wanting elsewhere to reduce the several

Both the parties in this dispute will perhaps ere long discover that something of the kind must be tried; and as the time and money wasted in putting the trial off will be so much loss, the sooner the discovery is made the better.

#### CHESTER AND HOLYHEAD RAILWAY STEAM-PACKETS.

Considerable opposition was given in the House of Commons on Friday and Monday last to the second reading of the bill for empowering the CHESTER AND HOLYHEAD COM-PANY to purchase steamboats for the Channel service from the last-named port. It was objected to by many Irish members, by Mr. Hume and others, on the ground of its giving the company a monopoly of the business; and was only allowed to proceed on an intimation from Mr. Labouchere that the general question as to the propriety of granting such powers to a railway company was under consideration by the Government, and that the result of its deliberations on this subject will be made known before any further progress can be made with the bill. The "monopoly" objection may at once be seen to be quite frivolous, so far as any weight can be claimed for it as a parliamentary plea. The company can have no great expectation of making a profit by the steam-packet service itself; and their motive for undertaking it must be to ensure a sufficient despatch from and to Holyhead of the Irish passengers, whose custom will be wanted to support the railway. If, therefore, other steamboat-owners are ready to perform the service duly, there can be no inducement to tempt the company to expend their money in organizing it. If there be not this readiness in such independent parties, the company's establishment cannot be viewed as an injury to them, while it will be a great convenience to the public. In short, the arrangement, far from being entitled to be condemned as creating a "monopoly," must have the very opposite tendency; and is, in fact, opposed by the representation of steamboat interests, because it will produce competition :- a circumstance so obvious, that were it not proved by frequent experience how apt the advocates of that principle are to be carried away by the mere cry of "monopoly," one might wonder at their hostility to a plan that must tend to promote the very object they profess to think desirable.

On what grounds the Government may decide it is not easy to conjecture; nor shall we attempt to anticipate the part it may take-having seen too often what unaccountable views on practical questions are apt to be put forward by those whom Ministers consult in railway cases. Leaving it therefore to time to make the character of their interference known, we shall for the present confine ourselves to a few remarks from a point of view which belongs to the promoters' interest.

Looking at the proposal from their side, we cannot avoid being struck with the manner in which it seems to contradict the declarations in which the expediency of making a line to Holyhead was formerly asserted. The argument then was, the certainty of the sea passage from that port being so much preferred, that if a railway were made to it, the whole Irish passenger business would surely be attracted thither; -- an argument, of course, quite inconsistent with the notion of its being necessary to make any other efforts to invite the traffic than by opening a line to that point. Now that the line is in progress of construction, it would seem to be apprehended that the inducement so far will not suffice ;-and that, whereas the line was at first promoted on the plea that it was wanted to meet a certain traffic, now steamboats must be established to make contending elements into something like order. that traffic certain. This looks like a comple-season has been remarkably exact and early,)

tion of the process usually termed "arguing in a circle.'

For our parts, we have serious doubts of the expediency of introducing such a process into railway enterprize; -- and have on previous occasions laid down what appear to us to be its proper tests and limits. On a deliberate view of these it will be seen that where the traffic which a given line can of itself command or invite will not afford a profit on the cost of making the line, the project lies beyond the proper sphere of railway undertakings. And it may be added that it is by no means clear that any original mistake in an enterprize which cannot be supported by its proper resources will be corrected by the recourse to foreign means of support. In a country like this, we have already remarked, a traffic which it is profitable to undertake need never go a-begging: -and it is obvious that to undertake one that is not profitable, in order to help another which without extra help threatens to be unprofitable also, is not much more likely to produce a favourable result than it is that an addition of two 0's together will make unity. We apprehend that the practical conclusion from this view of the question will be obvious,namely, that it need not be any disappointment to Chester and Holyhead proprietors if they are forbidden to become steamboat-owners,-that if their line will pay with the traffic that will be naturally attracted to it, this extra outlay is needless,-that if it will not, the chance from any such outlay would be that of adding a second loss to the first: and that the wisest course would be to be content with one.

## FRENCH RAILWAYS AND THE PROVI-SIONAL GOVERNMENT.

The English proprietors of shares in French railways have naturally been much alarmed by the rumoured intention of the revolutionary Government of France to absorb the whole property in those lines, giving the proprietors in return a compensation which, in the present state of the national funds, can hardly be deemed more than a nominal one. The project is quite in character with other designs that are known to be entertained by certain members of the Provisional Government, the execution of which would be tantamount to a confiscation of all the realized property of the middle and upper classes of industry and enterprize, for the temporary indulgence of the lowest. That the effect of any such destructive measures must in the end be as fatal to those whom they are intended to favour, as to those whom they would. in the first place, be sure to ruin, is a conclusion evident enough to considerate minds; but not likely to deter from attempting them such men as are known to be at the head of the Cominunist movement in France. The only security against the consummation of a system that would throw the nation a century back in the scale of European progress,-could it be carried out without resistance from that large section of the people whom it would reduce to immediate misery,-must be found in the degree to which the latter can make the resistance effectual. And it may be seen that one of the first of the many battles to be fought between contending principles in France, before anything like a settlement of its condition can be attained, must be on this important field.

As far as the railway question is concerned, it would appear that for the present the opposition has been decided enough to check the destructive progress of MM. Blanc and Rollin, to whose views it was said M. Garnier Pages was for a while inclined to adhere. The latter, as we now learn from the Daily News, (whose Parisian information throughout this critical

Digitized by Google

has been induced to reconsider his hasty deter-Deputations from several of the railway companies have been protesting against the confiscation; and their protests have been supported by the British ambassador, on behalf of the shareholders in this country. M. Lamartine, too, is said to be against the seizure. In the meanwhile the process has at least been adjourned; and it may be hoped that the companies will have a respite until the Constituent Assembly shall have undertaken the business of ordering the work of the Revolution.

What may be the ultimate prospect for the owners of this kind of property, -of any kind of property, indeed, in France,-it would be somewhat hazardous to predict. If the decision of their fate were to depend on the weight of such arguments as must convince thoughtful and intelligent minds, there would be little reason to fear the issue. It would be easy to prove that it would be quite as injurious to the nation at large as to the railway shareholders, to take the business out of their hands, and to make their lines a State establishment;-that they can never be so well worked in the hands of Government as in the hands of those who have a constant inducement to work them in the best possible way. But who can be sure that any evidence of this kind will be ad-mitted by the men who may be called together in a time of universal ferment, from a class of society unprepared by education or experience for the due appreciation of just principles of social economy? The result, we apprehend, will scarcely be determined by the forces of reason, however strongly it may lean in any direction; and what the trial of other force may produce under existing circumstances must be seen to be extremely doubtful.

We are little inclined in a time of such anxiety and distress to recall our former warning on the subject of investments in France, or to remind our readers that the risk of political commotion was one of the motives for insisting on them. Glad, indeed, should we have been had our views on this topic been less immediately and painfully confirmed by the event. It must be left to the Morrison school to triumph at this consummation of their theories.

#### Correspondence.

#### IRISH LINES .- REDUCED AMOUNT OF SHARES.

I addressed a letter to you some weeks ago strongly recommending the reduction of the 50L shares in the Irish railways. Two railways have adopted this plan, viz., the Londonderry and Enniskillen, and the Londonderry and Coleraine. In both cases the shares, originally 50L, are reduced to a lower amount, 20L and 5L, and the deficiency of the capital is to be raised by an issue of preference shares. The reason assigned is in both cases the same, viz., that the shares are too large for easy transfer, and fetter their powers of rais-The relief afforded to the shareholders ing money. is another great benefit derived from this reduction. Shareholders generally become interested in railways under the expectation that if payment of calls become inconvenient they might sell without great loss. The loss which would be sustained on a sale of shares in a railway in progress, would of course be much increased by the liability on shares of a heavy amount, and by any impediment to "easy transfer." the shares of the Dublin and Belfast 501., with 251. paid up, quoted at 11.! in your share list, 241. discount! 251 more are payable per share, and no one can doubt that this liability is the main cause of this very heavy depreciation of a line which formerly commanded a premium when only just commenced. My surprise is that this reduction is not more generally adopted. The advantage of small shares is evidently part of the experience that has been gained by parties connected with railways. The old companies, such as the London and North-Western and the Great Western, started with 100l. shares. The Dublin and Drogheda, an old company, adopted 75l. shares. In

the railways of a later period, the shares were 50L, later still we find 251, and 201, shares, and some of the most recent, the Trent Valley and South Staffordshire, have 121. shares. It is observable, also, that the new shares issued by old companies have always been of a very reduced amount—we find 50%, 251., 101., sixteenths, &c. There was something peculiarly Irish in fixing their railway shares at such a high amount as to prevent their being taken up to any great extent by the people of a country noto-riously deficient in capital. I should strongly re-commend the reduction of shares and issue of preference shares (to supply the deficiency) to all the lines now in progress, as the best means of enabling them to pass through the trying ordeal which occurs between the commencement of railways and their successful establishment as safe and profitable undertakings

London, March 25.

#### Gossip.

Capt. Simmons, the Government officer, inspected the DEE VIADUCT structure, on Tuesday, and will make his report to the Board of Trade. The bridge was repeatedly tested by heavy luggage trains, purposely loaded, and moved by two heavy locomotives. The speed at times was as high as 40 miles an hour. The utmost deflection obtained was 3-16ths of an inch in the span of 30 ft., and the vibration is said to

here in the span of 50 it, and the violation is said to have been scarcely perceptible.

Report says that the saving to be effected to the LONDON AND NORTH-WESTERN in the present cost of water at the Camden Town Station, and the hotels at Euston-square, when the arrangements are completed for the supply from the well lately sunk at Camden Town, will be little short of 1,200% a year, while the total outlay for sinking the well, for engine, pumps, and main, to Euston-square, will not exceed 3,1001.

The GREAT WESTERN are reported to be deriving upwards of 250%, per week, for the fish traffic from the coast of Devon for London consumption.

Freehold land is now selling, on what is called Diss Common, for building purposes, at the rate of 70l. an acre. Before the line was made, it was barely worth the tillage.

The navvies employed in the tunnel at Poundbury, for the Wilts. Somerset and Weymouth, will, in less than a fortnight, cut through that ancient encamp-

According to the *Derby Mercury*, the number of engines belonging to the MIDLAND, each, of course, with its tender, is 160, and the average length of an engine and tender we have ascertained to be 39 ft., making an aggregate of 6,3% ft., or 2,132 yards. The number of the other description of vehicles is 6,816, and the average length of each, from buffer to buffer, is 18 ft. A monster train, composed of the centire number of carriages, &c., would extend over 23 miles and 416 yards, or, with the coupling chains extended as when travelling, a distance exceeding that from Derby to Chesterfield.

Mr. Fairful Smith, of the AYRSHIRE, has addressed a public letter to the Glasgow magistracy regarding the distress of the working classes in the city, and suggests the means of relieving them by obtaining a small advance of Exchequer bills on RAILWAY SECU-RITY, to be expended on various works at present arrested. He says: "I feel warranted in stating that the several companies in connexion with Glasgow and its neighbourhood could at present afford employment and relief to upwards of 20,000 labourers, if the assistance I now advocate were afforded. The principle of giving assistance of this nature has been frequently recognized in Ireland, and in several instances in England—for example, in the case of the Newcastle and Carliele line, where the advance so made has since been repaid. It is simply a loan of Government credit, upon which the railway companies could raise the requisite capital—there being at present a greater scarcity of confidence than of capital in the country; and while the nation at large would benefit by the interest paid by the several companies, the plan could have but trifling effect on the market value of the floating debt of the empire.'

Everywhere are the effects of the Continental disturbance being felt. At Leeds some of the leading firms engaged in the iron and machine-making busihands, in consequence of orders in progress for France and other parts of the Continent having been countermanded.

The English workmen driven from France have lately had a meeting in London to petition the Government for assistance. Many of them consisted of engineers, stokers, mechanics and other workmen, lately employed on the various French lines, who as in other respects, that some immediate decision

stated, that in addition to the hardship of their expulsion, they had suffered losses in unpaid wages the amount of 3,000l.

The English directors of the Boulogne and Amiens have returned from Paris, after having examined and ascertained the position of its finances. The assets are said to be sufficient, exclusive of the balance in the bankers' lands, to liquidate all liabilities for the completion of the line, which may shortly be opened

to Boulogne.
The WATERFORD AND LIMERICK are to be assisted the line to Waterford. The line will shortly be opened to Tipperary for general traffic. The first public trip took place last Monday.

The injuries inflicted on the various lines during the late disturbances in France are actively repairing. The works on the bridge of Amiens are urged on. Its re-construction, which is directed with the greatest care, and on the model of the old one, may be terminated by the middle of April next. The working of the line from Rouen to the Paris terminus will be recommenced immediately after its reception by the Ponts et Chaussées. The damage to the stations on the line at Maisons, at Nantes and at Rouen is now almost repaired. The works for the restoration of the Northern line are terminated on the first section. No injury has been done to the Gard, the measures taken by the authorities preventing all criminal attempts. The same may be said of the Avignon and Marseilles. The works undertaken on the Rhone for the connecting bridge with the line from Bor-deaux to Cette, and those for the construction of the viaduct over the Durance and the extension of the railway to Avignon, are progressing rapidly. The Montereau and Troves has submitted for the approval of the administration its tariff for passengers and This is the last formality, so that the open-

ing of the line will soon take place.

The decree of the Minister of Public Works of the 20th divides, as has before been stated, the railways of France into six arrondissements. The first includes those from Paris to Belgium and the branches to Calais and Dunkirk, from Creil to St. Quentin, from Amiens to Boulogne; the second includes those from Paris to Strasburg and the branches of Reims and Saarbruck, from Strasburg to Bale, and from Mulhouse to Thann; the third includes those from Paris to Lyon, Montereau to Troyes, St. Etienne to Lyon and to Andrezieux, from Andrezieux to Roanne and the branch to Montrond, Lyon to Avignon, Mar-seilles to Avignon; the fourth includes those from Alais to Beaucaire and to Grand Combe, Montpellier to Cette, and Montpellier to Nimes; the fifth in-cludes those from Paris to Orleans, Orleans to Borcludes those from Paris to Orleans, Orleans to Bordeaux, Tours to Nantes, Orleans and the Central; the sixth includes those from Paris to Rouen, Rouen to Havre, Rouen to Dieppe and Fécamp, Paris to Versailles (Right Bank), Paris to St. Germain, Paris to Sceaux, Paris to Chartres.

Several of the neutral scripholders in the MADRID AND VALENTIA have agreed to a requisition calling on the directors to name an early day for the annual on the directors to name an early day for the annual meeting, the day for which has gone by for some considerable time. The report of the Spanish directors having paid back the deposits to the scripholders in Madrid, as stated at the meeting last week, is the cause of this movement.

#### Reports of Meetings.

LONDON, BRIGHTON AND SOUTH COAST. March 30.—Adjourned Meeting, London.—Mr. C. GEENFELL, M.P., in the chair.

The CHAIRMAN said the directors were present at The CHAIRMAN said the directors were present at the wish of the proprietors, to hear any observations, and to receive any Report from the committee, and then to proceed to the completion of the business of the half-yearly meeting, left unfinished from the meeting of the 14th of February.

Mr. Whishaw, the chairman of the committee, said that his impression and that of the committee.

generally was that the meeting stood adjourned till that day on the distinct understanding that if the Report should not then be ready a further adjournment should take place. The committee had intimated to the directors a week ago(the impossibility of preparing the Report in time for the present meeting, and they naturally thought the directors would have advertised a further postponement, and that the meeting that

day would be merely pro formd.

Mr. Parsons (the deputy-chairman), had certainly been informed on Thursday last, late in the afternoon, that they required until the 1st of May to report. He and the other directors, feeling how absolutely necessary it was—seeing that the directors had been for seven weeks lying under most unjust imputations, and in regard to their mercantile affairs as well

Digitized by GOOGIC

should be come to-protested against such delay, and ultimately the committee promised to have their Report ready by the 14th of April. This decision the directors were not acquainted with until Tuesday evening last, when it was too late to advertise a further postponement of the meeting. As the proprietors in appointing the committee had taken the whole matter out of the hands of the Board, it was the duty of the committee to give notice of the adiournment.

After some altercation between Messrs. P. A TAYLOR, PARSONS, the CHAIRMAN and others, as to whose duty it was to give notice of the further adjournment.

Mr. Cash moved that the meeting be further adjourned till the 14th of April; which having been seconded.

Mr. Ald. Wilson complained of the manner in which the proprietors had been unnecessarily brought together that day, and suggested that the committee should print and circulate their Report pre-

vious to the proposed day of meeting.

The CHAIRMAN thought it was due to the character of the Board that the committee should state at once. whether anything during their investigation reflected on the character of any one of the members of the Board. Those who were present at the first meeting in February, in that room, must admit that the directors were then treated by the proprietors in a most ungentlemanlike way. Were they not hissed when they came into the room? Was that the way to meet gentlemen responsible for the management of the concern, at a time of unexampled commercial pressure and difficulty, when their property was depreciated only in common with property of every description? Many of those gentlemen were far more deeply interested in the success of the company than their assailants. The Board had now for seven weeks been exposed to the obloquy and reproach of all who examined into railway affairs. Had they not been accused of trafficking, and had not the deputy-chairman been charged with transactions which if proved would stamp his name with dishonour?

Mr. Cohen: Name, if you allude to me.

The CHAIRMAN was not alluding to the hon. pro-prietor, but charges had been brought against his hon. friend (Mr. Parsons) which if proved would dishonour his name. The directors were labouring under the most ungrateful and most unjust aspersions on their characters, and they had a right to call on those by whom those aspersions had been made, to state the grounds on which they had been brought forward, and on the committee to declare, from what had come before them, whether there was anything in the conduct of the Board, or any of its members, derogatory to men of honour.

Mr. Whishaw regretted the chairman had raked up the proceedings of the first meeting, at which a reception was given to the directors in which the majority of the proprietors did not participate. committee were not parties to, nor could they be responsible for, the charges then made against the directors. That was all he had to say on the matter.

Mr. MILLS though he sympathized with the chairman's feelings objected to the report of the committee being prejudged by any explanation at present.

Mr. Ald. Wilson understood that a bill had been

read a second time in the House of Commons, authorizing the Board to borrow 423,000l., 100,000l. of which was to go to the Steam Navigation Company. Would that bill be submitted to the proprietors for their approval?

The CHAIRMAN replied that it must receive the assent of the shareholders at a special meeting before it could pass the Lords. He wished to ask the chairman of the committee whether the directors had not placed all books and papers required before the committee, and whether they had not, as far as they could, facilitated the investigation ?

Mr. Whishaw said every possible assistance had been received by the committee from the directors and all the officers.

Mr. TAYLOR, in reply to a question, said the committee had every confidence of being able to have the Report ready by the 14th of April. He was happy to add that the investigation, as far as it had gone, showed that there was not the slightest ground for charging the directors with misconduct. It was impossible for anybody to have acted with greater fairness and openness than they had during the whole inquiry—in fact, their whole conduct had been such as to inspire the greatest confidence. He thought they were doing mischief, therefore, by continuing this discussion, and casting suspicion where none ought to exist. As to their future prospects, the committee had had before them gentlemen of all opinions, as to the past-persons who found fault with every proceeding and almost every contract entered into by

the Board; but by no one was any doubt expressed as to the affairs of the company being in any other than a sound condition. And though they must not expect large dividends, or any large increase in the shares within any given time, and perhaps not at all, yet there was on all hands a settled confidence in their soundness, and a conviction that they would recover themselves, and become, at least, a fairly paying company. There was no one member, he believed, of the committee, nor any proprietor who had considered the subject, who would sell his shares at anything like the price at which they would probably stand in the market for some time to come.

Mr. Parsons thought the speech they had just heard fully repaid the proprietors for their attend-

ance that day.

After some further conversation the meeting was further adjourned till Monday, the 17th of April; the Report of the committee to be printed and circulated between the 14th and the day of meeting.

NEWPORT, ABERGAVENNY AND HEREFORD. March 30 .- Ordinary Meeting, London .- The Hon. Capt. FITZMAURICE in the chair.
The Report stated that—

The usual

At the date of the last Report, a contract had been entered into for the construction of the portion between Pontypool and Abergavenny, being a distance of 9½ niles, and that the land required for the commencement of the works had been placed in the hands of the contractor. The usual been placed in the hands of the contractor. The usual notices were served on landowners; but in consequence of the continued depression in the money-market, the directors made arrangements for a suspension of the contract, and they have not proceeded further. A further suspension of the contract is advisable, and they hope to be able to make arrangements with the contractor for that purpose. No fresh engagements will at present be entered into. Application has been made to the Commissioners under 11 Vict. c. 3, for an extension of time. Thus the powers for the purposes of lead will be extended to Avenue 1231. 11 Vict. c. 3, for an extension of time. Thus the powers for the purchase of land will be extended to August 1851, and, for the construction of the line, to August 1855. The powers of the "Extension to Taff Vale Act," for the taking possession of land, will be extended to July 1852, and, for the completion of the line, to July 1853. In lieu of the payment of the remainder of the purchase money for the Hereford, Grosmont and Llanvillangel tram-roads, amount-ing to 45,968L, payable in March 1848, those companies respectively have been induced to accept 15 per cent, for respectively have been induced to accept 15 per cent for the total discharge of the obligation at the present time; and have agreed to accept payment of the balances as follows, viz.:—15 per cent. in September next; 15 per cent. in March 1849; 15 per cent. in September 1849; and the balance in March 1850. Further payments have thus been recently made as follows:—To the Hereford Tram-road, 2,9194; to the Llauvihangel, 3,262. 10z.; and to the Grosmont, 2,437l. 10z. The payment of arrears of calls have necessarily been enforced, to meet the existing engagements. Under the arrangements with the Monnouthshire. Welsh necessarily been enforced, to meet the existing engagements. Under the arrangements with the Monnouthshire, Welsh Midland, and Great Eastern and Western, 9,696 shares in this company, of 25l. each, have been registered in the names of proprietors in those companies; the original 50l. shares have thus been reduced to 25l. each, and the pro-Under the prictors been relieved of calls and from future liability prictors been relieved of calls and from tuture mannity to a corresponding amount. No deposit has been paid to the Rhymney, from certain obstacles to their proposed arrangements for the purchase or lease. The directors' confidence in their undertaking is unshaken, and their determination to suspend the works for the present has been formed solely from a desire to relieve the shareholders from calls during the manning of the property of the region and the confidence of the shareholders from calls during the manning of the property of the region of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the p the present crisis. The lines north of Hereford are in a state of forwardness towards completion. The North Wales Mineral, amalgamated with the Shrewsbury and Chester, has been opened for traffic, and is now earning a fair profit on the capital expended. The Shrewsbury and Chester, on the capital expended. The Shrewsbury and Chester, extending from Chester to Shrewsbury, is expected to open in the autumn of the present year, and the Shrewsbury and Birmingham will open throughout in the summer of 1849. The Shrewsbury and Hereford are proceeding with their station and bridge at Shrewsbury: and the latter being in the same interest as the other lines north of it, no doubt the same interest as the other lines north of 15, no doubt exists of the ultimate carrying out of that undertaking. The directors propose a reduction of the grant voted to them for their services, from 2004, to 4004, per annum. They have also reduced the office expenses, down to the lowest limit. The secretary, fully participating in this feeling, has placed the consideration of a present reduction of his calvary in their bands and the averaging the secretary. of his salary in their hands, and they accordingly propose to reduce the same from 600l. to 400l. per annum. Two directors retire from office. viz., Messrs. H. G. Key and J. Brightman, and their places are to be supplied by two duly qualified sharcholders. Mr. W. E. Snow, one of the auditors, also retires.

The statement of accounts showed the receipts at 72.814l. 5s. 11d.; expenditure, 65,796l. 3s. 8d.; balance, 7,018l. 2s. 3d.

The CHAIRMAN, in moving the adoption of the Report, reviewed their past as well as present condition. As respected the report circulated that this company was about to wind up, he begged to say that he knew nothing of such an intention except coming from two individuals, viz., Messrs. Spackman and Newbone. In reply, he must say they were not going to commit any suicidal act. He could pledge to them-and he hoped the enormous stake held by the directors was a sufficient guarantee—that they would not proceed with the line, as well for themselves as the proprietors, till more favourable times. As to the value of their undertaking, he held still the same opinion as

he did at first, when he traversed the whole of the line with some of the first engineers of the day.

Mr. Oxenham moved that a committee should be

appointed to examine into the accounts, the law charges of which he considered enormous.

A Proprietor said he should second the motion.

He would ask how they were to get the money for the would only get 350,000*l*., and altogether but a sum of 440,000*l*. This was a difficulty they could not surmount. He had no desire to wind up, but they would by that course know the extent of their loss.

The Secretary, in reply, said that the number of shares registered was 22,220.

The Solicitor having been attacked as to the extent of his bills, said that he and his firm held onetenth of the capital, and had contributed more than he had received.

Mr. CHAPMAN (a director) advised the shareholders to pay the remainder of their calls, for he was confident that when they were in a safe position some of the large companies would be most anxious to take

After some discussion the amendment was withdrawn, the Report was received, and the meeting adjourned.

CLARENCE.

March 31. - Annual Meeting, London. - Mr. H. BLANDSHARD in the chair.

The Report stated that the accounts present a satisfactory result. The gross receipts amount to 47,093l.~2s.~7d., and the nett profit for the same year to 23,1091. 19s. 9d., being, as compared with the year 1845, (the most profitable year to the Clarence), an increase of nett profit of 3,080l. 5s. 8d.; and as compared with the year 1846, an increase of nett profit of 5,735*l*. 15s. After all there remains a nett balance of 8,754*l*. 13s. 2*d*.; reserved fund from the year 1846 (as per Report for that year), of 1,814*l*. 16s. 3*d*.; less amount of income-tax paid thereout, for the years 1845 and 1846, omitted before to have been charged, 744*l*. 8s. 8*d*.—1,070*l*. 7s. 7*d*.; total, 9,825*l*. 0s. 9*d*. This sum of 9,825l. 0s. 9d. affords dividend of 2l. per share on the original shares, which will amount to 6,000l., leaving 3,825l. 0s. 9d. as an unapplied fund in reserve. The dividend to be payable the 1st of June next. The delays of the Stockton and Hartlepool in furnishing and settling their accounts, as lessees of the Clarence, have prevented the committee obtaining the assent of the lessees to the balance of the revenue account for the year ending December 31, 1847; the committee have no doubt of the balance being perfectly correct, as stated in this Report. The

The CHAIRMAN drew attention to the item of 300%. under revenue, being the Clarence Company's proportion of waggon rent for the year 1847. During the last twelve or fourteen months the Clarence had to buy a considerable number of waggons, as on the passing of their affairs into the hands of the Leeds and Thirsk that company would take them at their cost, and they had already gone so far as to advance

arrangements with the Leeds and Thirsk for the

leasing and amalgamation are in progress.

half the money.

On the motion of Mr. DE CASTRO, a dividend at the rate of 40s. per share was declared payable on and after the 1st of June next.

The CHAIRMAN intimated that on the 1st of May the company paid dividend on their first class preferential shares, and on the Government loan. their Act it was provided that they should meet triennially at Stockton, and the next meeting would accordingly be held there.

Mr. Bell, the solicitor, stated that the parliamentary proceedings of the company's bill for its lease to and amalgamation with the Leeds and Thirsk were in progress. It had passed the stage of second reading. advancing steadily and promised to come to satisfactory conclusion.

The CHAIRMAN, in reply to a Proprietor, said that

the Clarence when leased over, would become a fixed charge on the Leeds and Thirsk. Though their business had not been quite so large as last year, still they had maintained a good aggregate amount, and the allowance made towards making the Tees a free port, at the rate of \( \frac{1}{2}d \), per ton on coals, had materially increased the trade. The result of it had been that there was never a want of shipping in the Tees.

LIVERPOOL, MANCHESTER AND NEWCASTLE UPON-TYNE JUNCTION.

To consider a requisition to the directors, by Messrs. Hayne.

Ashlin, Kilgour, and other shareholders, of the 1st of December 1847, as to the expediency of abandoning the undertaking, and of winding up the concern; or, of selling, leasing or transferring the railway and works to some other company; of removing all or any of the present directors; and for choosing and electing of other or new directors;

Digitized by GOOSIC

of increasing the number of the directors to sixteen, or to any lesser number, and for choosing and electing new directors in addition to the existing directors, and for determin-

tors in addition to the existing directors, and for determining the order of rotation in which the directors shall go out of office, and the number for a quorum; and for appointing a committee of shareholders to investigate and report upon the accounts and financial affairs.

The general half-yearly meeting, held on the 8th of February last, also stood adjourned to the same day. Notice had also been given of a second special meeting, at the same place, for the purpose of confirming. Notice had also been given of a second special meeting, at the same place, for the purpose of confirming, or otherwise, "An agreement entered into between Mr. T. B. W. Ffrance, on behalf of this company, and Mr. G. Hudson, M.P., on behalf of the York, Newcastle and Berwick, and dated the 25th of February last, for the lease of a portion of the line, when constructed, to the York, Newcastle and Berwick

The CHAIRMAN said the directors had complied with the requisition, but it had been done under protest. A copy of that protest had been duly forwarded to Mr. Gibson, as representing the committee.

The protest was read.

The CHAIRMAN said the requisition embraced a variety of subjects. The first of them was the expediency of abandoning the undertaking. Had any

Mr. Parsons begged to suggest to the Chairman that the Report of the committee should be read, and a motion that the same should be received would

better regulate the matters referred to.

Mr. S. Marriott questioned the propriety of the position taken by the gentlemen who had signed the requisition, being parties also to the Report as well as promoters of the bill for the dissolution.

Mr. GIBSON objected.

The CHAIRMAN said the Report was not before the

meeting.
The SECRETARY accordingly read the Report (see ante, p. 204). The principal features of it were as follows. Under the head of "the accounts" the committee object to a loan of 25,000L, lent by the directors to the Lancashire and Yorkshire on terms of short notice of repayment, with interest at 5 per cent., but without taking any security. Under the head of contracts entered into with other companies, the committee especially complain of this company taking upon itself the entire cost of the construction of a connecting link between the lines of the Lancashire and Yorkshire and the East Lancashire at Burnley, now known by the name of the Burnley link. The Report also refers particularly, but gives no decision as to an agreement of the date of the 28th of February last, entered into between the chairman of this company and Mr. Hudson, as chairman of the York, Newcastle and Berwick, for a lease of certain small portions of this company's line in the county of York, when completed, at a guaranteed rent equal to 6 per cent. on the actual outlay on the portions in question, and for the abandonment of certain other portions. The contracts with Mr. Hawkshaw and the sums paid to that gentleman are :also complained of. It is alleged also in the same Report, that contracts for the purchase of land have been prematurely entered into. The committee conclude by charging mismanagement, and urging an alteration in the direction. They recommended friendly relations with the Lancashire and Yorkshire; the withdrawal of the dissolution recently presented to Parliament, and advised the Board to direct its energies to practical arrangements with the terminal lines in connexion with this company's line.
The CHAIRMAN resumed the business to be con-

sidered by the meeting.

Mr. MARRIOTT, before the chairman proceeded, thought it incumbent on the gentlemen who had signed that Report to apologize for the insinuations cast upon the character of Mr. J. Yates.

Mr. PARSONS begged to move that the Report be entered on the minutes.

After a personal discussion between Messrs. MAR-

RIOTT, PARSONS and the CHAIRMAN,

Mr. WESTOBY, a director, explained that Mr. Yates, who had been spoken of as a salaried officer of the Lancashire and Yorkshire, had been so spoken of in ignorance of the real relation which that gentleman sustained with reference to this company. gentleman was a barrister, who had been selected to watch the progress of the bill of the Lancashire and North-Yorkshire through Parliament, and in respect of such serving, had received a sum considered as a reasonable remuneration.

A Shareholder would select one paragraph, which he thought particularly deserving of attention. The passage to which he alluded was as follows:—"We consider this course of proceeding extremely irregular, and recommend that in future matters of such importance shall not be so loosely conducted."

The CHAIRMAN refused to put the motion for the reception of the Report, as not specially included in the notice convening the meeting.

Mr. Parsons wished to be distinctly informed of the course intended to be pursued, because, if the motion for the reception of the Report was not put, he should feel himself bound to move the adjo ment of the meeting until after the holding of the adjourned half-yearly meeting.

Mr. Marriott rose to oppose the course Mr. Par-

sons was pursuing.

The CHAIRMAN and Mr. WESTOBY both declared that the motion could not be entertained.

Mr. Parsons handed up to the chairman a written notice of a motion for the adjournment of the special meeting until immediately after the termination of the adjourned half-yearly meeting. He looked upon the matter as a question of common sense. committee were appointed on the 8th of February. They made a Report and signed a requisition, based on that Report, for convening the present meeting.

The CHAIRMAN objected that the agreement with

Mr. Hudson, which was the main point for consideration, was made the subject of a special meeting, convened for two o'clock that afternoon.

Mr. Parsons would obviate that objection by appending to his motion for the adjournment the following words:—"and in addition to consider, &c., agreement between Mr. Ffrance and Mr. Hudson which, in its amended form, was then duly seconded.

Mr. MARRIOTT rose to move as an amendment a vote of confidence in the directors. He charged the dissentient shareholders with having systematically thrown impediments in the way of the directors. The committee only wanted to divide the funds in hand. In reference to the contracts for land which had been complained of, any man of common sense, he felt convinced, must at once see that they were binding on the company, and by a dissolution there would not be one sixpence to divide amongst the shareholders.

Mr. Courtnay seconded the amendment, and urged the duty of the requisitionists who had brought the shareholders there that day to lay before the meeting facts in support of their recommendation.

Mr. Bradshaw drew the attention of the meeting to a clause in the bill for the dissolution, which provided for the payment of the expenses of the promoters in the first place—ridiculed the idea of the solicitors-a class of men proverbial for their kind their London benevolence, coming down to feelings towards shareholders—out of the abundance enlighten the poor Manchester people. He, too, was quite sure that if they were to wind up to-morrow the shareholders would not have a penny to receive. He preferred leaving the management of their property to their directors. Of course he was much obliged to the London shareholders for their trouble, but he hoped the meeting would send them home again with thanks.

Mr. HARPUR spoke in favour of the Report being entered on the minutes.

Mr. WESTOBY concurred in the propriety of that course as the best mode of saving time and would have moved an amendment on the amendment.

Mr. MARRIOTT should have no objection to withdraw his amendment, if he were satisfied the entry of the resolution on the minutes would not make the company liable for the lawyers' expenses

After a further discussion of no public interest the question at length assumed the character of confidence or no confidence in the directors

Mr. Parsons declared his satisfaction at this. replied to the insinuations as to his exertions in reference to their affairs, by stating that he himself held 400 shares, and his family and friends held as many as 4,000 in the company. He had therefore a private interest quite important enough to justify him in looking after his property.

The amendment was at length withdrawn, and the motion, that the report be received and entered on the minutes was carried unanimously.

Mr. HARPUR had formerly held a seat at the Board, but when he believed that he no longer enjoyed the confidence of the proprietors, he thought it his duty to retire. Himself and Mr. Houldsworth, both to retire. Himself and Mr. Houldsworth, both directors of the Lancashire and Yorkshire, were formerly directors, but they both considered it their duty to resign. He objected to the Report because he believed that the statements made were not sufficiently authenticated by facts, and several gentlemen had been mentioned highly exceptionable. In reference to the loan of 25,000l, to the Lancashire and Yorkshire, he believed it a perfectly prudent and business-like transaction. He as a merchant approved it. The investment was a profitable one, and he did not imagine the solvency of the company was brought in question. As to the construction of the Burnley link, it was of the highest importance to this line. The line, in short, would be useless without it. The traffic of the North could not be got on to this line except through that link. The hon, proprietor entered at considerable length into the imperfect evidence examined before the committee, and concluded by moving the further prosecution of the works.

Mr. Alcock seconded the motion.

A long and irregular discussion was at length closed by a resolution for the prosecution of the undertaking being placed in opposition to an amendment sanc-tioning the continuance of the undertaking for two years with a view to the ultimate winding-up of the concern. This latter was the resolution proposed by the committee, and upon a show of hands by a majority of at least 30 to 5.

A poll was then demanded and a scrutiny, the result of which was announced by the SECRETARY. result of which was announced by the SECRETARY.
For the resolution of the committee, proxies 712, votes 3,112; in favour of the continuance and prosecution of the undertaking, proxies 16,254, votes 3,315:—showing a majority, in favour of the directors, of proxies 15,542, votes 203.

Mr. Ashlin, on the part of the committee, put in 28,900 proxies, which the directors, acting under 18,900 proxies, which the directors, acting under conviction that the proxies were improperly rejected.

conviction that the proxies were improperly rejected, and gave notice of their intention to try the validity of the proxies referred to elsewhere.

NEWMARKET.

March 27.—Special Meeting, London.—Lord G. Manners, M.P., in the chair.
Mr. Brown, the secretary, read the Report. It

stated that according to the resolutions of the half-yearly meeting, the directors submit the agreement conditionally entered into with the Norfolk, and the terms of amalgamation since proposed by the directors of the Eastern Counties. Those terms were, that the whole plant, and also the works of the New-market and Chesterford and Cambridge branch, would have to be paid for by the Newmarket to the would have to be paid for by the Arewinaraes to the extent of their share capital and the monies already borrowed: any further monies for works or plant the Eastern Counties would find. The 20t. share of the Newmarket stock must be paid up in full, in order to rank with the 201. shares of the consolidated stock of the Eastern Counties, and be entitled to the same dividend. If the Act for sanctioning the amalgamation be obtained, the Eastern Counties to pay the expenses; but if the bill be lost, the expenses to be bor ne equally by the two companies. If the Eastern Counties shall have to return the plant to the Newmarket, they will pay to the latter such sum for de-preciation as shall be fixed by arbitration. The Eastern Counties will require the Extension Acts handed over to them clear of any liabilities beyond the 35,500l. paid up by the extension scripholders, so that they may construct the extensions or not, as they think fit. If the Amalgamation Act shall not be obtained, the nett profit, if any, which the Eastern Counties shall have received from the Newmarket beyond the dividends paid over to the shareholders the latter, shall be paid over to the Newmarket. The Report then alluded to the peculiar and relative position of the lines of the Newmarket to those of other companies with whom, in the event of the authorized extensions being constructed, they may be connected, viz., with the Eastern Counties at Chester-ford and Ely, the Norfolk at Thetford, the Eastern Union at Fury St. Edmunds, and with the Great Northern at Cambridge, by means of their proposed extensions. The lines of the Newmarket may thus become of more or less importance to four established companies, and more especially to the Norfolk and the Great Northern, as affording them the only short and convenient route from London. One of the points for consideration was with reference to the terms suggested by the Eastern Counties—the payment of a like interest upon 201. per share paid up in cash by the Newmarket proprietors as was paid upon the 20% of Eastern Counties consolidated stock, upon which the sum of 16t. only has been actually paid; and this depreciation extending not only over the capital already paid up, but on 72,000t., the cost of the plant, which the Eastern Counties thus obtain at a discount of 20 per cent., and involving the like depreciation upon further calls, amounting to 6t. 10s. per share. The line from Chesterford to Newmarket being ready to be opened for general traffic, and the branch to Cambridge in a forward state, there was a fair prospect of nearly, if not quite, as great a return upon the capital expended as offered by the proposed arrangements with the Eastern Counties. In conclusion, the directors were of opinion that unless the proprietors thought fit to confirm the agreement with the Norfolk, it would be more to the interest of the company to remain for the present independent than to accept the terms of amalgamation proposed by the directors of the Eastern Counties. The CHAIRMAN said that circumstances had mate-

rially altered since the Report. That morning a letter
Digitized by

had been received from Mr. Till, the secretary to the Norfolk, stating that a negotiation was pending be-tween the Norfolk and the Eastern Counties respecting the amalgamation of these companies. The directors of the Newmarket therefore conceived that they were fully absolved from their provisional agreement with the Norfolk. He then moved that the Report be received and entered upon the minutes, which was seconded, and carried unanimously.

The CHAIRMAN moved a resolution that the propo-

sition of the Eastern Counties should be acceded to, and that three shareholders should be appointed to

act with the directors in carrying out the agreement.

Mr. MORTIMER had no great confidence in the direction: he thought that some of the shareholders

direction: he thought that some of the shareholders ought to have seats at the Board.

Mr. Fane could not see what object would be gained by adding to the direction. Were the committee appointed they would be equally as effectual.

A long discussion ensued, in which Messrs. Borrodails, Mortimer, Tyrrell, Fane, Shelley, the Chairman, and various others, shared. It was assumed that the directors having expressed an opinion against the agreement with the Eastern Counties, ought not to be entrusted with carrying it out. ties, ought not to be entrusted with carrying it out, and that Mr. Mortimer and four other gentlemen ought to be added to the direction. The directors declared that they were not averse to the agreement with the Eastern Counties, and that the circumstances of the case were entirely altered by the withdrawal of the offer of the Norfolk from what they were when the directors prepared their Report. After amendment upon amendment had been proposed and with-

The CHAIRMAN put the motion of the directors amended as follows, so as not to pledge them to the details of the offer of the Eastern Counties:—

That the agreement with the Eastern Counties is hereby in substance approved, and that three shareholders be ap-

in substance approved, and that three shareholders be appointed to act with three directors for making the necessary arrangements for carrying it out.

On this Mr. Cooper moved as an amendment that the words "in substance," and all the words after "approved," be expunged from the resolution.

On a show of hands the amendment was declared carried by a majority of 46 to 36. A poll was demanded, but after some discussion it was agreed that

the resolution as proposed by the directors should be carried, the words "in substance" being omitted.

It was then resolved that the committee should consist of Lord George Manners and Messrs. Shelley and Hunt on the part of the directors; and Messrs Mortimer, Wheeler and Hyde on the part of the shareholders.

#### NEWCASTLE AND CARLISLE.

March 29 .- Annual Meeting, Newcastle-upon-Tyne,

Mr. Plummer in the chair.

The Report and the statement of accounts showed The Report and the statement of accounts snowed the receipts during the past year for passenger and merchandise traffic at 115,825*l*. 8*s*. 1*d*., being an excess over the preceding year of 12,663*l*. 0*s*. 9*d*., which would have been greater but for the recent stagnation in trade. The directors anticipate a considerable increase of traffic from the Caledonian, now opened, and its tributary branches, and from the Dumfriesshire lines, now in course of completion. The works on the Alston branch have not been pressed forward. Deviations and improvements have been made, which will require the sanction of Parliament, which is proposed to be obtained in the next session, after which the works will be vigorously prosecuted. In the meantime calls on the new shares will be postponed, that payable on the new shares will be postponed to the 21st of June. The central station at Newcastle is in progress; that at Carlisle is completed; and as this company have contributed no part of the cost of forming the latter, they propose to pay an annual rent for the privilege of using it for their passenger traffic. The negotiations with the Maryner and Carlisle for a payable lass with the Maryport and Carlisle for a perpetual lease of their line to this company have terminated, the expectations of the former being such as this comany could not prudently entertain. An intermediate dividend for the half-year ending the 30th of June last, was, in the month of September, declared after the rate of 3l. upon the 100l. shares, and so in proportion for the quarter shares; and the directors recommend a dividend after the same rate for the last halfyear, making 6 per cent. on the whole year, to be paid on the 14th of April inst.

The Report was unanimously adopted.

Mr. Graham presented two memorials against running trains on the Sunday, and, at great length, "That this meeting does not approve or sanction the running of trains on the Lord's Day."

The CHAIRMAN explained that the only trains run on that day were those required by the Government to conver the mail bors.

to convey the mail bags.

The motion was negatived by a large majority

Capt. Coulson, after describing the important services tendered to the company, both before and since its incorporation by Act of Parliament, by Mr. Plummer, the chairman of the directors, proposed that a subscription be entered into for the purpose of pur-chasing a piece of plate, or some other testimonial, to be presented to that gentleman.

The motion was received with acclamation, on which

Mr. Howard, M.P., suggested that the directors should be empowered to carry out the wish of the meeting with the funds of the company, instead of by

individual subscription.

The motion, thus amended, was carried unani-

The retiring directors were re-elected.

EDINBURGH AND GLASGOW.

March 28.—Half-yearly Meeting, Glasgow.—Mr. P. Blackburn in the chair.

The Report was read.

The directors regret that the balance-sheet shows a diminution as compared with the similar period last year. The comparative statement of receipts is—

£60,087 9 6 Passengers-1846-7 1847-8 1,054 2 10 Goods—1846-7 ,, 1847-8 ... .. 31.781 19 2.734 12 7

£3.788 15 5 The falling off in numbers of passengers is still more apparent; the numbers are—

2nd class. 3rd & 4th class. 1st class. In 1846-7 ... 56,957 ... 112,496 ... 425,968 ... 593,421 1847-8 ... 50,800 ... 104,413 ... 407,831 ... 563,054

Decrease .. 6,157 .... 8,083 .... 18,137 .... The diminution in passengers is, however, partly to be accounted for by this company ceasing to carry the Airdrie trains; and, considering the extreme depression of the times, is not so great as might have been feared. During this half-year there has been no new competition with any other mode of conveyance, nor has there been a single accident to a passenger. The working expenses are 32 7911. other mode of conveyance, nor has there been a single accident to a passenger. The working expenses are 32,791. 73. 3d., exclusive of parochial rates, passenger-duty and interest on loans, and amount to 34 per cent. upon the receipts for the half-year. This sum also includes a charge upon revenue for the partial re-laying of the Glasgow tunnel with new rails. The balance from revenue to January 31, 1848 is 56,439. 6s. 4d.; to which is to be added the balance in hand on the 31st of July 1847, 7,283. 8s.; total, 63,722. 14s. 4d.; which leaves a surplus of 8,136. 1s. 7d. after deducting a sum equal to a dividend of 6 per cent. on the whole capital paid up, or 55,586. 12s. 9d. But your directors do not recommend you to divide this sum at present; and the reasons for not doing so are two-fold. The total expenditure will exceed the parliamentary estimates by about 300,000., and powers to raise this additional sum were refused in last session. They are again to be applied for; about 300,000L, and powers to raise this additional sum were refused in last session. They are again to be applied for; and your directors trust they will be able to show satisfactorily that they should be granted. In ordinary circumstances, however, their being refused would not produce much inconvenience, and your directors would not, on this account alone, recommend that your earnings should be retained from you. But you are also aware that the Caledonian has now opened its line from Edinburgh and Glasgow to Carlisle, and affords another communication between your terminal points. It is, however, ten miles longer, and the gradients and character of the line are so inferior that your directors have no doubt as to the result of competition, should any take place. They trust there will be none, as it should any take place. They trust there will be none, as it is certain to prove most injurious to both; and it will be poor consolation for you to know that your opponents are the greater sufferers. As yet your Board has not been able to convince the Caledonian of the evil of this, and therefore thinks it absolutely necessary to be prepared to defend your rights if invaded. Your Board, then, is unanimously of opinion that to declare no dividend and carry forward the whole sum earned is, under these circumstances, the safe and prudent course. But there was some doubt whether the shareholders would resolve on such a present sacrifice, though so clearly for their ultimate benefit, and it was feared that such a proposition might create a most injurious amount of disunion. It was therefore thought expedient to amount of disunion. It was therefore thought expedient to hold a private meeting of the larger shareholders, where more full explanations might be given on any point required; and one was accordingly called by circular sent to all holding to the extent of fifty shares – Manchester being fixed on for the place of meeting as most convenient for the greatest number. A report of this meeting has been circulated. From it the shareholders will see that those present, holding a very large proportion of the stock of the company, were all but unanimous in recommending the course now proposed to you, there being only two dissentients. Strengthened by this decision, your Board now leaves this matter with you, confident that you will adopt the same conclusion with equal unanimity. Parties who have paid up in advance on the half-shares will receive interest on the amount at the rate of 6 per cent., either from the date of up in advance on the half-shares will receive interest on the amount at the rate of 6 per cent, either from the date of payment of the advance, or from the period for which back interest has been paid by them at that rate. On the line and works and state of plant Mr. Adie reports as follows:—

"In obedience to your instructions I have to report that, in general, the works on the main line are in good order. Some attention has been required by the occurrence of slips on the banks and cuttings, arising out of the severity of the

on the banks and cuttings, arising out of the severity of the weather; but these, with the exception of the one at the east end of the Falkirk tunnel, have been attended with

little expense or inconvenience, and have been easily repaired. The slip at Falkirk will require the rebuilding of the retaining walls and other precautions, to prevent future accidents; but these works are of little extent, and have been let to a very respectable contractor. Mr. M'Donald, the contractor, has begun the works of the Stirlingshire Midland Junction, and is prepared to push them on with vigour. The alteration of the goods station in Glasgow has been attended with very great convenience, and the trade is now carried on with a regularity which was formerly unattainable; and I hope that powers may be got this session to enable you to make a corresponding improvement on the passenger station, which is now so urgently required. The to enable you to make a corresponding improvement on the passenger station, which is now so urgently required. The plant on the line is, with the exception of some trucks, equal to the demand of the trade, and the engine-power is in first-rate order, so that it now rarely happens that we are incommoded by any detention. The stationary engine at the top of the Cowlairs tunnel has been again started, and promises to work the trains well, since the important improvements which have been effected in its construction under the superinted one of Medical Construction. under the superintendence of Mr. M'Naughton and Mr.

Engineer's Office, Glasgow, March 16." "Engineer's Office, triasgow, March 10."
It is most satisfactory to have to state that the line is in such effective working condition. A further supply of first-class carriages has been received, and, with the engines now nearly ready, will enable the whole traffic to be carried in the very best manner. The Campsie branch will be opened by the beginning of June; the Edinburgh station is just the very best manner. The Campsie branch will be opened by the beginning of June; the Edinburgh station is just completed, and an arrangement has been made with the Morth British, by which that company undertakes the management of the station. This will prove a considerable economy to both companies. The Stirlingshire Midland Junction line has been commenced, and the rails and other material have been provided. As the company are now entitled to exercise the powers of borrowing on mortgage conferred by the Act, you will be asked to authorize raising 50,000. on loan. With regard to your relations with other lines, it is feared that the Central Company will be a party to the bill authorizing the lease to the Caledonian and English lines. Your directors propose to oppose this in the most determined manner, unless your rights to all traffic which would naturally flow along your line are secured to you. With the Caledonian no satisfactory arrangement has been made. When that line was about to be opened various meetings were held, at which it was attempted to arrange the traffic on the east and west lines—the North-Western and York and North Midland lines being parties. No permanent arrangement was, however, effected between these interests; but it was agreed that the fares from Edinburgh and York and North Midland lines being parties. No permanent arrangement was, however, effected between these interests; but it was agreed that the fares from Edinburgh and Glasgow to all points common to the east and west lines should be alike, so that a passenger may book from Glasgow to London, Manchester, Newcastle or Edinburgh at the same fare, whether he goes by the Caledonian and North-Western, or Edinburgh and Glasgow and York and Berwick lines. When the bridges over the Tyne and Tweed are complete, the time given from London to Glasgow by either route will probably be the same, while the very superior gradients of the East Coast lines will make the trains by them more regular. Arrangements for the carringe of passengers and goods have been made with the North British and York and Newcastle lines. The traffic from Newcastle upon the completion of the bridges is expected to be very large; and these lines, having a common interest, will act together for their mutual support. An amicable arrangement has been come to with the Monkland, by which they withdraw the suits raised against this company. The Stirling and Dunfermline have brought a bill into Parliament or repeal the lease of that line to your company. The directors propose that you should authorize them to take the necessary steps in this matter. At the special meeting five bills will be submitted. The first embraces the increase of capital already mentioned, the improvement of your station

and dissow, and an extension of your fine to Campsie, four miles further north. The second embraces a deviation of the line to Queensferry, and authorizes the formation of a line from Queensferry to Dunfermline, to join the Stirling and Dunfermline line, leased to you by Act of Parliament. The third is to amend the Cowlairs branch Act of last year, and to enable you to obtain a goods station to the east of Glasgow. The fourth and fifth are to carry into effect the arrangements made with the Edinburgh and Batthgate and Wilsontown Companies, sanctioned by you at the last general meeting. The following directors retire by rotation at this period, but are re-eligible, viz., Messrs. Blackburn, Dunlop, Cheetham, Ewing and Maitland. The directors have called this meeting at a later date than formerly, to give time for the previous one at Manchester, and that the proposal them made might be fully considered by the proprietors. And they now send out this Report and the balance-sheets at a longer interval before the meeting than is usual, that all the shareholders may have full time to consider and understand the state of their affairs, feeling that the fullest explanation on every point is due to them, and that in these disastrous times nothing can give stability to railway property but the hearty concurrence and converting of shareholders and directors. to railway property but the hearty concurrence and co-operation of shareholders and directors. operation of shareholders and directors.

In the balance-sheet to the 31st of January 1848, the capital account shows the receipts at 2,353,290l. 13s. 7d.; expenditure, 2,448,457l. 2s. 2d.; balance against the company, 95,166l. 8s. 7d., due to banks, revenue, &c. The revenue account shows the receipts at 96,093l. 12s. 9d.; expenditure, 39,654l. 6s. 5d.; balance, 56,439l. 6s. 4d.; balance in hand from last account, 7,283l. 8s.; total balance in favour, 63,722l. 14s. 4d. Sum set aside to meet contingencies, 63,000l.; balance for present division, 722l. 14s. 4d.

The CHARDAN said that in the working of the line

capital already mentioned, the improvement of your station at Glasgow, and an extension of your line to Campsie, four miles further north. The second embraces a deviation of the

The CHAIRMAN said that in the working of the line for the last six months the excellent condition of the plant had enabled the directors to run their trains satisfactorily, without injury to one passenger. In goods traffic there had not been the same quantity carried as formerly, but the trade was improving, as

Digitized by **GOO** 

they had now become sole carriers themselves. They only just begun to work the wire rope in the Edinburgh and Glasgow tunnel, but he had no doubt it would be found satisfactory, and the public by this means be relieved from the suffocation of the smoke, to which they were previously subjected. When the Shieldhill, Slamannan and Campsie branches were completed, he expected the capital account would be closed. The only pressing work was the improvement of the station at Glasgow and the extension of the goods department. The company had had various negotiations with the Scottish Central, but had not been treated as they ought to have been. They were, however, determined to oppose the bill authorizing the lease to the Caledonian and English lines. The company had gone to Parliament for power to hold a number of shares due to them by the lease of the Stirling and Dunfermline, but great objections had been raised against this by that company, and they were consequently sold to another company. The directors did not want to quarrel with any Board; and if the Stirling and Dunfermline wished to get quit of them, they were quite willing to treat with them. He was happy to say that the North British them. He was happy to say that the North British and all the other northern lines were at peace with them. The company had had various negotiations with the Caledonian, but as yet the result had been very unsatisfactory. In regard to the proposition not to divide the profits at this time, he would not detain the marketing with any particulars as it had already the meeting with any particulars, as it had already been fully discussed at the meeting held in Manches-Such a proposition would not have been made had it not been that the directors knew the greater bulk of the shareholders would willingly agree to it. The money was not required to increase the capital, but for the support of the line. He moved that the Report be adopted, and that it is inexpedient, in the circumstances, to declare a dividend.

Mr. H. DUNLOP seconded the motion, which was unanimously agreed to.

Mr. BLACKADDER regretted that no dividend was to be paid, not on his own account, but on that of several ladies who had become shareholders at his solicitation. He, however, heartily agreed that this company should have a sinking fund as well as any other.

In answer to a question, the CHAIRMAN stated that the increase of capital required was to pay off 300,000l. borrowed on loans and debentures, and thus to raise the actual capital to 2,448,4571.

Several resolutions in accordance with the recommendations of the Report were passed.

The meeting was made special, to consider the draft of the following bills, all of which were approved of:—To make certain branches, and to alter the tunnel at Glasgow, and for other purposes; to make branches in the counties of Edinburgh, Linlithgow and Fife, and for other purposes; to facilitate the construction of the Cowlairs branch of the Glasgow, Airdrie and Monklands Junction by the Edinburgh and Glasgow, and to grant further powers; to amalgamate the Edinburgh and Bathgate with the Edinburgh and Glasgow; to authorize the transfer of the Wilsontown, Morningside and Coltness to and to vest the same in the Edinburgh and Glasgow.

Sir A. Agnew renewed his resolution respecting the

carrying the mails on Sunday.

GLASGOW, KILMARNOCK AND ARDROSSAN March 25.—Half-yearly Meeting, Glasgow.—The Earl of Eglintoun and Winton in the chair.

Mr. TENNENT read the Report, which stated that the directors, in deference to the expression of opinions as to the continued pressure on the money-market, have refrained from commencing the works contemplated in the Report submitted to the meeting held at this time last year, and have confined their operations to the line between your Irvine and Perceton branch and the Ardrossan, at Dubbs. They intend to connect the same with the Ayrshire's Kilmarnock line at Burnbrae. The bill for extending the time for purchase of land, &c., had not been prosecuted, as the late extension Act met all its objects. The directors hope in a short time to receive the necessary warrants from the Commissioners, so as to justify them in postponing the execution of the heavier works till such time as their monetary pros-pects will enable them to carry out your undertaking pects will enable them to carry out your undertaking with the least possible pressure on the shareholders. Messrs. J. Wilkie, writer, in Glasgow, and A. Christy, merchant there, have supplied the two vacancies in the direction. Two subsequent vacancies have been filled by the election of Messrs. C. Saltmarshe and T. D. Speirs. The Glasgow, Barrhead and Neilston Direct, which forms your access to Glasgow, is now Direct, which forms your access to Glasgow, is now nearly completed from Glasgow to Barrhead, and on the eve of being opened-a matter of the utmost importance to your company, not merely on account of your pecuniary interest in their stock, but also on

conveyance of materials during the construction of the works on your main line. Notwithstanding the the works on your main line. Notwithstanding the prostration of trade, and the number of furnaces temporarily out of blast, the traffic of the Ardrossan

temporarily out of Diast, the trame of the Ardrossan continues most satisfactory; and for the year ending the 31st of December last the receipts amounted to 9,7991. 10s. 11½d; the harbour receipts for the same period amounted to 2,2281. 5s. 5½d.

The CHAIRMAN said, looking at the depressed state of the money-market, he trusted the Report would be found satisfactory. The directors had refrained from carrying out any operations except those absolutely necessary, and had come to an arrangement lutely necessary, and had come to an arrangement with the Glasgow and Ayr to prevent the introduc-tion of any bills into Parliament for branches this session, so that their funds might not be expended unnecessarily. He moved the adoption of the Report.

Mr. J. Bain seconded the motion, which was

approved of.

Mr. Gourlay, in reference to a call of 5l. per share, advertised some weeks ago, wished to know if it was legal for the directors to make that call at a meeting held for the purpose of electing two new members.

The CHAIRMAN said the meeting was not called for the mere purpose of appointing two new directors, but for business generally, at which there had been a decided majority of the directors present. The call was agreed to, on the understanding that it was not to be severely pressed for, it being more as a safeguard to the company than anything else.

Mr. Gourlay wished to know if there was a clause in the company's Act which permitted the directors to appropriate their funds to buying stock from any

The CHAIRMAN said the purchase of the Barrhead and Neilston stock was made by the provisional directors, and afterwards sanctioned by the registered

After some further discussion, Mr. Gourlay lodged a protest against the funds of the company being so applied; against which

The CHAIRMAN protested, on the ground that it was incompetent for him (Mr. Gourlay) to lodge a protest after the matter had been sanctioned.

ENERAL TERMINUS AND GLASGOW HARBOUR. March 29.—Half yearly Meeting, Glasgow.—Mr. A. S. Dalgleish in the chair.

The Report stated that from the condition of the works the directors had no doubt of being able to open the line for traffic by August next. They had avoided making calls during the severe pressure of the money-market, but as that pressure was now to a great extent modified they had determined to make a call of 51. per share, to be paid in instalments of 21. 10s. on May 15 and November 1 next.

The CHAIRMAN, alluding to the call, said that, if the parties who had made purchases in the line had been able to have met their previous calls, one would not now have been necessary; but he had little hesi-tation in saying that, if their present prospects con-tinued, the second instalment would not be required. He anticipated that they would soon be in a position to pay the interest on the money already received. The directors had no intention of carrying either goods or passengers on the Sabbath-day. He moved

the approval of the Report.

Mr. M. Sproat seconded the motion, which was carried; and the retiring directors were re-elected.

STIRLING AND DUNIERMLINE.

March 28.—Half yearly Meeting, Glasgow.

Anstruther in the chair.

The Report stated that in consequence of the general distress the directors had not thought it advisable to press for calls, or to urge the works forward with great vigour. The Edinburgh and Glasgow having acquired a large number of shares in this line, it appeared to the directors that the only way in which they could carry on their affairs in a satisfactory manner was by relieving that company of them. They accordingly did so, and the Stirling and Dunfermline is now free from that influence. Various negotiations had been entered into for the purpose of getting rid of the lease between this company and the Edinburgh and Glasgow, but no satisfactory result had yet been obtained. The balance-sheet showed the total amount of receipts at 153,408l. 9s. 2d.

The CHAIRMAN, in moving the adoption of the Report, explained the conduct of the Board in the re-purchase of their shares from the Edinburgh and Glasgow. This time last year that company intro-duced into Parliament a bill to bind them to hold shares in this company to the amount of one-half, and to authorize this line to be sold to them. The shareholders of this company ordered that bill to be opposed, and it was opposed successfully. In the course of the discussion various hints were thrown out that the holders of these shares would subdivide account of the facilities which it will afford in the I them into small portions, and by this means get com-

plete influence in this line. This they had done to some other companies, and it therefore became necessary for the directors to consider their position. The shareholders of this line must either have been handed over to be managed by the Edinburgh and Glasgow, who would take the whole charge of the affairs of this company, or in some way or other that influence must be got rid of altogether. It had been suggested to the directors that they should purchase these shares, which they succeeded in accomplishing.

In answer to a Shareholder, the CHAIRMAN stated that the number of shares bought amounted to upwards of 8,000, and that they were purchased pre-

vious to the last meeting.

Mr. Cullen said, at the last meeting the question was, whether it was competent to rescind the lease by the Edinburgh and Glasgow. It appeared to him that if they had kept the directors of that railway partners in their line, they might have carried an arrangement on that lease much more favourably than at present.

After some discussion, Mr. Robertson moved— That the meeting approve of the Report now read, on the understanding and condition that the directors, by their personal credit and funds, pay up the calls on the shares purchased from the Edinburgh and Glasgow, and on that condition the meeting undertake to relieve the directors of their purchase, it being understood that the shares are not to be disposed of without the sanction of a meeting of the shareholders.

Mr. MACARA, W.S., seconded the motion.

Mr. Cullen moved, as an amendment-

Mr. UULLEN moved, as an amendment—
That the meeting adjourn for fourteen days from this date, to enable the directors to come to some arrangement, if possible, with the Edinburgh and Glasgow, in reference to the lease of this line, and quead ultra, that the consideration of the Report be postponed in the meantime, and that the Report be printed and circulated among the shareholders, with the view of being disposed of at the adjourned meeting.

Mr. G. BUCHANAN seconded the amendment. On the vote being taken, Mr. Robertson's motion was carried by a large majority.

Messrs. Cowan and Paton entered their protest. The number of directors was then agreed to be

limited to seven.

The meeting was made special, when drafts of the following bills introduced into Parliament were approved of :-To enable the Stirling and Dunfermline and the Edinburgh and Northern jointly to construct a railway from Dunfermline to North Queensferry, with a branch therefrom to the harbour of Inverkeithing; to make certain deviations of their main line at Tulligarth and Dunfermline, &c.; to amend their Act, 1846, and to repeal so much of the said Act as relates to a lease of the railway, and branch railways, thereby authorized to be made to the Edinburgh and Glasgow.

DUTCH-RHENISH .- March 25 .- Special Meeting of Shareholders, Liverpool, to petition the directors with reference to the proposed call. A requisition was read, and afterwards signed by all present, that though the English shareholders always objected to the appropriation of the funds of the company to the purchase of bonds, especially when none of the main objects of the line had been secured, yet they are fully determined to persevere in their efforts to carry out the project. That in their opinion, until some guarantee was obtained for the completion of the line to Prussia and Germany, it would be unjustifiable to expend more money on such parts as, in the absence of that extension, would accommodate merely interior traffic in Holland, without a profitable return. Should the present funds be insufficient to meet any present pressing engagement, the commissaries are to call upon their colleagues to avail themselves of the assets of the company by raising a loan on the bonds. If this loan cannot be effected in either Holland or London, the shareholders pledge themselves to advance the money by a payment of 10s. per share pro ratá on their respective shares, on the deposit of the bonds of each shareholder so advancing capital; that if the present call now made of 10s. per share be absolutely required, the shareholders claim their undoubted right to have the bonds deposited pro rata amongst the shareholders paying up their colleagues that no further call be made until the Prussian Junction line be obtained, and, pending the present state of the money-market, that no shares be forfeited; that a reduction be made in the present large expenses of direction; that the London Board be remodelled; and that the present call now announced be not persisted in.

PORT OF GREAT GRIMSBY.

#### NOTICE TO FOREIGN MERCHANTS AND SHIPPERS.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

### SCOTTISH CENTRAL RAILWAY.

NOTICE IS HEREBY GIVEN, that a SPECIAL GENE-RAL MEETING of this Company will be held at Perth, and within the Town Hall there, on Thursday, the 20th day of April next, at 1 o'clock Afternoon, for the following purposes:-

I. To consider the actions presently pending in the Court L To consider the actions presently pending in the Court of Session in regard to the Lease or Agreement entered into between this Company and the Caledonian, Lancaster and Carlisle, and London and North-Western Railway Companies, bearing date the 21st day of October 1846; and also the previous Acts, Resolutions and Proceedings of this Company in relation to the said Lease, Agreement and Actions, and especially the Resolutions of the General Meeting held on the 20th of July last; and to decide and determine whether the said litigations shall be proceeded with or finally abandoned; and generally to come to such resolutions, and to give such instructions to the Directors in regard to the said matters, as shall be deemed expedient.

II. To consider and determine as to the Bill now pending II. To consider and determine as to the Bill now pending in Parliament, entitled "A Bill to enable the Scottish Central Railway Company to lease their undertaking to the Caledonian, Lancaster and Carlisle, and London and North-Western Railway Companies," the draft of which will be submitted to the Meeting; and to approve or disapprove of the said Bill.

By order of the Board of Directors,
ROBERT D. KER, Secretary

Perth, March 9, 1848.

The Directors of the Scottish Central Railway Company are anxious to impress on the Shareholders the necessity of giving their careful attention to the questions which are to be discussed at the Special General Meeting, of which notice is now given; and as these questions involve the most important and vital interests of the Company, the Directors would feel wanting in the duty which they owe to themselves and to the Shareholders, were they not to state the very decided opinion which they entertain in regard to them. The Directors may sum up their views in a single sentence—That, in their opinion, the prosperity of this Company, and the value of the stock as a permanent investment, imperatively demand that the actions presently depending should be put an end to; that all attempts to get free from the existing agreement with the Southern Companies should be abandoned, and that the Shareholders should exert themselves to the utmost to obtain for that agreement the snaction of the Legislature. Their reasons for arriving at these conclusions they beg very shortly and articulately to state:— The Directors of the Scottish Central Railway Company articulately to state :-

- 1. The existing agreement by which the Central Company is guaranteed in a minimum dividend of 7 per cent. on the whole called-up capital, with the half of the surplusproits which may arise from the working of the line, is a most liberal and advantageous bargain, and ensures to the Shareholders a larger return than, as the Directors are of opinion, they can age about an advantageous bargain, and ensures to the Shareholders a larger return than, as the Directors are of opinion they can age about an advantage and they are supposed. nion, they can ever obtain under any other arrangement.
- 2. This large return is secured to the Central Company by the ample guarantee of the Caledonian, Lancaster and Carlisle, and London and North-Western Railway Companies, who are conjunctly and severally bound to the Central Company for payment of it—a guarantee which, in the estimation of the Central Board, is equal to that of the public
- 3. Besides the minimum dividend of 7 per cent, the Central Company is also entitled to the half of the surplus profits which may arise from the working of their line; and to give the Central Shareholders the most perfect assurance of realizing from this source the largest possible return, a preponderating interest is secured to them in the control and management of the line. By the present arrangement, the future management of the Central Railway is to be intrusted to a Board composed of twelve Directors, of whom six are to be elected by the Central Shareholders alone, two by the Caledonian, two by the Lancaster and Carlisle, and two by the London and North-Western Companies; the nomination of the Chairman and Deputy Chairman to belong archiffoly to the Scottish Central section of the Board.

  4. The Directors believe the existing agreement to be valid and bineting on the Central Company both in honour and in law; and of this they are very certain, that even if this Company shouthrenceed in setting it saide, there is not the alightest probability of the Legislature giving their sanction, after such a breach of contract, to an agreement with any other Company.

  5. The Directors are also agreed in believing, that if the sanction of the Legislature is not should be account of the Legislature in the sanction of the Legislature is not should be accounted to the Legislature in the sanction of the Legislature is not should be accounted to the Legislature in the sanction of the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the Legislature is not should be accounted to the 3. Besides the minimum dividend of 7 per cent. the Central Company is also entitled to the half of the surplus
- 5. The Directors are also agreed in believing, that if the sanction of the Legislature is not obtained to the existing

agreement in the present session of Parliament, arrangements will be entered into by the Edinburgh and Glasgow and Caledonian Companies for the settlement of their differences—the inevitable result of which will be that the Central line will cease to be an object of competition, and fail in obtaining a guarantee from either Company.

in obtaining a guarantee from either Company.

6. The Directors would only further earnestly request their Shareholders to weigh well and deliberately consider the effect of putting an end to the existing agreement; and it is this—that the line, in that event, must be worked as a separate and independent line, subject to all the risks and contingencies incident to such a position; while, on the other hand, if the existing bargain is adhered to, a permanent and substantial value, independent of all risk, is given to the charter graches are the results of the discount of the Directors there nent and substantial value, independent of all risk, is given to the stock, such as, in the opinion of the Directors, there is no chance of acquiring for it under any other arrangement. The stock has hitherto stood high in the market; but the directors are strongly of opinion, that this is in no small degree to be attributed to the guarantee from the Southern Companies; and that but for the expectation that the present arrangement will be confirmed, its position in the Share List would have been very different.

For these reasons the Directors earnestly but confidently appeal for assistance and co-operation in carrying through the existing most advantageous bargain, to all those of their co-proprietors who have the same interests as themselves in the prosperity of the undertaking, to whom the safety and protection of their property is an object of importance, and who have no other interests to serve than those of the Scottish Central Railway Company.

REPORT OF THE DIRECTORS,

Presented at the Annual General Meeting, held at the Society's Office, on Thursday, March 2, 1848.

Having, at the Meeting held in January 1847, presented to the Proprietors and Assured a very full account of the Society's affairs, your Directors have but little to communicate on the present occasion.

Proprietors and Assured a very full account of the Society's attains, your Directors have but little to communicate on the present eccasion.

It may, however, be satisfactory to those now assembled to learn, that, notwithstanding the increased and active competition arising from the yearly establishment of many new Lafe Assurance Othees, the business of this Society still continues to advance.

In proof of this, it will be sufficient to state the following facts:

1. The number of Policies granted on the lives of Clerguigner—a class of persons generally distinguished for long city, has been greater during the your ending dune both but the period colopte headed in this Reports, than in any one year since the commencement of the Society's mome, which was 165387, in the year ending June 30, 1857.

3. The number of NEW POLICIES issued within the year has been 313, and the amount assured thereby 257, 252, being an increase both in the number of Policies and in the sum assured, over those of any preceding year.

In conclusion, the Directors are happy to inform the Proprietors, that the Society has not in any decree suffered from the creatmortality which has prevailed of late throughout the Kingdom, also within the six months ending with December Last, not having equalled either in number or amount those of preceding years.

Tables of Rates and Forms of Proposal can be obtained of any

Tables of Rates and Forms of Proposal can be obtained of any of the Society's Agents, or by addressing a letter to Office, No. 99, Great Russell-street,

SATURDAY, APRIL 8.

PRESENT STATE OF THE GAUGE QUESTION. We have been favoured with a copy of the

following letter written by one of the ablest of the authorities on the gauge question :-

You have asked me to recapitulate the principal points in the narrative of the railway gauge question, in which you have taken so much interest. They are about as follows:-In 1845 Mr. Cobden made the following sensible motion, which met with general support:-"That it having been represented to this House by petitions from various public bodies, as well as from merchants manufacturers and others that serious impediments to the internal traffic of the country are likely to arise from the breaks that will occur in railway communication from the want of a uniform gauge, &c. an address be presented. praying for the appointment of a commission to inquire whether in future private Acts for the construction of railways, provision ought to be made for securing a uniform gauge; and whether it would be expedient and practicable to take measures to bring railways already constructed, or in progress of construction, into uniformity of gauge, and to inquire whether any other mode of obviating or mitigating the apprehended evil could be adopted," &c. Commissioners (viz., Sir F. Smith, Mr. Airy and Prof. Barlow) were appointed, they sat for several months, examined many witnesses, and reported strongly on the following points, on which the evidence was overwhelming: The importance, or rather the necessity, of uniformity of gauge; the practical superiority of the narrower over the broader gauge; the facility with which uniformity of gauge might be obtained by altering the broad gauge to the narrow, which might be done under an expense of one million, without stopping the traffic for a single day. Of forty-five witnesses examined, only Mr. Brunel, his colleague Mr. Saunders, and their two subordinates, spoke in favour of the 7 ft. gauge and of diversity of gauge. The Commissioners proceed to recommend "that all lines in course of construction, or hereafter to be authorized, shall be on the usual or narrow gauge; and that it was desirable that some equitable means should be found for defraying the expense of bringing all lines already constructed on the exceptional gauge of 7 ft. to the general gauge." No sooner was the Report out than the Commissioners were furiously attacked by Mr. Brunel's supporters. Deputations of gentlemen, instigated by the active agents of the Great Western Company, waited on the ministers (Sir R. Peel's ministry being then in a falling state), and the consequence was, that an Act, called the Gauge Act, was passed; the preamble of which was contradicted by the second clause, and which, of course, settled nothing. The quarrel on the question became most lucrative to numbers of railway agents and others; (I am personally cognizant of 900,0001. thrown away, in this way, in the district north of London and Bristol only); and it has continued ever since to occupy the committees of Parliament and the courts of law, and it is again to come before Parliament this year. More money, in short, has been spent upon it than would have sufficed to attain uniformity of gauge twice over, and this expenditure continues. The question has always been argued on the narrowest ground by the partisans of contending companies, each anxious to maintain diversity of gauge, and only desirous that the break of gauge should be so placed as to protect them. So the question has been treated, and so it will be treated. until some independent member brings in a bill to carry out the simple recommendations of the Gauge Commissioners, the soundness of which all subsequent experience has confirmed, The following facts show what change has taken place in the circumstances affecting the question since the Commissioners reported in January 1846 :-

| Narrow Gauge, Broad Gauge, | Miles of Railway open, | Miles of Railway open, | Miles of Railway open, | 1,846 | 274 | 274 | Opened since | 1,213 | 54 Totals, Jan. 1848 .. 3.057

the mileage proportion of broad to narrow-gauge railways having been in 1846 as 1 to 7, and being now as 1 to 10. 7,000 new or unopened miles of railway have been sanctioned before and since 1846,

have not. Of this 7,000 miles, about 1,000 are intended to be on the broad gauge. The present session is thus evidently the last opportunity which will ever be afforded of recovering the foolish mistakes which have been made on the subject to which Mr. Cobden's motion referred. The possibility of attaining greater extreme speed on the broad than the narrow gauge-(without stopping, here to consider the usefulness of such extreme speeds)—has been decided by experience since the Commissioners reported against the broad gauge. The express train on the 7 ft. gauge between London and Exeter, has, during the last year, been travelling at 44 miles per hour. The express train between London and Southampton over generally much worse gradients has been, during the same period, performing the journey at the rate of 441 miles per hour. Since 1846, we see that only 54 miles of broad-gauge railway have been opened, so that the expense of the alteration of the broad to the narrow gauge, and the consequent attainment of uniformity, would be very little more than when the Commissioners made their estimate of one million. I need not tell you, that this outlay would be soon saved ten times over, not only by the suppression of a most expensive cause of detention in Parliament, but by the introduction of a less expensive form of railway, and by the great economy which is found to accompany the uninter-rupted use of continuous railways. This latter point is completely established by reference to the enormous increase in the operations of the clearing-house during the last year, a part of the railway system not much known by the public, although of incalculable utility. Last year upwards of three hundred thousand mineral and goods waggons, all laden, were, by the clearing-house arrangements, passed from one company's line on to another's without touching the loads, every one of which, if the gauges of these lines had not been uniform, would have had to be shifted twice. As each of these trucks holds on an average 4 tons of load, one million tons of merchandise and minerals would therefore have had to be shifted twice if there had not been uniformity of gauge on the Northern railways. To say nothing of the cost of all this labour, any merchant can estimate that which would result from injury to the articles transhipped, and from delay and consequent loss of capital, or interest on capital, on the goods in transit. I would stake the case of the necessity of uniformity of gauge on this one fact, which Continental states have had the sense to appreciate, and which we have not. It is a shame to see the interests of commerce and common sense sacrificed to the interest and clamour of a railway company, and to the whims of a few firstclass travellers, in the way in which we have seen they have been on this question of railway gauge.

#### Railwan Literature.

A Plan for additional National Defences, in a Letter to the Duke of Wellington and Her Majesty's Ministers. By W. Malins, Esq.

This letter, written before the Revolution, seems in many places almost prophetic. All that the author then expected has since happened, except invasion; with this difference, how-ever, that it has come to pass before Louis Philippe's death instead of after. The author followed the Duke on the Peninsula in 1811, 1812, 1813, 1814, and served in America till 1815. Having seen something of war and invasion practically, he deprecates the postponement of measures of defence till immediate fear shall paralyze preparation, and he suggests certain additional means of defence, easy of adoption, and well calculated for the end.

The great means of defence suggested by Mr. Malins is the construction of large railway trains of heavy artillery. He instances the means provided by Napoleon to defend his vast preparations for invading England. Napoleon, he says, defended a line of coast by horse artillery; these gallopped to any threatened point, instantly unlimbered, and told with fearful effect on any object approaching the shore from the low-shore level from which they fired. some of which have been commenced, and some | To defend Brighton, for example, Mr. Malins |

would run a mile or two of railway along the shore. This line should be constructed for military purposes alone. Long moving batteries, mounted on railway carriages, should traverse the whole distance, drawn by steam-engines. The guns might be of enormous size, and fire red-hot balls and shells. Such is the new species of line with which Mr. Malins would encircle our harbours and places of embarkation.

The following extracts will serve to show the spirit of Mr. Malins's paper, and to show what appear to be some of the military uses of rail-

"If an isthmus of a mile in width were suddenly "If an isthmus of a mile in width were suddenly to arise between Dover and Calais, every man would at once see the danger, and say 'We have ceased to be an island; fortify and prepare every possible and practicable means of defence, raise troops, increase your ordnance, make every preparation for safety; supplies would be voted without stint or measure;—but because old ocean still rolls between Gaul and Albion, men picture to themselves declarations of war in the form—naval preparations tions of war in due form-naval preparationstimely notice—Channel flects—safety on former terms—England a stranger to the foot of foeman, as she has been since the days of Pevensey and Hastings. But banish such dangerous dreams, my countrymen, or the peril may be at your doors, and you may awake to the sad reality too late. Every point of the coast is now as open to attack as the supposed neck of land would be between Dover and Calais, with this difference;-the point to be defended would then be distinctly known; now we must be prepared at all points. It may, perhaps, be conceded that, under the sway of the present prudent and calculating monarch of the French people, peace will not be disturbed on light grounds; but the age of that monarch renders it probable that at no very distant date a change t come, and what the next form of government will be, seems to be rendered doubtful by the reform meetings held in so many important places, where the king's health and name are studiously omitted. Should a republic succeed, or, on the accession of a new monarch, should it be deemed necessary to conciliate the public spirit and affections by some deed of "glory," that would be the hour of peril to Eng-land, should she leave her coasts and harbours, and the heart even of her empire unprotected as now

The details of the proposed military railway

are given as follows:-

"A fleet of steamers carries an armament so heavy, that field artillery, if it could be concentrated in time upon the coast, could not stand within range. tello towers, though thickly studded on the vulnerable points, could bring but few guns to bear on a given Detached forts, without sufficient garrisons, would be worse than useless; for they would, if taken by an enemy, form citadels for him. Guns upon the open beach, like those six which obstruct the public road on Brighton cliff, would avail but little; and, unless thickly placed along the shore, would be avoided by an enemy approaching, until he could turn or take them; a few detached guns, indeed, would produce but little effect; for if the invasion is not still be desire; is ever tried, it will be done in earnest. A few guns will not turn the scale. It will be necessary therefore to possess the power of perfect and immediate communication along the coast—to the harbours of refuge and the points d'appui; but this would be of little use, unless the means of support were at command, together with the power of always bringing superior forces at the point attacked. The electric telegraph will give the one, the rail the other. For example, to defend Brighton, six 32-pounder guns are immovably fixed upon the cliff, four looking to the sea, and one up each cliff, east and west, or some such arrangement. Steamers might take a position whence every shot would tell upon the town, without being much injured by these guns. But suppose these six guns or rather six of the heaviest pivotguns, traversing not merely on the usual circle, but that powerful trucks bearing the guns, gunners and ammunition, traversed the whole length of the town on a rail below the cliffs, the guns, à fleur d'eau, throwing red-hot shot and shells,—what steamer would venture within their range! If this could be done with 6 guns, why not with 60, or 600, and the rail extended not only the length of the town of Brighton, but from thence to Portsmouth on one side, and Dover on the other? What ships or fleets of steamers would then venture to approach the projectiles which would be showered amongst them ! Arrest them thus on the beach at any given point selected by themselves, and give your block-ships and fleets from the ports of refuge time to come up in the rear, and England will have little to fear from a second

appearance of a fleet so handled. * * The power of the railway in concentrating troops has been in some measure appreciated; but for a coast line of defence it is quite unknown. The subject, however, on careful examination, will be found to possess many of the first elements of success—rapidity of concentration, unlimited mechanical power, equal to any weight of metal; in short, all the advantages of a ship, without its risks and uncertainties, and at a very small cost compared with the necessary number of steamers and ships to be kept in commission to effect the same object. The coast line from Portsmouth to Dover, lying conveniently for the French coast, is usually looked upon as the most likely to be first attempted, also because it gives the readiest access to our capital. This line should therefore first be secured. I have not inspected the whole line to offer any precise opinion of what would be required, but I recollect sufficient to feel assured that almost the whole extent between those garrisons is assailable. The chalk cliffs of Beechy Head, and some other points, may be sufficient defence against some other points, may be sumcient defence against the landing of troops; but there are, I doubt not, many gullies and low places in those cliffs, which the sappers and miners would render passable even for artillery in a couple of hours, if left undefended; but if a powerful brigade of 100 or 200 guns, of the heaviest calibre, could be concentrated on any point, ready for boats, shipping, or steamers, as they came within range, I leave it to nautical men to say how many would be afloat by the time they came near enough to land troops. The rapidity of motion on the rail would ensure this timely concentration, because the artillery would be conveyed at least four times as fast as the steamboat, though favoured by wind and tide. It is not necessary here to enter into a minute detail of the plans proposed. The next war will be decided by great guns. The Americans took us by surprise with them in the last. Light guns against steamer armaments will be of little use; the rail alone can carry heavy guns quickly enough to the menaced point of an open coast. It may be sufficient briefly to observe, that it would be requisite to construct as near to high-water mark as possible a railway exclusively for ordnance purposes; of such strength as to bear carriages sufficiently strong to resist the recoil of guns of the largest capacity, and carry their ammunition and appurtenances. Indeed, we would construct something like moveable block houses, which should serve as well for the habitation of the men on duty, so they would be always com-fortable at their post, like sailors on board ship. The broad-gauge engine carriages on the Great Western are equal to 50 tons. Of course a railway could be constructed much stronger than anything yet accomplished; but a carriage which would bear 50 tons on six wheels would be equal to three guns of 5 tons weight, and three guns would ballast the carriage sufficiently, it is presumed, to bear the recoil of one pivot gun fired at a time; if not, the proper proportions and other matters could readily be adjusted. Of course I do not presume to offer any opinion upon the sort of gun to be used, but the plan is applicable to the Paixhan or any other. Mortars might be let down on the solid earth when in use, and raised by hydraulic pressure when required to be removed from place to place. An upper floor might be constructed over the gun-room, which would serve for a rocket-platform, or loopholes for musketry in case of close quarters; but it would be very difficult to get to close quarters with such a brigade of heavy guns, and certainly could never be done from the sea, except by surprise in a fog or by night; an opportunity which seems to have occupied the especial attention of the Prince de Joinville."

Napoleon's plan is thus described:

The nearest approach to this plan of defence was that of Napoleon's, when concentrating his Boulogne The British cruisers were of course always on the look out, and to avoid them the small vessels of the flotilla ran in shore, and sometimes on shore; but even then our gallant tars followed, until Napo leon organized a coast guard of horse artillery, which was always on duty along shore;—directly a vessel was in danger they galloped to the spot, down to the water's edge, and by their horizontal fire afforded effectual protection. What would they have done with heavy guns and a rail to travel upon?"

Of course we are no judges of the means of military defence, but these proposals seem to us sufficiently plain and feasible to induce military engineers to examine more closely than heretofore the means which railways present of increasing and economizing our means of military defence; and the public are certainly under obligations to Mr. Malins for the experience and ingenuity he has brought in aid of their cause.

#### Broccedinas of Societies.

INSTITUTION OF CIVIL ENGINEERS. -- April 4. General Meeting.—Mr. J. FIELD, President, in the chair.—The second part of Mr. Jackson's paper 'On the Engineering of the Rhine and the Moselle' was read. It consisted to considerable extent of a translation of an account of the spurs, groynes and other works on the Moselle for restricting the dimensions the bed of that river and increasing the depth of the water, so as to enable the navigation to be carried on, which would otherwise be averted in the lowwater seasons. It was shown that to effect this, numerous arms of the river had been dammed across and allowed to silt up, the course had been straightened, elbows had been cut off, and the convex shores, after being silted up by deposits between the groynes, were defended by an arming of fascines, &c. Division banks had been established for the inflowing rivulets, so as to carry the gravel to greater distance down the stream. Rocks also were removed by down the stream. Rocks also were removed by powder, and general improvements to such an extent were executed that the river was comparatively under good control. The account of the Rhine was then resumed, and, after detailing the various plans that had been proposed for ameliorating its course, giving numerous interesting and valuable tables of Blanken's and Bolstra's experiments as to the tides, the inclination of the bed of the various rivers, the duration of the ebb and flow and average height of the river at the time of new and full moon, the height of various dykes above the extraordinary flood line, &c., the paper finished with these general views:—"On looking at the map of Holland, and tracing its various streams, it certainly does not appear singular that frequent stoppages should take place in that country, whilst such occurrences are comparatively rare in Germany; for, as long as the Rhine retains its single course, as at Emmerick, no obstacles, excepting elbows, stay the progress of the current seawards; but, as soon as it divides at the Waal and Pannerden Canal the evil commences and increases, according to the number of arms and channels lower down. It is generally agreed that a river should have as few outlets as possible, in order to allow it the more effectually to clear itself, and that the tide should be admitted as far as possible, whilst, at the same time, the action of the winds should be diminished; again, that the more the surface-water of any river is abstracted the more quickly the sand will accumulate; and also that if a cut be made it is usual for ice stoppages to take place below it, so as to raise the water level above; and it is also agreed that if a cut be made as capacious as the river itself, or be permitted to increase to that extent, it will soon get beyond control, whilst the sand will accumulate rapidly, and that when openings exist in dykes the ice gets into eddies, loses its velocity, and by degrees closes up the passage below the opening, so as to raise the water above. The question therefore to be solved with regard to Holland and the system followed there, in order to prevent breaches in dykes and to save the better part of the country (taking into account its weak marshy soil and its incapacity to withstand any great force) is whether it be the better plan to relieve the pressure on the dykes by cuts and new channels and local floodings, at the expense of increasing the number of ice stoppages and at the same time diminishing the velocity in the main rivers, thereby greatly augmenting its liability to accumulating sand. It is true, as already stated, that the rivers are at present in such a condition that it must be very expensive to effect anything of importance, but the question is of such vital importance to the port of Rotterdam, and the certainty of the mouth of the Meuse at the Brielle in the course of time closing up like that at Katwyk, if no improvement be attempted, is so clear, that it is very much to be regretted some steps have not been taken ere this to prevent so great a flow of water from passing out by the Hollands Diep to Hellvoet." The author directs the attention of the Institution to this subject, and suggests the following points for the consideration of the members:—"That the object to be aimed at, in any steps which might be adopted for improving the Meuse at Rotterdam, should be to protect and strengthen the shores and dykes likely to be operated upon by the alterations; to straighten all the curves on the Leck, so as to lessen chances of ice stoppages; to separate the Waal and Meuse waters as much as possible, and to lead off the former, together with the Leck, into the sea by the Brielle; to narrow the Bresbosch channel (now divided) into one, regulating the quantity of water; to close the Krabbe, the Noord and the Spry with sluice gates; and, for the purpose of widening the outlet, to join the island of Rosenburgh to the main land at Vlaardingin, thereby causing the ebb water to act upon this island, and with increased velocity and an additional quantity of

water, attempting to remove the bar and shoals." —At the monthly ballot Messrs. F. C. Penrose, R. Hughes, H. Curry, F. P. Smith and S. Woods were elected as associates.

REPORTS OF THE ADMIRALTY (under 9 & 10 Vict. c. 106), relative to applications for Railway Bills.

Railway Bills.

Great Western (Branch from Slough to Windsor).—This is to cross the river Thanes about three furlongs above Windsor, upon a bridge consisting of five arches, of 150 ft. span each, enabling the structure to extend across the two branches of the river, an islet, and the low grounds on either hank, and with only one pier placed in the stream. The soffit of the crown of the arches is to be 10 ft. above the level of the greatest recorded flood, and 16 ft. above the surface of the giver in ordinary winter flowed. The present reversion the greatest recorded mood, and 16 it, above the surface of the river in ordinary winter floods. The promoters propose to cut off part of the islet crossed by the bridge, to afford a freer passage to the water. The Lords Commissioners therefore give their assent to the measure, subject to the provision that the company shall always maintain the towns not be more above. the towing-path under the bridge and within the limits of

their land in a good and effective state.

Edinburgh and Perth.-This bill is to make a line from North Queensferry, by Dunfermline, to Pertli. There are four schemes before Parliament for communication between four schemes before Parliament for communication between North Queensferry and Dunfermline; two take an inland route and two skirt the shore. It has been their lordships' desire to prevent railways occupying coast lines whenever the same object can be attained by retiring the lines more inland, which it would appear in this case may be done without interce-pting the communication between land and water. Their lordships therefore recommend, as a general measure, that permission be given in preference to the lines which interfere kast with the shore. In the present bill they further recommend—1. That in crossing Toll Bay the line be deviated landward of the pier marked No. 10 in the plan and book of reference, and that the whole area inclosed should not exceed three acres within high-water mark. 2. That at Queensferry and Inverkeithing Bays the line be not carried seavard of the black continuous centreway marked on the deposited plan without the previous way marked on the deposited plan without the previous consent of the Admiralty. 3. That in the embankments in Queensferry and Toll Bays such openings be left for the passage of boats as the Admiralty shall previously ap-

Edinburgh and Northern and Stirling and Dunfermline. Edinburgh and Northern and Sirling and Dunfermline.—
The objects of the present bill are—first, to make a branch from the pier at North Queensferry to the Dunfermline line; secondly, to carry a branch from the same point to the east pier of North Queensferry; thirdly, to make a branch to the harbour of Inverkeithing. As in the evidence taken before the surveying officer no sufficient reason has been assigned, either on account of the nature of the ground or on the score of supense, for not carrying the line more inland. score of expense, for not carrying the line more inland, their lord-hips recommend—1. That instead of skirting the shore below high-water mark for 500 yards, the line be deviated inland of St. Margaret's 2. That in crossing Toll Play the line be restricted from cutting off more than three cares of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the pre acres of the upper part of the bay, and if one pier be in-closed, that sufficient access for boats to that pier be given. 3. That in crossing Queensferry and Inverkeithing Bays no 3. That in crossing Queensferry and inverseiting page indeviation be sanctioned seaward of the black continuous centre line of way laid down on the parliamentary plan. 4. That instead of solid embankment throughout Queensferry Bay, three openings be left of 30 ft. span each, and 6 ft. above high-water level of ordinary spring tides.

Edinburgh and Glasgow (Amendment and Branches, No. 2).—The objects of this bill are—first, to make a line from the Edinburgh and Glasgow main line to Port Edgar and South Queensferry, on the Firth of Forth, with two branches therefrom, one to the harbour of South Queens branches therefrom, one to the harbour of South Queensferry, and the other to the pier at Port Edgar; secondly, to make a line from North Queensferry to Dunfernijne; thirdly, to abandon the whole or a portion of the branch line to South Queensferry, authorized to be made by the 9 Vict. c. 70. On the south side of the Firth the only works that approach high-water mark are the branches to Port Edgar and Queensferry. The Port Edgar branch traverses the pier, and passes, for the distance of about 100 yards, across the beach below high-water mark, encroaching about 20 yards within that line. The Queensferry Harbour branch skirts high-water mark for a distance of 290 yards, and encroaches within it about 30 yards. As neither of these branches will prove prejudicial to navigation, nor prevent access to the shore, they have their lordships' assent. The line on the north shore of the Firth begins at the Signathouse Pier, passes for a distance of 260 yards across a small line on the north shore of the Firth begins at the Signal-house Pier, passes for a distance of 260 yards across a small rocky bay, dry at low water, and encroaches 100 yards within high-water mark. Passing a short distance through the land the line again skirts the sea shore below St. Margaret's, then crosses Toll Bay for a distance of a quarter of a mile, encroaching 260 yards within high-water mark, and cutting off an area of 15½ acres. Within are three small piers, one of which is used by coasting vessels. The line then passes inland till it reaches inverkeithing, when the limit of deviation encroaches on high water for a distance of 900 yards. As in the evidence before the surveying officer no sufficient reason is assigned, either from the nature of the ground or on the score of expense, for carrying the of the ground or on the score of expense, for carrying the line along the margin of the shore under St. Margaret's, or for cutting off 15½ acres of Toll Bay, or for inclosing the three small piers, or for encroaching on Inverseithing Bay, their lordships recommend—1. That the line be not carried along the shore, but pass landward of St. Margaret's.

That in crossing Toll Bay the line be limited to inclosing an area of three acres below high-water mark, including only the Quarry Pier; and that access for boats to this pier be provided for on a plan to be approved by the Admiralty. 3. That where the line is carried below the line of highwater mark, no deviation be permitted seaward of the black

G000Digitized by

continuous centre line as laid down in the parliamentary plan, without the previous sanction of the Admiralty. Caledonian (Branch across the Clude and Glasgow Station).

Calcionan (Branch across the Civic and Gasgow Station)
—The most important object of the bill is to carry a railway across the river Clyde at Glasgow, below Stockwell Bridge. Their lordships have already expressed their decided objection to a line crossing at the same site by the same company in two former sessions; and having received no further information calculated to alter their previous decisions, they have therefore again to express their dissent to the construction of any bridge across the Clyde at Glasgow below Stockwell Bridge, as they consider the space between that bridge and Glasgow Bridge should be left entirely free and unimpeded for the use of the numerous small vessels frequenting the port, and open to such further improvements of the harbour as from time to time may become requisite. Their lordships are further confirmed in their dissent to the proposed interference with the Clyde below Stockwell Bridge, as no sufficient necessity has been shown why the same object could not be effected with equal advantage to

the public interest by a crossing above Stockwell Bridge.

Glasgow, Airdric and Monklands Junction (Central Junction Branch).—The object of the bill is to effect a junction between the Airdrie and Monklands Junction line, on the north side, and the joint line between Glasgow a Paisley, on the south side of the river Clyde and city Glasgow, being a distance of about 2 miles and 1 furlong. Glasgow, being a distance of about 2 miles and 1 furlong. It is proposed to carry the line across the river, 1,000 ft. above Hutchinson's bridge, and 1,900 ft. above Stockwell Bridge, upon four arches, of 60 ft. span each, and on a line nearly aquare to the course of the river; the springing of the arches to be 8 ft. above the level of the highest recorded flood, and 25\frac{1}{2} ft. above high-water mark, and the sofit of the crown of the arches to be 40 ft. above the same. The site of crossing being about 1,000 ft. above all the Glasgow bridges, their lordships can offer no objection to the site of crossing; and they approve of the structure, as being well considered for the free flow of the tides and floods, and the further extension of the navigation when required; and considered for the free flow of the tides and floods, and the further extension of the navigation when required; and their assent will therefore be given to the measure, on the sole condition that the piers in the bed of the river, and on each bank, be founded so low as to permit the channel being deepened to 15 ft. below the high-water mark at ordinary spring tide. nary spring tides.

nary spring tides.

North British (No. 2).—The object of this bill, as far as the Admiralty is concerned, is to enlarge and improve that portion of the Edinburgh and Dalkeith extending from Seafield to a point near the harbour of Leith (now worked by horse power), so as to render it fit for locomotive engines. This line skirts the sea-shore, from Leith l'ier eastward, for a considerable distance, and if adapted to locomotive power would interfere materially with the free access to the water now enjoyed by the public of Leith; and should any part of the bench adjoining the harbour be occupied by works connected with the line, the facilities for carrying on the extensive timber trade of Leith would be much crippled. The Lords Commissioners therefore object to any appropriation of the beach to railway works, within certain limits of Leith Harbour; but assent to the scheme, subject to the following provisions:—That within 4 furlongs of Leith Harbour no railway works extend seaward beyond the line of way, as Harbour; but assent to the scheme, anoject to the honowing provisions:—That within 4 furlongs of Leith Harbour no milway works extend seaward beyond the line of way, as indicated by the black line on the deposited plan, and that within the same distance ample provision be made, to the satisfaction of the Admiralty, for the transit of timber over or under the railway.

Dunfermline and Queensferry.—The object of this bill is

to make a line from Dunfermline to North Queensferry with a branch to Inverkeithing Harbour. The importance with a branch to inverkeithing Harbour. The importance of a northern line communicating with Queensferry is sufficient to justify the encroachments contemplated by this bill, if restricted within the following limits:—Lat, that whenever the line is to be carried below the line of highwater mark, no deviations be permitted seaward from the black continuous centre line of way shown on the deposited plan, without the previous sanction of the Admiralty; 2ndly, that in the embankments in Queensferry and Toll Bays, three openings be left, of 30 ft. span each, and 6 ft. above the level of high-water at ordinary spring tides.

Bays, three openings be left, of 30 ft. span each, and 6 ft. above the level of high-water at ordinary spring tides. Londonderry and Coleraine (Deciation of Line and Amendment of Act).—The principal object is to abandon about 19 miles, between Londonderry and Coleraine, authorized in the 9 Vict. (sess. 1845), and to substitute another line in lieu thereof, for a distance of about 21 miles. The substituted line is to skirt part of the shore of Lough Poyle, and to a considerable extent below high-water mark, crossing eight small rivers and canals in its course. It appeared on the preliminary inquiry, that about 4 miles of the new or altered line had already been partly or entirely executed, and that bridges over the river Faughan and Scots' canal are already erected, and that a diversion of the river Muff is now advancing to completion. Their lordships call attention to the circumstance of a great extent of railway being is now advancing to completion. Their fordships call atten-tion to the circumstance of a great extent of railway being constructed without the sanction of Parliament, and inter-fering with their lordships jurisdiction without previous assent being obtained, and that by so doing the intentions of the Preliminary Inquiries Act have been frustrated and evaded, and the 17th clause of the Railway Consolidation Act has been disregarded, and that the promoters have further subjected themselves to a penalty under 46 Geo. 3. c. 153. With respect to the line itself, their lordships are of opinion that it is not more objectionable than that for which

an Act has been already obtained.

Whitehaven and Furness Junction.—The object of this Whitcharen and Furness Junction.—The object of this bill is to deviate or extend the line from Silecroft to Foxicield, and to cross the Duddon Estuary about 4 miles above the crossing authorized by the Act of 1845. Also to make branch railways to Whitchaven Harbour. No junction is formed with the Whitehaven and Maryport in its present state. The line, in passing through the town, crosses, by arching, four of the principal streets leading to the harbour, and communicates with the New Tongue Pier by means of a viaduct, which it is proposed to extend to the end of the pier, at the height of 16ft, above its surface. The upper level to be appropriated chiefly for the conveyance of mineral traffic, as iron ore, lime, &c., while the surface of

the quay is to be used for general and passenger traffic. In evidence laid before the surveying officer, berthage for vessels can only be safely afforded on the south side of the vessels can only be safely afforded on the south side of the proposed viaduct, and that there it would be extremely limited; also that considerable damage would be likely to ensue, both to the intended structure and to vessels running into the harbour, especially in westerly gales. Their lordships would therefore only assent on the following conditions:—I. That the company shall not be allowed an exclusive right to any part of the harbour, or to encroach upon its limits, or to make erections that will prevent a free passage along the piers for the public at large. 2. That the viaduct shall not extend above 80 yards along the New Tongue Pier. 3. That the line do not deviate seaward of the black continuous centre line, as traced on the parlisthe black continuous centre line, as traced on the parliamentary plan. 4. That it shall not be constructed so as to interfere with the approaches to the harbour as they at present exist, and that the arches shall be of a sufficient span and height not to impede, prevent or obstruct traffic. 5. That in case further accommodation for shipping, and dditional approaches to the harbour be required to the additional approaches to the harbour be required, shall be of sufficient span to allow of such approaches shall be of sufficient span to allow of such approaches being made, or a provision inserted in the Act for their being made, whenever required, at the company's expense. 6. That the company shall not have any right to, or property in, any part of the harbour, to the exclusion of the Steam Navigation Company, or to the exclusion of any vessels frequenting the harbour or piers. With respect to the deviation at the Duddon Estuary, their lordships fully assent to the crossing, as in every way preferable to that formerly proposed; but provision should be made in the bill for the establishment of an opening bridge, in case at any future time such be desirable.

Whitcharen Junction (Extension, Alteration and Branches).

—The object of this bill is to form a junction between the

-The object of this bill is to form a junction between the resent Whitehaven station and the harbour, and also with the Whitehaven and Furness Junction. The mode of communication with the harbour, by a short line in connexion with a timber viaduct on a high level along the New Tongue, is in many respects similar to that proposed by the White-laven and Furness plan. As regards the safety of vessels running into harbour in westerly gales, and the limited berthage alongside the pier, the plan now proposed is open to the same objections as that of the Whitelaven and Fur-ness: it is further to be remarked, that with respect to inness: it is further to be remarked, that with respect to in-terrupting the communications between the town and har-bour, the line crosses several thoroughfares at a height less than the parliamentary requirements. Their lordships therefore can only assent to the bill on similar conditions to those imposed on the Whitehaven and Furness, as above stated. With respect to the proposed alteration of roads connected with Workington Harbour, as it appears it will not interfere with the traffic between the two harbours, their lordships assent to the proposal of the company to stop up the crossing mentioned in the appendix to the printed evidence. printed evidence.

#### CORK AND BANDON.

CORK AND BANDON.

Engineer's Report for the Meeting, Feb. 9 (p. 136).

I have the honour to report, for the information of the proprietary at the approaching meeting, that since August last all operations on the works have been confined to the Bandon half of the line. The works on this portion continued in active progress until the commencement of the autumn, when several unforescen circumstances arose, beyond my control, that considerably retarded the execution of the works, the particulars of which you are fully acquainted with. I have much pleasure in stating that the works have not been injured by the heavy mins and floods of the month of December last, and that they continue to afford satisfactory evidence of their permanent and substantial character. Great difficulty has existed in completing the arrangements for obtaining the lands of Clogheenavodig, and remaining part of Cloughmacsimon, situated near Bandon; but I hope the possession will shortly be procured, and the works thereon commenced. These lands, besides a short length required at the Ballinhassig station, making in all an extent of not more than three quarters of a mile, are the only portions remaining to be purchased for completing the line and terminus on the Bandon half of the railway.

The following statement is descriptive of the progress and

present conditions of the works on the line:

Bandon end, No. 6 Division.—This contract, which extends from the terminus at Bandon, is about 2 miles 5 furlongs in length. The principal earthworks remaining to be longs in length. The principal earthworks remaining to ne completed are the formation of a low embankment near Bandon (the land for which is not yet obtained), and the slopes of the open cutting at Curranure. The mail coach road bridge at Ballylangley is finished, except the parapet walls. The formation of the road approaches remains to be executed. The ballasting on this contract is completed for about 11 wiles in extent and ready to receive the rails and about 12 miles in extent, and ready to receive the rails and sleepers. The permanent fencing is nearly finished for a length of 2 miles.

No. 5 Division .- The length of this contract is about 31 miles. The principal earthworks yet incomplete are the excavations at Rockforest, and the formation of the emexcavations at Rockforest, and the formation of the em-bankment near the river Brinny. The Kilpatrick tunnel is finished to the full size area throughout. The masonry fronts are also finished, except the coping courses. The stone arch bridge over the river lirinny, and also over the mail-coach road, require only the parapet walls to make them complete. The construction of the timber superthem complete. The construction of the timber super-structure of the Bandon river bridge has been suspended by the contractor for a few weeks, on account of the present unfavourable weather for proceeding with the work. One of the four large trusses is completed and the strength of it has been satisfactorily tested; the other three trusses are m a forward condition. The permanent fencing is in an advanced state, and a large quantity of ballast has been deposited on the line.

No. 4 Division.—The extent of this contract is about 3 miles 7 furlongs. The principal excavations remaining to be completed are the open cuttings at Ballyholcen and

Goggin's Hill. The public road bridge at Coolatooder, and an accommodation bridge at Ballyholeen, the arches of which were not commenced in August last, are now comwhich were not commenced in August last, are now complete, with the exception of parapets. The viaduct over the ravine, at the west end of Bailyholeen, is also complete, except parapets. The west piers of the viaduct at the half-may are up to the springing level of the arches, and the contractor is now proceeding with the east piers, which have been delayed in consequence of the trouble that ensued in procuring possession of the land which has been recently purchased. The permanent fencing, as well as the depositing of ballast on this part of the line, are being proceeded with. For the better understanding of the actual progress made in the construction of this half of the line, I progress made in the construction of this half of the line, I would explain that the total quantity of excavations from open cuttings on the above three contracts amounts to 350,000 cubic yards, exclusive of road approaches to the bridges and crossings, and the Kilpatrick tunnel; of this quantity about 273,000 cubic yards have already been executed. The total quantity of rubble masonry also required on this part of the line, exclusive of stations and terminus, is about 32,000 cubic yards, in which not less than 26,500 yards have already been performed. It is therefore apparent that the small proportion of excavation at present incomplete is comparatively unimportant, being only one-fifth of the total quantity, and which principally consists of fifth of the total quantity, and which principally consists of side alopes in open cuttings. The proportion of masonry also remaining to be completed is not more than one sixth

also remaining to be completed is not more than one-sixth of the whole quantity required, a large portion of which is comprised of parapets to bridges.

Cork end.—The only work at present in progress on this half of the line is the sinking of the working shafts of the tunnel at Goggin's Itill, which is situated immediately on the Cork side of the Ballinhassig station. These shafts have been but lately commenced. In order that the progress made, up to the present period, on this portion of the line, which is rightly independed. I would represe that the have might be rightly understood, I would remark that there have been about 40,000 cubic yards of excavations from open cuttings already performed, as also 5,500 cubic yards of masonry in bridges and viaducts. The cost of all the land yet remaining to be purchased, in order to complete the railway from Goggin's Hill tunnel into Cork, is estimated by your late valuator at about 4,#ML, which is exclusive of the land requisite for the terminus at Cork. C. Nixos. Company's Offices, Cork, Jan. 26.

MIDLAND GREAT WESTERN.

Engineer's Report for the Meeting, March 31 (p. 263).
The opening of the ten additional miles to the Kinnegad

The opening of the ten additional miles to the Kinnegad station, as promised at the last general meeting, having astisfactorily taken place, I have little to report on that section of the works beyond the fact that the traffic has been conducted with perfect safety during the most trying months of the winter; and the earthworks having stood so severe a test may now be considered as quite consolidated. I have great pleasure in the reflection that no accident of any kind has occurred in the working of the 36 miles now opened, and I am now quite prepared for any additional rate of speed that may be considered desirable. The restrictions laid during the winter months on the works beyond the Hill of Down being now removed, I have organized an active resumption of operations in that district; and, as the works progress very favourably, I hope to be able to open to Mullingar in the course of the ensuing summer. There are only three bridges to be built, and 135,000 cubic yards of earthwork to be excavated between the Hill of Down and Mullingar; the chief exertion to be made will be in the earthwork to be excavated between the HIII of From and Mullingar; the chief exertion to be made will be in the ballasting and laying of the rails on the whole extent of 14 miles, which operation is now in progress. Five locomotive engines have been delivered since the last meeting, making eleven in all, and six more are in course of construction, which will be sufficient for working the line to Mullingar. I believe the present stock of carriages to be adequate to the same purpose, and all the new stock necessary will be to accommodate the increased traffic for cattle and meraccommodate the increased traffic for cattle and merchandise. It is almost unnecessary for me to dwell on the great importance of reaching Mullingar as a present terminus, and also as a point of convergence for the traffic coming from the directions of Sligo through Longford, and from Galway through Athlone. In an engineering point of view, the desirableness of completing the works and opening the line during the summer months is most obvious, as we always find the cost of maintaining a railway for the first is most overed at months is most obvious, as we always find the cost of maintaining a railway, for the first six months, when opened at that season, considerably less than when the traffic commences in winter; and I feel persuaded that shareholders will have no cause to recret any efforts required from them to enable you to place their line on so improved a footing as the opening to Mullingar will certainly produce; economy in working cannot be fully accomplished until the line is so extended. The erection of coke ovens having received your sanction, I expect to obtain from their use a better and much cheaper coke than we are now using; and as this is a most important item in expenditure, a considerable saving will thereby be effected. The permanent line, which is now nearly ballasted, will be a very cleap one to maintain. The double line out of Dublin for 15 miles is nearly completed, and a considerable portion of it is now in use. This will admit of a more convenient arrangement for the future working of the trains. You will be pleased at the appearance of your terminus-roof, now that the temporary undersheds are removed. Its loftiness and extent of span make it very your terminus-roof, now that the temporary undersheds are removed. Its loftiness and extent of span make it very superior to any other I have seen; the space beneath is well lighted, and can never be impeded with clouds of steam, which is often the case in some of the largest sations for want of height and ventilation. The covering of the roof being wholly of galvanized from (with the exception of the glass in the skylights) will require no repairs.

G. W. HEMARS.

#### IRISH SOUTH-EASTERN.

Engineer's Report for the Meeting, March 30 (p. 263). The present state of the works on your line is as follows:
-The first contract, which extends from the junction of the Great Southern and Western at Carlow, to the Borris-road at Bagenalstown, a distance of 104 miles, is in a very forward state. The whole of the fencing, with the exception of \$2,000 lineal yards, is completed. The excavations and embankments, which amounted to 237,600 cubic yards, are executed, with the exception of 60,000 cubic yards, which will be completed in next month. More than half the whole extent of the contract is ballasted, and nearly ready for the rails. All the contract bridges, of which there are twenty, are completed with the exception of two. The lattice ironwork has also to be executed on the stone abutments at Green-lane, Stapleton and Palliton roads, near Carlow; but as these are nearly ready, and can be put up in a few days after they are delivered, I expect these three bridges will be completed by the end of next month. Two accommodation bridges are in hand, and will be completed in a fortnight. All the rails and sleepers are provided, and as soon as the cutting machine for the sleepers and the proving benches for the rails are completed, the work of laying the permanent way will be commenced; and unless some unforescen accident occurs which cannot be calculated on. I am quite confident the line can be opened for public traffic to Hagenalstown in the month of May, as six weeks from the present time will be quite sufficient to lay the rails and erect the turn-table and necessary sidings and crossings at Bagenalstown. The permanent goods stores and stations will also be so far advanced by that time as to give means of carrying on the traffic without having recourse to any temporary buildings beyond that of an engine-shed for two or three engines, which may be put up in the cheapest manner, as it will not be required after the line is opened to Kilkenny. On the second contract, which extends from the Horris-road at Hagenalstown to Ratheash, in the county of Kilkenny, a distance of 12½ miles, the following works have been executed, viz., 8,000 lineal yards of fences, and 76,300 cubic yards of e

## NEWRY, WARRENPOINT AND ROSSTREVOR. Engineer's Report for the Meeting, Feb. 18 (p. 136).

I have the honour to submit to you, for the information of the directors, the following Report on the state and progress of the works on the Newry, Warrenpoint and Rosstrevor. The embankments through the slob lands adjoining the Newry river are in a very forward state, and that portion between the rampart and Green Island, a distance of a month. I have much satisfaction in stating this fact, as I had been led to anticipate some difficulty in the construction of this portion of the line. The retaining walls and excavations through the demense of Narrow Water are completed, and the public road diverted at this point, as originally intended. The embankments also in this neighbourhood are progressing rapidly, and present no difficulty in their construction. From the arrangements which the contractor has made with the landholders in the neighbourhood of the line for procuring the necessary material for the formation of the embankments, together with the very efficient working plant on the line, he is in a condition to accelerate the progress of the works, should the directors deem it expedient to do so. Jan. 22.

J. Godwin.

#### ULSTER.

Engineer's Report for the Meeting, March 30 (p. 263).

The ordinary working of the line affords me no topic for observation, as it is carried on with great regularity, and the working stock and permanent way are generally in excellent order. On the 1st inst., a single line between Portadown and Armagh was opened for public traffic; and in the course of a few weeks the second line, which, from the nature of some of the embankments, was not then in a condition rendering it prudent to bring it into operation at the same time, will also be in use. It is very satisfactory to me to be able to state that the whole of the works are well and substantially constructed.

J. Godwin.

March 23.

### Progress of Works.

CHESTER AND HOLVHEAD.—This line is rapidly approaching completion. Last week a party of directors, accompanied by the principal officers, inspected the line from end to end, in order to determine the period when it may be opened throughout. With the exception of the passage of the Conway and the Menai Straits, the whole distance was traversed. The trip from Chester to Conway, 45 miles, was performed, including one stoppage of four minutes, in 1 h. 17 m. All the preparations for raising the Conway Bridge are now completed. Between Conway and Bangor everything is ready for opening. The Britannia Bridge across the Menai Straits is in active progress, both as respects the masonry and the tubes. The pier on the Britannia Rock, upon which the completion depends, is now about 55 ft. above high water mark, leaving 50 ft. still to be added to complete it to the tube level. More than half the iron work of the tubes is finished. From the Menai Straits to Holyhead, 22 miles, was traversed by the locomotive engine and train in 55 minutes. The line presents almost a singular instance of a contract of that extent being delivered over by the contractor to

fixed by the contract. At Holyhead the improvements made in the old harbour, and the arrangements for proceeding with the new harbour were inspected. The result of the inspection was so satisfactory as to determine the directors in opening the line throughout to Holyhead as soon as the Conway is passable, which it is expected will be by the 1st of May. Pending the completion of the Britannia Bridge, the traffic will be conveyed by the common road, and over the suspension-bridge, a distance of about 3½ miles.

EDINBURGH, LEITH AND GRANTON (Leith Harbour Improvements).—Operations are at present in progress, says the Scottish Railway Gazette, for the removal of a portion of the massive sea-wall which forms the northern boundary of the Wet Docks, Leith, preparatory to the commencement of the new dock for steam-vessels. A considerable breach has already been effected in the wall at the building-yard of Rose & Son, but the substantial construction of the masonry renders its removal a work of much difficulty, and the foundation stone of the new works will not in all probability be laid for a month or two. The plans have been prepared by Mr. J. M. Rendall, of London, in accordance with which the present eastern pier is to be extended 1,000 ft., on a scale similar to the present portion. The western breakwater is to be carried out 600 yards, inclusive of a low water landing, at the extremity of which the depth of water at the lowest ebb will be 81 ft.; and it will run almost parallel with the pier, thereby confining the channel of the harbour, which it is proposed to dredge, so as to have 6 ft. at low and 24 ft. at high water spring tides. The extension is to consist of a wooden platform, on piles, capable of bearing a line, which will cross the docks by the present draw-bridge, and form a junction with the Edinburgh Leith and Granton at the station in Commercial street. The entrance to the harbour will then be 200 ft. wide, and will face north north-west. The new dock is to be situated to the northward of the present east dock, and will be 700 ft. long and 300 ft. wide, with 1,900 ft. of lineal wharfage. The entrance, which is from the harbour, is to be 60 ft. wide, and the dock will be excavated to admit fully 21 it. of water at the lowest neap tides.

GREAT NORTHERN.—The loop line will soon be

GREAT NORTHERN.—The loop line will soon be completed, at least that part of it lying between Lincoln and Boston. The station at Lincoln, says the Lincolnshire Chronicle, has been commenced, and the new hotel is finished. A dispute between the Great Northern and the Grimsby has led to the stoppage of the works of the Lincoln and Rasen branch, at Lincoln, which the citizens regret, as they hoped to have been enabled to visit Cleethorpes frequently during the bathing season, through the accommodation of this line.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE (Grimsby Docks) .- We have reports before us of the progress of these important works, which state that the coffer dam is now nearly completed, as well as the wharves. We may hope that the platform for examining the works is rather more safe than it was in the autumn, especially as many visitors may now be expected. The iron tubs are fixed in the dam: the sluice is nearly finished, so as to be ready for action when the piling has been closed up. The foreshore is to remain in its present state, as the excavations from the docks will not suffice to level up the whole of the reclaimed mud to the height of the dock walls. It is hoped that the water will be entirely excluded before the end of this present month, when the masonry will proceed with all speed. The docks, when finished, will be one of the grandest feats of modern engineering, and we fully expect to see them overflowing with shipping, even in the first year after their completion.

NORTH KENT.—The work at Gravesend and its neighbourhood is progressing rapidly, and the cutting through the town will probably be completed in a few weeks. A temporary station is to be erected in the heart of the town for carriages between Gravesend and Chatham, as the present station is at a very inconvenient distance. We have been informed, says the Maidstone Journal, that the whole line will be opened from Chatham to Greenwich by the end of August; but this may reasonably be doubted, seeing that there is a vast portion of the line between Gravesend and Greenwich to be yet completed.

Perth Lines.—The works converging at Perth

pier on the Britannia Rock, upon which the pletion depends, is now about 55 ft. above high pletion depends, is now about 55 ft. above high re mark, leaving 50 ft. still to be added to come it to the tube level. More than half the iron k of the tubes is finished. From the Menai its to Holyhead, 22 miles, was traversed by the motive engine and train in 55 minutes. The line sents almost a singular instance of a contract of extent being delivered over by the contractor to company in a finished state on the very day

viaduct, of six arches, in the immediate vicinity of the terminus (commenced only a week or two ago) is already nearly half built. On the Midland Junction the viaduct that spans the line at Dovecotland is nearly finished, while those on the Glasgow and Crieff roads, as well as the bridge over the Dunkeld road, are ready for the commencement of the arches, the wooden centres being already put up on one or more of them. The Edinburgh and Northern, in its course from Newburgh to where it will cross the Earn, in the immediate vicinity of the tunnel, is likewise greatly advanced; while the bridge over that river is at last commenced, and proceeding favourably. At the general terminus, where nothing has been doing for some months during the winter, the whole is again bustle and animation.

South Devox.—Mr. Brunel and several members of his engineering staff were at Laira, on the 31st ut., inspecting the station and the works. It is reported, says the *Plymouth Herald*, that a locumetive engine will run down the line from Totnes to Laira in the course of next week. The posts are being erected on the line for the electric telegraph.

Typical, is the Prymoun Present at a tocombetive engine will run down the line from Totnes to Laira in the course of next week. The posts are being erected on the line for the electric telegraph.

WILTS, SOMERSET AND WEYMOUTH.— The works from Thingley to Melksham and Bradford, and to Trowbridge, Westbury and Warminster are in active operation, and the line is expected to be opened to each of those places during the ensuing summer. There is no prospect of anything being done on the line to Devizes. The reason assigned is, says the Devizes Gazette, that influential persons still seek to alter the proposed entrance to the town; and the non-influential, which comprise, in this matter, 909 out of every 1,000 of the inhabitants, appear quite content with this reason. There was a talk some time since of convening a public meeting to find out who those influential persons were, but it has ended in talk.

#### FOREIGN.

PARIS AND STRASBURG.—The directors publicly announce that the works have not been interrupted, and that the Minister of Public Works has given orders to have the utmost activity imparted to the works between Paris and Epernay. The bridges and tunnels are almost terminated, and the works are entirely finished on a length of 75 kilometres (about 47 English miles). The company, says Galignami, is now beginning to lay down the rails. All the rails, chairs, &c., are every day being delivered, and the locomotives and carriages will be ready in a few months. The whole distance between Paris and Epernay, being 140 kilometres (873 English miles), will be in a condition to be opened to the public in September. It will not be necessary, it is announced, in order to arrive at that result, to make any new call.

#### Accidents.

SOUTH DEVON.—April 1.—A man employed to attend to the grooves of the atmospheric near Powderham Point, was run over by an afternoon train and killed. He was supposed to have fallen asleep on the line.

#### Law Intelligence.

March 30.—At the BANKRUPTCY COURT, in re the Tring, Reading and Busingstoke, it was argued as to whether the solicitors of a company, to whom shares have been allotted, became partners in that company. (The meeting was for declaring an adjourned and final dividend.) Mr. Cooke for Messrs. Hill and Everitt, the solicitors, sought a debt of 4.4061. 17s. 6d., due to the claimants for expenses.—His Honour was of opinion that the act of one of the partners bound the other, and as they were cognizant of the whole proceedings, they could not claim as creditors.—The proof was rejected.

March 31.—In the same Court, his Honour sus-

March 31.—In the same Court, his Honour suspended the certificate of D. P. Gamble, described as an electric telegraph manufacturer, in Exchange-buildings, for nine months. The amount of debts and liabilities was about 700l., and the assets were comparatively large. The main ground of opposition was that the bankrupt had misrepresented the position of his affairs to a creditor.

March 31.—On the Home Circuit, in rethe Surrey Iron v. Chaplin, this was an action by the proprietors of the old tramway between Croydon and Wandsworth, to compel the purchase. In 1845 there was a negotiation for the purchase of the tramway, there being at that time some intention of using it as a link to connect the South-Western and the Brighton. Only a portion of the agreed purchase-money was paid, and the present action was brought to enforce the original agreement.—The jury found for the plaintiffs.

LIBEL.—April 4.—On the same Circuit, in re Chadwick v. Archer, this was an action for libel. The plain-

tiff was the chairman of the North Wales, and the defendant had formerly been in the service of the company, and on being removed he published a pamphlet, entitled 'A Black Book with a White Face,' in which he made a variety of charges against the plaintiff, connected with the management.-The jury found for the plaintiff—damages 100l.

March 29.—On the MIDLAND CIRCUIT, in re Cox

the Midland, on the 8th of February 1847, one J. Higgins, at the Whitacre station, where the train divides for Hampton and Derby, had taken a ticket, and was upon the platform. When the train was on the move, Higgins was about to open the door of a first-class carriage. The station-master ran to him and told him he must not get in there. Higgins was about to get on a truck, when, the ground being slippery from snow, he fell, and the carriages passing over him fractured his thigh. He was conveyed to a place where he could be attended to. The surgeon however, who attended him thought the case of such importance that an hospital surgeon should be called, and sent for Mr. S. Cox, from Birmingham Higgins brought an action for compensation for the loss of his limb, amputated at the thigh bone. The company agreed to pay 150l. Mr. Cox now sought for nine attendances, at three guineas each. The company did not deny the reasonableness of the charge, but denied agency, and the authority of another surgeon to make a special contract on their Subject to that point the jury were directed to find for the plaintiff. -A similar course was taken with reference to two other cases, involving a sur geon's and a tavern bill.

LIABILITIES OF PROVISIONAL COMMITTEEMEN. On the same day, on the same Circuit, in re Wright v. Holden, the plaintiffs, the proprietors of the Mid-land County Herald, sued a provisional committee-man of the Avon and Severn Valley (defunct) scheme for 37l. 10s., for advertising. The defendant was shown to have applied by letter to have his name inserted in the provisional committee, and to have taken an active part in the proceedings, sanctioning the giving of orders, &c.—The jury found for the amount claimed.—April 1.—On the same Circuit, in re Higgins v. Hopkins, this was an action brought by an engineer and surveyor for the sum of 2,554. for surveying a line called the London and Birming. ham Extension (now defunct), of which company the defendant was a provisional and managing director. The plaintiff had been duly appointed by the committee, the work had been done, and evidence was given that the amount claimed was a fair remunera-The only question was, whether the defendant had pledged his personal credit. The ruling of the learned Judge intimating that he had not, the jury found a verdict for the defendant.

PLANS .- On the OXFORD CIRCUIT, in re Alexander v. Brooke, Bart., and another, the surveyor and engineer of the Direct Birmingham and Boughton sued two of the managing committee for a balance of 2,000L, due for professional services. The plans, it was alleged, were insufficient. The case was ultimately arranged by the defendants agreeing that a verdict should be taken against them for 1,300l. without costs, and that a stet processus should be entered in an action now pending at the suit of the plaintiff against another member of the committee for the same claim, and this seemed to meet with the approbation of both parties.

LUGGAGE.—In the SHOREDITCH COUNTY COURT, in re Ward v. the Eastern Counties, the plaintiff, a surgeon, of Huntingdon. sought to recover 201., the value of a portmanteau, which he had delivered to one of the porters at the Shoreditch terminus. On his arrival at Cambridge the portmanteau was missing, and had not since been recovered .- The defendants were ordered to pay 201. and costs.

GREAT NORTHERN.-Some weeks since the Doncaster Chronicle published a statement of the amounts claimed by certain landholders, and the sums awarded by the juries, by which it was seen that about onethird of that which was demanded was awarded. Even greater reductions by the taxing-master have been made in respect to the legal claims attendant on the awards. The solicitors' bills of two landowners have been thus dealt with. The bill of one of the landowner's solicitors was sent in for 442l., taxed off 329l., diminishing his bill to 112l. The other attorclaim was for 2881., taxed off 1961., leaving only 911. to be paid by the company.

Judgment has been pronounced by the Tribunal of Correctional Police in Paris upon the four persons through whose alleged negligence an accident happened on the Northern line in October last. The defendants were Comby, an engine driver, and a garde ligne, the chief of the station, and the chief of the traffic. In addition to these, M. Emilie Periere, director of the line, was cited as civilly responsible.

On the occasion in question Comby had to drive a train from Paris at 8 p.m. The engine to be employed was at a distance from the carriages, and in order to attach it to the train, it was necessary to run over a portion of the up line to Paris. Comby found no one at the point, where the lines cross, to put the engine on the other line, and he did so by himself, when at that moment the up train from Paris arrived, and came in violent collision. Comby was seriously injured, and several of the passengers were hurt. The Tribunal several of the passengers were hurt. acquitted all but Comby, condemning him to two months' imprisonment, and a fine of 200f. M. Periere was declared civilly responsible for the payment of the fine and costs.

LAFFITTE, BLOUNT & Co.-So largely and specially connected with the French lines was this well-known banking firm, that we feel assured the following statement of their affairs, read to the meeting of creditors on the 27th ult., will be highly interesting to the ma-

jority of our readers :-Gentlemen,—The political and financial crisis which has overturned public and private credit, has placed us under the painful necessity of suspending our payments. We have succumbed to the effect of circumstances beyond all human prevision, and in consequence we think that we are entitled prevision, and in consequence we think that we are entitled to appeal to your indulgence. Our banking house, from its foundation to the day of the revolution, had progressively advanced in prosperity. Our operations had acquired a great developement, and everything led us to hope for happy results. You are aware, gentlemen, that our firm had largely co-operated in the establishment of great industrial undertakings; you know that we took a large share in the creation of the Ronen, Havre, Boulogne, Dieppe, Northern and Lyon lines. Our suspension was caused by the impossi-bility in which we found ourselves of paying and renewing the bills falling due at fixed terms of the Rouen and Havre, issued with our endorsement and through our intermedi ation. You are not ignorant, gentlemen, that the Rouen and the Havre had been authorized to issue engagements to order, to the amount of the sums which they were allowed to borrow. These engagements were bound to be converted into bonds, whenever circumstances should permit the debt to be consolidated at a suitable rate. It was in that way that the Rouen had succeeded since last December in con-solidating the greatest portion of its engagements, at fixed dates, by means of negotiating nearly four millions of bonds. The amount of these securities endorsed by us was: for the Rouen, 590,088f.; for the Havre, 2,560,408f. 46c.; total, 3,150,496f. 46c. of which 100,000f. fell due in the course of the month of March. Previously to the events of February the negotiation and renewal of these bills were effected with the greatest facility; capitalists looked on them very properly as resting on a perfectly sound basis; and in con-sequence we had constantly been able to place them out at a lower rate than that of the discount of the Bank of France.
The payment of these bills was, besides, facilitated by the
daily receipts of the railways, which were paid into our bank. daily receipts of the railways, which were paid into our bank. But all at once every means of credit was paralyzed; the partial destruction of the Rouen and Havre lines deprived the companies of the greatest part of their receipts; the period when the enagements of the companies were to fall due was approaching; and all the applications made by us and by the companies to the Government, to obtain any assistance, were fruitless. Notwithstanding this, we had determined to withstand the storm, but from the first day of the revolution we were assailed with demands, and we beheld our resources diminishing day by day. The demands of our credit accounts did not discontinue, whilst from our debtors we could not obtain any payments. In the midst debtors we could not obtain any payments. In the midst of these serious difficulties, we were struck by an unexpected blow. Our cashier absconded on the 10th of March, leaving behind a deficit of nearly 300,000f. In other circumstances this deficiency, although of considerable amount, would not have been a grant or proposed and the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of the state of would not have been a grave embarrassment to us; but, in the then existing state of our affairs, it deprived us of resources on which we had a right to reckon. We found ourselves at last obliged to suspend our payments. The following, gentlemen, is a statement of our situation:—

F2,899,166 48 We owe, by account current, a sum of Our acceptances, of which 1,000,000f. are uncovered, amount to 1.624.603.89

Total liabilities 4,523,770 37 Per Contrà—There is due to us by account current, good debts
Doubtful debts, 641,622f. 77c. which we value at 3,148,855 14 332,560 48 Deficit of our cashier, 292,873f, 20c. Bad debts, 45,271f, 85c. We possess in securities and

Total assets 7,823,800 72

rapitulation:—Assets F7,825,800-72 Liabilities 4,523,770-37 Difference in favour of assets Recapitulation:—Assets

Thus, gentlemen, as you may perceive, had it not been Thus, gentlemen, as you may perceive, had it not been for the events which occurred last month, our situation presented no serious difficulty, as we had before us more than sufficient resources for our operations. What was due to us in accounts current, by good debts, and of easy recovery, would have sufficed to enable us to meet our engagements; our various securities would have furnished us with resources beyond our wants. But we even go further, and affirm our belief that, notwithstanding the creats, we should have been able to withstand the crisis were it not should have been able to withstand the crisis were it not should have been able to withstand the crisis, were it not for the necessity of reimbursing the bons of the Ronen and the Havre. As we stated above, we have endorsed bons for the Rouen and the Havre to the amount of 3,150,496f. 46c.

Although these bills represent a debt of the Rouen and the Havre, still, as long as they bear our endorsement, they entitle the holders of them to come to us and demand payentitie the holders of them to come to us and demand payment. With grief we declare it, these bills bearing our signature are our debt, and they are the sole obstacle to prevent us from resuming our payments. We think it right, however, to observe to you that the Rouen and the Hayre have comprehended the gravity of our situation, and that they are doing all that lies in their power to shorten the, period when these bills will no longer weigh on us. We await with anxiety the result of their proceedings, and we await with anxiety the result of their proceedings, and we trust that it will turn out favourably for us. Should it, however, be otherwise, the Rouen and the Havre would be bound to reimburse us, in a space of time more or less prolonged, to the amount of the sums which we should have to pay to the holders of their bills. You perceive, therefore, gentlemen, that if the reimbursement of these bills has placed us under the necessity of suspending our payments, that same reimbursement, although it may for some time intended our liquidition cannot in any case cause a real impede our liquidation, cannot in any case cause a real injury to our creditors. We declare with satisfaction that our assets are sufficient to meet all our engagements. Should we, as we hope, be so fortunate as to obtain your consent to an amicable liquidation, we feel a firm conviction that you will be paid every farthing in a delay which we shall do everything in our power to abridge as much as possible.

The meeting accepted this statement. is to be entrusted with the liquidation of all claimsthose under 500f. to be paid immediately; and as soon as a tenth is recovered, a first dividend will be distributed. The banking business is to be continued.

THE SEA AND THE RAILWAY. - A propos of the cry in Parliament respecting the monopoly of railway companies becoming proprietors of steamboats for the accommodation and increase of their traffic, the Irish Railway Gazette thus fairly remarks on the case of the Chester and Holyhead proposed class of steamers between Kingstown and Holyhead:—The capital which the company are now making application to Parliament for powers to raise, to provide steamboat accommodation, is 250,000*l*.—about two-thirds of the sum required to cross the narrow strait that separates Carnarvon from Anglesey; 450,0001., to be expended in a railway bridge of about a quarter of a mile; 250,000l., to span the 63 miles between Holyhead and Kingstown, and which, unless it is spanned, and spanned most efficiently too, the bridge, the 200,000l. subscription towards the refuge harbour at Holyhead and the whole of the line through Anglesey (for Anglesey will have little or no local traffic) will be sacrificed; while the traffic over the 60 miles between Chester and Bangor will be only one-third of what it otherwise should be and would be. An alteration was made in the course of the line approaching the Menai Straits, by the desire of Her Majesty's Government, for the purpose of saving about three quarters of a minute in time in the iourney between Chester and Holyhead. What a bathos! save three-quarters of a minute in journeying to Holyhead, and then perhaps, have to wait for hours after having got there, before being able to continue the journey! If economy was an object, the 450,000l. to cross the Menai Straits had better have been saved, rather than the sum required to provide steamboats. The traffic might be contrived to be conveyed without the new bridge, but not without steamboats. We have stated that the total charge of every description for steamboats between Holyhead and Kingstown, to make four passages each way daily, has been estimated at 70,000*l*. per annum. The working cost of eight railway trains each way daily (being one ordinary and one quick train in connexion with each steamboat) may be estimated, exclusive of passenger-duty and parish rates (two charges to which stcamboats are not liable), at 65,000l. per annum, or, including those charges, at 70,000l. per annum. Hence, it results that the addition of the steamboat proprietorship to that of the railway, in order to complete the communication with Ireland and insure the traffic, is the same in effect as adding 63 miles to the length of the railway, without ls. outlay in the construction of this extra length, and irrespective of that most important point, upon which too much stress cannot be placed, of each feeding each with traffic, which must otherwise remain at one-fourth of its rightful supply. It is in effect the same as reducing the cost of the railway from 40,000l. to 23,000l. per mile, and furnishing the means of conveying passengers at 25 per cent. less charge to the passenger, or 33 per cent. greater profit to the company.

IRON TRADE.—Glasgow, April 3.— There is but little stirring between buyers and sellers in the pig iron trade. The Continental crisis affects prices still. iron trade. The Continental crisis affects prices stm. Quotations from 42s. 6d. to 43s. for mixed numbers, and 42s. for No. 3, cash.

London Stock Exchange, April 7.—We have had another week of depression, the causes of which are too numerous to allow the improvement in some circumstances to produce a general effect. Thus, the were led to expect, would, on ordinary occasions, have inspired confidence and hope, but the prevailing mistrust is too great to admit its effect. The market at the close was rather more cheerful, and the tendency in the price of Consols was towards improvement. The following are the latest prices for foreign lines:—
Boulogne and Amiens, 5\(\frac{1}{6}\); Dutch Rhenish, \(\frac{1}{2}\); Northern of France, 2\(\frac{1}{6}\); Orleans, Tours and Bordeaux, 1\(\frac{1}{6}\); Paris and Lyon, 1\(\frac{1}{6}\); Paris and Rouen, 11\(\frac{1}{2}\); Rouen and Havre, 6.

Liverpool, April 6.— There has been almost a total absence of business in our market throughout the week, and the quotations are all lower.

Suplow, Brothers. Manchester, April 6 .- Our share-market this week has been pretty much the same as it was last. Though for a few hours we may have had some appearance of improvement, gloom has returned, and the market is now anything but satisfactory.

SAM. GRINDROD. Birmingham, April 6.—All descriptions of shares have been done lower to-day than on any previous day since the present remarkable, and to a great extent uncalled for, panic set in. Midlands have been done at 94½, and the best descriptions of scrip in the local lines have participated equally in the fall, North Staffords actually finding sales at 56s. 3d. dis., and Shrewsbury and Birmingham A's at 4½ dis.

York, April 6 .- We are sorry to observe that the prices of all kinds of railway shares still continue declining, but the amount of bond side transactions in this market is not great. Grayston & Earle.

in this market is not great. Grayston & Earle.

Hull, April 6.—The market, with the smallest possible amount of business passing, is rather better for the higher stocks; but anything which requires a fair sum of money is difficult of sale, unless at reduced This is perhaps more owing to want of confidence than actual want of money, but it is nevertheless the case, people at present seeming inclined to limit their operations to trifling amounts of stock.

FLINT & TOOTAL. Newcastle-upon-Tyne, April 6.—A very considerable business has been done in Newcastle and Carlisles during the week, and they have, on the faith in a rumour that lines on the east and west coasts are making friendly overtures, advanced to 7 prem. ex div.; but with this exception business has been very limited, and prices have generally declined.

W. FORDYCE. W. FORDYCE.
Glasgow, April 5.—The market here remains in
the same state of prostration, prices of some of the
old lines having still further receded under the
influence of continued sales. Very little alteration is
perceptible in the quotations of the lighter stocks,
although the tendency has been downwards. The

latest transactions to-day were as under :-- Dundee and Perth, 264; Edinburgh and Northern, Newport, 64 dis.; Dumfries and Carlisle, 58; Ayr, 74: ditto, halves, No. 1, 7 dis.; North British, thirds, 35s. 9d. dis.; ditto, quarters, 36s. dis.; Scottish Central, 26d.

# Railway Chronicle.

LONDON, SATURDAY, APRIL 8.

"No work and all play" seems to be the motto for the unfortunate BIRMINGHAM AND OXFORD shareholders. The meeting was again adjourned till the 11th inst., without any satisfactory announcement.

The shareholders of the South Devon at a special meeting approved of bills before Parliament for assistance from the Great Western and the Bristol and Exeter for the Plymouth Docks. The loan to the Cornwall was refused.

No certain decision as to the character of the votes tendered by dissentient shareholders of the Liverpool; Manchester and New-CASTLE-UPON-TYNE JUNCTION has been arrived at. All proceedings have consequently been adjourned till the meeting on the 4th of May.

The Report from the committee of investigation was read at the adjourned half-yearly meeting of the WEST CORNWALL. The agreement with Mr. Mowatt as to his taking up 4,967 shares is to be enforced, and the meeting was again adjourned, to give the directors time to answer the committee.

Both the companies of the GLASGOW, AIR-DRIE AND MONKLANDS and the EAST OF FIFE adopted the Reports and accounts presented at their half-yearly meetings.

The Report and accounts were approved of at the annual meeting of the MONKLAND AND KIRKINTILLOCH, BALLOCHNEY AND SLAMAN-NAN. The bill for their amalgamation was also specially agreed to.

The Report and accounts of the EDINBURGH AND BATHGATE were unanimously adopted by the shareholders at their half-yearly meeting. Ten months have passed since the last call,fact manifesting a prudent management and judicious expenditure worthy of example.

The Airdrie and Bathgate Junction shareholders adjourned their half-yearly meeting to the 12th.

At the half-yearly meeting of the GLASGOW, BARRHEAD AND NEILSTON DIRECT, the Report was unanimously adopted. The bill for the Paisley branch has been withdrawn.

A dividend of 19s. per share was declared by the ULSTER directors at the half-yearly meeting, 685l. being added to the reserve fund. The number of third-class passengers appears to have increased.

The Report from the committee of inquiry of the Dublin and Drogheda was received. It affirms a neglectful and careless way of administration, which it is to be hoped will be answered at the adjourned meeting on the 25th.

The IRISH SOUTH-EASTERN shareholders met to receive the half-yearly Report. The line from Carlow to Bagenalstown will be opened in May. Shares to the number of 7,386 were declared forfeited.

An average of 871L per week, exclusive of mails, was declared in the half-yearly Report laid before the MIDLAND GREAT WESTERN (IRELAND) shareholders. This of course includes the canal receipts, which have much increased. A nett dividend of 5 per cent. might be expected, and the line certainly affords good promise. The Report and accounts were adopted.

At the special meeting of the NAMUR AND LIEGE it was resolved to advance the ninth and tenth calls, and to increase the capital to 1,250,000l., for the advancement of the works.

The shareholders of the CENTRAL OF FRANCE received their annual Report. Upwards of 320,000l. will be required for the completion of the works. The last call of 50f. had been stopped by political occurrences.

The dividend declared at the PARIS AND

ORLEANS annual meeting was rather more than 12 per cent. The shareholders are to receive acknowledgments, bearing interest at the rate of 5 per cent. The Report was adopted.

The Edinburgh and Glasgow Company having failed to pay a dividend, for the best of all reasons-that of having no effects at their bankers', are now busily engaged in trying to revive dissension in the SCOTTISH CENTRAL. We had thought that the late defeat of that party had been signal enough to render any further wrangling as hopeless as unprofitable. The persistence, characteristic of the Northern race, exhibits itself, however, in a long epistle, in which an attempt has been made to revive

Digitized by GOOGIC

the repudiation of the agreement—the attempt |. In future we shall have two things weighed in to get the most out of opposing parties, without regard to honesty, which we have seen advocated by names high in the religious world, as well as distinguished in social rank: men to whom, we regret to say, the public have been told to look for examples of public virtue. That social dis-honesty should be recommended from such quarters, seems to intimate an amount of wounded vanity and personal feeling of which we noticed the symptoms at the last meeting, but of which the extent and depth seem much to exceed what we had given credit for.

In the present times we think it very unlikely that very many sensible Scotchmen will be misled by such feelings, in such quarters, to repudiate a profitable amalgamation with powerful and wealthy companies, to accept the vague promises of a line of which the financial affairs have been so badly managed as to leave them without the wherewithal to pay a dividend, which they state they had fairly earned-a piece of mismanagement which we think we may fairly say is unequalled in the history of railway blundering. We think that if the shareholders fail to support their directors at the ensuing meeting, the old story of "between two stools" will be in a fair way of illustration.

The confiscation of RAILWAY PROPERTY IN FRANCE has at length commenced-commenced, too, in the very case which, reasoning on ordinary principles, we should have expected to be least obnoxious to such a proceeding. The Orleans and Central had already given their officials for some years the advantages of communism to its fullest extent: every employé was a shareholder, and participated in the pro-fits to a respectable extent. These very men, knowing the desire of the Government to get hold of the line, at once resolve to furnish a pretext for it. They, the executive officers, simply refuse, one fine morning, to work the line for the company. Of course the line must be worked somehow; so the Government step in, to see the line worked, take possession of the till, and henceforth the five-franc pieces paid for fares roll away into the treasury, and, with a chink most agreeable to ears of provisional governors, drop into the chest of the commonwealth.

In this country we call such acts by plain, ungracious names, which it is bootless to repeat. The moving cause of this confiscation is abundantly plain, whatever the immediate occasion. The cause is simply that railway traffic is a ready-money trade-railway fares are hard coin -of metallic currency the Government are particularly in want: to appropriate railway fares is therefore a most convenient source of replenishment for empty coffers-to take payment in coin and to make payment in paper, is a simple but effectual contrivance to remedy poverty; so effectual, that virtue super-human, or at least super-French, or at all events superdemocratic, was required to have resisted the tempting and profitable dishonesty. Henceforth Government take the fares; but-mark the generous liberality of the transfer—"credit the company with the amount." The balance of the Provisional Government is delicately adjusted to show an equipoise, with metallic coin in one scale and a Government I O U in the other!

Of course we all understand that this is the beginning of the end-c'est ne que le premier pas qui coute; and this first step has cost so little and returns so much that we imagine the cost of the rest will be of the infinitesimal order. It will however cost English shareholders something,—enough to make them regret that the warnings of the Railway Chronicle against the money balance more carefully than hitherto national honesty and chances of revolution.

What we have stated is the cause of all this confiscation. The railways take fares in cash, this cash is convenient to the National Government,-ergo, the National Government takes it-and will also pay when convenient. The national conscience is not peculiarly sensitive on this point. Perhaps it is useless to hint that a day of reckoning may come if the property of English shareholders be disregarded. Our advice to them is, to keep their shares in England—not to agree to any compromise—to bide their time-and in the end, at a fitting time, to demand restitution in an unmistakeable manner. Let the prices go down as they may, to hold on is the true policy for the end. But that may be a long way off, and a terrible depreciation is the only immediate prospect. With their own subjects the French Government may do as they will; with us they are not at liberty to deal so summarily, nor with impunity rob those English capitalists to whom mainly they are indebted for the benefit of a national system of railways.

From our official returns it appears that the amount of traffic for the last week, on 3,658 miles of railway, was 158,475l., thus accounted for: - 72,603l. for the conveyance of passengers only, 45,569l. for the carriage of goods, and a remainder of 40,303l. for passengers and goods together, not respectively apportioned; being an increase of 13,989l. over the corresponding week of last year, when the mileage was 2,711. The average earnings per mile last week were 43l., whilst in 1847 they were 53l.

#### THE BRIGHTON COMMITTEE OF INVES-TIGATION.

We regret to hear that the Brighton committee continue to devote themselves with assiduous and most laborious trifling to the affairs of the railway. We have been waiting anxiously for tidings of their having commenced serious inquiries of a nature likely to serve some good purpose-to work some revolution in the management of affairs-to root out some great abuses-to lop off some prurient extravagancies -and to point out some rich mine of traffic, or invent some happy measure of economy still unknown or unworked, and so open up for the shareholders something likely to realize a harvest of the golden hopes which excited them when they appointed this committee of inspection. As matters now proceed there is every likelihood of our having a big blue book, full of nothing, and from which nothing is to be

All this is what might have been expected from the men appointed to form the committee. They were all men of talk, but not of practical knowledge. Neither did one of them possess any considerable stake in the property with which they have so laboriously trifled. Had the shareholders appointed one good man-one man of experience and skill in railway affairs, he would have brought out more information in one week than these in six. It is well known to all men of experience, especially to those who have acquaintance with parliamentary or judicial investigations, that you can get nothing out of a witness unless you know pretty well beforehand what he ought to say. You can then bring him at once to the point-you can get what you want out of him. Unless, however, you know nearly as much about the matter as the witness himself, you can get very little value out of his examination. It is because we do not think there is much in the committee themselves of practical knowledge,

tract much matter? out of their inquiry of a kind likely to benefit the future conduct of their railway.

We imagine the line of examination must be very much of this kind :

Committeeman. Call in Mr. Killman. You're something about steam-engines, arn't ye? Mr. Killman. I'm locomotive manager.

Comm. O, that's what ye call it? You manage a locomotive, do you?

Mr. K. No, Sir: I manage all the locomotives on the line.

Comm. What! eh! Mr. Alderman, do you understand his managing 'em all at once?

Alderman. That beats Astley's.

Comm. Aye, or Drury Lane! you can manage all the engines at once, can you? How many have you got?

Mr. K. We have 84, Sir, in good working condition. That is about one engine to every two miles!

Comm. One engine to two miles! I never saw 'em. I've travelled all last summer on the line, and never saw more than two or three engines the whole way! That man's talking nonsense! Put it down in the book, Mr. Short. The witness says one engine is required for every two miles, whereas I know that one engine has taken me all the way from London to Brighton every day last summer." An engine to every two miles! What folly; what extravagance! No wonder the dividends are down to 20s. Here's a fine item for our Report to the shareholders, arn't it, Mr. Alderman? Well. Sir, have you anything else to say? And you think that good management, do you? and economical? Two engines to a mile! Well, Sir. you may go! Put a mark opposite that fellow's name, Mr. Short. When we are directors every engine shall do his 60 miles, ave, his 120 or 180. Won't we be the making of the concern! Ave, and the dividend! Call another, Mr. John! call another! Three witnesses a day; was there ever such work!

And so, from day to day, Each tedious dullard drags his weary way.

We shall have a Report, at least; and such a one! The directors who now rule the affairs of the company have at least the advantage of having some experience and knowledge of their business: the committee have still theirs to learn. The present question is, who are to pay the fee for their apprenticeship? If the company put them into the directorship, and pay the apprentice fee, Heaven help them.

#### Correspondence.

#### THE VALUE, FINANCIAL POSITION AND PROSPECTS OF RAILWAYS.

The railway share lists present a very cheerless aspect. A fall of from 30 to 50 per cent, below the actual cost price is a common occurrence, and this fall is the more remarkable when we recollect that many of the lines thus depreciated formerly commanded premiums. Railway shares may now be very generally purchased on such terms as to pay 7 per cent, at present, and from 7 to 10 per cent, in future. Every one who remembers the state of the share list two years ago is aware that all lines which paid 5 per cent. were then at a premium. Is this alteration of value founded on real or imaginary causes, or both? We have to seek for these causes, 1st, in the sensitiveness of capitalists as a class; 2nd, in the political events of the day; and 3rd, in causes more particularly affecting railways. 1. The class of persons who have money to invest, the public generally, exhibit usually the extremes of recklessness and timidity; they are either all confidence, or all distrust. When the markets are rising, and have risen, they purchase; when they are falling, and have fallen, they sell, thus reversing the practice of the jobber and successful speculator, who purchases at what his experience leads him to think are depressed foreign investments were not listened to in time. I that we do not expect they will be able to ex- | prices, and sells whenever he can get a fair profit. Digitized by

Those persons who now have money to invest, and | the courage to use it, can scarcely go wrong in purchasing any railway shares at the present prices, with a view to permanent investment. 2. The revolutions now in progress throughout Europe, and especially the experimental republic in France, increase the alarms of capitalists and depreciate the funds. With a fall of 1 per cent. in the funds, there is a fall of 2 or 3 per cent. in all other descriptions of stock and shares. I believe it is not difficult to show that such falls in railway stock can proceed only from most unreasonable and unfounded fears. The rate of interest that can be obtained from the funds is still very indifferent, less than 4 per cent. It is not surprising then that a prospect of the greatly increased value of money, in the event of war, or of future loans at 5 per cent., should make the holders of stock sensitive and desirous of realizing; but why railway investments with a prospect, in esse or in posse, of from 6 to 10 per cent., should undergo such changes of value, is not by any means clear. The only explanation that can be offered is that these changes are influenced by the operations of jobbers and the fears of capitalists, not by the intrinsic value of investments. 3. A third cause remains in those facts which more especially affect railways, the most prominent are, 1st, the reduced dividends of the old companies; 2nd, the eternal system of loans and increased capital; and 3rdly, the continuance of heavy calls. I. The powerful London and North-Western leads the way in the reduction of dividends. The predictions of the chairman have proved too true, and we see the realization of them in reductions from 10 to 8 per cent. Whether there be "in the lowest depth a lower still," remains to be seen. No one can, of course, censure a proceeding which is an act of self-preservation—the only subject of regret is, that higher dividends were ever paid. If less dividends had been paid, reduction would never have been required, and there would be no unfortunate purchasers who bought in the expectation of 10 per cent dividends, and now find them-selves sentenced to receive 2 or 3 per cent. less. The attention of railway proprietors and directors should be drawn to the fact that some joint-stock banks with very moderate capitals have realized "rests" of more than 100,000*l*., besides paying dividends of 6 per cent. I am very far from joining in the censure which I see cast on such lines as the Edinburgh and Glasgow and North British, the former of which withholds a half-year's dividend altogether, and the latter can pay 6 but pays only 5 per cent. We want more conduct distinguished by equal boldness, providence and honesty. At the same time the shareholders, in all such cases, have a right to expect, in return for the confidence which permits this, the strictest attention to their interests, _no unnecessary litigation, __no costly experiments. engineering or otherwise,—no extravagant expenditure. 2. The system of loans, and raising more capital by issuing new shares. This continual begging for money is the most unsatisfactory part of railway management, and calls for the strictest scru-We see the grossest anomalies practised. A railway will pay a dividend of or near 10 per cent., and will, notwithstanding, be a petitioner for loans! Is there not something wrong in this? would any prudent private individual conduct his business in such a manner? It certainly does appear to me that any surplus beyond 5 or 6 per cent. dividend ought to be employed in keeping down all this incessant craving for more money. This should be strongly impressed on the attention of all the new railway companies. 3. Railway calls press fearfully on a falling market. It would be easy, but might be invidious, to quote cases in which shares have fallen more than 50 per cent, under the pressure of calls. This is an evil in course of cure ; railway enterprize being almost extinct, so far as new projects are concerned, calls must gradually terminate, as they can only be made to complete projects which have been some time in progress. No new work can or ought to be undertaken; many works already commenced must be indefinitely postponed. I cannot conclude these remarks on the financial proceedings of railways without protesting strongly, as a friend to railway interests generally, against the system of paying interest on calls before a line is completed and one sixpence of profit can be realized. I

have before me the accounts of a new railway company, by no means a large one, which paid only two half-years interest on calls. More than 10,000l. was paid for this purpose. This sum is of course absolutely lost to the company, while, if not paid, it would, at the present value of money, have provided permanently an annual sum of from 500l. to 1,000l. per annum towards its expenses. Allow me, in conclusion, to say a few words as to the prospects of railways. Their motto should be that of all good governments-" Peace, reform, retrenchment," a cordial understanding with each other for their common benefit, honesty of management, the absence of jobbing and the curtailment of all unnecessary expenditure. With these features of management, no investments can be more promising. Their receipts are rapidly increasing, railways make no bad debts, the return of our people from the Continent will cause increased travelling, and even war, which I trust may be averted, will be more likely to increase than diminish the receipts of railways. London, April 4.

#### Gossip.

As if to point out the utter inutility of the Railway Board, Mr. Hastie last week moved for a return "showing the name of each railway for which Acts have been obtained in each of the years 1844, 1845, 1846 and 1847; the length, and how much of the same is now completed; the amount of capital stock, and the sums authorized to be borrowed; the amount of each call made, with the date thereof, distinguishing the several years in separate columns, the proportion of each of such calls as have been paid, and the sums remaining to be paid; the date and amount of sums borrowed under the several Acts and which remain owing, stated also in separate columns for each year, together with balance of capital uncalled for, and of money which each company have still authority to borrow; and the periods for which any company may have definitively postponed making further calls, with the totals of each."

The parliamentary records of the season show that the MARCHESTER, SHEFFIELD AND LINCOLNSHIRE is about to apply for leave to improve the HUMBER FERRIES, by constructing a long pier on the HUMBER ferrier. The Admiralty has given an assent; and, by way of giving irresistible proof of its practicability, experimental operations have already commenced. We learn from the Eastern Counties Herald that they commenced on Monday last the driving of piles for their passenger-boat landing at Lime-kiln Creek. The piers or supports of the jetty are about 50 ft. apart. Two of these piers are in course of construction. Yesterday, at dead low water, we saw one of the company's steamers moored at the outermost, and one of their new fast boats passed close by at that moment.

The lightning of Sunday, says the Manchester Guardian, had very considerable effect on the wires of the electric telegraph, particularly on the line eastward from Manchester to Normanton. Not only were the needles greatly deflected, and their power of answering to the handles considerably weakened, but those at the Normanton station were found to have had their poles reversed by some action of the electric fluid on the atmosphere. The mischief has since been repaired, and the needles are again in good working order. It is found, however, that those wires which pass through hilly districts, and are consequently conveyed through railway tunnels, are more deranged by electric or other causes, and the needles more deflected than those of the more level tracts of country.

English shareholders (if no other portion of our countrymen) will be perfectly disgusted at the caut of the motto of the Provisional Government which heads the decree touching the ORLEANS AND CENTRE LINES—

Liberty, Equality, Fraternity.— In the name of the French People.—The Provisional Government having issued a decree on the 30th of March 1848, appointing citizens Bineau and Didion commissaries extraordinary to the Orleans and Centre; considering that it is now evident that the companies of those two roads do not now possess sufficient authority to insure the recular communications; considering that, under those circumstances, it is the right and duty of the Government to assume pro tempore the administration and working of those two lines, reserving, however, all the rights and interest of the shareholders and others; on the proposition of the Minister of Public Works, decrees:—Article 1. The Paris and Orleans and Centre are sequestered. They shall be administered and worked under the direction of the Minister of Public Works. 2. Citizen Satuage, engineer of the mines, is appointed administrator of the two roads, and shall exercise his powers under the direction of citizens Didion, inspector of the division of roads and bridges, and Bineau, engineer-in-chief of the mines. 3. From this date, all the direct and indirect pro-

ceeds of both lines shall be collected, notwithstanding all opposition or distraints, and shall be applied to the wants of the enterprise.

How politely is the argument put for this sequestration!

The Provisional Government still looks longingly on the ready-money returns of the railways. In spite of the decision to postpone the question of purchase till the meeting of the National Assembly, a proposal has lately been made for the redemption by the State of all railway shares at the price of the 21st of February; these shares are to be deposited by the Government in the Bank, and made the basis of a corresponding issue of paper. The National has also an article on the right of the State to purchase back the railway lines which it assists, and of which it demands the immediate application. "We see not," says this Government organ, "wherefore the State should not emit a quantity of paper corresponding to the value of the railways, inasmuch as the riches of the State would be increased by the value of the railway lines. Let it be considered also that the payment of these rentes would not burden the budget, and would impose no fresh sacrifices on the public, because the receipts of the railways would be enough to meet this service. We should certainly have to provide for the finishing of the lines already commenced, but money can always be found in France for useful works."

The line from Montereau to Troves has been subjected successfully to various provisional trials by locomotives with and without trains. The works over the Seine are solid. The line to Troyes, according to the Journal des Chemins de Fer, was to be officially opened by the Minister of Public Works on the 6th.

The works near and through the town of Lyon will employ a vast body of the workmen disposable by the Provisional Government. The Council of the Ponts et Chaussées have, it is reported, accorded the plans presented.

The St. Denis quarter has been visited by M. Foucher, who is specially investigating the late devastation on the Northern line. The incendiaries and vagabonds are reaping fruits rather more summary than pleasant for their Anglo-mania.

The service on the ROUEN AND PARIS will be regularly resumed on the 10th inst. The bridge at Bezons is almost re-constructed.

The portion of the BOULOGNE AND AMIENS from Boulogne is to be opened by the 17th. All due preparation has been made at the Boulogne terminus for the passenger traffic.

Disagreements have arisen between the directors of the Versallles (left bank) and a number of the workmen and officials. The entire administration has meanwhile been confided, says a correspondent, to M. Bergeror, the chief engineer, whose high character has won him the confidence of all by whom he is surrounded.

A few days ago, says the Journal des Chemins de Fer, a deputation from the Haute-Marne waited on M. Barthelemy de St. Hilaire to press, as soon as possible, the construction of the section of the PAKIS AND STRASBURG between Vitry-sur-Marne and Bar-le-Duc, by St. Dizier. M. de St. Hilaire replied that the question required much consideration, but all he could say was that he would transmit the demand to the Provisional Government, and that it would receive due attention.

In Paris the miscreants (thirteen in number) found guilty of destroying the bridge of the St. Germain at Asnières, have been sentenced to various terms of imprisonment, varying from one to five years. The Club de la Montagne in Paris wishes to set aside this sentence. It naïvely contends that the judgment be regarded as null and void, it having been delivered by judges appointed by the fallen Government, and that the accused be tried over again by a republican jury.—[Why not let the prisoners try themselves?]

Among the offerings of the working classes to the

Among the offerings of the working classes to the Provisional Government, the employés of the Northern last week went to the Hotel de Ville, and made a donation of 8,900f. to the Provisional Government. There would be much greater honour to these good citizens if they would subscribe their surplus money to liquidate the arrears of wages due to several of their fellow labourers, driven out of France, and turned for a time houseless on the world.

It appears by the report of the board of directors of the St. Germain, that the damage done to the road during the late events is estimated at 977,000f. The company has applied to the Government for compensation, and the Report expresses a hope that the claim will be admitted.

A subscription has been commenced among the LONDON SERVANTS AND OPPLIERS of the different lines to aid the prosecution of the claims of the work-people lately driven out from France, without even receiving the arrears of their wages. In comexion with this let us remark that M. Emile de Girardin

Digitized by Google

never lets a chance go by. The general report is that the Presse has sent 100f. to the subscription making in England among the French residents for the ex-

pelled English workmen.
Capt. Field, R.N., the secretary to the EDINBURGH LEITH AND GRANTON since its formation (a period of ten years), was lately entertained at dinner by the contractors. This gentleman's conduct has won esteem from all classes. The gentlemen employed under him have already presented him with a testi-monial of their esteem, and the directors meditate a similar acknowledgment of his services.

The alleged insecurity of the line of the GREAT SOUTHERN AND WESTERN (Ireland) over the CASHEL MORASS is thus disposed of by Sir J. Macneill, the engineer. In the forming of the line some difficulty presented itself, as much from the great quantity of rain which fell during the autumn and winter months as from any other cause. There were no piles driven nor any lives lost, as has been stated. The rails have been laid on a timber raft or platform, The line which was completed in eight or ten days. was inspected and opened early last month, and the trains have run with the most perfect regularity every day since.

Certainly just now there are peculiar advantages attending the employment of some of our poor countrymen on the Continent. At the late émeute at Madrid, Mr. Whitwell, an English engineer of a bridge on the Aranjuez Line, was shot through the body, and, we learn, has since died. He was young, and married to an English lady, by whom he has left a family of children, who reside in a cottage near the s raminy of chidren, who reside in a cottage hear the spot of his employment. Mr. Brackenbury, the English consul, immediately repaired to the side of our wounded countryman, and sent the most consolatory notices in his power to his distressed wife. To complete the outrage, according to the law of the land, his remains, as being those of a heretic, were denied the rites of Christian burial.

Next to discovering the produce of any particular soil is the provision of means for the transport of that produce. Such discoveries as the following show the absolute necessity for the active developement of the EAST INDIAN lines. The efforts of the Indian Govern-ment to discover coal within the districts of Western India are likely to be successful. The search had been entrusted to Mr. Johnson, C.E., who, under the guidance of Mr. Hamilton, the resident at Indore, proceeded to examine the coal formation in the neighbourhood of Nimar. Some specimens of that coal had been sent to Bombay, and proved to be of a good quality. It was hoped that means could be devised for conveying these coals by the Nerbudda to the sea.

#### Reports of Beetings.

BIRMINGHAM AND OXFORD JUNCTION.

April 1 .- Adjourned Meeting, Birmingham .- Mr.

A peril 1.—As Journess Intering, But many series.

A letter from Messrs. Hunt, in reply to statements made by Mr. Dobie at the meeting on the 23rd ult. (see ante, p. 228), was read. It denied that any imputation had been cast on the Birmingham and Oxford. Company as to the non-fulfilment of the agreement. Mr. Dobie had declared that the Great Western had insisted on new and inadmissible conditions. These new conditions were the proposals as to the written undertaking to be given by the Birmingham and Oxford shareholders. These proposals emanated from the Birmingham and Oxford, and not from the Great Western. None of the proceedings at the conferences were looked upon as strictly confidential. Mr. Dobie had himself handed in an account of the

The CHAIRMAN had been in communication with the Great Western and with others on the arrangement of their differences. He wished to see the agreement carried out in all its integrity. He had been assured that the Great Western was ready and willing to perform its part. The purchasers had been put to great trouble and expense by this company, and they would not consider themselves safe until the Act was passed to confirm the sale. If this company acted in a straightforward manner and petitioned fairly for the bill which the Great Western would lay before Parliament, that company would honourably discharge its obligation. One party was determined not to give the coupons till the sale was finally settled, and the other determined not to aid in perfecting the sale until the coupons were delivered.

An Act of Parliament could alone resolve this diffi-

culty.

A Shareholder wished to ask, suppose the Great Western could get a clause for carrying out the sale of the line, but not one for the broad gauge, and that then they should prefer withdrawing the bill, would they issue the coupons?

The CHAIRMAN had no hesitation in saying that if the Great Western withdrew the bill he did not believe they would give the coupons, but he had also no hesitation in saying he believed they would not withdraw the bill.

A Shareholder would suppose the chairman's opinion to be well founded. Then it came to this—Why should not the Great Western declare to him that if they withdrew the bill because they could not get the second clause which related to the gauge, although they could obtain the first clause confirming the sale -- why could they not tell the chairman they would then carry out this agreement so far as the coupons were concerned?

Mr. S. BEALE said they were undoubtedly entitled to the coupons. The agreement provided that, upon the payment of a certain sum of money they w entitled to the coupons; and if there was any other conditions they were ready to comply with them.

Mr. Mozley said it had been clearly admitted that the obtainment of the broad gauge was not a condition of the delivery of the coupons.

The CHAIRMAN: Certainly.

Mr. MozLEY then would ask upon what grounds were the Great Western to be permitted to assume a position of broad-faced repudiation?—for what they said amounted to that. If they got their bill before Parliament they would issue the coupons, but if not, the shareholders were to have no security. He therefore begged leave to ask the chairman what course he intended to pursue.

The CHAIRMAN was determined, as far as he could to carry out the agreement he as one had entered

into with the Great Western.

Mr. W. MATTHEWS said, the conditions of the greement being fulfilled by the Birmingham and Oxford, the Great Western were bound to give the coupons upon the passing of the bill, whether the broad gauge was included in it or not. He had before stated that not only were the shareholders of the Birmingham and Oxford bound not to oppose the passing of that bill, but they were bound to give their active assistance in obtaining it.

After an observation from Mr. Spooner, as to

diametrically opposite opinions of counsel on the

The CHAIRMAN said, the course for the directors must depend upon circumstances. There was one important matter overlooked, namely, that there was another condition in the agreement which secured to the shareholders their money. It was provided that in six months after the opening of any portion the

money was to be paid.

Mr. Matthews wished to ask Mr. Mozley whether, supposing some little difficulty should occur in getting the bill, he would sign a petition for it, and ask others to do the same.

Mr. Mozley : Yes.

Mr. Matthews said Mr. Mozley had come there from time to time with a great many proxies, and by means of them had brought them into their present position, and he thought it not too much to ask him to use those proxies in getting them out of the difficulty.

Mr. Mozley had not the least objection to sign a petition, and induce others to do so; but to think of binding down by any secret agreement other gentle-men interested in other lines, he could not do it. His opinions had lately been very much altered with respect to the question at issue. He could now, with perfect satisfaction to himself, sign a petition in favour of the Great Western, obtaining what they asked; but he would take care, before such a consideration should be obtained from him, the coupons should not only be made out, but delivered into the hands of a third party.

Mr. TURNER would not trust one of them a minute. Mr. Mozley said he was perfectly willing to bring the matter to an honourable termination.

Mr. Alston was anxious for a similar result. Mr. Spooner said Mr. Mozley's proposal should be submitted to the Great Western, with a determination, if possible, to effect a settlement.

Mr. Mozley then said, until arrangements were

finally entered into, it would be necessary for the shareholders to continue their proceedings, and he should therefore propose the following resolutions:—

should therefore propose the following resolutions:—
Resolved.—That in the bill introduced into Parliament in the name of this company, initialed 'A Bill to enable the Birmingham and Oxford Junction to make a deviation of the line of the Birmingham and Oxford Junction from Leannington to Warwick, and for other purposes, the following words be withdrawn from the bill, that is to say, in the 5th clause, the words "with the consent of the Great Western, who, by virtue of an agreement bearing date the 12th day of November 1846, claim to have become the purchasers of the said Birmingham and Oxford Junction;" inte 6th clause, the words "with such consent as aforesaid and "with such consent as aforesaid it" in the 12th clause, the words "with the consent of the Great Western:" in the the words "with the consent of the Great Western;" in the 14th clause, the words "with the consent of the said Great

Western." And it is further resolved, that Messra. Doble and Colmore and Beale be, and they are hereby instructed, in the name and on behalf of this company, to appear by themselves and their agents before the committee of the House of Commons to whom the said bill may be referred, and to propose the withdrawal from the said bill of the words before specified, and if such words are not withdraw then to withdraw the said bill.

That the petitions to the Houses now read be, and the same are hereby approved and adopted, and that the same be presented as the petitions of this company to the Houses, and that the common seal of this company now produced be affixed as such to such petitions against the bill for conferring additional powers on the Great Western, with reference to an agreement of the 12th day of November 1846, for Western." And it is further resolved, that Messrs. Dobie

ence to an agreement of the 12th day of November 1846, for the purchase by them of the Birmingham and Oxford Junction and Birmingham, Wolverhampton and Dudley, and that Messrs. Dobie and Colmore and Beale be, and they are hereby directed to appear, and to employ counsel and agents to appear on behalf of this company, in support of the said petitions before the committees of the Houses of Lords and

Commons.

That this meeting be, and the same is hereby adjourned. to Tuesday, the 11th day of April inst, at Dee's Hotel, in Birmingham, at 2 30 p.m., when the consideration of all and singular the matters and things mentioned and referred

and singular the matters and sining inclination and retered to in the requisition under which this meeting is held will be resumed, if necessary.

The CHAIRMAN declined putting the two former, which were put by Mr. Mozley, and by him declared carried.

#### SOUTH DEVON.

April 4 .- Special Meeting, Plymouth .- Mr. GILL in the chair.

Drafts of two bills before Parliament were sub-mitted. The first related to the Plymouth Great Western Docks, situated at the terminus. This bill western Docks, situated at the terminus. This bill sought to obtain powers of assistance from the Great Western, 7,500L; Bristol and Exeter, 7,500L; and South Devon, 15,000L. The last amount had been previously granted at a meeting; but legislative power had not been obtained in consequence of a parliamentary failure last session. Through the altered condition of the money-market, and from some local differences this meeting wished to receive the local differences, this meeting wished to rescind their resolution last year, but when it was declared that upon the faith of that resolution fifteen directors had become personally responsible in 1,000l. each, it agreed to believe the Board. Power was also obtained to increase the subscription by 10,000*l*., if the share-holders of the South Devon should hereafter consent. This clause was agreed to on the distinct understanding that by obtaining the power, the shareholders could in no measure be committed to the principle of any further grant beyond the 15,000l.

To the second bill relative to the Cornwall, which

sought assistance to the amount of 66,666l. beyond a larger amount previously guaranteed by the South Devon, there was so much disinclination that the chairman withdrew the proposition. Mr. Peto, the contractor, had had some negotiation with the Cornwall direction, for the purpose of taking the works of the line, and of holding a large interest in the undertaking. This negotiation is understood to have gone off, and Mr. Peto has withdrawn from any con-

nexion with the Cornwall.

The exact period of opening the South Devon to Laira could not be stated by the chairman.

LIVERPOOL, MANCHESTER AND NEWCASTLE UPON-TYNE JUNCTION.

March 31 .- Adjourned Meeting, Manchester .- Mr.

T. R. W. FFRANCE in the chair.

The CHAIRMAN said they would consider the second part of the requisition, as to the expediency of selling or leasing the line.

Mr. Parsons moved that the copy of the bill now before Parliament for the abandonment of the line be approved, with the exception of the second and third clauses, giving power of continuing the line if deemed expedient.

Mr. ASHLIN seconded the motion.

The CHAIRMAN had taken a legal opinion to the effect that the consideration of the bill now before Parliament was not part of the business set forth in the notice; that the chairman would be justified in refusing to put any resolution having reference to the bill; and that no resolution approving of the bill, or directing it to be presented, would be good or ought to be acted upon.

Mr. Parsons himself accordingly put the motion, and declared the approval of the parties present.

Mr. Ashlin moved a resolution to the effect that the Board having expressed their determination not to abandon the undertaking, they be called upon to resign. He next moved that the directors, in their circular of the 23rd inst., having stated that they will make all the required changes in the Board, this meeting, having reference to the Report of the committee of investigation read yesterday, and the conduct of the directors in rejecting the votes of the great majority, pressing for the abandonment of the

Digitized by GOOSIC

undertaking, do consider it proper that a thorough change be made in the Board, and that the directors be and are hereby requested to resign.

Mr. KILGOUR seconded the motion.

After a long discussion, the CHAIRMAN put the motion under protest, and there were four hands in favour and twelve (including directors) against it.

Mr. Parsons demanded a poll, and it was agreed that each party should give his personal votes and proxies as before.

The CHAIRMAN declined, however, to declare the number

Mr. Gibson apprehended that the chairman would not object to do it under protest. He took it that all the parties wanted was to put the questions in such a shape as to enable them to get a decision in the higher courts.

The CHAIRMAN, on this view of the case, agreed to give the numbers; and we understood the proxies tendered by Mr. Ashlin to be 28,504, of which, as before, 712 only were allowed by the chairman to be

legal.

Mr. Ashlin and others then moved a series of reso lutions separately, proposing the substitution on the board of directors of Mr. W. Hutt for Mr. W. Ffrance; Mr. R. Gill for Mr. W. Gibb; Mr. W. L. Ogibby for Mr. N. Gill for Mr. W. Gibb; Mr. W. L. Ogibby for Mr. N. Plews; Mr. S. J. Hayne for Mr. Bilham; Mr. F. Kilgour for Mr. T. Broadbent; Mr. E. R. Langworthy for Mr. G. A. Grey; and Mr. W. Rawson for Mr. W. Nichol.

All these resolutions were put by the CHAIRMAN, under protest, and being negatived by a show of hands on each, polls were demanded, and the supposed informal proxies tendered.

During these proceedings, Messrs. Parsons and Ashlin declared it to be their sole object to wind up

the company.

Mr. W. Rawson, in regretting that he was proposed as a director, appealed to the chairman and the Board to offer no opposition to the winding up, believing that no good practical result could follow the present divided state of the proprietary.

The meeting was then further adjourned to the 4th

of May, to be held at the London Tavern, Bishopsgate-

street, London, at noon.

The half-yearly meeting was then resumed, and, after a vote authorizing the directors to pay reasonable expenses and compensations to the committee appointed in February, was also further adjourned to the 4th of May, in London, as was the second adjourned meeting.

#### WEST CORNWALL

April 5 .- Adjourned Half-yearly Meeting, London. apt. Moorsom in the chair.

Mr. Harr, the secretary pro tem., read the Report handed in by Mr. Wills from the committee of shareholders appointed on the 22nd of February to inves-

tigate affairs :-The committee had divided the subject of their investigation into two parts, namely, the general state and prospects, and their own recommendations. The scheme was originally proposed with a capital of 180,000L, in 9,000 shares of 20L proposed with a capital of 180,000l., in 9,000 shares of 20l., each, to make a line from Truro to Penzance, and making the Hayle available as a portion. This was thrown out in 1845, and the present scheme was shortly afterwards brought forward, with Mr. Brunel instead of Capt. Moorsom as the engineer, and with an increased capital of 50,000l., with 2,500 shares. The total cost of the Hayle, at the time of its purchase by the West Cornwall, was 127,702l. 12x. 2d., and there were debts due to them, up to the 31st of December 1844, at which time they had lost from its completion 10,000l. The working cost for the year 1844 was 10,855l. 10s. 11d., and the receipts 10,434l. 8s. 3d., making a loss of 421l. 7s. 8d. In 1845 the amount of loss was 1,353l. 6s. 3d., to each of which losses must be added the interest on the amount of capital borrowed, amounting to 2,300l. per amount. The purchase of the Hayle by the West Cornwall was 127,960l., which was paid for by giving 10,000l. in paid-up shares, and the balance by the debts of the Hayle being taken by the West Cornwall. Since the Hayle line had been in their possession it had greatly improved, the receipts for 1847 having been 14,056l. 17s. 4d., and the working costs 9,700l. 13s. 11d., showing a profit of 4,356l. 3s. 5d. All the shares not being taken up, an agreement was entered into with Mr. Mowatt that he should take up the number on hand, amounting to 4,967, at a discount of 5l. per share; but the contract had not been carried out, and proceedings was negative to the starts and the contract had not been carried out, and proceedings was negative to the starts and second of 5l. per share; but the contract had not been carried out, and proceedings was negative to the starts and the starts and the contract had not been carried out, and proceedings was negative to the starts and the starts and the starts and the contract had not been carried out, and proceedings each, to make a line from Truro to Penzance, and making hand, amounting to 4,967, at a discount of 54, per share; but the contract had not been carried out, and proceedings were pending to enforce it. The total receipts were exclusive of the Hayle 64,6174, of which a balance remained of 1,9144, 175, 54, in the banker's bands, liabilities against the company 24,7324, 63, 5d. Providing that Mr. Mowatt's agreement was established, the present shares existing in the company would produce 245,2791, 178, 5d., irrespective of 3,430 shares, upon which 2l. had been paid, the balance of which would amount to 62,630l. The amount already expended and the liabilities amounted to 77,000l., for which, which would amount to 62,640). The amount already expended and the liabilities amounted to 77,000 t, for which, with the exception of being relieved of a portion of the mortrage of the Hayle, the company only possessed its Act of Parliament and the engineer's plans. Mr. Brunch had estimated the entire cost of completing their line, including the Falmouth branch, at 455,000 f for a double, and 372,000 for a single line. If the 3,400 shares should be taken up at par, and Mr. Mowatt's shares fully secured, the company would have a sufficient capital, without borrowing or dehave a sufficient capital, without borrowing on de

bentures, to complete the line from Penzance to Truro. The

directors had reserved on the second scheme 5 000 shares. and the committee had no evidence before them that those shares had been allotted, or with what object they had been snares mu been anotted, or with what toget they had oester reserved. From the large number of applications, doubt-less all of those shares might have been taken up. The ex-penses of the direction had been very heavy. From August 1946 to January 1847, the directors had had seven meetings, and there were three further meetings without a quorum; dividing this by the number of attendances, they found that each director would receive 171, 4s. 94d. for each attendance. From January to July 1847, the directors had divided 500L, the number of meetings being seventeen, thus giving 61. 8s. 23d. to each director for each attendance. The committee recommended that there should be a proper revision of all the bills of costs; that in filling up the direction of all the bills of costs; that in filling up the direction parties should be selected in whom the proprietary should have the fullest confidence; that the directors, until the next half-yearly meeting, suspend all proceedings, except enforcing the payment of all arrears of calls and the performance of Mr. Mowatt's bargain, in order to discharge the liabilities; that all shares held by unsubstantial persons should be forfeited; and that a communication should be opened by all the holders of the Hayle shares to approximate their interests to that of the general shareholders.

A long conversation ensued between Mr. SQUANCE, who represented a large number of Hayle shares, Mr. Wills, the chairman of the committee, and other gentlemen, with regard to various subjects connected with the company's affairs, and particularly with reference to the proceedings against Mr. Mowatt, and the probability of being able to come to some arrangement with that gentleman.

Eventually a resolution was adopted, that the proceedings against Mr. Mowatt should be continued by the solicitors in whose hands the papers were at present, under the guidance of the directors.

Another resolution was then passed, adopting the Report, and adjourning the meeting until the 25th of May, in order to give the directors time to answer it.

GLASGOW, AIRDRIE AND MONKLANDS. March 29 .- Half-yearly Meeting, Glasgow .- Mr. J. Sigo in the chair.

The Report stated that owing to the unprecedented pressure nothing had been done to the works. The directors were still confident of the ultimate productiveness of the line. They were of opinion that it would be a great advantage to obtain a crossing of the Clyde, and they had introduced a bill into Parlia-

The CHAIRMAN moved that the seal be affixed to

the register.
Mr. WRIGHT, a holder of 7,000 shares, protested against it, unless his name was entered on the

register.
The Secretary stated that his protest should be entered on their minutes, but, for reasons already assigned, his name could not be entered on the

register.
The CHAIRMAN moved the adoption of the Report, which was agreed to, after a suggestion from Mr. HILL as to an amicable arrangement with the mineral companies.

The meeting was made special, and a bill was approved by a large majority to enable the company to form a branch to connect their line with that of the Glasgow, Paisley and Ayr.

#### EAST OF FIFE.

March 29 .- Half-yearly Meeting, Edinburgh .- Mr.

C. C. HALKETT in the chair.

The Report stated that the directors had been getting up working plans and specifications for the line between Markinch and Largo, and in acquiring land. They could not let any contract before the 20th of December next. They had applied for an extension of time to complete their works for two years beyond the period limited by their Act.

Resolutions were passed adopting the Report and re-electing the directors

Interest at the rate of 4 per cent. per annum is to be allowed on calls and deposits paid up, and on shares in arrear 5 per cent. would be charged on the amount of calls in arrear, and no interest would be allowed on the amount paid upon shares in arrear.

Mr. HUTCHINSON gave notice that at the next meeting he would propose a resolution that no con tracts should be entered into without the sanction of a special meeting.

MONKLAND AND KIRKINTILLOCH, BALLOCHNEY AND SLAMANNAN.

March 30. - Annual Meeting, Glasgow. - Mr. GRAHAM in the chair.

The Report stated that-

The actions against the Edinburgh and Glasgow before the Court of Session at the date of the last meeting had since been satisfactorily arranged. The actions against the Edinbeen satisfactory arranged. The acrons against the ram-burgh and Glasgow and against the Slamannan and Borrow-stouness shareholders are to be withdrawn; the whole expenses are to be paid by the Edinburgh and Glasgow; the Moukland, Balbechney and Slamannan are to have the right to use the Slamannan Junction line for their whole traffic, on payment of a small fixed sum per ton per mile;

they are to be paid 5.400L, and to be relieved of their obligation to take up  $1.75 \, 25L$  shares of the Glasgow, Airdrie and Monkland Junction stock. The directors await an early and Monkland Junction stock. The directors await an early and favourable decision in the case of the lease of the Monkland Junction line. They anticipate little or no opposition to the bill before Parliament for amalzamating the Monkland and Kirkintilloch and the Ballochney and Slamannan, which have been worked as one undertaking since March 1845. The capital of the amalzamated companies has been divided thus:—Monkland and Kirkintilloch, 5.777 shares, at 221. 17c. per share, 131.9561.; Ballochney, 3.499 shares, at 401.11z., 141.8552.; Slamannan, 2.460 shares, at 221. 16z., 56.0631., making the total capital 329.8791. With regard to the future prospects of the united companies, the directors expected, in addition to their existing traffic, a considerable increase from their connexion with the Caledonian at Gartagil, and with the Edinburgh and Glasgow at Kirkintilloch, and at Causeway-end near Linlithgow. As to the connexion and at Causeway end near Linlithgow. As to the connexion with the Caledonian, it may be stated that the part of the Monkland and Kirkintilloch to be used by that company Monkiand and Kirkintiliceli to be used by that company had been widened and relaid, and immediately on the completion of the Castlecary branch the whole trade between the Caledonian and Scottish Central would pay this company dues for two miles. This traffic has been estimated as likely to yield the company 1,500% a year. In referring to their financial position, the Report continued—It is proposed that the ambenuation shall be held to company as posed that the amalgamation shall be held to commend posed that the amalgamation shall be held to commence as on December 31, 1845, so as to admit of the consolidation of interests and the payment of dividends accordingly. New stock to the extent of 32,470L should be created, and, after deducting a sum sufficient to pay all arrears of dividend, the balance be applied to the reduction of the debt. The the balance be applied to the reduction of the debt. The whole amount now at the credit of revenue is 32,36%, which by the end of the current half-year will have increased to 40,00%,—a sum sufficient to pay a dividend of 12 per cent. on the whole new capital stock. Although the revenue account shows the above profit of 32,36%, for the past years, that amount, together with a sum of 40,591, borrowed, has been spent on the works, at a time when it would have been very difficult, if not impossible, to have the provided funds attentive of the would have been very difficult, if not impossible, to have provided funds otherwise. During the alteration of the gauge on these lines in the months of August and September last, the falling off of the traffic was estimated at 2,400. A considerable accession of traffic is expected from the opening of branch lines connecting with the Caledonian and Edinburgh and Glasgow. A committee has been appointed to carry into effect a measure for reducing the working expenses without diminishing the efficiency of the lines.

The capital account showed that 499,581l. had been received and expended. The revenue account stated the receipts at 22,246l.; expenditure, 13,818l.; balance, 8,427t.

The Report was unanimously adopted, and the

directors were elected for the ensuing year.

At the special meeting, held immediately after-wards, the amalgamation bill was approved, with the understanding that the directors named in the bill should retire at the first meeting after the amalgamation, and be relieved of all their responsibility.

#### EDINBURGH AND BATHGATE.

March 31 .- Half yearly Meeting, Edinburgh. J. STEWART in the chair.

The Report stated that-

The directors, by prudent expenditure of the funds, had The directors, by prudent expenditure of the funds, had avoided the necessity of making calls for a considerable time; and although it was upwards of ten months since the last call became payable, they have been enabled during that period to carry on the works. They have now, however, been compelled to make a further call of 21. los. per share, payable on the 1st of May next. Under more favourable circumstances the line might have been opened in the course of this year, so as to have been connected with the Wilsontown and Morningside, and thereby have afforded a new and continuous line between Edimental and dispense. new and continuous line between Edinburgh and Glasgow. The directors consider that corresponding advantages have been obtained by postponing the opening till early in the ensuing spring. The whole of the land required for the main line and Uphall branch has been acquired, and about fourth part of the principles properties. main line and Uphall branch has been acquired, and about a fourth part of the price only remains unsettled. A considerable portion of the rails, chairs and sleepers have been provided and paid for, besides upwards of three miles of the permanent way completed. Drafts of the bills for the amalgamation with the Edinburgh and Glasgow, and for extensions of the Whitburn branch to the Benhar coal-fields, will be submitted. No increase of capital will be necessary, the saving effected by the deviation bill of last session being more than adequate for carrying out the extension to the Benhar coal field. The directors express their undiminished confidence in the value of the undertaking.

The statement of accounts to the 31st of January showed the receipts at 65,196l.; expenditure, 59,850l.; balance, 5.346/.

The CHAIRMAN urged strongly the necessity of using every exertion to finish the line and open it for traffic before the 1st of March 1849. He said they had already expended 7l. 10s. per share, which was at present dead stock, and could only return a dividend by extracting it from the funds already subscribed. This was at all times a bad principle, and ought to be carefully avoided. He concluded by moving the adoption of the Report.

The Report was then unanimously adopted.

Some conversation ensued respecting the agreement between this company and the Edinburgh and

Mr. HILL complained that the shareholders of the former company were treated in a manner contrary to the spirit of the agreement with the latter.

Mr. BLACKBURN explained that it was not their wish to do so.

Mr. HILL intimated he would bring forward the question when the amalgamation bill was submitted. The retiring directors and auditors were re-elected.

#### AIRDRIE AND BATHGATE JUNCTION.

March 29.—Half-yearly Meeting, Glasgow.—Mr. J. L. Ewing in the chair.

The SECRETARY stated that the register of transfers, as made up to the time limited for recording transfers, contained the names of two gentlemen (Messrs. Miller and Buchanan) who had since that date offered transfers of their shares for presentation, which of course could not be done, the books having been previously closed. Although the names of these parties were on the register, they were no longer proprietors.

On the proposition for affixing the seal to the re-

Mr. J. Reid entered a protest against it.
The Secretary read the Report, which chiefly referred to the company's relations with the Edinburgh and Glasgow.

A motion for the adoption of the Report having been submitted, an amendment was proposed and carried to adjourn the meeting to the 12th of April.

GLASGOW, BARRHEAD AND NEILSTON DIRECT. March 30 .- Half-yearly Meeting, Glasgow .- Mr. J. GRAHAM in the chair.

The Report stated that-

The Report stated that—
The main line to Barrhead and the Thornliebank and Househill branches would be soon completed. The works had proceeded slowly, owing to the state of the moneymarket and the long continuance of unfavourable weather. The works on the Clydesdale Junction and General Terminus, with which the traffic of the line is so intimately connected, have not been urged on during winter. The tardiness of operation will conduce to the permanent stability of the line. The bill for the branch line to Paisley was, in consequence of the unexpected opposition, withdrawn, on the second reading is the House of Commons. The directors, being satisfied that the objects sought by the branch alluede to cannot be affected by the lines proposed The directors, being satisfied that the objects sought by the branch alluded to cannot be affected by the lines proposed by the Paisley, Barrhead and Hurlet, have resolved to use every exertion to secure the rejection of that company's bill. The directors regret to announce the retirement from their Board of their chairman, Sir J. Maxwell, Bart. The vacancy has been filled by Mr. H. Hinde; and the Earl of Eglinton and Winton has been appointed chairman of the directors.

The Report was unanimously adopted. The meeting approved of the conduct of the directors in reference to the bill.

#### ULSTER.

March 30 .- Half-yearly Meeting, Belfast .- Mr. J. GODDARD in the chair.

The Report stated that the gross receipts for the half-year were 18,887l. After the cost of working the line, 8,338l., the balance of nett profits amounted to 10,549l., out of which a dividend of 19s. per share was declared, and 6551. added to the reserved fund. There is an increase in the working expenses, but a large portion of the addition is owing to the increased taxation. The mode of poor-law valuation is extremely injurious to railways, and demands an early remedy. The directors have obtained on loan the whole amount required, 200,000l., which they are whole amount required, 200,000t., which they are enabled to borrow. The project being now nearly completed, with the extension from Portadown to Armagh, the capital account will be brought to a close as soon as possible. The number of passengers conveyed during the half-year was 314,415, of whom 21,856 were first-class, 77,806 second-class and 214,753 third-class passengers. The last class also contributed more than one-half the passenger receipts.

Mr. Pix had not been present at the meeting of

Mr. Pin had not been present at the meeting of directors on that day week, when a dividend of 19s. was recommended, or he should have proposed but 18s. a share. He went into some calculations, and concluded by suggesting that the dividend should be but 18s.

A desultory conversation ensued respecting the insufficiency of the present Belfast station; the 200,000l. borrowed to make the Portadown Extension; and on the conveyance of the mails. Ultimately, in accordance with the wishes of the meeting, the amendment was withdrawn.

The CHAIRMAN moved that a dividend of 19s. be declared payable on the 10th of April.

This was agreed to, and the meeting, after some routine business, separated.

#### DUBLIN AND DROGHEDA.

March 30 .- Adjourned Meeting, Dublin .- Mr. G. HOYTE in the chair.

Mr. M. CARTNEY, before bringing up the Report from the committee of investigation, had a few ob-servations to make. In the anxiety to bring the line into operation, too much haste, and consequently too weeks, and that the next division to Kilkenny was in much expense, had been incurred, a large portion of a forward condition, it would be admitted that the

which was of little importance. The object of the committee was particularly to see, if he might so express it, if the administration was carried on with clean hands, although they did not join in the suggestions and suspicions abroad; and, although they found things that might have been better done, they had found nothing to implicate the administration with those charges. The committee regretted to say that there was colour for some of the remarks that had been made, arising out of the manner in which ransfers were loosely made, not registered in proper time, and calls not actually paid, though secured in some way. Beyond that they had not been able to trace anything like a delinquency. They, however, trace anything like a delinquency. They, however, found some directors supplying articles for consumption in very large quantities, and they would recommend all contracts in future to be taken on a different system. Mr. M'Cartney then read the Report, which went at considerable length into the state and prospects, and contained several suggestions as to the future management. The principal of these was that a committee of management should be formed for the purposes specified, and to carry out economic alterations in several departments. By the failure of Labertouche and Stafford, the company had lost 4,6222.14s.9d., and also two forfeited shares on which it was likely dividends were being received. appeared good means to meet all their liabilities, and the directors should at once set about getting rid of the bad principle of dealing with banks at a high rate of interest, discount and commission. The committee found a most objectionable practice in the mode of auditing the accounts. All the books of account had not been laid before the auditors. What was called the auditors' book was nothing more nor less than a cash account of receipts and payments. Therefore to rely on the auditors' Report as exhibiting the whole state of their affairs was perfectly fallacious; and this in an establishment yielding about 40,000l. a year!
The CHAIRMAN said that the directors were well

satisfied with the labours of the committee, and he was sure the proprietors would admit that the Board had discharged its duty in giving them a committee.

The expense of the coke ovens at Balbriggan were

canvassed, although not noticed in the report of the committee. Mr. Hamilton, the proprietor of the land, had voluntarily abided by the lowest amount of rent offered.

In reply to questions from Mr. DUNLOP and others, Mr. M'CARTNEY stated that at present it cost 63%. per mile to keep the permanent way in repair; and Sir J. Macneill was of opinion that it could be let to a contractor at the rate of 40l. per mile. The whole of the liabilities on the capital up to the 31st of December amounted to 82,000l. The mode of fighting what was called the company's interest had not in many instances been based upon the broad principles of law, but upon some legal plea, and in almost all cases the solicitor was the only party who gained.

Mr. Lesh, the company's engineer, in reply to Mr.

DUNLOP, respecting the cost of maintenance of way, stated, that when he first came on the line it was let by contract for 1,600*l*. per annum. At that time, and for eight months after, there were no means adopted to carry off the surface water, and the sleepers were almost floating, in consequence of the injudicious manner in which the line was managed: and it was in order to restore the line to its proper state that the additional expenses were incurred. At

present the expenses did not exceed 46l. per mile.

After a long and desultory conversation thanks were voted to the committee for their Report; an adjournment to the 25th of April was proposed, for the consideration of the Report. An amendment carried for a committee to assist the directors, consisting of Messrs. M Cartney, Jordan, Verdon and Dunlop. The Report was then referred to the directors, with power to confer with the committee.

#### IRISH SOUTH-EASTERN.

March 30 .- Half yearly Meeting, Dublin .- Mr. J. E. REDMOND in the chair.

The SECRETARY read the Report. The line from Carlow to Bagenalstown could be opened for public traffic in May next. The anticipation of a highly remunerative return will certainly be confirmed; and, notwithstanding the extravagant prices paid for land, the cost of the line from Carlow to Kilkenny would be under 10,000l. a mile, including rails and sleepers for a double line. The statement of accounts showed the receipts at 45,700l. 10s. 4d.; expenditure, 35,100l. 7s. 10d.; balance, 10,600l. 3s. 6d.

The Снагиман might mention that it was scarcely

fourteen months since the company commenced operations, and when it was considered that they would be able to open ten miles of the line within six

works had been urged on as fast as could be expected The directors had been under the severe pressure. able to effect this without having been obliged to resort to unpleasant or severe measures against any of the proprietors, and they had been able to collect a sufficient amount of calls without having had to put the proprietors to any unnecessary inconvenience. Notwithstanding the extraordinary prices which the owners of land and houses insisted on receiving, the directors believed that the original estimate would be sufficient, and the line, when completed to Kilkenny, would be amply remunerative. The Chairman moved that the Report be adopted.

The motion was seconded by Mr. T. MOONEY and agreed to.

On the motion of Mr. G. Roz, the following directors were re-elected:—Messrs. Alexander, Bainbridge, Collett and Grogan; and Mr. G. W. Grogan as appointed auditor.

The meeting was made special, for the purpose of declaring the forfeiture of a number of shares, &c.

In reply to Mr. Roe, the CHAIRMAN stated that the names of the holders would not be submitted, but the numbers alone.

The Secretary having read out the numbers of the shares, amounting in all to 7,386,

The CHAIRMAN said the shares were originally in the Great Leinster and Munster, and the holders had the option of continuing their subscriptions upon the renewal of the Act, and obtaining the benefit of the amount subscribed; but as they did not avail themselves of that, it would be unfair to those still subscribing to allow the others to remain on the books. He therefore moved that the shares in question be declared forfeited.

Mr. G. Rok seconded the resolution. He quite agreed with the chairman that it would be better to adopt the course proposed rather than take legal proceedings. He hoped, however, that the course to be adopted would not prevent the directors from soon completing the works. It was very important as regarded the prosperity of the country, as well as of the company, that the line should be finished as quickly as they could, for he believed that those undertakings were among the best means of promot-

ing the prosperity of the country.

The Chairman said that if the amount of 5l. on each share were paid by all, there would be ample means to construct the line to Kilkenny. They found that it was useless to expect that the persons holding the shares about to be forfeited should pay; and if law proceedings were taken the solicitor would get more than the company. With respect to the works, it could not be expected that the same per centage on the reduced number of shares, as on the full number, would be sufficient. He could not therefore hold out the expectation that the line could be opened to Kilkenny at 51. per share; but he thought that, calculating on those only who were known to be able to pay, 50s. more would complete the line to Kilkenny.

The resolution was then adopted.

#### MIDLAND GREAT WESTERN.

March 30 .- Half-yearly Meeting, Dullin .- Mr. A.

BOYD in the chair.

The SECRETARY read the Report. It expressed the satisfaction of the directors at the substantial proof of the permanent value of the undertaking.

The receipts on the line have amounted to 11, 1091. 18s. 6d., derived (with the exception of three weeks in December) from the traffic of 20, miles between Dublin and Enfield and to 11,7011. 17s. 4d. on the canal, making altogether an average of upwards of 8711. per week, exclusive of mails on the 6th of December an additional distance of 10 miles, average of upwards of 8711. per week, exclusive of mails, ton the 6th of December an additional distance of 10 miles, from Enfield to the Kinegad station, was opened; and the traffic, including the conveyance of the Galway and Sligo mails, has been carried on with great regularity, and without any accident. On the canal, its revenue for the past half-year has been greater than during the corresponding period in 1846, or any similar period before the line was opened. The continuation of the line to Mullinear has been steadily carried on; but the unfavourable period of the year for the execution of such works, and the circumstance of the company not having yet received the same assistance from Government as has been given to other companies, have compelled the directors to limit their operations during the winter; but as the works are now being carried on with increased activity, they will be enabled to open the line to Mullingar during the approaching summer. The call due on the loth inst. has been well responded to, upwards of 60,000d. having been received up to the 20th inst.; and they beg to assure the proprietors that every effort consistent with their interests shall be exerted to avoid making any further call as long as possible, and that they are determined to confine their operations to the line between Dublin and Mullingar until that shall be completed, and its traffic developed.

developed.

The CHAIRMAN said that even under the late extraordinary times the expectations of traffic had been fully realized. In six months no fewer than 133,000 passengers had been conveyed, and without an accident. The canal has produced more than on any

Digitized by GOOGLE

previous six months since it first opened, which, considering that the export of corn almost ceased, and that the passenger traffic was transferred to the line for 26 miles, must be considered as highly satisfactory. At the last meeting the line was only opened to Enfield. 26 miles; but from the confidence and the directors have not only opened the line 10 miles more to the Hill of Down, but have the further portion to Mullingar in as forward a state as to be enabled to receive on it in summer the great additional traffic which will attend its opening. He then quoted Mr. Hudson's opinions as to the unfairness of estimates made in the infancy of a line. A period of seven years enabled a judgment to be formed of the amount of traffic a line would accommodate. Within the last few days an arrangement had been made for accommodating the district about Cavan and Killeshandra with a good four-horse coach, to come on the line at the Hill of Down. The exertions of the directors had been and would be increasing in a judicious economy, assisted by a due regard for the full deve-lopement of traffic. He then moved the adoption of

the Report.

Mr. Perry seconded the resolution, and called attention to the actual result of the last six months' working. It had produced a clear profit of 12,618., which would return somewhere about 5 per cent. on the capital; and that certainly was a good beginning. That was also exclusive of the carriage of mails. The present income of the railway was somewhere about 4300, per week, and of the canal 4400. The extent at present opened, 261 miles, was exactly half the whole line, the distance to Mullingar being about 52 miles; and he considered it a moderate calculation to say they should at least double their receipts when the whole line to Mullingar was opened.

Mr. TAYLOR: Every mile nearer to the city is worth two.

Mr. PERRY: The experience on every line fully at work proves what I state. Besides the double mileage, the greater extent of country opened up by railway communication always gives that result.

Mr. TAYLOR: The Cashel does not prove that.

Mr. PERRY was satisfied the Cashel would prove that when it was in full operation, and his opinion might be taken for what it was worth. He thought they might expect an increase of 1,500l. per week when they got to Mullingar, and that would give them over 5 per cent. In the beginning of the Kingstown he knew that the revenue did not amount to more than 36,000*l*. a year, and now it had got up to about 52,000*l*. a year. He regretted that several of their original subscribers, either from the pressure of circumstances, or from undue and unwarranted apprehensions, had been induced to sacrifice their property.

Mr. TAYLOR drew attention to their Report of September 1846, wherein there was an intimation to the effect that an amalgamation should take place between that company and the extension company; and that both should pay calls of equal amount.

The CHAIRMAN stated that at the period when the amalgamation was effected with the Athlone Extension, they had intended to proceed at once to Athlone; but the circumstances of the country deferred that undertaking, and the Board did not consider it was just to make a call on the proprietors of the extension for the construction of the main line, when not a sod was turned on their own property.

A Shareholder took exception to this flourishing statement, and complained of the want of economy in the working. Four solicitors had been employed, who pocketed 1l. out of every 8l. applied to the construction of the line.

This was contradicted by the answer that the law charges were 1,200l. a year.

Another Shareholder moved for a committee of in quiry, which was negatived by a large majority.

The Report was adopted.

The meeting was made special, to approve the draft of a bill now before Parliament. for a deviation in the line between Mullingar and Athlone.

The CHAIRMAN moved that the bill be approved of,

which was carried unanimously.

A Shareholder inquired whether another 51. call would be required before they got to Mullingar.

The CHAIRMAN said that neither of the last two calls would have been made if there was any possibility of their getting money on fair and equitable terms; and if they could now procure money on fair terms, they would not have to make a further call before they got there.

#### NAMUR AND LIÉGE.

March 30 .- Special Meeting, London .- Mr. Spot-TISWOODE in the chair.

The CHAIRMAN stated that the uncertainty and

Minister had been applied to for an extension of time for the completion of the line, and had granted it conditionally that the company kept a certain number of men constantly at work. The directors had agreed to do so, but they were very much straitened for money. They did not see their way unless the shareholders would advance assistance. The works were in a forward state, between 600,000L and 700,000L had been expended, and if they were not proceeded with, the whole of that sum would be acrificed, for they must abandon the line, whereas, if they were completed, a dividend would soon be paid. What he had to propose was, that the assistance required to complete the rails should be granted first, in the way of immediate payment of the remaining instalments, and then by way of advances on debentures. The directors were at present negotiating a loan on such terms as, though they were high, would supply part of the sum required. But they must have all the assistance possible from the shareholders. The directors proposed to issue debentures bearing interest equal to 10 per cent., viz., 5 per cent. bonus and 5 per cent. interest. They could offer these terms in consequence of the number of shares that had been forfeited by the non-payment of calls. A statement would be read by the accountant.

Sir F. Smith had only recently joined the direction, and had every reason to be satisfied with their prospects, provided the shareholders resolved upon carry

ing out the project.

Mr. Miles, the accountant, then read a figured statement of the number of shares paid up and of those which had been forfeited, from which it appeared that the total number of shares which had been forfeited was 11,180, the amount of calls paid upon which was 69,960l., so that the shareholders who now constituted the company had received that sum. There were some deficiencies in the payments of the seventh and eighth calls, which if not made good would increase the sums forfeited to 185,210t. So far that was satisfactory, but the consequence of the non-payment of the calls was to cripple operations. The directors proposed that the ninth and tenth calls, which (independently of the sums paid on them in advance) would produce 64,170*k*, should be at once paid up. There were negotiations proceeding for obtaining a loan of 14,940*k*, and another sum of 281,693f. (11,260l.) was also negotiating on loan. The total amount received from the various calls and total amount received from the various cans and other sources was 695,110*l*., of which there was now a balance in hand of 10,911*l*. The expenses of direction and the losses incurred by the depreciation of Belgian stock in which the calls were invested only amounted to 7,210l.

Mr. Stokes, the resident engineer, and Sir J. RENNIE, the consulting engineer, entered into some details, which were repetitions of what had been previously stated.

In answer to a Proprietor, the CHAIRMAN stated that the calls on 24,895 shares had been fully paid up. The lines could not be finished by July 1848, but he repeated that the Belgian Minister had consented to grant an extension of time, provided the company would engage to keep 1,500 men always at work. A Proprietor asked how much was required to

complete the whole undertaking.

Mr. Spottiswoode: 500,000l. would be sufficient for double lines. After some desultory conversation, resolutions were put from the chair, to the effect that in the opinion of the meeting it was expedient, in order to enable the directors to complete the lines, that the ninth and tenth calls should be paid in advance immediately. And that it was expedient to empower the directors to increase the capital of the

company to 1,250,000L, or 31,250,000f.

Mr. Carvalho proposed an amendment that a committee of six shareholders be appointed to examine into the state of affairs, and to print and circulate their Report: he complained that no Report of the account read by the cierk at the table had been printed; and observed truly that it was impossible to understand the figures from hearing them read once in a hasty manner.

The amendment was almost unanimously negatived, and the original resolutions were then agreed to.

#### CENTRAL OF FRANCE.

March 28 .- Annual Meeting, Paris .- M. BAR-THOLOMY in the chair.

M. JAUBERT read the Report. It alluded to the past and present condition of their project, of which, though only partially employed, the total receipts had been 1,478,825f. (59,1536.); expenditure, 854,629f. (10,1854.); balance, 624,195f. (24,9674.). The first chapter detailed the establishment of the line. The total expenses would but slightly exceed the amount of subscribed capital, 33,000,000f. (1,420,000l.). From the non-completion of its works by the State, the difficulties in the share and money-markets had the non-completion of its works by the State, the induced the directors to call a meeting. The Belgian company had been obliged to erect temporary

stations, &c.; the inundation of the Loire sweeping away two arches also formed part of the extraordinary expenses, which will amount to 770,000f. (30,800L). The second chapter detailed the results The second chapter detailed the results of the working—of the two sections opened from Orleans to Bourges and from Vierzon to Chateauroux—results which were declared in the opening of the Report. The Report proceeded to examine the actual condition and promise of the traffic. The balance of 624,195f. (24,967l.), according to the terms of the statute, would be appropriated to the payment of interest during the progress of the works. I third chapter declared the financial condition. sum of 8,000,000f. (320,000l.) will be required for the completion of the works. The late political events stopped the payment of the last call of 50f. All expense is restricted to that for the immediate wants of the line. The delivery and completion of the final section, from Nerondes to Allier, depends mainly on the part taken by the Government, which it is hoped will also see the necessity of forwarding the lines to Clermont and Limoges. The present state of affairs forbids all idea of any new enterprize. The branch to Nevers is the only one to be considered, and authority is sought to negotiate this.

PARIS AND ORLEANS. March 30.--Annual Meeting, Paris .- M. BAR-

THOLOMY in the chair.

M. BENOIT read the Report. It stated that the M. Benoir read the Report. It stated that the receipts had been 10,845,752f. (433,830L); expenses, 5,061,109f. (20,244L); balance to be distributed, 5,783,643f.; (231,385L). The dividend accordingly would be 62f. 70c. per share, being more than 12 per cent. The working expenses had been heavier from various causes. The shareholders would receive schron/degments of the dividend due having its acknowledgments of the dividend due, bearing interest at the rate of 5 per cent, negotiable. Measures would be immediately taken to consolidate the floating debt. The total of bonds issued up to the 20th of March was about 6,000,000f. Last year the council March was about 0,000001. Last year the council had been authorized to raise the emission to 10,000,000f. It was known that for four years the company had associated all the employes with the benefits of the enterprise. The participation amounted in 1847 to 353,311f. 76c. The working expenses had been 39 per cent. of the gross receipts. The Report also alluded to the late covering over the third-class carriages and the trifling increase of fares.

After some discussion respecting the means of providing for the dividend and the financial affairs, the meeting unanimously adopted the Report and its

recommendations.

M. Bartholomy, M. de Bousquet, M. de Warn, and M. Foucher, sen, the retiring members of the Board,

were unanimously re-elected.

A deputation from the employés of this line has just presented to the Provisional Government a sum of 547f.

MANCHESTER AND SOUTHAMPTON. - April 4. -Special Meeting of Glasgow Shareholders to consider the propriety of dissolving the company-Neilson in the chair.—A series of resolutions in favour of winding up the concern as soon as possible were agreed to. It was also resolved that the shareholders should be called upon to pay 1d. per share for the purpose of defraying expenses.

BROAD-GAUGE TRAINS .- The late success of the narrow-gauge expresses conveying the Premier's financial statement has not passed unheeded by the broad-gauge party. The Morning Herald boldly declares that last Saturday's ordinary morning express train, from the Paddington terminus, made for 53 miles the most rapid trip that has yet been performed by the locomotive. During the experiments that were made with the broad-gauge eight-wheel engines some months since, the shortest time in which the 53 miles from Paddington to Didcot were run over was 53 m. 34 s. On the 18th the 'Lightning, eight wheel engine, with 8 ft. driving wheels, and driven by W. Cowell, a careful and experienced man, left Paddington at 54 m. 6s. past 10 o'clock, and came to a dead stop at the Didcot station at 45 m. 44 s. after 11 o'clock; performing the 53 miles, therefore, in 51 m. 38 s.—that is from a state of rest to a state The writer rode the whole of the distance of rest. on the engine, which was perfectly steady at the highest velocity—viz., between 75 and 76 miles per hour. Of the 53 miles, 50 were performed at the average velocity of between 67 and 68 miles per hour. The weight was 50 tons.

Printed by James Holmes, of No. 4, New Ormand-Street, in the county of Middlesex, printer, at his office No. 4, Took's Court, Chancery-lane, in the parish of St. Andri w, inthe said-county and published by John Francis, of No. 1s, Wellington-street North, in the said county, Publisher, at No. 14, in Wellington-street North, in the said county, Publisher, at No. 14, in Wellington-street foresaid; and sold by all Booksellers and Newstenders.—Ayents, for Nortandon, Messris Bell & Bradfute, Feinburgh; for Ibelland, Cumming & Ferguson, Jublin.—Saturday, April 8, 1848.

332. The BRIDE'S INKSTAND in Florentine Bronze, with round marble Tazza, designed by J. Bell for Summerly's Art-Manafactures, exhibited by J. Candall.

365 and 366. The BRIDE'S INKSTAND: Specimens in Parian, with light blue Tazza and dark blue Tazza with gilt Lizarda, decigned and modelled by J. Bell, made by Minton & Co., for Summerly's Art-Manufactures; exhibited by John Mortlock.

368. The BRIDE'S INKSTAND in Electro Silver, designed by J. Bell, made by B. Smith: exhibited by Cundall.

Smith; exhibited by Cundall.

See The BRIDE'S INKSTAND, designed by J. Bell, with Papier Macké Tray made by

Jonenes & Bettridge; exhibited by Mechl. 370. The BRIDE'S INKSTAND, in Silver Gill, designed by J. Bell, made by B. Smith;

370. The BRIDE'S INESTAND, in Swer Gill, designed by J. Bell, made by B. Smini; exhibited by P. & D. Colnaghi.
371. "Kissing Children," surmounting a PAPER WEIGHT, in Parian, designed by J. Bell, made by Minton & Co. for Summerly's Art-Manufactures; exhibited by G. Bell.
372. DORUTHEA, a Statuette, in Parian, modelled by J. Bell, made by Minton & Co. for Summerly's Art-Manufactures, exhibited by J. Cundall.
"They espied a youth dressed like a peasant stooping to bathe his lovely feet in a rivulet that ran by... The lovely maiden looked up on hearing them approach......In doing this, so exquisite a face was displayed that Cardento said to the Friest in a low voice, Since this is not Lucinda, it can be no human creature."—Don Quixors, Part i, chapter xxix.

can be no human creature."—Don QUIXOTE, Part I, chapter XXIX.

373. "The Vintagers"—"Gathering the Grapes"—"Wine making"—"Wine made"—a series of DECANTER 870PPERS in Siter and Electro Gilt, designed by J. C. Horsley, made by B. Smith for Summerly's Art-Manufactures; exhibited by P. & D. Colnaght.

374. The "Well Spring," ornamented in enamelled colours: WATER VASE, and a JUG and BUTTLE, designed by R. Redgrave, A.R.A., made by Christy & Co. for Summerly's Art-Manufactures; exhibited by Chamberlains.

N 375. The "Well Spring," in Parians and coloured Porcelain; as originally designed by R. Redgrave, A.R.A., inade by Minton & Co.; exhibited by William Mortlock.

376. The "Water Lily" GOBLET in Glass, to match the "Well Spring Vase," designed by R. Redgrave, A.R.A., made by Christy & Co. for Summerly's Art-Manufactures; exhibited by Chamberlains.

N 377. A TEA CADDY SPOON examinated with the account.

by R. Redgrave, A.R.A., made by Christy & Co. for Summerly's Art-Manufactures; exhibited by Chamberlains.

N. 377. A TEA CADDY SPOON, ornamented with the common Tea plant, designed by W. H. Rogers, made in Steer, by B. Smith for Summerly's Art-Manufactures; exhibited by Chamberlains.

N. 378. The "Sower, Resper, Gleaner and Miller" ornamenting a BREAD or CAKE DISH, in Glass, with gilt encaned; designed by John Absolon, made by Richardsons for Summerly's Art-Manufactures; exhibited by J. Cindall.

N. 379. The JUG, which received the prize awarded by the Society of Arts in 1846, designed by Felix Summerly, made in Opal Class, by Richardsons: exhibited by William Mortlock.

N. 380. A BREAD PLATTER in Wood, the rim ornamented with Wheat, Rye, Barley and Oats, designed by J. Bell, carved by Phillips & Wynne for Summerly's Art-Manufactures: exhibited by J. Cundall.

N. 381. A BREAD PLATTER, in Wood, the rim ornamented with Wheat, Rye, Barley and Oats, designed by J. Bell, with Electro-plated Mountings made by B. Smith.

N. 383. 383 and 384. BREAD PLATTERS, in Porcelain, the rim ornamented with Wheat, Rye, Barley and Oats, designed by J. Bell, with Electro-plated Mountings made by B. Smith.

N. 385. BREAD KNIFE, with a carved wooden Handle representing an ear of Indian Corn, designed by J. Bell, made by Joseph Rodgers & Sons for Summerly's Art-Manufactures; exhibited by J. Cundall.

N. 385. BREAD KNIFE, with a Porcelain Handle, representing an ear of Indian Corn, designed by J. Bell, made by Joseph Rodgers & Sons for Summerly's Art-Manufactures; exhibited by J. Cundall.

N. 388 and 389. The "Tendril" WINE GLASS and FINGER GLASS, designed and ornamented in commelled Colours by R. Rederaye. A.R.A. made by Richardsons for Summerly's Art-Manufactures; exhibited by J. Cundall.

bited by J. Candall.

397. One copy with blue background, another with gold background, made by Minton & Co.; exhibited by John Mortlock.

398. Another copy mounted in Silver Gilt, by B. Smith; exhibited by Chamberlains.

399. The "Shell" SALTCELLAR, in Earthenware, designed by J. Bell, made by Wedge-woods for Summerly's Art Manufactures; exhibited by Philips.

400. Also in Earthenware coloured, and in Silone; exhibited by John Mortlock.

N. 401. The "Endive" SALAD FORK and SPOON, in Irory, designed and modelled by J. Bell, carved by Philips & Wynne, for Summerly's Art-Manufactures; exhibited by H. & D. Colnaghi.

N. 402. The same in Silver, made by B. Smith; exhibited by P. & D. Colnaghi.

N. 403. The same, carved in Wood, by Philips & Wynne; exhibited by J. Cundall.

404. PAPER KNIFE, the handle an "Boy and Dolphin" as representing water, and the blade ornamented with the flower of the flax, the chief ingredients of the best paper. Designed by J. Bell; the handle nade in Periom by Minton & Co.; the blade fitted by Joseph Rodgers & Sons for Summerly's Art-Manufactures; exhibited by J. Mechi.

405. The same, with Irory handle, made by J. Rodgers & Sons; exhibited by W. Lund.

N. 406. "The Camellia" TEAPOT, in Britannia Metal, designed by R. Redgrave, A.R.A., made by J. Cundall.

N. 407. The same design in Silver, with an Irory figure carved by Taylor, Williams & Jordan; exhibited by J. Cundall.

N. 408. The Chinese Facry examining the Tea-plant, designed by R. Redgrave, A.R.A. on a tyrated Wooden TEA CADDY, made by Holland & Sons; exhibited by Q. Bell.

N. 409. The Chinese Facry examining the Tea-plant, designed by R. Redgrave, A.R.A. on a Pepier Mache TEA CADDY, made by Holland & Sons; exhibited by Deane.

N. 410. "Bubbles Bursting," ornamenting a CHAMI'AGNE GLASS, designed by H. J. Ownsed, engraved on Glass by Richardsons, for Summerly's Art-Manufacture; exhibited by J. G

Townsend, engraved on Gless by Richardsons, for Summerly's Art-Manufactures; exhibited by J. Green.

N 411. The same design printed on Glass; exhibited by John Mortlock.

N 412. A WINE TRAY, in Papier Maché, on the new principle of fixing the decanters and preventing their shifting among the glasses, designed by R. Redgrave, A.R.A., adapted for handing wine round. The Tray made by Jennens & Bettridge, for Summerly's Art-Manufactures; exhibited by Chamberlains.

N 413. The same design, made in a cheaper way, without figures; exhibited by Barrons.

N 414. The "Flask" DECANTERS, with gilt Enamel, Parian, and coloured Porcelains Stoppers, designed by R. Redgrave, A.R.A., made by Richardsons, for Summerly's Art-Manufactures; exhibited by Chamberlains.

N 415. WINE GLASSES, with gilt Enamel, by the same Artists and Manufactures, to match; exhibited by Chamberlains.

N 416. "English Fruits," part of a SET OF DESSERT KNIVES AND FORKS; handles modelled and designed in colours by J. Bell; made in Porcelain by Minton & Co., and the blades and forks fitted by J. Rodgers & Sons, for Summerly's Art-Manufactures; exhibited by Desnes.

N 418. Experiments in Printing on China, from Etchings of Shakespears Artie; the larger subject by H. J. Townsend, the smaller by J. Bell.

419. The "Crusaders' Altar Tomb," in Ormolu, being a MATCH BOX; designed by J. Bell, made by Dee & Fargues for Summerly's Art-Manufactures; exhibited by J. Cundall.

N 420. The SHAKESPEARE CLOCK, designed and modelled by J. Bell, and made in Perion by Minton & Co. The works will be furnished by Vulliamy of Pall Mall.

SATURDAY, APRIL 15.

#### CONDITION OF THE SHARE-MARKET.

The depression in the share-market reached a lower point at the close of last week than has been previously known, even in this season of extraordinary difficulty; and we may hope it will have to be recorded as the lowest descent of the year. Since then, indeed, signs have appeared of a certain disposition in purchasers to take advantage of the extremely reduced prices at which even the best stocks can be bought; and the effect of this has already been to raise the quotations slightly. It would not be possible now to obtain any of the favourite classes of shares on the terms at which they were offered last week-terms which would have realized to the buyer an interest of more than 7 per cent., in many cases, on a calculation of the last dividend. This condition of the railway share-market, at a time during which 3 per cent. Government consols have been kept at an average of 80 at the least, betrays, as we have already remarked, something far more serious than mere scarcity of money. It proves, besides the special diffi-culties of the times, or the action of external causes of anxiety, an altered state of feeling as to the value of railway securities, for which the policy of railway management, during the last three years, is wholly accountable; and there is no probability of the effect being so far removed as to replace such values in their former favourable position, as compared with other kinds of investment, until unmistakeable evidence is given that the cause is in a way of being removed by some efficient means.

The first thing to be done, in order to revive the desponding spirits of shareholders and investors in this quarter, must be to show not the disposition merely, but the determination to set about a total change of system in good earnest. Nothing less than this will prevent railway stock from continuing to fluctuate below the level of other securities that ought to be in every respect inferior to this, if it were but properly treated; -and if the circumstances of the past six months have not convinced directors of the necessity of so doing, as promptly and emphatically as possible, no experience, and no facts whatever, it is plain, can convince them of anything out of the ordinary routine of their practice. Of the depreciation, of something like 50 per cent .- in the value of a property that has cost more than 200 millions—it is perfectly evident that less than one half is attributable to the rise in the value of money, or to any other influence to which this particular description of property is merely exposed in common with all others at a time of general distress, followed by political convulsions. This may be seen by the rate at which the funds have been kept up since last January. It should therefore be taken as a plain fact that the effects of the calamity from without on this particular kind of property have been more than doubled by the operation of what has been prepared by its own internal transactions of the last three years,-a conclusion the mere statement of which speaks a much stronger warning and a far clearer instruction than anything that could be added in the way of comment upon it.

We have long since, as our readers well know, been persuaded of the certainty of this conclusion, which events have now rendered visible to all minds,—and we have done what lay in our power to avert its preceding causes, while they might have been prevented by a wise and moderate policy. Our business is now to exhort all concerned—not to undo what has been done,—that is impossible,—but to do what in them lies in the way of remedy, and to shun all such mistakes in future.

pointed out the most important. What is most wanted to repair the damage in railway property is the improvement of railway profits; and this can in no other way be attained than by study-We shall ing the economy of railway business. not cease to insist on the necessity of this duty; whatever be the strange apathy on the one hand, or the questionable reluctance on the other, with which it is regarded. In no other way can the interest at stake be effectually relieved; and great as this interest now is, we are persuaded that it will not be allowed to go to ruin for want of an available remedy, in a country the inhabitants of which are not accustomed to suffer their property to be wrecked for the want of a little determination in favour of means that are visibly within reach. Surely the prospect of what is wanted, and of what will be sooner or later demanded, must now be clear enough to all but the wilfully blind; -and of those who are not, what can be said if they see this and still do nothing?

### Mechanical Improbements.

NEW CONSTRUCTION OF LOCOMOTIVES, BY GASPARD CIPRI, OF THE PARIS AND ORLEANS BAILWAY.

This hydro-electric process of supplying the generating power of steam-engines belongs to a class that have to a considerable extent occupied the attention of ingenious men, in this country as well as elsewhere. It is a plan of utilizing all the products of combustion as well as the genesis of steam in the usual way. If there were any way of inclosing a large fire in a box, of supplying it with fuel, of supplying it also with oxygen for combustion, and of using all the gaseous products of combustion conveniently for the propulsion of the machinery of something like a steam-engine; and if all this could be done in such a way that the materials of the boiler and engine should last well, and keep long in an efficient state, we might perhaps get something good in this way; but as the matter now stands there are many difficulties not solved. Mr. Alex. Gordon, in this country, is known to have given this subject much attention, and to have made experiments on it, as yet without practical result. M. Cipri seems to have conceived something of a similar nature. He proposes steam alone as the supporter of combustion, in which we think he is mistaken. We give his own account of his invention, as inserted in the Patent Journal, and from that we doubt whether the plan is as yet anything more than ideal. It may, however, be the means of suggesting something better to somebody else:

Up to the present time the progress which has been made in the construction of locomotives and steam-engines has been confined to the improvement of that part of the machine which regards its movement; whilst the fundamental principle, that of combustion, has been for the most part neglected. By the mode at present in use there is an enormous expense produced. The same time a considerable expense produced. The combustion in the fires of locomotives and steam-boilers being fed by the oxygen of the atmosphere, the result is, that the principal part of the heat developed by combustion additionated in the six instead of being resulting is dispersed in the air, instead of being usefully applied. I have studied carefully the necessary means of preventing this enormous loss of heat; and have arrived at a method of preventing it. I have found, by the aid of a very simple process, that all combustion can be fed by the vapour of water in place of the air of the atmosphere.

The following are the scientific facts on which my principle is based:—1. The difference between the vapours and the gases has been falsely given for a long time, by the facts constantly exhibited in the hysical sciences; thus, the bodies which are present in the state of gas are the bodies in a state of vapour, and vice versa. 2. The vapour of water, or rather

which the mixtures of the two gases are present which form the vapour of water. 3. The vapour of which form the vapour of water. 5. The vapour of water in coming into contact with electricity undergoes almost a disjunction, or a repulsion, between the two gases which compose it; by an unknown cause, this repulsion between the elements of the vapour of water is almost necessary in order that this same vapour might become a powerful supporter of combustion. 4. Ignition, or the flame which arises from the combustion of a body, is an electrical phe-

Such are the scientific facts. My discovery of a new process of producing combustion in blast-fur-naces is but a corollary of these facts. Thus, if we pass underneath the grating of these furnaces a current of the vapour of water, and then shut off the communication which existed with the atmospheric air, what is the result? The fuel burns with great force. In effect, the vapour of water, in traversing the fuel already in a state of ignition, comes in conthat with the flame; then the two gases of which this vapour is composed, in consequence of the electrical reaction which occasions this flame and which is nothing more than the decomposition of their mix-ture, powerfully promotes, as already mentioned, the burning of the fuel. The employment of atmo-spheric air in blast furnaces might then be dispensed with, with a great economy of heat, if constructed

according to my new arrangements.

After these preliminary considerations, indispensable for the explanation of my system of locomotives, I will pass to a brief description of the parts of which it is composed.

The Fire-place.—The fire-place in the new system of locomotives is placed in the middle of the boiler; its form, following the law of the propagation of radiant heat, should be elliptical, and the larger axis of this ellipse perpendicular to the horizon. It has of this ellipse perpendicular to the normon. It has no door; the grate is a spherical hemisphere; it is separated by about 10 in. from the inner walls of the fire-place. The boiler, divided in the centre by its fire-place, is surrounded by a large cylinder, which is filled to two-thirds with the water necessary for its supply; a convex surface divides horizontally this cylinder at its upper part, and forms of this part a receptacle appropriated for the fuel, which, by its own weight supplies the fire by means of a registerown weight, supplies the fire by means of a register-pipe, which the conductor of the engine regulates. This register-pipe has two valves at its two extremities. These valves are united with each other in such a manner, that when the lower valve is opened to cause the fuel to descend, the upper valve closes itself, in order that there may be no communication between the fire-place and the atmosphere. side of the fire-place, at the extremity of the boiler, is a tube, which is furnished with a lens, serving as an indicator to the driver of the engine of the state of the fire. The upper part of the fire-place is a dome, which receives all the steam to produce the movement of the engine. This steam will be deprived of all water which could supply the boiler, for the dome, placed in the centre of the fire-place, will reduce to a state of steam all the water which can pass. Advantages of these arrangements: 1. No tender is required. 2. The fire-place is in the centre of the liquid mass, which it is required to quickly heat. 3. The boiler, with all its heated surfaces, is placed between the fire place and the warm water which serves to supply it. 4. The water which supplies the wants of the boiler, by surrounding these heated surfaces, completely absorbs the caloric which, in the loco-motives in actual use, is lost in the air. 5. No firemen are required.

Material of the Tubes and the Fire-place.—It is well known that the compounds of silex resist, better than copper, the oxidizing action of flame; every-thing then that touches the flame may be enveloped in a siliceous coating; as, for instance, that of flint glass or crown glass. By this means the tubes and the fire-place might be constructed of sheet-iron instead of copper.

Supply of Combustion .- Between the hemispherical sides of the grate and those of the fire-place, there is a space. In the sides of the fire-place, which are underneath the grate, there are four stop-cocks which communicate with the boiler. The steam which escapes from these stop-cocks will pass through the whole mass of the burning fuel, and will increase the combustion already commenced. This combustion, supplied by steam, will be more powerful than that produced in the ordinary method by means of a current of air; this effect has been observed in the blast furnaces fed with currents of steam, and this one,—that is impossible,—but to do what in em lies in the state of gas are the bodies in a state of vapour, of the possible remedies, we have already in the state of gas are the bodies in a state of vapour, of water, or rather the gas of water, arising from two volumes of hydrogen which it contains, which is a very inflammable gas. In opening gradually these stop cocks, the intensity of the currents may powerfully developes combustion, either by its chemical properties or by the proportion of volume in the fire-place through the opening of the pipe, through which the fuel passes into the fire-place; and in opening the valves of this pipe, the air necessary for

combustion is supplied.

Application of the Smoke and the Gaseous Products of the Combustion as a Motive Power .- By this new arrangement of the locomotive, it follows that when the fire is in full activity, its flame, the gaseous products, and the smoke, pass through the tubes at the upper end of the boiler, to mix with the steam. In effect, the posterior extremities of these tubes form a prolonged bend, which exceeds the level of form a protonged bend, which exceeds the total the the water in the boiler; these extremities, which communicate with the fire-place, have a net-work in crown glass or copper, in order that the ashes or burning pieces of fuel might not be drawn into the tubes, and into the boiler. The result of this combination is, that the steam of the boiler cannot pass into the fire-place, for this is the centre of the calorific emanations, in the sphere of which exists an expanemanations, in the sphere of which states a sign of gas, developed by ignition, superior to that of the steam of the boiler, which steam, under the powerful action of these gases, is obliged to remain in this same boiler. Advantages of this arrangement of the tubes and the boiler:—1. The employment of the tension of the smoke and the gaseous products of combustion, so that they mix with the steam, and assist to put into movement the engine by means of their tensile force. 2. Economical employment of all the heat, which, in the locomotives at present in use, once developed, passes off in complete loss in the air, by passing through the sides of the fire-place and the tubes.

3. Suppression of chimney—whence it follows that tunnels and bridges might be constructed of less height, and at therefore a diminished cost. 4. It becomes impossible for the tubes of the boiler

to be stopped up.

Employment of Coal in the place of Coke.—In the new system the smoke produced by the fuel, and which does not take fire in traversing the heated sides of the tubes of the fire-place, is condensed with the steam, after being worked with it, and remains in the reservoir of water, which envelopes the entire boiler. In replacing coke by coal there is nothing to be feared from the smoke, and the following results are obtained:-1. Economy of almost one-half the expense of fuel. Coal gives the same degree of heat as fine coke, and costs about one-half the price.

2. All the heated parts of the locomotive, being enveloped by the vapour of water, resist the lasting and strong heat which arises from the combustion of coal. 3. The volatile oils, which exist in consider able quantity in smoke, in passing into the moveable parts of the machine, produce a useful greasing.

The Frames (Chassis) of Locomotives and Waggons —However, to give great solidity, and at the same time great speed, the locomotives, instead of being placed over the axle-trees of moving wheels, are placed underneath and fixed by a frame. This frame should be raised above the wheels at least 4 in. Thus, with this new frame lowered to the last degree, the centre of gravity of the engine having nothing to fear from its excentric position, a diameter of almost 5 metres (16 ft.) may be given to the wheels of the new locomotive, or double that of the express engines of the Great Western. By this means all the machinery which gives movement to the locomotives will be placed in the boiler and arranged around its

longitudinal sides.

The Application of Condensing Engines to the New Locomotive.—The application of condensing engines to the new locomotive is an almost necessary result. In effect, the steam, after having worked with the smoke, will be conducted by means of a tube into the reservoir of water which envelopes the boiler, and will there be condensed.

#### Braceedings of Societies.

INSTITUTION OF CIVIL ENGINEERS. — April 11.—General Meeting. — Mr. J. Field, President, in the chair.—The paper read was the second part of a communication made in the year 1841, descriptive of the Bann Reservoir, county Down, Ireland, by J. F. Bateman.—The first part, of which a short abstract was read, gave the object of the construction of these reservoirs, which were undertaken with the view of regulating the quantity of water in the river Bann, and more effectually supplying water-power to the flourishing and increasing establishments on its banks. This river is, from the bare and naked character of the Mourne Mountains, among which it rises, naturally liable to the greatest irregularity in its volume; devastating floods frequently pour down the channel, where a few hours previously there was not sufficient water for agricultural purposes. Greatly injurious as this must have been to the agriculturist, it was infinitely more so to the mill-owners, who depended

entirely upon water-power for their manufactories. Mr. Fairbairn was consulted on the subject. He examined the locality, and advised the formation of reservoirs. The author was then appointed the engineer, and, acting in some degree upon the suggestions of his predecessor, whom he continued to consult, the works were undertaken which are described in the present paper. The peculiarities in the Act of Parliament, granted in 1836, constituting the proprietors of the mills a joint-stock company for the formation of the Bann reservoirs, are detailed. The works were originally intended to have been more extensive than have been really executed. The reservoir at Lough Island Reary is alone described. The ground in that spot was admirably adapted for the work, being the bottom of a basin, which was bounded on all sides by rugged hills of granite; in the centre of the basin was a small lake, at the bottom of which was discovered a bed, several feet in thickness, of fossil confervæ, similar to those discovered by Prof. Silliman at Massachussetts, North America. This interesting geological fact was first noticed by Dr. Hunter, of Bryansford. The con-fervæ appeared like an impalpable powder, but when viewed through a powerful microscope they were found to be regular parallelograms, many of them covered with strise. They are described by naturalists as the fossil skeletons of minute vege-The situation fixed upon for the reservoir tables. rendered necessary the construction of four embank-ments between the hills, so as to raise the water to a height of 35 ft. above the summer level of the lake. The particulars are also given of a series of observations with rain-gauges, continued for two years, for the purpose of furnishing data for computing the extent of reservoir which would be necessary to insure a supply of water throughout the year. The continuasupply of water throughout the year, the con-tion described the subsequent works, which con-sisted of the Corbet Lough Reservoir, which was designed as an auxiliary pound to receive the flood waters of the lower part of the river, and to retain the night water, to be discharged again during the day, immediately above the more extensive mills on the river. A water-course of considerable dimensions was constructed to effect this, and an embankment was thrown across the narrow outlet of the lake, the water being admitted through self-acting flood gates, which closed as soon as the lowering of the river created a current in the contrary direction. The details of the construction of all these works were given, and it was shown by calculations based upon actual experiment and observations of the quantity of water received, stored, and delivered from the reservoirs, that their construction had increased the value of the mill power of the river Bann full fivevalue of the min power of the works at cost, as the actual expenditure for the works at Corbet Lough did not exceed 3,300l., the closest economy consistent with the efficiency and durability of the work being rigidly kept in view, and the utmost attention being exercised by the resident engineer, Mr. W. L. Stoney.

#### Official Papers.

PROPOSED CLASSIFICATION OF RAILWAY BILLS FOR THE PRESENT SESSION.

ENGLAND.

GROUP 1, Monday, May 22.

Northern Counties Union Amendment and Deviation. York, Newcastle and Berwick (Great North of England, &c. Leasing).

Whitehaven and Furness Junction (Extension or Deviation Line).

Liverpool, Manchester and Newcastle-upon-Tyne Junction (Abandonment and Dissolution).
Whitehaven Junction; (Extension, &c.).

GROUP 2, Thursday, May 11.

Manchester South Junction and Altrincham (Enlargement of Stations). South Yorkshire, Doncaster and Goole Amendment (Exten-

sion and Alteration).

Manchester, Sheffield and Lincolnshire (Enlargement, &c.);

(Humber Ferries Improvement, &c.).

GROUP 3, Monday, May 22.

Manchester, Buxton, Matlock and Midlands Junction Deviation and Branches. Midland (Branches).

ushire Union and Canal (Extension of Time) North Staffordshire (Deviation); (Ashbourne Branch).

GROUP 4, Tuesday, May 9.

Oxford, Worcester and Wolverhampton (Deviations); (In-

crease of Capital).

Birmingham and Oxford Junction (Deviation from Leamington to Warwick).

Great Western (Loop Line); (to confer additional powers with reference to agreement for purchase of the Birming-ham and Oxford Junction, &c.). Vale of Neath (Power to South Wales to subscribe). London and North-Western (proposed Branches and Exten-

sions, &c.)

GROUP 5, Thursday, May 4

Waterford, Wexford, Wicklow and Dublin (Amendment Acts, Alteration of Gauge of the Dublin and Kingstown, and power to South Wales to subscribe).

London and South-Western (Amendment, Extension and Naw Works

London and Brighton and South Coast (Stations; authority to subscribe to Steam-boats).

Newport and Pontypool (Amendment). South Wales (Amendment). Chester and Holyhead (Steamboats).

GROUP 6, Thursday, May 11.

North and South Western (Harrow to Brentford).

Windsor, Staines and South-Western (Slough Extension and Deviation

Great Western (Slough to Windsor).

GROUP 7, Thursday, May 25.

Royston and Hitchin (Extension to Cambridge and

Direct London and Portsmouth.

London and Blackwall (East and West India Docks, and Birmingham Junction Connecting Branch, and powers to use Eastern Counties).

Eastern Counties (Enlargement of London and Stratford Stations, and Amendment of Acts).

gamation). Scottish Midland Junction (Amendment and Branches). Leeds and Thirsk (Alteration of Levels, &c.). Kendal and Windermere Amendment.

### REPORTS OF THE ADMIRALTY under 9 & 10 Vict. c. 106), relative to applications for Railway Bills.

London and South-Western (Acts Amendment, Extensions, Deviations and New Works).—The objects of this bill, which come within the Admiralty jurisdiction, are—1. To carry a deviation from the Guildford extension, and Portsmouth and Fareham, across Portsbridge Creek, near Cosham. The Admiralty will assent to the crossing Portsbridge Creek by the proposed viaduct on piles, provided the centre line of way be not deviated from, as shown on the deposited plans, unless with the previous consent of the Admiralty; that the soffit of the viaduct be not less than 8 ft. above the level of high water of ordinary spring tides; and that, should the Admiralty hereafter so require, an opening bridge be made on plans, and with a width of span to be previously approved of by their lordships. 2. An extension of the South-Western tation, near London Bridge. The only interference likely a communication with the bridge and the station, for which purpose it is proposed to carry a road on arches over the communication with the bridge and the station, for which purpose it is proposed to carry a road on arches over the steps leading to the river. Their lordships require that by the plan for effecting that object, neither the waterway nor the communication with the river be interfered with. 3. An extension at Poole to obtain a water frontage. It is proposed at Poole to carry the railway to a quay, encroaching on the waterway about 20ft. beyond low-water mark. The waterway being already too confined, their lordships will not consent to any encroachment beyond an average line of shore, but they will assent to a continuous quay being built, providing it be set back to their satisfaction, an arrangement which would be very beneficial to the navigation and trade of the port, and particularly so if the same retired line of quay be continued downward at a future time. 4. An extension at Godalming. The interference at Godalming is with a small tributary of the river Wey, and the provision made for crossing is quite sufficient, and will be assented to. 5. A transway at Southampton. The transway at Southampton appears to be unobjectionable.

#### MANCHESTER, SHEFFIELD AND LINCOLNSHIRE. Engineers' Reports for the Meeting, Feb. 16 (p. 122). EASTERN SECTION.

Ma. Fowler's Report.—The progress made with the works under contract since my last Report has been generally less

Ma. Fowler's Report.—The progress made with the works under contract since my last Report has been generally less than was anticipated at that time; over some portions of the works, considerably less; but in others, my expectations have been nearly realized. In no case, however, have works in progress been actually stopped, nor has any contractor suffered pecuniary inconvenience from the temporarily reduced rate of progress; so that although the universal pressure for money has occasioned a smaller amount of work to be accomplished than was expected, no further loss or inconvenience will arise to the company than a trifling delay in the opening for traffic of the various portions which have been thus retarded.

With the Sheffield viaduct, contract No. 1, very fair progress has been made. The embankment east of the viaduct, consisting of 10,000 cubic yards, has been finished; and of the excavations for foundations, 23,000 cubic yards are done, and 8,000 yet remain to be completed. Of the masonry, upwards of 20,000 cubic yards of rubble work are built, and 50,000 remain; 70,000 cubic feet of ashlar masonry are set, and 190,000 have yet to be done, of which, however, and of the rubble, a large proportion of the stone necessary is already upon the ground. The contract or has made arrangements for a rate of progress, immediately after the winter months, which will ensure this work being opened simultaneously with the line to the Midland.

Contract No. 2.—Upwards of 490,000 cubic yards of earthwork have been removed, and 110,000 remain. Eight bridges are completed, and the remaining four are in a forward state. Handsworth tunnel requires 60 lineal yards for its completion; and of the permanent way 23 miles of double line are ballasted and laid, and 4 miles remain to be done. The earthwork yet to be done is principally in two embankments, and as they form the task of the contract in point of time, I have required arrangements to be made for a more rapid progress, which are now nearly completed in a satisfactory manner

and of ordinary construction. In this contract, which contains one or two heavy points, and a considerable extent of light work, care has been taken to apply the means at our the heat advantage, by reducing the heavier of the heat advantage, by reducing the heavier of the heat advantage.

light work, care has been taken to apply the means at our disposal to the best advantage, by reducing the heaviest works, and the whole is now in a position to be pushed forward simultaneously with advantage.

Contract No. 4.—This contract contains a tunnel (Clarborough), about 660 yards in length, and a heavy cutting at each end, with the remaining part of very moderate works. Nearly 120,000 cubic yards of excavation have been removed, principally from the west end of the tunnel, and 480,000 remain to be done. The progress made at Clarborough tunnel, of which upwards of 100 yards are already finished, is satisfactory; and from the number of shafts sunk, and the excellent machinery erected, I expect in August next this tunnel will be finished. The bricks made near Retford are celebrated for their excellent quality, and the brickwork which has been done is very creditable to the contractor.

Retford to Lincoin.—No further step has been taken since my last Report with the works on this important branch, which, however, should be proceeded with in the ensuing spring.

my last Report with the works on this important branch, which, however, should be proceeded with in the ensuing spring.

Trent Bridge at Gainsborough.—This work is proceeding satisfactorily, but slowly, as there is no object in pushing it to completion before the line to Sheffield is ready to be opened. The masonry of the east abutment is 7 ft. above the ground. The bearing and sheeting piles are all driven in the east pier, and the coffer dam for the middle pier is almost completed. The centering for the eastern arch is nearly finished, and there are upwards of 10,000 cubic feet of stone on the ground ready dressed for going into the work. From the Trent bridge to Kirton tunnel, a little trimming of the earthwork and some trifling finishing to a few of the bridges, are the only works, excepting the permanent way, remaining to be done, and this is so well forward that a continuous line of rails is laid throughout.

Kirton Tunnel.—40 yards only of this tunnel remain to be bricked, and they will be finished during the present month. The total length is 1,320 yards. From Kirton tunnel to Brigg, and thence to Ulceby, the works remaining to be done consist principally of 33,000 cubic yards of excavation at the east end of Kirton tunnel, and the completion of the two bridges over the river Axholme and Axholme navigation. These works, which are the most important on the main line from Ulceby to Grimsby and the New Holland branch are completed by the lat of July next. The remainder of the main line from Ulceby to Grimsby and the New Holland branch are completed by the lat of July next. The remainder of the main line from Ulceby to Grimsby and the New Holland branch are completed by the lat of July next. The remainder of the main line from Ulceby to Grimsby and the New Holland branch are completed by the lat of July next. The remainder of the main line from Ulceby to Grimsby and the New Holland, and the bridges over the Withman are finished, and the bridges over the Withman are finished, and the bridges over the Withman every effort will be made to complete it at the earliest pos-sible day, New Helland.—The works here have made excellent pro-

New Holland.—The works here have made excellent progress, and are done in a very superior manner. The pier is sufficiently advanced for a convenient temporary landing-place to be formed by the lat of March, at which the steam-packets may discharge or receive their passengers at all states of the tide, and the pier will be well lighted with gas from the works erected for the use of the station. The two Thames steamboats purchased for the ferry will be in the Humber, ready to take their places on the lat of March. Great inconvenience will be felt by the public until proper accommodation is provided on the Hull side of the Humber, for landing passengers and goods at all times of tide, but this will be entirely remedied when your proposed new pier is completed.

#### 2, Queen-square-place, Westminster, Feb. 15.

Mr. RENDEL'S REPORT.—During the past half-year the Grimsby Dock works have proceeded without accident or loss of any kind, and the experience of another winter tends to confirm the sufficiency of the works, and the correctness loss of any kind, and the experience of abother winter tends to confirm the sufficiency of the works, and the correctness of all our previous calculations as to the ultimate cost of the dock and its adequacy for the complete accommodation of every description of shipping. In my Report of the 30th of July last, I informed you that the east and west wharfing and cofferdam would be complete, and that the descluded from the whole site of the dock, by the end of last year. This might have been accomplished, but for your desire to lessen the expenditure during the past three months. Those parts of the work are, however, advanced to a stage of forwardness which admits of their completion by the end of April next, so that the masonry of the locks may be commenced early in the summer. As economy is best insured by our being independent of any sudden rise in the labour market, or in the general demand for stone after a commencement of the masonry, it must be satisfactory to the proprietors to know that we have on the works a very large stock of stone and brick, and that much of the stone is wrought fit for setting; that we have also a large proportion of the timber required for foundation piles on the ground; a complete set of mortar mills and lime kilns ready for use; and that a considerable stock of limestone, of a kind suitable for the work is provided. It will be obvious there. a complete set of mortar mills and lime kilns ready for use; and that a considerable stock of limestone, of a kind suitable for the work, is provided. It will be obvious, therefore, that during the past half-year much has been effected towards the future means of prosecuting the works with all possible despatch; and, consequently, that it is of great importance to be in a position to make a long summer available, by the exclusion of the tide from the site of the dock, as early as possible. The expenditure on the works up to the 2nd inst. is as follows:—On permanent works, 102,9681.

12s. 8d.; stock, 87,520l. 18s. 1d.; plant, 23,668l. 17s. 7d.; total, 184,148l. 8s. 4d. The great value of the stock and plant will both show the importance of their early appropriation, and also give evidence of the means now at our command for the vigorous prosecution of the works. Grimsby. Feb. 9. Grimsby, Feb. 9.

WESTERN SECTION.

MR. JRY'S REPORT.—In accordance with your instructions, I beg to make a Report to you upon the progress of the works on the Manchester district of your railway. The warehouse at Manchester has been roofed in, and is nearly completed, so that it may be made available almost immediately, but cannot be brought into full use until the Act for the approach to it shall have been passed, and the lines of rails laid into it. The new coal depot at Ardwick has progressed favourably, and will be completed in a short time. By means of it you will be able to dispose of a large quantity of coal, and to increase your traffic in this mineral; the old station being merely temporary, and totally inadequate to meet the wants of the line. The locomotive depot at Gorton has also been carried on as fast as the season would permit of; and I expect it will be ready for the repairs of engines, carriages, and waggons, during the ensuing spring. The warehouse at Ashton has been completed and the rails laid in. At most of the other stations on the line, where increased accommodation was not so absolutely necessary, the proposed works have been suspended, or carried on very slowly, so that no more money has been laid out anywhere than was really required for the safe working of the traffic. The second tunnel through the Woodhead ridge has been prosecuted by the contractor, Mr. Pauling, with considerable vigour. There are now more than than 40 faces in operation, and the total length completed is 700 lineal yards. The work is in so favourable a position, that it might easily be completed in twelve months, if the funds of the company would warrant them in pushing it; but at the present rate of progress it will require about two years, which is the time contracted for. The Thurgoland Coal traffic on the 22nd of November last, and has now got into good working order. It is capable of supplying 400 tons per day, and will, I have no doubt, prove a very remunerative undertaking. The contractors on the Whaley Bridge Branch have,

[The following statement of accounts was deferred when the Report was published (p. 118): it is now inserted for future reference.]

GREAT GRIMSBY AND SHEFFIELD .- The Balance Sheet

GREAT GRIMSBY AND SHEFFIELD.—The Balance Sheet to the 31st of December shows an expenditure of 721,241L, eing an excess over receipts of 77,148L.

SHEFFIELD AND LINCOLNSHIBE.—The Balance Sheet to the 31st of December exhibits expenditure at 283,063L, being an excess over receipts of 83,156L.

MANCHESTER AND LINCOLN UNION.—The Balance Sheet to the 31st of December exhibits receipts at 196,562L 19x, 6d.; showing a balance, less expenditure, of 15,282. 14x, 3d.

CHESTERFIELD CANAL exhibits receipts at 4,880L; expenditure at same sum. The Recente Account shows receipts at 4,941L 19x, 8d.; expenditure at 4,823L 0x, 1d.; balance, 118L 19x, 7d.

GRIMSBY DOCKS. - The Balance Sheet to the 31st of December exhibits receipts at 402.527l., showing a balance, less expenditure, of 91,603.11s. 8d. The Revenue Account shows receipts at 3,533 16s. 3d., and expenditure, 3,507l. 14s. 1d.; balance, 26d. 2s. 10d.

#### SHREWSBURY AND BIRMINGHAM.

Engineers' Report for the Meeting, Feb. 24 (p. 145).

Engineers' Report for the Meeting, Feb. 24 (p. 145).

In accordance with your request, we now beg to submit our Report, showing the state of the works between Shrewsbury and Wolverhampton to the present time.

Shrewbury and Wellington Contract.—Between Shrewsbury and Wellington, which is 10 miles in length, and under the joint management of the Shrewsbury and Birmingham and Shropshire Union Companies, the works have been progressing steadily through the winter; the land is now all arranged for, and the contractors are in a position to use every exertion requisite for expediting the works during the ensuing spring and summer. About one-fourth of the whole quantity of excavation is finished, and several bridges over and under the railway are completed, and others are in progress. The bridge over the river Severn, at Preston Boats, near Shrewsbury (the heaviest piece of building on the con-

gress. The bridge over the river Severn, at Preston Boats, near Shrewsbury (the heaviest piece of building on the contract) is commenced, and the masonry of the river pier sufficiently advanced above the ordinary water-level, to ensure there being no further delay at this spot.

Shiffuel Contract.—On the contract between Wellington and Shiffnal, 7½ miles in length, the works are not in so forward a state as we expected they would have been by this time. The Shiffnal embankment and the excavations are thaughten are the most important works on the whole this time. The Shiffnal embankment and the excavations at Haughton are the most important works on the whole railway, and unfortunately the most backward, which has been occasioned by the heavy rains at the end of last year entirely preventing the earthwork from being carried on; but in justice to the contractor we must state that he is now using every exertion in order to bring them to the same state of forwardness as the other parts of the line. The tunnel at Oakengates is in full operation both day and night, and is proceeding satisfactorily. The viaduct at Shiffnal and the various bridges along the line are progressing rapidly, and are more advanced than the earthwork on this contract. contract.

Wolverhampton Contract.—On the contract between Shiffnal and Wolverhampton, 11 miles in length, about onefourth of the entire quantity of earthwork is completed, every cutting and embankment is in progress, and about one mile of road ballasted and ready for the permanent way, which will be laid down very shortly. The Oxley Viaduct, near Wolverhampton, is to the height of the springing of the arches, about 35 feet above the ground, and the bridges and other works on this portion of the line are in a forward

state.

Stations.—The station and bridge over the river Severn. at Shrewsbury, under contract to Mr. Brassey, are proceeding steadily, and will be completed by the time required. The land for the Wellington, Wolverhampton and other stations along the line is nearly all purchased, and the build-ings and other works will be contracted for during the aummer.

In conclusion, we may remark that very nearly the whole of the land between Shrewsbury and Wolverhampton has been purchased, and the works are all contracted for under the parliamentary estimate, and are progressing as satisfac-torily as can be expected, although not quite so rapidly as is tority as can be expected, atthough not quite so raphny as is required by the contracts. The survey and plans for the branch line from Shiffnal to Coalbrookdale are in course of preparation, and if thought desirable the works may be let during the spring of the present year.

R. STRURRSON.
W. BAKER.

Birmingham, Feb. 11.

### Brogress of Works.

BELFAST AND BALLYMENA.—April 7.—The line was officially inspected by the Government officer. The total length is 38 miles. The Northern Whig gives an account of an experimental trip by the directors two days previously to the Government inspection; -At 11 a.m. a very long train, composed of first, second and third class carriages and goods waggons, started from the terminus at York-street. It proceeded from Belfast to the White house station (3 miles) in steady and excellent order, thence to Carrickfergus junction (6½ miles) in the same manner; the next station was Ballyclare road (114 miles), then old Doagh road (131), next Templepatrick (153), then Dunadry (184), Antrim (213), Drumsough junction of the Randalstown branch (213), Randalstown (263), Kellswater (291), and Ballymena (33); the total length of the line, including the two branches to Carrick-fergus and Randalstown, is 38 statute miles. The engineering work must have been of a most difficult character owing to the elevation of the country, and the quantity of sea and bog through which the line passes. Over several parts of the journey a speed of 48 miles an hour was attained. Throughout the carriages progressed with the least possible vibration; and we never travelled on any railway where there was less oscillation and more settled comfort. The smoothness with which the carriages ran was the subject of general approbation. The line is laid on cross sleepers, which are groined with the most critical accuracy to receive the rail so as to prevent the possibility of the line getting out of gauge. The rails weigh 81lb. per yard lineal; each joint is fastened with four screw bolts, having nuts on the under side of the sleepers, thus insuring a firm joint, which is one of the most important points, both for security | miles; and the journey, including two stoppages, the

and ease, in a line of railway. The masonry, generally, is very substantial in appearance; and the embank-ments are well consolidated notwithstanding the rapidity with which the work has been carried on. It is not two years since the work was actively com-menced; and considering the heavy character of the undertaking, and the unusual wetness of the winter. its completion will bear comparison with any work of equal magnitude in the United Kingdom. In one embankment alone, across the slob at Belfast Lough, there are about 800,000 cubic yards of filling. The stations along the line are generally built of wood, and of a neat and suitable character. Every precau-tion has been taken to prevent accidents, by the erection of signal posts along the line. When the When the directors' inspection train arrived at Ballymena, after visiting all the stations on the line, a sumptuous entertainment was prepared for those gentlemen (together with a select number of ladies who had been invited on the occasion). The Hon. Mr. Handcock, of Randalstown, occupied the chair; and Mr. John M'Neile, of Parkmount, acted as croupier. The toasts proposed were—"The Queen." "The Hon. Mrs. Handcock, and the Ladies," "The Chairman and the Directors of the Belfast and Ballymena," and "The healths of the Engineer, the Contractor and the Solicitors." This was loudly cheered. Mr. Lanyon, Mr. Dargan and Mr. Davidson severally returned thanks; each distinctly stating that, in the course of all his transactions with the directors, they had exhibited the most honourable, straightforward dealing, as men of business, combined with the most gentlemanly courtesy. Reciprocity of good feeling predominated amongst all parties, and in such terms they all parted. The train arrived in Belfast about

CHESTER AND HOLYHEAD.—April 10.—The Conway tube was raised 14 ft. during a hail storm. Only ten men were employed, and the working of the presses was quite satisfactory. Mr. S. Clarke superintended the operation.

EDINBURGH AND GLASGOW .- The grand station. the Constitutional, and also for the North British, in Edinburgh, being now finished, is in full operation. There are also refreshment-rooms in course of being fitted up, and nothing is now wanting but a more convenient egress for the Glasgow passengers, the present passage being extremely ill-suited for the public accommodation; and the annovance. if not danger, from the crowding and driving of be devised to allow the passengers to leave by the grand station-house, in the same way as is done by those coming by the North British line.

EDINBURGH AND NORTHERN.—The demand on the Lochgelly coal-fields appears to increase. The Fife-shire Journal records the departure of a monster train with coals lately from the colliery. It consisted of seventy-four trucks. The coals weighed 238 tons, trucks and engine 305 tons, together 543 tons. The train would be at least one-eighth of a mile in length. The engine drew the immense load with ease, and the train, even on steep gradients, appeared completely under the control of the engineer. The line is now partially opened to Cuttlehill colliery to the westward, and coals have been carried from within three miles of Dunfermline to Burntisland. The resident engineer, Mr. Bryson, appears to be exerting himself to get the line connected with the western coal-fields, and which, when the line is opened to Perth, and thence by the Scottish Midland to Forfar, must draw an immense mineral traffic to this line.

NITHSDALE .- The operations on the lower portion are being actively pursued. In the heavy contract in Mousewald and Ruthwell a great number of men are employed, and a locomotive is at work conveying earth along the rails, which have been laid down to the points requiring embankment. In the adjoining contract a double line has been laid down, most of which has been ballasted. The force work at the accommodation bridge near Racks is being laid down, and the bridge beyond is completely finished. embankment from Noblehill through the Milldamhead meadows is nearly completed, and preparations are made for building the bridge across the cattle road, over which the line will pass. Contracts for building the Dumfries station will soon be let.

Scottish Central.—April 1.—The contractors having expressed a wish that some of the directors and officials should examine the progress and present condition of the works, a train, says the Scottish Railway Gazette, started at 10 a.m. from the west end of the Moncrieff tunnel, near Perth, and proceeded direct from thence to the junction with the Caledonian and Edinburgh and Glasgow lines at Castlecary. The distance from Perth to Castlecary is 45 miles. Deducting the two miles from the west end of the tunnel to Perth, the distance travelled over was 43

one at the Kincardine viaduct, near Auchterarder, and the other at Stirling (besides several minor stop-pages), was performed in 2 h. 30 m. After an inspec-tion of the works at Castlecary, the party returned to Stirling, and there took some refreshments. About Sp.m. the train started again for the north from Stirling, and reached its destination with great ease in 1 h, 30 m., the distance from Stirling to the tunnel being 31 miles. The directors present expressed their satisfaction at the substantial character of the works. and the general state of the line, which, it is thought, will now be ready for the use of the public in about six weeks from this date. Mr. Falshaw, the contractor's agent, was much praised for his attention, and the accuracy with which all the arrangements, as

regarded the clearing of the line, were conducted.
WAKEFIELD, PONTEFRACT AND GOOLE.—The value of this line, which was opened on the 29th of March, even in these times, is being gradually recognized by the district it intersects. The Manchester Courier the district it intersects. The Manchester Courier gives the following interesting details of the course of the line:—The line is 27 miles in length, divided into two portions.—from Wakefield to Pontefract. 9 miles, and from thence to Goole, 18 miles. It runs nearly due east and west, and is what is termed a surface line throughout, that is to say, no tunnelling has been needed. But, though the surface of the country presents none of those stupendous difficulties found on the parent line of the now Lancashire and Yorkshire, it has many very heavy embankments, and one cutting (through magnesian limestone rock, we believe) of somewhere about 50 ft., near to Pontefract. The largest portion of the heavy cutting is between Wakefield and Knottingley, beyond which the country is nearly flat down to the terminus at the The embankments are exceedingly high in many places, especially one at the Pontefract station, reaching towards Goole. But these, we presume, are in consequence of the engineer's efforts to preserve good gradients, for we are informed that the steepest gradient is 1 in 150, and that is at the junction with the Lancashire and Yorkshire at Wakefield. It branches off a little to the east of the Nor-manton side of the Wakefield station, and then crosses the Calder by a substantial bridge, and next the Barnsley canal. The Midland line runs across it at a considerable elevation, and after passing a number of turnpike and small roads and waternumber of turnpike and small roads and water-courses, and passing Stanley, Sandal Magna, Warmfield, Sandal, Walton, Heath, Normanton, Oakenshaw, Crofton, Sharlston, Suydale, Featherstone, Pontefract-park and Tanshelf, we arrive at the town of Pontefract. About Wakefield coal is abundant; and occasionally along the sides of the line coal and coal shale might be seen cropping out in the deeper cuttings. Besides the coal traffic here, agricultural pursuits are much cultivated, and at Featherstone a great deal of malting is carried on; limestone is also quarried and burnt, but not in the same quantities as lower down. Pontefract is a market town, well attended by the farmers of the surrounding neighbourhood, who there bring their grain to market. is more generally known, perhaps, as having the best soil in England for the growth of liquorice, and for the manufacture from that root of "Pomfret cakes," which the inhabitants religiously believe are the only panacea for coughs, colds, hoarsenesses, and a thoupanacea for coughs, colors, noarsenesses, and a thousand varieties of pulmonary disease. Leaving Ponte-fract, we next come to Ferrybridge, Knottingley, Beall, Kellington, Hensall, Heck, Gowdall, Snaith, Rawcliffe, Armin, Hook, and last, Goole. Of the places now enumerated, Ferrybridge, Knottingley and Snaith are the most important. The first is a well-remembered stage on the great north road, in the palmy days of Jehus and London mails, from thirty to forty coaches passing through it daily at thirty to forty coaches passing through it daily at one time; but, like its equally celebrated compeer of Boroughbridge, it is now neglected and languishing. At Knottingley vast quantities of excellent lime are made, and have proved a source of much revenue to a canal constructed there. This is one of the most expensive parts of the line, owing to the large sums demanded for the land through which it passed and the limestone it contained. Snaith is a neat country town of considerable extent, the inhabitants employed in agriculture, especially in the growth of flax and as market gardeners, their produce finding a ready sale in the Leeds and Wakefield markets, from whence it is transported to Bradford and other towns at a distance. At Hensall, the contractor, in cutting through, was so fortunate as to meet with a very extensive bed of most excellent gravel, which has served to ballast nearly 20 miles of the line, and is not yet exhausted. Goole is a place of some considerable magnitude, but has been prevented from fully developing its growth by untoward circum-stances, which would require more space to describe than we can give. It owes much of its present importance to its position on the river Ouse, and to the

exertions of that powerful company the Aire and Calder Navigation, who succeeded in procuring, some years ago, that the town should be a port for foreign trade. The harbour consists of an entrance basin, 250 ft. long and 200 ft. wide, communicating with the Ouse, here more than a quarter of a mile wide. The communication locks will admit vessels of 300 tons burden. There is also a ship dock 600 ft. long and 200 ft. wide, with a depth of water of 18 ft. There are dry docks, and the various other requisites for doing a large shipping business, a custom-house, an excise-office, and extensive coal-sheds and warehouses. In the construction of the various works and buildings connected with the navigation, the Aire and Calder Company had expended an immense amount of money, not less certainly than 1,000,000l. The amount of duties are large and increasing. The station is in the main street, leading to the docks, and is a spacious structure, not yet finished; immediately in front of it is a most beautiful church, of the perpendicular style, erected in 1843-4, to which the railway company have subscribed 500l. Of 1,000 seats it contains, one-half are free. The line has three communications with the port—first, the main line to the town; then a branch for carrying the coal traffic especially to the docks; and a further branch to carry the goods traffic to its proper destination. These latter run at some elevation above the main line; and it is intended to run the goods line around the docks. There is a wast quantity of what is called warp land, that is, land on which the river is allowed to flow at certain periods and deposit its alluvium. This is most excellent land for the growth of potatoes, and vast quantities of that root are shipped to the London and other markets. For some distance around Goole, the warp land and peat moss obtain. Throughout the whole course of the line the country presents a richly-cultivated aspect, and the marks of improvement in farming are distinguishable in many places.

#### Accidents.

DUNDALK AND ENNISKILLEN .-- A correspondent of the Irish Railway Gazette writes as follows from Castleblaney:—"The works have met with a very serious interruption about four miles from this. A very heavy embankment, upwards of 20 ft. high, ran through the bog of Meghernakill, nearly adjoining the river Fane. The embankment had been all but completed, when lo, on last night it totally disappeared; but the mischief did not end here, for the sinking of the embankment in the bog caused a rise in the bed of the river so as to choke it up, and the consequence is, the country all about is flooded, and serious damage will be done to the crops. I have this from good authority, so that you may depend on its correctness, but I cannot ascertain all the particulars at present.

EDINBURGH AND NORTHERN .- March 29 .- When the luggage train from Cupar to Burntisland was a little to the north of Markinch, two carts belonging to Messrs. Cameron, general carriers, loaded with valuable goods, were observed by the guard to be on fire. The train was immediately stopped, and, by the assistance of some porters returning from Cupar to Burntisland, the fire was put out, although a large amount of property was destroyed. Whether the fire was caused by sparks from the engine, or otherwise, Edinburgh and Glasgow.—April 8.—A fire in the

ticket office at Cowlairs, arising from the over-heating of a stove, consumed the wooden building. Its progress was arrested; and all communication with the passengers' platform being cut off, the other buildings escaped destruction.

#### Law Intelligence.

April 11 .- In the VICE-CHANCELLOR'S COURT, in re Smith v. the York, Newcastle and Berwick, this was a motion on behalf of the plaintiff, who represented the trustees of the turnpike-roads of the town of Berwick-upon-Tweed, to restrain the defendants from using a certain viaduct and road, or inclined plane, by themselves, their servants, workmen, &c., with omnibuses, carriages and horses, for the conveyance of passengers and goods between the station near Berwick and the town, and also to restrain the company from permitting the said road to be used as a public road to and from the said town of Berwick by any other persons. The company, instead of using the turnpike-road from their station into the town, had made use of an ordinary township road passing over property belonging to the company, thereby evading the tolls; and the public had frequently taken advantage of this road, which they were enabled to do by means of the station lately erected.—The plaintiffs contended that this conduct was an infringement of the Act of Parliament under which the turnnike trusts were created The Vice-Chancellor thought that this question ought to be decided by a court of law; but as to those persons who passed over the road and were not going to the station, it was evident that the company themselves wished to prevent the use of the road for that purpose; therefore, if the company would undertake to prevent such persons from passing, the legal rights of the parties upon the other question might be tried.—An undertaking to this effect was then given, and a case directed for the opinion of a court of law.

IRON TRADE.—Glasgow, April 7.—The continued political excitement and the fear of an European war has produced the utmost depression in the pig iron market. No. 1 is at 40: 6d., cash down; No. 3 is scarce, and same price as No. 1. The old figure of 35s. is looked for ere long. The North British Railway Gazette furnishes the comparative exports of pig iron in April 1847 and 1848 :-

1847 15,861 tons. 20,417

Staffordshire and Shropshire was held here. The first took place at Walsall yesterday. The attendance was not numerous, and the business was proportionately limited. The general state of the trade, says the Daily News, does not appear to present much of matter for congratulation; but the orders in hand are sufficient to enable the masters to keep the works pretty much employed, and the prospects are suffi-ciently encouraging to lead to the inference that no further reduction of price is impending; in fact, for some descriptions of the commodity (especially pigs) current rates are firm. The aspect of affairs in this district, with all its gloom, presents at least a favour-able picture as compared with the last quarter-day. At that time thousands of the men were out upon strike, and all the large works were standing still; now operations are resumed with tolerable briskness, and the differences between the masters and men have to all appearance been satisfactorily adjusted. The general trade of the district is depressed almost beyond parallel: all persons concurred in this opinion to-day, yet it is believed that accounts were paid with tolerable punctuality. The embarrassment of the principals at a rather considerable iron work in the district (Cruttingden & Co., of Lye Brook), has created some stir in the trade. The amount of liabilities is not stated. A meeting of the creditors is already convened. There is no doubt that the trade is infinitely worse than at the corresponding period of last year; at the same time it is fair to assume that as soon as the panic in the railway market shall have subsided, increased vitality will be given to the progress of the lines in course of construction, and that an additional impetus will arise from the cirthat an additional impetus will arise from the crimstance of the great companies not then ordering iron so sparingly for general purposes as they have done during the last few months.—Birmingham, April 13.—The third of the quarterly meetings was held here. The attendance was numerous, the heads of most of the great houses being present. The orders in the houses are far larger than are generally ima-gined; these are daily increasing, and are of such a nature that no fall off may at present reasonably be expected. It is affirmed that there never was a more firm resolve to stand by existing prices than was manifested at the late preliminary meeting. The stocks of pigs are large, the makers having of necessity fallen to stacking them during the height of the panic. The present quotations are—bars, 8l. to 8l. 10s.; hoops, 8l. 10s. to 9l.; and sheets, 9l. 10s. to 10l. the outside figures being, of course, only given for the very best qualities.

[Secretaries of companies are requested to forward notices of Meet-ings, and closing of Contracts, as early as possible.] MEETINGS.

† Ex Div. * For account, May 9.

London Stock Exchange, April 14 .- In the early part of the week business was much circumscribed and prices lower in the share-market. Towards the close a greatly increased business was transacted at improved quotations. The Consols account has passed over without any casualty in the house, although there have been some heavy defalcations out of doors

Liverpool, April 13 .- Our market has improved considerably since Monday in the present week, and prices close firm at the quotations. There is, however no increase of business. Sublow, Brothers.

Manchester, April 13.—Though we have had no great business doing in shares during the week, yet the market has assumed a more healthy appearance. Prices in several instances are higher, and buyers are SAM. GRINDROD. more desirous to operate.

York, April 13.—The market has assumed a firmer appearance, but we note a very limited amount of business.

GRAYSTON & EARLE.

Hull, April 13 .- The peaceable result of the Chartist demonstration has imparted a firmer tone to the share-market, but there is still sufficient in the un-settled state of Continental and Irish affairs to make buyers cautious. A petition to the Legislature is in preparation here, praying Government to assist the railways by a loan of Exchequer bills, and thus to accelerate the completion of these great undertakings, and give employment to the unemployed. This would be of especial use at the present moment,

because it is practical, easy of accomplishment, and beneficial to all classes, and because it would do more than anything else to restore harmony, good feeling and confidence. FLINT & TOOTAL. and confidence.

Newcastle-upon-Tyne, April 13.—Newcastle and Carlisles have fluctuated a good deal this week; on Tuesday they fell to par, but they have again advanced, and have to-day reached 5 prem. The general tone of our market is better.

Glasgow, April 13.-Very little business has been transacted in this market during the past week, but the disposition to force sales has not been quite so decided. For the last day or two there have been indications of a slight upward movement in prices, which, it is hoped, may continue. The following are which, it is hoped, may continue. The following are to-day's latest transactions:—Edinburgh and Perth, 1\(\frac{1}{2}\) dis.; Dumfries and Carlisle, 5\(\frac{1}{2}\). 19s.; Ayr, halves, No. 1, 8\(\frac{1}{2}\) dis.; Greenock, preference, \(\frac{1}{2}\) dis.; Great Northern, 9\(\frac{1}{2}\) dis.; Manchester and Southampton, 39s. 6d. dis.; North British, thirds, 38s. 6d. dis.; ditto, new quarters, 8s. 6d. dis.; Scottish Central, 26.

BUCHANAN, AITEEN & Co.

The disease of "an itching palm" has, as we anti-cipated, spread among the French appropriators of private property. The Club of the Revolution, presided over by citizen Barbes, adopted the following resolutions, on Saturday night last, after a long and animated discussion :-

That the Provisional Government be requested by the committee of the club—1. To take possession of the Bank of France, which, under existing circumstances, cannot render the service required of it. 2. To take possession of the insurance companies (a subject on which two ordinances the insurance companies is subject on white a volume of a granting privileges to certain companies inserted in the Moniteur gave rise to an energetic protest). 3. To take possession of all railroads. 4. To take possession of all mines and minerals. 5. To take possession of all canals.

The Provisional Government, upon the application of the department of the Vaucluse, has granted to the Marseilles and Avignon a sum of 600,000f. The Municipal Council has decided that this money shall be applied in employing men upon new works from La Petite-Hôtesse to the viaduct, and not in paying up arrears, as the company wished.

At the meeting of holders of bons of the ORLEANS, the Beport from the committee appointed to confer with the directors was presented. Two propositions with the directors was presented. Two propositions had been submitted; one that the bons should be nau peen submitted; one that the bone should be re-imbursed, vis., 10 per cent. in cash and 90 per cent. in old bonds, re-payable at 1,250, and which should be delivered to the holders at 800, bearing interest at 59f. a year, the other that they should be re-imbursed at 10 per cent. cash and 90 per cent. in two years, by quarterly payments, with interest at 5 per cent. This latter was favourably received, but as all the holders were not in attendance, another meeting is to take place. The company offers to grant to the holders of bons and bonds a priority of claim on the future interest and dividends of shares.

The wealthy and well known house of THURNEYS-

SEN & Co., bankers at Paris, have stopped payment. This step has been caused solely by the events of the revolution, as it is announced that in due time the firm will be able to pay all their creditors in full.

# Railway Chronicle.

LONDON, SATURDAY, APRIL 15.

We have only to record of the BIRMINGHAM AND OXFORD, a further adjournment of the meeting of shareholders till the 2nd of May.

At the special meeting of the DERBYSHIRE, STAFFORDSHIRE AND WORCESTERSHIRE the auditors' Report reflected most unpleasantly on the late directors. Besides the charge of "rig-ging the market," the fact of voting themselves off-hand a remuneration of 2,3101. looked as if the members of the Board were rather too needy for their office.

At the special meeting of the shareholders of the SOUTH YORKSHIRE, DONCASTER AND GOOLE the bill for extending the Dunn navigation to Sheffield was approved of.

On the return of 11. 8s. per share, the shareholders of the Cockermouth and Workington EXTENSION have agreed to release their directors from all further claims.

At the annual meeting of the PARIS AND ST. GERMAIN a dividend at the rate of 8 per cent. has been declared. The indemnity for the late havoc on the line is as yet unpaid. Each shareholder is meanwhile to receive an acknowledgment of the dividend at 5 per cent. interest.

The amalgamation of the two VERSAILLES

COMPANIES seems as distant as ever. The late monetary crisis has considerably affected the receipts of the Right Bank Company.

The CEYLON meeting was again postponed, as no official intelligence had been as yet received from the Colonial Office.

The ADJOURNED MEETING OF THE BIRKEN-HEAD, LANCASHIRE AND CHESHIRE Company on Saturday was a large one, and not without some plain speaking and somewhat angry discussion; but it seems, on the whole, to have ended well. Our readers all remember the history of the undertaking, and the origin of its present embarrassments. They know that the Lancashire and Cheshire Junction Company amalgamated with the old Birkenhead and Chester line, and that they then proceeded with the new line until the great embarrassment of the time, the want of money, stopped their progress. Of course when the former meeting, of the 26th of February, was called together to hear a statement of their unprofitable investment, they were discontented, found fault with their accounts, and adjourned, to allow time for a revised statement. The chairman of the meeting had accordingly placed all the books and papers in the hands of Mr. S. E. Cottam, a public accountant, of Manchester, and it appeared that the result of his inquiry was a complete justification of the directors, the accounts being reproduced in a different form, but identical in substance, and with precisely the same financial result. It is a result on which we think the railway world is to be congratulated, that rarely does an investigation of accounts take place, without the conclusion being that every director has acted with the uprightness and integrity worthy of the character of a British merchant.

Of this conduct also the proceedings with reference to the individual case of Mr. John Laird bear ample evidence. In some of the unpleasant altercations which the winding-up of an unprofitable concern too often exhibits, insinuations had been thrown out against Mr. Laird and his brothers, who, from their great local interest in Birkenhead, were conceived to have acted more for interests of their own than those of the company. He had been accused of

spending the Dock Commissioners' money in carrying out illegal works; but these works had been forced upon them by the Crown. He believed also that land-jobbing had been the ruin of the company—he had often stood nearly alone in exposing it. Since he had been a director he had not sold the company one yard of land. He had kept his hands perfectly free, and no one could accuse him of jobbing. He had wished to retire from the company, but would not do so until the meeting cleared his character from the aspersions untruly cast upon it. The meeting appear to have unanimously cleared him of the accusations of his adversaries. Mr. Townsend, said from all he had heard the Messrs. Laird were the most honourable of men. Mr. Garnett said he had acted with Mr. John Laird in the Dock Company, and never met with a more honourable man. The chairman said that a more upright man did not exist in Birkenhead or elsewhere. We are most happy to find that investigations of this kind continue to turn out most honourable to the character of those of our great English merchants who are charged with the direction of that large capital now embarked in the private enterprize of our English railways.

The proposition about the Chester and Bir-kenhead shares, that they should, for the present, not take more than the full amount of their earnings from the company, on condition that for the same period the Cheshire Junction stock should not take interest, was favourably received, and referred to the serious consideration of the directors.

When we announced the probable extinction of the BOARD OF RAILWAYS We were somewhat premature as to public cost. There is, it seems, one branch of economy which Whig Governments are not given to—we mean the extinction of place and diminution of pension. The Railway Board is to be extinguished—but not its cost; excepting, perhaps, the salary of Mr. Strutt may be deducted. Mr. Labouchere is to do duty without (perhaps) additional salary, but the other Commissioners remain-and their

We agree with Mr. Hudson in thinking that if there is to be any supervision at all, it ought to be at a cost of a very few thousands a year. Three engineer officers, a secretary and clerk are quite enough for the duties, without Commissioners. We think it can easily be established that any services which are now rendered, are performed by these alone, and we are quite sure that four thousand a year would cover their cost. We think any independent member of the house would do good service who should inquire why the establishment is not reduced; why useless Commissioners are retained; why the country has not in reality obtained the benefits of the economy which it was led to expect from the change. We are content that those who do the work should be well paid for it; we do not think the public will reckon their interests to have been well considered when they learn that the places and salaries of Commissioners are retained after their services have been admitted to be unnecessary-as they were on all sides in the course of the late debates in Parliament. More stirring events may divert attention from such abuses for a moment, but only for a moment, and to be reverted to with increasing indignation as an inexcusable waste of public wealth.

From our official returns it appears that the amount of traffic for the last week, on 3,663 miles of railway, was 167,913l., thus accounted for: — 79,288l. for the conveyance of passengers only, 47,040l. for the carriage of it in our power to do so. goods, and a remainder of 41,585l. for passengers and goods together, not respectively appor- | see the intrinsic difference between the value of

tioned; being an increase of 13,898l. over the corresponding week of last year, when the mileage was 2,812. The average earnings per mile last week were 461., whilst in 1847 they were 551.

#### WAR IN SCOTLAND.

The war in Scotland rages with increasing fury on the field of the SCOTTISH CENTRAL. We have on one side the Southern Companies, as they are called, waging war against the Edinburgh and Glasgow; and we have shareholders trying to conquer directors, and a late chairman, a noble marquis, conspiring with the minority of malcontents to overturn the decision of his late colleagues and of a majority in a meeting over which the marquis himself had presided and been beaten.

The story is brief, and with its details many of our readers are well acquainted. The North-Western, Lancaster and Carlisle, and Caledonian Companies, have agreed to lease the Scottish Central, at a large figure, seven per cent.; more by half than it could ever earn for itself. Edinburgh and Glasgow want to have the line, and to get the Scottish Central to repudiate its agreement on the chance of what the Edinburgh and Glasgow Company may some day be able to do for it. We say "chance" advisedly; for we have seen that the directors, with an empty exchequer, were unable to pay a dividend which they were said to have fairly earned; we have seen how they have, by their mismanagement, allowed a competing line to be made, and that this line on commencing operations will be able to reduce the profits of the Edinburgh and Glasgow to nil; and yet they propose to guarantee 9 per cent. to a new line, or promise even more, and expect such a guarantee to have weight with shareholders against a bargain, which has for guarantee of its fulfilment not only the Caledonian but the London and North-Western!

We can account for their entertaining such hopes and persevering in such hostilities on no more excellent plea than the "folly of despair." We advised them long ago to take hold of the Caledonian and make it a feeder. They rejected our advice and made it a rival-a competing parallel line with identical termini! Every step they have taken since, has been in the wrong direction-the further they have gone the further have they involved themselves in embarrassments. Their present floundering about, now on this side, now on that, is an evidence of how much pain their former errors are now inflicting.

Our own opinion is, as that of any impartial spectator must be, very different from that to which the directors of the Edinburgh and Glasgow would lead the Scottish Central share-holders. The Southern companies offer a lease of 7 per cent., and half surplus profits, to the Scottish Central. This is to be secured by Act of Parliament, to be passed this session, and so finally secured to shareholders. A better prospect than this, in these times, seems very far from probable. What do the Edinburgh and Glasgow propose to the shareholders? They say, repudiate this agreement-throw yourselves loose from this bargain, and we will promise you something much better.-We who cannot pay any dividend for ourselves, who are about to have a competing line and a reduction of fares likely to be ruinous-we will give you 9 per cent.-No! not so much as that-we will promise you to try to get a bill next year, to enable us to promise you 9 per cent., or at least to enable us to promise to pay it you if we happen to have

We believe the shareholders will be able to

Digitized by GOOG

the one offer and that of the other. It is as a Bank of England note against an assignment to the effects of a non-dividend-paying railway. Or, to give a still stronger illustration, it is as the value of a present London and North-Western share against the value of the possibility of obtaining a future share in the Edinburgh and Glasgow line. We leave the shareholders to find out the comparative value of such offers, and according to the result to send their proxies to the Board of Directors or their opponents—observing always that the Marquis of Breadabane has now ceased to be the chairman, and has joined the opponents in their somewhat factious opposition. We think we can augur how Scotchmen will look at their interests in this matter.

#### ST. ANDREW'S AND QUEBEC.

In consequence of the recent state of the moneymarket having had the effect of raising the amount of interest on every description of security, so much so as to oblige the great railway companies to issue preferential shares, guaranteeing a permanent high rate of interest in perpetuity, it was thought futile to attempt to induce the public to embark in this undertaking unless permanent guarantees were awarded, of not only equal, but higher amount than those at home. The London Board therefore resolved, that a preferential dividend of 7 per cent. should be guaranteed from the time of subscription, in perpetuity, to the English shareholders; and that after a dividend of the same amount shall have been declared on all the shares, an equal division of profits should take place. We learn that the directors in New Brunswick have not only acquiesced in this, but proposed an addition of 1 per cent. to the provincial guarantee of 5 per cent. for twenty-five years, making it therefore a guarantee of 6 per cent. from the Province for that period. This, together with certain other advantages, (one of which is an additional free grant of 20,000 acres), they embodied in a bill, which has been introduced into the House of Assembly as an amendment on their previous Act. The railway committee of the house having reported favourably on the bill, it passed the second reading on the 13th of March; and as the progress of the bill through the three readings, after the assent of the committee, is a mere formal proceeding, there seems no doubt that the next packet will bring in-telligence of its having been passed. The assent of the Crown (a matter of form) will only then remain to be obtained for the bill to become law. The guarantee of 7 per cent. in perpetuity by the local Board, in favour of the English shareholders, will also arrive by the same conveyance. It may afford additional encouragement to speculators to state that the Board expects a grant of money in aid of the undertaking from the local Legislature, and that as soon as the Imperial Government are in possession of certain documents, they will be prepared to consider the case, and how far they may be justified in affording assistance.

#### Correspondence.

#### UNIFORM PARCEL BATES.

I did not offer the example of the extensive adoption of "uniform time" in illustration of anything excepting the readiness with which provincial railway managers adopt the laws laid down by the authorities of the metropolitan lines; and that therefore it was only necessary for the directors of the latter to adopt "H. C.'s" proposal, if they saw fit, to ensure its immediate adoption by all the railway companies in the kingdom. On your own admission, the question, or the difference between you and "H. C.," is narrowed to this one point, whether the plan is capable of being carried into practical operation? And as you have been kind enough to invite argument on the point, I take leave to say a few words, which I am sure will meet with that courteous attention which has ever been one of the chief attractions of the Railway Chronicle, and for which it is so distinguished. The difficulty which you cannot get over appears to be, how the cross-roads are to be provided for, both in receiving and delivering. In attempting to get this difficulty out of the way, let over by Mr. Morrison at Euston-square. I do trust

us see how the Post-office provides for the delivery of letters in districts beyond the usual boundaries. And here I by no means agree with you, that the public would be more unreasonable with the railway companies than with the Post-office, if the former granted all the accommodation in their power; although it is true that public opinion has not that influence over Government that it has over other bodies. I find that in England (including, of course, Wales) and Scotland the number of post towns is a little above 3,500. The practice of delivery differs considerably according to the locality; but the general rule is, that letters addressed to parties residing out of the boundaries, are detained for a few days, in order to collect a number of letters for the same district; and when that is not the case, a messenger is sent with the letter, for which an extra charge of 3d., 4d., 6d., or upwards, according to the distance, is made. Sometimes parties send regularly for their letters; and in no case is more than a week allowed to elapse before delivery. Against this system we hear no complaints from the public, simply because no better arrangement can be made. Are the railway companies in a position to afford equal accommodation? At the present moment they certainly are not in a condition to give accommodation so extensive; but I believe that for the purposes of a parcel traffic they are in a position to do the work quite as effectively as the Post-office. The traffic in parcels never can become so minute and ramified as the postage of letters; and promptness in the delivery of parcels is clearly not so essential as in the case of letters. There are now 3,500 miles of railway opened for traffic, and before the end of the present year, 600 or 800 more will be added. There will, therefore, then be somewhere about 1,000 railway stations, being one for every 41 miles, on an average,—a calculation that will be fully borne out by a reference to Bradshaw. Besides, very many of these stations are so situated as to be within but a short distance of a cluster of little towns and villages. Thus, there are the means of conducting a traffic between ten or twelve hundred places, within a given reasonable distance from each of which parcels might be delivered at the "uniform" rate, and for greater distances an extra charge might be made, as in the case of the Post-office delivery. For very great distances from the nearest station, the existing conveyances would be required until such time as every town and village in the kingdom shall be embraced in the great net-work; and to that we must come ere long, if not by individual enterprise, at any rate by the stern necessity of finding work for the daily increasing unemployed artizans and labourers. To my mind, the greatest objection to the carrying out of this scheme is the expense of delivery at small stations, where the traffic would be inconsiderable. At those stations where a porter is employed, in addition to the policeman or signalman, the delivery, once a day, could be entrusted to the porter, which would not in the least interfere with the safe working of the line; the time of delivery being so arranged as to be made during the longest interval between any two trains. At the smaller stations, where no porter is kept, the station clerks are generally a class of men with whom arrangements could perhaps be made to deliver light parcels, more particularly as at these third or fourth-rate stations, parcels are "few and far between." Exceptional cases, difficult to manage, there no doubt would be, but I am of opinion that a willing mind could overcome them. I have said nothing as to the collecting, nor is it necessary at this stage of the inquiry, because the great point to agree upon is the delivery. Then with regard to the clearing-house; I took the liberty of suggesting the establishment of a "uniform parcel traffic clearinghouse" for this reason,—that when a great and comprehensive scheme is to be carried out and conducted with credit and advantage, it can only be so done by some central or chief superintending authority; and such authority should, by the consent of all, be given Without a concentrated to the clearing-house. management no uniform system could ever succeed, and I am greatly surprised that you do not see how possible it would be to give that character to a clearing-house; with, of course, more extended powers than are possessed by the establishment presided

that the matter will be vigorously taken up by the proper parties; and if you could only see your way to a "practical working scheme," and would lend it your influential advocacy, we should soon see it in operation.

A. K.

#### DIVERSITY OF GAUGE.

We have remarked more than once, with much pleasure, the unbiassed and discriminating tone of the Spectator when writing about our fiercely-contested gauge warfare. A correspondent of that journal has lately furnished the following able argumentative summary of the points affecting the public interest in

the present diversity of gauge.

The Commercial consequences of Diversity of Gauge. We are under our system of administration so accustomed to see questions merely of general importance to the community, and not affecting greatly any one particular interest, trifled with until interference is too late, that I feel hardly an apology is necessary for asking for a corner in your paper to call attention to the course which is being pursued in regard to our railway system. The principle which railways have established is, that the intercommunication in passengers and merchandise may be indefinitely multiplied by increasing the cheapness, the speed and the convenience of the conveyance. On this principle, the coach twice a day is replaced by the train of ten coaches six times a day—the weekly waggon or barge by the goods train of forty loaded trucks twice a day. It requires, then, no argument to show that anything that interferes with the speed and cheapness of the mode of conveyance is opposed to the vital principles of a railway system; and that it must detract from the use of the invention exactly to such an extent as the interference is effective. As railways fix an enormous capital, any such interference must of course be equivalent to an unproductive waste of a proportional amount of national capital so fixed. Now, the differamount of national capital so fixed. Now, the difference of dimensions on which railways are being made, technically called the "diversity of gauge," involving as its consequences the break of gauge, is precisely such an impediment. On this point the Gauge Commission inquiry is conclusive. The Commissioners—themselves picked men, presided over by the late Inspector Capacital Railways. Sir F. Smith—examined spector-General of Railways, Sir F. Smith-examined forty-five witnesses, including all the most experienced men acquainted with railways; and on this point evidence was irresistible. It was not merely the engineers examined who represented the overwhelming inconvenience, delay, uncertainty and injury to merchandise which occurred at a break of gauge; but the great carriers, as Messrs. Pickford, Messrs. Chaplin and Horne—the railway superintendents, as Capt. Lawes, Capt. Huish, Mr. Harding—the coalowners and ironmasters—all agreed on this point. One extract from the evidence of an old carrier:

Carrier:—

An ordinary train of waggons laden with promiscuous goods may be composed of the following descriptions; viz., bricks, slates, manure, salt, coke, iron, lead and metal-castings, bark, hides, oil-cake, potatoes and other vegetables, cheese. furniture, earthenware, drysalteries, groceries, cotton, wool, oils, spirits and other liquids, fish and eggs, tipe fruits, &c. Now, let us contemplate the less by damage done to the goods on this oue train alone by reason of the break of gauge causing the removal of every article. In the hurry the bricks are miscounted, the slates chipped at the edges, the cheese cracked, the ripe fruit and vegetables crushed and spoiled, furniture more or less broken, the salt short of weight, and the fish too late for market. Whereas, if there had not been any interruption of gauge, the whole train would in all probability have been at its destination long before the transfer of the last article, and without any damage or delay.

Another witness, Mr. Harding, who had daily observed the transhipment of goods at a break of gauge, describes it as equivalent to that which takes place at a barrier custom-house. Such are the commercial

consequences of diversity of gauge.

The bearing of the Question on the National Defence.—I have drawn attention to the proofs which we possess that diversity of railway gauge detracts largely and appreciably from the economical use of railways for the internal traffic of the country, in the conveyance of merchandise and live stock; but railways are destined to play no less important a part in the "trade" of war than they are now playing in the furtherance of peaceful commerce. We have it on the highest military authority, that a power of incalculable importance in military, and especially in defensive operations, is included in an unbroken railway system—namely, that of rapid concentration of force, and of making a small army do the work of a large one—in which two points the whole secret of success in war may be said to consist. The Quartermaster-General and the Inspector-General of Fortifications were expressly examined by the Gauge Commissioners on this point; and they state in the most unqualified manner that this arm of our national defence—our

Digitized by Google

railway communication-will be crippled if our lines are not on one gauge. The evidence of these witnesses is at the present time most interesting, explaining as it does the scheme of defence to which the military authorities agree in thinking we must have recourse in case of invasion, and of which a system of commu-nication of troops and artillery by railways on one uniform gauge from the interior to the coast forms an essential feature. I will content myself with a single quotation on the point in question. Sir Willoughby Gordon is asked—

loughby Gordon is asked—
Q. Do you imagine that in the event of this country being at war with France railways could be advantageously used in the national defence? A. Certainly the effect of rapid communication by railway, speaking militarily, is this, that it enables you to do with a small army the work of a large one.—Q. Do you conceive that such utility would be materially diminished by breaks of gauge in the line of route, involving a transfer from one set of carriages to anothe? A. Cortoliva, the practical result would be the inconvented. A. Certainly: the practical result would be the inconvenience of a ferry. I can conceive no greater inconvenience than shifting from one gauge to another.

The Commissioners, presided over by an experienced officer of Engineers, sum up the evidence by saying, or The effect of diversity of gauge may be, in a military point of view, to expose the country to serious danger." Such, then, are the tangible and serious evils consequent on the "laisses faire" system we are pursuing of allowing different engineers to have their crotchets as to the width of lines of railway, and so to break up and interrupt the communications of the country to gratify their individual vanity. How dif-ferent and how far wiser is the course pursued by the more provident Governments of the Continent of Europe! The shores of the Baltic, of Belgium, of France from Calais to Bordeaux, of the Mediterranean, and of the Adriatic, are now either actually or are rapidly being connected with the capitals Paris, Berlin, Vienna, Dresden, Munich, with all the interior parts of the Continent of Europe, and with each other, by a great network of railways, all, notwithstanding the jealousies of nations and of engineers upon one uniform and unbroken gauge—(the ordinary English gauge of 4 ft. 84 in.). By this wise and comprehensive design, both the peaceful and warlike resources of these vast territories will receive all that accession of strength which results from unbroken intercommunication, but which we are suffering to slip through our fingers for ever, while Mr. Brunel and Mr. Somebody-else are settling their differences as to what is mathematically the precise optimum width for a railway. To those who have witnessed the advantages of uninterrupted railway communication, and the incredible extent to which these advan-tages are neutralized by a break of gauge, it is most painful to contemplate the irremediable evils which the diversity of gauge we are permitting to extend must (if it be not now remedied) inevitably produce in the course of the next five years.

Diversity of Gauge and its Remedy .- I have endeavoured to point out the pernicious consequence of our "laissez faire" policy as applied to the gauge of railways—consequences of which we have been warned in terms the most direct which can be used by all the highest mercantile and military authorities consulted on the subject. What, then, is the present position of our railways in reference to diversity of gauge? Is such diversity on the increase or not? Can it be stopped? If so, how best, and at what cost? There are 3,400 miles open for traffic in Great cost? There are 3,400 miles open for traine in Great Britain: of these, something under 350 miles are on a gauge (or of a width) of 7ft.; the remaining 3,050 of a width of 4ft. 8½ in. Out of 7,000 miles of new railway now sanctioned by Parliament, no less than about 1,000 are designed on the exceptional width of 7ft.; the remaining 6,000 miles being designed on the ordinary width of 4 ft. 8½ in., which prevails here and on the Continent. The railways on the exceptional gauge thus at present only amount to prevails here and on the Continent. The rankways on the exceptional gauge thus at present only amount to one-eleventh of the whole mileage of completed railways. Diversity of gauge has not then, at the present moment, taken firm root; but if nothing is done this year it will take firm root, and be scarcely possible to year it will take firm root, and be scarcely possible to eradicate. There are three ways of bringing about uniformity of gauge:—1. By altering the 3,050 miles of 4 ft. 8½ in. wide to the width of 350 miles of 7 ft. 2. By altering both the 7 ft. gauge and the 4 ft. 8½ in. gauge to some intermediate gauge. 3. By altering the 350 miles on the exceptional gauge of 7 ft. to the gauge of 4 ft. 8½ in., which is that of the remaining 3,050 miles of completed railway. The objections to the first mode of attaining uniformity of gauge are the first mode of attaining uniformity of gauge are obvious and insuperable. The tunnels and works on the whole of the 3,050 miles of railway on the narrow gauge must be widened to admit of the passage of the vehicles of the broader dimension; the traffic on tenelevenths of the railways in the country must be impeded or stopped while this is being done; new carrying stock, alone involving an expense of about four millions, must be provided. Ten millions would

not cover the expense of alteration, and the traffic of the country would be impeded for an indefinite period. The objections to the second mode are equally strong: it would involve the alteration of both the 7 ft. and the 4 ft. 83 in. lines, and therefore of a greater length of line and more carrying stock of a greater length of line and more carrying stock than even the first mode; it would impede the public traffic intolerably. When done, it would result in a form of railway not practically superior, if equal, to either the 7 ft. or 4 ft. 8 in. gauge. An intermediate gauge has been tried in England and Ireland, and has been found to present no one tangible advantage over either the 4 ft. 8 in. gauge on the 7 ft. gauges It is either the 4 ft. 8₂ in. gauge or the 7 ft. gauge. It is indeed impossible to rise from the perusal of the Re-port and evidence of the Gauge Commissioners with-out the impression that even between these two dimensions (4 ft. 8½ in. and 7 ft.) there is no practical difference—except inasmuch as it appears that the gauge of 4 ft. 8½ in. is more economical to construct and to work than that of 7 ft., and that the vehicles are more handy for mercantile purposes. riages can, as on the foreign lines, be built for the one as well as the other; and as for extreme speed, I observe that on the South-Western line of 4 ft. 8 in. the express train has been for the last year travelling faster than that on the London and Exeter line of 7 ft. width. Without going into detail, it is clear that whatever slight advantages there may possibly be peculiar to either gauge, the importance of uniformity infinitely counterbalances them. The third mode of attaining uniformity, then, is clearly the only one practicable—namely, to alter the one-eleventh of the lines on the exceptional 7 ft. gauge to the narrower gauge of the remaining ten-elevenths of the system. It was proved before the Commissioners that the narrowing of a gauge had been done before, and could be in this case effected, without stopping the traffic for a single day, at an expense of less than one million; but as preparations for new lines on this gauge have been made since the Commissioners reported, that estimate should now be increased by a quarter of a million. The extent of the difficulty of attaining uniformity in this way, and of compensating the proprietors of the altered lines for inconvenience during the process of alteration, lies therefore between one and two millions, a sum which in these days, when the railway interest is expending some forty millions per annum, cannot be considered as offering a formidable difficulty to the attainment of an object so important to the country and to the developement and economical working of the rail ways themselves as uniformity of gauge. The way of bringing about uniformity is therefore very plain. First, you must stop the extension of diversity by adopting the advice of the Commissioners, and caus-ing all lines under construction to be on the ordinary gauge of 4 ft. 85 in.; secondly, you must provide the means for raising a fund of between one and two millions to pay for the alteration of the lines on the exceptional gauge of 7 ft. to the ordinary gauge of 4 ft. 8 in., and to protect the proprietors of such lines from any loss in consequence of the alteration. Some compromising attempts have been made to mitigate the evils of a diversity of gauge by an Act of Parliament called the Gauge Act, the provisions of which have proved to be utterly unintelligible, the second clause contradicting the preamble. They must therefore be altogether disregarded. I trust that some independent member of Parliament will take up this question, which affects so closely that which Bacon himself defines as the third element "which makes a nation great and prosperous," namely, "easy conveyance of men and commodities from one place to another.'

#### BAILWAYS IN FRANCE.

The fate of the railway companies in France is now settled. The Orleans and Central were merely the first mouthful for l'appetit qui vient en mangeant. The Finance Minister of the Government has publicly proposed the appropriation of all the lines, and an indemnification to the shareholders by Government stock. The Daily News correspondent affords the following details of this spoliation according to law. On the evening of the 12th, the directors of the railway companies were summoned by the Provisional Government to hear the conditions on which it was proposed that they should surrender to the State their entire interest in these enterprizes. They accordingly assembled at the Hotel of the Minister of Finance:

latter shall be completed by the State, and that all shall be henceforward conducted and worked under the exclusive control and to the exclusive profit of the State. The sevelatter shall be completed by the State, and that all shall be lenercforward conducted and worked under the exclusive control and to the exclusive profit of the State. The several projects differ one from another only in the mode of indemnifying the companies. The indemnity in every case is to be paid for in Government stock. The question them is, at what price the Government stock to be given to the companies is to be estimated on the one hand, and at what price the railway shares to be purchased from the companies by the Government are to be estimated on the other. All the three projects agree that the same standard of estimation is to be applied to the one and to the other—to the indemnity on the one hand and to the shares on the other. By the first project it is proposed that both shall be taken at the prices they had upon the Bourse on the 15th second, the prices are to be those of the 4th of April, forty days after the revolution; and, by the third, the prices are to be the average of those of the six months immediately preceding the revolution. Such are the projects of the Minister of Finance, communicated, as I have said, to the directors of the companies. But it must be understood that these projects of the Minister of Finance, communicated, as I have said, to the directors of the companies. But it must be understood that these projects of the Minister of Finance have not yet been discussed by the other members of the Government. They are to be taken into consideration at a council of the Government to be held this evening, and the measure will most probably be definitively settled on or before Saturday. I have reason to know that another of council of the Government to be held this evening, and the measure will most probably be definitively settled on or before Saturday. I have reason to know that another of the ministers intends this evening to present a fourth project differing from those of the Minister of Finance as to the form in which the indemnity is to be paid to the companies. He proposes that the actual value of the indemnity to be paid, whatever it may be, shall be commuted into an annuity for such a period of years as the companies respectively, by the terms of their original concessions, would have enjoyed the profits of the enterprizes. It is calculated that the amount of capital still required to complete all the unfinished lines is about 36,000,000/MV, sterling, or 900,000,000f. unfinished lines is about 36,000,000%, sterling, or 900,000,000f. By the original contracts between the companies and the State 364,000,000f. of this amount would have to be supplied by the companies, and 536,000,000f. by the State.

#### Gossip.

The LONDON AND NORTH-WESTERN have liberally extended the privilege of RETURN-TICKETS for the visitors to Stratford on the occasion of the annual SHARSPEARE CELEBRATION on the 24th — Easter Monday. _ Tickets will be issued to embrace the Monday. Tickets will be issued to embrace the previous Thursday and include the Tuesday following, for the same fare. Great preparations, says the Athenœum, are being made. The vicar allows the Athenœum, are being made. the registers of the church recording the poet's baptism and death and many other interesting Shak-speare entries to be placed for inspection under a pation of the poet's father, including the memorable document wherein he is said to be described as a "glover":—Mr. Lucy throws open Charlecote House and grounds, and allows the visitor to inspect his fine Elizabethan hall, where it is pleasant to believe (and within the limits of likelihood to suppose) the poet was accused of deer-stealing; and from thence to stroll through the beautiful park well stocked with deer (the lineal descendants of the herd which the poet lessened), and so on to the beautiful little church where the Lucys sleep beneath stately

monuments of the poet's period.

Among our Official Papers will be found a list of the proposed GROUPS for the various Committees on the Railway Bills of this session, and the days of meeting;—a new feature is, that a separate one is devoted to STEAMBOATS. The bills suspended last

devoted to STEAMBOATS. The bills suspended last session are all comprised in one group.

The likely candidate to succeed Mr. Strutt at Derby is a member of the railway interest. The local paper says—"Mr. Heyworth is possessed of a large fortune and a balder of railway stock. is a landed proprietor, and a holder of railway stock; all these are satisfactory reasons why he would be a safe candidate in these times."

The North Staffordshire is to be opened on Monday from between Stoke, Trentham and Stone to Norton Bridge. There is to be no ceremony on the occasion, and we learn that in lieu of any public demonstration, the directors have determined on distributing the sum of 250t. amongst the necessitous poor of the district, instead of expending it in the festivities common on these occasions.

Among the preparations made to resist any riotous or rebellious outrage on Monday last, those which the railway companies were able to contribute were not the least efficient. The police and porters are chiefly picked men, both for physical and moral qualities, and are paid well enough to be attached their employers. their employers. At the SOUTH-WESTERN, one of the most exposed points, Mr. Campbell, the secretary, without any show, made very formidable arrange-ments, 800 men, among them many old soldiers, were ready at a moment's notice; two guns commanded the vulnerable open space near the Wandsworth-The Minister informed the companies that the Government contemplated purchasing their interests on one or other of three conditions, and he proceeded to unfold these three projects of appropriation. In all the three it is proposed that the State shall take immediate possession of all the railways in France, finished or unfinished; that the

private individuals have raised so many garrisons for order all over the kingdom.

We see that some companies are taking a new means of raising the necessary funds for making progress, now that money is not to be had on loan at a reasonable rate. The SOUTH-EASTERN propose admitting to the full dividend all the No. 1 shares if the sum remaining to be called (8%) be paid up at once, and to take dividend from January last on payment of interest for the time elapsed. The YORK AND NEWCASTLE also propose allowing at once 6 per cent. on all the Preference shares that shall be paid up before the 1st of May, till July 1850. These methods are perhaps the best that could be adopted, as it is but fair that, if they must pay a large interest, they should give the advantage to those shareholders who can advance the money. While on this subject we may add that the ABERDEEN is offering 6 per cent. on loan.

No patient ever lingered so painfully under the effects of disease as John Bull under his RAILWAY MANIA. As the Daily News has very fairly remarked:—"It is extraordinary that more money is not carried for investment into reputed lines in work, in progress of completion, and into guaranteed lines. The cause generally assigned is the presumed difficulty of realizing, in cases where the money may be wanted; but although such a difficulty may be experienced in extraordinary times like the present-and times have been when even Consols could not be turned into money—yet parties investing for income have no occasion to be discouraged on that ground, since so long as the dividends are forthcoming legitimately the principal cannot be required, and must

be known to be safely held."

The church of St. Matthias, lately destroyed at Liverpool by fire, had been purchased by the LIVER-POOL AND BURY, who, as their line ran immediately contiguous, purposed to pull it down and to build another church in lieu of it in the neighbourhood. As the accident occurred on the day of the Chartist movement, rumour, of course, assigned the origin of the fire to a wanton political attack on public property.

The recent return of RAILWAY ACCIDENTS discloses the incessant and anxious activity of railway servants, the increase of accidents being on the side of those who have disregarded the notices for safety, and have been killed or injured from their own want of caution. The total shows that 110 persons were killed and 74 injured on all the railways of Great Britain and Ireland during the six months ending the 31st of December 1847. There were 5 persons killed and 39 injured from causes beyond their own control; 3 passengers killed and 3 injured owing to their own misconduct and want of caution. There were 9 servants of companies and contractors killed and 8 injured, from causes beyond their own control; 56 servants of companies and contractors killed and 19 injured, owing to their own recklessness or want of caution. There were 36 trespassers and other persons, neither passengers nor servants, killed and 5 injured by improperly crossing or standing on the railway; and I suicide. During the above period, 31,734,607 passengers were conveyed over the lines, from which it appears that 1 passenger out of every 3,966,826 was killed, and one out of every 755,586 injured; but that only 1 out of every 6,346,921 was killed owing to causes beyond the individual's own control, and fortunately not more than 1 passenger in 10,578,202 through his own misconduct or want of caution. The total number of passengers killed and injured amounted to 50, or 1 in 634,692. There were 5 accidents from the breaking of as many axles of locomotive engines; 2 accidents from breaking 2 axles of tenders, and 1 accident from the breaking of the wheel-tire of an engine to an express train.

We are sorry to see, by a paragraph in the Mining Journal, that the LONDON ELECTRIC TELEGRAPH COMPANY does not find its speculation so advantageous as at first expected. They have notified to 150 employés, mechanists, clerks, &c., that their services would be dispensed with for the present. Nearly 3,000 persons are employed on the different lines and the London offices in various duties.

The total number of public works in the United States, consisting of railways and canals, with the length of each, the cost and the nett profit, has been lately published. There are at present in operation miles of canal, constructed at an outlay of 91,090,649 dollars (being about 34,250 dollars per mile, or 7,000l, sterling), the nett income from which is 4,222,535 dollars, or about 48 per cent. In addition there are about 475 miles not in operation, or of which the revenue returns are not given. Of railways there are 3,376 miles, constructed at an expense of about 104,200,000 dollars (being about 31,000 dollars per mile, or 6,200*l*. sterling), yielding a nett income of about 6,700,000 dollars, or 64 per cent. There are also 2,133 miles contemplated, unfinished or discontinued, or of which the revenue returns are omitted. Assuming the correctness of these figures, says the *Times*, it will be observed that the rate of interest on both descriptions of works is rather low, 7 per cent. in the United States being an ordinary rate even on the best securities. At the same time it must be borne in mind that a large proportion of these works was promoted by the respective States more for the sake of bringing property into value throughout the various routes than for the actual prospect of clear returns on the investments themselves, so that on the whole English capital has been turned to profitable account in America, whatever may have been the fate of its lenders.

#### Reports of Meetings.

BIRKENHEAD, LANCASHIRE AND CHESHIRE

April 8 .- Adjourned Meeting, Birkenhead .- Ald. J. BANCROFT in the chair.

At the half-yearly meeting, considerable dissatisfaction having been expressed at the statement of accounts, the balance-sheet was referred back to the

committee (see ante, p. 169).

Mr. Gibson read a supplemental Report, which stated that the directors had carefully investigated the present position of affairs, and that, with the view of insuring the greatest possible accuracy in the accounts, they had placed the books, papers and other documents connected therewith in the hands of Mr. Cottam, with instructions to prepare as full and complete a statement as possible, the result of which was now before them. Satisfactory arrangements have been made with the Birkenhead Dock Company for the re-payment of the money borrowed. Judgment by consent had also been obtained, without going into court, against all shareholders who had been proceeded against for arrears of calls. The directors have decided to throw open the register of shareholders for inspection, having ascertained that such

is the practice of other companies.

The CHAIRMAN stated that it had been agreed upon to engage Mr. Cottam, a gentleman of high reputa-tion, as auditor of the disputed accounts. Mr. Cottam had borne testimony to the economy with which the books had been kept, and it would be seen, that although his arrangement was different from the original statement submitted, he had arrived at the same result. One matter only he wished to refer to
—that was the debt owing to the company by the
Birkenhead Dock Company. This had been remarked upon at the last meeting with some degree of feeling, and he was glad to say that an arrangement had been made by which this money would be payable by instalments of 3,000% a month. 3,000% was to be paid on the 1st of May, and 3,000l. on the 1st of every month till the whole debt was liquidated, the dock company paying 5 per cent. on the balance due from time to time. A verdict also against them had been taken by consent without going into court, in case the dock company should fail to make the instalments as agreed. These arrangements were on all grounds desirable for both parties.

The Rev. W. BIRLEY admitted that the accounts as drawn up by Mr. Cottam were plain, clear and intelligible; but there appeared to him to be some extravagant items in regard to the working of the line. He contrasted various charges with those of the Preston and Wyre line. The many items he adduced showed, he said, a great opening for a large reduction. The Board should consist of nine members, and the compensation allowed should be reduced from 1,200l. to 900l.

This proposition was carried, after testimony from various promoters had been borne to the undoubted integrity of Messrs. Laird, and especially of Mr. J. Laird (a director), in the transaction affecting the Dock Company.

Mr. Hostage then moved a recommendation to the

directors, that as powers had been taken to defer the completion of the works of the Cheshire Junction for vears, the holders of the original stock should continue to receive the same amount of dividend as at present till the works are got in working order.

This proposition was also agreed to. On the CHAIRMAN moving the adoption of the

Report-

Mr. CATTERALL insisted on the omission of one sentence, lest its adoption should prejudice the claims of the parties interested in the resolution just passed. The CHAIRMAN thought the motion unnecessary.

On a division the numbers were found to be equal. Matters were compromised by an addition to the motion for adopting the Report to the effect that nothing which it contained should be construed to the prejudice of the parties in question.

The CHAIRMAN stated that he had mooted at the Board the question of interest to be paid to holders of the original stock of the Chester and Birkenhead, and considered it very important. They could not complete the Cheshire Junction line in reasonable time; and he thought they would be putting their property in jeopardy if they went on paying interest after the present rate. He was quite satisfied in his own mind that they could not do it. What he had suggested was that the Chester and Birkenhead should be satisfied with the nett earnings of the line for a year or a year and a half, and that interest should not be paid at all to Cheshire Junction stock during that period. After that period let the arrangement, as provided for in the Act of Parliament. take effect. Let the Chester and Birkenhead receive 5 per cent. for the first year, and 6 per cent. for the second year; and the Cheshire Junction receive 4 per cent., as they now do. This would be simply a postpone-ment—a loan by the company to themselves, which would enable them to complete the line. He suggested that the Board should consider the matter, and call a special meeting at an early day to decide upon it.

The proposition appeared suitable to the majority of the shareholders present.

SOUTH YORKSHIRE, DONCASTER AND GOOLE.

April 8.—Special Meeting, London, to consider the draft of a bill for extending the Dunn Navigation to Sheffield .- Dr. DYMOND in the chair.

The CHAIRMAN explained that the communication between Sheffield and the tideway was effected by the Dunn Navigation and the Sheffield Canal. The Dunn Navigation, as the proprietors were aware, was to be amalgamated with their company when half their capital was paid up. The Sheffield Canal had, however, fallen into the hands of a railway which had interests opposed to theirs (the South Yorkshire), and it therefore became necessary to extend the Dunn Navigation to the town of Sheffield, to enable the company to carry the traffic to that place. Mr. BAXTER went through the clauses of the bill.

In reply to a Proprietor, it was stated that the extension of the navigation will commence at Tinsley and pass through the valley of the Dunn to Sheffield, the distance being about 31 miles, the capital 60,000l., and to borrow 20,000l.

The bill was unanimously agreed to.

COCKERMOUTH AND WORKINGTON EXTENSION. April 4 .- Special Meeting, Cockermouth .- Mr. J.

WHITWELL in the chair. The CHAIRMAN stated that the directors had carefully examined the accounts, and found that the liabilities cannot be estimated at less than 13s. per share on the whole amount of shares subscribed for in the two subscription deeds. Under these circumstances, and as the works are not likely to be carried out at an early period, the directors have undertaken, without acknowledging their liability to defray the outstanding expenses, and for the sake of promoting an amicable arrangement, to repay such shareholders as may demand the same, the amount of deposit over and above the expenses incurred, and that such amount be rated at 11.9s. per share. He concluded by moving that the proposal of the directors to pay

11. 9s. per share be adopted.

Mr. Morry wished to know whether the sum mentioned was intended to be the whole return, or

only a first instalment.

The CHAIRMAN said that the directors were taking upon themselves the whole liability of any additional accounts which may come in, and of which they have received some notice, in order to the matter being settled, and the shareholders satisfied. He presumed the proposal was on the understanding that the sum named was the full amount to be returned under the circumstances, and was really a release and discharge of the directors from all further claims.

Mr. Steel suggested, as an amendment, that the sum to be returned should be 1l. 8s. per share. He feared if the directors returned 1l. 9s. they would have to put their hands into their pockets to make up

the deficiency.

Mr. THORNBURN seconded the amendment, which, after some discussion, was carried by a large majority.

BIRMINGHAM AND OXFORD JUNCTION.

April 11.—Adjourned Extraordinary Meeting, Birmingham.—Mr. P. H. Muntz in the chair.

On the motion of Mr. Colmore, the meeting, without having entered into business, was further adjourned to the 2nd of May next, to be held at the King's Arms, Palace-yard, Westminster.

DERBYSHIRE, STAFFORDSHIRE AND WORCESTER-

April 13.—Special Meeting, London.—Mr. J. M. MATTHEWS in the chair.

The CHAIRMAN said the shareholders present would remember that at the last meeting, at which directors were elected, it was resolved that the Report should be received, and the accounts referred to the auditors. The auditors had been through the accounts, and had made their Report, on which document the directors had framed one for the consideration of the present meeting.

The SECRETARY read the Report of the auditors, which stated that the late directors had expended 6,046l. 11s. 3d. in "rigging" the market, and that they had, after the passing of the Act of Incorporation, voted themselves the sum of 2,310l. as a remuneration for their services. Cheques had been drawn for that amount, viz., for 630l. for the chairman, and for 420l. for four other of the directors, with the understanding amongst them that the cheques were not to be presented until there was a sufficient sum at the banker's to cash the whole of them, when they were to be presented together. One of the directors, Lieut. Gen. Sir J. Fitzgerald, had had a similar cheque drawn, which, however, had never been signed, in consequence of the gallant officer having declined to receive any sum as remuneration for his services without the consent of the shareholders. The chairman (Mr. Matthews) had returned his cheque, but three other directors had declined to do One had borrowed money upon his cheque, or, in common parlance, had "pawned" it, and the company were threatened with an action for the amount advanced; another wished the application for the cheque to be made to his solicitor, and the other said his cheque was in the hands of a third party. The call of ll. per share had also been irregularly made. Of the shares issued 3,491 had been paid on. The Board had now made a legal call of ll. per share, and credit would be given to those who had already paid the previous but irregular call, so that all the shareholders would be put on an equal footing. The directors had made an application to the Commissioners for an extension of time, to which no opposition had been offered. They (the directors) felt satisfied that the call of 1l. per share would relieve the company from all its liabilities, and place the shareholders in a position to render the Act of Incorporation beneficial to themselves.

The CHAIRMAN considered it his duty to offer a few explanatory remarks. He thought that he was, in conjunction with his late colleagues, entitled to some remuneration for his services. With regard to him-self, the sum that had been mentioned would not, he considered, pay him for the loss of professional time (though as a mere matter of money that could not be taken into account,) but as it had been felt that

he ought to return the cheque, he did so instantly.

Lieut. Gen. Sir J. FITZGERALD made a statement as to the remark in the Report about "rigging" the market. He received a letter from the secretary informing him that fifty shares had been allotted to each director. He paid at the banker's the deposit on this number, but on applying at the office for the shares, he was told he could not sign the deed, as it was then in the country. A fortnight elapsed before he was able to sign. His broker had told him that "something extraordinary" injured the sale of the shares in the market. He spoke to the then chairman on the subject, but the answer he received was a vague one. He afterwards ascertained that a number of persons who had paid their deposits were told, when they applied at the office for their shares, that they would receive them in a day or two. At this time the shares were at a good premium, and such parties sold; but they were unable to get their shares for delivery at the proper time. They were therefore obliged to go into the market and buy them at any price. The Report was then adopted.

Mr. Curtis moved—

Alr. CURTIS moved—
That the conduct of the late board of directors, in voting remuneration to themselves, after the passing of the Act, and without the sanction of the shareholders, was most irregular, and, in the opinion of the meeting, illegal.

Mr. Young seconded the motion.

Mr. H. Browne, M.P., condemned the conduct of the late directors. He thought the prudent course to pursue would be to let the company remain in abeyance for a year or two. This might be effected at an expense of not more than 2001. per annum. The line was one of the very best of its class, and he was of opinion that ultimately it might be made amply to remunerate the shareholders for the money they had embarked and should embark in it. It was a pleasing and striking fact that nearly the whole of the land owners through which the line was to pass would join in a memorial to the Commissioners for further time for the construction of the works.

The motion was then carried.

The directors were formally empowered to take the most prompt and stringent measures to obtain the restoration of the cheques already alluded to.

PARIS AND ST. GERMAIN.

March 26 .- Annual Meeting, Paris .- M. THUB NEVSSEN in the chair.

M. EMILE PEREIRE read the Report, which stated that a dividend of 27f. 50c. per share would be declared. This added to the 12f. 50c. already paid forms a total of 40f., or 8 per cent. By a decision of the 6th of March last, the Minister of Public Works had relieved the company from the necessity of extending the working on the atmospheric principle to Chatou and Nanterre, as would be required by the terms of the convention, which granted to the company a subvention of 1,790,000f. (71,600L). The enlargement of the Paris station and other works had necessitated an expense of 605,374f. (24,214L). The arrangements with the Versailles companies for the provisional working of the Chartres line, promise a compensation for the expenses already incurred on its behalf; and the future negotiations with the Minister of Public Works will be made in a spirit free from any exclusiveness or monopoly. The Report then refers to the sale of 4,700 shares, remaining from the 6,000 lately created, which cleared 4,498,494f. (179,939l.), an amount still so insufficient that the Board were driven to make further temporary arrangements. The question of indemnity for the late havoc on the line is then noticed. The cost of this is estimated at 977,928f. Meanwhile, pending the settlement of the question with the Government and the consequent payment of the indemnity, the dividend of 27f. 50c. will be applied to the present expenses of the company, and each shareholder will receive an acknowledgment, bearing 5 per cent. interest. Discretionary powers are sought for conducting the concession of the West line during the present unsettled state of affairs.

M. PEREIRE announced that negotiations were still pending respecting the West line; and that a meeting of directors from the Right and Left Bank had taken place before the Minister on the subject.

The Report and accounts were adopted.

VERSAILLES (RIGHT BANK).

March 29.—Annual Meeting, Paris.—M. THURNEYSSEN in the chair.

M. EMILE PEREIRE read the Report. the efforts of the directors towards the fusion of the two companies and their consequent negotiations for the concession of the West line between Versailles and Chartres. The tribunal duly appointed had decided on the superiority of the situation of the Right Bank Company. Had the fusion taken place, a premium of 250f. on each share would have been due to the Right Bank shareholders. In spite of previous arrangements, however, the fusion had been rejected by some shareholders of the Left Bank, and rejected by some shareholders of the Left Bank, and indefinitely postponed by the events of the late revolution. The receipts during 1847 had diminished by about 89,000f. (3,560*L*), while the expenses had increased about 83,000f. (3,320*L*). The balance of 26,000f. (1,040*L*), which remains after all expenses, will be carried to the credit of the company. repairs, &c. of the stations and bridges, and the carriages and stock had necessitated the above increase in the expenditure. The reduction of the receipts was attributable to the late monetary crisis. The reduction of the

In answer to a question touching the depreciation of the Right Bank shares below those of the Left Bank, M. EMILE PEREIRE said he could not explain the fluctuations of the Bourse, and cited as an instance the Northern line, which, though paying a dividend, is lower than some of the non-paying lines.

The accounts were unanimously approved Powers for the negotiation of the West line were also accorded.

M. J. Rothschild was re-elected director, and M. Clapeyron, in place of M. Alphon, deceased.

CEYLON

April 10. - Adjourned Meeting, London. - The shareholders had been summoned to receive the decision of the Ceylon Government respecting the terms authorizing the railway agreed upon with the Secretary of State for the Colonies, but in the absence of such intelligence the meeting was further adjourned to the 31st of May.

LINCOLNSHIRE LINES.—The schemes amalgamated under the name of the Manchester, Sheffield and Lincolnshire were founded on the Manchester and Sheffield line, and, embracing an aggregate length of about 212 miles, comprise within their limits the following towns and counties:—It commences in Store-street, Manchester, and, after throwing out in its way branches to Ashton-under-Lyne, to Whaley Bridge (joining the Buxton and Midland lines), and case, according to the practices in common use."

several other small branches, passes through Sheffield to Worksop, with a branch to Staveley, joining the Erewash line, Retford, where it crosses the Great Northern, and after throwing out a branch to Newark, a loop line which embraces Lincoln and Market Rasen, proceeds through Gainsborough, the great inland port of the district, and on to Ulceby, where iniand port of the district, and on to creey, where the line divides; one line of the fork runs up to the ferries, which communicate with Hull (these ferries having been purchased and improved by this company); the other line terminates at Great Grimsby, a port at the mouth of the Humber, thoroughly a port at the mouth of the Humber, thoroughly sheltered by Spurnpoint, a natural breakwater, where docks, also the property of the Lincolnshire Company, are in the course of erection at a cost of nearly half a million sterling. The cost of the whole of the projects sanctioned by Parliament will exceed six millions sterling, and in a few months the main trunk line from Grimsby to Manchester will be open.

Trunk line from Grimsby to Manchester will be open.

PRELBACH'S PATENT PROCESS OF UNITING
WROUGHT-IRON AND CAST-IRON, &c.—The nature or
object of this invention, according to the Mechanics'
Magazine, consists in an improved method or
methods of securely uniting certain metals and alloys
of metals of different properties and values together
—as, for example, wrought-iron with cast-iron, or
copper with cast-iron, or gun-metal with cast-iron—
whereby compound pieces of metal suitable for beams,
girdens ribs guideons railway chairs wheels, axles. girders, ribs. gudgeons, railway chairs, wheels, axles, and other parts of machinery and mechanical structures may be produced, possessing all the aggregate weight and other cohesiveness required, but much weight and other concaveness required, but much harder and stronger in some parts—such, for example, as those exposed to friction or to direct strain—than in other parts. Of the great utility of such a process as this there can be no question. We have seen some specimens of wrought and cast iron thus combined together which resisted every attempt of a powerful hammer to separate them. The following are the details of the process:—"To unite casting. are the details of the process:—"To unite cast-iron with wrought-iron—as, for example, to make a rectangular beam which shall consist of one quarter of its thickness of wrought-iron and three quarters of cast-iron, or of these two metals in any other given proportions—I proceed as follows:—I take a piece of wrought-iron of the quarter, or other required thickness aforesaid, and immerse it in a cleansing bath of nitric, or any other suitable acid, diluted with water. I next remove it from the bath and make it red hot, whereupon I plunge it once more into the cleansing bath. By these processes it is freed from any oxide which may have formed upon it. Then, in order to get rid of the acid which may be adhering to it, I wash it with an alkaline solution (salammoniac, for example, diluted in water), immediately after which I immerse it in a bath of melted tin, and leave it there till it is well tinned over. I next coat or cover the tinned wrought-iron on that side where it is to be united to the cast-iron with an alloy or solder, composed of copper and tin in the proportion of about to parts of copper to 95 parts of tim. The wrought-iron thus prepared is then dropped into the bottom of a mould of a size and form corresponding with that of the compound beam desired to be produced, and made fast by well-tinned pins and nails. Iron, in a hot and fluid state, is next poured upon the wrought-iron till the mould is filled, when a fusion takes place between the surface of the wrought-iron and castiron, through the action of the interposed alloy or solder of copper and tin, and the two principal substances become so firmly united together as not to be easily detachable, if at all. To unite steel with cast-iron, I adopt the same method in all respects as has just been directed to be followed in regard to wrought-iron and cast-iron. To unite in regard to wrought-iron and cast-iron. To unite copper with cast-iron, or gun-metal and cast-iron, brass and cast-iron, or any other of the alloys of copper with cast-iron, I also make use of similar or copper with cast-fron, I also make use of similar means to the preceding — only, instead of freeing the surfaces of the metal to which the cast-iron is to be added by acid and alkaline solutions, and heating as aforesaid, I effect this by filing merely, and add the iron at a lower degree of heat—so that it may not melt the body of the copper, the gunnetal, brass, or other alloy. The proportions before directed to be observed in the composition of the alloy, or solder, are such as will be suitable to be observed, when the compound piece of metal is of a medium size; but when it is above that size, and according to the ratio in which it exceeds it, the quantity of copper used in the alloy should be increased. In the exemplifications before given, the different metals have been supposed to be united literally, or side to side; but one metal may have another united to it on both sides, or be inclosed by it on all sides, and the pieces may be also of any

OOO

PORT OF GREAT GRIMSBY.

### NOTICE TO FOREIGN MERCHANTS

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive v. ssels about the end of 1849. These Docks will present the great advantage over most other English Ports of being ac-osstible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. The railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

DEMERARA RAILWAY COMPANY. received until 9 p.m., and forwarded by the 6 15 Train on the following morning (Sunday excepted), by the London and Birmingham Railway, at very reduced rates.

POST HORSES

(for the conveyance of Carriages arriving at the Euston Station), are always in readiness, at a churge of 10.6 cd. including post-boy, to any part of London (within 5 miles). OMNIBUSES

#### to and from every Train, FARE 6d.

GOODS AND MERCHANDISE conveyed from the several Branch Offices and Hambro'Wharf,
Thames street, by every Railway.

HORNE & CHAPLIN,

DIGHTZ PROPRIETORS AND AGENTS.

PORT OF GREAT GRIMSBY.

The Dues for Vessels entering the Docks at Great Grimsby have been reduced to 10d. per register tonnage.

It is expected that the New Docks will be ready to receive vessels about the end of 1849. These Docks will present the great advantage over most other English Ports of being accessible at all hours, except a couple of hours at low-water spring-tide. The Harbour offers refuge in all weathers. railway communication, by means of the MANCHESTER, SHEFFIELD and LINCOLNSHIRE lines, will be complete to all the manufacturing districts, and to all parts of the United Kingdom.

Safen von Great Grimsby.

Notice to foreign merchants Angeige an Kaufleute und Waaren-Ablader im

Daß bie Abgaben für Schiffe, welche bie Docten gu Great Grimeby einlaufen mogen, auf 10 pence per registrirte Eon niebetgefest worben finb.

Aller Erwartung nach werben biefe neue Docten gegen bas Ente bes Sahre 1840 ben notigigen Grab von Bequemlichteit und Bollenbung erreicht haben, um Schiffe aufzunehmen.

Diefe Docken werben ben großen Borque vor ben meiften anbern englischen bafen anerbieten, baß fie zu allen Beiten, ausgenommen ein paar Stunden beb niedrigem Waffer nach ben Springfluthen, guganglich fen merben.

jegn berten. Der hafen bietet eine Buflucht gegen Ungewitter von allen Seiten und ber Berkehr mit den Manufactur-Gegenden und mit allen Theilen des vereinigten Konigreichs wird mittelft die Gifenbahne von Manchefter, Sheffield und ber Graffchaft Lincoln, erganget und complet febn.

PORT DE GREAT GRIMSBY.

A VIS AUX NÉGOCIANTS, AUX AR-MATEURS ET AUX CAPITAINES DES NAVIRES ÉTRANGERS.

Les droits de tonnage sur les Navires qui entrent les bassins à Great Grimsby, ont été reduit à 10 sols Anglais par tonneau de registre.

On compte que les nouveaux bassins seront prêts à recevoir les vaisseaux vers la fin de l'année 1849.

Ces bassins offriront des arantages bien decidés sur la plu-part des autres ports de Mer de l'Angleterre en étant acces-sibles à toute heure, excepté pendant une couple d'heures à la marée basse, en tems de maline.

marce cases, ett cems de manne.

Le Havre présente un abri en tout tems. Les communications par l'entremise des Chemins de Fer de MANCHESTER, de SHEFFIELD, et des Lignes du comté de LiNCOLN,
seront ouvertes avec tous les districts manufacturiers et avec
toutes les parties de la Grande Bretagne.

### RAILWAY TRAVELLER'S COMPANION.

By FELIX SUMMERLY.

## TRAVELLING CHARTS:

Or, IRON ROAD BOOKS,

### FOR PERUSAL ON THE JOURNEY.

IN WHICH ARE NOTED

THE TOWNS, VILLAGES, CHURCHES, MANSIONS, PARKS, STATIONS, BRIDGES, VIADUCTS, TUNNELS, GRADIENTS, &c., THE SCENERY AND ITS NATURAL HISTORY, THE ANTIQUITIES AND THEIR HISTORICAL ASSOCIATIONS, &c., PASSED BY THE RAILWAY.

With numerous Mustrations.

Constituting a Novel and Complete Companion for the Railway Carriage.

* Upwards of Eight Hundred Engravings, from drawings taken expressly for these Charts, by distinguished Artists, are comprised in the series.

The following, each in a Wrapper, are now ready, and may be had at all the Stations:

- 1. LONDON TO BRIGHTON, containing a Map and 83 Engravings, 2nd edit. price 6d. 2. TUNBRIDGE WELLS, with 52 Engravings, price 6d. 3. WOKING AND GUILDFORD, with 52 Engravings, price 4d.
- WOLVERTON, with 85 Engravings, price 6d.
- 5. RICHMOND, with 15 Engravings, including a View from Richmond Hill, price 2d.
- 6. WINCHESTER AND SOUTHAMPTON, with 125 Engravings, price 1s.
- 7. GOSPORT, with 143 Engravings, price 1s.
- 8. READING AND OXFORD, with a Map and 74 Engravings, price 6d.
- 9. BISHOPS STORTFORD AND CAMBRIDGE, with a Map and 47 Engravings, price 6d. 10.
- FOLKSTONE AND DOVER, with a Map and 99 Engravings, price 1s. 11.

RUGBY AND BIRMINGHAM, with 137 Engravings, price 1s. Or, handsomely bound in morocco-cloth, price 6d. extra.

Also, in Octavo.

### FELIX SUMMERLY'S

#### PLEASURE EXCURSIONS BY RAILWAY

On the Eastern Counties, Birmingham, South-Western, Brighton, and South-Eastern.

TO PANSHANGER, with 3 Engravings, price 1d. TO WINCHESTER, 11 Engravings, price 2d. HARROW, 7 Engravings, price 1d.

— CROYDON, 9 Engravings, price 1d. — CHIDDINGSTONE AND HEVER, 7 SHOREHAM, 4 Engravings, price 1d. GUIEDFORD, 9 Engravings, price 2d. Engravings, price 1d.

TO REIGATE, 10 Engravings, price 1d.

WALTON AND WEYBRIDGE, 13 Engravings, price 1d.

Or the whole in One Volume, 74 Engravings, price 1s.

SATURDAY, APRIL 22,

PRACTICAL VIEW OF UNIFORM PARCEL RATES RESUMED.

The remarks of our correspondent "A. K., whose second letter on the subject of UNIFORM PARCEL RATES we inserted last week, do not afford any materials whatever by which we can alter our construction of the plan recommended. It is, as we have already observed, and as "A. K." allows, on its practicability as a working scheme in the present state of the railway system, that its merits can alone be ascertained; whereas our doubts of the expediency of attempting it under existing circumstances arise, as has been stated, from the entire deficiency of the proposal in this respect, so far as its details have yet been explained. Had we been able to "see our way to a practical working scheme," as "A. K." hopes we may yet be, we should not have hesitated to produce it, as soon as we had attentively considered "H. C.'s" suggestions; but neither then nor since have we been able to perceive any satisfactory method of getting over the various practical disadvantages that stand in the way of their adoption, or to avoid the cardinal fault of such a partial operation of the system as must impair the very principle on which alone low uniform rates can be expected to become either profitable, or indeed equitable, to all the parties who must cooperate in their introduction.

In the meantime, we shall observe, that it cannot be admitted that "A. K.'s" illustration, taken from the consent of railway companies generally to set the station clocks to "London time," is available, even on the explanation he now gives of his reason for adducing it. The willingness of the railway interest generally to adopt the system of the metropolitan concerns, in a matter, the convenience of which was obvious, and the risk altogether null, can by no means be taken as a proof that their example would be followed with equal readiness in a case where the immediate difficulties must be many, and the present advantage more than

questionable.

Nor does our observation of the method of conducting business at road-side or branch stations, lead us to approve of the method by which "A. K." suggests, that one of the difficulties, (and this, we may remark, by no means the greatest,) in disposing of the cross-country traffic, might be met without incurring a disproportionate expense. By converting the station-keeper, porter or policeman into a parcel deliverer, during the intervals between the several train arrivals at his post, little would be effected in one way, and serious irregularities could hardly fail to arise in another. The kind of parcels which alone could be distributed by such deliveries, within the short time between train and train, would not be those in which the greatest difficulty would arise. They could only be packages addressed to places within a very short distance from the station, for which the parties themselves might call or send on notice without much inconvenience; whereas those which must be despatched beyond the circuit of a mile or twoand these it would be the hardest to bring into the rule of the new system—could not be delivered by any such means. This process, therefore, would be quite imperfect, while it would be apt to cause extreme disorder in the more important duties of the station. To say nothing of the unreasonableness of adding a new task-and that a rather onerous one-to the other duties of the railway servant, it could hardly be performed without frequently causing his absence at times when he ought to be at his

excuse for every default in his attendance there. This method can on no account be approved of: it would be, in every respect, erroneous and unsatisfactory; and if, in order to avoid breaches of discipline, and to insure a regular attendance at the station at train times, additional hands were appointed, that arrangement would merely amount to a new and disproportionate expense, really chargeable to the cheap parcel system, however it might be nominally set down to general station charges.

But such short cross-country deliveries as this unsatisfactory plan would alone provide for, would not, we say, be those most likely to interfere with the working of a uniform low rate. The parcels from and to the more distant outlying places, which the railway carriage or the railway porters cannot in any way reach, would be far more troublesome exceptions; and of these, too, the number would at present be far too great to be possibly adjusted in harmony with a system, which, we repeat, could only succeed by universal popularity, founded on a generally uniform method and scale of charges. The Post-office extra deliveries afford no parallel here. They are the very small exceptions to an untaxed mode of delivery that obtains in the vast majority of cases. In the present incomplete state of railway communications, extra parcel charges must occur from and too nearly every roadside station on every line; and that not to thinly peopled districts merely, but to many considerable villages and not a few towns. Of this the most cursory glance at any map will afford numerous instances, on whatever district the eye may be cast-instances of a quite different character from those of the rare extra post deliveries here and there, to few places remote from the offices, with which there is scarcely a hamlet in the United Kingdom now unprovided.
